contains a drainage canal and the smaller parcel has a pumping plant that pumps storm water and agricultural runoff into the Sacramento River. The property also serves as a cross canal between the West Drainage Canal and the Sacramento River. The area is zoned as “Permanent Agricultural Zone,” in conformity with most of the surrounding area, which is farm land. Since the 1960’s, the land has been used as a regional drainage canal and pumping plant. The location, size and dimensions of the two parcels are only suited as a drainage canal and open space. With no contemplated commercial use, the land’s value is diminimus.

The release will allow the title of the two parcels to be transferred to the Reclamation District 1000 in exchange for storm water drainage channel clearance services. The value of these services will compensate the airport for the property’s residual fair market value. The channel clearance service is likely more beneficial to the County Airport System than a diminimus payment. The release parcels will continue to be utilized for drainage purposes and will benefit the airport by increasing the airport’s impervious surface runoff and drainage needs. Furthermore, it represents a compatible land use that will not interfere with the airport or its operation. Therefore, the release is a benefit to civil aviation.

Acting Manager, San Francisco Airports District Office, Western-Pacific Region.
