

sensitive joint-vetch. We would emphasize maintaining and restoring the forest integrity of tidal freshwater marsh, tidal swamp forest, the James River and associated backwater habitats, and mature mixed mesic forest habitats through increased monitoring and data collection, and a more aggressive response to habitat changes associated with invasive species, global climate change, or storm events. We would also convert 200 acres of grassland habitat to transitional mixed mesic forest habitat.

This alternative would enhance our visitor services programs to improve opportunities for environmental education and wildlife-dependent recreation. The improvements would include expanding the on-refuge environmental education program through a partnership with the JRA and enhancing interpretive materials. We would also evaluate opportunities to expand the hunting program to include turkey hunting, a 5-day hunt for deer, and a youth deer or turkey hunt.

We would also expand our conservation, research, monitoring, and management partnerships to help restore and conserve the refuge.
