SUPPLEMENTARY INFORMATION:

Overview: The overall goal of the EBDM Initiative is to establish and test the links (information tools and protocols) between local criminal justice decisions and the application of human and organizational change principles (evidence-based practices) in achieving measurable reductions in pretrial misconduct and post-conviction risk of reoffending. The unique focus of the initiative is the review of locally developed criminal justice strategies that guide practice within existing sentencing statutes and rules. The initiative intends to (1) improve the quality of information that leads to making individual case decisions in local systems and (2) engage these systems as policymaking bodies to

collectively improve the effectiveness and capacity of their decision making related to pretrial release/sentencing options. Local officials involved in the initiative include judges, prosecutors, public defenders, police, human service providers, county executives, and administrators of jail, probation, and pretrial services agencies.

Local criminal justice decisions are defined broadly to include dispositions regarding arrest, cite and release or to custody; pretrial release or detention and setting of bail and pretrial release conditions; pretrial diversion; charging and plea bargaining; sentencing of adjudicated offenders regarding use of community and custody options; and responses to violations of conditions of pretrial release and community sentences.

Background: In June 2008, the National Institute of Corrections (NIC) launched a multi-phased initiative and awarded a cooperative agreement to address evidence-based decision making in local criminal justice systems. The goal of Phase I of the initiative was to build a systemwide framework (from arrest through final disposition and discharge) that would result in more collaborative, evidence-based decision making and practices in local criminal justice systems. This effort was grounded in two decades of research on the factors that contribute to criminal reoffending and the methods a justice system can employ to interrupt the cycle of reoffense. Today, the initiative seeks to equip criminal justice policymakers in local communities with information, processes, and tools that will result in measurable reductions of pretrial misconduct and post-conviction reoffending.

The principle product of Phase I of this initiative was the Evidence-Based Decision Making Framework in Local Criminal Justice Systems. The Framework identifies the key structural elements of a system informed by evidence-based practice. It defines a vision of safer communities. It puts forward the belief that risk and harm reduction are fundamental goals of the justice system and that these can be achieved without sacrificing offender accountability or other important justice system outcomes.

The Framework both acknowledges the importance of the key premises and values underlying our criminal justice system and provides a set of principles to guide evidence-based decision making within that context; the principles themselves are evidence-based. The Framework also highlights the groundbreaking research that demonstrates pretrial misconduct and
