#### **SUPPLEMENTARY INFORMATION:**

##### **Background and Purpose**

The ASME/USCG Workshop on Marine Technology and Standards provides a unique opportunity for classification societies, industry groups, standards development organizations, government agencies, and interested members of the public to come together for a professional exchange of information on topics ranging from technological impacts on the marine industry, corresponding coverage in related codes and standards, and government regulations.

Held once every two to three years, the public workshop is sponsored by the American Society of Mechanical Engineers (ASME), in coordination with the USCG Office of Design and Engineering Standards. ASME is a standards setting organization with wide-ranging volunteer committee membership, which includes USCG supported personnel who serve as members of various ASME committees in support of USCG missions in maritime safety and environmental protection. The USCG Office of Design and Engineering Standards is responsible for developing and promulgating national regulations and standards that govern the safe design and construction of ships and shipboard equipment, including hull structure, stability, electrical and mechanical systems, lifesaving and fire safety equipment, and related equipment approval and laboratory acceptance.

This workshop is an opportunity for the public to provide expertise on technical matters affecting the marine industry, to leverage new technologies, and to improve future policymaking, standards development, and rulemaking. The most recent workshop was held in Washington, DC, on July 29-30, 2010 (75 FR 8099, February 23, 2010). Public engagement on regulations and design standards enhances both the effectiveness and the quality of policy

development. As an example, dialogue from the previous workshop on the safe and economical use of natural gas as a marine fuel provided valuable insight for the development of CG-521 Policy Letter No. 01-12,<sup>1</sup> which sets forth national policy regarding acceptable design criteria for shipboard natural gas fuel systems.

Topics for the 2013 workshop are listed below and include application of various marine technologies to promote safe and environmentally conscious operation of ships and offshore vessels and platforms.

The next workshop will be held in Arlington, VA, over a two-day period on Wednesday, July 24, 2013, and Thursday, July 25, 2013. See **ADDRESSES** above for event location information.
