

jeopardize the existence of federally listed fish, wildlife, or plants.

Applicant's Proposal

The applicant is requesting take of approximately 3.57 ac of occupied sand skink foraging and sheltering habitat incidental to construction of a commercial development, and seeks a 5-year permit. The 3.92-ac project site is located on 21.28-ac parcel #19-22-25-000100005200 within Section 19, Township 22 South, Range 25 East, Lake County, Florida. The applicant proposes to mitigate for the take of the sand skink by the purchase of 7.14 mitigation credits within the Hatchineha Ranch Conservation Bank.

Our Preliminary Determination

We have determined that the applicant's proposal, including the proposed mitigation and minimization measures, would have minor or negligible effects on the species covered in the HCP. Therefore, we determined that the ITP is a "low-effect" project and qualifies for categorical exclusion under the National Environmental Policy Act (NEPA), as provided by the Department of the Interior Manual (516 DM 2 Appendix 1 and 516 DM 6 Appendix 1). A low-effect HCP is one involving (1) minor or negligible effects on federally listed or candidate species and their habitats, and (2) minor or negligible effects on other environmental values or resources.

Next Steps

We will evaluate the HCP and comments we receive to determine whether the ITP application meets the requirements of section 10(a) of the Act (16 U.S.C. 1531 et seq.). If we determine that the application meets these requirements, we will issue ITP #TE83714A-0. We will also evaluate whether issuance of the section 10(a)(1)(B) ITP complies with section 7 of the Act by conducting an intra-Service section 7 consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether or not to issue the ITP. If the requirements are met, we will issue the permit to the applicant.
