

near real-time tactical information, including both data and voice, among air, ground, and sea elements. The Link 16 hardware, publications, performance specifications, operational capability, parameters, vulnerabilities to countermeasures, and software documentation are classified Confidential. The classified information to be provided is necessary for the operation, maintenance, and repair (through intermediate level) of the data link terminal, installed systems, and related software.

7. *Remote Operation Video Enhanced Receive (ROVER)*: This system allows personnel on the ground to receive the generated video and overlays, but not aircraft overlays. This system is Unclassified and has no critical technology.

8. *Ultra High Frequency/Very High Frequency (UHF/VHF) Radios (AN/ARC-210)*: The ARC 210 [RT-1851A (C)] UHF/VHF secure radios with HAVE QUICK II are voice communications radio systems that can operate in either normal, secure, and/or jam-resistant modes. They can employ cryptographic technology that is classified Secret. Classified elements include operating characteristics, parameters, technical data, and keying material.

9. *UHF/VHF Air-to-Ground Radio (RF-7800M-MP)*: This is a wideband air-to-ground tactical radio incorporating encrypted voice and data communication. Classified elements, up to Secret, include operating characteristics, parameters, technical data, and keying material.

10. *Identification Friend or Foe transponder interrogator system (AN/APX-114/119)*: This system is Unclassified unless encrypted Mode 4 operational evaluator parameters, which are Secret, are loaded into the equipment.

11. *Inertial Navigation/Global Positioning System (INS/GPS) (LN-100 or H764G)*: This is a highly accurate inertial navigation system with an embedded GPS for blended GPS/INS, free-inertial, and GPS only navigation solutions. Classified elements up to Secret include a Selective Availability Anti-spoofing Module (SAASM) for decryption of precision GPS signals.

12. *Counter-Measures Dispensing System (CMDS) (AN/ALE-47)*: The CMDS is an integrated, threat-adaptive, software-programmable dispensing system capable of dispensing chaff, flares, and active radio frequency expendables. The threats countered by the CMDS include radar-directed anti-aircraft artillery (AAA), radar command-guided missiles, radar homing-guided missiles, and infrared (IR) guided

missiles. The system is internally mounted and may be operated as a stand-alone system or may be integrated with other on-board EW and avionics systems. The AN/ALE-47 uses threat data received over the aircraft interfaces to assess the threat situation and to determine a response. Expendable routines tailored to the immediate aircraft and threat environment may be dispensed using one of four operational modes. The hardware is Confidential. The software when loaded into the ALE-47 is classified Confidential. Technical data and documentation to be provided are Unclassified.

13. *Missile Launch Detection System (MLDS) (AN/AAR-60)*: The MLDS is a passive, true imaging sensor device that is optimized to detect the radiation signature of a threat missile's exhaust plume within the Ultra-Violet (UV) solar blind spectral band. Functionally, the architecture detects incoming missile threats and indicates their direction of arrival with the 'maximum' warning time. The system is further noted as featuring inherently high-spatial resolution, advanced temporal processing, a very high declaration rate, and the virtual elimination of false alarm rates, fast threat detection and the automatic initiation of appropriate countermeasures. Physically, a typical application comprises four to six self-contained detector units each of which provides full signal processing. Hardware, software, and technical data and documentation to be provided are Unclassified.

14. Additional sensitive areas include operating manuals and maintenance technical orders containing performance information, operating and test procedures, and other information related to support operations and repair. The hardware, software, and data identified are classified to protect vulnerabilities, design and performance parameters and other similar critical information.

15. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software, the information could be used to develop countermeasures, which might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.
