II. Background

A. What action is the agency taking?

In accordance with 40 CFR 155.58(c), this notice announces the availability of EPA's final registration review decision for *Agrobacterium radiobacter* strains K84/Kerr-84 and K1026, case 4101. When used as a microbial pest control agent in seed, root, and stem treatments of nonbearing fruit, nut, and ornamental plants, *Agrobacterium radiobacter* is intended to protect treated plants from Crown Gall, which is caused by the plant pathogen, *Agrobacterium tumefaciens*. Both strains of *Agrobacterium radiobacter* control *Agrobacterium tumefaciens* through direct competition, which is primarily accomplished by the production of agrocin 84, a bacteriocin produced by both *Agrobacterium radiobacter* strain K84 and strain K1026 that is specific for certain pathogenic strains of *Agrobacterium* spp. Bacteriocins are peptides that are produced by certain bacteria, and are known to inhibit the growth of other bacteria.

In accordance with 40 CFR 155.57, a registration review decision is the Agency's determination whether a pesticide meets, or does not meet, the standard for registration in FIFRA. EPA has considered *Agrobacterium radiobacter* strains K84/Kerr-84 and K1026 in light of the FIFRA standard for registration. The *Agrobacterium radiobacter* strains K84/Kerr-84 and K1026 Final Decision document in the docket describes the Agency's rationale for issuing a registration review final decision for this pesticide.

In addition to the final registration review decision document, the registration review docket for *Agrobacterium radiobacter* strains K84/Kerr-84 and K1026 also includes other relevant documents related to the registration review of this case. The proposed registration review decision was posted to the docket and the public was invited to submit any comments or
