### SUPPLEMENTARY INFORMATION:

#### Background

In a separate notice of data availability, EPA provided an opportunity to comment on EPA's analyses of palm oil used as a feedstock to produce biodiesel and renewable diesel under the Renewable Fuel Standard (RFS) program. EPA's analysis of palm oil-based biofuels is a supplement to the final rule published on March 26, 2010, which made changes to the RFS program (75 FR 14670). EPA's analysis of the two types of biofuel shows that biodiesel and renewable diesel produced from palm oil have estimated lifecycle greenhouse gas (GHG) emission reductions of 17% and 11% respectively for these biofuels compared to the statutory baseline petroleum-based diesel fuel used in the

RFS program. This analysis indicates that both palm oil-based biofuels would not qualify as meeting the minimum 20% GHG performance threshold for renewable fuel under the RFS program. On February 14, 2012, EPA published a notice extending the comment period by 30 days until March 28, 2012 to provide the public additional time to comment on the NODA.

#### Extension of Comment Period

EPA received requests for an additional extension of the palm oil NODA comment period from various parties. After considering all of these comments, EPA has determined that an extension of the comment period would provide the public adequate time to provide meaningful comment on the NODA. However, this need must be balanced against our desire to finalize our analysis in a timely manner. EPA believes that an additional 30 days is an appropriate amount of time to balance these needs. Accordingly, the public comment period for the palm oil NODA is extended until April 27, 2012. EPA does not anticipate any further extension of the comment period at this time.

Dated: March 27, 2012.

**DATES:** Written Paperwork Reduction Act (PRA) comments should be submitted on or before April 17, 2012. **Needs and Uses:** The Commission will submit this new information collection to the Office of Management and Budget (OMB) during this 15 day comment period in order to obtain emergency approval from them. The Commission is requesting emergency OMB approval for this new information collection and assignment of an OMB control number. Part 11 contains rules and regulations addressing the nation's Emergency Alert System (EAS). The EAS provides the President with the capability to provide immediate communications and information to the general public at the national, state and local area level during periods of national emergency. The EAS also provides state and local governments and the National Weather Service with the capability to provide immediate communications and information to the general public concerning emergency situations posing a threat to life and property. For this new collection, the Commission is requesting emergency OMB review and processing for the reporting and recordkeeping requirements in the Fifth Report and Order, FCC 12-7. The Commission amended its Part 11 rules governing the EAS to more fully codify the existing obligation to process Common Alerting Protocol (CAP)-formatted alert messages adopted in the Second Report and Order.

Certification procedures for meeting general certification requirements are under 47 CFR 11.34. Paragraphs 164-167, 107-171, and 175-176 in the Fifth Report and Order, establish that integrated CAP-capable EAS devices and intermediate devices that are used in tandem with legacy EAS equipment are subject to the Commission's existing device certification requirements set forth in the Commission's Part 2 equipment authorization rules. These paragraphs also establish specific procedures by which EAS device manufacturers can update existing device certifications and obtain new certifications, which generally involve the submission of test data and other materials to the FCC.

The information collected by the Commission is used to confirm that EAS devices comply with the technical and performance requirements set forth in the EAS rules and other applicable rules maintained by the Commission. These rules are designed to minimize electrical
