

Altitude Chamber complies with the criteria:

- Acceptance Test Plan,
- Pressure profile demonstrations, and
- Altimeter and pressure gauge test results.

FOR FURTHER INFORMATION CONTACT: For questions about the performance criteria, you may contact Randal Maday, Licensing and Evaluation Division (AST-200), FAA Office of Commercial Space Transportation (AST), 800 Independence Avenue SW., Room 331, Washington, DC 20591, telephone (202) 267-8652; Email randal.maday@faa.gov.

Issued in Washington, DC, on September 17, 2012.

George C. Nield,

Associate Administrator for Commercial Space Transportation.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

Notice of Submission Deadline for Schedule Information for O'Hare International Airport, San Francisco International Airport, John F. Kennedy International Airport, and Newark Liberty International Airport for the Summer 2013 Scheduling Season

AGENCY: Federal Aviation Administration (FAA), Department of Transportation.

ACTION: Notice of submission deadline.

SUMMARY: Under this notice, the FAA announces the submission deadline of October 11, 2012, for Summer 2013 flight schedules at Chicago's O'Hare International Airport (ORD), San Francisco International Airport (SFO), New York's John F. Kennedy International Airport (JFK), and Newark Liberty International Airport (EWR) in accordance with the International Air Transport Association (IATA) Worldwide Slot Guidelines. The deadline coincides with the schedule submission deadline for the IATA Slots Conference for the Summer 2013 scheduling season.

DATES: Schedules must be submitted no later than October 11, 2012.

ADDRESSES: Schedules may be submitted by mail to the Slot Administration Office, AGC-200, Office of the Chief Counsel, 800 Independence Ave. SW., Washington, DC 20591; facsimile: 202-267-7277; or by email to: 7-AWA-slotadmin@faa.gov.

FOR FURTHER INFORMATION CONTACT:

Robert Hawks, Office of the Chief Counsel, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone number: 202-267-7143; fax number: 202-267-7971; email: rob.hawks@faa.gov.

SUPPLEMENTARY INFORMATION: The FAA has designated ORD as an IATA Level 2 airport, SFO as a Level 2 airport, JFK as a Level 3 airport, and EWR as a Level 3 airport. Scheduled operations at JFK and EWR are currently limited by FAA Orders until a final Congestion Management Rule for LaGuardia Airport, John F. Kennedy International Airport, and Newark Liberty International Airport (RIN 2120-AJ89) becomes effective but not later than October 26, 2013.¹

The FAA is primarily concerned about planned passenger and cargo operations during peak hours, but carriers may submit schedule plans for the entire day. At ORD, the peak hours are 0700 to 2100 Central Time (1200 to 0200 UTC), at SFO from 0600 to 2300 Pacific Time (1300 to 0600 UTC), and at EWR and JFK from 0600 to 2300 Eastern Time (1000 to 0300 UTC). Carriers should submit schedule information in sufficient detail including, at minimum, the operating carrier, flight number, scheduled time of operation, frequency, and effective dates. IATA standard schedule information format and data elements (Standard Schedules Information Manual or SSIM) may be used.

The U.S. summer scheduling season for these airports is from March 24, 2013, through October 26, 2013, in recognition of the IATA northern summer period. The FAA understands there may be differences in slot times due to different U.S. daylight saving time dates and will accommodate these differences to the extent possible.

Issued in Washington, DC, on September 17, 2012.

Rebecca B. MacPherson,

Assistant Chief Counsel for International Law, Legislation, and Regulations.

BILLING CODE 4910-13-M

¹ Operating Limitations at John F. Kennedy International Airport, 73 FR 3510 (Jan. 18, 2008) as amended 76 FR 18620 (Apr. 4, 2011); Operating Limitations at Newark Liberty International Airport, 73 FR 29550 (May 21, 2008) as amended 76 FR 18618 (Apr. 4, 2011).

DEPARTMENT OF TRANSPORTATION

Federal Railroad Administration

[Docket No. FRA-2000-7257; Notice No. 71]

Railroad Safety Advisory Committee (RSAC); Working Group Activity Update

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Announcement of Railroad Safety Advisory Committee (RSAC) Working Group Activities.

SUMMARY: FRA is updating its announcement of the RSAC Working Group activities to reflect its current status.

FOR FURTHER INFORMATION CONTACT:

Larry Woolverton, RSAC Designated Federal Officer/Administrative Officer, FRA, 1200 New Jersey Avenue SE., Mailstop 25, Washington, DC 20590, (202) 493-6212; or Robert Lauby, Deputy Associate Administrator for Regulatory and Legislative Operations, FRA, 1200 New Jersey Avenue SE., Mailstop 25, Washington, DC 20590, (202) 493-6474.

SUPPLEMENTARY INFORMATION: This notice serves to update FRA's last announcement of working group activities and status reports of April 23, 2012 (77 FR 24257). The 46th full RSAC meeting was held on April 26, 2012, and the 47th meeting is scheduled for September 27, 2012, at the National Association of Home Builders, National Housing Center, located at 1201 15th Street NW., Washington, DC 20005.

Since its first meeting in April 1996, the RSAC has accepted 38 tasks. Status for each of the open tasks (neither completed nor terminated) is provided below:

Open Tasks

Task 96-4—Tourist and Historic Railroads. Reviewing the appropriateness of the agency's current policy regarding the applicability of existing and proposed regulations to tourist, excursion, scenic, and historic railroads. This task was accepted on April 2, 1996, and a working group was established. The working group monitored the steam locomotive regulation task. Planned future activities involve the review of other regulations for possible adaptation to the safety needs of tourist and historic railroads.

Contact: Robert Lauby, (202) 493-6474.

Task 03-01—Passenger Safety. This task includes updating and enhancing the regulations pertaining to passenger

safety, based on research and experience. This task was accepted on May 20, 2003, and a working group was established. Prior to embarking on substantive discussions of a specific task, the working group set forth in writing a specific description of the task. The working group reports planned activities to the full RSAC at each scheduled full RSAC meeting, including milestones for completion of projects and progress toward completion. At the first meeting, held on September 9–10, 2003, a consolidated list of issues was completed. At the second meeting, held on November 6–7, 2003, four task groups were established: Emergency Preparedness, Mechanical, Crashworthiness, and Vehicle/Track Interaction. The task forces met and reported on activities for working group consideration at the third meeting, held on May 11–12, 2004, and a fourth meeting was held on October 26–27, 2004. The working group met on March 21–22, 2006, and again on September 12–13, 2006, at which time the group agreed to establish a task force on General Passenger Safety. The full Passenger Safety Working Group met on April 17–18, 2007; December 11–12, 2007; November 13, 2008; and June 8, 2009. On August 5, 2009, the working group was requested to establish an Engineering Task Force (ETF) to consider technical criteria and procedures for qualifying alternative passenger equipment designs as equivalent in safety to equipment meeting the design standards in the Passenger Equipment Safety Standards. Consensus Tier III recommendations of the ETF were developed and were approved at a meeting on October 6–7, 2011, by the Passenger Safety Working Group, and these recommendations were approved by the full RSAC Committee by electronic vote on March 2, 2012. These recommendations address safety issues related to high-speed rail trainsets used in the United States. No additional meetings are currently scheduled.

Contact: Charles Bielitz, (202) 493–6314.

Engineering Task Force. The Passenger Safety Working Group approved a request from FRA to establish an ETF under the Passenger Safety Working Group in August 2009. The mission of the task force is to produce a set of technical evaluation criteria and procedures for passenger rail equipment built to alternative designs. The technical evaluation criteria and procedures would provide a means of establishing whether an alternative design would result in

performance at least equal to the structural design standards set forth in the Passenger Equipment Safety Standards (Title 49 Code of Federal Regulations (CFR) part 238). The initial focus of this effort will be on Tier I standards. When completed, the criteria and procedures would form a technical basis for making determinations concerning equivalent safety pursuant to 49 CFR Section 238.201, and provide a technical framework for presenting evidence to FRA in support of any request for waiver of the compressive (buff) strength requirement, as set forth in 49 CFR 238.203. *See* 49 CFR part 211, Rules of Practice. The criteria and procedures could be incorporated into Part 238 at a later date after notice and opportunity for public comment. The ETF was formed and a kickoff meeting was held on September 23–24, 2009. The group held follow-on meetings November 3–4, 2009; January 7–8, 2010; and March 9–10, 2010. A followup GoTo/Webinar meeting was held on July 12, 2010. The ETF developed a draft “Criteria and Procedures Report” that was approved by the Passenger Safety Working Group during the September 16, 2010, meeting and by the RSAC Committee during the September 23, 2010, meeting. The document has been placed on the FRA Web site at the following address: http://www.fra.dot.gov/downloads/safety/RSAC_REPORT-%209-16-10.pdf.

Engineering Task Force II. In order to build on the success of the ETF in developing a set of alternative technical criteria and procedures for evaluating the crashworthiness and occupant protection performance of passenger rail equipment in service at conventional operating speeds, FRA requested that the Passenger Safety Working Group re-task the group to concentrate on developing crashworthiness and occupant protection safety recommendations for high-speed passenger trains. The Passenger Safety Working Group accepted the task on July 28, 2010, by electronic vote. Under the new task, the task force may address any safety features of the equipment, including but not limited to crashworthiness, interior occupant protection, glazing, emergency egress, and fire safety features. Any type of equipment may be addressed, including conventional locomotives, high-speed power cars, cab cars, multiple-unit (MU) locomotives, and coach cars. The equipment addressed may be used in any type of passenger service, from conventional-speed to high-speed. Recommendations may take the form of criteria and procedures, revisions to

existing regulations, or adoption of new regulations, including rules of particular applicability. The work of the re-tasked ETF is intended to assist FRA in developing appropriate safety standards for the high-speed rail projects planned in California and Nevada. The ETF II held a kickoff meeting on October 21–22, 2010, to begin work on the new high-speed task, and had follow-on meetings on January 11–12, February 14–15, March 30–31, June 16–17, October 6–7, 2011; and June 27–28, 2012. Consensus Tier III recommendations of the ETF were developed and were accepted by vote during the meeting on October 6–7, 2011. The ETF II formed three additional Task Groups to work in the areas of track worthiness and brakes.

The Track Worthiness Task Group is tasked to identify potential safety issues related to operation of high-speed trainsets on conventional track and to make recommendations on how best to mitigate any consequences. The Task Group includes experts and key stakeholders such as international operators of high-speed equipment, car builders, wheel/rail interaction dynamics specialists, and other RSAC working group members involved in vehicle/track interaction.

The Brakes Task Group is tasked to review braking system requirements and international braking system requirements versus existing U.S. requirements including inspection and maintenance and identify common features, determine basic parameters, and consider use of service proven braking systems. The Task Group will also consider performance-based provisions and requirements with consideration for operators to develop maintenance, inspection, and service plans, and make recommendations regarding brakes to the ETF II as related to Tier III.

The Engineering Structure and Integrity Task Group is tasked to develop a document that outlines and describes procedures and processes necessary to demonstrate compliance with the requirements of applicable Federal regulations and American Public Transportation Association (APTA) standards for structural integrity and crashworthiness for railroad passenger train sets. The next ETF meeting is scheduled for September 25–26, 2012. *Contact:* Robert Lauby, (202) 493–6474.

Emergency Preparedness Task Force. At the working group meeting on March 9–10, 2005, the working group received and approved the consensus report of the Emergency Preparedness Task Force related to emergency communication,

emergency egress, and rescue access. These recommendations were presented to and approved by the full RSAC on May 18, 2005. The working group met on September 7–8, 2005, and additional, supplementary recommendations were presented to and accepted by the full RSAC on October 11, 2005. The Notice of Proposed Rulemaking (NPRM) was published on August 24, 2006 (71 FR 50275), and was open for comment until October 23, 2006. The working group agreed on recommendations for the final rule, including resolution of final comments received, during the April 17–18, 2007, meeting. The recommendations were presented to and approved by the full RSAC on June 26, 2007. The Passenger Train Emergency Systems final rule, focusing on emergency communication, emergency egress, and rescue access, was published on February 1, 2008 (73 FR 6370). The task force met on October 17–18, 2007, and reached consensus on the draft rule text for a followup NPRM on Passenger Train Emergency Systems, focusing on low location emergency exit path marking, emergency lighting, and emergency signage. The task force presented the draft rule text to the Passenger Safety Working Group on December 11–12, 2007, and the consensus draft rule text was presented to and approved by full RSAC vote during the February 20, 2008, meeting. During the May 13–14, 2008, meeting, the task force recommended clarifying the applicability of back-up emergency communication system requirements in the February 1, 2008, final rule, and FRA announced its intention to exercise limited enforcement discretion for a new provision amending instruction requirements for emergency window exit removal. The working group ratified these recommendations on June 19, 2008. The task force met again on March 31, 2009, to clarify issues raised by members related to the followup NPRM. The modified rule text was presented to and approved by the Passenger Safety Working Group on June 8, 2009. The working group requested that FRA draft the rule text requiring daily inspection of removable panels or windows in vestibule doors and entrust the Emergency Preparedness Task Force with reviewing the text. FRA sent the draft text to the task force for review and comment on August 4, 2009. The draft rule text was approved by the Passenger Safety Working Group by mail ballot on December 23, 2009, and the resultant NPRM was published January 3, 2012 (77 FR 154). No additional task force meetings are currently scheduled.

Contact: Brenda Moscoso, (202) 493–6282.

Vehicle/Track Interaction Task Force. The task force is developing proposed revisions to 49 CFR parts 213 and 238, principally regarding high-speed passenger service. The task force met on October 9–11, 2007, and again on November 19–20, 2007, in Washington, DC, and presented the final task force report and final recommendations and proposed rule text for approval by the Passenger Safety Working Group at the December 11–12, 2007, meeting. The final report and the proposed rule text were approved by the working group and were presented to and approved by full RSAC vote during the February 20, 2008, meeting. The group met on February 27–28, 2008, and by teleconference on March 18, 2010, to address unresolved issues, and the NPRM was published on May 10, 2010 (75 FR 25928). The task force was called back into session on August 5–6, 2010, to review and consider NPRM comments. The final rule will amend the Track Safety Standards and Passenger Equipment Safety Standards for high-speed train operations and train operations at high cant deficiencies to promote the safe interaction of rail vehicles with the track over which they operate. It will revise both the safety limits for these operations and the process to qualify them. It accounts for a range of vehicle types that are currently used and may likely be used on future high-speed or high cant deficiency rail operations, and would provide safety assurance for train operations in all classes of track. It is based on the results of simulation studies designed to identify track geometry irregularities associated with unsafe wheel forces and acceleration, thorough reviews of vehicle qualification and revenue service test data, and consideration of international practices. The draft final rule was sent to the task force for final consensus on November 11, 2011, and was approved by electronic vote on November 21, 2011. The draft final rule was then approved by electronic vote by the Passenger Safety Working Group on December 12, 2011, and by the full RSAC Committee by electronic vote on January 6, 2012. Target publication date of the final rule is September 2012. *Contact:* John Mardente, (202) 493–1335.

General Passenger Safety Task Force. At the Passenger Safety Working Group meeting on April 17–18, 2007, the task force presented a progress report to the working group. The task force met on July 18–19, 2007, and afterwards it reported proposed reporting cause codes

for injuries involving the platform gap, which were approved by the working group by mail ballot in September 2007. The full RSAC approved the recommendations for changes to 49 CFR part 225 accident/incident cause codes on October 25, 2007. The General Passenger Safety Task Force presented draft guidance material for management of the gap that was considered and approved by the working group during the December 11–12, 2007, meeting and was presented to and approved by full RSAC vote during the February 20, 2008, meeting. The group met April 23–24, 2008, December 3–4, 2008, April 21–23, 2009, October 7–8, 2009, and July 30, 2010, by GoTo/Webinar teleconference. The task force continues work on passenger train door securement, “second train in station,” trespasser incidents, and system safety-based solutions by developing a regulatory approach to system safety. The task force has created two task groups to focus on these issues.

The Door Safety Task Group has reached consensus on 47 out of 48 safety issues and had five items that have been remanded to the task force for vote. The issues are addressed in the area of passenger train door mechanical and operational requirements and presented draft regulatory language to the Passenger Safety Working Group at the September 16, 2010, meeting. More work remains to ensure the 49 CFR part 238 door rule consensus document and the proposed APTA door standard (APTA SS–M–18–10) uses uniform language. The document was approved by the Passenger Safety Working Group by electronic vote on March 31, 2011, and approved by the RSAC on May 20, 2011. This rulemaking would amend the passenger equipment safety standards to enhance safety standards as they relate to passenger door securement while a passenger train is in service based on research and experiences of FRA safety inspectors. Specifically, FRA would incorporate by reference APTA standard: “APTA SS–M–18–10 Standard for Powered Exterior Side Door System Design for New Passenger Cars.” A draft NPRM is currently under development with a target publication date of September 2012. No additional Door Task Group meetings are currently scheduled. *Contact:* Brian Hontz, (610) 521–8220.

The System Safety Task Group has produced draft regulatory language for a System Safety Rule, but work on this rulemaking was delayed until a study of legal protections for Risk Reduction Program (RRP) and System Safety Program (SSP) risk analysis data that is required by the Rail Safety Improvement

Act of 2008 (RSIA) was completed. The System Safety rulemaking would improve passenger railroad safety through structured, proactive processes and procedures developed by passenger railroad operators. It would require passenger railroads to establish an SSP that would systematically evaluate and manage risks in order to reduce the number and rates of railroad accidents, incidents, injuries, and fatalities. FRA continued to work on a draft NPRM while waiting for the legal review of protection of hazard analysis information, required by Section 109 of the RSIA. The Office of Chief Counsel completed a legal study and posted it on the FRA Web site and in the docket. The General Passenger Safety Task Force including the members of the System Safety Task Group met on February 1–2, 2012, and continued work on finalizing the draft NPRM language. The resulting NPRM was published on September 7, 2012 (77 FR 55372), with comments due by November 6, 2012. No additional System Safety Task Group meetings are currently scheduled.

Contact: Dan Knot, (631) 567-1596.

Task 05-01 Review of Roadway Worker Protection Issues. This task was accepted on January 26, 2005, to review 49 CFR part 214, subpart C, Roadway Worker Protection (RWP), and related sections of Subpart A; to recommend consideration of specific actions to advance the on-track safety of railroad employees and contractors engaged in maintenance-of-way activities throughout the general system of railroad transportation, including clarification of existing requirements. A working group was established and reported any specific actions to the RSAC that it identified as appropriate. The first meeting of the working group was held on April 12–14, 2005. Over the course of 2 years, the group drafted and reached consensus on regulatory language for various revisions, clarifications, and additions to 32 separate items in 19 sections of the rule. However, two parties raised technical concerns regarding one of those items, namely, the draft language concerning electronic display of track authorities. The working group presented and received approval on all of its consensus recommendations for draft rule text to the full RSAC at the June 26, 2007, meeting. FRA will address the issue of electronic display of track authorities, along with eight additional items that the working group was unable to reach consensus, through the traditional NPRM process. In early 2008, the external working group members were solicited to review the consensus rule

text for errata review. In order to address the heightened concerns raised with the current regulations for adjacent-track, on-track safety, FRA decided to issue, on an accelerated basis, a separate NPRM that would solely focus on this element of the RWP rule. An NPRM with an abbreviated comment period regarding adjacent-track, on-track safety was published on July 17, 2008, but was later withdrawn on August 13, 2008, to permit further consideration of the RSAC consensus language. A second NPRM concerning adjacent-controlled-track, on-track safety was published on November 25, 2009, and comments were due to the docket by January 25, 2010. Comments were reviewed and considered by FRA, and the final rule was published on November 30, 2011 (76 FR 74586). In response to the final rule, FRA received two petitions for reconsideration that raise a number of substantive issues requiring a detailed response. A delay of the effective date of the final rule and a request for comments was published on March 8, 2012 (77 FR 13978). This document delays the effective date of the final rule until July 1, 2013, and establishes a 60-day comment period in order to permit interested parties an opportunity to respond to the submitted petitions for reconsideration. FRA received five comments on the petitions, some of which raise additional substantive issues or provide further detailed information on the issues already raised. The petitions and comments on the petitions are available for review in the docket for this rulemaking, and have been assigned identification numbers of FRA-2008-0059-0031 and FRA-2008-0059-0032, for the petitions, and identification numbers of FRA-2008-0059-0034, FRA-2008-0059-0035, FRA-2008-0059-0036, FRA-2008-0059-0037, and FRA-2008-0059-0038, for the comments on the petitions. Due to the complex issues raised and extensive estimates provided in the petitions and comments, FRA continues to formulate an appropriate response. FRA's response to the petitions and comments will be published as soon as practicable and will be filed in the same docket.

The remaining larger NPRM relating to the various revisions, clarifications, and additions to 31 separate items in 19 sections of the rule, and FRA's recommendations for 9 nonconsensus items was published on August 20, 2012 (77 FR 50324), with comments due by October 19, 2012. Contact: Joe Riley, (202) 493-6357.

Task 05-02—Reduce Human Factor-Caused Train Accident/Incidents. This task was accepted on May 18, 2005, to

reduce the number of human factor-caused train accidents/incidents and related employee injuries. The Railroad Operating Rules Working Group was formed, and the working group extensively reviewed the issues presented. The final working group meeting devoted to developing a proposed rule was held on February 8–9, 2006. The working group was not able to deliver a consensus regulatory proposal, but it did recommend that it be used to review comments on FRA's NPRM, which was published in the **Federal Register** on October 12, 2006 (FR 71 60372), with public comments due by December 11, 2006. Two reviews were held, one on February 8–9, 2007, and one on April 4–5, 2007. Consensus was reached on four items and those items were presented and accepted by the full RSAC at the June 26, 2007, meeting. A final rule was published in the **Federal Register** on February 13, 2008 (73 FR 8442), with an effective date of April 14, 2008. FRA received four petitions for reconsideration of that final rule. The final rule that responded to the petitions for consideration was published in the **Federal Register** on June 16, 2008, and concluded the rulemaking. Working group meetings were held September 27–28, 2007; January 17–18, 2008; May 21–22, 2008; and September 25–26, 2008. The working group has considered issues related to issuance of Emergency Order No. 26 (prohibition on use of certain electronic devices while on duty), and “after arrival mandatory directives,” among other issues. The working group continues to work on after arrival orders and, at the September 25–26, 2008, meeting, voted to create a Highway-Rail Grade Crossing Task Force to review highway-rail grade crossing accident reports regarding incidents of grade crossing warning systems providing “short or no warning” resulting from or contributed to “by train operational issues” with the intent to recommend new accident/incident reporting codes that would better explain such events, and which may provide information for remedial action going forward. A followup task is to review and provide recommendations regarding supplementary reporting of train operations-related, no-warning or short-warning incidents that are not technically warning system activation failures, but that result in an accident/incident or a near miss. The task force has been formed and will begin work after other RSIA priorities are met. Contact: Douglas Taylor, (202) 493-6255.

Task 06-01—Locomotive Safety Standards. This task was accepted on February 22, 2006, to review 49 CFR part 229, Railroad Locomotive Safety Standards, and revise as appropriate. A working group was established with the mandate to report any planned activities to the full Committee at each scheduled full RSAC meeting, to include milestones for completion of projects and progress toward completion. The first working group meeting was held May 8–10, 2006. Working group meetings were held on August 8–9, 2006; September 25–26, 2006; October 30–31, 2006; and the working group presented recommendations regarding revisions to requirements for locomotive sanders to the full RSAC on September 21, 2006. The NPRM regarding sanders was published in the **Federal Register** on March 6, 2007 (72 FR 9904). Comments received were discussed by the working group for clarification, and FRA published a final rule on October 19, 2007 (72 FR 59216). The working group met on January 9–10, 2007; November 27–28, 2007; February 5–6, 2008; May 20–21, 2008; August 5–6, 2008; October 22–23, 2008; January 6–7, 2009; and April 15–16, 2009. The working group has now completed the review of 49 CFR part 229 and was unable to reach consensus regarding locomotive cab temperatures standards, locomotive alerters, and remote control locomotives. The group reached consensus regarding critical locomotive electronic standards, updated annual/biennial air brake standards, clarification of the “air brakes operate as intended” requirement, locomotive pilot clearance within hump classification yards, clarification of the “high voltage” warning requirement, an update of “headlight lamp” requirements, and language to allow locomotive records to be stored electronically. The working group presented a 49 CFR part 229 draft rule text revision covering these items to the RSAC for consideration at the September 10, 2009, meeting and received approval. The NPRM was delayed due to competing RSIA priorities and the need for additional language. This rulemaking would amend the rules pertaining to the Locomotive Safety Standards. The proposed amendments would update, consolidate, and clarify existing rules, and adopt existing industry and engineering best practices. The proposed amendments include: updating locomotive inspection recordkeeping requirements by permitting electronic records; consolidating locomotive air brake maintenance into a single provision;

clarifying locomotive headlight requirements to address new technology; and, establishing locomotive electronics standards based on existing industry and engineering best practices, as well as other existing Federal electronics standards. This action was taken by FRA in an effort to improve its safety regulator program. The NPRM was published on January 12, 2011 (76 FR 2200), and the final rule was published on April 9, 2012 (77 FR 21312), and a correction to the final rule was published on April 18, 2012 (77 FR 23159). *Contact:* Steve Clay, (202) 493–6259.

Task 06-03—Medical Standards for Safety-Critical Personnel. This task was accepted on September 21, 2006, to enhance the safety of persons in the railroad operating environment and the public by establishing standards and procedures for determining the medical fitness for duty of personnel engaged in safety-critical functions. A working group was established by the full RSAC and reports its activities and progress toward completion of this task to the full RSAC during each meeting of the full RSAC. The first working group meeting was held on December 12–13, 2006, and the working group has held follow-on meetings on February 20–21, 2007; July 24–25, 2007; August 29–30, 2007; October 31–November 1, 2007; December 4–5, 2007; February 13–14, 2008; March 26–27, 2008; April 22–23, 2008; December 8–9, 2009; February 16–17, 2010; March 11–12, 2010; May 24–26, 2010; August 31–September 1, 2010; November 18–19, 2010; and September 27–28, 2011. During the working group’s September 2011 meeting, the working group discussed stakeholder positions on the draft rule text and draft medical qualification criteria and protocols, and a preliminary cost-benefit analysis was presented to the working group by the FRA economists. The working group tentatively agreed to proceed to revise its draft recommendations to include a proposed option that the medical qualification criteria be issued as medical qualification guidelines rather than standards. The working group established a task force to draft proposed revisions to working draft documents to be presented to the working group for review and comment. The next working group meeting has not currently been scheduled due to other priority RSIA projects. *Contact:* Dr. Bernard Arseneau, (202) 493–6002.

Physicians Task Force. A Physicians Task Force was established by the working group in May 2007, and tasked to draft recommended medical qualification criteria and protocols for

locomotive engineers and conductors. The Physicians Task Force had meetings or conference calls on July 24, 2007; August 20, 2007; October 15, 2007; October 31, 2007; June 23–24, 2008; September 8–10, 2008; October 8, 2008; November 12–13, 2008; December 8–10, 2008; January 27–28, 2009; February 24–25, 2009; March 11–12, 2009; March 31–April 1, 2009; April 15, 2009; April 22, 2009; May 13, 2009; May 20, 2009; June 17, 2009; January 21–22, 2010; March 3, 2010; August 16–17, 2010; and October 25–26, 2010; December 17, 2010; January 11, 2011; March 3–4, 2011; May 16–17, 2011; August 18, 2011; August 25, 2011; August 31, 2011. On September 1, 2011, the task force notified working group members that it had made significant progress in completing its task and requested that the working group participate in clarifying a limited number of remaining operational issues relevant to the task that merited review by industry management, labor, and other stakeholders. No further meetings of the Physicians Task Force are currently scheduled. *Contact:* Dr. Bernard Arseneau, (202) 493–6002.

Critical Incident Task Force. The Medical Standards Working Group accepted RSAC Task 2009–02, Critical Incident Response, during the December 8–9, 2010, meeting. The working group has been tasked to provide advice regarding development of implementing regulations for critical incident stress plans as required by the RSIA. A Critical Incident Task Force was established during the May 24–26, 2010, Medical Standards Working Group meeting. The scheduled kickoff meeting for the Critical Incident Task Force scheduled for September 2, 2010, was postponed at the request of industry participants. In late March 2011, FRA leadership decided to request that the RSAC be asked to amend the Critical Incident task statement to remove reference to the Medical Standards Working Group and to allow the group to assume full working group status to expedite the work. The Committee approved the revised task statement with a target date for recommendations to the Committee of December 2011, and the task force transitioned to the Critical Incident Working Group. (See Critical Incident Working Group entry.) *Contact:* Dr. Bernard Arseneau, (202) 493–6002.

Task 08-03—Track Safety Standards Rail Integrity. This task was accepted on September 10, 2008, to consider specific improvements to the Track Safety Standards or other responsive actions designed to enhance rail integrity. The Rail Integrity Task Force was created in October 2007 under Task 07–01 and

first met on November 28–29, 2007. The task force met on February 12–13, 2008; April 15–16, 2008; July 8–9, 2008; September 16–17, 2008; February 3–4, 2009; June 16–17, 2009; October 29–30, 2009; January 20–21, 2010; March 9–11, 2010; and April 20, 2010. Consensus has been achieved on bond wires and a common understanding on internal rail flaw inspections has been reached. The task force has reached consensus to recommend to the working group that the item regarding “the effect of rail head wear, surface conditions and other relevant factors on the acquisition and interpretation of internal rail flaw test results” be closed. The task force does not recommend regulatory action concerning head wear. Surface conditions and their affect on test integrity has been discussed and understood during dialogue concerning common understanding on internal rail flaw inspections. The task force believes that new technology has been developed that improves test performance and will impact the affect of head wear and surface conditions on interpretation of internal rail flaw test results. Consensus text was developed on recommended changes that would approach a performance-based approach to flaw detection scheduling. However, the group did not reach consensus on what length of segment of track is practical to use on determining test cycles. Consensus text has been finalized for recommended changes to 49 CFR 213.113, Defective rails; 213.237, Rail inspection; and 213.241, Inspection records. The task force has developed a new 49 CFR 213.238, Qualified operator language, that defines the minimum requirements for the training of a rail flaw detector car operator. The task force presented the consensus language to the Track Standards Working Group during the July 28–30, 2010, meeting and the Track Standards Working Group presented its consensus recommendations to the RSAC for approval during the September 23, 2010, Committee meeting. By majority vote, the RSAC accepted the recommendations of the Track Standards Working Group and forwarded those recommendations to the Administrator, completing RSAC Task 08–03. The associated NPRM is currently in the final stages of development with anticipated target publication date of September 2012. RSAC Task 08–03 will be complete once the final rule is issued. *Contact:* Carlo Patrick, (202) 493–6399.

Task No. 09–02—Critical Incident Programs. This task was accepted on September 10, 2009, to provide advice

regarding development of implementing regulations for Critical Incident Stress Plans as required by the RSIA. The group has been tasked to define what a “critical incident” is that requires a response; review available data, literature, and standards of practice concerning critical incident programs to determine appropriate action when a railroad employee is involved in or directly witnesses a critical incident; review any evaluation studies available for existing railroad critical incident programs; describe program elements appropriate for the rail environment, including those requirements set forth in the RSIA; provide an example of a suitable plan (template); and assist in the preparation of an NPRM no later than December 2010. In late March 2011, FRA leadership requested that the RSAC amend the Critical Incident task statement to remove reference to the Medical Standards Working Group and to allow the group to assume full working group status to expedite the work. The Committee approved the revised task statement with a target date for recommendations to the Committee of December 2011. The Critical Incident Working Group kickoff meeting was held on June 24, 2011. The draft report assessing current knowledge of post-traumatic interventions and to advance evidence-based recommendations for controlling the risks associated with traumatic exposure in the railroad setting was completed and distributed to the working group prior to the September 8–9, 2011, working group meeting. Due to the aggressive timeline, the working group held its second meeting on October 11–12, 2011, and held a follow-on meeting December 13, 2011. The grantee provided a report titled “Proposed Key Elements of Critical Incident Intervention Program for Reducing the Effects of Potentially Traumatic Exposure on Train Crews to Grade Crossing and Trespasser Incidents” to the Critical Incident Working Group on December 13, 2011. The Critical Incident Working Group approved draft proposed rule text by electronic vote on August 20, 2012, and will present its recommendations to the RSAC Committee for vote during the September 27, 2012, meeting. *Contact:* Ron Hynes, (202) 493–6404.

Task No. 10–01—Minimum Training Standards and Plans. This task was accepted on March 18, 2010, to establish minimum training standards for each class and craft of safety-related railroad employees and their railroad contractor and subcontractor equivalents, as required by the RSIA. The group has been tasked to assist FRA in developing

regulations responsive to the legislative mandate, while ensuring that generally accepted principles of adult learning are employed in training, development, and delivery; determine a reasonable method for submission and FRA review of training plans, which takes human resource limitations into account; establish reasonable oversight criteria to ensure training plans are effective, using the operational tests and inspections requirements of 49 CFR part 217 as a model. The Training Standards Working Group was officially formed through the formal Committee member nomination process in March 2010, and the first meeting was held on April 13–14, 2010. A followup working group meeting was held on June 2–3, 2010, and additional followup meetings were held August 17–18, 2010, and September 21–22, 2010. A Task Analysis Task Force was formed under the working group to develop a task analysis template and met in Florence, KY, on June 22–23, 2010, with CSX Transportation hosting the event. The group developed a 21-page task analysis document for an outbound train yard carman position, which is complete regarding FRA railroad safety laws, regulations, and orders. The working group met August 17–18, 2010, and October 19–20, 2010, and by GoTo/Webinar on November 15–16, 2010. The working group reached consensus and the resulting training standards draft regulatory language was presented to and approved by the RSAC Committee on December 14, 2010. This rulemaking will (1) Establish minimum training standards for each class or craft of safety-related employee and equivalent railroad contractor and subcontractor employee that require railroads, contractors, and subcontractors to qualify or otherwise document the proficiency of such employees in each such class and craft regarding their knowledge and ability to comply with Federal railroad safety laws and regulations and railroad rules and procedures intended to implement those laws and regulations; (2) require submission of railroads, contractors, and subcontractors’ training and qualification programs for FRA approval; and (3) establish a minimum training curriculum and ongoing training criteria, testing, and skills evaluation measures for track and equipment inspectors employed by railroads and railroad contractor and subcontractors. The resulting NPRM was published February 7, 2012 (77 FR 6411), with comments on the proposed rule due by April 9, 2012. The target publication date for the final rule is March 2013 and this rulemaking is

categorized as a modal priority. No additional working group meetings are scheduled at this time. *Contact:* Rob Castiglione, (817) 447-2715.

Task No. 10-02—Safety Technology in Dark Territory. This task was accepted on September 23, 2010, to provide advice regarding development of standards, guidance, regulations, or orders governing the development, use, and implementation of rail safety technology in dark territory, as required by Section 406 of the RSIA. Specifically, the task was to assist FRA in developing regulations responsive to the legislative mandate and to report recommendations to the FRA Administrator for a proposed or interim final rule (as determined by FRA in consultation with OST and OMB) by September 30, 2011. This rulemaking would issue standards or guidance governing development and deployment of technology to promote safe operation in non-signalized territory in arrangements not defined in signal inspection law. The delay in starting this effort was caused by the PTC rulemaking, which required the same key personnel both in government and industry. With the PTC effort maturing, resources became available and the Dark Territory Working Group was formed to assist FRA in developing regulations responsive to the legislative mandate and to report recommendations to the FRA Administrator for proposed or interim final rule (as determined by FRA in consultation with OST and OMB). The working group met on March 3-4, 2011, May 9-10, 2011, and September 6-7, 2011, and created four task forces to investigate specific subject areas. A follow-on meeting was held November 17-18, 2011, and a proposed rule is currently under development with the assistance of the Dark Territory Working Group. Target date for NPRM publication is November 2012. *Contact:* Olga Cataldi, (202) 493-6321.

Task No. 11-01—Preventing Railroad Employee Distractions Caused by Personal Electronic Devices. This task was accepted on May 20, 2011, to prescribe mitigation strategies, programs, and processes for governing the use of personal electronic devices that could cause distractions to railroad employees engaged in safety-critical activities. This working group will explore additional methods to achieve compliance through education, peer-to-peer coaching, counseling, and other cooperative, non-regulatory/punitive methods. The Electronic Device Distraction Working Group was formed and held its kickoff meeting on October 25-26, 2011, and held follow-on meetings on January 11-12, 2012, and March 27, 2012. Work on this task has

progressed well and the working group presented its recommendations to the Committee during the April 2012 RSAC meeting. As a result of the working group's efforts, FRA is producing an outreach video, and FRA will participate in an inclusive media event with its partners in Chicago, IL, on October 9, 2012. *Contact:* Miriam Kloeppel, (202) 493-6224.

Task No. 11-03—Fatigue Management Plans. This task was accepted by the Committee on December 8, 2011, to provide advice regarding development of implementing regulations for Fatigue Management Plans and their deployment under the RSIA. The working group was formed and held its kickoff meeting on March 27, 2012. Follow-on meetings were held June 12, 2012; July 10-11, 2012; and August 28, 2012. Work continues on this task and the working group is tasked to report recommendations to the Committee no later than February 2013. *Contact:* Miriam Kloeppel, (202) 493-6224.

Task No. 11-04—Risk Reduction Program. This task was accepted by the Committee on December 8, 2011, in order to develop requirements for certain railroads to develop a Risk Reduction Program as mandated by the RSIA. The working group was formed and held its kickoff meeting on January 31-February 1, 2012, and follow-on meetings were held April 10-11, 2012; May 16-17, 2012; June 13, 2012; June 25, 2012; and July 18, 2012. The working group has made considerable progress, and no further working group meetings are currently scheduled. *Contact:* Miriam Kloeppel, (202) 493-6224.

Completed Tasks

Task 96-1—(Completed) Revising the freight power brake regulations.

Task 96-2—(Completed) Reviewing and recommending revisions to the Track Safety Standards (49 CFR part 213).

Task 96-3—(Completed) Reviewing and recommending revisions to the Radio Standards and Procedures (49 CFR part 220).

Task 96-5—(Completed) Reviewing and recommending revisions to Steam Locomotive Inspection Standards (49 CFR part 230).

Task 96-6—(Completed) Reviewing and recommending revisions to miscellaneous aspects of the regulations addressing locomotive engineer certification (49 CFR part 240).

Task 96-7—(Completed) Developing roadway maintenance machines (on-track equipment) safety standards.

Task 96-8—(Completed) Evaluating the need for action responsive to recommendations contained in a report to Congress titled, *Locomotive Crashworthiness & Working Conditions.*

Task 97-1—(Completed) Developing crashworthiness specifications (49 CFR part 229) to promote the integrity of the locomotive cabs in accidents resulting from collisions.

Task 97-2—(Completed) Evaluating the extent to which environmental, sanitary, and other working conditions in locomotive cabs affect the crew's health and the safe operation of locomotives, proposing standards where appropriate.

Task 97-3—(Completed) Developing event recorder data survivability standards.

Task 97-4 and Task 97-5—(Completed) Defining PTC functionalities, describing available technologies, evaluating costs and benefits of potential systems, and considering implementation opportunities and challenges, including demonstration and deployment.

Task 97-6—(Completed) Revising various regulations to address the safety implications of processor-based signal and train control technologies, including communications-based operating systems.

Task 97-7—(Completed) Determining damages qualifying an event as a reportable train accident.

Task 00-01—(Completed task withdrawn) Determining the need to amend regulations protecting persons who work on, under, or between rolling equipment and persons applying, removing, or inspecting rear end marking devices (Blue Signal Protection).

Task 01-01—(Completed) Developing conformity of FRA's regulations for accident/incident reporting (49 CFR part 225) to revised regulations of the Occupational Safety and Health Administration, U.S. Department of Labor, and to make appropriate revisions to the *FRA Guide for Preparing Accident/Incident Reports* (Reporting Guide).

Task 03-01—Mechanical Task Force—(Completed) Developing recommendations on mechanical issues (revisions to 49 CFR part 238).

Task 03-01—Crashworthiness Task Force—(Completed) Providing consensus recommendations on static-end strength.

Task 06-02—(Completed) Issuing requirements for inspection of joint bars in continuous welded rail (CWR) to detect cracks that could affect the integrity of the track structure.

Task 07-01—(Completed)

Considering specific improvements to the Track Safety Standards or other responsive actions, supplementing work already underway on CWR specific to: reviewing controls applied to the reuse of rail in CWR “plug rail”; reviewing the issue of cracks emanating from bond wire attachments; considering improvements in the Track Safety Standards related to fastening of rail to concrete ties; and ensuring a common understanding within the regulated community concerning requirements for internal rail flaw inspections.

Task 08-01—(Completed) Reporting on the Nation’s railroad bridges. Reporting to FRA on the current state of railroad bridge safety management; updating the findings and conclusions of the 1993 Summary Report of the FRA Railroad Bridge Safety Survey.

Task No. 08-04—(Completed) Providing advice regarding development of implementing regulations for PTC systems and their deployment under the RSIA.

Task No. 08-05—(Completed) Developing a rule encompassing the requirements of Section 417 of the RSIA (Railroad Bridge Safety Assurance).

Task No. 08-06—(Completed) Developing revised recordkeeping and reporting requirements for hours of service of railroad employees.

Task No. 08-07—(Completed) Developing regulations for certification of railroad conductors, as required by the RSIA, and considering any appropriate related amendments to existing regulations and reporting recommendations for a proposed or interim final rule.

Task No. 09-01—(Completed) Providing advice regarding development of implementing regulations for the hours of service of operating employees of commuter and intercity passenger railroads under the RSIA.

Task No. 11-02—(Completed) Considering specific improvements to the Track Safety Standards or other responsive actions related to the Track Inspection Time Study required by Sections 403 (a)–(c) of the of the RSIA and other relevant studies and resources.

Please refer to the notice published in the **Federal Register** on March 11, 1996 (61 FR 9740), for more information about the RSAC.

Issued in Washington, DC, on September 17, 2012.

Robert C. Lauby,

Deputy Associate Administrator for Regulatory and Legislative Operations.

BILLING CODE 4910-06-P

DEPARTMENT OF TRANSPORTATION**Federal Railroad Administration**

[Docket Number FRA–2001–10654]

Petition for Waiver of Compliance

In accordance with Part 211 of Title 49 Code of Federal Regulations (CFR), this document provides the public notice that by a document dated July 26, 2012, the Association of American Railroads (AAR) has petitioned the Federal Railroad Administration (FRA) for an extension and amendment of an existing waiver of compliance from certain provisions of the Federal railroad safety regulations contained at 49 CFR 213.143 and 213.355. FRA assigned the petition Docket Number FRA–2001–10654.

The existing waiver was originally granted on April 22, 2003, and was extended by a letter dated February 25, 2008. The current waiver expires on February 1, 2013. AAR is petitioning for an additional extension of the waiver. The waiver permits the operation of trains at Class 5 speeds over “heavy-point” frog designs conforming to the standards for Class 4 track frogs guard check and face gage dimensions.

The heavy-point frog is a unique design, which has a thicker frog point. As proposed in the original waiver petition, AAR states that it offers safety benefits over a traditional frog because there is more mass to reduce metal fatigue from impact loading, greater durability, reduced susceptibility to point rollover, and better ability to guide the wheel flange toward the proper flangeway. Heavy-point frog insert design characteristics gradually widen to $3\frac{1}{32}$ (0.9688) inches overall, resulting in the heavy-point frog insert point being thicker at the actual $\frac{5}{8}$ (0.6250)-inch frog point gage lines. The gage line is actually $1\frac{1}{32}$ (0.3438) inches thicker than a traditional $\frac{5}{8}$ (0.6250)-inch rail bound manganese frog point. Heavy-point frogs reduce the standard guard check distance from 4 feet and $6\frac{3}{8}$ inches (54.6250 inches) to 4 feet $6\frac{29}{64}$ inches (54.4531 inches), which does not comply with minimum safety standards for Class 5 track.

AAR also seeks approval for the operation of trains at Class 6 speeds over heavy-point frog designs with guard check gages conforming to the standards for Class 4 track frogs guard check and face gage dimensions. AAR states that waiver denial would adversely affect proposed high-speed operations that have numerous existing heavy-point frog installations. AAR claims that since the requirements are the same for Class 5 and Class 6 (49 CFR

213.143 and 213.355), the waiver should be extended to Class 6.

A copy of the petition, as well as any written communications concerning the petition, is available for review online at www.regulations.gov and in person at the U.S. Department of Transportation’s (DOT) Docket Operations Facility, 1200 New Jersey Avenue SE., W12–140, Washington, DC 20590. The Docket Operations Facility is open from 9 a.m. to 5 p.m., Monday through Friday, except Federal Holidays.

Interested parties are invited to participate in these proceedings by submitting written views, data, or comments. FRA does not anticipate scheduling a public hearing in connection with these proceedings since the facts do not appear to warrant a hearing. If any interested party desires an opportunity for oral comment, they should notify FRA, in writing, before the end of the comment period and specify the basis for their request.

All communications concerning these proceedings should identify the appropriate docket number and may be submitted by any of the following methods:

- *Web site:* <http://www.regulations.gov>. Follow the online instructions for submitting comments.
- *Fax:* 202–493–2251.
- *Mail:* Docket Operations Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., W12–140, Washington, DC 20590.
- *Hand Delivery:* 1200 New Jersey Avenue SE., Room W12–140, Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal Holidays.

Communications received by October 22, 2012 will be considered by FRA before final action is taken. Comments received after that date will be considered as far as practicable.

Anyone is able to search the electronic form of any written communications and comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT’s complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (Volume 65, Number 70; Pages 19477–78), or online at <http://www.dot.gov/privacy.html>.

Issued in Washington, DC, on September 17, 2012.

Ron Hynes,

Director, Office of Safety Assurance and Compliance.
