1. Launch vehicle. The launch vehicle must—
   (i) Be unmanned;
   (ii) Be powered by a liquid or hybrid rocket motor; and
   (iii) Carry no more than 5,000 pounds of propellant.

2. Tether system. The tether system must—
   (i) Have established strength properties that will not yield or fail under—
       (A) The maximum dynamic load on the system; or
       (B) A load equivalent to two times the maximum potential engine thrust.
   (ii) Have a minimum safety factor of 3.0 for yield stress and 5.0 for ultimate stress.
   (iii) Constrain the launch vehicle within 75 feet above ground level.
   (iv) Display no damage prior to the launch.
   (v) Be insulated or located such that it will not experience thermal damage due to the launch vehicle’s exhaust.

3. Separation distances. The launch operator must separate its launch from the public and the property of the public by a distance no less than that provided for each quantity of propellant listed in Table A of this section.

4. Amend § 401.5 by adding the definition of tether system in alphabetical order to read as follows:

§ 401.5 Definitions.
