

salmon and PS steelhead. Sampling sites would be located in the Lake Washington Ship Canal between the Ballard Locks and Shilshole Bay. The purpose of the study is to identify the spatial and temporal distribution of bull trout in the Lake Washington Ship Canal and in the nearshore waters of Shilshole Bay. The research would benefit listed fish by improving management decisions regarding operations at the Hiram Chittenden Locks, as well as by providing valuable information on the overall picture of bull trout populations and their life histories in Puget Sound. The researchers propose to use beach seines to capture the fish. All Chinook salmon and steelhead would be immediately released at the capture. The researchers do not propose to kill any of the listed salmonids being captured, but a small number may die as an unintended result of the activities.

Permit 17214

The U.S. Fish and Wildlife Service (FWS) is seeking a 1-year research permit to annually take juvenile PS Chinook salmon and PS steelhead. The sampling would take place in Dean Creek, Washington (a tributary flowing into Sequim Bay). The purpose of the study is to determine fish species presence and distribution in Dean Creek and its environs; this information would be used to inform the Dungeness Wildlife Refuge comprehensive conservation plan. The research would benefit listed salmonids by identifying and prioritizing management activities designed to protect fish species in this stream. The FWS proposes capturing fish by using backpack electrofishing equipment. Fish would be collected with dip nets, enumerated, allowed to recover in aerated water, and released back into their capture locations. The researchers do not propose to kill any of the listed salmonids being captured, but a small number may die as an unintended result of the activities.

Permit 17222

The Confederated Tribes of the Warm Springs Reservation of Oregon (CTWSRO) are seeking a 5-year permit to annually take MCR steelhead during the course of research designed to determine the feasibility of PIT-tagging juvenile summer/fall Chinook (a non-listed species) in the Deschutes River, Oregon. The purpose of the research is to generate population metrics such as juvenile growth rates, smolt-to-adult return ratios, size/condition at emigration, etc. This information would be used to develop performance indicators for monitoring the fishes'

status and trends. This research would benefit listed species by helping managers develop a picture of river health and salmonid population trends in the Deschutes River. That information, in turn, would be used in recovery planning efforts and generally incorporated into resource management decisions that may affect the Deschutes River. The researchers intend to use seines to capture the fish and all captured MCR steelhead will be released immediately. The researchers do not propose to kill any of the listed salmonids being captured, but a small number may die as an unintended result of the activities.

This notice is provided pursuant to section 10(c) of the ESA. NMFS will evaluate the applications, associated documents, and comments submitted to determine whether the applications meet the requirements of section 10(a) of the ESA and Federal regulations. The final permit decisions will not be made until after the end of the 30-day comment period. NMFS will publish notice of its final action in the **Federal Register**.

Dated: April 19, 2012.

Angela Somma,

Chief, Endangered Species Division, Office of Protected Resources, National Marine Fisheries Service.

National Oceanic and Atmospheric Administration

RIN 0648-XB168

Endangered and Threatened Species; Take of Anadromous Fish

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Receipt of two applications for scientific research and enhancement permits.

SUMMARY: Notice is hereby given that NMFS has received two scientific research and enhancement permit application requests relating to salmonids listed under the Endangered Species Act (ESA). The proposed research activities are intended to increase knowledge of the species and to help guide management and conservation efforts. The applications and related documents may be viewed online at: https://apps.nmfs.noaa.gov/preview/preview_open_for_comment.cfm. These

documents are also available upon written request or by appointment by contacting NMFS by phone (916) 930-3600 or fax (916) 930-3629.

DATES: Written comments on the permit applications must be received at the appropriate address or fax number (see **ADDRESSES**) no later than 5 p.m. Pacific standard time on May 24, 2012.

ADDRESSES: Written comments on either application should be submitted to the Protected Resources Division, NMFS, 650 Capitol Mall, Suite 5-100, Sacramento, CA 95814. Comments may also be submitted via fax to (916) 930-3629 or by email to FRNpermitsSAC.SR@noaa.gov.

FOR FURTHER INFORMATION CONTACT: Amanda Cranford, Sacramento, CA (ph.: 916-930-3706, email: Amanda.Cranford@noaa.gov).

SUPPLEMENTARY INFORMATION:

Species Covered in This Notice

This notice is relevant to federally threatened California Central Valley steelhead (*Oncorhynchus mykiss*), threatened Central Valley spring-run Chinook salmon (*O. tshawytscha*), endangered Sacramento River winter-run Chinook salmon (*O. tshawytscha*), and threatened Southern Distinct Population Segment of North American green sturgeon (*Acipenser medirostris*).

Authority

Scientific research permits are issued in accordance with section 10(a)(1)(A) of the ESA of 1973 (16 U.S.C. 1531-1543) and regulations governing listed fish and wildlife permits (50 CFR parts 222-226). NMFS issues permits based on findings that such permits: (1) Are applied for in good faith; (2) if granted and exercised, would not operate to the disadvantage of the listed species which are the subject of the permits; and (3) are consistent with the purposes and policies set forth in section 2 of the ESA. The authority to take listed species is subject to conditions set forth in the permits.

Anyone requesting a hearing on the applications listed in this notice should set out the specific reasons why a hearing on the application(s) would be appropriate (see **ADDRESSES**). Such hearings are held at the discretion of the Assistant Administrator for Fisheries, NMFS.

Applications Received

Permit 14808

The California Department of Fish and Game (CDFG) is requesting a 5-year scientific research and enhancement permit to take juvenile California

Central Valley steelhead, juvenile Central Valley spring-run Chinook salmon, juvenile Sacramento River winter-run Chinook salmon, and juvenile Southern Distinct Population Segment North American green sturgeon associated with research activities at two different sites in the upper Sacramento River. Application 14808 was previous noticed in the **Federal Register** (75 FR 14134) with a 30 day comment period from March 24, 2010, to April 23, 2010. No comments were received for this application, however due to substantial changes to the sampling locations and the amount take NMFS decided to publish the revised notice for public comment. In the studies described below, researchers do not expect to kill any natural origin listed fish but a small number, up to two percent, may die as an unintended result of the research activities. A sub-sample of hatchery produced winter-run Chinook salmon (up to 40 per day) may experience intentional (directed) mortality and be retained by CDFG for coded wire tag retrieval and reading.

Monitoring efforts are conducted in order to compile information on timing, composition (species/race), and relative abundance of emigrating juvenile Chinook salmon and Central Valley steelhead from the upper Sacramento River system into the Sacramento-San Joaquin Delta. This information provides an early warning of salmonid movement into the Delta, enabling the implementation of adaptive management practices to protect juveniles as they enter and pass through the Delta.

Sampling will occur through the use of paired 8-foot rotary screw traps at two different sites along the upper Sacramento River. The first site, located near the town of Knights Landing (river mile (RM) 88.5) will be sampled beginning in October and continue through June of the following year. Traps will be fished continuously and checked once every 24 hours unless conditions warrant more frequent sampling. Captured salmonids will be: Anesthetized, handled (including fork length and wet weight measurements), allowed to recover, and released back into the river with the exception of up to 40 adipose fin clipped Chinook salmon that will be retained for coded wire tag processing. Sampling at Tisdale Weir (RM 120) will follow the same methods as described above, however sampling will occur year round from January through December.

Permit 13791

The U.S. Fish and Wildlife Service (USFWS) is requesting a 3-year

scientific research and enhancement permit to take juvenile California Central Valley steelhead, juvenile Central Valley spring-run Chinook salmon, juvenile Sacramento River winter-run Chinook salmon, and juvenile Southern Distinct Population Segment North American green sturgeon associated with research activities at monitoring sites in the Sacramento River basin and the Sacramento-San Joaquin Delta. Application 13791 was previously noticed in the **Federal Register** (73 FR 70622) with a 30-day comment period from November 21, 2008, to December 22, 2008. No comments were received for this application, however due to substantial changes in the sampling procedures and the amount take NMFS decided to publish the revised notice for public comment. In the studies described below, researchers do not expect to kill any natural origin listed fish but a small number, up to three percent, may die as an unintended result of the research activities. All hatchery origin Chinook salmon with clipped adipose fins are assumed to be implanted with a coded wire tag. In order to retrieve and read these tags, all adipose fin clipped Chinook salmon captured during sampling will be sacrificed and retained for processing.

The Stockton Fish and Wildlife Office's Delta Juvenile Fish Monitoring Program (DJFMP) monitors the abundance, temporal and spatial distribution, and survival of juvenile salmonids and other fishes occurring within the lower Sacramento and San Joaquin Rivers and the San Francisco Estuary. The Breach III Project documents the occurrence and habitat use of ESA-listed fishes within Liberty Island, a tidally influenced freshwater marsh currently undergoing passive restoration, located within the San Francisco Estuary. The fish monitoring data collected by the DJFMP and the Breach III Project are intended to provide basic biological and population information on fishes of management concern, including the ESA listed winter- and spring-run Chinook salmon and Central Valley steelhead. Further, data can be used by natural resource managers to evaluate the effectiveness of water operations, aquatic habitat restoration, and fish management practices within the San Francisco Estuary and its watershed. As a result, take of ESA listed salmonids will likely occur while sampling using a variety of methodologies (e.g. fyke nets, multi-mesh gill nets, larval fish trawls, mid-water trawls, Kodiak trawls, and beach seines). Captured fish will be identified

to species or race, measured for fork length to the nearest millimeter, and released back into the sampled location. Scale samples will also be taken from a sub-sample of natural origin Chinook salmon to assist the University of California, Davis with their genetic research in the Yolo Bypass.

Dated: April 19, 2012.

Marine Mammals; Photography Permit File No. 17032

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice; issuance of permit.

SUMMARY: Notice is hereby given that a permit has been issued to Shane Moore, Moore & Moore Films, Box 2980, 1203 Melody Creek Lane, Jackson, WY 83001 to conduct commercial/educational photography in Alaska.

ADDRESSES: The permit and related documents are available for review upon written request or by appointment in the following offices:

Permits and Conservation Division, Office of Protected Resources, NMFS, 1315 East-West Highway, Room 13705, Silver Spring, MD 20910; phone (301) 427-8401; fax (301) 713-0376; and

Alaska Region, NMFS, P.O. Box 21668, Juneau, AK 99802-1668; phone (907) 586-7221; fax (907) 586-7249.

FOR FURTHER INFORMATION CONTACT: Carrie Hubard or Joselyd Garcia-Reyes, (301) 427-8401.

SUPPLEMENTARY INFORMATION: On January 13, 2012, notice was published in the **Federal Register** (77 FR 2037) that a request for a permit for commercial/educational photography had been submitted by the above-named applicant. The requested permit has been issued under the authority of the Marine Mammal Protection Act of 1972, as amended (16 U.S.C. 1361 *et seq.*) and the regulations governing the taking and importing of marine mammals (50 CFR part 216).
