SUPPLEMENTARY INFORMATION:

Title: National Animal Health Reporting System (NAHRS).

OMB Number: 0579-0299.

Type of Request: Extension of approval of an information collection.

Abstract: Under the Animal Health Protection Act (7 U.S.C. 8301 *et seq.*), the Animal Plant Health Inspection Service (APHIS) is authorized, among other things, to prohibit or restrict the importation and interstate movement of animals and other articles to prevent the introduction and interstate spread of livestock diseases and to eradicate such diseases from the United States when feasible. In connection with this mission, APHIS operates the National Animal Health Reporting System (NAHRS), which collects, on a national basis, data monthly from State veterinarians on the presence or absence of diseases of interest to the World Organization for Animal Health (OIE).

As a member country of OIE, the United States must submit reports to the OIE on the status of certain diseases in specific livestock, poultry, and aquaculture species. Reportable diseases are diseases that have the potential for rapid spread, irrespective of national borders, that are of serious socioeconomic or public health consequence, and that are of major importance in the international trade of animals and animal products. The potential benefits to trade of accurate reporting on the health status of the U.S. commercial livestock, poultry, and aquaculture industries include expansion of those industries into new export markets, and preservation of existing markets through increased confidence in quality and disease freedom. This data collection is unique in terms of the type, quantity, and

frequency; no other entity is collecting and reporting data to the OIE on the health status of U.S. livestock, poultry, and aquaculture.

The number of NAHRS reportable diseases has increased approximately from 120 to 150 diseases in 2012 in part due to the expansion of information collected on aquaculture diseases. In addition, States have expanded their laboratory resources through improved laboratory information management systems, the information collected regarding equine infectious anemia has been expanded, and increased efforts are being made by APHIS to validate the information collected from States.

We are asking the Office of Management and Budget (OMB) to approve our use of these information collection activities for 3 years.

The purpose of this notice is to solicit comments from the public (as well as affected agencies) concerning our information collection. These comments will help us:

- (1) Evaluate whether the collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility;

- (2) Evaluate the accuracy of our estimate of the burden of the collection of information, including the validity of the methodology and assumptions used;

- (3) Enhance the quality, utility, and clarity of the information to be collected; and

- (4) Minimize the burden of the collection of information on those who are to respond, through use, as appropriate, of automated, electronic, mechanical, and other collection technologies; e.g., permitting electronic submission of responses.

Estimate of burden: The public reporting burden for this collection of information is estimated to average 8 hours per response.

Respondents: State animal health officials.

Estimated annual number of respondents: 52.

Estimated annual number of responses per respondent: 12.

Estimated annual number of responses: 624.

Estimated total annual burden on respondents: 4,992 hours. (Due to averaging, the total annual burden hours may not equal the product of the annual number of responses multiplied by the reporting burden per response.)

All responses to this notice will be summarized and included in the request for OMB approval. All comments will also become a matter of public record.

Done in Washington, DC, this 24th day of September 2012.

Kevin Shea,

Acting Administrator, Animal and Plant Health Inspection Service.
