

plantations include islands of residual trees that pre-date the plantations which would be left untreated to provide diverse structure and habitat within the plantations.

About 80% of the treatment acres would have wood products removed using whole-tree-yarding to designated landings.

One or more of these secondary treatments, depending on site conditions, would follow the primary silvicultural treatments: (1) Masticate competing brush; (2) pile and burn activity fuels; (3) lop and scatter activity fuels; and (4) pull slash back or chip within 50 feet of National Forest System roads. Secondary treatments address predicted wildfire behavior by reducing hazardous fuels conditions.

The project would be accomplished under several Service and Timber Sale Contracts over a period of several years, dependent upon funding. Plantations to be treated are generally put together in contracts of 300 to 600 acres in size and located close to one another to be operationally and economically feasible. Additional vegetation and road treatments would be completed with Forest Service employees and agency owned machinery (i.e., force account), Youth Conservation Corp Crews, California Conservation Corp Crews and/or volunteers as funding allows. Treatment activities and road actions would occur between approximately May 1 and October 15 each year. Plantations with poor stand health and vigor and/or high fuel hazards would be treated first. Commercial removal units would be scheduled as soon as possible. Upon award, the average Service Contract vegetation treatment and related road closures would generally be completed within 18 months. Timber Sale Contracts can take anywhere from 1 to 5 years from award to completion. Associated road closures would occur upon completion of an activity in each contract/sale area boundary.

Road management activities necessary to implement the proposed action and also needed for future management activities include: 126 miles of road maintenance and 36 miles of reconstruction on National Forest System (NFS) roads. Existing unauthorized routes totaling 33 miles are proposed to be added to the NFS (these routes are currently open roads that are not part of the National Forest system under the Shasta-Trinity National Forests Motorized Travel Management, Final Environmental Impact Statement, 2010); and construction of 24 segments totaling 5.5 miles of new roads that would be added to the system.

Eighteen miles of existing unauthorized routes and 3.5 miles of new temporary roads would be decommissioned within 1–3 years of project conclusion.

Approximately 462 landings up to one-half acre in size (or up to one-quarter acre in the LSR) would be located within or near plantation boundaries where wood products would be removed.

Landings and skid trails would be rehabilitated when no longer needed for this project. Maintenance Level 1 (intermittent use) roads would be closed within 1–3 years of each contract completion, until needed for future management activities.

The Proposed Action implements the Forest Plan standards and guides, management recommendations in the Forestwide Late Successional Reserve Assessment, the Forest's Fire Management Plan, and Regional Ecosystem Office guidance. Additional site-specific project design features and best management practices would be used to further protect resources. Coordination and consultation with the U.S. Fish and Wildlife Service will continue and consultation with the State Historic Preservation Office and Tribes is planned.

Responsible Official

J. Sharon Heywood, Forest Supervisor, Shasta-Trinity National Forest.

Nature of Decision To Be Made

The Forest Supervisor will decide whether to implement the proposed action, take an alternative action that meets the purpose and need, or take no action.

Permits or Licenses Required

A permit would be required from the State of California prior to burning piles. Storm Water Permits: The appropriate regulatory agencies will be consulted regarding national or state required permits associated with roads used in project implementation. Required permits will be obtained prior to implementation.

Scoping Process

This notice of intent initiates the scoping process, which guides the development of the environmental impact statement.

It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency's preparation of the environmental impact statement. Therefore, comments should be provided prior to the close of the

comment period and should clearly articulate the reviewer's concerns and contentions.

Include the following information with your comments: your name, address, email (optional), and telephone number; the project name: East McCloud Plantations Thinning Project; and site-specific comments about the proposed action, along with supporting information you believe will help identify issues, develop alternatives, or predict environmental effects of this proposal. The most useful comments provide new information or describe unwanted environmental effects potentially caused by the proposed action. If you reference scientific literature in your comments, you must provide a copy of the entire reference you have cited and include rationale as to how you feel it is pertinent to the East McCloud Plantations Thinning Project.

Comments received in response to this solicitation, including names and addresses of those who comment, will be part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered; however.

Dated: August 21, 2012.
