

FEDERAL REGISTER

Vol. 77

Monday,

No. 199

October 15, 2012

Book 1 of 2 Books

Pages 62417–62622

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpo@custhelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 77 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

FEDERAL REGISTER WORKSHOP

THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

FOR: Any person who uses the Federal Register and Code of Federal Regulations.

WHO: Sponsored by the Office of the Federal Register.

WHAT: Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

WHY: To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

WHEN: Tuesday, October 23, 2012
9 a.m.-12:30 p.m.

WHERE: Office of the Federal Register
Conference Room, Suite 700
800 North Capitol Street, NW.
Washington, DC 20002

RESERVATIONS: (202) 741-6008

Rules and Regulations

Federal Register

Vol. 77, No. 199

Monday, October 15, 2012

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

FEDERAL DEPOSIT INSURANCE CORPORATION

12 CFR Part 325

RIN 3064-AD91

Annual Stress Test

AGENCY: Federal Deposit Insurance Corporation.

ACTION: Final rule.

SUMMARY: The Federal Deposit Insurance Corporation (the “Corporation” or “FDIC”) is issuing a final rule that implements the requirements of the Dodd-Frank Wall Street Reform and Consumer Protection Act (the “Dodd-Frank Act”) regarding stress tests (“final rule”). The Dodd-Frank Act requires the Corporation to issue regulations that require FDIC-insured state nonmember banks and FDIC-insured state-chartered savings associations with total consolidated assets of more than \$10 billion to conduct annual stress tests, report the results of such stress tests to the Corporation and the Board of Governors of the Federal Reserve System (“Board”), and publish a summary of the results of the stress tests. The final rule requires large covered banks to conduct annual stress tests beginning on the effective date of this final rule. The Corporation, however, will delay implementation of the annual stress test requirements under the final rule for institutions with total consolidated assets of more than \$10 billion but less than \$50 billion until September 30, 2013. The final rule requirement for public disclosure of a summary of the stress testing results for these institutions will be implemented starting with the 2014 stress test, with the disclosure occurring during the period starting June 15 and ending June 30 of 2015.

DATES: This final rule is effective October 15, 2012.

FOR FURTHER INFORMATION CONTACT:

George French, Deputy Director, Policy, (202) 898-3929, Robert Burns, Associate Director, Mid-Tier Bank Branch, (202) 898-3905, or Ryan Sheller, Senior Large Financial Institutions Specialist, (202) 412-4861, Division of Risk Management and Supervision; Mark G. Flanigan, Counsel, (202) 898-7426, Jason Fincke, Senior Attorney, (202) 898-3659, Rachel Jones, Attorney, (202) 898-6858, or Ryan K. Clougherty, Senior Attorney, (202) 898-3843, Legal Division, Federal Deposit Insurance Corporation, 550 17th Street NW., Washington, DC 20429.

SUPPLEMENTARY INFORMATION:

I. Background

A. Overview of Section 165(i) of the Dodd-Frank Act

The Dodd-Frank Act was enacted on July 21, 2010.¹ Section 165(i)(2) of the Dodd-Frank Act (“section 165(i)(2)”) requires the Corporation, as a Federal primary financial regulatory agency, to issue regulations that require FDIC-insured state nonmember banks and FDIC-insured state-chartered savings associations with total consolidated assets of more than \$10 billion to conduct annual stress tests. Additionally, section 165(i)(2) requires that the Corporation issue regulations that: (1) Define the term “stress test” for purposes of the regulations; (2) establish methodologies for the conduct of the stress tests that provide for at least three different sets of conditions, including baseline, adverse, and severely adverse conditions; (3) establish the form and content of a required report on the stress tests that covered banks must submit to the Corporation; and (4) require covered banks to publish a summary of the results of the required stress tests.

Section 165(i)(2)(C) requires the Corporation, in coordination with the Board of Governors and the Federal Insurance Office, to issue regulations implementing the stress testing requirements that are consistent and comparable with the other Federal primary financial regulatory agencies.²

¹ Public Law 111-203, 124 Stat. 1376 (2010).

² Under section 2(12) of the Dodd-Frank Act, the term “Primary financial regulatory agency” includes the federal banking agencies, including the Corporation, the Board of Governors, and the Office of the Comptroller of the Currency (“OCC”); the Securities and Exchange Commission; the Commodity Futures Trading Commission; and the Federal Housing Finance Agency. 12 U.S.C. 5301(12).

On January 23, 2012, pursuant to section 165(i) of the Dodd-Frank Act, the Corporation issued a notice of proposed rulemaking in the **Federal Register** that proposed to require covered banks to conduct annual stress tests (“NPR” or “proposed rule”).³ The Corporation is now issuing a final rule implementing the requirements of section 165(i)(2) as proposed in the NPR, with certain modifications as described further below.

II. Comments Received

A. Overview

The NPR solicited public comment on all aspects of the proposed rule. The NPR’s comment period ended on April 30, 2012, and resulted in the FDIC receiving 18 comment letters. Comments were submitted by, or on behalf of, individuals, banks and bank holding companies, consulting firms, and banking and financial services industry trade groups and associations. The comment letters generally supported the broader goals of the NPR, but many expressed concerns with respect to certain aspects of the proposed rule, as discussed in more detail below.

B. Agency Coordination

A number of commenters expressed concerns about the scope of the proposed rule and the need for coordination between the agencies in implementing the stress test requirements for various institutions. These commenters generally suggested that the agencies should seek comparability on their respective stress testing requirements and resolve some of the key differences between their respective proposals to ensure consistent and comparable stress testing for all covered financial institutions and to minimize regulatory burden.

The Corporation understands and is sensitive to commenters’ concerns regarding the importance of issuing a consistent and comparable set of final stress testing rules across the banking agencies. The FDIC understands that there are a number of insured depository institutions subject to the stress testing final rules that may operate within organizational structures with regulated entities that may be supervised by different federal banking

³ 77 FR 3166 (Jan. 23, 2012).

regulators. The FDIC has developed this rule in coordination with the FRB and the Federal Insurance Office as required by section 165(i)(2)(C). Additionally, the FDIC has worked closely with the other banking agencies to ensure the standards of the final rule are consistent and comparable in the areas of: scope of application, scenarios, data collection and reporting, and disclosure. The Board and OCC have issued separate final stress test rules with respect to their supervised entities.

C. Effective Date of Proposed Rule

The NPR sought public comment on the timing of the proposed rule, both with respect to the proposed immediate effectiveness and the proposed time period allotted for completion of the stress tests.

With respect to the proposed effective date, several commenters recommended delayed effective dates based on the asset size of the bank. One commenter suggested a delayed effective date because, due to the complexity of the rule's stress testing requirements, regional and community banks would require additional time to build and effectuate the systems necessary to conduct testing. Another commenter noted that community banks have not participated in stress tests and have not experienced the supervisory expectations that accompany the stress testing process and therefore need additional time to comply with the proposed rule. Several commenters requested delaying the implementation of the proposed rule for at least one year.

The FDIC recognizes that a number of state nonmember banks and state savings associations are at different stages in developing their stress testing frameworks. Certain institutions may need additional time to fully develop their stress testing systems, processes, and procedures, and to collect the information that the FDIC may require in connection with these tests. After considering the comments, the FDIC has decided to delay implementation of the final rule for institutions with total consolidated assets of more than \$10 billion but less than \$50 billion until September 30, 2013, to ensure that these institutions have sufficient time to develop high-quality stress testing programs. Furthermore, the FDIC has decided to delay the initial public disclosure requirement for these institutions until the 2014 stress test (with the public disclosure to be made in 2015).

Most banks with consolidated assets of \$50 billion or more have been involved in stress testing previously,

including the 2009 Supervisory Capital Assessment Program (SCAP) and the Board's Comprehensive Capital Analysis and Review (CCAR) stress tests, and consequently have in place a framework necessary to conduct the stress tests required by this rule. Given the size, complexity, and importance of these covered banks to the safety and soundness of the United States banking system, the FDIC believes it is appropriate for these covered banks to commence stress testing as soon as possible. Consequently, state nonmember banks and state savings associations with consolidated total assets equal to or exceeding \$50 billion will be required to conduct their first annual stress tests under this final rule using financial data as of September 30, 2012.

The FDIC is aware, however, that some state nonmember banks and state savings associations with assets of \$50 billion or more may not be able or ready to conduct the annual stress test this year in a manner that would yield meaningful results. For example, covered banks that were not subject to SCAP and CCAR may need more time to develop and implement a robust stress testing framework. Therefore, the FDIC is reserving authority in the rule to permit these covered banks to delay the application of the requirements under this final rule on a case-by-case basis.

D. Timing of the Stress Test Requirements

The NPR sought public comment on the proposed time period allotted for completion of the stress tests. A number of comments were received expressing concern with respect to the proposed rule's timing for the annual stress test. Several commenters noted that the proposed rule would require covered banks to conduct stress tests during the busiest time of year for many institutions. Furthermore, one commenter argued that the narrow timeframe between the release of scenarios and the submission of the required reports could present timing issues for institutions, particularly smaller banks, in preparing year-end information. Additionally, several commenters requested that the Corporation provide flexibility with respect to when covered banks are required to perform stress tests. For example, one commenter recommended that covered banks be permitted to choose when they will conduct stress testing throughout the year, and also suggested that the Corporation should provide economic scenarios for the

stress tests no later than September 30 of each calendar year.

After consideration of the comments, the FDIC has decided to make changes in the timeline in the final rule. The Corporation intends to distribute the scenarios to all covered banks no later than November 15 of each year, which aligns the development and issuance of the scenarios with the other agencies and which is approximately seven weeks prior to the date by which an over \$50 billion covered bank must report the results of its annual stress test. The Corporation believes, based on its supervisory experience, that over \$50 billion covered banks will have adequate time to carry out the required stress tests. For the \$10 billion to \$50 billion covered banks, the final rule extends the reporting date to March 31 of each year giving additional time to these institutions to conduct stress tests and report the results. The final rule also permits these institutions to report their stress test results under the same timeframe as their parent holding company.

The final rule states that a state nonmember bank or state savings association that becomes a covered bank after the final rule's effective date shall comply with the requirements of the final rule and conduct its stress test beginning in the calendar year after the date the state nonmember bank or state savings association becomes a covered bank. This modification to the proposed rule is in response to commenters' concerns that certain institutions have not previously been subject to stress-testing requirements and may need additional time to develop the systems and procedures, as well as information collection processes necessary to conduct these tests.

E. Scenario Development

A number of the comments received by the Corporation raised concerns with respect to the development and use of economic scenarios within the proposed rule. For example, one commenter suggested that the scenarios should be realistic and robust enough to illuminate potential problems, and that, at a minimum, the "severely adverse" scenario should be as adverse as conditions were during the recent financial crisis. A trade association recommended that the scenarios address only general macroeconomic factors for institutions with between \$10 billion and \$50 billion in assets, while more complex institutions or those that have significant trading positions should incorporate rate "shocks" into their stress tests. Another commenter requested that the banking regulators

and the bank mutually determine stress testing criteria that are tailored to a bank's specific business profile, including unique asset mixes and operating profiles, in order to avoid the distortions that a "one size fits all" approach would create.

Several commenters requested that banks with small geographic footprints be permitted to develop economic scenarios relevant to banks' regional operations. One such commenter argued that the requirements could become a costly "check the box" exercise if stress scenarios are not relevant to banks with small geographic footprints. The commenter also recommended that the Corporation provide guidance to banks for developing their own scenarios, including reports on regional economic outlooks.

A comment submitted jointly by a number of industry organizations requested that the Corporation and other federal banking agencies minimize the burden of the multiple and overlapping stress test requirements by consistently using the same set of supervisory stress scenarios and models for all stress-test requirements. The FDIC intends to coordinate with other federal banking agencies on the development of scenarios. To promote a consistent and transparent framework to support scenario design, the banking agencies anticipate seeking comment on the procedures to be used by the agencies in the development of the scenarios. With regard to commenters' requests to use their own internally generated scenarios, the FDIC believes that all covered banks should use the same set of scenarios so that the results are more directly comparable. However, to allow for unforeseen circumstances, the FDIC reserves the authority to require a covered bank to use different or additional scenarios that the FDIC deems appropriate.

F. Reporting

Commenters also expressed concerns about the required reports that must be submitted to the Corporation under the proposed rule. For example, one commenter suggested that the Corporation's expectations for the required reports should be clear and simple enough so that institutions, particularly smaller banks, do not have to rely on vendors or third-party professionals to comply with the requirements.

A number of commenters suggested that it would be appropriate in certain situations to allow a covered bank that is a subsidiary of a bank holding company (that is itself subject to stress testing requirements) to submit a single

report for both the bank and the bank holding company. One such commenter requested that the Corporation provide more comprehensive guidance with respect to the standards by which the company-run stress tests will be analyzed.

The FDIC recently proposed reporting templates for covered banks with consolidated assets of \$50 billion or more.⁴ The Dodd-Frank Act stress testing reporting requirements apply to all covered banks, but the FDIC recognizes that many covered banks with consolidated total assets of \$50 billion or more have been subject to stress testing requirements under the Board's CCAR or Capital Plan Review (CapPR) exercises. The FDIC also recognizes that these banks' stress tests will be applied to more complex portfolios and therefore warrant a broader set of reports to adequately capture the results of the company-run stress tests. These reports will necessarily require more detail than would be appropriate for smaller, less complex banks. Therefore, the FDIC will propose more simplified and separate reporting templates for institutions with total consolidated assets of more than \$10 billion but less than \$50 billion than for covered banks with total consolidated assets of \$50 billion or more. The general expectations for the proposed reporting requirements are discussed further below.

The FDIC reserves the authority to require a \$10 billion to \$50 billion covered bank to use the reporting template for larger banks. The FDIC may also, on a case-by-case basis, require a covered bank to report stress test results using a simpler format to be specified by the FDIC.

G. Public Disclosure of Stress Test Results

Many of the comments received by the Corporation addressed issues associated with the proposed rule's public disclosure requirement. Several commenters expressed concern that the publication of detailed stress test results could be misinterpreted by the general public which could, in turn, undermine public confidence in banks. One such commenter noted that the required public disclosure of results may be used for comparison across institutions, suggesting that regulators run the risk of creating an environment where banks present a conservative bias where there is flexibility in adopting test inputs.

Several commenters requested additional clarity with respect to the Corporation's expectations for the

required summary public disclosure. One commenter noted that the company-run stress tests would not be standardized, and thus, comparison of results across various companies may not be possible. This commenter urged the Corporation to provide companies with a standardized template for disclosure that could enable a better understanding of the stress test results by the capital markets and the general public. Another commenter urged the Corporation to require small banks to disclose only a description of the types of risks being included in the stress test, a general description of the methodologies employed, and the capital ratios at the end of the planning horizon.

Two commenters recommended that the CCAR or CapPR disclosure templates be used for disclosure of the results of the severely adverse scenario for company-run stress tests, at least for covered banks with consolidated assets of \$50 billion or more. One of these commenters supported not requiring the publication of summary results under the adverse scenario. Several commenters suggested that covered banks should not be required to disclose baseline stress test results or other information that could be used to reverse-engineer earnings guidance.

After careful consideration of the comments, the FDIC has decided to make the following changes. First, the public disclosure requirement will be delayed for an additional year for institutions with total consolidated assets of more than \$10 billion but less than \$50 billion so that these institutions will have additional time to develop robust stress testing methodologies before they report publicly. Therefore, these covered banks will conduct their required stress tests for the first time in 2013, with the first disclosure of a summary of stress test results occurring in 2015, based on the results of the 2014 stress tests. Covered banks with total consolidated assets of \$50 billion or more that are subject to this final rule as of the effective date of this final rule must conduct their first stress test this year, with disclosure required in 2013.

Institutions that become \$10 billion to \$50 billion covered banks after the effective date of the final rule would begin stress testing in the calendar year after they become covered banks. This is a change from the proposed rule, which would have required institutions to begin stress testing in the same calendar year if they became covered banks no less than 90 days before September 30 of that year. This change was in response to comments that requested

⁴ 77 FR 52718 (Aug. 30, 2012).

that the Corporation's final rule be consistent with the OCC's and the Board's final rules under Section 165(i).

Additionally, the final rule removes the requirement that covered banks publicly disclose results under the baseline scenario and adverse scenario. The FDIC agrees with the commenters that publicly disclosing the above items under a baseline or adverse scenario could be construed as long-term earnings forecasts.

H. Other Issues

In addition to the issues identified above, the Corporation received a number of comments that addressed a wide range of other topics associated with the proposed rule. A number of commenters suggested establishing a threshold to determine when a covered bank that is a subsidiary of an institution that is itself subject to stress-testing requirements would be required to perform independent stress tests and comply with the requirements of the proposed rule. Commenters suggested that the proposed rule may create duplicative efforts when a subsidiary covered bank comprises greater than 90 percent of its holding company's total consolidated assets. One of these commenters suggested that in order to eliminate duplicate stress testing, the Corporation should accept the CCAR and the Board of Governors' Board FR Y-14A form submissions for annual stress tests of a covered bank that comprises greater than 90 percent of its bank holding company's total consolidated assets and that also serves as the lead depository institution for the bank holding company covered by the CCAR process.

Another commenter noted that the completion of the stress testing and related supervisory evaluation process should not hinder or delay covered banks' ability to take necessary strategic capital actions not otherwise set forth in previously approved capital plans. One of the comments received requested that the Corporation set forth a robust and transparent process for responding to inquiries in a timely manner and suggested that experienced examiners should offer instruction, assistances, and feedback to facilitate the good faith efforts of smaller banks to implement the proposed rule. This commenter also suggested that the Corporation offer a dedicated email address that banks could use to submit questions and receive answers in a timely manner.

The FDIC has carefully considered the comments and has made appropriate revisions to the final rule as described below.

III. The Final Rule

The Corporation is now issuing this final rule to implement the requirements of section 165(i)(2) as proposed in the NPR, with certain modifications, as discussed below. Under this final rule, FDIC-insured state nonmember banks and FDIC-insured state-chartered savings associations with total consolidated assets of more than \$10 billion would be required to conduct an annual stress test. The FDIC is delaying the application of the annual stress test requirements by one year for state nonmember banks and state-chartered savings associations with consolidated assets of more than \$10 billion but less than \$50 billion.

A. The Purpose of the Annual Stress Test

The FDIC views the stress tests conducted under the final rule as providing forward-looking information to supervisors to assist in their overall assessments of a covered bank's capital adequacy and to aid in identifying downside risks and the potential impact of adverse outcomes on the covered bank. In addition, the FDIC may use stress tests to determine whether additional analytical techniques and exercises are appropriate for a covered bank to employ in identifying, measuring, and monitoring risks to the financial soundness of the covered bank, and may require a covered bank to implement such techniques and exercises in conducting its stress tests. Further, these stress tests are expected to support ongoing improvement in a covered bank's internal assessments of capital adequacy and overall capital planning.

The FDIC expects that the annual stress tests required under the final rule will be only one component of the broader stress testing activities conducted by covered banks. In this regard, the FDIC notes that the agencies have recently issued final joint guidance on "Stress Testing for Banking Organizations with More Than \$10 Billion in Total Consolidated Assets."⁵ These broader stress testing activities should address the impact of a range of potentially adverse outcomes across a set of risk types affecting aspects of the covered bank's financial condition including, but not limited to, capital adequacy. In addition, a full assessment of a covered bank's capital adequacy should take into account a range of factors, including evaluation of its capital planning processes, the governance over those processes,

regulatory capital measures, results of supervisory stress tests where applicable, and market assessments.

B. Applicability

The final rule will apply to covered banks that are FDIC-insured state nonmember banks and FDIC-insured state savings associations with more than \$10 billion in total consolidated assets. Covered banks will be required to conduct stress in accordance with the requirements of the final rule. However, the final rule separates a "covered bank" into two categories: a state nonmember bank or state savings association that is either a \$10 billion to \$50 billion covered bank or an over \$50 billion covered bank. The final rule defines a \$10 billion to \$50 billion covered bank as any state nonmember bank or state savings association with average total consolidated assets that are greater than \$10 billion but less than \$50 billion. The final rule defines an over \$50 billion covered bank as any state nonmember bank or state savings association with average total consolidated assets that are not less than \$50 billion. The stress testing, reporting, and disclosure requirements, and deadlines of the final rule differ depending on whether the covered bank is a \$10 billion to \$50 billion covered bank or an over \$50 billion covered bank.

The FDIC recognizes that some covered bank subsidiaries may be affiliated with larger institutions also subject to requirements for stress testing, reporting, and disclosure. In such cases, it may be less burdensome and more appropriate for the covered bank subsidiaries to follow the timing requirements of their parent holding companies. The final rule permits covered bank subsidiaries to choose to conduct their stress tests using the same timeline requirements as their parent holding companies.

A state nonmember bank or state savings association becomes a covered bank for purposes of the final rule based on its total consolidated assets averaged over each of the institution's four most recent consecutive quarters as reported on its Call Reports. The date on which a state nonmember bank or state savings association becomes a covered bank is the as-of date of the fourth consecutive Call Report in which its reported average total consolidated assets are greater than \$10 billion. Similarly, a covered bank will remain subject to the stress testing requirements of the final rule until it has \$10 billion or less in total consolidated assets for each of the four most recent consecutive quarters as reported in the covered

⁵ See 77 FR 29458 (May 17, 2012).

bank's four most recently filed Call Reports. Public comments requested that the Corporation's final rule be consistent with the OCC's and the Board's final rules under Section 165(i). Therefore, in order to maintain consistency with the OCC's and the Board's final rules and to provide clarity in the application of standards of coverage, the Corporation will use the measure described in the final rule to determine whether an institution meets the definition of a covered bank and at which point a state nonmember bank or state savings association ceases to be a covered bank.

The date by which a state nonmember bank or state savings association must conduct its first annual stress test under this final rule depends on its size category and whether it becomes a covered bank before or after the effective date of this final rule. A state nonmember bank or state savings association that is subject to this final rule as of October 15, 2012 must conduct the annual stress test under this final rule beginning this year if it is an over \$50 billion covered bank, whereas a \$10 billion to \$50 billion covered bank would conduct its first annual stress test in 2013. Further, the final rule requirement for public disclosure of a summary of the stress testing results for a \$10 billion to \$50 billion covered bank will not occur until the 2014 stress test.

A state nonmember bank or state savings association that becomes a covered bank after October 15, 2012 would be required to conduct its first annual stress test in the calendar year following the year in which it becomes a covered bank. For example, a bank for which the four-quarter average of total consolidated assets exceeded \$10 billion on its June 2013 Call Report (based on the average from its September 2012, December 2012, March 2013, and June 2013 Call Reports) would become a covered bank on June 30, 2013, and would conduct their first stress test in 2014.

C. Shell Holding Companies and Multi-Bank Holding Companies

When a covered bank comprises the bulk of the assets for a given parent holding company, the inputs to the stress tests conducted by that institution and the holding company, and the conclusions reached, would be expected to be similar. The FDIC expects to take this into account in applying the requirements of this rule. For example, for a holding company that is essentially a shell holding company with a single state nonmember or state savings association that has total consolidated assets of more than \$10 billion, the

Board and the FDIC would coordinate efforts and communicate with the holding company and the covered bank on how to adequately address their respective stress testing requirements while avoiding duplication of effort.

The FDIC recognizes that certain parent company structures may include one or more subsidiary banks or savings associations, each with total consolidated assets greater than \$10 billion. The stress test requirements of section 165(i)(2) apply to the parent company and to each subsidiary bank or savings association of the covered company that has \$10 billion or more in total consolidated assets. The FDIC anticipates addressing, on a case-by-case basis through the supervisory process, instances in which it may be appropriate to modify stress testing requirements when there are multiple covered banks within a single parent organization.

D. Scenarios

Under the final rule, each covered bank would be required to conduct an annual stress test using its financial data as of September 30 of that year, unless the FDIC communicates, in the fourth quarter of that year, a different required as-of date for any or all categories of financial data. Additionally, the Corporation could accelerate or extend any specified deadline for stress testing if the Corporation determined that such modification is appropriate in light of the institution's activities, level of complexity, scope of operations, risk profile, or regulatory capital.

The stress test must assess the potential impact of different scenarios on the capital of the covered bank and certain related items over a forward-looking, nine-quarter planning horizon (that is, through the December 31 reporting date of the second calendar year following the year containing the September 30 as-of date), taking into account all relevant exposures and activities.

The FDIC will provide a minimum of three economic scenarios, (baseline, adverse, and severely adverse), or such additional scenarios as the FDIC determines appropriate, no later than November 15, which the covered bank must use for the stress test. While each scenario includes the paths of a number of economic variables that are typically considered in stress test models, the FDIC expects that covered banks may use all or a subset of the economic variables provided, and may extrapolate other variables (such as local economic variables) from the paths of the economic variables provided, as appropriate, to conduct the stress test.

The FDIC may require a covered bank to include one or more additional scenarios in its stress test based on the institutions activities, level of complexity, risk profiles, scope of operations and regulatory capital, in addition to any other relevant factors. The FDIC will notify the institution in writing that it will be required to include one or more additional scenarios in its stress test, and the notification will include a description of the scenario and the basis for requiring the institution to include the scenario in its stress test.

The FDIC has established provisions within the final rule that apply to covered banks having significant trading activities. For those covered banks, an additional trading and counterparty risk scenario may be included as a component of their stress test scenarios. The FDIC will select an as-of date between October 1 and December 1 of that calendar year for the trading and counterparty risk scenario which will be communicated to the covered bank no later than December 1. This provision is necessary to allow the FDIC to tailor the scenarios and other stress test requirements for those covered banks to ensure that the stress tests provide a meaningful identification of downside risks and assessment of the potential impact of adverse outcomes on the covered bank's capital. Typically, the scenarios would include market price and rate "shocks" consistent with historical or hypothetical adverse market events.

The FDIC expects that the annual stress test scenarios will be revised from time to time to ensure that each scenario remains relevant under current economic and industry conditions. The FDIC will consult closely with the Board and OCC on the development of the annual stress test scenarios to ensure consistent and comparable stress tests for all covered financial institutions and to minimize regulatory burden.

The FDIC expects to issue for comment proposed guidance and procedures for scenario development at a later date.

E. Stress Test Methodologies and Practices

The final rule requires each covered bank to use the annual stress test scenarios provided by the FDIC in conducting its annual stress tests. Each covered bank must use a planning horizon of at least nine quarters over which the impact of specified scenarios would be assessed. The nine-quarter planning horizon would permit the covered bank to make informed capital projections of its financial and capital

positions for a two-calendar-year period. The covered bank is required to calculate, for each quarter-end within the planning horizon, estimates of losses, pre-provision net revenues, net income, and provision for loan and lease losses that result from the conditions specified in each scenario. Such a covered bank also is required to calculate, for each quarter-end within the planning horizon, the potential impact on its capital levels and regulatory capital ratios applicable to the institution under 12 CFR Part 325 (and any other capital ratios specified by the Corporation), incorporating the effects of any expected capital actions over the planning horizon.

The final rule also requires the senior management of each covered bank to establish and maintain a system of controls, oversight, and documentation, including policies and procedures, designed to ensure that the stress testing processes used by the covered bank are effective in meeting the requirements of the final rule. The covered bank's policies and procedures must, at a minimum, outline the covered bank's stress testing practices and methodologies, and processes for validating and updating its stress testing practices consistent with applicable laws, regulations and supervisory guidance.⁶ The covered bank's board of directors (or a committee thereof) must approve and review the policies and procedures of the stress testing processes as frequently as economic conditions may warrant, but no less than annually. The covered bank's board of directors and senior management must receive a summary of the results of the annual stress test.

F. Reporting and Disclosures

Section 165(i)(2)(B) requires a covered bank to submit a report to the Board and its primary financial regulatory agency at such time, in such form, and containing such information as the primary financial regulatory agency shall require. Section 165(i)(2)(C)(iv) mandates that the primary financial regulatory agencies require a covered bank to publish a summary of its stress test results.

The final rule requires that each over \$50 billion covered bank submit a report of the stress test results and documentation to the FDIC and to the

Board by January 5. The FDIC published for notice and comment specific annual stress test reporting requirements for over \$50 billion covered banks in a separate information collection under the Paperwork Reduction Act (44 U.S.C. 3501–3521).⁷ The Corporation plans to publish for comment separately the required report for covered banks with total consolidated assets of more than \$10 billion but less than \$50 billion. For \$10 billion to \$50 billion covered banks, the final rule requires that each bank submit a report of the stress test results to the FDIC and to the Board by March 31.

The confidentiality of information submitted to the Corporation under the final rule will be determined in accordance with applicable law including any available exemptions under the Freedom of Information Act (5 U.S.C. 552(b)) and the FDIC's Rules and Regulations regarding the Disclosure of Information (12 CFR Part 309).

Based on information submitted by a covered bank in the required report to the Corporation, as well as other relevant information, the Corporation will conduct an analysis of the quality of the bank's stress test processes and related results. The Corporation envisions that feedback concerning such analysis will be provided to a covered bank through the supervisory process. In addition, each covered bank must consider the results of the stress tests conducted under the final rule in the normal course of business including, but not limited to, the banking organization's capital planning, assessment of capital adequacy, and risk management practices. The Corporation may also require other actions consistent with safety and soundness of the covered bank.

Consistent with section 165(i)(2), the final rule also requires each covered bank to publish a summary of the results of its annual stress tests after submitting its annual stress test report to the FDIC and the Board. Under the final rule, a \$10 billion to \$50 billion covered bank must publish a summary of the results of its annual stress test from the period beginning on June 15 and ending June 30 and an over \$50 billion covered bank must publish its summary disclosures from the period beginning on March 15 and ending on March 31.

The timing of the disclosures in the final rule has changed from the timing sequence proposed in the NPR. The proposed rule would have required all disclosures to be made no later than April 5. The final rule extends the disclosure due date for \$10 billion to \$50 billion covered banks to June 30. Therefore, this final rule replaces the specific disclosure due date with a 15-day period in which disclosures must be made. This change ensures adequate time for review of stress test results prior to disclosure.

The summary may be published on a covered bank's Web site or any other forum that is reasonably accessible to the public. The required information publicly disclosed by each covered bank for the severely adverse scenario, at a minimum, includes:

- i. A description of the types of risks being included in the stress test;
- ii. A summary description of the methodologies used in the stress test;
- iii. Estimates of aggregate losses, pre-provision net revenue, net income, provision for loan and lease losses, capital ratios (including regulatory and any other capital ratios specified by the FDIC); and
- iv. An explanation of the most significant causes for the changes in regulatory capital ratios, such as the amount of losses attributable to a particular portfolio.

Covered banks that are consolidated subsidiaries of a bank holding company or savings and loan holding company will be permitted to publish abbreviated disclosures with the parent's summary and on the same timeline as the parent holding company. These disclosures will include a summary of changes in regulatory capital ratios of the depository institution subsidiary over the planning horizon, including an explanation of the most significant causes for changes in regulatory capital ratios, such as the amount of losses attributable to a particular portfolio. However, the FDIC reserves the right to require additional disclosures if the FDIC believes that the disclosures at the holding company level do not accurately capture the potential impact of the scenarios on the condition of the covered bank.

G. Summary of Steps for Annual Stress Test

The table below describes the steps and timeframes for the annual stress test for covered banks.

⁶ See Supervisory Guidance on Stress Testing for Banking Organizations With More Than \$10 Billion in Total Consolidated Assets, 77 FR 29458 (May 17, 2012).

⁷ 77 FR 52718 (Aug. 30, 2012).

Process Overview of Annual Stress Test (Using Data as of September 30th)

Step	Timeframe for over \$50 billion covered banks	Timeframe for \$10 billion to \$50 billion covered banks
1. FDIC provides covered banks with scenarios for annual stress tests.	No later than November 15th	No later than November 15th.
2. Covered banks submit required regulatory reports to the FDIC on their stress tests.	No later than January 5th	No later than March 31st. ⁸
3. Covered banks make required public disclosures	Between March 15th and March 31st	Between June 15th and June 30th.

H. Administrative Law Matters

Administrative Procedure Act

The final rule will be effective immediately upon publication in the **Federal Register**. Section 553(d)(3) of the Administrative Procedure Act (“APA”) provides that publication of a rule shall be made not less than 30 days before its effective date, except “* * * (3) as otherwise provided by the agency for good cause found and published with the rule.” Consistent with section 553(d)(3) and for the reasons discussed below, the FDIC finds good cause exists to publish this final rule with an immediate effective date.⁹

The FDIC believes the final rule is necessary to address the continuing exposure of the banking industry to potentially adverse economic conditions. The FDIC expects that all covered banks should have the capacity to understand their risks and the potential impact of stressful events and circumstances on their financial condition. The stress test requirements contained in the final rule will help covered banks and the FDIC to better understand such banks’ financial condition in stressed environments, including the potential impact on covered banks’ capital adequacy. Further, stress tests serve as an ongoing risk management tool that supports a covered bank’s forward-looking assessment of its risks and better equips

such organizations to address a range of adverse outcomes. As adverse economic conditions can occur quickly, the process of stress testing needs to begin promptly. Ensuring that covered banks are prepared for adverse economic situations is essential for their health and the overall financial stability of the economy. Accordingly, the FDIC finds good cause for the final rule to take effect immediately upon publication in the **Federal Register**.

Paperwork Reduction Act Analysis

The Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521) (“PRA”) prohibits the Corporation from conducting or sponsoring, and respondents are not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (“OMB”) control number. In accordance with the PRA, the Corporation published notice of the proposed information collection for over \$50 billion covered banks on August 30, 2012.¹⁰ Following the close of the sixty-day comment period associated with the Corporation’s proposed information collection notice, the Corporation will review the public comments and submit a proposed information collection to the OMB director for approval. If approved, covered banks would then be subject to the Corporation’s stress test reporting requirements contained in the final rule.

Additionally, prior to the 2013 stress test, the Corporation intends to publish in the **Federal Register** a proposed information collection notice for \$10 billion to \$50 billion covered banks.

Title of Information Collection: Annual Stress Test Reporting Template and Documentation for Covered Banks under the Dodd-Frank Wall Street Reform and Consumer Protection Act.

For over \$50 billion covered banks, following the close of the sixty-day comment period associated with the Corporation’s proposed information collection notice, the Corporation will submit its proposed information collection to the OMB director for approval. For \$10 billion to \$50 billion covered banks, the Corporation will submit a proposed information collection to OMB following the publication and 60-day comment period of a proposed information collection notice for \$10 billion to \$50 billion covered banks.

OMB Number: 3064–0187.

Frequency of Response: Annually.

Affected Public: State nonmember banks and state savings associations supervised by the Corporation with more than \$10 billion in total consolidated assets.

Estimated Total Burden (includes all covered banks):

The estimated burden for the reporting and disclosure requirements is as follows:

	Number of respondents	Annual frequency	Hourly estimate	Total hours
Initial Paperwork Burden:				
Initial Report	25	1	2,000	50,000
Total	25	1	2,000	50,000
Ongoing Paperwork Burden:				
Annual Report	25	1	1,040	26,000
Total	25	1	1,040	26,000

Abstract: The information collection requirements are found in sections 325.205, 325.206, and 325.207 of the

final rule. These requirements implement the stress testing and stress testing reporting requirements set forth

in Section 165(i) of the Dodd-Frank Act. Section 325.205(a) identifies the calculations of the potential impact on

⁸ A covered bank subsidiary may elect to report and issue its required public disclosure on its

parent bank holding company’s or savings and loan holding company’s timeline.

⁹ 5 U.S.C. 553(d)(3).

¹⁰ 77 FR 52718 (Aug. 30, 2012).

capital that must be made during each quarter of the planning horizon. Section 325.205(c) requires that each covered bank must establish and maintain a system of controls, oversight, and documentation, including policies and procedures that describe the covered bank's stress test practices and methodologies, as well as processes for updating such bank's stress test practices. Section 325.206 sets forth the requirements for stress test reports to be filed annually with the Corporation and the Board in the time, manner, and form specified by the Corporation. Section 325.207 requires that a covered bank must publish a summary of the results of its annual stress tests. The summary must include a description of the types of risks being included in the stress test, a summary description of the methodologies used in the stress test, and estimates of losses, pre-provision net revenue, provision for loan and lease losses, net income and pro forma capital ratios (including regulatory and any other capital ratios specified by the FDIC) over the planning horizon, under the severely adverse scenario.

Regulatory Flexibility Act Analysis

Pursuant to section 605(b) of the Regulatory Flexibility Act ("RFA"),¹¹ the regulatory flexibility analysis otherwise required under section 604 of the RFA is not required if an agency certifies that the rule will not have a significant economic impact on a substantial number of small entities (defined for purposes of the RFA to include banks with assets less than or equal to \$175 million)¹² and publishes its certification and a short, explanatory statement in the **Federal Register** along with its rule. For the reasons provided below, the FDIC certifies that the final rule does not have a significant economic impact on a substantial number of small entities. Since the final rule applies only to state nonmember banks and state savings associations with more than \$10 billion in total consolidated assets, the Corporation does not expect that the final rule will directly affect a substantial number of small entities. Accordingly, a regulatory flexibility analysis is not required.

Plain Language

Section 722 of the Gramm-Leach-Bliley Act¹³ requires federal banking agencies to use plain language in all proposed and final rules published after January 1, 2000. The Corporation sought

to present the proposed rule in a simple and straightforward manner and invited comment on how to make the proposed rule easier to understand. The FDIC received no comments on the use of plain language.

Riegle Community Development and Regulatory Improvement Act

Section 302 of Riegle Community Development and Regulatory Improvement Act ("RCDRIA") generally requires that regulations prescribed by federal banking agencies which impose additional reporting, disclosures or other new requirements on insured depository institutions take effect on the first day of a calendar quarter which begins on or after the date on which the regulations are published in final form unless an agency finds good cause that the regulations should become effective sooner. The final rule will be effective immediately upon publication in the **Federal Register**. The first day of a calendar quarter which begins on or after the date on which the regulations are published will be January 1, 2013. Accordingly, the FDIC invokes the good cause exception to the publication requirement because the final rule is necessary to address the continuing exposure of the banking industry to potentially adverse economic factors. For the same reasons discussed in support of the good cause waiver from the 30-day delayed effective date required by the APA, the FDIC finds that good cause exists for an immediate effective date for the final rule.

Small Business Regulatory Enforcement Fairness Act

The Office of Management and Budget has determined that the final rule is not a "major rule" within the meaning of the relevant sections of the Small Business Regulatory Enforcement Fairness Act of 1996¹⁴ ("SBREFA"). As required by SBREFA, the FDIC will file the appropriate reports with Congress and the Government Accountability Office so that the final rule may be reviewed.

Authority and Issuance

The Corporation amends part 325 of chapter III of title 12 of the Code of Federal Regulations as follows:

PART 325—CAPITAL MAINTENANCE

■ 1. The authority citation for part 325 is revised to read as follows:

Authority: 12 U.S.C. 1815(a), 1815(b), 1816, 1818(a), 1818(b), 1818(c), 1818(t), 1819(Tenth), 1828(c), 1828(d), 1828(i), 1828(n), 1828(o), 1831o, 1831p-1, 1835, 3907, 3909, 4808; Pub. L. 102-233, 105 Stat. 1761, 1789, 1790 (12 U.S.C. 1831n note); Pub. L. 102-242, 105 Stat. 2236, as amended by Pub. L. 103-325, 108 Stat. 2160, 2233 (12 U.S.C. 1828 note); Pub. L. 102-242, 105 Stat. 2236, 2386, as amended by Pub. L. 102-550, 106 Stat. 3672, 4089 (12 U.S.C. 1828 note); 12 U.S.C. 5365(i); 12 U.S.C. 5412(b)(2)(B).

■ 2. Add subpart C to read as follows:

Subpart C—Annual Stress Test

Sec.

- 325.201 Authority, purpose, and reservation of authority.
- 325.202 Definitions.
- 325.203 Applicability.
- 325.204 Annual stress tests required.
- 325.205 Methodologies and practices.
- 325.206 Required reports of stress test results to the FDIC and the Board of Governors of the Federal Reserve System.
- 325.207 Publication of stress test results.

Subpart C—Annual Stress Test

§ 325.201 Authority, purpose, and reservation of authority.

(a) *Authority.* This subpart is issued by the Federal Deposit Insurance Corporation (the "Corporation" or "FDIC") under 12 U.S.C. 5365(i)(2), 12 U.S.C. 5412(b)(2)(B), 12 U.S.C. 1818, 12 U.S.C. 1819(a)(Tenth), 12 U.S.C. 1831o, and 12 U.S.C. 1831p-1.

(b) *Purpose.* This subpart implements 12 U.S.C. 5365(i)(2), which requires the Corporation (in coordination with the Board of Governors of the Federal Reserve System ("Board") and the Federal Insurance Office) to issue regulations that require each covered bank to conduct annual stress tests and establishes a definition of stress test, methodologies for conducting stress tests, and reporting and disclosure requirements.

(c) *Reservation of authority.*

Notwithstanding any other provisions of this subpart, the Corporation may modify some or all of the requirements of this subpart.

(1) The Corporation may accelerate or extend any deadline for stress testing, reporting, or publication of the stress test results.

(2) The Corporation may require different or additional tests not otherwise required by this subpart or may require or permit different or additional analytical techniques and methodologies, different or additional scenarios (including components for the

¹¹ 5 U.S.C. 605(b).

¹² 5 U.S.C. 601, *et seq.*

¹³ Public Law 106-102, 113 Stat. 1338, 1471, 12 U.S.C. 4809 (1999).

¹⁴ 5 U.S.C. 801, *et seq.*

scenarios), or different assumptions for the covered bank to use in meeting the requirements of this subpart. In addition, the FDIC may specify a different as-of date for any or all categories of financial data used by the stress test.

(3) The Corporation may modify the reporting requirements of a report under this subpart or may require additional reports. The Corporation may modify the publication requirements of this subpart and or may require different or additional publication disclosures.

(4) Factors considered: Any exercise of authority under this section by the Corporation will be in writing and will consider the activities, level of complexity, risk profile, scope of operations, and the regulatory capital of the covered bank, in addition to any other relevant factors.

(5) Notice and comment procedures: In exercising its authority to require different or additional stress tests and different or additional scenarios (including components for the scenarios) under paragraph (c)(2) of this section, the Corporation will apply notice and response procedures in the same manner and to the same extent as the notice and response procedures in 12 CFR 325.6, as appropriate.

(6) Nothing in this subpart limits the authority of the Corporation under any other provision of law or regulation to take supervisory or enforcement action, including action to address unsafe and unsound practices or conditions, or violations of law or regulation.

§ 325.202 Definitions.

For purposes of this subpart—

(a) *Adverse scenario* means a set of conditions that affect the U.S. economy or the financial condition of a covered bank that are more adverse than those associated with the baseline scenario and may include trading or other additional components.

(b) *Average total consolidated assets* means the average of the covered bank's total consolidated assets, as reported on the covered bank's Consolidated Report of Condition and Income (Call Report) for the four most recent consecutive quarters. If the covered bank has not filed a Call Report for each of the four most recent consecutive quarters, the covered bank's average total consolidated assets means the average of the covered bank's total consolidated assets, as reported on the covered bank's Call Reports, for the most recent one or more consecutive quarters. The date on which the state nonmember bank or the state savings association becomes a covered bank will be the as-of date of

the most recent Call Report used in the calculation of the average.

(c) *Baseline scenario* means a set of conditions that affect the U.S. economy or the financial condition of a covered bank, and that reflect the consensus views of the economic and financial outlook.

(d) *Covered bank* means any state nonmember bank or state savings association subject to the following categories:

(1) *\$10 billion to \$50 billion covered bank.* Any state nonmember bank or state savings association with average total consolidated assets calculated as required under this subpart that are greater than \$10 billion but less than \$50 billion.

(2) *Over \$50 billion covered bank.* Any state nonmember bank or state savings association with average total consolidated assets calculated as required under this subpart that are not less than \$50 billion.

(e) *Planning horizon* means the period of at least nine quarters over which the relevant projections extend.

(f) *Pre-provision net revenue* means the sum of net interest income and non-interest income, less expenses, before adjusting for loss provisions.

(g) *Provision for loan and lease losses* means the provision for loan and lease losses as reported by the covered bank on its Call Report.

(h) *Regulatory capital ratio* means a capital ratio for which the Corporation established minimum requirements by regulation or order, including the leverage ratio and tier 1 and total risk-based capital ratios applicable to that covered bank as calculated under the Corporation's regulations.

(i) *Scenarios* are those sets of conditions that affect the U.S. economy or the financial condition of a covered bank that the Corporation annually determines are appropriate for use in the company-run stress tests, including, but not limited to, baseline, adverse, and severely adverse scenarios.

(j) *Severely adverse scenario* means a set of conditions that affect the U.S. economy or the financial condition of a covered bank and that overall are more severe than those associated with the adverse scenario and may include trading or other additional components.

(k) *State nonmember bank* and *state savings association* have the same meanings as those terms are defined in section 3 of the Federal Deposit Insurance Act (12 U.S.C. 1813).

(l) *Stress test* means the process to assess the potential impact of scenarios on the consolidated earnings, losses, and capital of a covered bank over the planning horizon, taking into account

the current condition of the covered bank and the covered bank's risks, exposures, strategies, and activities.

§ 325.203 Applicability.

(a) *First stress test for covered banks subject to stress testing requirements as of October 15, 2012.*

(1) A \$10 billion to \$50 billion covered bank as of October 15, 2012 must conduct its first stress test under this subpart using financial statement data as of September 30, 2013, and report the results of its stress test on or before March 31, 2014.

(2) A \$10 billion to \$50 billion covered bank that is subject to its first annual stress test pursuant to section 203(a)(1) of this subpart must make its initial public disclosure in the period starting June 15 and ending June 30 of 2015, by disclosing the results of a stress test conducted in 2014, using financial statement data as of September 30, 2014.

(3) A state nonmember bank or state savings association that is an over \$50 billion covered bank as of October 15, 2012, must conduct its first stress test under this subpart using financial statement data as of September 30, 2012, and report the results of its stress test on or before January 5, 2013.

(b) *Covered banks that become subject to stress testing requirements after October 15, 2012.* A state nonmember bank or state savings association that becomes a covered bank after October 15, 2012 will conduct its first annual stress test under this subpart beginning in the next calendar year after the date the state nonmember bank or state savings association becomes a covered bank.

(c) *Ceasing to be a covered bank or changing categories.* (1) A covered bank will remain subject to the stress test requirements based on its applicable category unless and until total consolidated assets of the covered bank falls below the relevant size threshold for each of four consecutive quarters as reported on the covered bank's most recent Call Reports. The calculation will be effective on the as-of date of the fourth consecutive Call Report.

(2) Notwithstanding paragraph (c)(1) of this section, a state nonmember bank or state savings association that migrates from a \$10 billion to \$50 billion covered bank to an over \$50 billion covered bank will be subject to the stress test requirements applicable to an over \$50 billion covered bank immediately as of the date the state nonmember bank or state savings association satisfies the size threshold for an over \$50 billion covered bank.

(d) *Covered bank subsidiaries of a bank holding company or savings and*

loan holding company subject to annual stress test requirements. (1)

Notwithstanding the requirements applicable to covered banks under this section, a covered bank that is a consolidated subsidiary of a bank holding company or savings and loan holding company that is required to conduct an annual company-run stress test under applicable regulations of the Board of Governors of the Federal Reserve System may elect to conduct its stress test and report to the FDIC on the same timeline as its parent bank holding company or savings and loan holding company.

(2) A covered bank that elects to conduct its stress test under paragraph (d)(1) of this section will remain subject to the same timeline requirements of its parent company until otherwise approved by the FDIC.

§ 325.204 Annual stress tests required.

(a) *General requirements.* (1) *\$10 billion to \$50 billion covered bank.* A \$10 billion to \$50 billion covered bank must conduct a stress test on or before March 31 of each calendar year based on financial data as of September 30 of the preceding calendar year.

(2) *Over \$50 billion covered bank.* An over \$50 billion covered bank must conduct a stress test on or before January 5 of each calendar year based on financial data as of September 30 of the preceding calendar year.

(b) *Scenarios provided by the Corporation.* In conducting the stress test under this subpart, each covered bank must use the scenarios provided the Corporation. The scenarios provided by the Corporation will reflect a minimum of three sets of economic and financial conditions, including: Baseline, adverse, and severely adverse scenarios. The Corporation will provide a description of the scenarios required under this section to each covered bank no later than November 15 of that calendar year.

(c) *Significant trading activities.* The Corporation may require a covered bank with significant trading activities, as determined by the Corporation, to include a trading and counterparty component for the scenarios used in its stress test. The trading and counterparty position data used in this component of the scenarios will be as of a date between October 1 and December 1 of that calendar year selected by the Corporation and communicated to the covered bank no later than December 1 of the calendar year.

§ 325.205 Methodologies and practices.

(a) *Potential impact on capital.* In conducting a stress test under this

subpart, during each quarter of the planning horizon, each covered bank must estimate the following for each scenario required to be used:

(1) Pre-provision net revenues, losses, loan loss provisions and net income; and

(2) The potential impact on the regulatory capital levels and ratios applicable to the covered bank, and any other capital ratios specified by the Corporation, incorporating the effects of any capital action over the planning horizon and maintenance of an allowance for loan losses appropriate for credit exposures throughout the planning horizon.

(b) *Controls and oversight of stress testing processes.* (1) The senior management of a covered bank must establish and maintain a system of controls, oversight, and documentation, including policies and procedures, that are designed to ensure that its stress test processes satisfy the requirements in this subpart. These policies and procedures must, at a minimum, describe the covered bank's stress test practices and methodologies, and processes for validating and updating the covered bank's stress test practices and methodologies consistent with applicable laws, regulations, and supervisory guidance.

(2) The board of directors, or a committee thereof, of a covered bank must approve and review the policies and procedures of the stress testing processes as frequently as economic conditions or the condition of the covered bank may warrant, but no less than annually. The board of directors and senior management of the covered bank must receive a summary of the results of the stress test.

(3) The board of directors and senior management of each covered bank must consider the results of the stress tests in the normal course of business, including but not limited to, the covered bank's capital planning, assessment of capital adequacy, and risk management practices.

§ 325.206 Required reports of stress test results to the FDIC and the Board of Governors of the Federal Reserve System.

(a) *Report required for annual stress test results—(1) \$10 billion to \$50 billion covered bank.* A \$10 billion to \$50 billion covered bank must report to the FDIC and to the Board on or before March 31 the results of the stress test in the manner and form specified by the FDIC.

(2) *Over \$50 billion covered bank.* An over \$50 billion covered bank must report to the FDIC and to the Board, on or before January 5, the results of the

stress test in the manner and form specified by the FDIC.

(b) *Content of reports.* (1) The reports required under paragraph (a) of this section must include under the baseline scenario, adverse scenario, severely adverse scenario and any other scenario required by the Corporation under this subpart, a description of the types of risks being included in the stress test, a summary description of the methodologies used in the stress test, and, for each quarter of the planning horizon, estimates of aggregate losses, pre-provision net revenue, provision for loan and lease losses, net income, and pro forma capital ratios (including regulatory and any other capital ratios specified by the FDIC). In addition, the report must include an explanation of the most significant causes for the changes in regulatory capital ratios and any other information required by the Corporation.

(2) The description of aggregate losses and net income must include the cumulative losses and cumulative net income over the planning horizon, and the description of each regulatory capital ratio must include the beginning value, ending value, and minimum value of each ratio over the planning horizon.

(c) *Confidential treatment of information submitted.* The confidentiality of information submitted to the Corporation under this subpart and related materials will be determined in accordance with applicable law including any available exemptions under the Freedom of Information Act (5 U.S.C. 552(b)) and the FDIC's Rules and Regulations regarding the Disclosure of Information (12 CFR Part 309).

§ 325.207 Publication of stress test results.

(a) *Publication date.* (1) A \$10 billion to \$50 billion covered bank must publish a summary of the results of its annual stress test in the period starting June 15 and ending June 30.

(2) An over \$50 billion covered bank must publish a summary of the results of its annual stress tests in the period starting March 15 and ending March 31.

(b) *Publication method.* The summary required under this section may be published on the covered bank's Web site or in any other forum that is reasonably accessible to the public. A covered bank that is a consolidated subsidiary of a bank holding company or savings and loan holding company that is required to conduct an annual company-run stress test under applicable regulations of the Board of Governors of the Federal Reserve

System will be deemed to have satisfied the public disclosure requirements under this subpart if it publishes a summary of its stress test results with its parent bank holding company's or savings and loan holding company's summary of stress test results. Subsidiary covered banks electing to satisfy their public disclosure requirement in this manner must include a summary of changes in regulatory capital ratios of such covered bank over the planning horizon, and an explanation of the most significant causes for the changes in regulatory capital ratios.

(c) *Information to be disclosed in the summary.* A covered bank must disclose the following information regarding the severely adverse scenario if it is not a consolidated subsidiary of a parent bank holding company or savings and loan holding company that has elected to make its disclosure under section 203(d):

- (1) A description of the types of risks included in the stress test;
- (2) A summary description of the methodologies used in the stress test;
- (3) Estimates of aggregate losses, pre-provision net revenue, provision for loan and lease losses, net income, and pro forma capital ratios (including regulatory and any other capital ratios specified by the FDIC); and
- (4) An explanation of the most significant causes for the changes in the regulatory capital ratios.

(d) *Content of results.* (1) The disclosure of aggregate losses, pre-provision net revenue, provisions for loan and lease losses, and net income under this section must be on a cumulative basis over the planning horizon.

(2) The disclosure of regulatory capital ratios and any other capital ratios specified by the Corporation under this section must include the beginning value, ending value, and minimum value of each ratio over the planning horizon.

Dated at Washington, DC, this 9th day of October, 2012.

By order of the Board of Directors.

Robert E. Feldman,

Executive Secretary, Federal Deposit Insurance Corporation.

BILLING CODE 6714-01-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 97

[Docket No. 30865; Amdt. No. 3500]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Final rule.

SUMMARY: This rule establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective October 15, 2012. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the **Federal Register** as of October 15, 2012.

ADDRESSES: Availability of matter incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591;
 2. The FAA Regional Office of the region in which the affected airport is located;
 3. The National Flight Procedures Office, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,
 4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.
- Availability—*All SIAPs are available online free of charge. Visit nfdc.faa.gov

to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from:

1. FAA Public Inquiry Center (APA-200), FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591; or
2. The FAA Regional Office of the region in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Richard A. Dunham III, Flight Procedure Standards Branch (AFS-420) Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd., Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082 Oklahoma City, OK. 73125) telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) by amending the referenced SIAPs. The complete regulatory description of each SIAP is listed on the appropriate FAA Form 8260, as modified by the National Flight Data Center (FDC)/Permanent Notice to Airmen (P-NOTAM), and is incorporated by reference in the amendment under 5 U.S.C. 552(a), 1 CFR part 51, and § 97.20 of Title 14 of the Code of Federal Regulations.

The large number of SIAPs, their complex nature, and the need for a special format make their verbatim publication in the **Federal Register** expensive and impractical. Further, airmen do not use the regulatory text of the SIAPs, but refer to their graphic depiction on charts printed by publishers of aeronautical materials. Thus, the advantages of incorporation by reference are realized and publication of the complete description of each SIAP contained in FAA form documents is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAP and the corresponding effective dates. This amendment also identifies the airport and its location, the procedure and the amendment number.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP as amended in the transmittal. For safety and timeliness of change considerations, this amendment incorporates only specific changes contained for each SIAP as modified by FDC/P-NOTAMs.

The SIAPs, as modified by FDC P-NOTAM, and contained in this amendment are based on the criteria contained in the U.S. Standard for

Terminal Instrument Procedures (TERPS). In developing these changes to SIAPs, the TERPS criteria were applied only to specific conditions existing at the affected airports. All SIAP amendments in this rule have been previously issued by the FAA in a FDC NOTAM as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for all these SIAP amendments requires making them effective in less than 30 days.

Because of the close and immediate relationship between these SIAPs and safety in air commerce, I find that notice and public procedure before adopting these SIAPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making these SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are

necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

Air Traffic Control, Airports, Incorporation by reference, and Navigation (Air).

Issued in Washington, DC on September 28, 2012.

Ray Towles,
Deputy Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal Regulations, Part 97, 14

CFR part 97, is amended by amending Standard Instrument Approach Procedures, effective at 0901 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

- 1. The authority citation for part 97 continues to read as follows:
Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

- 2. Part 97 is amended to read as follows:

§§ 97.23, 97.25, 97.27, 97.29, 97.31, 97.33, 97.35 [Amended]

By amending: § 97.23 VOR, VOR/DME, VOR or TACAN, and VOR/DME or TACAN; § 97.25 LOC, LOC/DME, LDA, LDA/DME, SDF, SDF/DME; § 97.27 NDB, NDB/DME; § ILS, ILS/DME, MLS, MLS/DME, MLS/RNAV; § 97.31 RADAR SIAPs; § 97.33 RNAV SIAPs; and § 97.35 COPTER SIAPs, Identified as follows:

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION**Federal Aviation Administration****14 CFR Part 97**

[Docket No. 30864 ; Amdt. No. 3499]

Standard Instrument Approach Procedures, and Takeoff Minimums and Obstacle Departure Procedures; Miscellaneous Amendments**AGENCY:** Federal Aviation Administration (FAA), DOT.**ACTION:** Final rule.

SUMMARY: This rule establishes, amends, suspends, or revokes Standard Instrument Approach Procedures (SIAPs) and associated Takeoff Minimums and Obstacle Departure Procedures for operations at certain airports. These regulatory actions are needed because of the adoption of new or revised criteria, or because of changes occurring in the National Airspace System, such as the commissioning of new navigational facilities, adding new obstacles, or changing air traffic requirements. These changes are designed to provide safe and efficient use of the navigable airspace and to promote safe flight operations under instrument flight rules at the affected airports.

DATES: This rule is effective October 15, 2012. The compliance date for each SIAP, associated Takeoff Minimums, and ODP is specified in the amendatory provisions.

The incorporation by reference of certain publications listed in the regulations is approved by the Director of the **Federal Register** as of October 15, 2012.

ADDRESSES: Availability of matters incorporated by reference in the amendment is as follows:

For Examination—

1. FAA Rules Docket, FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591;

2. The FAA Regional Office of the region in which the affected airport is located;

3. The National Flight Procedures Office, 6500 South MacArthur Blvd., Oklahoma City, OK 73169 or,

4. The National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: <http://www.archives.gov/>

*federal register/
code_of_federal_regulations/
ibr_locations.html.*

*Availability—*All SIAPs and Takeoff Minimums and ODPs are available online free of charge. Visit <http://www.nfdc.faa.gov> to register. Additionally, individual SIAP and Takeoff Minimums and ODP copies may be obtained from:

1. FAA Public Inquiry Center (APA-200), FAA Headquarters Building, 800 Independence Avenue SW., Washington, DC 20591; or

2. The FAA Regional Office of the region in which the affected airport is located.

FOR FURTHER INFORMATION CONTACT:

Richard A. Dunham III, Flight Procedure Standards Branch (AFS-420), Flight Technologies and Programs Division, Flight Standards Service, Federal Aviation Administration, Mike Monroney Aeronautical Center, 6500 South MacArthur Blvd. Oklahoma City, OK. 73169 (Mail Address: P.O. Box 25082, Oklahoma City, OK 73125) Telephone: (405) 954-4164.

SUPPLEMENTARY INFORMATION: This rule amends Title 14 of the Code of Federal Regulations, Part 97 (14 CFR part 97), by establishing, amending, suspending, or revoking SIAPs, Takeoff Minimums and/or ODPS. The complete regulators description of each SIAP and its associated Takeoff Minimums or ODP for an identified airport is listed on FAA form documents which are incorporated by reference in this amendment under 5 U.S.C. 552(a), 1 CFR part 51, and 14 CFR part 97.20. The applicable FAA Forms are FAA Forms 8260-3, 8260-4, 8260-5, 8260-15A, and 8260-15B when required by an entry on 8260-15A.

The large number of SIAPs, Takeoff Minimums and ODPs, in addition to their complex nature and the need for a special format make publication in the **Federal Register** expensive and impractical. Furthermore, airmen do not use the regulatory text of the SIAPs, Takeoff Minimums or ODPs, but instead refer to their depiction on charts printed by publishers of aeronautical materials. The advantages of incorporation by reference are realized and publication of the complete description of each SIAP, Takeoff Minimums and ODP listed on FAA forms is unnecessary. This amendment provides the affected CFR sections and specifies the types of SIAPs and the effective dates of the associated Takeoff Minimums and ODPs. This amendment also identifies the airport and its location, the procedure, and the amendment number.

The Rule

This amendment to 14 CFR part 97 is effective upon publication of each separate SIAP, Takeoff Minimums and ODP as contained in the transmittal. Some SIAP and Takeoff Minimums and textual ODP amendments may have been issued previously by the FAA in a Flight Data Center (FDC) Notice to Airmen (NOTAM) as an emergency action of immediate flight safety relating directly to published aeronautical charts. The circumstances which created the need for some SIAP and Takeoff Minimums and ODP amendments may require making them effective in less than 30 days. For the remaining SIAPs and Takeoff Minimums and ODPS, an effective date at least 30 days after publication is provided.

Further, the SIAPs and Takeoff Minimums and ODPS contained in this amendment are based on the criteria contained in the U.S. Standard for Terminal Instrument Procedures (TERPS). In developing these SIAPs and Takeoff Minimums and ODPs, the TERPS criteria were applied to the conditions existing or anticipated at the affected airports. Because of the close and immediate relationship between these SIAPs, Takeoff Minimums and ODPs, and safety in air commerce, I find that notice and public procedures before adopting these SIAPs, Takeoff Minimums and ODPs are impracticable and contrary to the public interest and, where applicable, that good cause exists for making some SIAPs effective in less than 30 days.

Conclusion

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. It, therefore—(1) is not a “significant regulatory action” under Executive Order 12866; (2) is not a “significant rule” under DOT Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. For the same reason, the FAA certifies that this amendment will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR part 97

Air Traffic Control, Airports, Incorporation by reference, and Navigation (Air).

Issued in Washington, DC, on September 28, 2012.

Ray Towles,

Deputy Director, Flight Standards Service.

Adoption of the Amendment

Accordingly, pursuant to the authority delegated to me, Title 14, Code of Federal Regulations, Part 97 (14 CFR part 97) is amended by establishing, amending, suspending, or revoking Standard Instrument Approach Procedures and/or Takeoff Minimums and/or Obstacle Departure Procedures effective at 0902 UTC on the dates specified, as follows:

PART 97—STANDARD INSTRUMENT APPROACH PROCEDURES

■ 1. The authority citation for part 97 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40106, 40113, 40114, 40120, 44502, 44514, 44701, 44719, 44721–44722.

■ 2. Part 97 is amended to read as follows:

SECURITIES AND EXCHANGE COMMISSION

17 CFR Part 232

[Release Nos. 33-9364; 34-67978; 39-2486; IC-30227]

Adoption of Updated EDGAR Filer Manual

AGENCY: Securities and Exchange Commission.

ACTION: Final rule.

SUMMARY: The Securities and Exchange Commission (the Commission) is adopting revisions to the Electronic Data Gathering, Analysis, and Retrieval System (EDGAR) Filer Manual and related rules to reflect updates to the EDGAR system. The revisions are being made primarily to support public dissemination of previously submitted draft registration statements either under the JOBS Act or the Division of Corporation Finance's foreign private issuer policy; support PDF as an official filing format for submission type 40-33 and 40-33/A; support changes in the beneficiary account and receiver American Bank Association number and name for fee payments made for filings; and allow a future period date up to the next business date for Form 8-K. The EDGAR system is scheduled to be upgraded to support this functionality on October 1, 2012.

DATES: Effective October 15, 2012. The incorporation by reference of the EDGAR Filer Manual is approved by the Director of the **Federal Register** as of October 15, 2012.

FOR FURTHER INFORMATION CONTACT: In the Division of Corporation Finance, for questions on draft registration statements and Form 8-K, contact Jeffrey Thomas at (202) 551-3600; in the Division of Investment Management for questions concerning submission types 40-33 and 40-33/A, contact Barry Miller at (202) 551-6796; and in the Office of Information Technology, contact Rick Heroux at (202) 551-8800.

SUPPLEMENTARY INFORMATION: We are adopting an updated EDGAR Filer Manual, Volume I and Volume II. The Filer Manual describes the technical formatting requirements for the preparation and submission of electronic filings through the EDGAR system.¹ It also describes the requirements for filing using

EDGARLink Online and the Online Forms/XML Web site.

The revisions to the Filer Manual reflect changes within Volume I entitled EDGAR Filer Manual, Volume I: "General Information," Version 14 (October 2012) and Volume II entitled EDGAR Filer Manual, Volume II: "EDGAR Filing," Version 21 (October 2012). The updated manual will be incorporated by reference into the Code of Federal Regulations.

The Filer Manual contains all the technical specifications for filers to submit filings using the EDGAR system. Filers must comply with the applicable provisions of the Filer Manual in order to assure the timely acceptance and processing of filings made in electronic format.² Filers may consult the Filer Manual in conjunction with our rules governing mandated electronic filing when preparing documents for electronic submission.³

The EDGAR system will be upgraded to Release 12.2 on October 1, 2012 and will introduce the following changes: EDGAR will be updated to support public dissemination of the confidential draft registration statements, submission types DRS and DRS/A. Issuers that submitted draft registrations either under the JOBS Act or the Division of Corporation Finance's foreign private issuer policy will be able to disseminate their previously submitted draft registration statements. A new correspondence type, DRSLTR, will be available to submit any correspondences related to draft registration statements. The options to disseminate draft registration statements as well as to create DRSLTR submissions can be accessed by selecting the "Draft Reg. Statement" link on the EDGAR Filing Web site.

Form ID application will be updated with "JOBS Act § 106" or "Foreign Private Issuer Policy" options to allow applicants to indicate that they are submitting an application for EDGAR access to file draft registration statements. These options will replace the "Access codes will be used to submit draft registration statement" check box.

Submission form types 8-K, 8-K/A, 8-K12B, 8-K12B/A, 8-K12G3, 8-K12G3/A, 8-K15D5, and 8-K15D5/A will allow a future period date up to the next business date from the date of submission, if the time of submission is

¹ We originally adopted the Filer Manual on April 1, 1993, with an effective date of April 26, 1993. Release No. 33-6986 (April 1, 1993) [58 FR 18638]. We implemented the most recent update to the Filer Manual on August 30, 2012. See Release No. 33-9353 (September 6, 2012) [77 FR 54806].

² See Rule 301 of Regulation S-T (17 CFR 232.301).

³ See Release No. 33-9353 (September 6, 2012) [77 FR 54806] in which we implemented EDGAR Release 12.1. For additional history of Filer Manual rules, please see the cites therein.

between 05:31 p.m. EST and 10:00 p.m. EST.

EDGAR will be updated to allow filers to submit, on a voluntary basis, copies of litigation documents pursuant to Section 33 of the Investment Company Act of 1940 (submission types 40–33 and 40–33/A) in Portable Document Format (PDF) as an official filing format. EDGAR will continue to allow ASCII and HTML as official filing formats for submission types 40–33 and 40–33/A.

Starting October 1, 2012, filers initiating FEDWIRE transactions to make deposits to pay their filing fees will need to use a new US Treasury beneficiary account number (850000001001), as well as a new American Bank Association (ABA) number and bank name for the receiving bank (021030004/TREAS NYC). The current bank account number (152307768324) and receiving bank ABA number and name (081000210/US BANK) will be invalid from this date forward. Filer may obtain the new US Treasury account number and ABA number from the notice posted on the “Information for EDGAR Filers” web page prior to October 1, 2012 and by accessing the updated “Instructions for Wire Transfer (FEDWIRE) and Check Payment of SEC Filing Fees” by logging onto the EDGAR Filing Web site and accessing the “Fees” link on the EDGAR menu thereafter.

The new online version of Form N–SAR, originally planned for deployment on July 9, 2012, has been delayed and will not go into production any sooner than January 14th 2013. The specific deployment date will be announced on the Commission’s public Web site’s “Information for EDGAR Filers” page (<http://www.sec.gov/info/edgar.shtml>). Filers should continue to use the EDGAR Filer Manual, Volume III: N–SAR Supplement to file their N–SAR submissions. When the online version of Form N–SAR is deployed, EDGAR Filer Manual, Volume III: N–SAR Supplement will be retired. Instructions to file the online version of Form N–SAR addressed in Chapter 9 of EDGAR Filer Manual, Volume II: EDGAR Filing should then be followed.

Along with the adoption of the Filer Manual, we are amending Rule 301 of Regulation S–T to provide for the incorporation by reference into the Code of Federal Regulations of today’s revisions. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51.

You may obtain paper copies of the updated Filer Manual at the following address: Public Reference Room, U.S. Securities and Exchange Commission,

100 F Street, NE., Room 1543, Washington DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. We will post electronic format copies on the Commission’s Web site; the address for the Filer Manual is <http://www.sec.gov/info/edgar.shtml>.

Since the Filer Manual and the corresponding rule changes relate solely to agency procedures or practice, publication for notice and comment is not required under the Administrative Procedure Act (APA).⁴ It follows that the requirements of the Regulatory Flexibility Act⁵ do not apply.

The effective date for the updated Filer Manual and the rule amendments is October 15, 2012. In accordance with the APA,⁶ we find that there is good cause to establish an effective date less than 30 days after publication of these rules. The EDGAR system upgrade to Release 12.2 is scheduled to become available on October 1, 2012. The Commission believes that establishing an effective date less than 30 days after publication of these rules is necessary to coordinate the effectiveness of the updated Filer Manual with the system upgrade.

Statutory Basis

We are adopting the amendments to Regulation S–T under Sections 6, 7, 8, 10, and 19(a) of the Securities Act of 1933,⁷ Sections 3, 12, 13, 14, 15, 23, and 35A of the Securities Exchange Act of 1934,⁸ Section 319 of the Trust Indenture Act of 1939,⁹ and Sections 8, 30, 31, and 38 of the Investment Company Act of 1940.¹⁰

■ 2. Section 232.301 is revised to read as follows:

§ 232.301 EDGAR Filer Manual.

Filers must prepare electronic filings in the manner prescribed by the EDGAR Filer Manual, promulgated by the Commission, which sets out the technical formatting requirements for electronic submissions. The requirements for becoming an EDGAR Filer and updating company data are set forth in the updated EDGAR Filer Manual, Volume I: “General Information,” Version 14 (October 2012). The requirements for filing on EDGAR are set forth in the updated EDGAR Filer Manual, Volume II: “EDGAR Filing,” Version 21 (October 2012). All of these provisions have been incorporated by reference into the Code of Federal Regulations, which action was approved by the Director of the **Federal Register** in accordance with 5 U.S.C. 552(a) and 1 CFR part 51. You must comply with these requirements in order for documents to be timely received and accepted. You can obtain paper copies of the EDGAR Filer Manual from the following address: Public Reference Room, U.S. Securities and Exchange Commission, 100 F Street, NE., Room 1543, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Electronic copies are available on the Commission’s Web site. The address for the Filer Manual is <http://www.sec.gov/info/edgar.shtml>. You can also inspect the document at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030, or go to:

http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

Dated: October 4, 2012.

By the Commission.

Kevin M. O’Neill,

Deputy Secretary.

[FR Doc. 2012–24998 Filed 10–12–12; 8:45 am]

BILLING CODE 8011–01–P

DEPARTMENT OF LABOR**Occupational Safety and Health Administration****29 CFR Parts 1910, 1915, and 1926****[Docket No. OSHA-H022K-2006-0062]****RIN 1218-AC20****Hazard Communication Standard; Approval of Information Collection Requirements****AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.**ACTION:** Final rule; notice of the Office of Management and Budget's (OMB) approval of information collection requirements.

SUMMARY: The Occupational Safety and Health Administration (OSHA) is announcing that the Office of Management and Budget (OMB) approved the revised information collection requirements contained in the Hazard Communication Standard (HCS) (29 CFR parts 1910, 1915, and 1926) under the Paperwork Reduction Act of 1995 (PRA-95). The OMB control number is 1218-0072.

DATES: The collections of information contained in the final rule published March 26, 2012 (77 FR 17573) are effective October 15, 2012.

FOR FURTHER INFORMATION CONTACT: Theda Kenney or Todd Owen, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor, Room N-3609, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-2222.

SUPPLEMENTARY INFORMATION: On March 26, 2012, OSHA published a final rule that aligned the existing HCS with the United Nations Globally Harmonized System of Classification and Labeling of Chemicals that benefits workers by reducing confusion about chemical hazards in the workplace, facilitating safety training and improving the understanding of hazards, especially for low literacy workers. The final rule revised existing collection of information (paperwork) requirements that were approved by the Office of Management and Budget (OMB) under PRA-95, 44 U.S.C. 3501 et seq., and OMB's regulations at 5 CFR part 1320.

Hazard communication is currently addressed by many different international, national, and State authorities. These existing requirements are not always consistent and often contain different definitions of hazards and varying provisions for what information is required on labels and safety data sheets (SDSs). The final

standard harmonizes the U.S. system with international norms and as a result would enhance worker safety and facilitate international trade. The final rule's modifications to the Hazard Communication Standard's collection of information requirements include: (1) Revised criteria for classification of chemical hazards; (2) revised labeling provisions that include requirements for use of standardized signal words, pictograms, hazard statements, and precautionary statements; (3) a specified format for SDSs; and (4) related revisions to definitions of terms used in the Standard and to requirements for employee training on labels and SDSs.

As required by PRA-95, the **Federal Register** notice for the Hazard Communication final rule stated that the Department of Labor would publish a notice in the **Federal Register** announcing the results of OMB's reviews. On March 26, 2012, OSHA submitted a revised Hazard Communication ICR for the final rule to OMB for approval in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520). On June 11, 2012, OMB approved the revised collections of information contained in the final rule. This approval expires on June 30, 2015.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520), OMB approved the collections of information contained in the HCS, and assigned these collections of information OMB control number 1218-0072. This approval expires on June 30, 2015. In accordance with 5 CFR 1320.5(b), an Agency may not conduct or sponsor, and a person need not respond to, a collection of information unless the collection displays a valid OMB control number. Also, notwithstanding any other provision of law, no employer shall be subject to penalty for failing to comply with a collection of information if the collection of information does not display a currently valid OMB control number.

Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is the Paperwork Reduction Act of 1995 (44 U.S.C. 3506 et seq.) and Secretary of Labor's Order No. 1-2012 (77 FR 3912).

Signed at Washington, DC on October 2, 2012.

David Michaels,*Assistant Secretary of Labor for Occupational Safety and Health.*

[FR Doc. 2012-24595 Filed 10-12-12; 8:45 am]

BILLING CODE 4510-26-P**PENSION BENEFIT GUARANTY CORPORATION****29 CFR Part 4022****Benefits Payable in Terminated Single-Employer Plans; Interest Assumptions for Paying Benefits****AGENCY:** Pension Benefit Guaranty Corporation.**ACTION:** Final rule.

SUMMARY: This final rule amends the Pension Benefit Guaranty Corporation's regulation on Benefits Payable in Terminated Single-Employer Plans to prescribe interest assumptions under the regulation for valuation dates in November 2012. The interest assumptions are used for paying benefits under terminating single-employer plans covered by the pension insurance system administered by PBGC.

DATES: Effective November 1, 2012.**FOR FURTHER INFORMATION CONTACT:**

Catherine B. Klion (*Klion.Catherine@pbgc.gov*), Assistant General Counsel for Regulatory Affairs, Pension Benefit Guaranty Corporation, 1200 K Street, NW., Washington, DC 20005, 202-326-4024. (TTY/TDD users may call the Federal relay service toll-free at 1-800-877-8339 and ask to be connected to 202-326-4024.)

SUPPLEMENTARY INFORMATION: PBGC's regulation on Benefits Payable in Terminated Single-Employer Plans (29 CFR Part 4022) prescribes actuarial assumptions—including interest assumptions—for paying plan benefits under terminating single-employer plans covered by title IV of the Employee Retirement Income Security Act of 1974. The interest assumptions in the regulation are also published on PBGC's Web site (<http://www.pbgc.gov>).

PBGC uses the interest assumptions in Appendix B to Part 4022 to determine whether a benefit is payable as a lump sum and to determine the amount to pay. Appendix C to Part 4022 contains interest assumptions for private-sector pension practitioners to refer to if they wish to use lump-sum interest rates determined using PBGC's historical methodology. Currently, the rates in Appendices B and C of the benefit payment regulation are the same.

The interest assumptions are intended to reflect current conditions in the financial and annuity markets. Assumptions under the benefit payments regulation are updated monthly. This final rule updates the benefit payments interest assumptions for November 2012.¹

The November 2012 interest assumptions under the benefit payments regulation will be 0.75 percent for the period during which a benefit is in pay status and 4.00 percent during any years preceding the benefit's placement in pay status. In comparison with the interest assumptions in effect for October 2012, these interest assumptions are unchanged.

PBGC has determined that notice and public comment on this amendment are impracticable and contrary to the public interest. This finding is based on the need to determine and issue new

interest assumptions promptly so that the assumptions can reflect current market conditions as accurately as possible.

Because of the need to provide immediate guidance for the payment of benefits under plans with valuation dates during November 2012, PBGC finds that good cause exists for making the assumptions set forth in this amendment effective less than 30 days after publication.

PBGC has determined that this action is not a "significant regulatory action" under the criteria set forth in Executive Order 12866.

Because no general notice of proposed rulemaking is required for this amendment, the Regulatory Flexibility Act of 1980 does not apply. See 5 U.S.C. 601(2).

List of Subjects in 29 CFR Part 4022

Employee benefit plans, Pension insurance, Pensions, Reporting and recordkeeping requirements.

In consideration of the foregoing, 29 CFR part 4022 is amended as follows:

PART 4022—BENEFITS PAYABLE IN TERMINATED SINGLE-EMPLOYER PLANS

■ 1. The authority citation for part 4022 continues to read as follows:

Authority: 29 U.S.C. 1302, 1322, 1322b, 1341(c)(3)(D), and 1344.

■ 2. In appendix B to part 4022, Rate Set 229, as set forth below, is added to the table.

Appendix B to Part 4022—Lump Sum Interest Rates For PBGC Payments

* * * * *

Rate set	For plans with a valuation date		Immediate annuity rate (percent)	Deferred annuities (percent)				
	On or after	Before		i_1	i_2	i_3	n_1	n_2
*	*	*	*	*	*	*	*	*
229	11-1-12	12-1-12	0.75	4.00	4.00	4.00	7	8

■ 3. In appendix C to part 4022, Rate Set 229, as set forth below, is added to the table.

Appendix C to Part 4022—Lump Sum Interest Rates For Private-Sector Payments

* * * * *

Rate set	For plans with a valuation date		Immediate annuity rate (percent)	Deferred annuities (percent)				
	On or after	Before		i_1	i_2	i_3	n_1	n_2

BILLING CODE 7709-01-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 104

46 CFR Parts 10, 11, 12, and 15

[Docket No. USCG-2012-0917]

Policy Letters on the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978

AGENCY: Coast Guard, DHS.

ACTION: Notice of availability.

SUMMARY: The Coast Guard announces the availability of three policy letters providing guidance to vessels and mariners subject to the International Convention on Standards of Training, Certification and Watchkeeping for Seafarers, 1978, as amended (STCW). These letters provide guidance on: The hours of rest requirements of the 2010 amendments to the STCW Convention and Code; issuance of endorsements and approval of training for Vessel Personnel with Designated Security Duties (VPDSD) and vessel personnel

¹ Appendix B to PBGC's regulation on Allocation of Assets in Single-Employer Plans (29 CFR Part 4044) prescribes interest assumptions for valuing

benefits under terminating covered single-employer plans for purposes of allocation of assets under

ERISA section 4044. Those assumptions are updated quarterly.

requiring security awareness training; and issuance of other endorsements and approval of other training to meet the 2010 amendments. These letters are necessary to provide guidance to affected parties until regulations implementing amendments to the STCW are promulgated.

DATES: The three letters are available for viewing beginning October 15, 2012.

ADDRESSES: The policy letters are available for viewing on the Coast Guard's National Maritime Center Web site at <http://www.uscg.mil/nmc/>.

The docket for this notice is available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may also find this docket on the Internet by going to <http://www.regulations.gov>, inserting USCG-2012-0917 in the "Keyword" box, and then clicking "Search."

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or email the U.S. Coast Guard, Mariner Credentialing Program Policy Division (CG-CVC-4) at (202) 372-2357 or MMCPolicy@uscg.mil. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Background and Purpose

In 2007, the International Maritime Organization (IMO) embarked on a comprehensive review of the entire STCW Convention and STCW Code. The Parties adopted amendments on June 25, 2010 at the STCW Diplomatic Conference in Manila, Philippines, and the amendments entered into force for all ratifying countries on January 1, 2012.

The STCW Convention is not self-implementing; therefore, the U.S., as a signatory to the Convention, must initiate regulatory changes to ensure full implementation of the amendments to the STCW Convention and STCW Code. The U.S. implements these provisions under the Convention and under the authority of United States domestic laws in United States Code Titles 5, 14, 33, 46, and pursuant to 46 CFR, Chapter I, Subchapter B.

The Coast Guard published a Supplemental Notice of Proposed Rulemaking (SNPRM) on August 1, 2011 (76 FR 45908), proposing changes to implement the STCW Convention and Code, to address the comments received

from the public in response to the Notice of Proposed Rulemaking published on November 17, 2009 (74 FR 59354), and to incorporate the 2010 amendments to the STCW Convention that came into force on January 1, 2012. The public comment period for the SNPRM ended on September 30, 2011. The Coast Guard intends to publish a final rule to implement amendments to the STCW, including the 2010 amendments, and ensure that the U.S. is meeting its obligations under the Convention.

Description of Policy Letters

The following three policy letters provide guidance to parties affected by STCW:

1. Hours of Rest

This policy letter provides guidance to clarify the changes associated with the hours of rest requirements found within the 2010 amendments to the STCW Convention and Code. This policy will provide information on the changes to the hours of rest requirements that are now being monitored internationally. It also provides recommended methods to lessen the port state control impact on U.S. vessels while operating abroad until the Coast Guard promulgates the final rule implementing STCW.

2. Security Endorsements

This policy letter provides guidance on the issuance of endorsements and approval of training for Vessel Personnel with Designated Security Duties and vessel personnel requiring security awareness training under the 2010 amendments to the STCW Convention and Code. The IMO has provided an alternative means of compliance until January 1, 2014, and the Coast Guard has determined that the requirements in 33 CFR 104.220 and 104.225 can be used to comply with the 2010 amendments under this alternative. Endorsements will be issued based upon the documentary evidence that an individual has complied with existing regulations.

3. Issuing Endorsements and Approving Training

This policy letter provides guidance on issuance of endorsements other than the security endorsements discussed above, and approval of other related training to meet the 2010 amendments to the STCW Convention and Code. The guidance in this document is intended to assist industry and individual mariners to meet the requirements of STCW and 46 CFR, Chapter I, Subchapter B. This policy provides

methods for issuing STCW endorsements established by the 2010 amendments that may be obtained by meeting current domestic requirements. In addition to the information regarding the STCW endorsements, the policy letter announces that the Coast Guard will consider granting approval of training to meet various provisions of the 2010 amendments.

This notice is issued under authority of 5 U.S.C. 552(a) and United States Code Titles 5, 14, 33, 46.

Dated: September 28, 2012.

Paul F. Thomas,

Captain, U.S. Coast Guard, Director of Inspections and Compliance.

Wright, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

On May 8, 2012, we published in the **Federal Register** a notice of proposed rulemaking (NPRM) entitled *Inland Waterways Navigation Regulations (77 FR 27007)*. We received 1 comment. Specifically, Lake Carriers' Association (LCA) submitted a letter on May 15, 2012 in which LCA offered its full support for this rulemaking as proposed in the NPRM. No other comments were received. No public meeting was requested, and none was held.

B. Basis and Purpose

As discussed in the aforesaid NPRM, representatives from LCA, the Lakes Pilots Association, the International Shipmasters Association, and the Canadian Shipowners Association previously made a request of the Coast Guard regarding 33 CFR Part 162. Particularly, these groups requested that the Coast Guard amend, via federal rulemaking, 33 CFR 162.138(a)(1)(ii), which requires vessels on the Detroit River north of the Detroit River Light to operate at no more than 12 statute miles per hour. In response to that request, the Coast Guard's Ninth District Commander, in consultation with the Captain of the Port, Sector Detroit, Windsor Port Authority, Transport Canada, and the Canadian Coast Guard, assessed the necessity and utility of the aforementioned regulatory provision and determined that the southern point of the restricted speed area in 33 CFR 162.138(a)(1)(ii) should be relocated to a point approximately 2.5 statute miles to the north at the D33 stationary light. The reasoning for the Ninth District Commander's decision is discussed in the following paragraph.

The speed restriction in 33 CFR 162.138(a)(1)(ii) requires vessels on the Detroit River north of the Detroit River Light to operate at no more than 12 statute miles per hour. This restriction serves two purposes. First, it is intended to prevent collisions and groundings. (See 33 CFR 162.130(a)). Second, it is intended to limit wake damage to vessels and shore structures (See 60 FR 35701–01). Because the Detroit River Light is several miles into Lake Erie and because the channel between the Detroit River Light and the D33 stationary light is roughly twelve-hundred feet wide, the Ninth District Commander has

determined that limiting speed south of the D33 stationary light is not necessary to prevent wake damage or to prevent collisions and groundings. Thus, 33 CFR 162.138(a)(1)(ii), as currently written, serves as an unnecessary restriction on vessel operations. Moreover, this unnecessary restriction is exacerbated by the fact that upbound vessels must decelerate well in advance of the Detroit River Light in order to attain the maximum speed at the light itself.

Pursuant to the authority contained in the Ports and Waterways Safety Act, (33 U.S.C. 1221 *et seq.*), as delegated to the Commandant of the Coast Guard via Department of Homeland Security Delegation No. 0170.1 and to Coast Guard District Commanders pursuant to 33 CFR 1.05–1(e)(1)(vii), the Ninth District Commander is amending 33 CFR 162.138(a)(1)(ii) to alleviate unnecessary restrictions on commercial vessel operations.

C. Discussion of Comments, Changes, and the Final Rule

As mentioned above, only one comment was received in response to the NPRM published on May 8, 2012. In that comment, LCA offered its full support for the proposed rulemaking.

This Final Rule is identical to the rule proposed in that NPRM. As stated in the NPRM, because 33 CFR 162.138, as currently written, unnecessarily restricts commercial vessel operations, the Ninth District Commander is amending 33 CFR 162.138 to reduce the size of the restricted speed area currently delineated in 33 CFR 162.138(a)(1)(ii). Particularly, this rule relocates the southern point of the restricted speed area from its current location at the Detroit River Light to a new location near the D33 stationary light.

D. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes or executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, *Regulatory Planning and Review*, as supplemented by Executive Order 13563, *Improving Regulation and Regulatory Review*, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

It is not “significant” under the regulatory policies and procedures of the Department of Homeland Security (DHS). We conclude that this proposed rule is not a significant regulatory action because relocating the southern point of the restricted speed area delineated in 33 CFR 162.138(a)(1)(ii) will lessen navigation restrictions on the public and on private industry. Thus, we anticipate that it will not adversely affect the economy, will not interfere with other agencies, will not adversely alter the budget of any grant or loan recipients, and will not raise any novel legal or policy issues.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard received no comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule would not have a significant economic impact on a substantial number of small entities. This rule will affect the following entities, some of which might be small entities: The owners and operators of vessels intending to transit between the Detroit River Light and the D33 stationary. However, the relocation of the southern point of the restricted speed area delineated in 33 CFR 162.138(a)(1)(ii) will not have a significant economic impact on a substantial number of small entities because it will lessen navigation restrictions on the public and private industry.

3. Assistance for Small Entities

In keeping with section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture

Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule does not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

7. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

8. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

9. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and

does not create an environmental risk to health or risk to safety that may disproportionately affect children.

10. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

11. Energy Effects

This action is not a "significant energy action" under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

12. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

13. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321-4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves amendments to navigation regulations and thus, is categorically excluded under paragraph 34(i) of the Commandant Instruction. A Categorical Exclusion Determination (CED) and a preliminary environmental analysis checklist are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

List of Subjects 33 CFR Part 162

Navigation (water), Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR Part 162 as follows:

PART 162—INLAND WATERWAYS NAVIGATION REGULATIONS

■ 1. The authority citation for part 162 continues to read as follows:

Authority: 33 U.S.C. 1231; Department of Homeland Security Delegation No. 0170.1.

§ 162.138 [Amended]

■ 2. In § 162.138(a)(1)(ii), remove the words "Detroit River Light" and in their place add the words "D33 stationary light in the Detroit River entrance".

Dated: October 1, 2012.

M.N. Parks,

Rear Admiral, U.S. Coast Guard, Commander, Ninth Coast Guard District.

33 CFR Part 165

[Docket No. USCG-2012-0191]

RIN 1625-AA11

Regulated Navigation Area; Columbus Day Weekend, Biscayne Bay, Miami, FL

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is amending the Columbus Day weekend regulated navigation area on Biscayne Bay in Miami, Florida. The amended regulated navigation area alters the boundaries of the area and expands the enforcement period. These regulations are necessary to protect the public during Columbus Day weekend; a period that has historically had a significant concentration of persons and vessels on the waters of Biscayne Bay. To ensure the public's safety, all vessels within the regulated navigation area are: Required to transit the regulated navigation area at no more than 15 knots; subject to control by the Coast Guard; and required to follow the instructions of all law enforcement vessels in the area.

DATES: This rule will be effective November 14, 2012 and will be enforced annually on Columbus Day weekend, starting at 12:01 p.m. on the Saturday before Columbus Day, through 2 a.m. on Monday (the Columbus Day holiday). Columbus Day is the federally recognized holiday occurring annually on the second Monday in October.

ADDRESSES: Documents indicated in this preamble are part of docket USCG-2012-0191. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket

Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Lieutenant Junior Grade Mike H. Wu, Sector Miami Prevention Department, Coast Guard; telephone (305) 535–7576, email Mike.H.Wu@uscg.mil. If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR **Federal Register**
NPRM Notice of Proposed Rulemaking
RNA Regulated Navigation Area

I. Regulatory History and Information

On July 25, 2012, we published a Notice of Proposed Rulemaking (NPRM) entitled USCG–2012–0191 in the **Federal Register** (73 FR 2012–18151). We received no comments on the proposed rule. No public meeting was requested, and none was held.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Our experience in administering the current Biscayne Bay Columbus Day regulated navigation area (RNA), established in 2011 and contained in 33 CFR 165.779, persuaded us that altering the dimensions of the RNA and slightly extending the hours of its enforcement is necessary to better protect the public. During this period, numerous vessels concentrate on the waters of Biscayne Bay during the high traffic hours of Columbus Day weekend. This rule is necessary to protect the public on this congested waterway, including during Columbus Day 2012. Under these circumstances, it would be contrary to the public interest in maintaining safety in Biscayne Bay to delay the effective date of the final.

II. Basis and Purpose

The legal basis for the rule is the Coast Guard's authority to establish regulated navigation areas and other limited access areas: 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5; Public Law 107–295, 116

Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

The purpose of the rule is to ensure the safe transit of vessels and to protect persons, vessels, and the marine environment within the regulated navigation area during the Columbus Day weekend.

III. Discussion of Comments, Changes and the Final Rule

While no comments were receiving following the NPRM, the final rule has been modified by clarifying that Columbus Day weekend is the weekend preceding the second Monday of October.

This final rule revises the existing Biscayne Bay Columbus Day RNA in 33 CFR 165.779 by altering the RNA's boundaries and revising the enforcement period, extending it by two hours into the early morning of Columbus Day. The revised RNA encompasses certain waters of Biscayne Bay between Rickenbacker Causeway Bridge and Coon Point on Elliot Key in Miami, Florida.

All vessels within the regulated navigation area are: (1) Required to transit the area at no more than 15 knots; (2) subject to control by the Coast Guard; and (3) required to follow the instructions of all law enforcement vessels in the area.

The regulated navigation area is necessary to ensure the safety of the public during a time of heightened vessel traffic in the aforementioned area. Each year numerous recreation vessels, which include an annual sailing regatta, congregate in the waters of Biscayne Bay during Columbus Day weekend. The close proximity of numerous vessels within the proposed regulated navigation area during Columbus Day weekend poses a hazardous condition.

The regulated navigation area will result in the transiting of vessels at a reduced speed, thereby significantly reducing the threat of vessel collisions. Requiring vessels within the regulated navigation area to transit at no more than 15 knots will also enable law enforcement officials to identify, respond to, query, and stop operators who may pose a hazard to other vessels in the area. Nothing in this regulation alleviates the requirement for vessel operators from complying with all other federal, state, and local laws in the area, including manatee slow speed zones.

IV. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses

based on a number of these statutes or executive orders.

A. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

The economic impact of this rule is not significant for the following reasons: (1) The regulated navigation area will be enforced for less than 2 days each year; (2) although, during the enforcement period, vessels are required to transit the area at no more than 15 knots, be subjected to control by the Coast Guard, and be required to follow the instructions of all law enforcement vessels in the area, the regulated navigation area does not prohibit vessels from transiting the area; (3) vessels will still be able to operate in surrounding waters that are not encompassed within the regulated navigation area without the restrictions imposed by the regulated navigation area; and (4) advance notification of the regulated navigation area will be made to the local maritime community via Local Notice to Mariners and Broadcast Notice to Mariners.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule may affect the following entities, some of which may be small entities: The owners or operators of vessels intending to transit the regulated navigation area from 12:01 p.m. on Saturday until 2 a.m. on Monday on the weekend preceding the federally recognized holiday of Columbus Day occurring annually on the second

Monday in October. For the reasons discussed in the Regulatory Planning and Review section above, this rule will not have a significant economic impact on a substantial number of small entities.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency's responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or Tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security

Management Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule involves establishing a regulated navigation area to ensure the safe transit of vessels and to protect persons, vessels, and the marine environment within the regulated navigation area during the Columbus Day weekend, which will be enforced for less than 2 days each year. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. An environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR Part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

- 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

- 2. Revise § 165.779 to read as follows:

§ 165.779 Regulated Navigation Area; Columbus Day Weekend, Biscayne Bay, Miami, FL.

(a) *Regulated Area.* The regulated navigation area encompasses all waters of Biscayne Bay between Rickenbacker Causeway Bridge and Coon Point, Elliot Key contained within an imaginary line connecting the following points: beginning at Point 1 in position 25°44'49" N, 80°12'04" W; thence southwest to Point 2 in position 25°30'00" N, 80°15'48" W; thence southeast to Point 3 in position 25°28'22" N, 80°15'00" W; thence east to Point 4 in position 25°28'23" N, 80°12'53" W; thence northeast to Point 5 in position 25°30'00" N, 80°12'06" W; thence west to Point 6 in position

25°30'00" N, 80°13'17" W; thence northwest to Point 7 in position 25°30'53" N, 80°13'21" W; thence northeast to Point 8 in position 25°43'57" N, 80°10'01" W; thence back to origin. All coordinates are North American Datum 1983.

(b) *Definition.* The term "designated representative" means Coast Guard Patrol Commanders, including Coast Guard coxswains, petty officers, and other officers operating Coast Guard vessels, and Federal, state, and local officers designated by or assisting the Captain of the Port Miami in the enforcement of the regulated area.

(c) *Regulations.* (1) All vessels within the regulated area are required to transit at no more than 15 knots, are subject to control by the Coast Guard, and must follow the instructions of designated representatives.

(2) At least 48 hours prior to each enforcement period, the Coast Guard will provide notice of the regulated area through advanced notice via Local Notice to Mariners and Broadcast Notice to Mariners. The Coast Guard will also provide notice of the regulated area by on-scene designated representatives.

(d) *Enforcement Period.* This rule will be in enforced annually on Columbus Day weekend, starting at 12:01 p.m. on the Saturday before Columbus Day, through 2:00 a.m. on Monday (the Columbus Day holiday). Columbus Day is the federally recognized holiday occurring annually on the second Monday in October.

Dated: September 28, 2012.

William D. Baumgartner,
Rear Admiral, U.S. Coast Guard, Commander,
Seventh Coast Guard District.

Coast Guard

33 CFR Part 165

[Docket No. USCG-2012-0889]

RIN 1625-AA00

Safety Zone; Wounded Warriors Benefit, Lake Erie, Huron, OH

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the waters of Lake Erie, East Huron, Ohio. This regulation is intended to restrict vessels from portions of Lake Erie during the Wounded Warriors

Benefit. This safety zone is necessary to protect spectators and vessels from the hazards associated with launched pumpkins.

DATES: This rule is effective from 10:00 a.m. on October 27, 2012, until 7:00 p.m. on October 28, 2012.

ADDRESSES: Documents mentioned in this preamble are part of docket USCG-2012-0889. To view documents mentioned in this preamble as being available in the docket, go <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590-0001 between 9 a.m. and 5 p.m., Monday through Friday, except federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, call or email the Marine Events Coordinator, LTJG Benjamin Nessia, Marine Safety Unit, Toledo, 420 Madison Avenue Suite 700, Toledo, OH 43604; (419) 418-6040, email Benjamin.B.Nessia@uscg.mil. If you have questions on viewing the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because doing so would be impracticable and contrary to the public interest. The details of this year's event were not submitted in sufficient time for the Coast Guard to solicit public comments before the start of the event. Thus, waiting for a notice and comment period to run would inhibit the Coast Guard from protecting

the public and vessels from the hazards associated with the event.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Delaying this rule would be impracticable and contrary to the public interest for the same reasons discussed in the preceding paragraph.

B. Basis and Purpose

On October 27, 2012, a pumpkin launching event will take place on Lake Erie in which participants shoot pumpkins from an air cannon into the lake in East Huron, OH. This event is known as the Wounded Warriors Benefit. The Captain of the Port Detroit has determined that this benefit is in close proximity to other watercraft and poses a significant risk to public safety and property. Thus, the Captain of the Port Detroit has determined it necessary to establish a safety zone to control vessel movement around the location of the launch platform which will help ensure the safety of persons and property at these events and help minimize the associated risks.

C. Discussion of Proposed Rule

As suggested above, this rule is intended to ensure safety of the public and vessels during the Wounded Warriors Benefit. This rule will be effective from 10:00 a.m. on October 27, 2012 until 7:00 p.m. on October 28, 2012, and enforced from 10:00 a.m. until 7:00 p.m. on October 27, 2012; in the event of inclement weather, the zone will be enforced from 10:00 a.m. until 7:00 p.m. on October 28, 2012. The safety zone will encompass all waters of Lake Erie within a 2500 ft radius of the pumpkin launching site located at position 41° 23' 6.7194" N, - 82° 27' 46.6812" W. All geographic coordinates are North American Datum of 1983 (NAD 83).

Entry into, transiting, or anchoring within the safety zone is prohibited unless authorized by the Captain of the Port Detroit or his designated on scene representative. The on-scene representative may be present on any Coast Guard, state or local law enforcement, or sponsor provided vessel assigned to patrol the event. The Captain of the Port or his designated on-scene representative may be contacted via VHF Channel 16.

C. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses

based on these statutes or executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders. It is not “significant” under the regulatory policies and procedures of the Department of Homeland Security (DHS). We conclude that this rule is not a significant regulatory action because we anticipate that it will have minimal impact on the economy, will not interfere with other agencies, will not adversely alter the budget of any grant or loan recipients, and will not raise any novel legal or policy issues. The safety zone will be relatively small and exist for a relatively short time. Thus, restrictions on vessel movement within that particular area are expected to be minimal. Under certain conditions, moreover, vessels may still transit through the area when permitted by the Captain of the Port.

2. Impact on Small Entities

Under the Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule will affect the following entities, some of which may be small entities: The owners or operators of vessels intending to transit or anchor in the portion of Lake Erie discussed above during the enforcement of the safety zone established herein.

This safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons: This rule will be enforced for approximately nine hours on either October 27 or 28, 2012.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental

jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between Federal Government and Indian tribes.

12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321–4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of a safety zone and, therefore it is categorically excluded from further review under paragraph 34(g) of Figure 2–1 of the Commandant

Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 46 U.S.C. Chapters 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T09–0889 to read as follows:

§ 165.T09–0889 Safety Zone; Wounded Warriors Benefit, East Huron, OH.

(a) *Location*. The following area is designated a safety zone: all waters of Lake Erie within a 2500 ft radius of the pumpkin launch site located at position 41° 23' 6.7194" N, –82° 27' 46.6812" W. All geographic coordinates are North American Datum of 1983 (NAD 83).

(b) *Effective and Enforcement Period*. This safety zone is closed to all vessel traffic and will be effective from 10:00 a.m. on October 27, 2012 until 7:00 p.m. on October 28, 2012. The safety zone will be enforced from 10:00 a.m. until 7:00 p.m. on October 27, 2012; in the event of inclement weather, the safety zone will be enforced from 10:00 a.m. until 7:00 p.m. on October 28, 2012.

(c) *Definitions*. The following definitions apply to this section:

(1) “On-scene Representative” means any Coast Guard Commissioned, warrant, or petty officer designated by the Captain of the Port Detroit to monitor a safety zone, permit entry into the zone, give legally enforceable orders to persons or vessels within the zones, and take other actions authorized by the Captain of the Port.

(2) “Public vessel” means vessels owned, chartered, or operated by the United States, or by a State or political subdivision thereof.

(d) *Regulations*. (1) In accordance with the general regulations in § 165.23 of this part, entry into, transiting, or

anchoring within this safety zone is prohibited unless authorized by the Captain of the Port Detroit, or his designated representative.

(2) This safety zone is closed to all vessel traffic, excepted as may be permitted by the Captain of the Port Detroit or his designated representative. All persons and vessels must comply with the instructions of the Coast Guard Captain of the Port or his designated representative. Upon being hailed by the U.S. Coast Guard by siren, radio, flashing light or other means, the operator of a vessel shall proceed as directed.

(3) All vessels must obtain permission from the Captain of the Port or his designated representative to enter, move within, or exit the safety zone established in this section when this safety zone is enforced. Vessels and persons granted permission to enter the safety zone must obey all lawful orders or directions of the Captain of the Port or a designated representative. While within a safety zone, all vessels must operate at the minimum speed necessary to maintain a safe course.

(e) *Exemption*. Public vessels, as defined in paragraph (b) of this section, are exempt from the requirements in this section.

(f) *Waiver*. For any vessel, the Captain of the Port Detroit or his designated representative may waive any of the requirements of this section, upon finding that operational conditions or other circumstances are such that application of this section is unnecessary or impractical for the purposes of public or environmental safety.

(g) *Notification*. The Captain of the Port Detroit will notify the public that the safety zones in this section are or will be enforced by all appropriate means to the affected segments of the public including publication in the **Federal Register** as practicable, in accordance with 33 CFR 165.7(a). Such means of notification may also include, but are not limited to Broadcast Notice to Mariners or Local Notice to Mariners. The Captain of the Port will issue a Broadcast Notice to Mariners notifying the public when enforcement of the safety zone is cancelled.

Dated: September 28, 2012.

J. E. Ogden,

Captain, U.S. Coast Guard, Captain of the Port, Sector Detroit.

Coast Guard

33 CFR Part 165

[Docket Number USCG–2012–0805]

RIN 1625–AA00

Safety Zone; Oregon City Bridge Grand Opening Fireworks Display; Willamette River, Oregon City, OR

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a safety zone on the Willamette River between the Oregon City Bridge and the Interstate 205 Bridge on October 13, 2012 from 7:30 p.m. (P.D.T.) to 9 p.m. (P.D.T.). This safety zone is necessary to ensure the safety of the maritime public during a fireworks display, and will do so by prohibiting unauthorized persons and vessels from entering the safety zone unless authorized by the Sector Columbia River Captain of the Port (COTP) or his designated representative.

DATES: This rule is effective from 7:30 p.m. to 9 p.m. on October 13, 2012.

ADDRESSES: Documents mentioned in this preamble are part of docket [USCG–2012–0805]. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email, ENS Ian McPhillips, Waterways Management Division, Marine Safety Unit Portland, U.S. Coast Guard; telephone (503) 240–9319, email msupdxwwm@uscg.mil. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366–9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR **Federal Register**
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

The Coast Guard is issuing this final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because to do so would be impracticable since the event will have taken place by the time the notice could be published and comments taken.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register** due to the late notification of this event and that the event will have occurred before comments could have been taken.

B. Basis and Purpose

The Captain of the Port has been delegated the authority to establish safety zones for safety or environmental purposes in 33 CFR 160.5.

The fireworks display will create hazardous conditions for vessels in the area and the people onboard those vessels due to loud noises, falling debris, and explosions, as well as potential heavy vessel traffic congregating near the display. To mitigate these hazards, the Coast Guard believes that a temporary safety zone is needed.

C. Discussion of the Rule

The Coast Guard is establishing a temporary safety zone in the Sector Columbia River Captain of the Port Zone. The safety zone will be established on the Willamette River from shore to shore between the Oregon City Bridge and the Interstate 205 Bridge, and will be enforced during the Oregon City Bridge Grand Opening fireworks display from 7:30 p.m. (P.D.T.) to 9:00 p.m. (P.D.T.) on October 13, 2012. All persons and vessels will be prohibited from entering the safety zone during this time unless authorized by the Sector Columbia River Captain of the Port or his designated representative.

This safety zone will improve the safety of the maritime public in the area during the fireworks display by prohibiting persons and vessels from

entering areas where the risks associated with the fireworks display are present.

C. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders. The Coast Guard has made this determination because the safety zone created by this rule will not significantly affect the maritime public as vessels may still transit the zone with prior authorization from the Coast Guard.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule would affect the following entities, some of which might be small entities: The owners or operators of vessels intending to transit or anchor in a portion of the Willamette River from 7:30 p.m. (P.D.T.) to 9:00 p.m. (P.D.T.) on October 13, 2012.

This safety zone would not have a significant economic impact on a substantial number of small entities for the following reasons. This safety zone would be activated, and thus subject to enforcement, for only 1.5 hours in the evening. Although the safety zone would apply to the entire width of the river, traffic would be allowed to pass through the zone with the permission of the Captain of the Port. Before the activation of the zone, we will issue maritime advisories widely available to users of the river.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Enforcement Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a

State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a "significant energy action" under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321-4370f), and have determined that this action is one

of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of a safety zone around the fall out area of a fireworks display. This rule is categorically excluded from further review under paragraph 34(g) of Figure 2-1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine Safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

- 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, and 160.5; Pub. L. 107-295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

- 2. Add § 165.T13-230 to read as follows:

§ 165.T13-230 Safety Zone; Oregon City Bridge Grand Opening Fireworks Display; Willamette River, Oregon City, OR.

(a) *Location.* The following area is a safety zone: All water of the Willamette River at Oregon City, OR, bounded by the Oregon City Bridge to the south, the Interstate 205 Bridge to the north, and the shoreline to the east and west.

(b) *Regulations.* In accordance with the general regulations in § 165.23 if this part, no person or vessel may enter or remain in this zone unless authorized by the Captain of the Port or his designated representatives.

(c) *Enforcement Period.* This section will be enforced October 13, 2012 from 7:30 p.m. (P.D.T.) to 9 p.m. (P.D.T.).

Dated: October 3, 2012.

B. C. Jones,

Captain, U.S. Coast Guard, Captain of the Port, Sector Columbia River.

33 CFR Part 165

[Docket Number USCG-2012-0913]

RIN 1625-AA00

Safety Zone; 2012 Head of the South Regatta, Savannah River, Augusta, GA

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing a temporary safety zone on the Savannah River in Augusta, Georgia, during the 2012 Head of the South Regatta, which will consist of a series of rowing races. The 2012 Head of the South Regatta is scheduled to take place on Friday, November 9, 2012 and Saturday, November 10, 2012. The temporary safety zone is necessary for the safety of race participants, participant vessels, spectators, and the general public during the event. Persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining within the safety zone unless authorized by the Captain of the Port Savannah or a designated representative.

DATES: This rule is effective from 6 a.m. on November 9, 2012 through 6 p.m. on November 10, 2012. This rule will be enforced daily from 6 a.m. to 6 p.m. on November 9, 2012 and November 10, 2012.

ADDRESSES: Documents mentioned in this preamble are part of docket [USCG-2012-0913]. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Marine Science Technician First Class William N. Franklin, Marine Safety Unit Savannah, Coast Guard; telephone 912-652-4353, email William.N.Franklin@uscg.mil. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366-9826.

SUPPLEMENTARY INFORMATION:**Table of Acronyms**

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

The Coast Guard is issuing this final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are “impracticable, unnecessary, or contrary to the public interest.” Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because the Coast Guard did not receive confirmation of the details of this event until September 11, 2012. As a result, the Coast Guard did not have sufficient time to publish a NPRM and to receive public comments prior to the event. Any delay in the effective date of this rule would be contrary to the public interest because immediate action is needed to minimize potential danger to the race participants, participant vessels, spectators, and the general public.

B. Basis and Purpose

The legal basis for the rule is the Coast Guard’s authority to establish regulated navigation areas and other limited access areas: 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5; Public Law 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

The purpose of the rule is to protect race participants, participant vessels, spectators, and the general public from the hazards associated with the event.

C. Discussion of the Final Rule

On November 9, 2012, Augusta Rowing Club is hosting the 2012 Head of the South Regatta, a series of rowing races on the Savannah River in Augusta, Georgia. The races will start in the vicinity of Hammond Ferry Landing and finish in the vicinity of the Highway 520 Bridge.

The safety zone encompasses part of the Savannah River in Augusta, Georgia, where the event will be held. The safety zone will be enforced daily from 6 a.m. until 6 p.m. on November 9, 2012 and November 10, 2012. Persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining

within the safety zone unless authorized by the Captain of the Port Savannah or a designated representative.

Persons and vessels desiring to enter, transit through, anchor in, or remain within the safety zone may contact the Captain of the Port Savannah by telephone at 912–652–4353, or a designated representative via VHF radio on channel 16, to request authorization. If authorization to enter, transit through, anchor in, or remain within the safety zone is granted by the Captain of the Port Savannah or a designated representative, all persons and vessels receiving such authorization must comply with the instructions of the Captain of the Port Savannah or a designated representative. The Coast Guard will provide notice of the safety zone by Local Notice to Mariners, Broadcast Notice to Mariners, and on-scene designated representatives.

D. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on 13 of these statutes or executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

The economic impact of this rule is not significant for the following reasons: (1) The safety zone will be enforced for a maximum of twenty four hours; (2) although persons and vessels will not be able to enter or remain in the safety zone without authorization from the Captain of the Port Savannah or a designated representative, they may operate in the surrounding area during the enforcement periods; (3) persons and vessels may still enter or remain in this safety zone if authorized by the Captain of the Port Savannah or a designated representative; and (4) the Coast Guard will provide advance notification of the safety zone to the local maritime community by Broadcast Notice to Mariners.

2. Impact on Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered

whether this rule would have a significant economic impact on a substantial number of small entities. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This rule may affect the following entities, some of which may be small entities: The owners or operators of vessels intending to enter, transit through, anchor in, or remain within that portion of the Savannah River encompassed within the safety zone from 6 a.m. until 6 p.m. on November 9, 2012 and November 10, 2012. For the reasons discussed in the Regulatory Planning and Review section above, this rule will not have a significant economic impact on a substantial number of small entities.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they can better evaluate its effects on them and participate in the rulemaking process.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of

compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have concluded this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2–1, paragraph (34)(g), of the Instruction. This rule involves establishing a temporary safety zone that will be enforced for a total of 24 hours. An environmental analysis checklist and a categorical exclusion determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

- 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

- 2. Add temporary § 165.T07–0913 to read as follows:

§ 165.T07–0913 Safety Zone; 2012 Head of the South Regatta, Savannah River, Augusta, GA.

(a) *Regulated area.* The following regulated area is a safety zone. All waters of the Savannah River in Augusta, Georgia encompassed within the following points: starting at Point 1 in position 33°29′39.64″ N, 81°59′25.40″ W; thence southeast to Point 2 in

position 33°27′43.34″ N, 81°55′30.90″ W; thence southwest to Point 3 in position 33°27′35.80″ N, 81°55′33.42″ W; thence northwest to Point 4 in position 33°29′39.72″ N, 81°59′30.48″ W; thence east back to origin. All coordinates are North American Datum 1983.

(b) *Definition.* The term “designated representative” means Coast Guard Patrol Commanders, including Coast Guard coxswains, petty officers, and other officers operating Coast Guard vessels, and Federal, state, and local officers designated by or assisting the Captain of the Port Savannah in the enforcement of the regulated area.

(c) *Regulations.* (1) All persons and vessels are prohibited from entering, transiting through, anchoring in, or remaining within the regulated area unless authorized by the Captain of the Port Savannah or a designated representative.

(2) Persons and vessels desiring to enter, transit through, anchor in, or remain within the regulated area may contact the Captain of the Port Savannah by telephone at 912–652–4353, or a designated representative via VHF radio on channel 16, to request authorization. If authorization to enter, transit through, anchor in, or remain within the regulated area is granted by the Captain of the Port Savannah or a designated representative, all persons and vessels receiving such authorization must comply with the instructions of the Captain of the Port Savannah or a designated representative.

(3) The Coast Guard will provide notice of the regulated area by Local Notice to Mariners, Broadcast Notice to Mariners, and on-scene designated representatives.

(d) *Effective date and enforcement periods.* This rule is effective from 6 a.m. on November 9, 2012 through 6 p.m. on November 10, 2012. This rule will be enforced daily from 6 a.m. to 6 p.m.

Dated: October 4, 2012.

J.B. Loring,

Commander, U.S. Coast Guard, Captain of the Port Savannah.

[FR Doc. 2012–25211 Filed 10–12–12; 8:45 am]

BILLING CODE 9110–04–P

POSTAL SERVICE

39 CFR Part 111

Every Door Direct Mail-Retail

AGENCY: Postal Service™.

ACTION: Final rule.

SUMMARY: This final rule establishes the retail option of Every Door Direct Mail-Retail® (EDDM-Retail) as a formal product offering within Mailing Services, and ends the market test period for this initiative.

DATES: Effective January 27, 2013.

FOR FURTHER INFORMATION CONTACT: Bill Chatfield at 202-268-7278 or Dave Mastervich at 202-268-7419.

SUPPLEMENTARY INFORMATION: The Postal Service's final rule includes the announcement to make EDDM-Retail a permanent product, and contains the revisions to *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM®) that we adopt to implement the changes. The price for Standard Mail® saturation flats with simplified addresses (EDDM flats) entered at a BMEU will be different than the price for EDDM-Retail flats effective with the January 2013 price change.

EDDM-Retail a Permanent Product

In December 2010, the Postal Service announced a new market test to begin in January 2011, to enable customers to mail saturation flats with simplified addresses to all types of delivery in an even more simplified manner. The USPS™ developed a Web Tool to assist customers in determining which routes cover certain delivery areas and the number of residential, business, and total deliveries for each delivery route or Post Office Box™ section. The USPS also waived permit imprint application fees and annual presort mailing fees for mailers paying postage at the time of mailing while entering mail (up to 5000 pieces per day) at the office of delivery. In addition, mailers do not maintain a trust account for postage payment, instead paying at the time of mailing and using a simplified postage statement.

This market test has been very successful in making it easier for new customers to mail and increase their marketing efforts. On July 10, 2012, the Postal Service filed a request with the Postal Regulatory Commission (PRC) pursuant to 39 U.S.C. 3642 and 39 CFR 3020.30, *et seq.*, to modify the Mail Classification Schedule (MCS) by adding Every Door Direct Mail-Retail (EDDM-Retail) to the market-dominant product list. We have subsequently received approval from the PRC and will convert this product to a permanent product offering.

Our current standards for use of simplified addresses on Standard Mail and on other classes of mail entered through Business Mail Entry Units are not changing. We are adding an alternative marketing name of Every

Door Direct Mail for commercial mailings of Standard Mail flats with simplified addresses.

The Postal Service adopts the following changes to *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM), which is incorporated by reference in the *Code of Federal Regulations*. See 39 CFR 111.1.

List of Subjects in 39 CFR Part 111

Administrative practice and procedure, Postal Service.

Accordingly, 39 CFR Part 111 is amended as follows:

PART 111—[AMENDED.]

■ 1. The authority citation for 39 CFR part 111 continues to read as follows:

Authority: 5 U.S.C. 552(a); 13 U.S.C. 301-307; 18 U.S.C. 1692-1737; 39 U.S.C. 101, 401, 403, 404, 414, 416, 3001-3011, 3201-3219, 3403-3406, 3621, 3622, 3626, 3632, 3633, and 5001.

■ 2. Revise the following sections of *Mailing Standards of the United States Postal Service*, Domestic Mail Manual (DMM), as follows:

Mailing Standards of the United States Postal Service, Domestic Mail Manual (DMM):

* * * * *

100 Retail Letters, Cards, Flats, and Parcels

101 Physical Standards

* * * * *

2.0 Physical Standards for Flats

2.1 General Definition of Flat-Size Mail

Flat-size mail is:

[Revise item 2.1a as follows:]

a. More than 11½ inches long, or more than 6⅞ inches high, or more than ¼ inch thick, except as allowed for EDDM-Retail flats under 140. For general retail mailability, all pieces ¼ inch thick or less must be a minimum of 5 inches long and 3½ inches high and 0.007 inch thick.

* * * * *

[Add new section 140 as follows:]

140 Standard Mail Flats—Every Door Direct Mail-Retail (EDDM-Retail)

143 Prices and Eligibility

1.0 Description, Price, and Fees

1.1 General Description of EDDM-Retail Service

Standard Mail flats with simplified addresses (under 602.3.0) may be mailed under conditions in 140 as EDDM-Retail flats or as commercial mail under 340 and 602.3.0.

1.2 EDDM-Retail Flats Characteristics

EDDM-Retail flats must weigh a maximum of 3.3 ounces and must have a length greater than 10½ inches long, a height greater than 6⅞ inches high, or a thickness greater than ¼ inch thick.

See 101.2.1 for general minimum dimensions. EDDM-Retail flats have the following maximum dimensions:

- The length (the longest dimension) must be a maximum of 15 inches.
- The height must be a maximum of 12 inches.
- The thickness must be a maximum of 0.75 inch.

1.3 Price

For price, see Notice 123—Price List. Flats mailed under EDDM-Retail are not eligible for Nonprofit prices.

1.4 Fees and Services

There are no annual presort or mailing fees to mail pieces as EDDM-Retail. Ancillary service endorsements are not allowed on pieces mailed as EDDM-Retail flats.

2.0 Content Standards for EDDM-Retail Flats

2.1 Definition and Weight

EDDM-Retail flats are Standard Mail, and are generally subject to Standard Mail eligibility standards, with differences as described in 2.0 due to the use of simplified addresses. EDDM-Retail mailpieces consist ofailable matter that is neither mailed nor required to be mailed as First-Class Mail and that is not authorized to be mailed as Periodicals. All EDDM-Retail flats in a mailing must be of identical content, size, and weight and cannot weigh more than 3.3 ounces. Each piece must meet the physical standards for a flat under 101.2.0. See 101.2.1 for dimensions.

2.2 Personal Information

Personal information may not be included in an EDDM-Retail mailpiece.

2.3 Bills and Statements of Account

Mail containing bills or statements of account as defined in 333.2.2 may not be entered as EDDM-Retail mail.

2.4 Handwritten and Typewritten Matter

Mail containing handwritten or typewritten matter may not be entered as EDDM-Retail mail.

2.5 Attachments and Enclosures

EDDM-Retail mailpieces may not have First-Class Mail enclosures or attachments. An EDDM-Retail flat may bear a label, a sticker, or a release card eligible as Standard Mail matter, when affixed under 2.5 and 301.1.8.4. EDDM-

Retail flats may bear repositionable notes under 705.23.0. EDDM-Retail flats also may bear other attachments eligible as Standard Mail matter if these additional conditions are met:

a. The host piece must be at least .009 inch thick.

b. The attachment is securely attached, not larger than the host piece, and does not extend beyond the host piece.

c. Each piece in the mailing bears the attachment, and the attachment is of identical size, weight, and positioning on the host piece.

d. The attachment does not interfere with processing or delivery. Folded or multipage attachments must be secured and sealed to prevent opening during handling.

2.6 Inspection of Contents

EDDM-Retail flats are not sealed against postal inspection.

3.0 Basic Standards for EDDM-Retail Flats

3.1 Basic Standards

EDDM-Retail flats must be part of a saturation flats mailing with all pieces bearing simplified addresses meeting the saturation and addressing standards

in 602.3.0. Each mailing must consist of 200 or more pieces or 50 or more pounds of mail up to a maximum of 5000 pieces per day per 5-digit ZIP Code. As an exception to this minimum quantity, a mailing to all addresses in a 5-digit ZIP Code area may contain fewer than 200 pieces when there are fewer than 200 deliverable addresses in the entire ZIP Code service area to which the pieces are mailed. All pieces in a mailing must be entered at the designated Post Office servicing the routes and Post Office Box sections to which delivery is intended.

3.2 Forwarding and Return Service

No forwarding or return service is available for pieces mailed as EDDM-Retail.

3.3 Extra Services

No extra services are available with EDDM-Retail mailpieces.

3.4 Additional Standards for EDDM-Retail Flats

Each EDDM-Retail mailing is subject to postage payment standards in 144, preparation standards in 145, and deposit and entry standards in 146.

EDDM-Retail flats are not subject to the ZIP Code accuracy or Move Update

standards. Additional basic standards for Standard Mail flats in 343.3.0 apply to EDDM-Retail flats, unless stated otherwise in 140.

144 Postage Payment and Documentation

1.0 Basic Standards for Postage Payment

1.1 Postage Payment Options

The mailer is responsible for proper postage payment. Postage for EDDM-Retail flats must be paid with a postage evidencing system indicia (604.4.0) of the correct amount of postage affixed to each piece or at the time of mailing by cash, check, debit card, or credit card.

1.2 Customer Registration

Mailers must obtain a Customer Registration ID (CRID), available online at <https://gateway.usps.com/bcg/login.htm>.

1.3 Postage Indicia

A postage indicia must be on each piece mailed as EDDM-Retail, printed above and to the right of the simplified address. See Exhibit 1.3 for the required wording of the indicia.

Exhibit 1.3 EDDM-Retail Indicia

2.0 Mailing Documentation

2.1 Completing Postage Statements

Each mailing of EDDM-Retail flats must be accompanied by a postage statement (PS Form 3587) completed and signed by the mailer.

2.2 Basic Documentation Standards

Documentation for mailings of EDDM-Retail flats includes the postage statement (see 2.1), a sample mailpiece, and (if applicable) a list of "do not deliver" addresses.

145 Mail Preparation

1.0 Preparation of EDDM-Retail Flats

1.1 General Information

All pieces mailed as EDDM-Retail mailings must be bundled under 1.3 and presented directly to the correct

delivery Post Office or destination delivery unit (DDU), or mailed to the DDU via Priority Mail under 146.

1.2 Quantity per Mailing

EDDM-Retail flats must be part of one mailing of at least 200 pieces (or 50 pounds) of mail except under 143.3.1, but no more than 5000 pieces per mailing per day at any one Post Office. If a Post Office serves multiple ZIP Codes, the maximum number of EDDM-Retail pieces per day is 5000 per 5-digit ZIP Code.

1.3 Delivery Statistics, Sortation, and Bundling

EDDM-Retail flats must be separated by delivery route (or Post Office Box section) under 145, using delivery statistics obtained from the EDDM web tool at the Web site eddm.usps.com/

eddm. EDDM-Retail flats must be in bundles of 50–100. Place a facing slip on the top of each bundle, under the straps, with the number of pieces in the bundle written on the facing slip. See 602.2.0 and 602.3.2 for more information.

146 Enter and Deposit

1.0 Basic Options

1.1 Entry at Delivery Post Office

All EDDM-Retail mailings must be entered directly at the Post Office (or DDU) responsible for the Post Office Box or carrier route delivery for which the mailing is prepared, or shipped to that Post Office under 1.2.

1.2 Alternate Entry by Priority Mail

1.2.1 Preparation

Place prepared EDDM-Retail mail, in bundles with facing slips, in Priority Mail boxes, including Priority Mail Flat Rate boxes.

1.2.2 Documentation

Box #1 (see 1.2.3) for the EDDM-Retail mailing must contain an envelope with the following:

- a. Sample mailpiece.
- b. Check or money order made out to "Postmaster" or "Postal Service" for the amount of postage for the EDDM-Retail pieces (not for the Priority Mail shipment). Include your telephone number on the front of the check.
- c. Completed EDDM-Retail postage statement (PS Form 3587).
- d. The Postmaster Instruction letter; see <https://www.usps.com/business/pdf/eddm-postmaster-letter.pdf> for a copy.

1.2.3 Labeling the Boxes

On each box, write "Every Door Direct Mail—Retail" and "Open Immediately." For multiple boxes, number the boxes, starting with 1 of X, (with "X" being the total number of boxes in the shipment). Include the payment and documentation in box #1.

1.2.4 Shipping

Address the boxes to "Postmaster" at the Post Office that will deliver the mailpieces. To ship them, either bring the boxes to your local Post Office or use Click-N-Ship. Each box must have a Delivery Confirmation label affixed by the mailer.

300 Commercial Mail Flats

301 Physical Standards

2.0 Physical Standards for Nonautomation Flats

2.2 Standard Mail

[Revise the title and introductory text of 2.2.2 as follows:]

2.2.2 Dimensions for Standard Mail and EDDM-Retail Flats with Simplified Addresses

Standard Mail flats with simplified addresses for which saturation flats prices are paid and EDDM-Retail flats (see 140) must have at least one dimension that is greater than a letter-size maximum dimension as noted in 1.1a. The minimum thickness must be at

least 0.007 inch up to a maximum of 0.75 inch. As an exception to the minimum length, flats with simplified addresses may have a length shorter than a letter-size maximum length, under all of the following conditions:

* * *

302 Elements on the Face of a Mailpiece

* * *

3.0 Placement and Content of Mail Markings

* * *

3.2 First-Class Mail and Standard Mail Markings

3.2.1 Placement

Mailpieces must be marked under the corresponding standards to show the class of service and/or price paid:

- a. Basic Marking. The basic required marking that indicates the class or subclass which must be printed or produced as part of, directly below, or to the left of the permit imprint, meter imprint, or stamp as follows:
[Revise items 1 through 4 as follows:]
 1. "First-Class Mail"
 2. "Standard," "STD," "Presorted Standard," or "PRSRT STD"
 3. "Nonprofit Organization," "Nonprofit Org.," or "Nonprofit"
 4. For Standard Mail flats mailed at saturation flats prices under EDDM-Retail standards in 140 and 602.3.0, add "EDDM-Retail" as the last line in the permit imprint indicia. See Exhibit 144.1.3 for an example.

* * *

602 Addressing

* * *

3.0 Use of Alternative Addressing

* * *

3.2 Simplified Address

3.2.1 Conditions for General Use

The following conditions must be met when using a simplified address on commercial mailpieces:

* * *

[Revise item 3.2.1c as follows:]

- c. Standard Mail flats with simplified addresses (also known as "Every Door Direct Mail" or "EDDM") must have one dimension larger than a letter-size maximum dimension, except under 301.2.2.2. Standard Mail pieces, when mailed under conditions in 301.2.2.2 and delivered by city route delivery or Post Office Box delivery in offices with city route delivery, are considered to be flats and are charged postage for Standard Mail saturation flats. Letter-

size pieces that meet the size standards in 301.2.2.2 and that are delivered by rural or HCR routes may be mailed (when entered at a BMEU) as letters or flats with simplified addresses, at the mailer's option. See 140 for more information about entering EDDM pieces (EDDM-Retail) at Retail locations.

* * *

3.2.4 Postage

[Add a new last sentence in 3.2.4 as follows:]

* * * Postage for pieces mailed as EDDM-Retail flats must be as described in 144.

* * *

We will publish an appropriate amendment to 39 CFR part 111 to reflect these changes.

Stanley F. Mires,
Attorney, Legal Policy & Legislative Advice.
[FR Doc. 2012-25059 Filed 10-12-12; 8:45 am]

BILLING CODE 7710-12-P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA-R04-OAR-2012-0343; FRL-9739-3]

Approval and Promulgation of Implementation Plans; Alabama; Disapproval of 110(a)(2)(E)(ii) Infrastructure Requirement for the 1997 and 2006 Fine Particulate Matter National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is taking final action to disapprove a portion of the State Implementation Plan (SIP) submissions, submitted by the State of Alabama, through the Alabama Department of Environmental Management (ADEM), on July 25, 2008, and September 23, 2009, which were intended to meet the requirement of the Clean Air Act (CAA or the Act). The CAA requires that each state adopt and submit a SIP for the implementation, maintenance, and enforcement of each NAAQS promulgated by EPA, which is commonly referred to as an "infrastructure" SIP. Alabama certified that the Alabama SIP contains provisions that ensure the 1997 annual and 2006 24-hour fine particulate matter (PM_{2.5}) national ambient air quality standards (NAAQS) are implemented, enforced and maintained in the State. Specifically, EPA is disapproving the State's submissions that requires the

State to comply with the CAA. EPA is taking a separate action to address the other applicable infrastructure elements for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS.

DATES: This rule will be effective November 14, 2012.

ADDRESSES: EPA has established a docket for this action under Docket Identification No. EPA-R04-OAR-2012-0343. All documents in the docket are listed on the www.regulations.gov Web site. Although listed in the index, some information is not publicly available, *i.e.*, Confidential Business Information or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically through www.regulations.gov or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30 excluding federal holidays.

FOR FURTHER INFORMATION CONTACT: Sean Lakeman, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. The telephone number is (404) 562-9043. Mr. Lakeman can be reached via electronic mail at lakeman.sean@epa.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Background
- II. EPA's Response to Comments
- III. Final Action
- IV. Statutory and Executive Order Reviews

I. Background

Upon promulgation of a new or revised NAAQS, sections 110(a)(1) and (2) of the CAA require states to make a SIP submission to address basic SIP requirements, including emissions inventories, monitoring, and modeling to assure attainment and maintenance for that new NAAQS. On July 18, 1997 (62 FR 36852), EPA promulgated a new annual PM_{2.5} NAAQS and on October 17, 2006 (71 FR 61144), EPA

promulgated a new 24-hour NAAQS. On July 20, 2012, EPA proposed to disapprove Alabama's July 25, 2008, and September 23, 2009, infrastructure submissions related to the requirements respecting state boards for the for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS. *See* 77 FR 42682. A summary of the background for today's final action is provided below. *See* EPA's July 20, 2012, proposed rulemaking at 77 FR 42682 for more detail.

Section 110(a) of the CAA requires states to submit SIPs to provide for the implementation, maintenance, and enforcement of a new or revised NAAQS within three years following the promulgation of such NAAQS, or within such shorter period as EPA may prescribe. Section 110(a) imposes the obligation upon states to make a SIP submission to EPA for a new or revised NAAQS, but the contents of that submission may vary depending upon the facts and circumstances. In particular, the data and analytical tools available at the time the state develops and submits the SIP for a new or revised NAAQS affects the content of the submission. The contents of such SIP submissions may also vary depending upon what provisions the state's existing SIP already contains. In the case of the 1997 annual and 2006 24-hour PM_{2.5} NAAQS, states typically have met the basic program elements required in section 110(a)(2) through earlier SIP submissions in connection with previous PM NAAQS.

More specifically, section 110(a)(1) provides the procedural and timing requirements for SIPs. Section 110(a)(2) lists specific elements that states must meet for "infrastructure" SIP requirements related to a newly established or revised NAAQS. Among the elements that states must address is section 110(a)(2)(E)(ii), which in turn refers to the specific requirements of section 128. Section 128 explicitly provides that state SIPs "shall contain requirements" as described in sections 128(a)(1) and (2). In addition, states may adopt any additional requirements that are "more stringent" than those explicitly required in section 128. EPA issued guidance to states making recommendations concerning compliance with section 128.¹

In this action, EPA is only addressing sub-element 110(a)(2)(E)(ii). In taking final action on the proposed disapproval, EPA is responding to an adverse comment received on EPA's

July 20, 2012, proposed disapproval of Alabama's July 25, 2008, and September 23, 2009, infrastructure submissions for sub-element 110(a)(2)(E)(ii). EPA is taking a separate action to address the other applicable infrastructure elements for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS. *See, e.g.*, 77 FR 34288.

II. EPA's Response to Comments

The following is EPA's response to the adverse comment received on EPA's July 20, 2012, proposed disapproval of Alabama's July 25, 2008, and September 23, 2009, infrastructure submissions as they relate to section 110(a)(2)(E)(ii) of the CAA.

Comment: On August 20, 2012, ADEM commented on EPA's proposed action and requested that EPA withdraw its proposed disapproval of section 110(a)(2)(E)(ii). ADEM suggested in their comment that EPA approve a conflict of interest protocol submitted for inclusion in the SIP in connection with the State's 2008 ozone NAAQS infrastructure submission. ADEM submitted this conflict of interest protocol as an attachment to its adverse comment on the proposal action. ADEM asserted that with the inclusion of this protocol in the SIP, EPA would be able to approve Alabama's 1997 annual and 2006 24-hour PM_{2.5} infrastructure SIP for sub-element 110(a)(2)(E)(ii).

Response: Section 110(a)(2)(E)(ii) requires that each implementation plan provide that states comply with the requirements respecting state boards pursuant to section 128 of the Act. Section 128 requires that: (1) The majority of members of the state board or body which approves permits or enforcement orders represent the public interest and do not derive any significant portion of their income from persons subject to permitting or enforcement orders under the CAA; and (2) any potential conflicts of interest by such board or body, or the head of an executive agency with similar powers be adequately disclosed.

In its July 20, 2012, proposed rulemaking (77 FR 42682), EPA preliminarily determined that the State's implementation plan did not contain provisions to comply with section 128 of the Act, and thus, Alabama's July 25, 2008, and September 23, 2009, submissions do not meet the requirements of the Act with respect to section 110(a)(2)(E)(ii).² Alabama's

¹ See "Guidance to States for Meeting Conflict of Interest Requirements of section 128" from David O. Bickert, Deputy General Counsel, to Regional Air Directors, dated March 2, 1978.

² Prior to EPA's proposed disapproval for this sub-element, ADEM and EPA engaged in a numerous communications regarding this infrastructure SIP deficiency (*see, e.g.*, EPA's comment to ADEM's proposed SIP submittal addressing infrastructure requirements for the 2008 ozone NAAQS which was attached to ADEM's

comment on that proposal, which contends that EPA should not finalize the proposed disapproval based upon a conflict of interest disclosure protocol included with the comment for incorporation into the SIP, does not address the underlying basis for the proposed disapproval of element 110(a)(2)(E)(ii). The basis for EPA's disapproval, as discussed in the proposed rule for today's action, is that the SIP presently fails to include any requirements to address the applicable requirements of section 128 of the CAA.

EPA considered the State's comment and has determined the comments do not adequately address the requirements for the following procedural and substantive reasons. With respect to procedural issues, an adverse comment letter on a proposed action does not meet the statutory and regulatory requirements for a SIP submission. Section 110(a)(1), section 110(a)(2), and section 110(l), all provide that a state's implementation plan submission must undergo reasonable notice and opportunity for comment. In addition, EPA regulations at Part 51, Appendix V, set forth additional criteria for a SIP submission. EPA has determined that the conflict of interest disclosure protocol attached to the State's adverse comment letter does not constitute such a SIP submission for a number of reasons including, but not limited to, the fact that the State has not provided information that the submission has undergone the requisite public notice or a demonstration that the protocol has been adopted and is in final form as submitted. In addition, the protocol was not signed, stamped and dated by an appropriate official to indicate that it is fully enforceable by the State.

Substantively, were it an official submission, it would not be sufficient to satisfy the requirements of section 128 necessary for EPA to approve Alabama's infrastructure submissions as they relate to section 110(a)(2)(E)(ii). As noted in the proposed rule for today's action, section 128 requires that: (1) The majority of members of the state board or body which approves permits or enforcement orders represent the public interest and do not derive any significant portion of their income from persons subject to permitting or enforcement orders under the CAA; and (2) any potential conflicts of interest by such board or body, or the head of an executive agency with similar powers be adequately disclosed.

Alabama provides no explanation as to how its conflict of interest disclosure

protocol would satisfy the public interest and significant portion of income requirements applicable to the majority of a state board or body subject to section 128(a)(1). Alabama's response to EPA's comments on the State's draft 2008 8-hour ozone infrastructure submission (included with Alabama's comment on today's rulemaking) notes that certain ADEM officials are charged with responsibilities for issuing permits or enforcement orders. EPA has interpreted the "board or body" requirements of section 128(a)(1) as not applying to individuals tasked with authority to approve permits or enforcement orders. However, where appeals of such permits or enforcement orders are resolved by boards or bodies, those entities are subject to the majority requirements of section 128(a)(1). Alabama's comment does not describe how appeals of permits or enforcement order are handled in the State. In order for EPA to determine that the requirements of section 128(a)(1) are not applicable in Alabama, the State must provide this information. If a board or body does review appeals of permit or enforcement orders, the SIP must require that such board or board be subject to the 128(a)(1) majority requirements in order for EPA to approve Alabama's section 110(a)(2)(E)(ii) infrastructure submittals. Based upon the information protocol described by Alabama, the State's approach fails to address the majority requirements of section 128.

In addition to the issues noted above regarding the section 128(a)(1) requirements, the question of whether a board or body handles appeals of permits or enforcement orders is also relevant to sufficiency of the State's protocol with respect to the section 128(a)(2) requirements. To the extent a board or body decides appeals of permits or enforcement orders, the SIP must require that members of such board or body be subject to the section 128(a)(2) conflict of interest disclosure requirements. The State's conflict of interest disclosure protocol, as submitted, would appear to only apply to three specified officials within ADEM. Alabama has failed to demonstrate how the submitted protocol would provide adequate disclosure consistent with the requirements section 128(a)(2).

EPA also notes that Alabama's conflict of interest disclosure protocol, at footnote 3, asserts that "EPA defines 'significant portion of income' as 50% or more of gross personal income for a calendar year if the recipient is over 60 years of age and is receiving that portion under retirement, pension, or similar

arrangement. This information need only be provided if the recipient falls in this category." This statement is incomplete. The complete suggested definition for "Significant Portion of Income" recommended in EPA's 1978 Guidance to States for Meeting Conflict of Interest Requirements of Section 128 is "10 percent or more of gross personal income for a calendar year, including retirement benefits, consultation fees, and stock dividends, except that it shall mean 50 percent [or more] of gross personal income for a calendar year if the recipient is over 60 years of age and is receiving such portion pursuant to retirement, pension, or similar arrangement." Alabama's protocol omits the generally applicable 10 percent standard.³

EPA is finalizing disapproval of Alabama's infrastructure submissions as they relate to sub-element 110(a)(2)(E)(ii) because, as described above, the SIP presently does not contain provisions to address the requirements of section 128 of the CAA. Consistent with the obligations under the CAA, EPA intends to continue working with the State to resolve this SIP deficiency.

III. Final Action

EPA is taking final action to disapprove the portion of Alabama's July 25, 2008, and September 23, 2009, submissions which was intended to meet the requirement to address element 110(a)(2)(E)(ii) for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS. EPA has made the determination that Alabama's SIP does not satisfy the requirement for element 110(a)(2)(E)(ii) for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS. In today's action, EPA is not taking any action on the remaining elements of the submission, including other section 110(a)(2) infrastructure elements.

Under section 179(a) of the CAA, final disapproval of a submittal that addresses a requirement of a Part D Plan (42 U.S.C. 7501-7515) or is required in response to a finding of substantial inadequacy as described in section 7410(k)(5) (SIP call) starts a sanctions clock. Section 110(a)(2)(E)(ii) provisions (the provisions being disapproved in today's notice) were not submitted to meet requirements for Part D, and

³ EPA notes that this suggested definition is provided in a guidance document as an example to states of how to define significant portions of income, therefore, states may propose a different standard as constituting a "significant portion of income." However, as noted in the guidance, EPA views the substance of the suggested definitions as representing the minimum level of stringency necessary to meet the requirements of section 128.

adverse comment and is available in the docket for today's action.)

therefore, no sanctions will be triggered. This final action triggers the requirement under section 110(c) that EPA promulgate a Federal Implementation Plan (FIP) no later than 2 years from the date of the disapproval unless the State corrects the deficiency, and the Administrator approves the plan or plan revision before the Administrator promulgates such FIP.

IV. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly this final action disapproves state law because it does not meet federal requirements. For that reason, this action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 14, 2012. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements. *See* section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Nitrogen dioxide, Ozone, Reporting and recordkeeping requirements, Volatile organic compounds.

Dated: September 27, 2012.

A. Stanley Meiburg,

Acting Regional Administrator, Region 4.

40 CFR part 52 is amended as follows:

PART 52—APPROVAL AND PROMULGATION OF IMPLEMENTATION PLANS

- 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart B—Alabama

- 2. Section 52.62 is amended by adding paragraph (e), to read as follows:

§ 52.62 Control strategy: Sulfur oxides and particulate matter.

* * * * *

(e) *Disapproval.* EPA is disapproving portions of Alabama's Infrastructure SIP for the 1997 annual and 2006 24-hour PM_{2.5} NAAQS addressing section 110(a)(2)(E)(ii) that requires the State to comply with section 128 of the CAA.

Approval and Promulgation of Implementation Plans; State of Arizona; Prevention of Air Pollution Emergency Episodes

AGENCY: Environmental Protection Agency (EPA).

ACTION: Final rule.

SUMMARY: EPA is approving a State Implementation Plan (SIP) revision submitted by the State of Arizona to address the requirements regarding air pollution emergency episodes in Clean Air Act (CAA or Act).

DATES: This final rule is effective on November 14, 2012.

ADDRESSES: EPA has established a docket for this action, identified by Docket ID Number EPA-R09-OAR-2012-0244. The index to the docket for this action is available electronically at <http://www.regulations.gov> and in hard copy at EPA Region IX, 75 Hawthorne Street, San Francisco, California 94105-3901. While all documents in the docket are listed in the index, some information may be publicly available only at the hard copy location (e.g., copyrighted material), and some may not be publicly available in either location (e.g., confidential business information). To inspect the hard copy materials, please schedule an appointment during normal business hours with the contact listed directly below.

FOR FURTHER INFORMATION CONTACT: Jeffrey Buss, Air Planning Office (AIR-2), U.S. Environmental Protection Agency, Region IX, (415) 947-4152, buss.jeffrey@epa.gov.

SUPPLEMENTARY INFORMATION:

Throughout this document, the terms “we,” “us,” and “our” refer to EPA.

Table of Contents

- I. Background
- II. Final Action
- III. Statutory and Executive Order Reviews

I. Background

On April 12, 2012 (77 FR 21911), EPA proposed to approve a SIP revision submitted by the State of Arizona to address the requirements regarding air pollution emergency episodes in CAA section 110(a)(2)(G). Section 110(a)(2)(G) requires that each SIP provide for authority comparable to that in section 303 of the Act (“Emergency Powers”) and adequate contingency plans to implement such authority. EPA proposed to approve Arizona’s SIP revision as meeting the authority and contingency plans for the 1997 8-hour ozone National Ambient Air Quality Standard (NAAQS).

The rationale supporting EPA’s action, including the scope of infrastructure SIPs in general, is explained in the Notice of Proposed Rulemaking (NPR) and in the technical support document (TSD) for that action and will not be restated here. The TSD is available online at <http://www.regulations.gov>, Docket ID number EPA–R09–OAR–2012–0244. No public comments were received on the NPR.

II. Final Action

EPA is approving Arizona’s SIP revision as meeting the authority and contingency plans for the 1997 8-hour ozone National Ambient Air Quality Standards (NAAQS or standards).

The Arizona Emergency Episode Plan is substantively identical to the CAA section 110(a)(2)(G) rule currently approved into Arizona’s SIP (R9–3–219, “Air pollution emergency episodes”), which EPA approved in 1982 (47 FR 42572, September 28, 1982), with one exception which makes it more stringent than the SIP program. We determine that our approval of this submittal would comply with CAA section 110(l), because the SIP revision would not interfere with the ongoing process for ensuring that requirements for reasonable further progress (RFP) and attainment of the NAAQS are met, and the submitted SIP revision is more stringent than the rule previously approved into the SIP. We also determine that our approval of the submittal would comply with CAA section 193, to the extent it applies, because the SIP revision would ensure equivalent or greater emission

reductions of ozone precursors compared to the SIP-approved rule. Therefore, EPA is removing the superseded Rule R9–3–219 from the SIP and approving Rule R18–2–220 and the “Procedures for Prevention of Emergency Episodes,” into the SIP.

III. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve State choices, provided that they meet the criteria of the Clean Air Act. Accordingly, this action merely approves State law as meeting Federal requirements and does not impose additional requirements beyond those imposed by State law. For that reason, this action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
- Does not provide EPA with the discretionary authority to address disproportionate human health or environmental effects with practical, appropriate, and legally permissible methods under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the State, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it is published in the **Federal Register**. This action is not a “major rule” as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the Clean Air Act, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 14, 2012. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. This action may not be challenged later in proceedings to enforce its requirements (see section 307(b)(2)).

Approval and Promulgation of Implementation Plans; Portion of York County, South Carolina Within Charlotte-Gastonia-Rock Hill, North Carolina-South Carolina 1997 8-Hour Ozone Nonattainment Area; Reasonable Further Progress Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Direct final rule.

SUMMARY: EPA is taking direct final action to approve two state implementation plan (SIP) revisions,

submitted by the South Carolina Department of Health and Environmental Control (SC DHEC), on August 31, 2007, and April 29, 2010, to address the reasonable further progress (RFP) plan requirements for the 1997 8-hour ozone national ambient air quality standards (NAAQS) for the portion of York County, South Carolina that is within the bi-state Charlotte-Gastonia-Rock Hill 1997 8-hour ozone nonattainment area. The Charlotte-Gastonia-Rock Hill, North Carolina-South Carolina 1997 8-hour ozone nonattainment area (hereafter referred to as the “bi-state Charlotte Area”) is comprised of Cabarrus, Gaston, Lincoln, Mecklenburg, Rowan, Union and a portion of Iredell (Davidson and Coddle Creek Townships) Counties in North Carolina; and a portion of York County in South Carolina (hereafter referred to as “the York County Area”). EPA is also providing the status of its adequacy determination for the motor vehicle emissions budgets (MVEB) for volatile organic compounds (VOC) that were included in South Carolina’s RFP plan. Further, EPA is approving these MVEB. These actions are being taken pursuant to section 110 of the Clean Air Act (CAA or Act). EPA will take action on North Carolina’s RFP plan for its portion of the bi-state Charlotte Area, in a separate action.

DATES: This direct final rule is effective December 14, 2012 without further notice, unless EPA receives adverse comment by November 14, 2012. If EPA receives such comments, it will publish a timely withdrawal of the direct final rule in the **Federal Register** and inform the public that the rule will not take effect.

ADDRESSES: Submit your comments, identified by Docket ID Number, “EPA–R04–OAR–2008–0177,” by one of the following methods:

1. *www.regulations.gov*: Follow the on-line instructions for submitting comments.
2. *Email*: R4-RDS@epa.gov.
3. *Fax*: 404–562–9019.
4. *Mail*: “EPA–R04–OAR–2008–0177,” Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960.
5. *Hand Delivery or Courier*: Ms. Lynorae Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. Such

deliveries are only accepted during the Regional Office’s normal hours of operation. The Regional Office’s official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding federal holidays.

Instructions: Direct your comments to Docket ID Number, “EPA–R04–OAR–2008–0177.” EPA’s policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through *www.regulations.gov* or email, information that you consider to be CBI or otherwise protected. The *www.regulations.gov* Web site is an “anonymous access” system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov*, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA’s public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm*.

Docket: All documents in the electronic docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW.,

Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

FOR FURTHER INFORMATION CONTACT: Ms. Sara Waterson of the Regulatory Development Section, in the Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. The telephone number is (404) 562–9061. Ms. Sara Waterson can be reached via electronic mail at waterson.sara@epa.gov.

- III. What is EPA's analysis of the RFP plan for the York County Area?
- IV. What is EPA's analysis of the 2008 VOC MVEB for the York County Area?
- V. What is the status of EPA's adequacy determination for the 2008 VOC MVEB for the York County Area?
- VI. Final Action
- VII. Statutory and Executive Order Reviews

I. What action is EPA taking?

EPA is approving revisions to the South Carolina SIP, submitted by the State of South Carolina through SC DHEC, on August 31, 2007, and April 29, 2010, to meet RFP requirements of the CAA for the York County Area for the 1997 8-hour ozone NAAQS. The RFP plan demonstrates that VOC emissions will be reduced by at least 15 percent for the period of 2002 through 2008. Additionally, EPA is approving the required 2008 VOC MVEB which were included in the York County Area RFP plan. EPA is taking these actions because they are consistent with CAA requirements for the requirements for RFP. The York County Area MVEB, expressed in tons per day (tpd) and kilograms per day (kgd), are provided in Table 1 below.

TABLE 1—YORK COUNTY, SOUTH CAROLINA* 1997 8-HOUR OZONE VOC MVEB

	2008	2008
York County (partial county) VOC MVEB		
VOC	6.053 tpd	5,493 kgd

* Represents only the portion of York County that is in the nonattainment area for the bi-state Charlotte Area.

EPA is also describing the status of its transportation conformity adequacy determination for the 2008 MVEB.

II. What is the background for EPA's action?

A. General Background

On July 18, 1997, EPA promulgated a revised 8-hour ozone NAAQS of 0.08 parts per million (ppm). Under EPA's regulations at 40 CFR part 50, the 1997 8-hour ozone NAAQS is attained when the 3-year average of the annual fourth highest daily maximum 8-hour average ambient air quality ozone concentrations is less than or equal to 0.08 ppm (i.e., 0.084 ppm when rounding is considered) (69 FR 23857, April 30, 2004). Ambient air quality monitoring data for the 3-year period must meet the data completeness requirement as determined in 40 CFR part 50, appendix I. The ambient air quality monitoring data completeness requirement is met when the average percent of days with valid ambient monitoring data is greater than 90 percent, and no single year has less than 75 percent data completeness.

Upon promulgation of a new or revised NAAQS, the CAA requires EPA to designate as nonattainment any area that is violating the NAAQS, based on the three most recent years of ambient air quality data at the conclusion of the designation process. The bi-state Charlotte Area was designated nonattainment for the 1997 8-hour ozone NAAQS on April 30, 2004 (effective June 15, 2004) using 2001–2003 ambient air quality data (69 FR 23857, April 30, 2004). At the time of designation the bi-state Charlotte Area was classified as a moderate nonattainment area for the 1997 8-hour ozone NAAQS. In the April 30, 2004, Phase I Ozone Implementation Rule, EPA established ozone nonattainment area attainment dates based on Table 1 of section 181(a) of the CAA. This established an attainment date six years after the June 15, 2004, effective date for areas classified as moderate areas for the 1997 8-hour ozone nonattainment designations. Section 181 of the CAA explains that the attainment date for moderate nonattainment areas shall be as expeditiously as practicable, but no later than six years after designation, or June 15, 2010. Therefore, the bi-state Charlotte Area's original attainment date was June 15, 2010. See 69 FR 23951, April 30, 2004.

The bi-state Charlotte Area did not attain the 1997 8-hour ozone NAAQS by June 15, 2010 (the applicable attainment date for moderate nonattainment areas); however, the Area qualified for an

extension of the attainment date. Under certain circumstances, the CAA allows for extensions of the attainment dates prescribed at the time of the original nonattainment designation. In accordance with CAA section 181(a)(5), EPA may grant up to 2 one-year extensions of the attainment date under specified conditions. On May 31, 2011, EPA determined that North Carolina and South Carolina met the CAA requirements to obtain a one-year extension of the attainment date for the 1997 8-hour ozone NAAQS for the bi-state Charlotte Area. See 76 FR 31245. As a result, EPA extended the bi-state Charlotte Area's attainment date from June 15, 2010, to June 15, 2011, for the 1997 8-hour ozone NAAQS.

On November 15, 2011 (76 FR 70656), EPA determined the bi-state Charlotte Area attained the 1997 8-hour ozone NAAQS; and subsequently, on March 7, 2012 (77 FR 13493), EPA determined that the bi-state Charlotte Area attained the 1997 8-hour ozone NAAQS by the applicable attainment date. The determination of attaining data was based upon complete, quality-assured and certified ambient air monitoring data for the 2008–2010 period, showing that the Area had monitored attainment of the 1997 8-hour ozone NAAQS. The requirements for the Area to submit an attainment demonstration and associated reasonably available control measures (RACM), RFP plan, contingency measures, and other planning SIP revisions related to attainment of the standard were suspended as a result of the determination of attainment, so long as the Area continues to attain the 1997 8-hour ozone NAAQS.¹ See 40 CFR 52.2125(a).

On January 12, 2012, South Carolina withdrew the attainment demonstration submissions (except RFP, emissions statements, and the emissions inventory) as allowed by 40 CFR 51.918 for the York County Area.²

¹ Originally, South Carolina submitted SIP revisions, including an attainment demonstration, on August 31, 2007, to address nonattainment requirements related to the 1997 8-hour ozone NAAQS. Specifically, South Carolina submitted an attainment demonstration and associated RACM, a RFP plan, contingency measures, emissions statement, a 2002 base year emissions inventory and other planning SIP revisions related to attainment of the 1997 8-hour ozone NAAQS for the York County Area. South Carolina withdrew the August 31, 2007, attainment demonstration portion of the SIP for the York County Area on December 22, 2008. On April 29, 2010, South Carolina resubmitted the attainment demonstration SIP, and provided a supplement for the August 31, 2007, RFP plan for the York County Area.

² South Carolina did not withdraw any elements related to reasonably available control technology

Subsequently, EPA approved South Carolina's SIP revisions related to the emissions statements and emissions inventory requirements for the York County Area for the 1997 8-hour ozone NAAQS. For the EPA action related to the emissions statements requirements for the 1997 8-hour ozone NAAQS, see 77 FR 37812 (June 25, 2012). For the EPA action related to the emissions inventory requirements for the 1997 8-hour ozone NAAQS, see 77 FR 29540 (May 18, 2012). Despite the determination of attainment, South Carolina opted to leave the SIP submissions related to the RFP requirements for the 1997 8-hour ozone NAAQS before EPA for action. As such, EPA is taking action to approve South Carolina's August 31, 2007, and April 29, 2010, SIP revisions as they related to the RFP requirements for the 1997 8-hour ozone NAAQS.

B. Background for RFP

On November 29, 2005 (70 FR 71612), as revised on June 8, 2007 (72 FR 31727), EPA published a rule entitled "Final Rule To Implement the 8-Hour Ozone National Ambient Air Quality Standard—Phase 2; Final Rule To Implement Certain Aspects of the 1990 Amendments Relating to New Source Review and Prevention of Significant Deterioration as They Apply in Carbon Monoxide, Particulate Matter and Ozone NAAQS; Final Rule for Reformulated Gasoline" (hereafter referred to as the Phase 2 Rule). Section 182(b)(1) of the CAA and EPA's Phase 2 Rule³ require a state, for each 1997 8-hour ozone nonattainment area that is classified as moderate, to submit an emissions inventory and a RFP plan to show how the state will reduce emissions of VOC.

The bi-state Charlotte Area had an attainment date of June 15, 2010 (i.e., that is beyond five years after designation), that was later extended to June 15, 2011. See 76 FR 31245 (May 31, 2011). For a moderate area with an

attainment date of more than five years after designation, the RFP plan must obtain a 15 percent reduction in ozone precursor emissions for the first six years after the baseline year (2002 through 2008). Since the York County Area did not have a previous plan to address RFP requirements,⁴ the initial RFP requirement for the Area must be met through VOC reductions as required by the 1990 CAA Amendments.

Pursuant to CAA section 172(c)(9), RFP plans must include contingency measures that will take effect without further action by the state or EPA, which includes additional controls that would be implemented if the area fails to reach the RFP milestones. While the CAA does not specify the type of measures or quantity of emissions reductions required, EPA provided guidance interpreting the CAA that implementation of these contingency measures would provide additional emissions reductions of up to 3 percent of the adjusted base year inventory in the year following the RFP milestone year (i.e., in this case 2008). For more information on contingency measures please see the April 16, 1992 General Preamble (57 FR 13498, 13510) and the November 29, 2005 Phase 2 8-hour ozone standard implementation rule (70 FR 71612, 71650). Finally, RFP plans must also include a MVEB for the precursors for which the plan is developed. See Section IV of this rulemaking for more information on MVEB requirements.

On August 31, 2007, and April 29, 2010, South Carolina submitted RFP plans for the York County Area to address the CAA's requirements for the 1997 8-hour ozone NAAQS. The August 31, 2007, SIP revision (as supplemented by the April 29, 2010, SIP revision) included an attainment demonstration plan, RFP plan for 2008 milestone year, contingency measures, RACT, RACM requirements, on-road VOC MVEB, and the 2002 base year emissions inventory.

These SIP revisions were subject to notice and comment by the public and the State addressed the comments received on the proposed SIPs. Today's rulemaking is approving only the RFP plan, including the associated MVEB. The remainder of South Carolina's August 31, 2007, and April 29, 2010, SIP revisions were addressed by previous EPA actions, or by the State's withdrawal of submissions that were no longer necessary.

III. What is EPA's analysis of the RFP plan for the York County Area?

On August 31, 2007, and April 29, 2010, South Carolina submitted RFP plans for the York County Area to address the CAA's requirements for the 1997 8-hour ozone NAAQS. Below provides EPA's analysis of South Carolina's RFP submissions.

A. Base Year Emissions Inventory

An emissions inventory is a comprehensive, accurate, current inventory of actual emissions from all sources and is required by section 182(a)(1) of the CAA. Because the York County Area as part of the bi-state Charlotte Area did not implement the 15 percent VOC reductions for the 1-hour ozone NAAQS, the requirement for South Carolina to meet RFP is a 15 percent VOC reduction between 2002 and 2008 with continued progress toward attainment through attainment.⁵ EPA recommended 2002 as the base year emissions inventory, and is therefore the starting point for calculating RFP. South Carolina submitted its 2002 base year emissions inventory on August 31, 2007. In an action on May 18, 2012, EPA approved South Carolina's 2002 base year emissions inventory for the York County Area for the 1997 8-hour ozone NAAQS. See 77 FR 29540. A summary of the York County Area 2002 base year emissions inventories is included in Table 2 below.

TABLE 2—2002 POINT AND AREA SOURCES ANNUAL EMISSIONS FOR THE YORK COUNTY AREA
[Tons per summer day]

County	Point		Area		Non-road		Mobile	
	NO _x	VOC						
York (partial) *	11.1	7.29	2.2	7.48	4.9	3.19	13.8	6.84

* Represents only the portion of York County that is in the nonattainment area for the bi-state Charlotte Area.

(RACT) requirements, to the extent that these requirements were addressed in the attainment demonstration submissions.

³ RFP regulations are at 40 CFR 51.910.

⁴ Some areas that were designated as moderate or above for the 1-hour ozone NAAQS may have

implemented Rate of Progress plans (i.e., plans similar to the RFP requirements) by which the area would have achieved at least a 15 percent reduction in VOC from an initial baseline. Such areas have the flexibility to meet RFP requirements through a reduction in VOC or nitrogen oxides, after the

initial achievement in a reduction of at least 15 percent for VOC emissions for the area.

⁵ The bi-state Charlotte Area attained the 1997 8-hour ozone NAAQS by June 15, 2011, based on 2008–2010 data.

As mentioned above, EPA has already approved this emissions inventory and thus is not taking comment on these inventories in the parallel proposal to today's direct final action.

B. Adjusted Base Year Inventory and 2008 RFP Target Levels

The process for determining the emissions baseline from which the RFP reductions are calculated is described in section 182(b)(1) of the CAA and 40 CFR 51.910. This baseline value is the 2002 adjusted base year inventory. Sections 182(b)(1)(B) and (D) require the exclusion from the base year inventory of emissions benefits resulting from the Federal Motor Vehicle Control Program (FMVCP) regulations promulgated by January 1, 1990, and the Reid Vapor Pressure (RVP) regulations promulgated June 11, 1990 (55 FR 23666). The FMVCP and RVP emissions reductions are determined by the State using EPA's on-road mobile source emissions modeling software, MOBILE6. The FMVCP and RVP emission reductions are then removed from the base year inventory by the State, resulting in an adjusted base year inventory. The emission reductions needed to satisfy the RFP requirement are then calculated from the adjusted base year inventory. These reductions are then subtracted from the adjusted base year inventory to establish the emissions target for the RFP milestone year (2008).

For moderate areas like the York County Area (as part of the bi-state Charlotte Area),⁶ the CAA specifies a 15 percent reduction in ozone precursor emissions over an initial six year period following the baseline inventory year. In the Phase 2 Rule, EPA interpreted this requirement for areas that were also designated nonattainment and classified

as moderate or higher for the 1-hour ozone NAAQS. In the Phase 2 Rule, EPA provided that an area classified as moderate or higher that has the same boundaries as an area, or is entirely composed of several areas or portions of areas, for which EPA fully approved a 15 percent plan for the 1-hour NAAQS, is considered to have met the requirements of section 182(b)(1) of the CAA for the 8-hour NAAQS. In this situation, a moderate nonattainment area is subject to RFP under section 172(c)(2) of the CAA and shall submit, no later than 3 years after designation for the 8-hour NAAQS, a SIP revision that meets the requirements of 40 CFR 51.910(b)(2). The RFP SIP revision must provide for a 15 percent emission reduction (either nitrogen oxides (NO_x) and/or VOC) accounting for any growth that occurs during the six year period following the baseline emissions inventory year, that is, 2002–2008.

As mentioned earlier and according to section 182(b)(1)(D) of the CAA, emission reductions that resulted from the FMVCP and RVP rules promulgated prior to 1990 are not creditable for achieving RFP emission reductions. Therefore, the 2002 base year inventory is adjusted by subtracting the VOC and NO_x emission reductions that are expected to occur between 2002 and the future milestone years due to the FMVCP and RVP rules.

In the Phase 2 Rule, promulgated on November 29, 2005 (70 FR 71612), EPA outlines Method 1 as the process that states should use to show compliance with RFP for areas like the York County Area. A summary of the steps for Method 1 is provided below.

- Step A is the actual anthropogenic base year VOC emissions inventory in 2002.

- Step B is to account for creditable emissions for RFP.
- Step C is to calculate non-creditable emissions for RFP. Non-creditable emissions include emissions from: (1) Motor vehicle exhaust or evaporative emissions regulations promulgated by January 1, 1990; (2) regulations concerning RVP promulgated by November 15, 1990; (3) RACT corrections required prior to November 1990; and (4) corrective inspection and maintenance (I/M) plan required prior to November 1990.

- Step D is the 2002 base year emissions (Step A) minus the non-creditable emissions (Step C).

- Step E is to calculate the 2008 target level VOC emissions. This is calculated by reducing the emissions from Step D by 15 percent.

- The estimated 2008 VOC emissions are then compared to the 2008 target level VOC emissions (Step E).

As provided in South Carolina's August 31, 2007, SIP revision (as supplemented by the April 29, 2010, SIP revision), the State utilized the steps from Method 1 of the Phase 2 Rule. Specifically, South Carolina sets out its calculations in Section VI.B.2 of the August 31, 2007, plan and SC DHEC's April 29, 2010, SIP revision as summarized below.

1. Step A: Estimate the actual anthropogenic base year VOC inventory in 2002 with all 2002 control programs in place for all sources.

South Carolina provided this emission inventory in Table VI–1 of the April 29, 2010, York County RFP plan, and as shown in Table 3, below. As mentioned above, EPA has already approved this inventory. See 77 FR 29540 (May 18, 2012).

TABLE 3—2002 VOC EMISSIONS INVENTORY FOR THE YORK COUNTY AREA

[Tons per summer day]

	Point	Area	Nonroad	Mobile	Total
York *	7.29	7.48	3.19	6.84	24.80

* Represents only the portion of York County that is in the nonattainment area for the bi-state Charlotte Area.

⁶The portion of the bi-state Charlotte Area that was classified as moderate under the 1-hour ozone NAAQS contained the counties of Gaston and Mecklenburg in North Carolina. Gaston and Mecklenburg counties were also designated nonattainment as a part of the 1997 8-hour ozone moderate bi-state Charlotte Area. Although a

portion of this Area was classified as moderate for the 1-hour ozone NAAQS, a 15 percent rate of progress (ROP) plan was not submitted for this Area due to its change in attainment status. Specifically, North Carolina submitted a redesignation and maintenance plan request instead before the due date of the 1-hour ozone NAAQS ROP plan.

Therefore, because the bi-state Charlotte Area did not implement a 15 percent ROP plan under the 1-hour ozone NAAQS, the Area must have VOC reductions totaling at least 15 percent for the first six years following the baseline inventory year of 2002 in order for the RFP plan to be approved.

2. Step B: Using the same highway vehicle activity inputs used to calculate the actual 2002 inventory, run the appropriate motor vehicle emissions model for 2002 and for 2008 with all post-1990 CAA measures turned off. Any other local inputs for vehicle I/M programs should be set according to the program that was required to be in place in 1990. Fuel RVP should be set at 9.0 or 7.8 pounds per square inch (psi) depending on the RVP required in the local area as a result of fuel RVP regulations promulgated in June, 1990.

South Carolina conducted the mobile modeling in accordance with the directions outlined above for Step B. For the York County Area, the RVP requirement was set at 9.0 psi. Currently, I/M is not required in the York County Area, nor were there any outstanding obligations for the State to correct deficiencies for an existing or required I/M program. The York County Area was not designated nonattainment for the ozone NAAQS until June 15, 2005, and thus did not have outstanding requirements related I/M.

3. Step C: Calculate the difference between the 2002 and 2008 VOC emission factors calculated in Step B and multiply by the 2002 vehicle miles traveled. The result is the VOC emission calculation that will occur between 2002 and 2008 without the benefits of any post-1990 CAA measures. These are the non-creditable reductions that occur over this period.

South Carolina calculated the non-creditable emission reductions between 2002 and 2008 by modeling its 2002 and 2008 motor vehicle emissions with all post-1990 CAA measures turned off, and calculating the difference. This difference resulted in 1.00 tpd and can be found in Table VI-3 of the State's August 31, 2007, SIP revision.

4. Step D: Subtract the non-creditable reductions calculated in Step C from the actual anthropogenic 2002 inventory estimated in Step A. This adjusted VOC inventory is the basis for calculating the target level of emissions in 2008.

The adjusted VOC inventory for calculating the target level of VOC emissions reductions for 2008 is 23.80 tpd (i.e., 24.80 tpd (i.e., result of Step A) and 1.00 tpd (i.e., the result of Step C)).

5. Step E: Reduce the adjusted VOC inventory calculated in Step D by 15 percent. The result is the target level of VOC emissions in 2008 in order to meet the 2008 RFP requirement. The actual projected 2008 inventory for all sources with all control measures in place, including projected 2008 growth in activity, must be at or lower than this target level of emissions.

The targeted level of emissions reductions for the York County Area to meet RFP requirements is 3.57 tpd of VOC (i.e, 23.80 tpd multiplied by 15 percent). Thus the required targeted level of VOC emissions is 20.23 tpd for the York County Area.

C. Final Analysis of South Carolina's RFP Analysis for the York County Area

As mentioned above, the required target level for the York County Area to meet the initial RFP plan requirement is a 15 percent reduction in VOC emissions for 2008 from the VOC emissions in 2002 (as adjusted per CAA requirements). Specifically, to meet this requirement, South Carolina needed to demonstrate a reduction of at least 3.57 tpd. Table 4 below summarizes the results of South Carolina's calculations for this RFP analysis.

TABLE 4—YORK COUNTY AREA 15 PERCENT RFP ANALYSIS

Step from Method 1	Matrix	VOC (tpd)
Step A	Total 2002 Base Year Anthropogenic VOC Emissions	24.80
Step C	Non-Creditable VOC reductions	1.00
Step D	2002 Base Year minus the Non-Creditable Emissions	23.80
Step E	2008 Target Level of VOC Emissions	20.23

In its August 31, 2007, SIP revision, South Carolina calculated the 2008 VOC emissions inventory for the York County

Area. This emissions inventory is provided below in Table 5 below.

TABLE 5—2008 VOC EMISSIONS INVENTORY FOR THE YORK COUNTY AREA

[Tons per summer day]

	Point	Area	Nonroad	Mobile	Total
York *	3.60	7.90	2.40	3.94	17.84

* Represents only the portion of York County that is in the nonattainment area for the bi-state Charlotte Area.

As discussed above, the required target for VOC emissions for the year 2008 for South Carolina to meet the RFP requirements for York County is 20.23 tpd (i.e., 15 percent reduction from the adjusted 2002 baseline). As revealed in Table 5, South Carolina calculated an emissions inventory of 17.84 tpd of VOC for York County in 2008, which is well below the 20.23 tpd required target. Thus, EPA is making the determination

that South Carolina's SIP revision demonstrates the required progress towards attainment for the York County Area as part of the bi-state Charlotte Area. In today's action, EPA is approving South Carolina's August 31, 2007, and April 29, 2010, SIP revisions as meeting the CAA and EPA's regulations regarding RFP.

IV. What is EPA's analysis of the 2008 VOC MVEB for the York County Area?

Under section 176(c) of the CAA, new transportation plans, programs, and projects, such as the construction of new highways, must "conform" to (i.e., be consistent with) the part of the state's air quality plan that addresses pollution from cars and trucks. Conformity to the SIP means that transportation activities will not cause new air quality

violations, worsen existing violations, or delay timely attainment of the NAAQS or any interim milestones. If a transportation plan does not conform, most new projects that would expand the capacity of roadways cannot go forward. Regulations at 40 CFR part 93 set forth EPA policy, criteria, and procedures for demonstrating and assuring conformity of such transportation activities to a SIP. The regional emissions analysis is one, but not the only, requirement for implementing transportation conformity. Transportation conformity is a requirement for nonattainment and maintenance areas. Maintenance areas are areas that were previously nonattainment for a particular NAAQS but have since been redesignated to attainment with an approved maintenance plan for that NAAQS.

Under the CAA, states are required to submit, at various times, control strategy SIPs and maintenance plans for nonattainment areas. These control strategy SIPs (including RFP and attainment demonstrations) and maintenance plans create MVEB for criteria pollutants and/or their precursors to address pollution from cars and trucks. Per 40 CFR part 93, a MVEB must be established for the target year and precursor pollutant of the RFP (i.e., in this case, for the target year of 2008 and for VOC). A state may adopt MVEB for other precursors as well. The MVEB is the portion of the total allowable emissions in the RFP plan that is allocated to highway and transit vehicle use and emissions. See 40 CFR 93.101. The MVEB serves as a ceiling on emissions from an area's planned transportation system. The MVEB concept is further explained in the preamble to the November 24, 1993, Transportation Conformity Rule (58 FR 62188). The preamble also describes how to establish the MVEB in the SIP and how to revise the MVEB.

After interagency consultation with the transportation partners for the York County Area, South Carolina developed VOC MVEB for the year 2008. Specifically, South Carolina developed these MVEB, as required, for the target year and precursor—2008 and VOC—for the RFP plan. The York County Area MVEB for the 2008 RFP plan are based on the projected 2008 mobile source emissions accounting for all mobile control measures. The 2008 VOC MVEB are defined in Table 6 below.

TABLE 6—YORK COUNTY, SOUTH CAROLINA* 1997 8-HOUR OZONE VOC MVEB

	2008	2008
York County (partial county) VOC MVEB		
VOC	6.053 tpd	5,493 kgd

* Represents only the portion of York County that is in the nonattainment area for the bi-state Charlotte Area

Through this rulemaking, EPA is approving the 2008 VOC MVEB for the York County Area because EPA has made the determination that the Area is on target to attain the 1997 8-hour ozone NAAQS with the emissions at the levels of the budgets. Once the MVEB for the York County Area are approved or found adequate (whichever is completed first), they must be used for future conformity determinations for the 1997 8-hour ozone NAAQS for the Metropolitan Planning Organization's long-range transportation plans and transportation improvement programs. After thorough review, EPA has previously determined that the budgets meet the adequacy criteria, as outlined in 40 CFR 93.118(e)(4) (see 77 FR 33454, June 6, 2012), and is now approving the budgets because they are consistent with RFP for the 1997 8-hour ozone NAAQS for the year 2008.

V. What is the status of EPA's adequacy determination for the 2008 VOC MVEB for the York County Area?

When reviewing a submitted "control strategy" SIP, RFP or maintenance plan containing a MVEB, EPA may affirmatively find the MVEB contained therein adequate for use in determining transportation conformity. Once EPA affirmatively finds the submitted MVEB is adequate for transportation conformity purposes, that MVEB must be used by state and federal agencies in determining whether proposed transportation projects conform to the SIP as required by section 176(c) of the CAA.

EPA's substantive criteria for determining adequacy of a MVEB are set out in 40 CFR 93.118(e)(4). The process for determining adequacy consists of three basic steps: Public notification of a SIP submission, a public comment period, and EPA's adequacy determination. This process for determining the adequacy of submitted MVEB for transportation conformity purposes was initially outlined in EPA's May 14, 1999, guidance, "Conformity Guidance on Implementation of March 2, 1999, Conformity Court Decision." EPA adopted regulations to codify the

adequacy process in the Transportation Conformity Rule Amendments for the "New 8-Hour Ozone and PM_{2.5} National Ambient Air Quality Standards and Miscellaneous Revisions for Existing Areas; Transportation Conformity Rule Amendments—Response to Court Decision and Additional Rule Change," on July 1, 2004 (69 FR 40004).

Additional information on the adequacy process for transportation conformity purposes is available in the proposed rule entitled, "Transportation Conformity Rule Amendments: Response to Court Decision and Additional Rule Changes," 68 FR 38974, 38984 (June 30, 2003).

As discussed earlier, South Carolina's RFP plan submission includes VOC MVEB for the York County Area for the year 2008. EPA reviewed the VOC MVEB through the adequacy process. The South Carolina SIP submission, including the 2008 VOC MVEB for the York County Area, was open for public comment on EPA's adequacy Web site on May 13, 2010, found at: <http://www.epa.gov/otaq/stateresources/transconf/currsips.htm>. The EPA public comment period on adequacy of the 2008 VOC MVEB for the York County Area closed on June 14, 2010. EPA received comments during the adequacy process. These comments were addressed through the adequacy process, and EPA's responses to these comments can be found on EPA's adequacy Web site.

In a letter sent on May 25, 2012, EPA notified SC DHEC that the MOBILE6.2-based 2008 VOC MVEB for the York County Area were determined to be adequate for transportation conformity purposes. On June 6, 2012, EPA published its adequacy notice in the **Federal Register** (77 FR 33454). When EPA found the 2008 VOC MVEB adequate, this triggered a requirement that the new MVEB are used for future transportation conformity determinations. For required regional emissions analysis years beyond 2008, the applicable budgets are the 2008 VOC MVEB. The 2008 VOC MVEB are defined in sections I and IV of this rulemaking.

VI. Final Action

EPA is taking direct final action to approve portions of two SIP revisions, submitted on August 31, 2007, and April 29, 2010, by the State of South Carolina, through the SC DHEC to meet the RFP requirements for the York County Area for the 1997 8-hour ozone NAAQS. Additionally, EPA is approving the VOC MVEB for the York County Area that were including in South Carolina's RFP plan. These

actions are being taken pursuant to section 110 of the CAA.

EPA is publishing this rule without prior proposal because the Agency views this as a non-controversial amendment and anticipates no adverse comments. However, in the proposed rules section of this **Federal Register** publication, EPA is publishing a separate document that will serve as the proposal to approve the SIP revision should adverse comment be filed. This rule will be effective on December 14, 2012 without further notice unless the Agency receives adverse comment by November 14, 2012. If EPA receives such comments, then EPA will publish a document withdrawing the final rule and informing the public that the rule will not take effect. All public comments received will then be addressed in a subsequent final rule based on the proposed rule. EPA will not institute a second comment period on this action. Any parties interested in commenting must do so at this time. If no such comments are received, the public is advised this rule will be effective on December 14, 2012 and no further action will be taken on the proposed rule.

VII. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this final action:

- Is not a "significant regulatory action" subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely

affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
 - Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
 - Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
 - Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and
 - Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).
- In addition, this RFP for the York County Area does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because it does not have substantial direct effects on an Indian Tribe. The Catawba Indian Nation Reservation is located within the York County Area. Pursuant to the Catawba Indian Claims Settlement Act, S.C. Code Ann. 27-16-120, "all state and local environmental laws and regulations apply to the Catawba Indian Nation and Reservation and are fully enforceable by all relevant state and local agencies and authorities." EPA notes today's action will not impose substantial direct costs on Tribal governments or preempt Tribal law.

The Congressional Review Act, 5 U.S.C. 801 *et seq.*, as added by the Small Business Regulatory Enforcement Fairness Act of 1996, generally provides that before a rule may take effect, the agency promulgating the rule must submit a rule report, which includes a copy of the rule, to each House of the Congress and to the Comptroller General of the United States. EPA will submit a report containing this action and other required information to the U.S. Senate, the U.S. House of Representatives, and the Comptroller General of the United States prior to publication of the rule in the **Federal Register**. A major rule cannot take effect until 60 days after it

is published in the **Federal Register**. This action is not a "major rule" as defined by 5 U.S.C. 804(2).

Under section 307(b)(1) of the CAA, petitions for judicial review of this action must be filed in the United States Court of Appeals for the appropriate circuit by December 14, 2012. Filing a petition for reconsideration by the Administrator of this final rule does not affect the finality of this action for the purposes of judicial review nor does it extend the time within which a petition for judicial review may be filed, and shall not postpone the effectiveness of such rule or action. Parties with objections to this direct final rule are encouraged to file a comment in response to the parallel notice of proposed rulemaking for this action published in the proposed rules section of today's **Federal Register**, rather than file an immediate petition for judicial review of this direct final rule, so that EPA can withdraw this direct final rule and address the comment in the proposed rulemaking. This action may not be challenged later in proceedings to enforce its requirements. *See* section 307(b)(2).

List of Subjects in 40 CFR Part 52

Environmental protection, Air pollution control, Incorporation by reference, Intergovernmental relations, Ozone, Reporting and recordkeeping requirements, and Volatile organic compounds.

Dated: October 2, 2012.

A. Stanley Meiburg,

Acting Regional Administrator, Region 4.

40 CFR part 52 is amended as follows:

PART 52—[AMENDED]

- 1. The authority citation for part 52 continues to read as follows:

Authority: 42 U.S.C. 7401 *et seq.*

Subpart PP—South Carolina

- 2. Section 52.2120(e) is amended by adding new entries to the end of the table for "York County 1997 8-hour ozone reasonable further progress plan" and "Update for York County 1997 8-hour ozone reasonable further progress plan" to read as follows:

§ 52.2120 Identification of plan.

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 0, 27, and 90

[PS Docket 12-94; PS Docket No. 06-229; WT Docket 06-150; DA 12-1462]

Implementing Public Safety Broadband Provisions of the Middle Class Tax Relief and Job Creation Act of 2012

AGENCY: Federal Communications Commission.

ACTION: Final rule.

SUMMARY: In this document, the Public Safety and Homeland Security Bureau (Bureau) of the Commission implemented certain provisions of the Middle Class Tax Relief and Job Creation Act of 2012 (Public Safety Spectrum Act) governing deployment of a nationwide public safety broadband network in the 700 MHz band. Pursuant to clear statutory directives, the Bureau reallocated the D Block (758-763/788-793 MHz) for “public safety services” and delete Commission rules that are plainly inconsistent with this revised allocation; deleted the rules establishing, providing license authority with respect to, and governing operations under the Public Safety Broadband License in the existing public safety broadband spectrum; and adopted rules implementing the clear mandate of the Public Safety Spectrum Act to grant a license with respect to the public safety broadband spectrum (763-768/793-798 MHz), guard band (768-769/798-799 MHz), and the D Block to the First Responder Network Authority (FirstNet). By eliminating any confusion or uncertainty about the new regulatory framework applicable to the public safety broadband network, these action takes further steps necessary to facilitate the transition of this spectrum to FirstNet as required by the Act.

DATES: Effective November 14, 2012, except for the removal of §§ 90.18 and

90.528 of the Commission’s rules. The Commission will publish a separate document in the **Federal Register** announcing the subsequent effective date of these removals.

FOR FURTHER INFORMATION CONTACT:

Gene Fullano, Federal Communications Commission, Public Safety and Homeland Security Bureau, 445 12th Street SW., Room 7-C747, Washington, DC 20554. Telephone: (202) 418-0492, email: genaro.fullano@fcc.gov.

SUPPLEMENTARY INFORMATION: In the *Report and Order*, DA 12-1462, adopted and released September 7, 2012, the Bureau implements certain provisions of the Middle Class Tax Relief and Job Creation Act of 2012 (“Public Safety Spectrum Act” or “Act”)¹ governing deployment of a nationwide public safety broadband network in the 700 MHz band. The Public Safety Spectrum Act establishes the First Responder Network Authority (FirstNet) to oversee the construction and operation of this network as licensee of both the “existing public safety broadband spectrum” (763-769/793-799 MHz) and the spectrally adjacent “700 MHz D Block spectrum” (758-763/788-793 MHz).² The Act directs the Federal Communications Commission (FCC or Commission) to reallocate the D Block for public safety services,³ to license the D Block and the existing public safety broadband spectrum to FirstNet⁴ and to take other actions necessary to “facilitate the transition” of the existing public safety broadband spectrum to FirstNet.

In the *Report and Order*, the Bureau implements clear directives of Congress set forth in the Public Safety Spectrum Act. The Bureau reallocates the D Block for “public safety services” and deletes Commission rules that are plainly

¹ See Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. No. 112-96, 126 Stat. 156 (2012).

² See *id.* Secs. 6201(a), 6202 and 6204(a); see also *id.* sec. 6001(2) (defining “700 MHz D Block spectrum”) and (14) (defining “existing public safety broadband spectrum”).

³ See *id.* sec. 6101.

⁴ See *id.* sec. 6201(a).

inconsistent with this revised allocation. It also deletes the Commission rules establishing, providing license authority with respect to, and governing operations under the Public Safety Broadband License in the existing public safety broadband spectrum. The Bureau replaces these with rules implementing the clear mandate of the Public Safety Spectrum Act to grant a license with respect to this spectrum and the D Block to FirstNet. The rule changes adopted by the Bureau in this order are strictly limited to implementation of aspects of that mandate that leave no room for agency discretion, and thus fall within the Bureau’s delegated authority and are consistent with the requirements of the Administrative Procedure Act.⁵ As noted below, by eliminating any confusion or uncertainty about the new regulatory framework applicable to the public safety broadband network, the Bureau’s action takes further steps necessary to facilitate the transition of this spectrum to FirstNet as the prospective licensee established by the Act. The *Report and Order* is available at http://transition.fcc.gov/Daily_Releases/Daily_Business/2012/db0907/DA-12-1462A1.pdf.

This *Report and Order* will become effective November 14, 2012, except for the deletion of sections 90.18 and 90.528 of the Commission’s rules. Following that date, the Commission will publish a separate notice in the **Federal Register** announcing the subsequent effective date of these rule deletions, which shall be the date of issuance of a license to the First Responder Network Authority pursuant to Section 6201(a) of the Middle Class Tax Relief and Job Creation Act of 2012.

Under Section 603(a) of the Regulatory Flexibility Act (RFA), the Commission is not required to prepare a final regulatory flexibility analysis relating to the *Report and Order* because it was not required to publish general notice of proposed rulemaking before effecting the rule changes set forth

⁵ See *id.*; 5 U.S.C. 553(b)(B).

therein. The Report and Order contains no new or modified information collection requirements subject to the Paperwork Reduction Act of 1995 (PRA), Public Law 104-13. The Commission shall send a copy of the Report and Order in a report to be sent to Congress and the Government Accountability Office pursuant to the Congressional Review Act, see 5 U.S.C. 801(a)(1)(A).

List of Subjects

47 CFR Part 0

Classified information, Freedom of information, Government publications, Infants and children, Organization and functions (Government agencies), Privacy, Reporting and recordkeeping requirements, Sunshine Act.

47 CFR Part 27

Communications common carriers, Radio.

47 CFR Part 90

Administrative practice and procedure, Business and industry, Civil defense, Common carriers, Communications equipment, Emergency medical services, Incorporation by reference, Individuals with disabilities, Radio, Reporting and recordkeeping requirements.

Federal Communications Commission.

Timothy A. Peterson,

Chief of Staff, Public Safety and Homeland Security Bureau.

For the reasons discussed in the preamble, The Federal Communications Commission amends 47 CFR parts 0, 27, and 90 as follows:

PART 0—COMMISSION ORGANIZATION

■ 1. The authority citation for part 0 continues to read as follows:

Authority: Secs. 5, 48 Stat. 1068, as amended; 47 U.S.C. 155.

§ 0.181 [Amended]

■ 2. Section 0.181 is amended by removing paragraph (k).

PART 27—MISCELLANEOUS WIRELESS COMMUNICATIONS SERVICES

■ 3. The authority citation for part 27 continues to read as follows:

Authority: 47 U.S.C. 154, 301, 302, 303, 307, 309, 332, 336, and 337 unless otherwise noted.

■ 4. Section 27.1 is amended by revising paragraph (b)(2) to read as follows:

§ 27.1 Basis and purpose.

* * * * *

(b) * * *

(2) 746-758 MHz, 775-788 MHz, and 805-806 MHz.

* * * * *

§ 27.4 [Amended]

■ 5. Section 27.4 is amended by removing the following definitions “700 MHz Public/Private Partnership,” “Network Assets Holder,” “Network Sharing Agreement (NSA)” Operating Company,” “Public Safety Broadband License,” “Special Purpose Bankruptcy Remote Entity Public Safety Broadband Licensee,” “Shared Wireless Broadband Network,” “Special Purpose Bankruptcy Remote Entity,” “Upper 700 MHz D Block license,” “Upper 700 MHz D Block licensee.”

■ 6. Section 27.5 is amended by revising paragraph (b) to read as follows:

§ 27.5 Frequencies.

* * * * *

(b) 746-758 MHz, 775-788 MHz, and 805-806 MHz bands. The following frequencies are available for licensing pursuant to this part in the 746-758 MHz, 775-788 MHz, and 805-806 MHz bands:

(1) Two paired channels of 1 megahertz each are available for assignment in Block A in the 757-758 MHz and 787-788 MHz bands.

(2) Two paired channels of 1 megahertz each are available for assignment in Block B in the 775-776 MHz and 805-806 MHz bands.

(3) Two paired channels of 11 megahertz each are available for assignment in Block C in the 746-757 MHz and 776-787 MHz bands. In the event that no licenses for two channels in this Block C are assigned based on the results of the first auction in which such licenses were offered because the auction results do not satisfy the applicable reserve price, the spectrum in the 746-757 MHz and 776-787 MHz bands will instead be made available for assignment at a subsequent auction as follows:

(i) Two paired channels of 6 megahertz each available for assignment in Block C1 in the 746-752 MHz and 776-782 MHz bands.

(ii) Two paired channels of 5 megahertz each available for assignment in Block C2 in the 752-757 MHz and 782-787 MHz bands.

* * * * *

Subpart N—[Removed]

■ 7. Remove subpart N, consisting of §§ 27.1301 through 27.1340.

PART 90—PRIVATE LAND MOBILE RADIO SERVICES

■ 8. The authority citation for part 90 is amended to read as follows:

Authority: Sections 4(i), 11, 303(g), 303(r), and 332(c)(7) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 161, 303(g), 303(r), and 332(c)(7), and Title VI of the Middle Class Tax Relief and Job Creation Act of 2012, Pub. L. 112-96, 126 Stat. 156.

■ 9. Section 90.7 is amended by removing the following definitions “700 MHz Public/Private Partnership,” “Network Assets Holder,” “Network Sharing Agreement (NSA),” “Operating company,” “Public safety broadband license,” “Public Safety Broadband Licensee,” “Public safety broadband network operator,” “Shared Wireless Broadband Network,” “Special Purpose Bankruptcy Remote Entity,” “Upper 700 MHz D Block license,” “Upper 700 MHz D Block licensee,” and adding the definition “First Responder Network Authority” to read as follows:

§ 90.7 Definitions.

* * * * *

First Responder Network Authority. An entity established by the Middle Class Tax Relief and Job Creation Act of 2012 as an independent authority within the National Telecommunications and Information Administration and designated by that statute to hold a nationwide license associated with the 758-769 MHz and 788-799 MHz bands for use in deploying a nationwide public safety broadband network.

* * * * *

§ 90.18 [Removed]

■ 10. Section 90.18 is removed.
■ 11. Add § 90.19 to read as follows:

§ 90.19 Nationwide Public Safety Broadband Network.

Pursuant to the Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112-96, 126 Stat. 156 (2012), the 758-769 MHz and 788-799 MHz bands are allocated for use by the First Responder Network Authority to deploy a nationwide public safety broadband network as prescribed by statute.

■ 12. Section 90.20 is amended in the table in paragraph (c)(3) by removing the entries for “763 to 775” and “793 to 805” and adding in their place entries for “758 to 775” and “788 to 805” and by revising paragraph (d)(77) to read as follows:

§ 90.20 Public Safety Pool.

* * * * *

(c) * * *

(3) Frequencies.

PUBLIC SAFETY POOL FREQUENCY TABLE

Frequency or band	Class of station(s)	Limitations	Coordinator
758 to 775	Base, mobile	77	PX
788 to 805	Mobile	77	PX

(d) * * *
 (77) Subpart R of this part contains rules for assignment of channels in the 758–775 MHz and 788–805 MHz bands.
 * * * * *

Subpart R—Regulations Governing the Licensing and Use of Frequencies in the 758–775 and 788–805 MHz Bands

- 13. Revise the subpart heading to subpart R to read as set forth above.
- 14. Section 90.521 is amended by revising the first sentence to read as follows:

§ 90.521 Scope.

This subpart sets forth the regulations governing the licensing and operations of all systems operating in the 758–775 MHz and 788–805 MHz frequency bands. * * *
 * * * * *

§ 90.528 [Removed]

- 15. Remove § 90.528.
- 16. Section 90.531 is amended by revising the introductory text and paragraph (g) to read as follows:

§ 90.531 Band plan.

This section sets forth the band plan for the 758–775 MHz and 788–805 MHz public safety bands.
 * * * * *

(g) *Broadband.* The 758–768 MHz and 788–798 MHz bands are allocated for broadband communications.

- 17. Add § 90.532 to read as follows:

§ 90.532 Licensing of the 758–769 MHz and 788–799 MHz Bands.

Pursuant to Section 6201 of the Middle Class Tax Relief and Job Creation Act of 2012, Public Law 112–96, 126 Stat. 156 (2012), a nationwide license for use of the 758–769 MHz and 788–799 MHz bands shall be issued to the First Responder Network Authority for a initial license term of ten years from the date of the initial issuance of the license. Prior to expiration of the term of such initial license, the First Responder Network Authority shall submit to the Commission an

application for the renewal of such license. Such renewal application shall demonstrate that, during the preceding license term, the First Responder Network Authority has met the duties and obligations set forth under the foregoing Act. A renewal license shall be for a term not to exceed ten years.

Subpart AA [Removed]

- 18. Remove subpart AA, consisting of §§ 90.1401 through 90.1440.
[FR Doc. 2012–25235 Filed 10–11–12; 11:15 am]

BILLING CODE 6712–01–P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 622

[Docket No. 0907271173–0629–03]

RIN 0648–XC135

Fisheries of the Caribbean, Gulf of Mexico, and South Atlantic; 2012 Commercial Accountability Measure and Closure for South Atlantic Gag and South Atlantic Shallow-Water Grouper

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS implements accountability measures (AMs) for the commercial sector for gag in the exclusive economic zone (EEZ) of the South Atlantic. Commercial landings for gag, as estimated by the Science Research Director, are projected to reach the commercial annual catch limit (ACL) on October 20, 2012. Therefore, NMFS closes the commercial sector for gag and all other South Atlantic Shallow-Water Grouper (SASWG) on October 20, 2012 for the remainder of the 2012 fishing year, through December 31, 2012. Because there is a January through April seasonal closure for

SASWG, SASWG will not reopen until May 1, 2013. In the South Atlantic, SASWG means gag, black grouper, red grouper, scamp, red hind, rock hind, yellowmouth grouper, yellowfin grouper, graysby, and coney. This action is necessary to reduce overfishing of the South Atlantic gag and other SASWG resources.

DATES: This rule is effective 12:01 a.m., local time, October 20, 2012, until 12:01 a.m., local time, January 1, 2013.

FOR FURTHER INFORMATION CONTACT: Catherine Hayslip, telephone: 727–824–5305, email: Catherine.Hayslip@noaa.gov.

SUPPLEMENTARY INFORMATION: The snapper-grouper fishery of the South Atlantic is managed under the Fishery Management Plan for the Snapper-Grouper Fishery of the South Atlantic Region (FMP). Gag in the South Atlantic are managed under this FMP. The FMP was prepared by the South Atlantic Fishery Management Council and is implemented under the authority of the Magnuson-Stevens Fishery Conservation and Management Act by regulations at 50 CFR part 622.

The commercial ACL (commercial quota) for gag in the South Atlantic is 352,940 lb (160,091 kg), gutted weight, for the current fishing year, as specified in 50 CFR 622.42(e)(7).

In accordance with regulations at 50 CFR 622.49(b)(3)(i), NMFS is required to close the commercial sector for gag and all other SASWG when the commercial ACL (commercial quota) for gag has been reached, or is projected to be reached, by filing a notification to that effect with the Office of the Federal Register. NMFS has determined that the commercial ACL (commercial quota) for South Atlantic gag will be reached by October 20. Accordingly, the commercial sector for South Atlantic gag and all other SASWG is closed effective 12:01 a.m., local time, October 20, 2012, until 12:01 a.m., local time, January 1, 2013. The recreational sector will continue to remain open until December 31, 2012.

Additionally, a seasonal closure is in place for the recreational and commercial sectors for gag and all other SASWG from January through April each fishing year as specified in 50 CFR 622.35(j). Therefore, the commercial harvest of gag and all other SASWG will not commence until May 1, 2013.

The operator of a vessel with a valid commercial vessel permit for South Atlantic snapper-grouper having gag or other SASWG onboard must have landed and bartered, traded, or sold such gag or other SASWG prior to 12:01 a.m., local time, October 20, 2012. During this commercial closure, the bag limit and possession limits specified in 50 CFR 622.39(d)(1) and (d)(2), respectively, apply to all harvest or possession of gag or other SASWG in or from the South Atlantic EEZ, and the sale or purchase of gag or other SASWG taken from the EEZ is prohibited. The prohibition on sale or purchase does not apply to the sale or purchase of gag or other SASWG that were harvested, landed ashore, and sold prior to 12:01 a.m., local time, October 20, 2012, and were held in cold storage by a dealer or processor. For a person on board a vessel for which a Federal commercial permit for the South Atlantic snapper-grouper fishery has been issued, the sale and purchase provisions of the commercial closure for gag or other SASWG would apply regardless of whether the fish are harvested in state or Federal waters, as specified in 50 CFR 622.43(a)(5)(iii).

During the seasonal closure for the recreational and commercial sectors for gag and all other SASWG from January through April each fishing year, no person may fish for, harvest, or possess in or from the South Atlantic EEZ any SASWG. In addition, for a person on board a vessel for which a valid Federal commercial or charter vessel/headboat permit for South Atlantic snapper-grouper has been issued, the provisions of this closure apply in the South Atlantic, regardless of where such fish are harvested, *i.e.*, in state or Federal waters as specified in 50 CFR 622.35(j).

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA, (AA), finds that the need to immediately implement this action to close the commercial sector for gag and other SASWG constitutes good cause to waive the requirements to provide prior notice and opportunity for public comment pursuant to the authority set forth in 5 U.S.C. 553(b)(B), as such procedures would be unnecessary and contrary to

the public interest. Such procedures would be unnecessary because the rule itself has been subject to notice and comment, and all that remains is to notify the public of the closure. Allowing prior notice and opportunity for public comment is contrary to the public interest because of the need to immediately implement this action to protect gag since the capacity of the fishing fleet allows for rapid harvest of the quota. Prior notice and opportunity for public comment would require time and would potentially result in a harvest well in excess of the established commercial ACL (commercial quota).

For the aforementioned reasons, the AA also finds good cause to waive the 30-day delay in the effectiveness of this action under 5 U.S.C. 553(d)(3).

This action is taken under 50 CFR 622.43(a) and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 10, 2012.

Emily H. Menashes,

Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2012-25262 Filed 10-10-12; 4:15 pm]

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 111207737-2141-02]

RIN 0648-XC288

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Vessels Using Pot Gear in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for Pacific cod by vessels using pot gear in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary to prevent exceeding the 2012 Pacific cod total allowable catch apportioned to vessels using pot gear in the Central Regulatory Area of the GOA.

DATES: Effective 1200 hrs, Alaska local time (A.l.t.), October 12, 2012, through 2400 hrs, A.l.t., December 31, 2012.

FOR FURTHER INFORMATION CONTACT: Obren Davis, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the

GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679. Regulations governing sideboard protections for GOA groundfish fisheries appear at subpart B of 50 CFR part 680.

The 2012 Pacific cod total allowable catch (TAC) apportioned to vessels using pot gear in the Central Regulatory Area of the GOA is 11,755 metric tons (mt), as established by the final 2012 and 2013 harvest specifications for groundfish of the GOA (77 FR 15194, March 14, 2012).

In accordance with § 679.20(d)(1)(i), the Administrator, Alaska Region, NMFS (Regional Administrator) has determined that the 2012 Pacific cod TAC apportioned to vessels using pot gear in the Central Regulatory Area of the GOA will soon be reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 11,755 mt and is setting aside the remaining 0 mt as bycatch to support other anticipated groundfish fisheries. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for Pacific cod by vessels using pot gear in the Central Regulatory Area of the GOA. After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the directed fishing closure of Pacific cod for vessels using pot gear in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment

because the most recent, relevant data only became available as of October 9, 2012.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon

the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 10, 2012.

Emily H. Menashes,
Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Proposed Rules

Federal Register

Vol. 77, No. 199

Monday, October 15, 2012

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2012-0946; Directorate Identifier 2012-CE-037-AD]

RIN 2120-AA64

Airworthiness Directives; GA200 (Pty) Ltd Airplanes

AGENCY: Federal Aviation Administration (FAA), Department of Transportation (DOT).

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all GA200 (Pty) Ltd Models GA200 and GA200C airplanes that would revise an existing AD. This proposed AD results from mandatory continuing airworthiness information (MCAI) originated by an aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as failure of the wing strut bolt through the main spar. We are issuing this proposed AD to require actions to address the unsafe condition on these products.

DATES: We must receive comments on this proposed AD by November 29, 2012.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* (202) 493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m.

and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact GippsAero, P.O. Box 881, Morwell, Victoria 3840, Australia, telephone: + 61 (0) 3 5172 1200; fax + 61 (0) 3 5172 1201; email: support@gippsaero.com; Internet: www.gippsaero.com. You may review copies of the referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Examining the AD Docket

You may examine the AD docket on the Internet at <http://www.regulations.gov>; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Office (telephone (800) 647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Doug Rudolph, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329-4059; fax: (816) 329-4090; email: doug.rudolph@faa.gov.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2012-0946; Directorate Identifier 2012-CE-037-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each

substantive verbal contact we receive about this proposed AD.

Discussion

On August 31, 2012, we issued AD 2012-18-10, Amendment 39-17187 (77 FR 55686, September 11, 2012). That AD required actions intended to address an unsafe condition on the products listed above.

Since we issued AD 2012-18-10, Amendment 39-17187 (77 FR 55686, September 11, 2012), the Civil Aviation Safety Authority (CASA), which is the aviation authority for the Commonwealth of Australia, has issued AD AD/GA200/1, Amendment 1, dated September 21, 2012 (referred to after this as "the MCAI"), to correct an unsafe condition for the specified products. The MCAI states:

As a result of a reported case of failure of a strut on a GA200C aircraft, GippsAero has issued a mandatory service bulletin to alert operators and maintenance organisations and to provide inspection and rectification actions.

This Airworthiness Directive makes this inspection and rectification action mandatory. Failure to complete the actions required by this service bulletin may result in wing strut bolt failure, resulting in wing structural failure.

Amendment 1 is issued to revise the repeat inspection compliance time to 500 hours (previously 100 hours). The requirement service bulletin is also revised to provide a corrective action if the inboard (upper) strut fitting hole is found to be larger than specified. The initial inspection compliance time of 10 hours remains unchanged.

This proposed AD would retain the actions required in AD 2012-18-10, Amendment 39-17187 (77 FR 55686, September 11, 2012), change the compliance time for the repetitive inspections, and incorporate the revised service bulletin. You may obtain further information by examining the MCAI in the AD docket.

Relevant Service Information

GippsAero has issued Mandatory Service Bulletin SB-GA200-2012-08, Issue 2, dated September 4, 2012. The actions described in this service information are intended to correct the unsafe condition identified in the MCAI.

FAA's Determination and Requirements of the Proposed AD

This product has been approved by the aviation authority of another

country, and is approved for operation in the United States. Pursuant to our bilateral agreement with this State of Design Authority, they have notified us of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all information and determined the unsafe condition exists and is likely to exist or develop on other products of the same type design.

Costs of Compliance

We estimate that this proposed AD will affect 3 products of U.S. registry. We also estimate that it would take about 2 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is \$85 per work-hour.

Based on these figures, we estimate the cost of the proposed AD on U.S. operators to be \$510, or \$170 per product.

In addition, we estimate that any necessary follow-on actions would take about 2 work-hours and require parts costing \$400, for a cost of \$570 per product. We have no way of determining the number of products that may need these actions.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. "Subtitle VII: Aviation Programs," describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in "Subtitle VII, Part A, Subpart III, Section 44701: General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a "significant regulatory action" under Executive Order 12866,
- (2) Is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
- (3) Will not affect intrastate aviation in Alaska, and
- (4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

1. The authority citation for part 39 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

2. The FAA amends § 39.13 by removing Amendment 39–17187 (77 FR 55686, September 11, 2012), and adding the following new AD:

GA200 (Pty) Ltd: Docket No. FAA–2012–0946; Directorate Identifier 2012–CE–037–AD.

(a) Comments Due Date

We must receive comments by November 29, 2012.

(b) Affected ADs

This AD revises AD 2012–18–10, Amendment 39–17187 (77 FR 55686, September 11, 2012).

(c) Applicability

This AD applies to GA200 (Pty) Ltd Models GA200 and GA200C airplanes, all serial numbers, certificated in any category.

(d) Subject

Air Transport Association of America (ATA) Code 57: Wings.

(e) Reason

This AD was prompted by mandatory continuing airworthiness information (MCAI) issued by the aviation authority of another country to identify and correct an unsafe condition on an aviation product. The MCAI describes the unsafe condition as failure of the wing strut bolt through the main spar. We are issuing this AD to prevent failure of the wing strut bolt, which could result in wing failure.

(f) Actions and Compliance

Unless already done, do the following actions.

(1) Within 10 hours time-in-service (TIS) after September 14, 2012 (the effective date retained from AD 2012–18–10, Amendment 39–17187 (77 FR 55686, September 11, 2012)), inspect the inboard strut fitting following GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 1, dated August 22, 2012; or GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 2, dated September 4, 2012. Repetitively thereafter inspect at intervals not to exceed 500 hours TIS following GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 2, dated September 4, 2012.

(2) If the 100-hour TIS repetitive inspection previously required in AD 2012–18–10, Amendment 39–17187 (77 FR 55686, September 11, 2012) has already been done before the effective date of this AD following GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 1, dated August 22, 2012, the next required inspections are due at intervals not to exceed 500 hours TIS after the last inspection following GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 2, dated September 4, 2012.

(3) If any discrepancies are found during any of the inspections required by paragraphs (f)(1) and (f)(2) of this AD, before further flight after the inspection in which the discrepancy is found, take all necessary corrective actions following GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 1, dated August 22, 2012; or GippsAero Mandatory Service Bulletin SB–GA200–2012–08, Issue 2, dated September 4, 2012.

(g) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs):* The Manager, Standards Office, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. Send information to ATTN: Doug Rudolph, Aerospace Engineer, FAA, Small Airplane Directorate, 901 Locust, Room 301, Kansas City, Missouri 64106; telephone: (816) 329–4059; fax: (816) 329–4090; email: doug.rudolph@faa.gov. Before using any approved AMOC on any airplane to which the AMOC applies, notify your appropriate principal inspector (PI) in the FAA Flight Standards District Office (FSDO), or lacking a PI, your local FSDO.

(2) *Airworthy Product:* For any requirement in this AD to obtain corrective actions from a manufacturer or other source, use these actions if they are FAA-approved. Corrective actions are considered FAA-approved if they are approved by the State of Design Authority (or their delegated agent). You are required to assure the product is airworthy before it is returned to service.

(3) *Reporting Requirements:* For any reporting requirement in this AD, a federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that

collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120-0056. Public reporting for this collection of information is estimated to be approximately 5 minutes per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW., Washington, DC 20591, Attn: Information Collection Clearance Officer, AES-200.

(h) Related Information

Refer to MCAI Civil Aviation Safety Authority (CASA) AD AD/GA200/1, Amendment 1, dated September 21, 2012; GippsAero Mandatory Service Bulletin SB-GA200-2012-08, Issue 1, dated August 22, 2012; and GippsAero Mandatory Service Bulletin SB-GA200-2012-08, Issue 2, dated September 4, 2012, for related information. For service information related to this AD, contact GippsAero, P.O. Box 881, Morwell, Victoria 3840, Australia, telephone: + 61 (0) 3 5172 1200; fax + 61 (0) 3 5172 1201; email: support@gippsaero.com; Internet: www.gippsaero.com. You may review copies of the referenced service information at the FAA, Small Airplane Directorate, 901 Locust, Kansas City, Missouri 64106. For information on the availability of this material at the FAA, call (816) 329-4148.

Issued in Kansas City, Missouri, on October 9, 2012.

Earl Lawrence,

Manager, Small Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910-13-P

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 71

Docket No. FAA-2012-0971; Airspace
Docket No. 12-ASO-31

RIN 2120-AA66

Proposed Amendment of VOR Federal Airway V-537, GA

AGENCY: Federal Aviation
Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking
(NPRM).

SUMMARY: This action proposes to modify VHF omnirange (VOR) Federal airway V-537 in Georgia. The FAA is proposing this action to realign the route due to the scheduled decommissioning of the Moultrie, GA, VOR/DME facility which forms a point along the route.

DATES: Comments must be received on or before November 29, 2012.

ADDRESSES: Send comments on this proposal to the U.S. Department of Transportation, Docket Operations, M-30, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12-140, Washington, DC 20590-0001; telephone: (202) 366-9826. You must identify FAA Docket No. FAA-2012-0971 and Airspace Docket No. 12-ASO-31 at the beginning of your comments. You may also submit comments through the Internet at <http://www.regulations.gov>.

FOR FURTHER INFORMATION CONTACT: Paul Gallant, Airspace Policy and ATC Procedures Group, Office of Airspace Services, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-8783.

SUPPLEMENTARY INFORMATION:

Comments Invited

Interested parties are invited to participate in this proposed rulemaking by submitting such written data, views, or arguments as they may desire. Comments that provide the factual basis supporting the views and suggestions presented are particularly helpful in developing reasoned regulatory decisions on the proposal. Comments are specifically invited on the overall regulatory, aeronautical, economic, environmental, and energy-related aspects of the proposal.

Communications should identify both docket numbers (FAA Docket No. FAA-2012-0971 and Airspace Docket No. 12-ASO-31) and be submitted in triplicate to the Docket Management Facility (see **ADDRESSES** section for address and phone number). You may also submit comments through the Internet at <http://www.regulations.gov>.

Commenters wishing the FAA to acknowledge receipt of their comments on this action must submit with those comments a self-addressed, stamped postcard on which the following statement is made: "Comments to FAA Docket No. FAA-2012-0971 and Airspace Docket No. 12-ASO-31." The postcard will be date/time stamped and returned to the commenter.

All communications received on or before the specified comment closing date will be considered before taking action on the proposed rule. The proposal contained in this action may be changed in light of comments received. All comments submitted will be available for examination in the public docket both before and after the comment closing date. A report summarizing each substantive public contact with FAA personnel concerned

with this rulemaking will be filed in the docket.

Availability of NPRM's

An electronic copy of this document may be downloaded through the Internet at <http://www.regulations.gov>.

You may review the public docket containing the proposal, any comments received and any final disposition in person in the Dockets Office (see **ADDRESSES** section for address and phone number) between 9:00 a.m. and 5:00 p.m., Monday through Friday, except Federal holidays. An informal docket may also be examined during normal business hours at the office of the Eastern Service Center, Federal Aviation Administration, Room 210, 1701 Columbia Ave., College Park, GA, 30337.

Persons interested in being placed on a mailing list for future NPRM's should contact the FAA's Office of Rulemaking, (202) 267-9677, for a copy of Advisory Circular No. 11-2A, Notice of Proposed Rulemaking Distribution System, which describes the application procedure.

The Proposal

The FAA is proposing an amendment to Title 14, Code of Federal Regulations (14 CFR) part 71 to modify the description of VOR Federal airway V-537. The Moultrie, GA, VOR/DME, which forms a point along the route, is scheduled to be decommissioned, thus the route description would be redefined to provide for the continuity of V-537.

Specifically, V-537 extends between Palm Beach, FL, and Macon, GA. In order to maintain the current ground track of the airway, the FAA would redefine the position of the Moultrie, GA, VOR/DME with a navigation fix formed by the intersection of the Greenville, FL, VORTAC 001°(T)/360°(M) and the Macon, GA, VORTAC 185°(T)/184°(M) radials.

VOR Federal airways are published in paragraph 6010, of FAA Order 7400.9W dated August 8, 2012, and effective September 15, 2012, which is incorporated by reference in 14 CFR 71.1. The VOR Federal airway listed in this document would be subsequently published in the Order.

The FAA has determined that this proposed regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this proposed regulation: (1) Is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory

Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that will only affect air traffic procedures and air navigation, it is certified that this proposed rule, when promulgated, will not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it modifies the route structure as required to preserve the safe and efficient flow of air traffic within the National Airspace System.

Environmental Review

This proposal will be subject to an environmental analysis in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures" prior to any FAA final regulatory action.

List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

The Proposed Amendment

In consideration of the foregoing, the Federal Aviation Administration proposes to amend 14 CFR part 71 as follows:

PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

1. The authority citation for part 71 continues to read as follows:

Authority: 49 U.S.C. 106(g), 40103, 40113, 40120; E.O. 10854, 24 FR 9565, 3 CFR, 1959–1963 Comp., p. 389.

§ 71.1 [Amended]

2. The incorporation by reference in 14 CFR 71.1 of FAA Order 7400.9W, Airspace Designations and Reporting Points, Dated August 8, 2012 and

effective September 15, 2012, is amended as follows:

* * * * *

Paragraph 6010—Domestic VOR Federal Airways

V–537 [Amended]

From Palm Beach, FL; INT Palm Beach 356° and Treasure, FL, 143° radials; Treasure; INT Treasure 318° and Orlando, FL, 140° radials; INT Orlando 140° and Melbourne, FL 298° radials; INT Melbourne 298° and Ocala, FL 145° radials; Ocala; Gators, FL; Greenville, FL; INT Greenville 001°(T)/360°(M) and Macon, GA, 185°(T)/184°(M) radials to Macon.

Issued in Washington, DC, on October 4, 2012.

Gary A. Norek,

Manager, Airspace Policy and ATC Procedures Group.

Office of the Secretary

32 CFR Part 300

Defense Logistics Agency

32 CFR Part 1285

RIN 0790–AI87

[Docket ID: DOD–2012–OS–0019]

Defense Logistics Agency Freedom of Information Act Program

AGENCY: Defense Logistics Agency, DoD.

ACTION: Proposed rule.

SUMMARY: The Defense Logistics Agency (DLA) proposes to revise and update its existing rule concerning the DLA Freedom of Information Act (FOIA) Program. This rule implements changes to conform to the requirements of the Electronic Freedom of Information Act Amendments of 1996, Public Law 104–231, and the OPEN Government Act of 2007, Public Law 110–175. In addition, part 1285 will be redesignated as part 300.

DATES: Submit comments on or before December 14, 2012.

ADDRESSES: You may submit comments, identified by docket number and/or RIN number and title, by any of the following methods:

- Federal Rulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

- Mail: Federal Docket management System Office, 4800 Mark Center Drive, East Tower, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name and docket number or Regulatory Information Number (RIN) for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Deborah Teer, (703) 767–5247 or Deborah.teer@dla.mil.

SUPPLEMENTARY INFORMATION: This rule supplements 32 CFR part 286 to accommodate specific requirements of the DLA FOIA Program.

Executive Summary

I. Purpose of This Regulatory Action

a. This rule assigns responsibilities and establishes policies and procedures for a uniform DLA Freedom of Information Act program pursuant to the provisions of the Freedom of Information Act.

b. Authority: 5 U.S.C. 552.

II. Summary of the Major Provisions of This Regulatory Action

This rule implements changes to conform to the requirements of the Electronic Freedom of Information Act Amendments of 1996, Public Law 104–231, and the OPEN Government Act of 2007, Public Law 110–175.

III. Costs and Benefits of this Regulatory Action

This regulatory action imposes no monetary costs to the Agency or public. The benefit to the public is the accurate reflection of the Agency's FOIA Program to ensure that policies and procedures are known to the public.

Regulatory Procedures

Executive Order 12866, "Regulatory Planning and Review" and Executive Order 13563, "Improving Regulation and Regulatory Review"

It has been certified that 32 CFR part 300 does not: (1) Have an annual effect on the economy of \$100 million or more or adversely affect in a material way the economy; a sector of the economy; productivity; competition; jobs; the environment; public health or safety; or State, local, or tribal governments or communities; (2) Create a serious inconsistency or otherwise interfere with an action taken or planned by another Agency; (3) Materially alter the budgetary impact of entitlements,

grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or (4) Raise novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in these Executive orders.

Public Law 96-354, "Regulatory Flexibility Act" (5 U.S.C. Chapter 6)

It has been determined that 32 CFR part 300 is not subject to the Regulatory Flexibility Act because it would not, if promulgated, have significant economic impact on a substantial number of small entities.

Public Law 96-511, Paperwork Reduction Act (44 U.S.C. Chapter 35)

It has been determined that 32 CFR part 300 does not impose reporting or recordkeeping requirements under the Paperwork Reduction Act of 1995.

Public Law 104-4, Unfunded Mandates Reform Act of 1995

It has been certified that 32 CFR part 300 does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995.

Executive Order 13132, Federalism

It has been certified that 32 CFR part 300 does not have substantial direct effects on the states, on the relationship between the national government and the states, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132.

Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks

32 CFR part 300 is not subject to Executive Order 13045.

List of Subjects in 32 CFR Parts 300 and 1285 Freedom of Information Act.

For the reasons stated in the preamble, DLA proposes to redesignate 32 CFR part 1285 as part 300 and revise it to read as follows:

**TITLE 32—NATIONAL DEFENSE
CHAPTER XII—DEFENSE LOGISTICS
AGENCY**

**PART 300 DEFENSE LOGISTICS
AGENCY FREEDOM OF INFORMATION
ACT PROGRAM—**

Subpart A—General Provisions

- Sec.
300.1 Purpose
300.2 DLA FOIA regulatory precedence
300.3 Definitions
300.4 Policy

Subpart B—Exemptions

- Sec.
300.5 General

Subpart C—FOIA Request Processing

- Sec.
300.6 General
300.7 FOIA request processing procedures
300.8 Initial determinations
300.9 Appeals
300.10 Judicial actions

Subpart D—Fees and Fee Waivers

- Sec.
300.11 General
Appendix A to Part 300—Access to DLA Records

Authority: 5 U.S.C. 552.

Subpart A—General Provisions

§ 300.1 Purpose.

This part provides policies and procedures for the Defense Logistics Agency (DLA) implementation of the Freedom of Information Act (FOIA) (5 U.S.C. 552). This part supplements and implements the Department of Defense (DOD) FOIA Program Regulation (Refer to 32 CFR part 286 (<http://www.gpoaccess.gov/cfr/index.html>) and the DOD FOIA Program (<http://www.dod.mil/pubs/foi/dfoipo/>). This part applies to DLA Components and takes precedence over all DLA regulations that supplement the FOIA program.

§ 300.2 DLA FOIA regulatory precedence.

This part is published in accordance with the authority contained in 5 U.S.C. 552 and 32 CFR parts 285 and 286. It supplements 32 CFR part 286 to accommodate specific requirements of the DLA FOIA Program. For all FOIA issues not covered by this part, the rules set forth in 32 CFR part 286 will govern.

§ 300.3 Definitions.

The following terms and meanings apply for the purposes of this part:

(a) *Administrative Appeal*. A written request by a member of the public, made under the FOIA, to DLA's Appellate Authority requesting reversal of an adverse determination.

(b) *Adverse Determination*. Adverse determinations may include decisions that: Withhold all or part of a requested record; deny a fee category claim by a requester; deny a request for waiver or reduction of fees; deny requesters challenge of fee estimates; denies a request for expedited processing; state that no records were located; or what the requester believes is adverse in nature.

(c) *Appellate Authority*. The General Counsel, DLA, who upon receipt of an administrative appeal, reviews an initial

determination and may uphold, reverse or amend any adverse determination.

(d) *Consultation*. The process whereby a document is sent to another DLA or DOD Component or Federal agency to obtain recommendations on the releasability of the document and is returned to the originator for further action.

(e) *Defense Freedom of Information Program Office (DFOIPO)*. The office responsible for the formulation and implementation of DOD policy guidance for FOIA. For information about DFOIPO refer to <http://www.dod.mil/pubs/foi/dfoipo/>.

(f) *Direct Costs*. Expenditures made in searching for, reviewing, and duplicating documents in response to a FOIA request. Direct costs include, for example, the salary of the employee performing the work (the basic rate of pay plus 16 percent of that rate to cover benefits) and the costs of operating duplicating machinery. Not included in direct costs are overhead expenses such as the cost of space, heating, or lighting the facility in which the records are stored.

(1) *Search*. This term includes all time spent looking, both manually and electronically, for records that are responsive to a FOIA request, such as: (1) Searching for responsive emails or electronic documents located on individually-assigned computers or servers; (2) time taken by a programmer to create a program to run a requested report from a database; or (3) searching through hardcopy files to include records stored at a Federal Records Center. The term "search" also includes a page-by-page and line-by-line identification of a record to determine if it, or portions, are responsive to the request.

(2) *Duplication*. The process of making a copy of a document in response to a FOIA request. Copies can take the form of paper, microfiche, audiovisual or machine-readable documentation (e.g., magnetic tape or compact disc), among others. Personnel time spent performing tasks to enable a computer system to output information in a particular digital form or format for a requester is considered search time, as calculated in the DoD FOIA Program Manual (DoD 5400-07-M).

(3) *Review*. The examination of documents located in response to a FOIA request to determine withholding. Review also includes the time taken to redact documents, preparing them for release. Review does not include the time spent resolving general legal or policy issues regarding the application of exemptions.

(g) *DLA Component*. DLA Components consist of Headquarters Organizations, Primary Level Field Activities, Defense Business Services, Regional Commands, and other Organizational entities. A description of DLA Components can be found at www.dla.mil.

(h) *Electronic Records*. Records (including email) created, stored, and retrieved by electronic means.

(i) *Federal Agency*. This term is defined at 5 U.S.C. 551(1) and 5 U.S.C. 552(f)(1).

(j) *FOIA Officer*. DLA employee who is responsible for processing FOIA requests and is a point of contact for the FOIA program. The FOIA Officer grants or denies requests for fee waivers or expedited processing and makes requester category determinations.

(k) *FOIA Public Liaison*. The member of the DLA Headquarters FOIA staff to whom a FOIA requester can raise concerns about the service the requester received from a DLA FOIA Requester Service Center.

(l) *FOIA Request*. A written request for DLA records that reasonably describes the record(s) sought; indicates a willingness to pay processing fees, asks for their statutory entitlement (if applicable), or requests a fee waiver; includes a postal mailing address, and contact information. A FOIA request meeting these conditions, arriving at the DLA FOIA Requester Service Center in possession of the requested records, is considered perfected or properly received at which time the statutory time limit for response begins. Written requests may be received by postal service or other commercial delivery means, by facsimile, or electronically.

(m) *DLA FOIA Requester Service Center*. The DLA Office authorized to receive and process FOIA requests and where a FOIA requester can gain information concerning the DLA FOIA Program, the status of the person's FOIA request, or information about the agency's FOIA response. Refer to Appendix A of this part for locations of FOIA Requester Service Centers or for additional information refer to DLA's public web site at www.dla.mil/FOIA-Privacy.

(n) *Initial Denial Authority (IDA)*. By this regulation, the Director, DLA, delegates to Heads of DLA Components the authority to withhold information requested under the FOIA pursuant to one or more of the nine FOIA exemptions and to confirm that no records were located in response to a request. The designation of IDA may be further delegated by the Heads of DLA Components to their Deputies. IDA's may also deny a fee category claim by

a requester, deny a request for expedited processing, deny a request for a waiver or reduction of fees, or review a fee estimate, although these determinations are usually made by the FOIA Officer.

(o) *Referral*. The process of transferring records found in response to a FOIA request to another DLA or DOD Component, or any Federal agency for review and direct response to the requester. This process is used when documents located during a search are found to have originated with another DLA or DOD Component, or Federal agency.

§ 300.4 Policy.

DLA adopts and supplements the DOD FOIA Program policy and procedures codified at 32 CFR part 286, Subpart A, General Provisions and Subpart B, FOIA Reading Rooms and 32 CFR part 285.

(a) *General*. The public has a right to information concerning the activities of its Government. DLA policy is to conduct its activities in an open manner and to provide the public maximum accurate and timely information concerning DLA activities, balanced with the need for security, public and private interests of the American people, and adherence to other requirements of law and regulation. A DLA record, requested by a member of the public who follows the DLA established procedures, shall not be withheld, in whole or in part, unless the record is exempt from mandatory, partial or total disclosure under the FOIA. As a matter of policy, DLA shall make discretionary disclosures of exempt records or information whenever disclosure would not foreseeably harm an interest protected by a FOIA exemption, but this policy does not create any right enforceable in court. Records requested through public affairs channels by news media representatives, that would not be withheld if requested under the FOIA, should be released promptly upon request. Similarly, requests from other members of the public for information that would not be withheld under the FOIA should continue to be provided through appropriate means without requiring the requester to invoke the FOIA.

(b) *Customer Service*. Executive Order 13392, Improving Agency disclosure of Information, December 14, 2005, requires agencies to emphasize a new citizen-centered approach to the FOIA that is results-oriented. Because FOIA requesters are seeking a service from the Federal Government, all DLA Components shall respond courteously and professionally to FOIA requesters.

Additionally, the Components shall provide the public with information about agency records that are already publicly available, as well as information about the status of a person's FOIA request and an estimated date on which the DLA Component will complete the request. Refer to Appendix A for DLA FOIA Requester Service Center contact information.

(1) To meet the requirements of Executive Order 13392, each FOIA Requester Service Center shall have an internet Web site that serves to educate the public on the FOIA process. At a minimum, each Web site shall have the address, telephone number, facsimile number, and electronic mail address to which FOIA requests can be sent; a link to DOD's FOIA handbook; the name and contact information of the DLA FOIA Officer and Public Liaison; and information on how a requester can obtain the status of a request. Additionally, each FOIA Requester Service Center Web site will have links to the DLA Headquarters FOIA/Privacy Web site reading room.

(c) *Creating a Record*. (1) A record must exist and be in the possession and control of DLA at the time the search begins to be considered subject to this part and the FOIA.

(2) With regards to electronic data, the issue of whether records are actually created or merely retrieved from an existing database is not always readily apparent. Consequently, when processing FOIA requests for electronic data, if the DLA Component has the capability to respond to the request, and the effort is reasonable and would be a business as usual approach, then the request should be processed. FOIA requests for electronic data will not be processed when:

(i) Processing a request would cause a significant interference with the operation of the DLA Component's automated system, require a significant amount of programming effort or require extensive complex programming to merge files of disparate data formats.

(ii) Creating computer programs and/or purchasing additional hardware (i.e., to extract electronic mail that has been archived) is needed.

(d) *Consultations and Referrals*. The rules published in part 32 CFR part 286, Subpart A, 286.4(i) and 286.22(e), Policy, apply to this rule (see www.access.gpo.gov/nara/cfr/cfr-table-search.html#page1).

(e) *Forms*. This part authorizes the use of forms developed by DoD and DLA for the express use of the FOIA Program. Refer to www.dla.mil for a list of all forms prescribed by this part.

Subpart B—Exemptions

§ 300.5 General.

Refer to the DOD FOIA Program regulations codified at 32 CFR part 286, Subpart C, Exemptions.

Subpart C—FOIA Request Processing

§ 300.6 General.

DLA adopts and supplements the DOD FOIA Program regulations codified at 32 CFR part 286, Subpart E, Release and Processing Procedures.

(a) *Requests from the public.* (1) Individuals seeking DLA information should address their FOIA requests to one of the FOIA Requester Service Center addresses listed in Appendix A.

(2) When personally identifying information in a record is requested by the subject of the record or the subject's representative, and the information is contained within a Privacy Act system of records, the request will be processed under both the FOIA and the Privacy Act. DLA Components must comply with the provisions of DOD 5400.11–R, C3.1.3 to confirm the identity of the requester (<http://www.privacy.defense.gov/files/540011r.pdf>).

§ 300.7 FOIA request processing procedures.

(a) *Receipt and Control.* Requests received after 5:00 p.m. EST will be considered received the following business day. Upon receipt of a request for records, the FOIA Officer must:

(1) Open a file in the DLA specified control system designed to ensure accountability and compliance with the FOIA. The control system will include the data elements needed to compile the statistics required in the annual Department of Justice FOIA report or other reports required by another authority. Each request shall automatically be assigned a unique tracking number.

(2) Screen the request for defects in the description, the requester category, the fee declaration, and full postal address. If the request is not perfected, the request is placed on hold and the FOIA Officer will notify requesters of any such defects and provide assistance to help remedy the defects. When a DLA FOIA Requester Service Center receives a request for records that clearly belong to an agency outside of DOD, the requester shall be told these are not agency records and, if possible, provide the name of the agency that may hold the records. No referral of the request is made outside of DOD.

(3) Once a request is perfected, DLA may make one request for additional information unrelated to fees and toll

the 20 working-day period while awaiting the information. Tolling the 20 working-day period is not limited for fee related issues.

(4) DLA uses the date-of-search cut-off to ensure that as many records as possible will be captured by the agency's search. A FOIA request may not be on-going or open-ended in nature. DLA Components are responsible for providing records in possession and control of DLA at the time the search for records begins. DLA Components are not required to expend DLA funds to establish data links that provide real-time or near-real-time data to a FOIA requester.

(b) *Multi-track processing.* DLA components shall process requests according to their order of receipt. A DLA component uses three processing tracks by distinguishing between simple, complex, and expedited requests based on the need to search from multiple directorates/locations; the need to search for and review a voluminous amount of records; and/or the need to consult with other DLA or DoD Components. Requesters are notified in the acknowledgement letter of the track the request is placed in. Requests placed in the simple track can reasonably expect that their request will be completed within the statutory time limit for responding to requests. Requesters placed in the complex track may be given an opportunity to narrow or modify the scope of their request in order to qualify for faster processing within the specified limits of DLA's simple track. Expedited processing must be requested and a requester who seeks expedited processing must submit a statement, certified to be true and correct to the best of that person's knowledge and belief, explaining in detail the basis for requesting expedited processing. Within ten calendar days of its receipt of a request for expedited processing, the proper component shall decide whether to grant expedited processing and shall notify the requester of the decision. If a request for expedited processing is granted, the request shall be given priority and processed as soon as practicable. If a request for expedited processing is denied, any appeal of that decision shall be acted on expeditiously. Refer to the DoD FOIA Handbook for information on multi-track processing (<http://www.dod.mil/pubs/foi/dfoipo/foiaHandbook.html#long>).

(c) *Payments in Arrears.* Where a requester has previously failed to pay a fee charged within 30 calendar days, DLA may require the requester to pay the full amount owed, plus any applicable interest, before beginning to

process a new or pending request from the requester (see OMB Fee Guidelines, 52 FR at 10012 (http://www.dod.gov/pubs/foi/dfoipo/docs/OMBGuidelines_FOIAFees.pdf)).

Interest will be at the rate prescribed in 31 U.S.C. 3717, and confirmed with the servicing Financial Operations Office.

(d) *Misdirected requests.* Misdirected requests shall be forwarded promptly to the FOIA Office of the DLA or DOD Component with the responsibility for the records requested within 10 working days. A misdirected request is a request received by one of DLA or DoD FOIA Offices but is actually seeking records maintained by another DLA or DoD Component. The receiving FOIA Office shall route the request to the proper DLA or DoD FOIA Office and the response time will commence on the date that the request is received by the proper FOIA Office, but not later than ten working days after the request is first received by any DLA or DoD FOIA Office. FOIA requests are not forwarded outside of DOD.

§ 300.8 Initial determinations.

(a) The initial determination is whether to make a record available in response to a FOIA request. A full release may be made by an official knowledgeable of the record, with authority to determine that no harm would come from release. Adverse determinations (refer to § 300.3 (b)) must be made by the designated Initial Denial Authority (IDA). By this regulation, the Director, DLA, delegates to Heads of DLA Components (see § 300.3 (h)) the designation of IDA. The designation of IDA may be further delegated by the Heads of DLA Components to their Deputies. The IDA shall review all recommendations for withholding information and whether the criteria for withholding under one or more FOIA exemptions are met. DLA has IDAs throughout the agency; and each IDA will make the determination for records within their area of functional responsibility. If a request involves records from more than one functional area, consultation will be done with all responsible IDAs but will be signed by the IDA assigned the primary responsibility for processing the request.

(b) The FOIA requires that any reasonably segregable portion of a record must be released after appropriate application of the Act's nine exemptions. Segregation is not reasonable when it would produce an essentially meaningless set of words and phrases, or even sentences which taken separately or together have minimal or no information content.

§ 300.9 Appeals.

(a) An appeal can be made as a result of an initial determination that is considered by the requester to be an adverse determination (see 300.3 (b)).

(b) An appeal must be made in writing to DLA's Appellate Authority and must be postmarked within 30 calendar days from the date of the initial determination letter. The General Counsel serves as DLA's appellate authority. The appeal should include reasons for reconsideration and a copy of the initial determination letter. An appeal may be mailed, emailed to hq-foia@dla.mil, or faxed to 703-767-6091. Appeals are to be addressed to the General Counsel, Defense Logistics Agency, ATTN: DGA, Suite 1644, 8725 John J. Kingman Road, Fort Belvoir, Virginia 22060-6221.

§ 300.10 Judicial actions.

DLA adopts the DOD FOIA Program regulations codified at 32 CFR part 286, Subpart E, Release and Processing Procedures.

Subpart D—Fees and Fee Waivers**§ 300.11 General.**

DLA adopts the rules and rates published in 32 CFR part 286, Subpart F, Fee Schedule. In addition, DLA considers fees charged by a Federal Records Center to retrieve and re-file records a part of the direct costs charged to requesters.

APPENDIX A TO PART 300—GAINING ACCESS TO DLA RECORDS**(a) General.**

(1) The Defense Logistics Agency, established pursuant to authority vested in the Secretary of Defense, is an agency of DOD under the direction, authority, and control of the Assistant Secretary of Defense for Logistics and Materiel Readiness, and is subject to DOD policies, directives, and instructions.

(2) DLA is comprised of several Components and each DLA Component is responsible for maintaining its own records; therefore, FOIA requests should be addressed to the FOIA Requester Service Center that has custody of the record desired. (See (c) below.) DLA FOIA Officers will assist requesters in determining the correct DLA Requester Service Center to address requests. (See paragraph (c) of this appendix and DLA's public Web site at www.dla.mil.)

(3) On the DLA public Web site is an index to assist in locating DLA records by category, organization, keyword search, or by contract prefix. The index is titled "Index of Information at DLA FOIA Service Centers" at www.dla.mil/FOIA-Privacy/servindex/pages/category.aspx.

(b) Requester Requirements.

(1) Requesters are responsible for submitting a perfected request as defined in 300.3(m), FOIA Request.

(2) Addressing Requests.

Address requests to the DLA FOIA Requester Service Center most likely to hold the records (see paragraph (c) of this appendix for mailing addresses of DLA FOIA Offices designated to receive FOIA requests). If the DLA FOIA Requester Service Center is undeterminable, address requests to DLA Headquarters FOIA Office for proper routing.

(3) Availability of DLA Publications.

Many unrestricted DLA regulations, manuals, and handbooks are available online. Visit the DLA FOIA/Privacy Web site for more information at <http://www.dla.mil/foia-privacy/>.

(c) Locations of DLA FOIA Requester Service Centers.

Refer to the FOIA/Privacy Web page at <http://www.dla.mil/FOIA-Privacy/pages/foiapocs.aspx> for current points of contact at each of the DLA FOIA Requester Service Centers.

Defense Logistics Agency Headquarters, ATTN: DGA, 8725 John J. Kingman Rd., Ste 1644, Fort Belvoir, VA 22060-6221—Responsible for broad functional areas, such as Office of the Director, General Counsel, Small Business Programs, DLA Office of Inspector General, Legislative Affairs, Equal Employment Opportunity Office, Installation Support, Human Resources, Logistics Operations, Information Operations, Acquisition, and Financial Operations. This FOIA Requester Service Center also processes FOIA requests for the following locations:

- DLA Transaction Service, Wright-Patterson AFB, Ohio—Editing/routing of logistics transactions, network interoperability and eBusiness services.

- DLA Strategic Materials, Fort Belvoir, Va.—Manages the strategic and critical raw material stockpile that supports national defense needs.

- DLA Europe & Africa, Kaiserslautern, Germany—Focal point for U.S. European Command's and U.S. Africa Command's theater of operations.

- DLA Pacific, Camp Smith, Hawaii—Focal point for U.S. Pacific Command's theater of operations.

- DLA Central, MacDill AFB, Fla.—Focal point for U.S. Central Command's theater of operations.

DLA Energy, 8725 John J. Kingman Rd., Ste 3729, Fort Belvoir, VA 22060-6222—Fuel, energy support and services, and bulk petroleum.

DLA Land and Maritime, ATTN: GC, 3990 E. Broad Street, Columbus, OH 43218-3990—Maritime and land weapons system supply chains.

DLA Aviation, 8000 Jefferson Davis Highway, Richmond, VA 23297-5000—Aviation supply chain.

DLA Troop Support, 700 Robbins Avenue, Bldg 36, Philadelphia, PA 19111-5096—Subsistence, clothing, and textiles, medical, and construction and equipment supply chains.

DLA Distribution, ATTN: DDC-GC, Mission Drive, Bldg 81, New Cumberland, PA 17070-5000—Worldwide network of 25 distribution depots and nine map support offices.

DLA Disposition Services and DLA Logistics Information Service, 74 Washington Avenue North, Battle Creek, MI 49017-3084.

- Disposition Services: Reutilization, transfer, demilitarization, and environmental disposal and reuse.

- Logistics Information Service: Manages a wide range of logistics information and identification systems.

DLA Document Services, 5450 Carlisle Pike, Bldg 9, P.O. Box 2020, Mechanicsburg, PA 17055-0788—Automated document production, printing services, digital conversion and document storage.

Dated: September 24, 2012.

Patricia L. Toppings,

*OSD Federal Register Liaison Officer,
Department of Defense.*

BILLING CODE 5001-06-P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 165**

[Docket Number USCG-0212-0903]

RIN 1625-AA00

Safety Zone, Seafair Blue Angels Air Show Performance, Seattle, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of proposed rulemaking.

SUMMARY: The U.S. Coast Guard is proposing to amend the Seafair Blue Angels Air Show Performance safety zone on the waters of Lake Washington, Seattle, WA. This action is necessary to safeguard participants and spectators from the safety hazards associated with the Seafair Blue Angels Air Show Performance, which include low flying high speed aircraft, and will do so by prohibiting entry into the safety zone unless authorized by the Captain of the Port (COTP), Puget Sound or a Designated Representative.

DATES: Comments and related material must be received by the Coast Guard on or before December 14, 2012.

ADDRESSES: You may submit comments identified by docket number using any one of the following methods:

(1) *Federal eRulemaking Portal:* <http://www.regulations.gov>.

(2) *Fax:* 202-493-2251.

(3) *Mail or Delivery:* Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590-0001. Deliveries accepted between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202-366-9329.

See the "Public Participation and Request for Comments" portion of the

SUPPLEMENTARY INFORMATION section below for further instructions on submitting comments. To avoid duplication, please use only one of these three methods.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email ENS Nathaniel P. Clinger; Waterways Management Division, Coast Guard Sector Puget Sound; Coast Guard; telephone 206-217-6045, email SectorPugetSoundWWM@uscg.mil. If you have questions on viewing or submitting material to the docket, call Renee V. Wright, Program Manager, Docket Operations, telephone (202) 366-9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Public Participation and Request for Comments

We encourage you to participate in this rulemaking by submitting comments and related materials. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided.

1. Submitting Comments

If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online at <http://www.regulations.gov>, or by fax, mail, or hand delivery, but please use only one of these means. If you submit a comment online, it will be considered received by the Coast Guard when you successfully transmit the comment. If you fax, hand deliver, or mail your comment, it will be considered as having been received by the Coast Guard when it is received at the Docket Management Facility. We recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission.

To submit your comment online, go to <http://www.regulations.gov>, type the docket number USCG-0212-0903 in the "SEARCH" box and click "SEARCH." Click on "Submit a Comment" on the line associated with this rulemaking.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by

11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the Facility, please enclose a stamped, self-addressed postcard or envelope. We will consider all comments and material received during the comment period and may change the rule based on your comments.

2. Viewing Comments and Documents

To view comments, as well as documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number USCG-0212-0903 in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

3. Privacy Act

Anyone can search the electronic form of comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review a Privacy Act notice regarding our public dockets in the January 17, 2008, issue of the **Federal Register** (73 FR 3316).

4. Public Meeting

We do not now plan to hold a public meeting. But you may submit a request for one, using one of the methods specified under **ADDRESSES**. Please explain why you believe a public meeting would be beneficial. If we determine that one would aid this rulemaking, we will hold one at a time and place announced by a later notice in the **Federal Register**.

B. Regulatory History and Information

The Coast Guard is amending this rule because the current regulation associated with the Seafair Blue Angels Air Show performance (33 CFR 165.1319) is not large enough to safeguard participants and spectators from the safety hazards associated with the Seafair Blue Angels Air Show Performance, which include low flying high speed aircraft.

C. Basis and Purpose

The Coast Guard proposes to amend this safety zone to ensure the safety of the maritime public during the Seattle

Blue Angels Air Show. The size of the safety zone in 33 CFR 165.1319 has been determined to be inadequate to accommodate the anticipated flight pattern of the Blue Angels, and the current regulation is not large enough to safeguard participants and spectators from the safety hazards associated with the Seafair Blue Angels Air Show Performance, which include low flying high speed aircraft. This proposed rule would extend the northern boundary line of the existing regulation northward by 500 yards, and updates coordinates to provide a zone of adequate size.

D. Discussion of Proposed Rule

As described in the June 24, 2004 final rule (69 FR 35249), the Coast Guard established a safety zone for the annual Blue Angels Air Show Performance. The purpose of this rule was to protect the public from dangers including excessive noise and falling objects from any potential accidents caused by these low-flying military aircraft. The regulation contained in 33 CFR 165.1319 encompasses "all waters of Lake Washington, Washington State, enclosed by the following points: Near the termination of Roanoke Way 47°35'44" N, 122°14'47" W; thence to 47°35'48" N, 122°15'45" W; thence to 47°36'02.1" N, 122°15'50.2" W; thence to 47°35'56.6" N, 122°16'29.2" W; thence to 47°35'42" N, 122°16'24" W; thence to the east side of the entrance to the west highrise of the Interstate 90 bridge; thence westerly along the south side of the bridge to the shoreline on the western terminus of the bridge; thence southerly along the shoreline to Andrews Bay at 47°33'06" N, 122°15'32" W; thence northeast along the shoreline of Bailey Peninsula to its northeast point at 47°33'44" N, 122°15'04" W; thence easterly along the east-west line drawn tangent to Bailey Peninsula; thence northerly along the shore of Mercer Island to the point of origin. [Datum: NAD 1983]"

However, the participating aircraft have a flight pattern that will extend past the northern boundary of the regulation in 33 CFR 156.1319. As such, an extension is necessary in order to protect the spectating public.

This rule amends the Seafair Blue Angels Air Show Performance Safety Zone, extending the northern boundary starting at point 47°36'17.28" N, 122°16'49.44" W; thence west to point 47°36'17.28" N, 122°16'58.56" W; thence south along the shoreline to point 47°35'25.44" N, 122°17'9.48" W; thence east along the I-90 bridge to point 47°35'23.16" N, 122°15'17.1" W; thence north east along the shoreline to point

47°35'45.3" N, 122°14'49.44" W; thence north back to the point of origin.

E. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on a number of these statutes or executive orders.

1. Regulatory Planning and Review

This proposed rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders. The Coast Guard bases this finding on the fact that the safety zone will be in place for a limited period of time and vessel traffic will be able to transit around the safety zone. Maritime traffic may also request permission to transit through the zone from the (COTP), Puget Sound or a Designated Representative.

2. Impact on Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered the impact of this proposed rule on small entities. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule will not have a significant economic impact on a substantial number of small entities. This rule would affect the following entities, some of which may be small entities; the owners and operators of vessels intending to operate in the waters covered by the safety zone while it is in effect. The rule would not have a significant economic impact on a substantial number of small entities because the safety zone would be in place for limited periods of time and maritime traffic would still be able to transit around the safety zone. Maritime traffic may also request permission to transit through the zone from the COTP, Puget Sound or a Designated Representative.

If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

4. Collection of Information

This proposed rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This proposed rule would not cause a taking of private property or otherwise have taking implications under

Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This proposed rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children From Environmental Health Risks

We have analyzed this proposed rule under Executive Order 13045, Protection of Children From Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

11. Indian Tribal Governments

This proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it would not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This proposed rule is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This proposed rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves the amendment of a safety zone. This rule is categorically excluded from further review under paragraph

34(g) of Figure 2–1 of the Commandant Instruction. A preliminary environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under ADDRESSES. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165, as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

1. The authority citation for Part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1

2. Amend § 165.1319 by revising paragraph (b) to read as follows:

§ 165.1319 Safety Zone Regulations; Seafair Blue Angels Air Show Performance, Seattle, WA.

* * * * *

(b) Location. The following is a safety zone: All waters of Lake Washington encompassed by the following points: 47°36'17.28" N, 122°14'49.44" W; thence west to point 47°36'17.28" N, 122°16'58.56" W; thence south along the shoreline to Andrews Bay at point 47°33'04.62" N, 122°15'32.46" W; thence northeast along the shoreline of Bailey Peninsula to its northeast point at 47°33'44.98" N, 122°15'03.48" W; thence easterly to point 47°33'43.98" N, 122°13'51.36" W on Mercer Island; thence northerly along the shore of Mercer Island to point 47°35'45.12" N, 122°14'49.44" W; thence north back to the point of origin.

* * * * *

Dated: September 25, 2012.

S.J. Ferguson,

Captain, U.S. Coast Guard, Captain of the Port, Puget Sound.

DEPARTMENT OF THE INTERIOR

National Park Service

36 CFR Part 7

[NPS–SLBE–10552; 6620–SZM]

RIN 1024–AE11

Special Regulations; Areas of the National Park System, Sleeping Bear Dunes National Lakeshore, Bicycling

AGENCY: National Park Service, Interior. ACTION: Proposed rule.

SUMMARY: The National Park Service proposes to designate the Sleeping Bear Heritage Trail currently under construction within Sleeping Bear Dunes National Lakeshore as a route for bicycle use. The approximately 27-mile-long trail will generally parallel major state highways and offer visitors safe, non-motorized access to the park. National Park Service general regulations require promulgation of a special regulation to designate routes for bicycle use outside developed areas or off park roads.

DATES: Comments must be received by December 14, 2012.

ADDRESSES: You may submit your comments, identified by Regulation Identifier Number (RIN), by any of the following methods:

- Federal eRulemaking Portal: http://www.regulations.gov. Follow the instructions for submitting comments.
- Mail or Hand Deliver to:

Superintendent's Office, Sleeping Bear Dunes National Lakeshore, 9922 Front Street, Empire, Michigan 49630.

FOR FURTHER INFORMATION CONTACT: Phil Akers, Chief Ranger, Sleeping Bear Dunes National Lakeshore, 231–326–5135, or at 9922 Front Street, Empire, Michigan 49630.

SUPPLEMENTARY INFORMATION:

Background

Sleeping Bear Dunes National Lakeshore (SLBE or Lakeshore) was established in 1970 "for the benefit, inspiration, education, recreation, and enjoyment of the public." (16 U.S.C. 460x). SLBE's enabling legislation requires the National Park Service (NPS) to "administer and protect [the Lakeshore] in a manner which provides for recreational opportunities consistent with the maximum protection of the natural environment within the area." (16 U.S.C. 460x). The 71,000-acre Lakeshore is located in the northwest portion of Michigan's Lower Peninsula and encompasses a 35-mile stretch of Lake Michigan's eastern coastline as well as North Manitou and South

Manitou islands. The mainland portion is located within Benzie and Leelanau counties. The Manitou Islands, in Leelanau County, are located to the northwest in Lake Michigan, about seven miles from the shore. The nearest city is Traverse City, Michigan (population 15,000), located 30 miles east of the Lakeshore. Smaller communities such as Empire, Glen Arbor, and Frankfort are closer.

Named after a complex of coastal sand dunes, the Lakeshore features white sand beaches, steep bluffs reaching as high as 450 feet above Lake Michigan, thick maple and beech forests, and clear inland lakes. The Lakeshore's most notable features—the ancient sand dunes—are products of wind, ice, and water action over thousands of years. The high, perched dunes afford spectacular views across Lake Michigan and of other glacially formed landscapes. The contrast between the open, sunny environment of the dunes and the adjacent lush beech-maple forests is striking.

The Robert H. Manning Memorial Lighthouse, three former U.S. Life-Saving Service/Coast Guard stations, several coastal villages, and picturesque farmsteads reflect the Lakeshore's rich maritime, agricultural, and recreational history. The region surrounding the Lakeshore is a popular vacation and summer home destination. SLBE offers visitors recreational activities such as hiking, backpacking, kayaking, cross-country skiing, backcountry camping, hunting, fishing, and boating.

Over 1.1 million people visit the Lakeshore annually. SLBE's main visitor attractions include the Dune Climb (330,000+ visitors/year), Pierce Stocking Scenic Drive (430,000 visitors/year), and the Visitor Center (130,000+ visitors/year). Traffic and parking congestion are a concern at these locations. A multi-use trail connecting the main visitor destinations would help relieve these traffic concerns while simultaneously enhancing visitor access to a variety of recreational activities.

History of Bicycle Use

Currently, bicycling within SLBE is allowed only on a lane shared with motor vehicles on Pierce Stocking Scenic Drive and on the road shoulders of state highways (M–22 and M–109) and county roads than run through the Lakeshore.

The Sleeping Bear Heritage Trail

The Sleeping Bear Heritage Trail (SBHT) will be a hard-surfaced, approximately 27-mile-long trail from the southern Leelanau County line at Manning Road to County Road 651 at

Good Harbor Beach. The trail will be separated from the roadway wherever possible, providing a safe, non-motorized route connecting the Lakeshore's main visitor destinations with neighboring communities in Glen Arbor and Empire. Construction of the first segment of the trail was completed in June 2012, with the remainder to be constructed over a period of approximately 10 years. The route will generally parallel state highways M-22 and M-109, but will occasionally depart from these rights-of-way to take advantage of other existing corridors, such as old logging trails and a narrow gauge railbed. By using other disturbed areas whenever feasible, the location of the SBHT will minimize disturbance to Lakeshore resources. The SBHT will be located entirely on public lands within the Lakeshore.

Moving bicycle traffic off roads used by motor vehicles will reduce safety hazards and enhance opportunities for non-motorized enjoyment of the Lakeshore. It will also encourage the use of alternate means of transportation by park employees and park visitors to access these extremely popular areas. The SBHT will give bicyclists, walkers, runners, wheelchair users, rollerbladers, and cross-country skiers a safe, enjoyable, and healthy way to access and explore the Lakeshore.

Maps depicting the planned trail route including the completed first segment are available for review in the office of the Superintendent and on the Lakeshore's Web site at <http://www.nps.gov/slbe/parkmgmt/planning.htm>.

Trail Planning and Environmental Analyses

The idea for a multi-use trail came from the Leelanau Scenic Heritage Route Committee (LSHR), which was created by the State of Michigan to preserve the historical integrity and safety of state highways M-22, M-109, and M-204. The LSHR is a broad partnership with representatives from 12 municipalities, the Lakeshore, the Michigan Department of Transportation, the Grand Traverse Band of Ottawa and Chippewa Indians, the Leelanau Conservancy, the Leelanau County Road Commission, the Leelanau County Planning Commission, chambers of commerce, interested organizations, and citizens.

Planning for the trail began in 2005 when the LSHR suggested the concept to the NPS. In 2006, the LSHR created a Trailway Work Group to develop a multi-use trail along the M-22 and M-109 corridor in the Lakeshore. The Work Group included representatives of

SLBE, the Michigan Department of Transportation, local townships and villages, and other interested groups and citizens. Through the LSHR, the public had many opportunities for involvement in planning the SBHT. The public provided input and review at various meetings and activities, including over 25 LSHR Committee meetings and 15 Trailway Work Group meetings from 2005 to 2008, and Port Oneida Days at the Lakeshore in August 2006 and 2007. In 2006 the LSHR staff also made introductory presentations to local governments, with follow-up presentations made in 2008.

The multi-use trail concept, including bicycle use, and the trail route were considered in the preferred alternative of SLBE's October 2008 Final General Management Plan/Wilderness Study/Environmental Impact Statement (GMP/EIS) and Record of Decision (ROD) signed by the NPS SLBE Superintendent and NPS Mid-West Regional Director in January 2009. In March 2009, SLBE published the Leelanau Scenic Heritage Route Trailway Plan and Environmental Assessment (EA) which evaluated the environmental impacts of a no-action alternative and two action alternatives, including one identified as the preferred alternative.

The Leelanau Scenic Heritage Trailway route was named the Sleeping Bear Heritage Trail, and in August 2009, the NPS SLBE Superintendent and NPS Mid-West Regional Director signed a Finding of No Significant Impact (FONSI). The FONSI identified the preferred alternative as the selected action and concluded that the construction of the multi-use trail, which would include bicycle use, would not have a significant effect on the human environment. The GMP/EIS, ROD, EA, FONSI, and related documents may be viewed on the Lakeshore's planning Web site at <http://www.nps.gov/slbe/parkmgmt/planning.htm>.

Proposed Rule

The SBHT will generally be constructed in M-22/M-109 and county road rights-of-way, and primarily within developed area zones as described in the Lakeshore's GMP. However, the trail route will occasionally deviate from the highway corridor and outside of developed areas as previously described in this rule, to provide access to natural, cultural, and recreation resources, and to promote a broader variety of experiences for the trailway user. Therefore SLBE is pursuing promulgation of a special regulation for bicycle use, as required by 36 CFR 4.30.

Accordingly, the proposed rule would add a new paragraph to 36 CFR 7.80, designating the proposed 27-mile-long SBHT as a route for bicycle use. The proposed rule also grants the Superintendent the authority to impose closures or restrictions upon bicycle use on designated trails after taking into consideration public health and safety, resource protection, and other management activities and objectives, provided public notice is given under 36 CFR 1.7.

The NPS now seeks comments on its proposal to designate this as a route for bicycle use. The construction of the SBHT as a multi-use trail, as stated above, was a separate decision and is not at issue in this proposal.

Compliance With Other Laws and Executive Orders

Regulatory Planning and Review (Executive Orders 12866 and 13563)

Executive Order 12866 provides that the Office of Information and Regulatory Affairs (OIRA) will review all significant rules. OIRA has determined that this rule is not significant.

Executive Order 13563 reaffirms the principles of Executive Order 12866 while calling for improvements in the nation's regulatory system to promote predictability, to reduce uncertainty, and to use the best, most innovative, and least burdensome tools for achieving regulatory ends. The executive order directs agencies to consider regulatory approaches that reduce burdens and maintain flexibility and freedom of choice for the public where these approaches are relevant, feasible, and consistent with regulatory objectives. Executive Order 13563 emphasizes further that regulations must be based on the best available science and that the rulemaking process must allow for public participation and an open exchange of ideas. We have developed this rule in a manner consistent with these requirements.

Regulatory Flexibility Act (RFA)

This rule will not have a significant economic effect on a substantial number of small entities under the RFA (5 U.S.C. 601 *et seq.*). This certification is based on information contained in the report entitled "Cost-Benefit and Regulatory Flexibility Analyses Leelanau Scenic Heritage Route Trailway, Sleeping Bear Dunes National Lakeshore" (NPS Environmental Quality Division—May 2012), available for review at <http://www.nps.gov/slbe/parkmgmt/planning.htm>.

Small Business Regulatory Enforcement Fairness Act (SBREFA)

This rule is not a major rule under 5 U.S.C. 804(2), the SBREFA. This rule:

- a. Does not have an annual effect on the economy of \$100 million or more.
- b. Will not cause a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions.
- c. Does not have significant adverse effects on competition, employment, investment, productivity, innovation, or the ability of U.S.-based enterprises to compete with foreign-based enterprises. The rule would not require fees, or involve other measures that would increase costs to visitors or businesses. Rather, this rule would reasonably increase Lakeshore visitation and thereby generate benefits for businesses through increased visitor spending.

Unfunded Mandates Reform Act (UMRA)

This rule does not impose an unfunded mandate on State, local, or tribal governments or the private sector of more than \$100 million per year. The rule does not have a significant or unique effect on State, local or tribal governments or the private sector. It addresses public use of national park lands, and imposes no requirements on other agencies or governments. A statement containing the information required by the UMRA (2 U.S.C. 1531 *et seq.*) is not required.

Takings (Executive Order 12630)

Under the criteria in section 2 of Executive Order 12630, this rule does not have significant takings implications. The rule will not deny any property owner beneficial uses, or reduce the value, of their land. No taking of property will occur as a result of this rule. A takings implication assessment is not required.

Federalism (Executive Order 13132)

Under the criteria in section 1 of Executive Order 13132, the rule does not have sufficient federalism implications to warrant the preparation of a Federalism summary impact statement. This proposed rule only affects use of NPS administered lands and waters. It has no outside effects on other areas. A Federalism summary impact statement is not required.

Civil Justice Reform (Executive Order 12988)

This rule complies with the requirements of Executive Order 12988. Specifically, this rule:

(a) Meets the criteria of section 3(a) requiring that all regulations be reviewed to eliminate errors and ambiguity and be written to minimize litigation; and

(b) Meets the criteria of section 3(b)(2) requiring that all regulations be written in clear language and contain clear legal standards.

Consultation With Indian Tribes (Executive Order 13175 and Department Policy)

The Department of the Interior strives to strengthen its government-to-government relationship with Indian tribes through a commitment to consultation with Indian tribes and recognition of their right to self-governance and tribal sovereignty. We have evaluated this rule under the Department's consultation policy and under the criteria in Executive Order 13175 and have determined that it has no substantial direct effects on federally recognized Indian tribes and that consultation under the Department's tribal consultation policy is not required.

Representatives of the five Indian tribes affiliated with SLBE were consulted during the evaluation of the trail concept and route in the preparation of the GMP/EIS. Representatives of the nearest affiliated tribe, the Grand Traverse Band of Ottawa and Chippewa Indians, are members of the LSHR that proposed the trail and helped to prepare the EA.

Paperwork Reduction Act (PRA)

This rule does not contain information collection requirements, and a submission under the PRA is not required.

National Environmental Policy Act (NEPA)

This rule does not constitute a major Federal action significantly affecting the quality of the human environment. A detailed statement under the NEPA is not required because we reached a FONSI. The GMP/EIS, EA, FONSI, and related documents may be viewed on the Lakeshore's planning Web site <http://www.nps.gov/slbe/parkmgmt/planning.htm>.

Effects on the Energy Supply (Executive Order 13211)

This rule is not a significant energy action under the definition in Executive Order 13211. A statement of Energy Effects is not required.

Clarity of This Regulation

We are required by Executive Orders 12866 (section 1(b)(12)) and 12988

(section 3(b)(1)(B)), and 13563 (section 1(a), and by the Presidential Memorandum of June 1, 1998, to write all rules in plain language. This means that each rule we publish must:

- (a) Be logically organized;
- (b) Use the active voice to address readers directly;
- (c) Use common, everyday words and clear language rather than jargon;
- (d) Be divided into short sections and sentences; and
- (e) Use lists and tables wherever possible.

If you feel that we have not met these requirements, send us comments by one of the methods listed in the **ADDRESSES** section. To better help us revise the rule, your comments should be as specific as possible. For example, you should tell us the numbers of the sections or paragraphs that you find unclear, which sections or sentences are too long, the sections where you feel lists or tables would be useful, etc.

Drafting Information: The primary authors of this regulation were Tom Ulrich, Deputy Superintendent, Sleeping Bear Dunes National Lakeshore, Michael Tiernan, Office of the Solicitor, U.S. Department of the Interior, Washington, DC, A.J. North, Jay P. Calhoun, and Rose Wilkinson, NPS Regulations and Special Park Uses, Washington, DC.

Public Participation

It is the policy of NPS, whenever practicable, to afford the public an opportunity to participate in the rulemaking process. Accordingly, interested parties may submit written comments, suggestions, or objections regarding this proposed rule to the addresses noted at the beginning of this rule.

Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

List of Subjects in 36 CFR Part 7

National Parks, Reporting and recordkeeping requirements.

In consideration of the foregoing, the National Park Service proposes to amend 36 CFR part 7 as set forth below:

PART 7—SPECIAL REGULATIONS, AREAS OF THE NATIONAL PARK SYSTEM

1. The authority for Part 7 continues to read as follows:

Authority: 16 U.S.C. 1, 3, 9a, 462(k); Sec. 7.96 also issued under 36 U.S.C. 501–511, D.C. Code 10–137 (2001) and D.C. Code 50–2201 (2001).

2. In § 7.80 add paragraph (c) to read as follows:

§ 7.80 Sleeping Bear Dunes National Lakeshore.

* * * * *

(c) *Bicycling.* (1) The Sleeping Bear Heritage Trail, approximately 27 miles in length from the southern Leelanau County line at Manning Road to County Road 651 at Good Harbor Beach, is designated as a route for bicycle use.

(2) The Superintendent may open or close designated routes, or portions thereof, or impose conditions or restrictions for bicycle use after taking into consideration public health and safety, natural and cultural resource protection, and other management activities and objectives.

(i) The Superintendent will provide public notice of all such actions through one or more of the methods listed in § 1.7 of this chapter.

(ii) Violating a closure, condition, or restriction is prohibited.

Rachel Jacobson,

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks.

BILLING CODE 4310–HH–P

ARCHITECTURAL AND TRANSPORTATION BARRIERS COMPLIANCE BOARD

36 CFR Part 1195

[Docket No. ATBCB–2012–0003]

RIN 3014–AA40

Medical Diagnostic Equipment Accessibility Standards Advisory Committee

AGENCY: Architectural and Transportation Barriers Compliance Board.

ACTION: Notice of advisory committee meeting.

SUMMARY: The Medical Diagnostic Equipment Accessibility Standards Advisory Committee (Committee) will hold its second meeting. On July 5, 2012, the Architectural and Transportation Barriers Compliance Board (Access Board) established an

advisory committee to make recommendations to the Board on matters associated with comments received and responses to questions included in a previously published Notice of Proposed Rulemaking (NPRM) on Medical Diagnostic Equipment Accessibility Standards.

DATES: The Committee will meet on October 29, 2012, from 10:00 a.m. to 5:00 p.m. and on October 30, 2012, from 9:00 a.m. to 3:00 p.m.

ADDRESSES: The meeting will be held at the Access Board's Conference Room, 1331 F Street NW., Suite 800, Washington, DC 20004–1111.

FOR FURTHER INFORMATION CONTACT: Rex Pace, Office of Technical and Information Services, Architectural and Transportation Barriers Compliance Board, 1331 F Street NW., suite 1000, Washington, DC 20004–1111. Telephone number (202) 272–0023 (Voice); (202) 272–0052 (TTY). Electronic mail address: pace@access-board.gov.

SUPPLEMENTARY INFORMATION: On July 5, 2012, the Architectural and Transportation Barriers Compliance Board (Access Board) established an advisory committee to make recommendations to the Board on matters associated with comments received and responses to questions included in a previously published NPRM on Medical Diagnostic Equipment Accessibility Standards. See 77 FR 6916 (February 9, 2012). The NPRM and information related to the proposed standards are available on the Access Board's Web site at: <http://www.access-board.gov/medical-equipment.htm>.

The advisory committee will hold its second meeting on October 29 and 30, 2012. The agenda for the meeting includes the following:

- Review of previous committee work;
- Formation of subcommittees based on medical diagnostic equipment type;
- Continued discussion on transfer surface height and size;
- Consideration of and possible discussion on permitted obstructions to the transfer surface;
- Consideration of and possible discussion on transfer support location and configuration;
- Consideration of and possible discussion on issues proposed by committee members; and
- Discussion of administrative issues.

The preliminary meeting agenda, along with information about the committee, is available at the Access Board's Web site (<http://www.access-board.gov/medical-equipment.htm>).

Committee meetings are open to the public and interested persons can attend the meetings and communicate their views. Members of the public will have opportunities to address the committee on issues of interest to them during public comment periods scheduled on each day of the meeting.

The meetings will be accessible to persons with disabilities. An assistive listening system, computer assisted real-time transcription (CART), and sign language interpreters will be provided. Persons attending the meetings are requested to refrain from using perfume, cologne, and other fragrances for the comfort of other participants (see www.access-board.gov/about/policies/fragrance.htm for more information). Also, persons wishing to provide handouts or other written information to the committee are requested to provide electronic formats to Rex Pace via email prior to the meetings so that alternate formats can be distributed to committee members.

David M. Capozzi,

Executive Director.

[FR Doc. 2012–25257 Filed 10–12–12; 8:45 am]

BILLING CODE 8150–01–P

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R04–OAR–2008–0177; FRL–9740–8]

Approval and Promulgation of Implementation Plans; Portion of York County, South Carolina Within Charlotte-Gastonia-Rock Hill, North Carolina-South Carolina 1997 8-Hour Ozone Nonattainment Area; Reasonable Further Progress Plan

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve portions of two state implementation plan (SIP) revisions, submitted by the South Carolina Department of Health and Environmental Control, on August 31, 2007, and April 29, 2010, to address the reasonable further progress (RFP) plan requirements for the 1997 8-hour ozone national ambient air quality standards (NAAQS) for the portion of York County, South Carolina that is within the bi-state Charlotte-Gastonia-Rock Hill 1997 8-hour ozone nonattainment area. The Charlotte-Gastonia-Rock Hill, North Carolina-South Carolina 1997 8-hour ozone nonattainment area (hereafter referred to as the “bi-state Charlotte Area”) is

comprised of Cabarrus, Gaston, Lincoln, Mecklenburg, Rowan, Union and a portion of Iredell (Davidson and Coddle Creek Townships) Counties in North Carolina; and a portion of York County in South Carolina. EPA is also providing the status of its adequacy determination for the motor vehicle emissions budgets (MVEB) for volatile organic compounds that were included in South Carolina's RFP plan. Further, EPA is proposing to approve these MVEB. This proposed action is being taken pursuant to section 110 of the Clean Air Act. EPA will take action on North Carolina's RFP plan for its portion of the bi-state Charlotte Area, in a separate action. In the Final Rules Section of this **Federal Register**, EPA is approving the State's implementation plan revision as a direct final rule without prior proposal because the Agency views this as a noncontroversial submittal and anticipates no adverse comments.

DATES: Written comments must be received on or before November 14, 2012.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA-R04-OAR-2008-0177 by one of the following methods:

1. www.regulations.gov: Follow the on-line instructions for submitting comments.
2. *Email:* R4-RDS@epa.gov.
3. *Fax:* (404) 562-9019.
4. *Mail:* "EPA-R04-OAR-2008-0177," Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960.
5. *Hand Delivery or Courier:* Lynorae Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

Please see the direct final rule which is located in the Rules section of this **Federal Register** for detailed instructions on how to submit comments.

FOR FURTHER INFORMATION CONTACT: Sara Waterson, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection

Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. The telephone number is (404) 562-9061. Ms. Waterson can be reached via electronic mail at waterson.sara@epa.gov.

SUPPLEMENTARY INFORMATION: On March 12, 2008, EPA issued a revised ozone NAAQS. See 73 FR 16436. The current action, however, is being taken to address requirements under the 1997 8-hour ozone NAAQS. Requirements for the South Carolina portion of the bi-state Charlotte Area under the 2008 ozone NAAQS will be addressed in the future. For additional information see the direct final rule which is published in the Rules Section of this **Federal Register**. A detailed rationale for the approval is set forth in the direct final rule. If no adverse comments are received in response to this rule, no further activity is contemplated. If EPA receives adverse comments, the direct final rule will be withdrawn and all public comments received will be addressed in a subsequent final rule based on this proposed rule. EPA will not institute a second comment period on this document. Any parties interested in commenting on this document should do so at this time.

Dated: October 2, 2012.

A. Stanley Meiburg,

Acting Regional Administrator, Region 4.

[FR Doc. 2012-25168 Filed 10-12-12; 8:45 am]

BILLING CODE 6560-50-P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Parts 2 and 90

[WP Docket No. 07-100; PS Docket No. 06-229; WT Docket No. 06-150; DA 12-1540]

4.9 GHz Band

AGENCY: Federal Communications Commission.

ACTION: Proposed rule; reopening of comment and reply comment periods.

SUMMARY: The Public Safety and Homeland Security Bureau on its own motion extends by one month the comment and reply deadlines to the *Fifth Further Notice of Proposed Rulemaking* of dockets WP Docket No. 07-100, PS Docket No. 06-229, WT Docket No. 06-150. The Bureau takes this action to allow the First Responder Network Authority, a newly formed independent authority within the National Telecommunications and Information Administration, sufficient time to file comments.

DATES: The comment and reply dates for the proposed rule published at 77 FR 45558 (August 1, 2012), are reopened. Submit comments on or before November 1, 2012. Submit reply comments on or before November 30, 2012.

ADDRESSES: You may submit comments, identified by WP Docket No. 07-100, PS Docket No. 06-229, WT Docket No. 06-150, by any of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Federal Communications Commission's Web Site:* <http://fjallfoss.fcc.gov/ecfs2/>. Follow the instructions for submitting comments.
- *Mail:* U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington, DC 20554. Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.
- *Hand or Messenger Delivery:* 445 12th St. SW., Room TW-A325, Washington, DC 20554.
- *People With Disabilities:* Contact the FCC to request reasonable accommodations (accessible format documents, sign language interpreters, CART, etc.) by email: FCC504@fcc.gov or phone: 202-418-0530 or TTY: 202-418-0432.

For detailed instructions for submitting comments, additional information on the rulemaking process, and where to find materials available for inspection, see the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Thomas Eng, Policy and Licensing Division, Public Safety and Homeland Security Bureau, Federal Communications Commission, 445 12th Street SW., Washington, DC 20554, at (202) 418-0019, TTY (202) 418-7233, or via email at Thomas.Eng@fcc.gov.

SUPPLEMENTARY INFORMATION: This is a summary of the Public Safety and Homeland Security Bureau's *Order* in WP Docket No. 07-100; PS Docket No. 06-229; WT Docket No. 06-150; adopted and released on September 26, 2012. The complete text of this document is available for inspection and copying during normal business hours in the FCC Reference Information Center, Portals II, 445 12th Street SW., Room CY-A257, Washington, DC 20554. This document may also be purchased from the Commission's duplicating contractor, Best Copy and Printing, Inc., in person at 445 12th Street SW., Room CY-B402, Washington, DC 20554, via telephone at (202) 488-5300, via

facsimile at (202) 488-5563, or via email at FCC@BCPIWEB.com. Alternative formats (computer diskette, large print, audio cassette, and Braille) are available to persons with disabilities or by sending an email to FCC504@fcc.gov or calling the Consumer and Governmental Affairs Bureau at (202) 418-0530, TTY (202) 418-0432. This document is also available on the Commission's Web site at <http://www.fcc.gov>. The Commission's *Fifth Further Notice of Proposed Rulemaking* in WP Docket No. 07-100; PS Docket No. 06-229; WT Docket No. 06-150; adopted and released on June 13, 2012 is available by searching FCC 12-61 on the Commission's EDOCS Web site at http://hraunfoss.fcc.gov/edocs_public/. A summary of the Commission's *Fifth Further Notice of Proposed Rulemaking* is available in the **Federal Register** at 77 FR 45558 (August 1, 2012).

Comments

Pursuant to §§ 1.415 and 1.419 of the Commission's rules, 47 CFR 1.415, 1.419, interested parties may file comments and reply comments.

Comments may be filed using: (1) The Commission's Electronic Comment Filing System (ECFS), (2) the Federal Government's eRulemaking Portal, or (3) by filing paper copies. See *Electronic Filing of Documents in Rulemaking Proceedings*, 63 FR 24121, May 1 (1998).

- **Electronic Filers:** Comments may be filed electronically using the Internet by accessing the ECFS: <http://fjallfoss.fcc.gov/ecfs2/> or the Federal eRulemaking Portal: <http://www.regulations.gov>.

- **Paper Filers:** Parties who choose to file by paper must file an original and four copies of each filing. If more than one docket or rulemaking number appears in the caption of this proceeding, filers must submit two additional copies for each additional docket or rulemaking number.

- Filings can be sent by hand or messenger delivery, by commercial overnight courier, or by first-class or overnight U.S. Postal Service mail. All filings must be addressed to the Commission's Secretary, Office of the Secretary, Federal Communications Commission.

- All hand-delivered or messenger-delivered paper filings for the Commission's Secretary must be delivered to FCC Headquarters at 445 12th St. SW., Room TW-A325, Washington, DC 20554. The filing hours are 8:00 a.m. to 7:00 p.m. All hand deliveries must be held together with rubber bands or fasteners. Any envelopes must be disposed of before entering the building.

- Commercial overnight mail (other than U.S. Postal Service Express Mail and Priority Mail) must be sent to 9300 East Hampton Drive, Capitol Heights, MD 20743.

- U.S. Postal Service first-class, Express, and Priority mail must be addressed to 445 12th Street SW., Washington DC 20554.

On our own motion, we extend the comment and reply deadlines established in the *Fifth Further Notice of Proposed Rulemaking (Fifth FNPRM)* of the above-captioned proceeding. A summary of the Commission's *Fifth FNPRM* is available in the **Federal Register** at 77 FR 45558 (August 1, 2012). In the *Fifth FNPRM*, the Commission specified that comments are due 60 days after publication in the **Federal Register**, and reply comments are due 90 days after publication in the **Federal Register**. On August 1, 2012, the Office of the Federal Register published a summary of the *Fifth FNPRM*, which established a comment deadline of October 1, 2012, and a reply comment deadline of October 30, 2012.

The *Fifth FNPRM* seeks comment on various issues relating to the 4.9 GHz band, including the relationship between the 4.9 GHz band and the 700 MHz public safety broadband network, which will be administered by the First Responder Network Authority (FirstNet), a newly formed independent authority within the National Telecommunications and Information Administration. We note that FirstNet is still in the initial stages of formation, and held its first public meeting on September 25, 2012. Thus, under the current comment schedule for this proceeding, FirstNet may not have sufficient time to file comments to the *Fifth FNPRM* by the comment deadline. Therefore, on our own motion we find that an extension of the comment and reply comment dates for the *Fifth FNPRM* is appropriate to provide FirstNet and other interested parties additional time to file, which in turn will enable the Commission to develop a more substantial record in this proceeding. Accordingly, we extend the comment deadline to November 1, 2012, and the reply comment deadline to November 30, 2012.

Accordingly, *it is ordered* that, pursuant to sections 4(i), 4(j), and 5(c) of the Communications Act of 1934, as amended, 47 U.S.C. 154(i), 154(j), 155(c), and pursuant to the authority delegated in Sections 0.191 and 0.392 of the Commission's rules, 47 CFR 0.191, 0.392, we extend the comment and reply comment deadlines for the above proceeding as discussed herein.

Federal Communications Commission.

David S. Turetsky,

Chief, Public Safety and Homeland Security Bureau.

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

47 CFR Part 73

[MB Docket No. 12-261; RM-11677; DA 12-1506]

Radio Broadcasting Services; Crownpoint, NM

AGENCY: Federal Communications Commission.

ACTION: Proposed rule.

SUMMARY: This document sets forth a proposal to amend the FM Table of Allotments. The Commission requests comment on a petition filed by Navajo Technical College, proposing to amend the Table of Allotments by allotting Channel 297A at Crownpoint, New Mexico, as a Tribal Allotment. Channel 297A would constitute a first local service at Crownpoint. Channel 297A can be allotted at Crownpoint, New Mexico, in compliance with the Commission's minimum distance separation requirements with a site restriction of 0.9 km (0.58 miles) northeast of Crownpoint, at 35-41-07 North Latitude and 108-08-43 West Longitude. See Supplementary Information *infra*.

DATES: The deadline for filing comments is November 12, 2012. Reply comments must be filed on or before November 26, 2012.

ADDRESSES: Federal Communications Commission, 445 12th Street SW., Washington, DC 20554. In addition to filing comments with the FCC, interested parties should serve counsel for petitioner as follows: Albert J. Catalano, Esq., Matthew J. Plache, Esq., Victoria Garcia, Esq., Catalano & Plache, PLLC, 3221 M Street NW., Washington, DC 20007.

FOR FURTHER INFORMATION CONTACT: Deborah A. Dupont, Media Bureau (202) 418-7072.

SUPPLEMENTARY INFORMATION: This is a synopsis of the Commission's *Notice of Proposed Rule Making*, MB Docket No. 12-261, adopted September 17, 2012, and released September 18, 2012. The full text of this Commission decision is available for inspection and copying during normal business hours in the FCC Reference Information Center (Room CY-A257), 445 12th Street SW.,

Washington DC 20554. The complete text of this decision may also be purchased from the Commission's copy contractor, Best Copy and Printing, Inc., 445 12th Street SW., Room CY-B402, Washington, DC 20554, (800) 378-3160, or via the company's Web site, *www.bcpweb.com*. This document does not contain proposed information collection requirements subject to the Paperwork Reduction Act of 1995, Public Law 104-13. In addition, therefore, it does not contain any proposed information collection burden "for small business concerns with fewer than 25 employees," pursuant to the Small Business Paperwork Relief Act of 2002, Public Law 107-198, *see* 44 U.S.C. 3506(c)(4).

The Provisions of the Regulatory Flexibility Act of 1980 do not apply to this proceeding. Members of the public should note that from the time a Notice of Proposed Rule Making is issued until the matter is no longer subject to Commission consideration or court review, all *ex parte* contacts are prohibited in Commission proceedings, such as this one, which involve channel allotments. *See* 47 CFR 1.1204(b) for rules governing permissible *ex parte* contacts.

For information regarding proper filing procedures for comments, *see* 47 CFR 1.415 and 1.420.

List of Subjects in 47 CFR Part 73

Radio, Radio broadcasting.

Federal Communications Commission.

Nazifa Sawez,

Assistant Chief, Audio Division, Media Bureau.

For the reasons discussed in the preamble, the Federal Communications Commission proposes to amend 47 CFR Part 73 as follows:

PART 73—RADIO BROADCAST SERVICES

1. The authority citation for Part 73 continues to read as follows:

Authority: 47 U.S.C. 154, 303, 334, 336.

§ 73.202 [Amended]

2. Section 73.202(b), the Table of FM Allotments under New Mexico, is amended by adding Crownpoint, 297A (Tribal Allotment).

[Docket No. 110321210-2495-01]

RIN 0648-BA93

Fisheries of the Exclusive Economic Zone Off Alaska; Bering Sea and Aleutian Islands Management Area; Groundfish Retention Standard

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes a regulatory amendment that would modify the groundfish retention standard (GRS) program in the Bering Sea and Aleutian Islands (BSAI) management area by removing certain regulatory requirements mandating minimum levels of groundfish retention and adding requirements for annual reports on groundfish retention performance. The GRS program was implemented to increase the retention and utilization of groundfish caught by trawl catcher/processor (C/P) vessels not listed in the American Fisheries Act (AFA), referred to as Amendment 80 vessels, and Amendment 80 cooperatives participating in the Bering Sea and Aleutian Islands groundfish fisheries. NMFS has discovered that the regulatory methodology used to calculate compliance with the GRS requires individual Amendment 80 vessels and Amendment 80 cooperatives to retain groundfish at minimum rates well above the minimum rates recommended by the Council or implemented by NMFS. As a result, the GRS is expected to impose significantly higher than predicted compliance costs on vessel owners and operators due to the increased level of retention needed to meet the minimum retention rates.

Additionally, NMFS has discovered that enforcement of the GRS has proven far more complex, challenging, and potentially costly than anticipated by NMFS. This proposed rule would relieve non-AFA trawl C/Ps and Amendment 80 cooperatives from undue compliance costs stemming from the mandatory GRS rates, but continue the GRS program goals of increased retention and utilization by establishing additional reporting requirements on groundfish retention performance together with current monitoring

requirements for the Amendment 80 fleet. This action is intended to promote the goals and objectives of the Magnuson-Stevens Fishery Conservation and Management Act, the fishery management plan, and other applicable law.

DATES: Comments must be received no later than November 14, 2012.

ADDRESSES: You may submit comments on this document, identified by NOAA-NMFS-2011-0049, by any of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal *www.regulations.gov*. To submit comments via the e-Rulemaking Portal, first click the "submit a comment" icon, then enter NOAA-NMFS-2011-0049 in the keyword search. Locate the document you wish to comment on from the resulting list and click on the "Submit a Comment" icon on that line.

- **Mail:** Address written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Ellen Sebastian. Mail comments to P.O. Box 21668, Juneau, AK 99802-1668.

- **Fax:** Address written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Ellen Sebastian. Fax comments to 907-586-7557.

- **Hand delivery to the Federal Building:** Address written comments to Glenn Merrill, Assistant Regional Administrator, Sustainable Fisheries Division, Alaska Region NMFS, Attn: Ellen Sebastian. Deliver comments to 709 West 9th Street, Room 420A, Juneau, AK.

Instructions: Comments must be submitted by one of the above methods to ensure that the comments are received, documented, and considered by NMFS. Comments sent by any other method, to any other address or individual, or received after the end of the comment period, may not be considered. All comments received are a part of the public record and will generally be posted for public viewing on *www.regulations.gov* without change. All personal identifying information (e.g., name, address) submitted voluntarily by the sender will be publicly accessible.

Do not submit confidential business information, or otherwise sensitive or protected information. NMFS will accept anonymous comments (enter "N/A" in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word or Excel, WordPerfect, or Adobe PDF file formats only.

Electronic copies of the Environmental Assessment, Regulatory Impact Review (RIR), and Initial Regulatory Flexibility Analysis (IRFA) that are collectively known as the analysis prepared for this proposed rule may be obtained from <http://www.regulations.gov> or from the Alaska Region Web site at <http://alaskafisheries.noaa.gov>.

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements contained in this proposed rule may be submitted to NMFS at the above address and by email to OIRA_Submission@omb.eop.gov or fax to 202-395-7285.

FOR FURTHER INFORMATION CONTACT: Seanbob Kelly, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the U.S. groundfish fisheries of the Bering Sea and Aleutian Islands management area (BSAI) in the Exclusive Economic Zone (EEZ) under the Fishery Management Plan for Groundfish of the Bering Sea and Aleutian Islands Management Area (FMP). The Council prepared the FMP pursuant to the Magnuson-Stevens Fishery Conservation and Management Act (MSA). Regulations implementing the FMP appear at 50 CFR part 679. General regulations that pertain to U.S. fisheries appear at subpart H of 50 CFR part 600.

Background

In June 2003, the Council adopted Amendment 79 to the FMP. Amendment 79 revised section 2.2.1 of the FMP to include the management objective of improving the retention of groundfish where practicable, by establishing minimum groundfish retention standards. At the same time the Council adopted Amendment 79, it adopted the groundfish retention standard (GRS) program. NMFS published a final rule implementing the GRS program in April 2006 (71 FR 17362), and the GRS program became effective in 2008.

As originally recommended by the Council and approved by NMFS, the GRS program applied to non-AFA trawl C/Ps equal to or greater than 125 feet (38.1 m) length overall (LOA). The GRS program required each of these vessels to retain and utilize a minimum amount of groundfish caught during the calendar year. The Council recommended the GRS program for non-AFA trawl C/Ps because, as a group, they had the lowest retained catch rates of any C/P sector operating in the BSAI groundfish fishery. The Council chose to exclude non-AFA trawl C/Ps less

than 125 feet (38.1 m) LOA from the original GRS program because GRS compliance costs associated with observers and scale monitoring requirements were found to be higher for these vessels, and their contribution to the overall bycatch and discard of groundfish was minimal compared to vessels equal to or greater than 125 feet (38.1 m) LOA.

The Council’s policy objectives for the GRS program included reducing bycatch, minimizing waste, and improving utilization of fish resources to the extent practicable, acknowledging that any solution to the problem of reducing discards must take into account the ability of NMFS to monitor discards and adequately enforce any regulations. The full rationale for the GRS is described in the preamble to the final rule for the GRS program (71 FR 17362, April 6, 2006) and is not repeated here. Regulations implementing the GRS program at §§ 679.7(m) and 679.27(j) established annual minimum groundfish retention standards and prohibited the owner or operator of a non-AFA trawl C/P equal to or greater than 125 feet (38.1 m) LOA from retaining an amount of groundfish during a fishing year that is less than the GRS. Section 679.27(j)(2) contains the equations used by NMFS for determining GRS compliance. GRS program regulations also established new observer and scale requirements at § 679.27(j)(5) in order to effectively monitor and account for groundfish catch onboard non-AFA trawl C/Ps subject to the GRS program. The GRS was phased in to allow owners and operators of affected vessels time to adjust to the retention requirements. The GRS was based on historic total catch and retention estimates presented in the analysis for the GRS program. The GRS schedule can be found at § 679.27(j)(4) and is listed below in Table 1.

TABLE 1—ANNUAL GROUND FISH RETENTION STANDARD AT 50 CFR 679.27(J)(4)

GRS Schedule	Annual GRS (Percent)
2008	65
2009	75
2010	80
2011 and each year after	85

In June 2006, the Council adopted Amendment 80 to the FMP, which authorized the allocation of specified groundfish species to harvesting cooperatives and established a catch share program for non-AFA trawl C/Ps.

This catch share program is commonly referred to as the Amendment 80 program, and the vessels used in this program are commonly referred to as Amendment 80 vessels, or the Amendment 80 sector. Amendment 80 was intended to meet a number of policy objectives that included improving retention and utilization of fishery resources by the Amendment 80 sector, reducing potential bycatch reduction costs, encouraging fishing practices with lower discard rates, and promoting opportunities for the sector to increase the value of harvested species. NMFS approved Amendment 80 and published a final rule implementing it in 2007 (72 FR 52668, September 14, 2007), and the Amendment 80 program was fully effective starting with the 2008 fishing year.

Under the Amendment 80 program, NMFS annually issues an Amendment 80 quota share (QS) permit to a person holding the catch history of an original qualifying vessel. The amount of QS issued is based on the qualifying vessels’ catch history of six Amendment 80 species (Atka mackerel, Aleutian Islands Pacific ocean perch, flathead sole, Pacific cod, rock sole, and yellowfin sole) in the BSAI from 1998 through 2004. Generally, the Amendment 80 program is intended to facilitate the formation of cooperatives among persons receiving Amendment 80 QS permits. These cooperatives are eligible to receive cooperative quota (CQ), which represents an exclusive harvest privilege for a portion of these fishery resources. Amendment 80 sector participants who do not choose to join a harvesting cooperative must fish in a limited access fishery, without an exclusive harvest privilege, and must continue in a race for fish with other participants in that fishery. The allocation of CQ allows vessel operators to make operational choices to improve returns from the fisheries and reduce discards of fish, because the incentives of the limited access fishery—to maximize catch rates to capture a larger share of the available catch—are removed. The principal benefits from the Amendment 80 program are achieved with harvesters choosing to join cooperatives. These benefits are described more fully in the final rule for Amendment 80 (72 FR 52668, September 14, 2007).

In addition to issuing QS permits and providing mechanisms for the formation of cooperatives, the Amendment 80 program established measures to reduce the discard of groundfish. Amendment 80 modified the GRS program in two critical ways. First, the GRS program

was extended to all non-AFA trawl C/Ps operating in the BSAI, removing the exemption for vessels under 125 feet (38.1 m) LOA. Therefore, all Amendment 80 vessels, regardless of size, are required to comply with the GRS. Second, Amendment 80 modified the method of calculating the total retention of groundfish catch that applies to cooperatives. Amendment 80 authorized a cooperative to meet the GRS by aggregating the retention rate of all vessels assigned to the cooperative. Under this modification, not every vessel within the cooperative is required to meet the minimum GRS; some vessels may not meet the minimum GRS as long as the minimum is met by the aggregated retention rate of all vessels in the cooperative. This action was intended to enable the owners of Amendment 80 vessels with relatively low retention rates to join a cooperative, assign their harvest privilege to the cooperative, and allow vessels with higher retention rates to harvest the cooperative's exclusive allocation of fish. Additionally, for Amendment 80 vessels that fish under a cooperative's exclusive harvest privilege, the costs associated with retaining less valuable fish under the GRS program may be offset by increased profitability because they are no longer operating in a race for fish.

Under the current GRS program, each Amendment 80 cooperative and each vessel participating in the limited access fishery must ensure that it meets the GRS requirements, based on the amount of catch retained by that cooperative or vessel. Catch is defined in regulations at § 600.10 to include, but is not limited to, any activity that results in killing fish or bringing any live fish onboard a vessel. As noted earlier, vessels participating in a cooperative can aggregate the total catch and total retained catch by all vessels in the cooperative. Therefore, vessels with poorer retention rates may have an incentive to join a cooperative with other vessels that have better retention rates and are able to offset the lower retention rates of those vessels. As the GRS increased, individual vessels with lower retention rates likely had greater difficulty meeting the GRS than vessels that coordinated with other vessels in an Amendment 80 cooperative.

Many of the objectives for establishing monitoring and enforcement regulations under Amendment 80 were similar to those under Amendment 79. However, the regulations implementing Amendment 80 established a quota

management program that had somewhat different monitoring needs. Therefore, the Council recommended and NMFS implemented a separate, enhanced set of monitoring and enforcement regulations for Amendment 80 because of the increased incentive for Amendment 80 vessels and Amendment 80 cooperatives to engage in presorting or "high grading" of catch prior to weighing under the quota-based catch share management plan. The monitoring and enforcement regulations implemented for Amendment 80 were in addition to and did not remove any of the monitoring and enforcement regulations established under the GRS program and were intended to minimize the under-reporting or misreporting of catch under the quota-based catch share program.

Concerns With the GRS

At its April 2010 meeting, the Council requested that NMFS report on the status of monitoring, enforcing, and prosecuting the GRS program. The Council's request was based, in part, on the concerns raised by NMFS at the time the Council took final action on BSAI Amendment 93, which established Amendment 80 cooperatives. The request also was based upon general concerns expressed by participants in the Amendment 80 sector regarding the enforcement of the GRS. Specifically, the Council requested a report on the enforcement and prosecution concerns raised since the development of the GRS program, including changes to the GRS program under Amendment 80, changes proposed by the Council at the time it adopted Amendment 93 to the FMP, and concerns about monitoring and enforcing the GRS program that were identified by the agency or industry participants. The Council also requested conceptual alternatives to modify the GRS program to address these concerns.

In June 2010, NMFS provided the Council with a preliminary assessment of the GRS program. NMFS raised two key concerns in the June 2010 report to the Council. First, NMFS pointed out that the methodology for calculating annual retention standards established in regulations implementing the GRS was different than the methodology used in the analysis for the GRS program to estimate the fleet's historic retention rates. NMFS explained that the methodology implemented in regulation was necessary for calculating retention rates that were verifiable and enforceable on an individual vessel basis. However, when NMFS compared

the retention rates produced by the two methodologies, NMFS determined that the methodology used in the analysis for the GRS program, which was the basis for the Council's selection of minimum retention rates, produced consistently higher retention rates than the methodology established in regulation. As a result, NMFS realized that the fleet had to retain more groundfish in order to meet the minimum retention rate using the regulatory methodology than the fleet would have been required to retain using the methodology in the analysis. Second, NMFS explained the difficulties the agency was encountering in effectively enforcing and prosecuting the GRS for individual vessels, and that these difficulties would extend to prosecution of a single cooperative, or multiple cooperatives. NMFS also noted that since the GRS program was implemented, the retention rate of groundfish by the Amendment 80 fleet had increased substantially under either methodology. Additional information on the key concerns raised by NMFS is provided below.

At the June 2010 Council meeting, representatives of the Amendment 80 sector testified that vessel operators that met the GRS in 2009 will face significant additional challenges meeting the increasing standard. Vessel operators cited the differences in the Council's recommended GRS and NMFS' methodology for calculating compliance with that standard as an unintended burden on the fleet. Industry representatives reported to the Council that the GRS calculation specified in regulations results in a lower retention percentage than the methodology used in the analysis developed for the GRS program. Amendment 80 vessel operators raised concerns that it may not be possible to achieve the highest GRS required in regulation for vessels operating individually in the Amendment 80 limited access fishery, or collectively in a cooperative.

Differences in Catch Data Estimation

In its report to the Council, NMFS confirmed that the regulatory method for calculating compliance with the GRS consistently results in a lower calculated retention rate than the method used in the GRS program analysis, as shown in Table 2 below. In 2008, this difference was 13 percent, in 2009 it was 10 percent, and in 2010 it was 7 percent.

Table 2. Comparison of Methods to Calculate the Annual BSAI Groundfish Retention Rate for the Amendment 80 Sector

Year	Regulatory GRS %	Total Catch ¹ (A) mt	Retained Catch ² (B) mt	Round Weight Equivalent ³ (D) mt	Historic Retention GRS Program Analysis (B)/(A) %	Regulatory Compliance Calculation (D)/(A) %	Difference %
2003	*	269,050	188,584	183,334	70	68	2
2004	*	314,018	214,959	201,232	68	64	4
2005	*	301,538	236,226	216,391	78	72	7

* GRS program not implemented until 2008

Source: Catch Accounting, April 29, 2011

¹Prior to 2008, total catch estimates were based on a combination of observer data and weekly production reports. After 2008, total catch estimates are based on scale weights of total groundfish catch from observer data.

²Prior to 2008, retained catch estimates were based on a combination of observer estimates of discards and data from weekly production reports. After 2008, retained catch estimates are based on observer estimates of discard.

³Retained catch for the purposes of the GRS program is based on the round weight equivalent of reported production.

The regulatory method requires a level of groundfish retention much higher than that intended by the Council when it adopted the GRS program. The reasons for the underestimates of groundfish retention are not clear, but likely reflect a mixture of factors. One possible source of the variation in the retention estimates may stem from differences in the data used in the analysis for the GRS program to calculate the historic total catch and NMFS' current method for estimating groundfish retention.

Total catch estimates in the groundfish fisheries off Alaska are generated by NMFS from information provided through a variety of required industry reports of harvest and at-sea discard, and data collected through an extensive fishery observer program. Over the past decade, NMFS changed the methodologies used to determine catch estimates from the NMFS blend database (1995 through 2002) to the catch accounting system (2003 through present). The analysis for the GRS program used data from the blend database to determine the total retention rates of the non-AFA trawl C/P fleet and the Council relied on these retention rates to recommend specific groundfish retention standards for the GRS program.

In 2003, the catch accounting system was implemented to better meet the increasing information needs of

fisheries scientists and managers. Currently, the catch accounting system relies on data derived from a mixture of production and observer reports as the basis of the total catch estimates. The approach for estimating retained catch used in the GRS program relies on round weight equivalents of retained products and NMFS product recovery rates to estimate retention. The 2003 modifications in catch estimation included providing more frequent data summaries at finer spatial and fleet resolution, and the increased use of observer data. Redesigned observer program data collections were implemented in 2008, and include recording sample-specific information in lieu of pooled information, increased use of systematic sampling over simple random and opportunistic sampling, and decreased reliance on observer computations. As a result of these modifications, NMFS is unable to recreate blend database estimates for total catch and retained catch after 2002. Therefore, NMFS is not able to reliably determine differences in retention rates when comparing historic data from the blend database to the current catch accounting system.

Enforcement Concerns

In the June 2010 report, NMFS described a suite of enforcement concerns about the ability to effectively prosecute a violation of the GRS. When

the GRS program was approved by NMFS, NOAA's Office of General Counsel for Enforcement and Litigation raised concerns about certain difficulties it anticipated in prosecuting vessel specific violations of the GRS program. These concerns primarily focused on the program's reliance on an annual groundfish retention percentage based in part on data collected by numerous observers deployed on a vessel over the course of a year, and whether these observers would be available in future years to support the prosecution process. NMFS explained that these concerns are aggravated under Amendment 80 because the number of observers necessary to support an enforcement case and associated prosecution increases significantly from a single vessel scenario to a multiple vessel cooperative, or a multiple cooperative scenario as proposed by the Council at the time it adopted Amendment 93.

NMFS also explained that enforcement of the GRS has proven far more complex, challenging, and potentially more costly than anticipated at the time it approved the GRS program. The Amendment 80 sector has operated under a cooperative system for several years in a manner that appears to facilitate compliance with the GRS (see Table 2 of this preamble); however, the method used to calculate compliance with the GRS requires

higher retention rates than those used by the Council to establish the GRS. Thus, many participants in the Amendment 80 sector have expressed strong doubt that it will be possible to achieve the highest retention standard of 85 percent using the existing regulatory methodology. NMFS determined the likelihood that additional vessels may be unable to meet the GRS, as calculated by NMFS, in coming years may unnecessarily increase compliance and enforcement costs, considering that the Council's objectives for retention appear to be met, as demonstrated in Table 2 of this preamble. In addition, NMFS explained that it now has actual enforcement experience indicating that the costs to NOAA of developing a GRS compliance case are high and will increase if the 85 percent GRS cannot be met by the fleet in 2012 and following years.

Emergency Action

After receiving NMFS' report and the public testimony described above, the Council recommended two GRS actions. First, the Council recommended that NMFS initiate an emergency rule to suspend the application of the GRS. The Council voted 10 to 1 to request that NMFS promulgate an emergency rule to relieve the GRS requirement for the non-AFA trawl C/Ps. The statutory provisions for emergency rules are described in section 305(c)(1) of the MSA. On December 15, 2010, NMFS published an emergency rule exempting Amendment 80 vessels and cooperatives from GRS regulations, effective during 2010 and 2011 (75 FR 78172). The preamble to the emergency rule describes the Council's justification for emergency action, and it is not repeated here. An extension of this emergency action was published on June 2, 2011, and the action was effective until December 17, 2011 (76 FR 31881).

Second, the Council recommended the development of an analysis to review and recommend permanent changes to the GRS program. Given the concerns raised by NMFS and the public, the Council stated that the analysis should examine options that would revise the GRS or that would remove the specific regulatory requirements to meet a GRS, and allow the Amendment 80 sector to implement an internal retention monitoring program that ensures continued high groundfish retention. During the February 2011 Council meeting, NMFS, with its Office of Law Enforcement (OLE), reiterated the agency's concerns about the potential costs and complexity of enforcing the GRS across cooperatives. At final action, the

Council unanimously recommended that NMFS implement a regulatory amendment to modify the GRS program such that it meets the management objectives for groundfish retention included in the BSAI FMP and that maintains incentives for groundfish retention through a new groundfish retention reporting requirement.

Rationale for Proposed Action

This action is intended to provide a long-term solution to the problems outlined by the Council in the problem statement. The Council determined that this action is necessary because the circumstances that justified the increasing GRS have changed. The Council concluded that the regulatory constraint and associated GRS established for 2012, and each following fishing year, no longer achieve the goals that led to their establishment. This action is intended to mitigate higher than expected compliance costs of the GRS borne by the Amendment 80 sector. Furthermore, the Council determined that this action is needed to mitigate management and enforcement costs that were not foreseen when the regulation was promulgated.

The Council noted that the regulatory GRS of 85 percent may not be achievable by most vessels in the Amendment 80 sector in 2012 and each following year. The Council determined that the additional and potentially significant compliance costs associated with the 85 percent GRS are not warranted because the improvements in retention rates by the non-AFA trawl C/Ps through 2010 have met Council objectives. Furthermore, the Council concluded that the likelihood that additional vessels may be unable to meet the GRS, as calculated by NMFS, in coming years may unnecessarily increase compliance and enforcement costs, again noting that the Council's objectives for retention have been met.

Although this proposed rule would remove the GRS requirements from the regulations, Amendment 80 vessel owners have stated their intent to maintain groundfish retention rates that are consistent with Council intent, the BSAI FMP, and the MSA requirement that regulations be consistent with the 10 national standards for fishery conservation and management, including National Standard 9, which requires regulations to minimize bycatch to the extent practicable through cooperative civil contract agreements. The Council and NMFS determined that ongoing commitments of the Amendment 80 sector to maintain recent improvements in groundfish

retention rates should enhance resource management and conservation.

Proposed Action

The proposed action would remove regulations implementing the GRS at §§ 679.7 and 679.27. To meet Council intent for this action, NMFS would revise the language at § 679.27(b)(4) to remove references to the GRS program and would remove § 679.27(j), which contains the bulk of the GRS program's regulations. This action is not intended to change the use caps, sideboard limits, recordkeeping, permitting, monitoring, or catch accounting requirements established for the Amendment 80 sector. This proposed action also would leave in place the regulations at § 679.27(b)(4) that require non-AFA trawl C/Ps to meet a 15 percent utilization standard for all retained groundfish species listed in Table 2a to part 679 that are used in the calculation for percent of retained groundfish.

Also, the proposed action would add regulations requiring each Amendment 80 cooperative to provide an annual report to NMFS on groundfish retention performance. NMFS would require Amendment 80 cooperatives to report groundfish performance as part of the Amendment 80 cooperative report established in regulations at § 679.5(s)(6). Under existing regulations at § 679.5(s)(6), each Amendment 80 cooperative issued a CQ permit must annually submit a report to the Regional Administrator detailing the use of the cooperative's CQ. In addition, this action would require Amendment 80 cooperatives to calculate and report their annual aggregate groundfish retention rate using the methodology currently established in regulation at § 679.27(j)(3). The Council recommended the regulatory methodology over the methodology used in the analysis for the GRS program because blend data are no longer available and because use of the regulatory methodology would provide the Council and the public with a consistent and comparable data set of groundfish retention rates since the implementation of the GRS program in 2008. This additional reporting requirement is intended to provide the Council, NMFS, and the public with information as to whether the groundfish retention achievements of the GRS program are being maintained. As part of the annual reporting requirement proposed in this action, estimates of total catch for the non-AFA trawl C/Ps participating in Amendment 80 cooperatives would need to include all catch (as defined in § 600.10) that passes over the flow scale, including

deliveries from other vessels, commonly referred to as “bags over the side.” NMFS would continue to oversee the submission of Amendment 80 cooperative reports and provide these reports to the Council.

Retaining Monitoring and Enforcement Provisions

To meet the Council’s intent that monitoring and enforcement regulations not change under this action, NMFS proposes to modify regulations at § 679.93(c)(1) to incorporate certain provisions in regulations that would otherwise be removed under this proposed action. OLE has expressed concerns that removing certain specific catch monitoring provisions could result in fishing behavior that was not intended by the Council when it took final action to remove the GRS. Currently, regulations implementing the GRS prohibit non-AFA trawl C/Ps from receiving deliveries of sorted catch. Amendment 80 vessels are authorized to receive deliveries of unsorted codends from vessels for processing. However, deliveries received from a catcher vessel’s refrigerated salt water tank are prohibited because such deliveries do not meet the definition of unsorted codend. “Unsorted Codend” is defined by regulations at § 679.2 as a codend of groundfish that is not brought on board a catcher vessel and that is delivered to a mothership, shoreside processor, or stationary floating processor without the potential for sorting. No other instance of catcher vessel harvest is considered an “unsorted codend.” All other catch that does not meet this definition is considered “presorted” whether or not sorting occurs.

Although the proposed rule would remove certain regulations at §§ 679.7(m)(3) and 679.27(j)(5)(iii) that require non-AFA trawl C/Ps to weigh all catch and prohibit any sorting of catch prior to weighing, this removal is necessary because these sections specifically reference the current GRS program that will be replaced by this action. However, the requirements put in place by these two provisions are essential to monitoring and enforcement. Sections 679.7(m)(3) and 679.27(j)(5)(iii) require weighing of catch and prohibit presorting, respectively. Removing these provisions would not be consistent with the Council’s recommendation that this action not change existing monitoring and enforcement regulations. Therefore, this action would revise § 679.93(c)(1) to reincorporate these two requirements into the regulations, ensuring that the status quo monitoring and recording of catch by the Amendment 80 sector is

retained and that pre-sorting will remain prohibited.

Recordkeeping and Reporting Requirements

The Council recommended that the Amendment 80 fleet be required to annually report groundfish retention using observer, scale, and product data that can be verified by NMFS. As noted earlier in this preamble, Amendment 80 cooperatives would be required to report annual groundfish retention rates to the Council as part of the extant Amendment 80 annual cooperative report, instead of requiring an additional report from these participants. The confidential catch and production data needed to calculate annual groundfish retention are generally available to both NMFS and the Amendment 80 entity responsible for meeting current observer and production reporting requirements established for the Amendment 80 fleet. The authorized representative of an Amendment 80 cooperative could request that NMFS verify these data (see **ADDRESSES**). These data could then be used by the Amendment 80 cooperative to calculate its annual groundfish retention rate. As recommended by the Council, this proposed rule would require each Amendment 80 cooperative to have a third party audit the cooperative’s groundfish retention calculations and include these findings as part of the Amendment 80 annual cooperative report. Any third party audit would require the Amendment 80 cooperative to coordinate with NMFS and the appropriate Amendment 80 entities for a release of confidential observer data and production data. NMFS notes that it is highly unlikely that the third party audit will differ from NMFS’ or the cooperative’s estimates of annual groundfish retention rates because the data used in the calculation originate from the same source.

The Council also recommended that it receive an annual report on groundfish retention performance by Amendment 80 vessels participating in the Amendment 80 limited access fishery. Rather than propose regulations that would require the owners of vessels participating in the Amendment 80 limited access fishery to report annual groundfish retention to the Council, NMFS determined that it would prepare information on groundfish retention performance for Amendment 80 vessels participating in the Amendment 80 limited access fishery. NMFS currently produces this data as part of its inseason management report to the Council, and would continue to report these retention

rates to the Council during the October Council meeting. NMFS concluded that requiring individual vessels not participating in an Amendment 80 cooperative to participate in the new reporting requirement would be duplicative and could result in undue burden on these entities. Because NMFS will provide this information to the Council, no proposed regulation is needed to implement this aspect of the Council’s recommendation.

Summary of Regulatory Changes

This action proposes the following changes to the existing regulatory text at 50 CFR part 679:

- Remove the definition of “Groundfish Retention Standard (GRS)” from § 679.2;
- Add requirements for cooperative reporting and third party audits to § 679.5(s)(6)(iii)(D) and (E);
- Remove the prohibitions specific to the GRS at § 679.7(m);
- Remove the requirement that Amendment 80 cooperatives meet a minimum GRS at § 679.7(o)(4)(iv);
- Revise improved retention and improved utilization regulations at § 679.27(b)(4);
- Remove regulations implementing the GRS at § 679.27(j); and
- Revise regulations at § 679.93(c)(1).

Classification

Pursuant to sections 304(b)(1)(A) and 305(d) of the MSA, the NMFS Assistant Administrator has determined that this proposed rule is consistent with the FMP, other provisions of the MSA, and other applicable law, subject to further consideration after public comment.

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

An IRFA was prepared, as required by section 603 of the Regulatory Flexibility Act (RFA). A copy of this analysis is available from NMFS (see **ADDRESSES**).

The IRFA for this proposed action describes the reasons why this action is being proposed; describes the objectives and legal basis for the proposed rule; describes and estimates the number of small entities to which the proposed rule would apply; describes any projected reporting, recordkeeping, or other compliance requirements of the proposed rule; identifies any overlapping, duplicative, or conflicting Federal rules; and describes any significant alternatives to the proposed rule that accomplish the stated objectives of the MSA and any other applicable statutes, and that would minimize any significant adverse economic impact of the proposed rule.

on small entities. A summary of that analysis follows.

Rationale, Objectives, and Legal Basis of the Proposed Rule

The preamble to this proposed rule describes the reasons why this action is being proposed, describes the objectives and legal basis for the proposed rule, and discusses both small and other regulated entities to adequately characterize the fishery participants. The MSA is the legal basis for the proposed rule. This proposed rule is needed to mitigate management and enforcement costs that were not foreseen when the regulation was promulgated. In addition, this action is needed to mitigate higher than expected compliance costs of the groundfish retention standard borne by the non-AFA trawl C/Ps. The objective for this proposal is to remove the groundfish retention standard for the Amendment 80 fleet and require the sector to report their groundfish retention performance to the Council annually. This objective is encompassed by authorities contained in the MSA. Under the MSA, the Unities States has exclusive management authority over all living marine resources found within the EEZ.

The management of marine fishery resources is vested in the Secretary of Commerce (Secretary), with advice from the Regional Fishery Management Councils. The groundfish fisheries in the EEZ off Alaska are managed under the Fishery Management Plan for Groundfish of the BSAI and the Fishery Management Plan for Groundfish of the Gulf of Alaska. Statutory authority for measures designed to reduce bycatch is specifically addressed in the MSA at section 301(a)(9). That section establishes National Standard 9—Bycatch, which directs the Councils to minimize bycatch to the extent practicable or minimize mortality when bycatch cannot be avoided.

The groundfish fisheries of the BSAI and GOA are managed under the MSA. In the Alaska region, the Council is responsible for preparing management plans for marine fishery resources requiring conservation and management. NMFS, under the U.S. Department of Commerce, is charged with carrying out the Federal mandates with regard to marine fish, once they are approved by the Secretary. NMFS' Alaska Regional Office and Alaska Fisheries Science Center review the management actions recommended by the Council.

Number of Small Entities To Which the Proposed Rule Would Apply

These impacts are analyzed in the RIR prepared for this action (see **ADDRESSES**). The entities directly regulated by this action are those catcher processors that are members of the Amendment 80 sector that target flatfish, Atka mackerel, Pacific cod, and Pacific ocean perch in the EEZ of the BSAI.

Earnings from all Alaska fisheries for 2009 were matched with the vessels that are members of the Amendment 80 sector and participated in the BSAI groundfish fisheries for that year. There are a total of 28 Amendment 80 qualified C/Ps in the sector. Based on the known affiliations and joint ownership of the Amendment 80 vessels, all vessels in the sector would be categorized as a large entity for the purpose of the RFA, because they all have annual revenues that exceed \$4 million. Due to their participation in a harvest cooperative or through known ownership of multiple vessels, co-ownerships and "shares" ownership arrangements among vessels, and other economic and operational affiliations, it is the aggregate annual gross receipts of all affiliated operations worldwide that are relevant under the Small Business Administration rules. Because of the lack of complete data on ownership and affiliation, it was determined that preparation of an IRFA, in lieu of 'certification' of this action under RFA, was appropriate, thereby allowing for public comment on this aspect of the RFA analysis.

Description of Significant Alternatives to the Proposed Action

An IRFA requires a description of any significant alternatives to the preferred alternative that would minimize any significant adverse economic impact of the proposed rule on small entities. The suite of potential actions includes two alternatives.

The Council's preferred alternative, Alternative 2, has been selected as the action alternative. It would remove the GRS from the GRS program for the Amendment 80 sector. Revocation of the GRS will result in significant operational benefits and cost savings to all directly regulated entities. The Amendment 80 sector would be permitted to internally monitor the groundfish retention rates to meet Council retention goals described in the analysis prepared for Amendment 79 and the GRS program, but avoid mandatory compliance standards and their associated costs. The action would also include a requirement for the

sector, as a whole, to report to the Council its annual groundfish retention performance. It would also further the program's original purpose of reducing bycatch, encouraging the use of all fish resources, and minimizing waste.

The Council also considered an alternative to revise the GRS to require groundfish retention at rates similar to the estimates presented in the analysis prepared for the GRS program. The Council determined that, while revising the GRS could reduce economic hardship imposed on the Amendment 80 sector by more closely correlating groundfish retention rates with historical retention rates, it would not address the monitoring, enforcement, and prosecution issues that arise from the requirements for annual determination of vessel compliance with the GRS program. Because this alternative would not resolve the problems for the program, the Council decided not to forward this alternative in the analysis for the proposed action.

Based upon the best available scientific data and information, and consideration of the objectives of this action, there are no alternatives to the proposed action that have the potential to accomplish the stated objectives of the MSA and any other applicable statutes and that have the potential to minimize any significant adverse economic impact of the proposed rule on directly regulated small entities.

Projected Reporting, Recordkeeping, and Other Compliance Requirements

This action is projected to have de minimis impact on the recordkeeping and reporting requirements of small entities participating in the BSAI groundfish fisheries. Some recordkeeping and reporting requirements may be needed by individual firms. Those firms that already record and report catch data will likely not be significantly impacted by this proposed action. It is not possible to determine which firms will be most impacted by the requirements, since the information each firm collects is based on what they need to operate their business and the current reporting requirements. The regulations proposed in this amendment are not expected to impact the recordkeeping and reporting requirements for any other entities in the fishery.

Under this action, NMFS would not require the individual owners and operators of non-AFA trawl C/P vessels participating in the limited access fishery to annually report groundfish retention performance. Instead, NMFS would prepare retention estimates for each vessel in the limited access fishery

and present these data to the Council annually as part of the inseason management report.

Duplicate, Overlapping, or Conflicting Federal Rules

No Federal rules that might duplicate, overlap, or conflict with this proposed action have been identified.

Collection-of-Information Requirements

This proposed rule contains a collection-of-information requirement subject to review and approval by OMB under the Paperwork Reduction Act (PRA). This requirement has been submitted to OMB for approval under OMB Control No. 0648-0565. Public reporting burden for the Amendment 80 cooperative report is estimated to average 25 hours per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information.

Public comment is sought regarding: Whether this proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; the accuracy of the burden estimate; ways to enhance the quality, utility, and

clarity of the information to be collected; and ways to minimize the burden of the collection of information, including through the use of automated collection techniques or other forms of information technology. Send comments on these or any other aspects of the collection of information to NMFS at the ADDRESSES above, and email to OIRA_Submission@omb.eop.gov, or fax to (202) 395-7285.

Notwithstanding any other provision of the law, no person is required to respond to, nor shall any person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB Control Number.

List of Subjects in 50 CFR Part 679

Alaska, Fisheries, Reporting and recordkeeping requirements.

Dated: October 5, 2012.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, performing the functions and duties of the Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 679 is proposed to be amended as follows:

PART 679—FISHERIES OF THE EXCLUSIVE ECONOMIC ZONE OFF ALASKA

1. The authority citation for 50 CFR part 679 continues to read as follows:

Authority: 16 U.S.C. 773 et seq.; 1801 et seq.; 3631 et seq.; Pub. L. 108-447.

§ 679.2 [Amended]

2. In § 679.2, remove the definition of “Groundfish Retention Standard (GRS).”

3. In § 679.5, add paragraph (s)(6)(iii)(D) and paragraph (s)(6)(iii)(E) to read as follows:

§ 679.5 Recordkeeping and reporting (R&R).

* * * * *

(s) * * *

(6) * * *

(iii) * * *

(D) For each Amendment 80 cooperative, the percent of groundfish retained by that Amendment 80 cooperative of the aggregate groundfish retained by all Amendment 80 vessels assigned to that Amendment 80 cooperative using the following equations:

(b) * * *

(4) For catcher/processors not listed in § 679.4(l)(2)(i) using trawl gear in the BSAI, all species listed in Table 2a to this part, except for groundfish in prohibited species status.

* * * * *

6. In § 679.93, revise paragraph (c)(1) to read as follows:

§ 679.93 Amendment 80 Program recordkeeping, permits, monitoring, and catch accounting.

* * * * *

(c) * * *

(1) Catch weighing. All catch are weighed on a NMFS-approved scale in compliance with the scale requirements at § 679.28(b). Each haul must be weighed separately, all catch must be made available for sampling by a NMFS-certified observer, and no sorting of catch may take place prior to weighing.

* * * * *

[FR Doc. 2012-25012 Filed 10-12-12; 8:45 am]

BILLING CODE 3510-22-P

G_Froundweight = sum from n=1 to N of (P_Wspecies_n / P_RRspecies_n)

Substituting the value for G_Froundweight into the following equation:

GFR% = (G_Froundweight / TotalGF) * 100

Where:

G_Froundweight is the total annual round weight equivalent of all retained product weights retained by all Amendment 80 vessels assigned to that Amendment 80 cooperative for each IR/IU groundfish species.

P_Wspecies_n is the total annual product weight for each groundfish species listed in Table 2a to this part by product type as reported in the vessel's production report for all Amendment 80 vessels assigned to that Amendment 80 cooperative required at § 679.5(e).

P_RRspecies_n is the standard product recovery rate for each groundfish species and product combination listed in Table 3 to this part.

GFR% is the groundfish retention percentage for an Amendment 80 cooperative calculated as G_Froundweight divided by the total weight of groundfish catch.

TotalGF is the total groundfish round catch weight for all Amendment 80 vessels

assigned to that Amendment 80 cooperative as measured by the flow scale measurement, less any non-groundfish, PSC species or groundfish species on prohibited species status under § 679.20.

(E) For each Amendment 80 cooperative, a third party must audit the Amendment 80 cooperative's annual groundfish retention calculations and the Amendment 80 cooperative must include the finding of the third party audit in its Amendment 80 annual cooperative report.

* * * * *

§ 679.7 [Amended]

4. In § 679.7, remove and reserve paragraphs (m) and (o)(4)(iv).

5. In § 679.27,

a. Remove and reserve paragraph (j); and

b. Revise paragraph (b)(4) to read as follows:

§ 679.27 Improved Retention/Improved Utilization Program.

DEPARTMENT OF AGRICULTURE

Performance Review Board Appointments

AGENCY: Office of Human Resource Management, Departmental Management.

ACTION: Notice of Appointment.

SUMMARY: This notice announces the appointment of the members of the Senior Executive Service (SES) and Senior Level (SL) and Scientific or Professional (ST) Performance Review Boards (PRBs) for the Department of Agriculture, as required by 5 U.S.C. 4314(c)(4). The Department of Agriculture has a total of seven PRBs: The Secretary's PRB; Career Agency Head's PRB; Departmental Management and Staff Offices PRB; Natural Resources and Environment PRB; Farm and Foreign Agricultural Services, Rural Development, Food, Nutrition and Consumer Services PRB; Marketing and Regulatory Programs, Food Safety PRB; and Research, Education, and Economics PRB. The PRBs are comprised of career and noncareer executives and chairpersons, who make recommendations on the performance of executives to the Secretary, including performance ratings and bonuses for SES, SL, and ST employees. The boards meet annually to review and evaluate performance appraisal documents and provide written recommendations to the Secretary for final approval of performance ratings and base salary increases.

SUPPLEMENTARY INFORMATION: In accordance with 5 U.S.C. 4314(c)(4), the following executives may be appointed by mission areas to the USDA PRBs:

Office of the Secretary

Baening, Brian; Bittleman, Sarah; Bonnie, Robert Farrell; Gonzales, Oscar; Gutter, Karis T.; Harden, Krysta.; Hipp, Janie; Holtzman, Max T.; Jett, Carole E.; Jones, Carmen; MacMillan, Anne;

Mande, Jerold; Palmieri, Suzanne; Willis, Brandon L.; Wright, Ann.

Departmental Management and Staff Offices

Parham, Gregory L.; Armstrong, Kent W.; Bange, Gerald A.; Baumes, Harry S.; Bender, Stuart; Bice, Donald; Black, David O.; Brady, Terence M.; Brewer, John; Bumbary-Langston, Inga P.; Chasteen, G. Taylor; Christian, Lisa A.; Clanton, Michael W.; Coffee, Richard; Farington, Kim S.; Foster, Andrea L.; Glauber, Joseph; Grahn, David P.; Hawk, Gilbert; Heard, Robin; Hobbs, Alma; Hohenstein, William G.; Holladay, Jon; Jackson, Yvonne T.; Jenson, William; Johansson, Robert C.; Jones, Diem-Linh; Kelly, Janet Karlease; Leland, Arlean; Leonard, Joe; Linden, Ralph A.; Lowe, Christopher S.; Lowe, Stephen O.; Maddux, Sheryl; McClam, Charles; Messmore, Karen; Milton, William; Moulton, Robert Jeffrey; Paul, Matt; Parker, Carolyn C.; Pfaeffle, Frederick; Repass, Todd; Romero, Ramona; Ruiz, Carl-Martin; Shearer, David P.; Speed, Randy L.; Turner, Calvin; Vos, John P.; Wallace, Charles; Walsh, Thomas M.; Watts, Michael; White, John S.; White, Sharmian L.; Wilburn, Curtis; Wilusz, Lisa; Young, Benjamin; Young, Mike; Zehren, Christopher J.

Marketing and Regulatory Programs

Avalos, Ed; Blue, Rebecca A.; Walsh, Joan L.

Agricultural Marketing Service

Bailey, Douglas; Barnes, Rex; Coale, Dana; Earnest, Darryl; Epstein, Robert; Guo, Ruihong; McCullough, Catherine; McEvoy, Miles; Morris, Craig; Neal, Arthur; Shipman, David.

Animal and Plant Health Inspection Service

Bech, Rebecca; Berger, Philip; Brown, Charles; Clark, Larry; Clay, William; Clifford, John; Davidson, Mark L.; Diaz-Soltero, Hilda; Dick, Jere; Diez, Jose; El Lissy, Osama A.; Firko, Michael J.; Gipson, Chester; Granger, Larry; Green, Jeffrey; Gregoire, Michael; Harabin, Victor; Hill, Jr., Richard; Hoffman, Neil E.; Holland, Marilyn; Huttenlocker, Robert; Jones, Bethany; Kaplan, David; Lautner, Elizabeth; Levings, Randall L.; McCammon, Sally L.; McCluskey, Brian; Mendoza, Jr., Martin; Morgan, Andrea; Munno, Joanne; Myers, Thomas; Purcell, Roberta; Shea, A. Kevin; Shere, Jack; Simmons, Beverly; Smith, Cynthia;

Thiermann, Alejandro B.; Watson, Michael T.; Wiggins, Marsha A.; Zakarka, Christine.

Grain Inspection, Packers and Stockyards Administration

Alonzo, Mary C.; Christian, Alan; Jones, Randall; Mitchell, Lawrence W.

Food Safety

Hagen, Elisabeth; Ronholm, Brian; Almanza, Alfred; Basu, Parthapratim; Blake, Carol L.; Chen, Vivian; Dearfield, Kerry L.; Derfler, Philip; Edelstein, Rachel; Engeljohn, Daniel; Esteban, Jose Emilio; Garcia, Joseph L.; Gilmore, Keith Allyn; Kelley, Lynda Collins; Jones, Ronald; Mian, Haroon S.; Myers, Jacqueline; Nintemann, Terri; Roth, Jane; Sidrak, Hany Z.; Smith, William; Stevens, Janet; Stuck, Karen; Tawadrous, Armia.

Farm and Foreign Agricultural Services

Scuse, Michael; Vetter, Darci.

Foreign Agricultural Service

Foster, Christian; Quick, Bryce; Nuzum, Janet; Riemenschneider, Robert; Sheikh, Patricia.

Farm Service Agency

Beyerhelm, Christopher; Garcia, Juan M.; Gwinn, James; Harwood, Joy; Monahan, James; Nelson, Bruce; Stephenson, Robert; Thompson, Candace; Trimm, Alan; Ward, Bruce Edward; Ware, Heidi Grace.

Risk Management Agency

Alston, Michael; Hand, Michael; Leach, Barbara; Murphy, William; Nelson, Leiann H.; Witt, Timothy; Worth, Thomas W.

Food, Nutrition and Consumer Services

Anand, Rajen; Arena-DeRosa, James; Arnette, Donald; Bailey, Jr., Robin David; Barnes, Darlene; Burr, David Glenn; Carlson, Steven; Concannon, Kevin; Dombroski, Patricia; Holden, Ollice; Jackson, Yvette S.; Kane, Deborah J.; Ludwig, William; Ng, Allen; O'Connor, Thomas; Pino, Lisa; Rowe, Audrey; Shahin, Jessica; Thornton, Jane; Tribiano, Jeffrey.

Rural Development

Tonsager Dallas; Cook, Cheryl; O'Brien, Doug.

Rural Business Service

Canales, Judith Ann; Hadjy, Pandor; Parker, Chadwick O.; Wiley, Curtis A.

Rural Housing Service

Allen, Joyce; Banegas, Ronald; Davis, Richard A.; Glendenning, Roger; Hannah, Thomas; Hooper, Bryan; Ross, Robert; Trevino, Tammye.

Rural Utilities Service

Ackerman, Kenneth; Adelstein, Jonathan S.; Bojes, Gary; Elgohary, Nivin; Newby, James; Ponti-Lazaruk, Jacqueline; Villano, David; Zufolo, Jessica.

Natural Resources and Environment

Sherman, Harris; Blazer, Arthur; Mills, Ann C.

Forest Service

Agpaoa, Elizabeth; Atkinson, Kathleen; Bedwell, James; Bisson, Peter A.; Blount, Emilee; Bryant, Arthur; Bytnerowicz, Andrzej; Christiansen, Victoria; Cleaves, David A.; Cohen, Warren Bruce; Coleman, Angela V.; Connaughton, Kent P.; Cordell, Harold K.; Cullen, Daniel; DeCoster, Timothy P.; Dixon, Antione; Doudrick, Robert; Eav, Bov B.; Ferguson, Tony; Ferrell, David L.; Forsgren, Harvey L.; Foster, George S.; Grant, Gordon E.; Guldin, Richard; Hammel, Kenneth E.; Harbour, Thomas C.; Hubbard, James E.; Iverson, Louis R.; Jeffries, Thomas W.; Jiron, Daniel J.; Joyner, Calvin N.; Krueger, Faye L.; Lago, Jacquelyn L.; Lemly, A. Dennis; Lugo, Ariel E.; Mangold, Robert D.; McGuire, Jennifer; Meinzer, Frederick C.; Mezinis, Valdis E.; Moore, Randy; Muse, Debra A.; Myers, Jr., Charles L.; Nash, Douglas R.; Newman, Corbin L.; Pena, James M.; Pendleton, Beth G.; Peterson, David L.; Phipps, John E.; Rains, Michael T.; Raphael, Martin G.; Reaves, Jimmy L.; Richmond, Charles S.; Ries, Paul F.; Rodriguez-Franco, Carlos; Ross, Robert J.; Ryan, Michael G.; Sears, George A.; Shortle, Walter C.; Smith, Gregory C.; Spies, Thomas A.; Stouder, Deanna J.; Strong, Thelma J.; Thompson, Robin L.; Thompson III, Frank R.; Tidwell, Thomas; Tooke, Tony; Wagner, Mary A.; Weldon, Leslie; West, Cynthia D.; Zimmermann, Anne J.

Natural Resources Conservation Service

Boozer, Astor F.; Christensen, Thomas; Erickson, Terrell; Gelburd, Diane; Golden, Michael; Herbert, Noller; Honeycutt, C. Wayne; Hubbs, Michael; Jordan, Leonard; Kramer, Anthony; Kunze, Stephen; Laur, Michele; Perry, Janet; Reed, Lesia; Salinas, Salvador; Speight, Eloris; Washington, Gary; Weller, Jason; White, Dave.

Research, Education and Economics

Bartuska, Ann; Woteki, Catherine.

Agricultural Research Service

Allen, Lindsay; Arnold, Jeffrey G.; Baldus, Lisa; Brennan, Deborah; Brenner, Richard; Bretting, Peter K.; Chandler, Laurence; Cleveland, Thomas; Collins, Wanda; Cregan, Perry B.; Erhan, Sevin; Fayer, Ronald; Gay, Cyril G.; Gibson, Paul; Gonsalves, Dennis; Gottwald, Timothy R.; Hackett, Kevin J.; Hammond, Andrew; Hatfield, Jerry L.; Hefferan, Colien; Huber, Steven C.; Hunt, Patrick G.; Jackson, Thomas J.; Jacobs-Young, Chavonda; Jenkins, Johnie Norton; Kappes, Steven; King, Jr., Edgar; Klesius, Phillip Harry; Knipling, Edward; Kochian, Leon V.; Kretsch, Mary; Kunickis, Sheryl; Lillehoj, Hyun S.; Lindsay, James A.; Liu, Simon; Loper, Joyce E.; Matteri, Robert; Mattoo, Autar K.; McGuire, Michael; McMurtry, John; Narang, Sudhir; Ort, Donald R.; Pollak, Emil; Rango, Albert; Rexroad, Jr., Caird; Riley, Ronald T.; Sebesta, Paul; Shafer, Steven; Simmons, Mary W.; Smith, Timothy P.; Spence, Joseph; Suarez, David Lee; Swietlik, Dariusz; Tu, Shu-I; Upchurch, Dan; Vance, Carroll P.; Vogel, Kenneth P.; Willett, Julious L.; Yates, Allison; Zhang, Howard; Zuelke, Kurt.

Economic Research Service

National Institute of Food and Agriculture

Boteler, Franklin; Brandon, Andrea; Broussard, Meryl; Desbois, Michel; Holland, Robert E.; Otto, Ralph; Qureshi, Muquarrab A.; Ramaswamy, Sonny; Sheely, Deborah.

DATES: Effective November 5, 2012 through November 23, 2012.

FOR FURTHER INFORMATION CONTACT: Karen Messmore, Director, Office of Human Resources Management, telephone: (202) 690-2994, email: karen.messmore@dm.usda.gov or Patricia Moore, Director, Executive Resources Management Division, telephone: (202) 720-8629, email: patty.moore@dm.usda.gov.

Dated: October 9, 2012.

Thomas J. Vilsack,
Secretary.

[FR Doc. 2012-25246 Filed 10-12-12; 8:45 am]

BILLING CODE 3410-96-P

DEPARTMENT OF COMMERCE**Submission for OMB Review; Comment Request**

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Oceanic and Atmospheric Administration (NOAA).

Title: Drivers' Awareness of and Response to Significant Weather Events and the Correlation of Weather to Road Impacts.

OMB Control Number: 0648-0624.

Form Number(s): NA.

Type of Request: Regular submission (reinstatement without change of a previously approved information collection).

Number of Respondents: 1,200.

Average Hours Per Response: 6 minutes.

Burden Hours: 120.

Needs and Uses: This request is for a reinstatement without change of a previously approved information collection. Due to an unusually dry winter, this survey could not be conducted during the OMB approval period.

This project is a joint effort of the University of Utah, NOAA's National Weather Service (NWS), the Utah Department of Transportation (UDOT), and NorthWest WeatherNet (NWN) to investigate and understand the relationship between meteorological phenomena and road conditions, as well as public understanding and response to available forecast information. The events which impact the Salt Lake City metro area during the winter of 2012-2013 will be examined. Through the administration of a targeted survey, important details will be gathered regarding: (a) The information that drivers possessed prior to and during a storm, including knowledge of observed and forecast weather conditions; (b) sources of weather and road information; (c) any modification of travel and/or commute plans, based on event information; (d) anticipation and perception of storm impacts and severity; and (e) perception and behavioral response to messages conveyed by the NWS and UDOT, along with their satisfaction of information provided. Analyses of the information gathered will focus on driver knowledge, perceptions, and decision making. Ultimately, the results of this survey will provide insight on how the Weather Enterprise may more

effectively communicate hazard information to the public in a manner which leads to improved response (*i.e.*, change travel times, modes, *etc.*). With a sufficient level of behavior change, it should be possible to improve safety and reduce the costs associated with weather related congestion and associated delays. Additionally, the project will shed light upon the interrelationship between meteorological phenomena, road conditions, and their combined impact on travel.

Affected Public: Individuals or households.

Frequency: One time.

Respondent's Obligation: Voluntary.
OMB Desk Officer:

OIRA_Submission@omb.eop.gov.

Copies of the above information collection proposal can be obtained by calling or writing Jennifer Jessup, Departmental Paperwork Clearance Officer, (202) 482-0336, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at *JJessup@doc.gov*).

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to

OIRA_Submission@omb.eop.gov.

Dated: October 9, 2012.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510-KE-P

DEPARTMENT OF COMMERCE

International Trade Administration

[A-583-849]

Steel Wire Garment Hangers From Taiwan: Final Determination of Sales at Less Than Fair Value

AGENCY: Import Administration, International Trade Administration, Department of Commerce.

SUMMARY: The Department of Commerce (the "Department") has determined that imports of steel wire garment hangers ("hangers") from Taiwan are being, or are likely to be, sold in the United States at less than fair value ("LTFV"), as provided in section 735 of the Tariff Act of 1930, as amended (the "Act"). The estimated margins of sales at LTFV are listed in the "Continuation of Suspension of Liquidation" section of this notice.

DATES: *Effective Date:* October 15, 2012

FOR FURTHER INFORMATION CONTACT: Paul Walker, AD/CVD Operations, Office 9, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone-202.482.0413.

SUPPLEMENTARY INFORMATION:

Background

On August 2, 2012, the Department published in the **Federal Register** the *Preliminary Determination* in the antidumping duty investigation of hangers from Taiwan.¹ No interested party provided case briefs or rebuttal briefs.

Period of Investigation

The period of investigation ("POI") is October 1, 2010, through September 30, 2011.

Scope of Investigation

The merchandise subject to this investigation is steel wire garment hangers, fabricated from carbon steel wire, whether or not galvanized or painted, whether or not coated with latex or epoxy or similar gripping materials, and whether or not fashioned with paper covers or capes (with or without printing) or nonslip features such as saddles or tubes. These products may also be referred to by a commercial designation, such as shirt, suit, strut, caped, or latex (industrial) hangers.

Specifically excluded from the scope of the investigation are (a) wooden, plastic, and other garment hangers that are not made of steel wire; (b) steel wire garment hangers with swivel hooks; (c) steel wire garment hangers with clips permanently affixed; and (d) chrome plated steel wire garment hangers with a diameter of 3.4 mm or greater.

The products subject to the investigation are currently classified under U.S. Harmonized Tariff Schedule ("HTSUS") subheadings 7326.20.0020 and 7323.99.9080. Although the HTSUS subheadings are provided for convenience and customs purposes, the written description of the merchandise is dispositive.

Final Determination of Sales at LTFV

As noted in the *Preliminary Determination*, because the antidumping duty questionnaires sent to the selected respondent, Golden Canyon Ltd. ("Golden Canyon"), were returned as undeliverable, in accordance with our practice, we classified Golden Canyon as an unlocated company and

¹ See *Steel Wire Garment Hangers from Taiwan: Preliminary Determination of Sales at Less Than Fair Value*, 77 FR 46055 (August 2, 2012) ("*Preliminary Determination*").

assigned it the all others rate.² For the other selected respondent, Taiwan Hanger Manufacturing Co., Ltd. ("Taiwan Hanger"), in the *Preliminary Determination* we applied facts otherwise available with an adverse inference, because Taiwan Hanger twice received the questionnaire, and then returned the questionnaire to the Department at a later date.³ We note that our determination here with respect to Golden Canyon and Taiwan Hanger is identical to our determination in the *Preliminary Determination*.⁴

Continuation of Suspension of Liquidation

Pursuant to section 735(c)(1)(B) of the Act, we will instruct U.S. Customs and Border Protection ("CBP") to continue to suspend liquidation of all entries of hangers from Taiwan which were entered, or withdrawn from warehouse, for consumption on or after August 2, 2012, the date of publication of the *Preliminary Determination*. We will instruct CBP to require a cash deposit or the posting of a bond equal to the weighted-average margins, as indicated below, as follows: (1) The rates for Golden Canyon and Taiwan Hanger will be the rates we have determined in this final determination; (2) if the exporter is not a firm identified in this investigation but the producer is, the rate will be the rate established for the producer of the subject merchandise; (3) the rate for all other producers or exporters will be 69.98 percent, as discussed in the "All Others Rate" section, below. These suspension-of-liquidation instructions will remain in effect until further notice.

Manufacturer/Exporter	Margin (percent)
Golden Canyon Ltd.	69.98
Taiwan Hanger Manufacturing Co., Ltd.	125.43
All Others Rate	69.98

All Others Rate

Section 735(c)(5)(A) of the Act provides that the estimated all others rate shall be an amount equal to the weighted average of the estimated

² See, e.g., *Chrome-Plated Lug Nuts from Taiwan: Preliminary Results of Antidumping Duty Administrative Review*, 64 FR 55234, 55234 (October 12, 1999), unchanged in *Chrome-Plated Lug Nuts from Taiwan: Final Results of Antidumping Duty Administrative Review*, 65 FR 7491 (February 15, 2000).

³ See Memorandum to the File, "Steel Wire Hangers from Taiwan: Questionnaire Delivery Attempts," dated July 26, 2012, which details our attempts to deliver the questionnaires to Golden Canyon and Taiwan Hanger.

⁴ See *Preliminary Determination* at 46056.

weighted-average dumping margins established for exporters and producers individually investigated excluding any zero or *de minimis* margins and any margins determined entirely under section 776 of the Act. No respondent has participated in this investigation. Therefore, as noted in the *Preliminary Determination*, because the only dumping margins for this final determination are found in the petition, the all others rate is a simple average of these values, which is 69.98 percent.⁵

Disclosure

We intend to disclose to parties in this proceeding the calculations performed within five days of the date of publication of this notice in accordance with section 351.224(b) of the Department's regulations.

International Trade Commission Notification

In accordance with section 735(d) of the Act, we have notified the International Trade Commission ("ITC") of our final determination. As our final determination is affirmative and in accordance with section 735(b)(2) of the Act, the ITC will determine, within 45 days, whether the domestic industry in the United States is materially injured, or threatened with material injury, by reason of imports or sales (or the likelihood of sales) for importation of the subject merchandise. If the ITC determines that such injury does exist, the Department will issue an antidumping duty order directing CBP to assess antidumping duties on all imports of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the effective date of the suspension of liquidation.

Notification Regarding Administrative Protective Order

This notice also serves as a final reminder to parties subject to administrative protective order ("APO") of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with section 351.305 of the Department's regulations. Timely notification of the destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

⁵ See Initiation Checklist, dated January 18, 2012, at Attachment V; see, e.g., *Certain Steel Nails from the United Arab Emirates: Amended Final Determination of Sales at Less Than Fair Value and Antidumping Duty Order*, 77 FR 27421 (May 10, 2012) (where the Department determined the all others rate using a simple average).

This determination is issued and published pursuant to sections 735(d) and 777(i)(1) of the Act.

Dated: October 9, 2012.

Paul Piquado,

Assistant Secretary for Import Administration.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Modification Northeast Multispecies Amendment 16

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before December 14, 2012.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at JJessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to Allison Murphy, (978) 281-9122 or Allison.murphy@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for revision and extension of a current information collection. Under the Magnuson-Stevens Fishery Conservation and Management Act, the Secretary of Commerce has the responsibility for the conservation and management of marine fishery resources. We, National Oceanic and Atmospheric Administration's (NOAA) National Marine Fisheries Service (NMFS), and the Regional Fishery Management Councils are delegated the majority of this responsibility. The New England Fishery Management Council (Council) develops management plans for fishery resources in New England.

In 2010, we implemented a new suite of regulations for the Northeast (NE) multispecies fishery through Amendment 16 to the Multispecies Fishery Management Plan (Amendment 16). This action updated status determination criteria for all regulated NE multispecies or ocean pout stocks; adopted rebuilding programs for NE multispecies stocks newly classified as being overfished and subject to overfishing; revised management measures, including significant revisions to the sector management measures, necessary to end overfishing, rebuild overfished regulated NE multispecies and ocean pout stocks, and mitigate the adverse economic impacts of increased effort controls. It also implemented new requirements under Amendment 16 for establishing acceptable biological catch (ABC), annual catch limits (ACLs), and accountability measures (AMs) for each stock managed under the FMP, pursuant to the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

Revisions:

Not all measures that were included in Amendment 16 were ultimately approved, including the Gulf of Maine Sink Gillnet Pilot Program, which would have necessitated a Letter of Authorization (LOA) had it been approved. Therefore, we propose to remove this requirement from the information collection. In addition, Framework 47 to the Multispecies FMP removed Restricted Gear Requirements from the regulations. Therefore the requirement to declare into these areas via vessel monitoring system (VMS), or to receive an LOA are also proposed to be removed from this information collection.

In an attempt to consolidate reporting requirements that are mandated by the NE multispecies regulation, we propose moving some requirements out of OMB Control No. 0648-0202, Northeast Region Permit Family of Forms, and into this collection, including: The Days-at-Sea (DAS) Transfer Program, Expedited Submission of Proposed Special Access Programs (SAPs), and North Atlantic Fisheries Organization (NAFO) Reporting Requirements.

II. Method of Collection

Respondents must submit either paper forms via postal service, or electronic forms submitted via the internet or vessels' vessel monitoring system (VMS).

III. Data

OMB Control Number: 0648-0605.
Form Number: None.

Type of Review: Regular submission (revision and extension of a current information collection).

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 1,482.

Estimated Time per Response: Sector operations plan and associated National Environmental Policy Act (NEPA) analysis, 640 hours; monitoring service provider response to application disapproval, 10 hours; Data entry for sector discard monitoring system, 3 minutes; Sector weekly catch report, 4 hours; Sector annual report, 12 hours; Notification of expulsion from a sector, 30 min; Request to transfer Annual Catch Entitlement (ACE), 5 minutes; VMS certification form, 10 minutes; VMS confirmation call, 5 minutes; VMS area and DAS declaration, 5 minutes; VMS trip-level catch reports and Daily VMS catch reports, 15 minutes; Pre-trip hail report to a dockside monitoring (DSM) service provider, 2 minutes; Trip-end hail report to a DSM service provider, 15 minutes; Confirmation of DSM trip-end hail report, 2 minutes; Forward trip start/end hails to NMFS, 2 minutes; Notification to vessel/sector/NMFS of monitor emergency, 5 minutes; DSM/roving service provider data entry, 3 minutes; Dockside/roving or at-sea monitor deployment report, 10 minutes; DSM/roving or at-sea monitoring (ASM) service provider catch report to NMFS upon request, minutes; Dockside/roving or at-sea monitor report of harassment and other issues, 30 minutes; Copy of DSM/roving or ASM service provider contract or information materials upon request, 30 minutes; OLE debriefing of dockside/roving or at-sea monitors, 2 hours; ASM Pre-Trip Notification and Vessel notification of selection for at-sea monitoring coverage, 5 minutes each; NMFS ASM Database and Data Entry, 30 minutes n; Observer program pre-trip notification, 2 minutes; Copy of the dealer weigh-out slip or dealer signature of the dockside monitor report, 2 minutes; DAS Transfer Program, 5 min; Expedited Submission of Proposed SAPs, 20 hr; NAFO Reporting Requirements, 10 minutes.

Estimated Total Annual Burden Hours: 78,719.

Estimated Total Annual Cost to Public: \$3,486,168.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden

(including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: October 9, 2012.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

Proposed Information Collection; Comment Request; Evaluations of Coastal Zone Management Act Programs—State Coastal Management Programs and National Estuarine Research Reserves

AGENCY: National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before December 14, 2012.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to L. Christine McCay, (301) 563-1163 or chris.mccay@noaa.gov.

SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a new information collection.

The Coastal Zone Management Act of 1972, as amended (CZMA; 16 U.S.C. 1451 *et seq.*) requires that state coastal management programs and national estuarine research reserves developed pursuant to the CZMA and approved by the Secretary of Commerce be evaluated periodically. This request is to collect information to accomplish those evaluations.

Section 1458 of the CZMA and implementing regulations at 15 CFR part 923, Subpart L, require that state coastal management programs be evaluated concerning the extent to which the state has implemented and enforced the program approved by the Secretary, addressed the coastal management needs identified in 16 U.S.C. 1452(2)(A) through (K), and adhered to the terms of any grant, loan, or cooperative agreement funded under the CZMA. Section 1461(f) of the CZMA and implementing regulations at 15 CFR Part 921, Subpart E, require that national estuarine research reserves be evaluated with regard to their operation and management, including education and interpretive activities, the research being conducted within the reserve, and be evaluated in accordance with section 1458 of the CZMA and procedures set forth in 15 CFR part 923.

NOAA's Office of Ocean and Coastal Resource Management (OCRM) conducts periodic evaluations of the 34 coastal management programs and 28 research reserves and produces written findings for each evaluation. OCRM has access to documents submitted in cooperative agreement applications, performance reports, and certain documentation required by the CZMA and implementing regulations. However, additional information from each coastal management program and research reserve, as well as information from the program and reserve partners and stakeholders with whom each works, is necessary to evaluate against statutory and regulatory requirements. Different information collection subsets are necessary for (1) coastal management programs, (2) their partners and stakeholders, (3) research reserves, and (4) their partners and stakeholders.

II. Method of Collection

Coastal program and reserve manager respondents will receive information requests/questionnaires via email, and submittals will be made via email. Partners and stakeholders of coastal management programs and of reserves will receive a link to a web-based survey

tool (Survey Monkey) and respond through the survey tool.

III. Data

OMB Control Number: None.

Form Number: None.

Type of Review: Regular submission (request for a new information collection).

Affected Public: State, local, or tribal government; not-for-profit institutions; business or other for-profit organizations.

Estimated Number of Respondents: 468.

Estimated Time Per Response: 60 hours per CZMA program manager; 30 minutes per partner/stakeholder.

Estimated Total Annual Burden Hours: 1,008 hours.

Estimated Total Annual Cost to Public: \$0 in recordkeeping/reporting costs.

IV. Request for Comments

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: October 9, 2012.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510-08-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

RIN 0648-XC197

Fisheries of the Northeastern United States; Tilefish Fishery; 2013 Tilefish Fishing Quota Specification

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.

ACTION: Notice.

SUMMARY: NMFS announces that the overall annual tilefish quota for the 2013 fishing year (November 1, 2012–October 31, 2013) will remain the same as it was in fishing year 2012. NMFS is required to notify the public of the overall annual quota levels for tilefish if the previous year's quota specifications remain unchanged. This document also provides notice of tilefish specifications recently adopted by the Mid-Atlantic Fishery Management Council.

FOR FURTHER INFORMATION CONTACT: Jason Berthiaume, Fishery Management Specialist, (978) 281-9177; fax (978) 281-9135.

SUPPLEMENTARY INFORMATION: The tilefish regulations at § 648.292 specify that NMFS notify the public in the **Federal Register** of the overall annual quota levels for tilefish if the previous year's quota specifications remain unchanged. The tilefish total allowable landings (TAL) for the 2013 fishing year will remain the same as the fishing year 2012 TAL of 1.995 million lb (904,917 kg). Five percent of the TAL (99,750 lb (45,246 kg)) is allocated to incidental catch, leaving 1,895,250 lb (859,671 kg) allocated to Individual Fishing Quota (IFQ) holders.

This document also announces tilefish specifications recently adopted by the Mid-Atlantic Fishery Management Council (Council). At the April 2012 Council meeting, the Council adopted specifications for an acceptable biological catch (ABC), annual catch limit (ACL), and annual catch target (ACT). These specifications are consistent with the overall quota and rebuilding schedule that was established in Amendment 1 to the Golden Tilefish Fishery Management Plan. The adopted specifications also comply with the Council's annual catch limits and accountability measures omnibus amendment (76 FR 60606; September 29, 2011).

TABLE 1—2013 TILEFISH QUOTAS AND SPECIFICATIONS

Specification	Pounds	Kilograms
ABC	2,013,000	913,081
ACL	2,013,000	913,081
ACT	2,013,000	913,081
TAL	1,995,000	904,917
Incidental quota	99,750	42,246
IFQ quota	1,895,250	859,671

Authority: 16 U.S.C. 1801 *et seq.*

Dated: October 10, 2012.

Emily H. Menashes,

Deputy Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

Federal Acquisition Regulation; Submission for OMB Review; Novation/Change of Name Requirements

AGENCY: Department of Defense (DOD), General Services Administration (GSA), and National Aeronautics and Space Administration (NASA).

ACTION: Notice of request for comments regarding an extension to an existing OMB clearance.

SUMMARY: Under the provisions of the Paperwork Reduction Act, the Regulatory Secretariat will be submitting to the Office of Management and Budget (OMB) a request to review and approve an extension of a previously approved information collection requirement concerning Novation/Change of Name Requirements. A notice was published in the **Federal Register** at 77 FR 29983, on May 21, 2012. One respondent submitted comments.

Public comments are particularly invited on: Whether this collection of information is necessary; whether it will have practical utility; whether our estimate of the public burden of this collection of information is accurate, and based on valid assumptions and methodology; ways to enhance the quality, utility, and clarity of the information to be collected; and ways in which we can minimize the burden of the collection of information on those who are to respond, through the use of appropriate technological collection techniques or other forms of information technology.

DATES: Submit comments on or before November 14, 2012.

ADDRESSES: Submit comments identified by Information Collection 9000-0076, Novation/Change of Name Requirements, by any of the following methods:

- *Regulations.gov:* <http://www.regulations.gov>. Submit comments

via the Federal eRulemaking portal by searching the OMB control number. Select the link "Submit a Comment" that corresponds with "Information Collection 9000-0076, Novation/Change of Name Requirements". Follow the instructions provided at the "Submit a Comment" screen. Please include your name, company name (if any), and "Information Collection 9000-0076, Novation/Change of Name Requirements" on your attached document.

- Fax: 202-501-4067.
- Mail: General Services

Administration, Regulatory Secretariat (MVCB), 1275 First Street NE., Washington, DC 20417. ATTN: Hada Flowers/IC 9000-0076, Novation/Change of Name Requirements.

Instructions: Please submit comments only and cite Information Collection 9000-0076, Novation/Change of Name Requirements, in all correspondence related to this collection. All comments received will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided.

FOR FURTHER INFORMATION CONTACT: Mr. Curtis E. Glover, Sr., Procurement Analyst, Office of Governmentwide Acquisition Policy, GSA, (202) 208-4949 or via email Curtis.glover@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

FAR 42.1203 and 42.1204 provide requirements for contractors to request novation/change of name agreements and supporting documents when a firm performing under Government contracts wishes the Government to recognize (1) a successor in interest to these contracts, or (2) a name change, it must submit certain documentation to the Government.

B. Discussion and Analysis

One respondent submitted public comments on the extension of the previously approved information collection. The analysis of the public comments is summarized as follows:

Comment: The respondent commented that the extension of the information collection would violate the fundamental purposes of the Paperwork Reduction Act (PRA) because of the burden it puts on the entity submitting the information and the agency collecting the information. The respondent opposed granting the extension under the PRA.

Response: In accordance with the PRA, agencies can request an OMB approval of an existing information collection. The PRA requires that

agencies use the **Federal Register** notice and comment process, to extend the OMB's approval, at least every three years. This extension, to a previously approved information collection, pertains to FAR Subpart 42.12, Novation and Change-of-Name Agreements. The purpose of this subpart is to allow recognition of a successor in interest to Government contracts when contractor assets are transferred, recognition of a change in a contractor's name, and execution of novation agreements and change-of-name agreements by the responsible contracting officer. This subpart provides the contractor a process and a forum to transfer interest in a Government contract and recognition of a corporate name change. Not granting this extension would eliminate the contractor's ability to conduct business with the Government in those instances where the company has been sold or changed its name.

Comment: The respondent commented that the agency did not accurately estimate the public burden challenging that the agency's methodology for calculating it is insufficient and inadequate and does not reflect the total burden. For this reason, the respondent provided that the agency should reassess the estimated total burden hours and revise the estimate upwards to be more accurate, as was done in FAR Case 2007-006. The same respondent also provided that the burden of compliance with the information collection requirement greatly exceeds the agency's estimate and outweighs any potential utility of the extension.

Response: Serious consideration is given, during the open comment period, to all comments received and adjustments are made to the paperwork burden estimate based on reasonable considerations provided by the public. This is evidenced, as the respondent notes, in FAR Case 2007-006 where an adjustment was made from the total preparation hours from three to 60. This change was made considering particularly the hours that would be required for review within the company, prior to release to the Government.

The burden is prepared taking into consideration the necessary criteria in OMB guidance for estimating the paperwork burden put on the entity submitting the information. For example, consideration is given to an entity reviewing instructions; using technology to collect, process, and disclose information; adjusting existing practices to comply with requirements; searching data sources; completing and reviewing the response; and transmitting or disclosing information.

The estimated burden hours for a collection are based on an average between the hours that a simple disclosure by a very small business might require and the much higher numbers that might be required for a very complex disclosure by a major corporation. Also, the estimated burden hours should only include projected hours for those actions which a company would not undertake in the normal course of business. Careful consideration went into assessing the estimated burden hours for this collection, and it is determined that an upward adjustment is not required at this time. However, at any point, members of the public may submit comments for further consideration, and are encouraged to provide data to support their request for an adjustment.

C. Annual Reporting Burden

Respondents: 1,000.

Responses per Respondent: 1.

Annual Responses: 1,000.

Hours per Response: 2.0.

Total Burden Hours: 2,000.

Obtaining Copies of Proposals:

Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat (MVCB), 1275 First Street NE., Washington, DC 20417, telephone (202) 501-4755. Please cite OMB Control No. 9000-0076, Novation/Change of Name Requirements, in all correspondence.

Dated: October 5, 2012.

William Clark,

Acting Director, Federal Acquisition Policy Division, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

- *Mail:* General Services

Administration, Regulatory Secretariat (MVCB), 1275 First Street NE., Washington, DC 20417. ATTN: Hada Flowers/IC 9000-0067, Incentive Contracts.

Instructions: Please submit comments only and cite Information Collection 9000-0067, Incentive Contracts, in all correspondence related to this collection. All comments received will be posted without change to <http://www.regulations.gov>, including any personal and/or business confidential information provided.

FOR FURTHER INFORMATION CONTACT: Mr. Michael O. Jackson, Procurement

Analyst, Office of Acquisition Policy, GSA (202) 208-4949 or via email michaelo.jackson@gsa.gov.

SUPPLEMENTARY INFORMATION:

A. Purpose

In accordance with FAR 16.4, incentive contracts are normally used when a firm fixed-price contract is not appropriate and the required supplies or services can be acquired at lower costs, and sometimes with improved delivery or technical performance, by relating the amount of profit or fee payable under the contract to the contractor's performance.

The information required periodically from the contractor, such as cost of work already performed, estimated costs of further performance necessary to complete all work, total contract price for supplies or services accepted by the Government for which final prices have been established, and estimated costs allocable to supplies or services accepted by the Government and for which final prices have not been established, is needed to negotiate the final prices of incentive-related items and services. Contractors are required to submit the information in accordance with several incentive fee FAR clauses: FAR 52.216-16, Incentive Price Revision—Firm Target; FAR 52.216-17, Incentive Price Revision—Successive Targets; and FAR 52.216-10, Incentive Fee.

The contracting officer evaluates the information received to determine the contractor's performance in meeting the incentive target and the appropriate price revision, if any, for the items or services.

B. Discussion and Analysis

One respondent submitted public comments on the extension of the previously approved information collection. The analysis of the public comments is summarized as follows:

Comment: The respondent commented that the extension of the information collection would violate the fundamental purposes of the Paperwork Reduction Act because of the burden it puts on the entity submitting the information and the agency collecting the information. The respondent opposes granting the extension of the information collection requirement.

Response: In accordance with the Paperwork Required Act (PRA), agencies can request an OMB approval of an existing information collection. The PRA requires that agencies use the **Federal Register** notice and comment process, to extend the OMB's approval, at least every three years. This

extension, to a previously approved information collection, pertains to several incentive fee FAR clauses: FAR 52.216-16, Incentive Price Revision—Firm Target; FAR 52.216-17, Incentive Price Revision—Successive Targets; and FAR 52.216-10, Incentive Fee. Incentive contracts are used when other types of fixed-price or cost reimbursement contracts are inappropriate because the assumption of risk on one of the contracting parties is unfavorable. Thus, incentive contracts provide an alternative that the contracting parties can agree impose some risk but not as much as the other types of fixed-price or cost reimbursement contracts. The information collected, which should be information collected in the normal course of doing business, allows a contractor to justify and the contracting officer to evaluate the contractor's performance in meeting the incentive target and the appropriate price revision, if any, for the items or services received. Not granting this extension would consequently eliminate FAR clauses that provide a benefit to the public and the agency collecting the information.

Comment: The respondent commented that the agency did not accurately estimate the public burden challenging that the agency's methodology for calculating it is insufficient and inadequate and does not reflect the total burden. For this reason, the respondent provided that the agency should reassess the estimated total burden hours and revise the estimate upwards to be more accurate, as was done in FAR Case 2007-006. The same respondent also provided that the burden of compliance with the information collection requirement greatly exceeds the agency's estimate and outweighs any potential utility of the extension.

Response: Serious consideration is given, during the open comment period, to all comments received and adjustments are made to the paperwork burden estimate based on reasonable considerations provided by the public. This is evidenced, as the respondent notes, in FAR Case 2007-006 where an adjustment was made from the total preparation hours from three to 60. This change was made considering particularly the hours that would be required for review within the company, prior to release to the Government.

The burden is prepared taking into consideration the necessary criteria in OMB guidance for estimating the paperwork burden put on the entity submitting the information. For example, consideration is given to an entity reviewing instructions; using

technology to collect, process, and disclose information; adjusting existing practices to comply with requirements; searching data sources; completing and reviewing the response; and transmitting or disclosing information. The estimated burden hours for a collection are based on an average between the hours that a simple disclosure by a very small business might require and the much higher numbers that might be required for a very complex disclosure by a major corporation. Also, the estimated burden hours should only include projected hours for those actions which a company would not undertake in the normal course of business. Careful consideration went into assessing the burden for this collection, and although adjustments were made, the estimated annual burden remains unchanged. However, at any point, members of the public may submit comments for further consideration, and are encouraged to provide data to support their request for an adjustment.

C. Annual Reporting Burden

The estimated annual burden remains the same from the notice published at 77 FR 18819 on March 28, 2012. Adjustments were made to the estimated number of respondents, and the estimated annual responses using fiscal year 2011 data from the Federal Procurement Data System as a baseline. In addition, the estimated hours per response increased, but the total estimated burden hours remain unchanged.

Respondents: 1,000.

Responses Per Respondent: 2.

Annual Responses: 2,000.

Hours Per Response: 1.5.

Total Burden Hours: 3,000.

Obtaining Copies of Proposals:

Requesters may obtain a copy of the information collection documents from the General Services Administration, Regulatory Secretariat (MVCB), 1275 First Street NE., Washington, DC 20417, telephone (202) 501-4755. Please cite OMB Control No. 9000-0067, Incentive Contracts, in all correspondence.

Dated: October 5, 2012.

William Clark,

Acting Director, Federal Acquisition Policy Division, Office of Governmentwide Acquisition Policy, Office of Acquisition Policy, Office of Governmentwide Policy.

BILLING CODE 6820-EP-P

DEPARTMENT OF DEFENSE

Office of the Secretary

Advisory Council on Dependents' Education; Meeting Cancellation Notice and Open Meeting Notice

AGENCY: Department of Defense Education Activity (DoDEA), DoD.

ACTION: Meeting cancellation notice and open meeting notice.

SUMMARY: The meeting of the Department of Defense Advisory Council on Dependents' Education announced on August 31, 2012 (77 FR 53187-53188) under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), and the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and scheduled to occur on Tuesday, October 16, 2012, from 8:00 a.m. to 12:00 p.m. Eastern Daylight Savings Time; Stuttgart and Wiesbaden, Germany, from 2:00 p.m. to 6:00 p.m., Central European Summer Time (CEST); Okinawa, Japan, from 9:00 p.m. to 1:00 a.m., Japan Standard Time (JST); Honolulu, Hawaii, from 2:00 a.m. to 6:00 a.m., Hawaii-Aleutian Standard Time (H-AST); Peachtree City, Georgia, from 8:00 a.m. to 12:00 p.m., Eastern Daylight Savings Time (EDST) has been cancelled.

Under the provisions of the Federal Advisory Committee Act of 1972 (5 U.S.C., Appendix, as amended), the Government in the Sunshine Act of 1976 (5 U.S.C. 552b, as amended), and 41 CFR 102-3.150, the Department of Defense announces that the following Federal advisory committee meeting of the Advisory Council on Dependents' Education will take place.

DATES: Tuesday, December 4, 2012, Alexandria, Virginia (via Video Teleconference or Telephone Conference), from 8:00 a.m. to 12:00 p.m., Eastern Standard Time (EST); Stuttgart and Wiesbaden, Germany, from 2:00 p.m. to 6:00 p.m., Central European Standard Time (CET); Okinawa, Japan, from 10:00 p.m. to 2:00 a.m., Japan Standard Time (JST); Honolulu, Hawaii, from 3:00 a.m. to 7:00 a.m., Hawaii-Aleutian Standard Time (HAST); Peachtree City, Georgia, from 8:00 a.m. to 12:00 p.m., Eastern Standard Time (EST).

ADDRESSES: 4800 Mark Center Drive, Alexandria, VA 22350; USAG Stuttgart, Stuttgart, Germany; DoDDS-Europe Area Office, Wiesbaden, Germany; DoDDS-Pacific Area Office, Okinawa, Japan; Pacific Command, Honolulu, Hawaii; DDESS Area Office, Peachtree City, Georgia.

FOR FURTHER INFORMATION CONTACT: Mr. Joel K. Hansen at (571) 372-5812 or Joel.Hansen@hq.dodea.edu.

SUPPLEMENTARY INFORMATION: Purpose of the Meeting: Recommend to the Director, DoDEA, general policies for the operation of the Department of Defense Dependents Schools (DoDDS); to provide the Director with information about effective educational programs and practices that should be considered by DoDDS; and to perform other tasks as may be required by the Secretary of Defense.

Agenda: The meeting agenda will reflect current DoDDS schools operational status, educational practices, and other educational matters that come before the Council.

Public Accessibility to the Meeting: Pursuant to 5 U.S.C. 552b and 41 CFR 102-3.140 through 102-3.165 and the availability of space, this meeting is open to the public. Seating is limited and is on a first-come basis. All members of the public who wish to attend the public meeting at the Mark Center must contact Mr. Joel Hansen at the number listed in this notice no later than noon on Tuesday, November 27, 2012, to make arrangements for entrance to the Mark Center. The public attendees should arrive at the Mark Center no later than 7:30 a.m. on December 4, 2012. To receive access to the Mark Center, please come prepared to present a picture identification card.

Committee's Point of Contact: Mr. Joel K. Hansen at (571) 372-5812, 4800 Mark Center Drive, Alexandria, VA 22350 or Joel.Hansen@hq.dodea.edu.

Special Accommodations: Individuals requiring special accommodations to access the public meeting should contact Mr. Hansen at least five (5) business days prior to the meeting so that appropriate arrangements can be made.

Pursuant to 41 CFR 102-3.105(j) and 102-3.140 and section 10(a)(3) of the Federal Advisory Committee Act of 1972, the public or interested organizations may submit written statements to the Advisory Council on Dependents' Education about its mission and functions. Written statements may be submitted at any time or in response to the stated agendas of the planned meeting of the Advisory Council on Dependents' Education.

All written statements shall be submitted to the Designated Federal Officer (DFO) for the Advisory Council on Dependents' Education, Mr. Joel K. Hansen, 4800 Mark Center Drive, Alexandria, VA 22350; Joel.Hansen@hq.dodea.edu.

Statements being submitted in response to the agendas mentioned in

this notice must be received by the DFO at the email address listed in **FOR FURTHER INFORMATION CONTACT** at least fourteen calendar days prior to the meeting, which is the subject of this notice. Written statements received after this date may not be provided to or considered by the Advisory Council on Dependents' Education until its next meeting.

The DFO will review all timely submissions with the Advisory Council on Dependents' Education Chairpersons and ensure they are provided to all members of the Advisory Council on Dependents' Education before the meeting that is the subject of this notice.

Oral Statements by the Public to the Membership:

Pursuant to 41 CFR 102-3.140(d), time will be allotted for public comments to the Advisory Council on Dependents' Education. Individual comments will be limited to a maximum of five minutes duration. The total time allotted for public comments will not exceed thirty minutes.

Dated: October 10, 2012.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

[FR Doc. 2012-25232 Filed 10-12-12; 8:45 am]

BILLING CODE 5001-06-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. CP12-526-000]

Leaf River Energy Center LLC; Notice of Application

Take notice that on September 24, 2012, Leaf River Energy Center LLC (Leaf River), 53 Riverside Avenue, Westport, Connecticut, 06880, filed an application in Docket No. CP12-526-000 pursuant to Section 7(c) of the Natural Gas Act (NGA) and Part 157 of the Commission's Regulations, for a certificate of public convenience and necessity to expand the certificated storage capacities of three of its four existing caverns at its Leaf River Energy Center facility in Smith County, Mississippi near the town of Taylorsville. The proposed expansion would increase the aggregate working gas capacity of the Leaf River Energy Center from the current 32.0 Bcf to 48.0 Bcf while the total aggregate gas storage capacity would increase from about 41.9 Bcf to 62.8 Bcf. The expansion would be accomplished by additional leaching of three existing salt dome caverns and would not require the construction of

any new facilities. Leaf River also requests reaffirmation of its authority to charge market based rates for the expanded storage services. A more detailed description of the project is available in the application which is on file with the Commission and open for public inspection.

This filing is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site at <http://www.ferc.gov> using the "e-Library" link. Enter the docket number excluding the last three digits in the docket number field to access the document. For assistance, contact FERC at FERCOnlineSupport@ferc.gov or call toll-free, (866) 208-3676, or for TTY, (202) 502-8659. Any questions regarding this application should be directed to Laura L. Luce, Leaf River Energy Center LLC, 700 Milam, 53 Riverside Avenue, Westport, CT 06880, (203) 557-1000 (phone), lluce@ngsenergy.com or James F. Bowe, Jr., King & Spalding LLP, 1700 Pennsylvania Ave. NW., Suite 200, Washington, DC 20006, (202) 737-0500 (phone), jbowe@kslaw.com.

Pursuant to section 157.9 of the Commission's rules, 18 CFR 157.9, within 90 days of this Notice the Commission staff will either complete its environmental assessment (EA) and place it into the Commission's public record (eLibrary) for this proceeding; or issue a Notice of Schedule for Environmental Review. If a Notice of Schedule for Environmental Review is issued, it will indicate, among other milestones, the anticipated date for the Commission staff's issuance of the final EA for this proposal. The filing of the EA in the Commission's public record for this proceeding or the issuance of a Notice of Schedule for Environmental Review will serve to notify federal and state agencies of the timing for the completion of all necessary reviews, and the subsequent need to complete all federal authorizations within 90 days of the date of issuance of the Commission staff's EA.

There are two ways to become involved in the Commission's review of this project. First, any person wishing to obtain legal status by becoming a party to the proceedings for this project should, on or before the comment date stated below file with the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426, a motion to intervene in accordance with the requirements of the Commission's Rules of Practice and Procedure (18 CFR 385.214 or 385.211) and the Regulations under the NGA (18 CFR 157.10). A person obtaining party

status will be placed on the service list maintained by the Secretary of the Commission and will receive copies of all documents filed by the applicant and by all other parties. A party must submit 14 copies of filings made in the proceeding with the Commission and must mail a copy to the applicant and to every other party. Only parties to the proceeding can ask for court review of Commission orders in the proceeding.

However, a person does not have to intervene in order to have comments considered. The second way to participate is by filing with the Secretary of the Commission, as soon as possible, an original and two copies of comments in support of or in opposition to this project. The Commission will consider these comments in determining the appropriate action to be taken, but the filing of a comment alone will not serve to make the filer a party to the proceeding. The Commission's rules require that persons filing comments in opposition to the project provide copies of their protests only to the party or parties directly involved in the protest.

Persons who wish to comment only on the environmental review of this project should submit an original and two copies of their comments to the Secretary of the Commission. Environmental commenters will be placed on the Commission's environmental mailing list, will receive copies of the environmental documents, and will be notified of meetings associated with the Commission's environmental review process. Environmental commenters will not be required to serve copies of filed documents on all other parties. However, the non-party commenters will not receive copies of all documents filed by other parties or issued by the Commission (except for the mailing of environmental documents issued by the Commission) and will not have the right to seek court review of the Commission's final order.

Protests and interventions may be filed electronically via the Internet in lieu of paper; see, 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's web site under the "e-Filing" link. The Commission strongly encourages electronic filings.

Comment Date: October 25, 2012.

Dated: October 4, 2012.

Kimberly D. Bose,
Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission**

[Project No. 14355–001]

John B. Crockett; Notice of Intent To File License Application, Filing of Pre-Application Document, and Approving Use of the Traditional Licensing Process

a. *Type of Filing:* Notice of Intent to File License Application and Request to Use the Traditional Licensing Process.

b. *Project No.:* 14355–001.

c. *Dated Filed:* September 4, 2012.

d. *Submitted By:* John B. Crockett.

e. *Name of Project:* East Fork Ditch Hydropower Project.

f. *Location:* On the existing East Fork Ditch canal system, fed by the East Fork Weiser River, in Adams County, Idaho. The project would occupy approximately 16 acres of land, partly on United States lands administered by the U.S. Forest Service.

g. *Filed Pursuant to:* 18 CFR 5.3 of the Commission's regulations.

h. *Potential Applicant Contact:* John B. Crockett, 3296 Snowflake Way, Boise, ID 83706; (208) 344–5319; email—johncrockett@cableone.net.

i. *FERC Contact:* Ken Wilcox at (202) 502–6835; or email at ken.wilcox@ferc.gov.

j. John B. Crockett filed a request to use the Traditional Licensing Process on September 4, 2012. Mr. Crockett provided public notice of his request on September 14, 2012. In a letter dated October 5, 2012, the Director of the Division of Hydropower Licensing approved Mr. Crockett's request to use the Traditional Licensing Process.

k. With this notice, we are initiating informal consultation with: (a) The U.S. Fish and Wildlife Service under section 7 of the Endangered Species Act and the joint agency regulations thereunder at 50 CFR Part 402; and (b) the Idaho State Historic Preservation Officer, as required by section 106, National Historical Preservation Act, and the implementing regulations of the Advisory Council on Historic Preservation at 36 CFR 800.2.

l. John B. Crockett filed a Pre-Application Document (PAD) including a proposed process plan and schedule with the Commission, pursuant to 18 CFR 5.6 of the Commission's regulations.

m. A copy of the PAD is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site (<http://www.ferc.gov>), using the "eLibrary" link. Enter the docket number,

excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at 1–866–208–3676, or for TTY, (202) 502–8659. A copy is also available for inspection and reproduction at the address in paragraph h.

n. Register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filing and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

Dated: October 5, 2012.

Kimberly D. Bose,

Secretary.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY**Federal Energy Regulatory Commission**

[Project No. 14446–000]

Peabody Trout Creek Reservoir LLC; Notice of Intent To File License Application, Filing of Pre-Application Document (Pad), Commencement of Pre-Filing Process, and Scoping; Request for Comments on the Pad and Scoping Document, and Identification of Issues and Associated Study Requests

a. *Type of Filing:* Notice of Intent To File License Application for a New License and Commencing Pre-Filing Process.

b. *Project No.:* 14446–000.

c. *Dated Filed:* August 9, 2012.

d. *Submitted By:* Peabody Trout Creek Reservoir LLC.

e. *Name of Project:* Trout Creek Reservoir Hydroelectric Project.

f. *Location:* On Trout Creek, 15 miles southwest of Steamboat Springs, Colorado. The project occupies 4.3 acres of lands administered by the Bureau of Land Management.

g. *Filed Pursuant to:* 18 CFR part 5 of the Commission's Regulations.

h. *Potential Applicant Contact:* David Merritt, URS Corporation, 713 Cooper Avenue, #100, Glenwood Springs, Colorado 81601.

i. *FERC Contact:* Shana Murray at (202) 502–8333 or email at shana.murray@ferc.gov.

j. *Cooperating Agencies:* Federal, state, local, and tribal agencies with jurisdiction and/or special expertise with respect to environmental issues that wish to cooperate in the

preparation of the environmental document should follow the instructions for filing such requests described in item o below. Cooperating agencies should note the Commission's policy that agencies that cooperate in the preparation of the environmental document cannot also intervene. See 94 FERC ¶ 61,076 (2001).

k. With this notice, we are initiating informal consultation with: (a) The U.S. Fish and Wildlife Service and/or NOAA Fisheries under section 7 of the Endangered Species Act and the joint agency regulations thereunder at 50 CFR, Part 402 and (b) the State Historic Preservation Officer, as required by section 106, National Historical Preservation Act, and the implementing regulations of the Advisory Council on Historic Preservation at 36 CFR 800.2.

l. With this notice, we are designating Peabody Trout Creek Reservoir LLC as the Commission's non-federal representative for carrying out informal consultation, pursuant to section 7 of the Endangered Species Act and section 106 of the National Historic Preservation Act.

m. Peabody Trout Creek Reservoir LLC filed with the Commission a Pre-Application Document (PAD; including a proposed process plan and schedule), pursuant to 18 CFR 5.6 of the Commission's regulations.

n. A copy of the PAD is available for review at the Commission in the Public Reference Room or may be viewed on the Commission's Web site (<http://www.ferc.gov>), using the "eLibrary" link. Enter the docket number, excluding the last three digits in the docket number field to access the document. For assistance, contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at 1–866–208–3676, or for TTY, (202) 502–8659. A copy is also available for inspection and reproduction at the address in paragraph h.

Register online at <http://www.ferc.gov/docs-filing/esubscription.asp> to be notified via email of new filing and issuances related to this or other pending projects. For assistance, contact FERC Online Support.

o. With this notice, we are soliciting comments on the PAD and Commission's staff Scoping Document 1 (SD1), as well as study requests. All comments on the PAD and SD1, and study requests should be sent to the address above in paragraph h. In addition, all comments on the PAD and SD1, study requests, requests for cooperating agency status, and all communications to and from Commission staff related to the merits of

the potential application must be filed with the Commission. Documents may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

All filings with the Commission must include on the first page, Trout Creek Reservoir Hydroelectric Project and project number (P-14446), and bear the appropriate heading: "Comments on Pre-Application Document," "Study Requests," "Comments on Scoping Document 1," "Request for Cooperating Agency Status," or "Communications to and from Commission Staff." Any individual or entity interested in submitting study requests, commenting on the PAD or SD1, and any agency requesting cooperating status must do so by December 4, 2012.

p. Although our current intent is to prepare an environmental assessment (EA), there is the possibility that an Environmental Impact Statement (EIS) will be required. Nevertheless, this meeting will satisfy the NEPA scoping requirements, irrespective of whether an EA or EIS is issued by the Commission.

Scoping Meetings

Commission staff will hold two scoping meetings in the vicinity of the project at the time and place noted below. The daytime meeting will focus on resource agency, Indian tribes, and non-governmental organization concerns, while the evening meeting is primarily for receiving input from the public. We invite all interested individuals, organizations, and agencies to attend one or both of the meetings, and to assist staff in identifying particular study needs, as well as the scope of environmental issues to be addressed in the environmental document. The times and locations of these meetings are as follows:

Evening Scoping Meeting

Date and Time: Wednesday, October 24, 2012, 7:00 p.m.

Location: Steamboat Springs Community Center, 1605 Lincoln Avenue, Steamboat Springs, CO 80487.
Phone Number: (970) 871-8264.

Daytime Scoping Meeting

Date and Time: Thursday, October 25, 2012, 10:00 a.m.

Location: Steamboat Springs Community Center, 1605 Lincoln Avenue, Steamboat Springs, CO 80487.
Phone Number: (970) 384-4738.

Scoping Document 1 (SD1), which outlines the subject areas to be addressed in the environmental document, was mailed to the individuals and entities on the Commission's mailing list. Copies of SD1 will be available at the scoping meetings, or may be viewed on the Web at <http://www.ferc.gov>, using the "eLibrary" link. Follow the directions for accessing information in paragraph n. Based on all oral and written comments, a Scoping Document 2 (SD2) may be issued. SD2 may include a revised process plan and schedule, as well as a list of issues, identified through the scoping process.

Environmental Site Review

The potential applicant and Commission staff will conduct an *Environmental Site Review* of the project on Wednesday, October 24, 2012, starting at 11:00 a.m. All participants should meet at the Steamboat Springs Community Center, located at 1605 Lincoln Avenue, Steamboat Springs, Colorado 80487. All participants are responsible for their own transportation. Anyone with questions about the site visit should contact Mr. Dave Merritt of URS Corporation at (970) 384-47387 on or before October 19, 2012.

Meeting Objectives

At the scoping meetings, staff will: (1) Initiate scoping of the issues; (2) review and discuss existing conditions and resource management objectives; (3) review and discuss existing information and identify preliminary information and study needs; (4) review and discuss the process plan and schedule for pre-filing activity that incorporates the time frames provided for in Part 5 of the Commission's regulations and, to the extent possible, maximizes coordination of federal, state, and tribal permitting and certification processes; and (5) discuss the appropriateness of any federal or state agency or Indian tribe acting as a cooperating agency for development of an environmental document.

Meeting participants should come prepared to discuss their issues and/or

concerns. Please review the PAD in preparation for the scoping meetings. Directions on how to obtain a copy of the PAD and SD1 are included in item n. of this document.

Meeting Procedures

The meetings will be recorded by a stenographer and will be placed in the public records of the project.

Dated: October 5, 2012.

Kimberly D. Bose,
Secretary.

Take notice that the Commission received the following electric rate filings:

Docket Numbers: ER12-2653-000.

Applicants: Public Service Company of Colorado.

Description: Public Service Company of Colorado submits tariff filing per 35.13(a)(2)(iii): 2012-9-19-PSCo-Lamar Rev Filing to be effective 11/1/2012.

Filed Date: 9/19/12.

Accession Number: 20120919-5042.

Comments Due: 5 p.m. ET 10/10/12.

Docket Numbers: ER12-2654-000.

Applicants: World Digital Innovations.

Description: World Digital Innovations submits tariff filing per 35.12: mbr_tar to be effective 9/21/2012.

Filed Date: 9/19/12.

Accession Number: 20120919-5043.

Comments Due: 5 p.m. ET 10/10/12.

Docket Numbers: ER12-2655-000.

Applicants: Public Service Company of Colorado.

Description: Public Service Company of Colorado submits tariff filing per 35.13(a)(2)(iii): 2012-9-19_NXPM-Limon EP 314 NOC to be effective 11/19/2012.

Filed Date: 9/19/12.

Accession Number: 20120919-5047.

Comments Due: 5 p.m. ET 10/10/12.

The filings are accessible in the Commission's eLibrary system by

clicking on the links or querying the docket number.

Any person desiring to intervene or protest in any of the above proceedings must file in accordance with Rules 211 and 214 of the Commission's Regulations (18 CFR 385.211 and 385.214) on or before 5 p.m. Eastern time on the specified comment date. Protests may be considered, but intervention is necessary to become a party to the proceeding.

eFiling is encouraged. More detailed information relating to filing requirements, interventions, protests, service, and qualifying facilities filings can be found at: <http://www.ferc.gov/docs-filing/efiling/filing-req.pdf>. For other information, call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

BILLING CODE 6717–01–P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. PF12–19–000]

Texas Eastern Transmission, LP; Notice of Intent To Prepare an Environmental Assessment for the Texas Eastern and Appalachia Market Expansion Project 2014 and Request for Comments on Environmental Issues

The staff of the Federal Energy Regulatory Commission (FERC or Commission) will prepare an environmental assessment (EA) that will discuss the environmental impacts of the Texas Eastern and Appalachia Market Expansion Project 2014 (TEAM 2014) involving construction and operation, modification and abandonment of facilities proposed by Texas Eastern Transmission, LP (Texas Eastern) in Pennsylvania, West Virginia, Ohio, Kentucky, Tennessee, Alabama and Mississippi. The Commission will use this EA in its decision-making process to determine whether the project is in the public convenience and necessity.

This notice announces the opening of the scoping process the Commission will use to gather input from the public and interested agencies on the project. Your input will help the Commission staff determine what issues they need to evaluate in the EA. Please note that the scoping period will close on November 3, 2012. You may submit comments in written form. Further details on how to submit written comments are in the Public Participation section of this notice. This is not your only public input opportunity; please refer to the Environmental Review Process flow chart in Appendix 1.¹

This notice is being sent to the Commission's current environmental mailing list for this project. State and local government representatives should notify their constituents of this proposed project and encourage them to comment on their areas of concern.

If you are a landowner receiving this notice, a pipeline company representative may contact you about the acquisition of an easement to construct, operate, and maintain the

proposed facilities. The company would seek to negotiate a mutually acceptable agreement. However, if the Commission approves the project, that approval conveys with it the right of eminent domain. Therefore, if easement negotiations fail to produce an agreement, the pipeline company could initiate condemnation proceedings where compensation would be determined in accordance with state law.

Texas Eastern may have provided landowners with a fact sheet prepared by the FERC entitled "An Interstate Natural Gas Facility on My Land? What Do I Need To Know?". This fact sheet addresses a number of typically-asked questions, including the use of eminent domain and how to participate in the Commission's proceedings. It is also available for viewing on the FERC Web site (www.ferc.gov).

Summary of the Proposed Project

TEAM 2014 involves constructing approximately 33.4 miles of 36-inch-diameter natural gas transmission pipeline comprised of seven separate pipeline loops² and associated pipeline facilities in Pennsylvania; upgrade the horsepower (hp) at four existing compressor stations in Pennsylvania, and modify existing pipeline facilities in Pennsylvania, West Virginia, Ohio, Kentucky, Tennessee, Alabama, and Mississippi. According to Texas Eastern, the new pipeline would supply an additional 600,000 dekatherms per day of natural gas to markets along the Texas Eastern system in the Northeast, Midwest, and Gulf Coast areas, as well as to markets in the Southeast through Texas Eastern's interconnections with downstream pipelines. TEAM 2014 modifications would also result in a bi-directional natural gas transmission system that would provide access to the new, emerging liquefied natural gas export and gas-to-liquids markets. The 33.4 miles of planned pipeline loops are, as follows:

- The Holbrook Loop—a 6.6-mile pipeline in Fayette County, Pennsylvania, downstream of the existing Holbrook Compressor Station. A pig³ receiver assembly and crossover piping would be installed along this loop;
- The Perulack West Loop—a 2.7-mile pipeline in Perry County, Pennsylvania, downstream of the existing Perulack Compressor Station;

² A pipeline loop is constructed parallel to an existing pipeline to increase capacity.

³ A "pig" is a tool that is inserted into and moves through the pipeline, and is used for cleaning the pipeline, internal inspections, or other purposes.

¹ The appendices referenced in this notice are not being printed in the **Federal Register**. Copies of appendices were sent to all those receiving this notice in the mail and are available at www.ferc.gov using the link called "eLibrary" or from the Commission's Public Reference Room, 888 First Street NE., Washington, DC 20426, or call (202) 502–8371. For instructions on connecting to eLibrary, refer to the last page of this notice.

- The Perulack East Loop—5.3-mile pipeline in Perry County, Pennsylvania, downstream of the existing Perulack Compressor Station. A pig receiver assembly and crossover piping would be installed along this loop;

- The Shermans Dale Loop—7.1-mile pipeline in Dauphin County, Pennsylvania, downstream of the existing Shermans Dale Compressor Station. A pig receiver assembly and crossover piping would be installed along this loop;

- The Grantville West Loop—a 2.4-mile pipeline in Lebanon County, Pennsylvania, downstream of the existing Grantville Compressor Station;

- The Grantville East Loop—a 3.8-mile pipeline in Lebanon County, Pennsylvania, downstream of the existing Grantville Compressor Station. A pig receiver assembly and crossover piping would be installed along this loop; and

- The Bernville Loop—a 5.5-mile pipeline in Berks County, Pennsylvania, downstream of the existing Bernville Compressor Station. A pig receiver assembly and crossover piping would be installed along this loop.

In addition, as part of TEAM 2014, Texas Eastern plans to add approximately 80,060 hp of compression and aboveground facility modifications at four existing Texas Eastern compressor stations:

- Uniontown Compressor Station—a paper uprate (software update to meet maximum hp) of one existing electric unit and power uprate (replacing hardware to improve hp) of two existing gas turbine units;

- Delmont Compressor Station—installation of one new gas turbine compressor unit, one new electric unit, and abandonment of one gas turbine unit and six gas-reciprocating units;

- Armagh Compressor Station—installation of a new gas compressor unit; and

- Entriken Compressor Station—installation of a new gas compressor unit.

TEAM 2014 would require modifications to numerous existing facilities to allow bi-directional flow/transmission of natural gas. These facilities include 18 existing compressor stations, 17 separate and existing pig launcher and receiver sites, and two existing meter and regulating facilities between Pennsylvania and Mississippi. These are described in Appendix 2. Although these modifications would occur at existing facilities, temporary workspaces may be needed outside of the existing/maintained facility footprints. The general location of the

project facilities are shown in Appendix 3.

Land Requirements for Construction

Texas Eastern is still in the planning phase of the project, and workspace requirements have not been finalized. However, TEAM 2014 would disturb approximately 1191.5 acres and install or modify about 12 miles of new access roads. The construction and operation of the pipeline loops would be mostly collocated adjacent to existing pipelines and would affect about 547.1 acres of land in Berks, Dauphin, Fayette, Lebanon, and Perry Counties, Pennsylvania. In addition, 48 new access roads would be required. Modifications at the compressor stations would be confined to the existing facility property and would temporarily affect 124 acres in Fayette, Westmoreland, Indiana and Huntingdon, Pennsylvania. Workspace for the bi-directional flow modifications is planned to temporarily impact about 520.4 acres within or adjacent to existing facilities in the following counties: Marshall County, West Virginia; Monroe, Noble, Athens, Meigs, and Scioto Counties, Ohio; Bath, Madison, Lincoln, Casey, and Monroe Counties, Kentucky; Trousdale, Wilson, Rutherford, Williamson, Giles, and Lawrence Counties, Tennessee; Colbert County, Alabama; and Itawamba, Monroe, Oktibbeha, Attala, Madison, Hinds, and Jefferson Counties, Mississippi.

The EA Process

The National Environmental Policy Act (NEPA) requires the Commission to take into account the environmental impacts that could result from an action whenever it considers the issuance of a Certificate of Public Convenience and Necessity. NEPA also requires us⁴ to discover and address concerns the public may have about proposals. This process is referred to as “scoping.” The main goal of the scoping process is to focus the analysis in the EA on the important environmental issues. By this notice, the Commission requests public comments on the scope of the issues to address in the EA. We will consider all filed comments during the preparation of the EA.

In the EA we will discuss impacts that could occur as a result of the construction and operation of the proposed project under these general headings:

- Geology and soils;

- land use;
- water resources, fisheries, and wetlands;
- cultural resources;
- vegetation and wildlife;
- air quality and noise;
- endangered and threatened species;
- public safety; and
- cumulative impacts.

We will also evaluate reasonable alternatives to the proposed project or portions of the project, and make recommendations on how to lessen or avoid impacts on the various resource areas.

Although no formal application has been filed, we have already initiated our NEPA review under the Commission’s pre-filing process. The purpose of the pre-filing process is to encourage early involvement of interested stakeholders and to identify and resolve issues before the FERC receives an application. As part of our pre-filing review, we have begun to contact some federal and state agencies to discuss their involvement in the scoping process and the preparation of the EA.

The EA will present our independent analysis of the issues. The EA will be available in the public record through eLibrary. Depending on the comments received during the scoping process, we may also publish and distribute the EA to the public for an allotted comment period. We will consider all comments on the EA before making our recommendations to the Commission. To ensure we have the opportunity to consider and address your comments, please carefully follow the instructions in the Public Participation section of this notice.

With this notice, we are asking agencies with jurisdiction by law and/or special expertise with respect to the environmental issues of this project to formally cooperate with us in the preparation of the EA.⁵ Agencies that would like to request cooperating agency status should follow the instructions for filing comments provided under the Public Participation section of this notice.

Consultations Under Section 106 of the National Historic Preservation Act

In accordance with the Advisory Council on Historic Preservation’s implementing regulations for section 106 of the National Historic Preservation Act, we are using this notice to initiate consultation with the applicable State Historic Preservation

⁴ “We,” “us,” and “our” refer to the environmental staff of the Commission’s Office of Energy Projects.

⁵ The Council on Environmental Quality regulations addressing cooperating agency responsibilities are at Title 40, Code of Federal Regulations, § 1501.6.

Office (SHPO), and to solicit their views and those of other government agencies, interested Indian tribes, and the public on the project's potential effects on historic properties.⁶ We will define the project-specific Area of Potential Effects (APE) in consultation with the SHPO as the project develops. On natural gas facility projects, the APE at a minimum encompasses all areas subject to ground disturbance (examples include construction right-of-way, contractor/pipe storage yards, compressor stations, and access roads). Our EA for this project will document our findings on the impacts on historic properties and summarize the status of consultations under section 106.

Public Participation

You can make a difference by providing us with your specific comments or concerns about the project. Your comments should focus on the potential environmental effects, reasonable alternatives, and measures to avoid or lessen environmental impacts. The more specific your comments, the more useful they will be. To ensure that your comments are timely and properly recorded, please send your comments so that the Commission receives them in Washington, DC on or before November 3, 2012.

For your convenience, there are three methods which you can use to submit your comments to the Commission. In all instances please reference the project docket number (PF12-19-000) with your submission. The Commission encourages electronic filing of comments and has expert staff available to assist you at (202) 502-8258 or efiling@ferc.gov.

(1) You can file your comments electronically using the eComment feature on the Commission's Web site (www.ferc.gov) under the link to Documents and Filings. This is an easy method for interested persons to submit brief, text-only comments on a project;

(2) You can file your comments electronically using the eFiling feature on the Commission's Web site (www.ferc.gov) under the link to Documents and Filings. With eFiling, you can provide comments in a variety of formats by attaching them as a file with your submission. New eFiling users must first create an account by clicking on "eRegister." You must select the type of filing you are making. If you

are filing a comment on a particular project, please select "Comment on a Filing"; or

(3) You can file a paper copy of your comments by mailing them to the following address: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Room 1A, Washington, DC 20426.

Environmental Mailing List

The environmental mailing list includes: Federal, state, and local government representatives and agencies; elected officials; environmental and public interest groups; Native American Tribes; other interested parties; and local libraries and newspapers. This list also includes all affected landowners (as defined in the Commission's regulations) who are potential right-of-way grantors, whose property may be used temporarily for project purposes, or who own homes within certain distances of aboveground facilities, and anyone who submits comments on the project. We will update the environmental mailing list as the analysis proceeds to ensure that we send the information related to this environmental review to all individuals, organizations, and government entities interested in and/or potentially affected by the proposed project.

When an EA is published for distribution, copies will be sent to the environmental mailing list for public review and comment. If you would prefer to receive a paper copy of the document instead of the CD version or would like to remove your name from the mailing list, please return the attached Information Request (Appendix 4).

Becoming an Intervenor

Once Texas Eastern files its application with the Commission, you may want to become an "intervenor" which is an official party to the Commission's proceeding. Intervenor play a more formal role in the process and are able to file briefs, appear at hearings, and be heard by the courts if they choose to appeal the Commission's final ruling. An intervenor formally participates in the proceeding by filing a request to intervene. Instructions for becoming an intervenor are in the User's Guide under the "e-filing" link on the Commission's Web site. Please note that the Commission will not accept requests for intervenor status at this time. You must wait until the Commission receives a formal application for the project.

Additional Information

Additional information about the project is available from the Commission's Office of External Affairs, at (866) 208-FERC, or on the FERC Web site at www.ferc.gov using the "eLibrary" link. Click on the eLibrary link, click on "General Search" and enter the docket number, excluding the last three digits in the Docket Number field (i.e., PF12-19). Be sure you have selected an appropriate date range. For assistance, please contact FERC Online Support at FercOnlineSupport@ferc.gov or toll free at (866) 208-3676, or for TTY, contact (202) 502-8659. The eLibrary link also provides access to the texts of formal documents issued by the Commission, such as orders, notices, and rulemakings.

In addition, the Commission now offers a free service called eSubscription which allows you to keep track of all formal issuances and submittals in specific dockets. This can reduce the amount of time you spend researching proceedings by automatically providing you with notification of these filings, document summaries, and direct links to the documents. Go to www.ferc.gov/esubscribenow.htm.

Finally, public meetings or site visits, if scheduled, will be posted on the Commission's calendar located at www.ferc.gov/EventCalendar/EventsList.aspx along with other related information.

Dated: October 4, 2012.

Kimberly D. Bose,
Secretary.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Docket No. ER13-18-000]

Big Blue Wind Farm, LLC; Supplemental Notice That Initial Market-Based Rate Filing Includes Request for Blanket Section 204 Authorization

This is a supplemental notice in the above-referenced proceeding, of Big Blue Wind Farm, LLC's application for market-based rate authority, with an accompanying rate schedule, noting that such application includes a request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability.

Any person desiring to intervene or to protest should file with the Federal Energy Regulatory Commission, 888

⁶ The Advisory Council on Historic Preservation's regulations are at Title 36, Code of Federal Regulations, Part 800. Those regulations define historic properties as any prehistoric or historic district, site, building, structure, or object included in or eligible for inclusion in the National Register of Historic Places.

First Street NE., Washington, DC 20426, in accordance with Rules 211 and 214 of the Commission's Rules of Practice and Procedure (18 CFR 385.211 and 385.214). Anyone filing a motion to intervene or protest must serve a copy of that document on the Applicant.

Notice is hereby given that the deadline for filing protests with regard to the applicant's request for blanket authorization, under 18 CFR part 34, of future issuances of securities and assumptions of liability is October 25, 2012.

The Commission encourages electronic submission of protests and interventions in lieu of paper, using the FERC Online links at <http://www.ferc.gov>. To facilitate electronic service, persons with Internet access who will eFile a document and/or be listed as a contact for an intervenor must create and validate an eRegistration account using the eRegistration link. Select the eFiling link to log on and submit the intervention or protests.

Persons unable to file electronically should submit an original and 14 copies of the intervention or protest to the Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

The filings in the above-referenced proceeding(s) are accessible in the Commission's eLibrary system by clicking on the appropriate link in the above list. They are also available for review in the Commission's Public Reference Room in Washington, DC. There is an eSubscription link on the Web site that enables subscribers to receive email notification when a document is added to a subscribed docket(s). For assistance with any FERC Online service, please email FERCOnlineSupport@ferc.gov or call (866) 208-3676 (toll free). For TTY, call (202) 502-8659.

Dated: October 5, 2012.

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

[Project No. 13528-001]

Soule Hydro LLC; Notice of Preliminary Permit Application Accepted for Filing and Soliciting Comments, Motions To Intervene, and Competing Applications

On September 1, 2012, Soule Hydro LLC, filed an application for a successive preliminary permit, pursuant to section 4(f) of the Federal Power Act (FPA), proposing to study the feasibility of the Soule River Hydroelectric Project (project) to be located on the Soule River near Hyder within the Ketchikan Recording District in Alaska. The sole purpose of a preliminary permit, if issued, is to grant the permit holder priority to file a license application during the permit term. A preliminary permit does not authorize the permit holder to perform any land-disturbing activities or otherwise enter upon lands or waters owned by others without the owners' express permission.

The proposed project would consist of the following: (1) A 265-foot-high, 903-foot-long Main dam; (2) a 265-foot-high, 2,024 feet-long Saddle dam adjacent to the main dam; (3) a storage reservoir with a surface area of 1,072 acres and active storage capacity of 91,800 acre-feet; (4) a 16-foot-diameter, 11,400-foot-long conduit tunnel; (5) a powerhouse with approximate dimensions of 80 feet wide by 160 feet long containing three Francis-type turbines with total installed capacity of 77 megawatts; (6) a marine access facilities including staging area, boat ramp, barge basin, float, and access road; (7) a 138-kilovolt buried transmission line extending 700

feet from the powerhouse across the Soule River, 10 miles submarine cable across the Portland Canal, then 2.5 miles overhead to the point of interconnection at the existing BC Hydro substation near Stewart; and (8) appurtenant facilities. The estimated annual generation of the project would be 200 gigawatt-hours.

Applicant Contact: Mr. Bob Grimm, Alaska Power & Telephone Company, P.O. Box 3222, 193 Otto Street, Port Townsend, Washington 98368; phone: (360) 385-1733 ext. 120.

FERC Contact: Kim A. Nguyen; phone: (202) 502-6015.

Deadline for filing comments, motions to intervene, competing applications (without notices of intent), or notices of intent to file competing applications: 60 days from the issuance of this notice. Competing applications and notices of intent must meet the requirements of 18 CFR 4.36. Comments, motions to intervene, notices of intent, and competing applications may be filed electronically via the Internet. See 18 CFR 385.2001(a)(1)(iii) and the instructions on the Commission's Web site <http://www.ferc.gov/docs-filing/efiling.asp>. Commenters can submit brief comments up to 6,000 characters, without prior registration, using the eComment system at <http://www.ferc.gov/docs-filing/ecomment.asp>. You must include your name and contact information at the end of your comments. For assistance, please contact FERC Online Support at FERCOnlineSupport@ferc.gov or toll free at 1-866-208-3676, or for TTY, (202) 502-8659. Although the Commission strongly encourages electronic filing, documents may also be paper-filed. To paper-file, mail an original and seven copies to: Kimberly D. Bose, Secretary, Federal Energy Regulatory Commission, 888 First Street NE., Washington, DC 20426.

More information about this project, including a copy of the application, can be viewed or printed on the "eLibrary" link of Commission's Web site at <http://www.ferc.gov/docs-filing/elibrary.asp>. Enter the docket number (P-13528) in the docket number field to access the document. For assistance, contact FERC Online Support.

Dated: October 5, 2012.

BILLING CODE 6717-01-P

DEPARTMENT OF ENERGY

Federal Energy Regulatory Commission

Notice of Revised Restricted Service List for a Programmatic Agreement

BOST3 Hydroelectric LLC.	Project No. 12756-003—Louisiana, Red River Lock & Dam No. 3, Hydroelectric Project.
BOST4 Hydroelectric LLC.	Project No. 12757-004—Louisiana, Red River Lock & Dam No. 4, Hydroelectric Project.
BOST5 Hydroelectric LLC.	Project No. 12758-004—Louisiana, Red River Lock & Dam No. 5, Hydroelectric Project.

Rule 2010 of the Federal Energy Regulatory Commission's (Commissions) Rules of Practice and Procedure, 18 CFR 385.2010, provides that, to eliminate unnecessary expense or improve administrative efficiency, the Secretary may establish a restricted service list for a particular phase or issue in a proceeding. The restricted service list should contain the names of persons on the service list who, in the judgment of the decisional authority establishing the list, are active participants with respect to the phase or issue in the proceeding for which the list is established.

The Commission staff is consulting with the Louisiana State Historic Preservation Officer (Louisiana SHPO) and the Advisory Council on Historic Preservation (Advisory Council) pursuant to the Advisory Council's regulations, 36 CFR Part 800, implementing section 106 of the National Historic Preservation Act *as amended* (16 U.S.C. 470f), to prepare a programmatic agreement for managing properties included in, or eligible for inclusion in, the National Register of Historic Places that could be affected by issuance of licenses for the Red River Lock & Dam No. 3, the Red River Lock & Dam No. 4, and the Red River Lock & Dam No. 5 projects.

The programmatic agreement, when executed by the Commission, the Louisiana SHPO, and the Advisory Council would satisfy the Commission's section 106 responsibilities for all individual undertakings carried out in accordance with the licenses until the licenses expire or are terminated (36 CFR 800.13(e)).

On April 19, 2012, the Commission staff established a restricted service list for the Red River Lock & Dam No. 3, the Red River Lock & Dam No. 4, and the Red River Lock & Dam No. 5 projects. On October 3, 2012, the Caddo Nation requested to be added to the restricted

service list. The restricted service list is supplemented to include: "Robert Cast or Representative, Caddo Nation, P.O. Box 487, Binger, OK 73009."

Dated: October 5, 2012.

BILLING CODE 6717-01-P

FEDERAL COMMUNICATIONS COMMISSION

[DA 12-1580]

Emergency Access Advisory Committee; Announcement of Date of Next Meeting

AGENCY: Federal Communications Commission.

ACTION: Notice.

SUMMARY: This document announces the date of the Emergency Access Advisory Committee's (Committee or EAAC) next meeting. At the October meeting, the agenda will include discussion of next steps for 2012 and the draft 2012 reports from subcommittee activities.

DATES: The Committee's next meeting will take place on Friday, October 12, 2012, 10:30 a.m. to 3:30 p.m. (EST), at the headquarters of the Federal Communications Commission (FCC).

ADDRESSES: Federal Communications Commission, 445 12th Street, SW., Washington, DC 20554, in the Commission Meeting Room.

FOR FURTHER INFORMATION CONTACT: Cheryl King, Consumer and Governmental Affairs Bureau, (202) 418-2284 (voice) or (202) 418-0416 (TTY), email: Cheryl.King@fcc.gov and/or Patrick Donovan, Public Safety and Homeland Security Bureau, (202) 418-2413, email: Patrick.Donovan@fcc.gov.

SUPPLEMENTARY INFORMATION: On December 7, 2010, in document DA 10-2318, Chairman Julius Genachowski announced the establishment and appointment of members and Co-Chairpersons of the EAAC, an advisory committee required by the Twenty-First Century Communications and Video Accessibility Act (CVAA), Public Law 11-260, for the purpose of achieving equal access to emergency services by individuals with disabilities as part of our nation's migration to a national Internet protocol-enabled emergency network, also known as the next generation 9-1-1 system (NG9-1-1). The purpose of the EAAC is to determine the most effective and efficient technologies and methods by which to enable access to Next

Generation 911 (NG 9-1-1) emergency services by individuals with disabilities, and to make recommendations to the Commission on how to achieve those effective and efficient technologies and methods. During the spring of 2011, the EAAC conducted a nationwide survey of individuals with disabilities and released a report on that survey on June 21, 2011. Following release of the survey report, the EAAC developed recommendations, which it submitted to the Commission on December 7, 2011, as required by the CVAA. At the October 2012 EAAC meeting, the agenda will include discussion of next steps for 2012 and the draft 2012 reports from subcommittee activities.

The meeting site is fully accessible to people using wheelchairs or other mobility aids. Sign language interpreters, open captioning, and assistive listening devices will be provided on site. Other reasonable accommodations for people with disabilities are available upon request. In your request, include a description of the accommodation you will need and a way we can contact you if we need more information. Last minute requests will be accepted, but may be impossible to fill. Send an email to: fcc504@fcc.gov or call the Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (TTY).

To request materials in accessible formats for people with disabilities (Braille, large print, electronic files, audio format), send an email to fcc504@fcc.gov or call the Consumer and Governmental Affairs Bureau at (202) 418-0530 (voice), (202) 418-0432 (TTY).

Federal Communications Commission.

Karen Peltz Strauss,
Deputy Chief, Consumer and Governmental Affairs Bureau.

BILLING CODE 6712-01-P

FEDERAL DEPOSIT INSURANCE CORPORATION

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Suspicious Activity Report

AGENCY: Federal Deposit Insurance Corporation (FDIC).

ACTION: Notice and request for comments.

SUMMARY: In accordance with requirements of the Paperwork Reduction Act of 1995 ("PRA"), 44 U.S.C. 3501 *et seq.*, the FDIC may not conduct or sponsor, and the respondent is not required to respond to, an information collection unless it displays a currently valid Office of Management and Budget (OMB) control number. The FDIC, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on the renewal of an existing information collection, as required by the PRA. On August 10, 2012 (77 FR 47840), the FDIC solicited public comment for a 60-day period on renewal of the following information collections: Suspicious Activity Report (OMB No. 3064-0077). No comments were received. Therefore, the FDIC hereby gives notice of submission of its request for renewal to OMB for review.

DATES: Comments must be submitted on or before November 14, 2012.

ADDRESSES: Interested parties are invited to submit written comments to the FDIC by any of the following methods:

- <http://www.FDIC.gov/regulations/laws/federal/notices.html>.
- *Email:* comments@fdic.gov. Include the name of the collection in the subject line of the message.
- *Mail:* Leneta G. Gregorie (202-898-3719), Counsel, Room NY-5050, Federal Deposit Insurance Corporation, 550 17th Street NW., Washington, DC 20429.
- *Hand Delivery:* Comments may be hand-delivered to the guard station at the rear of the 17th Street Building (located on F Street), on business days between 7:00 a.m. and 5:00 p.m.

All comments should refer to the relevant OMB control number. A copy

of the comments may also be submitted to the OMB desk officer for the FDIC: Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Washington, DC 20503.

FOR FURTHER INFORMATION CONTACT: Leneta Gregorie, at the FDIC address above.

SUPPLEMENTARY INFORMATION:

Proposal to renew the following currently approved collections of information:

Title: Suspicious Activity Report.

OMB Number: 3064-0077.

Form Numbers: FDIC 6710/06.

Frequency of Response: On occasion.

Affected Public: Insured state nonmember banks and state savings institutions.

Estimated Number of Respondents: 5,243.

Estimated Average Time per Response: 1 hour.

Frequency of Response: 26.2.

Total Annual Burden: 137,467 hours.

General Description of Collection: In 1985, the FDIC, the Federal Reserve Board (FRB), the Office of the Comptroller of the Currency (OCC), the National Credit Union Administration (NCUA) (collectively "the Agencies"), issued procedures to be used by banks and certain other financial institutions operating in the United States to report known or suspected criminal activities to the appropriate law enforcement and the Agencies. Beginning in 1994, the Agencies and the Financial Crimes Enforcement Network (FinCEN) undertook a redesign of the reporting process and developed the Suspicious Activity Report, which became effective in April 1996. The report is authorized by the following regulations: 12 CFR 353.3 (FDIC); 12 CFR 21.11 and 12 CFR 163.180 (OCC); 12 CFR 208.62(c), 211.5(k), 211.24(f), and 225.4(f) (FRB); 12 CFR 748.1 (NCUA); and 31 CFR 103.18 (FinCEN). The regulations were issued under the authority contained in the following statutes: 12 U.S.C. 1818-1820 (FDIC); 12 U.S.C. 248(a)(1), 625, 1818, 1844(c), 3105(c)(2) and 3106(a) (FRB); 12 U.S.C. 93a, 1463, 1464, 1818, 1881-84, 3401-22, 31 U.S.C. 5318 (OCC); 12 U.S.C. 1766(a), 1789(a) (NCUA); and 31 U.S.C. 5318(g) (FinCEN).

Request for Comment

Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the FDIC's functions, including whether the information has practical utility; (b) the accuracy of the estimates of the burden of the information collection,

including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including through the use of automated collection techniques or other forms of information technology. All comments will become a matter of public record.

Dated at Washington, DC, this 9th day of October 2012.

Federal Deposit Insurance Corporation.

Robert E. Feldman,

Executive Secretary.

FEDERAL RESERVE SYSTEM

Federal Open Market Committee; Domestic Policy Directive of September 12-13, 2012

In accordance with Section 271.25 of its rules regarding availability of information (12 CFR part 271), there is set forth below the domestic policy directive issued by the Federal Open Market Committee at its meeting held on September 12-13, 2012.¹

"The Federal Open Market Committee seeks monetary and financial conditions that will foster price stability and promote sustainable growth in output. To further its long-run objectives, the Committee seeks conditions in reserve markets consistent with federal funds trading in a range from 0 to ¼ percent. The Committee directs the Desk to continue the maturity extension program it announced in June to purchase Treasury securities with remaining maturities of 6 years to 30 years with a total face value of about \$267 billion by the end of December 2012, and to sell or redeem Treasury securities with remaining maturities of approximately 3 years or less with a total face value of about \$267 billion. For the duration of this program, the Committee directs the Desk to suspend its policy of rolling over maturing Treasury securities into new issues. The Committee directs the Desk to maintain its existing policy of reinvesting principal payments on all agency debt and agency mortgage-backed securities in the System Open Market Account in

¹ Copies of the Minutes of the Federal Open Market Committee at its meeting held on September 12-13, 2012, which includes the domestic policy directive issued at the meeting, are available upon request to the Board of Governors of the Federal Reserve System, Washington, DC 20551. The minutes are published in the Federal Reserve Bulletin and in the Board's Annual Report.

agency mortgage-backed securities. The Desk is also directed to begin purchasing agency mortgage-backed securities at a pace of about \$40 billion per month. The Committee directs the Desk to engage in dollar roll and coupon swap transactions as necessary to facilitate settlement of the Federal Reserve's agency MBS transactions. The System Open Market Account Manager and the Secretary will keep the Committee informed of ongoing developments regarding the System's balance sheet that could affect the attainment over time of the Committee's objectives of maximum employment and price stability."

October 5, 2012.

By order of the Federal Open Market Committee.

William B. English,

Secretary, Federal Open Market Committee.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Announcement of Solicitation of Written Comments on Modifications of Healthy People 2020 Objectives

AGENCY: Department of Health and Human Services, Office of the Secretary, Office of the Assistant Secretary for Health, Office of Disease Prevention and Health Promotion.

ACTION: Notice.

SUMMARY: The U.S. Department of Health and Human Services (HHS) solicits written comments regarding new objectives proposed to be added to Healthy People 2020 since its launch in December 2010 and written comments proposing new objectives to be included within existing Healthy People 2020 Topic Areas. Public participation helps shape Healthy People 2020, its framework, objectives, organization, and targets. Healthy People 2020 will provide opportunities for public input periodically throughout the decade to ensure Healthy People 2020 reflects current public health priorities and public input. The updated set of Healthy People 2020 objectives will be incorporated on www.healthypeople.gov. This set will reflect further review and deliberation by the Topic Area workgroups, Federal Interagency Workgroup on Healthy People 2020, and other Healthy People 2020 stakeholders.

DATES: Written comments will be accepted until 5:00 p.m. ET on November 5, 2012.

ADDRESSES: Written comments will be accepted via an online public comment database at <http://healthypeople.gov/2020/about/publicComment.aspx>; by mail at Office of Disease Prevention and Health Promotion, U.S. Department of Health and Human Services, Attn: Public Comment 1101 Wootton Parkway, Room LL-100, Rockville, MD 20852; fax—240-453-8281; or email—HP2020@hhs.gov.

FOR FURTHER INFORMATION CONTACT:

Theresa Devine, MPH, Office of Disease Prevention and Health Promotion, U.S. Department of Health and Human Services, 1101 Wootton Parkway, Room LL-100, Rockville, MD 20852, Theresa.Devine@hhs.gov (email), 240-453-6112 (telephone), 240-453-8281 (fax).

SUPPLEMENTARY INFORMATION: For three decades, Healthy People has provided a comprehensive set of national 10-year health promotion and disease prevention objectives aimed at improving the health of all Americans. Healthy People 2020 objectives provide a framework by presenting a comprehensive picture of the nation's health at the beginning of the decade, establishing national goals and targets to be achieved by the year 2020, and monitoring progress over time. The U.S. Department of Health and Human Services (HHS) is soliciting the submission of written comments regarding new objectives proposed to be added to Healthy People 2020 since its launch in December 2010.

Healthy People 2020 is the product of an extensive collaborative process that relies on input from a diverse array of individuals and organizations, both within and outside the federal government, with a common interest in improving the nation's health. Public comments were a cornerstone of Healthy People 2020's development. During the first phase of planning for Healthy People 2020, HHS asked for the public's comments on the vision, mission, and implementation of Healthy People 2020. Those comments helped set the framework for Healthy People 2020. The public was also invited to submit comments on proposed Healthy People 2020 objectives, which helped shape the final set of Healthy People 2020 objectives.

The public is now invited to comment on new objectives proposed to be added to Healthy People 2020. These new objectives were developed by Topic Area workgroups led by various agencies within the federal government. They have been reviewed by a Federal Interagency Workgroup on Healthy People 2020 and are presented now for the public's review and comment. The

public is also invited to suggest additional objectives for consideration that address critical public health issues within existing Healthy People 2020 Topic Areas. All proposed new objectives must meet all of the objective selection criteria (see below).

Written comments will be accepted at <http://healthypeople.gov/2020/about/publicComment.aspx> during a three-week public comment period beginning in October 2012. The public will also be able to submit written comments via mail, fax, and email (see contact information above). Comments received in response to this notice will be reviewed and considered by the Topic Area workgroups, Federal Interagency Workgroup on Healthy People 2020, and other Healthy People 2020 stakeholders.

Objective Selection Criteria

The following nine criteria should be taken into consideration when commenting on the proposed or suggesting additional objectives.

1. The result to be achieved should be important and understandable to a broad audience and support the Healthy People 2020 goals.

2. Objectives should be prevention oriented and/or should address health improvements that can be achieved through population-based and individual actions, and systems-based, environmental, health-service, or policy interventions.

3. Objectives should drive actions that will work toward the achievement of the proposed targets (defined as quantitative values to be achieved by the year 2020).

4. Objectives should be useful and reflect issues of national importance. Federal agencies, states, localities, non-governmental organizations, and the public and private sectors should be able to use objectives to target efforts in schools, communities, work sites, health practices, and other environments.

5. Objectives should be measurable and should address a range of issues, such as: Behavior and health outcomes; availability of, access to, and content of behavioral and health service interventions; socio-environmental conditions; and community capacity—directed toward improving health outcomes and quality of life across the life span. (Community capacity is defined as the ability of a community to plan, implement, and evaluate health strategies.)

6. Continuity and comparability of measured phenomena from year to year are important, thus, when appropriate, retention of objectives from previous Healthy People iterations is encouraged. However, in instances where objectives and/or measures have proven ill-suited

to the purpose or are inadequate, new improved objectives and/or new measures should be developed. Whether or not an objective has met its target in a previous Healthy People iteration should not be the sole basis for retaining or deleting an objective.

7. The objectives should be supported by the best available scientific evidence. The objective selection and review processes should be flexible enough to allow revisions to objectives in order to reflect major updates or new knowledge.

8. Objectives should address population disparities. These include populations categorized by race/ethnicity, socioeconomic status, gender, disability status, sexual orientation, and geographic location. For particular health issues, additional special populations should be addressed, based on an examination of the available evidence on vulnerability, health status, and disparate care.

9. Healthy People 2020, like past versions, will be heavily data driven. Valid, reliable, nationally representative data and data systems should be used for Healthy People 2020 objectives. Each objective will have (1) a data source, or potential data source, identified, (2) baseline data and (3) assurance of at least one additional data point throughout the decade.

Dated: October 1, 2012.

Don Wright,

Deputy Assistant Secretary for Health, Office of Disease Prevention and Health Promotion.

Proposed Data Collections Submitted for Public Comment and Recommendations

In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 for opportunity for public comment on proposed data collection projects, the Centers for Disease Control and Prevention (CDC) will publish periodic summaries of proposed projects. To request more information on the proposed projects or to obtain a copy of the data collection plans and instruments, call 404-639-7570 and

send comments to Ronald Otten, CDC Reports Clearance Officer, 1600 Clifton Road, MS-D74, Atlanta, GA 30333 or send an email to omb@cdc.gov.

Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Well-Integrated Screening and Evaluation for Women Across the Nation (WISEWOMAN) Reporting System (OMB #0920-0612, exp. 3/31/2013)—Extension—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

Cardiovascular disease (CVD), which includes heart disease, myocardial infarction, and stroke, is the leading cause of death for women in the United States, and is largely preventable. The WISEWOMAN program (Well-Integrated Screening and Evaluation for Women Across the Nation), administered by the Centers for Disease Control and Prevention (CDC), was established to examine ways to improve the delivery of services for women who have limited access to health care and elevated risk factors for CVD. The program focuses on reducing CVD risk factors and provides screening services for select risk factors such as elevated blood cholesterol, hypertension and abnormal blood glucose levels. The program also provides lifestyle interventions and medical referrals. On an annual basis, 21 grantees funded through the WISEWOMAN program have provided services to approximately 30,000 women who are already participating in the National Breast and Cervical Cancer Early Detection Program (NBCCEDP), also administered by CDC.

CDC currently collects information from WISEWOMAN grantees to support continuous program monitoring and

improvement activities. CDC seeks to extend OMB approval for one additional year. There are no changes to the number of respondents, the data items reported to CDC, the estimated burden per response, or the total estimated annualized burden. All information will continue to be collected twice per year.

Information reported to CDC includes baseline and follow-up data (12 months post enrollment) for all women served through the WISEWOMAN program. These data, called the minimum data elements (MDE), include data elements that describe risk factors for the women served in each program and data elements that describe the number and type of intervention sessions attended. Funded grantees compile the data from their existing databases and report the MDE to CDC on April 15th and October 15th of each year.

The MDE data provide an assessment of how effective the WISEWOMAN program is at reducing the burden of cardiovascular disease risk factors among women who utilize program services. The information collected from grantees is also used to assess the cost-effectiveness and impact of the program. Because certain demographic information has already been collected as part of NBCCEDP, the additional burden of WISEWOMAN program reporting is modest.

The overall program evaluation is designed to demonstrate how WISEWOMAN can obtain more complete health data on vulnerable populations, promote public education about disease incidence and risk-factors, improve the availability of screening and diagnostic services for under-served women, ensure the quality of services provided to under-served women, and develop strategies for improved interventions. The information reported to CDC also includes programmatic information related to grantee management, public education and outreach, professional education, service delivery, cost, and progress toward meeting stated programmatic objectives.

All MDE information will be submitted to CDC electronically. The estimated burden per response for Screening and Assessment MDE is 16 hours. The estimated burden per response for Lifestyle Intervention MDE is 8 hours. Progress reports will be submitted in hardcopy format. The estimated burden per response for each progress report is 16 hours.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hr)	Total burden (in hr)
WISEWOMAN Grantees	Screening and Assessment MDE	21	2	16	672
	Lifestyle Intervention MDE	21	2	8	336
	Progress Report	21	2	16	672
Total	1,680

Dated: October 9, 2012.

Proposed Project

Evaluation of the National Tobacco Prevention and Control Public Education Campaign (OMB No. 0920-0923, exp. 2/28/2013)—Revision—National Center for Chronic Disease Prevention and Health Promotion (NCCDPHP), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

In 2012, CDC obtained OMB approval to collect information needed to evaluate CDC's National Tobacco Prevention and Control Public Education Campaign (The Campaign) (OMB No. 0920-0923, exp. 2/28/2013). The evaluation plan was based on two waves of data collection conducted in 2012: An initial baseline survey before the launch of The Campaign (wave 1), and a longitudinal follow-up survey of those participants approximately three months after the conclusion of The Campaign (wave 2). The pre/post assessment design allowed CDC to examine the association between smokers' and nonsmokers' exposure to The Campaign and changes in outcome variables of interest.

CDC recently announced plans to launch a second phase of The Campaign (Phase 2) using the same campaign name ("Tips from Former Smokers"), similar advertisement styles, similar message themes and strategies, and in some cases the same ad cast members. In order to apply a similar evaluation strategy to Phase 2 of The Campaign, CDC is requesting changes to the previously approved information collection plan. These changes include one additional survey in 2013 (wave 3), and changes to the previously approved follow-up questionnaires.

The evaluation plan for Phase 2 will utilize a similar study design (pre/post assessment) and the same sample sources that were utilized in the first phase of campaign evaluation. In 2013, CDC plans to administer 13,750 additional follow-up questionnaires to smokers sourced through the Knowledge Networks (KN) online panel

and the Survey Sampling International (SSI) online panel, and 3,286 additional questionnaires to nonsmokers drawn from the KN Panel. Because respondents in 2013 will be drawn from the same sources utilized in 2012, CDC will be able to conduct longer-term longitudinal analysis of respondents who participate in both the first wave (2012) and third wave (2013) of information collection. CDC will assess relevant outcome measures prior to initiation of Phase 1 of The Campaign, and after completion of the combined Phase 1 and Phase 2 campaigns.

The analysis plan for Phase 2 of The Campaign will allow CDC to estimate smokers' and nonsmokers' exposure to Phase 2 campaign messages, characterize respondents' reactions to Phase 2 campaign messages, describe changes in knowledge, attitudes, and beliefs related to smoking and secondhand smoke, and quantify the number of quit attempts made during the Phase 2 campaign. The revised follow-up questionnaires for 2013 will be similar to the questionnaires administered in 2012, however, changes will be made to measure new outcomes targeted by the Phase 2 campaign, such as knowledge of the association between smoking and diabetes, and knowledge of the relationship between secondhand smoke exposure and heart attacks.

The Phase 2 Campaign is expected to launch in early winter/spring 2013 and will air for approximately three months. To ensure accurate measurement of campaign awareness after all media have been delivered, wave 3 data collection will occur approximately three months after the launch of Phase 2 messages. Information will be collected about smokers' and non-smokers' awareness of and exposure to campaign advertisements; knowledge, attitudes, and beliefs related to smoking and secondhand smoke; and behaviors related to smoking cessation (among the smokers in the sample) and behaviors related to non-smokers' encouragement of smokers to quit smoking. Respondents will undergo a brief screening process to ensure that they

receive the appropriate version of the follow-up questionnaire (smoker or nonsmoker).

OMB approval is requested for one year. Questionnaires will be administered on-line. Participation is

voluntary and there are no costs to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average burden per response (in hr)	Total burden (in hr)
General Population	Screening and Consent Process	43,022	1	2/60	1,434
Adults, ages 18–54 in the U.S.	Smoker Follow-Up Questionnaire	13,750	1	25/60	5,729
	Non-Smoker Follow-Up Questionnaire.	3,286	1	25/60	1,369
Total	8,532

Comments are invited on: (a) Whether the proposed collection of information

is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency’s estimate of the burden of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology. Written comments should be received within 60 days of this notice.

Proposed Project

Vital Statistics Training Application, OMB No. 0920–0217—Revision exp. 5/31/2013—National Center for Health Statistics (NCHS), Centers for Disease Control and Prevention (CDC).

Background and Brief Description

In the United States, legal authority for the registration of vital events, i.e., births, deaths, marriages, divorces, fetal deaths, and induced terminations of pregnancy, resides individually with the States (as well as cities in the case of New York City and Washington, DC) and Puerto Rico, the Virgin Islands, Guam, American Samoa, and the Commonwealth of the Northern Mariana Islands. These governmental entities are the full legal proprietors of vital records and the information contained therein.

As a result of this State authority, the collection of registration-based vital statistics at the national level, referred to as the U.S. National Vital Statistics System (NVSS), depends on a cooperative relationship between the States and the Federal government. This data collection, authorized by 42 U.S.C. 242k, has been carried out by NCHS since it was created in 1960.

NCHS assists in achieving the comparability needed for combining data from all States into national statistics, by conducting a training program for State and local vital statistics staff to assist in developing expertise in all aspects of vital registration and vital statistics. The training offered under this program includes courses for registration staff, statisticians, and coding specialists, all designed to bring about a high degree of uniformity and quality in the data provided by the States. This training program is authorized by 42 U.S.C. 242b, section 304(a). NCHS notifies State and local vital registration officials, as well as Canadian counterparts, about upcoming training. Individual candidates for training then submit an application form including name, address, occupation, and other relevant information. NCHS is requesting 3 years of OMB clearance for these training application forms. There is no cost to respondents other than their time.

ESTIMATED ANNUALIZED BURDEN HOURS

National Institutes of Health

Submission for OMB Review; Comment Request (30-Day FRN); Prostate, Lung, Colorectal and Ovarian Cancer Screening Trial (PLCO) (NCI)

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request to review and approve the information collection listed below. This proposed information collection was previously published in the **Federal Register** on July 16, 2012 (FR 77, 41791) and allowed 60-days for public comment. One public comment was received and a response was sent. The comment referenced alternative research that is unrelated to cancer screening. The purpose of this notice is to allow an additional 30 days for public comment. The National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has

been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the Attention: NIH Desk Officer, Office of Management and Budget, at OIRA_submission@omb.eop.gov or by fax to 202-395-6974. To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact Dr. Christine D. Berg, Chief, Early Detection Research Group, National Cancer Institute, NIH, EPN Building, Room 3100, 6130 Executive Boulevard, Bethesda, MD 20892, or call non-toll-free number 301-496-8544 or email your request, including your address to: bergc@mail.nih.gov.

Comments regarding this information collection are best assured of having their full effect if received within 30 days of the date of this publication.

Proposed Collection: Prostate, Lung, Colorectal, and Ovarian Cancer Screening Trial (PLCO), OMB No: 0925-0407, Expiration Date 9/30/2014, Revision, National Cancer Center (NCI), National Institutes of Health (NIH).

Need and Use of Information Collection: This trial was designed to determine if screening for prostate, lung, colorectal, and ovarian cancer can reduce mortality from these cancers which currently cause an estimated

255,700 deaths annually in the U.S. The design is a two-armed randomized trial of men and women aged 55 to 74 at entry. OMB first approved this study in 1993 and has approved it every 3 years since then through 2014. During the first approval period a pilot study was conducted to evaluate recruitment methods and data collection procedures. Recruitment was completed in 2001, screening was completed in 2006, and data collection continues through 2016. When participants enrolled in the trial they agreed to be followed for at least 13 years from the time of enrollment. In 2011, participants were re-consented for at least an additional five years of follow-up. The current number of respondents is limited to the approximately 94,000 participants being actively followed up. This is down from the initial total. The reports on screening and prostate, lung, colorectal and ovarian cancer mortality based on this trial have been published in peer review medical journals. The additional follow-up will provide data that will clarify further the long term effects of the screening on cancer incidence and mortality for the four targeted cancers. Further, demographic and risk factor information may be used to analyze the differential effectiveness of screening in high versus low risk individuals.

OMB approval is requested for 3 years. There are no costs to respondents other than their time. The total estimated annualized burden hours are 31,813.

ESTIMATES OF ANNUALIZED BURDEN HOURS

Type of respondents	Form name	Number of respondents	Number of responses per respondent	Average time per response (in hrs)	Total burden hours
Male and Female Participants	ASU	94,000	1	5/60	7,833
	Script for ASU Non-response	3,760	1	5/60	313
	HSQ	2,000	1	5/60	167
	MUQ	94,000	1	15/60	23,500
Total	31,813

Dated: October 5, 2012.

Vivian Horovitch-Kelley,

NCI Project Clearance Liaison, NCI, NIH.

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Proposed Collection; Comment Request: Recipient Epidemiology and Donor Evaluation Study-III (REDS-III) Request for Generic Clearance

SUMMARY: In compliance with the requirement of Section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995, for opportunity for public comment on proposed data collection projects, the

National Heart, Lung, and Blood Institute (NHLBI), the National Institutes of Health (NIH), will publish periodic summaries of proposed projects to the Office of Management and Budget (OMB) for review and approval.

Proposed Collection: Title: Recipient Epidemiology and Donor Evaluation Study-III (REDS-III). **Type of Information Collection Request:** New. **Need and Use of Information Collection:** The objective of the Recipient Epidemiology and Donor Evaluation

Study-III (REDS-III) program is to ensure safe and effective blood banking and transfusion medicine practices through a comprehensive, multifaceted strategy involving basic, translational, and clinical research to improve the benefits of transfusion while reducing its risks. The conduct of epidemiologic, survey, and laboratory studies is the cornerstone of REDS-III and its predecessors, the REDS and REDS-II programs. Over the past 20 years, the National Heart, Lung, and Blood Institute (NHLBI) REDS programs have proven to be the premier research programs in blood collection and transfusion safety in the United States. Successive renditions of the REDS programs have built upon the many successes that this research network has realized over the years while being responsive to changing research and clinical needs, and adapting to emerging priorities. Research findings have served to improve the screening of donors and collected blood products, blood banking practices, diagnoses, and the basic science principles of transfusion medicine.

While significant progress has been made, transfusion therapy—a very commonly used therapy affecting about six million recipients annually in the U.S.—remains one of the least understood medical procedures. REDS-II conducted studies of blood donor health but much more needs to be learned, including how donor genetic or

environmental factors may affect the quality of collected blood components and influence non-infectious transfusion complications in recipients. Additionally, there is always the potential that a new, emerging or re-emerging infection may pose a threat to the safety of the U.S. blood supply. Much of the success of the REDS programs was due to their ability to respond in a timely fashion to potential blood safety threats such as West Nile Virus (WNV) in 2002 or Xenotropic Murine Leukemia Virus Related Virus (XMRV) in 2009. Globally, the threat of HIV and other blood-borne infections to blood safety remains real and has to be closely monitored. Therefore, continuing collection of new scientific evidence through REDS-III is both critical to public health in the U.S. and to countries struggling with the HIV epidemic where blood safety and availability are major concerns. Additionally, the research areas encompassed in REDS-III have been and continue to be hypothesis generating, leading to the development of new basic and translational research projects with implications well beyond the fields of blood banking and transfusion medicine. REDS-III has also been charged with the tasks of education and training and integration of these components in a transfusion medicine research network.

With this submission, the REDS-III Study seeks approval from OMB to

develop research studies with data collection activities using focus groups, cognitive interviews, questionnaires and/or qualitative interviews following all required informed consent procedures for respondents and parents/caregivers as appropriate. With this generic clearance, study investigators will be able to use the OMB-approved data collection methods where appropriate to plan and implement time sensitive studies. Such studies that fall within the overall scope of this submission will be subjected to expedited review and approval by OMB before their implementation. Additionally, studies are reviewed by an NHLBI Observational Study Monitoring Board (OSMB) and by all relevant IRBs.

Frequency of Response: Once. *Affected Public:* Individuals. *Type of Respondents:* Males and females 16 years old or older. The annual reporting burden is as follows: *Estimated Number of Respondents:* 6,882; *Estimated Number of Responses per Respondent:* 1; *Average Burden of Hours per Response:* 1 hour; *Estimated Total Annual Burden Hours Requested:* 6,826. The annualized total costs to all respondents except for the Brazil and South Africa studies are estimated at \$53,964 (based on \$9.00 per hour). The annualized total cost to all respondents for the Brazil and South African studies is \$2,940. There are no capital, operating, or maintenance costs to the respondents.

ESTIMATED BURDEN HOURS FOR PROPOSED EXAMPLE STUDIES TO BE CONDUCTED UNDER THIS CLEARANCE

Forms	Number of respondents	Number of responses per respondent	Average burden per response (in hours)	Total annual burden hours
Summary of Burdens	6,882	1	0.25–1 hour	6,826

Request for Comments: Written comments and/or suggestions from the public and affected agencies should address one or more of the following points: (1) Whether the proposed collection of information is necessary for the proper performance of the function of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and the assumptions used; (3) Ways to enhance the quality, utility, and clarity of the information collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic,

mechanical, or other technological collection techniques or other forms of information technology.

FOR FURTHER INFORMATION CONTACT: To request more information on the proposed project or to obtain a copy of the data collection plans and instruments, contact: Simone Glynn, MD, Project Officer/ICD Contact, Two Rockledge Center, Suite 9142, 6701 Rockledge Drive, Bethesda, MD 20892, or call 301-435-0065, or Email your request to: glynnsa@nhlbi.nih.gov.

Comments Due Date: Comments regarding this information collection are best assured of having their full effect if received within 60 days of the date of this publication.

National Institutes of Health
Prospective Grant of Exclusive License: The Development of Anti-CD22 Chimeric Antigen Receptors (CARs) for the Treatment of B Cell Malignancies

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209(c)(1) and 37 CFR part 404.7(a)(1)(i), that the National Institutes of Health, Department of Health and Human Services, is contemplating the grant of an exclusive license to practice the inventions embodied in (a) U.S. Patent Application 61/549,516 entitled "Anti-CD22 Chimeric Antigen Receptors" [HHS Ref. E-265-2011/0-US-01], and (b) U.S. Patent Application 60/325,360 [HHS Ref. E-129-2001/0-US-01], PCT Application PCT/US02/30316 [HHS Ref. E-129-2001/0-PCT-02], U.S. Patent 7,355,012 [HHS Ref. E-129-2001/0-US-03], European Patent 1448584 [HHS Ref. E-129-2001/0-EP-04] (validated in Germany, Spain, France, The United Kingdom and Italy [HHS Ref. E-129-2001/0-IT-12], Australian Patent 2002327053 [HHS Ref. E-129-2001/0-AU-05], Canadian Patent Application 2461351 [HHS Ref. E-129-2001/0-CA-06], U.S. Patent 7,777,019 [HHS Ref. E-129-2001/0-US-07], U.S. Patent Application 12/846,625 [HHS Ref. E-129-2001/0-US-13], U.S. Patent Application 13/438,725 [HHS Ref. E-129-2001/0-US-14] (all entitled "Mutated Anti-CD22 Antibodies with Increased Affinity to CD22 Expressing Leukemia Cells"), and all related continuing and foreign patents/patent applications for these technology families, to Neomune, Inc. The patent rights in these inventions have been assigned to and/or exclusively licensed to the Government of the United States of America.

The prospective exclusive license territory may be worldwide, and the field of use may be limited to:

Treatment of B cell malignancies that express CD22 on their cell surface using chimeric antigen receptors which contain the HA22 or BL22 antibody binding fragments.

DATES: Only written comments and/or applications for a license which are received by the NIH Office of Technology Transfer on or before November 14, 2012 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, comments, and other materials relating to the contemplated exclusive evaluation option license should be directed to: David A. Lambertson, Ph.D., Senior Licensing and Patenting Manager, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852-3804; Telephone: (301) 435-4632; Facsimile: (301) 402-0220; Email: lambertson@mail.nih.gov.

SUPPLEMENTARY INFORMATION: Chimeric antigen receptors (CARs) are engineered cell surface receptors which have been designed to target immune effector cells (such as a T cell) to certain cellular targets. CARs target diseased cells through antigen-specificity domain recognizes a protein that is preferentially expressed on the cells, and the immune effector cell proceeds to eradicate the diseased cells. Since there are a number of cell surface proteins that are preferentially expressed on cancer cells, CARs are potential therapeutic candidates in the treatment of cancer.

The specific CARs for which this exclusive license may be granted comprise a targeting domain which contains the antibody binding fragments of the anti-CD22 antibodies HA22 and BL22. CD22 is a cell surface protein that is preferentially expressed on several types of cancer cells, including hematological malignancies such as chronic lymphocytic leukemia (CLL), acute lymphocytic leukemia (ALL), hairy cell leukemia (HCL) and non-Hodgkin's lymphoma (NHL). By linking an anti-CD22 antibody binding fragment to a CAR, it is possible to selectively kill the CD22-expressing cancer cells, leaving non-cancer cells alone. This results in an effective therapeutic strategy with fewer side effects than a non-targeted therapy.

The prospective exclusive license will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR 404.7. The prospective exclusive license may be granted unless the NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR 404.7 within thirty (30) days from the date of this published notice.

Complete applications for a license in the field of use filed in response to this notice will be treated as objections to the grant of the contemplated exclusive license. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the Freedom of Information Act, 5 U.S.C. 552.

Dated: October 9, 2012.

Richard U. Rodriguez,

Director, Division of Technology Development & Transfer, Office of Technology Transfer, National Institutes of Health.

[FR Doc. 2012-25187 Filed 10-12-12; 8:45 am]

BILLING CODE 4140-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES**National Institutes of Health****Prospective Grant of Exclusive License: The Development of Therapeutic Agents for the Treatment of Metastatic Breast Cancer and T-cell Lymphoma**

AGENCY: National Institutes of Health, Public Health Service, HHS.

ACTION: Notice.

SUMMARY: This is notice, in accordance with 35 U.S.C. 209(c)(1) and 37 CFR Part 404.7(a)(1)(i), that the National Institutes of Health, Department of Health and Human Services, is contemplating the grant to Birich Technologies, Inc., of an exclusive evaluation option license to practice the inventions embodied in the following U.S. Patent Applications (and all continuing applications and foreign counterparts): Serial No. 61/045,088 entitled, "COMPOSITIONS AND METHODS FOR DELIVERING INHIBITORY OLIGONUCLEOTIDES" [HHS Ref. E-051-2008/0-US-01]; Serial No. 61/333,512 entitled, "Peptide Inhibitors of Interferon Gamma and Interleukin 10 Signaling" [HHS Ref. E-167-2010/0-US-01]; and Serial No. 60/987,340 entitled, "Diagnostic and Therapeutic Applications of a p53 Isoform in Regenerative Medicine, Aging and Cancer" [HHS Ref. E-033-2008/0-US-01]. The patent rights in these inventions have been assigned or exclusively licensed to the Government of the United States of America.

The prospective exclusive evaluation option license territory may be worldwide, and the field of use may be limited to:

The use in humans of the peptide-based antisense delivery technology (ChemoArp) in conjunction with either (i) a peptide-based interleukin-10 (IL-10) inhibitor as a dual-biologic therapy to treat metastatic breast cancer, or ii) incorporating a p53 isoform antisense oligonucleotide as a single biologic therapy to treat T-cell lymphoma.

Upon the expiration or termination of the exclusive evaluation option license, Birich Technologies, Inc. will have the exclusive right to execute an exclusive commercialization license which will supersede and replace the exclusive evaluation option license with no greater field of use and territory than granted in the exclusive evaluation option license.

DATES: Only written comments or applications for a license (or both) which are received by the NIH Office of

Technology Transfer on or before October 30, 2012 will be considered.

ADDRESSES: Requests for copies of the patent application, inquiries, comments, and other materials relating to the contemplated exclusive evaluation option license should be directed to: Patrick McCue, Ph.D., Licensing and Patenting Manager, Office of Technology Transfer, National Institutes of Health, 6011 Executive Boulevard, Suite 325, Rockville, MD 20852-3804; Telephone: (301) 435-5560; Facsimile: (301) 402-0220; Email: mccuepat@mail.nih.gov.

SUPPLEMENTARY INFORMATION: These inventions concern i) compositions and methods for targeted delivery of inhibitory nucleic acids to cells using a cell surface receptor ligand targeting domain and an inhibitory oligonucleotide-binding domain to efficiently deliver the antisense nucleic acid to cells that expresses the cell surface receptor that binds the ligand, ii) compositions that potently and selectively interfere with dimerization of interleukin-10 and binding of this protein to its receptor, and iii) compositions that inhibit *delta133p53*, a natural variant nucleic acid of tumor suppressor protein 53 (p53) that inhibits p53-dependent cell senescence.

The prospective exclusive evaluation option license is being considered under the small business initiative launched on 1 October 2011, and will comply with the terms and conditions of 35 U.S.C. 209 and 37 CFR Part 404.7. The prospective exclusive evaluation option license, and a subsequent exclusive commercialization license, may be granted unless the NIH receives written evidence and argument that establishes that the grant of the license would not be consistent with the requirements of 35 U.S.C. 209 and 37 CFR Part 404.7 within fifteen (15) days from the date of this published notice.

Complete applications for a license in the field of use filed in response to this notice will be treated as objections to the grant of the contemplated exclusive evaluation option license. Comments and objections submitted to this notice will not be made available for public inspection and, to the extent permitted by law, will not be released under the *Freedom of Information Act*, 5 U.S.C. 552.

Dated: October 9, 2012.

Richard U. Rodriguez,
Director, Division of Technology Development & Transfer, Office of Technology Transfer, National Institutes of Health.

BILLING CODE 4140-01-P

DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS-2012-0056]

National Infrastructure Advisory Council

AGENCY: National Protection and Programs Directorate, DHS.

ACTION: Committee Management; Notice of an open Federal Advisory Committee Meeting.

SUMMARY: The National Infrastructure Advisory Council (NIAC) will meet Tuesday, October 16, 2012, at the United States Access Board, 1331 F Street NW., Suite 800, Washington, DC 20004. The meeting will be open to the public.

DATES: The NIAC will meet Tuesday, October 16, 2012, from 1:30 p.m. to 4:30 p.m. The meeting may close early if the committee has completed its business. For additional information, please consult the NIAC Web site, www.dhs.gov/NIAC, or contact the NIAC Secretariat by phone at (703) 235-2888 or by email at NIAC@hq.dhs.gov.

ADDRESSES: United States Access Board, 1331 F Street NW., Suite 800, Washington, DC 20004.

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact the person listed under **FOR FURTHER INFORMATION CONTACT**, below as soon as possible.

To facilitate public participation, we are inviting public comment on the issues to be considered by the Council as listed in the **SUMMARY** section below. Comments must be submitted in writing no later than October 11, 2012, and must be identified by "DHS-2012-0056" and may be submitted by any one of the following methods:

- *Federal eRulemaking Portal:* www.regulations.gov. Follow the instructions for submitting written comments.
- *Email:* NIAC@hq.dhs.gov. Include the docket number in the subject line of the message.
- *Fax:* (703) 603-5098.
- *Mail:* Nancy Wong, National Protection and Programs Directorate, Department of Homeland Security, 245 Murray Lane SW., Mail Stop 0607, Arlington, VA 20598-0607.

Instructions: All written submissions received must include the words "Department of Homeland Security" and the docket number for this action. Written comments received will be posted without alteration at www.regulations.gov, including any personal information provided.

Docket: For access to the docket to read background documents or comments received by the NIAC, go to www.regulations.gov.

Members of the public will have an opportunity to provide oral comments after the presentation of the report from the Regional Resilience Working Group. We request that comments be limited to the issues listed in the meeting agenda and previous NIAC studies. All previous NIAC studies can be located at www.dhs.gov/NIAC. Relevant public comments may be submitted in writing or presented in person for the Council to consider. Comments received by Nancy Wong after October 11, 2012, will still be accepted and reviewed by the members, but not necessarily by the time of the meeting. In-person presentations will be limited to 3 minutes per speaker, with no more than 30 minutes for all speakers. Parties interested in making in-person comments should register no later than 15 minutes prior to the beginning of the meeting at the meeting location.

FOR FURTHER INFORMATION CONTACT: Nancy Wong, National Infrastructure Advisory Council Designated Federal Officer, Department of Homeland Security, telephone (703) 235-2888.

SUPPLEMENTARY INFORMATION: Notice of this meeting is given under the Federal Advisory Committee Act, 5 U.S.C. App. (Pub. L. 92-463). The NIAC shall provide the President through the Secretary of Homeland Security with advice on the security of the critical infrastructure sectors and their information systems.

The NIAC will meet to discuss issues relevant to the protection of critical infrastructure as directed by the President. At this meeting, the Council will receive and discuss a presentation from the NIAC Regional Resilience Working Group documenting their work to date on the Regional Resilience Study, which includes the role and impact of critical infrastructure on regional resiliency, best regional practices and models, and the contribution of public private partnerships. The presentation will be posted no later than one week prior to the meeting on the Council's public Web page on www.dhs.gov/NIAC. The Council will review and discuss the findings of the Working Group. Federal officials will provide further direction to the Council on the scope of the Working Group's study.

The Federal Advisory Committee Act requires that notices of meetings of advisory committees be announced in the **Federal Register** 15 days prior to the meeting date.

This notice of the NIAC meeting is published in the **Federal Register** with less than 15 days notice due to the complexity of the issues within the current study. Due to the complexities, the NIAC Working Group was not able to complete the interim finding of the report within this aggressive time line. Waiting for the full 15 day notice period to conduct the meeting will delay the discussion of the report. In order to not delay the continuation of this important study, this meeting is being announced with less than 15 days notice.

Meeting Agenda

- I. Opening of Meeting
- II. Roll Call of Members
- III. Opening Remarks and Introductions
- IV. Approval of July 17, 2012, minutes
- V. NIAC Presentation on Regional Resilience Working Group
- VI. Public Comment: Discussion Limited to Meeting Agenda Items and Previous NIAC Studies
- VII. Closing Remarks

Information on Services for Individuals With Disabilities

For information on facilities or services for individuals with disabilities or to request special assistance at the meeting, contact the NIAC Secretariat at (703) 235-2888 as soon as possible.

Dated: October 3, 2012.

Nancy Wong,

Designated Federal Officer for the NIAC.

BILLING CODE 9110-9P-P

DEPARTMENT OF THE INTERIOR

Fish and Wildlife Service

[FWS-R4-ES-2012-N236;
FXES1113040000EA-123-FF04EF1000]

Endangered and Threatened Wildlife and Plants; Receipt of Application for Incidental Take Permit; Availability of Proposed Low-Effect Habitat Conservation Plan; Primax Properties, LLC, Lake County, FL

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Notice of availability; request for comment/information.

SUMMARY: We, the Fish and Wildlife Service (Service), have received an application from Primax Properties, LLC (applicant), for an incidental take permit (ITP). The applicant requests a 5-year ITP under the Endangered Species Act of 1973, as amended (Act). We request public comment on the permit application (#TE83714A-0) and

accompanying proposed habitat conservation plan (HCP), as well as on our preliminary determination that the plan qualifies as low-effect under the National Environmental Policy Act (NEPA). To make this determination, we used our environmental action statement and low-effect screening form, which are also available for review.

DATES: To ensure consideration, please send your written comments by November 14, 2012.

ADDRESSES: If you wish to review the application and HCP, you may request documents by email, U.S. mail, or phone (see below). These documents are also available for public inspection by appointment during normal business hours at the office below. Send your comments or requests by any one of the following methods.

Email: northflorida@fws.gov. Use "Attn: Permit number TE83714A-0" as your message subject line.

Fax: David L. Hankla, Field Supervisor, (904) 731-3045, Attn.: Permit number TE83714A-0.

U.S. mail: David L. Hankla, Field Supervisor, Jacksonville Ecological Services Field Office, Attn: Permit number TE83714A-0, U.S. Fish and Wildlife Service, 7915 Baymeadows Way, Suite 200, Jacksonville, FL 32256.

In-person drop-off: You may drop off information during regular business hours at the above office address.

FOR FURTHER INFORMATION CONTACT: Erin M. Gawera, telephone: (904) 731-3121; email: erin_gawera@fws.gov.

SUPPLEMENTARY INFORMATION:

Background

Section 9 of the Act (16 U.S.C. 1531 et seq.) and our implementing Federal regulations in the Code of Federal Regulations (CFR) at 50 CFR part 17 prohibit the "take" of fish or wildlife species listed as endangered or threatened. Take of listed fish or wildlife is defined under the Act as "to harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or to attempt to engage in any such conduct" (16 U.S.C. 1532). However, under limited circumstances, we issue permits to authorize incidental take—i.e., take that is incidental to, and not the purpose of, the carrying out of an otherwise lawful activity.

Regulations governing incidental take permits for threatened and endangered species are at 50 CFR 17.32 and 17.22, respectively. The Act's take prohibitions do not apply to federally listed plants on private lands unless such take would violate State law. In addition to meeting other criteria, an incidental take permit's proposed actions must not

jeopardize the existence of federally listed fish, wildlife, or plants.

Applicant's Proposal

The applicant is requesting take of approximately 3.57 ac of occupied sand skink foraging and sheltering habitat incidental to construction of a commercial development, and seeks a 5-year permit. The 3.92-ac project site is located on 21.28-ac parcel #19-22-25-000100005200 within Section 19, Township 22 South, Range 25 East, Lake County, Florida. The applicant proposes to mitigate for the take of the sand skink by the purchase of 7.14 mitigation credits within the Hatchineha Ranch Conservation Bank.

Our Preliminary Determination

We have determined that the applicant's proposal, including the proposed mitigation and minimization measures, would have minor or negligible effects on the species covered in the HCP. Therefore, we determined that the ITP is a "low-effect" project and qualifies for categorical exclusion under the National Environmental Policy Act (NEPA), as provided by the Department of the Interior Manual (516 DM 2 Appendix 1 and 516 DM 6 Appendix 1). A low-effect HCP is one involving (1) minor or negligible effects on federally listed or candidate species and their habitats, and (2) minor or negligible effects on other environmental values or resources.

Next Steps

We will evaluate the HCP and comments we receive to determine whether the ITP application meets the requirements of section 10(a) of the Act (16 U.S.C. 1531 et seq.). If we determine that the application meets these requirements, we will issue ITP #TE83714A-0. We will also evaluate whether issuance of the section 10(a)(1)(B) ITP complies with section 7 of the Act by conducting an intra-Service section 7 consultation. We will use the results of this consultation, in combination with the above findings, in our final analysis to determine whether or not to issue the ITP. If the requirements are met, we will issue the permit to the applicant.

Public Comments

If you wish to comment on the permit application, HCP, and associated documents, you may submit comments by any one of the methods in **ADDRESSES**.

Public Availability of Comments

Before including your address, phone number, email address, or other

personal identifying information in your comments, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority

We provide this notice under Section 10 of the Act and NEPA regulations (40 CFR 1506.6).

Dated: October 5, 2012.

David L. Hankla,

Field Supervisor, Jacksonville Field Office, Southeast Region.

DEPARTMENT OF THE INTERIOR

Geological Survey

[GX13GG009950000]

Scientific Earthquake Studies Advisory Committee

AGENCY: U.S. Geological Survey.

ACTION: Notice of Meeting.

SUMMARY: Pursuant to Public Law 106-503, the Scientific Earthquake Studies Advisory Committee (SESAC) will hold its next meeting on the campus of the Colorado School of Mines, Ballroom B, in Golden, Colorado. The Committee is comprised of members from academia, industry, and State government. The Committee shall advise the Director of the U.S. Geological Survey (USGS) on matters relating to the USGS's participation in the National Earthquake Hazards Reduction Program.

The Committee will receive reports on the status of activities of the Program and progress toward Program goals and objectives. The Committee will assess this information and provide guidance on the future undertakings and direction of the Earthquake Hazards Program.

Meetings of the Scientific Earthquake Studies Advisory Committee are open to the public.

DATES: October 29, 2012, commencing at 8:30 a.m. and adjourning at Noon on October 30, 2012.

Contact: Dr. William Leith, U.S. Geological Survey, MS 905, 12201 Sunrise Valley Drive, Reston, Virginia 20192, (703) 648-6786, wleith@usgs.gov.

BILLING CODE 4311-AM-P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

Land Acquisitions: Mandan, Hidatsa, and Arikara Nation

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice.

SUMMARY: The Assistant Secretary—Indian Affairs made a final agency determination to acquire approximately 468.39 acres of land into trust for the Mandan, Hidatsa, and Arikara Nation (MHA Nation) on October 10, 2012.

FOR FURTHER INFORMATION CONTACT: Diane Mann-Klager, Bureau of Indian Affairs, Division of Natural Resources, 115 Fourth Ave Southeast, Suite 400, Aberdeen, South Dakota 57401; phone: (605) 226-7621; email: diane.mann-klager@bia.gov.

SUPPLEMENTARY INFORMATION: This notice is published in the exercise of authority delegated by the Secretary of the Interior to the Assistant Secretary—Indian Affairs by 209 Departmental Manual 8.1 and is published to comply with the requirements of 25 CFR 151.12(b) that notice be given to the public of the Secretary's decision to acquire land into trust at least 30 days prior to signatory acceptance of the land into trust. The purpose of the 30-day waiting period in 25 CFR 151.12(b) is to afford interested parties the opportunity to seek judicial review of final administrative decisions to take land into trust for Indian tribes and individual Indians before transfer of title to the property occurs.

On October 10, 2012, the Assistant Secretary—Indian Affairs decided to accept approximately 468.39 acres of land into trust for the MHA Nation; under the authority of the Indian Reorganization Act of 1934, 25 U.S.C. 465. The parcel is located on the Fort Berthold reservation, in Ward County, North Dakota, and is located in the northeast corner of the Fort Berthold Indian Reservation west of Makoti, North Dakota, in N¹/₂ of Section 19 and NW¹/₄ of Section 20 of Township 152 North, Range 87 West, 5th Principal Meridian. The MHA Nation proposes to use the property to construct and operate a new "Clean Fuels Refinery" and grow forage for buffalo.

Dated: October 10, 2012.
Kevin K. Washburn,
Assistant Secretary—Indian Affairs.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLWO35000.L14300000.FR0000]

Renewal of Approved Information Collection

AGENCY: Bureau of Land Management, Interior.

ACTION: 30-day notice and request for comments.

SUMMARY: The Bureau of Land Management (BLM) has submitted an information collection request to the Office of Management and Budget (OMB) to continue the collection of information from applicants for a land patent under the Color-of-Title Act. The Office of Management and Budget (OMB) previously approved this information collection activity, and assigned it control number 1004–0029.

DATES: The OMB is required to respond to this information collection request within 60 days but may respond after 30 days. For maximum consideration, written comments should be received on or before November 14, 2012.

ADDRESSES: Please submit comments directly to the Desk Officer for the Department of the Interior (OMB #1004–0029), Office of Management and Budget, Office of Information and Regulatory Affairs, fax 202–395–5806, or by electronic mail at *oira_docket@omb.eop.gov*. Please provide a copy of your comments to the BLM. You may do so via mail, fax, or electronic mail.

Mail: U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

Fax: to Jean Sonneman at 202–245–0050.

Electronic mail:
Jean_Sonneman@blm.gov.

Please indicate “Attn: 1004–0029” regardless of the form of your comments.

FOR FURTHER INFORMATION CONTACT: Jeff Holdren, at 202–912–7335. Persons who use a telecommunication device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1–800–877–8339, to leave a message for Mr. Holdren. You may also review the information collection request online at *http://www.reginfo.gov/public/do/PRAMain*.

SUPPLEMENTARY INFORMATION: The Paperwork Reduction Act (44 U.S.C. 3501–3521) and OMB regulations at 5 CFR part 1320 provide that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond. In order to obtain and renew an OMB control number, Federal agencies are required to seek public comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d) and 1320.12(a)).

As required at 5 CFR 1320.8(d), the BLM published a 60-day notice in the **Federal Register** on June 13, 2012 (77 FR 35420), and the comment period ended August 13, 2012. The BLM received no comments. The BLM now requests comments on the following subjects:

1. Whether the collection of information is necessary for the proper functioning of the BLM, including whether the information will have practical utility;
2. The accuracy of the BLM’s estimate of the burden of collecting the information, including the validity of the methodology and assumptions used;
3. The quality, utility and clarity of the information to be collected; and
4. How to minimize the information collection burden on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other forms of information technology.

Please send comments as directed under **ADDRESSES** and **DATES**. Please refer to OMB control number 1004–0029

in your correspondence. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information is provided for the information collection:

Title: Color-of-Title Application (43 CFR Subparts 2540 and 2541).

Forms:

- Form 2540–1, Color-of-Title Application;
- Form 2540–2, Color-of-Title Conveyances Affecting Color or Claim of Title; and
- Form 2540–3, Color-of-Title Tax Levy and Payment Record.

OMB Control Number: 1004–0029.

Abstract: The Color-of-Title Act (43 U.S.C. 1068, 1068a, and 1068b) provides for the issuance of a land patent to a tract of public land of up to 160 acres, where the claimant shows peaceful, adverse possession of the tract in good faith for more than 20 years, as well as sufficient improvement or cultivation of the land. The information covered in this submission enables the BLM to determine whether or not such a claimant has made a showing that is sufficient under the pertinent statutory and regulatory criteria.

Frequency of Collection: Once.

Estimated Number and Description of Respondents Annually: 8 individuals, 1 group, and 1 association, which seek title to public land on the basis of adverse possession.

Estimated Reporting and Recordkeeping “Hour” Burden Annually: 30 hours.

Estimated Reporting and Recordkeeping “Non-Hour Cost” Burden: \$100.

The following table details the individual components and respective hour burdens of this information collection request:

A. Type of response	B. Number of responses	C. Hours per response	D. Total hours (Column B × Column C)
Color-of-Title Application/Individuals	8	3	24
Color-of-Title Application/Groups	1	3	3
Color-of-Title Application/Corporations	1	3	3
Totals	10	30

Jean Sonneman,

Bureau of Land Management, Information
Collection Clearance Officer.

Notice of Availability of the Draft Supplemental Environmental Impact Statement and the Draft Resource Management Plan Amendment for the Proposed Silver State Solar South Project in Clark County Near Primm, NV

AGENCY: Bureau of Land Management,
Interior.

ACTION: Notice of Availability.

SUMMARY: In accordance with the National Environmental Policy Act of 1969, as amended (NEPA), and the Federal Land Policy and Management Act of 1976, as amended, the Bureau of Land Management (BLM) has prepared a Draft Supplemental Environmental Impact Statement (EIS) and a Draft Resource Management Plan (RMP) Amendment for the proposed Silver State Solar South Project located on public lands east of Primm, Nevada, and by this notice is announcing the opening of the comment period.

DATES: To ensure that comments will be considered, the BLM must receive written comments on the Draft Supplementary EIS and the Draft RMP Amendment within 90 days following the date the Environmental Protection Agency publishes its Notice of Availability in the **Federal Register**. The BLM will announce future meetings or hearings and any other public involvement activities at least 15 days in advance through public notices, media releases, and/or mailings.

ADDRESSES: You may submit comments related to the Silver State Solar South Project by any of the following methods:

- *Web site:* http://www.blm.gov/nv/st/en/fo/ivfo/blm_programs/energy/Silver_State_Solar_South.html.

- *Email:*

SilverStateSouthEIS@blm.gov.

- *Fax:* 702-515-5155, attention Gregory Helseth.

- *Mail:* Bureau of Land Management, Las Vegas Field Office, Attn: Gregory Helseth, 4701 North Torrey Pines Drive, Las Vegas, NV 89130-2301.

Copies of the Silver State Solar South Project Draft Supplemental EIS and the Draft RMP Amendment are available in the BLM Southern Nevada District Office at the above address and on the project Web site.

FOR FURTHER INFORMATION CONTACT:

Gregory Helseth, Renewable Energy Project Manager, at 702-515-5173; or address 4701 North Torrey Pines Drive, Las Vegas, Nevada 89130-2301; or email ghelseth@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: Silver State Solar, LLC, has submitted a right-of-way (ROW) application for the construction, operation, maintenance, and termination of a solar energy generation facility on 13,183 acres of public land east of Primm, Nevada. The ROW application is assigned BLM case number N-89530. This application expands on the previously considered ROW application N-85801. The proposed solar energy project would consist of photovoltaic (PV) panels and related infrastructure ROW appurtenances, including a substation and switchyard facilities, and would produce about 350 megawatts (MW) of electricity. The solar field and infrastructure would consist of single-axis tracker systems or fixed panels, an underground and overhead electrical power collection system, two step-up transformers, 230 kilovolt (kV) and 220 kV transmission lines, an operation and maintenance area, a switchyard, paved access and maintenance roads, flood and drainage controls, and a fire break.

The Silver State Solar South Project Draft Supplemental EIS will address the new application N-89530 and update as necessary the consideration of N-85801, which was initially analyzed in the Final EIS for the Silver State Solar North Project. The approved Silver State Solar North Project did not authorize ROW application N-85801. The BLM approved a Record of Decision on October 12, 2010, for the Silver State Solar North Project and authorized ROW N-85077 for the construction and operation of a 50 MW PV solar energy facility on 618 acres of BLM administered lands adjacent to the Silver State South project area. The application for N-85801 is now included as part of the Silver State Solar South Project, along with ROW

application N-89530. If the BLM approves ROW application N-89530, the BLM will also need to amend the October 1998 Las Vegas RMP to address proposed changes in land and resource use within the Jean Lake/Roach Lake Special Recreation Management Area (SRMA).

The Draft Supplemental EIS analyzes the site-specific impacts on air quality, biological resources, cultural resources, special designations (SRMA), water resources, and geological resources and hazards. The document will also analyze land and airspace use, noise, paleontological resources, public health, socioeconomics, soils, traffic and transportation, visual resources, wilderness characteristics, waste management, worker safety, fire protection, and hazardous materials handling; as well as facility-design engineering, efficiency, reliability, transmission-system engineering, transmission line safety, and nuisance issues.

By this notice, the BLM is complying with requirements in 43 CFR 1610.2(c) to notify the public of potential amendments to land use plans. The BLM will integrate the land use planning process with the NEPA process for this project. Besides the SRMA, the BLM will consider additional plan amendments to the Las Vegas RMP, including a proposed nomination for an Area of Critical Environmental Concern (ACEC) within the Ivanpah Valley and a Visual Resource Management (VRM) change within the project boundary from Class III to Class IV.

As required by 43 C.F.R. 1610.7-2(b), the BLM is also taking public comments on the proposed ACEC. In order to adequately protect the relevant and important values in the proposed 40,180-acre ACEC, the BLM is evaluating whether to impose the following new restrictions:

- Retaining the lands in Federal ownership;
- Allowing facilities that provide resource protection;
- Enhancing the relevant and important (R&I) values and/or addressing human health and safety on a case-by-case basis;
- Imposing a linear ROW avoidance restriction;
- Excluding large site-type ROWs (greater than 5 acres);
- Restoring temporary disturbances to meet the standard BLM restoration standards; and
- Allowing land use authorizations and small site-type ROWs (5 acres or less) on a case-by-case basis.

The proposed ACEC would be open to locatable mineral development and closed to solid leasable mineral development. Fluid leasable mineral development would be allowed with controlled surface use restrictions; the BLM may require that a proposed facility or activity be relocated by more than 200 meters from a proposed location as necessary to achieve the desired level of resource protection. Saleable mineral disposals that provide resource protection, enhancement of the R&I values and/or address human health and safety would be allowed on a case-by-case basis.

The proposed ACEC would be closed to livestock grazing.

The BLM would limit development of recreation facilities to those necessary for resource protection only. Off-highway vehicle (OHV) use would be limited to designated routes, and permitted non-speed recreation activities in the ACEC would require a desert tortoise spotter during the tortoise active season. In addition, the BLM would monitor the activities to ensure tortoises are not affected.

For sensitive species, the BLM would allow prescribed fire use to meet resource objectives and habitat enhancement purposes in appropriate areas to support habitat recovery objectives and allow use of approved herbicides following ground-disturbing activities in order to implement invasive species control methods and support habitat recovery objectives. Military maneuvers would not be authorized. Activities that result in loss or degradation of tortoise habitat would require reclamation so that pre-disturbance conditions may be reached within a reasonable time frame; reclamation may include, but is not limited to, salvaging and transplanting cactus and yucca, recontouring of the area, scarifying compacted soil, adding soil amendments, seeding, and transplanting of seedling shrubs. Subsequent seeding or transplanting efforts may be required if monitoring indicates that the original effort was not successful. Alternative B and C would not designate an ACEC; however, the BLM would manage the area as part of an SRMA.

The visual resource class change from Class III to Class IV would only apply to the project site and applies to alternatives B, C and D.

The BLM will use and coordinate the NEPA comment process to satisfy the public involvement process for Section 106 of the National Historic Preservation Act (16 U.S.C. 470(f)) as provided for in 36 CFR 800.2(d)(3). Native American tribal consultations

have been conducted in accordance with policy. Tribal concerns have been given due consideration, including impacts on Indian trust assets.

The Draft Supplemental EIS analyzes four alternatives, including the no action alternative (Alternative A) and three action alternatives. Alternative B is Silver State's original proposal (as described in its Plan of Development dated July 2011). This alternative was introduced in initial scoping meetings and does not include perimeter roads. Alternative B would disturb up to 3,855 acres of Federal land. Alternative C would disturb up to 2,515 acres of Federal lands, and includes the project layout for Phases II and III that was previously evaluated in the 2010 Final EIS. Alternative D would disturb up to 3,091 acres of Federal land and is a modified layout of Silver State's original proposal (Alternative B above) to allow access through a historically used recreation route.

The BLM is required to select a preferred alternative for the RMP amendment; this decision is separate from whether a preferred alternative is identified for the proposed project. The BLM preferred alternative for the RMP amendment identified in the Draft Supplemental EIS is to (1) Reduce the acreage of the SRMA by the project footprint (if approved) and (2) To change the VRM class from VRM Class III to IV for the project footprint (if approved). There is no BLM preferred project alternative identified in the Draft Supplemental EIS so that the BLM can make best use of public input to reach an informed decision. Formal scoping for the project occurred from September 1 to October 31, 2011 (74 FR 31306). The BLM received a total of 55 comment submissions during the scoping period, identifying 201 issues. The comments identified concerns in a broad range of categories, including OHV access; recreation; socioeconomic resources; federally listed species and their habitat, including desert tortoise habitat and rare plants; surface water/storm runoff; alternatives for analysis; and cumulative impacts.

Maps of the proposed project area and the alternatives being analyzed in the Draft Supplemental EIS are available at the BLM Southern Nevada District Office and the Southern Nevada BLM energy Web site cited above. Please note that public comments and information submitted including names, street addresses, and email addresses of persons who submit comments will be available for public review and disclosure at the above address during regular business hours (8 a.m. to 4 p.m.),

Monday through Friday, except holidays.

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Authority: 40 CFR 1506.6, 40 CFR 1506.10, 43 CFR 16.

Vanessa Hice,

Assistant Field Manager, Division of Lands.

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LLMT926000-L14200000-BJ0000]

Notice of Filing of Plats of Survey; South Dakota

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of filing of plats of survey.

SUMMARY: The Bureau of Land Management (BLM) will file the plat of survey of the lands described below in the BLM Montana State Office, Billings, Montana, on November 14, 2012.

DATES: Protests of the survey must be filed before November 14, 2012 to be considered.

ADDRESSES: Protests of the survey should be sent to the Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101-4669.

FOR FURTHER INFORMATION CONTACT: Marvin Montoya, Cadastral Surveyor, Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101-4669, telephone (406) 896-5124 or (406) 896-5009, Marvin_Montoya@blm.gov. Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: This survey was executed at the request of

the Regional Director, Great Plains Region, Bureau of Indian Affairs, Aberdeen, South Dakota, and was necessary to determine individual and tribal trust lands.

The lands we surveyed are:

Fifth Principal Meridian, South Dakota

T. 127 N., R. 48 W.

The plat, in four sheets, representing the dependent resurvey of a portion of the subdivisional lines, a portion of the subdivision of sections 22 and 27, and the adjusted original meanders of Lake Traverse, through section 27, and the subdivision of sections 22 and 27, Township 127 North, Range 48 West, Fifth Principal Meridian, South Dakota, was accepted September 27, 2012.

We will place a copy of the plat, in four sheets, and related field notes we described in the open files. They will be available to the public as a matter of information. If the BLM receives a protest against this survey, as shown on this plat, in four sheets, prior to the date of the official filing, we will stay the filing pending our consideration of the protest. We will not officially file this plat, in four sheets, until the day after we have accepted or dismissed all protests and they have become final, including decisions or appeals.

Authority: 43 U.S.C. Chap. 3.

James D. Clafin,

Chief Cadastral Surveyor, Division of Resources.

Notice of Filing of Plats of Survey; Montana

AGENCY: Bureau of Land Management, Interior.

ACTION: Notice of filing of plats of survey.

SUMMARY: The Bureau of Land Management (BLM) will file the plat of survey of the lands described below in the BLM Montana State Office, Billings, Montana, on November 14, 2012.

DATES: Protests of the survey must be filed before November 14, 2012 to be considered.

ADDRESSES: Protests of the survey should be sent to the Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101-4669.

FOR FURTHER INFORMATION CONTACT:

Marvin Montoya, Cadastral Surveyor, Branch of Cadastral Survey, Bureau of Land Management, 5001 Southgate Drive, Billings, Montana 59101-4669, telephone (406) 896-5124 or (406) 896-5009, *Marvin_Montoya@blm.gov*.

Persons who use a telecommunications device for the deaf (TDD) may call the Federal Information Relay Service (FIRS) at 1-800-877-8339 to contact the above individual during normal business hours. The FIRS is available 24 hours a day, 7 days a week, to leave a message or question with the above individual. You will receive a reply during normal business hours.

SUPPLEMENTARY INFORMATION: This survey was executed at the request of the Regional Director, Bureau of Indian Affairs, Rocky Mountain Region, Billings, Montana and was necessary to determine individual and tribal trust lands.

The lands we surveyed are:

Principal Meridian, Montana

T. 27 N., R. 54 E.

The plat, in four sheets, representing the dependent resurvey of portions of the north boundary, the subdivisional lines, the subdivision of section 4, and the adjusted original meanders of the left bank of the Missouri River, downstream, through section 4, and the subdivision of section 4, and the survey of a portion of the meanders of the present left bank, downstream through section 4, Township 27 North, Range 54 East, Principal Meridian, Montana, was accepted September 20, 2012.

We will place a copy of the plat, in four sheets, and related field notes we described in the open files. They will be available to the public as a matter of information. If the BLM receives a protest against this survey, as shown on this plat, in four sheets, prior to the date of the official filing, we will stay the filing pending our consideration of the protest. We will not officially file this plat, in four sheets, until the day after we have accepted or dismissed all protests and they have become final, including decisions or appeals.

Authority: 43 U.S.C. Chap. 3.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS-MWR-MORU-10496; 6065-4000-409]

Termination of Environmental Impact Statement for the General Management Plan, Mount Rushmore National Memorial, South Dakota

AGENCY: National Park Service, Interior.

ACTION: Notice of Termination of Environmental Impact Statement.

SUMMARY: The National Park Service (NPS) is terminating the preparation of an environmental impact statement (EIS) for the Mount Rushmore National Memorial General Management Plan (GMP) and will be preparing an Environmental Assessment (EA) instead.

DATES: The draft GMP EA is expected to be distributed for public comment in the fall of 2012. Specific dates, times, and locations will be announced on the Internet at the NPS Planning, Environment, and Public Comment Web site (<http://www.parkplanning.nps.gov/moru>), at the park Web site (<http://www.nps.gov/moru>), and will also be available by contacting park staff at the address below.

ADDRESSES: Mount Rushmore National Memorial, 13000 Hwy 244 Bldg 31 Suite 1, Keystone, South Dakota 57751; telephone, (605) 574-2523.

FOR FURTHER INFORMATION CONTACT:

Contact Superintendent Schreier at the address above, by telephone at (605) 574-3131, or by email at *MORU_Superintendent@nps.gov*.

SUPPLEMENTARY INFORMATION: We, the NPS, have determined that an EA rather than an EIS is the appropriate level of environmental documentation for the GMP. Preliminary analysis of alternatives showed there was no potential for significant impacts to park resources and values and no concerns or issues were expressed during the public scoping process for the GMP that have the potential for controversial impacts. For these reasons the NPS determined the proposal would not constitute a major federal action requiring an EIS. A notice of intent to prepare the EIS for the GMP was published in the November 26, 2008, **Federal Register** (Volume 73, Number 229). Publication of the notice was followed with public meetings held in Rapid City, Hot Springs, and Keystone, South Dakota, in December 2008.

We intend to issue an EA that considers the following two alternatives and their related impacts:

No-action alternative: Continue the present management direction as guided by the 1980 GMP.

Preferred alternative: Relocate emergency operations and park maintenance operations to increase safety and operational effectiveness; rehabilitate an existing overflow parking lot as a picnic/day use area; make trail and observation platform improvements consistent with Architectural Barriers Act Accessibility Standards (ABAAS); and redesign concession dining facilities to accommodate growth in visitation. The preferred alternative would result in beneficial changes in the safety, operations, visitor experience, and accessibility within the memorial.

Dated: May 31, 2012.

Michael T. Reynolds,

Regional Director, Midwest Region.

DEPARTMENT OF JUSTICE

Notice of Lodging of Proposed Consent Decree Under the Comprehensive Environmental Response, Compensation and Liability Act

On October 9, 2012, the Department of Justice lodged a proposed Consent Decree with the United States District Court for the Eastern District of Wisconsin in the lawsuit entitled *United States v. Mercury Marine*, Civil Action No. 2:12-cv-1022.

The United States filed this lawsuit under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The complaint seeks injunctive relief and payment of past and future costs that the United States incurred and will incur responding to releases of hazardous substances at the Cedarville Dams (a/k/a Cedar Creek) Superfund Site in Cedarburg, Wisconsin. In the proposed Consent Decree, the defendant agrees to pay the United States' past and future response costs and to perform the selected remedy for the Operable Unit 1, which addresses contamination at Mercury Marine's former Plant 2 at 2526 St. John

Avenue in Cedarburg, Wisconsin. In return, the United States agrees not to sue the defendant under sections 106 and 107 of CERCLA.

The publication of this notice opens a period for public comment on the proposed Consent Decree. Comments should be addressed to the Assistant Attorney General, Environment and Natural Resources Division, and should refer to *United States v. Mercury Marine*, D.J. Ref. No. 90-11-3-10575. All comments must be submitted no later than thirty (30) days after the publication date of this notice. Comments may be submitted either by email or by mail:

<i>To submit comments:</i>	<i>Send them to:</i>
By email	<i>pubcomment-ees.enrd@usdoj.gov.</i>
By mail	Assistant Attorney General, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

During the public comment period, the proposed Consent Decree may be examined and downloaded at this Justice Department Web site: http://www.usdoj.gov/enrd/Consent_Decrees.html. We will provide a paper copy of the proposed Consent Decree upon written request and payment of reproduction costs. Please mail your request and payment to: Consent Decree Library, U.S. DOJ—ENRD, P.O. Box 7611, Washington, DC 20044-7611.

Please enclose a check or money order for \$11.75 (25 cents per page reproduction cost) payable to the United States Treasury.

Maureen M. Katz,
Assistant Section Chief, Environmental Enforcement Section, Environment and Natural Resources Division.

BILLING CODE 4410-15-P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[OMB Number 1117-0014]

Agency Information Collection Activities; Proposed Collection; Comments Requested: Application for Registration; Application for Registration Renewal; Affidavit for Chain Renewal; Application for Modification of Registration for Online Pharmacies DEA Forms 224, 224a, 224b, 224c

ACTION: 30-Day Notice.

The Department of Justice (DOJ), Drug Enforcement Administration (DEA) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** at 77 FR 47095, August 7, 2012, allowing for a 60 day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until November 14, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, VA 22152; (202) 307-7297.

Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: DOJ Desk Officer. The best way to ensure your comments are received is to email them to oir_submission@omb.eop.gov or fax them to (202) 395-7285. All comments should reference the eight-digit OMB number for the collection or the title of the collection. If you have questions concerning the collection, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, VA 22152, (202) 307-7297, or the DOJ Desk Officer at (202) 395-3176.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

- Enhance the quality, utility, and clarity of the information to be collected; and

- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of Information Collection 1117-0014

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Application for Registration; Application for Registration Renewal; Affidavit for Chain Renewal; Application for Modification of Registration for Online Pharmacies.

(3) *Agency form number, if any, and the applicable component of the Department sponsoring the collection:*

Form number: DEA Forms 224, 224a, 224b, 224c.

Component: Office of Diversion Control, Drug Enforcement Administration, U.S. Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for-profit.

Other: Not-for-profit institutions; State, local, or tribal government.

Abstract: All firms and individuals who dispense controlled substances must register with the DEA under the Controlled Substances Act. Pharmacies wishing to be online pharmacies must apply to modify their registrations. Such registration is mandatory under the law and needed for control measures over legal handlers of controlled substances and to monitor their activities.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:*

	Number of annual respondents	Average time per response	Total annual hours
DEA-224 (paper)	5,867	0.2 hours (12 minutes)	1,173.4
DEA-224 (electronic)	79,057	0.13 hours (8 minutes)	10,540.9
DEA-224a (paper)	66,200	0.2 hours (12 minutes)	13,240
DEA-224a (electronic)	323,758	0.07 hours (4 minutes)	21,583.8
DEA-224b (chain renewal)*	32	5 hours	160
DEA-224c	0	0.25 hours (15 minutes)	0
Total	474,914	46,698.1

* In total, 64 chain pharmacies represent 36,660 individual pharmacy registrants. Pharmacies register for a three-year registration period. In calendar year 2011, the year for which estimates are calculated, 32 chains registered 6,472 individual pharmacies.

(6) *An estimate of the total public burden (in hours) associated with the collection:* It is estimated that there are 46,698 annual burden hours associated with this information collection. If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, 145 N Street NE., Suite 2E-508, Washington, DC 20530.

Dated: October 9, 2012.

Jerri Murray,

Department Clearance Officer, PRA, U.S. Department of Justice.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

[OMB Number 1117-0047]

Agency Information Collection Activities; Proposed Collection; Comments Requested: Application for Import Quota for Ephedrine, Pseudoephedrine, and Phenylpropanolamine; DEA Form 488

ACTION: 30-Day Notice.

The Department of Justice (DOJ), Drug Enforcement Administration (DEA) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** 77, Number 154, page 47667, on August 9, 2012, allowing for a 60 day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until November 14, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, VA 22152; (202) 307-7297.

Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: DOJ Desk Officer. The best way to ensure your comments are received is to email them to oir_submission@omb.eop.gov or fax them to (202) 395-7285. All comments should reference the eight-digit OMB number for the collection or the title of the collection. If you have questions concerning the collection, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, VA 22152, (202) 307-7297, or the DOJ Desk Officer at (202) 395-3897.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the

use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of Information Collection 1117-0047

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Application for Import Quota for Ephedrine, Pseudoephedrine, and Phenylpropanolamine.

(3) *Agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number: DEA form 488.

Component: Office of Diversion Control, Drug Enforcement Administration, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for-profit.
Other: None.

Abstract: Title 21 U.S.C. 952 and 21 CFR 1315.34 require that persons who desire to import the List I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine during the next calendar year shall apply on DEA Form 488 for import quota for such List I chemicals.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* It is estimated that 22 persons complete 52 DEA Forms 488 annually for this collection at 1 hour per form, for an annual burden of 52 hours. Respondents complete a separate DEA Form 488 for each List I chemical for which quota is sought.

(6) *An estimate of the total public burden (in hours) associated with the collection:* It is estimated that there are 52 annual burden hours associated with this collection. If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management

Division, Department of Justice, Two Constitution Square, 145 N Street NE., Suite 2E-508, Washington, DC 20530.

Dated: October 9, 2012.

Agency Information Collection Activities; Proposed Collection; Comments Requested: Import/Export Declaration for List I and List II Chemicals; DEA Forms 486 and 486A

ACTION: 30-Day Notice.

The Department of Justice (DOJ), Drug Enforcement Administration (DEA) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. This proposed information collection was previously published in the **Federal Register** at Volume 77, Number 154, page 47666, August 9, 2012, allowing for a 60 day comment period.

The purpose of this notice is to allow for an additional 30 days for public comment until November 14, 2012. This process is conducted in accordance with 5 CFR 1320.10.

If you have comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement

Administration, 8701 Morrisette Drive, Springfield, VA 22152; (202) 307-7297.

Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: DOJ Desk Officer. The best way to ensure your comments are received is to email them to oir_submission@omb.eop.gov or fax them to (202) 395-7285. All comments should reference the eight-digit OMB number for the collection or the title of the collection. If you have questions concerning the collection, please contact John W. Partridge, Chief, Liaison and Policy Section, Office of Diversion Control, Drug Enforcement Administration, 8701 Morrisette Drive, Springfield, VA 22152, (202) 307-7297, or the DOJ Desk Officer at (202) 395-3897 or the DOJ desk officer at (202) 395-3897.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agencies estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of Information Collection 1117-0023

(1) *Type of Information Collection:* Extension of a currently approved collection.

(2) *Title of the Form/Collection:* Import/Export Declaration for List I and List II Chemicals.

(3) *Agency form number, if any, and the applicable component of the Department sponsoring the collection:* Form number: DEA Forms 486 and 486A.

Component: Office of Diversion Control, Drug Enforcement Administration, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Business or other for-profit.

Other: Not-for-profit; State, local, and tribal government.

Abstract: Persons importing, exporting, and conducting international transactions with List I and List II chemicals must notify DEA of those transactions in advance of their occurrence, including information regarding the person(s) to whom the chemical will be transferred and the quantity to be transferred. Persons must also provide return declarations, confirming the date of the importation and transfer, and the amounts of the chemical transferred. For the List I chemicals ephedrine, pseudoephedrine, and phenylpropanolamine, importers must report all information known to them on the chain of distribution of the chemical from the manufacturer to the importer. This information is used to prevent shipments not intended for legitimate purposes.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* The below table presents information regarding the number of respondents, responses, and associated burden hours. Note that all hour calculations have been rounded up to the nearest hour.

	Number of respondents	Number of responses	Average time per response	Total in (hours)
Form 486 (export)	273	9,155	0.283 hour (17 minutes)	2,594 hours
Form 486 (Export Return Declaration)	273	9,155	0.166 hour (10 minutes)	1,526 hours
Form 486 (import)	127	1,899	0.333 hour (20 minutes)	633 hours
Form 486 (import return declaration)*	127	2,089	0.2 hour (12 minutes)	418 hours
Form 486A (import)	29	412	0.4 hour (24 minutes)	165 hours
Form 486A (import return declaration)*	29	453	0.2 hour (12 minutes)	91 hours
Form 486 (international transaction)	15	169	0.2 hour (12 minutes)	34 hours
Form 486 (international transaction return declaration).	15	169	0.08 hour (5 minutes)	14 hours
Quarterly reports for imports of acetone, 2-butanone, and toluene.	110	440	0.5 hour (30 minutes)	220 hours
Total	273	5,695 hours

*DEA assumes 10% of all imports will not be transferred in the first thirty days and will necessitate submission of a subsequent return declaration.

(6) *An estimate of the total public burden (in hours) associated with the collection:* DEA estimates that this collection takes 5,695 annual burden hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, Department of Justice, Two Constitution Square, 145 N Street NE., Suite 2E-508, Washington, DC 20530.

Dated: October 9, 2012.

Jerri Murray,

Department Clearance Officer, PRA, U.S. Department of Justice.

BILLING CODE 4410-09-P

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

[OMB Number 1110-0009]

Agency Information Collection Activities; Proposed Collection, Comments Requested; Revision of a Currently Approved Collection: Law Enforcement Officers Killed and Assaulted Program; Analysis of Officer Feloniously Killed and Assaulted Law Enforcement Officers Killed and Assaulted Program; Analysis of Officers Accidentally Killed

ACTION: 60-day Notice.

The Department of Justice, Federal Bureau of Investigation, Criminal Justice Information Services Division will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and clearance in accordance with established review procedures of the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies. Comments

are encouraged and will be accepted until December 14, 2012.

This process is conducted in accordance with 5 CFR 1320.10.

All comments, suggestions, or questions regarding additional information, to include obtaining a copy of the proposed information collection instrument with instructions, should be directed to Mrs. Amy C. Blasher, Unit Chief, Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division, Module E-3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306, or facsimile to (304) 625-3566.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques of other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

(1) *Type of information collection:* Revision of a currently approved collection.

(2) *The title of the form/collection:* Law Enforcement Officers Killed and Assaulted Program; Analysis of Officers Feloniously Killed and Assaulted and Law Enforcement Officers Killed and Assaulted Program; Analysis of Officers Accidentally Killed

(3) *The agency form number, if any, and the applicable component of the department sponsoring the collection:* Forms 1-701 and 1-701a; Criminal Justice Information Services Division, Federal Bureau of Investigation, Department of Justice.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* Primary: City, county, state, federal, and tribal law enforcement agencies. These forms will gather specific incident data obtained from law enforcement agencies in which an officer was accidentally killed, feloniously killed or assaulted with injury from a firearm or knife or other cutting instrument in the line of duty. Data are published annually in the publication Law Enforcement Officers Killed and Assaulted.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:* There are approximately 243 law enforcement agency respondents; calculated estimates indicate 1 hour per report.

(6) *An estimate of the total public burden (in hours) associated with this collection:* There are approximately 243 hours, annual burden, associated with this information collection.

If additional information is required contact: Jerri Murray, Department Clearance Officer, Policy and Planning Staff, Justice Management Division, United States Department of Justice, Two Constitution Square, 145 N Street NE., Room 2E-508, Washington, DC 20530.

Dated: October 9, 2012.

Jerri Murray,

Department Clearance Officer, ORA, United States Department of Justice.

[FR Doc. 2012-25163 Filed 10-12-12; 8:45 am]

BILLING CODE 4410-02-P

DEPARTMENT OF JUSTICE

Federal Bureau of Investigation

[OMB Number 1110-0026]

Agency Information Collection Activities; Existing Collection, Comments Requested: Federal Firearms Licensee (FFL) Enrollment/National Instant Criminal Background Check System (NICS) E-Check Enrollment Form, Federal Firearms Licensee (FFL) Officer/Employee Acknowledgment of Responsibilities Under the NICS Form

ACTION: 60 Day notice.

The Department of Justice (DOJ), Federal Bureau of Investigation (FBI), Criminal Justice Information Services (CJIS) Division's National Instant Criminal Background Check System (NICS) Section will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection is published to obtain comments from the public and affected agencies.

Comments are encouraged and will be accepted for 60 days until December 14, 2012. This process is conducted in accordance with Title 5, Code of Federal Regulations (CFR), § 1320.10. If you have comments, especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Sherry L. Kuneff, Management and Program Analyst, Federal Bureau of Investigation, Criminal Justice Information Services (CJIS) Division, NICS Section, Module A-3, 1000 Custer Hollow Road, Clarksburg, West Virginia 26306, or facsimile at (304) 625-7540.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency/component,

including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency's/component's estimate of the burden of the proposed collection of the information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of This Information

(1) *Type of Information Collection:* Approval of an Existing Collection
Title of the Form:

Federal Firearms Licensee (FFL) Enrollment/National Instant Criminal Background Check System (NICS) E-Check Enrollment Form.

Federal Firearms Licensee (FFL) Officer/Employee Acknowledgment of Responsibilities under the National Instant Criminal Background Check System (NICS) Form.

(2) *Agency Form Number, if any, and the applicable component of the department sponsoring the collection:*
Form Number: 1110-0026.

Sponsor: Criminal Justice Information Services (CJIS) Division of the Federal Bureau of Investigation (FBI), Department of Justice (DOJ).

(3) *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Any Federal Firearms Licensee (FFL) or State Point of Contact (POC) requesting access to conduct National Instant Criminal Background Check System (NICS) checks telephonically or by the Internet through the NICS E-Check.

Brief Abstract: The Brady Handgun Violence Prevention Act of 1993 required the United States Attorney General to establish a national instant criminal background check system that any FFL may contact, by telephone or by other electronic means, for information to be supplied immediately, on whether receipt of a firearm to a prospective purchaser would violate state or federal law. Information pertaining to licensees who may contact the NICS is being collected to manage and control access to the NICS and to the NICS E-Check, to ensure appropriate resources are available to support the NICS, and also to ensure the privacy and security of NICS information.

<http://www.fbi.gov/programs/nics/index.htm>.

(4) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond:*

It is estimated that 250 FFLs enroll with the NICS per month for a total of 3,000 enrollments per year. The average response time for reading the directions for the National Instant Criminal Background Check System (NICS) Federal Firearms Licensee (FFL) Enrollment/NICS E-Check Enrollment Form is estimated to be two minutes; time to complete the form is estimated to be three minutes; and the time it takes to assemble, mail, or fax the form to the FBI is estimated to be three minutes, for a total of eight minutes. The average hour burden for this specific form is $3,000 \times 8 \text{ minutes}/60 = 400$ hours.

The Federal Firearms Licensee (FFL) Officer/Employee Acknowledgment of Responsibilities Form under the National Instant Criminal Background Check System (NICS) takes approximately three minutes to read the responsibilities and two minutes to complete the form, for a total of five minutes. The average hour burden for this specific form is $6,000 \times 5 \text{ minutes}/60 = 250$ hours.

The letter mailed to each new FFL takes an additional two minutes to read which would be $3,000 \times 2 \text{ minutes}/60 = 100$ hours.

The entire process of reading the letter and completing both forms would take 15 minutes per respondent. The average hour burden for completing both forms and reading the accompanying letter would be $3,000 \times 15/60 = 750$ hours.

(5) *An estimate of the total public burden (in hours) associated with the collection:*

The entire process of reading the letter and completing both forms would take 15 minutes per respondent. The average hour burden for completing both forms and reading the accompanying letter would be $3,000 \times 15/60 = 750$ hours.

If additional information is required, contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Room2E-508, Washington, DC 20530.

Dated: October 10, 2012.

Jerri Murray,

*Department Clearance Officer for PRA,
United States Department of Justice.*

[FR Doc. 2012-25263 Filed 10-12-12; 8:45 am]

BILLING CODE 4410-02-P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-81,751]

General Motors Vehicle Manufacturing Including On-Site Leased Workers From Aerotek, Kelly Services, Voith Industrial Services, Shreveport Ramp Services, Dana Holding Corporation, the Landing Of GM, Filtration Services Group, BASF, G4S Secure Coalition, Seibert Powder Coating, Advantis Occupational Health, Veolis ES Industrial Services, Inc., Automotive Quality Associates, and Career Adventures, Shreveport, Louisiana; Amended Certification Regarding Eligibility to Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on August 3, 2012, applicable to workers of General Motors Vehicle Manufacturing, including on-site leased workers from Aerotek, Kelly Services, Voith Industrial Services, Shreveport Ramp Services, Dana Holding Corporation, The Landing of GM, Filtration Services Group, BASF, G4S Secure Services, Seibert Powder Coating, and Advantis Occupational Health, Shreveport, Louisiana (subject firm).

On September 17, 2012, the Department issued an amended certification to include on-site leased workers of Veolia ES Industrial Services, Inc. and Automotive Quality Associates.

The workers’ firm is engaged in activities related to the production of pick-up trucks.

Based on information provided in a later-filed Trade Adjustment Assistance petition, the Department reviewed the certification for workers of the subject firm.

New information from the subject firm shows that workers from Career Adventures are sufficiently under the control of General Motors Vehicle Manufacturing, Shreveport, Louisiana, to be considered leased workers.

The intent of the Department’s certification is to include all workers of

the subject firm who were adversely affected by increased imports of pick-up trucks.

Based on these findings, the Department is amending this certification to include workers leased from Career Adventures working on-site at the subject firm. The amended notice applicable to TA-W-81,751 is hereby issued as follows:

All workers of General Motors Vehicle Manufacturing, including on-site leased workers from Aerotek, Kelly Services, Voith Industrial Services, Shreveport Ramp Services, Dana Holding Corporation, The Landing of GM, Filtration Services Group, BASF, G4S Secure Services, Seibert Powder Coating, Advantis Occupational Health, Veolia ES Industrial Services, Inc., Automotive Quality Associates, and Career Adventures, Shreveport, Louisiana, who became totally or partially separated from employment on or after July 28, 2012, through August 3, 2014, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed in Washington, DC, this 2nd day of October, 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-81,589; TA-W-81,589A]

Hydro Aluminum North America, Inc., Midwest Region, Including On-Site Leased Workers From Employment Group, Aerotek, and Manpower, Kalamazoo, Michigan; Hydro Aluminum North America, Inc., Midwest Region, Including On-Site Leased Workers From Penmac, Monett, Missouri; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on July 3, 2012, applicable to workers and former workers of Hydro Aluminum North America, Inc., Kalamazoo, Michigan. The subject worker group includes on-site leased workers from Employment Group, Aerotek, and Manpower. The workers’

firm is engaged in activities related to the production of extruded aluminum rod, bar, and other extruded shapes.

The certification was based on the Department’s findings that the criteria set forth in Section 222(e) of the Act, 19 U.S.C. 2272(e), have been met.

Based on information provided in a later-filed petition, the Department reviewed the certification for workers of the subject firm.

Additional information provided by the company official revealed that the Kalamazoo, Michigan facility is not part of the Kalamazoo Division but is part of the Midwest Region. The certification is being amended to reflect this correction.

The new information also revealed that the Midwest Region includes facilities in Indiana, Missouri, Ohio and Michigan, and that Regional operation is coordinated through the Kalamazoo, Michigan facility. The Monett, Missouri facility has ceased operations and work formerly completed at that facility has been moved to the remaining Midwest Region facilities. The worker group at the Monett, Missouri facility includes on-site leased workers from Penmac.

The intent of the Department’s certification is to include all workers of the subject firm who were adversely affected by imports of certain aluminum extrusions from China.

Based on these findings, the Department is amending this certification to include workers and former workers of the Monett, Missouri facility of Hydro Aluminum North America, Inc., Midwest Region, including on-site leased workers of Penmac.

The amended notice applicable to TA-W-81,589 is hereby issued as follows:

All workers of Hydro Aluminum North America, Inc., Midwest Region, including on-site leased workers from Employment Group, Aerotek, and Manpower, Kalamazoo, Michigan (TA-W-81,589), and Hydro Aluminum North America, Inc., Midwest Region, including on-site leased workers from Penmac, Monett, Missouri (TA-W-81,589A), who became totally or partially separated from that employment on or after May 19, 2010 through May 19, 2012, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed in Washington, DC this 3rd day of October, 2012.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR**Occupational Safety and Health Administration**

[Docket No. OSHA-2012-0019]

National Advisory Committee on Occupational Safety and Health (NACOSH)**AGENCY:** Occupational Safety and Health Administration (OSHA), Labor.**ACTION:** Notice of renewal of the NACOSH charter.**SUMMARY:** The Secretary of Labor will renew the charter of the National Advisory Committee on Occupational Safety and Health (NACOSH).**FOR FURTHER INFORMATION CONTACT:** Ms. Deborah Crawford, OSHA Directorate of Evaluation and Analysis, Room N-3641, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-1932.**SUPPLEMENTARY INFORMATION:** The Secretary of Labor (Secretary) will renew the NACOSH charter. The Charter will expire two years from the date it is filed.

NACOSH was established by Section 7(a) of the Occupational Safety and Health Act of 1970 (OSH Act) (29 U.S.C. 651, 656) to advise, consult with and make recommendations to the Secretary and the Secretary of Health and Human Services on matters relating to the administration of the OSH Act. Under the OSH Act, Congress intended NACOSH to be a continuing advisory committee of indefinite duration.

NACOSH operates in accordance with the Federal Advisory Committee Act (FACA) (5 U.S.C. App. 2) and OSHA's regulations on NACOSH (29 CFR part 1912a). Pursuant to FACA and its implementing regulations (41 CFR 102-3), the NACOSH Charter must be renewed every two years. The Charter expires two years from the date it is filed.

The new Charter includes minor updates and an increase in the staff years for operating NACOSH from 1.5 to 2 staff years.

To read or download a copy of the new NACOSH Charter, go to Docket No. OSHA-2012-0019 at <http://www.regulations.gov>, the Federal e-Rulemaking Portal. The Charter also is available on the NACOSH page on OSHA's Web page at <http://www.osha.gov> and at the OSHA Docket Office, N-2625, U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-2350. In addition, the Charter may be viewed or downloaded at the Federal

Advisory Committees Database at <http://www.fido.gov>.

Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice under the authority granted by Section 7 of the Occupational Safety and Health Act of 1970 (U.S.C. 656), the Federal Advisory Committee Act (5 U.S.C. App. 2); 29 CFR Part 1912a; 41 CFR part 102-3; and Secretary of Labor's Order No. 1-2012 (77 FR 3912, 1/25/2012).

Signed at Washington, DC, on October 3, 2012.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P**NATIONAL AERONAUTICS AND SPACE ADMINISTRATION**

[Notice 12-081]

Meeting of Astrophysics Subcommittee of the NASA Advisory Council Science Committee**AGENCY:** National Aeronautics and Space Administration.**ACTION:** Notice of meeting.

SUMMARY: In accordance with the Federal Advisory Committee Act, Public Law 92-463, as amended, the National Aeronautics and Space Administration (NASA) announces a meeting of the Astrophysics Subcommittee of the NASA Advisory Council (NAC) Science Committee. This Subcommittee reports to the Science Committee of the NAC. The meeting will be held via Teleconference and WebEx for the purpose of soliciting, from the scientific community and other persons, scientific and technical information relevant to program planning.

DATES: Tuesday, November 6, 2012, 12 p.m. to 4 p.m., local time.

ADDRESSES: This meeting will take place telephonically and by WebEx. Any interested person may call the USA toll free conference call number 888-391-7042, pass code APS, to participate in this meeting by telephone. The WebEx link is <https://nasa.webex.com/>, meeting number 993 757 038, and password APS\$6Nov12.

FOR FURTHER INFORMATION CONTACT: Ms. Marian Norris, Science Mission Directorate, NASA Headquarters, Washington, DC 20546, (202) 358-4452, fax (202) 358-4118, or mnorris@nasa.gov.

SUPPLEMENTARY INFORMATION: The agenda for the meeting includes the following topics:

- Astrophysics Division Update
- Proposed Data Centers Study
- Strategic Implementation for the Astrophysics Division

It is imperative that the meeting be held on this date to accommodate the scheduling priorities of the key participants.

Patricia D. Rausch,

Advisory Committee Management Officer, National Aeronautics and Space Administration.

BILLING CODE 7535-01-P

NATIONAL FOUNDATION ON THE ARTS AND THE HUMANITIES**Meetings of Humanities Panel**

AGENCY: National Endowment for the Humanities.

ACTION: Notice of Meetings.

SUMMARY: Pursuant to section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App.), notice is hereby given that 11 meetings of the Humanities Panel will be held during November 2012 as follows. The purpose of the meetings is for panel review, discussion, evaluation, and recommendation of applications for financial assistance under the National Foundation on the Arts and Humanities Act of 1965 (20 U.S.C. 951–960, as amended).

DATES: See **SUPPLEMENTARY INFORMATION** section for meeting dates.

ADDRESSES: The meetings will be held at the Old Post Office Building, 1100 Pennsylvania Ave. NW., Washington, DC 20506. See **SUPPLEMENTARY INFORMATION** section for meeting room numbers.

FOR FURTHER INFORMATION CONTACT: Lisette Voyatzis, Committee Management Officer, 1100 Pennsylvania Ave. NW., Room, 529, Washington, DC 20506, or call (202) 606–8322. Hearing-impaired individuals are advised that information on this matter may be obtained by contacting the National Endowment for the Humanities' TDD terminal at (202) 606–8282.

SUPPLEMENTARY INFORMATION:**Meetings**

1. *Date:* November 01, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 421

This meeting will discuss applications for the America's Media Makers Production grant program on the subject of American Studies, submitted to the Division of Public Programs.

2. *Date:* November 1, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 415

This meeting will discuss applications for the Humanities Collections and Reference Resources grant program on the subject of U.S. History and Culture, submitted to the Division of Preservation and Access.

3. *Date:* November 5, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 421

This meeting will discuss applications for the America's Historical & Cultural Organizations Implementation grant program on the subject of U.S. History and the West, submitted to the Division of Public Programs.

4. *Date:* November 7, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 421

This meeting will discuss applications for the America's Historical & Cultural Organizations Implementation grant program on the subject of recent U.S. History, submitted to the Division of Public Programs.

5. *Date:* November 07, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 415

This meeting will discuss applications for the Humanities Collections and Reference Resources grant program on the subject of History of Science and Technology, submitted to the Division of Preservation and Access.

6. *Date:* November 8, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 415

This meeting will discuss applications for the Humanities Collections and Reference Resources grant program on the subject of U.S. History and Culture, submitted to the Division of Preservation and Access.

7. *Date:* November 8, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: Conference Call

This meeting will discuss applications for the America's Media Makers Production grant program, submitted to the Division of Public Programs.

8. *Date:* November 28, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 415

This meeting will discuss applications for the Humanities Collections and Reference Resources grant program on the subject of U.S. History and Culture, submitted to the Division of Preservation and Access.

9. *Date:* November 28, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 402

This meeting will discuss applications for the Digital Humanities Start-Up Grants grant program on the subject of New Media, submitted to the Office of Digital Humanities.

10. *Date:* November 29, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 402

This meeting will discuss applications for the Digital Humanities Start-Up Grants grant program on the subject of Scholarly Communications, submitted to the Office of Digital Humanities.

11. *Date:* November 30, 2012

Time: 8:30 a.m. to 5:00 p.m.

Room: 415

This meeting will discuss applications for the Humanities Collections and Reference Resources grant program on the subject of Art

History, submitted to the Division of Preservation and Access.

Because these meetings will include review of personal and/or proprietary financial and commercial information given in confidence to the agency by grant applicants, the meetings will be closed to the public pursuant to sections 552b(c)(4) and 552b(c)(6) of Title 5 U.S.C., as amended. I have made this determination pursuant to the authority granted me by the Chairman's Delegation of Authority to Close Advisory Committee Meetings dated July 19, 1993.

Dated: October 10, 2012.

Lisette Voyatzis,

Committee Management Officer.

BILLING CODE 7536–01–P

NATIONAL SCIENCE FOUNDATION**Notice of Waste Management Permit Application Received Under the Antarctic Conservation Act of 1978**

AGENCY: National Science Foundation.

ACTION: Notice of a Waste Management Permit Application Received Under the Antarctic Conservation Act.

SUMMARY: Notice is hereby given that the National Science Foundation (NSF) has received a waste management permit application for Mike Libeck and his team to conduct a skiing and mountaineering expedition to Queen Maud Land from November 6 to December 31, 2012. The application by Mike Libeck of Salt Lake City, Utah is submitted to NSF pursuant to regulations issued under the Antarctic Conservation Act of 1978.

DATES: Interested parties are invited to submit written data, comments, or views with respect to this permit application within November 14, 2012. Permit applications may be inspected by interested parties at the Permit Office, address below.

ADDRESSES: Comments should be addressed to Permit Office, Room 755, Office of Polar Programs, National Science Foundation, 4201 Wilson Boulevard, Arlington, Virginia 22230.

FOR FURTHER INFORMATION CONTACT: Dr. Polly A. Penhale at the above address or (703) 292–8030.

SUPPLEMENTARY INFORMATION: NSF's Antarctic Waste Regulation, 45 CFR Part 671, requires all U.S. citizens and entities to obtain a permit for the use or release of a designated pollutant in Antarctica, and for the release of waste in Antarctica. NSF has received a permit application under this Regulation for

skiing and mountaineering expedition in Queen Maud Land. The expedition will depart Cape Town, South Africa and fly to Novolazerevskaya Station, then onto to Wolthat Mountains in Queen Maud Land to set up base camp.

Designated pollutants that would be associated with the expedition are white gas for cooking, kitchen waste, solid waste, trash, batteries, and human waste (urine and human solid waste). All waste will be stored in plastic barrels and returned to Cape Town for disposal. If camping fuel is spilled, the contaminated snow and ice will be contained in waste barrels and brought to Cape Town for disposal.

The permit applicant: Mike Libecki, Salt Lake City, Utah, Permit application No. 2013 WM-004.

Nadene G. Kennedy,
Permit Officer.

NATIONAL SCIENCE FOUNDATION

Advisory Committee for Social, Behavioral and Economic Sciences; Notice of Meeting

In accordance with Federal Advisory Committee Act (Pub. L. 92-463, as amended), the National Science Foundation announces the following meeting:

Name: Advisory Committee for Social, Behavioral and Economic Sciences (#1171).

Date/Time: November 15, 2012; 8:00 a.m. to 5:00 p.m.

Place: National Science Foundation, 4201 Wilson Boulevard, Stafford I, Room 1235, Arlington, VA 22230.

Type of Meeting: Open.

Contact Person: Ms. Lisa Jones, Office of the Assistant Director, Directorate for Social, Behavioral and Economic Sciences, National Science Foundation, 4201 Wilson Boulevard, Room 905, Arlington, Virginia 22230, 703-292-8700.

Summary of Minutes: May be obtained from contact person listed above.

Purpose of Meeting: To provide advice and recommendations to the National Science Foundation on major goals and policies pertaining to Social, Behavioral and Economic Sciences Directorate programs and activities.

Agenda:

Updates and discussions on continuing activities

- Directorate Update: Dr. Myron Gutmann
- NSF and Government Wide Initiatives: How can the Advisory Committee help?
- Public Access: Background on Access to Scientific Publication and Data
- SBE Advisory Committee Activities (Overview & Discussion)
- New and Recent Competitions
- Agenda for Future Meeting, Assignments, Concluding Remarks

Dated: October 9, 2012.

Susanne Bolton,

Committee Management Officer.

BILLING CODE 7555-01-P

NUCLEAR REGULATORY COMMISSION

Advisory Committee on the Medical Uses of Isotopes: Call for Nominations

AGENCY: U.S. Nuclear Regulatory Commission.

ACTION: Call for nominations.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is advertising for nominations for the positions of health care administrator and nuclear cardiologist on the Advisory Committee on the Medical Uses of Isotopes (ACMUI). Nominees for the position of the health care administrator should have professional or personal experience with or knowledge about health care administration. Nominees for the position of the nuclear cardiologist should be a physician with professional or personal experience with or knowledge about nuclear cardiology.

DATES: Nominations are due on or before December 14, 2012.

Nomination Process: Submit an electronic copy of a resume or curriculum vitae, along with a cover letter, to Ms. Sophie Holiday, sophie.holiday@nrc.gov.

The cover letter for the health care administrator should describe the nominee's current involvement with health care administration and express the nominee's interest in the position. Please ensure that the resume or curriculum vitae includes the following information, if applicable: Education; certification; professional association membership and committee membership activities; and number of years, recentness, and type of setting for health care administration.

The cover letter for the nuclear cardiologist should describe the nominee's current involvement with nuclear cardiology and express the nominee's interest in the position.

Please ensure that the resume or curriculum vitae includes the following information, as applicable: Education; certification; professional association membership and committee membership activities; and number of years, recentness, and type of setting for nuclear cardiology.

FOR FURTHER INFORMATION CONTACT: Ms. Sophie Holiday, U.S. Nuclear

Regulatory Commission, Office of Federal and State Materials and Environmental Management Programs; (301) 415-7865; sophie.holiday@nrc.gov.

SUPPLEMENTARY INFORMATION: The health care administrator and nuclear cardiologist provide advice to NRC staff on issues associated with the regulation of medical applications of byproduct material. The nominee for the health care administrator position is appointed based on his or her professional and personal experience with and/or knowledge about health care administration, involvement and/or leadership with health care organizations, and related experience obtained in letters or during the selection process. The nominee for the nuclear cardiologist position is appointed based on his or her professional and personal experience with and/or knowledge about nuclear cardiology, involvement and/or leadership with nuclear cardiology organizations, and related experience obtained in letters or during the selection process. Nominees should have the demonstrated ability to establish effective work relationships with peers and implement successful approaches to problem solving and conflict resolution.

NRC is inviting nominations for the appointments of the health care administrator and nuclear cardiologist to the ACMUI. The term of the individual currently occupying the health care administrator position will end May 2013 and the term of the individual currently occupying the nuclear cardiologist position will end October 2013.

ACMUI members currently serve a four-year term and may be considered for reappointment to an additional term. The current membership is comprised of the following professionals: (a) Nuclear medicine physician; (b) nuclear cardiologist; (c) nuclear medicine physicist; (d) therapy medical physicist; (e) radiation safety officer; (f) nuclear pharmacist; (g) two radiation oncologists; (h) patients' rights advocate; (i) Food and Drug Administration representative; (j) Agreement State representative; (k) health care administrator; and (l) diagnostic radiologist. For additional information about membership on the ACMUI, visit the ACMUI Membership Web page, <http://www.nrc.gov/about-nrc/regulatory/advisory/acmui/membership.html>.

Nominees must be U.S. citizens and be able to devote approximately 160 hours per year to Committee business.

Members are expected to attend semi-annual meetings in Rockville, Maryland and to participate in teleconferences, as needed. Members who are not Federal employees are compensated for their service. In addition, these members are reimbursed for travel and correspondence expenses. Full-time Federal employees are reimbursed for travel expenses only.

Security Background Check: The selected nominee will undergo a thorough security background check. Security paperwork may take the nominee several weeks to complete. Nominees will also be required to complete a financial disclosure statement to assure that there are no conflicts of interest.

Dated at Rockville, Maryland, this 10th day of October 2012.

For the U.S. Nuclear Regulatory Commission.

Andrew L. Bates,

Advisory Committee Management Officer.

BILLING CODE 7590-01-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 50-336; NRC-2010-0128]

Dominion Nuclear Connecticut, Inc.; Millstone Power Station, Unit 2, Revocation of Exemption

1.0 Background

Dominion Nuclear Connecticut, Inc., (DNC or the licensee) is the holder of Facility Operating License No. DPR-65, which authorizes operation of the Millstone Power Station, Unit 2 (MPS2). The license provides, among other things, that the facility is subject to all rules, regulations, and orders of the U.S. Nuclear Regulatory Commission (NRC, the Commission) now or hereafter in effect.

The facility consists of a pressurized-water reactor located in New London County, Connecticut.

2.0 Request/Action

By letter dated November 5, 2004,¹ as supplemented by letters dated January 6 and January 25, 2005,² the licensee

¹ Agencywide Document Access and Management System (ADAMS) Accession No. ML043130360.

² ADAMS Accession Nos. ML050110079 and ML050260675, respectively.

submitted a request for an exemption from the requirements in section 50.68(b)(1) of Title 10 of the *Code of Federal Regulations* (10 CFR) for loading, unloading, and handling of the components of the Transnuclear (TN) NUHOMS®-32PT dry cask storage system at MPS2. By Exemption dated February 15, 2005,³ the NRC granted DNC's request.

Section 50.68(b)(1) of 10 CFR set forth the following requirement, at the time the exemption was granted, that must be met, in lieu of a monitoring system capable of detecting criticality events.

Plant procedures shall prohibit the handling and storage at any one time of more fuel assemblies than have been determined to be safely subcritical under the most adverse moderation conditions feasible by unborated water.

The licensee was unable to satisfy the above requirement for handling the 10 CFR Part 72 licensed contents of the TN NUHOMS®-32PT system. Section 50.12(a) allows licensees to apply for an exemption from the requirements of 10 CFR Part 50 if the regulation is not necessary to achieve the underlying purpose of the rule and other conditions are met. The licensee stated in the application that compliance with 10 CFR 50.68(b)(1) is not necessary for handling the 10 CFR Part 72 licensed contents of the cask system to achieve the underlying purpose of 10 CFR 50.68(b)(1). The Commission determined that, pursuant to 10 CFR 50.12(a), the exemption was authorized by law, would not present an undue risk to the public health and safety, and was consistent with the common defense and security. Also, special circumstances were present. Therefore, the Commission granted DNC an exemption from the requirements of 10 CFR 50.68(b)(1) for the loading, unloading, and handling of the components of the TN NUHOMS®-32PT storage system at MPS2.

On November 16, 2006 (71 FR 66648), the NRC published a direct final rule in the **Federal Register** amending its regulations "so that the requirements governing criticality control for the spent fuel pool storage racks do not apply to the fuel within the spent fuel transportation package or storage cask when the package or cask is in the spent fuel pool." The regulation in 10 CFR 50.68 was amended by adding a new paragraph (c) which states the following:

(c) While a spent fuel transportation package approved under Part 71 of this chapter or spent fuel storage cask approved

under Part 72 of this chapter is in the spent fuel pool:

- (1) The requirements in § 50.68(b) do not apply to the fuel located within that package or cask; and
- (2) The requirements in Part 71 or 72 of this chapter, as applicable, and the requirements of the Certificate of Compliance for that package or cask apply to the fuel within that package or cask.

The statements of consideration state that for licensees with an approved exemption, these licensees can continue to use their approved exemption or they may choose to comply with the amended rule. The statements of consideration go on to say, "[o]perating under the exemption or the amended rule have effectively the same criticality accident requirements for fuel within a package or cask in a spent fuel pool, namely only those of 10 CFR Part 71 or 72, as applicable."

By letter dated April 10, 2012,⁴ DNC stated that MPS2 will comply with the amended rule instead of the February 15, 2005, exemption.

3.0 Discussion

Pursuant to 10 CFR 50.12, the Commission may, upon application by any interested person or upon its own initiative, grant exemptions from the requirements of 10 CFR Part 50 when (1) the exemptions are authorized by law, will not present an undue risk to public health or safety, and are consistent with the common defense and security; and (2) when special circumstances are present. On February 15, 2005, the NRC granted the above exemption for the technical requirements of 10 CFR 50.68(b)(1) for loading, unloading, and handling of the components of the TN NUHOMS®-32PT storage system at MPS2.

Based on the NRC rule change that amended the requirements of 10 CFR 50.68, in November 2006, DNC is able to comply with all requirements of 10 CFR 50.68. The NRC staff examined the licensee's rationale, and concluded that the revocation is acceptable because the licensee has established compliance with 10 CFR 50.68 for loading, unloading, and handling of the components of the TN NUHOMS®-32PT storage system at MPS2.

This revocation of exemption would remove the licensee's exemption from the associated requirements of 10 CFR 50.68(b)(1) for loading, unloading, and handling of the components of the TN NUHOMS®-32PT dry cask storage system at MPS2, which was granted by the Commission on February 15, 2005. With the exemption removed, MPS2

will be subject to all of the applicable requirements of 10 CFR 50.68. The NRC staff has determined that revoking the exemption will not result in a violation of the Atomic Energy Act of 1954, as amended, or the Commission's regulations.

No Undue Risk to Public Health and Safety

The underlying purposes of 10 CFR 50.68 is to maintain spent fuel pools subcritical in an unborated, maximum moderation condition. DNC has decided to comply with all of the amended requirements of 10 CFR 50.68 which were issued in November 2006, without exemption. Based on compliance with the requirements of 10 CFR 50.68, no new accident precursors are created by the revocation of this exemption, thus, the probability of postulated accidents is not increased. Also, based on compliance with the requirements of 10 CFR 50.68, the consequences of postulated accidents are not increased. Therefore, there is no undue risk to public health and safety.

Consistent With Common Defense and Security

The proposed revocation of exemption would restore the requirements of 10 CFR 50.68 for loading, unloading, and handling of the components of the TN NUHOMS®-32PT dry cask storage system at MPS2. This change to the operation of the plant has no relation to security issues. Therefore, the common defense and security is not impacted by this exemption.

4.0 Conclusion

Accordingly, the Commission has determined that the exemption granted February 15, 2005, related to loading, unloading, and handling of the components of the TN NUHOMS®-32PT dry cask storage system at MPS2 is hereby revoked.

Pursuant to 10 CFR 51.32, the Commission has determined that the revocation of this exemption will not have a significant effect on the quality of the human environment (71 FR 66650).

This exemption revocation is effective upon issuance.

Dated at Rockville, Maryland, this 3rd day of October 2012.

For the Nuclear Regulatory Commission.

Michele G. Evans,

Director, Division of Operating Reactor Licensing, Office of Nuclear Reactor Regulation.

SECURITIES AND EXCHANGE COMMISSION

[Release Nos. 33–9365; 34–68019; File No. 265–28]

Investor Advisory Committee

AGENCY: Securities and Exchange Commission.

ACTION: Notice of Telephonic Meeting of Securities and Exchange Commission Investor Advisory Committee.

SUMMARY: The Securities and Exchange Commission Investor Advisory Committee, established pursuant to Section 911 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010, is providing notice that it will hold a telephonic meeting on Friday, October 12, 2012. The meeting will begin at 12:00 p.m. (EDT) and end at 1:00 p.m. and will be open to the public via telephone at 1–866–606–4717, participant code 3877211. Persons needing special accommodations to take part because of a disability should notify the contact person listed below. The public is invited to submit written statements to the Committee. The agenda for the meeting includes discussion of and voting on a recommendation from the Investor as Purchaser subcommittee regarding the Jumpstart Our Business Startups Act (JOBS Act) requirements on general solicitation and general advertising in Rule 506 private placements.

DATES: Written statements should be received on or before October 12, 2012.

ADDRESSES: Written statements may be submitted by any of the following methods:

Electronic Statements

- Use the Commission's Internet submission form (<http://www.sec.gov/rules/other.shtml>); or
- Send an email message to rules-comments@sec.gov. Please include File No. 265–28 on the subject line; or

Paper Statements

- Send paper statements in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, Stop 1090, 100 F Street NE., Washington, DC 20549–1090.

All submissions should refer to File No. 265–28. This file number should be included on the subject line if email is used. To help us process and review your statement more efficiently, please use only one method.

Statements also will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Room 1580,

Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. All statements received will be posted without change; we do not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

FOR FURTHER INFORMATION CONTACT: M. Owen Donley, Chief Counsel, at (202) 551–6322, Office of Investor Education and Advocacy, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

Dated: October 9, 2012.

Elizabeth M. Murphy,

Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34–68011; File No. SR–NYSE–2012–49]

Self-Regulatory Organizations; New York Stock Exchange LLC; Notice of Filing of Proposed Rule Change, as Modified by Amendment No. 1, Amending Sections 303A.00, 303A.02(a) and 303A.05 of the Exchange's Listed Company Manual To Comply With the Requirements of Securities and Exchange Commission Rule 10C–1

October 9, 2012.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b–4 thereunder,³ notice is hereby given that on September 25, 2012, New York Stock Exchange LLC ("NYSE" or the "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II and III below, which filing was amended and replaced in its entirety by Amendment No. 1 thereto on October 1, 2012, and which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend Sections 303A.00, 303A.02(a) and 303A.05 of the Exchange's Listed Company Manual (the "Manual") to

comply with the requirements of Securities and Exchange Commission ("Commission" or "SEC") Rule 10C–1.⁴ The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

This Amendment No. 1 to SR–NYSE–2012–49 (the "filing") amends and replaces in its entirety the Filing as originally submitted on September 25, 2012. Amendment No. 1 corrects a single error in the rule text in Exhibit 5 as originally filed. The error was in Section 303A.00 under the heading "Transition Periods for Compensation Committee Requirements."

The Exchange proposes to amend Sections 303A.00, 303A.02(a) and 303A.05 of the Manual to comply with the requirements of SEC Rule 10C–1.

The proposed changes to Sections 303A.00, 303A.02(a) and 303A.05 will not become operative until July 1, 2013. Consequently, the existing text of these sections will remain in the Manual until June 30, 2013 and will be removed immediately thereafter.⁵ Upon approval of this filing, the amended provisions of those sections will be included in the Manual with introductory text indicating that the revised text does not become operative until July 1, 2013.

Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act")⁶ added Section 10C to the Securities Exchange Act of 1934.⁷ Section 10C

⁴ 17 CFR 240.10C–1.

⁵ The Commission notes that the Exchange will have to comply with Section 19(b) of the Act.

⁶ Public Law 111–203, 124 Stat. 1900 (2010).

⁷ 15 U.S.C. 78j–3.

³ 17 CFR 240.19b–4.

requires the Commission to adopt rules directing the national securities exchanges and national securities associations to prohibit the listing of any equity security of an issuer that is not in compliance with Section 10C's compensation committee and compensation adviser requirements. On June 20, 2012, to comply with the requirements of Section 10C, the Commission adopted new Rule 10C-1, which directs the national securities exchanges to adopt listing rules effectuating the compensation committee and compensation adviser requirements of Section 10C.

Compensation Committee Director Independence Requirement

In adopting independence requirements for compensation committee members, Rule 10C-1(b)(1)(ii)⁸ requires the exchanges to consider relevant factors including, but not limited to: (i) The source of the director's compensation, including any consulting, advisory or other compensatory fees paid by the listed company; and (ii) whether the director has an affiliate relationship with the company, a subsidiary of the company or an affiliate of a subsidiary of the company. Rule 10C-1(a)(4)⁹ requires that the rule filing submitted to the SEC by each exchange in connection with the adoption of the rules required by Rule 10C-1 must include a review of whether and how the proposed listing standards satisfy the requirements of the final rule; a discussion of the exchange's consideration of factors relevant to compensation committee independence; and the definition of independence applicable to compensation committee members that the exchange proposes to adopt or retain in light of such review.

The Exchange's director independence standards are set forth in Section 303A.02. Section 303A.02(a) provides that no director qualifies as "independent" unless the board of directors affirmatively determines that the director has no material relationship with the listed company (directly or as a partner, shareholder or officer of an organization that has a relationship with the company).¹⁰ In addition, Section

303A.02(b) provides that a director may not be deemed to be independent if such director has a relationship with the listed company which violates any one of five "bright line" tests.¹¹ Section 303A.02(b) will continue to be applicable to independence determinations in relation to compensation committee service, as compensation committee members will be required to be independent under the Exchange's general board independence standards set forth in Section 303A.02, in addition to the independence requirements proposed specifically for compensation committee service.

The Exchange proposes to amend Section 303A.02(a) of the Manual to adopt proposed Section 303A.02(a)(ii),¹² which would require that, in affirmatively determining the independence of any director who will serve on the compensation committee of

the Exchange believes that, when assessing the materiality of a director's relationship with the listed company, the board should consider the issue not merely from the standpoint of the director, but also from that of persons or organizations with which the director has an affiliation. The Exchange does not view the ownership of even a significant amount of stock, by itself, as a bar to an independence finding.

¹¹ The following are the "bright line" tests set forth in Section 303A.02(b): (i) The director is, or has been within the last three years, an employee of the listed company, or an immediate family member is, or has been within the last three years, an executive officer, of the listed company; (ii) The director has received, or has an immediate family member who has received, during any twelve-month period within the last three years, more than \$120,000 in direct compensation from the listed company, other than director and committee fees and pension or other forms of deferred compensation for prior service (provided such compensation is not contingent in any way on continued service); (iii) (A) The director is a current partner or employee of a firm that is the listed company's internal or external auditor; (B) the director has an immediate family member who is a current partner of such a firm; (C) the director has an immediate family member who is a current employee of such a firm and personally works on the listed company's audit; or (D) the director or an immediate family member was within the last three years a partner or employee of such a firm and personally worked on the listed company's audit within that time; (iv) The director or an immediate family member is, or has been within the last three years, employed as an executive officer of another company where any of the listed company's present executive officers at the same time serves or served on that company's compensation committee; (v) The director is a current employee, or an immediate family member is a current executive officer, of a company that has made payments to, or received payments from, the listed company for property or services in an amount which, in any of the last three fiscal years, exceeds the greater of \$1 million, or 2% of such other company's consolidated gross revenues. For purposes of Sections 303A.01, 303A.03, 303A.04, 303A.05 and 303A.09, a director of a business development company is considered to be independent if he or she is not an "interested person" of the company, as defined in Section 2(a)(19) of the Investment Company Act of 1940.

¹² As proposed, the current text of Section 303.02(a) would become Section 303A.02(a)(i).

the listed company's board of directors, the board of directors must consider all factors specifically relevant to determining whether a director has a relationship to the listed company which is material to that director's ability to be independent from management in connection with the duties of a compensation committee member, including, but not limited to, the two factors explicitly enumerated in Rule 10C-1(b)(ii). When considering the sources of a director's compensation in determining his independence for purposes of compensation committee service, commentary to proposed Section 303A.02(a)(ii) provides that the board should consider whether the director receives compensation from any person or entity that would impair his ability to make independent judgments about the listed company's executive compensation. Similarly, when considering any affiliate relationship a director has with the company, a subsidiary of the company, or an affiliate of a subsidiary of the company, in determining his independence for purposes of compensation committee service, the proposed commentary provides that the board should consider whether the affiliate relationship places the director under the direct or indirect control of the listed company or its senior management, or creates a direct relationship between the director and members of senior management, in each case of a nature that would impair his ability to make independent judgments about the listed company's executive compensation.

The Exchange does not propose to adopt any specific numerical tests with respect to the factors specified in proposed Section 303A.02(a)(ii) or to adopt a requirement to consider any other specific factors. In particular, the Exchange does not intend to adopt an absolute prohibition on a board making an affirmative finding that a director is independent solely on the basis that the director or any of the director's affiliates are shareholders owning more than some specified percentage of the listed company. In the adopting release for Rule 10C-1 (the "Adopting Release"),¹³ the SEC recognized that the exchanges might determine that not all affiliate relationships would adversely affect a director's ability to be independent from management.¹⁴ Consistent with the views of commenters on the SEC's rules as originally proposed, the Exchange believes that—rather than adversely

¹³ Release Nos. 33-9330; 34-67220 (June 20, 2012); 77 FR 38422 (June 27, 2012).

¹⁴ See Adopting Release at 38428.

⁸ 17 CFR 240.10C-1(b)(1)(ii).

⁹ 17 CFR 240.10C-1(a)(4).

¹⁰ Commentary to Section 303A.02(a) notes that it is not possible to anticipate, or explicitly to provide for, all circumstances that might signal potential conflicts of interest, or that might bear on the materiality of a director's relationship to a listed company (references to "listed company" would include any parent or subsidiary in a consolidated group with the listed company). Accordingly, the commentary states that it is best that boards making "independence" determinations broadly consider all relevant facts and circumstances. In particular,

affecting a director's ability to be independent from management as a compensation committee member—share ownership in the listed company aligns the director's interests with those of unaffiliated shareholders, as their stock ownership gives them the same economic interest in ensuring that the listed company's executive compensation is not excessive.

The Exchange believes that its existing "bright line" independence standards as set forth in Section 303A.02(b) of the Manual are sufficiently broad to encompass the types of relationships which would generally be material to a director's independence for compensation committee service. In addition, Section 303A.02(a) already requires the board to consider any other material relationships between the director and the listed company or its management that are not the subject of "bright line" tests in Section 303A.02(b). The Exchange believes that these requirements with respect to general director independence, when combined with the specific considerations required by proposed Section 303A.02(a)(ii), represent an appropriate standard for compensation committee independence that is consistent with the requirements of Rule 10C-1.

Compensation Committee Advisers

Rule 10C-1(b)(2)¹⁵ requires exchange rules to mandate that compensation committees must have broad authority to engage advisers to assist in their performance of the committee's functions. Specifically, exchange rules must mandate that:

(i) The compensation committee may, in its sole discretion, retain or obtain the advice of a compensation consultant, independent legal counsel or other adviser; and

(ii) The compensation committee shall be directly responsible for the appointment, compensation and oversight of the work of any compensation consultant, independent legal counsel and other adviser retained by the compensation committee.

Rule 10C-1(b)(3)¹⁶ requires exchange rules to mandate that the listed company must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to a compensation consultant, independent legal counsel or any other adviser retained by the compensation committee.

The required powers of the compensation committee under Rule 10C-1(b)(2) and (3) as set forth above are in significant part already required by the NYSE's existing compensation committee listing standard, as they are required elements of the compensation committee charter as set forth in Section 303A.05(b). In the interests of clarity and emphasis, the Exchange proposes to adopt the requirements specified in Rule 10C-1(b)(2) and (3) verbatim as a proposed new subsection (c) of Section 303A.05. The Exchange proposes to remove the comparable requirements currently in Section 303A.05(b) commentary and replace them with a provision stating that the compensation committee charter must provide that the committee has all of the powers specified in new subsection (c).

Compensation Adviser Independence Factors

Rule 10C-1(b)(4)¹⁷ provides that the compensation committee of a listed issuer may select a compensation consultant, legal counsel or other adviser to the compensation committee only after taking into consideration the following factors, as well as any other factors identified by the relevant national securities exchange or national securities association in its listing standards:

(i) The provision of other services to the listed company by the person that employs the compensation consultant, legal counsel or other adviser;

(ii) The amount of fees received from the listed company by the person that employs the compensation consultant, legal counsel or other adviser, as a percentage of the total revenue of the person that employs the compensation consultant, legal counsel or other adviser;

(iii) The policies and procedures of the person that employs the compensation consultant, legal counsel or other adviser that are designed to prevent conflicts of interest;

(iv) Any business or personal relationship of the compensation consultant, legal counsel or other adviser with a member of the compensation committee;

(v) Any stock of the listed company owned by the compensation consultant, legal counsel or other adviser; and

(vi) Any business or personal relationship of the compensation consultant, legal counsel, other adviser or the person employing the adviser with an executive officer of the listed company.

Accordingly, the Exchange proposes to include in proposed Section 303A.05(c) a provision specifying that, before engaging an adviser, the compensation committee must consider the factors enumerated above. As proposed, Section 303A.05(c) would not include any specific additional factors for consideration, as the Exchange believes that the list included in Rule 10C-1(b)(4) is very comprehensive and the proposed listing standard would also require the compensation committee to consider any other factors that would be relevant to the adviser's independence from management.

Consistent with Rule 10C-1(b)(2)(iii),¹⁸ the Exchange proposes to include in Section 303A.05(c) an explicit statement that nothing in Section 303A.05(c) shall be construed: (A) To require the Compensation Committee to implement or act consistently with the advice or recommendations of the compensation consultant, independent legal counsel or other adviser to the compensation committee; or (B) to affect the ability or obligation of the Compensation Committee to exercise its own judgment in fulfillment of the duties of the Compensation Committee (or, if applicable, the independent directors). In addition, as provided by Rule 10C-1(b)(4), proposed in [sic] Section 303A.05(c) would specify that the compensation committee need not engage in an analysis of the independence factors before consulting with or obtaining advice from in-house legal counsel.

Cure Periods

Rule 10C-1(a)(3)¹⁹ requires that exchange rules must include appropriate procedures for a listed issuer to have a reasonable opportunity to cure any non-compliance with the provisions of exchange rules adopted as required by Rule 10C-1. In addition, Rule 10C-1(a)(3) states that such rules may provide that if a member of a compensation committee ceases to be independent in accordance with the requirements of Rule 10C-1 for reasons outside the member's reasonable control, that person, with notice by the issuer to the exchange, may remain a compensation committee member of the listed issuer until the earlier of the next annual meeting or one year from the occurrence of the event that caused the member to be no longer independent. The Exchange proposes to amend Section 303A.00 to adopt this cure provision period for events of non-

¹⁵ 17 CFR 240.10C-1(b)(2).

¹⁶ 17 CFR 240.10C-1(b)(3).

¹⁷ 17 CFR 240.10C-1(b)(4).

¹⁸ 17 CFR 240.10C-1(b)(2)(iii).

¹⁹ 17 CFR 240.10C-1(a)(3).

compliance with the proposed compensation committee independence requirements that are outside of the director's reasonable control. However, the Exchange proposes to modify this cure provision by limiting its use to circumstances where the committee continues to have a majority of independent directors, as this would ensure that the applicable committee could not take any action without the agreement of one or more independent directors. The Exchange believes that this requirement addresses any actual or apparent conflict of interest which may arise due to the continued service of a non-independent director on the compensation committee.

Transition Periods

The Adopting Release contemplates that exchanges may provide transition periods through the exemptive authority provided to the exchanges under Rule 10C-1(b)(1)(iii).²⁰ Consistent with the transition periods approved by the SEC for inclusion in Section 303A at the time of its original adoption,²¹ the Exchange proposes to amend Section 303A.00 to provide that listed companies would have until the earlier of their first annual meeting after January 15, 2014, or October 31, 2014, to comply with the new Section 303A.02(a)(ii) compensation committees independence standards. Existing compensation committee independence standards would continue to apply pending the transition to the new independence standards. The Exchange believes that its prior use of a similar transition period was satisfactory and that it is reasonable to follow the same approach in connection with the proposed changes to the compensation committee independence standards.

In addition, the Exchange proposes to continue to apply to the proposed new compensation committee requirements the existing transition periods available to newly-listed companies under Section 303A.00. Transition periods are available to: Companies listing in connection with their initial public offerings ("IPOs") or which did not have a class of common stock registered under the Exchange Act prior to the listing date;²² companies listing in connection with a spin-off or carve-out;

companies listing upon emergence from bankruptcy; companies previously registered under Section 12(g) of the Exchange Act; and companies previously registered under Section 12(b) of the Exchange Act to the extent the national securities exchange on which they were listed did not have the same requirement; and companies that cease to qualify as a controlled company or a foreign private issuer. All of the foregoing categories of issuers (other than companies previously registered under Section 12(b) of the Exchange Act) would continue to be entitled to a transition under which the company must have: At least one independent member on its compensation committee by the listing date (or (i) in the case of an IPO, the earlier of the closing date of the IPO or five business days from the listing date, or (ii) in the case of a spin-off or carve-out, by the date the transaction closes); at least a majority of independent members on the compensation committee within 90 days of the listing date; and a fully independent compensation committee within one year of the listing date. A company that ceases to qualify as a controlled company would continue to have a transition under which it must have at least one independent member on its compensation committee by the date its status changed, at least a majority of independent members on the compensation committee within 90 days of the date its status changed and a fully independent compensation committee within one year of the date its status changed. A company that ceases to be a foreign private issuer would continue to have a transition under which it must have a fully independent compensation committee within six months of the Foreign Private Issuer Determination Date.²³ A company previously registered under Section 12(b) of the Exchange Act must satisfy the requirements of Section 303A within one year of the listing date to the extent the national securities exchange on which it was listed did not have the same requirements; and if the other exchange had a substantially similar requirement and the company was afforded a transition period that had not expired, the company has the same

transition period as would have been available to it on the other exchange.

The Exchange proposes to exempt smaller reporting companies²⁴ from compliance with the proposed new independence requirements with respect to compensation committee service. Under SEC Rule 12b-2, a smaller reporting company is required to test whether it continues to qualify for that status as of the last business day of its second quarter of each fiscal year (the "Smaller Reporting Company Determination Date") and ceases as of the first day of the next fiscal year to be able to avail itself of the benefits under SEC rules applicable to smaller reporting companies. Consequently, the Exchange proposes to adopt a new transition provision applicable to companies that cease to be smaller reporting companies and become subject to the compensation committee independence requirements of proposed Section 303A.02(a)(ii).²⁵ As proposed, a company that ceases to be a smaller reporting company would be required, if applicable, (I) to have a committee composed entirely of members that meet the independence requirements of proposed Section 303A.02(a)(ii) within six months of the Smaller Reporting Company Determination Date and (II) to comply with Section 303A.05(c)(iv) as of the Smaller Reporting Company Determination Date. The Exchange also proposes to include a new subsection in Section 303A.00 specifying that smaller reporting companies are subject to proposed Section 303A.05(c) with the exception of proposed Section 303A.05(c)(iv) requirements with respect to the Compensation Committee's consideration of compensation consultant's independence from management. Under this approach, smaller reporting companies will effectively be subject to precisely the same requirements as is currently the case.

General Exemptions

Rule 10C-1(b)(5)²⁶ provides an automatic exemption from the application of the entirety of Rule 10C-1 for controlled companies and smaller reporting companies, and Rule 10C-1(b)(1)(iii)(A)²⁷ provides an automatic exemption from the compensation committee independence requirements

²⁰ See Adopting Release at 38444.

²¹ See Securities Exchange Act Release No. 48745 (November 4, 2003), 68 FR 64154 (November 12, 2003) (SR-NYSE-2002-33).

²² For purposes of Section 303A other than Sections 303A.06 and 303A.12(b), a company is considered to be listing in conjunction with an initial public offering if, immediately prior to listing, it does not have a class of common stock registered under the Exchange Act.

²³ Section 303A.00 currently defines the "Determination Date" as the date at the end of a company's second fiscal quarter on which it is required by SEC Rule 240.3b-4 to test its foreign private issuer status on an annual basis. The Exchange proposes to change this to the "Foreign Private Issuer Determination Date" so it is distinguished from the new "Smaller Reporting Company Determination Date".

²⁴ As defined in SEC Rule 12b-2 and Item 10(f) of Regulation S-K.

²⁵ A company that is otherwise exempt from the requirement to have an independent compensation committee when it ceases to be a smaller reporting company would not, of course, be subject to a transition period. See discussion *infra*.

²⁶ 17 CFR 240.10C-1(b)(5).

²⁷ 17 CFR 240.10C-1(b)(1)(iii)(A).

for limited partnerships, companies in bankruptcy, open-end management investment companies registered under the Investment Company Act of 1940 ("1940 Act"). Rule 10C-1(b)(1)(iii)(A) also exempts from the compensation committee independence requirements any foreign private issuer that discloses in its annual report filed with the SEC the reasons that the foreign private issuer does not have an independent compensation committee.

Pursuant to the general exemptive authority granted in Rule 10C-1(b)(5)(i), the Exchange proposes to exempt from all of the proposed requirements each category of issuer that qualifies for a general or specific exemption under Rule 10C-1(b)(1)(iii)(A). The Exchange also proposes to provide a general exemption from all of the requirements to all of the other categories of issuers that are currently exempt from the NYSE's existing compensation committee requirements. Thus, as proposed, controlled companies, limited partnerships and companies in bankruptcy, closed-end and open-end funds registered under the 1940 Act, passive business organizations in the form of trusts (such as royalty trusts), derivatives and special purpose securities (such as those described in Sections 703.19 and 703.20 of the Manual), and issuers whose only listed equity security is a preferred stock, would be exempt. The Exchange notes that these categories of issuers typically: (i) Are externally managed and do not directly employ executives (e.g., limited partnerships that are managed by their general partner or closed-end funds managed by an external investment adviser); (ii) do not by their nature have employees (e.g., passive business organizations in the form of trusts or issuers of derivative or special purpose securities); or (iii) have executive compensation policy set by a body other than the board (e.g., bankrupt companies have their executive compensation determined by the bankruptcy court). In light of these structural reasons why these categories of issuers generally do not have compensation committees, the Exchange believes that it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements and that it is appropriate to grant them an exemption.

Section 303A.00 currently provides that foreign private issuers are permitted to follow home country practice in lieu of compliance with the Exchange's compensation committee listing standard. The Exchange proposes to

follow this approach by granting a general exemption, pursuant to the discretion granted to the Exchange by Rule 10C-1(b)(5)(i),²⁸ from the proposed new compensation committee requirements to foreign private issuers that follow home country practice. The Exchange notes that Section 303A.11 requires foreign private issuers to disclose any significant ways in which their corporate governance practices differ from those followed by domestic companies under NYSE listing standards. Foreign private issuers that are required to file an annual report on Form 20-F with the SEC must include their statement of significant differences in that annual report. All other foreign private issuers may either (i) include the statement of significant differences in an annual report filed with the SEC or (ii) make the statement of significant differences available on or through the listed company's Web site. As any foreign private issuer availing itself of the proposed exemption would have to disclose that fact in its statement of significant differences, the Exchange does not propose to require those companies to comply with the disclosure requirement of Rule 10C-1(b)(1)(iii)(A). While Section 303A.11 does not require a statement as to why a company does not comply with an applicable requirement in the manner provided by Rule 10C-1(b)(1)(iii)(A), the Exchange does not believe that this is a significant difference, as the explanation companies would likely provide for not having an independent compensation committee would simply be that they were not required to do so by home country law.

The Exchange currently does not require issuers whose only listed security is a preferred stock to comply with Section 303A.05(c). The Exchange proposes to grant these issuers a general exemption from compliance with the proposed amended rule. The Exchange believes this approach is appropriate because holders of listed preferred stock have significantly greater protections with respect to their rights to receive dividends and a liquidation preference upon dissolution of the issuer, and preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1.

2. Statutory Basis

The Exchange believes that the proposed rule change in relation to the Exchange's compensation committee

requirements and the proposed compensation consultant independence requirements are consistent with Section 10C of the Exchange Act and Rule 10C-1 thereunder in that they comply with the requirements of Rule 10C-1 with respect to the adoption by national securities exchanges of compensation committee listing standards. The Exchange believes that the proposed rule change is consistent with Section 6(b)²⁹ of the Exchange Act in general, and furthers the objectives of Section 6(b)(5) of the Exchange Act,³⁰ in particular in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that the proposed amendments to its compensation committee listing standards are consistent with the protection of investors and the public interest in that they strengthen the independence requirements for compensation committee membership, provide additional authority to compensation committees and require compensation committees to consider the independence of compensation consultants.

The Exchange believes that the general exemptions from the proposed requirements that it is granting to foreign private issuers and smaller reporting companies are consistent with Section 10C and Rule 10C-1, for the reasons stated above in the "Purpose" section, including because (i) Rule 10C-1(b)(5)(ii) explicitly exempts smaller reporting companies and (ii) foreign private issuers will comply with their home country law and, if they avail themselves of the exemption, will be required to disclose that fact under existing NYSE listing requirements. The Exchange believes it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules to issuers whose only listed class of equity securities on the Exchange is a preferred stock, as holders of listed preferred stock have significantly greater protections with respect to their rights to receive dividends and a liquidation

²⁹ 15 U.S.C. 78f(b).

²⁸ 17 CFR 240.10C-1(b)(5)(i).

preference upon dissolution of the issuer, and preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1. The Exchange believes that it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules for all of the other categories of issuers that are not currently subject to the Exchange's compensation committee requirement, for the structural reasons discussed in the "Purpose" section and because it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited written comments on the proposed rule change. The Exchange has received two comment letters on the proposed rule change.³¹ One commenter made the following points: (i) The Exchange should specify that the relevant factors for consideration with respect to compensation committee independence should include a consideration of fees received for service on the board itself; (ii) the relevant factors should explicitly include consideration of the personal and business relationships between directors and officers; (iii) the additional factors to be considered for compensation committee independence should be considered as a part of general board independence determinations; and (iv) the listing standards should specify that, while the factors must be considered in their totality, a single factor can result in the loss of board independence.

The Exchange does not believe that it is appropriate to consider board

compensation as part of the compensation committee independence determination with respect to individual directors. Non-executive directors devote considerable time to the affairs of the companies on whose boards they sit and eligible candidates would be difficult to find if board and committee service were unpaid in nature. Consequently, independent directors of listed companies are almost invariably paid for their board and committee service. As all independent directors are almost certainly going to receive board compensation from the company and do so on terms determined by the board as a whole, the Exchange does not believe that an analysis of the board compensation of individual directors is a meaningful consideration in determining their independence for purposes of compensation committee service.

The Exchange's existing director independence requirements require the board to consider relationships between the director and any member of management in making its affirmative independence determinations. Commentary included in Section 303A.02(a) makes this explicit by stating that when the board is making an affirmative independence determination "the concern is independence from management." Consequently, the Exchange does not believe that any further clarification of this requirement is necessary.

The Exchange does not believe that it is necessary to explicitly require that the additional independence considerations for compensation committee service should be a part of the board's general independence determinations for all independent directors. Section 303A.02(a) notes that "[I]t is not possible to anticipate, or explicitly to provide for, all circumstances that might signal potential conflicts of interest, or that might bear on the materiality of a director's relationship to a listed company" and that the board should therefore "broadly consider all relevant facts and circumstances" when making affirmative independence determinations. As such, the Exchange believes that, where appropriate, listed company boards should already be including in their general independence determinations factors including those being added to the compensation committee independence determination.

The Exchange does not believe it is necessary to include in the listing standards a statement that a single factor may be sufficiently material to render a director non-independent, as this is clearly the intention of the listing standards as drafted. Section 303A.02(a)

in its current form and in its proposed amended form requires the board to consider the materiality of each separate relationship between the director and the listed company or its management.

The second commenter proposed that the Exchange should require companies to make a public disclosure with respect to the factors considered by the compensation committee in reviewing the independence of compensation consultants, legal counsel and other compensation advisers. This commenter also proposed that the Exchange should require with respect to outside counsel hired by the compensation committee the same disclosure as is required by Item 407(e)(3)(iv) of Regulation S-K with respect to the nature of any conflict that arises from the engagement of a compensation consultant identified in the proxy statement. The Exchange does not believe that it is necessary to establish additional disclosure requirements of this nature. Item 407 of Regulation S-K contains extensive disclosure requirements with respect to a listed company's corporate governance and the Exchange's own rules generally incorporate those requirements by reference where applicable. Moreover, with respect to disclosure of any conflicts of interest that may arise with respect to outside counsel hired by the compensation committee, the Exchange believes that the rigorous conflict of interest requirements applicable to attorneys adequately address such concerns. And the Exchange is mindful that requiring additional public disclosures regarding outside counsel could require a listed company to disclose information that otherwise may be protected by attorney-client privilege.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule

³¹ Both of these letters were addressed to NYSE Regulation, Inc. Neither author indicated that the comments related to just one of the three national securities exchanges owned by NYSE Euronext. Therefore, the Exchange is addressing those comments to the extent they are applicable to its existing rules and the proposed amendments.

change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSE-2012-49 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSE-2012-49. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office and the Internet Web site of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSE-2012-49, and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³²

Kevin M. O'Neill,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68018; File No. SR-BX-2012-063]

Self-Regulatory Organizations; NASDAQ OMX BX, Inc.; Notice of Filing of Proposed Rule Change To Modify the Listing Rules for Compensation Committees To Comply With Rule 10C-1 under the Exchange Act and Make Other Related Changes

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on September 25, 2012, NASDAQ OMX BX, Inc. ("BX" or the "Exchange") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by BX. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

BX proposes to modify the listing rules for compensation committees to comply with Rule 10C-1 under the Exchange Act and make other related changes. The text of the proposed rule change is available on BX's Web site at <http://nasdaqomxbx.cchwallstreet.com>, at BX's principal office, and at the Commission's Public Reference Room.

BX will implement the proposed rule upon approval. Proposed BX Venture Market Listing Rule 5605(d)(3), which requires compensation committees to have the specific responsibilities and authority necessary to comply with Rule 10C-1(b)(2), (3) and (4)(i)-(vi) under the Exchange Act, shall be effective immediately.³ To the extent a Company does not have a compensation committee, the provisions of this rule shall apply to the Independent Directors who determine, or recommend to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company.

Companies must comply with the remaining provisions of the amended listing rules by the earlier of: (1) Their second annual meeting held after the date of approval of this proposal; or (2)

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ The Commission notes that this portion of the proposed rule, proposed BX Venture Market Listing Rule 5605(d)(3), will be effective upon approval by the Commission.

December 31, 2014. Until a Company is required to comply with the amended listed rules, it must continue to comply with BX's existing listing rules.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, BX included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. BX has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act")⁴ added Section 10C to the Exchange Act.⁵ Section 10C required the Commission to direct the national securities exchanges, including BX, and national securities associations to prohibit the listing of any equity security of an issuer, with certain exemptions, that does not comply with Section 10C's requirements relating to compensation committees and advisers. To effect this requirement, the Commission has adopted Rule 10C-1 under the Exchange Act, which became effective on July 27, 2012. Rule 10C-1 requires each national securities exchange and national securities association to provide to the Commission, no later than September 25, 2012, proposed rules or rule amendments that comply with the requirements of Rule 10C-1.⁶

Rule 10C-1 generally requires that:

- Each member of the compensation committee of a listed issuer must be an independent member of the board of directors;
- in determining independence requirements for compensation committee members, exchanges must consider relevant factors, including, but not limited to:
 - the source of compensation of a member, including any consulting, advisory or other compensatory fee paid by the issuer to such member; and

⁴ Public Law 111-203, 124 Stat. 1376 (2010).

⁵ 15 U.S.C. 78j-3.

⁶ See 17 CFR 240.10C-1(a)(4)(i).

- whether the member is affiliated with the issuer, a subsidiary of the issuer or an affiliate of a subsidiary of the issuer;
- the compensation committee must have the authority to retain or obtain the advice of a compensation consultant, independent legal counsel or other compensation adviser;
- the listed issuer must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to such compensation advisers;
- the compensation committee may select such compensation advisers only after taking into consideration six independence factors that are enumerated in Rule 10C-1, as well as any other factors identified by an exchange; and
- certain categories of issuers, including, but not limited to, controlled companies and smaller reporting companies, are generally exempt from all of Rule 10C-1, while other categories of issuers, including, but not limited to, foreign private issuers that provide certain disclosures, are specifically exempt from the requirement to have a fully independent compensation committee.

General Overview of BX's Proposals

While BX does not presently list any securities, the Commission has approved listing rules for the Exchange's BX Venture Market.⁷ BX is proposing to modify the compensation-related listing rules for the BX Venture Market, as required by Rule 10C-1.

- Generally, BX's proposals provide that:
- Companies⁸ must have a compensation committee consisting of at least two members, each of whom must be an Independent Director⁹ as defined under BX's current listing rules;
 - compensation committee members must not accept directly or indirectly any consulting, advisory or other compensatory fee, other than for board service, from a Company or any subsidiary thereof;
 - in determining whether a director is eligible to serve on a compensation

committee, a Company's board must consider whether the director is affiliated with the Company, a subsidiary of the Company or an affiliate of a subsidiary of the Company to determine whether such affiliation would impair the director's judgment as a member of the compensation committee;

- Companies may continue to rely on BX's existing exception that allows certain non-Independent Directors to serve on a compensation committee under exceptional and limited circumstances;
 - if a Company fails to comply with the compensation committee composition requirements in certain circumstances, it may rely on a cure period;
 - Companies must adopt a formal, written compensation committee charter that must specify the compensation committee responsibilities and authority in Rule 10C-1 relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel;
 - Companies must review and reassess the adequacy of the compensation committee charter on an annual basis;
 - BX's existing exemptions from, and phase-in schedules for, the compensation-related listing rules remain generally unchanged, other than to add exemptions for cooperatives and Controlled Companies, as defined below, as well as a phase-in schedule for Companies ceasing to be Controlled Companies; and
 - Smaller Reporting Companies¹⁰ must have a compensation committee comprised of at least two Independent Directors and a formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority, but such Companies are not required to adhere to the compensation committee eligibility requirements relating to compensatory fees and affiliation, or the requirements relating to compensation consultants, independent legal counsel and other compensation advisers that BX is proposing to adopt under Rule 10C-1.
- Rule 10C-1 requires BX to include in its submission: (i) A review of whether and how its existing or proposed listing rules satisfy the requirements of Rule

10C-1; (ii) a discussion of the consideration of factors relevant to compensation committee independence conducted by BX; and (iii) the definition of independence applicable to compensation committee members that BX proposes to adopt or retain in light of such review.¹¹ BX's proposals and its underlying analysis are discussed in depth below.

Requirement To Have a Compensation Committee

BX's current listing rules require that compensation of the chief executive officer and all other Executive Officers¹² of a Company must be determined, or recommended to the board for determination, either by: (i) A compensation committee comprised solely of Independent Directors; or (ii) Independent Directors constituting a majority of the board's Independent Directors in a vote in which only Independent Directors participate (the "Alternative").¹³

Although it was not required to do so by Rule 10C-1,¹⁴ BX considered whether the Alternative remains appropriate given the heightened importance of compensation decisions in today's corporate governance environment. Since responsibility for executive compensation decisions is one of the most important responsibilities entrusted to a board of directors, BX believes that there are benefits from a board having a standing committee dedicated solely to oversight of executive compensation. Specifically, directors on a standing compensation committee may develop expertise in a Company's executive compensation program in the same way that directors on a standing audit committee develop expertise in a Company's accounting and financial reporting processes. In addition, a formal committee structure may help promote accountability to stockholders for executive compensation decisions.

BX also considered whether eliminating the Alternative would pose an undue hardship on listed Companies. Since BX does not currently have any listed Companies, it does not believe

⁷ References in this filing to BX's listing rules refer to the listing rules for the BX Venture Market.

⁸ "Company" means "the issuer of a security listed or applying to list on the Exchange." BX Venture Market Listing Rule 5005(a)(4).

⁹ For a discussion of the definition of the term "Independent Director," see the section entitled "Compensation Committee Composition—General Independence Definition" below. Notwithstanding any of the proposed changes, and consistent with BX's existing listing rules, a Company's board has the responsibility to make an affirmative determination that no Independent Director has a relationship that, in the opinion of the board, would interfere with the exercise of independent judgment in carrying out the responsibilities of a director.

¹⁰ Smaller Reporting Company is defined in Rule 12b-2 under the Exchange Act.

¹¹ See 17 CFR 240.10C-1(a)(4)(i).

¹² "Executive Officer" is defined as an officer "covered in Rule 16a-1(f) under the [Exchange] Act." BX Venture Market Listing Rule 5605(a)(1).

¹³ See BX Venture Market Listing Rules 5605(d)(1) and (2).

¹⁴ See Securities Exchange Act Release No. 67220 (June 20, 2012), 77 FR 38422, 38425 (June 27, 2012) (the "Adopting Release") (stating that "[t]he final rule will not require a listed issuer to have a compensation committee or a committee that performs functions typically assigned to a compensation committee.").

that eliminating the Alternative would be unduly burdensome.

As a result, BX proposes to eliminate the Alternative and require listed Companies to have a standing compensation committee with the responsibility for determining, or recommending to the full board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company.

Compensation Committee Size

BX's current listing rules do not impose size requirements on any board committees, other than the audit committee, which must consist of at least three members.¹⁵ As a result, it is possible to have a compensation committee comprised of only one member under BX's current listing rules.

Although it was not required to do so by Rule 10C-1, BX considered whether it is appropriate to impose a minimum size requirement on a compensation committee. Given the importance of compensation decisions to stockholders, BX believes that it is appropriate to have more than one director responsible for these decisions and that therefore, a compensation committee should consist of at least two members. BX then considered whether to require compensation committees to adhere to the same size requirement as audit committees and have a minimum of three members. However, BX was concerned that it might be difficult for Companies, especially smaller Companies, to comply with a requirement to have a three-member compensation committee, in addition to a three-member audit committee.

BX also considered whether imposing a minimum size requirement on a compensation committee would be unduly burdensome to listed Companies, especially in combination with the proposal to eliminate the Alternative, as discussed above. Since BX does not currently have any listed Companies, it does not believe that imposing a minimum size requirement on a compensation committee would be unduly burdensome.

As a result, BX proposes to require a compensation committee of a Company to consist of at least two members of the board of directors.

Compensation Committee Composition—General Independence Definition

BX's current listing rules require a compensation committee to be

comprised solely of Independent Directors, as defined in BX Venture Market Listing Rule 5605(a)(2).¹⁶ This definition includes a two-part test for independence. First, there are certain categories of directors who cannot be considered independent, including:

- A director who is an Executive Officer or employee of the Company;¹⁷
- a director who is, or at any time during the past three years was, employed by the Company;¹⁸
- a director who accepted or who has a Family Member¹⁹ who accepted any compensation from the Company in excess of \$120,000 during any period of twelve consecutive months within the three years preceding the determination of independence;²⁰
- a director who is a Family Member of an individual who is, or at any time during the past three years was, employed by the Company as an Executive Officer;²¹
- a director who is, or has a Family Member who is, a partner in, or a controlling Shareholder²² or an Executive Officer of, any organization to which the Company made, or from which the Company received, payments for property or services in the current or any of the past three fiscal years that exceed 5% of the recipient's consolidated gross revenues for that year, or \$200,000, whichever is more;²³

¹⁶ See BX Venture Market Listing Rules 5605(d)(1) and (2).

¹⁷ See BX Venture Market Listing Rule 5605(a)(2). The rule's reference to the term "Company" includes any parent or subsidiary of the Company. The term "parent or subsidiary" is intended to cover entities the Company controls and consolidates with the Company's financial statements as filed with the Commission (but not if the Company reflects such entity solely as an investment in its financial statements). See IM-5605-1.

¹⁸ See BX Venture Market Listing Rule 5605(a)(2)(A).

¹⁹ "Family Member" is defined as "a person's spouse, parents, children and siblings, whether by blood, marriage or adoption, or anyone residing in such person's home." BX Venture Market Listing Rule 5605(a)(2).

²⁰ See BX Venture Market Listing Rule 5605(a)(2)(B). This prohibition includes exceptions for: (i) compensation for board or board committee service; (ii) compensation paid to a Family Member who is an employee (other than an Executive Officer) of the Company; or (iii) benefits under a tax-qualified retirement plan, or non-discretionary compensation.

²¹ See BX Venture Market Listing Rule 5605(a)(2)(C).

²² "Shareholder" is defined as "a record or beneficial owner of a [s]ecurity listed or applying to list. For purposes of [the BX Venture Market Listing Rules], the term 'Shareholder' includes, for example, a limited partner, the owner of a depository receipt, or unit." BX Venture Market Listing Rule 5005(a)(26).

²³ See BX Venture Market Listing Rule 5605(a)(2)(D). This prohibition includes exceptions for payments: (i) Arising solely from investments in the Company's securities; or (ii) under non-

• a director of the Company who is, or has a Family Member who is, employed as an Executive Officer of another entity where at any time during the past three years any of the Executive Officers of the Company serve on the compensation committee of such other entity;²⁴ or

• a director who is, or has a Family Member who is, a current partner of the Company's outside auditor, or was a partner or employee of the Company's outside auditor who worked on the Company's audit at any time during any of the past three years.²⁵

Second, a Company's board of directors must make an affirmative determination that each Independent Director has no relationship that, in the opinion of the board, would interfere with the exercise of independent judgment in carrying out the responsibilities of a director.²⁶

BX proposes to continue unchanged its existing requirement that a compensation committee be comprised solely of Independent Directors, as defined in BX Venture Market Listing Rule 5605(a)(2).

Compensation Committee Composition—Compensatory Fees

Rule 10C-1 requires that in determining the independence requirements for compensation committee members, BX must consider relevant factors, including, but not limited to, the source of compensation of a member, including any consulting, advisory or other compensatory fee paid by the issuer to the member.²⁷ In considering this particular factor, BX reviewed its current listing rules relating to compensatory fees. As outlined above, BX's current listing rules require compensation committee members to be Independent Directors. Independent Director is defined to exclude any director who: (i) Accepted any compensation from the Company in excess of \$120,000 during any period of twelve consecutive months within the prior three years; or (ii) is a partner in, or a controlling Shareholder or an

discretionary charitable contribution matching programs.

²⁴ See BX Venture Market Listing Rule 5605(a)(2)(E).

²⁵ See BX Venture Market Listing Rule 5605(a)(2)(F). In the case of an investment company, in lieu of the prohibitions in BX Venture Market Listing Rule 5605(a)(2)(A)-(F), a director cannot be considered independent if he or she is an "interested person" of the Company as defined in Section 2(a)(19) of the Investment Company Act of 1940, other than in his or her capacity as a member of the board of directors or any board committee.

²⁶ See BX Venture Market Listing Rule 5605(a)(2) and IM-5605-1.

²⁷ See 17 CFR 240.10C-1(b)(1)(ii)(A).

¹⁵ See BX Venture Market Listing Rule 5605(c)(2)(A).

Executive Officer of, any organization to which the Company made, or from which the Company received, payments for property or services in the current or any of the past three fiscal years that exceed 5% of the recipient's consolidated gross revenues for that year, or \$200,000, whichever is more.²⁸ As a result, directors who receive compensatory fees from a Company below these thresholds may serve on a compensation committee under BX's current listing rules.

This is in contrast to BX's current listing rules relating to audit committees, which require audit committee members to meet the criteria for independence set forth in Rule 10A-3(b)(1) under the Exchange Act, subject to certain exemptions.²⁹ Rule 10A-3(b)(1) prohibits an audit committee member from accepting directly or indirectly any consulting, advisory or other compensatory fee from an issuer or any subsidiary, with certain exemptions.

After reviewing its current listing rules, BX concluded that there is no compelling justification to have different independence standards for audit and compensation committee members with respect to the acceptance of compensatory fees from a Company. Accordingly, BX proposes to adopt the same standard for compensation committee members that applies to audit committee members under Rule 10A-3 under the Exchange Act with respect to compensatory fees. Specifically, BX's proposal prohibits a compensation committee member from accepting directly or indirectly any consulting, advisory or other compensatory fee from an issuer or any subsidiary. As in Rule 10A-3, compensatory fees shall not include: (i) Fees received as a member of the compensation committee, the board of directors or any other board committee; or (ii) the receipt of fixed amounts of compensation under a retirement plan (including deferred compensation) for prior service with the Company (provided that such compensation is not contingent in any way on continued service).³⁰ Also similar to Rule 10A-3, the proposed requirement applicable to compensation committee members will not include a "look-back" period.³¹

²⁸ See BX Venture Market Listing Rules 5605(a)(2)(B) and (D).

²⁹ See BX Venture Market Listing Rule 5605(c)(2)(A)(ii).

³⁰ See 17 CFR 240.10A-3(b)(1).

³¹ See Securities Exchange Act Release No. 47654 (April 9, 2003), 68 FR 18788, 18792 (April 16, 2003) (stating that "[t]he final rule, like [the] proposal, applies the prohibitions only to current relationships with the audit committee member and

Accordingly, the prohibition on the receipt of any consulting, advisory or other compensatory fee by a compensation committee member begins with the member's term of service on the compensation committee.³²

Compensation Committee Composition—Affiliation

Rule 10C-1 requires that in determining the independence requirements for compensation committee members, BX also must consider whether a member is affiliated with the issuer, a subsidiary of the issuer or an affiliate of a subsidiary of the issuer.³³ In considering this particular factor, BX reviewed its current listing rules relating to affiliation. As outlined above, BX's current listing rules require compensation committee members to be Independent Directors. The definition of the term "Independent Director" does not refer to affiliation, although the definition does exclude certain individuals who may be considered affiliates from being an Independent Director. For example, any director who is an Executive Officer of the Company cannot be considered an Independent Director.³⁴ Significantly, the Interpretive Material to BX's definition of Independent Director states that "[b]ecause the Exchange does not believe that ownership of Company stock by itself would preclude a board finding of independence, it is not included in the aforementioned objective factors."³⁵

Beyond the definition of Independent Director, BX's current listing rules relating to audit committees require audit committee members to meet the criteria for independence set forth in Rule 10A-3(b)(1) under the Exchange Act, subject to certain exemptions.³⁶ Rule 10A-3(b)(1) prohibits an audit committee member from being an affiliated person of the issuer or any subsidiary thereof. The term "affiliate" means "a person that directly, or indirectly through one or more intermediaries, controls, or is controlled

related persons. They do not extend to a 'look back' period before appointment to the audit committee. * * *")

³² BX notes, however, that as discussed above, compensation committee members must be Independent Directors as defined in BX Venture Market Listing Rule 5605(a)(2). Each of the bright-line tests in this definition includes a three-year "lookback" period. See BX Venture Market Listing Rule 5605(a)(2).

³³ See 17 CFR 240.10C-1(b)(1)(ii)(B).

³⁴ See BX Venture Market Listing Rule 5605(a)(2).

³⁵ IM-5605-1.

³⁶ See BX Venture Market Listing Rule 5605(c)(2)(A)(ii).

by, or is under common control with, the person specified."³⁷ However, Rule 10A-3 includes a safe harbor for a person that is not: (i) The beneficial owner, directly or indirectly, of more than 10% of any class of voting equity securities of the specified person; and (ii) an executive officer of a specified person.³⁸

After reviewing its current listing rules, BX considered whether to propose that compensation committee members must meet the same standard applicable to audit committee members under Rule 10A-3 under the Exchange Act with respect to affiliation, similar to its proposal with respect to compensatory fees. However, BX concluded that such a blanket prohibition would be inappropriate for compensation committees. In fact, BX believes that it may be appropriate for certain affiliates, such as representatives of significant stockholders, to serve on compensation committees since their interests are likely aligned with those of other stockholders in seeking an appropriate executive compensation program.

As a result, BX proposes that Companies' boards of directors should consider affiliation in making an eligibility determination for compensation committee members, but it does not propose bright-line rules around this factor. In making this eligibility determination, a Company's board specifically must consider whether the director is affiliated with the Company, a subsidiary of the Company or an affiliate of a subsidiary of the Company to determine whether such affiliation would impair the director's judgment as a member of the compensation committee. In performing this analysis, a board of directors is not required to apply a "look-back" period, and is therefore required to consider affiliation only with respect to relationships that occur during an individual's term of service as a compensation committee member.

A board may conclude that it is appropriate for a director who is an affiliate to serve on the compensation committee. While this differs from the requirement applicable to audit committee members, BX could identify no compelling policy justification for precluding all affiliates, such as owners of a Company, even those with very large stakes, from serving on the compensation committee.

³⁷ See 17 CFR 240.10A-3(e)(1).

³⁸ *Id.*

Compensation Committee Composition—Other

Rule 10C–1 permits BX to consider other relevant factors in determining the independence requirements for compensation committee members.³⁹ After reviewing its current and proposed listing rules, BX concluded that these rules are sufficient to ensure the independence of compensation committee members. Therefore, BX determined not to propose further independence requirements.

Exceptional and Limited Circumstances Exception

With some edits, BX proposes to retain its existing exception that allows a Company to have a non-Independent Director serve on the compensation committee under exceptional and limited circumstances.⁴⁰ Under this exception, if a compensation committee consists of at least three members, one director who is not an Independent Director and is not a current officer or employee or a Family Member of an officer or employee, may be appointed to the compensation committee if the board, under exceptional and limited circumstances, determines that such individual's membership on the committee is required by the best interests of the Company and its Shareholders. The NASDAQ Stock Market LLC ("Nasdaq") recently amended the identical exception in its rules to allow a Company to rely on the exception for a non-Independent Director who is a Family Member of a non-executive employee of the Company.⁴¹ BX proposes to make the same change to its exceptional and limited circumstances exception.

A Company that relies on this exception must disclose either on or through the Company's Web site or in the proxy statement for the next annual meeting subsequent to such determination (or, if the Company does not file a proxy, in its Form 10–K or 20–F), the nature of the relationship and the reasons for the determination. In

³⁹ See 17 CFR 240.10C–1(b)(1)(ii).

⁴⁰ See BX Venture Market Listing Rule 5605(d)(3).

⁴¹ See Securities Exchange Act Release No. 67468 (July 19, 2012), 77 FR 43618 (July 25, 2012) (SR–NASDAQ–2012–062). Nasdaq made the same change to its exceptional and limited circumstances exception for audit committee members, and BX also proposes to make a conforming change to its identical exception for audit committee members. BX notes that under both the current and proposed versions of the exception for audit committee members, a Company could not rely on the exception for a director who does not meet the criteria set forth in Section 10A(m)(3) of the Exchange Act and the rules thereunder to allow a director to serve on the audit committee. See 15 U.S.C. 78j–1(m)(3) and 17 CFR 240.10A–3(b)(1).

addition, the Company must provide any disclosure required by Instruction 1 to Item 407(a) of Regulation S–K regarding its reliance on this exception. A member appointed under this exception may not serve longer than two years.

BX believes this exception is an important means to allow Companies flexibility as to board and committee membership and composition in unusual circumstances, which may be particularly important for smaller Companies.

BX would allow a Company to avail itself of the exception even for a director who fails the new requirements adopted pursuant to Rule 10C–1.

Cure Period

Consistent with Rule 10C–1, BX's proposal provides Companies with an opportunity to cure defects in the composition of compensation committees.⁴² The proposed cure period is copied from the cure period in Nasdaq's current listing rules for noncompliance with the requirement to have a majority independent board.⁴³

Under BX's proposal, if a Company fails to comply with the compensation committee composition requirements due to one vacancy, or one compensation committee member ceases to be independent due to circumstances beyond the member's reasonable control, the Company shall regain compliance by the earlier of the next annual shareholders meeting or one year from the occurrence of the event that caused the noncompliance. However, if the annual shareholders meeting occurs no later than 180 days following the event that caused the noncompliance, the Company shall instead have 180 days from such event to regain compliance. This provides a Company at least 180 days to cure noncompliance and would typically allow a Company to regain compliance in connection with its next annual meeting. A Company relying on this provision shall provide notice to BX immediately upon learning of the event or circumstance that caused the noncompliance.

Compensation Committee Charter

BX proposes to require each Company to certify that it has adopted a formal written compensation committee charter and that the compensation committee will review and reassess the adequacy of the formal written charter on an annual basis.⁴⁴ This proposal is similar to BX's

⁴² See 17 CFR 240.10C–1(a)(3).

⁴³ See Nasdaq Listing Rule 5605(b)(1)(A).

⁴⁴ Smaller Reporting Companies may adopt either a formal written compensation committee charter or

current requirement for Companies to certify as to the adoption of a formal written audit committee charter, except that the proposed requirement for annual review and reassessment of the adequacy of the compensation committee charter is written prospectively, rather than retrospectively.⁴⁵ In other words, the proposed compensation committee charter requirement states that the compensation committee will review and reassess the adequacy of the charter on an annual basis, while the current audit committee charter requirement states that the audit committee has reviewed and reassessed the adequacy of the charter on an annual basis.⁴⁶

BX proposes that the compensation committee charter must specify:

- The scope of the compensation committee's responsibilities, and how it carries out those responsibilities, including structure, processes and membership requirements;
- The compensation committee's responsibility for determining, or recommending to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company;
- That the chief executive officer of the Company may not be present during voting or deliberations by the compensation committee on his or her compensation; and
- The specific compensation committee responsibilities and authority set forth in proposed BX Venture Market Listing Rule 5605(d)(3), which implements the requirements of Section 10C(b)–(e) of the Exchange Act and Rule 10C–1(b)(2), (3) and (4)(i)–(vi) thereunder.

The requirement for the charter to specify the scope of the compensation committee's responsibilities, and how it carries out those responsibilities, including structure, processes and membership requirements, is copied

a board resolution that specifies the committee's responsibilities and authority, except Smaller Reporting Companies are not required to specify the specific compensation responsibilities and authority set forth in proposed BX Venture Market Listing Rule 5605(d)(3). For further discussion, see the section entitled "Smaller Reporting Companies" below.

⁴⁵ See BX Venture Market Listing Rule 5605(c)(1).

⁴⁶ BX proposes to make a conforming change to its audit committee charter requirement to clarify that Companies' annual review and reassessment of the audit committee charter should be prospective. This is consistent with BX's current interpretation of its audit committee charter requirement. By proposing this amendment, BX seeks to minimize differences between the audit committee and compensation committee charter requirements and to eliminate potential questions as to whether BX intended a discrepancy between these two requirements.

from BX's similar listing rule relating to audit committee charters.⁴⁷

The requirement for the charter to specify the compensation committee's responsibility for determining, or recommending to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company, is based upon BX's current compensation-related listing rules.⁴⁸ These listing rules require that the compensation of a Company's chief executive officer and all other Executive Officers must be determined by (i) a compensation committee comprised solely of Independent Directors or (ii) the Independent Directors constituting a majority of the board's Independent Directors in a vote in which only Independent Directors participate. As discussed above, BX proposes to eliminate the Alternative, and therefore, the compensation of a Company's chief executive officer and all other Executive Officers must be determined, or recommended to the board for determination, by a compensation committee comprised of Independent Directors. Going forward, BX proposes to implement this requirement by requiring Companies to include it in their formal written compensation committee charters.

The requirement for the charter to specify that the chief executive officer of the Company may not be present during voting or deliberations by the compensation committee on his or her compensation is based upon BX's current compensation-related listing rules.⁴⁹ Going forward, BX proposes to implement this requirement by requiring Companies to include it in their formal written compensation committee charters.

Finally, the requirement for the charter to specify the specific compensation committee responsibilities and authority set forth in proposed BX Venture Market Listing Rule 5605(d)(3) is modeled after BX's similar listing rule relating to audit committee charters.⁵⁰ Proposed BX

Venture Market Listing Rule 5605(d)(3) implements the requirements of Section 10C(b)–(e) of the Exchange Act and Rule 10C–1(b)(2), (3) and (4)(i)–(vi) thereunder. Specifically, the proposed listing rule states that a compensation committee must have the specific compensation committee responsibilities and authority necessary to comply with Rule 10C–1(b)(2), (3) and (4)(i)–(vi) relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel.⁵¹

Rule 10C–1 permits BX to identify other relevant independence factors that a compensation committee must consider when selecting a compensation consultant, legal counsel or other adviser.⁵² BX considered whether to adopt other independence factors, but ultimately concluded that the six independence factors enumerated in Rule 10C–1 will provide compensation committees with a broad and sufficient range of facts and circumstances to consider in making an independence determination. Like the Commission, BX seeks to emphasize that a compensation committee is not required to retain an independent compensation adviser; rather, a compensation committee is required only to conduct the independence analysis described in Rule 10C–1 before selecting a compensation adviser.⁵³

concerns responsibilities relating to: (i) Registered public accounting firms; (ii) complaints relating to accounting, internal accounting controls or auditing matters; (iii) authority to engage advisors; and (iv) funding as determined by the audit committee.

⁵¹ The independence factors include: (i) The provision of other services to the issuer by the person that employs the adviser (the "Employer"); (ii) the amount of fees received from the issuer by the Employer, as a percentage of the total revenue of the Employer; (iii) the policies and procedures of the Employer that are designed to prevent conflicts of interest; (iv) any business or personal relationship of the adviser with a member of the compensation committee; (v) any stock of the issuer owned by the adviser; and (vi) any business or personal relationship of the adviser or the Employer with an executive officer of the issuer. See 17 CFR 240.10C–1(b)(4).

⁵² *Id.*

⁵³ See the Adopting Release, at 38432–3 (stating that "neither the [Dodd-Frank] Act nor [Rule 10C–1] requires a compensation adviser to be independent, only that the compensation committee consider the enumerated independence factors before selecting a compensation adviser. Compensation committees may select any compensation adviser they prefer, including ones that are not independent, after considering the six independence factors outlined in the [Rule 10C–1].")

Exemptions

Rule 10C–1 allows the national securities exchanges to exempt from the listing rules adopted pursuant to Rule 10C–1 certain categories of issuers, as the national securities exchange determines is appropriate, taking into consideration, among other relevant factors, the potential impact of the listing rules on smaller reporting issuers.⁵⁴ BX proposes that its existing exemptions from the compensation-related listing rules remain generally unchanged. BX's current listing rules include exemptions for: asset-backed issuers and other passive issuers,⁵⁵ limited partnerships⁵⁶ and management investment companies.⁵⁷ For the same reasons that these categories of Companies have traditionally been exempt from BX's compensation-related listing rules, BX proposes that they continue to be exempt from its revised listing rules relating to compensation committees.

In addition, BX's current listing rules provide that a Foreign Private Issuer may follow its home country practice in lieu of BX's compensation-related listing rules if the Foreign Private Issuer discloses in its annual reports filed with the Commission each requirement that it does not follow and describes the home country practice followed by the issuer in lieu of such requirements.⁵⁸

⁵⁴ See 17 CFR 240.10C–1(b)(5).

⁵⁵ See BX Venture Market Listing Rule 5615(a)(1). Asset-backed issuers and other passive issuers have traditionally been exempt from BX's compensation-related listing rules because these issuers do not have a board of directors or persons acting in a similar capacity and their activities are limited to passively owning or holding (as well as administering and distributing amounts in respect of) securities, rights, collateral or other assets on behalf of or for the benefit of the holders of the listed securities. See IM–5615–1.

⁵⁶ See BX Venture Market Listing Rule 5615(a)(4). BX's compensation-related listing rules historically have not been applied to limited partnerships because the structure of these entities requires that public investors have limited rights and that the general partners make all significant decisions about the operation of the limited partnership. As such, limited partners do not expect to have a voice in the operations of the partnership. Limited partnerships also are exempt from the independence requirements of Rule 10C–1. See 17 CFR 240.10C–1(b)(1)(iii)(A)(1).

⁵⁷ See BX Venture Market Listing Rule 5615(a)(5). Management investment companies registered under the Investment Company Act of 1940 are already subject to a pervasive system of federal regulation in certain areas of corporate governance, and as a result, these entities have traditionally been exempt from BX's compensation-related listing rules. See IM–5615–4. Open-end management investment companies registered under the Investment Company Act of 1940 also are exempt from the independence requirements of Rule 10C–1. See 17 CFR 240.10C–1(b)(1)(iii)(A)(3).

⁵⁸ See BX Venture Market Listing Rule 5615(a)(3). Under BX's listing rules, Foreign Private Issuer has the same meaning as under Rule 3b–4 under the Exchange Act. See BX Venture Market Listing Rule

⁴⁷ See BX Venture Market Listing Rule 5605(c)(1)(A).

⁴⁸ See BX Venture Market Listing Rules 5605(d)(1) and (2).

⁴⁹ See BX Venture Market Listing Rule 5605(d)(1).

⁵⁰ See BX Venture Market Listing Rule 5605(c)(1)(D), which requires that an audit committee charter set forth the specific audit committee responsibilities and authority set forth in BX Venture Market Listing Rule 5605(c)(3). BX Venture Market Listing Rule 5605(c)(3) states that an audit committee must have the specific responsibilities and authority necessary to comply with Rule 10A–3(b)(2), (3), (4) and (5) under the Exchange Act, with certain exemptions. Rule 10A–3(b)(2), (3), (4) and (5) under the Exchange Act

Alternatively, a Foreign Private Issuer that is not required to file its annual report with the Commission on Form 20-F may make this disclosure only on its Web site. BX proposes that a Foreign Private Issuer continue to be allowed to follow its home country practice in lieu of BX's revised listing rules relating to compensation committees if the Foreign Private Issuer provides the disclosures described above. BX also proposes to add an additional disclosure requirement for any Foreign Private Issuer that follows its home country practice in lieu of the requirement to have an independent compensation committee to disclose in its annual reports filed with the Commission the reasons why it does not have such a committee.⁵⁹

Finally, BX proposes to add exemptions to its compensation committee rules for cooperatives⁶⁰ and Controlled Companies,⁶¹ which BX proposes to define as Companies "of which more than 50% of the voting power for the election of directors is held by an individual, a group or another company." These proposed exemptions are modeled after the similar exemptions in Nasdaq's rules.⁶²

Phase-In Schedules

BX proposes that its existing phase-in schedules for the requirements relating to compensation committee composition remain generally

5005(a)(12). BX's listing rules are modeled after Nasdaq's listing rules, which have traditionally provided qualified exemptions for foreign private issuers so that such issuers are not required to do any act that is contrary to a law, rule or regulation of any public authority exercising jurisdiction over such issuer or that is contrary to generally accepted business practices in the issuer's country of domicile, except to the extent such exemptions would be contrary to the public securities laws. See Securities Exchange Act Release No. 48745 (November 4, 2003), 68 FR 64154, 64165 (November 12, 2003) (SR-NASD-2002-138).

⁵⁹ This proposal adopts the requirements of Rule 10C-1(b)(1)(iii)(A)(4), which provides an exemption from the independence requirements of Rule 10C-1 for a "foreign private issuer that discloses in its annual report the reasons that the foreign private issuer does not have an independent compensation committee."

⁶⁰ Certain member-owned cooperatives that list their preferred stock are required to have their common stock owned by their members. Because of their unique structure and the fact that they do not have a publicly traded class of common stock, BX believes these Companies should be exempt from its compensation committee rules.

⁶¹ This exemption recognizes that majority Shareholders, including parent companies, have the right to select directors and control certain key decisions, such as executive officer compensation, by virtue of their ownership rights. Controlled Companies also are exempt from all of the requirements of Rule 10C-1. See 17 CFR 240.10C-1(b)(5)(ii).

⁶² See Nasdaq Listing Rule 5615(a)(2), Nasdaq IM-5615-2, Nasdaq Listing Rule 5615(c) and Nasdaq IM-5615-5.

unchanged. BX's current listing rules include phase-in schedules for: Companies listing in connection with an initial public offering⁶³ and Companies emerging from bankruptcy.⁶⁴ Since each of these categories of Company did not previously have a compensation committee, each is allowed to phase in compliance with the compensation committee composition requirement as follows: (1) One independent member at the time of listing; (2) a majority of independent members within 90 days of listing; and (3) all independent members within one year of listing. BX proposes that these phase-in schedules remain unchanged under its revised listing rules, except to clarify that a Company may phase in compliance with the minimum size requirement and the additional eligibility requirements adopted pursuant to Rule 10C-1, as well as the requirement for compensation committee members to be Independent Directors.⁶⁵

In addition, BX proposes minor clarifying changes to the phase-in schedule in its current listing rules for Companies transferring from other markets.⁶⁶ Companies transferring from another national securities exchange with a substantially similar requirement shall be immediately subject to the compensation committee requirement, provided that such Companies shall be afforded the balance of any grace period afforded by the other market. Companies that are not subject to a substantially similar requirement at the time of listing on BX, such as a Company quoted in the over-the-counter market, shall be permitted to phase in compliance with the compensation

⁶³ See BX Venture Market Listing Rule 5615(b)(1).

⁶⁴ See BX Venture Market Listing Rule 5615(b)(2).

⁶⁵ To provide an illustration of how the compensation committee composition requirement will interact with the minimum size requirement, consider a Company that at the time of listing has a compensation committee consisting of two members, both of whom are Independent Directors, but one of whom accepts compensatory fees of \$50,000 annually from the Company pursuant to a consulting agreement. Although only one of these directors is fully eligible to serve on the compensation committee, the committee meets the requirements of BX's phase-in schedule because it has one fully eligible member at the time of listing. By the 90th day from listing, the committee must have a majority of fully eligible members, so the Company could: (i) Remove the ineligible member and temporarily have a committee of one fully eligible member; (ii) replace the ineligible member with a fully eligible member so that the committee consists of two members, all of whom are fully eligible; or (iii) add a second fully eligible member so that the committee consists of three members, a majority of whom are fully eligible. By one year from listing, the Company's compensation committee must consist of at least two members, and all members must be fully eligible under BX's compensation committee composition requirement.

⁶⁶ See BX Venture Market Listing Rule 5615(b)(3).

committee composition requirements in Rule 5605(d)(2)(A), including the requirement that compensation committee members be Independent Directors, the minimum size requirement and the additional eligibility requirements adopted pursuant to Rule 10C-1, on the same schedule as Companies listing in connection with an initial public offering.

Since BX is proposing to add to its rules an exemption for Controlled Companies, as discussed above, BX also proposes to add a phase-in schedule for Companies ceasing to be Controlled Companies. This proposed phase-in schedule is modeled after the similar phase-in schedule in Nasdaq's rules.⁶⁷ None of the aforementioned phase-in schedules apply to the requirement to adopt a formal written compensation committee charter including the content specified in BX Venture Market Listing Rule 5605(d)(1)(A)-(D).⁶⁸

Smaller Reporting Companies

While Rule 10C-1 exempts Smaller Reporting Companies from all of its requirements, BX's current listing rules do not include any such exemptions.⁶⁹ Consistent with the exemption in Rule 10C-1, however, BX proposes not to require Smaller Reporting Companies to adhere to the new requirements relating to compensatory fees and affiliation, which BX is proposing in response to Rule 10C-1, or to incorporate into their formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority the language in Rule 10C-1 regarding compensation advisers. This approach will minimize new costs imposed on Smaller Reporting Companies and allow them some flexibility not allowed for larger Companies.

However, as discussed above, BX proposes to eliminate the Alternative in its current listing rules that allows compensation decisions to be made by a majority of the Independent Directors rather than by a committee composed entirely of Independent Directors. BX proposes to eliminate the Alternative for Smaller Reporting Companies, just like all other Companies. As a result, Smaller Reporting Companies would be

⁶⁷ See Nasdaq Listing Rule 5615(c)(3).

⁶⁸ As discussed below under "Smaller Reporting Companies," BX is proposing a new phase-in schedule for a Company ceasing to be a Smaller Reporting Company. BX proposes to allow such a Company 30 days to certify to BX that it has adopted a formal written compensation committee charter including the content specified in BX Venture Market Listing Rule 5605(d)(1)(A)-(D). See footnote 70, *infra*.

⁶⁹ See 17 CFR 240.10C-1(b)(5)(ii).

required to have a compensation committee comprised of at least two Independent Directors as defined under BX's existing listing rules.

In addition, BX proposes that Smaller Reporting Companies must adopt a formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority. Unlike other Companies, Smaller Reporting Companies may include this content in a board resolution, rather than a compensation committee charter, and Smaller Reporting Companies are not required to review and reassess the adequacy of the charter or board resolution on an annual basis. The charter or board resolution must specify the same content as other Companies, except Smaller Reporting Companies are not required to specify the specific compensation responsibilities and authority set forth in proposed BX Venture Market Listing Rule 5605(d)(3) relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel.⁷⁰

BX also proposes to apply the same phase-in schedule to a Company ceasing to be a Smaller Reporting Company that applies to a Company listing in conjunction with its initial public offering. Since a Smaller Reporting Company is required to have a compensation committee comprised of at least two Independent Directors, a Company that has ceased to be a Smaller Reporting Company may use the phase-in schedule for the additional eligibility requirements relating to compensatory fees and affiliation, but not for the minimum size requirement or the requirement that the committee consist only of Independent Directors. This phase-in schedule will start to run on the due date of the SEC filing in which the Company is required to report that it is an issuer other than a Smaller Reporting Company.⁷¹ During

⁷⁰ BX notes that Smaller Reporting Companies remain subject to the disclosure requirements of Item 407(e)(3)(iv) of Regulation S-K, which were adopted at the same time as Rule 10C-1. See the Adopting Release.

⁷¹ Within 30 days after the start of its phase-in schedule, a Company that has ceased to be a Smaller Reporting Company must certify to BX that: (i) It has complied with the requirement in BX Venture Market Listing Rule 5605(d)(1) to have a compensation committee charter including the content specified in BX Venture Market Listing Rule 5605(d)(1)(A)-(D); and (ii) it has, or will within the applicable phase-in schedule, comply with the requirement in BX Venture Market Listing

the phase-in schedule, a Smaller Reporting Company must continue to comply with the requirement to have a compensation committee comprised of at least two Independent Directors as defined under BX's existing listing rules.

Effective Dates/Transition

BX proposes that Rule 5605(d)(3), relating to compensation committee responsibilities and authority, shall be effective immediately.⁷² Specifically, this proposed rule states that a compensation committee must have the specific compensation committee responsibilities and authority necessary to comply with Rule 10C-1(b)(2), (3) and (4)(i)-(vi) under the Act relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel. To the extent a Company does not have a compensation committee, the provisions of this rule shall apply to the Independent Directors who determine, or recommend to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company. Companies should consider under state corporate law whether to grant these specific responsibilities and authority through a charter, resolution or other board action; however, BX proposes to require only that compensation committees immediately have such responsibilities and authority. While BX proposes that Companies must eventually have a written compensation committee charter that includes, among others, these responsibilities and authority, Companies may implement such a charter on the schedule discussed below.

In order to allow Companies to make necessary adjustments to their boards and committees in the course of their regular annual meeting schedules, BX proposes that Companies must comply with the remaining provisions of the amended listing rules on compensation committees by the earlier of: (1) Their second annual meeting held after the date of approval of BX's amended listing rules; or (2) December 31, 2014. This transition period is similar to the transition period used when Nasdaq

Rule 5605(d)(2) regarding compensation committee composition.

⁷² See *supra* note 3.

implemented similar requirements for audit committees in 2003.⁷³

A Company must certify to BX, no later than 30 days after the implementation deadline applicable to it, that it has complied with the amended listing rules on compensation committees. BX will provide Companies with a form for this certification.

During the transition period, Companies that are not yet required to comply with the amended listing rules on compensation committees must continue to comply with BX's existing listing rules, which have been redesignated as Listing Rule 5605A(d) and IM-5605A-6 in BX's proposal.

Conforming Changes and Correction of Typographical Errors

Finally, BX proposes to make minor conforming changes to its requirements relating to audit committees. BX also proposes to correct certain typographical errors in its corporate governance requirements as set forth in Exhibit 5.⁷⁴

2. Statutory Basis

BX believes that the proposed rule change is consistent with the provisions of Section 6 of the Exchange Act,⁷⁵ in general, and with Section 6(b)(5) of the Exchange Act,⁷⁶ in particular. Section 6(b)(5) requires, among other things, that a national securities exchange's rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest. Section 6(b)(5) also requires that a national securities exchange's rules not be designed to permit unfair discrimination between customers, issuers, brokers or dealers.

As required by the Dodd-Frank Act and Rule 10C-1, BX is proposing amendments to its listing rules relating to the independence of compensation committees and their advisers. BX reviewed its existing compensation-relating listing rules, in combination with the requirements of Rule 10C-1, to develop a set of proposed compensation-related listing rules. These proposals generally fall into three categories: proposed rule amendments to comply with Rule 10C-1; proposals

⁷³ See Securities Exchange Act Release No. 48745 (November 4, 2003), 68 FR 64154 (November 12, 2003) (SR-NASD-2002-141).

⁷⁴ The Commission notes that Exhibit 5 is available at <http://nasdaqomxbx.cchwallstreet.com>.

⁷⁵ 15 U.S.C. 78f.

⁷⁶ 15 U.S.C. 78f(b)(5).

to continue certain rules relatively unchanged; and proposed rule amendments not required by Rule 10C–1. BX believes that collectively, these proposals protect investors and the public interest by requiring Companies, with certain exemptions, to have a compensation committee meeting certain requirements relating to composition, responsibilities and authority.

More specifically, BX's proposed amendments to its listing rules in order to comply with Rule 10C–1 set forth: additional eligibility requirements for compensation committee members relating to compensatory fees and affiliation; an opportunity to cure defects in compensation committee composition; a requirement that compensation committees have the specific responsibilities and authority necessary to comply with Rule 10C–1(b)(2), (3) and (4)(i)–(vi) under the Exchange Act; and exemptions for limited partnerships, management investment companies, foreign private issuers that provide certain required disclosures, Controlled Companies and Smaller Reporting Companies. BX believes that its proposals fairly balance the goal of protecting the investing public by ensuring effective deliberation over executive compensation with the goal of avoiding the imposition of undue costs on Companies.

BX's proposals to continue relatively unchanged some of its existing exemptions to the compensation-related listing rules for certain categories of Companies and to add a new exemption for cooperatives takes into account the unique characteristics of these Companies.⁷⁷ As a result, BX does not believe that continuing the existing exemptions and adding a new exemption for cooperatives will discriminate unfairly among issuers, consistent with Section 6(b)(5) of the Exchange Act.⁷⁸

The proposed rule amendments not required by Rule 10C–1 require that: Companies must have a standing compensation committee; the committee must consist of a minimum of two members; the committee must have a formal written charter (or board resolution, in the case of Smaller Reporting Companies) that specifies the committee's responsibilities and authority; and Smaller Reporting Companies must continue to comply with certain of BX's compensation-related listing rules. As discussed in the "Purpose" section, BX believes that these new requirements will facilitate

effective oversight of executive compensation and promote accountability to investors for executive compensation decisions. With regard to Smaller Reporting Companies, BX notes that these Companies continue to be subject to the same requirements as all other Companies, except the new requirements that BX is proposing under Rule 10C–1 relating to compensatory fees, affiliation and the specific compensation committee responsibilities and authority set forth in proposed BX Venture Market Listing Rule 5605(d)(3). BX believes that this hybrid approach does not discriminate unfairly between issuers because it recognizes the fact that the "executive compensation arrangements of [Smaller Reporting Companies] generally are so much less complex than those of other public companies that they do not warrant the more extensive disclosure requirements imposed on companies that are not [Smaller Reporting Companies] and related regulatory burdens that could be disproportionate for [Smaller Reporting Companies]." ⁷⁹ In addition, BX notes that the Commission exempted Smaller Reporting Companies from Rule 10C–1.⁸⁰ As a result, this distinction does not discriminate unfairly among issuers.

B. Self-Regulatory Organization's Statement on Burden on Competition

BX does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Exchange Act, as amended.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

BX did not solicit comments on the proposed rule change. BX received two written comments, which are attached as Exhibit 2.⁸¹

The first commenter recommended that BX should require Companies to disclose: (i) How they are complying with the requirement to consider the independence factors enumerated in Rule 10C–1; and (ii) the nature of any conflict of interest arising from the engagement of legal counsel by a compensation committee. BX considered these recommendations, but it preferred to defer to the judgment of

the Commission with respect to the appropriate disclosure framework under Rule 10C–1. BX therefore decided not to propose any new disclosure requirements for Companies, other than those that are required by Rule 10C–1.⁸²

The second commenter proffered four recommendations. First, this commenter recommended that BX include director fees within the list of relevant factors that must be considered when assessing the independence of compensation committee members. BX does not believe that the intent of the Dodd-Frank Act or Rule 10C–1 was to limit independence based on director compensation, and therefore, BX proposes to continue to exempt board fees from its prohibition on payment of compensatory fees to a compensation committee member. Second, this commenter recommended that BX include in the requirements for compensation committee independence a factor relating to business or personal relationships between directors and officers. As discussed in the "Purpose" section above, BX reviewed its current and proposed listing rules and concluded that these rules are sufficient to ensure the independence of compensation committee members. Therefore, BX determined not to propose further independence requirements, other than those discussed above. Third, this commenter recommended that BX expand the additional factors for compensation committee eligibility to cover all independent directors, not just those serving on the compensation committee. While BX heavily weighed the commenter's concern that multiple definitions of independence add to the complexity of board membership, BX believed that the intent of the Dodd-Frank Act and Rule 10C–1 was to address the independence of compensation committee members, as well as their advisers, specifically. BX concluded therefore that it is inappropriate to expand the additional requirements proposed herein to cover all independent directors. Finally, this commenter recommended that BX clarify that, while the factors must be considered in their totality, a single factor can result in a loss of director independence. BX confirms that a director cannot be deemed independent if he or she fails any one of the bright-line prohibitions in BX Venture Market Listing Rule 5605(a)(2).

⁷⁹ See the Adopting Release, at 38438 (quoting Securities Exchange Act Release No. 54302A (August 29, 2006), 71 FR 53158, 53192 (September 8, 2006)).

⁸⁰ See 17 CFR 240.10C–1(b)(5)(ii).

⁸¹ The Commission notes that the comments are available at <http://nasdaqomxbx.cchwallstreet.com>.

⁸² Specifically, as required by Rule 10C–1(b)(1)(iii)(A)(4), BX proposes to require a Foreign Private Issuer that follows a home country practice in lieu of the requirement to have an independent compensation committee to disclose the reasons why it does not have such a committee.

⁷⁷ See footnotes 54–57 and 59, *supra*.

⁷⁸ 15 U.S.C. 78f(b)(5).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BX-2012-063 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BX-2012-063. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such

filing also will be available for inspection and copying at the principal office of BX. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make publicly available. All submissions should refer to File Number SR-BX-2012-063 and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁸³

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68012; File No. SR-Phlx-2012-115]

Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Clarify Further That the Provisions of the Rule 800 Series Are Not Effective To Permit the Listing of Securities and Include a Reference on the Need To Comply With Rule 10C-1 Under the Securities Exchange Act of 1934 Should the Exchange List Equity Securities in the Future

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ and Rule 19b-4² thereunder, notice is hereby given that on September 25, 2012, NASDAQ OMX PHLX LLC ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

Phlx is proposing to modify certain Exchange Rules to clarify further that the provisions of the Rule 800 Series are not effective to permit the listing of securities. The text of the proposed rule change is available at <http://>

⁸³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

nasdaqomxphlx.cchwallstreet.com/nasdaqomxphlx/phlx/, at Phlx's principal office, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Commission recently adopted rules that require any national securities exchange that lists equity securities to have listing standards relating to the independence of compensation committees and their advisers.³

The Exchange operates NASDAQ OMX PSX ("PSX"), a fully integrated order display and execution system for all NMS stocks,⁴ as defined in SEC Rule 600(b)(47) under Regulation NMS.⁵ PSX trades stocks listed on other exchanges pursuant to unlisted trading privileges ("UTP"). As provided by SEC Rule 12f-5, the Exchange may extend UTP to any security for which the Exchange has in effect rules providing for transactions in such class or type of security.⁶ Accordingly, Phlx's rules include the Rule 800 Series to support UTP trading of all NMS stocks on PSX. However, the Exchange does not list any securities pursuant to the Rule 800 Series, and does not have any present intent to list securities under this series in the future.⁷

³ See 17 CFR 240.10C-1 and Securities Exchange Act Release No. 67220 (June 20, 2012), 77 FR 38422 (June 27, 2012).

⁴ See Securities Exchange Act Release No. 62877 (September 9, 2010), 75 FR 56633 (September 16, 2010) (SR-Phlx-2010-079).

⁵ See 17 CFR 242.600(b)(47).

⁶ See 17 CFR 240.12f-5.

⁷ Pursuant to its Rule 1000, 1000A and 1000C Series, the Exchange lists only standardized options, as defined in Rule 9b-1 under the Act, issued by a clearing agency that is registered pursuant to Section 17A of the Act. As a result, the Exchange is not proposing any clarifying changes to its Rule 1000, 1000A and 1000C Series relating to Rule 10C-1 under the Act because Rule 10C-1 includes an exemption for listing of such

The Exchange proposes to modify Rules 800–803 and 867.5 to clarify further that the provisions of the Rule 800 Series are not effective to permit the listing of securities. Specifically, the Exchange proposes to change the title of the Rule 800 Series from “Listing of Securities” to “Standards for Trading Securities Pursuant to Unlisted Trading Privileges.” Regarding Rule 801, the Exchange proposes to delete references to listing and add clarifying language to state that the Exchange lists only standardized options, as defined in Rule 9b–1 under the Act, issued by a clearing agency that is registered pursuant to Section 17A of the Act, pursuant to the Rule 1000, 1000A and 1000C Series. In addition, the Exchange will not list securities pursuant to any other rule until the Exchange files a proposed rule change under Section 19(b)(2) under the Act to amend its rules to make any changes needed to comply with Rules 10A–3 and 10C–1 under the Act and to incorporate additional qualitative and other listing criteria, and such proposed rule change is approved by the Commission. The Exchange also proposes to state explicitly in Rule 801, as well as Rule 803, which is discussed further below, that the provisions of the Rule 800 Series are not effective to permit the listing of securities.

Regarding Rule 802, the Exchange proposes to move the statement that “[t]he Exchange does not rate or guarantee the quality of any security dealt on the Exchange” to Rule 801. The Exchange also proposes to move the definition of the terms “public shareholder” and “public holder” to Rule 800, which includes definitions that apply to the entire Rule 800 Series. The Exchange proposes to delete the remainder of Rule 802, which relates to determinations concerning listing or delisting, and is therefore irrelevant since the Exchange does not list securities pursuant to the Rule 800 Series.

The Exchange proposes to change the title of Rule 803 from “Criteria for Listing—Tier I” to “Listing Standards for Unlisted Trading Privileges.” As discussed above, Rule 803(o) includes a

standardized options. See 17 CFR 240.10C–1(b)(5)(iv). The Exchange’s Rule 1000B Series is a dormant set of rules applicable to trading of cash index participations, and the Exchange has no present intent to trade or list such securities. Should the Exchange ever propose to trade or list any securities pursuant to its Rule 1000, 1000A, 1000B or 1000C Series that are not entitled to an exemption under Rule 10C–1 under the Act, the Exchange recognizes that it must file a proposed rule change under Section 19(b)(2) under the Act to amend its rules to make any changes needed to comply with Rule 10C–1 under the Act and that such proposed rule change must be approved by the Commission.

statement that the provisions of the Rule 800 Series that permit the listing of securities will not be effective until the Exchange files a proposed rule change under Section 19(b)(2) under the Act to amend its rules to make any changes needed to comply with Rule 10A–3 under the Act and to incorporate additional qualitative listing criteria, and such proposed rule change is approved by the Commission. The Exchange proposes to move this language to Rule 801, so that it is more prominent at the beginning of this section of rules, and to revise the existing language to state that the Exchange will not list securities pursuant to any other rule until it complies with the aforementioned conditions. The Exchange also proposes to add a reference to Rule 10C–1 under the Act, which requires securities exchanges that list equity securities to adopt rules relating to the independence of compensation committees and their advisers,⁸ and to expand the reference to additional qualitative listing criteria to include other listing criteria as well. As a result of this new language, the Exchange cannot list securities pursuant to the Rule 800 Series until it files proposed rules under Rule 10C–1, and such rules are approved by the Commission.

Finally, the Exchange proposes to add similar clarifying language to Rule 867.5, which relates to compensation committees.

2. Statutory Basis

The Exchange believes that its proposal is consistent with Section 6(b) of the Act,⁹ in general, and furthers the objectives of Section 6(b)(5) of the Act,¹⁰ in particular, in that it is designed to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general to protect investors and the public interest, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers. The rule change will promote these goals by clarifying further the intent of the Exchange’s Rule 800 Series, which exists to permit the Exchange to extend UTP to NMS stocks that are listed on another national securities exchange. The proposed amendments to the Rule 800 Series emphasize that the Exchange does not list securities pursuant to that series and that it will not list securities pursuant to that series until it proposes

⁸ See 17 CFR 240.10C–1.

⁹ 15 U.S.C. 78f(b).

¹⁰ 15 U.S.C. 78f(b)(5).

certain rule changes and those changes are approved by the Commission. These clarifications will serve to protect investors and the public interest by preventing confusion about the intent of the Rule 800 Series.

B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A) of the Act¹¹ and subparagraph (f)(6) of Rule 19b–4 thereunder.¹²

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission’s Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68020; File No. SR-CBOE-2012-094]

Self-Regulatory Organizations; Chicago Board Options Exchange, Incorporated; Notice of Filing of a Proposed Rule Change To Update Its Rule 31.10—Corporate Governance—in Order To Comply With New Rule 10C-1 Under the Securities Exchange Act of 1934

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on September 25, 2012, Chicago Board Options Exchange, Incorporated (the "Exchange" or "CBOE") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

CBOE proposes to update its Rule 31.10—Corporate Governance—in order to comply with new Rule 10C-1 under the Act. The text of the proposed rule change is available on the Exchange's Web site (<http://www.cboe.com/AboutCBOE/CBOELegalRegulatoryHome.aspx>), at the Exchange's Office of the Secretary, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Effective July 27, 2012, the Commission adopted Rule 10C-1 (the "New Rule") to the Act.³ The New Rule directs national securities exchanges to establish listing standards that, among other things, require each member of a listed issuer's compensation committee to be a member of the board of directors and to be "independent", as defined in the listing standards of the national securities exchanges. The New Rule also discusses issuers' retention of compensation advisers. The Exchange hereby proposes to update its Rule 31.10, which discusses corporate governance requirements of issuers on the Exchange, in order to place Rule 31.10 in compliance with the New Rule.

Rule 31.10 currently states that compensation of the chief executive officer, and all other executive officers, of an issuer must be determined, or recommended to the board of directors of the issuer for determination, either by a majority of all independent directors or a compensation committee comprised solely of independent directors. The New Rule's requirements regarding a compensation committee, as well as the broad definition of "compensation committee" and the independence of those directors on the compensation committee (all described below), make Rule 31.10(c)'s statement that compensation of executive officers may be determined by a majority of all independent directors a bit superfluous. Due to the broad definition of the term "compensation committee" as defined in the New Rule, the Exchange hereby proposes to simply state that compensation of all executive officers of an issuer be determined, or recommended to the board of directors of the issuer for determination, by a compensation committee.

The New Rule provides a definition of "compensation committee", which the Exchange proposes to adopt. For the purposes of Rule 31.10, the term "compensation committee" shall mean: (A) A committee of the board of directors that is designated as the compensation committee; or (B) in the absence of a committee of the board of directors that is designated as the compensation committee, a committee of the board of directors performing functions typically performed by a

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ See Securities Exchange Act Release No. 67220 (June 20, 2012) 77 FR 38422 (June 27, 2012) (File No. S7-13-11).

¹³ 17 CFR 200.30-3(a)(12).

compensation committee, including oversight of executive compensation, even if it is not designated as the compensation committee or also performs other functions; or (C) in the absence of a committee as described in paragraphs (c)(1)(A) or (B) of Rule 31.10, the members of the board of directors who oversee executive compensation matters on behalf of the board of directors. The Exchange's proposed definition of "compensation committee" is modeled after that described in the New Rule.⁴ The New Rule allows exchanges to exempt issuers who, in the absence of a committee as described in paragraphs (c)(1)(A) or (B) of Rule 31.10, have a "compensation committee" that is composed of the members of the board of directors who oversee executive compensation matters on behalf of the board of directors from those requirements described in paragraphs (a)(1) and (b) of proposed Interpretation and Policy .11 to Rule 31.10 (described and discussed below). However, the Exchange does not believe that it is unduly burdensome to require issuers who, in the absence of a committee as described in paragraphs (c)(1)(A) or (B) of Rule 31.10, have a "compensation committee" that is composed of the members of the board of directors who oversee executive compensation matters on behalf of the board of directors to comply with paragraphs (a)(1) and (b) of proposed Interpretation and Policy .11. Further, providing this exemption might provide issuers with a way to avoid those requirements of paragraphs (a)(1) and (b) of proposed Interpretation and Policy .11 by simply not having a "compensation committee" as defined in paragraphs (c)(1)(A) or (B) of Rule 31.10. Therefore, the Exchange does not propose to exempt issuers who, in the absence of a committee as described in paragraphs (c)(1)(A) or (B) of Rule 31.10, have a "compensation committee" that is composed of the members of the board of directors who oversee executive compensation matters on behalf of the board of directors from those requirements described in paragraphs (a)(1) and (b) of proposed Interpretation and Policy .11 to Rule 31.10.

The New Rule states that "each member of the compensation committee must be an independent member of the board of directors of the listed issuer, and must otherwise be independent."⁵ The New Rule further clarifies that, in determining the independence requirements for the members of

compensation committees, the Exchange must consider all relevant factors, including, but not limited to, the source of compensation for that director (including any consulting, advisory or other compensatory fee paid by the issuer to the director), and whether the director is affiliated with the issuer or a subsidiary or affiliate of a subsidiary of the issuer.⁶

The Exchange hereby proposes to amend Rule 31.10(c) to state that all members of a compensation committee must be "independent directors" as defined in Rule 31.10(h)(2).

"Independent director" is defined in Rule 31.10(h)(2) as:

a person other than an officer or employee of the company or its subsidiaries or any other individual having a relationship, which, in the opinion of the company's board of directors, would interfere with the exercise of independent judgment in carrying out the responsibilities of a director. The following persons shall not be considered independent:

(A) a director who is, or at any time during the past three years was, employed by the company or by any parent or subsidiary of the company;

(B) a director who accepted or who has a family member who accepted any payments from the company or any parent or subsidiary of the company in excess of \$60,000 during the current or any of the past three fiscal years, other than the following:

(i) compensation for board or board committee service;

(ii) payments arising solely from investments in the company's securities;

(iii) compensation paid to a family member who is a non-executive employee of the company or a parent or subsidiary of the company;

(iv) benefits under a tax-qualified retirement plan, or non-discretionary compensation; or

(v) loans permitted under Exchange Act Section 13(k).

Provided, however, that audit committee members are subject to additional, more stringent requirements under Exchange Act Rule 10A-3, which requirements are incorporated by reference in the Exchange rules pursuant to Rule 31.10(b).

(C) a director who is a family member of an individual who is, or at any time during the past three years was, employed by the company or by any parent or subsidiary of the company as an executive officer;

(D) a director who is, or has a family member who is, a partner in, or a controlling shareholder or an executive

officer of, any organization to which the company made, or from which the company received, payments for property or services in the current or any of the past three fiscal years that exceed 5% of the recipient's consolidated gross revenues for that year, or \$200,000, whichever is more, other than the following:

(i) payments arising solely from investments in the company's securities; or

(ii) payments under non-discretionary charitable contribution matching programs;

(E) a director of the listed company who is, or has a family member who is, employed as an executive officer of another entity where at any time during the past three years any of the executive officers of the listed company serve on the compensation committee of such other entity;

(F) a director who is, or has a family member who is, a current partner of the company's outside auditor, or was a partner or employee of the company's outside auditor who worked on the company's audit at any time during any of the past three years; or

(G) in the case of an investment company, in lieu of Rules 31.10(h)(2)(A)-(F), a director who is an "interested person" of the company as defined in Section 2(a)(19) of the Investment Company Act of 1940, other than in his or her capacity as a member of the board of directors or any board committee.⁷

The Exchange believes that the current definition of "independent director" meets the criteria listed for determining independence requirements under the New Rule. The requirements that a director is not considered "independent" if he or a family member has accepted any payments from the company or any parent or subsidiary of the company in excess of \$60,000 during the current or any of the past three fiscal years, other than compensation for board or committee service, payments arising solely from investments in the company's securities, compensation paid to a family member who is a non-executive employee of the company or a parent or subsidiary of the company, benefits under a tax-qualified retirement plan, or non-discretionary compensation, or loans permitted under Exchange Act Section 13(k) demonstrates that the definition of "independent" considers the sources of compensation of a member of the compensation committee.

⁴ 17 CFR 240.10C-1(c)(2).

⁵ 17 CFR 240.10C-1(b)(1)(i).

⁶ 17 CFR 240.10C-1(b)(1)(ii).

⁷ See CBOE Rule 31.10(h)(2).

The Exchange believes that the current definition of “independent director” meets the requirement in the New Rule that the Exchange’s rules must consider whether the director is affiliated with the issuer or a subsidiary or affiliate of a subsidiary of the issuer. For purposes of the New Rule, an “affiliate” of, or a person “affiliated” with, a specified person, is a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified.⁸ Rule 31.10(h)(2) states that a director is not “independent” if, in the opinion of the issuer’s board of directors, the person has a relationship which would interfere with the exercise of independent judgment in carrying out the responsibilities of a director. Any kind of affiliate relationship, under the definition provided above, could be viewed as a conflict of interest that might interfere with the exercise of independent judgment in carrying out the responsibilities of a director. Therefore, by nature, a board of directors would have to consider any affiliate relationship in coming to that manner of opinion. As such, a rule that requires a board of directors to consider whether a director has a relationship which would interfere with the exercise of independent judgment in carrying out the responsibilities of a director in order to determine whether or not the director is “independent” naturally requires consideration of whether the director is affiliated with the issuer, a subsidiary of the issuer or an affiliate of a subsidiary of the issuer.

The New Rule states that any exchange to which the New Rule applies must provide issuers an opportunity to cure any violations of the rules that such exchange may put in place as a result of the New Rule.⁹ The New Rule further states that an exchange’s rule regarding the curing of violations may state that if a member of a compensation committee ceases to be an “independent director” for reasons outside of that member’s reasonable control, that person, with notice by the issuer to the applicable exchange, may remain a compensation committee member until the earlier of the next annual shareholders meeting of the issuer or one year from the occurrence

of the event that caused the member to no longer be an “independent director”. As such, the Exchange proposes to adopt this language and state that if a member of a compensation committee ceases to be an “independent director” for reasons outside of that member’s reasonable control, that person may remain a compensation committee member until the earlier of the next annual shareholders meeting of the issuer or one year from the occurrence of the event that caused the member to no longer be an “independent director”. The Exchange will require that an issuer relying on this provision must provide notice to the Exchange immediately upon learning of the event or circumstance that caused the member to cease to be an “independent director”.

Rule 31.10(c) currently provides an exception to the independence requirement for compensation committee members. This exception states that, notwithstanding said independence requirements, if the compensation committee is comprised of at least three members, one director, who is not independent as defined in Rule 31.10(h)(2) and is not a current officer or employee or a family member of an officer or employee, may be appointed to the compensation committee if the board, under exceptional and limited circumstances, determines that such individual’s membership on the committee is required by the best interests of the company and its shareholders, and the board discloses, in the proxy statement for the next annual meeting subsequent to such determination (or, if the issuer does not file a proxy, in its Form 10-K or 20-F), the nature of the relationship and the reasons for the determination. A member appointed under this exception may not serve longer than two years.¹⁰ However, the New Rule includes no such exception to the independence requirements. The Exchange therefore proposes to delete this exception. The Exchange believes that independence of compensation committee members is important to ensure that there exist no undue influences in the compensation of executive officers. Further, in these times during which executive compensation has (understandably) fallen under some scrutiny, it is important to provide the appearance of a transparent and not-unduly-influenced process to determine executive compensation, and an exception that allows issuers to have non-independent directors influence

compensation can have a damaging impact on the markets.

Currently, Rule 31.10(c) states that the chief executive officer of an issuer may not be present during voting or deliberations regarding his salary. CBOE proposes to extend this clause to all executive officers and state that the executive officer for whom compensation is being determined may not be present during voting or deliberations regarding compensation of that executive officer. The Exchange believes that this extension is appropriate and will further prevent any executive officer for whom compensation is being determined from having undue or inappropriate influence on his compensation.

The New Rule exempts from the independence requirements limited partnerships, companies in bankruptcy proceedings, open-end management investment companies registered under the Investment Company Act of 1940, and any foreign private issuer that discloses in its annual report the reasons that the foreign private issuer does not have an independent compensation committee.¹¹ The Exchange thereby proposes to incorporate those exemptions into proposed Rule 31.10(f)(6) by reference by stating that the categories of issuers listed in § 240.10C-1(b)(1)(iii)(A) of the Securities Exchange Act of 1934 [sic] are also exempt from the requirements Rule 31.10(c)(2) (which discusses independence of directors on an issuer’s compensation committee). These categories of issuers are still subject to all other requirements regarding executive compensation (unless otherwise noted).

Rule 31.10(f) currently exempts a number of other categories of issuers from the executive compensation requirements of Rule 31.10(c). These types of issuers are controlled companies, registered management investment companies (which are similar to open-end management investment companies), and asset-backed issuers and other passive issuers, cooperatives.¹² The Exchange determined to exempt these categories of issuers from executive compensation requirements of Rule 31.10(c) due to their various unique attributes.¹³ While the New Rule changes some of the executive compensation requirements, The Exchange believes that these categories of issues [sic] should still be

⁸ 17 CFR 240.12b-2. The term “control” (including the terms “controlling,” “controlled by” and “under common control with”) means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a person, whether through the ownership of voting securities, by contract, or otherwise. 17 CFR 240.12b-2.

⁹ 17 CFR 240.10C-1(a)(3).

¹⁰ See CBOE Rule 31.10(c)(3).

¹¹ 17 CFR 240.10C-1(b)(1)(iii).

¹² See CBOE Rule 31.10(f)(1)-(4).

¹³ See Securities Exchange Act Release No. 49995 (July 9, 2004), 69 FR 42476 (July 15, 2004) (SR-CBOE-2004-028).

exempt from all executive compensation requirements in Rule 31.10(c) generally. To the extent that the above-referenced proposed Rule 31.10(f)(6)'s exemption of open-end management investment companies registered under the Investment Company Act of 1940 from the compensation committee director independence requirements of Rule 31.10(c)(2) conflicts with the more general already-existing exemption of registered management investment companies from the requirements of Rule 31.10(c), the more general exemption of registered management investment companies from the requirements of Rule 31.10(c) shall be controlling. As such, Rule 31.10(f)(2) shall be amended to state that the exemption of management investment companies from the requirements of Rule 31.10(c) shall be controlling over any other potentially-conflicting exemptions that may arise under Rule 31.10(f)(6).

The New Rule also discusses the retention of compensation consultants, independent legal counsel and other compensation advisers to assist the compensation committee of an issuer in determining compensation for executives.¹⁴ Rule 31.10 currently does not speak to this issue. Therefore, the Exchange proposes to adopt the provisions of the New Rule regarding this issue in a substantively identical manner to that in the New Rule in new Interpretation and Policy .11 to Rule 31.10. This new Interpretation and Policy would state that the compensation committee of an issuer, in its capacity as a committee of the board of directors, may, in its sole discretion, retain or obtain the advice of a compensation consultant, independent legal counsel or other adviser. The compensation committee shall be directly responsible for the appointment, compensation and oversight of the work of any compensation consultant, independent legal counsel and other adviser retained by the compensation committee. Nothing in this Interpretation and Policy .11 to Rule 31.10 shall be construed to require the compensation committee to implement or act consistently with the advice or recommendations of the compensation consultant, independent legal counsel or other adviser to the compensation committee, or to affect the ability or obligation of a compensation committee to exercise its own judgment in fulfillment of the duties of the compensation committee.

Under this new Interpretation and Policy .11 to Rule 31.10, each listed issuer must provide for appropriate funding, as determined by the compensation committee, in its capacity as a committee of the board of directors, for payment of reasonable compensation to a compensation consultant, independent legal counsel or any other adviser retained by the compensation committee.

Under this new Interpretation and Policy .11 to Rule 31.10, the compensation committee of a listed issuer may select a compensation consultant, legal counsel or other adviser to the compensation committee only after taking into consideration the following factors: (1) The provision of other services to the issuer by the person that employs the compensation consultant, legal counsel or other adviser, (2) the amount of fees received from the issuer by the person that employs the compensation consultant, legal counsel or other adviser, as a percentage of the total revenue of the person that employs the compensation consultant, legal counsel or other adviser with a member of the compensation committee, (3) the policies and procedures of the person that employs the compensation consultant, legal counsel or other adviser that are designed to prevent conflicts of interest, (4) any business or personal relationship of the compensation consultant, legal counsel or other adviser with a member of the compensation committee, (5) any stock of the issuer owned by the compensation consultant, legal counsel or other adviser, and (6) any business or personal relationship of the compensation consultant, legal counsel, other adviser or the person employing the adviser with an executive office of the issuer. A compensation committee must consider these factors with respect to any compensation consultant, legal counsel or other adviser that provides advice to the compensation committee (other than in-house legal counsel).

The requirements of this Interpretation and Policy .11 to Rule 31.10 shall not apply to (1) any controlled company or to any smaller reporting company, (2) the listing of a security futures product cleared by a clearing agency that is registered pursuant to section 17A of the Act (15 U.S.C. 78q-1) or that is exempt from the registration requirements of section 17A(b)(7)(A) (15 U.S.C. 78q-1(b)(7)(A)), or (3) the listing of a standardized option, as defined in § 240.9b-1(a)(4), issued by a clearing agency that is registered pursuant to section 17A of the Act (15 U.S.C. 78q-1). These exemptions comply with those stated in

the New Rule.¹⁵ To be clear, small reporting companies are still subject to other corporate governance rules, as applicable

2. Statutory Basis

The Exchange believes the proposed rule change is consistent with the Act¹⁶ and the rules and regulations thereunder and, in particular, the requirements of Section 6(b) of the Act.¹⁷ Specifically, the Exchange believes the proposed rule change is consistent with the Section 6(b)(5)¹⁸ requirements that the rules of an exchange be designed to promote just and equitable principles of trade, to prevent fraudulent and manipulative acts, to remove impediments to and to perfect the mechanism for a free and open market and a national market system, and, in general, to protect investors and the public interest. The proposed changes will protect investors by ensuring independent and well-informed determination of executive compensation. In addition, the Exchange believes that the proposed changes bring the Exchange into compliance with the requirements described in the New Rule.

The Exchange further believes that the proposed changes are consistent with the New Rule. Further, these proposed changes, in ensuring independent determination of executive compensation, will also improve investor confidence regarding executive compensation. This improved investor confidence will perfect the mechanism for a free and open market and a national market system.

B. Self-Regulatory Organization's Statement on Burden on Competition

CBOE does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange neither solicited nor received comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal**

¹⁵ 17 CFR 240.10C-1(b)(5).

¹⁶ 15 U.S.C. 78s(b)(1).

¹⁷ 15 U.S.C. 78f(b).

¹⁸ 15 U.S.C. 78f(b)(5).

¹⁴ 17 CFR 240.10C-1(b)(2).

Register or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

A. By order approve or disapprove such proposed rule change, or

B. Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-CBOE-2012-094 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-CBOE-2012-094. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from

submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-CBOE-2012-094, and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁹

Kevin M. O'Neill,
Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68016; File No. SR-ICC-2012-14]

Self-Regulatory Organizations; ICE Clear Credit LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to Schedule 502 of the ICC Rules

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),¹ notice is hereby given that on September 24, 2012, ICE Clear Credit LLC ("ICC") filed with the Securities and Exchange Commission ("Commission") the proposed rule change described in Items I, II and III, below, which Items have been prepared primarily by ICC. ICC filed the proposal pursuant to Section 19(b)(3)(A)² of the Act and Rule 19b-4(f)(4)(i)³ thereunder, so that the rule change was effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The purpose of the proposed rule change is to update the Contract Reference Obligation International Securities Identification Numbers ("Contract Reference Obligation ISINs") and entity names in Schedule 502 of the ICC Rules in order to reflect the changes to the industry standard Contract Reference Obligation ISINs and entity names for one single name credit default swap contract that ICC currently clears (the Sara Lee Corporation), which will undergo a succession event on September 17, 2012. As a result of the Sara Lee Corporation's succession event, ICC will clear two single names (The

Hillshire Brands Company and DE US, Inc.).

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, ICC included statements concerning the purpose of and basis for the proposed rule change, and discussed any comments it received on the proposed rule change. The text of these statements and comments may be examined at the places specified in Item IV below. ICC has prepared summaries, set forth in sections A, B, and C, below, of the most significant aspects of these statements.⁴

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

The proposed rule change would amend Schedule 502 of the ICC Rules, which lists all the Contract Reference Obligation ISINs and entity names of all single name credit default swaps contracts that ICC clears. This amendment will update Schedule 502 to account for the Sara Lee Corporation's September 17, 2012 succession event. Specifically, the amendment will remove Schedule 502's listing of the credit default swap contract that ICC currently clears for the Sara Lee Corporation, and replace it with listings for the credit default swap contracts of the Sara Lee Corporation's successor companies, The Hillshire Brands Company and DE US, Inc. This update does not require any changes to the body of the ICC Rules. Also, the update does not require any changes to the ICC risk management framework.

Section 17A(b)(3)(F)⁵ of the Act requires, among other things, that the rules of a clearing agency be designed to promote the prompt and accurate clearance and settlement of securities transactions and, to the extent applicable, derivative agreements, contracts and transactions. ICC believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder applicable to ICC, in particular Section 17A(b)(3)(F), because the change will facilitate the prompt and accurate clearance and settlement of securities transactions, and will assure the safeguarding of securities and funds associated with securities transactions

¹⁹ 17 CFR 200.30-3(a)(12).

¹⁵ U.S.C. 78s(b)(1).

²⁵ U.S.C. 78s(b)(3)(A).

³⁷ CFR 240.19b-4(f)(4)(i).

⁴ The Commission has modified the text of the summaries provided by ICC.

⁵ 15 U.S.C. 78q-1(b)(3)(F).

that are in the custody or control of ICC, or for which it is responsible.

B. Self-Regulatory Organization's Statement on Burden on Competition

ICC does not believe that the proposed rule change would have any impact, or impose any burden, on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

ICC has not solicited written comments regarding the proposed change. ICC will notify the Commission of any written comments received by ICC.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change has become effective upon filing pursuant to Section 19(b)(3)(A)⁶ of the Act and Rule 19b-4(f)(4)(i)⁷ thereunder because it effects a change in one of ICC's existing services without significantly affecting the safeguarding of securities or funds in the custody or control of ICC, or for which it is responsible, and without significantly affecting the respective rights or obligations of ICC or persons using its services. At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.⁸

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule changes are consistent with the Act. Comments may be submitted by any of the following methods:

- Electronic comments may be submitted by using the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>), or by sending an email to rule-comments@sec.gov. Please include File No. SR-ICC-2012-14 on the subject line.
- Paper comments should be sent in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-0609.

All submissions should refer to File Number SR-ICC-2012-14. To help the Commission process and review your comments more efficiently, please use only one method of submission. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule changes that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filings also will be available for inspection and copying at the principal office of ICC, and on ICC's Web site at: https://www.theice.com/publicdocs/regulatory_filings/ICEClearCredit_091212a.pdf.

All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly.

All submissions should refer to File Number SR-ICC-2012-14 and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68013; File No. SR-NASDAQ-2012-109]

Self-Regulatory Organizations; The NASDAQ Stock Market LLC; Notice of Filing of Proposed Rule Change To Modify the Listing Rules for Compensation Committees To Comply With Rule 10C-1 Under the Exchange Act and Make Other Related Changes

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934

("Exchange Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on September 25, 2012, The NASDAQ Stock Market LLC ("Nasdaq") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by Nasdaq. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

Nasdaq proposes to modify the listing rules for compensation committees to comply with Rule 10C-1 under the Exchange Act and make other related changes. The text of the proposed rule change is available on Nasdaq's Web site at <http://nasdaq.cchwallstreet.com>, at Nasdaq's principal office, and at the Commission's Public Reference Room.

Nasdaq will implement the proposed rule upon approval. Proposed Nasdaq Listing Rule 5605(d)(3), which requires compensation committees to have the specific responsibilities and authority necessary to comply with Rule 10C-1(b)(2), (3) and (4)(i)-(vi) under the Exchange Act, shall be effective immediately.³ To the extent a Company does not have a compensation committee, the provisions of this rule shall apply to the Independent Directors who determine, or recommend to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company.

Companies must comply with the remaining provisions of the amended listing rules by the earlier of: (1) Their second annual meeting held after the date of approval of this proposal; or (2) December 31, 2014. Until a Company is required to comply with the amended listed rules, it must continue to comply with Nasdaq's existing listing rules.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, Nasdaq included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

³ The Commission notes that this portion of the proposed rule, proposed Nasdaq Listing Rule 5605(d)(3), will be effective upon approval by the Commission.

⁶ 15 U.S.C. 78s(b)(3)(A).

⁷ 17 CFR 240.19b-4(f)(4)(i).

⁸ 15 U.S.C. 78s(b)(3)(C).

⁹ 17 CFR 200.30-3(a)(12).

in Item IV below. Nasdaq has prepared summaries, set forth in Sections A, B, and C below, of the most significant aspects of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act")⁴ added Section 10C to the Exchange Act.⁵ Section 10C required the Commission to direct the national securities exchanges, including Nasdaq, and national securities associations to prohibit the listing of any equity security of an issuer, with certain exemptions, that does not comply with Section 10C's requirements relating to compensation committees and advisers. To effect this requirement, the Commission has adopted Rule 10C-1 under the Exchange Act, which became effective on July 27, 2012. Rule 10C-1 requires each national securities exchange and national securities association to provide to the Commission, no later than September 25, 2012, proposed rules or rule amendments that comply with the requirements of Rule 10C-1.⁶

Rule 10C-1 generally requires that:

- Each member of the compensation committee of a listed issuer must be an independent member of the board of directors;
- in determining independence requirements for compensation committee members, exchanges must consider relevant factors, including, but not limited to:
 - The source of compensation of a member, including any consulting, advisory or other compensatory fee paid by the issuer to such member; and
 - whether the member is affiliated with the issuer, a subsidiary of the issuer or an affiliate of a subsidiary of the issuer;
 - the compensation committee must have the authority to retain or obtain the advice of a compensation consultant, independent legal counsel or other compensation adviser;
 - the listed issuer must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to such compensation advisers;
 - the compensation committee may select such compensation advisers only after taking into consideration six

independence factors that are enumerated in Rule 10C-1, as well as any other factors identified by an exchange; and

- certain categories of issuers, including, but not limited to, controlled companies and smaller reporting companies, are generally exempt from all of Rule 10C-1, while other categories of issuers, including, but not limited to, foreign private issuers that provide certain disclosures, are specifically exempt from the requirement to have a fully independent compensation committee.

General Overview of Nasdaq's Proposals

Nasdaq is proposing to modify its compensation-related listing rules, as required by Rule 10C-1. Generally, Nasdaq's proposals provide that:

- Companies⁷ must have a compensation committee consisting of at least two members, each of whom must be an Independent Director⁸ as defined under Nasdaq's current listing rules;
 - compensation committee members must not accept directly or indirectly any consulting, advisory or other compensatory fee, other than for board service, from a Company or any subsidiary thereof;
 - in determining whether a director is eligible to serve on a compensation committee, a Company's board must consider whether the director is affiliated with the Company, a subsidiary of the Company or an affiliate of a subsidiary of the Company to determine whether such affiliation would impair the director's judgment as a member of the compensation committee;
 - Companies may continue to rely on Nasdaq's existing exception that allows certain non-Independent Directors to serve on a compensation committee under exceptional and limited circumstances;
 - if a Company fails to comply with the compensation committee composition requirements in certain circumstances, it may rely on a cure period;
 - Companies must adopt a formal, written compensation committee charter

⁷ "Company" means "the issuer of a security listed or applying to list on Nasdaq." Nasdaq Listing Rule 5005(a)(6).

⁸ For a discussion of the definition of the term "Independent Director," see the section entitled "Compensation Committee Composition—General Independence Definition" below. Notwithstanding any of the proposed changes, and consistent with Nasdaq's existing listing rules, a Company's board has the responsibility to make an affirmative determination that no Independent Director has a relationship that, in the opinion of the board, would interfere with the exercise of independent judgment in carrying out the responsibilities of a director.

that must specify the compensation committee responsibilities and authority in Rule 10C-1 relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel;

- Companies must review and reassess the adequacy of the compensation committee charter on an annual basis;
- Nasdaq's existing exemptions from, and phase-in schedules for, the compensation-related listing rules remain generally unchanged; and
- Smaller Reporting Companies⁹ must have a compensation committee comprised of at least two Independent Directors and a formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority, but such Companies are not required to adhere to the compensation committee eligibility requirements relating to compensatory fees and affiliation, or the requirements relating to compensation consultants, independent legal counsel and other compensation advisers that Nasdaq is proposing to adopt under Rule 10C-1.

Rule 10C-1 requires Nasdaq to include in its submission: (i) A review of whether and how its existing or proposed listing rules satisfy the requirements of Rule 10C-1; (ii) a discussion of the consideration of factors relevant to compensation committee independence conducted by Nasdaq; and (iii) the definition of independence applicable to compensation committee members that Nasdaq proposes to adopt or retain in light of such review.¹⁰ Nasdaq's proposals and its underlying analysis are discussed in depth below.

Requirement To Have a Compensation Committee

Nasdaq's current listing rules require that compensation of the chief executive officer and all other Executive Officers¹¹ of a Company must be determined, or recommended to the board for determination, either by: (i) A compensation committee comprised solely of Independent Directors; or (ii) Independent Directors constituting a majority of the board's Independent

⁹ Smaller Reporting Company is defined in Rule 12b-2 under the Exchange Act.

¹⁰ See 17 CFR 240.10C-1(a)(4)(i).

¹¹ "Executive Officer" is defined as an officer "covered in Rule 16a-1(f) under the [Exchange] Act." Nasdaq Listing Rule 5605(a)(1).

⁴ Public Law 111-203, 124 Stat. 1376 (2010).

⁵ 15 U.S.C. 78j-3.

⁶ See 17 CFR 240.10C-1(a)(4)(i).

Directors in a vote in which only Independent Directors participate (the "Alternative").¹²

Although it was not required to do so by Rule 10C-1,¹³ Nasdaq considered whether the Alternative remains appropriate given the heightened importance of compensation decisions in today's corporate governance environment. Since responsibility for executive compensation decisions is one of the most important responsibilities entrusted to a board of directors, Nasdaq believes that there are benefits from a board having a standing committee dedicated solely to oversight of executive compensation. Specifically, directors on a standing compensation committee may develop expertise in a Company's executive compensation program in the same way that directors on a standing audit committee develop expertise in a Company's accounting and financial reporting processes. In addition, a formal committee structure may help promote accountability to stockholders for executive compensation decisions.

Nasdaq also considered whether eliminating the Alternative would pose an undue hardship on Nasdaq-listed Companies. Only a small number of Companies rely on the Alternative,¹⁴ and since the Alternative requires certain executive compensation decisions to be determined, or recommended to the board for determination, by a majority of the board's Independent Directors, these Companies already have some directors who focus on executive compensation. In addition, Nasdaq would allow a transition period for these Companies to implement a standing compensation committee. As a result, Nasdaq does not believe that eliminating the Alternative would be unduly burdensome to Companies.

As a result, Nasdaq proposes to eliminate the Alternative and require Nasdaq-listed Companies to have a standing compensation committee with the responsibility for determining, or recommending to the full board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company.

Compensation Committee Size

Nasdaq's current listing rules do not impose size requirements on any board committees, other than the audit committee, which must consist of at least three members.¹⁵ As a result, it is possible to have a compensation committee comprised of only one member under Nasdaq's current listing rules.

Although it was not required to do so by Rule 10C-1, Nasdaq considered whether it is appropriate to impose a minimum size requirement on a compensation committee. Given the importance of compensation decisions to stockholders, Nasdaq believes that it is appropriate to have more than one director responsible for these decisions and that therefore, a compensation committee should consist of at least two members. Nasdaq then considered whether to require compensation committees to adhere to the same size requirement as audit committees and have a minimum of three members. However, Nasdaq was concerned that it might be difficult for Companies, especially smaller Companies, to comply with a requirement to have a three-member compensation committee, in addition to a three-member audit committee.

Nasdaq also considered whether imposing a minimum size requirement on a compensation committee would be unduly burdensome to Nasdaq-listed Companies, especially in combination with the proposal to eliminate the Alternative, as discussed above. Since only a small number of Companies currently have a compensation committee of one member and Nasdaq would allow a transition period to add an additional member, Nasdaq does not believe that requiring a compensation committee to consist of at least two members would be an undue hardship for Nasdaq-listed Companies.¹⁶

As a result, Nasdaq proposes to require a compensation committee of a Company to consist of at least two members of the board of directors.

Compensation Committee Composition—General Independence Definition

Nasdaq's current listing rules require a compensation committee to be comprised solely of Independent Directors, as defined in Nasdaq Listing Rule 5605(a)(2).¹⁷ This definition includes a two-part test for

independence. First, there are certain categories of directors who cannot be considered independent, including:

- A director who is an Executive Officer or employee of the Company;¹⁸
- a director who is, or at any time during the past three years was, employed by the Company;¹⁹
- A director who accepted or who has a Family Member²⁰ who accepted any compensation from the Company in excess of \$120,000 during any period of twelve consecutive months within the three years preceding the determination of independence;²¹
- A director who is a Family Member of an individual who is, or at any time during the past three years was, employed by the Company as an Executive Officer;²²
- A director who is, or has a Family Member who is, a partner in, or a controlling Shareholder²³ or an Executive Officer of, any organization to which the Company made, or from which the Company received, payments for property or services in the current or any of the past three fiscal years that exceed 5% of the recipient's consolidated gross revenues for that year, or \$200,000, whichever is more;²⁴
- A director of the Company who is, or has a Family Member who is, employed as an Executive Officer of another entity where at any time during the past three years any of the Executive Officers of the Company serve on the

¹⁸ See Nasdaq Listing Rule 5605(a)(2). The rule's reference to the term "Company" includes any parent or subsidiary of the Company. The term "parent or subsidiary" is intended to cover entities the Company controls and consolidates with the Company's financial statements as filed with the Commission (but not if the Company reflects such entity solely as an investment in its financial statements). See IM-5605.

¹⁹ See Nasdaq Listing Rule 5605(a)(2)(A).

²⁰ "Family Member" is defined as "a person's spouse, parents, children and siblings, whether by blood, marriage or adoption, or anyone residing in such person's home." Nasdaq Listing Rule 5605(a)(2).

²¹ See Nasdaq Listing Rule 5605(a)(2)(B). This prohibition includes exceptions for: (i) Compensation for board or board committee service; (ii) compensation paid to a Family Member who is an employee (other than an Executive Officer) of the Company; or (iii) benefits under a tax-qualified retirement plan, or non-discretionary compensation.

²² See Nasdaq Listing Rule 5605(a)(2)(C).

²³ "Shareholder" is defined as "a record or beneficial owner of a security listed or applying to list. For purposes of [Nasdaq's Listing Rules], the term 'Shareholder' includes, for example, a limited partner, the owner of a depository receipt, or unit." Nasdaq Listing Rule 5005(a)(38).

²⁴ See Nasdaq Listing Rule 5605(a)(2)(D). This prohibition includes exceptions for payments: (i) Arising solely from investments in the Company's securities; or (ii) under non-discretionary charitable contribution matching programs.

¹² See Nasdaq Listing Rules 5605(d)(1) and (2).

¹³ See Securities Exchange Act Release No. 67220 (June 20, 2012), 77 FR 38422, 38425 (June 27, 2012) (the "Adopting Release") (stating that "[t]he final rule will not require a listed issuer to have a compensation committee or a committee that performs functions typically assigned to a compensation committee.")

¹⁴ As of June 30, 2012, only 25 of 2,636 Nasdaq-listed Companies relied on the Alternative in lieu of having a standing compensation committee.

¹⁵ See Nasdaq Listing Rule 5605(c)(2)(A).

¹⁶ As of June 30, 2012, only 26 of 2,636 Nasdaq-listed Companies had a compensation committee of only one member.

¹⁷ See Nasdaq Listing Rules 5605(d)(1) and (2).

compensation committee of such other entity;²⁵ or

- a director who is, or has a Family Member who is, a current partner of the Company's outside auditor, or was a partner or employee of the Company's outside auditor who worked on the Company's audit at any time during any of the past three years.²⁶

Second, a Company's board of directors must make an affirmative determination that each Independent Director has no relationship that, in the opinion of the board, would interfere with the exercise of independent judgment in carrying out the responsibilities of a director.²⁷

Nasdaq proposes to continue unchanged its existing requirement that a compensation committee be comprised solely of Independent Directors, as defined in Nasdaq Listing Rule 5605(a)(2).

Compensation Committee Composition—Compensatory Fees

Rule 10C-1 requires that in determining the independence requirements for compensation committee members, Nasdaq must consider relevant factors, including, but not limited to, the source of compensation of a member, including any consulting, advisory or other compensatory fee paid by the issuer to the member.²⁸ In considering this particular factor, Nasdaq reviewed its current listing rules relating to compensatory fees. As outlined above, Nasdaq's current listing rules require compensation committee members to be Independent Directors. Independent Director is defined to exclude any director who: (i) Accepted any compensation from the Company in excess of \$120,000 during any period of twelve consecutive months within the prior three years; or (ii) is a partner in, or a controlling Shareholder or an Executive Officer of, any organization to which the Company made, or from which the Company received, payments for property or services in the current or any of the past three fiscal years that exceed 5% of the recipient's consolidated gross revenues for that

year, or \$200,000, whichever is more.²⁹ As a result, directors who receive compensatory fees from a Company below these thresholds may serve on a compensation committee under Nasdaq's current listing rules.

This is in contrast to Nasdaq's current listing rules relating to audit committees, which require audit committee members to meet the criteria for independence set forth in Rule 10A-3(b)(1) under the Exchange Act, subject to certain exemptions.³⁰ Rule 10A-3(b)(1) prohibits an audit committee member from accepting directly or indirectly any consulting, advisory or other compensatory fee from an issuer or any subsidiary, with certain exemptions.

After reviewing its current listing rules, Nasdaq concluded that there is no compelling justification to have different independence standards for audit and compensation committee members with respect to the acceptance of compensatory fees from a Company. Accordingly, Nasdaq proposes to adopt the same standard for compensation committee members that applies to audit committee members under Rule 10A-3 under the Exchange Act with respect to compensatory fees. Specifically, Nasdaq's proposal prohibits a compensation committee member from accepting directly or indirectly any consulting, advisory or other compensatory fee from an issuer or any subsidiary. As in Rule 10A-3, compensatory fees shall not include: (i) Fees received as a member of the compensation committee, the board of directors or any other board committee; or (ii) the receipt of fixed amounts of compensation under a retirement plan (including deferred compensation) for prior service with the Company (provided that such compensation is not contingent in any way on continued service).³¹ Also similar to Rule 10A-3, the proposed requirement applicable to compensation committee members will not include a "look-back" period.³² Accordingly, the prohibition on the receipt of any consulting, advisory or other compensatory fee by a compensation committee member begins with the member's term of

service on the compensation committee.³³

Compensation Committee Composition—Affiliation

Rule 10C-1 requires that in determining the independence requirements for compensation committee members, Nasdaq also must consider whether a member is affiliated with the issuer, a subsidiary of the issuer or an affiliate of a subsidiary of the issuer.³⁴ In considering this particular factor, Nasdaq reviewed its current listing rules relating to affiliation. As outlined above, Nasdaq's current listing rules require compensation committee members to be Independent Directors. The definition of the term "Independent Director" does not refer to affiliation, although the definition does exclude certain individuals who may be considered affiliates from being an Independent Director. For example, any director who is an Executive Officer of the Company cannot be considered an Independent Director.³⁵ Significantly, the Interpretive Material to Nasdaq's definition of Independent Director states that "[b]ecause Nasdaq does not believe that ownership of Company stock by itself would preclude a board finding of independence, it is not included in the aforementioned objective factors."³⁶

Beyond the definition of Independent Director, Nasdaq's current listing rules relating to audit committees require audit committee members to meet the criteria for independence set forth in Rule 10A-3(b)(1) under the Exchange Act, subject to certain exemptions.³⁷ Rule 10A-3(b)(1) prohibits an audit committee member from being an affiliated person of the issuer or any subsidiary thereof. The term "affiliate" means "a person that directly, or indirectly through one or more intermediaries, controls, or is controlled by, or is under common control with, the person specified."³⁸ However, Rule 10A-3 includes a safe harbor for a person that is not: (i) The beneficial owner, directly or indirectly, of more than 10% of any class of voting equity securities of the specified person; and

²⁵ See Nasdaq Listing Rule 5605(a)(2)(E).

²⁶ See Nasdaq Listing Rule 5605(a)(2)(F). In the case of an investment company, in lieu of the prohibitions in Nasdaq Listing Rule 5605(a)(2)(A)-(F), a director cannot be considered independent if he or she is an "interested person" of the Company as defined in Section 2(a)(19) of the Investment Company Act of 1940, other than in his or her capacity as a member of the board of directors or any board committee.

²⁷ See Nasdaq Listing Rule 5605(a)(2) and IM-5605.

²⁸ See 17 CFR 240.10C-1(b)(1)(ii)(A).

²⁹ See Nasdaq Listing Rules 5605(a)(2)(B) and (D).

³⁰ See Nasdaq Listing Rule 5605(c)(2)(A)(ii).

³¹ See 17 CFR 240.10A-3(b)(1).

³² See Securities Exchange Act Release No. 47654 (April 9, 2003), 68 FR 18788, 18792 (April 16, 2003) (stating that "[t]he final rule, like [the] proposal, applies the prohibitions only to current relationships with the audit committee member and related persons. They do not extend to a 'look back' period before appointment to the audit committee * * *.")

³³ Nasdaq notes, however, that as discussed above, compensation committee members must be Independent Directors as defined in Nasdaq Listing Rule 5605(a)(2). Each of the bright-line tests in this definition includes a three-year "lookback" period. See Nasdaq Listing Rule 5605(a)(2).

³⁴ See 17 CFR 240.10C-1(b)(1)(ii)(B).

³⁵ See Nasdaq Listing Rule 5605(a)(2).

³⁶ IM-5605.

³⁷ See Nasdaq Listing Rule 5605(c)(2)(A)(ii).

³⁸ See 17 CFR 240.10A-3(e)(1).

(ii) an executive officer of a specified person.³⁹

After reviewing its current listing rules, Nasdaq considered whether to propose that compensation committee members must meet the same standard applicable to audit committee members under Rule 10A-3 under the Exchange Act with respect to affiliation, similar to its proposal with respect to compensatory fees. However, Nasdaq concluded that such a blanket prohibition would be inappropriate for compensation committees. In fact, Nasdaq believes that it may be appropriate for certain affiliates, such as representatives of significant stockholders, to serve on compensation committees since their interests are likely aligned with those of other stockholders in seeking an appropriate executive compensation program.

As a result, Nasdaq proposes that Companies' boards of directors should consider affiliation in making an eligibility determination for compensation committee members, but it does not propose bright-line rules around this factor. In making this eligibility determination, a Company's board specifically must consider whether the director is affiliated with the Company, a subsidiary of the Company or an affiliate of a subsidiary of the Company to determine whether such affiliation would impair the director's judgment as a member of the compensation committee. In performing this analysis, a board of directors is not required to apply a "look-back" period, and is therefore required to consider affiliation only with respect to relationships that occur during an individual's term of service as a compensation committee member.

A board may conclude that it is appropriate for a director who is an affiliate to serve on the compensation committee. While this differs from the requirement applicable to audit committee members, Nasdaq could identify no compelling policy justification for precluding all affiliates, such as owners of a Company, even those with very large stakes, from serving on the compensation committee.

Compensation Committee Composition—Other

Rule 10C-1 permits Nasdaq to consider other relevant factors in determining the independence requirements for compensation committee members.⁴⁰ After reviewing its current and proposed listing rules, Nasdaq concluded that these rules are

sufficient to ensure the independence of compensation committee members. Therefore, Nasdaq determined not to propose further independence requirements.

Exceptional and Limited Circumstances Exception

With minor edits, Nasdaq proposes to retain its existing exception that allows a Company to have a non-Independent Director serve on the compensation committee under exceptional and limited circumstances.⁴¹ Under this exception, if a compensation committee consists of at least three members, one director who is not an Independent Director and is not currently an Executive Officer or employee or a Family Member of an Executive Officer, may be appointed to the compensation committee if the board, under exceptional and limited circumstances, determines that such individual's membership on the committee is required by the best interests of the Company and its Shareholders. A Company that relies on this exception must disclose either on or through the Company's Web site or in the proxy statement for the next annual meeting subsequent to such determination (or, if the Company does not file a proxy, in its Form 10-K or 20-F), the nature of the relationship and the reasons for the determination. In addition, the Company must provide any disclosure required by Instruction 1 to Item 407(a) of Regulation S-K regarding its reliance on this exception. A member appointed under this exception may not serve longer than two years.

In addition to the existing exception for compensation committees, Nasdaq's current listing rules include similar exceptions for audit and nominations committees.⁴² While these exceptions are used infrequently by Nasdaq-listed Companies,⁴³ Nasdaq believes they are an important means to allow Companies flexibility as to board and committee membership and composition in unusual circumstances, which may be

⁴¹ See Nasdaq Listing Rule 5605(d)(3).

⁴² See Nasdaq Listing Rules 5605(c)(2)(B) and 5605(e)(3). Nasdaq recently amended the exceptions for all three committees to allow a Company to rely on the exception for a non-Independent Director who is a Family Member of a non-executive employee of the Company. See Securities Exchange Act Release No. 67468 (July 19, 2012), 77 FR 43618 (July 25, 2012) (SR-NASDAQ-2012-062). Nasdaq proposes to retain this aspect of the exception for compensation committees, as well as audit and nominations committees.

⁴³ On June 30, 2012, ten of 2,636 Nasdaq-listed Companies were using one of these exceptions: six Companies for the audit committee and four Companies for the nominations committee. No Companies were using this exception for the compensation committee.

particularly important for smaller Companies.

Nasdaq would allow a Company to avail itself of the exception even for a director who fails the new requirements adopted pursuant to Rule 10C-1.

Cure Period

Consistent with Rule 10C-1, Nasdaq's proposal provides Companies with an opportunity to cure defects in the composition of compensation committees.⁴⁴ The proposed cure period is copied from the cure period in Nasdaq's current listing rules for noncompliance with the requirement to have a majority independent board.⁴⁵

Under Nasdaq's proposal, if a Company fails to comply with the compensation committee composition requirements due to one vacancy, or one compensation committee member ceases to be independent due to circumstances beyond the member's reasonable control, the Company shall regain compliance by the earlier of the next annual shareholders meeting or one year from the occurrence of the event that caused the noncompliance. However, if the annual shareholders meeting occurs no later than 180 days following the event that caused the noncompliance, the Company shall instead have 180 days from such event to regain compliance. This provides a Company at least 180 days to cure noncompliance and would typically allow a Company to regain compliance in connection with its next annual meeting. A Company relying on this provision shall provide notice to Nasdaq immediately upon learning of the event or circumstance that caused the noncompliance.

Compensation Committee Charter

Nasdaq proposes to require each Company to certify that it has adopted a formal written compensation committee charter and that the compensation committee will review and reassess the adequacy of the formal written charter on an annual basis.⁴⁶ This proposal is similar to Nasdaq's current requirement for Companies to certify as to the adoption of a formal written audit committee charter, except that the proposed requirement for annual review and reassessment of the

⁴⁴ See 17 CFR 240.10C-1(a)(3).

⁴⁵ See Nasdaq Listing Rule 5605(b)(1)(A).

⁴⁶ Smaller Reporting Companies may adopt either a formal written compensation committee charter or a board resolution that specifies the committee's responsibilities and authority, except Smaller Reporting Companies are not required to specify the specific compensation responsibilities and authority set forth in proposed Nasdaq Listing Rule 5605(d)(3). For further discussion, see the section entitled "Smaller Reporting Companies" below.

³⁹ *Id.*

⁴⁰ See 17 CFR 240.10C-1(b)(1)(ii).

adequacy of the compensation committee charter is written prospectively, rather than retrospectively.⁴⁷ In other words, the proposed compensation committee charter requirement states that the compensation committee will review and reassess the adequacy of the charter on an annual basis, while the current audit committee charter requirement states that the audit committee has reviewed and reassessed the adequacy of the charter on an annual basis.⁴⁸

Nasdaq proposes that the compensation committee charter must specify:

- the scope of the compensation committee's responsibilities, and how it carries out those responsibilities, including structure, processes and membership requirements;
- the compensation committee's responsibility for determining, or recommending to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company;
- that the chief executive officer of the Company may not be present during voting or deliberations by the compensation committee on his or her compensation; and
- the specific compensation committee responsibilities and authority set forth in proposed Nasdaq Listing Rule 5605(d)(3), which implements the requirements of Section 10C(b)–(e) of the Exchange Act and Rule 10C–1(b)(2), (3) and (4)(i)–(vi) thereunder.

The requirement for the charter to specify the scope of the compensation committee's responsibilities, and how it carries out those responsibilities, including structure, processes and membership requirements, is copied from Nasdaq's similar listing rule relating to audit committee charters.⁴⁹

The requirement for the charter to specify the compensation committee's responsibility for determining, or recommending to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company, is based upon Nasdaq's current compensation-related listing rules.⁵⁰

The requirement for the charter to specify the compensation committee's responsibility for determining, or recommending to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company, is based upon Nasdaq's current compensation-related listing rules.⁵⁰

These listing rules require that the compensation of a Company's chief executive officer and all other Executive Officers must be determined by (i) a compensation committee comprised solely of Independent Directors or (ii) the Independent Directors constituting a majority of the board's Independent Directors in a vote in which only Independent Directors participate. As discussed above, Nasdaq proposes to eliminate the Alternative, and therefore, the compensation of a Company's chief executive officer and all other Executive Officers must be determined, or recommended to the board for determination, by a compensation committee comprised of Independent Directors. Going forward, Nasdaq proposes to implement this requirement by requiring Companies to include it in their formal written compensation committee charters.

The requirement for the charter to specify that the chief executive officer of the Company may not be present during voting or deliberations by the compensation committee on his or her compensation is based upon Nasdaq's current compensation-related listing rules.⁵¹ Going forward, Nasdaq proposes to implement this requirement by requiring Companies to include it in their formal written compensation committee charters.

Finally, the requirement for the charter to specify the specific compensation committee responsibilities and authority set forth in proposed Nasdaq Listing Rule 5605(d)(3) is modeled after Nasdaq's similar listing rule relating to audit committee charters.⁵² Proposed Nasdaq Listing Rule 5605(d)(3) implements the requirements of Section 10C(b)–(e) of the Exchange Act and Rule 10C–1(b)(2), (3) and (4)(i)–(vi) thereunder.

Specifically, the proposed listing rule states that a compensation committee must have the specific compensation committee responsibilities and authority necessary to comply with Rule 10C–1(b)(2), (3) and (4)(i)–(vi) relating to the: (i) Authority to retain compensation consultants, independent legal counsel

and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel.⁵³

Rule 10C–1 permits Nasdaq to identify other relevant independence factors that a compensation committee must consider when selecting a compensation consultant, legal counsel or other adviser.⁵⁴ Nasdaq considered whether to adopt other independence factors, but ultimately concluded that the six independence factors enumerated in Rule 10C–1 will provide compensation committees with a broad and sufficient range of facts and circumstances to consider in making an independence determination. Like the Commission, Nasdaq seeks to emphasize that a compensation committee is not required to retain an independent compensation adviser; rather, a compensation committee is required only to conduct the independence analysis described in Rule 10C–1 before selecting a compensation adviser.⁵⁵

Exemptions

Rule 10C–1 allows the national securities exchanges to exempt from the listing rules adopted pursuant to Rule 10C–1 certain categories of issuers, as the national securities exchange determines is appropriate, taking into consideration, among other relevant factors, the potential impact of the listing rules on smaller reporting issuers.⁵⁶ Nasdaq proposes that its existing exemptions from the compensation-related listing rules remain generally unchanged. Nasdaq's current listing rules include exemptions for: asset-backed issuers and other

⁵³ The independence factors include: (i) The provision of other services to the issuer by the person that employs the adviser (the "Employer"); (ii) the amount of fees received from the issuer by the Employer, as a percentage of the total revenue of the Employer; (iii) the policies and procedures of the Employer that are designed to prevent conflicts of interest; (iv) any business or personal relationship of the adviser with a member of the compensation committee; (v) any stock of the issuer owned by the adviser; and (vi) any business or personal relationship of the adviser or the Employer with an executive officer of the issuer. See 17 CFR 240.10C–1(b)(4).

⁵⁴ *Id.*

⁵⁵ See the Adopting Release, at 38432–3 (stating that "neither the [Dodd-Frank] Act nor [Rule 10C–1] requires a compensation adviser to be independent, only that the compensation committee consider the enumerated independence factors before selecting a compensation adviser. Compensation committees may select any compensation adviser they prefer, including ones that are not independent, after considering the six independence factors outlined in the [Rule 10C–1].")

⁵⁶ See 17 CFR 240.10C–1(b)(5).

⁴⁷ See Nasdaq Listing Rule 5605(c)(1).

⁴⁸ Nasdaq proposes to make a conforming change to its audit committee charter requirement to clarify that Companies' annual review and reassessment of the audit committee charter should be prospective. This is consistent with Nasdaq's current interpretation of its audit committee charter requirement. By proposing this amendment, Nasdaq seeks to minimize differences between the audit committee and compensation committee charter requirements and to eliminate potential questions as to whether Nasdaq intended a discrepancy between these two requirements.

⁴⁹ See Nasdaq Listing Rule 5605(c)(1)(A).

⁵⁰ See Nasdaq Listing Rules 5605(d)(1) and (2).

⁵¹ See Nasdaq Listing Rule 5605(d)(1).

⁵² See Nasdaq Listing Rule 5605(c)(1)(D), which requires that an audit committee charter set forth the specific audit committee responsibilities and authority set forth in Nasdaq Listing Rule 5605(c)(3). Nasdaq Listing Rule 5605(c)(3) states that an audit committee must have the specific responsibilities and authority necessary to comply with Rule 10A–3(b)(2), (3), (4) and (5) under the Exchange Act, with certain exemptions. Rule 10A–3(b)(2), (3), (4) and (5) under the Exchange Act concerns responsibilities relating to: (i) Registered public accounting firms; (ii) complaints relating to accounting, internal accounting controls or auditing matters; (iii) authority to engage advisers; and (iv) funding as determined by the audit committee.

passive issuers,⁵⁷ cooperatives,⁵⁸ limited partnerships,⁵⁹ management investment companies⁶⁰ and Controlled Companies.⁶¹ For the same reasons that these categories of Companies have traditionally been exempt from Nasdaq's compensation-related listing rules, Nasdaq proposes that they continue to be exempt from its revised listing rules relating to compensation committees.

In addition, Nasdaq's current listing rules provide that a Foreign Private Issuer may follow its home country practice in lieu of Nasdaq's compensation-related listing rules if the Foreign Private Issuer discloses in its annual reports filed with the Commission each requirement that it does not follow and describes the home country practice followed by the Company in lieu of such

⁵⁷ See Nasdaq Listing Rule 5615(a)(1). Asset-backed issuers and other passive issuers have traditionally been exempt from Nasdaq's compensation-related listing rules because these issuers do not have a board of directors or persons acting in a similar capacity and their activities are limited to passively owning or holding (as well as administering and distributing amounts in respect of) securities, rights, collateral or other assets on behalf of or for the benefit of the holders of the listed securities. See IM-5615-1.

⁵⁸ See Nasdaq Listing Rule 5615(a)(2). Certain member-owned cooperatives that list their preferred stock are required to have their common stock owned by their members. Because of their unique structure and the fact that they do not have a publicly traded class of common stock, these entities have traditionally been exempt from Nasdaq's compensation-related listing rules. See IM-5615-2.

⁵⁹ See Nasdaq Listing Rule 5615(a)(4). Nasdaq's compensation-related listing rules historically have not been applied to limited partnerships because the structure of these entities requires that public investors have limited rights and that the general partners make all significant decisions about the operation of the limited partnership. As such, limited partners do not expect to have a voice in the operations of the partnership. Limited partnerships also are exempt from the independence requirements of Rule 10C-1. See 17 CFR 240.10C-1(b)(1)(iii)(A)(1).

⁶⁰ See Nasdaq Listing Rule 5615(a)(5). Management investment companies registered under the Investment Company Act of 1940 are already subject to a pervasive system of federal regulation in certain areas of corporate governance, and as a result, these entities have traditionally been exempt from Nasdaq's compensation-related listing rules. See IM-5615-4. Open-end management investment companies registered under the Investment Company Act of 1940 also are exempt from the independence requirements of Rule 10C-1. See 17 CFR 240.10C-1(b)(1)(iii)(A)(3).

⁶¹ See Nasdaq Listing Rule 5615(c). This exemption recognizes that majority Shareholders, including parent companies, have the right to select directors and control certain key decisions, such as executive officer compensation, by virtue of their ownership rights. See IM-5615-5. A Controlled Company is defined as "a Company of which more than 50% of the voting power for the election of directors is held by an individual, a group or another company." Nasdaq Listing Rule 5615(c)(1). Controlled Companies also are exempt from all of the requirements of Rule 10C-1. See 17 CFR 240.10C-1(b)(5)(ii).

requirements.⁶² Alternatively, a Foreign Private Issuer that is not required to file its annual report with the Commission on Form 20-F may make this disclosure only on its Web site. Nasdaq proposes that a Foreign Private Issuer continue to be allowed to follow its home country practice in lieu of Nasdaq's revised listing rules relating to compensation committees if the Foreign Private Issuer provides the disclosures described above. Nasdaq also proposes to add an additional disclosure requirement for any Foreign Private Issuer that follows its home country practice in lieu of the requirement to have an independent compensation committee to disclose in its annual reports filed with the Commission the reasons why it does not have such a committee.⁶³

Phase-In Schedules

Nasdaq proposes that its existing phase-in schedules for the requirements relating to compensation committee composition remain generally unchanged. Nasdaq's current listing rules include phase-in schedules for: Companies listing in connection with an initial public offering,⁶⁴ Companies emerging from bankruptcy⁶⁵ and Companies ceasing to be Controlled Companies.⁶⁶ Since each of these categories of Company did not previously have a compensation committee, each is allowed to phase in compliance with the compensation committee composition requirement as follows: (1) One independent member at the time of listing; (2) a majority of independent members within 90 days of listing; and (3) all independent members within one year of listing. Nasdaq proposes that these phase-in schedules remain unchanged under its revised listing rules, except to clarify that a

⁶² See Nasdaq Listing Rule 5615(a)(3). Under Nasdaq's listing rules, Foreign Private Issuer has the same meaning as under Rule 3b-4 under the Exchange Act. See Nasdaq Listing Rule 5005(a)(18). Nasdaq's listing rules have traditionally provided qualified exemptions for foreign private issuers so that such issuers are not required to do any act that is contrary to a law, rule or regulation of any public authority exercising jurisdiction over such issuer or that is contrary to generally accepted business practices in the issuer's country of domicile, except to the extent such exemptions would be contrary to the public securities laws. See Securities Exchange Act Release No. 48745 (November 4, 2003), 68 FR 64154, 64165 (November 12, 2003) (SR-NASD-2002-138).

⁶³ This proposal adopts the requirements of Rule 10C-1(b)(1)(iii)(A)(4), which provides an exemption from the independence requirements of Rule 10C-1 for a "foreign private issuer that discloses in its annual report the reasons that the foreign private issuer does not have an independent compensation committee."

⁶⁴ See Nasdaq Listing Rule 5615(b)(1).

⁶⁵ See Nasdaq Listing Rule 5615(b)(2).

⁶⁶ See Nasdaq Listing Rule 5615(c)(3).

Company may phase in compliance with the minimum size requirement and the additional eligibility requirements adopted pursuant to Rule 10C-1, as well as the requirement for compensation committee members to be Independent Directors.⁶⁷

In addition, Nasdaq proposes no changes to the phase-in schedule in its current listing rules for Companies transferring from other markets.⁶⁸ Companies transferring from other markets with a substantially similar requirement shall be afforded the balance of any grace period afforded by the other market. Companies transferring from other listed markets that do not have a substantially similar requirement shall be afforded one year from the date of listing on Nasdaq to comply with the compensation committee composition requirements.

None of the aforementioned phase-in schedules apply to the requirement to adopt a formal written compensation committee charter including the content specified in Nasdaq Listing Rule 5605(d)(1)(A)-(D).⁶⁹

Smaller Reporting Companies

While Rule 10C-1 exempts Smaller Reporting Companies from all of its requirements, Nasdaq's current listing rules do not include any such exemptions.⁷⁰ Consistent with the

⁶⁷ To provide an illustration of how the compensation committee composition requirement will interact with the minimum size requirement, consider a Company that at the time of listing has a compensation committee consisting of two members, both of whom are Independent Directors, but one of whom accepts compensatory fees of \$50,000 annually from the Company pursuant to a consulting agreement. Although only one of these directors is fully eligible to serve on the compensation committee, the committee meets the requirements of Nasdaq's phase-in schedule because it has one fully eligible member at the time of listing. By the 90th day from listing, the committee must have a majority of fully eligible members, so the Company could: (i) Remove the ineligible member and temporarily have a committee of one fully eligible member; (ii) replace the ineligible member with a fully eligible member so that the committee consists of two members, all of whom are fully eligible; or (iii) add a second fully eligible member so that the committee consists of three members, a majority of whom are fully eligible. By one year from listing, the Company's compensation committee must consist of at least two members, and all members must be fully eligible under Nasdaq's compensation committee composition requirement.

⁶⁸ See Nasdaq Listing Rule 5615(b)(3).

⁶⁹ As discussed below under "Smaller Reporting Companies," Nasdaq is proposing a new phase-in schedule for a Company ceasing to be a Smaller Reporting Company. Nasdaq proposes to allow such a Company 30 days to certify to Nasdaq that it has adopted a formal written compensation committee charter including the content specified in Nasdaq Listing Rule 5605(d)(1)(A)-(D). See footnote 71, *infra*.

⁷⁰ See 17 CFR 240.10C-1(b)(5)(ii).

exemption in Rule 10C-1, however, Nasdaq proposes not to require Smaller Reporting Companies to adhere to the new requirements relating to compensatory fees and affiliation, which Nasdaq is proposing in response to Rule 10C-1, or to incorporate into their formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority the language in Rule 10C-1 regarding compensation advisers. This approach will minimize new costs imposed on Smaller Reporting Companies and allow them some flexibility not allowed for larger Companies.

However, as discussed above, Nasdaq proposes to eliminate the Alternative in its current listing rules that allows compensation decisions to be made by a majority of the Independent Directors rather than by a committee composed entirely of Independent Directors. Nasdaq proposes to eliminate the Alternative for Smaller Reporting Companies, just like all other Nasdaq-listed Companies. As a result, Smaller Reporting Companies would be required to have a compensation committee comprised of at least two Independent Directors as defined under Nasdaq's existing listing rules.

In addition, Nasdaq proposes that Smaller Reporting Companies must adopt a formal written compensation committee charter or board resolution that specifies the committee's responsibilities and authority. Unlike other Companies, Smaller Reporting Companies may include this content in a board resolution, rather than a compensation committee charter, and Smaller Reporting Companies are not required to review and reassess the adequacy of the charter or board resolution on an annual basis. The charter or board resolution must specify the same content as other Companies, except Smaller Reporting Companies are not required to specify the specific compensation responsibilities and authority set forth in proposed Nasdaq Listing Rule 5605(d)(3) relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel.⁷¹

Nasdaq also proposes to apply the same phase-in schedule to a Company

⁷¹ Nasdaq notes that Smaller Reporting Companies remain subject to the disclosure requirements of Item 407(e)(3)(iv) of Regulation S-K, which were adopted at the same time as Rule 10C-1. See the Adopting Release.

ceasing to be a Smaller Reporting Company that applies to a Company listing in conjunction with its initial public offering. Since a Smaller Reporting Company is required to have a compensation committee comprised of at least two Independent Directors, a Company that has ceased to be a Smaller Reporting Company may use the phase-in schedule for the additional eligibility requirements relating to compensatory fees and affiliation, but not for the minimum size requirement or the requirement that the committee consist only of Independent Directors. This phase-in schedule will start to run on the due date of the SEC filing in which the Company is required to report that it is an issuer other than a Smaller Reporting Company.⁷² During the phase-in schedule, a Smaller Reporting Company must continue to comply with the requirement to have a compensation committee comprised of at least two Independent Directors as defined under Nasdaq's existing listing rules.

Effective Dates/Transition

Nasdaq proposes that Rule 5605(d)(3), relating to compensation committee responsibilities and authority, shall be effective immediately.⁷³ Specifically, this proposed rule states that a compensation committee must have the specific compensation committee responsibilities and authority necessary to comply with Rule 10C-1(b)(2), (3) and (4)(i)-(vi) under the Act relating to the: (i) Authority to retain compensation consultants, independent legal counsel and other compensation advisers; (ii) authority to fund such advisers; and (iii) responsibility to consider certain independence factors before selecting such advisers, other than in-house legal counsel. To the extent a Company does not have a compensation committee, the provisions of this rule shall apply to the Independent Directors who determine, or recommend to the board for determination, the compensation of the chief executive officer and all other Executive Officers of the Company. Companies should consider under state corporate law whether to grant these specific responsibilities and authority through a charter, resolution or other

⁷² Within 30 days after the start of its phase-in schedule, a Company that has ceased to be a Smaller Reporting Company must certify to Nasdaq that: (i) It has complied with the requirement in Nasdaq Listing Rule 5605(d)(1) to have a compensation committee charter including the content specified in Nasdaq Listing Rule 5605(d)(1)(A)-(D); and (ii) it has, or will within the applicable phase-in schedule, comply with the requirement in Nasdaq Listing Rule 5605(d)(2) regarding compensation committee composition.

⁷³ See *supra* note 3.

board action; however, Nasdaq proposes to require only that compensation committees immediately have such responsibilities and authority. While Nasdaq proposes that Companies must eventually have a written compensation committee charter that includes, among others, these responsibilities and authority, Companies may implement such a charter on the schedule discussed below.

In order to allow Companies to make necessary adjustments to their boards and committees in the course of their regular annual meeting schedules, Nasdaq proposes that Companies must comply with the remaining provisions of the amended listing rules on compensation committees by the earlier of: (1) Their second annual meeting held after the date of approval of Nasdaq's amended listing rules; or (2) December 31, 2014. This transition period is similar to the transition period used when Nasdaq implemented similar requirements for audit committees in 2003.⁷⁴

A Company must certify to Nasdaq, no later than 30 days after the implementation deadline applicable to it, that it has complied with the amended listing rules on compensation committees. Nasdaq will provide Companies with a form for this certification.

During the transition period, Companies that are not yet required to comply with the amended listing rules on compensation committees must continue to comply with Nasdaq's existing listing rules, which have been redesignated as Listing Rule 5605A(d) and IM-5605A-6 in Nasdaq's proposal.

Conforming Changes and Correction of Typographical Errors

Finally, Nasdaq proposes to make minor conforming changes to its requirements relating to audit and nominations committees. Nasdaq also proposes to correct certain typographical errors in its corporate governance requirements as set forth in Exhibit 5.⁷⁵

2. Statutory Basis

Nasdaq believes that the proposed rule change is consistent with the provisions of Section 6 of the Exchange Act,⁷⁶ in general, and with Section 6(b)(5) of the Exchange Act,⁷⁷ in particular. Section 6(b)(5) requires,

⁷⁴ See Securities Exchange Act Release No. 48745 (November 4, 2003), 68 FR 64154 (November 12, 2003) (SR-NASD-2002-141).

⁷⁵ The Commission notes that Exhibit 5 is available at <http://nasdaq.cchwallstreet.com>.

⁷⁶ 15 U.S.C. 78f.

⁷⁷ 15 U.S.C. 78f(b)(5).

among other things, that a national securities exchange's rules must be designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest. Section 6(b)(5) also requires that a national securities exchange's rules not be designed to permit unfair discrimination between customers, issuers, brokers or dealers.

As required by the Dodd-Frank Act and Rule 10C-1, Nasdaq is proposing amendments to its listing rules relating to the independence of compensation committees and their advisers. Nasdaq reviewed its existing compensation-related listing rules, in combination with the requirements of Rule 10C-1, to develop a set of proposed compensation-related listing rules. These proposals generally fall into three categories: Proposed rule amendments to comply with Rule 10C-1; proposals to continue certain rules relatively unchanged; and proposed rule amendments not required by Rule 10C-1. Nasdaq believes that collectively, these proposals protect investors and the public interest by requiring Companies, with certain exemptions, to have a compensation committee meeting certain requirements relating to composition, responsibilities and authority.

More specifically, Nasdaq's proposed amendments to its listing rules in order to comply with Rule 10C-1 set forth: Additional eligibility requirements for compensation committee members relating to compensatory fees and affiliation; an opportunity to cure defects in compensation committee composition; a requirement that compensation committees have the specific responsibilities and authority necessary to comply with Rule 10C-1(b)(2), (3) and (4)(i)-(vi) under the Exchange Act; and exemptions for limited partnerships, management investment companies, Controlled Companies, foreign private issuers that provide certain required disclosures, and Smaller Reporting Companies. Nasdaq believes that its proposals fairly balance the goal of protecting the investing public by ensuring effective deliberation over executive compensation with the goal of avoiding the imposition of undue costs on Companies.

Nasdaq's proposals to continue relatively unchanged some of its existing exemptions to the compensation-related listing rules for

certain categories of Companies takes into account the unique characteristics of these Companies.⁷⁸ As a result, Nasdaq does not believe that continuing these exemptions will discriminate unfairly among issuers, consistent with Section 6(b)(5) of the Exchange Act.⁷⁹

The proposed rule amendments not required by Rule 10C-1 require that: Companies must have a standing compensation committee; the committee must consist of a minimum of two members; the committee must have a formal written charter (or board resolution, in the case of Smaller Reporting Companies) that specifies the committee's responsibilities and authority; and Smaller Reporting Companies must continue to comply with certain of Nasdaq's compensation-related listing rules. As discussed in the "Purpose" section, Nasdaq believes that these new requirements will facilitate effective oversight of executive compensation and promote accountability to investors for executive compensation decisions. With regard to Smaller Reporting Companies, Nasdaq notes that these Companies continue to be subject to the same requirements as all other Companies, except the new requirements that Nasdaq is proposing under Rule 10C-1 relating to compensatory fees, affiliation and the specific compensation committee responsibilities and authority set forth in proposed Nasdaq Listing Rule 5605(d)(3). Nasdaq believes that this hybrid approach does not discriminate unfairly between issuers because it recognizes the fact that the "executive compensation arrangements of [Smaller Reporting Companies] generally are so much less complex than those of other public companies that they do not warrant the more extensive disclosure requirements imposed on companies that are not [Smaller Reporting Companies] and related regulatory burdens that could be disproportionate for [Smaller Reporting Companies]." ⁸⁰ In addition, Nasdaq notes that the Commission exempted Smaller Reporting Companies from Rule 10C-1.⁸¹ As a result, this distinction does not discriminate unfairly among issuers.

B. Self-Regulatory Organization's Statement on Burden on Competition

Nasdaq does not believe that the proposed rule change will result in any burden on competition that is not

necessary or appropriate in furtherance of the purposes of the Exchange Act, as amended.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

Nasdaq did not solicit comments on the proposed rule change. Nasdaq received two written comments, which are attached as Exhibit 2.⁸²

The first commenter recommended that Nasdaq should require Companies to disclose: (i) How they are complying with the requirement to consider the independence factors enumerated in Rule 10C-1; and (ii) the nature of any conflict of interest arising from the engagement of legal counsel by a compensation committee. Nasdaq considered these recommendations, but it preferred to defer to the judgment of the Commission with respect to the appropriate disclosure framework under Rule 10C-1. Nasdaq therefore decided not to propose any new disclosure requirements for Companies, other than those that are required by Rule 10C-1.⁸³

The second commenter proffered four recommendations. First, this commenter recommended that Nasdaq include director fees within the list of relevant factors that must be considered when assessing the independence of compensation committee members. Nasdaq does not believe that the intent of the Dodd-Frank Act or Rule 10C-1 was to limit independence based on director compensation, and therefore, Nasdaq proposes to continue to exempt board fees from its prohibition on payment of compensatory fees to a compensation committee member. Second, this commenter recommended that Nasdaq include in the requirements for compensation committee independence a factor relating to business or personal relationships between directors and officers. As discussed in the "Purpose" section above, Nasdaq reviewed its current and proposed listing rules and concluded that these rules are sufficient to ensure the independence of compensation committee members. Therefore, Nasdaq determined not to propose further independence requirements, other than those discussed above. Third, this commenter recommended that Nasdaq expand the additional factors for

⁸² The Commission notes that the comments are available at <http://nasdaq.cchwallstreet.com>.

⁸³ Specifically, as required by Rule 10C-1(b)(1)(iii)(A)(4), Nasdaq proposes to require a Foreign Private Issuer that follows a home country practice in lieu of the requirement to have an independent compensation committee to disclose the reasons why it does not have such a committee.

⁷⁸ See footnotes 56-61, *supra*.

⁷⁹ 15 U.S.C. 78f(b)(5).

⁸⁰ See the Adopting Release, at 38438 (quoting Securities Exchange Act Release No. 54302A (August 29, 2006), 71 FR 53158, 53192 (September 8, 2006)).

⁸¹ See 17 CFR 240.10C-1(b)(5)(ii).

compensation committee eligibility to cover all independent directors, not just those serving on the compensation committee. While Nasdaq heavily weighed the commenter's concern that multiple definitions of independence add to the complexity of board membership, Nasdaq believed that the intent of the Dodd-Frank Act and Rule 10C-1 was to address the independence of compensation committee members, as well as their advisers, specifically. Nasdaq concluded therefore that it is inappropriate to expand the additional requirements proposed herein to cover all independent directors. Finally, this commenter recommended that Nasdaq clarify that, while the factors must be considered in their totality, a single factor can result in a loss of director independence. Nasdaq confirms that a director cannot be deemed independent if he or she fails any one of the bright-line prohibitions in Nasdaq Listing Rule 5605(a)(2).

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Exchange Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NASDAQ-2012-109 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NASDAQ-2012-109. This

file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of Nasdaq. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make publicly available. All submissions should refer to File Number SR-NASDAQ-2012-109 and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁸⁴

Kevin M. O'Neill,

Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68022; File No. SR-BATS-2012-039]

Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing of Proposed Rule Change, as Modified by Amendment No.1, To Adopt Listing Standards Related to Certain Compensation Committee and Compensation Adviser Requirements

October 9, 2012.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),¹ and Rule 19b-4 thereunder,² notice is hereby given that on

⁸⁴ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 17 CFR 240.19b-4.

September 25, 2012, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule change as described in Items I, II and III below, which filing was amended and replaced in its entirety by Amendment No. 1 thereto on October 9, 2012, and which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange's proposed rule change would amend BATS Rule 14.10, entitled "Corporate Governance Requirements," in accordance with the provisions of Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act") requiring the listing rules of a national securities exchange to prohibit the listing of any equity security of an issuer that is not in compliance with certain compensation committee and compensation adviser requirements, as well as modifying the numbering of Rule 14.10 in order to accommodate the proposed amendments and additions.

The text of the proposed rule change is available at the Exchange's Web site at <http://www.batstrading.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room. The proposed rule text can be found in Exhibit 5.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

This Amendment No. 1 to SR-BATS-2012-039 (the "Filing") amends and replaces in its entirety the Filing as originally submitted on September 25, 2012. Amendment No. 1 further clarifies

certain aspects of proposed Rule 14.10 as originally filed.³

Section 952 of the Dodd-Frank Act added Section 10C to the Act,⁴ which requires the listing rules of each national securities exchange to prohibit the listing of any equity security of an issuer that is not in compliance with the compensation committee and compensation adviser requirements of Rule 10C-1 under the Act (“Rule 10C-1”).⁴ Specifically, Rule 10C-1 requires the Exchange to establish listing standards that require each member of a listed issuer’s compensation committee to be a member of the board and to be independent, as well as establish certain factors that an issuer must consider when evaluating the independence of a director. Rule 10C-1 also requires the Exchange to establish standards for evaluating the independence of a compensation consultant, legal counsel, or other adviser (“Compensation Consultant”) and requires a Company to provide funding to a compensation committee to retain such Compensation Consultant. Accordingly, in order to carry out the requirements of Section 952 of the Dodd-Frank Act, the Exchange proposes to make several amendments to Rule 14.10.

The Exchange proposes to amend Rule 14.10(c)(4)(A) and (B) to require that, in addition to meeting the criteria listed under Rule 14.10(c)(1)(B), in evaluating the independence of a director acting in the capacity described in Rule 14.10(c)(4)(B), the board of directors of a Company⁵ shall consider the following factors: (i) The source of compensation of the director, including any consulting, advisory or other compensatory fee paid by the Company to such director; and (ii) whether the director is affiliated with the Company, a subsidiary of the Company, or an affiliate of a subsidiary of the Company.

The Exchange believes that the adoption of proposed Rule 14.10(c)(4)(A), along with the existing bright line tests for director

independence under Rule 14.10(c)(1)(B), would bring the Exchange in compliance with Rule 10C-1(b)(1), because the Rules would require that each director that is acting in the capacity described in Rule 14.10(c)(4)(B) be independent based on an evaluation by the board that include the consideration of the proposed factors in Rule 14.10(c)(4)(A). In determining these independence requirements, the Exchange considered relevant factors, including, but not limited to: The source of compensation of a director, including any consulting, advisory or other compensatory fee paid by the Company to such director and whether the director of a Company is affiliated with the Company, a subsidiary of the Company, or an affiliate of a subsidiary of the Company. Rule 10C-1 permits the Exchange to consider other relevant factors in determining the independence requirements for compensation committee members.⁶ After reviewing its current and proposed listing rules, the Exchange concluded that these rules are sufficient to ensure the independence of Independent Directors acting in the capacity described in Rule 14.10(c)(4)(B). The Exchange believes that its existing “bright line” independence standards as set forth in Rule 14.10(c)(1)(B) are sufficiently broad to encompass the types of relationships which would generally be material to a director’s independence for determining executive officer compensation. Therefore, the Exchange determined not to propose independence requirements in addition to those specific considerations required by proposed Rule 14.10(c)(4)(A). After considering the factors provided in Rule 10C-1(b)(1)(ii) and evaluating how the factors could impact the ability of a director to act independently in the determination [sic] executive compensation, the Exchange believes that it can best comply with Rule 10C-1 by adopting in its Rules the factors set forth in Rule 10C-1(b)(1)(ii). The Exchange believes that this approach will best provide the board of directors of a Company with the requisite guidance and discretion to evaluate the independence of each director as it relates to the determination of executive compensation.

The Exchange is also proposing to amend Rule 14.10(c)(4)(B) to add a title to and adjust the numbering of the Rule. The changes are being proposed in order to remain consistent with existing rule structure and to ensure that the rules are well-organized and easily understandable.

The Exchange is also proposing to delete existing Rule 14.10(c)(4)(C). As currently written, Rule 14.10(c)(4)(C) provides an exception to the independence standards under Rule 14.10(c)(4)(A) and (B) where the compensation committee is comprised of at least three members, permitting one director who is not independent and is not a current officer or employee or a family member of an officer or employee to be appointed to the compensation committee if the board determines that such individual’s membership is required by the best interest of the Company. However, no such exception exists under Rule 10C-1 and, after considering the factors relevant to compensation committee independence under Rule 10C-1, the Exchange believes that deletion of the exception under its rules would comply with Rule 10C-1.

Additionally, the Exchange is proposing to add Rule 14.10(c)(4)(C)(i) to permit the compensation committee of a Company, acting in its capacity as a committee of the Company’s board of directors and in its sole discretion, to retain or obtain the advice of a Compensation Consultant. The Company must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to a Compensation Consultant retained by the compensation committee. The Exchange believes that this proposed Rule 14.10(c)(4)(C)(i) would comply with Rule 10C-1 and, more specifically, Rule 10C-1(b)(2)(i) in that it would provide the compensation committee of the Company’s board of directors with the authority to retain or obtain the advice of a Compensation Consultant. Further, proposed Rule 14.10(c)(4)(C)(i) would require the Company to provide appropriate funding to the compensation committee for such Compensation Consultant, as required under Rule 10C-1(b)(3).

The Exchange is also proposing to amend Rule 14.10(c)(4)(C)(ii) to require Independent Directors of a Company that are acting in the capacity described in Rule 14.10(c)(4)(B), regardless of whether the Independent Directors are acting as a committee of the Company’s board of directors, that are selecting a Compensation Consultant to perform an independence assessment of the Compensation Consultant, as described below, prior to selecting the Compensation Consultant. An independence assessment is not required for the receipt of advice from in-house legal counsel. An independence assessment would include the consideration of the

³ The Commission notes that the filed Amendment No. 1 changed language in sections (ii), (iii), and (iv) of Rule 14.10(c)(4)(C) to clarify the responsibilities and obligations of Independent Directors responsible for determining executive compensation, as well as their rights and obligations regarding Compensation Consultants. In addition, the Commission notes that Amendment No. 1 made clarifying descriptive changes in the Purpose section of the filing regarding: Changes to the rule text; the factors for determining compensation committee independence; the elimination of existing exemptions for asset-backed issuers and cooperatives; the phase-in period for initial public offerings; and the exemption for Smaller Reporting Companies.

⁴ 15 U.S.C. 78f(b).

⁵ As defined in BATS Rule 14.1(a)(3).

⁶ See 17 CFR 240.10C-1(b)(1)(ii).

following factors: (i) The provision of other services to the Company by the person that employs the Compensation Consultant; (ii) the amount of fees received from the Company by the person that employs the Compensation Consultant, as a percentage of the total revenue of the person that employs the Compensation Consultant; (iii) the policies and procedures of the person that employs the Compensation Consultant that are designed to prevent conflicts of interest; (iv) any business or personal relationship of the Compensation Consultant with any of the Independent Directors acting in the capacity described in Rule 14.10(c)(4)(B); (v) any stock of the Company owned by the Compensation Consultant; and (vi) any business or personal relationship of the Compensation Consultant, legal counsel, other adviser, or the person employing the Compensation Consultant with an executive officer of the Company. As proposed, Rule 14.10(c)(4)(C)(ii) would not include any specific additional factors for consideration, as the Exchange believes that the list included in Rule 10C-1(b)(4) is very comprehensive.

The Exchange believes that proposed Rule 14.10(c)(4)(C)(ii) would comply with Rule 10C-1 and, more specifically, Rule 10C-1(b)(4) because the proposed rule would require the Independent Directors of a Company that are acting in the capacity described in Rule 14.10(c)(4)(B) to perform an independence assessment of the Compensation Consultant based on the factors required by Rule 10C-1(b)(4)(i)-(vi) before engaging such Compensation Consultant. Further, because proposed Rule 14.10(c)(4)(C)(ii) would adopt the standards exactly as provided in Rule 10C-1(b)(4), the Exchange believes that it would be in compliance with Rule 10C-1.

In addition, the Exchange is proposing to amend Rule 14.10(c)(4)(C)(iii) and (iv), also regarding Compensation Consultants. Specifically, the Exchange is proposing that Independent Directors of a Company that are acting in the capacity described in Rule 14.10(c)(4)(B): (i) shall be directly responsible for the appointment, compensation and oversight of the work of any retained Compensation Consultant; and (ii) shall not be required to implement or act consistently with the advice or recommendations of the retained Compensation Consultant, nor be restricted in their ability or obligation to exercise their own judgment in fulfilling their duties. The Exchange believes that proposed Rules 14.10(c)(4)(C)(iii) and

(iv) comply with Rule 10C-1 and, more specifically, Rule 10C-1(b)(ii) and (iii), [sic] in that the proposed rules mirror exactly the requirements of Rule 10C-1(b)(ii) and (iii) [sic] and, therefore, would bring the Exchange's listing rules in compliance with Rule 10C-1.

The Exchange is also proposing to add Rule 14.10(c)(4)(D), which provides a Company that fails to comply with the composition committee requirements under Rule 14.10(c)(4)(B) because a director ceases to be independent for reasons outside the director's reasonable control with a cure period during which the Company may allow that director to continue to act in the capacity described in Rule 14.10(c)(4)(B) until the earlier of its next annual shareholders meeting or one year from the occurrence of the event that caused the failure to comply with this requirement. A Company relying on this provision must provide notice to the Exchange immediately upon learning of the event or circumstances that caused the noncompliance. The Exchange believes that proposed Rule 14.10(c)(4)(D) would comply with Rule 10C-1(a)(3), which requires the Exchange to provide for appropriate procedures for a listed issuer to have a reasonable opportunity to cure any defects that would be the basis for a prohibition before the imposition of such prohibition. Rule 14.10(c)(4)(D) also describes a cure period that would be compliant with Rule 10C-1(a)(3), which the Exchange has proposed to adopt. For these reasons, the Exchange believes that proposed Rule 14.10(c)(4)(D) would comply with Rule 10C-1(a)(3).

The Exchange is also proposing to amend Rules 14.10(e)(1)(A) and (B) in order to eliminate exemptions to Rule 14.10(c)(4) for asset-backed issuers and other passive issuers (collectively, "Asset-backed Issuers") and cooperatives. The Exchange believes that these changes comply with Rule 10C-1 because Rule 10C-1 provides exemptions to independence requirements in certain circumstances as well as general exemptions in other circumstances, however, Rule 10C-1 does not provide any exemptions for Asset-backed Issuers or for cooperatives. Rule 10C-1 does provide the Exchange with some discretion to provide exemptions to the requirements of Rule 10C-1, however, the Exchange declines to propose exemptions for Asset-backed Issuers or cooperatives at this time. For these reasons, the Exchange believes that proposed Rules 14.10(e)(1)(A) and (B) comply with the requirements of Rule 10C-1. In conjunction with this change, the Exchange is also proposing to eliminate the existing exemptions

from the requirements of Rule 14.10(c)(4) for Asset-backed Issuers and cooperatives. The Exchange recognizes the importance of independence in the process of determining executive officer compensation. Additionally, under the proposed Rules, Companies will not be required in all cases to comply, initially and on a continued basis, with the independence requirements. For example, Companies listing in connection with their initial public offering will have a phase-in period before compliance with Rules 14.10(c)(4)(A) and (B) becomes necessary, and all Companies will be subject to a cure period should an event occur that causes noncompliance with the Rules. The Exchange does recognize that certain issuers, including Asset-backed Issuers and cooperatives, might have governance structures that make compliance with Rule 14.10(c)(4) difficult or impractical. However, due to the fact that the Exchange does not have any listed Asset-backed Issuers or cooperatives, the Exchange is proposing to remove the current exemption so that it can more fully review, as a whole, potential exemptions for Asset-backed Issuers and cooperatives. The Exchange will constantly evaluate the appropriateness of these exemptions as well as exemptions for all other categories of issuers and may propose to reinstitute these or other exemptions in the future.

The Exchange is also proposing to amend Rule 14.10(e)(1)(C) to require foreign private issuers to comply with the Compensation Consultants requirement of Rule 14.10(c)(4)(C). The Exchange is proposing the amendment in order to make clear that, while 10C-1(b)(iii)(4) [sic] exempts foreign private issuers from the independence requirements of 10C-1(b)(ii), [sic] which the proposed Rule 14.10(e)(1)(C) reflects, Rule 10C-1 does not exempt foreign private issuers from the Compensation Consultant requirements under Rule 10C-1(b)(4). As such, the Exchange is proposing to amend its Rules to continue to exempt foreign private issuers from the independence requirements of Rules 14.10(c)(4)(A) and (B), but to make clear that foreign private issuers are not exempt from the Compensation Consultant requirements of Rule 14.10(c)(4)(C). For these reasons, the Exchange believes that the proposed changes to Rule 14.10(e)(1)(C) comply with the requirements of Rule 10C-1.

The Exchange is also proposing to amend Rule 14.10(e)(1)(D)(ix) to require limited partnerships to comply with the Compensation Consultants requirement of Rule 14.10(c)(4)(C). The Exchange is proposing the amendment in order to

make its rules reflect that, while 10C–1(b)(iii)(1) [sic] exempts limited partnership from the independence requirements of 10C–1(b)(ii), [sic] which the proposed Rule 14.10(e)(1)(D) reflects, Rule 10C–1 does not exempt limited partnerships from the Compensation Consultant requirements under Rule 10C–1(b)(4). As such, the Exchange is proposing to amend its rules to continue to exempt limited partnerships from the independence requirements of Rules 14.10(c)(4)(A) and (B), but to make clear that limited partnerships are not exempt from the Compensation Consultant requirements of Rule 14.10(c)(4)(C). For these reasons, the Exchange believes that the proposed changes to Rule 14.10(e)(1)(D)(ix) comply with the requirements of Rule 10C–1.

The Exchange is also proposing to amend Rule 14.10(e)(1)(E) to make clear that not all managed investment companies are exempt from Rules 14.10(c)(4)(A) and (B), but rather, only open-end management investment companies registered under the Investment Company Act of 1940 are exempt from the requirements. The Exchange is making this proposal in order to make its rules reflect that, while Rule 10C–1(b)(iii)(3) [sic] exempts open-end management investment companies registered under the Investment Company Act of 1940 from the independence requirements of Rule 10C–1(b)(ii), [sic] this exemption does not apply to all management investment companies. In addition, Rule 10C–1 does not exempt open-end management investment companies from the Compensation Consultant requirements under Rule 10C–1(b)(4). As such, the Exchange is proposing to amend its rules to reflect that open-end management investment companies will not be exempt from the Compensation Consultant requirements under Rule 14.10(c)(4)(C). Because these changes have been made to make Rule 14.10(e)(1)(E) reflect the language of Rule 10C–1, the Exchange believes that the proposed changes comply with the requirements of Rule 10C–1.

The Exchange is also proposing to add Rule 14.10(e)(1)(F), which will provide that Companies in bankruptcy proceedings are exempt from the independence requirements of Rules 14.10(c)(4)(A) and (B). The Exchange is making this proposal in order to make its rules reflect that, while Rule 10C–1(b)(iii)(2) [sic] exempts Companies in bankruptcy proceedings from the independence requirements of 10C–1(b)(ii), Rule 10C–1 does not exempt Companies in bankruptcy proceedings from the Compensation Consultant

requirements under Rule 10C–1(b)(4). As such, the Exchange is proposing to amend its rules to exempt Companies in bankruptcy proceedings from the independence requirements of Rules 14.10(c)(4)(A) and (B), but to make clear that Companies in bankruptcy proceedings are not exempt from the Compensation Consultant requirements of Rule 14.10(c)(4)(C). Because these changes have been made to make Rule 14.10(e)(1)(F) reflect the requirements of Rule 10C–1, the Exchange believes that the proposed changes comply with the requirements of Rule 10C–1.

The Exchange is also proposing to add Rule 14.10(e)(1)(G), which will provide that smaller reporting companies, as defined in Rule 12b–2 under the Act (“Smaller Reporting Companies”), are exempt from all of the requirements of Rule 14.10(c)(4). The Exchange is making this proposal in order to make its rules reflect that Rule 10C–1(b)(5)(ii) exempts Smaller Reporting Companies from the entirety of Rule 10C–1(b), including the independence and Compensation Consultant requirements under Rule 10C–1. As such, the Exchange is proposing to amend its rules to exempt Smaller Reporting Companies from the independence requirements of Rules 14.10(c)(4)(A) and (B) as well as the Compensation Consultant requirements of Rule 14.10(c)(4)(C). Because these changes have been made to make Rule 14.10(e)(1)(G) reflect the requirements of Rule 10C–1, the Exchange believes that the proposed changes comply with the requirements of Rule 10C–1. In addition, this approach will minimize new costs imposed on Smaller Reporting Companies and allow them some flexibility not allowed for larger Companies.

The Exchange also proposes to amend Rule 14.10(e)(2)(A) to allow a Company listing in connection with its initial public offering to phase-in the independent committee requirements set forth in Rules 14.10(c)(4)(A) and (B) as follows: (1) One independent member at the time of listing; (2) a majority of independent members within 90 days of listing; and (3) all independent members within one year of listing. The Exchange believes that this amendment complies with Rule 10C–1 because it provides a Company with the opportunity to gradually meet the requirements of Rules 14.10(c)(4)(A) and (B) after becoming listed in connection with an initial public offering, rather than forcing a Company to meet independence requirements prior to its initial public offering. Since Companies listing in connection with an initial public offering may not have previously

had an independent compensation committee, the Exchange believes that allowing such Companies to phase in compliance with the independent compensation committee requirements will reasonably provide these Companies with a window identical to that of the Independent Director Oversight of Director Nominations under Rule 14.10(c)(5) and the independent audit committee requirement pursuant to Rule 10A–3(b)(1)(iv)(A) under the Act.⁷ As noted above, proposed Rule 14.10(e)(2)(A) would require that the Company have at least one independent member at the time of listing, meaning that even though it is described as a “phase-in period,” the Company would never actually be without at least one independent member.

The Exchange also proposes to add Rule 14.10(e)(2)(D) in order to permit a Company listed on the Exchange prior to the effective date of this proposal, commencing on June 1, 2013, to phase-in compliance with the Independent Director Oversight of Executive Officer Compensation requirements set forth in Rules 14.10(c)(4)(A) and (B) on the same schedule as Companies listing in conjunction with their initial public offering.

The Exchange also proposes to make a clarifying amendment to Rule 14.10(c)(1)(B), which defines an Independent Director, in order to indicate that there are additional factors involved in the determination of independence for directors acting in the capacity described in Rule 14.10(c)(4)(B). Lastly, the Exchange proposes to modify the numbering of Rule 14.10 in order to accommodate the amendments and additions proposed above.

2. Statutory Basis

Approval of the rule change proposed in this submission is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6(b) of the Act.⁸ The Exchange believes that proposed Rule 14.10 is consistent with Section 6(b)(5) of the Act,⁹ because it would promote just and equitable principles of trade, remove impediments to, and perfect the mechanism of, a free and open market and a national market system, and, in general, protect investors and the public interest. The Exchange is adopting proposed Rule

⁷ See 17 CFR 240.10A–3(b)(1)(iv)(A).

⁸ 15 U.S.C. 78f(b).

⁹ 15 U.S.C. 78f(b)(5).

14.10 to comply with the requirements of Section 952 of the Dodd-Frank Act, and therefore believes the proposed rule change to be consistent with the Act, particularly with respect to the protection of investors and the public interest.

The Exchange also believes that the proposal will contribute to investor protection and the public interest by requiring that only Independent Directors of an issuer oversee executive officer compensation matters, consider independence criteria before retaining compensation advisers, and have ultimate responsibility for the appointment, compensation, and oversight of these advisers. As discussed above, after considering the factors provided in Rule 10C-1(b)(1)(ii) and evaluating how the factors could impact the ability of a director to act independently in the determination of executive compensation, the Exchange believes that it can best comply with Rule 10C-1 by adopting in its Rules the factors set forth in Rule 10C-1(b)(1)(ii). The Exchange believes that this approach will best provide the board of directors of a Company with the requisite guidance and discretion to evaluate the independence of each director as it relates to the determination of executive compensation.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change imposes any burden on competition.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has neither solicited nor received written comments on the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission will: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-BATS-2012-039 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BATS-2012-039. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-BATS-2012-039, and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.¹⁰

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68007; File No. SR-NYSEMKT-2012-48]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing of Proposed Rule Change, as Modified by Amendment No. 1, Amending Sections 110, 801, 803 and 805 of the Exchange's Company Guide To Comply With the Requirements of Securities and Exchange Commission Rule 10C-1

October 9, 2012.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that on September 25, 2012, NYSE MKT LLC (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II and III below, which filing was amended and replaced in its entirety by Amendment No. 1 thereto on October 1, 2012, and which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend Sections 110, 801, 803 and 805 of the Exchange's Company Guide (the "Company Guide") to comply with the requirements of Securities and Exchange Commission ("Commission" or "SEC") Rule 10C-1.⁴ The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

¹⁰ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

⁴ 17 CFR 240.10C-1.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

This Amendment No. 1 to SR-NYSEMKT-2012-48 (the "filing") replaces the original Filing submitted on September 25, 2012 in its entirety. Amendment No. 1 corrects a single error in the rule text in Exhibit 5 as originally filed. The error was in Section 805(c)(5) under the heading "Transition Period."

NYSE MKT proposes to amend Sections 110, 801, 803 and 805 of the Company Guide to comply with the requirements of SEC Rule 10C-1.

The proposed changes to Sections 110, 801, 803 and 805 will become operative on July 1, 2013. Consequently, the existing text of these sections will remain in the Company Guide until June 30, 2013 and will be removed immediately thereafter.⁵ Upon approval of this filing, the amended provisions of those sections will be included in the Company Guide with introductory text indicating that the revised text does not become operative until July 1, 2013.

Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act")⁶ added Section 10C to the Securities Exchange Act of 1934.⁷ Section 10C requires the Commission to adopt rules directing the national securities exchanges and national securities associations to prohibit the listing of any equity security of an issuer that is not in compliance with Section 10C's compensation committee and compensation adviser requirements. On June 20, 2012, to comply with the requirements of Section 10C, the Commission adopted new Rule 10C-1, which directs the national securities

exchanges to adopt listing rules effectuating the compensation committee and compensation adviser requirements of Section 10C.

Rule 10C-1 does not by its terms require a national securities exchange to mandate that listed companies must have a compensation committee. However, in the absence of a compensation committee, most of the provisions of Rule 10C-1 applicable to compensation committees are applicable to "the members of the board of directors who oversee executive compensation matters on behalf of the board of directors."⁸ NYSE MKT's listing standard with respect to executive compensation, Section 805 of the Company Guide, provides that the compensation of the chief executive officer of a listed company must be determined, or recommended to the board for determination, either by a compensation committee comprised of independent directors or by a majority of the independent directors on the company's board of directors. Consequently, if a listed company does not have a compensation committee, the Exchange's proposed amendments to its rules pursuant to Rule 10C-1 would apply to the independent directors of the listed company individually and as a group, as applicable. The Exchange proposes to amend Section 805(a) to provide that all references to a listed company's compensation committee in Section 805 will, in the case of a listed company that does not have a compensation committee, be applicable to the listed company's independent directors as a group, and the same approach is utilized in this filing.

Compensation Committee Director Independence Requirement

In adopting independence requirements for compensation committee members, 10C-1(b)(1)(ii)⁹ requires the exchanges to consider relevant factors including, but not limited to: (i) The source of the director's compensation, including any consulting, advisory or other compensatory fees paid by the listed company; and (ii) whether the director has an affiliate relationship with the company, a subsidiary of the company or an affiliate of a subsidiary of the company. Rule 10C-1(a)(4)¹⁰ requires that the rule filing submitted to the SEC by each exchange in connection with the adoption of the rules required by Rule 10C-1 must include a review of

whether and how the proposed listing standards satisfy the requirements of the final rule; a discussion of the exchange's consideration of factors relevant to compensation committee independence; and the definition of independence applicable to compensation committee members that the exchange proposes to adopt or retain in light of such review.

The Exchange's director independence standards are set forth in Section 803(A)(2). That section provides that no director qualifies as independent unless the issuer's board of directors affirmatively determines that the director does not have a relationship that would interfere with the exercise of independent judgment in carrying out the responsibilities of a director. In addition, Section 803(A)(2) provides that a director may not be deemed to be independent if such director has a relationship with the listed company which violates any one of five "bright line" tests.¹¹

The provisions of Section 803(A)(2) will continue to be applicable to

¹¹ The following are the "bright line" tests set forth in Section 803(A)(2): (a) The director is, or during the past three years was, employed by the company, other than prior employment as an interim executive officer (provided the interim employment did not last longer than one year); (b) The director accepted or has an immediate family member who accepted any compensation from the company in excess of \$120,000 during any period of twelve consecutive months within the three years preceding the determination of independence, other than the following: (i) Compensation for board or board committee service; or, (ii) compensation paid to an immediate family member who is an employee (other than an executive officer) of the company; or, (iii) compensation received for former service as an interim executive officer (provided the interim employment did not last longer than one year); or, (iv) benefits under a tax-qualified retirement plan, or non-discretionary compensation; (c) The director is an immediate family member of an individual who is, or at any time during the past three years was, employed by the company as an executive officer; (d) The director is, or has an immediate family member who is, a partner in, or a controlling shareholder or an executive officer of, any organization to which the company made, or from which the company received, payments (other than those arising solely from investments in the company's securities or payments under non-discretionary charitable contribution matching programs) that exceed 5% of the organization's consolidated gross revenues for that year, or \$200,000, whichever is more, in any of the most recent three fiscal years; (e) The director is, or has an immediate family member who is, employed as an executive officer of another entity where at any time during the most recent three fiscal years any of the issuer's executive officers serve on the compensation committee of such other entity; or (f) The director is, or has an immediate family member who is, a current partner of the company's outside auditor, or was a partner or employee of the company's outside auditor who worked on the company's audit at any time during any of the past three years. In lieu of Section 803A(2)(a) through (f), a director of a business development company is considered to be independent if he or she is not an "interested person" of the company, as defined in Section 2(a)(19) of the Investment Company Act of 1940.

⁵ The Commission notes that the Exchange will have to comply with Section 19(b) of the Act.

⁶ Pub. L. No. 111-203, 124 Stat. 1900 (2010).

⁷ 15 U.S.C. 78j-3.

⁸ See the definition of the term "compensation committee" in Rule 10C-1(c)(2)(iii).

¹⁰ 17 CFR 240.10C-1(a)(4).

independence determinations in relation to compensation committee service, as compensation committee members will be required to be independent under the Exchange's general board independence standards set forth in Section 803(A)(2), in addition to the independence requirements proposed specifically for compensation committee service.

The Exchange proposes to amend Section 803(A)(2) of the Company Guide to require that, in affirmatively determining the independence of any director who will serve on the compensation committee of the listed company's board of directors, or, in the case of a company that does not have a compensation committee, in affirmatively determining the independence of all independent directors, the board of directors must consider all factors specifically relevant to determining whether a director has a relationship to the listed company which is material to that director's ability to be independent from management, in connection with the duties of a compensation committee member including, but not limited to, the two factors that are explicitly enumerated in Rule 10C-1(b)(ii) that are set forth in proposed Section 805(c)(1). When considering the sources of a director's compensation in determining his independence for purposes of compensation committee service, proposed new commentary .03 to Section 805 provides that the board should consider whether the director receives compensation from any person or entity that would impair his ability to make independent judgments about the listed company's executive compensation. Similarly, when considering any affiliate relationship a director has with the company, a subsidiary of the company, or an affiliate of a subsidiary of the company, in determining his independence for purposes of compensation committee service, the proposed commentary provides that the board should consider whether the affiliate relationship places the director under the direct or indirect control of the listed company or its senior management, or creates a direct relationship between the director and members of senior management, in each case of a nature that would impair his ability to make independent judgments about the listed company's executive compensation.

The Exchange does not propose to adopt any specific numerical tests with respect to the factors specified in proposed Section 805(c)(1) or to adopt a requirement to consider any other specific factors. In particular, the

Exchange does not intend to adopt an absolute prohibition on a board making an affirmative finding that a director is independent solely on the basis that the director or any of the director's affiliates are shareholders owning more than some specified percentage of the listed company. In the adopting release for Rule 10C-1 (the "Adopting Release"),¹² the SEC recognized that the exchanges might determine that not all affiliate relationships would adversely affect a director's ability to be independent from management.¹³ Consistent with the views of commenters on the SEC's rules as originally proposed, the Exchange believes that—rather than adversely affecting a director's ability to be independent from management as a compensation committee member—share ownership in the listed company aligns the director's interests with those of unaffiliated shareholders, as their stock ownership gives them the same economic interest in ensuring that the listed company's executive compensation is not excessive.

The Exchange believes that its existing "bright line" independence standards as set forth in Section 803(A)(2) of the Company Guide are sufficiently broad to encompass the types of relationships which would generally be material to a director's independence for compensation committee service. In addition, Section 803(A)(2) already requires the board to consider any relationship that would interfere with the director's exercise of independent judgment in carrying out the responsibilities of a director. The Exchange believes that these requirements with respect to general director independence, when combined with the specific considerations required by proposed Section 805(c)(1), represent an appropriate standard for compensation committee independence that is consistent with the requirements of Rule 10C-1.

Compensation Committee Advisers

Rule 10C-1(b)(2)¹⁴ requires exchange rules to mandate that compensation committees must have broad authority to engage advisers to assist in their performance of the committee's functions. Specifically, exchange rules must mandate that:

(a) The compensation committee may, in its sole discretion, retain or obtain the advice of a compensation consultant, independent legal counsel or other adviser; and

(b) The compensation committee shall be directly responsible for the appointment, compensation and oversight of the work of any compensation consultant, independent legal counsel and other adviser retained by the compensation committee.

Rule 10C-1(b)(3)¹⁵ requires exchange rules to mandate that the listed company must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to a compensation consultant, independent legal counsel or any other adviser retained by the compensation committee.

The Exchange proposes to adopt the requirements specified in Rule 10C-1(b)(2) and (3) verbatim as new subsection (c)(3) to Section 805.

Compensation Adviser Independence Factors

Rule 10C-1(b)(4)¹⁶ provides that the compensation committee of a listed issuer may select a compensation consultant, legal counsel or other adviser to the compensation committee only after taking into consideration the following factors, as well as any other factors identified by the relevant national securities exchange or national securities association in its listing standards:

(i) The provision of other services to the listed company by the person that employs the compensation consultant, legal counsel or other adviser;

(ii) The amount of fees received from the listed company by the person that employs the compensation consultant, legal counsel or other adviser, as a percentage of the total revenue of the person that employs the compensation consultant, legal counsel or other adviser;

(iii) The policies and procedures of the person that employs the compensation consultant, legal counsel or other adviser that are designed to prevent conflicts of interest;

(iv) Any business or personal relationship of the compensation consultant, legal counsel or other adviser with a member of the compensation committee;

(v) Any stock of the listed company owned by the compensation consultant, legal counsel or other adviser; and

(vi) Any business or personal relationship of the compensation consultant, legal counsel, other adviser or the person employing the adviser with an executive officer of the listed company.

¹² Release Nos. 33-9330; 34-67220 (June 20, 2012); 77 FR 38422 (June 27, 2012).

¹³ See Adopting Release at 38428.

¹⁴ 17 CFR 240.10C-1(b)(2).

¹⁵ 17 CFR 240.10C-1(b)(3).

¹⁶ 17 CFR 240.10C-1(b)(4).

Accordingly, the Exchange proposes to add as new subsection (c)(4) to Section 805 a provision specifying that, before engaging an adviser, the compensation committee must consider the factors enumerated above. As proposed, Section 805(c)(4) would not include any additional factors for consideration, as the Exchange believes that the list included in Rule 10C-1(b)(4) is very comprehensive and the proposed listing standard would also require the compensation committee to consider any other factors that would be relevant to the adviser's independence from management.

Consistent with Rule 10C-1(b)(2)(iii),¹⁷ the Exchange proposes to include as new Commentary .04 to Rule 805 an explicit statement that nothing in Section 805(c) shall be construed: (A) to require the Compensation Committee to implement or act consistently with the advice or recommendations of the compensation consultant, independent legal counsel or other adviser to the compensation committee; or (B) to affect the ability or obligation of the Compensation Committee to exercise its own judgment in fulfillment of the duties of the Compensation Committee (or, if applicable, the independent directors). In addition, as provided by Rule 10C-1(b)(4), proposed new Commentary .05 to Section 805 would specify that the compensation committee need not engage in an analysis of the independence factors before consulting with or obtaining advice from in-house legal counsel.

Cure Periods

Rule 10C-1(a)(3)¹⁸ requires that exchange rules must include appropriate procedures for a listed issuer to have a reasonable opportunity to cure any non-compliance with the provisions of exchange rules adopted as required by Rule 10C-1. In addition, Rule 10C-1(a)(3) states that such rules may provide that if a member of a compensation committee ceases to be independent in accordance with the requirements of Rule 10C-1 for reasons outside the member's reasonable control, that person, with notice by the issuer to the exchange, may remain a compensation committee member of the listed issuer until the earlier of the next annual meeting or one year from the occurrence of the event that caused the member to be no longer independent. The Exchange proposes to adopt, as new Rule 805(c)(2), this cure provision period for events of non-compliance with the proposed compensation

committee independence requirements that are outside of the director's reasonable control.¹⁹ However, the Exchange proposes to modify this cure provision by limiting its use to circumstances where the committee continues to have a majority of independent directors, as this would ensure that the applicable committee could not take any action without the agreement of one or more independent directors. The Exchange believes that this requirement addresses any actual or apparent conflict of interest which may arise due to the continued service of a non-independent director on the compensation committee.

Transition Periods

The Adopting Release contemplates that exchanges may provide transition periods through the exemptive authority provided to the exchanges under Rule 10C-1(b)(1)(iii).²⁰ Consistent with the transition periods approved by the SEC for inclusion in the Exchange's current corporate governance requirements at the time of their original adoption,²¹ the Exchange proposes to adopt new Section 805(c)(5), under which listed companies would have until the earlier of their first annual meeting after January 15, 2014, or October 31, 2014, to comply with the new Section 805(c)(1) compensation committee independence standards. Existing compensation committee independence standards would continue to apply pending the transition to the new independence standards. The Exchange believes that its prior use of a similar transition period was satisfactory and that it is reasonable to follow the same approach in connection with the proposed changes to the compensation committee independence standards. In addition, the Exchange proposes to continue to apply to the proposed new compensation committee requirements the existing transition periods available to newly-listed companies under Section 809(a) of the Company Guide.²²

¹⁹ See proposed Section 803(c)(3).

²⁰ See Adopting Release at 38444.

²¹ See Securities Exchange Act Release No. 48863 (December 1, 2003), 68 FR 68432 (December 8, 2003) (SR-Amex-2003-65).

²² Section 809(a) affords companies that have listed in conjunction with their initial public offering exemptions from all board composition requirements consistent with the exemptions afforded in Exchange Act Rule 10A-3. That is, for each applicable committee that the company establishes (i.e., nominating and/or compensation) the company must have one independent member at the time of listing, a majority of independent members within 90 days of listing and all independent members within one year.

The Exchange proposes to exempt smaller reporting companies²³ from compliance with the proposed new independence requirements with respect to compensation committee service. Under SEC Rule 12b-2, a smaller reporting company is required to test whether it continues to qualify for that status as of the last business day of its second quarter of each fiscal year (the "Smaller Reporting Company Determination Date") and ceases as of the first day of the next fiscal year to be able to avail itself of the benefits under SEC rules applicable to smaller reporting companies. Consequently, the Exchange proposes to include in proposed Section 805(c)(5) a transition provision applicable to companies that cease to be smaller reporting companies and become subject to the compensation committee independence requirements of proposed Section 805(c)(1).²⁴ As proposed, a company that ceases to be a smaller reporting company would be required, if applicable, to (I) have a committee composed entirely of members that meet the independence requirements of proposed Section 805(c) within six months of the Smaller Reporting Company Determination Date and (II) have a compensation committee as of the Smaller Reporting Company Determination Date that complies with the requirements of proposed Section 805(c)(4) with respect to compensation consultant independence considerations.

General Exemptions

Rule 10C-1(b)(5)²⁵ provides an automatic exemption from the application of the entirety of Rule 10C-1 for controlled companies and smaller reporting companies,²⁶ and Rule 10C-1(b)(1)(iii)(A)²⁷ provides an automatic

²³ As defined in SEC Rule 12b-2 and Item 10(f) of Regulation S-K.

²⁴ A company that is otherwise exempt from the requirement to have an independent compensation committee when it ceases to be a smaller reporting company would not, of course, be subject to a transition period. See discussion *infra*.

²⁵ 17 CFR 240.10C-1(b)(5).

²⁶ The Exchange proposes to amend subsection (h) of Section 801 to include a statement that smaller reporting companies are required to comply with Section 805(c), with the exception of the compensation committee independence requirements of [sic] Section 803(c)(1) [sic] and the requirements of proposed Section 805(c)(4) with respect to compensation consultant independence considerations. The same statement will be included in proposed Commentary .01 to Section 805. In addition, the Exchange proposes to amend Section 805(b) to clarify that henceforth only smaller reporting companies will be eligible to avail themselves of the ability of the board under exceptional and limited circumstances to appoint a non-independent director to the compensation committee.

²⁷ 17 CFR 240.10C-1(b)(1)(iii)(A).

¹⁷ 17 CFR 240.10C-1(b)(2)(iii).

¹⁸ 17 CFR 240.10C-1(a)(3).

exemption from the compensation committee independence requirements for limited partnerships, companies in bankruptcy, open-end management investment companies registered under the Investment Company Act of 1940 ("1940 Act"). Rule 10C-1(b)(1)(iii)(A) also exempts from the compensation committee independence requirements any foreign private issuer that discloses in its annual report filed with the SEC the reasons that the foreign private issuer does not have an independent compensation committee.

Pursuant to the general exemptive authority granted in Rule 10C-1(b)(5)(i), the Exchange proposes to exempt from all of the proposed requirements each category of issuers that qualifies for a general or specific exemption under Rule 10C-1(b)(1)(iii)(A). The Exchange also proposes to provide a general exemption from all of the requirements to all of the other categories of issuers that are currently exempt from the Exchange's existing compensation committee requirements. Thus, as proposed, controlled companies, limited partnerships, companies in bankruptcy, and open-end and closed-end funds that are registered under the 1940 Act, asset-backed issuers and other passive business organizations (such as royalty trusts) or derivatives and special purpose securities listed pursuant to Exchange Rules 1000, and 1200 and Sections 106, 107 and 118B would be exempt from both the new compensation committee independence requirements and the new compensation adviser requirements. The Exchange notes that these categories of issuers typically: (i) Are externally managed and do not directly employ executives (e.g., limited partnerships that are managed by their general partner or closed-end funds managed by an external investment adviser); (ii) do not by their nature have employees (e.g., passive business organizations (such as royalty trusts)); or (iii) have executive compensation policy set by a body other than the board (e.g., bankrupt companies have their executive compensation determined by the bankruptcy court). In light of these structural reasons why these categories of issuers generally do not have compensation committees, the Exchange believes that it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements and that it is appropriate to grant them an exemption.

Foreign private issuers²⁸ are currently permitted by Section 110 to apply for an exemption from the Exchange's compensation committee requirements. The Exchange proposes to follow this approach by granting a general exemption, pursuant to the discretion granted to the Exchange by Rule 10C-1(b)(5)(i),²⁹ from the proposed new compensation committee requirements to foreign private issuers that seek an exemption on the basis that they follow home country practice. The Exchange notes that Section 110 provides that foreign based entities availing themselves of exemptions from compliance with Exchange rules must provide English language disclosure of any significant ways in which their corporate governance practices differ from those followed by domestic companies pursuant to the Exchange's standards. Section 110 currently provides that this disclosure may be provided on the company's Web site and/or in its annual report as distributed to shareholders in the U.S. As the Exchange no longer requires companies to distribute annual reports, except for its requirements in Section 610 with respect to the Web site posting and distribution of annual reports filed with the SEC, the Exchange proposes to modify this provision to provide that a company must either include this disclosure on its web site or in the annual report it is required to file with the SEC that includes audited financial statements (including on Forms 10-K, 20-F, or 40-F) While Section 110 does not require a statement as to why a company does not comply with an applicable requirement in the manner provided by Rule 10C-1(b)(1)(iii)(A), the Exchange does not believe that this is a significant difference, as the explanation companies would likely provide for not having an independent compensation committee would simply be that they were not required to do so by home country law.

The Exchange currently does not require issuers whose only listed security is a preferred stock to comply with Section 805. The Exchange proposes to grant these issuers a general exemption from compliance with the proposed amended rule. The Exchange believes this approach is appropriate because holders of listed preferred stock have significantly greater protections with respect to their rights to receive dividends and a liquidation preference upon dissolution of the issuer, and

²⁸ The term "foreign private issuer" used in Section 110 is defined in Exchange Act Rule 3b-4(c).

²⁹ 17 CFR 240.10C-1(b)(5)(i).

preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1.

2. Statutory Basis

The Exchange believes that the proposed rule change in relation to the Exchange's compensation committee requirements and the proposed compensation consultant independence requirements are consistent with Section 10C of the Exchange Act and Rule 10C-1 thereunder in that they comply with the requirements of Rule 10C-1 with respect to the adoption by national securities exchanges of compensation committee listing standards. The Exchange believes that the proposed rule change is consistent with Section 6(b)³⁰ of the Exchange Act in general, and furthers the objectives of Section 6(b)(5) of the Exchange Act,³¹ in particular in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that the proposed amendments to its compensation committee listing standards are consistent with the protection of investors and the public interest in that they strengthen the independence requirements for compensation committee membership, provide additional authority to compensation committees and require compensation committees to consider the independence of compensation consultants.

The Exchange believes that the general exemptions from the proposed requirements that it is granting to foreign private issuers that request an exemption based on home country practice and smaller reporting companies are consistent with Section 10C and Rule 10C-1, for the reasons stated above in the "Purpose" section, including because (i) Rule 10C-1(b)(5)(ii) explicitly exempts smaller reporting companies and (ii) foreign private issuers will comply with their home country law and, if they avail themselves of the exemption, will be required to disclose that fact under

³⁰ 15 U.S.C. 78f(b).

³¹ 15 U.S.C. 78f(b)(5).

existing Exchange listing requirements. The Exchange believes it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules to issuers whose only listed class of equity securities on the Exchange is a preferred stock, as holders of listed preferred stock have significantly greater protections with respect to their rights to receive dividends and a liquidation preference upon dissolution of the issuer, and preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1. The Exchange believes that it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules for all of the other categories of issuers that are not currently subject to the Exchange's compensation committee requirement, for the structural reasons discussed in the "Purpose" section and because it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited written comments on the proposed rule change. The Exchange has received two comment letters on the proposed rule change.³² One commenter made the following points: (i) The Exchange should specify that the relevant factors for consideration with respect to compensation committee independence should include a consideration of fees received for service on the board itself; (ii) the relevant factors should explicitly

include consideration of the personal and business relationships between directors and officers; (iii) the additional factors to be considered for compensation committee independence should be considered as a part of general board independence determinations; and (iv) the listing standards should specify that, while the factors must be considered in their totality, a single factor can result in the loss of board independence.

The Exchange does not believe that it is appropriate to consider board compensation as part of the compensation committee independence determination with respect to individual directors. Non-executive directors devote considerable time to the affairs of the companies on whose boards they sit and eligible candidates would be difficult to find if board and committee service were unpaid in nature. Consequently, independent directors of listed companies are almost invariably paid for their board and committee service. As all independent directors are almost certainly going to receive board compensation from the company and do so on terms determined by the board as a whole, the Exchange does not believe that an analysis of the board compensation of individual directors is a meaningful consideration in determining their independence for purposes of compensation committee service.

The Exchange interprets its existing director independence requirements as requiring the board to consider relationships between the director and any member of management in making its affirmative independence determinations. Consequently, the Exchange does not believe that any further clarification of this requirement is necessary.

The Exchange does not believe that it is necessary to explicitly require that the additional independence considerations for compensation committee service should be a part of the board's general independence determinations for all independent directors. Section 803(A) provides that, in making its affirmative determination with respect to a director's independence, the board must satisfy itself that the director "does not have a relationship that would interfere with the exercise of independent judgment in carrying out the responsibilities of a director." As such, the Exchange believes that, where appropriate, listed company boards should already be including in their general independence determinations factors including those being added to the compensation committee independence determination.

The Exchange does not believe it is necessary to include in the listing standards a statement that a single factor may be sufficiently material to render a director non-independent, as this is clearly the intention of the listing standards as drafted. Section 803(A) in its current form and in its proposed amended form requires the board to consider the materiality of each separate relationship between the director and the listed company or its management.

The second commenter proposed that the Exchange should require companies to make a public disclosure with respect to the factors considered by the compensation committee in reviewing the independence of compensation consultants, legal counsel and other compensation advisers. This commenter also proposed that the Exchange should require with respect to outside counsel hired by the compensation committee the same disclosure as is required by Item 407(e)(3)(iv) of Regulation S-K with respect to the nature of any conflict that arises from the engagement of a compensation consultant identified in the proxy statement. The Exchange does not believe that it is necessary to establish additional disclosure requirements of this nature. Item 407 of Regulation S-K contains extensive disclosure requirements with respect to a listed company's corporate governance. Moreover, with respect to disclosure of any conflicts of interest that may arise with respect to outside counsel hired by the compensation committee, the Exchange believes that the rigorous conflict of interest requirements applicable to attorneys adequately address such concerns. And the Exchange is mindful that requiring additional public disclosures regarding outside counsel could require a listed company to disclose information that otherwise may be protected by attorney-client privilege.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

³² Both of these letters were addressed to NYSE Regulation, Inc. Neither author indicated that the comments related to just one of the three national securities exchanges owned by NYSE Euronext. Therefore, the Exchange is addressing those comments to the extent they are applicable to its existing rules and the proposed amendments.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEMKT-2012-48 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEMKT-2012-48. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office and the Internet Web site of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEMKT-2012-48, and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³³

Kevin M. O'Neill,

Deputy Secretary.

BILLING CODE 8011-01-P

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68004; File No. SR-NYSEMKT-2012-49]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change To Establish Fees for Certain Proprietary Options Market Data Products

October 9, 2012.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that, on September 26, 2012, NYSE MKT LLC (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II, and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to establish fees for certain proprietary options market data products. The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below,

of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange proposes to establish fees for certain proprietary options market data products. The products covered by the fees are ArcaBook for Amex Options—Trades, ArcaBook for Amex Options—Top of Book, ArcaBook for Amex Options—Depth of Book, ArcaBook for Amex Options—Complex, ArcaBook for Amex Options—Series Status, and ArcaBook for Amex Options—Order Imbalance (collectively, the "Amex Options Products").⁴ The fees set forth below, which will be implemented on October 1, 2012, are for all six of the Amex Options Products collectively; at this time, the Exchange is not establishing separate pricing for each of the individual products.

Access and Redistribution Fees

The Exchange proposes to charge an Access Fee of \$3,000 per month and a Redistribution Fee of \$2,000 per month.

Professional End-User⁵ Fee

For the receipt and use of the Amex Options Products, the Exchange proposes to charge Professional End-Users \$50 per month for each "User per Source."⁶ A "Source" is a Professional End-User-controlled source of data from a Redistributor,⁷ such as a data feed; in this case, it is the Amex Options Products. Professional End-Users must receive approval to report User per Source by way of a license with the

⁴ See Securities Exchange Act Release No. 67719 (Aug. 23, 2012); 77 FR 52767 (Aug. 30, 2012) (SR-NYSEMKT-2012-40).

⁵ A Professional End-User is a person or entity that receives market data from the Exchange or a Redistributor and uses that market data solely for its own internal purposes. A Professional End-User is not permitted to redistribute that market data to any person or entity outside of its organization.

⁶ The Exchange notes that the User per Source reporting policy differs from the unit-of-count policy used for other Exchange market data products, such as NYSE MKT Trades and NYSE MKT BBO. See Securities Exchange Act Release No. 62187 (May 27, 2010), 75 FR 31500 (June 3, 2010) (SR-NYSEAmex-2010-35). Because the Amex Options Products are new and the Exchange has not charged for them before, the Exchange has determined to utilize an updated methodology that it believes may be easier for it and its customers to administer. Based on its experience with these products, the Exchange will consider adopting User per Source reporting for other market data products in the future.

⁷ A Redistributor is any entity that makes market data available to any person other than the Redistributor and its employees, directors, officers and partners, irrespective of the means of transmission or access.

³³ 17 CFR 200.30-3(a)(12).

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

Exchange; without such approval, the Professional End-User must report each access identifier ("Access ID"). An Access ID is a unique identifier that a Professional End-User has assigned to a natural person, application, or device (each, a "User"),⁸ which identifier the Professional End-User's Entitlement System uses to administer technical controls over access to market data.⁹

Controlled Access

The unit-of-count for Redistributors of controlled accesses to market data, such as display devices and single-use application program interfaces ("APIs"), is each Access ID. Redistributors must ensure, by way of their agreements with clients, that Access IDs are not shared among Users. If a Professional End-User cannot or does not disclose in advance its restrictions relating to Access ID sharing, thereby enabling simultaneous access by multiple Users, the maximum number of potential accesses (i.e., the greatest number of natural persons, applications, and devices that can access the market data) will be chargeable.

Reporting Internal Use

Professional End-Users approved for User per Source reporting may report the total number of natural persons per each Source rather than the number of Access IDs per Source. For example, if a natural person has two Access IDs receiving data from a single Redistributor's data feed, the Professional End-User may report a count of one. If a natural person has one Access ID receiving data from two Redistributors' data feeds, however, the Professional End-User must report a

⁸ An Access ID may be a User name, but is not limited to a User name. For example, it could be a host name, Internet protocol ("IP") address, or a MAC/network address. A User may have more than one Access ID assigned to control access to market data. Sharing of passwords and/or Access IDs among Users is prohibited, as is simultaneous access by multiple Users using the same Access ID. Simultaneous access by an individual User is allowed if the Professional End-User discloses in advance the technical and/or process controls that prohibit the sharing of Access IDs or other means of accessing data.

⁹ The Exchange considers any mechanism that controls access to market data to constitute an Entitlement System. Examples of an Entitlement System include a system that a Redistributor provides for permissioning Users to receive and use market data, a dedicated system that a Professional End-User develops internally, a server-based market data application that controls access to a limited group of authorized Users, and a closed network in which physical access to the network determines a User's ability to access market data. Each Professional End-User must use an Entitlement System to control all data distribution. Each Entitlement System should control or track simultaneous access, generate authentic entitlement reports, control Access IDs and passwords, and maintain an audit trail.

count of two. Likewise, if a natural person has two Access IDs receiving data feeds from two separate Redistributors, the Professional End-User must report a count of two.

In order to report User per Source, the Professional End-User must identify the User associated with each Access ID. Possible methods to identify the User include using human resources or other corporate identifiers associated with a User in an inventory system. Where an Access ID cannot be associated to a natural person User, the Professional End-User must treat that Access ID as a User per Source.

This aspect of User per Source reporting applies only to a Professional End-User's controlled internal distribution of data, and does not apply to Redistributor-controlled access as described above; therefore, a Professional End-User may not net internal Users against Access IDs for a Redistributor's controlled access, such as a device or API, as described in the preceding section.

Application Usage

Some internal distribution networks feature downstream applications that control access to market data without using a centralized Entitlement System. The Access IDs of each such application must be reported, and Professional End-Users must ensure that audit trails are maintained. Professional End-Users that have been approved for User per Source reporting may report each of the Users of the application and not the Access IDs of these systems; however, Professional End-Users must ensure that all Users are reported across all Entitlement Systems and applications. For example, a User that has an Access ID from an Entitlement System and an Access ID from a downstream application each receiving data from a single Redistributor source would be reported once.

Counting Users in Closed Networks

In a Closed Network, a Professional End-User has an environment whereby market data is published on an intranet or subnet with no other access control such as an Entitlement System. In environments such as this, all assigned IP addresses on the network range are considered a User per Source and are therefore reportable. In the case of a closed network in which physical access to the network determines a User's ability to access market data, the Professional End-User must report any device that has physical access to the network as a separate User per Source.

In closed networks that employ virtual devices, the Professional End-

User must report all physical and virtual devices. For example, if a server provides five different market data products through five different IP addresses, each of which is capable of accessing market data, the Professional End-User must report all five IP addresses for each of the five products. That is, the Professional End-User must report virtual devices (in the form of IP addresses) as well as physical devices, and not just the physical server.¹⁰

Audit Trails

In order to remove an Access ID from the reporting and fee obligations for the Amex Options Products, the Professional End-User must disable the ability of the Access ID to receive such data entirely. The Professional End-User must maintain an audit trail to evidence the disabling of an Access ID for any period. In the absence of an adequate audit trail, all Access IDs that connect to the server remain fee liable. If the Professional End-User cannot limit or track the number of Access IDs, it must report all Access IDs.

Same User Name for Multiple Uses

Frequently, Users are assigned the same User name to log into multiple services and applications that do not share a common Entitlement System. For example, a natural person might elect to use the same User name to gain access to Redistributor A's services as it uses to gain access to Redistributor B's services. Or, he or she may use the same User name to access Redistributor A's Service X as he or she uses to gain access to Redistributor A's Service Y. Or, he or she may use the same User name to access Application A with Redistributor A's data as he or she may use to access Application B with Redistributor A's data. Despite the use of the same User name for multiple purposes, each use of a User name by a separate Entitlement System must be treated as a separate Access ID.

Simultaneous Access and Contention-Based Entitlement Systems

Simultaneous Access is the capability of a single Access ID to be used concurrently on two or more devices identified on a network by their host name, IP address, or other system-level identifier for network access. Entitlement Systems must control and track the number of simultaneous accesses by a single Access ID.

¹⁰ If a physical or virtual device (including an IP address) is capable of receiving a market data product, the Professional End-User must report the device regardless of whether a User uses the device to gain access to the market data product.

Contention-Based Entitlement Systems are not consistent with User per Source reporting. Those are systems for which a limited number of “tokens” or “accesses” that control the number of simultaneous Users are shared among Users. As is the case if a Professional End-User cannot or does not disclose in advance its restrictions relating to Access ID sharing, thereby enabling simultaneous access by multiple Users, the maximum number of potential accesses (i.e., the greatest number of natural persons, applications, and devices that can access the market data) will be chargeable.

Nonprofessional End-User Fees

The Exchange proposes to charge each Redistributor \$1.00 per month for each Nonprofessional End-User to whom it provides Amex Options Products. The Exchange proposes to impose the charge on the Redistributor, rather than on the Nonprofessional End-User. In addition, the Exchange proposes to cap the Nonprofessional End-User Fee at \$5,000 per month for each Redistributor. The Exchange proposes to apply the same criteria for qualification as a Non-Professional End-User as it does for non-professional subscribers to its other products.¹¹

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Securities Exchange Act of 1934 (the “Act”)¹² in general and with Section 6(b)(4) and 6(b)(5) of the Act¹³ in particular in that it provides an equitable allocation of reasonable fees among users and recipients of the data and is not designed to permit unfair discrimination among customers, issuers, and brokers. The proposed Amex Options Products fees are reasonable, equitable, and not unfairly

¹¹ The Exchange defines a nonprofessional subscriber as a natural person who receives market data solely for his or her personal, non-business use and who is not a “Securities Professional,” meaning that the person is not (1) registered or qualified with the Commission, the Commodities Futures Trading Commission, any state securities agency, any securities exchange or association, or any commodities or futures contract market or association; (2) engaged as an “investment adviser” as that term is defined in Section 202(a)(11) of the Investment Advisors Act of 1940 (whether or not registered or qualified under that statute); or (3) employed by a bank or other organization that is exempt from registration under federal and/or state securities laws to perform functions that would require him or her to be so registered or qualified if he or she were to perform such function for an organization not so exempt. The nonprofessional subscriber policy is available at <http://www.nyxdata.com/Docs/Market-Data/Policies>.

¹² 15 U.S.C. 78f(b).

¹³ 15 U.S.C. 78f(b)(4) and (5).

discriminatory because they will provide additional data to the marketplace and give investors greater choices at prices that are comparable to other similar products. For example, the Chicago Board Options Exchange (“CBOE”) offers CBOE Streaming Markets, a streaming data feed that includes best bids and offers (“BBOs”), trades, customer vs. non-customer breakdown of the BBOs, contingent prices (all-or-none orders) better than or equal to the BBOs, and BBO data and last sale data for complex strategies.¹⁴ CBOE charges a direct connect fee of \$3,500 per connection per month, a per user fee of \$25 per month per Authorized User or Device, and \$500 per month per data port for receipt of this data.¹⁵ NASDAQ PHLX offers PHLX Depth of Market, a data product that provides order and quotation information for individual quotes and orders on the PHLX book, last sale information for trades executed on PHLX, and an imbalance message, for which it charges \$4,000 per month for internal distribution and \$4,500 per month for external distribution.¹⁶ The Exchange also notes that its affiliate offers an integrated equities market data feed and equity depth-of-book product that are priced comparably to the proposed Amex Options Products pricing.¹⁷ The Exchange further believes that the proposed Amex Options Products fees are equitable and not unfairly discriminatory because the general categories of fees—Direct Access, Redistributor, Professional End-User, and Non-Professional End-User—are comparable to the fee categories

¹⁴ See Securities Exchange Act Release No. 66486 (Feb. 28, 2012), 77 FR 13166 (Mar. 5, 2012) (SR-CBOE-2012-016).

¹⁵ *Id.*

¹⁶ See Securities Exchange Act Release No. 67466 (July 19, 2012), 77 FR 43629 (July 25, 2012) (SR-Phlx-2012-93) (“PHLX Filing”).

¹⁷ The proposed Access Fee of \$3,000 per month is the same as the \$3,000 Direct Access Fee for the NYSE Arca Integrated Data Feed, an equities market data product that includes NYSE Arca BBO, NYSE Arca Trades, NYSE ArcaBook, and certain additional market data. The proposed Redistribution Fee of \$2,000 per month is less than the \$3,000 Redistribution Fee for the NYSE Arca Integrated Feed. The proposed Non-Professional End-User Fee of \$1.00 per month (capped at \$5,000) is less than the \$10 per month Non-Professional Subscriber Fee (capped at \$20,000) charged by NYSE Arca for NYSE ArcaBook. The Professional End-User Fee of \$50 per month per User per Source is more than the NYSE ArcaBook \$30 per month Professional Subscriber Fee. See Securities Exchange Act Release Nos. 66128 (Jan. 10, 2012), 77 FR 2331 (Jan. 17, 2012) (SR-NYSEArca-2011-96), and 63291 (Nov. 9, 2010), 75 FR 70311 (Nov. 17, 2010) (SR-NYSEArca-2010-97). However, the Exchange believes that the difference in the Professional fees is reasonable and equitable because the Amex Options Products offer more data than the NYSE Arca Integrated Feed.

already established by the Exchange as well as other exchanges for market data products and the fees will apply equally to all persons in the respective categories that choose to purchase the Amex Options Product.

The Exchange believes that the proposed User per Source reporting methodology is reasonable, equitable, and not unfairly discriminatory because it will help to simplify market data administration. The Exchange recognizes that each Redistributor and Professional End-User may use Amex Options Products differently, and the reporting methodology takes into account the various uses and provides a means to avoid duplicative counting that will allow data recipients to better manage their costs. Moreover, the reporting methodology does not discriminate among data recipients and users, as the reporting methodology would apply equally to all Professional End-Users that choose to utilize it.

The existence of alternatives to the Amex Options Products, including real-time consolidated data, free delayed consolidated data, and proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect such alternatives. The recent decision of the United States Court of Appeals for the District of Columbia Circuit in *NetCoalition v. SEC*, No. 09–1042 (DC Cir. 2010), upheld the Commission’s reliance upon the existence of competitive market mechanisms to set reasonable and equitably allocated fees for proprietary market data:

In fact, the legislative history indicates that the Congress intended that the market system ‘evolve through the interplay of competitive forces as unnecessary regulatory restrictions are removed’ and that the SEC wield its regulatory power ‘in those situations where competition may not be sufficient,’ such as in the creation of a ‘consolidated transactional reporting system.’ *NetCoalition* at 15 (quoting H.R. Rep. No. 94–229 at 92 (1975), as reprinted in 1975 U.S.C.C.A.N. 321, 323). The court agreed with the Commission’s conclusion that “Congress intended that ‘competitive forces should dictate the services and practices that constitute the U.S. national market system for trading equity securities.’”¹⁸

As explained below in the Exchange’s Statement on Burden on Competition, the Exchange believes that there is substantial evidence of competition in the marketplace for data and that the Commission can rely upon such evidence in concluding that the fees established in this filing are the product

¹⁸ *NetCoalition* at 16.

of competition and therefore satisfy the relevant statutory standards.¹⁹

As the *NetCoalition* decision noted, the Commission is not required to undertake a cost-of-service or ratemaking approach, and the Exchange incorporates by reference into this proposed rule change its analysis of this topic in another recent rule filing by its affiliate.²⁰

For these reasons, the Exchange believes that the proposed fees are reasonable, equitable, and not unfairly discriminatory.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. An exchange's ability to price its data feed products is constrained by (1) competition among exchanges in a variety of dimensions, (2) the existence of inexpensive real-time consolidated data and free delayed consolidated data, and (3) the inherent contestability of the market for proprietary data.

The market for proprietary data products is currently competitive and inherently contestable because there is fierce competition for the inputs necessary to the creation of proprietary data and strict pricing discipline for the proprietary products themselves. Numerous options exchanges compete with each other for trades and market data, providing virtually limitless opportunities for entrepreneurs who wish to produce and distribute their own market data. This proprietary data is produced by each individual exchange in a vigorously competitive market.

It is common for broker-dealers to further exploit this competition by sending their order flow to multiple markets, rather than providing it all to a single market. The current options market structure is dispersed and complex with trading volume dispersed among many highly automated trading centers that compete for order flow in the same options, with trading centers offering a wide range of services that are designed to attract different types of

market participants with varying trading needs.²¹

Competitive markets for order flow, executions, and transaction reports provide pricing discipline for the inputs of proprietary data products and therefore constrain markets from overpricing proprietary market data. The U.S. Department of Justice recently acknowledged the aggressive competition among exchanges. In announcing the abandoned bid for NYSE Euronext by NASDAQ OMX Group Inc. and IntercontinentalExchange Inc., Assistant Attorney General Christine Varney stated that exchanges "compete head to head to offer real-time equity data products. These data products include the best bid and offer of every exchange and information on each equity trade, including the last sale."²² Similarly, the options markets vigorously compete with respect to options data products.²³

Transaction execution and proprietary data products are complementary in that market data is both an input and a byproduct of the execution service. In fact, market data and trade execution are a paradigmatic example of joint products with joint costs. The decision whether and on which platform to post an order will depend on the attributes of the platform where the order can be posted, including the execution fees, data quality, and price and distribution of its data products. Without trade executions, exchange data products cannot exist. Further, data products are valuable to many end-users only insofar as they provide information that end-users expect will assist them or their customers in making trading decisions. In that respect, the Exchange believes that the Amex Options Products will offer options market data information that is useful for both professionals and non-professionals in making trading and investment decisions.

The costs of producing market data include not only the costs of the data distribution infrastructure, but also the costs of designing, maintaining, and operating the exchange's transaction execution platform and the cost of regulating the exchange to ensure its fair

operation and maintain investor confidence.²⁴ The total return that a trading platform earns reflects the revenues it receives from both products and the joint costs it incurs. Moreover, an exchange's broker-dealer customers view the costs of transaction executions and of data as a unified cost of doing business with the exchange. A broker-dealer will direct orders to a particular exchange only if the expected revenues from executing trades on the exchange exceed net transaction execution costs and the cost of data that the broker-dealer chooses to buy to support its trading decisions (or those of its customers). The choice of data products is, in turn, a product of the value of the products in making profitable trading decisions. If the cost of the proprietary product exceeds its expected value, the broker-dealer will choose not to buy it.

Moreover, if broker-dealers choose to direct fewer orders to a particular exchange, the value of that exchange's market data product to those broker-dealers decreases for two reasons. First, the product will contain less information because executions of fewer orders will be reflected in it. Second, and perhaps more importantly, the product will be less valuable to broker-dealers that choose to direct their orders to other venues because it does not provide information about the venues to which they are directing their orders. Data from the competing venues to which the broker-dealers are directing orders would become correspondingly more valuable.

Similarly, in the case of products that are distributed through market data vendors, the vendors provide price discipline for proprietary data products because they control the primary means of access to certain end-users. Vendors impose price restraints based upon their business models. For example, vendors such as Bloomberg and Thomson Reuters that assess a surcharge on data they sell may refuse to offer proprietary products that end-users will not purchase in sufficient numbers. Internet portals, such as Google, impose a discipline by providing only data that will enable them to attract "eyeballs" that contribute to their advertising revenue.

Other market participants have noted that the liquidity provided by the order book, trade execution, core market data, and non-core market data are joint products of a joint platform and have

¹⁹ Section 916 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 ("Dodd-Frank Act") amended paragraph (A) of Section 19(b)(3) of the Act, 15 U.S.C. 78s(b)(3), to make clear that all exchange fees for market data may be filed by exchanges on an immediately effective basis.

²⁰ See Securities Exchange Act Release No. 63291 (Nov. 9, 2010), 75 FR 70311 (Nov. 17, 2010) (SR-NYSEArca-2010-97).

²¹ See, e.g., Securities Exchange Act Release No. 49175, Concept Release: Competitive Developments in the Options Markets (Feb. 3, 2004), 69 FR 6124, 6125-6126 (Feb. 3, 2004) (S7-07-04).

²² Press Release, U.S. Department of Justice, "Assistant Attorney General Christine Varney Holds Conference Call Regarding NASDAQ OMX Group Inc. and IntercontinentalExchange Inc. Abandoning Their Bid for NYSE Euronext" (May 16, 2011), available at <http://www.justice.gov/iso/opa/atr/speeches/2011/at-speech-110516.html>.

²³ See PHLX Filing, *supra* note 16, which describes a variety of options market data products and their pricing.

²⁴ Although the Exchange charges an Options Regulatory Fee, it does not offset the full cost of the Exchange's regulatory program, e.g., non-customer trading activity. See Securities Exchange Act Release No. 64400 (May 4, 2011), 76 FR 27118 (May 10, 2011) (SR-NYSEAmex-2011-27).

common costs.²⁵ The Exchange agrees with and adopts those discussions and the arguments therein. The Exchange also notes that the economics literature confirms that there is no way to allocate common costs between joint products that would shed any light on competitive or efficient pricing.²⁶

The Exchange believes that retail broker-dealers, such as Schwab and Fidelity, offer their customers proprietary data only if it promotes trading and generates what they believe is sufficient commission revenue to justify the cost of acquiring that data. Although the business models may differ, these vendors' pricing discipline is the same: they can simply refuse to purchase any proprietary data product that fails to provide what they believe is sufficient value. The Exchange and other producers of proprietary data products must understand and respond to these varying business models and pricing disciplines in order to market proprietary data products successfully. Moreover, the Exchange believes that products can enhance order flow to the Exchange by providing more

²⁵ See Securities Exchange Act Release No. 62887 (Sept. 10, 2010), 75 FR 57092, 57095 (Sept. 17, 2010) (SR-Phlx-2010-121); Securities Exchange Act Release No. 62907 (Sept. 14, 2010), 75 FR 57314, 57317 (Sept. 20, 2010) (SR-NASDAQ-2010-110); and Securities Exchange Act Release No. 62908 (Sept. 14, 2010) (SR-NASDAQ-2010-111), 75 FR 57321, 57324 (Sept. 20, 2010) ("all of the exchange's costs are incurred for the unified purposes of attracting order flow, executing and/or routing orders, and generating and selling data about market activity. The total return that an exchange earns reflects the revenues it receives from the joint products and the total costs of the joint products."); see also August 1, 2008 Comment Letter of Jeffrey S. Davis, Vice President and Deputy General Counsel, NASDAQ OMX Group, Inc., Statement of Janusz Ordover and Gustavo Bamberger ("because market data is both an input to and a byproduct of executing trades on a particular platform, market data and trade execution services are an example of 'joint products' with 'joint costs.'"), attachment at pg. 4, available at www.sec.gov/comments/34-57917/3457917-12.pdf.

²⁶ See generally Mark Hirschey, *Fundamentals of Managerial Economics*, at 600 (2009) ("It is important to note, however, that although it is possible to determine the separate marginal costs of goods produced in variable proportions, it is impossible to determine their individual average costs. This is because common costs are expenses necessary for manufacture of a joint product. Common costs of production—raw material and equipment costs, management expenses, and other overhead—cannot be allocated to each individual by-product on any economically sound basis. * * * Any allocation of common costs is wrong and arbitrary."). This is not new economic theory. See, e.g., F.W. Taussig, "A Contribution to the Theory of Railway Rates," *Quarterly Journal of Economics* V(4) 438, 465 (July 1891) ("Yet, surely, the division is purely arbitrary. These items of cost, in fact, are jointly incurred for both sorts of traffic; and I cannot share the hope entertained by the statistician of the Commission, Professor Henry C. Adams, that we shall ever reach a mode of apportionment that will lead to trustworthy results.").

widespread distribution of information about transactions in real time, thereby encouraging wider participation in the market. Conversely, less order flow to a venue decreases the value of that venue's market data products to distributors and investors because the products contain less content.

Analyzing the cost of market data distribution in isolation from the cost of all of the inputs supporting the creation of market data will inevitably underestimate the cost of the data. Thus, because it is impossible to create data without a fast, technologically robust, and well-regulated execution system, system costs and regulatory costs affect the price of market data. It would be equally misleading, however, to attribute all of an exchange's costs to the market data portion of an exchange's joint product. Rather, all of an exchange's costs are incurred for the unified purposes of attracting order flow, executing and/or routing orders, and generating and selling data about market activity. The total return that an exchange earns reflects the revenues it receives from the joint products and the total costs of the joint products.

Competition among trading platforms can be expected to constrain the aggregate return that each platform earns from the sale of its joint products, but different platforms may choose from a range of possible, and equally reasonable, pricing strategies as the means of recovering total costs. For example, some platforms may choose to pay rebates to attract orders, charge relatively low prices for market information (or provide information free of charge), and charge relatively high prices for accessing posted liquidity. Other platforms may choose a strategy of paying lower rebates (or no rebates) to attract orders, setting relatively high prices for market information, and setting relatively low prices for accessing posted liquidity. In this environment, there is no economic basis for regulating maximum prices for one of the joint products in an industry in which suppliers face competitive constraints with regard to the joint offering.

The level of competition and contestability in the market is evident in the numerous alternative venues that compete for order flow, including 10 self-regulatory organization ("SRO") options markets. Plans to launch two new options exchanges have been announced.²⁷ Each SRO market

²⁷ Nina Mehta and Nikolaj Gammeltoft, "Miami Options Exchange Moves Closer to Becoming 11th U.S. Venue," *Bloomberg.com* (Aug. 16, 2012), available at <http://www.bloomberg.com/news/2012->

competes to produce transaction reports via trade executions. The large number of SROs that currently produce proprietary data or are currently capable of producing it provides further pricing discipline for proprietary data products. Each SRO is currently permitted to produce proprietary data products, and many currently do or have announced plans to do so, including but not limited to the Exchange, NYSE Arca, CBOE, C2, ISE, NASDAQ OMX, NASDAQ PHLX, NASDAQ BX, and BATS. Because market data users can thus find suitable substitutes for most proprietary market data products, a market that overprices its market data products stands a high risk that users may substitute another source of market information for its own.

In addition to the competition and price discipline described above, the market for proprietary data products is also highly contestable because market entry is rapid, inexpensive, and profitable. The history of electronic trading is replete with examples of entrants that swiftly grew into some of the largest electronic trading platforms and proprietary data producers: Archipelago, Bloomberg Tradebook, Island, RediBook, Attain, TradeECN, BATS Trading and Direct Edge.²⁸ As noted above, two new options exchanges recently have been proposed.²⁹

In this environment, a super-competitive increase in the fees charged for either transactions or data has the potential to impair revenues from both products. A broker-dealer that shifted its order flow from one platform to another in response to order execution price differentials would both reduce the value of that platform's market data and reduce its own need to consume data from the disfavored platform. If a platform increases its market data fees, the change may affect the overall cost of doing business with the platform, and affected market participants will assess whether they can lower their trading costs by directing orders elsewhere, thereby lessening the need for the more expensive data, or simply not purchase the data.

^{08-16/miami-options-exchange-moves-closer-to-becoming-11th-u-s-venue.html}.

²⁸ Today, BATS provides data at no charge on its Web site in order to attract more order flow, and uses market data revenue rebates from resulting additional executions to maintain low execution charges for its users. This is simply a securities market-specific example of the well-established principle that in certain circumstances more sales at lower margins can be more profitable than fewer sales at higher margins; this example is additional evidence that market data is an inherent part of a market's joint platform.

²⁹ See supra note 27.

In establishing the fees for the Amex Options Products, the Exchange considered the competitiveness of the market for data and all of the implications of that competition. The Exchange believes that it has considered all relevant factors and has not considered irrelevant factors in order to establish fair, reasonable, and not unreasonably discriminatory fees and an equitable allocation of fees among all users. The existence of numerous alternatives to the Exchange's product, including real-time consolidated data, free delayed consolidated data, and proprietary data from other sources, ensures that the Exchange cannot set unreasonable fees, or fees that are unreasonably discriminatory, when vendors and subscribers can elect these alternatives. Accordingly, the Exchange believes that the acceptance of data feed products in the marketplace demonstrates the consistency of these fees with applicable statutory standards.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The foregoing rule change is effective upon filing pursuant to Section 19(b)(3)(A)³⁰ of the Act and subparagraph (f)(2) of Rule 19b-4³¹ thereunder, because it establishes a due, fee, or other charge imposed by NYSE MKT.

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEMKT-2012-49 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549.

All submissions should refer to File Number SR-NYSEMKT-2012-49. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEMKT-2012-49 and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.³²

Kevin M. O'Neill,

Deputy Secretary.

[FR Doc. 2012-25220 Filed 10-12-12; 8:45 am]

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-68006; File No. SR-NYSEArca-2012-105]

Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing of Proposed Rule Change Amending NYSE Arca Equities Rule 5.3(k)(4) To Comply With the Requirements of Securities and Exchange Commission Rule 10C-1

October 9, 2012.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that on September 25, 2012, NYSE Arca, Inc. (the "Exchange" or "NYSE Arca") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend NYSE Arca Equities Rule 5.3(k)(4) to comply with the requirements of Securities and Exchange Commission ("Commission" or "SEC") Rule 10C-1.⁴ The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

⁴ 17 CFR 240.10C-1.

³⁰ 15 U.S.C. 78s(b)(3)(A).

³¹ 17 CFR 240.19b-4(f)(2).

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

NYSE Arca, through its wholly-owned corporation, NYSE Arca Equities, proposes to amend NYSE Arca Equities Rule 5.3(k)(4) to comply with the requirements of SEC Rule 10C-1.

The proposed changes to NYSE Arca Equities Rule 5.3(k)(4) will become operative on July 1, 2013. Consequently, the existing text of these sections will remain in the NYSE Arca Equities Rulebook until June 30, 2013 and will be removed immediately thereafter.⁵ Upon approval of this filing, the amended provisions of those sections will be included in the Rulebook with introductory text indicating that the revised text does not become operative until July 1, 2013.

Section 952 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (the "Dodd-Frank Act")⁶ added Section 10C to the Securities Exchange Act of 1934.⁷ Section 10C requires the Commission to adopt rules directing the national securities exchanges and national securities associations to prohibit the listing of any equity security of an issuer that is not in compliance with Section 10C's compensation committee and compensation adviser requirements. On June 20, 2012, to comply with the requirements of Section 10C, the Commission adopted new Rule 10C-1, which directs the national securities exchanges to adopt listing rules effectuating the compensation committee and compensation adviser requirements of Section 10C.⁸

Compensation Committee Director Independence Requirement

In adopting independence requirements for compensation committee members, 10C-1(b)(1)(ii)⁹ requires the exchanges to consider relevant factors including, but not limited to: (i) The source of the director's compensation, including any consulting, advisory or other compensatory fees paid by the listed company; and (ii) whether the director has an affiliate relationship with the company, a subsidiary of the company or an affiliate of a subsidiary of the

company. Rule 10C-1(a)(4)¹⁰ requires that the rule filing submitted to the SEC by each exchange in connection with the adoption of the rules required by Rule 10C-1 must include a review of whether and how the proposed listing standards satisfy the requirements of the final rule; a discussion of the exchange's consideration of factors relevant to compensation committee independence; and the definition of independence applicable to compensation committee members that the exchange proposes to adopt or retain in light of such review.

The Exchange's director independence standards are set forth in NYSE Arca Equities Rule 5.3(k)(1). That section provides that no director qualifies as independent unless the board of directors affirmatively determines that the director has no material relationship with the listed company, either directly or as a partner, shareholder or officer of an organization that has a relationship with the company. In addition, NYSE Arca Equities Rule 5.3(k)(1) provides that a director may not be deemed to be independent if such director has a relationship with the listed company which violates any one of five "bright line" tests.¹¹

¹⁰ 17 CFR 240.10C-1(a)(4).

¹¹ NYSE Arca Equities Rule 5.3(k)(1) provides that the following categories of directors may not be deemed independent: (A) A director who is or has been within the last three years, an employee of the listed company, or whose immediate family member is or has been within the last three years an executive officer of the listed company; (B) (i) A director or a director who has an immediate family member who is a current partner of a firm that is the company's internal or external auditor; (ii) A director who is a current employee of such a firm; (iii) A director who has an immediate family member who is a current employee of such a firm and who participates in the firm's audit, assurance or tax compliance (but not tax planning) practice; or (iv) A director or a director who has an immediate family member who was within the last three years (but is no longer) a partner or employee of such a firm and personally worked on the listed company's audit within that time; (C) A director or a director who has an immediate family member who is, or in the past three years has been, part of an interlocking directorate in which an executive officer of the listed company serves or served on the compensation committee of another company that concurrently employs or employed the director; (D) A director who is an executive officer or an employee, or whose immediate family member is an executive officer, of a company that makes payments to, or receives payments from, the listed company for property or services in an amount which, in any single fiscal year, exceeds the greater of \$200,000 or 5% of such other company's consolidated gross revenues, is not "independent" until three years after falling below such threshold; (E) A director who received, or whose immediate family member is an executive officer who received, during any twelve-month period within the last three years, more than \$100,000 in direct compensation from the listed company, other than director and committee fees and pension or other forms of deferred compensation for prior service (provided such compensation is not contingent in

The provisions of NYSE Arca Equities Rule 5.3(k)(1) as currently in effect will continue to be applicable to independence determinations in relation to compensation committee service, as compensation committee members will be required to be independent under the Exchange's general board independence standards set forth in NYSE Arca Equities Rule 5.3(k)(1), in addition to the independence requirements proposed specifically for compensation committee service.

The Exchange proposes to amend NYSE Arca Equities Rule 5.3(k)(4) to require that, in affirmatively determining the independence of any director who will serve on the compensation committee of the listed company's board of directors, the board of directors must consider all factors specifically relevant to determining whether a director has a relationship to the listed company which is material to that director's ability to be independent from management, in connection with the duties of a compensation committee member including, but not limited to, the two factors that are set forth in proposed NYSE Arca Equities Rule 5.3(k)(4) and are explicitly enumerated in Rule 10C-1(b)(ii). When considering the sources of a director's compensation in determining his independence for purposes of compensation committee service, NYSE Arca Equities Rule 5.3(k)(4) as amended provides that the board should consider whether the director receives compensation from any person or entity that would impair his ability to make independent judgments about the listed company's executive compensation. Similarly, when considering any affiliate relationship a director has with the company, a subsidiary of the company, or an affiliate of a subsidiary of the company, in determining his independence for purposes of compensation committee service, the proposed amended rule text provides that the board should consider whether the affiliate relationship places the director under the direct or indirect control of the listed company or its senior management, or creates a direct relationship between the director and members of senior management, in each case of a nature that would impair his ability to make independent judgments

any way on continued service); (F) In the case of an investment company, in lieu of paragraphs (A)-(E) above, a director who is an "interested person" of the company as defined in section 2(a)(19) of the Investment Company Act of 1940, other than in his or her capacity as a member of the board of directors or any board committee.

⁵ The Commission notes that the Exchange will have to comply with Section 19(b) of the Act.

⁶ Public Law 111-203, 124 Stat. 1900 (2010).

⁷ 15 U.S.C. 78j-3.

⁸ There are currently no issuers listed on the Exchange that would be subject to the proposed rules.

⁹ 17 CFR 240.10C-1(b)(1)(ii).

about the listed company's executive compensation.

The Exchange does not propose to adopt any specific numerical tests with respect to the factors specified in proposed NYSE Arca Equities Rule 5.3(k)(4)(ii) or to adopt a requirement to consider any other specific factors. In particular, the Exchange does not intend to adopt an absolute prohibition on a board making an affirmative finding that a director is independent solely on the basis that the director or any of the director's affiliates are shareholders owning more than some specified percentage of the listed company. In the adopting release for Rule 10C-1 (the "Adopting Release"),¹² the SEC recognized that the exchanges might determine that not all affiliate relationships would adversely affect a director's ability to be independent from management.¹³ Consistent with the views of commenters on the SEC's rules as originally proposed, the Exchange believes that—rather than adversely affecting a director's ability to be independent from management as a compensation committee member—share ownership in the listed company aligns the director's interests with those of unaffiliated shareholders, as their stock ownership gives them the same economic interest in ensuring that the listed company's executive compensation is not excessive.

The Exchange believes that its existing "bright line" independence standards as set forth in NYSE Arca Equities Rule 5.3(k)(1) are sufficiently broad to encompass the types of relationships which would generally be material to a director's independence for compensation committee service. In addition to these "bright line" tests, NYSE Arca Equities Rule 5.3(k)(1) also already requires the board to consider any relationship that would be material to the independence of a director. The Exchange believes that these requirements with respect to general director independence, when combined with the specific considerations required by proposed NYSE Arca Equities Rule 5.3(k)(4)(ii), represent an appropriate standard for compensation committee independence that is consistent with the requirements of Rule 10C-1.

Compensation Committee Advisers

Rule 10C-1(b)(2)¹⁴ requires exchange rules to mandate that compensation committees must have broad authority

to engage advisers to assist in their performance of the committee's functions. Specifically, exchange rules must mandate that:

(a) The compensation committee may, in its sole discretion, retain or obtain the advice of a compensation consultant, independent legal counsel or other adviser; and

(b) The compensation committee shall be directly responsible for the appointment, compensation and oversight of the work of any compensation consultant, independent legal counsel and other adviser retained by the compensation committee.

Rule 10C-1(b)(3)¹⁵ requires exchange rules to mandate that the listed company must provide for appropriate funding, as determined by the compensation committee, for payment of reasonable compensation to a compensation consultant, independent legal counsel or any other adviser retained by the compensation committee.

The Exchange proposes to adopt the requirements specified in Rule 10C-1(b)(2) and (3) verbatim as new subsection (iv) to NYSE Arca Equities Rule 5.3(k)(4).

Compensation Adviser Independence Factors

Rule 10C-1(b)(4)¹⁶ provides that the compensation committee of a listed issuer may select a compensation consultant, legal counsel or other adviser to the compensation committee only after taking into consideration the following factors, as well as any other factors identified by the relevant national securities exchange or national securities association in its listing standards:

(i) The provision of other services to the listed company by the person that employs the compensation consultant, legal counsel or other adviser;

(ii) The amount of fees received from the listed company by the person that employs the compensation consultant, legal counsel or other adviser, as a percentage of the total revenue of the person that employs the compensation consultant, legal counsel or other adviser;

(iii) The policies and procedures of the person that employs the compensation consultant, legal counsel or other adviser that are designed to prevent conflicts of interest;

(iv) Any business or personal relationship of the compensation consultant, legal counsel or other

adviser with a member of the compensation committee;

(v) Any stock of the listed company owned by the compensation consultant, legal counsel or other adviser; and

(vi) Any business or personal relationship of the compensation consultant, legal counsel, other adviser or the person employing the adviser with an executive officer of the listed company.

Accordingly, the Exchange proposes to add as new subsection (v) to NYSE Arca Equities Rule 5.3(k)(4) a provision specifying that, before engaging an adviser, the compensation committee must consider the factors enumerated above. As proposed, NYSE Arca Equities Rule 5.3(k)(4)(v) would not include any additional factors for consideration, as the Exchange believes that the list included in Rule 10C-1(b)(4) is very comprehensive and the proposed listing standard would also require the compensation committee to consider any other factors that would be relevant to the adviser's independence from management.

Consistent with Rule 10C-1(b)(2)(iii),¹⁷ the Exchange proposes to include as new Commentary .04 to NYSE Arca Equities Rule 5.3(k)(4) an explicit statement that nothing in NYSE Arca Equities Rule 5.3(k)(4)(ii) shall be construed: (A) To require the Compensation Committee to implement or act consistently with the advice or recommendations of the compensation consultant, independent legal counsel or other adviser to the compensation committee; or (B) to affect the ability or obligation of the Compensation Committee to exercise its own judgment in fulfillment of the duties of the Compensation Committee (or, if applicable, the independent directors). In addition, as provided by Rule 10C-1(b)(4), proposed new Commentary .05 to NYSE Arca Equities Rule 5.3(k)(4) would specify that the compensation committee need not engage in an analysis of the independence factors before consulting with or obtaining advice from in-house legal counsel.

Cure Periods

Rule 10C-1(a)(3)¹⁸ requires that exchange rules must include appropriate procedures for a listed issuer to have a reasonable opportunity to cure any non-compliance with the provisions of exchange rules adopted as required by Rule 10C-1. In addition, Rule 10C-1(a)(3) states that such rules may provide that if a member of a compensation committee ceases to be

¹² Release Nos. 33-9330; 34-67220 (June 20, 2012); 77 FR 38422 (June 27, 2012).

¹³ See Adopting Release at 38428.

¹⁷ 17 CFR 240.10C-1(b)(2)(iii).

¹⁸ 17 CFR 240.10C-1(a)(3).

independent in accordance with the requirements of Rule 10C-1 for reasons outside the member's reasonable control, that person, with notice by the issuer to the exchange, may remain a compensation committee member of the listed issuer until the earlier of the next annual meeting or one year from the occurrence of the event that caused the member to be no longer independent. The Exchange proposes to adopt, as a third paragraph in new subsection (ii) to NYSE Arca Equities Rule 5.3(k)(4), this cure provision period for events of non-compliance with the proposed compensation committee independence requirements that are outside of the director's reasonable control. However, the Exchange proposes to modify this cure provision by limiting its use to circumstances where the compensation committee continues to have a majority of independent directors, as this would ensure that the compensation committee could not take any action without the agreement of one or more independent directors. The Exchange believes that this requirement addresses any actual or apparent conflict of interest which may arise due to the continued service of a non-independent director on the compensation committee.

General Exemptions

Rule 10C-1(b)(5)¹⁹ provides an automatic exemption from the application of the entirety of Rule 10C-1 for controlled companies and smaller reporting companies,²⁰ and Rule 10C-1(b)(1)(iii)(A)²¹ provides an automatic exemption from the compensation committee independence requirements for limited partnerships, companies in bankruptcy, open-end management investment companies registered under the Investment Company Act of 1940

("1940 Act"). Rule 10C-1(b)(1)(iii)(A) also exempts from the compensation committee independence requirements any foreign private issuer that discloses in its annual report filed with the SEC the reasons that the foreign private issuer does not have an independent compensation committee.

Pursuant to the general exemptive authority granted in Rule 10C-1(b)(5)(i), the Exchange proposes to exempt from all of the proposed requirements each category of issuer that qualifies for a general or specific exemption under Rule 10C-1(b)(1)(iii)(A). The Exchange also proposes to provide a general exemption from all of the requirements to all of the other categories of issuers that are currently exempt from the Exchange's existing compensation committee requirements. Thus, as proposed, controlled companies, limited partnerships and companies in bankruptcy, closed-end and open-end funds registered under the 1940 Act, asset backed issuers and other passive business organizations (such as royalty trusts), derivatives and special purpose securities, and issuers whose only listed equity security is a preferred stock, would be exempt. The Exchange notes that these categories of issuers typically: (i) Are externally managed and do not directly employ executives (e.g., limited partnerships that are managed by their general partner or closed-end funds managed by an external investment adviser); (ii) do not by their nature have employees (e.g., passive business organizations in the form of trusts or issuers of derivative or special purpose securities); or (iii) have executive compensation policy set by a body other than the board (e.g., bankrupt companies have their executive compensation determined by the bankruptcy court). In light of these structural reasons why these categories of issuers generally do not have compensation committees, the Exchange believes that it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements and that it is appropriate to grant them an exemption.

The Exchange proposes to adopt as new Commentary .03 to NYSE Arca Equities 5.3(k)(4) a general exemption from the application of the rule for foreign private issuers. Foreign private issuers are currently exempt from the existing compensation committee requirement pursuant to NYSE Arca Equities Rule 5.3(n). The Exchange proposes to follow this approach by granting a general exemption, pursuant to the discretion granted to the

Exchange by Rule 10C-1(b)(5)(i),²² from the proposed new compensation committee requirements to foreign private issuers that follow home country practice. The Exchange notes that NYSE Arca Equities Rule 5.3(n) requires foreign private issuers to disclose any significant ways in which their corporate governance practices differ from those followed by domestic companies under Exchange listing standards. Listed foreign private issuers may provide this disclosure either on their Web site (provided it is in the English language and accessible from the United States) and/or in their annual report as distributed to shareholders in the United States (again, in the English language). If the disclosure is only made available on the Web site, the annual report must so state and provide the Web address at which the information may be obtained. As any foreign private issuer availing itself of the proposed exemption would have to disclose that fact in its statement of significant differences, the Exchange does not propose to require those companies to comply with the disclosure requirement of Rule 10C-1(b)(1)(iii)(A). While Section 110 [sic] does not require a statement as to why a company does not comply with an applicable requirement in the manner provided by Rule 10C-1(b)(1)(iii)(A), the Exchange does not believe that this is a significant difference, as the explanation companies would likely provide for not having an independent compensation committee would simply be that they were not required to do so by home country law.

The Exchange currently does not require issuers whose only listed security is a preferred stock to comply with NYSE Arca Equities Rule 5.3(k)(4). The Exchange proposes to grant these issuers a general exemption from compliance with the proposed amended rule. The Exchange believes this approach is appropriate because holders of listed preferred stock have significantly greater protections with respect to their rights to receive dividends and a liquidation preference upon dissolution of the issuer, and preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1.

2. Statutory Basis

The Exchange believes that the proposed rule change in relation to the Exchange's compensation committee

¹⁹ 17 CFR 240.10C-1(b)(5).

²⁰ A "smaller reporting company" is defined in SEC Rule 12b-2 and in Regulation S-K, Item 10(f)(1). Proposed Commentary .02 to NYSE Equities Rule 5.3(k)(4) will state that smaller reporting companies must comply with NYSE Equities Rule 5.3(k)(4), except that they need not comply with NYSE Equities Rule 5.3(k)(4)(ii) and (v). Proposed Commentary .02 will also include a transition period applicable to a company that ceases to be a smaller reporting company. Under SEC Rule 12b-2, a company tests its status as a smaller reporting company on an annual basis at the end of its most recently completed second fiscal quarter (hereinafter, for purposes of this subsection, the "Smaller Reporting Company Determination Date"). To the extent a smaller reporting company ceases to qualify as such under SEC rules, Commentary .02 will provide that such company is required, if applicable, to: (I) Have a compensation committee of which all of the members meet the independence standard of Rule 5.3(k)(4)(ii) within six months of the Smaller Reporting Company Determination Date; and (II) comply with Rule 5.3(k)(4)(v) as of the Smaller Reporting Company Determination Date.

²¹ 17 CFR 240.10C-1(b)(1)(iii)(A).

²² 17 CFR 240.10C-1(b)(5)(i).

requirements and the proposed compensation consultant independence requirements are consistent with Section 10C of the Exchange Act and Rule 10C-1 thereunder in that they comply with the requirements of Rule 10C-1 with respect to the adoption by national securities exchanges of compensation committee listing standards. The Exchange believes that the proposed rule change is consistent with Section 6(b)²³ of the Exchange Act in general, and furthers the objectives of Section 6(b)(5) of the Exchange Act,²⁴ in particular in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that the proposed amendments to its compensation committee listing standard are consistent with the protection of investors and the public interest in that they strengthen the independence requirements for compensation committee membership, provide additional authority to compensation committees and require compensation committees to consider the independence of compensation consultants.

The Exchange believes that the general exemptions from the proposed requirements that it is granting to foreign private issuers and smaller reporting companies are consistent with Section 10C and Rule 10C-1, for the reasons stated above in the "Purpose" section, including because (i) Rule 10C-1(b)(5)(ii) explicitly exempts smaller reporting companies and (ii) foreign private issuers will comply with their home country law and, if they avail themselves of the exemption, will be required to disclose that fact under existing Exchange listing requirements. The Exchange believes it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules to issuers whose only listed class of equity securities on the Exchange is a preferred stock, as holders of listed preferred stock have significantly greater protections with respect to their rights to receive

dividends and a liquidation preference upon dissolution of the issuer, and preferred stocks are typically regarded by investors as a fixed income investment comparable to debt securities, the issuers of which are exempt from compliance with Rule 10C-1. The Exchange believes that it is an appropriate use of its exemptive authority under Rule 10C-1(b)(5)(i), and that it is not unfairly discriminatory under Section 6(b)(5) of the Act, to provide general exemptions under the proposed rules for all of the other categories of issuers that are not currently subject to the Exchange's compensation committee requirement, for the structural reasons discussed in the "Purpose" section and because it would be a significant and unnecessarily burdensome alteration in their governance structures to require them to comply with the proposed new requirements.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

The Exchange has not solicited written comments on the proposed rule change. The Exchange has received two comment letters on the proposed rule change.²⁵ One commenter made the following points: (i) The Exchange should specify that the relevant factors for consideration with respect to compensation committee independence should include a consideration of fees received for service on the board itself; (ii) the relevant factors should explicitly include consideration of the personal and business relationships between directors and officers; (iii) the additional factors to be considered for compensation committee independence should be considered as a part of general board independence determinations; and (iv) the listing standards should specify that, while the factors must be considered in their totality, a single factor can result in the loss of board independence.

²⁵ Both of these letters were addressed to NYSE Regulation, Inc. Neither author indicated that the comments related to just one of the three national securities exchanges owned by NYSE Euronext. Therefore, the Exchange is addressing those comments to the extent they are applicable to its existing rules and the proposed amendments.

The Exchange does not believe that it is appropriate to consider board compensation as part of the compensation committee independence determination with respect to individual directors. Non-executive directors devote considerable time to the affairs of the companies on whose boards they sit and eligible candidates would be difficult to find if board and committee service were unpaid in nature. Consequently, independent directors of listed companies are almost invariably paid for their board and committee service. As all independent directors are almost certainly going to receive board compensation from the company and do so on terms determined by the board as a whole, the Exchange does not believe that an analysis of the board compensation of individual directors is a meaningful consideration in determining their independence for purposes of compensation committee service.

The Exchange interprets its existing director independence requirements as requiring the board to consider relationships between the director and any member of management in making its affirmative independence determinations. Consequently, the Exchange does not believe that any further clarification of this requirement is necessary.

The Exchange does not believe that it is necessary to explicitly require that the additional independence considerations for compensation committee service should be a part of the board's general independence determinations for all independent directors. NYSE Arca Equities Rule 5.3(k)(1) provides that the board must affirmatively determine that the director has no material relationship with the listed company, either directly or as a partner, shareholder or officer of an organization that has a relationship with the company. As such, the Exchange believes that, where appropriate, listed company boards should already be including in their general independence determinations factors including those being added to the compensation committee independence determination.

The Exchange does not believe it is necessary to include in the rule a statement that a single factor may be sufficiently material to render a director non-independent, as this is clearly the intention of the rule as drafted. NYSE Arca Equities Rule 5.3(k)(1) in its current form and proposed NYSE Arca Equities Rule 5.3(k)(4) require the board to consider the materiality of each separate relationship between the director and the listed company or its management.

²³ 15 U.S.C. 78f(b).

²⁴ 15 U.S.C. 78f(b)(5).

The second commenter proposed that the Exchange should require companies to make a public disclosure with respect to the factors considered by the compensation committee in reviewing the independence of compensation consultants, legal counsel and other compensation advisers. This commenter also proposed that the Exchange should require with respect to outside counsel hired by the compensation committee the same disclosure as is required by Item 407(e)(3)(iv) of Regulation S-K with respect to the nature of any conflict that arises from the engagement of a compensation consultant identified in the proxy statement. The Exchange does not believe that it is necessary to establish additional disclosure requirements of this nature. Item 407 of Regulation S-K contains extensive disclosure requirements with respect to a listed company's corporate governance. Moreover, with respect to disclosure of any conflicts of interest that may arise with respect to outside counsel hired by the compensation committee, the Exchange believes that the rigorous conflict of interest requirements applicable to attorneys adequately address such concerns, and the Exchange is mindful that requiring additional public disclosures regarding outside counsel could require a listed company to disclose information that otherwise may be protected by attorney-client privilege.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the self-regulatory organization consents, the Commission will:

(A) By order approve or disapprove the proposed rule change, or

(B) Institute proceedings to determine whether the proposed rule change should be disapproved.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEArca-2012-105 on the subject line.

Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEArca-2012-105. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office and the Internet Web site of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2012-105, and should be submitted on or before November 5, 2012.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.²⁶

Kevin M. O'Neill,

Deputy Secretary.

SOCIAL SECURITY ADMINISTRATION

Agency Information Collection Activities: Proposed Request

The Social Security Administration (SSA) publishes a list of information collection packages requiring clearance by the Office of Management and Budget (OMB) in compliance with Public Law 104-13, the Paperwork Reduction Act of 1995, effective October 1, 1995. This notice includes revisions to OMB-approved information collections.

SSA is soliciting comments on the accuracy of the agency's burden estimate; the need for the information; its practical utility; ways to enhance its quality, utility, and clarity; and ways to minimize burden on respondents, including the use of automated collection techniques or other forms of information technology. Mail, email, or fax your comments and recommendations on the information collection(s) to the OMB Desk Officer and SSA Reports Clearance Officer at the following addresses or fax numbers.

(OMB)

Office of Management and Budget,
Attn: Desk Officer for SSA, Fax: 202-395-6974, Email address:
OIRA_Submission@omb.eop.gov.

(SSA)

Social Security Administration,
DCRDP, Attn: Reports Clearance
Director, 107 Altmeyer Building, 6401
Security Blvd., Baltimore, MD 21235,
Fax: 410-966-2830, Email address:
OR.Reports.Clearance@ssa.gov.

The information collections below are pending at SSA. SSA will submit them to OMB within 60 days from the date of this notice. To be sure we consider your comments, we must receive them no later than December 14, 2012. Individuals can obtain copies of the collection instruments by writing to the above email address.

1. *Physician's/Medical Officer's Statement of Patient's Capability to Manage Benefits—20 CFR 404.2015 and 416.615—0960-0024.* SSA appoints a representative payee in cases where we determine beneficiaries are not capable of managing their own benefits. In those instances, we require medical evidence to determine the beneficiaries' capability of managing or directing their benefit payments. SSA collects medical evidence on Form SSA-787 to (1) determine beneficiaries' capability or inability to handle their own benefits, and (2) assist in determining the beneficiaries' need for a representative payee. The respondents are the

beneficiary's physicians, or medical officers of the institution in which the beneficiary resides.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-7156	120,000	1	10	20,000

2. *Farm Self-Employment Questionnaire—20 CFR 404.1082(c) & 404.1095—0960-0061.* SSA requires proof of the existence of a trade or business before determining if an individual or partnership may have net earnings from self-employment. When a claimant indicates self-employment as a farmer, SSA obtains the information we

need to determine the existence of an agricultural trade or business and subsequent covered earnings for Social Security entitlement purposes using Form SSA-7165, Farm Self-Employment Questionnaire. As part of the application process, we conduct a personal interview, either face-to-face or via telephone, and document the

interview using Form SSA-7165. The respondents are applicants for Social Security benefits, whose entitlement depends on worker's having covered earnings from self-employment as a farmer.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-7156	47,500	1	10	7,917

3. *Statement of Household Expenses and Contributions—20 CFR 416.1130-416.1148—0960-0456.* SSA bases eligibility for Supplemental Security Income (SSI) on the needs of the recipient. In part, we assess need by determining the amount of income a recipient receives. This income includes in-kind support and maintenance in the

form of food and shelter provided by other persons. SSA uses Form SSA-8011-F3 to determine if the claimant or recipient receives in-kind support and maintenance. This is necessary to determine (1) the claimant or recipient's eligibility for SSI and (2) the SSI payment amount. SSA only uses this form in cases where SSA needs the

householder's (head of household) corroboration of in-kind support and maintenance. Respondents are householders of homes in which an SSI applicant or recipient resides.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-8011-F3	428,100	1	15	107,025

Dated: October 10, 2012.

Faye Lipsky,

Mail, email, or fax your comments and recommendations on the information collection(s) to the OMB Desk Officer and SSA Reports Clearance Officer at the following addresses or fax numbers.

(OMB)

Office of Management and Budget, Attn: Desk Officer for SSA, Fax: 202-395-6974, Email address: OIRA_Submission@omb.eop.gov.

(SSA)

Social Security Administration, DCRDP, Attn: Reports Clearance Director, 107 Altmeyer Building, 6401 Security Blvd., Baltimore, MD 21235, Fax: 410-966-2830, Email address: OR.Reports.Clearance@ssa.gov.

The information collections below are pending at SSA. SSA will submit them to OMB within 60 days from the date of this notice. To be sure we consider your comments, we must receive them no later than December 14, 2012.

Individuals can obtain copies of the collection instruments by writing to the above email address.

1. *Certificate of Support—20 CFR 404.370, 404.750, 404.408a—0960-0001.* A parent of a deceased, fully insured worker may be entitled to Social Security Old-Age, Survivors, and Disability Insurance (OASDI) benefits

based on the earnings record of the deceased worker under certain conditions. One of the conditions is the parent must have received at least one-half support from the deceased worker. The one-half support requirement also applies to a spousal applicant in

determining whether OASDI benefits are subject to Government Pension Offset (GPO). SSA uses the information from Form SSA-760-F4 to determine if the parent of a deceased worker or a spouse applicant meets the one-half support requirement. Respondents are

(1) parents of deceased workers and (2) spouses who may meet the GPO exception.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-760-F4	18,000	1	15	4,500

2. *Pre-1957 Military Service Federal Benefit Questionnaire—20 CFR 404.1301-404.1371—0960-0120.* SSA may grant gratuitous military wage credits for active military or naval service (under certain conditions) during the period September 16, 1940 through December 31, 1956, if no other Federal agency (other than the Veterans Administration) credited the service for

benefit eligibility or computation purposes. We use Form SSA-2512 to collect specific information about other Federal, military, or civilian benefits the wage earner may receive when the applicant indicates both pre-1957 military service and the receipt of a Federal benefit. SSA uses the data in the claims adjudication process to grant gratuitous military wage credits when

applicable, and to solicit sufficient information to determine eligibility. Respondents are applicants for Social Security benefits on a record where the wage earner claims pre-1957 military service.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-2512	5,000	1	10	833

3. *Authorization for the Social Security Administration to Obtain Account Records from a Financial Institution and Request for Records—20 CFR 416.200, 416.203—0960-0293.* SSA collects and verifies financial information from individuals applying for Supplemental Security Income (SSI)

to determine if the applicant meets the SSI resource eligibility requirements. If the SSI claimants provide records that are incomplete, unavailable, or seemingly altered, SSA contacts their financial institution to verify the existence, ownership, and value of accounts owned. Financial institutions

require individuals to sign Form SSA-4641-U2 to authorize them to disclose records to SSA. The respondents are financial institutions of SSI applicants, recipients, and their deemors.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-4641 (paper)	44,100	1	6	4,410
e4641 (electronic)	6,955,900	1	2	231,863
Totals	7,000,000	236,273

4. *Response to Notice of Revised Determination—20 CFR 404.913-404.914, 404.992(b), 416.1413-416.1414 and 416.1492(d)—0960-0347.* When SSA determines that (1) claimants for initial disability benefits do not actually have a disability or (2) current disability recipients' records show their disability

ceased, SSA notifies the disability claimants or recipients of this decision. In response to this notice, the affected claimants and disability recipients have the following recourse: (1) They may request a disability hearing to contest SSA's decision and (2) they may submit additional information or evidence for

SSA to consider. Disability claimants, recipients, and their representatives use Form SSA-765 to accomplish these two actions. The respondents are disability claimants, current disability recipients, or their representatives.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA-765	1,925	1	30	963

5. *Notification of a Social Security Number (SSN) To An Employer for Wage Reporting—20 CFR 422.103(a)—0960–0778.* Individuals applying for employment must provide an SSN or indicate they have applied for one. However, when an individual applies for an initial SSN, there is a delay between the assignment of the number and the delivery of the SSN card. At an individual's request, SSA uses Form SSA–132 to send the individual's SSN

to an employer. Mailing this information to the employer (1) ensures the employer has the correct SSN for the individual; (2) allows SSA to receive correct earnings information for wage reporting purposes; and (3) reduces the delay in the initial SSN assignment and delivery of the SSN information directly to the employer. It also enables SSA to verify the employer as a safeguard for the applicant's personally identifiable information. The majority of individuals

who take advantage of this option are in the United States with exchange visitor and student visas; however, we allow any applicant for an SSN to use the SSA–132. The respondents are individuals applying for an initial SSN who ask SSA to mail confirmation of their application or the SSN to their employers.

Type of Request: Revision of an OMB-approved information collection.

Modality of completion	Number of respondents	Frequency of response	Average burden per response (minutes)	Estimated total annual burden (hours)
SSA–132	249,000	1	2	8,300

Dated: October 10, 2012.

Faye Lipsky,

Reports Clearance Director, Social Security Administration.

BILLING CODE 4191–02–P

DEPARTMENT OF STATE

[Public Notice: 8060]

30-Day Notice of Proposed Information Collection: Passport Demand Forecasting Study

ACTION: Notice of request for public comment and submission to OMB of proposed collection of information.

SUMMARY: The Department of State has submitted the information collection described below to the Office of Management and Budget (OMB) for approval. In accordance with the Paperwork Reduction Act of 1995 we are requesting comments on this collection from all interested individuals and organizations. The purpose of this Notice is to allow 30 days for public comment.

DATES: Submit comments directly to the Office of Management and Budget (OMB) up to November 14, 2012.

ADDRESSES: Direct comments to the Department of State Desk Officer in the Office of Information and Regulatory Affairs at the Office of Management and Budget (OMB). You may submit comments by the following methods:

- *Email:*

oira_submission@omb.eop.gov. You must include the DS form number, information collection title, and the OMB control number in the subject line of your message.

- *Fax:* 202–395–5806. Attention: Desk Officer for Department of State.

FOR FURTHER INFORMATION CONTACT:

Direct requests for additional information regarding the collection listed in this notice, including requests for copies of the proposed collection instrument and supporting documents, to the Office of Passport Services at *PassportStudy@state.gov*.

SUPPLEMENTARY INFORMATION:

- *Title of Information Collection:* Passport Demand Forecasting Study.
 - *OMB Control Number:* 1405–0177.
 - *Type of Request:* Reinstatement of a previous collection.
 - *Originating Office:* Bureau of Consular Affairs/Passport Services (CA/PPT).
 - *Form Number:* SV2012–0006.
 - *Respondents:* A national representative sample of U.S. citizens, U.S. nationals, and any other categories of individuals that are entitled to a U.S. passport product.
 - *Estimated Number of Respondents:* 4,000 survey respondents per month.
 - *Estimated Number of Responses:* 48,000 survey responses per year.
 - *Average Time Per Response:* approx. 10 minutes per survey.
 - *Total Estimated Burden Time:* 8,000 hours.
 - *Frequency:* Monthly.
 - *Obligation to Respond:* Voluntary.
- We are soliciting public comments to permit the Department to:
- Evaluate whether the proposed information collection is necessary for the proper functions of the Department.
 - Evaluate the accuracy of our estimate of the time and cost burden for this proposed collection, including the validity of the methodology and assumptions used.
 - Enhance the quality, utility, and clarity of the information to be collected.
 - Minimize the reporting burden on those who are to respond, including the

use of automated collection techniques or other forms of information technology.

Please note that comments submitted in response to this Notice are public record. Before including any detailed personal information, you should be aware that your comments as submitted, including your personal information, will be available for public review.

Abstract of proposed collection:

The Intelligence Reform and Terrorism Prevention Act of 2004 (IRTPA) calls for the Secretary of Homeland Security, along with the Secretary of State, to develop and implement a plan that requires sufficient documentation of identity and citizenship to be shown when entering the United States. The requirement that requires sufficient documentation of identity and citizenship to be shown when entering the United States along with other socio-demographic variables has left the future demand for U.S. passport products as undefined. The ambiguity of passport demand has resulted in Passport Services (CA/PPT) having an urgent need to obtain regular statistical data on issues that focuses on and are related to passport applications and travel. In support of these efforts, CA/PPT will conduct monthly forecasts of passport demand. The data gathered from the Passport Demand Forecasting Study will be used to monitor, assess, and forecast passport demand on a continuous basis.

Methodology:

CA/PPT is conducting a Passport Demand Forecast Study that includes monthly surveys that will gather data from a national representative sample of U.S. citizens, U.S. nationals, and any other categories of individuals that are entitled to a U.S. passport product. Methodologies can include mail, web/internet, telephone, and mixed-mode

surveys to ensure that Passport Services reaches the appropriate audience and leverages the best research method obtain valid responses. The survey data will cover an estimated 48,000 respondents annually and will include topics covering passport demand, travel, and socio-demographic variables of interest to the United States Department of State.

Dated: September 27, 2012.

Rachel M. Arndt,

Managing Director (Acting), Passport Support Operations, Bureau of Consular Affairs, Department of State.

BILLING CODE 4710-06-P

DEPARTMENT OF STATE

[Public Notice 8062]

Allowing New Investment in Burma

AGENCY: Bureau of Economic & Business Affairs, Office of Sanctions Policy and Implementation, Department of State.

SUMMARY: The Deputy Secretary of State has determined that it would be contrary to the national security interests of the United States to continue to apply the sanction referred to in section 570(b) of the Foreign Operations, Export Financing, and Related Programs Appropriations Act of 1997 (Pub. L. 104-208) (the "Act"), which authorizes and directs the President to prohibit U.S. persons from making new investment in Burma, if the President makes certain determinations and certifications to Congress. The President made the required determinations and certifications and imposed a prohibition on new investment in Executive Order 13047 (May 20, 1997). He subsequently delegated the waiver authority under Section 570(e) of the Act to the Secretary of State on July 11, 2012, and the determination described above constitutes the exercise of such waiver authority. In conjunction with this waiver determination, the Department of the Treasury's Office of Foreign Assets Control issued a General License (No. 17) on July 11, 2012 authorizing new investment in Burma by U.S. persons subject to limitations and requirements set forth therein.

These steps are in response to the recent reforms that have taken place in Burma over the past year. Continued application of the ban on investment would be contrary to U.S. national security interests because it would hinder current U.S. policy to support those in the Burmese government leading important reform efforts.

Further reforms would advance longstanding U.S. national security interests such as promoting national reconciliation and democracy in Burma; improving respect for human rights; curtailing the flow from Burma of refugees, illicit narcotics, infectious diseases, and victims of trafficking; and advancing nonproliferation goals. While the Department of State remains concerned about the protection of human rights, corruption, and the role of the military in the Burmese economy, it believes that the participation of U.S. businesses in the Burmese economy will set a model for responsible investment and business operations as well as encourage further change, promote economic development, and contribute to the welfare of the Burmese people.

DATES: *Effective Date:* July 11, 2012.

FOR FURTHER INFORMATION CONTACT: John Marshall Klein, Senior Sanctions Officer, Economic & Business Affairs, Office of Sanctions Policy and Implementation, 202-647-9452.

Dated: September 27, 2012.

Jose W. Fernandez,

Assistant Secretary for Economic and Business Affairs, Department of State.

BILLING CODE 4710-07-P

DEPARTMENT OF TRANSPORTATION

Office of the Secretary of Transportation

Interim Guidance on State Freight Plans and State Freight Advisory Committees

AGENCY: Office of the Secretary of Transportation (OST), U.S. Department of Transportation (DOT), Federal Aviation Administration (FAA), Federal Highway Administration (FHWA), Federal Motor Carriers Administration (FMCSA) Federal Railroad Administration (FRA), Maritime Administration (MARAD), Pipeline and Hazardous Materials Safety Administration (PHSMA), Research and Innovative Technology Administration (RITA), St. Lawrence Seaway Development Corporation (SLSDC).

ACTION: Notice of Interim Guidance and Request for Comments.

SUMMARY: On July 6, 2012, the President signed into law Public Law 112-141, the Moving Ahead for Progress in the 21st Century Act (MAP-21). Section 1118 of MAP-21 directs the Secretary of Transportation to encourage each State to develop a comprehensive State Freight Plan that outlines immediate

and long-range plans for freight-related transportation investments. Section 1117 of MAP-21 directs the Secretary to encourage each State to establish a State Freight Advisory Committee. The Department of Transportation is issuing this Notice to provide Interim Guidance on both State Freight Plans and State Freight Advisory Committees. It encourages States to develop State Freight Plans and provides guidance to States on the required elements of a State Freight Plan and information on funding and on the relationship of State Freight Plans to other provisions of MAP-21. It encourages States to develop State Freight Advisory Committees as part of the process for developing a State Freight Plan. The Department requests public comments on all aspects of this Interim Guidance.

DATES: All public comments must be received by November 15, 2012.

ADDRESSES: You may send comments identified by Docket Number DOT-OST-2012-0168 using any of the following methods:

Government-wide rulemaking Web site: <http://www.regulations.gov> and follow the instructions for sending your comments electronically.

Mail: Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590-0001. Fax 1-202-493-2251.

Courier: commercial delivery service, such as, but not limited to the following—Federal Express or United Parcel Service, addressed to Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC 20590.

Hand Delivery: Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC between 9 a.m. and 5 p.m. Monday through Friday, except Federal holidays.

The Department will post all comments received, without change, to <http://www.regulations.gov>, including any personal information. If you mail or hand deliver your comments and want the Department to acknowledge receipt of your comments, include with your comments a pre-addressed, stamped postcard on which the docket number appears. We will stamp the date on the postcard and mail it to you.

Docket: To read background documents or comments received, go to <http://www.regulations.gov> or to Docket Management Facility, U.S. Department of Transportation, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m. Monday through Friday, except Federal holidays.

Privacy Act: Anyone is able to search the electronic form of all comments

received in any of our dockets by the name of the individual submitting the comment (or signing the comment if submitted on behalf of an association, a business, a labor union, etc.). You may review the Department's complete Privacy Act statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78), or you may visit <http://www.dot.gov/privacy.html>.

This Interim Guidance will also be posted on the Department's MAP-21 Web site (www.dot.gov/map21).

FOR FURTHER INFORMATION CONTACT: Mr. Jack Wells, Chief Economist, 1200 New Jersey Avenue SE., Washington, DC 20590. Telephone Number (202) 366-9224 or Email jack.wells@dot.gov.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Background and Program Purpose
- II. Policy
- III. Funding
- IV. Contents of State Freight Plans
- V. The State Freight Planning Process
- VI. Data and Analytical Resources for State Freight Planning
- VII. Request for Comments

I. Background and Program Purpose

The purpose of this document is to provide guidance on the implementation of Section 1118 (State Freight Plans) and Section 1117 (State Freight Advisory Committees) of the Moving Ahead for Progress in the 21st Century Act (MAP-21). Section 1118 directs the Secretary of Transportation to encourage States to develop freight plans that are comprehensive and that include both immediate and long-term freight planning activities and investments. Section 1117 directs the Secretary to encourage each State to establish a State Freight Advisory Committee consisting of a representative cross-section of public and private freight stakeholders. Section 1118 specifies certain minimum contents for State Freight Plans, and states that such a plan may be developed separate from or be incorporated into the statewide strategic long-range transportation plan required by section 135 of title 23, United States Code.

Section 1116 of MAP-21 (Prioritization of Projects to Improve Freight Movement) authorizes the Secretary to increase the Federal share payable for any project to 95 percent for projects on the Interstate System and 90 percent for any other project if the Secretary certifies that the project:

- Demonstrates the improvement made by the project to the efficient movement of freight (including making progress on freight performance

measures established under MAP-21) and

- Is identified in a State Freight Plan developed pursuant to section 1118.

The Federal Highway Administration will be issuing separate guidance on the implementation of Section 1116. One purpose of this guidance is to inform States of the freight planning process they must undertake to qualify for the freight prioritization provisions of Section 1116.

II. Policy

The U.S. Department of Transportation strongly encourages all States to develop State Freight Plans. The Department believes that freight transportation, because its effects are often regional or national in scope, and includes freight providers that own and operate private infrastructure, has often been more difficult for States to incorporate into their planning process than has passenger transportation, and that accordingly infrastructure investments and other State policy initiatives related to freight transportation have often received less funding and attention than passenger-related initiatives. Because freight transportation is critical to the economic vitality of the United States, renewed attention to safe and efficient freight transportation can have a positive effect on the economic growth of the United States.

State Freight Plans can identify freight transportation facilities that are critical to each State's economic growth and give appropriate priority to investments in such facilities. In doing so, such Plans can enhance economic growth at both the State and National level, thus enhancing the Nation's economic competitiveness. State Freight Plans can also help to guide investments and other policies that will help to achieve the Department's other strategic goals, including safety, state of good repair, livability, and environmental sustainability. State Freight Plans can also identify freight transportation facilities that are critical to export movements and, by directing resources toward improving those facilities, assist the United States in meeting the goals of the President's National Export Initiative.

The State Freight Plan may be developed separate from or incorporated into the statewide strategic long-range transportation plan required by section 135 of title 23, United States Code. If the State Freight Plan is separate from the statewide strategic long-range transportation plan, each plan should show how the findings of the State Freight Plan are incorporated into the

statewide strategic long-range transportation plan. If the two plans are combined, the statewide strategic long-range transportation plan should include a separate section focused on freight transportation, and must include the elements specified in section 1118. Other State transportation plans, such as State Rail Plans, are required by statute to be coordinated with section 135 of title 23, and as a consequence the freight component of those plans should be incorporated into the State Freight Plan to ensure a comprehensive and system-wide planning approach.

The Department also strongly encourages all States to establish State Freight Advisory Committees. Such Advisory Committees are an important part of the process needed to develop a thorough State Freight Plan. Bringing together the perspectives and knowledge of public and private partners, including shippers, carriers, and infrastructure owners and operators, is important to developing a quality State Freight Plan.

The Department will be developing a multimodal National Freight Strategic Plan in accordance with the requirements of Section 1115 of MAP-21, and intends to rely significantly on the freight plans prepared by the States.

III. Funding

Authorization level under MAP-21: There is no formula or discretionary funding specifically associated with State Freight Plans or State Freight Advisory Committees.

States may use funding allocated under the Surface Transportation Program (23 U.S.C. 133) for developing State Freight Plans, as well as funding under the State Planning and Research Program (23 U.S.C. 505). They may also use carryover balances from National Highway System funds authorized under SAFETEA-LU (23 U.S.C. 103(b)(6)(E) as in effect on the day before enactment of MAP-21) that can be used for transportation planning in accordance with 23 U.S.C. 134 and 135 (23 U.S.C. 103 was amended by MAP-21 section 1104, which eliminated the National Highway System Program under section 103, and hence eliminated the funding for planning under section 103 as amended).

IV. Contents of State Freight Plans

Section 1118 of MAP-21 requires that a State Freight Plan developed pursuant to Section 1118 include, at a minimum, the following elements:

- An identification of significant freight system trends, needs, and issues with respect to the State;

- A description of the freight policies, strategies, and performance measures that will guide the freight-related transportation investment decisions of the State;

- A description of how the plan will improve the ability of the State to meet the national freight goals established under section 167 of title 23, United States Code;

- Evidence of consideration of innovative technologies and operational strategies, including intelligent transportation systems, that improve the safety and efficiency of freight movement;

- In the case of routes on which travel by heavy vehicles (including mining, agricultural, energy cargo or equipment, and timber vehicles) is projected to substantially deteriorate the condition of roadways, a description of improvements that may be required to reduce or impede the deterioration; and

- An inventory of facilities with freight mobility issues, such as truck bottlenecks, within the State, and a description of the strategies the State is employing to address those freight mobility issues.

In addition to these minimum elements required by section 1118, the Department has provided additional recommended elements based on what States have found useful to include in freight plans that have already been prepared, as well as on consistency with the requirements for the National Freight Strategic Plan, found in 23 U.S.C. 167(f).

State Freight Plans may be organized in any structure that works best for individual States, as long as they cover the required elements; however, in order to aid States in addressing the required criteria, and to facilitate the incorporation of analysis from the State Freight Plans into the National Freight Strategic Plan, as well as to aid in conceptualizing the detailed issues surrounding robust freight planning, DOT is suggesting the following structure as a recommended model for states to follow.

1. Strategic Goals

As specified in section 1118, a State Freight Plan must include a description of how the plan will improve the ability of the State to meet the national freight goals established under 23 U.S.C. 167. The following is a summary of the goals of the National Freight Policy established in 23 U.S.C. 167:

- Improving the contribution of the freight transportation system to economic efficiency, productivity, and competitiveness;

- Reducing congestion on the freight transportation system;

- Improving the safety, security, and resilience of the freight transportation system;

- Improving the state of good repair of the freight transportation system;

- Using advanced technology, performance management, innovation, competition, and accountability in operating and maintaining the freight transportation system;

- Reducing adverse environmental and community impacts of the freight transportation system.

The Department recommends that each State Freight Plan also include a discussion of the State's strategic goals for freight transportation. These goals would include the goals of the National Freight Policy summarized above, but States may also add other strategic goals. The Department recommends that State Freight Plans indicate which goals are most important to the State.

2. The Economic Context of Freight Transportation Planning

The Department recommends that each State Freight Plan include a discussion of the role that freight transportation plays in the State's overall economy. This section would identify what industries are most important to the State, and what supply chains (including the transportation modes that support them) are critical to the State's industries. In particular, it would indicate what supply chains involving the State are important to exports, whether the exports of that State or of other States.

3. Freight Policies, Strategies, and Institutions

As specified in section 1118, a State Freight Plan must include a discussion of the State's freight policies and strategies that will guide the freight-related transportation investment decisions of the State. The Department recommends that this section also discuss how these freight policies and strategies will guide not just freight-related transportation investment decisions of the State, but also the broader freight improvement strategy of the State, including operational strategies and policy changes. The Department recommends that this discussion also:

- Include the State's grant and loan programs that are available to pay for freight-related transportation infrastructure;

- Identify the State's freight-related institutions, including transportation-related infrastructure owners and regulatory authorities, such as the State

DOT, port authorities, toll roads, and bridge and tunnel authorities;

- Explain the governance structures and funding mechanisms for such authorities (e.g., whether the authorities are controlled by the governor or are independent, and whether the authority has a dedicated source of revenue);

- Identify private transportation infrastructure owners, such as railroads, terminals, pipelines, and freight transfer facilities;

- Identify statutory and constitutional constraints on freight-related investments and policies, such as prohibitions on spending State funds for certain kinds of freight infrastructure;

- Discuss regional freight planning activities in which the State participates, such as planning for key multi-state freight corridors, multi-state metropolitan areas, or for other regional groups of States; and

- Set out the State's priorities in freight transportation infrastructure development.

4. State Freight Transportation Assets

As specified in section 1118, a State Freight Plan must include an inventory of facilities with freight mobility issues. The Department recommends that this inventory also include a complete inventory of the State's freight transportation assets. This would include a description of the State's transportation infrastructure in all freight-carrying modes, the warehousing and intermodal facilities located in the State, and the freight gateways and corridors that are located in or that pass through the State. MAP-21 places particular emphasis on transportation infrastructure that is used to serve areas of the State that are significant for energy development, mining, agriculture, and timber production, and the Department recommends that the State Freight Plan inventory note particularly routes that are used to move equipment for these productive activities into those areas and for moving the output of those productive activities out of those areas.

5. The Conditions and Performance of the State's Freight Transportation System

As specified in section 1118, a State Freight Plan must include the performance measures that will guide the freight-related transportation investment decisions of the State. The Department recommends that this discussion also include an analysis of the conditions and performance of the State's freight transportation system. This analysis would include the identification of bottlenecks in the

freight transportation system that cause delays and unreliability in freight movements, as well as other specific locations that are in a poor state of good repair, create safety hazards, or create other performance problems. The National Freight Strategic Plan also is required to include an analysis of the conditions and performance of the national freight system, and when those measures of freight conditions and performance are established, the Department recommends that State Freight Plans include those measures. Until those measures are established, however, the Department recommends that States use the measures of condition and performance that they consider to be most reasonable and appropriate. In general, the Department recommends that measures of conditions and performance reflect the State's freight transportation goals—for each goal, there would be at least one measure of condition or performance that indicates how well the freight transportation system is doing in achieving that goal.

The Department recommends that States use measures of conditions of transportation infrastructure that reflect the quality of service that this infrastructure provides to users of that infrastructure and to the general public. Similarly, measures of the performance of the freight transportation system would reflect the quality of freight service provided to freight shippers and the impact of the freight transportation system on the general public. Measures of conditions and performance would reflect outcomes that are directly important to the system's users and to the general public (for example, reductions in crashes, fatalities, and injuries; reduced delay and congestion; and reduced vehicle operating costs); The Department recommends that States try to avoid using measures that are not of direct importance to users and the general public (for example, miles of track or number of bridges inspected each year).

6. Freight Forecast

Consistent with one of the required elements of the National Freight Strategic Plan, which must be developed in consultation with the States, the Department recommends that State Freight Plans include a 20-year forecast of freight transportation demands, broken down by mode of transportation and commodity classification, and showing demands for transportation of freight coming into the State, outbound from the State, passing through the State between outside origin and destination points, and moving

intrastate between origin and destination points within the State. The freight forecast could draw upon the forecast prepared by the Federal Highway Administration's (FHWA) Office of Freight Management and Operations and on the Federal Aviation Administration's national and airport-level forecasts of air cargo. The FHWA forecast includes projected tonnage for each mode—truck, rail, air (air and truck), water, and pipeline.

7. Overview of Trends, Needs, and Issues

As specified in section 1118, a State Freight Plan must identify significant freight system trends, needs, and issues with respect to the State. The Department recommends that this discussion also include how emerging trends make those needs and issues of greater significance, or how these trends affect how those needs and issues can be addressed.

8. Strengths and Problems of the State's Freight Transportation System

The Department recommends that a State Freight Plan include an analysis of the strengths of the State's freight system that it wishes to preserve and the problems that it wishes to solve. This analysis would show what the strengths of the State's freight system are that the State wishes to build upon; it would also show in what respects the State's freight system does not meet the State's goals, and indicate which problems are most important for the State to address. Some of these might include problems that the State expects to develop in the future as a result of increasing demand for freight transportation or other trends that the State is anticipating.

9. The State's Decision-Making Process

The Department recommends that a State Freight Plan include a discussion of the State's decision-making process on freight transportation improvements, including how the State conducted outreach to stakeholders and the public and how the State prioritized the various strategies, projects, and policy changes it considered. This discussion would show how the State coordinated improvements to different modes of transportation in order to achieve its goals in the most cost-effective way. It would also discuss ways in which the State coordinated with other States in regional freight planning efforts, and with metropolitan areas within the State that have done freight planning.

The Department encourages States to conduct economic analysis as part of the State Freight Plan, including analyses of benefits and costs of various

improvements that they are considering. If economic analysis has been conducted, the results of that analysis should be reported in this portion of the State Freight Plan. The discussion would show how the State compared alternative approaches to achieving the same goal. As specified in section 1118, the discussion must also show evidence of consideration of operational strategies (such as congestion pricing) or innovative technologies (such as use of intelligent transportation systems (ITS)) that improve the safety and efficiency of freight movement. If an economic analysis is provided, it would be particularly useful to estimate benefits and costs of each alternative considered.

10. The State's Freight Improvement Strategy

As specified in section 1118, a State Freight Plan must include a description of the strategies the State is employing to address freight mobility issues. The Department recommends that this description also include a presentation of the State's complete freight improvement strategy, with different improvements ranked in order of priority (or grouped into higher and lower priority groups). This presentation of the State's freight improvement strategy would include an analysis of how each improvement will advance the State's strategic goals, relating to:

- Capital investments;
- Operational improvements, such as congestion pricing and travel demand management;
- Policy changes, including performance management, competition, and accountability initiatives; and
- Expanded use of ITS and other innovative technologies.

The strategy would also include:

- An analysis of how proposed improvements will affect specific supply chains and industries that have been identified as important to the State in Section 2;
- Because MAP-21 places particular emphasis on infrastructure that is used for transporting mining, agricultural, energy, and timber equipment and products, a discussion of how those freight transportation routes would be affected (and in particular how the strategy would impede the deterioration in the condition of infrastructure on those routes);
- An analysis of the improvements in outcomes that are expected to result from the proposed freight improvements;
- A discussion of how the freight plan relates to other transportation

plans, such as a state rail plan, a long-range statewide transportation plan, or a metropolitan area freight plan; and A discussion of how the State's Freight Improvement Strategy coordinates with plans of other adjacent States, including groups of States that work together to plan for freight transportation along key multi-state freight corridors, in multi-state metropolitan areas, or through other regional groupings.

11. Implementation Plan

Finally, the Department recommends that a State Freight Plan include a comprehensive implementation plan, showing both short-term and long-term strategies, and including an approximate time schedule for each proposed freight improvement. This implementation plan would include an analysis of which capital improvements have the potential to generate a revenue stream, and hence which projects have the potential to be funded with loans (repaid from the revenue stream) rather than solely through grants or general funds. The Plan would include a funding plan, showing how each project will be funded, including those funded by grants, loans, and public-private partnerships. The Plan would discuss the State's proposed partnerships with private infrastructure owners, such as railroads, terminal operators, and pipeline companies. Finally, the Plan would discuss how the State proposes to work with adjacent States on projects that cross State lines, or on freight corridors that cross State lines (even if the project itself is all in one State).

V. The State Freight Planning Process

The Department recommends that States use a collaborative process for freight planning that involves all of the relevant stakeholders affected by the freight transportation system. These stakeholders would include owners of freight transportation infrastructure (both public and private); carriers operating on publicly-owned freight infrastructure; shippers and freight forwarders; representatives of employees of these stakeholders; State, local, and tribal governments; and the general public. Stakeholders might be domiciled both inside the State and outside of the State.

States are strongly encouraged to establish State Freight Advisory Committees to facilitate this collaborative process. As specified in section 1117 of MAP-21, State Freight Advisory Committees should include representatives of a cross-section of public and private sector experts and stakeholders. These might include representatives of:

- The transportation department of the State;
- Metropolitan planning organizations, councils of government, regional councils, and other regional and planning organizations;
- Local and tribal governments;
- Independent transportation authorities, such as seaport and airport authorities, toll highway authorities, and bridge and tunnel authorities;
- Private infrastructure owners, such as railroads and pipelines;
- Carriers, including carriers operating on their own infrastructure and carriers operating on publicly-owned infrastructure;
- Shippers and freight forwarders;
- Freight-related associations;
- Organizations representing the freight industry workforce;
- Environmental, safety, and community organizations; and
- Independent transportation experts, including academic specialists and consultants.

State Freight Advisory Committees should be charged with

- Advising the State on freight-related priorities, issues, projects, and funding needs;
- Serving as a forum for discussion of State decisions affecting freight transportation;
- Communicating and coordinating regional priorities with other organizations;
- Promoting the sharing of information between the private and public sectors on freight issues; and
- Participating in the development of the State's Freight Plan.

VI. Data and Analytical Resources for State Freight Planning

The modal administrations of the U.S. Department of Transportation and other departments in the U.S. Government can provide a wide range of data and analysis to assist States in the freight planning process. The following is a series of links to internet Web sites that provide useful data and analysis resources:

General Data and Analysis Sources on Freight

VII. Request for Comments

DOT invites interested parties to submit comments on any aspect of the Department's implementation of MAP-21 requirements for State Freight Plans or State Freight Advisory Committees. The Department will consider these comments as it continues to implement the freight provisions of the law. The instructions for submitting comments can be found in the Addresses section above. Late-filed comments will be considered to the extent practicable.

Issued in Washington, DC, on October 5, 2012.

Ray LaHood,
Secretary.

BILLING CODE P

DEPARTMENT OF TRANSPORTATION

Federal Motor Carrier Safety Administration

Sunshine Act Meetings; Unified Carrier Registration Plan Board of Directors

AGENCY: Federal Motor Carrier Safety Administration (FMCSA), DOT.

ACTION: Notice of Unified Carrier Registration Plan Board of Directors Meeting.

TIME AND DATE: The meeting will be held on October 25, 2012, from 12:00 noon to 3:00 p.m., Eastern Standard Time.

PLACE: This meeting will be open to the public via conference call. Any interested person may call 1-877-820-7831, passcode, 908048 to listen and participate in this meeting.

STATUS: Open to the public.

MATTERS TO BE CONSIDERED: The Unified Carrier Registration Plan Board of Directors (the Board) will continue its work in developing and implementing the Unified Carrier Registration Plan and Agreement and to that end, may consider matters properly before the Board.

FOR FURTHER INFORMATION CONTACT: Mr. Avelino Gutierrez, Chair, Unified Carrier Registration Board of Directors at (505) 827-4565.

Issued on: September 21, 2012.

Larry W. Minor,

Associate Administrator, Office of Policy,
Federal Motor Carrier Safety Administration.

BILLING CODE 4910-EX-P

DEPARTMENT OF TRANSPORTATION

Surface Transportation Board

[Docket Nos. NOR 38302S and NOR 38376S]

United States Department of Energy and United States Department of Defense v. Baltimore & Ohio Railroad Company, et al. and Aberdeen & Rockfish Railroad Company, et al.

AGENCY: Surface Transportation Board, DOT.

ACTION: Notice of Proposed Settlement Agreement, Issuance of Procedural Schedule.

SUMMARY: On September 4, 2012, United States Department of Energy and the United States Department of Defense (the Government) and BNSF Railway Company (BNSF) (collectively Movants), filed a motion requesting approval of an agreement that would settle these rate reasonableness disputes as between them only. The Board is adopting a procedural schedule for filing comments and replies addressing their proposed settlement agreement. (As detailed below, these proceedings involve disputes among a number of different entities, including other railroad carriers besides BNSF. This settlement applies only to the parties submitting the instant agreement and does not resolve these proceedings in their entirety.)

DATES: Comments are due by November 29, 2012. Reply comments are due by December 31, 2012.

ADDRESSES: Comments and replies may be submitted either via the Board's e-filing format or in the traditional paper format. Any person using e-filing should attach a document and otherwise comply with the instructions at the E-FILING link on the Board's Web site, at <http://www.stb.dot.gov>. Any person submitting a filing in the traditional paper format should send an original and 10 copies to: Surface Transportation Board, Attn: Docket No. NOR 38302S, et al., 395 E Street SW., Washington, DC 20423-0001. Copies of written comments and replies will be available for viewing and self-copying at the Board's Public Docket Room, Room 131, and will be posted to the Board's Web site. In addition, send one copy of comments to each of the following: (1) Stephen C. Skubel, Room 6H087, U.S. Department of Energy, 1000 Independence Ave. SW., Washington, DC 20585; (2) Terrance A. Spann, U.S. Department of Defense, 9275 Gunston Road, Suite 1300, Fort Belvoir, VA 22060; and (3) Jill K. Mulligan, BNSF Railway Company, 2500 Lou Menk Drive, AOB-3, Fort Worth, TX 76131.

FOR FURTHER INFORMATION CONTACT: Marc Lerner, (202) 245-0390.

[Assistance for the hearing impaired is available through the Federal Information Relay Service (FIRS) at: 1-800-877-8339.]

SUPPLEMENTARY INFORMATION: In March 1981, the Government filed these complaints against 21 major railroads (the Railroad Defendants) under section 229 of the Staggers Rail Act of 1980, Public Law 96-448, 94 Stat. 1895. The Government sought reparations and a rate prescription relating to the nationwide movement of spent nuclear fuel, other high level radioactive wastes,

and the empty containers (casks) and buffer and escort cars used for their movement (radioactive materials). In 1986, the Board's predecessor, the Interstate Commerce Commission (ICC), found that the Railroad Defendants were engaging in an unreasonable practice, imposing substantial and unwarranted cost additives—above and beyond the regular train service rates—in an effort to avoid transporting these radioactive materials. The ICC canceled the existing rates and cost additives, prescribed new rates, and awarded reparations. See *Commonwealth Edison Co. v. Aberdeen & Rockfish R.R.*, 2 I.C.C.2d 642 (1986). The United States Court of Appeals for the D.C. Circuit set aside and remanded the decision. See *Union Pacific R.R. v. ICC*, 867 F.2d 646 (D.C. Cir. 1989). On remand, the ICC ruled that the movement of these radioactive materials for reprocessing was subject to the rate cap on recyclables set out in former 49 U.S.C. 10731(e) and directed the parties to file revenue-to-variable cost (R/VC) evidence to resolve the remaining reparations and rate prescription issues. See *United States Department of Energy v. Baltimore & Ohio R.R.*, 10 I.C.C.2d 112 (1994). While judicial review was pending, Congress enacted the ICC Termination Act of 1995, Public Law 104-88, 109 Stat. 803, which repealed § 10731 in its entirety and directed that all proceedings pending under the repealed section be terminated.

The Railroad Defendants petitioned the Board to dismiss the complaints in 1996, and, in 1997, they invited the Government to explore the possibility of settling the complaints. Discussions commenced on a nationwide settlement covering all of the Railroad Defendants that might carry radioactive materials. The Government subsequently chose to negotiate only with Union Pacific Railroad Company (UP), the destination carrier for most of the movements of radioactive materials that were to be covered by the nationwide settlement, after the parties concluded that there were potential antitrust problems in negotiating with the Railroad Defendants as a group. On September 15, 2004, the Government and UP filed a motion seeking approval under 49 U.S.C. 10704 of a settlement agreement (the UP Agreement) they had negotiated to resolve these complaints as between them only. The Board, in a decision served in these proceedings on August 2, 2005: (1) Approved the UP Agreement; (2) dismissed UP as a party to these proceedings; (3) relieved UP of any obligation to participate in these or related proceedings involving claims against connecting railroad defendants

(except that UP remained obligated to respond to the Board's subpoena authority); (4) continued to hold these proceedings in abeyance; and (5) directed the Government to file quarterly reports on the progress of future settlement negotiations with the remaining Railroad Defendants.

Movants jointly request that the Board approve the proposed agreement they have negotiated (the BNSF Agreement) to settle these rate reasonableness complaints as between them only and that the requested approval be without prejudice to the Governments' complaints and other actions insofar as they apply to the remaining Railroad Defendants involved in these proceedings. The UP Agreement, according to Movants, served as a model for their Agreement.

The BNSF Agreement, which Movants describe as flexible, comprehensive, long-term, and system-wide:

(1) Provides for a term of 25 years commencing on the effective date of the Board's approval of the BNSF Agreement and continues in effect for additional 5-year periods, subject to a 1-year termination notice requirement;

(2) Applies broadly to the nationwide movement on BNSF's rail lines of irradiated spent fuel, parts, and constituents; spent fuel moving from foreign countries to the United States for disposal; empty casks; radioactive wastes; and buffer and escort cars. Excluded from the BNSF Agreement are local movements originating and terminating in the East, which are covered by the rate basis prescribed in *Trainload Rates on Radioactive Materials, E. Railroads*, 362 I.C.C. 756 (1980) and 364 I.C.C. 981 (1981) (*Eastern Prescription*);¹

(3) Establishes that the movement of these commodities constitutes common carrier service; addresses the elements of service required of BNSF; adopts guidelines for safe handling and security; obligates BNSF to provide, as needed, "extra services" as described in the BNSF Agreement, at the rates agreed upon;

(4) Adopts a rate methodology to:

(a) apply to all future movements of these radioactive materials in common carrier service. The methodology adopts maximum R/VC markups (not to exceed to 1.80, 2.50, or 3.51 times the shipment

cost, depending on commodity type) of BNSF's most current system-average variable unit costs computed under the Board's Uniform Rail Costing System. Movants state that the proposed rate methodology is consistent with, but broadens, the rate prescription adopted in *Eastern Prescription*; and

(b) compensate BNSF for "extra services" and dedicated train service, when requested by the Government, and procedures to calculate "equitable compensation" for emergency related costs that BNSF may incur.

(5) Adopts a procedure to update rates and "extra services" annually to reflect changes in BNSF's system-average unit costs;

(6) Extinguishes BNSF's liability (and that of its predecessors and subsidiaries) for reparations in all matters arising out of these proceedings; and

(7) Adopts Alternative Dispute Resolution procedures with final recourse to the Board and mechanisms to renegotiate portions of the BNSF Agreement in a limited number of circumstances or if changed circumstances make further adherence to the terms of the BNSF Agreement "grossly inequitable" to either party.

Movants request that the Board: (1) Prescribe the rate methodology and maximum R/VC ratios that have been agreed to for the radioactive materials and rail services that are the subject of the BNSF Agreement; (2) dismiss BNSF as a defendant in these proceedings, preserve the liability of connecting carriers for reparations as to their portion of the charges assessed on through routes that include(d) BNSF, and not require BNSF to participate in rate proceedings initiated by the Government against remaining Railroad Defendants (except that BNSF will remain obligated to respond to the Board's subpoena authority); (3) retain jurisdiction over these proceedings and continue to hold them in abeyance pending further settlement negotiations; and (4) publish notice of their motion and the proposed BNSF Agreement in the **Federal Register** and adopt a procedural schedule for the filing of comments and replies.

The Board is granting Movants' request in part. Notice of their motion and the proposed BNSF Agreement is being published in the **Federal Register** and a procedural schedule is being adopted for the filing of comments and replies responsive to Movant's remaining requests.

Decided: October 10, 2012.

By the Board, Rachel D. Campbell, Director, Office of Proceedings.

Jeffrey Herzig,

Clearance Clerk.

[FR Doc. 2012-25275 Filed 10-12-12; 8:45 am]

BILLING CODE 4915-01-P

DEPARTMENT OF THE TREASURY

Fiscal Service

Privacy Act of 1974, as Amended; System of Records Notice

AGENCY: Financial Management Service, Fiscal Service, Treasury.

ACTION: Notice of systems of records.

SUMMARY: In accordance with the requirements of the Privacy Act of 1974, as amended, 5 U.S.C. 552a, Financial Management Service is publishing its inventory of Privacy Act systems of records.

SUPPLEMENTARY INFORMATION: Pursuant to the Privacy Act of 1974 (5 U.S.C. 552a) and the Office of Management and Budget Circular No. A-130, Financial Management Service (FMS) has completed a review of its Privacy Act systems of records notices to identify minor changes to those notices. The systems of records were last published in their entirety on May 15, 2009, at 74 FR 23006-23021.

The following system of records was added to FMS's inventory of Privacy Act notices since May 9, 2000:

FMS .008—Mailing List Records—Treasury/FMS, published on December 16, 2010, at 75 FR 78802.

On August 17, 2011, FMS published a notice in the **Federal Register** that amended the scope of the categories of individuals covered by the system and the categories of records in the system. 76 FR 51123.

On July 19, 2011, FMS published a notice in the **Federal Register** that amended system of record FMS .006 (Direct Deposit Enrollment Records) to modify the scope of the categories of records in the system, update one routine use and update the record source categories. 76 FR 42765. On February 15, 2012, FMS published a notice in the **Federal Register** that: (a) Combined two pre-existing systems of records (FMS .002—Payment Issue Records for Regular Recurring Benefit Payments and FMS .016—Payment Records for Other Than Regular Recurring Benefit Payments) into one system of record. The resulting system of record is FMS .002 (Payment Records—Financial Management Service). 77 FR 8947. The same **Federal Register** notice also modified routine

¹ Maximum R/VC ratios were prescribed on a commodity-by-commodity basis at various minimum weights as local and proportional rate factors. The prescription was applicable within the East, but primarily was to be used for through movements destined beyond the lines of the rail carriers covered by the prescription. The ICC's 1980 decision, 362 I.C.C. 756, was affirmed in *Consolidated Rail Corp. v. ICC*, 646 F.2d 642 (D.C. Cir. 1981), cert. denied, 454 U.S. 1047 (1981).

use FMS .014 (Debt Collection Operations System) to reflect updated sources of information, routine uses and other matters.

The systems notices are reprinted in their entirety following the Table of Contents.

Systems Covered by This Notice

This notice covers all systems of records adopted by the FMS as of [enter date of FR publication]. The systems notices are reprinted in their entirety following the Table of Contents.

Dated: October 9, 2012.

Melissa Hartman,

Deputy Assistant Secretary for Privacy, Transparency, and Records, Financial Management Service (FMS).

Table of Contents

FMS .001—Administrative Records.
 FMS .002—Payment Records—Treasury/FMS.
 FMS .003—Claims and Inquiry Records on Treasury Checks, and International Claimants.
 FMS .004—Education and Training Records.
 FMS .005—FMS Personnel Records.
 FMS .006—Direct Deposit Enrollment Records.
 FMS .007—Payroll and Pay Administration.
 FMS .008—Mailing List Records—Treasury/FMS.
 FMS .010—Records of Accountable Officers' Authority With Treasury.
 FMS .012—Pre-complaint Counseling and Complaint Activities.
 FMS .013—Gifts to the United States.
 FMS .014—Debt Collection Operations System.
 FMS .017—Collections Records.

TREASURY/FMS .001

SYSTEM NAME:

Administrative Records—Treasury/FMS.

SYSTEM LOCATION:

FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Room 144, Hyattsville, MD 20782. Also, please see Appendix I.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

FMS personnel.

CATEGORIES OF RECORDS IN THE SYSTEM:

(1) Motor Vehicle Accident Reports.
 (2) Parking Permits. (3) Distribution lists of individuals requesting various Treasury publications. (4) Treasury Credentials.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to:

- (1) Disclose to GSA for driver's permits, parking permits, accident reports, and credentials;
- (2) Disclose to GPO or FMS contractors for servicing the public on Treasury publications and managing subscriptions to the appropriate publications;
- (3) Disclose to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by name and Treasury publication.

SAFEGUARDS:

Locked containers.
 Administrative Procedure—names are only given to those who control the listing.

RETENTION AND DISPOSAL:

- (1) Distribution List [printed materials]—destroyed after appropriate revision of mailing list or after three months, whichever is sooner.
- (2) Motor Vehicle Accident Reports—destroyed six years after the end of the fiscal year during which the records were created.
- (3) Treasury Credentials—destroyed in accordance with National Archives and Records Administration (NARA) General Records Schedule 11, item 4.
- (4) Parking Permits—destroyed two years after the end of the fiscal year during which the records were created.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Facilities Management Division, FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Room 144, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be sent to the Disclosure Officer, FMS, U.S. Department of the Treasury, Liberty Center Building, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether the Service maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer at the address shown above. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Financial Management Service personnel.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Appendix I to FMS .001

Motor Vehicle Accident Reports: Prince George's Metro Center II, 3700 East-West Highway, Room 127, Hyattsville, MD 20782.

Parking Permits: 1. Prince George's Metro Center II, 3700 East-West Highway, Room 127, Hyattsville, MD 20782.

2. Liberty Center Building, 401 14th Street SW., Room 118, Washington, DC 20227. Distribution List: Prince George's Metro Center II, 3700 East-West Highway, Hyattsville, MD 20782.

Treasury Credentials: Prince George's Metro Center II, 3700 East-West Highway, Room 158-B, Hyattsville, MD 20782.

TREASURY/FMS .002

SYSTEM NAME:

Payment Records—Treasury/FMS.

SYSTEM LOCATION:

The FMS, U.S. Department of the Treasury, Washington, DC 20227. Records are also located throughout the United States at FMS operations centers, Federal Records Centers, Federal Reserve Banks acting as Treasury's fiscal agents, and financial institutions acting as Treasury's financial agents. Additional addresses may be obtained from the system managers.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who are the intended or actual recipients of payments disbursed by the United States Government.

CATEGORIES OF RECORDS IN THE SYSTEM:

Payment records showing a payee's name; Social Security number, employer identification number, or other agency identification or account number; physical and/or electronic mailing address; telephone numbers; payment amount; date of issuance; trace number or other payment identification number, such as Treasury check number and symbol; financial institution information, including the routing number of his or her financial institution and the payee's account number at the financial institution; and vendor contract and/or purchase order number.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 31 U.S.C. 3325, and 31 U.S.C. 3321 note; Executive Order 6166, dated June 10, 1933.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to:

- (1) Disclose to the banking industry for payment verification;
- (2) Disclose to Federal investigative agencies, Departments and agencies for whom payments are made, and payees;
- (3) Disclose pertinent information to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violations of, or for enforcing or implementing, a statute, rule, regulation, order, or license, where the disclosing agency becomes aware of an indication of a violation or potential violation of civil or criminal law or regulation;
- (4) Disclose information to a Federal, State, or local agency maintaining civil, criminal or other relevant enforcement information or other pertinent information, which has requested information relevant or necessary to the requesting agency's or the bureau's hiring or retention of an individual, or

issuance of a security clearance, license, contract, grant, or other benefit;

(5) Disclose information to a court, magistrate, mediator, or administrative tribunal in the course of presenting evidence; to counsel, experts, or witnesses in the course of civil discovery, litigation, or settlement negotiations, in response to a subpoena, or in connection with criminal law proceedings;

(6) Disclose information to foreign governments in accordance with formal or informal international agreements;

(7) Provide information to a congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(8) Provide information to the news media in accordance with guidelines contained in 28 CFR 50.2 which relate to an agency's functions relating to civil and criminal proceedings;

(9) Provide information to unions recognized as exclusive bargaining representatives under the Civil Service Reform Act of 1978, 5 U.S.C. 7111 and 7114;

(10) Provide information to third parties during the course of an investigation to the extent necessary to obtain information pertinent to the investigation;

(11) Disclose information concerning delinquent debtors to Federal creditor agencies, their employees, or their agents for the purpose of facilitating or conducting Federal administrative offset, Federal tax refund offset, Federal salary offset, or for any other authorized debt collection purpose;

(12) Disclose information to any State, Territory or Commonwealth of the United States, or the District of Columbia to assist in the collection of State, Commonwealth, Territory or District of Columbia claims pursuant to a reciprocal agreement between FMS and the State, Commonwealth, Territory or the District of Columbia, or pursuant to Federal law that authorizes the offset of Federal payments to collect delinquent obligations owed to the State, Commonwealth, Territory, or the District of Columbia;

(13) Disclose to the Defense Manpower Data Center and the United States Postal Service and other Federal agencies through authorized computer matching programs for the purpose of identifying and locating individuals who are delinquent in their repayment of debts owed to the Department or other Federal agencies in order to collect those debts through salary offset and administrative offset, or by the use of other debt collection tools;

(14) Disclose information to a contractor of the FMS for the purpose of

performing routine payment processing services, subject to the same limitations applicable to FMS officers and employees under the Privacy Act;

(15) Disclose information to a fiscal or financial agent of the FMS, its employees, agents, and contractors, or to a contractor of the FMS, for the purpose of ensuring the efficient administration of payment processing services, subject to the same or equivalent limitations applicable to FMS officers and employees under the Privacy Act;

(16) Disclose information to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm; and

(17) Disclose information to (a) a Federal or state agency, its employees, agents (including contractors of its agents) or contractors; or, (b) a fiscal or financial agent designated by the FMS or other Department of the Treasury bureau or office, including employees, agents or contractors of such agent; or, (c) a contractor of the FMS, for the purpose of identifying, preventing, or recouping improper payments to an applicant for, or recipient of, Federal funds, including funds disbursed by a state in a state-administered, Federally funded program; disclosure may be made to conduct computerized comparisons for this purpose.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by name, social security number, employer identification number, agency-supplied identifier, date of payment, or trace

number or other payment identifying information, such as check number.

SAFEGUARDS:

All official access to the records is on a need-to-know basis, as authorized by a business line manager at FMS, or a fiscal or financial agent of the United States, consistent with agent authority granted by Treasury or FMS. Procedural and physical safeguards, such as personal accountability, audit logs, and specialized communications security, are utilized. Each user of computer systems containing records has individual passwords (as opposed to group passwords) or other unique, secure access authentication credentials for which he or she is responsible. Thus, a security manager can identify access to the records by user. Access to computerized records is limited, through use of access codes, encryption techniques, and/or other internal mechanisms, to those whose official duties require access. Storage facilities are secured by various means such as security guards, badge access, and locked doors with key entry.

RETENTION AND DISPOSAL:

FMS has submitted a records schedule to the NARA with a proposed retention period of seven years. Until NARA approves the proposed records schedule, disposal is not authorized.

SYSTEM MANAGER(S) AND ADDRESS:

Chief Disbursing Officer, FMS, 401 14th Street SW., Washington, DC 20227.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether the FMS maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer at the address shown above. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR, Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by Federal departments and agencies responsible for certifying, disbursing, and collecting Federal payments; Treasury or FMS-designated fiscal and financial agents of the United States that process payments and collections; and commercial database vendors. Each of these record sources may include information obtained from individuals.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .003

SYSTEM NAME:

Claims and Inquiry Records on Treasury Checks, and International Claimants—Treasury/FMS.

SYSTEM LOCATION:

FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Room 727D, Hyattsville, MD 20782.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

(1) Payees and holders of Treasury checks, (2) Claimants awarded benefits under the War Claims Act and the International Claims Settlement Act of 1949.

CATEGORIES OF RECORDS IN THE SYSTEM:

(1) Treasury check claim file: Treasury check, claim of payee with name and address, settlement action taken.
(2) Awards for claims for losses sustained by individuals.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; (1) For Treasury check claims—31 U.S.C. 71 with delegation of authority from Comptroller General of the United States; (2) International claims—50 U.S.C. 2012; 22 U.S.C. 1627, 1641, 1642.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

(1) Information is routinely disclosed to endorsers concerning checks for which there is liability, Federal agencies, State and local law enforcement agencies, General Accountability Office, Congressional offices and media assistance offices on behalf of payee claimants.
(2) International Claims—Information in files is used by claimants (awardees) and their representatives, Foreign Claims Settlement Commission, and

Congressmen. These records and information in the records may be used to:

(a) Disclose pertinent information to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violations of, or for enforcing or implementing, a statute, rule, regulation, order, or license, where the disclosing agency becomes aware of an indication of a violation or potential violation of civil or criminal law or regulation;

(b) Disclose information to a Federal, State, or local agency, maintaining civil, criminal or other relevant enforcement information or other pertinent information, which has requested information relevant to or necessary to the requesting agency's or the bureau's hiring or retention of an individual, or issuance of a security clearance, license, contract, grant, or other benefit;

(3) Disclose information to a court, magistrate, or administrative tribunal of competent jurisdiction;

(4) Disclose information to foreign governments in accordance with formal or informal international agreements;

(5) Provide information to a congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(6) Provide information to the news media in accordance with guidelines contained in 28 CFR 50.2 which relate to an agency's functions relating to civil and criminal proceedings;

(7) Provide information to unions recognized as exclusive bargaining representatives under the Civil Service Reform Act of 1978, 5 U.S.C. 7111 and 7114;

(8) Provide information to third parties during the course of an investigation to the extent necessary to obtain information pertinent to the investigation;

(9) Disclose information to the public when attempts by FMS to locate the claimant have been unsuccessful. This information is limited to the claimant's name and city and state of last known address, and the amount owed to the claimant. (This routine use does not apply to the Iran Claims Program or the Holocaust Survivors Claims Program or other claims programs that statutorily prohibit disclosure of claimant information); and

(10) Disclose information to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the

suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by:

- (1) Name of payee and check number and symbol;
- (2) Alpha cross-reference to case number; and
- (3) Name of claimant or alpha reference to claim number.

SAFEGUARDS:

- (1) Secured building.
- (2) Secured files in secured building.

RETENTION AND DISPOSAL:

Disposal of electronic Treasury check claims records is not authorized at this time.¹ Hardcopy international claims records are scheduled to be destroyed 10 years after the end of the fiscal year in which the case was closed.

SYSTEM MANAGER(S) AND ADDRESS:

Category 1: Director, Financial Processing Division, Prince George's Metro Center II, 3700 East-West Highway, Room 727D, Hyattsville, MD 20782. Category 2: Director, Funds Management Division, Prince George's Metro Center II, 3700 East-West Highway, Room 620D, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, Financial Management Service, 401 14th Street SW., Washington, DC 20227. All

¹ FMS has submitted a records schedule to the NARA with a proposed retention period of seven years for most electronic Treasury check claims records, and a proposed retention period of 20 years for certain trust-fund-related records. Until NARA approves the proposed records schedule, disposal is not authorized.

individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system managers will advise as to whether FMS maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to: Disclosure Officer, Financial Management Service, U.S. Department of the Treasury, 401 14th Street SW., Washington, DC 20227.

All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

- (1) Individual payees of Treasury checks, endorsers of Treasury checks, investigative agencies, contesting claimants.
- (2) Awards certified to Treasury for payment by Foreign Claims Settlement Commission.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .004

SYSTEM NAME:

Education and Training Records—Treasury/FMS.

SYSTEM LOCATION:

Washington, DC 20227; Financial Management Service, U.S. Department of the Treasury, 1990 K Street NW., Suite 300, Washington, DC 20006.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All Government employees (including separated employees, in certain cases) and other individuals who access and apply for FMS training services.

CATEGORIES OF RECORDS IN THE SYSTEM:

- (1) Personal Profile—Account Record;
- (2) Transcript Record;
- (3) Enrollment Status Record;
- (4) Job Skills Record;
- (5) Individual Development Plan Record;
- (6) Assessment Performance Results Record;
- (7) Managerial Approval/Disapproval Status Record;
- (8) Class Roster Record;

- (9) Certificate—Training Program Status Record;
- (10) Class Evaluation Record;
- (11) Payment Record;
- (12) Statistical Reports—retrievable by names: (a) Personnel Transcript Report, (b) Class Enrollment Report, (c) Class Payment/Billing Report, (d) Status of Training Report, (e) Ad hoc Training Report, and (f) Other similar files or registers.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 31 U.S.C. 321; 31 U.S.C. chapter 33; 31 U.S.C. 3720.

PURPOSE(S):

The purpose of this system is to maintain records about Government employees and other individuals who participate in FMS' education and training program. The information contained in the records will assist FMS in properly tracking individual training and accurately account for training revenue and expenditures generated through the FMS' training programs (for example, Learning Management System (LMS)). For FMS personnel, the records contained in FMS' training records will also assist managers' active participation in their employees' learning plans. FMS maintains the information necessary to ensure that FMS keeps accurate records related to classes, including a training participant's training and enrollment status, class completion information, transcripts and certificates of accomplishment. FMS also maintains the records to ensure that financial records pertaining to a training participant's payment for training fees are maintained accurately. FMS' training records will serve to report receipts to the appropriate Federal agency (currently the Treasury Department's Bureau of Public Debt) responsible for maintaining FMS' financial records for training. Finally, the information contained in the covered records will be used for collateral purposes related to the training processes, such as the collection of statistical information on training programs, development of computer systems, investigation of unauthorized or fraudulent activity related to submission of information to FMS for training program purposes and the collection of debts arising out of such activity.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information to:

- (1) Appropriate Federal, State, local or foreign agencies responsible for

investigating or prosecuting the violation of, or for enforcing or implementing, a statute, rule, regulation, order, or license;

(2) A court, magistrate, or administrative tribunal, in the course of presenting evidence, including disclosures to opposing counsel or witnesses, for the purpose of civil discovery, litigation, or settlement negotiations or in response to a subpoena, where relevant or potentially relevant to a proceeding, or in connection with criminal law proceedings;

(3) A congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(4) Federal agencies, financial institutions, and contractors for the purpose of performing financial management services, including, but not limited to, processing payments, investigating and rectifying possible erroneous reporting information, testing and enhancing related computer systems, creating and reviewing statistics to improve the quality of services provided, or conducting debt collection services;

(5) Federal agencies, their agents and contractors for the purposes of facilitating the collection of receipts, determining the acceptable method of collection, the accounting of such receipts, and the implementation of programs related to the receipts being collected as well as status of their personnel training, statistical training information;

(6) Financial institutions, including banks and credit unions, and credit card companies for the purpose of collections and/or investigating the accuracy of information required to complete transactions using electronic methods and for administrative purposes, such as resolving questions about a transaction;

(7) Unions recognized as exclusive bargaining representatives under the Civil Service Reform Act of 1978, 5 U.S.C. 7111 and 7114;

(8) Foreign governments in accordance with formal or informal international agreements and if they maintain proper administrative or financial controls related to the training activity;

(9) Third parties during the course of an investigation to the extent necessary to obtain information pertinent to the investigation;

(10) Federal agencies, their agents and contractors, credit bureaus, and employers of individuals who owe delinquent debt when the debt arises from the unauthorized use of electronic payment methods. The information will be used for the purpose of collecting

such debt through offset, administrative wage garnishment, referral to private collection agencies, litigation, reporting the debt to credit bureaus, or for any other authorized debt collection purpose;

(11) Representatives of the NARA who are conducting records management inspections under authority of 44 U.S.C. 2904 and 2906; and

(12) Appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Electronic training data can be retrieved by Class Name and/or Organization Name and Participant Name. Electronic financial data can be retrieved by Name, Organization and payment information (Credit Card, Form 182, DD Form 1556, for example).

SAFEGUARDS:

All hardcopy records are maintained in a secured building, secured room, and locked cabinets. FMS personnel access to training data is primarily for the purpose of using the training services or administering the LMS. For technical and administrative purposes, non-FMS personnel access is limited to contractors who are maintaining the LMS system in the normal performance of their duties and have completed non-disclosure statements and undergone security background checks consistent with their access in accordance with the existing contract.

RETENTION AND DISPOSAL:

Retention periods vary by record type, up to a maximum of 7 years after last training activity.

SYSTEM MANAGER AND ADDRESS:

Assistant Commissioner, Management, Human Resources Division, FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether the Service maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974, as amended, concerning procedures for gaining access to or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C, and appendix G, concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by: The individual on whom the record is maintained; the individual's employer, other governmental agency or educational institutions.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .005

SYSTEM NAME:

FMS Personnel Records—Treasury/FMS.

SYSTEM LOCATION:

FMS, U.S. Department of the Treasury, 401 14th Street SW., Washington, DC 20227; FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Hyattsville, MD 20782.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All Government employees (including separated employees, in certain cases) and applicants.

CATEGORIES OF RECORDS IN THE SYSTEM:

- (1) Locator Cards.
- (2) Incentive Awards Record.
- (3) Official Personnel Folder.
- (4) Personnel Roster.
- (5) Logs of SF-52's.
- (6) Correspondence File.
- (7) Position Listings.
- (8) Position Descriptions with Evaluation Statements.
- (9) Personnel Management Evaluation Survey Reports.
- (10) Request for Certification File.
- (11) Merit Promotion File.
- (12) Exit Interview File.
- (13) Performance File.
- (14) Statistical Reports—retrievable by names: (a) Personnel Status Report, (b) Ad Hoc Retiree Report, (c) Monthly EEO report, (d) Direct Hire Authority Report, (e) Registers Worked File, (f) Statements of Employment and Financial Interest, and (g) Other similar files or registers.
- (15) Training Course Nominations.
- (16) Evaluation of Training Program.
- (17) Tuition Assistance Files.
- (18) Senior Executive Service Development File.
- (19) Management Development File.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Executive Order 10561, dated September 13, 1954, Federal Personnel Manual, and Title 5 of U.S.C. Code.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to:

- (1) Disclose pertinent information to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violations of, or for enforcing or implementing, a statute, rule, regulation, order, or license, where the disclosing agency becomes aware of an indication of a violation or potential violation of civil or criminal law or regulation;
- (2) Disclose information to a Federal, State, or local agency, maintaining civil, criminal or other relevant enforcement information or other pertinent information, which has requested information relevant to or necessary to the requesting agency's or the bureau's hiring or retention of an individual, or issuance of a security clearance, license, contract, grant, or other benefit;
- (3) Disclose information to a court, magistrate, or administrative tribunal in the course of presenting evidence, including disclosures to opposing counsel or witnesses in the course of civil discovery, litigation, or settlement negotiations, in response to a subpoena, or in connection with criminal law proceedings;

(4) Disclose information to foreign governments in accordance with formal or informal international agreements;

(5) Provide information to a congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(6) Provide information to the news media in accordance with guidelines contained in 28 CFR 50.2 which relate to an agency's functions relating to civil and criminal proceedings;

(7) Provide information to unions recognized as exclusive bargaining representatives under the Civil Service Reform Act of 1978, 5 U.S.C. 7111 and 7114;

(8) Provide information to third parties during the course of an investigation to the extent necessary to obtain information pertinent to the investigation; and

(9) Disclose information to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Hardcopy/Electronic.

RETRIEVABILITY:

Alphabetically by name; also in some instances by organization, then Social Security number.

SAFEGUARDS:

Secured building, secured room, and locked cabinets. Non-FMS access is limited to investigators from OPM, etc., members of Fair Employment staff and Union officials.

RETENTION AND DISPOSAL:

Delete/destroy in accordance with NARA General Records Schedule 1.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Personnel Management Division, FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Room 115-F, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether the Service maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer at the address shown above. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Applicant Personnel Action Forms (SF-50), SF-171 (completed by applicant), Payroll Actions References, Educational Institutions, etc.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .006**SYSTEM NAME:**

Direct Deposit Enrollment Records—Treasury/FMS.

SYSTEM LOCATION:

Records are located at the Federal Reserve Bank, acting in its capacity as Treasury's fiscal agent, 2200 North Pearl Street, Dallas, TX 75201.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who enroll with the FMS to receive Federal payments from the Federal Government via an electronic funds transfer program known as "Direct Deposit."

CATEGORIES OF RECORDS IN THE SYSTEM:

The records may contain identifying information, such as an individual's name(s), social security number, home

address, home and work telephone number, and personal email address (home and work), and date of birth; about an individual's bank account(s) and other types of accounts to which payments are made, such as the individual's bank account number and the financial institution routing and transit number; information about an individual's payments received from the United States, including the type of payment received and the Federal agency responsible for authorizing the payment; information related to the cancellation or suspension of an individual's Direct Express(R) debit card² by FMS's financial agent; and information provided by an individual regarding a hardship due to a remote geographic location or about his or her inability to manage a bank account or prepaid debit card due to mental impairment.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 31 U.S.C. 321; 31 U.S.C. chapter 33; 31 U.S.C. 3332.

PURPOSE(S):

The purpose of this system is to maintain records about individuals who wish to enroll in the Direct Deposit program in order to receive Federal payments directly to a bank account or other similar type of account via electronic funds transfer, rather than by paper check. The records are used to process Direct Deposit enrollment applications that may be received directly by FMS, its fiscal agents, and/or contractors. The records are collected and maintained to guarantee that Direct Deposit enrollment applications are processed properly to ensure that a recipient's Federal payment will be disbursed to the correct account. Without the appropriate information, FMS, its fiscal agents and contractors, would not be able to process the Direct Deposit enrollment application as requested by the individual authorizing the Direct Deposit. The information will also be used for collateral purposes related to the processing of Direct Deposit enrollments, such as collection of statistical information on operations, development of computer systems, investigation of unauthorized or fraudulent activity, and the collection of debts arising out of such activity.

² Direct Express(R) is a registered service mark of the FMS, U.S. Department of the Treasury. The Direct Express(R) debit card is issued by FMS's financial agent, Comerica Bank.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information to:

(1) Appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violation of, or for enforcing or implementing, a statute, rule, regulation, order, or license, where the disclosing agency becomes aware of a potential violation of civil or criminal law or regulation;

(2) A court, magistrate, or administrative tribunal, in the course of presenting evidence, including disclosures to opposing counsel or witnesses, for the purpose of civil discovery, litigation, or settlement negotiations or in response to a subpoena, where relevant or potentially relevant to a proceeding, or in connection with criminal law proceedings;

(3) A congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(4) Fiscal agents, financial agents, financial institutions, and contractors for the purposes of (a) Processing Direct Deposit enrollment applications, including, but not limited to, processing Direct Deposit enrollment forms and implementing programs related to Direct Deposit; investigating and rectifying possible erroneous information; creating and reviewing statistics to improve the quality of services provided; conducting debt collection services for debts arising from Direct Deposit activities; or developing, testing and enhancing computer systems; and (b) processing waivers from the requirement to receive payments electronically, including, but not limited to, processing automatic waivers and applications for waivers, as well as implementing the waivers; investigating and rectifying possible erroneous information or fraud; creating and reviewing statistics to improve the quality of services provided; or developing, testing and enhancing computer systems.

(5) Federal agencies, their agents and contractors for the purposes of facilitating the processing of Direct Deposit enrollment applications and the implementation of programs related to Direct Deposit;

(6) Federal agencies, their agents and contractors, credit bureaus, and employers of individuals who owe delinquent debt for the purpose of garnishing wages, only when the debt arises from the unauthorized or improper use of the Direct Deposit program. The information will be used for the purpose of collecting such debt

through offset, administrative wage garnishment, referral to private collection agencies, litigation, reporting the debt to credit bureaus, or for any other authorized debt collection purpose;

(7) Financial institutions, including banks and credit unions, for the purpose of disbursing payments and/or investigating the accuracy of information required to complete transactions using Direct Deposit and for administrative purposes, such as resolving questions about a transaction;

(8) Representatives of the NARA who are conducting records management inspections under authority of 44 U.S.C. 2904 and 2906; and

(9) Appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Debt information concerning a government claim against a debtor when the debt arises from the unauthorized use of Direct Deposit is also furnished, in accordance with 5 U.S.C. 552a(b)(12) and 31 U.S.C. 3711(e), to consumer reporting agencies, as defined by the Fair Credit Reporting Act, 5 U.S.C. 1681(f), to encourage repayment of a delinquent debt.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records are retrieved by name, social security number, telephone number, transaction identification number, or other alpha/numeric identifying information.

SAFEGUARDS:

All official access to the system of records is on a need-to-know basis only, as authorized by a business line manager at FMS or FMS's fiscal agent. Procedural and physical safeguards, such as personal accountability, audit logs, and specialized communications security, are utilized. Each user of computer systems containing records has individual passwords (as opposed to group passwords) for which he or she is responsible. Thus, a security manager can identify access to the records by user. Access to computerized records is limited, through use of access codes, encryption techniques, and/or other internal mechanisms, to those whose official duties require access. Storage facilities are secured by various means such as security guards, badge access, and locked doors with key entry.

RETENTION AND DISPOSAL:

Electronic and paper records for enrollments and associated transactions will be retained for six (6) months or as otherwise required by statute or court order. Records in electronic media are electronically erased using industry-accepted techniques, and in accordance with applicable FMS policies regarding the retention and disposal of fiscal agency records. Paper records are destroyed in accordance with fiscal agency archive and disposal procedures and applicable FMS policies regarding the retention and disposal of fiscal agency records.

SYSTEM MANAGER(S) AND ADDRESS:

Assistant Commissioner, Payment Management, EFT Strategy Division, Financial Management Service, 401 14th Street SW., Washington, DC 20227.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974, as amended, shall be addressed to the Disclosure Officer, Financial Management Service, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the records requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974, as amended, concerning procedures for gaining access to or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1,

subpart C, and appendix G, concerning requirements of this Department with respect to the Privacy Act of 1974, as amended.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by the individual on whom the record is maintained (or by his or her authorized representative), other persons who electronically authorize payments from the Federal government, Federal agencies responsible for authorizing payments, Federal agencies responsible for disbursing payments, Treasury financial agents, and Treasury fiscal agents that process Direct Deposit enrollment applications, and contractors.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .007**SYSTEM NAME:**

Payroll and Pay Administration—Treasury/FMS.

SYSTEM LOCATION:

FMS, U.S. Department of the Treasury, Prince George's Metro Center II, 3700 East-West Highway, Room 133 and 101A, Hyattsville, MD 20782; and Room 120, Liberty Center Building, Washington, DC 20227.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

All employees of the Service and separated employees.

CATEGORIES OF RECORDS IN THE SYSTEM:

(1) Official Payroll Folder (a) Levy and Garnishment Records. (b) SF-1192—Savings Bond Authorization. (c) SF-1199A—Allotment of Pay to Savings Account. (d) Copies of SF-50—Notification of Personnel Action. (e) Withholding Tax Exemptions. (f) Copy of Health Benefit Designation. (g) Copy of Life Insurance Forms. (h) Payroll Change Slips. (i) Combined Federal Campaign Designations. (j) Copy of SF-1150. (2) Time and Attendance Reports (a) SF-71 Request for Leave. (b) Court Leave Documents. (c) Request for Advancement of Leave. (3) Payroll Comprehensive Listing (a) Current Payment Information. (b) Record of Leave Earned and Used. (c) All Deductions from Pay. (d) Personnel Information such as Grade, Step, Salary, Title, Date of Birth, Social Security Number, Veterans Preference, Tenure, etc. (4) Payroll Control Registers.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Title 5—Pay, Leave and Allowances.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information:

- (1) To Federal Agencies and to State and Local Agencies for tax purposes; and
- (2) To appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door. The records are stored on magnetic disc, tape, digital media, and CD-ROM.

RETRIEVABILITY:

Records may be retrieved by Social Security Number.

SAFEGUARDS:

Records in this system are safeguarded in a secured building, secured room and locked cabinets.

RETENTION AND DISPOSAL:

Dispose of in accordance with NARA General Records Schedule 2.

SYSTEM MANAGER(S) AND ADDRESS:

Director, Personnel Management Division, FMS, Prince George's Metro Center II, 3700 East-West Highway, Room 115-F, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with

their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer at the address shown above. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

From individual Service employees.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

Treasury/FMS .008

SYSTEM NAME:

Mailing List Records—Treasury/FMS.

SYSTEM LOCATION:

Records are located at the offices of FMS, 401 14th Street SW., Washington, DC 20227, or its fiscal or financial agents at various locations. The addresses of the fiscal or financial agents may be obtained by contacting the System Manager below.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Low- to moderate-income individuals, who are more likely to be unbanked or underbanked, who could potentially receive Federal tax refund payments, and whose names and addresses are included on mailing lists purchased from commercial providers.

CATEGORIES OF RECORDS IN THE SYSTEM:

The records may contain identifying information, such as an individual's name(s) and address.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 31 U.S.C. 321; 31 U.S.C. chapter 33; 31 U.S.C. 3332; Title XII of the Dodd-Frank Wall Street Reform and Consumer Protection Act (Pub. L. 111-203, Jul. 21, 2010).

PURPOSE(S):

The purpose of this system is to maintain limited records (names and addresses) about low to moderate income individuals, who are more likely

to be unbanked or under-banked, and who could potentially receive Federal tax refund payments. The records are used to send letters to individuals informing them of the benefits of electronic payments and Treasury-recommended account options for receiving payments electronically. Without the information, FMS, its fiscal or financial agents and contractors, would not be able to directly notify prospective payment recipients about the benefits of electronic payments and the Treasury-recommended account options for the receipt of Federal payments electronically.

The information will also be used to study the effectiveness of offering account options to individuals for the purpose of receiving Federal payments. To study program efficacy, FMS may use its mailing list records to collect aggregate statistical information on the success and benefits of direct mail and the use of commercial database providers.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information to:

(1) The U.S. Department of Justice ("DOJ") for its use in providing legal advice to the Department or in representing the Department in a proceeding before a court, adjudicative body, or other administrative body before which the Department is authorized to appear, where the use of such information by the DOJ is deemed by the Department to be relevant and necessary to the litigation, and such proceeding names as a party or interests: (a) The Department or any component thereof; (b) Any employee of the Department in his or her official capacity; (c) Any employee of the Department in his or her individual capacity where DOJ has agreed to represent the employee; or (d) The United States, where the Department determines that litigation is likely to affect the Department or any of its components.

(2) A congressional office in response to an inquiry made at the request of the individual to whom the record pertains.

(3) Fiscal agents, financial agents, and contractors for the purpose of mailing information to individuals about the benefits of electronic Federal payments and Treasury-recommended account options for receipt of federal payments electronically, including, but not limited to, processing direct mail or performing other marketing functions; and creating and reviewing statistics to

improve the quality of services provided.

(4) Federal agencies, their agents and contractors for the purposes of implementing and studying options for encouraging current and prospective Federal payment recipients to receive their Federal payments electronically.

(5) Representatives of the NARA who are conducting records management inspections under authority of 44 U.S.C. 2904 and 2906.

(6) Appropriate agencies, entities, and persons when: (a) FMS suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) FMS has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by FMS or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with FMS's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door. The records are store on magnetic disc, tape, digital media, and CD-ROM.

RETRIEVABILITY:

Records are retrieved by name, address, or other alpha/numeric identifying information.

SAFEGUARDS:

All official access to the system of records is on a need-to-know basis only, as authorized by a business line manager at FMS or FMS's fiscal or financial agent. Procedural and physical safeguards, such as personal accountability, audit logs, and specialized communications security, are utilized. Each user of computer systems containing records has individual passwords (as opposed to group passwords) for which he or she is responsible. Thus, a security manager can identify access to the records by user. Access to computerized records is limited, through use of access codes, encryption techniques, and/or other

internal mechanisms, to those whose official duties require access. Storage facilities are secured by various means such as security guards, badge access, and locked doors with key entry.

RETENTION AND DISPOSAL:

Electronic and paper records for mail operations based on the use of the mailing list records will be retained in accordance with FMS's record retention requirements or as otherwise required by statute or court order. FMS disposes, or arranges for the disposal of records in electronic media using industry-accepted techniques, and in accordance with applicable FMS policies regarding the retention and disposal of fiscal or financial agency records. Paper records are destroyed in accordance with fiscal or financial agency archive and disposal procedures and applicable FMS policies regarding the retention and disposal of fiscal agency records.

SYSTEM MANAGER(S) AND ADDRESS:

Agency Enterprise Solutions Division, Payment Management, FMS, 401 14th Street SW., Washington, DC 20227.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974, as amended, shall be addressed to the Disclosure Officer, Financial Management Service, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the records requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974, as amended, concerning procedures for gaining access to or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C, and appendix G, concerning requirements of this Department with respect to the Privacy Act of 1974, as amended.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by commercial database providers based on publicly available information.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .010

SYSTEM NAME:

Delegations and Designations of Authority for Disbursing Functions—Treasury/FMS.

SYSTEM LOCATION:

Kansas City Regional Financial Center (KFC), FMS, Department of the Treasury, 4241 NE 34th Street, Kansas City, MO 64117.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Heads of Agencies, Certifying Officers, Designated Agents, and other Federal employees designated to perform specific disbursement-related functions.

CATEGORIES OF RECORDS IN THE SYSTEM:

Records are maintained on the designation or removal of individuals to act in a specified capacity pursuant to a proper authorization.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; Executive Order 6166, dated June 10, 1933.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to:

(1) Disclose to banking institutions, Federal Reserve Banks, and Government agencies for verification of information on authority of individuals to determine propriety of actions taken by such individuals;

(2) Disclose pertinent information to appropriate Federal, State, local or foreign agencies responsible for investigating or prosecuting the violations of, or for enforcing or implementing, a statute, rule, regulation, order, or license, where the disclosing agency becomes aware of an indication of a violation or potential violation of civil or criminal law or regulation;

(3) Disclose information to a Federal, State, or local agency, maintaining civil, criminal or other relevant enforcement information or other pertinent information, which has requested information relevant to or necessary to the requesting agency's or the bureau's hiring or retention of an individual, or issuance of a security clearance, license, contract, grant, or other benefit;

(4) Disclose information to a court, magistrate, or administrative tribunal in the course of presenting evidence, including disclosures to opposing counsel or witnesses in the course of civil discovery, litigation, or settlement negotiations, in response to a subpoena, or in connection with criminal law proceedings;

(5) Disclose information to foreign governments in accordance with formal or informal international agreements;

(6) Provide information to a congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(7) Provide information to the news media in accordance with guidelines contained in 28 CFR 50.2 which relate to an agency's functions relating to civil and criminal proceedings;

(8) Provide information to unions recognized as exclusive bargaining representatives under the Civil Service Reform Act of 1978, 5 U.S.C. 7111 and 7114;

(9) Provide information to third parties during the course of an investigation to the extent necessary to obtain information pertinent to the investigation; and

(10) Disclose information to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by name.

SAFEGUARDS:

Access to computerized records is limited through use of access codes, encryption techniques, and/or other internal mechanisms, to those whose official duties require access. Storage facilities are secured by various means such as security guards, badge access, locked doors and locked cabinets.

RETENTION AND DISPOSAL:

Hardcopy records—destroy three years after authority is revoked. Electronic records—disposal is not authorized at this time.³

SYSTEM MANAGER(S) AND ADDRESS:

Director, Kansas City Regional Financial Center (KFC), FMS, Department of the Treasury, 4241 NE 34th Street, Kansas City, MO 64117.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system managers will advise as to whether the Service maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See “Record Access Procedures” above.

RECORD SOURCE CATEGORIES:

Government Departments and Agencies requiring services of Treasury Department for issuance and payment of Treasury checks.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .012**SYSTEM NAME:**

Pre-complaint Counseling and Complaint Activities—Treasury/FMS.

SYSTEM LOCATION:

Financial Management Service, U.S. Treasury Department, Prince George’s Metro Center II, 3700 East-West Highway, Room 132, Hyattsville, MD 20782.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Employees seeking services of EEO Counselors.

CATEGORIES OF RECORDS IN THE SYSTEM:

Monthly pre-complaint activity reports from seven Financial Centers and Headquarters.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 7154; 42 U.S.C. 200e–16; Executive Order 11478; and 5 CFR Part 713.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to:

- (1) Keep records on EEO Counseling activities for annual submission to Treasury; and
- (2) Disclose information to appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department’s efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Records in this system are stored on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by station and date of receipt.

SAFEGUARDS:

Staff supervision is maintained during the day. Records are kept locked in the files.

RETENTION AND DISPOSAL:

Destroy EEO case files 4 years after final adjustment. Destroy pre-complaint counseling reports after 1 year.

SYSTEM MANAGER(S) AND ADDRESS:

EEO Officer, FMS, Prince George’s Metro Center II, 3700 East-West Highway, Room 132, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974 shall be addressed to the Disclosure Officer, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the record requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974 concerning procedures for gaining access or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C concerning requirements of this Department with respect to the Privacy Act of 1974.

CONTESTING RECORD PROCEDURES:

See “Record Access Procedures” above.

RECORD SOURCE CATEGORIES:

Monthly submissions by Financial Centers and Headquarters.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .013**SYSTEM NAME:**

Gifts to the United States—Treasury/FMS.

SYSTEM LOCATION:

FMS, U.S. Department of the Treasury, Prince George’s Metro Center II, 3700 East-West Highway, Hyattsville, MD 20782.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Donors of intervivos and testamentary gifts to the United States.

CATEGORIES OF RECORDS IN THE SYSTEM:

Correspondence, copies of wills and court proceedings, and other material related to gifts to the United States.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

31 U.S.C. 3113.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

The records may be used to disclose information to appropriate agencies, entities, and persons when (1) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (2) the Department

³ FMS must submit a records schedule to NARA. Until NARA approves the proposed records schedule, disposal is not authorized.

has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (3) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by name of donor.

SAFEGUARDS:

Access is limited to persons on official business.

RETENTION AND DISPOSAL:

Permanent retention.

SYSTEM MANAGER(S) AND ADDRESS:

Financial Information Management, Directorate, FMS, Prince George's Metro Center II, 3700 East-West Highway, Hyattsville, MD 20782.

NOTIFICATION PROCEDURE:

Individuals wishing to be notified if they are named in this system of records, or gain access to records maintained in this system must submit a written request containing the following elements:

- (1) Identify the record system;
- (2) Identify the category and type of records sought; and
- (3) Provide at least two items of secondary identification (date of birth, employee identification number, dates of employment or similar information). Address inquiries to Disclosure Officer (See "Record Access Procedures" below).

RECORD ACCESS PROCEDURES:

Disclosure Officer, Financial Management Service, U.S. Department of the Treasury, Liberty Center Building, 401 14th Street SW., Washington, DC 20227.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Individuals, executors, administrators and other involved persons.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .014

SYSTEM NAME:

Debt Collection Operations System—Treasury/FMS.

SYSTEM LOCATION:

Records are also located throughout the United States at FMS operations centers, Federal Records Centers, Federal Reserve Banks acting as Treasury's fiscal agents, and financial institutions acting as Treasury's financial agents. Additional addresses may be obtained from the system managers.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who owe debts to: (a) The United States, through one or more of its departments and agencies; and/or (b) States, territories and commonwealths of the United States, and the District of Columbia (hereinafter collectively referred to as "States").

CATEGORIES OF RECORDS IN THE SYSTEM:

Debt records containing information about the debtor(s), the type of debt, the governmental entity to which the debt is owed, and the debt collection tools utilized to collect the debt. The records may contain identifying information, such as name(s) and taxpayer identifying number (i.e., Social Security Number or employer identification number); debtor contact information, such as work and home address, and work and home telephone numbers; information concerning the financial status of the debtor and his/her household, including income, assets, liabilities or other financial burdens, and any other resources from which the debt may be recovered; and name of employer and employer address. Debts include unpaid taxes, loans, assessments, fines, fees, penalties, overpayments, advances, extensions of credit from sales of goods or services, and other amounts of money or property owed to, or collected by, the Federal Government or a State, including past due support which is being enforced by a State. The records also may contain information about: (a) The debt, such as the original amount of the debt, the debt account number, the date the debt originated, the amount of the delinquency or default, the date of delinquency or default, basis for the debt, amounts accrued for interest,

penalties, and administrative costs, and payments on the account; (b) Actions taken to collect or resolve the debt, such as copies of demand letters or invoices, documents or information required for the referral of accounts to collection agencies or for litigation, and collectors' notes regarding telephone or other communications related to the collection or resolution of the debt; and (c) The referring or governmental agency that is collecting or owed the debt, such as name, telephone number, and address of the agency contact.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

Federal Claims Collection Act of 1966 (Pub. L. 89–508), as amended by the Debt Collection Act of 1982 (Pub. L. 97–365, as amended); Deficit Reduction Act of 1984 (Pub. L. 98–369, as amended); Debt Collection Improvement Act of 1996 (Pub. L. 104–134, sec. 31001); Taxpayer Relief Act of 1997 (Pub. L. 105–34); Internal Revenue Service Restructuring and Reform Act of 1998 (Pub. L. 105–206); 26 U.S.C. 6402; 26 U.S.C. 6331; 31 U.S.C. Chapter 37 (Claims), Subchapter I (General) and Subchapter II (Claims of the U.S. Government); 31 U.S.C. 3321 note.

PURPOSE(S):

The purpose of this system is to maintain records about individuals who owe debt(s) to the United States, through one or more of its departments and agencies, and/or to States, including past due support enforced by States. The information contained in the records is maintained for the purpose of taking action to facilitate the collection and resolution of the debt(s) using various collection methods, including, but not limited to, requesting repayment of the debt by telephone or in writing, offset, levy, administrative wage garnishment, referral to collection agencies or for litigation, and other collection or resolution methods authorized or required by law. The information also is maintained for the purpose of providing collection information about the debt to the agency collecting the debt, to provide statistical information on debt collection operations, and for the purpose of testing and developing enhancements to the computer systems which contain the records. The information also is maintained for the purpose of resolving delinquent debts owed by debtors who are ineligible for Federally funded programs until the delinquency is resolved, and for identifying, preventing, or recouping improper payments to individuals who owe delinquent obligations to Federal and/or state agencies.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information to:

(1) Appropriate Federal, State, local or foreign agencies responsible for investigating or implementing, a statute, rule, regulation, order, or license;

(2) A court, magistrate, mediator, or administrative tribunal in the course of presenting evidence; counsel, experts, or witnesses in the course of civil discovery, litigation, or settlement negotiations, in response to a subpoena, or in connection with criminal law proceedings;

(3) A congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(4) Any Federal agency, State or local agency, U.S. territory or commonwealth, or the District of Columbia, or their agents or contractors, including private collection agencies (consumer and commercial):

a. To facilitate the collection of debts through the use of any combination of various debt collection methods required or authorized by law, including, but not limited to;

(i) Request for repayment by telephone or in writing;

(ii) Negotiation of voluntary repayment or compromise agreements;

(iii) Offset of Federal payments, which may include the disclosure of information contained in the records for the purpose of providing the debtor with appropriate pre-offset notice and to otherwise comply with offset prerequisites, to facilitate voluntary repayment in lieu of offset, and to otherwise effectuate the offset process;

(iv) Referral of debts to private collection agencies, to Treasury-designated debt collection centers, or for litigation;

(v) Administrative and court-ordered wage garnishment;

(vi) Debt sales;

(vii) Publication of names and identities of delinquent debtors in the media or other appropriate places; and

(viii) Any other debt collection method authorized by law;

b. To conduct computerized comparisons to locate Federal payments to be made to debtors;

c. To conduct computerized comparisons to locate employers of, or obtain taxpayer identifying numbers or other information about, an individual for debt collection purposes;

d. To collect a debt owed to the United States through the offset of payments made by States, territories, commonwealths, or the District of Columbia;

e. To account or report on the status of debts for which such entity has a financial or other legitimate need for the information in the performance of official duties;

f. For the purpose of denying Federal financial assistance in the form of a loan or loan guaranty to an individual who owes delinquent debt to the United States or who owes delinquent child support that has been referred to FMS for collection by administrative offset;

g. To develop, enhance and/or test database, matching, communications, or other computerized systems which facilitate debt collection processes; or

h. For any other appropriate debt collection purpose.

(5) The Department of Defense, the U.S. Postal Service, or other Federal agency for the purpose of conducting an authorized computer matching program in compliance with the Privacy Act of 1974, as amended, to identify and locate individuals receiving Federal payments including, but not limited to, salaries, wages, and benefits, which may include the disclosure of information contained in the records for the purpose of requesting voluntary repayment or implementing Federal employee salary offset or other offset procedures;

(6) The Department of Justice or other Federal agency:

a. when requested in connection with a legal proceeding, or

b. to obtain concurrence in a decision to compromise, suspend, or terminate collection action on a debt;

(7) Any individual or other entity who receives Federal payments as a joint payee with a debtor for the purpose of providing notice of, and information about, offsets from such Federal payments; and

(8) Any individual or entity:

a. To facilitate the collection of debts through the use of any combination of various debt collection methods required or authorized by law, including, but not limited to:

(i) Administrative and court-ordered wage garnishment;

(ii) Report information to commercial credit bureaus;

(iii) Conduct asset searches or locate debtors;

(iv) Publish names and identities of delinquent debtors in the media or other appropriate places; or

(v) Debt sales;

b. For the purpose of denying Federal financial assistance in the form of a loan or loan guaranty to an individual who owes delinquent debt to the United States or who owes delinquent child support that has been referred to FMS for collection by administrative offset; or

c. For any other appropriate debt collection purpose. Disclosure to consumer reporting agencies including for the provision of routine debt collection services by an FMS contractor subject to the same limitations applicable to FMS officers and employees under the Privacy Act; and

(9) Appropriate agencies, entities, and persons when (A) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (B) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (C) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

(10) (a) A Federal or state agency, its employees, agents (including contractors of its agents) or contractors; or, (b) a fiscal or financial agent designated by the FMS or other Department of the Treasury bureau or office, including employees, agents or contractors of such agent; or, (c) a contractor of the FMS, for the purpose of identifying, preventing, or recouping improper payments to an applicant for, or recipient of, Federal funds, including funds disbursed by a state in a state-administered, Federally funded program; disclosure may be made to conduct computerized comparisons for this purpose.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Debt information concerning a government claim against a debtor is also furnished, in accordance with 5 U.S.C. 552a(b)(12) and 31 U.S.C. 3711(e), to consumer reporting agencies, as defined by the Fair Credit Reporting Act, 5 U.S.C. 1681(f), to encourage repayment of a delinquent debt.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Records in this system are stored electronically or on paper in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by various combinations of name, taxpayer identifying number (i.e., social security number or employer identification number), or debt account number.

SAFEGUARDS:

All officials access the system of records on a need-to-know basis only, as authorized by the system manager. Procedural and physical safeguards are utilized, such as accountability, receipt records, and specialized communications security. Access to computerized records is limited, through use of access codes, entry logs, and other internal mechanisms, to those whose official duties require access. Hard-copy records are held in steel cabinets, with access limited by visual controls and/or lock systems. During normal working hours, files are attended by responsible officials; files are locked up during non-working hours. The building is patrolled by uniformed security guards.

RETENTION AND DISPOSAL:

Retention periods vary by record type, up to a maximum of seven years after the end of the fiscal year in which a debt is resolved or returned to the agency as uncollectible.

SYSTEM MANAGER(S) AND ADDRESS:

System Manager, Debt Management Services, FMS, 401 14th Street SW., Washington, DC 20227.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974, as amended, shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the records requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974, as amended, concerning procedures for gaining access or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C, and appendix G, concerning requirements of this Department with respect to the Privacy Act of 1974, as amended.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by the individual on whom the record is maintained; Federal and State agencies to which the debt is owed; Federal agencies and other entities that employ the individual or have information concerning the individual's employment or financial resources; Federal and State agencies issuing payments; collection agencies; locator and asset search companies, credit bureaus, and other database vendors; Federal, State or local agencies furnishing identifying information and/or debtor address information; and/or public documents.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

TREASURY/FMS .017**SYSTEM NAME:**

Collections Records—Treasury/FMS.

SYSTEM LOCATION:

Records are located at the FMS, U.S. Department of the Treasury, Liberty Center Building (Headquarters), 401 14th Street SW., Washington, DC 20227. Records are also located throughout the United States at various Federal Reserve Banks and financial institutions, which act as Treasury's fiscal and financial agents. The address(es) of the fiscal and financial agents may be obtained from the system manager below.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who electronically authorize payments to the Federal government through the use of communication networks, such as the Internet, via means such as Automated Clearing House (ACH), check conversion, credit card, and/or stored value card.

CATEGORIES OF RECORDS IN THE SYSTEM:

Collections records containing information about individuals who electronically authorize payments to the Federal government to the extent such records are covered by the Privacy Act of 1974. The records may contain identifying information, such as an individual's name(s), taxpayer identifying number (i.e., Social Security Number or employer identification number), home address, home telephone number, and personal email address (home and work); an individual's employer's name, address, telephone number, and email address; an individual's date of birth and driver's license number; information about an individual's bank account(s) and other types of accounts from which payments

are made, such as financial institution routing and account number; credit card numbers; information about an individual's payments made to or from the United States (or to other entities such as private contractors for the Federal government), including the amount, date, status of payments, payment settlement history, and tracking numbers used to locate payment information; user name and password assigned to an individual; other information used to identify and/or authenticate the user of an electronic system to authorize and make payments, such as a unique question and answer chosen by an individual; information concerning the authority of an individual to use an electronic system (access status) and the individual's historical use of the electronic system. The records also may contain information about the governmental agency to which payment is made and information required by such agency as authorized or required by law. The information contained in the records covered by FMS's system of records is necessary to process financial transactions while protecting the government and the public from financial risks that could be associated with electronic transactions. It is noted that the system covers records obtained in connection with various mechanisms that are either used currently or may be used in the future for electronic financial transactions. Not every transaction will require the maintenance of all of the information listed in this section. The categories of records cover the broad spectrum of information that might be connected to various types of transactions.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301; 31 U.S.C. 321; 31 U.S.C. chapter 33; 31 U.S.C. 3720

PURPOSE(S):

The purpose of this system is to maintain records about individuals who electronically authorize payments to the Federal government. The information contained in the records is maintained for the purpose of facilitating the collection and reporting of receipts from the public to the Federal government and to minimize the financial risk to the Government and the public of unauthorized use of electronic payment methods. Examples of payment mechanisms authorized electronically include ACH, check conversion, credit card, or stored value cards. Individuals may authorize payments using paper check conversion or Internet-based systems through programs such as "Pay.gov" and "Electronic Federal

Taxpayer Payment System (EFTPS).”

The information also is maintained to:

(a) Provide collections information to the Federal agency collecting the public receipts;

(b) Authenticate the identity of individuals who electronically authorize payments to the Federal government;

(c) Verify the payment history and eligibility of individuals to electronically authorize payments to the Federal government;

(d) Provide statistical information on collections operations;

(e) Test and develop enhancements to the computer systems that contain the records; and

(f) Collect debts owed to the Federal government from individuals when the debt arises from the unauthorized use of electronic payment methods.

FMS's use of the information contained in the records is necessary to process financial transactions while protecting the government and the public from financial risks that could be associated with electronic transactions. The records are collected and maintained for three primary reasons. First, in order to process a payment electronically, a payor needs to submit his or her name and bank account or credit card account information. Without such information, FMS would not be able to process the payment as requested by the individual authorizing the payment. Second, to authenticate the identity of the person initiating the electronic transaction, FMS may, in some instances, require some or all of the information described in “Categories of records in the system,” above, depending upon the level of risk associated with a particular type of transaction. Third, to verify the financial and other information provided by the person initiating the electronic transaction and to evaluate the payor's ability to make the payment authorized, FMS may compare information submitted with information available in FMS's electronic transaction historical database or commercial databases used for verification purposes, much like a store clerk determines whether someone paying by paper check has a history of writing bad checks. The ability to research historical transaction information will help eliminate the risk of fraudulent activity, such as the purchase of government products using an account with insufficient funds or using a stolen identity. By collecting and maintaining a certain amount of unique personal information about an individual who purchases goods from the government, FMS can help ensure

that the individual's sensitive financial information will not be fraudulently accessed or used by anyone other than the individual.

In addition, the information contained in the covered records will be used for collateral purposes related to the processing of financial transactions, such as collection of statistical information on operations, development of computer systems, investigation of unauthorized or fraudulent activity related to electronic transactions, and the collection of debts arising out of such activity.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

These records may be used to disclose information to:

(1) Appropriate Federal, state, local or foreign agencies responsible for investigating or prosecuting the violation of, or for enforcing or implementing, a statute, rule, regulation, order, or license, but only if the investigation, prosecution, enforcement or implementation concerns a transaction(s) or other event(s) that involved (or contemplates involvement of), in whole or part, an electronic method of collecting receipts for the Federal government. The records and information may also be disclosed to commercial database vendors to the extent necessary to obtain information pertinent to such an investigation, prosecution, enforcement or implementation;

(2) Commercial database vendors for the purposes of authenticating the identity of individuals who electronically authorize payments to the Federal government, to obtain information on such individuals' payment or check writing history, and for administrative purposes, such as resolving a question about a transaction. For purposes of this notice, the term “commercial database vendors” means vendors who maintain and disclose information from consumer credit, check verification, and address databases;

(3) A court, magistrate, or administrative tribunal, in the course of presenting evidence, including disclosures to opposing counsel or witnesses, for the purpose of civil discovery, litigation, or settlement negotiations or in response to a subpoena, where arguably relevant to the litigation, or in connection with criminal law proceedings;

(4) A congressional office in response to an inquiry made at the request of the individual to whom the record pertains;

(5) Fiscal agents, financial agents, financial institutions, and contractors for the purpose of performing financial management services, including, but not limited to, processing payments, investigating and rectifying possible erroneous reporting information, creating and reviewing statistics to improve the quality of services provided, conducting debt collection services, or developing, testing and enhancing computer systems;

(6) Federal agencies, their agents and contractors for the purposes of facilitating the collection of receipts, determining the acceptable method of collection, the accounting of such receipts, and the implementation of programs related to the receipts being collected;

(7) Federal agencies, their agents and contractors, credit bureaus, and employers of individuals who owe delinquent debt for the purpose of garnishing wages only when the debt arises from the unauthorized use of electronic payment methods. The information will be used for the purpose of collecting such debt through offset, administrative wage garnishment, referral to private collection agencies, litigation, reporting the debt to credit bureaus, or for any other authorized debt collection purpose;

(8) Financial institutions, including banks and credit unions, and credit card companies for the purpose of collections and/or investigating the accuracy of information required to complete transactions using electronic methods and for administrative purposes, such as resolving questions about a transaction; and

(9) Appropriate agencies, entities, and persons when (a) the Department suspects or has confirmed that the security or confidentiality of information in the system of records has been compromised; (b) the Department has determined that as a result of the suspected or confirmed compromise there is a risk of harm to economic or property interests, identity theft or fraud, or harm to the security or integrity of this system or other systems or programs (whether maintained by the Department or another agency or entity) that rely upon the compromised information; and (c) the disclosure made to such agencies, entities, and persons is reasonably necessary to assist in connection with the Department's efforts to respond to the suspected or confirmed compromise and prevent, minimize, or remedy such harm.

DISCLOSURE TO CONSUMER REPORTING AGENCIES:

Debt information concerning a government claim against a debtor when the debt arises from the unauthorized use of electronic payment methods is also furnished, in accordance with 5 U.S.C. 552a(b)(12) and 31 U.S.C. 3711(e), to consumer reporting agencies, as defined by the Fair Credit Reporting Act, 5 U.S.C. 1681(f), to encourage repayment of a delinquent debt.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:**STORAGE:**

Records in this system are stored electronically in secure facilities in a locked drawer behind a locked door.

RETRIEVABILITY:

Records may be retrieved by account number (such as financial institution account number or credit card account number), name (including an authentication credential, e.g., a user name), social security number, transaction identification number, or other alpha/numeric identifying information.

SAFEGUARDS:

All officials access the system of records on a need-to-know basis only, as authorized by the system manager after security background checks. Procedural and physical safeguards, such as personal accountability, audit logs, and specialized communications security, are utilized. Accountability and audit logs allow systems managers to track the actions of every user of the system. Each user has an individual password (as opposed to a group password) for which he or she is responsible. Thus, a system manager can identify access to the records by user. Access to computerized records is limited, through use of encryption, access codes, and other internal mechanisms, to those whose official duties require access. Storage facilities are secured by various means such as security guards, locked doors with key entry, and limited virtual access requiring a physical token.

RETENTION AND DISPOSAL:

Disposal is not authorized at this time.⁴

⁴ FMS is updating its records schedules for these records to provide for a retention period of seven years for most collections records, and a retention period of 20 years for certain trust-fund-related records. FMS must submit the record schedules to NARA. Until NARA approves the updated records schedules, disposal is not authorized.

SYSTEM MANAGER(S) AND ADDRESS:

Assistant Commissioner, Federal Finance, FMS, 401 14th Street SW., Washington, DC 20227.

NOTIFICATION PROCEDURE:

Inquiries under the Privacy Act of 1974, as amended, shall be addressed to the Disclosure Officer, FMS, 401 14th Street SW., Washington, DC 20227. All individuals making inquiries should provide with their request as much descriptive matter as is possible to identify the particular record desired. The system manager will advise as to whether FMS maintains the records requested by the individual.

RECORD ACCESS PROCEDURES:

Individuals requesting information under the Privacy Act of 1974, as amended, concerning procedures for gaining access to or contesting records should write to the Disclosure Officer. All individuals are urged to examine the rules of the U.S. Department of the Treasury published in 31 CFR Part 1, subpart C, and appendix G, concerning requirements of this Department with respect to the Privacy Act of 1974, as amended.

CONTESTING RECORD PROCEDURES:

See "Record Access Procedures" above.

RECORD SOURCE CATEGORIES:

Information in this system is provided by the individual on whom the record is maintained (or by his or her authorized representative), other persons who electronically authorize payments to the Federal government, Federal agencies responsible for collecting receipts, Federal agencies responsible for disbursing and issuing Federal payments, Treasury fiscal and financial agents that process collections, and commercial database vendors.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

[FR Doc. 2012-25209 Filed 10-12-12; 8:45 am]

BILLING CODE 4810-35-P

DEPARTMENT OF THE TREASURY**Office of Foreign Assets Control**

Designation of Two (2) Entities Pursuant to Executive Order 13224 of September 23, 2001, "Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism"

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

SUMMARY: The Treasury Department's Office of Foreign Assets Control ("OFAC") is publishing the names of two (2) entities whose property and interests in property are blocked pursuant to Executive Order 13224 of September 23, 2001, "Blocking Property and Prohibiting Transactions With Persons Who Commit, Threaten To Commit, or Support Terrorism."

DATES: The designations by the Director of OFAC of the two (2) entities in this notice, pursuant to Executive Order 13224, are effective on October 4, 2012.

FOR FURTHER INFORMATION CONTACT:

Assistant Director, Compliance Outreach & Implementation, Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, tel.: 202/622-2490.

SUPPLEMENTARY INFORMATION:**Electronic and Facsimile Availability**

This document and additional information concerning OFAC are available from OFAC's Web site (www.treas.gov/ofac) or via facsimile through a 24-hour fax-on-demand service, tel.: 202/622-0077.

Background

On September 23, 2001, the President issued Executive Order 13224 (the "Order") pursuant to the International Emergency Economic Powers Act, 50 U.S.C. 1701-1706, and the United Nations Participation Act of 1945, 22 U.S.C. 287c. In the Order, the President declared a national emergency to address grave acts of terrorism and threats of terrorism committed by foreign terrorists, including the September 11, 2001 terrorist attacks in New York, Pennsylvania, and at the Pentagon. The Order imposes economic sanctions on persons who have committed, pose a significant risk of committing, or support acts of terrorism. The President identified in the Annex to the Order, as amended by Executive Order 13268 of July 2, 2002, 13 individuals and 16 entities as subject to the economic sanctions. The Order was further amended by Executive Order 13284 of January 23, 2003, to reflect the creation of the Department of Homeland Security.

Section 1 of the Order blocks, with certain exceptions, all property and interests in property that are in or hereafter come within the United States or the possession or control of United States persons, of: (1) Foreign persons listed in the Annex to the Order; (2) foreign persons determined by the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of the Department of

Homeland Security and the Attorney General, to have committed, or to pose a significant risk of committing, acts of terrorism that threaten the security of U.S. nationals or the national security, foreign policy, or economy of the United States; (3) persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to be owned or controlled by, or to act for or on behalf of those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order; and (4) except as provided in section 5 of the Order and after such consultation, if any, with foreign authorities as the Secretary of State, in consultation with the Secretary of the Treasury, the Secretary of the Department of Homeland Security and the Attorney General, deems appropriate in the exercise of his discretion, persons determined by the Director of OFAC, in consultation with the Departments of State, Homeland Security and Justice, to assist in, sponsor, or provide financial, material, or technological support for, or financial or other services to or in support of, such acts of terrorism or those persons listed in the Annex to the Order or determined to be subject to the Order or to be otherwise associated with those persons listed in the Annex to the Order or those persons determined to be subject to subsection 1(b), 1(c), or 1(d)(i) of the Order.

On October 4, 2012 the Director of OFAC, in consultation with the Departments of State, Homeland Security, Justice and other relevant agencies, designated, pursuant to one or more of the criteria set forth in subsections 1(b), 1(c) or 1(d) of the Order, two (2) entities whose property and interests in property are blocked pursuant to Executive Order 13224.

The listings for these entities on OFAC's list of Specially Designated Nationals and Blocked Persons appear as follows:

Entities

1. WAQFIYA RI'AYA AL-USRA AL-FILISTINYA WA AL-LUBNANYA (a.k.a. AL WAQFIYA AL USRAH AL FILASTINIA; a.k.a. AL-WAQFIYA ASSOCIATION; a.k.a. BILLING CODE 4810-AL-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning certain cash or deferred arrangements and employee and matching contributions under employee plans, and retirement plans; cash or deferred arrangements.

DATES: Written comments should be received on or before December 14, 2012 to be assured of consideration.

ADDRESSES: Direct all written comments to Yvette Lawrence, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulation should be directed to Allan Hopkins at Internal Revenue Service, room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or at (202) 622-6665, or through the Internet at Allan.M.Hopkins@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Certain Cash or Deferred Arrangements and Employee and Matching Contributions under Employee Plans: Retirement Plans; Cash or Deferred Arrangements.

OMB Number: 1545-1069.

Regulation Project Number: EE-175-86; Reg-108639-99.

Abstract: This regulation provides the public with the guidance needed to comply with sections 40(k), 401(m), and 4979 of the Internal Revenue Code. The regulation affects sponsors of plans that contain cash or deferred arrangements of employee or matching contributions, and employees who are entitled to make elections under these plans.

Current Actions: There are no changes to the existing regulations.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, not-for-profit institutions, farms, and state, local, or tribal governments.

Estimated Number of Respondents: 355,500.

Estimated Time per Respondent: 3 hours.

Estimated Total Annual Burden Hours: 1,060,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to

respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: September 27, 2012.

Yvette Lawrence,

IRS Reports Clearance Officer.

[FR Doc. 2012-25178 Filed 10-12-12; 8:45 am]

BILLING CODE 4830-01-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Information Collection Tools

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 706-GS(T), Generation-Skipping Transfer Tax Return For Terminations; REG-130477-00; REG-130481-00 (TD

8987) Required Distributions From Retirement Plans (§§ 1.401(a)(9)-1 and 1.401(a)(9)-4); Revenue Procedure 2000-37; Reverse Like-Kind Exchanges (modified by Revenue Procedure 2004-51); Form 13460, Employer/Payer Information; and Notice 2003-67, Notice on Information Reporting for Payments in Lieu of Dividends.

DATES: Written comments should be received on or before December 14, 2012 to be assured of consideration.

ADDRESSES: Direct all written comments to Yvette Lawrence, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224. Please send separate comments for each specific information collection listed below. You must reference the information collection's title, form number, reporting or record-keeping requirement number, and OMB number (if any) in your comment.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the collection tools should be directed to R. Joseph Durbala, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or at (202) 622-3634, or through the Internet at RJoseph.Durbala@irs.gov.

SUPPLEMENTARY INFORMATION: Currently, the IRS is seeking comments concerning the following information collection tools, reporting, and record-keeping requirements:

(1) **Title:** Generation-Skipping Transfer Tax Return For Terminations.

OMB Number: 1545-1145.

Form Number: 706-GS(T).

Abstract: Form 706-GS(T) is used by trustees to compute and report the tax due on generation-skipping transfers that result from the termination of interests in a trust. The IRS uses the information to verify that the tax has been properly computed.

Current Actions: There are no changes to the previously approved burden of this existing collection.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 500.

Estimated Time per Respondent: 1 hr., 22 min.

Estimated Total Annual Burden Hours: 684.

(2) **Title:** Required Distributions From Retirement Plans.

OMB Number: 1545-1573.

Form Number: REG-130477-00 and REG-130481-00 (TD 8987-final).

Abstract: This regulation permits a taxpayer to name a trust as the

beneficiary of the employee's benefit under a retirement plan and use the life expectancies of the beneficiaries of the trust to determine the required minimum distribution, if certain conditions are satisfied.

Current Actions: There are no changes being made to the revenue procedure at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Respondents: 1,000.

Estimated Time per Respondent: 20 min.

Estimated Total Annual Reporting Burden hours: 333.

(3) **Title:** Reverse Like-Kind Exchanges.

OMB Number: 1545-1701.

Form Number: Revenue Procedure 2000-37 (modified by RP 2004-51).

Abstract: Revenue Procedure 2000-37 provides a safe harbor for reverse like-kind exchanges in which a transaction using a "qualified exchange accommodation arrangement" will qualify for non-recognition treatment under section 1031 of the Internal Revenue Code. Revenue Procedure 2004-51 modifies sections 1 and 4 of Rev. Proc. 2000-37, 2000-2 C.B. 308, to provide that Rev. Proc. 2000-37 does not apply if the taxpayer owns the property intended to qualify as replacement property before initiating a qualified exchange accommodation arrangement (QEAA).

Current Actions: There is no change in the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households, business or other for-profit organizations, and farms.

Estimated Number of Respondents: 1,600.

Estimated Time per Respondent: 2 hrs.

Estimated Total Annual Burden Hours: 3,200.

(4) **Title:** Employer/Payer Information.

OMB Number: 1545-1849.

Form Number: 13460.

Abstract: Form 13460 is used to assist filers who have underreporter or correction issues. Also this form expedites research of the filer's problems.

Current Actions: There is no change in the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses and other for-profit organizations, farms, not-for-

profit institutions, Federal government, and state, local, or Tribal government.

Estimated Number of Respondents: 200.

Estimated Time per Respondent: 15 min.

Estimated Total Annual Burden Hours: 50.

(5) *Title:* Notice on Information Reporting for Payments in Lieu of Dividends.

OMB Number: 1545–1858.

Form Number: Notice 2003–67.

Abstract: Notice 2003–67 provides guidance to brokers and individuals regarding provisions in the Jobs and Growth Tax Relief Reconciliation Act of 2003. The notice provides rules for brokers to use in determining loanable shares and rules for allocating transferred shares for purposes of determining payments in lieu of dividend reportable to individuals. These rules require brokers to comply with certain recordkeeping requirements to use the favorable rules for determining loanable shares and for allocating transferred shares that may give rise to payments in lieu of dividends.

Current Actions: There is no change in the paperwork burden previously approved by OMB.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other-for-profit organizations.

Estimated Number of Respondents: 600.

Estimated Time per Respondent: 100 hrs.

Estimated Total Annual Burden Hours: 60,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection

techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: October 5, 2012.

R. Joseph Durbala,

IRS Reports Clearance Officer.

BILLING CODE 4830–01–P

DEPARTMENT OF VETERANS AFFAIRS

Advisory Committee Charter Renewals

AGENCY: Department of Veterans Affairs.

ACTION: Notice of Advisory Committee Charter Renewals.

SUMMARY: In accordance with the provisions of the Federal Advisory Committee Act (FACA), 5 U.S.C. App. 2, and after consultation with the General Services Administration, the Secretary of Veterans Affairs has determined that the following Federal advisory committees are vital to the mission of the Department of Veterans Affairs (VA) and renewing their charters would be in the public interest. Consequently, the charters for the following Federal advisory committees are renewed for a two-year period, beginning on the dates listed below:

Committee name	Committee description	Charter renewed on
Genomic Medicine Program Advisory Committee.	Provides advice on the scientific and ethical issues related to the establishment, development, and operation of a genomic medicine program within VA.	March 13, 2012.
Veterans' Rural Health Advisory Committee.	Provides advice on health care issues affecting enrolled veterans residing in rural areas.	June 21, 2012.
Clinical Science Research and Development Service Cooperative Studies Scientific Evaluation Committee.	Provides advice on VA cooperative studies, multi-site clinical research activities, and policies related to conducting and managing these efforts while ensuring that new and ongoing projects maintain high quality, are based upon scientific merit, and are efficiently and economically conducted.	July 12, 2012.
Health Services Research and Development Service Scientific Merit Review Board.	Provides advice on the fair and equitable selection of the most meritorious research projects for support by VA research funds and ensuring the high quality and mission relevance of VA's legislatively mandated research and development program. Also advises on the adequacy of protection of human and animal subjects.	July 12, 2012.
Joint Biomedical Laboratory Research and Development and Clinical Science Research and Development Services Scientific Merit Review Board.	Provides advice on the scientific quality, budget, safety, and mission relevance of investigator-initiated research proposals submitted for VA merit review consideration. The proposals may address research questions within the general areas of biomedical and behavioral research or clinical science research.	July 12, 2012.
Rehabilitation Research and Development Service Scientific Merit Review Board.	Provides advice on the rehabilitation needs of disabled veterans and the administration of VA's rehabilitation programs.	July 12, 2012.

The Secretary has also renewed the charters for the following statutorily authorized Federal advisory committees

for a two-year period, beginning on the dates listed below:

Committee name	Committee description	Charter renewed on
Advisory Committee on Minority Veterans.	Authorized by 38 U.S.C. 544. Provides advice on the administration of VA benefits for veterans who are minority group members in the areas of compensation, health care, rehabilitation, outreach, and other services.	March 13, 2012.
Advisory Committee on Prosthetics and Special Disabilities-Programs.	Authorized by 38 U.S.C. 543. Provides advice on VA prosthetics programs and rehabilitation research, development, and evaluation of prosthetics technology. Assesses VA programs that serve veterans with spinal cord injury, blindness, or vision impairment, loss of or loss of use of extremities, deafness or hearing impairment, or other serious incapacities.	March 13, 2012.
Advisory Committee on Homeless Veterans.	Authorized by 38 U.S.C. 2066. Provides advice on benefits and services provided to homeless veterans by VA.	March 15, 2012.
Advisory Committee on Former Prisoners of War.	Authorized by 38 U.S.C. 541. Provides advice on the administration of benefits for veterans who are former prisoners of war, and assesses the needs of such veterans in the areas of service-connected compensation, health care, and rehabilitation.	March 20, 2012.
Veterans' Advisory Committee on Education.	Authorized by 38 U.S.C. 3692. Provides advice on the administration of education and training programs for veterans and servicepersons, reservists, and dependents of veterans under chapters 30, 32, 33, 35, and 36 of title 38, and chapters 1606 and 1607 of title 10, United States Code.	March 21, 2012.
Special Medical Advisory Group	Authorized by 38 U.S.C. 7312. Provides advice on matters relating to the care and treatment of veterans and matters pertinent to the operations of the Veterans Health Administration (i.e. research, education, training of health care professionals, and VA's role in support of the missions of the Departments of Defense and Homeland Security).	April 4, 2012.
Geriatrics and Gerontology Advisory Committee.	Authorized by 38 U.S.C. 7315. Provides advice on all matters pertaining to geriatrics and gerontology by assessing the capability of VA health care facilities to meet the medical, psychological, and social needs of older veterans, and evaluating VA facilities designated as Geriatric Research, Education, and Clinical Centers.	July 5, 2012.
Advisory Committee on Structural Safety of Department of Veterans Affairs Facilities.	Authorized by 38 U.S.C. 8105. Provides advice on structural safety in the construction and remodeling of VA facilities, and recommends standards for use by VA in the construction and alteration of facilities.	September 27, 2012.

FOR FURTHER INFORMATION CONTACT:
 Vivian Drake, Committee Management Officer, Department of Veterans Affairs, Advisory Committee Management Office (00AC), 810 Vermont Avenue NW., Washington, DC 20420; telephone

(202) 461-7028; or email at vivian.drake@va.gov. To view a copy of a VA Federal advisory committee charter, visit <http://www.va.gov/advisory>.

Dated: October 9, 2012.

By direction of the Secretary.
Vivian Drake,
Committee Management Officer.

2017 and Later Model Year Light-Duty Vehicle Greenhouse Gas Emissions and Corporate Average Fuel Economy Standards

AGENCIES: Environmental Protection Agency (EPA) and National Highway Traffic Safety Administration (NHTSA), DOT.

ACTION: Final rule.

SUMMARY: EPA and NHTSA, on behalf of the Department of Transportation, are issuing final rules to further reduce greenhouse gas emissions and improve fuel economy for light-duty vehicles for model years 2017 and beyond. On May 21, 2010, President Obama issued a Presidential Memorandum requesting that NHTSA and EPA develop through notice and comment rulemaking a coordinated National Program to improve fuel economy and reduce greenhouse gas emissions of light-duty vehicles for model years 2017–2025, building on the success of the first phase of the National Program for these vehicles for model years 2012–2016. This final rule, consistent with the President’s request, responds to the country’s critical need to address global climate change and to reduce oil consumption. NHTSA is finalizing Corporate Average Fuel Economy standards for model years 2017–2021 and issuing augural standards for model years 2022–2025 under the Energy

Policy and Conservation Act, as amended by the Energy Independence and Security Act. NHTSA will set final standards for model years 2022–2025 in a future rulemaking. EPA is finalizing greenhouse gas emissions standards for model years 2017–2025 under the Clean Air Act. These standards apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles, and represent the continuation of a harmonized and consistent National Program. Under the National Program automobile manufacturers will be able to continue building a single light-duty national fleet that satisfies all requirements under both programs while ensuring that consumers still have a full range of vehicle choices that are available today. EPA is also finalizing minor changes to the regulations applicable to model years 2012–2016, with respect to air conditioner performance, nitrous oxides measurement, off-cycle technology credits, and police and emergency vehicles.

DATES: This final rule is effective on December 14, 2012, *sixty days after date of publication in the Federal Register*. The incorporation by reference of certain publications listed in this regulation is approved by the Director of the **Federal Register** as of December 14, 2012.

ADDRESSES: EPA and NHTSA have established dockets for this action under Docket ID No. EPA-HQ-OAR-2010-0799 and NHTSA 2010-0131, respectively. All documents in the docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, e.g., confidential business information (CBI) or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available in hard copy in EPA’s docket, and electronically in NHTSA’s online docket. Publicly available docket materials can be found

either electronically in www.regulations.gov by searching for the dockets using the Docket ID numbers above, or in hard copy at the following locations: EPA: EPA Docket Center, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744. NHTSA: Docket Management Facility, M-30, U.S. Department of Transportation (DOT), West Building, Ground Floor, Rm. W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590. The DOT Docket Management Facility is open between 9 a.m. and 5 p.m. Eastern Time, Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: EPA: Christopher Lieske, Office of Transportation and Air Quality, Assessment and Standards Division, Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor MI 48105; telephone number: 734-214-4584; fax number: 734-214-4816; email address: lieske.christopher@epa.gov, or contact the Assessment and Standards Division; email address: otaqpublicweb@epa.gov. NHTSA: Rebecca Yoon, Office of the Chief Counsel, National Highway Traffic Safety Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Telephone: (202) 366-2992.

SUPPLEMENTARY INFORMATION:

A. Does this action apply to me?

This action affects companies that manufacture or sell new light-duty vehicles, light-duty trucks, and medium-duty passenger vehicles, as defined under EPA’s CAA regulations,¹ and passenger automobiles (passenger cars) and non-passenger automobiles (light trucks) as defined under NHTSA’s CAFE regulations.² Regulated categories and entities include:

Category	NAICS Codes ^A	Examples of potentially regulated entities
Industry	336111 336112	Motor Vehicle Manufacturers.
Industry	811111 811112 811198 423110	Commercial Importers of Vehicles and Vehicle Components.
Industry	335312 336312	Alternative Fuel Vehicle Converters.

¹ “Light-duty vehicle,” “light-duty truck,” and “medium-duty passenger vehicle” are defined in 40 CFR 86.1803-01. Generally, the term “light-duty vehicle” means a passenger car, the term “light-duty truck” means a pick-up truck, sport-utility

vehicle, or minivan of up to 8,500 lbs gross vehicle weight rating, and “medium-duty passenger vehicle” means a sport-utility vehicle or passenger van from 8,500 to 10,000 lbs gross vehicle weight

rating. Medium-duty passenger vehicles do not include pick-up trucks.

² “Passenger car” and “light truck” are defined in 49 CFR Part 523.

Category	NAICS Codes ^A	Examples of potentially regulated entities
	336399 811198	

^A North American Industry Classification System (NAICS).

This list is not intended to be exhaustive, but rather provides a guide regarding entities likely to be regulated by this action. To determine whether particular activities may be regulated by this action, you should carefully examine the regulations. You may direct questions regarding the applicability of this action to the person listed in **FOR FURTHER INFORMATION CONTACT**.

I. Overview of Joint EPA/NHTSA Final 2017–2025 National Program

A. Executive Summary

1. Purpose of the Regulatory Action
 - a. The Need for the Action and How the Action Addresses the Need

NHTSA, on behalf of the Department of Transportation, and EPA are issuing final rules to further reduce greenhouse gas emissions and improve fuel economy for light-duty vehicles for model years 2017 and beyond. On May 21, 2010, President Obama issued a Presidential Memorandum requesting that EPA and NHTSA develop through notice and comment rulemaking a coordinated National Program to improve fuel economy and reduce greenhouse gas emissions of light-duty vehicles for model years 2017–2025, building on the success of the first phase of the National Program for these vehicles for model years 2012–2016. These final rules are consistent with the President's request and respond to the country's critical need to address global

climate change and to reduce oil consumption.

These standards apply to passenger cars, light-duty trucks, and medium-duty passenger vehicles (i.e. sport utility vehicles, cross-over utility vehicles, and light trucks), and represent the continuation of a harmonized and consistent National Program for these vehicles. Under the National Program automobile manufacturers will be able to continue building a single light-duty national fleet that satisfies all requirements under both programs.

The National Program is estimated to save approximately 4 billion barrels of oil and to reduce GHG emissions by the equivalent of approximately 2 billion metric tons over the lifetimes of those light duty vehicles produced in MYs 2017–2025. The agencies project that fuel savings will far outweigh higher vehicle costs, and that the net benefits to society of the MYs 2017–2025 National Program will be in the range of \$326 billion to \$451 billion (7 and 3 percent discount rates, respectively) over the lifetimes of those light duty vehicles sold in MYs 2017–2025.

The National Program is projected to provide significant savings for consumers due to reduced fuel use. Although the agencies estimate that technologies used to meet the standards will add, on average, about \$1,800 to the cost of a new light duty vehicle in MY 2025, consumers who drive their MY 2025 vehicle for its entire lifetime will save, on average, \$5,700 to \$7,400 (7 and 3 percent discount rates, respectively) in fuel, for a net lifetime savings of \$3,400 to \$5,000. This estimate assumes gasoline prices of \$3.87 per gallon in 2025 with small increases most years throughout the vehicle's lifetime.

b. Legal Authority

EPA and NHTSA are finalizing separate sets of standards for passenger cars and for light trucks, under their respective statutory authority. EPA is setting national CO₂ emissions standards for passenger cars and light-trucks under section 202 (a) of the Clean Air Act (CAA) ((42 U.S.C. 7521 (a)), and under its authority to measure passenger car and passenger car fleet fuel economy pursuant to the Energy Policy and Conservation Act (EPCA) 49 U.S.C. 32904 (c). NHTSA is setting national corporate average fuel economy (CAFE) standards under the Energy Policy and Conservation Act (EPCA), as amended by the Energy Independence and Security Act (EISA) of 2007 (49 U.S.C. 32902).

Section 202 (a) of the Clean Air Act requires EPA to establish standards for

emissions of pollutants from new motor vehicles which emissions cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare. See *Coalition for Responsible Regulation v. EPA*, No. 09–1322 (D.C. Cir. June 26, 2012) slip op. p. 41 (“[i]f EPA makes a finding of endangerment, the Clean Air Act requires the [a]gency to regulate emissions of the deleterious pollutant from new motor vehicles. * * * Given the non-discretionary duty in Section 202 (a)(1) and the limited flexibility available under Section 202 (a)(2), which this court has held relates only to the motor-vehicle industry,* * * EPA had no statutory basis on which it could ‘ground [any] reasons for further inaction’ (quoting *State of Massachusetts v. EPA*, 549 U.S. 497, 533, 535 (2007)). In establishing such standards, EPA must consider issues of technical feasibility, cost, and available lead time. Standards under section 202 (a) thus take effect only “after providing such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period” (CAA section 202 (a)(2) (42 U.S.C. 7512 (a)(2))).

EPCA, as amended by EISA, contains a number of provisions regarding how NHTSA must set CAFE standards. EPCA requires that NHTSA establish separate passenger car and light truck standards (49 U.S.C. 32902(b)(1)) at “the maximum feasible average fuel economy level that it decides the manufacturers can achieve in that model year (49 U.S.C. 32902(a)),” based on the agency’s consideration of four statutory factors: Technological feasibility, economic practicability, the effect of other standards of the Government on fuel economy, and the need of the nation to conserve energy (49 U.S.C. 32902(f)). EPCA does not define these terms or specify what weight to give each concern in balancing them; thus, NHTSA defines them and determines the appropriate weighting that leads to the maximum feasible standards given the circumstances in each CAFE standard rulemaking. For MYs 2011–2020, EPCA further requires that separate standards for passenger cars and for light trucks be set at levels high enough to ensure that the CAFE of the industry-wide combined fleet of new passenger cars and light trucks reaches at least 35 mpg not later than MY 2020 (49 U.S.C. 32902(b)(2)(A)). For model years 2021–2030, standards need simply be set at the maximum feasible level (49 U.S.C. 32903(b)(2)(B)).

Section I.E of the preamble contains a detailed discussion of both agencies’ statutory authority.

2. Summary of the Major Provisions of the Final Rule

NHTSA and EPA are finalizing rules for light-duty vehicles that the agencies believe represent the appropriate levels of fuel economy and GHG emissions standards for model years 2017 and beyond pursuant to their respective statutory authorities.

a. Standards

EPA is establishing standards that are projected to require, on an average industry fleet wide basis, 163 grams/mile of carbon dioxide (CO₂) in model year 2025, which is equivalent to 54.5 mpg if this level were achieved solely through improvements in fuel efficiency.³ Consistent with its statutory authority, NHTSA has developed two phases of passenger car and light truck standards in this rulemaking action. The first phase, from MYs 2017–2021, includes final standards that are projected to require, on an average industry fleet wide basis, a range from 40.3–41.0 mpg in MY 2021. The second phase of the CAFE program, from MYs 2022–2025, includes standards that are not final, due to the statutory requirement that NHTSA set average fuel economy standards not more than 5 model years at a time. Rather, those standards are augural, meaning that they represent NHTSA’s current best estimate, based on the information available to the agency today, of what levels of stringency might be maximum feasible in those model years. NHTSA projects that those standards could require, on an average industry fleet wide basis, a range from 48.7–49.7 mpg in model year 2025.

Both the CO₂ and CAFE standards are footprint-based, as are the standards currently in effect for these vehicles through model year 2016. The standards will become more stringent on average in each model year from 2017 through 2025. Generally, the larger the vehicle footprint, the less numerically stringent the corresponding vehicle CO₂ emissions and MPG targets. As a result of the footprint-based standards, the burden of compliance is distributed

³ Real-world CO₂ is typically 25 percent higher and real-world fuel economy is typically 20 percent lower than the CO₂ and CAFE compliance values discussed here. 163g/mi would be equivalent to 54.5 mpg, if the entire fleet were to meet this CO₂ level through tailpipe CO₂ and fuel economy improvements. The agencies expect, however, that a portion of these improvements will be made through improvements in air conditioning leakage and through use of alternative refrigerants, which would not contribute to fuel economy.

across all vehicle footprints and across all manufacturers. Manufacturers are not compelled to build vehicles of any particular size or type (nor do the rules create an incentive to do so), and each manufacturer will have its own fleet-wide standard that reflects the light duty vehicles it chooses to produce.

b. Mid-Term Evaluation

The agencies will conduct a comprehensive mid-term evaluation and agency decision-making process for the MYs 2022–2025 standards as described in the proposal. The mid-term evaluation reflects the rules' long time frame and, for NHTSA, the agency's statutory obligation to conduct a *de novo* rulemaking in order to establish final standards for MYs 2022–2025. In order to align the agencies' proceedings for MYs 2022–2025 and to maintain a joint national program, EPA and NHTSA will finalize their actions related to MYs 2022–2025 standards concurrently. If the EPA determination is that standards may change, the agencies will issue a joint NPRM and joint final rules. NHTSA and EPA fully expect to conduct this mid-term evaluation in coordination with the California Air Resources Board, given our interest in maintaining a National Program to address GHG emissions and fuel economy. Further discussion of the mid-term evaluation is found in Sections III.B.3 and IV.A.3.b.

c. Compliance Flexibilities

As proposed, the agencies are finalizing several provisions which provide compliance flexibility to manufacturers to meet the standards without compromising the program's overall environmental and energy security objectives. Further discussion of compliance flexibilities is in Section C.4, II.F, III.B, III.C, IV.I.

Credit Averaging, Banking and Trading

The agencies are continuing to allow manufacturers to generate credits for over-compliance with the CO₂ and CAFE standards.⁴ A manufacturer will generate credits if its car and/or truck fleet achieves a fleet average CO₂/CAFE level better than its car and/or truck standards. Conversely, a manufacturer will incur a debit/shortfall if its fleet average CO₂/CAFE level does not meet the standard when all credits are taken into account. As in the prior CAFE and GHG programs, a manufacturer whose fleet generates credits in a given model year would have several options for

using those credits, including credit carry-back, credit carry-forward, credit transfers, and credit trading.

Air Conditioning Improvement Credits

As proposed, EPA is establishing that the maximum total A/C credits available for cars will be 18.8 grams/mile CO₂-equivalent and 24.4 grams/mile for trucks CO₂-equivalent.⁵ The approaches used to calculate these credits for direct and indirect A/C improvement (i.e., improvements to A/C leakage (including substitution of low GHG refrigerant) and A/C efficiency) are generally consistent with those of the MYs 2012–2016 program, although there are several revisions. Most notably, a new test for A/C efficiency, optional under the GHG program starting in MY 2014, will be used exclusively in MY 2017 and beyond. Under its EPCA authority, EPA proposed and is finalizing provisions to allow manufacturers to generate fuel consumption improvement values for purposes of CAFE compliance based on these same improvements in air conditioner efficiency.

Off-Cycle Credits

EPA proposed and is finalizing provisions allowing manufacturers to continue to generate and use off-cycle credits to demonstrate compliance with the GHG standards. These credits are for measureable GHG emissions and fuel economy improvements attributable to use of technologies whose benefits are not measured by the two-cycle test mandated by EPCA. Under its EPCA authority, EPA proposed and is finalizing provisions to allow manufacturers to generate fuel consumption improvement values for purposes of CAFE compliance based on the use of off-cycle technologies.

Incentives for Electric Vehicles, Plug-in Hybrid Electric Vehicles, Fuel Cell Vehicles and Compressed Natural Gas Vehicles

In order to provide temporary regulatory incentives to promote the penetration of certain "game changing" advanced vehicle technologies into the light duty vehicle fleet, EPA is finalizing, as proposed, an incentive multiplier for CO₂ emissions compliance purposes for all electric vehicles (EVs), plug-in hybrid electric vehicles (PHEVs), and fuel cell vehicles (FCVs) sold in MYs 2017 through 2021. The incentives are expected to promote increased application of these advanced technologies in the program's early

model years, which could achieve economies of scale that will support the wider application of these technologies to help achieve the more stringent standards in MYs 2022–2025. In addition, in response to public comments persuasively explaining how infrastructure for compressed natural gas (CNG) vehicles could serve as a bridge to use of advanced technologies such as hydrogen fuel cells, EPA is finalizing an incentive multiplier for CNG vehicles sold in MYs 2017 through 2021.

NHTSA currently interprets EPCA and EISA as precluding it from offering incentives for the alternative fuel operation of EVs, PHEVs, FCVs, and NGVs, except as specified by statute, and thus did not propose and is not including incentive multipliers comparable to the EPA incentive multipliers described above.

Incentives for Use of Advanced Technologies Including Hybridization for full-Size Pick-up Trucks

The agencies recognize that the standards presented in this final rule for MYs 2017–2025 will be challenging for large vehicles, including full-size pickup trucks. To help address this challenge, the program will, as proposed, contain incentives for the use of hybrid electric and other advanced technologies in full-size pickup trucks.

3. Costs and Benefits of National Program

It is important to note that NHTSA's CAFE standards and EPA's GHG standards will both be in effect, and both will lead to increases in average fuel economy and reductions in GHGs. The two agencies' standards together comprise the National Program, and the following discussions of the respective costs and benefits of NHTSA's CAFE standards and EPA's GHG standards does not change the fact that both the CAFE and GHG standards, jointly, are the source of the benefits and costs of the National Program.

The costs and benefits projected by NHTSA to result from the CAFE standards are presented first, followed by those projected by EPA to result from the GHG emissions standards. For several reasons, the estimates for costs and benefits presented by NHTSA and EPA for their respective rules, while consistent, are not directly comparable, and thus should not be expected to be identical. See Section I.D of the preamble for further details and discussion.

NHTSA has analyzed in detail the projected costs and benefits for the 2017–2025 CAFE standards for light-

⁴ This credit flexibility is required by EPCA/EISA, see 49 U.S.C. 32903, and is well within EPA's discretion under section 202 (a) of the CAA.

⁵ This is further broken down by 5.0 and 7.2 g/mi respectively for car and truck A/C efficiency credits, and 13.8 and 17.2 g/mi respectively for car and truck alternative refrigerant credits.

duty vehicles. NHTSA estimates that the fuel economy increases would lead to fuel savings totaling about 170 billion gallons throughout the lives of light duty vehicles sold in MYs 2017–2025. At a 3 percent discount rate, the present value of the economic benefits resulting from those fuel savings is between \$481 billion and \$488 billion; at a 7 percent private discount rate, the present value

of the economic benefits resulting from those fuel savings is between \$375 billion and \$380 billion. The agency further estimates that these new CAFE standards will lead to corresponding reductions in CO₂ emissions totaling 1.8 billion metric tons during the lives of light duty vehicles sold in MYs 2017–2025. The present value of the economic benefits from avoiding those emissions

is approximately \$49 billion, based on a global social cost of carbon value of about \$26 per metric ton (in 2017, and growing thereafter).

The Table below shows NHTSA’s estimated overall lifetime discounted costs and benefits, and net benefits for the model years 2017–2025 CAFE standards.

NHTSA’S ESTIMATED MYs 2017–2021 AND MYs 2017–2025 COSTS, BENEFITS, AND NET BENEFITS (BILLIONS OF 2010 DOLLARS)) UNDER THE CAFE STANDARDS⁶

	Baseline fleet	Totals		Annualized

	2008	\$483	\$362	\$15.9	\$16.9

EPA has analyzed in detail the projected costs and benefits of the 2017–2025 GHG standards for light-duty vehicles. The Table below shows EPA’s estimated lifetime discounted cost, fuel savings, and benefits for all such vehicles projected to be sold in model years 2017–2025. The benefits include impacts such as climate-related economic benefits from reducing emissions of CO₂ (but not other GHGs), reductions in energy security externalities caused by U.S. petroleum consumption and imports, the value of certain particulate matter-related health benefits (including premature mortality), the value of additional driving attributed to the VMT rebound effect, the value of reduced refueling time needed to fill up a more fuel efficient vehicle. The analysis also includes estimates of economic impacts stemming from additional vehicle use, such as the economic damages caused by accidents, congestion and noise (from increased VMT rebound driving).

⁶“The “Estimated Achieved” analysis includes accounting for compliance flexibilities and advanced technologies that manufacturers may voluntarily use for compliance, but that NHTSA is prohibited from considering when determining the maximum feasible level of new CAFE standards.

B. Introduction

EPA is announcing final greenhouse gas emissions standards for model years 2017–2025 and NHTSA is announcing final Corporate Average Fuel Economy standards for model years 2017–2021 and issuing augural⁸ standards for

⁷ Further notes and details concerning these SCC. Value are found in Section I.D.2. Table I–17.

⁸ For the NPRM/PRIA/Draft EIS, NHTSA described the proposed standards for MYs 2022–2025 as “conditional.” “Conditional” was understood and objected to by some readers as implying that the future proceeding would consist merely of a confirmation of the conclusions and analysis of the current rulemaking, which would be incorrect and inconsistent with the agency’s obligations under both EPCA/EISA and the Administrative Procedure Act. The agency must conduct a de novo rulemaking for MYs 2022–2025. To avoid creating an incorrect impression, the agency is changing the descriptor for the MY 2022–2025 standards that are presented and discussed in these documents. The descriptor must convey that

Continued

model years (MYs) 2022–2025. These rules establish strong and coordinated Federal greenhouse gas and fuel economy standards for passenger cars, light-duty trucks, and medium-duty passenger vehicles (hereafter light-duty vehicles or LDVs). Together, these vehicle categories, which include passenger cars, sport utility vehicles, crossover utility vehicles, minivans, and pickup trucks, among others, are presently responsible for approximately 60 percent of all U.S. transportation-related greenhouse gas (GHG) emissions and fuel consumption. These final rules extend the MYs 2012–2016 National Program by establishing more stringent Federal light-duty vehicle GHG emissions and corporate average fuel economy (CAFE) standards in MYs 2017 and beyond. This coordinated program will achieve important reductions in GHG emissions and fuel consumption from the light-duty vehicle part of the transportation sector, based on technologies that either are commercially available or that the agencies project will be commercially available in the rulemaking timeframe and that can be incorporated at a reasonable cost. Higher initial vehicle costs will be more than offset by significant fuel savings for consumers over the lives of the vehicles covered by this rulemaking. NHTSA's final rule also constitutes the agency's Record of Decision for purposes of its NEPA analysis.

This joint rulemaking builds on the success of the first phase of the National Program to regulate fuel economy and GHG emissions from U.S. light-duty vehicles, which established strong and coordinated standards for MYs 2012–2016. As with the MY 2012–2016 final rules, a key element in developing this

the standards we are now presenting for MYs 2022–2025 reflect the agency's current best judgment of what we would have set at this time had we the authority to do so, but also avoid suggesting that the future process for establishing final standards for MYs 2022–2025 would be anything other than a new and separate rulemaking based on the freshly gathered and solicited information before the agency at that future time and on a fresh assessing and balancing of all statutorily relevant factors, in light of the considerations existing at the time of that rulemaking. The agency deliberated extensively, considering many alternative descriptors, and concluded that the best descriptor was "augural," from the verb "to augur," meaning to foretell future events based on current information (as in, "these standards may augur well for what the agency might establish in the future"). This is precisely what the MYs 2022–2025 standards presented in these documents are—our effort to help interested parties anticipate the future by providing our current best judgment as to what standards we would now set, based on the information before us today, recognizing that our future decision as to what standards we will actually set will be based on the information then before us.

rulemaking was the agencies' discussions with automobile manufacturers, the California Air Resources Board (CARB) and many other stakeholders. During the extended public comment period, the agencies received nearly 300,000 written comments (and nearly 400 oral comments through testimony at three public hearings held in Detroit, Philadelphia and San Francisco) on this rule and received strong support from most auto manufacturers, the United Auto Workers (UAW), nongovernmental organizations (NGOs), consumer groups, national security experts and veterans, State/local government and auto suppliers.

Continuing the National Program in coordination with California will help to ensure that all manufacturers can build a single fleet of vehicles that satisfy all requirements under both federal programs as well as under California's program,⁹ which will in turn help to reduce costs and regulatory complexity while providing significant energy security, consumer savings, and environmental benefits.¹⁰

Combined with the standards already in effect for MYs 2012–2016, as well as the MY 2011 CAFE standards, the final standards will result in MY 2025 light-duty vehicles with nearly double the fuel economy, and approximately one-half of the GHG emissions compared to MY 2010 vehicles—representing the most significant federal actions ever taken to reduce GHG emissions and improve fuel economy in the U.S.

EPA is establishing standards that are projected to require, on an average industry fleet wide basis, 163 grams/mile of carbon dioxide (CO₂) in model year 2025, which is equivalent to 54.5 mpg if this level were achieved solely through improvements in fuel

efficiency.¹¹ Consistent with its statutory authority,¹² NHTSA has developed two phases of passenger car and light truck standards in this rulemaking action. The first phase, from MYs 2017–2021, includes final standards that are projected to require, on an average industry fleet wide basis, a range from 40.3–41.0 mpg in MY 2021.¹³ The second phase of the CAFE program, from MYs 2022–2025, includes standards that are not final due to the statutory provision that NHTSA shall issue regulations prescribing average fuel economy standards for at least 1 but not more than 5 model years at a time.¹⁴ The MYs 2022–2025 CAFE standards, then, are not final based on this rulemaking, but rather augural, meaning that they represent the agency's current judgment, based on the information available to the agency today, of what levels of stringency would be maximum feasible in those model years. NHTSA projects that those standards could require, on an average industry fleet wide basis, a range from 48.7–49.7 mpg in model year 2025. The agencies note that these estimated combined fleet average mpg levels are projections and, in fact the agencies are establishing separate standards for passenger cars and trucks, based on a vehicle's size or "footprint," and the actual average achieved fuel economy and GHG emissions levels will be determined by the actual footprints and production volumes of the vehicle models that are produced. NHTSA will undertake a *de novo* rulemaking at a later date to set legally binding CAFE standards for MYs 2022–2025. *See*

¹¹ Real-world CO₂ is typically 25 percent higher and real-world fuel economy is typically 20 percent lower than the CO₂ and CAFE compliance values discussed here. 163g/mi would be equivalent to 54.5 mpg, if the entire fleet were to meet this CO₂ level through tailpipe CO₂ and fuel economy improvements. The agencies expect, however, that a portion of these improvements will be made through improvements in air conditioning leakage and use of alternative refrigerants, which would not contribute to fuel economy.

¹² 49 U.S.C. 32902.

¹³ The range of values here and through this rulemaking document reflect the results of co-analyses conducted by NHTSA using two different light-duty vehicle market forecasts through model year 2025. To evaluate the effects of the standards, the agencies must project what vehicles and technologies will exist in future model years and then evaluate what technologies can feasibly be applied to those vehicles to raise their fuel economy and reduce their greenhouse gas emissions. To project the future fleet, the agencies must develop a baseline vehicle fleet. For this final rule, the agencies have analyzed the impacts of the standards using two different forecasts of the light-duty vehicle fleet through MY 2025. The baseline fleets are discussed in detail in Section II.B of this preamble, and in Chapter 2 of the Technical Support Document. EPA's sensitivity analysis of the alternative fleet is included in Chapter 10 of its RIA.

¹⁴ 49 U.S.C. 32902(b)(3)(B).

⁹ Section I.B.4 provides an explanation of California's authority to set air pollution standards for vehicles.

¹⁰ The California Air Resources Board (CARB) adopted California MYs 2017–2025 GHG emissions standards on January 26, 2012. At its March 22, 2012 meeting the Board gave final approval to the California standards. The Board directed CARB's Executive Officer to "continue collaborating with EPA and NHTSA as their standards are finalized and in the mid-term review * * *" and the Board also reconfirmed its commitment to propose to revise its GHG emissions standards for MYs 2017 to 2025 "to accept compliance with the 2017 through 2025 MY National Program as compliance with California's greenhouse gas emission standards in the 2017 through 2025 model years if the Executive Officer determines that U.S. EPA has adopted a final rule that at a minimum preserve greenhouse reductions benefits set forth" in the NPRM issued by EPA on December 1, 2011. State of California Air Resources Board, Resolution 12–11, January 26, 2012, at 20. Available at <http://www.arb.ca.gov/regact/2012/cfo2012/res12-11.pdf> (last accessed July 9, 2012).

Section IV for more information. The agencies will conduct a comprehensive mid-term evaluation and agency decision-making process for the MYs 2022–2025 standards as described in the proposal. The mid-term evaluation reflects the rules' long time frame and, for NHTSA, the agency's statutory obligation to conduct *de novo* rulemaking in order to establish final standards for vehicles for those model years. In order to align the agencies' proceedings for MYs 2022–2025 and to maintain a joint national program, EPA and NHTSA will finalize their actions related to MYs 2022–2025 standards concurrently.

The agencies project that manufacturers will comply with the final rules by using a range of technologies, including improvements in air conditioning efficiency, which reduce both GHG emissions and fuel consumption. Compliance with EPA's GHG standards is also likely to be achieved through improvements in air conditioning system leakage and through the use of alternative air conditioning refrigerants with a lower global warming potential (GWP), which reduce GHGs (i.e., hydrofluorocarbons) but which do not generally improve fuel economy. The agencies believe there is a wide range of technologies already available to reduce GHG emissions and improve fuel economy from both passenger cars and trucks. The final rules facilitate long-term planning by manufacturers and suppliers for the continued development and deployment across their fleets of fuel saving and GHG emissions-reducing technologies. The agencies believe that advances in gasoline engines and transmissions will continue for the foreseeable future, and that there will be continual improvement in other technologies, including vehicle weight reduction, lower tire rolling resistance, improvements in vehicle aerodynamics, diesel engines, and more efficient vehicle accessories. The agencies also expect to see increased electrification of the fleet through the expanded production of stop/start, hybrid, plug-in hybrid and electric vehicles. Finally, the agencies expect that vehicle air conditioners will continue to improve by becoming more efficient and by increasing the use of alternative refrigerants and lower leakage air conditioning systems. Many of these technologies are already available today, some on a limited number of vehicles while others are more widespread in the fleet, and manufacturers will be able to meet the standards through significant efficiency improvements in these

technologies, as well as through a significant penetration of these and other technologies across the fleet. Auto manufacturers may also introduce new technologies that we have not considered for this rulemaking analysis, which could result in possible alternative, more cost-effective paths to compliance.

From a societal standpoint, this second phase of the National Program is estimated to save approximately 4 billion barrels of oil and to reduce GHG emissions by the equivalent of approximately 2 billion metric tons over the lifetimes of those light duty vehicles produced in MYs 2017–2025. These savings and reductions come on top of those that are being achieved through the MYs 2012–2016 standards.¹⁵ The agencies project that fuel savings will far outweigh higher vehicle costs, and that the net benefits to society of the MYs 2017–2025 National Program will be in the range of \$326 billion to \$451 billion (7 and 3 percent discount rates, respectively) over the lifetimes of those light duty vehicles sold in MY 2017–2025.

These final standards are projected to provide significant savings for consumers due to reduced fuel use. Although the agencies estimate that technologies used to meet the standards will add, on average, about \$1,800 to the cost of a new light duty vehicle in MY 2025, consumers who drive their MY 2025 vehicle for its entire lifetime will save, on average, \$5,700 to \$7,400 (7 and 3 percent discount rates, respectively) in fuel, for a net lifetime savings of \$3,400 to \$5,000. This estimate assumes gasoline prices of \$3.87 per gallon in 2025 with small increases most years throughout the vehicle's lifetime.¹⁶ For those consumers who purchase their new MY 2025 vehicle with cash, the discounted fuel savings will offset the higher vehicle cost in roughly 3.3 years, and fuel savings will continue for as long as the consumer owns the vehicle. Those consumers that buy a new vehicle with a typical 5-year loan will immediately benefit from an average monthly cash flow savings of about \$12 during the loan period, or about \$140 per year, on average. So this type of consumer would benefit immediately from the time of purchase: the increased monthly fuel savings would more than offset the

¹⁵ The cost and benefit estimates provided in this final rule are only for the MYs 2017–2025 rulemaking. EPA and DOT's rulemaking establishing standards for MYs 2012–2016 are already part of the baseline for this analysis.

¹⁶ See Chapter 4.2.2 of the Joint TSD for full discussion of fuel price projections over the vehicle's lifetime.

higher monthly payment. Section I.D provides a detailed discussion of the projected costs and benefits of the MYs 2017–2025 for CAFE and GHG emissions standards for light-duty vehicles.

In addition to saving consumers money at the pump, the agencies have designed their final standards to preserve consumer choice—that is, the standards should not affect consumers' opportunity to purchase the size of vehicle with the performance, utility and safety features that meets their needs. The standards are based on a vehicle's size (technically they are based on vehicle footprint, which is the area defined by the points where the tires contact the ground), and larger vehicles have numerically less stringent fuel economy/GHG emissions targets and smaller vehicles have numerically more stringent fuel economy/GHG emissions targets. Footprint based standards promote fuel economy and GHG emissions improvements in vehicles of all sizes, and are not expected to create incentives for manufacturers to change the size of their vehicles in order to comply with the standards. Moreover, since the standards are fleet average standards for each manufacturer, no specific vehicle *must* meet a target.¹⁷ Thus, nothing in these rules prevents consumers in the 2017 to 2025 timeframe from choosing from the same mix of vehicles that are currently in the marketplace.

1. Continuation of the National Program

EPA is adopting final greenhouse gas emissions standards for model years 2017–2025 and NHTSA is adopting final Corporate Average Fuel Economy standards for model years 2017–2021 and presenting augural standards for model years 2022–2025. These rules will implement strong and coordinated Federal greenhouse gas and fuel economy standards for passenger cars, light-duty trucks, and medium-duty passenger vehicles. Together, these vehicle categories, which include passenger cars, sport utility vehicles, crossover utility vehicles, minivans, and pickup trucks, are presently responsible for approximately 60 percent of all U.S. transportation-related greenhouse gas emissions and fuel consumption. The final rules continue the National Program by setting more stringent standards for MY 2017 and beyond light duty vehicles. This coordinated program will achieve important reductions of

¹⁷ A specific vehicle would only have to meet a fuel economy or GHG target value on the target curve standards being finalized today in the rare event that a manufacturer produces a single vehicle model.

greenhouse gas (GHG) emissions and fuel consumption from the light-duty vehicle part of the transportation sector, based on technologies that either are commercially available or that the agencies project will be commercially available in the rulemaking timeframe and that can be incorporated at a reasonable cost.

In working together to finalize these standards, NHTSA and EPA are building on the success of the first phase of the National Program to regulate fuel economy and GHG emissions from U.S. light-duty vehicles, which established the strong and coordinated light duty vehicle standards for model years (MY) 2012–2016. As with the MY 2012–2016 final rules, a key element in developing the final rules was the agencies' collaboration with the California Air Resources Board (CARB) and discussions with automobile manufacturers and many other stakeholders. Continuing the National Program will help to ensure that all manufacturers can build a single fleet of U.S. light duty vehicles that satisfy all requirements under both federal programs as well as under California's program, helping to reduce costs and regulatory complexity while providing significant energy security, consumer savings and environmental benefits.

The agencies have been developing the basis for these final standards almost since the conclusion of the rulemaking establishing the first phase of the National Program. Consistent with Executive Order 13563, this rule was developed with early consultation with stakeholders, employs flexible regulatory approaches to reduce burdens, maintains freedom of choice for the public, and helps to harmonize federal and state regulations. After much research and deliberation by the agencies, along with CARB and other stakeholders, on July 29, 2011 President Obama announced plans for extending the National Program to MY 2017–2025 light duty vehicles and NHTSA and EPA issued a Supplemental Notice of Intent (NOI) outlining the agencies' plans for proposing the MY 2017–2025 standards and program.¹⁸ This July NOI built upon the extensive analysis conducted by the agencies during 2010 and 2011, including an initial technical assessment report and NOI issued in September 2010, and a supplemental NOI issued in December 2010. The State of California and thirteen auto manufacturers representing over 90 percent of U.S. vehicle sales provided letters of support for the program

concurrent with the Supplemental NOI.¹⁹ The United Auto Workers (UAW) also supported the announcement,²⁰ as did many consumer and environmental groups. As envisioned in the Presidential announcement, Supplemental NOI, and the December 2011 Notice of Proposed Rulemaking (NPRM), these final rules establish standards for MYs 2017– and beyond light duty vehicles. These standards take into consideration significant public input that was received in response to the NPRM from the regulated industry, consumer groups, labor unions, states, environmental organizations, national security experts and veterans, industry suppliers and dealers, as well as other organizations and by thousands of U.S. citizens. The agencies anticipate that these final standards will spur the development of a new generation of clean and more fuel efficient cars and trucks through innovative technologies and manufacturing that will, in turn, spur economic growth and create high-quality domestic jobs, enhance our energy security, and improve our environment.

As described below, NHTSA and EPA are finalizing a continuation of the National Program for light-duty vehicles that the agencies believe represents the appropriate levels of fuel economy and GHG emissions standards for model years 2017 and beyond, given the technologies that the agencies project will be available for use on these vehicles and the agencies' understanding of the cost and manufacturers' ability to apply these technologies during that time frame, and consideration of other relevant factors. Under this joint rulemaking, EPA is establishing GHG emissions standards under the Clean Air Act (CAA), and NHTSA is establishing CAFE standards under EPCA, as amended by the Energy Independence and Security Act of 2007 (EISA). This joint final rulemaking reflects a carefully coordinated and harmonized approach to implementing these two statutes, in accordance with all substantive and procedural requirements imposed by law.²¹

These final rules allow for long-term planning by manufacturers and

suppliers for the continued development and deployment across their fleets of fuel saving and emissions-reducing technologies. NHTSA's and EPA's technology assessment indicates there is a wide range of technologies available for manufacturers to consider utilizing to reduce GHG emissions and improve fuel economy. The agencies believe that advances in gasoline engines and transmissions will continue during these model years and that these technologies are likely to play a key role in compliance strategies for the MYs 2017–2025 standards, which is a view that is supported in the literature, among the vehicle manufacturers, suppliers, and by public comments.²² The agencies also believe that there will be continued improvement in diesel engines, vehicle aerodynamics, and tires as well as the use of lighter weight materials and optimized designs that will reduce vehicle mass. The agencies also expect to see increased electrification of the fleet through the expanded production of stop/start, hybrid, plug-in hybrid and electric vehicles.²³ Finally, the agencies expect that vehicle air conditioners will continue to become more efficient, thereby improving fuel efficiency. The agencies also expect that air conditioning leakage will be reduced and that manufacturers will use reduced global warming refrigerants. Both of these improvements will reduce GHG emissions.

Although a number of these technologies are available today, the agencies' assessments support that there will be continuing improvements in the efficiency of some of the technologies and that the cost of many of the technologies will be lower in the future.

²² There are a number of competing gasoline engine technologies, with one in particular that the agencies project will increase beyond MY 2016. This is the downsized gasoline direct injection engine equipped with a turbocharger and cooled exhaust gas recirculation, which has better fuel efficiency than a larger engine and similar steady-state power performance. Paired with these engines, the agencies project that advanced transmissions (such as automatic and dual clutch transmissions with eight forward speeds) and higher efficiency gearboxes will contribute to providing fuel efficiency improvements. Transmissions with eight or more speeds can be found in the fleet today in very limited production, and while they are expected to penetrate further by MY 2016, we anticipate that by MY 2025 these will be common in new light duty vehicles.

²³ For example, while today less than three percent of annual vehicle sales are strong hybrids, plug-in hybrids and all electric vehicles, by MY 2025 we estimate in our analyses for this final rule that these technologies could represent 3–7%, while "mild" hybrids may be as high as 17–27% of new sales and vehicles with stop/start systems only may be as high as 6–15% of new sales. Thus by MY 2025, 26–49% of the fleet may have some level of electrification.

¹⁹ Letters of support are available at <http://www.epa.gov/otaq/climate/regulations.htm> and at <http://www.nhtsa.gov/fuel-economy> (last accessed June 12, 2012).

²⁰ The UAW's support was expressed in a statement on July 29, 2011, which can be found at <http://www.uaw.org/articles/uaw-supports-administration-proposal-light-duty-vehicle-cafe-and-greenhouse-gas-emissions-r> (last accessed June 12, 2012).

²¹ For NHTSA, this includes the requirements of the National Environmental Policy Act (NEPA).

We anticipate that the standards will require most manufacturers to considerably increase the application of these technologies across their light duty vehicle fleets in order to comply with the standards. Manufacturers may also develop and introduce other technologies that we have not considered for this rulemaking analysis, which could play important roles in compliance with the standards and potentially offer more cost effective alternatives. Due to the relatively long lead time for the later model years in this rule, it is quite possible that innovations may arise that the agencies (and the automobile manufacturers) are not considering today, which may even become commonplace by MY 2025.

As discussed further below, and as with the standards for MYs 2012–2016, the agencies believe that the final standards help to preserve consumer choice, that is, the standards should not affect consumers' opportunity to purchase the size and type of vehicle that meets their needs, and should not otherwise affect vehicles' performance attributes. NHTSA and EPA are finalizing standards based on vehicle footprint, which is the area defined by the points where the tires contact the ground, where smaller vehicles have relatively more stringent targets, and larger vehicles have less stringent targets. Footprint based standards promote fuel economy and GHG emissions improvements in vehicles of all sizes, and are not expected to create incentives for manufacturers to change the size of their vehicles in order to comply with the standards. Consequently, these rules should not have a significant effect on the relative availability of different size vehicles in the fleet. The agencies' analyses used a constraint of preserving all other aspects of vehicles' functionality and performance, and the technology cost and effectiveness estimates developed in the analyses reflect this constraint.²⁴ In addition, as with the standards for MYs 2012–2016, the agencies believe that the standards should not have a negative effect on vehicle safety, as it

relates to vehicle size and mass as described in Section II.C and II.G below, respectively. Because the standards are fleet average standards for each manufacturer, no specific vehicle *must* meet a target.²⁵ Thus, nothing in these rules prevents consumers in the 2017 to 2025 timeframe from choosing from the same mix of vehicles that are currently in the marketplace.

Given the long time frame at issue in setting standards for MYs 2022–2025 light-duty vehicles, and given NHTSA's statutory obligation to conduct a *de novo* rulemaking in order to establish final standards for vehicles for the 2022–2025 model years, the agencies will conduct a comprehensive mid-term evaluation and agency decision-making process for the MYs 2022–2025 standards, as described in the proposal. As stated in the proposal, both NHTSA and EPA will develop and compile up-to-date information for the mid-term evaluation, through a collaborative, robust and transparent process, including public notice and comment. The mid-term evaluation will assess the appropriateness of the MYs 2022–2025 standards, based on information available at the time of the mid-term evaluation and an updated assessment of all the factors considered in setting the standards and the impacts of those factors on the manufacturers' ability to comply. NHTSA and EPA fully expect to conduct this mid-term evaluation in coordination with the California Air Resources Board, given our interest in maintaining a National Program to address GHG emissions and fuel economy. NHTSA's rulemaking, which will incorporate findings from the mid-term evaluation, will be a totally fresh consideration of all relevant information and fresh balancing of statutory and other relevant factors in order to determine the maximum feasible CAFE standards for MYs 2022–2025. In order to align the agencies proceedings for MYs 2022–2025 and to maintain a joint national program, if the EPA determination is that its standards will not change, NHTSA will issue its final rule concurrently with the EPA determination. If the EPA determination is that standards may change, the agencies will issue a joint NPRM and joint final rule. Further discussion of the mid-term evaluation is found later in this section, as well as in Sections III.B.3 and IV.A.3.b.

The 2017–2025 National Program is estimated to reduce GHGs by

approximately 2 billion metric tons and to save 4 billion barrels of oil over the lifetime of MYs 2017–2025 vehicles relative to the MY 2016 standard curves already in place.²⁶ The average cost for a MY 2025 vehicle to meet the standards is estimated to be about \$1800 compared to a vehicle that meets the level of the MY 2016 standards in MY 2025. Fuel savings for consumers are expected to more than offset the higher vehicle costs. The typical driver will save a total of \$5,700 to \$7,400 (7 percent and 3 percent discount rate, respectively) in fuel costs over the lifetime of a MY 2025 vehicle and, even after accounting for the higher vehicle cost, consumers will save a net \$3,400 to \$5,000 (7 percent and 3 percent discount rate, respectively) over the vehicle's lifetime. This estimate assumes a gasoline price of \$3.87 per gallon in 2025 with small increases most years over the vehicle's lifetime.²⁷ Further, the payback period for a consumer purchasing a 2025 light-duty vehicle with cash would be, on average, 3.4 years at a 7 percent discount rate or 3.2 years at a 3 percent discount rate, while consumers who buy with a 5-year loan would save more each month on fuel than the increased amount they will spend on the higher monthly loan payment, beginning in the first month of ownership.

Continuing the National Program has both energy security and climate change benefits. Climate change is a significant long-term threat to the global environment. EPA has found that elevated atmospheric concentrations of six greenhouse gases—carbon dioxide, methane, nitrous oxide, hydrofluorocarbons, perfluorocarbons, and sulfur hexafluoride—taken in combination endanger both the public health and the public welfare of current and future generations. EPA further found that the combined emissions of these greenhouse gases from new motor vehicles and new motor vehicle engines contribute to the greenhouse gas air pollution that endangers public health and welfare. 74 FR 66496 (Dec. 15, 2009). As summarized in EPA's Endangerment and Cause or Contribute Findings under Section 202(a) of the Clean Air Act, anthropogenic emissions of GHGs are very likely (90 to 99 percent probability) the cause of most of the observed global warming over the last

²⁴ One commenter asserted that the standards "value purported consumer choice and the continued production of every vehicle in its current form over the need to conserve energy: as soon as increased fuel efficiency begins to affect any attribute of any existing vehicle, stringency increases cease." CBD Comments p. 4. This assertion is incorrect. As explained in the text above, the agencies' cost estimates include costs of preserving existing attributes, such as vehicle performance. These costs are reflected in the agencies' analyses of reasonableness of the costs of the rule, but do not by themselves dictate any particular level of standard stringency much less cause stringency to "cease" as the commenter would have it.

²⁵ A specific vehicle would only have to meet a fuel economy or GHG target value on the target curve standards being finalized today in the rare event that a manufacturer produces a single vehicle model.

²⁶ The cost and benefit estimates provided here are only for the MY 2017–2025 rulemaking. The CAFE and GHG emissions standards for MYs 2012–2016 and CAFE standards for MY 2011 are already part of the baseline for this analysis.

²⁷ See Chapter 4.2.2 of the Joint TSD for full discussion of fuel price projections of the vehicle lifetimes.

50 years.²⁸ Mobile sources emitted 30 percent of all U.S. GHGs in 2010 (transportation sources, which do not include certain off-highway sources, account for 27 percent) and have been the source of the largest absolute increases in U.S. GHGs since 1990.²⁹ Mobile sources addressed in the endangerment and contribution findings under CAA section 202(a)—light-duty vehicles, heavy-duty trucks, buses, and motorcycles—accounted for 23 percent of all U.S. GHG emissions in 2010.³⁰ Light-duty vehicles emit CO₂, methane, nitrous oxide, and hydrofluorocarbons and were responsible for nearly 60 percent of all mobile source GHGs and over 70 percent of Section 202(a) mobile source GHGs in 2010.³¹ For light-duty vehicles in 2010, CO₂ emissions represented about 94 percent of all greenhouse emissions (including HFCs), and similarly, the CO₂ emissions measured over the EPA tests used for fuel economy compliance represent about 90 percent of total light-duty vehicle GHG emissions.^{32,33}

²⁸ 74 FR 66,496, 66,518, December 18, 2009; “Technical Support Document for Endangerment and Cause or Contribute Findings for Greenhouse Gases Under Section 202(a) of the Clean Air Act” Docket: EPA–HQ–OAR–2009–0472–11292, <http://epa.gov/climatechange/endangerment/index.html> (last accessed August 9, 2012)

²⁹ Memorandum: Mobile Source Contribution to U.S. GHGs in 2010 (Docket EPA–HQ–OAR–2010–0799). See generally, U.S. Environmental Protection Agency. 2012. Inventory of U.S. Greenhouse Gas Emissions and Sinks: 1990–2010. EPA 430–R–12–001. Available at <http://epa.gov/climatechange/emissions/downloads12/US-GHG-Inventory-2012-Main-Text.pdf> (last accessed June 12, 2012).

³⁰ Section 202(a) sources include passenger cars, light-duty trucks, motorcycles, buses, and medium- and heavy-duty trucks. EPA’s GHG Inventory groups these modes into on-road totals. However, the on-road totals in the Inventory include refrigerated transport for medium- and heavy-duty trucks, which is not considered a source for Section 202(a). In order to determine the Section 202(a) total, we took the on-road GHG total of 1556.8 Tg and subtracted the 11.6 Tg of refrigerated transport to yield a value of 1545.2 Tg.

Improving our energy and national security by reducing our dependence on foreign oil has been a national objective since the first oil price shocks in the 1970s. Although our dependence on foreign petroleum has declined since peaking in 2005, net petroleum imports accounted for approximately 45 percent of U.S. petroleum consumption in 2011.³⁴ World crude oil production is highly concentrated, exacerbating the risks of supply disruptions and price shocks as the recent unrest in North Africa and the Persian Gulf highlights. Recent tight global oil markets led to prices over \$100 per barrel, with gasoline reaching over \$4 per gallon in many parts of the U.S., causing financial hardship for many families and businesses. The export of U.S. assets for oil imports continues to be an important component of the historically unprecedented U.S. trade deficits. Transportation accounted for about 72 percent of U.S. petroleum consumption in 2010.³⁵ Light-duty vehicles account for about 60 percent of transportation oil use, which means that they alone account for about 40 percent of all U.S. oil consumption.³⁶

2. Additional Background on the National Program and Stakeholder Engagement Prior to the NPRM

Following the successful adoption of a National Program for model years (MY) 2012–2016 light duty vehicles, President Obama issued a Memorandum on May 21, 2010 requesting that the NHTSA, on behalf of the Department of Transportation, and the U.S. EPA develop “* * * a coordinated national program under the CAA [Clean Air Act] and the EISA [Energy Independence and Security Act of 2007] to improve fuel efficiency and to reduce greenhouse gas emissions of passenger cars and light-duty trucks for model years 2017–2025.”³⁷ Among other things, the

³⁵ Energy Information Administration, Annual Energy Outlook 2011, “Oil/Liquids.” Available at http://www.eia.gov/forecasts/aeo/MT_liquidfuels.cfm (last accessed June 12, 2012).

³⁶ Energy Information Administration, Annual Energy Outlook 2012 Early Release Overview. Available at http://www.eia.gov/forecasts/aeo/er/early_fuel.cfm (last accessed June 14, 2012).

³⁷ The Presidential Memorandum is found at: <http://www.whitehouse.gov/the-press-office/presidential-memorandum-regarding-fuel-efficiency-standards>. For the reader’s reference, the President also requested the Administrators of EPA and NHTSA to issue joint rules under the CAA and EISA to establish fuel efficiency and greenhouse gas emissions standards for commercial medium- and heavy-duty on-highway vehicles and work trucks beginning with the 2014 model year. The agencies recently promulgated final GHG and fuel efficiency

agencies were tasked with researching and then developing standards for MYs 2017 through 2025 that would be appropriate and consistent with EPA’s and NHTSA’s respective statutory authorities. Several major automobile manufacturers and CARB sent letters to EPA and NHTSA in support of a MYs 2017 to 2025 rulemaking initiative as outlined in the President’s announcement.³⁸

The President’s memorandum requested that the agencies, “work with the State of California to develop by September 1, 2010, a technical assessment to inform the rulemaking process * * *”. Together, NHTSA, EPA, and CARB issued the joint Technical Assessment Report (TAR) consistent with Section 2(a) of the Presidential Memorandum.³⁹ In developing this assessment, the agencies and CARB held numerous meetings with a wide variety of stakeholders including the automobile original equipment manufacturers (OEMs), automotive suppliers, non-governmental organizations, states and local governments, infrastructure providers, and labor unions. Concurrent with issuing the TAR, NHTSA and EPA also issued a joint Notice of Intent to Issue a Proposed Rulemaking (NOI)⁴⁰ which highlighted the results of the TAR analyses, provided an overview of key program design elements, and announced plans for initiating the joint rulemaking to improve the fuel efficiency and reduce the GHG emissions of passenger cars and light-duty trucks built in MYs 2017–2025.

The TAR evaluated a range of potential stringency scenarios through model year 2025, representing a 3, 4, 5, and 6 percent per year estimated decrease in GHG levels from a model

standards for heavy duty vehicles and engines for MYs 2014–2018. 76 FR 57106 (September 15, 2011).

³⁸ These letters of support in response to the May 21, 2010 Presidential Memorandum are available at <http://www.epa.gov/otaq/climate/letters.htm> (last accessed August 9, 2012).

³⁹ This Interim Joint Technical Assessment Report (TAR) is available at <http://www.epa.gov/otaq/climate/regulations/ldv-ghg-tar.pdf> (last accessed August 9, 2012) and http://www.nhtsa.gov/staticfiles/rulemaking/pdf/cape/2017+CAFE-GHG_Interim_TAR2.pdf. Section 2(a) of the Presidential Memorandum requested that EPA and NHTSA “Work with the State of California to develop by September 1, 2010, a technical assessment to inform the rulemaking process, reflecting input from an array of stakeholders on relevant factors, including viable technologies, costs, benefits, lead time to develop and deploy new and emerging technologies, incentives and other flexibilities to encourage development and deployment of new and emerging technologies, impacts on jobs and the automotive manufacturing base in the United States, and infrastructure for advanced vehicle technologies.”

⁴⁰ 75 FR 62739, October 13, 2010.

year 2016 fleet-wide average of 250 gram/mile (g/mi), which was intended to represent a reasonably broad range of stringency increases for potential future GHG emissions standards, and was also consistent with the increases suggested by CARB in its letter of commitment in response to the President's memorandum.^{41,42} For each of these scenarios, the TAR also evaluated four illustrative "technological pathways" by which these levels could be attained, each pathway offering a different mix of advanced technologies and assuming various degrees of penetration of advanced gasoline technologies, mass reduction, hybrid electric vehicles (HEVs), plug-in hybrids (PHEVs), and electric vehicles (EVs). These pathways were meant to represent ways that the industry as a whole could increase fuel economy and reduce greenhouse gas emissions, and did not represent ways that individual manufacturers would be required to or necessarily would employ in responding to future standards.

Manufacturers and others commented extensively on a variety of topics in the TAR, including the stringency of the standards, program design elements, the effect of potential standards on vehicle safety, and the TAR's discussion of technology costs, effectiveness, and feasibility. In response, the agencies and CARB spent the next several months continuing to gather information from the industry and others in response to the agencies' initial analytical efforts. EPA and NHTSA issued a follow-on Supplemental NOI in November 2010,⁴³ highlighting many of the key comments the agencies received in response to the September NOI and TAR, and summarized some of the key themes from the comments and the additional stakeholder meetings.

The agencies' stakeholder engagement between December 2010 and July 29, 2011 focused on ensuring that the agencies possessed the most complete and comprehensive set of information to inform the proposed rulemaking. Information that the agencies presented to stakeholders is posted in the NPRM docket and referenced in multiple places in the NPRM. Throughout this period, the stakeholders repeated many of the broad concerns and suggestions described in the TAR, NOI, and November 2010 SNOI. For example, stakeholders uniformly expressed

interest in maintaining a harmonized and coordinated national program that would be supported by CARB and allow auto makers to build one fleet and preserve consumer choice. The stakeholders also raised concerns about potential stringency levels, consumer acceptance of some advanced technologies and the potential structure of compliance flexibilities available under EPCA (as amended by EISA) and the CAA. In addition, most of the stakeholders wanted to discuss issues concerning technology availability, cost and effectiveness and economic practicability. The auto manufacturers, in particular, sought to provide the agencies with a better understanding of their respective strategies (and associated costs) for improving fuel economy while satisfying consumer demand in the coming years. Additionally, some stakeholders expressed concern about potential safety impacts associated with the standards, consumer costs and consumer acceptance, and potential disparate treatment of cars and trucks. Some stakeholders also stressed the importance of investing in infrastructure to support more widespread deployment of alternative vehicles and fuels. Many stakeholders also asked the agencies to acknowledge prevailing economic uncertainties in developing proposed standards. In addition, many stakeholders discussed the number of years to be covered by the program and what they considered to be important features of a mid-term review of any standards set or proposed for MY 2022–2025. In all of these meetings, NHTSA and EPA sought additional data and information from the stakeholders that would allow them to refine their initial analyses and determine proposed standards that are consistent with the agencies' respective statutory and regulatory requirements. The general issues raised by those stakeholders are addressed in the sections of this final rule discussing the topics to which the issues pertain (e.g., the form of the standards, technology cost and effectiveness, safety impacts, impact on U.S. vehicle sales and other economic considerations, costs and benefits).

The first stage of the meetings occurred between December 2010 and June 20, 2011. These meetings covered topics that were generally similar to the meetings that were held prior to the publication of the November 2010 Supplemental NOI and that were summarized in that document. Manufacturers provided the agencies more detailed information related to their product plans for vehicle models

and fuel efficiency improving technologies and associated cost estimates, as well as more detailed feedback regarding the potential program design elements to be included in the program. The second stage of meetings occurred between June 21, 2011 and July 14, 2011, during which EPA, NHTSA, CARB and several components of the Executive Office of the President kicked-off an intensive series of meetings, primarily with manufacturers, to share tentative regulatory concepts including concept stringency curves and program flexibilities based on the analyses completed by the agencies as of June 21, 2011⁴⁴ and requested manufacturer feedback; specifically⁴⁵ detailed and reliable information on how they might comply with the concepts, potential changes to the concept stringency levels and program flexibilities available under EPA's and NHTSA's respective authority that might facilitate compliance, and if they projected they could not comply, information supporting that belief. In these second stage meetings, the agencies received considerable input from the manufacturers related to the questions asked by the agencies and also related to consumer acceptance and adoption of some advanced technologies and program costs based on their independent assessment or information previously submitted to the agencies. The third stage of meetings occurred between July 15, 2011 and July 28, 2011 during which the agencies continued to refine concept stringencies and compliance flexibilities based on further consideration of the information available to them as well as meeting with manufacturers who expressed ongoing interest in engaging with the agencies.⁴⁶

Throughout all three stages, EPA and NHTSA continued to engage other stakeholders to ensure that the agencies were obtaining the most comprehensive and reliable information possible to guide the agencies in developing proposed standards for MY 2017–2025. Environmental organizations consistently stated that stringent standards are technically achievable and critical to important national interests. Labor interests stressed the need to

⁴⁴ The agencies consider a range of standards that may satisfy applicable legal criteria, taking into account the complete record before them. The initial concepts shared with stakeholders were within the range the agencies were considering, based on the information then available to the agencies.

⁴⁵ "Agency Materials Provided to Manufacturers" Memo to docket NHTSA–2010–0131.

⁴⁶ "Agency Materials Provided to Manufacturers" Memo to docket NHTSA–2010–0131.

⁴¹ 75 FR 62744–45.

⁴² Statement of the California Air Resources Board Regarding Future Passenger Vehicle Greenhouse Gas Emissions Standards, California Air Resources Board, May 21, 2010. Available at: <http://www.epa.gov/otaq/climate/letters.htm> (last accessed August 9, 2012).

⁴³ 75 FR 76337, December 8, 2010.

carefully consider economic impacts and the opportunity to create and support new jobs, and consumer advocates emphasized the economic and practical benefits to consumers of improved fuel economy and the need to preserve consumer choice.

On July 29, 2011, President Obama with the support of thirteen major automakers, announced plans to pursue the next phase in the Administration's national vehicle program, increasing fuel economy and reducing GHG emissions for passenger cars and light trucks built in MYs 2017–2025.⁴⁷ The President was joined by Ford, GM, Chrysler, BMW, Honda, Hyundai, Jaguar/Land Rover, Kia, Mazda, Mitsubishi, Nissan, Toyota and Volvo, which together account for over 90 percent of all vehicles sold in the United States. The California Air Resources Board (CARB), the United Auto Workers (UAW) and a number of environmental and consumer groups, also announced their support.

On the same day as the President's announcement, EPA and NHTSA released a second SNOI (published in the *Federal Register* on August 9, 2011) describing the joint proposal that the agencies expected to issue to establish the National Program for model years 2017–2025. The agencies received letters of support for the concepts laid out in the SNOI from BMW, Chrysler, Ford, General Motors, Global Automakers, Honda, Hyundai, Jaguar/Land Rover, Kia, Mazda, Mitsubishi, Nissan, Toyota, Volvo and CARB. The input of stakeholders, which is encouraged by Executive Order 13563, was invaluable to the agencies in developing the NPRM. A more detailed summary of the process leading to the proposed rulemaking is found at 76 FR 74862–865.

3. Public Participation and Stakeholder Engagement Since the NPRM Was Issued

The agencies signed their respective proposed rules on November 16, 2011 (76 FR 74854 (December 1, 2011)), and subsequently received a large number of comments representing many perspectives. Between January 17 and 24, 2012 the EPA and NHTSA held three public hearings in Detroit, Philadelphia and San Francisco. Nearly 400 people testified and many more attended the hearings. In response to requests, the written comment period

was extended by two weeks for a total of 74 days from *Federal Register* publication, closing on February 13, 2012. The agencies received extensive written comments from more than 140 organizations, including auto manufacturers and suppliers, State and local governments and their associations, consumer groups, labor unions, fuels and energy providers, auto dealers, academics, national security experts and veterans, environmental and other non-governmental organizations (NGOs), and nearly 300,000 comments from private individuals. In addition to comments received on the proposal, the agencies met with many different stakeholder groups between issuance of the NPRM and this final rule. Generally, the agencies met with nearly all automakers individually to discuss flexibilities such as the A/C, off-cycle, and pickup truck incentives, as well as different ways to meet the standards; with suppliers to discuss the same flexibilities; with environmental groups to discuss flexibilities and that the agencies maintain strong standards for the final rule; and with the natural gas interests to discuss incentives for natural gas in the final rule. Memoranda summarizing these meetings can be found in the EPA and NHTSA dockets for this rulemaking. EPA–HQ–OAR–2010–0799 and NHTSA–2010–0131.⁴⁸

An overwhelming majority of commenters supported the proposed 2017–2025 CAFE and GHG standards with most organizations and nearly all of the private individuals expressing broad support for the program and for the continuation of the National Program to model years (MY) 2017–2025 light-duty vehicles, and the Program's projected achievement of an emissions level of 163 gram/mile fleet average CO₂, which would be equivalent to 54.5 miles per gallon if the automakers were to meet this CO₂ level solely through fuel economy improvements.⁴⁹

⁴⁸ NHTSA is required to provide information on these meetings per DOT Order 2100.2, available at <http://www.reg-group.com/library/DOT2100-2.PDF> (last accessed Jun. 12, 2012). The agencies have placed memos summarizing these meetings in their respective dockets.

⁴⁹ Real-world CO₂ is typically 25 percent higher and real-world fuel economy is typically 20 percent lower than the CO₂ and CAFE compliance values discussed here. 163 g/mi would be equivalent to 54.5 mpg, if the entire fleet were to meet this CO₂ level through tailpipe CO₂ and fuel economy improvements, and assumes gasoline fueled vehicles (significant diesel fuel penetration would have a different mpg equivalent). The agencies expect, however, that a portion of these improvements will be made through improvements in air conditioning leakage and alternative refrigerants, which would not contribute to fuel economy.

In general, more than a dozen automobile manufacturers supported the proposed standards as well as the credit opportunities and other provisions that provide compliance flexibility, while also recommending some changes to the credit and flexibility provisions—in fact, a significant majority of comments from industry focused on the credit and flexibility provisions. Nearly all automakers stressed the importance of the mid-term evaluation to assess the progress of technology development and cost, and the accuracy of the agencies' assumptions due to the long time-frame of the rule. Many industry commenters expressly predicated their support of the 2017–2025 National Program on the existence of this evaluation. Environmental and public interest non-governmental organizations (NGOs), as well as States that commented were also very supportive of extending the National Program to MYs 2017–2025 passenger vehicles and light trucks. Many of these organizations expressed concern that the mid-term evaluation might be used as an opportunity to weaken standards or to delay the environmental benefits of the National Program.

The agencies also received comments that either opposed the issuance of the standards, or that argued that they should be modified in various ways. The Center for Biological Diversity (CBD) commented that the proposed standards were not sufficiently stringent, recommending that the agencies increase the standards to 60–70 mpg in 2025. CBD, as well as several other organizations,⁵⁰ also argued that minimum standards (“backstops”) were necessary for all fleets in order to ensure anticipated fuel economy gains. Several environmental groups expressed concern that flexibilities, such as off-cycle credits, could result in significantly lower gains through double-counting and allowing manufacturers to avoid making fuel economy improvements.

Some car-focused manufacturers objected to the truck curves, which they considered lenient while some small truck manufacturers objected to the large truck targets, which they considered lenient; and some intermediate and small volume manufacturers with limited product lines requested additional lead time, as well as less stringent standards for their vehicles. Manufacturers in general argued that backstops were not

⁴⁷ The President's remarks are available at <http://www.whitehouse.gov/the-press-office/2011/07/29/remarks-president-fuel-efficiency-standards> (last accessed August 9, 2012); see also <http://www.nhtsa.gov/fuel-economy> for more information from the agency about the announcement.

⁵⁰ The Natural Resources Defense Council, the Union of Concerned Scientists, the Sierra Club, and the Consumer's Union.

necessary for fuel economy gains and would be outside NHTSA's authority. Manufacturers also commented extensively on the programs' flexibilities, such as off-cycle credits, generally requesting more permissive applications and requirements.

The National Automobile Dealers Association (NADA) opposed the MYs 2017–2025 proposed standards, arguing that the agencies should delay rulemaking since they believe there was no need to set standards so far in advance, that the costs of the proposed program are higher than agencies have projected, and that some (mostly low income) consumers will not be able to acquire financing for new cars meeting these more stringent standards.

Many environmental and consumer groups commented that the benefits of the rule were understated and the costs overstated, arguing that several potential benefits had not been included and the technology effectiveness estimates were overly conservative. Some environmental groups also expressed concern that the benefits of the rule could be eroded if the agencies' assumptions about the market do not come to pass or if manufacturers build larger vehicles. Other groups, such as NADA, Competitive Enterprise Institute, and the Institute for Energy Research, argued that the benefits of the rule were overstated and the costs understated, asserting that manufacturers would have already made improvements if the agencies' calculations were correct.

Many commenters discussed potential environmental and health aspects of the rule. Producers of specific materials, such as aluminum, steel, or plastic, commented that standards should ultimately reflect a life cycle analysis that accounts for the greenhouse gas emissions attributable to the materials from which vehicles are manufactured. Some environmental groups requested that standards for electrified vehicles reflect emissions attributable to upstream electricity generation. Many commenters expressed support for the rule and its health benefits, while other commenters were concerned about possible negative health impacts due to assumptions about future fuel properties.

Many commenters also addressed issues relating to safety, with most generally supporting the agencies' efforts to continue to improve their understanding of the relationship between mass reduction and safety. Consistent with their comments in prior rulemakings, several environmental and consumer organizations commented that data exist that mass reduction does not have adverse safety impacts, and stated

that the use of better designs and materials can improve both fuel economy and safety. Dynamic Research Institute (DRI) submitted a study, and other commenters pointed to DRI's work and additional studies for the agencies' consideration, as discussed in more detail in Section II.G below. Materials producers (aluminum, steel, composite, etc.) commented that their respective materials can be used to improve safety. The Alliance commented that while some recent mass reduction vehicle design concept studies have created designs that perform well in simulation modeling of safety standard and voluntary safety guideline tests, the design concepts yield aggressively stiffer crash pulses may be detrimental to rear seat occupants, vulnerable occupants and potential crash partners. The Alliance also commented that there are simulation model uncertainties with respect to advanced materials, and the real-world crash behavior of these concepts may not match that predicted in those studies. The Alliance and Volvo commented that it is important to monitor safety trends, and the Alliance urged that the agencies revisit this topic during the mid-term evaluation.

Additional comments touched on the use of "miles per gallon" to describe the standards, the agencies' baseline market forecast, consumer welfare and trends in consumer preferences for fuel economy, and a wide range of other topics.

Throughout this notice, the agencies discuss key issues arising from the public comments and the agencies' responses to those comments. The agencies also respond to comments in the Joint TSD and in their respective RIAs. In addition, EPA has addressed all of the public comments specific to the GHG program in a Response to Comments document.⁵¹

4. California's Greenhouse Gas Program

In 2004, the California Air Resources Board (CARB) approved standards for new light-duty vehicles, regulating the emission of CO₂ and other GHGs.⁵² On

⁵¹ EPA Response to Comments document. (EPA-420-F-12-017) Available in the docket and at: <http://www.epa.gov/otaq/climate/regs-light-duty.htm> (last accessed August 8, 2012).

⁵² Through operation of section 209(b) of the Clean Air Act, California is able to seek and receive a waiver of section 209(a)'s preemptions to enforce such standards. Section 209(b)(1) requires a waiver to be granted for any State that had adopted standards (other than crankcase emission standards) for the control of emissions from new motor vehicles or new motor vehicles' engines prior to March 30, 1966. California is the only state to have adopted standards prior to 1966 and is therefore the only state qualified to seek and receive a waiver. EPA evaluates California's request under the three waiver criteria set forth in section 209(b)(1)(A)–(C) and must grant a waiver under section 209(e)(2) if these criteria are met.

June 30, 2009, EPA granted California's request for a waiver of preemption under the CAA with respect to these standards.⁵³ Thirteen states and the District of Columbia, comprising approximately 40 percent of the light-duty vehicle market, adopted California's standards.⁵⁴ The granting of the waiver permits California and the other states to proceed with implementing the California emission standards for MYs 2009 and later. After EPA and NHTSA issued their MYs 2012–2016 standards, CARB revised its program such that compliance with the EPA greenhouse gas standards will be deemed to be compliance with California's GHG standards.⁵⁵ This facilitates the National Program by allowing manufacturers to meet all of the standards with a single national fleet.

As requested by the President and in the interest of maximizing regulatory harmonization, NHTSA and EPA worked closely with CARB throughout the development of the proposed rules. CARB staff released its proposal for MYs 2017–2025 GHG emissions standards consistent with the standards proposed by EPA on December 9, 2011 and the California Air Resources Board adopted these standards at its January 26, 2012 Board meeting, with final approval at its March 22, 2012 Board meeting.⁵⁶ In adopting their GHG standards the California Air Resources Board directed the Executive Officer to "continue collaborating with EPA and NHTSA as their standards are finalized and in the mid-term review to minimize potential lost benefits from federal treatment of upstream emissions of electricity and hydrogen fueled vehicles," and also, "to participate in U.S. EPA's review of the 2022 through 2025 model year

⁵³ 74 FR 32744 (July 8, 2009). See also *Chamber of Commerce v. EPA*, 642 F.3d 192 (D.C. Cir. 2011) (dismissing petitions for review challenging EPA's grant of the waiver).

⁵⁴ The Clean Air Act allows other states to adopt California's motor vehicle emissions standards under section 177 if such standards are identical to the California standards for which a waiver has been granted. States are not required to seek EPA approval under the terms of section 177.

⁵⁵ See "California Exhaust Emission Standards and Test Procedures for 2001 and Subsequent Model Passenger Cars, Light-Duty Trucks, and Medium-Duty Vehicles as approved by OAL," March 29, 2010 at 7. Available at <http://www.arb.ca.gov/regact/2010/ghgpv10/oaltp.pdf> (last accessed June 12, 2012).

⁵⁶ See California Low-Emission Vehicles (LEV) & GHG 2012 regulations adopted by State of California Air Resources Board, March 22, 2012, Resolution 12–21 incorporating by reference Resolution 12–11 (see especially Resolution 12–11 at 20) which was adopted January 26, 2012. Available at <http://www.arb.ca.gov/regact/2012/leviiighg2012/leviiighg2012.htm> (last accessed July 9, 2012).

passenger vehicle greenhouse gas standards being proposed under the 2017 through 2025 MY National Program.”⁵⁷ CARB also reconfirmed its commitment, previously made in July 2011 in conjunction with release of the Supplemental NOI,⁵⁸ to propose to revise its GHG emissions standards for MYs 2017–2025 such that compliance with EPA GHG emissions standards shall be deemed compliance with the California GHG emissions standards. The Board directed CARB’s Executive Officer that, “it is appropriate to accept compliance with the 2017 through 2025 model year National Program as compliance with California’s greenhouse gas emission standards in the 2017 through 2025 model years, once United States Environmental Protection Agency (U.S. EPA) issues their final rule on or after its current July 2012 planned release, provided that the greenhouse gas reductions set forth in U.S. EPA’s December 1, 2011 Notice of Proposed Rulemaking for 2017 through 2025 model year passenger vehicles are maintained, except that California shall maintain its own reporting requirements.”⁵⁹

C. Summary of the Final 2017–2025 National Program

1. Joint Analytical Approach

These final rules continue the collaborative analytical effort between NHTSA and EPA, which began with the MYs 2012–2016 rulemaking for light-duty vehicles. NHTSA and EPA have worked together on nearly every aspect of the technical analysis supporting these joint rules. The results of this collaboration are reflected in key elements of the respective NHTSA and EPA rules, as well as in the analytical work contained in the Joint Technical Support Document (Joint TSD). The agencies have continued to develop and refine the supporting analyses since issuing the proposed rule last December. The Joint TSD, in particular, describes important details of the analytical work that are common to both agencies’ rules, and also explains any key differences in approach. The joint analyses addressed in the TSD include the build-up of the baseline and reference fleets, the derivation of the shape of the footprint-based attribute curves that define the agencies’ respective standards, a detailed description of the estimated costs and effectiveness of the

technologies that are available to vehicle manufacturers, the economic inputs used to calculate the costs and benefits of the final rules, a description of air conditioner and other off-cycle technologies, and the agencies’ assessment of the impacts of hybrid technology incentive provisions for full-size pick-up trucks. This comprehensive joint analytical approach has provided a sound and consistent technical basis for both agencies in developing their final standards, which are summarized in the sections below.

2. Level of the Standards

EPA and NHTSA are finalizing separate sets of standards for passenger cars and for light trucks, each under its respective statutory authority. EPA is setting national CO₂ emissions standards for passenger cars and light-trucks under section 202(a) of the Clean Air Act (CAA), while NHTSA is setting national corporate average fuel economy (CAFE) standards under the Energy Policy and Conservation Act (EPCA), as amended by the Energy Independence and Security Act (EISA) of 2007 (49 U.S.C. 32902). Both the CO₂ and CAFE standards for passenger cars and standards for light trucks are footprint-based, similar to the standards currently in effect for these vehicles through model year 2016, and will become more stringent on average in each model year from 2017 through 2025. The basis for measuring performance relative to standards continues to be based predominantly on the EPA city and highway test cycles (2-cycle test). However, EPA is finalizing optional air conditioning and off-cycle credits for the GHG program and adjustments to calculated fuel economy for the CAFE program that are based on test procedures other than the 2-cycle tests.

As proposed, EPA is finalizing standards that are projected to require, on an average industry fleet wide basis, 163 grams/mile of CO₂ in model year 2025. This is projected to be achieved through improvements in fuel efficiency and improvements in non-CO₂ GHG emissions from reduced air conditioning (A/C) system leakage and use of lower global warming potential (GWP) refrigerants. The level of 163 grams/mile CO₂ is equivalent on a mpg basis to 54.5 mpg, if this level was achieved solely through improvements in fuel efficiency.⁶⁰

⁶⁰ Real-world CO₂ is typically 25 percent higher and real-world fuel economy is typically 20 percent lower than the CO₂ and CAFE values discussed here. The reference to CO₂ here refers to CO₂ equivalent reductions, as this included some degree of reductions in greenhouse gases other than CO₂, as one part of the A/C-related reductions. In

Consistent with the proposal, for passenger cars, the CO₂ compliance values associated with the footprint curves will be reduced on average by 5 percent per year from the model year 2016 projected passenger car industry-wide compliance level through model year 2025. In recognition of manufacturers’ unique challenges in improving the fuel economy and GHG emissions of full-size pickup trucks as the fleet transitions from the MY 2016 standards to MY 2017 and later, while preserving the utility (e.g., towing and payload capabilities) of those vehicles, EPA is finalizing standards reflecting an annual rate of improvement for light-duty trucks which is lower than that for passenger cars in the early years of the program. For light-duty trucks, the average annual rate of CO₂ emissions reduction in model years 2017 through 2021 is 3.5 percent per year. As proposed, EPA is also changing the slopes of the CO₂-footprint curves for light-duty trucks from those in the 2012–2016 rule, in a manner that effectively means that the annual rate of improvement for smaller light-duty trucks in model years 2017 through 2021 will be higher than 3.5 percent, and the annual rate of improvement for larger light-duty trucks over the same time period will be lower than 3.5 percent. For model years 2022 through 2025, EPA is finalizing an average annual rate of CO₂ emissions reduction for light-duty trucks of 5 percent per year.

Consistent with its statutory authority,⁶¹ NHTSA has developed two phases of passenger car and light truck standards in this rulemaking action. The first phase, from MYs 2017–2021, includes final standards that are projected to require, on an average industry fleet wide basis, a range from 40.3 to 41 mpg in MY 2021.⁶² For passenger cars, the annual increase in

addition, greater penetration of diesel fuel (as opposed to gasoline) will change the fuel economy equivalent.

⁶¹ 49 U.S.C. 32902.

⁶² The range of values here and through this rulemaking document reflect the results of co-analyses conducted by NHTSA using two different light-duty vehicle market forecasts through model year 2025. To evaluate the effects of the standards, the agencies must project what vehicles and technologies will exist in future model years and then evaluate what technologies can feasibly be applied to those vehicles to raise their fuel economy and reduce their greenhouse gas emissions. To project the future fleet, the agencies must develop a baseline vehicle fleet. For this final rule, the agencies have analyzed the impacts of the standards using two different forecasts of the light-duty vehicle fleet through MY 2025. The baseline fleets are discussed in detail in Section II.B of this preamble, and in Chapter 1 of the Technical Support Document. EPA’s sensitivity analysis of the alternative fleet is included in Chapter 10 of its RIA.

⁵⁷ Id.

⁵⁸ See State of California July 28, 2011 letter available at: <http://www.epa.gov/otaq/climate/letters.htm> (last accessed August 9, 2012).

⁵⁹ Id., CARB Resolution 12–21 (March 22, 2012) (last accessed June 6, 2012).

the stringency of the target curves between model years 2017 to 2021 is expected to average 3.8 to 3.9 percent. In recognition of manufacturers' unique challenges in improving the fuel economy and GHG emissions of full-size pickup trucks as the fleet transitions from the MY 2016 standards to MY 2017 and later, while preserving the utility (e.g., towing and payload capabilities) of those vehicles, NHTSA is also finalizing a lower annual rate of improvement for light trucks in the first phase of the program. For light trucks, the annual increase in the stringency of the target curves in model years 2017 through 2021 is 2.5 to 2.7 percent per year on average. NHTSA is changing the slopes of the fuel economy footprint curves for light trucks from those in the MYs 2012–2016 final rule, which effectively make the annual rate of improvement for smaller light trucks in MYs 2017–2021 higher than 2.5 or 2.7 percent per year, and the annual rate of improvement for larger light trucks over that time period lower than 2.5 or 2.7 percent per year.

The second phase of the CAFE program, from MYs 2022–2025, includes standards that are not final due to the statutory provision that NHTSA shall issue regulations prescribing average fuel economy standards for at least 1 but not more than 5 model years at a time.⁶³ The MYs 2022–2025 standards, then, are not final as part of this rulemaking, but rather augural, meaning that they represent the agency's current judgment, based on the information available to the agency today, of what levels of stringency would be maximum feasible in those model years. NHTSA projects that those standards would require, on an average industry fleet wide basis, a range from 48.7 to 49.7 mpg in model year 2025. NHTSA will undertake a *de novo* rulemaking at a later date to set legally binding standards for MYs 2022–2025. See Section IV for more information. For passenger cars, the annual increase in the stringency of the target curves between model years 2022 and 2025 is expected to average 4.7⁶⁴ percent, and

for light trucks, the annual increase during those model years is expected to average 4.8 to 4.9 percent.

NHTSA notes that for the first time in this rulemaking, EPA is finalizing, under its EPCA authority, rules allowing the impact of air conditioning system efficiency improvements to be included in the calculation of fuel economy for CAFE compliance. Given that these real-world improvements will be available to manufacturers for compliance, NHTSA has accounted for this by determining the amount that industry is expected to improve air conditioning system efficiency in each model year from 2017–2025, and setting the CAFE standards to reflect these improvements, in a manner consistent with EPA's GHG standards. See Sections III.B.10 and IV.I.4.b of this final rule preamble for more information.

NHTSA also notes that the rates of increase in stringency for CAFE standards are lower than EPA's rates of increase in stringency for GHG standards. As in the MYs 2012–2016 rulemaking, this is for purposes of harmonization and in reflection of several statutory constraints in EPCA/EISA. As a primary example, NHTSA's standards, unlike EPA's, do not reflect the inclusion of air conditioning system refrigerant and leakage improvements, but EPA's standards allows consideration of such A/C refrigerant improvements which reduce GHGs but do not affect fuel economy. As another example, the Clean Air Act allows various compliance flexibilities (among them certain credit generating mechanisms) not present in EPCA.

As with the MYs 2012–2016 standards, NHTSA and EPA's final MYs 2017–2025 passenger car and light truck standards are expressed as mathematical functions depending on the vehicle footprint attribute.⁶⁵ Footprint is one measure of vehicle size, and is determined by multiplying the vehicle's wheelbase by the vehicle's average track width. The standards that must be met by each manufacturer's fleet will be determined by computing the production-weighted average of the

targets applicable to each of the manufacturer's fleet of passenger cars and light trucks.⁶⁶ Under these footprint-based standards, the average levels required of individual manufacturers will depend, as noted above, on the mix and volume of vehicles the manufacturer produces in any given model year. The values in the tables below reflect the agencies' projection of the range of the corresponding average fleet levels that will result from these attribute-based curves given the agencies' current assumptions about the mix of vehicles that will be sold in the model years covered by these standards. EPA and NHTSA have each finalized the attribute-based curves, as proposed, for the model years covered by these final rules, as discussed in detail in Section II.B of this preamble and Chapter 2 of the Joint TSD. The agencies have updated their projections of the impacts of the final rule standards since the proposal, as discussed in Sections III and IV of this preamble and in the agencies' respective RIAs.

As shown in Table I–1 NHTSA's fleet-wide estimated required CAFE levels for passenger cars would increase from between 40.1 and 39.6 mpg in MY 2017 to between 55.3 and 56.2 mpg in MY 2025. Fleet-wide required CAFE levels for light trucks, in turn, are estimated to increase from between 29.1 and 29.4 mpg in MY 2017 and between 39.3 and 40.3 mpg in MY 2025. For the reader's reference, Table I–1 also provides the estimated average fleet-wide required levels for the combined car and truck fleets, culminating in an estimated overall fleet average required CAFE level of a range from 48.7 to 49.7 mpg in MY 2025. Considering these combined car and truck increases, the standards together represent approximately a 4.0 percent annual rate of increase,⁶⁷ on average, relative to the MY 2016 required CAFE levels.

⁶⁶ For CAFE calculations, a harmonic average is used.

⁶⁷ This estimated average percentage increase includes the effect of changes in standard stringency and changes in the forecast fleet sales mix.

⁶³ 49 U.S.C. 32902(b)(3)(B).

⁶⁴ The rate of increase is rounded at 4.7 percent per year using 2010 and 2008 baseline.

⁶⁵ NHTSA is required to set attribute-based CAFE standards for passenger cars and light trucks. 49 U.S.C. 32902(b)(3).

Table I-1 Estimated Average Required Fleet-Wide Fuel Economy (mpg) under Footprint-Based CAFE Standards

	MY Baseline	2017	2018	2019	2020	2021	2022	2023	2024	2025
Passenger cars	2008	40.1 –	41.6 –	43.1 –	44.8 –	46.8 –	49.0 –	51.2 –	53.6 –	56.2 –
	2010	39.6	41.1	42.5	44.2	46.1	48.2	50.5	52.9	55.3
Light trucks	2008	29.4 –	30.0 –	30.6 –	31.2 –	33.3 –	34.9 –	36.6 –	38.5 –	40.3 –
	2010	29.1	29.6	30.0	30.6	32.6	34.2	35.8	37.5	39.3
Combined	2008	35.4 –	36.5 –	37.7 –	38.9 –	41.0 –	43.0 –	45.1 –	47.4 –	49.7 –
	2010	35.1	36.1	37.1	38.3	40.3	42.3	44.3	46.5	48.7

The estimated average required mpg levels for passenger cars and trucks under the standards shown in Table I-1 above include the use of A/C efficiency improvements, as discussed above, but do not reflect a number of flexibilities and credits that manufacturers may use for compliance that NHTSA cannot consider in establishing standards based on EPCA/EISA constraints. These flexibilities

cause the actual achieved fuel economy to be lower than the required levels in the table above. The flexibilities and credits that NHTSA cannot consider include the ability of manufacturers to pay civil penalties rather than achieving required CAFE levels, the ability to use Flexible Fuel Vehicle (FFV) credits, the ability to count electric vehicles for compliance, the operation of plug-in hybrid electric vehicles on electricity for

compliance prior to MY 2020, and the ability to transfer and carry-forward credits. When accounting for these flexibilities and credits, NHTSA estimates that the CAFE standards will lead to the following average achieved fuel economy levels, based on the agencies' projections of what each manufacturer's fleet will comprise in each year of the program:⁶⁸

⁶⁸ The CAFE program includes incentives for full size pick-up trucks that have mild HEV or strong HEV systems, and for full size pick-up trucks that have fuel economy performance that is better than the target curve by more than final levels. To receive these incentives, manufacturers must produce vehicles with these technologies or

performance levels at volumes that meet or exceed final penetration levels (percentage of full size pick-up truck volume). This incentive is described in detail in Section IV.I.3.a.. The NHTSA estimates in Table I-2 do not account for the reduction in estimated average achieved fleet-wide CAFE fuel economy that will occur if manufacturers use this

incentive. NHTSA has conducted a sensitivity study that estimates the effects for manufacturers' potential use of this flexibility in Chapter X of the RIA.

Table I-2 Estimated Average Achieved Fleet-Wide Fuel Economy (mpg) under Footprint-Based CAFE Standards

	MY	2017	2018	2019	2020	2021	2022	2023	2024	2025
	Baseline									
Passenger cars	2008	39.5 –	41.5 –	43.8 –	46.3 –	47.9 –	49.3 –	50.0 –	51.5 –	52.9 –
	2010	39.4	41.1	43.3	45.1	47.1	48.1	49.6	51.3	52.1

	2010	28.8	29.3	31.3	32.8	34.9	35.5	36.5	37.4	37.6
Combined	2008	35.0 –	36.6 –	38.7 –	40.8 –	42.6 –	43.8 –	44.6 –	46.0 –	47.4 –
	2010	34.8	36.0	38.2	39.9	42.0	42.9	44.2	45.6	46.2

NHTSA is also required by EISA to set a minimum fuel economy standard for domestically manufactured passenger cars in addition to the attribute-based passenger car standard. The minimum standard “shall be the greater of (A) 27.5 miles per gallon; or (B) 92 percent of the average fuel economy projected by the Secretary for the combined domestic

and non-domestic passenger automobile fleets manufactured for sale in the United States by all manufacturers in the model year * * *,” and applies to each manufacturer’s fleet of domestically manufactured passenger cars (*i.e.*, like the other CAFE standards, it represents a fleet average requirement,

not a requirement for each individual vehicle within the fleet).

Based on NHTSA’s current market forecast, the agency is finalizing minimum standards for domestic passenger cars for MYs 2017–2021 and providing augural standards for MYs 2022–2025 as presented below in Table I–3.

TABLE I–3—MINIMUM STANDARD FOR DOMESTICALLY MANUFACTURED PASSENGER CARS (MPG)

2017	2018	2019	2020	2021	2022	2023	2024	2025
36.7	38.0	39.4	40.9	42.7	44.7	46.8	49.0	51.3

EPA is finalizing GHG emissions standards, and Table I–4 provides estimates of the projected overall fleet-wide CO₂ emission compliance target levels. The values reflected in Table I–4 are those that correspond to the manufacturers’ projected CO₂ compliance target levels from the

passenger car and truck footprint curves, but do not account for EPA’s projection of how manufacturers will implement two of the incentive programs being finalized in today’s rulemaking (advanced technology vehicle multipliers, and hybrid and performance-based incentives for full-

size pickup trucks). Table I–4 also does not account for the intermediate volume manufacturer lead-time provisions that EPA is adopting. EPA’s projection of fleet-wide emissions levels that do reflect these provisions is shown in Table I–5 below.

TABLE I–4—PROJECTED FLEET-WIDE CO₂ COMPLIANCE TARGETS UNDER THE FOOTPRINT-BASED CO₂ STANDARDS (G/MI) (PRIMARY ANALYSIS)^a

	2016 base	2017	2018	2019	2020	2021	2022	2023	2024	2025

Light Trucks	298	295	285	277	269	249	237	225	214	203
Combined Cars and Trucks	⁶⁹ 250	243	232	222	213	199	190	180	171	163

^a Projected results using MY 2008 based fleet projection analysis. These values differ slightly from those shown in the proposal because of revisions to the MY 2008 based fleet.

As shown in Table I-4, projected fleet-wide CO₂ emission compliance targets for cars increase in stringency from 212 to 143 g/mi between MY 2017 and MY 2025. Similarly, projected fleet-wide CO₂ equivalent emission compliance targets for trucks increase in stringency from 295 to 203 g/mi. As shown, the overall fleet average CO₂ level targets are projected to increase in stringency from 243 g/mi in MY 2017 to 163 g/mi in MY 2025, which is equivalent to 54.5 mpg if all reductions are made with fuel economy improvements.

EPA anticipates that manufacturers will take advantage of program

flexibilities, credits and incentives, such as car/truck credit transfers, air conditioning credits, off-cycle credits, advanced technology vehicle multipliers, intermediate volume manufacturer lead-time provisions, and hybrid and performance-based incentives for full size pick-up trucks. Three of these flexibility provisions—advanced technology vehicle multipliers, intermediate volume manufacturer lead-time provisions, and the full size pick-up hybrid/performance incentives—are expected to have an impact on the fleet-wide emissions levels that manufacturers will actually achieve.⁷⁰ Therefore, Table I-5 shows EPA’s projection of the achieved

emission levels of the fleet for MY 2017 through 2025. The differences between the emissions levels shown in Tables I-4 and I-5 reflect the impact on stringency due EPA’s projection of manufacturers’ use of the advanced technology vehicle multipliers, and the full size pick-up hybrid/performance incentives, but does not reflect car-truck trading, air conditioning credits, or off-cycle credits, because, while the latter credit provisions help reduce manufacturers’ costs of the program, EPA believes that they will result in real-world emission reductions that will not affect the achieved level of emission reductions. These estimates are more fully discussed in III.B.

^a Projected results using 2008 based fleet projection analysis. These values differ slightly from those shown in the proposal because of revisions to the MY 2008 based fleet and updates to the analysis.

A more detailed description of how the agency arrived at the year by year progression of both the projected compliance targets and the achieved CO₂ emission levels can be found in Sections III of this preamble.

As previously stated, there was broad support for the proposed standards by auto manufacturers including BMW, Chrysler, Ford, GM, Honda, Hyundai, Kia, Jaguar/Land Rover, Mazda, Mitsubishi, Nissan, Tesla, Toyota, Volvo, as well as the Global Automakers. Of the larger manufacturers, Volkswagen and Mercedes commented that the proposed passenger car standards were relatively too stringent while light truck standards were relatively too lenient and suggested several alternatives to the proposed standards. Toyota also commented that lower truck stringency puts more burdens on small cars. Honda was concerned that small light trucks face disproportionate stringency compared to larger footprint trucks

under the proposed standards. The agencies’ consideration of these and other comments and of the updated technical analyses did not lead to changes to the stringency of the standards nor in the shapes of the curves discussed above. These issues are discussed in more detail in Sections II, III and IV.

NHTSA and EPA reviewed the technology assessment employed in the proposal in developing this final rule, and concluded that there is a wide range of technologies available in the MY 2017–2025 timeframe for manufacturers to consider in upgrading light-duty vehicles to reduce GHG emissions and improve fuel economy. Commenters generally agreed with this assessment and conclusion.⁷³ The final technology assessment relied on our joint analyses for the proposed rule, as well as some new information and analyses, including information we received during the public comment period, as discussed in Section II.D below. The

analyses performed for this final rule included an updated assessment of the cost, effectiveness and availability of several technologies.

As noted further in Section II.D, for this final rule, the agencies considered over 40 current and evolving vehicle and engine technologies that manufacturers could use to improve the fuel economy and reduce CO₂ emissions of their vehicles during the MYs 2017–2025 timeframe. Many of the technologies we considered are available today, some on a limited number of vehicles and others more widespread throughout the fleet, and the agencies believe they could be incorporated into vehicles as manufacturers make their product development decisions. These “near-term” technologies are identical or very similar to those anticipated in the agencies’ analyses of compliance strategies for the MYs 2012–2016 final rule, but we believe they can achieve wider penetration throughout the

⁶⁹ As noted at proposal, the projected fleet compliance levels for 2016 are different for trucks and the fleet than were projected in the 2012–2016 rule. See 76 FR 74868 n. 44. Our assessment for this final rule is based on a predicted 2016 car value of 224, a 2016 truck value of 297 and a projected combined car and truck value of 252 g/mi. That is because the standards are footprint based and the fleet projections, hence the footprint distributions, change slightly with each update of our projections, as described below. In addition, the actual fleet compliance levels for any model year will not be

known until the end of that model year based on actual vehicle sales.

⁷⁰ There are extremely small (and unquantified) impacts on the achieved values from other flexibilities such as small volume manufacturer specific standards and emergency vehicle exemptions.

⁷¹ Electric vehicles are assumed at 0 gram/mile in this analysis.

⁷² The projected fleet achieved levels for 2016 are different for the fleet than were projected in the 2012–2016 rule. Our assessment is based on a

predicted 2016 car value of 224, and a 2016 truck value of 297 and a projected combined car and truck value of 252 g/mi. That is because the standards are footprint based and the fleet projections, hence the footprint distributions, change slightly with each update of our projections, as described below. In addition, the actual fleet achieved levels for any model year will not be known until the end of that model year based on actual vehicle sales.

⁷³ For more detail on comments regarding the agencies’ technology assessment, see Section II.D.

vehicle fleet during the MYs 2017–2025 timeframe. For this rulemaking, given its timeframe, we also considered other technologies that are not currently in production, but that are beyond the initial research phase, and are under development and expected to be in production in the next 5–10 years. Examples of these technologies are downsized and turbocharged engines operating at combustion pressures even higher than today's turbocharged engines, and emerging hybrid architecture combined with an 8-speed dual clutch transmission, a combination that is not available today. These are technologies that the agencies believe that manufacturers can, for the most part, apply both to cars and trucks, and that we expect will achieve significant improvements in fuel economy and reductions in CO₂ emissions at reasonable cost in the MYs 2017–2025 timeframe. Chapter 3 of the joint TSD provides the full assessment of these technologies. Due to the relatively long lead time before MY 2017, the agencies expect that manufacturers will be able to employ combinations of these and potentially other technologies and that manufacturers and the supply industry will be able to produce them in sufficient volumes to comply with the final standards.

A number of commenters suggested that the proposed standards were either too stringent or not stringent enough (either in some model years or in all model years, depending on the commenter), and nearly all auto manufacturers and their associations stressed the importance of the mid-term evaluation of the MYs 2022–2025 standards in their comments due to the long timeframe of the rule and uncertainty in assumptions given this timeframe. Our consideration of these comments as well as our revised analyses, leads us to conclude that the general rate of increase in the stringency of the standards as proposed remains appropriate. The comprehensive mid-term evaluation process being finalized and our evaluation of the stringency of the standards is discussed further in Sections III and IV.

Both agencies also considered other alternative standards as part of their respective Regulatory Impact Analyses that span a reasonable range of alternative stringencies both more and less stringent than the final standards. EPA's and NHTSA's analyses of these regulatory alternatives (and explanation of why we are finalizing the standards) are contained in Sections III and IV of this preamble, respectively, as well as in the agencies' respective Regulatory Impact Analyses (RIAs).

3. Form of the Standards

NHTSA and EPA are finalizing attribute-based standards for passenger cars and light trucks, as required by EISA and as allowed by the CAA, and will continue to use vehicle footprint as the attribute.⁷⁴ Footprint is defined as a vehicle's wheelbase multiplied by its average track width—in other words, the area enclosed by the points at which the wheels meet the ground. NHTSA and EPA adopted an attribute-based approach based on vehicle footprint for MYs 2012–2016 light-duty vehicle standards.⁷⁵ The agencies continue to believe that footprint is the most appropriate attribute on which to base the proposed standards, as discussed in Section II.C and in Chapter 2 of the Joint TSD. The majority of commenters supported the continued use of footprint as the vehicle attribute; those comments and the agencies' response are discussed in Section II.C below.

Under the footprint-based standards, the curve defines a GHG or fuel economy performance target for each separate car or truck footprint. Using the curves, each manufacturer thus will have a GHG and CAFE average standard that is unique to each of its fleets, depending on the footprints and production volumes of the vehicle models produced by that manufacturer. A manufacturer will have separate footprint-based standards for cars and for trucks. The curves are mostly sloped, so that generally, larger vehicles (*i.e.*, vehicles with larger footprints) will be subject to higher CO₂ grams/mile targets and lower CAFE mpg targets than smaller vehicles. This is because, generally speaking, smaller vehicles are more capable of achieving lower levels of CO₂ and higher levels of fuel economy than larger vehicles. Although a manufacturer's fleet average standards could be estimated throughout the model year based on the projected production volume of its vehicle fleet (and are estimated as part of the EPA certification process), the standards to which the manufacturer must comply will be determined by its final model

⁷⁴ NHTSA and EPA use the same vehicle category definitions for determining which vehicles are subject to the car curve standards versus the truck curve standards as were used for MYs 2012–2016 standards. As in the MYs 2012–2016 rulemaking, a vehicle classified as a car under the NHTSA CAFE program will also be classified as a car under the EPA GHG program, and likewise for trucks. This approach of using common definitions allows the CO₂ standards and the CAFE standards to continue to be harmonized across all vehicles for the National Program.

⁷⁵ NHTSA also used the footprint attribute in its Reformed CAFE program for light trucks for model years 2008–2011 and passenger car CAFE standards for MY 2011.

year production figures. A manufacturer's calculation of its fleet average standards as well as its fleets' average performance at the end of the model year will thus be based on the production-weighted average target and performance of each model in its fleet.⁷⁶

The final footprint-based standards are identical to those proposed. The passenger car curves are also similar in shape to the car curves for MYs 2012–2016. However, as proposed, the final light truck curves for MYs 2017–2025 reflect more significant changes compared to the light truck curves for MYs 2012–2016; specifically, the agencies have increased the slope and extended the large-footprint cutpoint for the light truck curves over time to larger footprints. We continue to believe that these changes from the MYs 2012–2016 curves represent an appropriate balance of both technical and policy issues, as discussed in Section II.C below and Chapter 2 of the Joint TSD.

NHTSA is adopting the attribute curves below for model years 2017 through 2021 and presenting the augural attribute curves below for model years 2022–2025. As just explained, these targets, expressed as mpg values, will be production-weighted to determine each manufacturer's fleet average standard for cars and trucks. Although the general model of the target curve equation is the same for each vehicle category and each year, the parameters of the curve equation differ for cars and trucks. Each parameter also changes on a model year basis, resulting in the yearly increases in stringency. Figure I–1 below illustrates the passenger car CAFE curves for model years 2017 through 2025 while Figure I–2 below illustrates the light truck CAFE curves for model years 2017 through 2025.

EPA is finalizing the attribute curves shown in Figure I–3 and Figure I–4 below, for model years 2017 through 2025. As with the CAFE curves, the general form of the equation is the same for each vehicle category and each year, but the parameters of the equation differ for cars and trucks. Again, each parameter also changes on a model year basis, resulting in the yearly increases in stringency. Figure I–3 below illustrates the CO₂ car standard curves for model years 2017 through 2025 while Figure I–

⁷⁶ As in the MYs 2012–2016 rule, a manufacturer may have some models that exceed their target, and some that are below their target. Compliance with a fleet average standard is determined by comparing the fleet average standard (based on the production weighted average of the target levels for each model) with fleet average performance (based on the production weighted average of the performance for each model).

4 shows the CO₂ truck standard curves for model years 2017–2025.

BILLING CODE 6560–50–P

Figure I-1 CAFE Target Curves for Passenger Cars

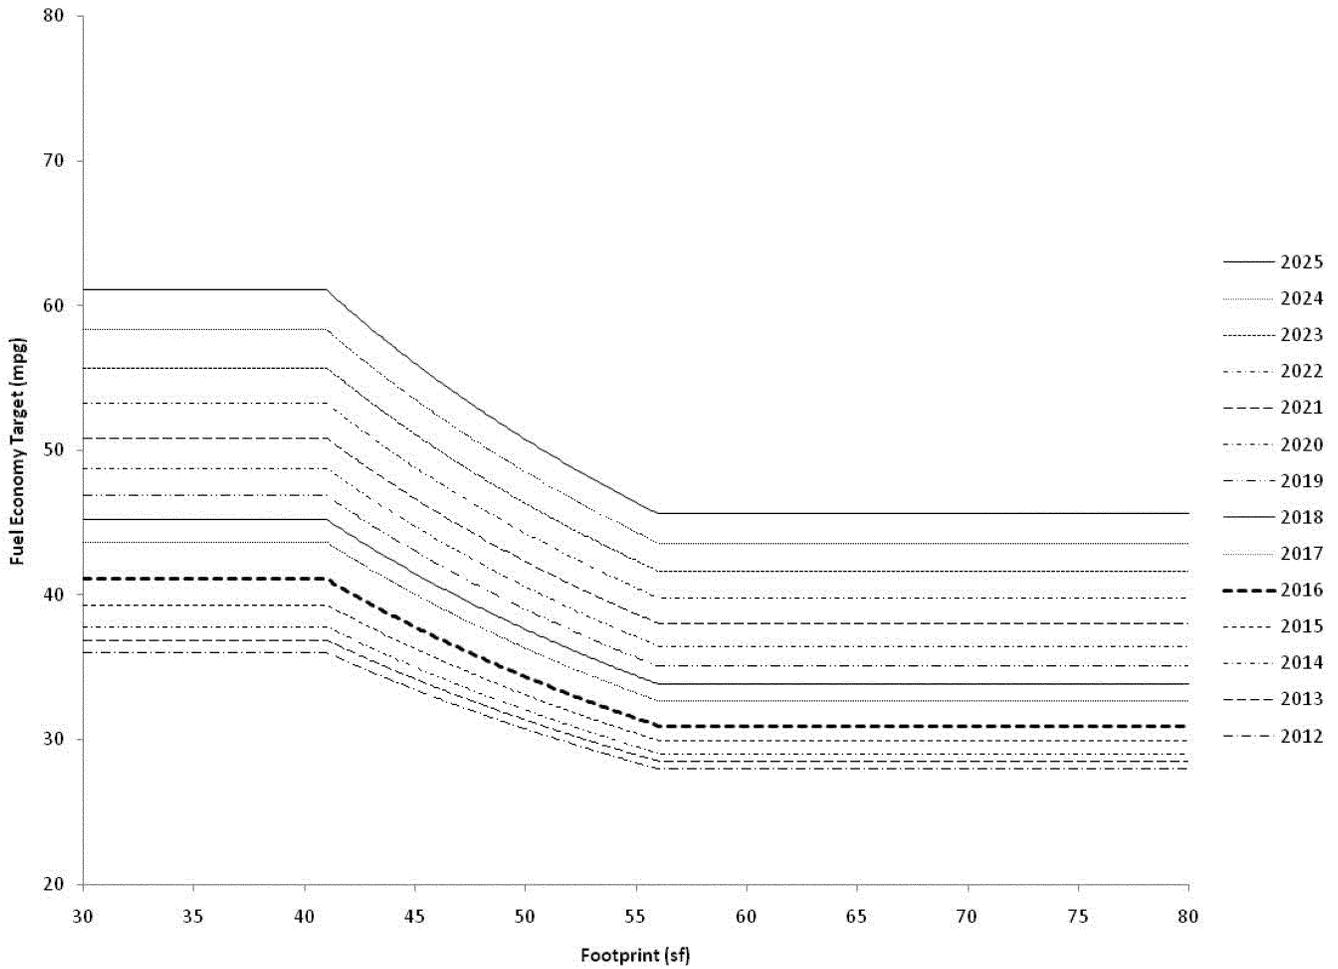

Figure I-2 CAFE Target Curves for Light Trucks

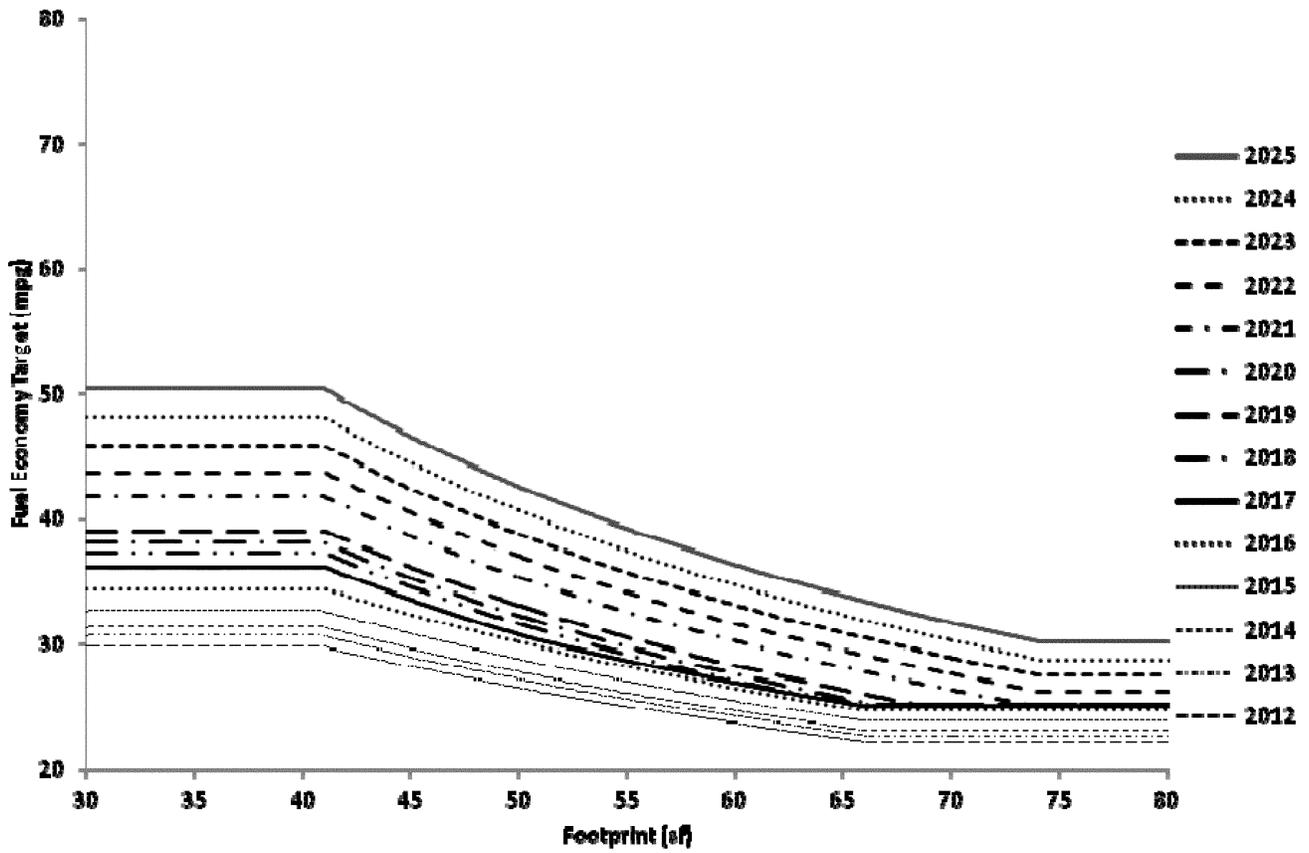

Figure I- 3 CO2 (g/mile) Passenger Car Standards

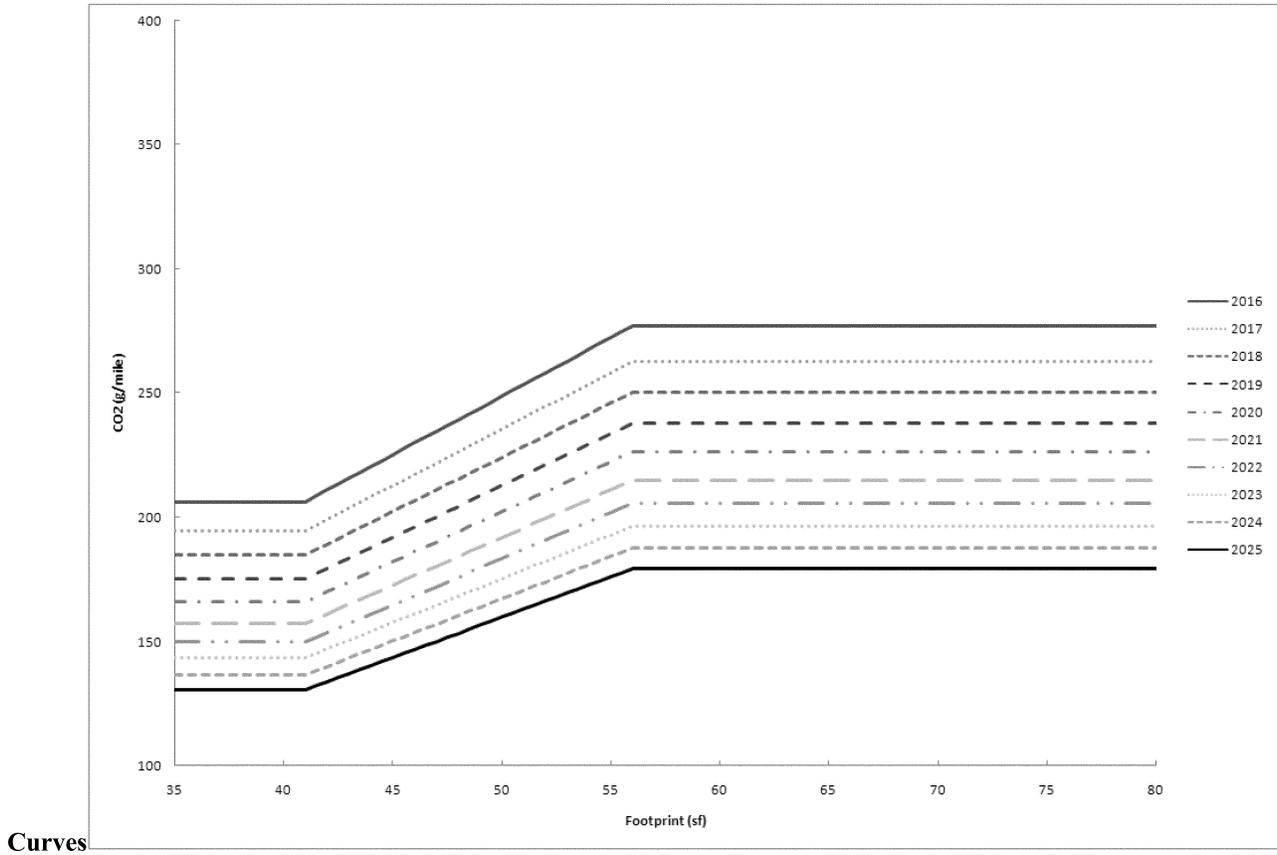

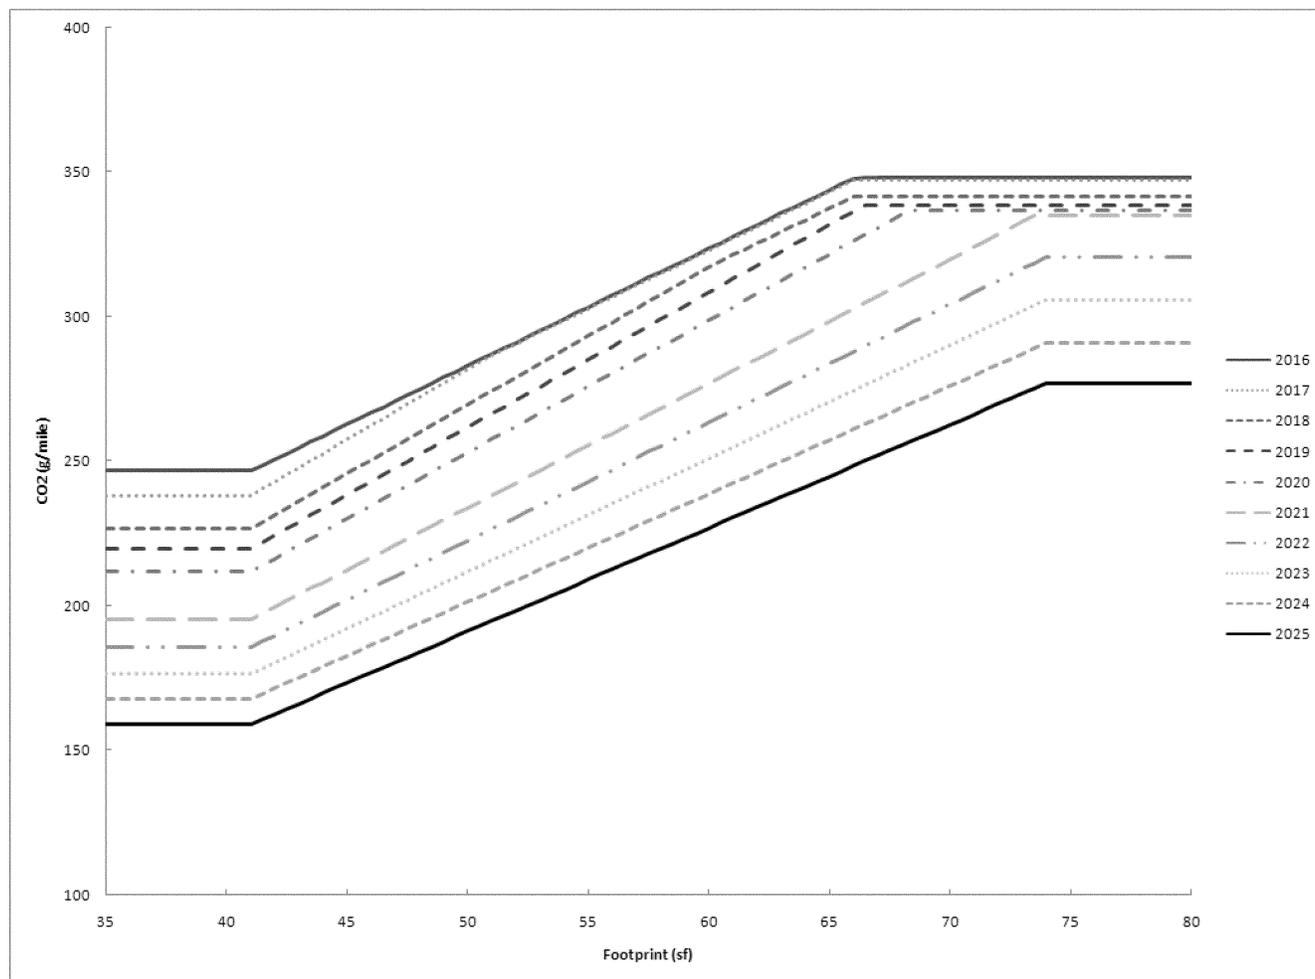

Figure I-4 CO₂ (g/mile) Light-Truck Standard Curves**BILLING CODE 6560-50-C**

EPA and NHTSA received a number of comments about the shape of the car and truck curves. Some commenters, including Honda, Toyota and Volkswagen, stated that the light truck curve was too lenient for large trucks, while Nissan and Honda stated the light truck curve was too stringent for small trucks; Porsche and Volkswagen stated the car curve was too stringent generally, and Toyota stated it was too stringent for small cars. A number of NGOs (Center for Biological Diversity, International Council on Clean Transportation, Natural Resources Defense Council, Sierra Club, Union of Concerned Scientists) also commented on the truck curves as well as the relationship between the car and truck curves. We address all these comments further in Section II.C as well as in Sections III and IV.

Generally speaking, a smaller footprint vehicle will tend to have higher fuel economy and lower CO₂ emissions relative to a larger footprint vehicle when both have a comparable level of fuel efficiency improvement technology. Since the finalized standards apply to a manufacturer's overall passenger car fleet and overall light truck fleet, not to an individual vehicle, if one of a manufacturer's fleets is dominated by small footprint vehicles, then that fleet will have a higher fuel economy requirement and a lower CO₂ requirement than a manufacturer whose fleet is dominated by large footprint vehicles. Compared to the non-attribute based CAFE standards in place prior to MY 2011, the final standards more evenly distribute the compliance burdens of the standards among different manufacturers, based on their respective product offerings.

With this footprint-based standard approach, EPA and NHTSA continue to believe that the rules will not create significant incentives to produce vehicles of particular sizes, and thus there should be no significant effect on the relative availability of different vehicle sizes in the fleet due to these standards, which will help to maintain consumer choice during the MY 2017 to MY 2025 rulemaking timeframe. Consumers should still be able to purchase the size of vehicle that meets their needs. Table I-6 helps to illustrate the varying CO₂ emissions and fuel economy targets under the final standards that different vehicle sizes will have, although we emphasize again that these targets are not actual standards—the standards are manufacturer-specific, rather than vehicle-specific.

TABLE I-6—MODEL YEAR 2025 CO₂ AND FUEL ECONOMY TARGETS FOR VARIOUS MY 2012 VEHICLE TYPES

Vehicle type	Example models	Example model footprint (sq. ft.)	CO ₂ Emissions target (g/mi) ^a	Fuel economy target (mpg) ^b
Example Passenger Cars				
Compact car	Honda Fit	40	131	61.1
Midsize car	Ford Fusion	46	147	54.9
Full size car	Chrysler 300	53	170	48.0
Example Light-duty Trucks				
Small SUV	4WD Ford Escape	43	170	47.5
Midsize crossover	Nissan Murano	49	188	43.4
Minivan	Toyota Sienna	56	209	39.2
Large pickup truck	Chevy Silverado (extended cab, 6.5 foot bed)	67	252	33.0

^{a,b} Real-world CO₂ is typically 25 percent higher and real-world fuel economy is typically 20 percent lower than the CO₂ and fuel economy target values presented here.

4. Program Flexibilities for Achieving Compliance

a. CO₂/CAFE Credits Generated Based on Fleet Average Over-Compliance

As proposed, the agencies are finalizing several provisions which provide compliance flexibility to manufacturers to meet the standards. Many of the provisions are also found in the MYs 2012–2016 rules. For example, the agencies are continuing to allow manufacturers to generate credits for over-compliance with the CO₂ and CAFE standards.⁷⁷ As noted above, under the footprint-based standards, a manufacturer’s ultimate compliance obligations are determined at the end of each model year, when production of vehicles for that model year is complete. Since the fleet average standards that apply to a manufacturer’s car and truck fleets are based on the applicable footprint-based curves, a production volume-weighted fleet average requirement will be calculated for each averaging set (cars and trucks) based on the mix and volumes of the models manufactured for sale by the manufacturer. If a manufacturer’s car and/or truck fleet achieves a fleet average CO₂/CAFE level better than its car and/or truck standards, then the manufacturer generates credits. Conversely, if the fleet average CO₂/CAFE level does not meet the standard, the fleet would incur debits (also referred to as a shortfall). As in the MY 2011 CAFE program under EPCA/EISA, and also in MYs 2012–2016 for the light-duty vehicle GHG and CAFE program, a manufacturer whose fleet generates credits in a given model year

would have several options for using those credits, including credit carry-back, credit carry-forward, credit transfers, and credit trading.

Credit “carry-back” means that manufacturers are able to use credits to offset a deficit that had accrued in a prior model year, while credit “carry-forward” means that manufacturers can bank credits and use them toward compliance in future model years. EPCA, as amended by EISA, requires NHTSA to allow manufacturers to carry back credits for up to three model years, and to carry forward credits for up to five model years. EPA’s MYs 2012–2016 light duty vehicle GHG program includes the same limitations and, as proposed, EPA is continuing this limitation in the MY 2017–2025 program. In its comments, Volkswagen requested that credits under the GHG rules be allowed to be carried back for five model years rather than three as proposed. A five year carry back could create a perverse incentive for shortfalls to accumulate past the point where they can be rectified by later model year performance. EPA is therefore adopting the three year carry back period in its rule. NHTSA is required to allow a three year carry-back period by statute.

However, to facilitate the transition to the increasingly more stringent standards, EPA proposed, and is finalizing under its CAA authority a one-time CO₂ carry-forward beyond 5 years, such that any credits generated from MYs 2010 through 2016 will be able to be used to comply with light duty vehicle GHG standards at any time through MY 2021. This provision does not apply to early credits generated in MY 2009. EPA received comments from the Alliance of Automobile Manufacturers and several individual manufacturers supporting the proposed

additional credit carry-forward flexibility and also comments from the Center for Biological Diversity opposing the additional credit carry-forward provisions which are addressed in section III.B.4. NHTSA’s program will continue the 5-year carry-forward and 3-year carry-back, as required by statute.

Credit “transfer” means the ability of manufacturers to move credits from their passenger car fleet to their light truck fleet, or vice versa. As part of the EISA amendments to EPCA, NHTSA was required to establish by regulation a CAFE credit transferring program, now codified at 49 CFR Part 536, to allow a manufacturer to transfer credits between its car and truck fleets to achieve compliance with the standards. For example, credits earned by over-compliance with a manufacturer’s car fleet average standard could be used to offset debits incurred due to that manufacturer’s not meeting the truck fleet average standard in a given year. However, EISA imposed a cap on the amount by which a manufacturer could raise its CAFE standards through transferred credits: 1 mpg for MYs 2011–2013; 1.5 mpg for MYs 2014–2017; and 2 mpg for MYs 2018 and beyond.⁷⁸ These statutory limits will continue to apply to the determination of compliance with the CAFE standards. EISA also prohibits the use of transferred credits to meet the minimum domestic passenger car fleet CAFE standard.⁷⁹

Under section 202 (a) of the CAA there is no statutory limitation on car-truck credit transfers, and EPA’s GHG program allows unlimited credit transfers across a manufacturer’s car-light truck fleet to meet the GHG

⁷⁷ This credit flexibility is required by EPCA/EISA, see 49 U.S.C. 32903, and is well within EPA’s discretion under section 202(a) of the CAA.

⁷⁸ 49 U.S.C. 32903(g)(3).

⁷⁹ 49 U.S.C. 32903(g)(4).

standard. This is based on the expectation that this flexibility will facilitate setting appropriate GHG standards that manufacturers can comply with in the lead time provided, and will allow the required GHG emissions reductions to be achieved in the most cost effective way. Therefore, EPA did not constrain the magnitude of allowable car-truck credit transfers in the MY 2012–2016 rule,⁸⁰ as doing so would reduce the flexibility to achieve the standards in the lead time provided, and would increase costs with no corresponding environmental benefit. EPA did not propose and is not finalizing any constraints on credit transfers for MY 2017 and later, consistent with the MY 2012–2016 program. As discussed in Section III.B.4, EPA received one comment from Center for Biological Diversity that it should be consistent with EISA and establish limitations on credit transfers. EPA disagrees with the commenter and continues to believe that limiting transfers and trading would unnecessarily constrain program flexibility as discussed in section III.B.4 below.

Credit “trading” means the ability of manufacturers to sell credits to, or purchase credits from, one another. EISA allowed NHTSA to establish by regulation a CAFE credit trading program, also now codified at 49 CFR Part 536, to allow credits to be traded between vehicle manufacturers. EPA also allows credit trading in the light-duty vehicle GHG program. These sorts of exchanges between averaging sets are typically allowed under EPA’s current mobile source emission credit programs. EISA also prohibits manufacturers from using traded credits to meet the minimum domestic passenger car CAFE standard.⁸¹

b. Air Conditioning Improvement Credits/Fuel Economy Value Increases

Air conditioning (A/C) systems contribute to GHG emissions in two ways. The primary refrigerant used in automotive air conditioning systems today—a hydrofluorocarbon (HFC) refrigerant and potent GHG called HFC–134a—can leak directly from the A/C system (direct A/C emissions). In addition, operation of the A/C system places an additional load on the engine that increases fuel consumption and thus results in additional CO₂ tailpipe emissions (indirect A/C emissions). In the MY 2012–2016 program, EPA allows

manufacturers to generate credits by reducing either or both types of GHG emissions related to A/C systems. For those model years, EPA anticipated that manufacturers would pursue these relatively inexpensive reductions in GHGs due to improvements in A/C systems and accounted for generation and use of both of these credits in setting the levels of the CO₂ standards.

For this rule, as with the MYs 2012–2016 program, EPA is finalizing its proposal to allow manufacturers to generate CO₂-equivalent⁸² credits to use in complying with the CO₂ standards by reducing direct and/or indirect A/C emissions. These reductions can be achieved by improving A/C system efficiency (and thus reducing tailpipe CO₂ and improving fuel consumption), by reducing refrigerant leakage, and by using refrigerants with lower global warming potentials (GWPs) than HFC–134a. As proposed, EPA is establishing that the maximum total A/C credits available for cars will be 18.8 grams/mile CO₂-equivalent and for trucks will be 24.4 grams/mile CO₂-equivalent.⁸³ The approaches to be used to calculate these direct and indirect A/C credits are generally consistent with those of the MYs 2012–2016 program, although there are several revisions, including as proposed the introduction of a new A/C efficiency test procedure that will be applicable starting in MY 2014 for compliance with EPA’s GHG standards.

In addition to the grams-per-mile CO₂-equivalent credits, for the first time the agencies are establishing provisions in the CAFE program that would account for improvements in air conditioner efficiency. Improving A/C efficiency leads to real-world fuel economy benefits, because as explained above, A/C operation represents an additional load on the engine. Thus, more efficient A/C operation imposes less of a load and allows the vehicle to go farther on a gallon of gas. Under EPCA, EPA has authority to adopt procedures to measure fuel economy and to calculate CAFE compliance values.⁸⁴ Under this authority, EPA is establishing that manufacturers can generate fuel consumption improvement values for purposes of CAFE compliance based on air conditioning system efficiency improvements for cars and trucks. An

⁸² CO₂ equivalence (CO₂e) expresses the global warming potential of a greenhouse gas (for A/C, hydrofluorocarbons) by normalizing that potency to CO₂’s. Thus, the maximum A/C credit for direct emissions is the equivalent of 18.8 grams/mile of CO₂ for cars.

⁸³ This is further broken down by 5.0 and 7.2 g/mi respectively for car and truck AC efficiency credits, and 13.8 and 17.2 g/mi respectively for car and truck alternative refrigerant credits.

⁸⁴ See 49 U.S.C. 32904(c).

increase in a vehicle’s CAFE grams-per-mile value would be allowed up to a maximum based on 0.000563 gallon/mile for cars and on 0.000810 gallon/mile for trucks. This is equivalent to the A/C efficiency CO₂ credit allowed by EPA under the GHG program. For the CAFE program, EPA would use the same methods to calculate the values for air conditioning efficiency improvements for cars and trucks as are used in EPA’s GHG program. Additionally, given that these real-world improvements will be available to manufacturers for compliance, NHTSA has accounted for this by determining the amount that industry is expected to improve air conditioning system efficiency in each model year from 2017–2025, and setting the CAFE standards to reflect these improvements, in a manner consistent with EPA’s GHG standards. EPA is not allowing generation of fuel consumption improvement values for CAFE purposes, nor is NHTSA increasing stringency of the CAFE standard, for the use of A/C systems that reduce leakage or employ alternative, lower GWP refrigerant. This is because those changes do not generally affect fuel economy. Most industry commenters supported this proposal, while one NGO noted that the inclusion of air conditioning improvements for purposes of CAFE car compliance was a change from prior interpretations.

c. Off-cycle Credits/Fuel Economy Value Increases

For MYs 2012–2016, EPA provided an option for manufacturers to generate credits for utilizing new and innovative technologies that achieve CO₂ reductions that are not reflected on current test procedures. EPA noted in the MYs 2012–2016 rulemaking that examples of such “off-cycle” technologies might include solar panels on hybrids and active aerodynamics, among other technologies. See generally 75 FR 25438–39. EPA’s current program allows off-cycle credits to be generated through MY 2016.

EPA proposed and is finalizing provisions allowing manufacturers to continue to generate and use off-cycle credits for MY 2017 and later to demonstrate compliance with the light-duty vehicle GHG standards. In addition, as with A/C efficiency, improving efficiency through the use of off-cycle technologies leads to real-world fuel economy benefits and allows the vehicle to go farther on a gallon of gas. Thus, under its EPCA authority EPA proposed and is finalizing provisions to allow manufacturers to generate fuel consumption improvement

⁸⁰ EPA’s GHG program will continue to adjust car and truck credits by vehicle miles traveled (VMT), as in the MY 2012–2016 program.

⁸¹ 49 U.S.C. 32903(f)(2).

values for purposes of CAFE compliance based on the use of off-cycle technologies. Increases in fuel economy under the CAFE program based on off-cycle technology will be equivalent to the off-cycle credit allowed by EPA under the GHG program, and these amounts will be determined using the same procedures and test methods as are used in EPA's GHG program. For the reasons discussed in Sections III.D and IV.I of this final rule preamble, the ability to generate off-cycle credits and increases in fuel economy for use in compliance will not affect or change the stringency of the GHG or CAFE standards established by each agency.⁸⁵

Many automakers indicated that they had a strong interest in pursuing off-cycle technologies, and encouraged the agencies to refine and simplify the evaluation process to provide more certainty as to the types of technologies the agencies would approve for credit generation. Other commenters, such as suppliers and some NGOs, also provided technical input on various aspects of the off-cycle credit program. Some environmental groups expressed concerns about the uncertainties in calculating off-cycle credits and that the ability for manufacturer's to earn credits from off-cycle technologies should not be a disincentive for implementing other (2-cycle) technologies. For MY 2017 and later, EPA is finalizing several proposed provisions to expand and streamline the MYs 2012–2016 off-cycle credit provisions, including an approach by which the agencies will provide default values, which will eliminate the need for case-by-case-testing, for a subset of off-cycle technologies whose benefits are reliably and conservatively quantified. EPA is finalizing a list of technologies and default credit values for these technologies, as well as capping the

maximum amount of these credits which can be utilized unless a manufacturer demonstrates through testing that greater amounts are justified. The agencies believe that our assessment of off-cycle technologies and associated credit values on this list is conservative, and emphasize that automakers may apply for additional off-cycle credits beyond the minimum credit value and cap if they present sufficient supporting data.

Manufacturers may also apply to receive credit for off-cycle technologies besides those listed, again, if they have sufficient data. EPA received several comments regarding the list of technologies and associated credit values and has modified the list somewhat in response to these comments, as discussed in Section II.F.2. EPA was also persuaded by the public comments that the default credit values should not be contingent upon a minimum penetration of the technology into a manufacturer's fleet, and so is not adopting this aspect of the proposal. Manufacturers often apply new technologies on a limited basis to gain experience, gauge consumer acceptance, allow refinement of the manufacturing and production processes for quality and cost, and other legitimate reasons. The proposed minimum penetration requirement might have discouraged introduction of off-cycle technologies in these legitimate circumstances.

In addition, as requested by commenters, EPA is providing additional detail on the process and timing for the credit/fuel consumption improvement values application and approval process for those instances where manufacturers seek off-cycle credits rather than using the default values from the list provided, or seek credits for technologies other than those provided through the list. EPA is finalizing a timeline for the approval process, including a 60-day EPA decision process from the time a manufacturer submits a complete application for credits based on 5-cycle testing. As proposed, EPA is also finalizing a detailed, step-by-step process, including a specification of the data that manufacturers must submit. EPA will also consult with NHTSA during the review process. For off-cycle technologies that are both not covered by the pre-approved off-cycle credit/fuel consumption improvement values list and that are not quantifiable based on the 5-cycle test cycle option provided in the 2012–2016 rulemaking, EPA is retaining the public comment process from the MYs 2012–2016 rule, and will

consult with NHTSA during the review process.

Finally, in response to many OEM and supplier comments encouraging EPA to allow access to the pre-defined credit menu earlier than MY 2017, EPA is allowing use of the credit menu for the GHG program beginning in MY 2014 to facilitate compliance with the GHG standards for MYs 2014–2016. This provision is for the GHG rules only, and does not apply to the 2012–2016 CAFE standards; the off-cycle credit program will not begin until MY 2017 for the CAFE program, as discussed in Section IV.I.4.c. A full description of the program, including an overview of key comments and responses, is provided in Section III.C.5. A number of technical comments were also submitted by a variety of stakeholders, which are addressed in Chapter 5 of the joint TSD.

d. Incentives for Electric Vehicles, Plug-in Hybrid Electric Vehicles, Fuel Cell Vehicles, and Compressed Natural Gas Vehicles

In order to provide temporary regulatory incentives to promote advanced vehicle technologies, EPA is finalizing, as proposed, an incentive multiplier for CO₂ emissions compliance purposes for all electric vehicles (EVs), plug-in hybrid electric vehicles (PHEVs), and fuel cell vehicles (FCVs) sold in MYs 2017 through 2021. In addition, in response to public comments explaining how infrastructure and technologies for compressed natural gas (CNG) vehicles could serve as a bridge to use of advanced technologies such as hydrogen fuel cells, EPA is finalizing an incentive multiplier for CNG vehicles sold in MYs 2017 through 2021. This multiplier approach means that each EV/PHEV/FCV/CNG vehicle would count as more than one vehicle in the manufacturer's compliance calculation. EPA is finalizing, as proposed, that EVs and FCVs start with a multiplier value of 2.0 in MY 2017 and phase down to a value of 1.5 in MY 2021, and that PHEVs would start at a multiplier value of 1.6 in MY 2017 and phase down to a value of 1.3 in MY 2021.⁸⁶ EPA is finalizing multiplier values for both dedicated and dual fuel CNG vehicles for MYs 2017–2021 that are equivalent to the multipliers for PHEVs. All incentive multipliers in EPA's program expire at the end of MY 2021. See Section III.C.2 for more discussion of these incentive multipliers.

⁸⁵ The agencies have developed estimates for the cost and effectiveness of various off-cycle technologies, including active aerodynamics and stop-start. For the final rule analysis, NHTSA assumed that these two technologies are available to manufacturers for compliance with the standards, similar to all of the other fuel economy improving technologies that the analysis assumes are available. The costs and benefits of these technologies are included in the analysis, similar to all other available technologies and therefore, NHTSA has included the assessment of off-cycle credits in the assessment of maximum feasible standards. EPA has included the 2-cycle benefit of stop-start and active aerodynamics in the standards setting analysis because these technologies have 2-cycle, in addition to off-cycle, effectiveness. As with all the technologies considered in TSD Chapter 3 which are modeled as part of potential compliance paths, EPA considers the 2-cycle effectiveness when setting the standard. The only exception where off-cycle effectiveness is reflected in the standard is for improvements to air conditioning leakage and efficiency.

⁸⁶ The multipliers are for EV/FCVs: 2017–2019—2.0, 2020—1.75, 2021—1.5; for PHEVs and dedicated and dual fuel CNG vehicles: 2017–2019—1.6, 2020—1.45, 2021—1.3.

NHTSA currently interprets EPCA and EISA as precluding it from offering additional incentives for the alternative fuel operation of EVs, PHEVs, FCVs, and NGVs, except as specified by statute,⁸⁷ and thus did not propose and is not including incentive multipliers comparable to the EPA incentive multipliers described above.

For EVs, PHEVs and FCVs, EPA is also finalizing, as proposed, to set a value of 0 g/mile for the tailpipe CO₂ emissions compliance value for EVs, PHEVs (electricity usage) and FCVs for MY 2017–2021, with no limit on the quantity of vehicles eligible for 0 g/mi tailpipe emissions accounting. For MY 2022–2025, EPA is finalizing, as proposed, that 0 g/mi only be allowed up to a per-company cumulative sales cap, tiered as follows: 1) 600,000 EV/PHEV/FCVs for companies that sell 300,000 EV/PHEV/FCVs in MYs 2019–2021; or 2) 200,000 EV/PHEV/FCVs for all other manufacturers. Starting with MY 2022, the compliance value for EVs, FCVs, and the electric portion of PHEVs in excess of individual automaker cumulative production caps must be based on net upstream accounting. These provisions are discussed in detail in Section III.C.2.

As proposed and as discussed above, for EVs and other dedicated alternative fuel vehicles, EPA will calculate fuel economy for the CAFE program (under its EPCA statutory authority, as further described in Section I.E.2.a) using the same methodology as in the MYs 2012–2016 rulemaking.⁸⁸ For liquid alternative fuels, this methodology generally counts 15 percent of the volume of fuel used in determining the mpg-equivalent fuel economy. For gaseous alternative fuels (such as natural gas), the methodology generally determines a gasoline equivalent mpg based on the energy content of the gaseous fuel consumed, and then adjusts the fuel consumption by effectively only counting 15 percent of the actual energy consumed. For

electricity, the methodology generally determines a gasoline equivalent mpg by measuring the electrical energy consumed, and then uses a petroleum equivalency factor to convert to a mpg-equivalent value. The petroleum equivalency factor for electricity includes an adjustment that effectively only counts 15 percent of the actual energy consumed. Counting 15 percent of the fuel volume or energy provides an incentive for alternative fuels in the CAFE program.

The methodology that EPA is finalizing for dual fueled vehicles under the GHG program and to calculate fuel economy for the CAFE program is discussed below in subsection I.C.7.a.

e. Incentives for Using Advanced, “Game-Changing” Technologies in Full-Size Pickup Trucks

The agencies recognize that the standards presented in this final rule for MYs 2017–2025 will be challenging for large vehicles, including full-size pickup trucks often used in commercial applications. To help address this challenge, the program will, as proposed, adopt incentives for the use of hybrid electric and non-hybrid electric “game changing” technologies in full-size pickup trucks.

EPA is providing the incentive for the GHG program under EPA’s CAA authority, and for the CAFE program under EPA’s EPCA authority. EPA’s GHG and NHTSA’s CAFE standards are set at levels that take into account this flexibility as an incentive for the introduction of advanced technology. This provides the opportunity in the program’s early model years to begin penetration of advanced technologies into this category of vehicles, and in turn creates more opportunities for achieving the more stringent MYs 2022–2025 truck standards.

EPA is providing a per-vehicle CO₂ credit in the GHG program and an equivalent fuel consumption improvement value in the CAFE program for manufacturers that sell significant numbers of large pickup trucks that are mild or strong hybrid electric vehicles (HEVs). To qualify for these incentives, a truck must meet minimum criteria for bed size, and for towing or payload capability. In order to encourage rapid penetration of these technologies in this vehicle segment, the final rules also establish minimum HEV sales thresholds, in terms of a percentage of a manufacturer’s full-size pickup truck fleet, which a manufacturer must satisfy in order to qualify for the incentives.

The program requirements and incentive amounts differ somewhat for

mild and strong HEV pickup trucks. As proposed, mild HEVs will be eligible for a per-vehicle CO₂ credit of 10 g/mi (equivalent to 0.0011 gallon/mile for a gasoline-fueled truck) during MYs 2017–2021. To be eligible a manufacturer would have to show that the mild hybrid technology is utilized in a specified portion of its truck fleet beginning with at least 20% of a company’s full-size pickup production in MY 2017 and ramping up to at least 80% in MY 2021. The final rule specifies a lower level of technology penetration for MYs 2017 and 2018 than the 30% and 40% penetration rates proposed, based on our consideration of industry comments that too high a penetration requirement could discourage introduction of the technology. The lower required rates will help factor in the early experience gained with this technology and allow for a more efficient ramp up in manufacturing capacity. As proposed, strong HEV pickup trucks will be eligible for a 20 g/mi credit (0.0023 gallon/mile) during MYs 2017–2025 if the technology is used on at least 10% of a company’s full-size pickups in that model year. EPA and NHTSA are adopting specific definitions for mild and strong HEV pickup trucks, based on energy flow to the high-voltage battery during testing. These definitions are slightly different from those proposed—reflecting the agencies’ consideration of public comments and additional pertinent data. The details of this program are described in Sections II.F.3 and III.C.3, as well as in Chapter 5.3 of the joint TSD.

Because there are other promising technologies besides hybridization that can provide significant reductions in GHG emissions and fuel consumption from full size pickup trucks, EPA is also adopting, as proposed, a performance-based CO₂ emissions credit and equivalent fuel consumption improvement value for full-size pickup trucks. Eligible pickup trucks certified as performing 15 percent better than their applicable CO₂ target will receive a 10 g/mi credit (0.0011 gallon/mile), and those certified as performing 20 percent better than their target will receive a 20 g/mi credit (0.0023 gallon/mile). The 10 g/mi performance-based credit will be available for MYs 2017 to 2021 and, once qualifying; a vehicle model will continue to receive the credit through MY 2021, provided its CO₂ emissions level does not increase. The 20 g/mi performance-based credit will be provided to a vehicle model for a maximum of 5 years within the 2017 to 2025 model year period provided its

⁸⁷ Because 49 U.S.C. 32904(a)(2)(B) expressly requires EPA to calculate the fuel economy of electric vehicles using the Petroleum Equivalency Factor developed by DOE, which contains an incentive for electric operation already, 49 U.S.C. 32905(a) expressly requires EPA to calculate the fuel economy of FCVs using a specified incentive, and 49 U.S.C. 32905(c) expressly requires EPA to calculate the fuel economy of natural gas vehicles using a specified incentive, NHTSA believes that Congress’ having provided clear incentives for these technologies in the CAFE program suggests that additional incentives beyond those would not be consistent with Congress’ intent. Similarly, because the fuel economy of PHEVs’ electric operation must also be calculated using DOE’s PEF, the incentive for electric operation appears to already be inherent in the statutory structure.

⁸⁸ See 49 U.S.C. 32904 and 32905.

CO₂ emissions level does not increase. Minimum sales penetration thresholds apply for the performance-based credits, similar to those adopted for HEV credits.

To avoid double-counting, no truck will receive credit under both the HEV and the performance-based approaches. Further details on the full-size truck technology credit program are provided in sections II.F.3 and III.C.3, as well as in Chapter 5.3 of the joint TSD.

The agencies received a variety of comments on the proposal for this technology incentive program for full size pickup trucks. Some environmental groups and manufacturers questioned the need for it, arguing that this vehicle segment is not especially challenged by the standards, that hybrid systems would readily transfer to it from other vehicle classes, and that the credit essentially amounts to an economic advantage for manufacturers of these trucks. Other industry commenters requested that it be made available to a broader class of vehicles, or that the minimum penetration thresholds be removed or relaxed. There were also a number of comments on the technical requirements defining eligibility and mild/strong HEV performance. In response to the comments, the agencies made some changes to the proposed program, including adjustments to the penetration thresholds for mild HEVs, clarification that non-gasoline HEVs can qualify, and improvements to the technical criteria for mild and strong hybrids. The comments and changes are discussed in detail in sections II.F.3, and III.C.3, and in Chapter 5 of the TSD.

5. Mid-Term Evaluation

Given the long time frame at issue in setting standards for MYs 2022–2025, and given NHTSA's obligation to conduct a *de novo* rulemaking in order to establish final standards for vehicles for those model years, the agencies will conduct a comprehensive mid-term evaluation and agency decision-making process for the MYs 2022–2025 standards, as described in the proposal.

The agencies received many comments about the importance of the proposed mid-term evaluation due to the long time-frame of the rule and the uncertainty in assumptions due to this long timeframe. Nearly all auto manufacturers and associations predicated their support of the MY 2017–2025 National Program on the agencies conducting this evaluation and decision-making process. In addition, a number of auto manufacturers suggested additional factors that the agencies should consider during the evaluation process and also stressed the

importance of completing the evaluation no later than April 1, 2018, the timeframe proposed by the agencies. Several associations also asked for more detail to be codified regarding the timeline, content and procedures of the review process. Several automakers and organizations suggested that the agencies also conduct a series of smaller, focused evaluations or “check-ins” on key issues and technological and market trends. Several organizations and associations stressed the importance of involving CARB and broad public participation in the review process.

The agencies also received a number of comments from environmental and consumer organizations expressing concerns about the mid-term evaluation—that it could occur too early, before reliable data on the new standards is available, be disruptive to auto manufacturers' product planning and add uncertainty, and that it should not be used as an opportunity to delay benefits or weaken the overall National Program for MY 2022–2025. Those organizations commented that if the agencies determined that a mid-term evaluation was necessary, it should be used as an opportunity to increase the stringency of the 2022–2025 standards. Some environmental groups opposed the concept of the agencies performing additional interim reviews. Finally, several environmental organizations urged transparency and recommended that the agencies provide periodic updates on technology progress and compliance trends. One commenter, NADA, stated that the rule should not be organized in a way that would require a mid-term evaluation and that the agencies should wait to set standards for MYs 2017–2021 until more information is available. The mid-term evaluation comments are discussed in detail in sections III.B.3 and IV.A.3.b.

The agencies are finalizing the mid-term evaluation and agency decision-making process as proposed. As stated in the proposal, both NHTSA and EPA will develop and compile up-to-date information for the mid-term evaluation, through a collaborative, robust and transparent process, including public notice and comment. The evaluation will be based on (1) a holistic assessment of all of the factors considered by the agencies in setting standards, including those set forth in this final rule and other relevant factors, and (2) the expected impact of those factors on the manufacturers' ability to comply, without placing decisive weight on any particular factor or projection. In order to align the agencies' rulemaking for MYs 2022–

2025 and to maintain a joint national program, if the EPA determination is that standards will not change, NHTSA will issue its final rule concurrently with the EPA determination. If the EPA determination is that standards may change, the agencies will issue a joint NPRM and joint final rule. The comprehensive evaluation process will lead to final agency action by both agencies, as described in sections III.B.3 and IV.A.3 of this Notice.

NHTSA's final action will be a *de novo* rulemaking conducted, as explained, with fresh inputs and a fresh consideration and balancing of all relevant factors, based on the best and most current information before the agency at that time. EPA will conduct a mid-term evaluation of the later model year light-duty GHG standards (MY2022–2025). The evaluation will determine what standards are appropriate for those model years.

Consistent with the agencies' commitment to maintaining a single national framework for regulation of vehicle GHG emissions and fuel economy, the agencies fully expect to conduct the mid-term evaluation in close coordination with the California Air Resources Board (CARB). In adopting their GHG standards on March 22, 2012, the California Air Resources Board directed the Executive Officer to continue collaborating with EPA and NHTSA as the Federal GHG standards were finalized and also “to participate in U.S. EPA's mid-term review of the 2022 through 2025 model year passenger vehicle greenhouse gas standards being proposed under the 2017 through 2025 MY National Program”.⁸⁹ In addition, in order to align the agencies' proceedings for MYs 2022–2025 and to maintain a joint national program, if the EPA determination is that standards will not change, NHTSA will issue its final rule concurrently with the EPA determination. If the EPA determination is that standards may change, the agencies will issue a joint NPRM and joint final rule.

Further discussion of the mid-term evaluation can be found in Sections III.B.3 and IV.A.3.b of this final rule preamble.

6. Coordinated Compliance

The MYs 2012–2016 final rules established detailed and comprehensive regulatory provisions for compliance and enforcement under the GHG and

⁸⁹ See California Low-Emission Vehicles (LEV) & GHG 2012 regulations approved by State of California Air Resources Board, Resolution 12–11. Available at: <http://www.arb.ca.gov/regact/2012/cfo2012/res12-11.pdf> (last accessed August 9, 2012).

CAFE programs. These provisions remain in place for model years beyond MY 2016 without additional action by the agencies and EPA and NHTSA are not finalizing any significant modifications to them. In the MYs 2012–2016 final rule, NHTSA and EPA established a program that recognizes, and replicates as closely as possible, the compliance protocols associated with the existing CAA Tier 2 vehicle emission standards, and with earlier model year CAFE standards. The certification, testing, reporting, and associated compliance activities established for the GHG program closely track those in previously existing programs and are thus familiar to manufacturers. EPA already oversees testing, collects and processes test data, and performs calculations to determine compliance with both CAFE and CAA standards. Under this coordinated approach, the compliance mechanisms for both programs are consistent and non-duplicative. EPA is also continuing the provisions adopted in the MYs 2012–2016 GHG rule for in-use compliance with the GHG emissions standards.

This compliance approach allows manufacturers to satisfy the GHG program requirements in the same general way they comply with previously existing applicable CAA and CAFE requirements. Manufacturers will demonstrate compliance on a fleet-average basis at the end of each model year, allowing model-level testing to continue throughout the year as is the current practice for CAFE determinations. The compliance program design includes a single set of manufacturer reporting requirements and relies on a single set of underlying data. This approach still allows each agency to assess compliance with its respective program under its respective statutory authority. The program also addresses EPA enforcement in instances of noncompliance.

7. Additional Program Elements

a. Compliance Treatment of Plug-in Hybrid Electric Vehicles (PHEVs), Dual Fuel Compressed Natural Gas (CNG) Vehicles, and Flexible Fuel Vehicles (FFVs)

As proposed, EPA is finalizing provisions which state that CO₂ emissions compliance values for plug-in hybrid electric vehicles (PHEVs) and dual fuel compressed natural gas (CNG) vehicles will be based on estimated use of the alternative fuels, recognizing that if a consumer incurs significant cost for a dual fuel vehicle and can use an alternative fuel that has significantly

lower cost than gasoline, it is very likely that the consumer will seek to use the lower cost alternative fuel whenever possible. Accordingly, for CO₂ emissions compliance, EPA is using the Society of Automotive Engineers “utility factor” methodology (based on vehicle range on the alternative fuel and typical daily travel mileage) to determine the assumed percentage of operation on gasoline and percentage of operation on the alternative fuel for both PHEVs and dual fuel CNG vehicles, along with the CO₂ emissions test values on the alternative fuel and gasoline. Dual fuel CNG vehicles must have a minimum natural gas range-to-gasoline range of 2.0 in order to use this utility factor approach. Any dual fuel CNG vehicles that do not meet this requirement would use a utility factor of 0.50, the value that has been used in the past for dual fuel vehicles under the CAFE program. EPA is also finalizing, as proposed, an option allowing the manufacturer to use this utility factor methodology for CO₂ emissions compliance for dual fuel CNG vehicles for MY 2012 and later model years.

As proposed, EPA is accounting for E85 use by flexible fueled vehicles (FFVs) as in the existing MY 2016 and later program, based on actual usage of E85 which represents a real-world tailpipe emissions reduction attributed to alternative fuels. Unlike PHEV and dual fuel CNG vehicles, there is not a significant cost differential between an FFV and a conventional gasoline vehicle and historically consumers have fueled these vehicles with E85 a very small percentage of the time. But E85 use in FFVs is expected to rise in the future due to Renewable Fuel Standard program requirements. GHG emissions compliance issues for dual fuel vehicles are discussed further in Section III.C.4.a.

In the CAFE program for MYs 2017–2019, the fuel economy of dual fuel vehicles will be determined in the same manner as specified in the MY 2012–2016 rule, and as defined by EISA. Beginning in MY 2020, EISA does not specify how to measure the fuel economy of dual fuel vehicles, and EPA is finalizing its proposal, under its EPCA authority, to use the “utility factor” methodology for PHEV and CNG vehicles described above to determine how to apportion the fuel economy when operating on gasoline or diesel fuel and the fuel economy when operating on the alternative fuel. For FFVs under the CAFE program, EPA is using the same methodology it uses for the GHG program to apportion the fuel economy, namely based on actual usage of E85. As proposed, EPA is continuing to use Petroleum Equivalency Factors

and the 0.15 divisor used in the MY 2012–2016 rule for the alternative fuels, however with no cap on the amount of fuel economy increase allowed. This issue is discussed further in Section III.C.4.b and in Section IV.I.3.a.

b. Exclusion of Emergency and Police Vehicles

Under EPCA, manufacturers are allowed to exclude emergency vehicles from their CAFE fleet⁹⁰ and all manufacturers that produce emergency vehicles have historically done so. In the MYs 2012–2016 program, EPA’s GHG program applies to these vehicles. However, after further consideration of this issue, EPA proposed and is finalizing the same type of exclusion provision for these vehicles for MY 2012 and later because of their unique features. Law enforcement and emergency vehicles are necessarily equipped with features which reduce the ability of manufacturers to sufficiently improve the emissions control without compromising necessary vehicle utility. Manufacturers commented in support of this provision and EPA received only one comment against exempting emergency vehicles. These comments are addressed in Section III.B.8.

c. Small Businesses, Small Volume Manufacturers, and Intermediate Volume Manufacturers

As proposed, EPA is finalizing provisions to address two categories of smaller manufacturers. The first category is small businesses as defined by the Small Business Administration (SBA). For vehicle manufacturers, SBA’s definition of small business is any firm with less than 1,000 employees. As with the MYs 2012–2016 program, EPA is exempting small businesses—that is, any company that meets the SBA’s definition of a small business—from the MY 2017 and later GHG standards. EPA believes this exemption is appropriate given the unique challenges small businesses would face in meeting the GHG standards, and since these businesses make up less than 0.1% of total U.S. vehicle sales, there is no significant impact on emission reductions. As proposed, EPA is also finalizing an opt-in provision that will allow small businesses wishing to waive their exemption and comply with the GHG standards to do so. EPA received no adverse comments on its proposed approach for small businesses.

EPA’s final rule also addresses small volume manufacturers, those with U.S. annual sales of less than 5,000 vehicles.

⁹⁰ 49 U.S.C. 32902(e).

Under the MYs 2012–2016 program, these small volume manufacturers are eligible for an exemption from the CO₂ standards. As proposed, EPA will bring small volume manufacturers into the CO₂ program for the first time starting in MY 2017, and allow them to petition EPA for alternative standards to be developed manufacturer-by-manufacturer in a public process. EPCA provides NHTSA with the authority to exempt from the generally applicable CAFE standards manufacturers that produce fewer than 10,000 passenger cars worldwide in the model year each of the two years prior to the year in which they seek an exemption.⁹¹ If NHTSA exempts a manufacturer, it must establish an alternate standard for that manufacturer for that model year, at the level that the agency decides is maximum feasible for that manufacturer.⁹² The exemption and alternative standard apply only if the exempted manufacturer also produces fewer than 10,000 passenger cars worldwide in the year for which the exemption was granted. NHTSA is not changing its regulations pertaining to exemptions and alternative standards (49 CFR Part 525) as part of this rulemaking.

Also, EPA requested comment on allowing manufacturers able to demonstrate that they are operationally independent from a parent company (defined as 10% or greater ownership), to also be eligible for small volume manufacturer alternative standards and treatment under the GHG program. Under the current program, the vehicle sales of such companies must be aggregated with the parent company in determining eligibility for small volume manufacturer provisions. The only comments addressing this issue supported including a provision recognizing operational independence in the rules. EPA has continued to evaluate the issue and the final GHG rule includes provisions allowing manufacturers to demonstrate to EPA that they are operationally independent. This is different from the CAFE program, which aggregates manufacturers for compliance purposes if a control relationship exists, either in terms of stock ownership or design control, or both.⁹³

⁹¹ 49 U.S.C. 32902(d). Implementing regulations may be found in 49 CFR Part 525.

⁹² NHTSA may also apply an alternative average fuel economy standard to all automobiles manufactured by small volume manufacturers, or to classes of automobiles manufactured by small manufacturers, per EPCA, although this particular provision has not yet been exercised. See 49 U.S.C. 32902(d)(2).

⁹³ See 49 U.S.C. 32901(a)(4) and 49 CFR Part 534.

EPA sought comment on whether additional lead-time is needed for niche intermediate sized manufacturers. Under the Temporary Lead-time Allowance Alternative Standards (TLAAS) provisions in the MYs 2012–2016 GHG rules (see 75 FR 25414–417), manufacturers with sales of less than 50,000 vehicles were provided additional flexibility through MY 2016. EPA invited comment on whether this or some other form of flexibility is warranted for niche intermediate volume, limited line manufacturers (see section III.B.7).

NRDC commented in support of EPA's proposal not to extend the TLAAS program. EPA received comments from Jaguar Land Rover, Porsche and Suzuki that the standards will raise significant feasibility concerns for some intermediate volume manufacturers that will be part of the expanded TLAAS program in MY 2016, especially in the early transition years of the program. Porsche commented that they would need to meet standards up to 25 percent more stringent in MY 2017 compared to MY 2016, requiring utilization of advanced technologies at rates wholly disproportionate to rates expected for larger manufacturers with more diverse product lines. EPA is persuaded that these manufacturers require additional lead-time to make the transition from the TLAAS regime to the more stringent standards. To provide this needed lead-time, EPA is finalizing provisions for manufacturers with sales below 50,000 vehicles per year that are part of the TLAAS program through MY 2016, which will allow eligible manufacturers to remain at their MY 2016 standards through MY 2018 and then begin making the transition to more stringent standards. The manufacturers that utilize this added lead time will be required to meet the primary program standards in MY 2021 and later. The intermediate volume manufacturer lead-time provisions are discussed in detail in Section III.B.8.

d. Nitrous Oxide and Methane Standards

As proposed, EPA is extending to MY 2017 and later the flexibility for manufacturers to use CO₂ credits on a CO₂-equivalent basis to comply with the nitrous oxides (N₂O) and methane (CH₄) cap standards. These cap standards, established in the MYs 2012–2016 rulemaking were intended to prevent future emissions increases and were generally not expected to result in the application of new technologies or significant costs for manufacturers using current vehicle designs. EPA is also finalizing additional lead time for

manufacturers to use compliance statements in lieu of N₂O testing through MY 2016, as proposed. In addition, in response to comments, EPA is allowing the continued use of compliance statements in MYs 2017–2018 in cases where manufacturers are not conducting new emissions testing for a test group, but rather carrying over certification data from a previous year. EPA is also clarifying that manufacturers will not be required to conduct in-use testing for N₂O in cases where a compliance statement has been used for certification. All of these provisions are discussed in detail below in section III.B.9.

D. Summary of Costs and Benefits for the National Program

This section summarizes the projected costs and benefits of the MYs 2017–2025 CAFE and GHG emissions standards for light-duty vehicles. These projections helped inform the agencies' choices among the alternatives considered and provide further confirmation that the final standards are appropriate under the agencies' respective statutory authorities. The costs and benefits projected by NHTSA to result from the CAFE standards are presented first, followed by those projected by EPA to result from the GHG emissions standards.

For several reasons, the estimates for costs and benefits presented by NHTSA and EPA, while consistent, are not directly comparable, and thus should not be expected to be identical. NHTSA and EPA's standards are projected to result in slightly different fuel efficiency improvements. EPA's GHG standard is more stringent in part due to its assumptions about manufacturers' use of air conditioning leakage/refrigerant replacement credits, which will result in reduced emissions of HFCs. NHTSA's final standards are at levels of stringency that assume improvements in the efficiency of air conditioning systems, but these standards do not require reductions in HFC emissions, which are generally not related to fuel economy or energy conservation. In addition, as noted above, the CAFE and GHG standards offer somewhat different program flexibilities and provisions, and the agencies' analyses differ in their accounting for these flexibilities, primarily because NHTSA is statutorily prohibited from considering some flexibilities when establishing CAFE standards,⁹⁴ while EPA is not. These differences contribute to differences in the agencies' respective estimates of

⁹⁴ See 49 U.S.C. 32902(h).

costs and benefits resulting from the new standards.

Specifically, the projected costs and benefits presented by NHTSA and EPA are not directly comparable because EPA's standards include air conditioning-related improvements in HFC reductions, and reflect compliance with the GHG standards, whereas NHTSA projects some manufacturers will pay civil penalties as part of their compliance strategy, as allowed by EPCA. EPCA also prohibits NHTSA from considering manufacturers' ability to earn, transfer or trade credits earned for over-compliance when setting standards. The Clean Air Act imposes no such limitations. The Clean Air Act also allows EPA to provide incentives for particular technologies, such as for electric vehicles and dual fueled vehicles. For these reasons, EPA's estimates of GHG reductions and fuel savings achieved by the GHG standards are higher than those projected by NHTSA for the CAFE standards. For these same reasons, EPA's estimates of manufacturers' costs for complying with the passenger car and light truck GHG standards are slightly higher than NHTSA's estimates for complying with the CAFE standards.

It also bears discussion here that, for this final rulemaking, the agencies have analyzed the costs and benefits of the standards using two different forecasts of the light vehicle fleet through MY 2025. The agencies have concluded that the significant uncertainty associated with forecasting sales volumes, vehicle technologies, fuel prices, consumer demand, and so forth out to MY 2025, make it reasonable and appropriate to evaluate the impacts of the final CAFE and GHG standards using two baselines.⁹⁵ One market forecast (or fleet projection), very similar to the one used for the NPRM, uses (corrected) MY 2008 CAFE certification data, information from AEO 2011, and information purchased from CSM in December of 2009. The agencies received comments regarding the market forecast used in the NPRM suggesting that updates in several respects could be helpful to the agencies' analysis of final standards; given those comments and since the agencies were already considering producing an updated fleet projection, the final rulemakings also utilize a second market forecast using MY 2010 CAFE certification data, information from AEO 2012, and information

purchased from LMC Automotive (formerly J.D. Power Forecasting).

These two market forecasts contain certain differences, although as will be discussed below, the differences are not significant enough to change the agencies' decision as to the structure and stringency of the final standards, and indeed corroborate the reasonableness of the EPA final GHG standards and that the NHTSA standards are the maximum feasible. For example, the 2008 based fleet forecast uses the MY 2008 "baseline" fleet, which represents the most recent model year for which the industry had sales data that was not affected by the subsequent economic recession. On the other hand, the 2010 based fleet projection employs a market forecast (provided by LMC Automotive) which is more current than the projection provided by CSM (utilized for the MY 2008 based fleet projection). The CSM forecast appears to have been particularly influenced by the recession, showing major declines in market share for some manufacturers (e.g., Chrysler) which the agencies do not believe are reasonably reflective of future trends.

However, the MY 2010 based fleet projection also is highly influenced by the economic recession. The MY 2010 CAFE certification data has become available since the proposal (see section 1.2.1 of the Joint TSD for the proposed rule, which noted the possibility of these data becoming available), and is used in EPA's alternative analysis, and continues to show the effects of the recession. For example, industry-wide sales were skewed down 20%⁹⁶ compared to pre-recession MY 2008 levels. For some companies like Chrysler, Mitsubishi, and Subaru, sales were down 30–40%⁹⁷ from MY 2008 levels. For BMW, General Motors, Jaguar/Land Rover, Porsche, and Suzuki, sales were down more than 40%⁹⁸ from 2008 levels. Using the MY 2008 vehicle data avoids projecting these abnormalities in predicting the future fleet, although it also perpetuates vehicle brands and models (and thus, their outdated fuel economy levels and engineering characteristics) that have since been discontinued. The MY 2010 CAFE certification data accounts for the phase-out of some brands (e.g., Saab) and the introduction of some

technologies (e.g., Ford's EcoBoost engine), which may be more reflective of the future fleet in this respect.

Thus, given the volume of information that goes into creating a baseline forecast and given the significant uncertainty in any projection out to MY 2025, the agencies think that the best way to illustrate the possible impacts of that uncertainty for purposes of this rulemaking is the approach taken here of analyzing the effects of the final standards under both the MY 2008-based and the MY 2010-based fleet projections. EPA is presenting its primary analysis of the standards using the same baseline/future fleet projection that was used in the NPRM (i.e., corrected MY 2008 CAFE certification data, information from AEO 2011, and a future fleet forecast purchased from CSM). EPA also conducted an alternative analysis of the standards based on MY 2010 CAFE certification data, updated AEO 2012 (early release) projections of the future fleet sales volumes, and a forecast of the future fleet mix projections to MY 2025 purchased from LMC Automotive. At the same time, given that EPA believes neither projection is strongly superior to the other, EPA has performed a detailed analysis of the final standards using the MY 2010 baseline, and we have concluded that the final standards are likewise appropriate using this alternative baseline/fleet projection. EPA's analysis of the alternative baseline/future fleet (based on MY 2010) is presented in EPA's Final Regulatory Impact Analysis (RIA), Chapter 10. NHTSA's primary analysis uses both market forecasts, and accordingly presents values from both in tables throughout this preamble and in NHTSA's FRIA. Joint TSD Chapter 1 includes a full description of the two market projections and their derivation.

As with the MYs 2012–2016 standards, and the MYs 2014–2018 standards for heavy duty vehicles and engines, NHTSA and EPA have harmonized the programs as much as possible, and continuing the National Program to MYs 2017–2025 will result in significant cost savings and other advantages for the automobile industry by allowing them to manufacture and sell one fleet of vehicles across the U.S., rather than potentially having to comply with multiple state standards that may occur in the absence of the National Program. It is also important to note that NHTSA's CAFE standards and EPA's GHG standards will both be in effect, and each will lead to increases in average fuel economy and reductions in GHGs. The two agencies' standards together comprise the National Program,

⁹⁶ These figures are derived from the manufacturer and fleet volume tables in Chapter 1 of the TSD.

⁹⁷ These figures are derived from the manufacturer and fleet volume tables in Chapter 1 of the TSD.

⁹⁸ These figures are derived from the manufacturer and fleet volume tables in Chapter 1 of the TSD.

⁹⁵ We refer to these baselines as "fleet projections" or "market forecasts" in Section II.B of the preamble and Chapter 1 of the TSD and elsewhere in the administrative record. The term "baseline" has a specific definition and is described in Chapter 1 of the TSD.

and the following discussions of the respective costs and benefits of NHTSA’s CAFE standards and EPA’s GHG standards do not change the fact that both the CAFE and GHG standards, jointly, are the source of the benefits and costs of the National Program.

1. Summary of Costs and Benefits for the NHTSA CAFE Standards

In reading the following section, we note that tables are identified as reflecting “estimated required” values and “estimated achieved” values. When establishing standards, EPCA allows NHTSA to only consider the fuel economy of dual-fuel vehicles (for example, FFVs and PHEVs) when operating on gasoline, and prohibits NHTSA from considering the use of dedicated alternative fuel vehicle credits (including for example EVs), credit carry-forward and carry-back, and credit transfer and trading. NHTSA’s primary analysis of costs, fuel savings, and related benefits from imposing higher CAFE standards does not include them. However, EPCA does not prohibit NHTSA from considering the fact that manufacturers may pay civil penalties rather than comply with CAFE standards, and NHTSA’s primary analysis accounts for some manufacturers’ tendency to do so. The primary analysis is generally identified in tables throughout this document by the term “*estimated required* CAFE levels.”

To illustrate the effects of the flexibilities and technologies that NHTSA is prohibited from including in its primary analysis, NHTSA performed a supplemental analysis of these effects on benefits and costs of the CAFE standards that helps to illustrate their real-world impacts. As an example of one of the effects, including the use of FFV credits reduces estimated per-vehicle compliance costs of the

program, but does not significantly change the projected fuel savings and CO₂ reductions, because FFV credits reduce the fuel economy levels that manufacturers achieve not only under the standards, but also under the baseline MY 2016 CAFE standards. As another example, including the operation of PHEV vehicles on both electricity and gasoline, and the expected use of EVs for compliance may raise the fuel economy levels that manufacturers achieve under the proposed standards. The supplemental analysis is generally identified in tables throughout this document by the term “*estimated achieved* CAFE levels.”

Thus, NHTSA’s primary analysis shows the estimates the agency considered for purposes of establishing new CAFE standards, and its supplemental analysis including manufacturer use of flexibilities and advanced technologies currently reflects the agency’s best estimate of the potential real-world effects of the CAFE standards.

Without accounting for the compliance flexibilities and advanced technologies that NHTSA is prohibited from considering when determining the maximum feasible level of new CAFE standards, since manufacturers’ decisions to use those flexibilities and technologies are voluntary, NHTSA estimates that the required fuel economy increases would lead to fuel savings totaling a range from 180 billion to 184 billion gallons throughout the lives of light duty vehicles sold in MYs 2017–2025. At a 3 percent discount rate, the present value of the economic benefits resulting from those fuel savings is between \$513 billion and \$525 billion; at a 7 percent private discount rate, the present value of the economic benefits resulting from those fuel savings is between \$400 billion and \$409 billion.

The agency further estimates that these new CAFE standards will lead to corresponding reductions in CO₂ emissions totaling 1.9 billion metric tons during the lives of light duty vehicles sold in MYs 2017–2025. The present value of the economic benefits from avoiding those emissions is approximately \$53 billion, based on a global social cost of carbon value of about \$26 per metric ton (in 2017, and growing thereafter).⁹⁹ All costs are in 2010 dollars.

Accounting for compliance flexibilities reduces the fuel savings achieved by the standards, as manufacturers are able to comply through credit mechanisms that reduce the amount of fuel economy technology that must be added to new vehicles in order to meet the targets set by the standards. NHTSA estimates that the fuel economy increases would lead to fuel savings totaling about 170 billion gallons throughout the lives of light duty vehicles sold in MYs 2017–2025, when compliance flexibilities are considered. At a 3 percent discount rate, the present value of the economic benefits resulting from those fuel savings is between \$481 billion and \$488 billion; at a 7 percent private discount rate, the present value of the economic benefits resulting from those fuel savings is between \$375 billion and \$380 billion. The agency further estimates that these new CAFE standards will lead to corresponding reductions in CO₂ emissions totaling 1.8 billion metric tons during the lives of light duty vehicles sold in MYs 2017–2025. The present value of the economic benefits from avoiding those emissions is approximately \$49 billion, based on a global social cost of carbon value of about \$26 per metric ton (in 2017, and growing thereafter).

TABLE I–7—NHTSA’S ESTIMATED MYs 2017–2025 COSTS, BENEFITS, AND NET BENEFITS (\$BILLION) UNDER THE CAFE STANDARDS (ESTIMATED ACHIEVED)

	Baseline Fleet	Totals		Annualized	
		3% Discount rate	7% Discount rate	3% Discount rate	7% Discount rate
Cumulative for MYs 2017–2021 Final Standards					
Costs	2010	(\$61)–	(\$58)–	(\$2.4)–	(\$3.6)–
	2008	(\$57)	(\$54)	(\$2.2)	(\$3.3)
Benefits	2010	\$243–	\$195–	\$9.2–	\$11.3–
	2008	\$240	\$194	\$9.0	\$11.0
Net Benefits	2010	\$183–	\$137–	\$6.8–	\$7.7–
	2008	\$184	\$141	\$6.8	\$7.8

⁹⁹ NHTSA also estimated the benefits associated with three more estimates of a one ton GHG

reduction in 2017 (\$6, \$41, and \$79), which will

likewise grow thereafter. See Section II.E for a more detailed discussion of the social cost of carbon.

TABLE I-7—NHTSA’S ESTIMATED MYs 2017–2025 COSTS, BENEFITS, AND NET BENEFITS (\$BILLION) UNDER THE CAFE STANDARDS (ESTIMATED ACHIEVED)—Continued

	Baseline Fleet	Totals		Annualized	
		3% Discount rate	7% Discount rate	3% Discount rate	7% Discount rate

NHTSA estimates that the fuel economy increases resulting from the standards will produce other benefits both to drivers (e.g., reduced time spent refueling) and to the U.S. as a whole (e.g., reductions in the costs of petroleum imports beyond the direct savings from reduced oil purchases),¹⁰⁰ as well as some disbenefits (e.g., increased traffic congestion) caused by drivers' tendency to travel more when the cost of driving declines (as it does

when fuel economy increases). NHTSA has estimated the total monetary value to society of these benefits and disbenefits, and estimates that the standards will produce significant net benefits to society. Using a 3 percent discount rate, NHTSA estimates that the present value of these net benefits will range from \$498 billion to \$507 billion over the lives of the vehicles sold during MYs 2017–2025; using a 7 percent discount rate a narrower range from

\$372 billion to \$377 billion. More discussion regarding monetized benefits can be found in Section IV of this preamble and in NHTSA's FRIA. Note that the benefit calculation in the following tables includes the benefits of reducing CO₂ emissions,¹⁰¹ but not the benefits of reducing other GHG emissions (those have been addressed in a sensitivity analysis discussed in Section IV of this preamble and in NHTSA's FRIA).

NHTSA attributes most of these benefits (between \$513 billion and \$525 billion at a 3 percent discount rate, or between \$400 billion and \$409 billion at

a 7 percent discount rate, excluding consideration of compliance flexibilities and advanced technologies for meeting the standards) to reductions in fuel

consumption, valuing fuel (for societal purposes) at the future pre-tax prices projected in the Energy Information Administration's (EIA) reference case

¹⁰⁰ We note, of course, that reducing the amount of fuel purchased also reduces tax revenue for the Federal and state/local governments. NHTSA discusses this issue in more detail in Chapter VIII of its RIA.

¹⁰¹ CO₂ benefits for purposes of these tables are calculated using the \$26/ton SCC value. Note that the net present value of reduced GHG emissions is calculated differently from other benefits. The same discount rate used to discount the value of damages

from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency.

forecast from the Annual Energy Outlook (AEO) 2012. NHTSA's RIA accompanying this rulemaking presents

a detailed analysis of specific benefits of the rule.

TABLE I-12—SUMMARY OF NHTSA'S FUEL SAVINGS AND CO₂ EMISSIONS REDUCTION UNDER THE CAFE STANDARDS (ESTIMATED REQUIRED)

	MY baseline	Amount	3% discount rate	7% discount rate
2017–2021 standards:				
Fuel savings (billion gallons)	2008	70.1 –	\$196 –	\$153 –
	2010	69.2	\$193	\$151
CO ₂ emissions reductions (million metric tons)	2008	760 –	\$19.3 –	\$19.3 –
	2010	751.40	\$19	\$19
2017–2025 standards:				
Fuel savings (billion gallons)	2008	183.5 –	\$525 –	\$409 –
	2010	180.3	\$513	\$400
CO ₂ emissions reductions (million metric tons)	2008	1,987 –	\$53 –	\$53 –
	2010	1,953	\$52	\$52

NHTSA estimates that the increases in technology application necessary to achieve the projected improvements in fuel economy will entail considerable

monetary outlays. The agency estimates that the incremental costs for achieving the CAFE standards—that is, outlays by vehicle manufacturers over and above

those required to comply with the MY 2016 CAFE standards—will total between about \$134 billion and \$140 billion.

TABLE I-13—NHTSA'S INCREMENTAL TECHNOLOGY OUTLAYS (\$BILLION) UNDER THE CAFE STANDARDS (ESTIMATED REQUIRED)

	MY base-line	Earlier	2017	2018	2019	2020	2021	Total through 2021	2022	2023	2024	2025	Total through 2025
Passenger cars	2008	3.9 – ...	2.3 – ...	4.3 – ...	6.1 – ...	9.4 – ...	11.7 –	37.7 –	13.1 –	14.6 –	18.8 –	20.2 –	104.4 –
	2010	7.7	3.6	4.8	6.5	8.5	9.9	41.0	11.0	12.4	15.5	16.7	96.6
Light trucks	2008	0.1 – ...	0.4 – ...	1.1 – ...	2.3 – ...	3.4 – ...	4.8 – ...	12.1 –	5.4 –	5.6 –	6.1 –	6.6 –	35.9 –

	2010	6.2	3.7	5.2	8.3	10.8	14.0	48.2	15.3	16.9	19.7	20.0	120.1

NHTSA projects that manufacturers will recover most or all of these additional costs through higher selling prices for new cars and light trucks. To allow manufacturers to recover these

increased outlays (and, to a much less extent, the civil penalties that some manufacturers are expected to pay for non-compliance), the agency estimates that the standards will lead to increase

in average new vehicle prices ranging from \$183 to \$287 per vehicle in MY 2017 to between \$1,461 and \$1,616 per vehicle in MY 2025:

TABLE I-15—NHTSA'S INCREMENTAL INCREASES IN AVERAGE NEW VEHICLE COSTS (\$) UNDER THE CAFE STANDARDS (ESTIMATED REQUIRED)

	MY baseline	2017	2018	2019	2020	2021	2022	2023	2024	2025
Passenger cars	2008	244 –	455 –	631 –	930 –	1,143	1,272	1,394	1,751	1,827

	2010	239 ...	340 ...	537 ...	704 ...	909 ...	985 ...	1,085	1,245	1,257

Despite estimated increases in average vehicle prices of between \$183 to \$287 per vehicle in MY 2017 to between \$1,461 and \$1,616 per vehicle in MY 2025, NHTSA estimates that discounted fuel savings over the vehicles’ lifetimes will be sufficient to offset initial costs. Even discounted at 7%, lifetime fuel

savings are estimated to be more than 2.5 times the incremental price increase induced by manufacturers’ compliance with the standards. Although NHTSA estimates lifetime fuel cost savings using 3% and 7% discount rates based on OMB guidance, it is possible that consumers use different discount rates

when valuing fuel savings, or value savings over a period of time shorter than the vehicle’s full useful life. A more nuanced discussion of consumer valuation of fuel savings appears in Section IV.G.6.

**Table I-17 NHTSA Estimated Lifetime Fuel Savings (\$), Discounted at 3% and 7% for MY
2017–2025 (Estimated Required)**

	MY baseline	2017	2018	2019	2020	2021	2022	2023	2024	2025
3% discount rate										
Passenger cars	2008	872–	1,657–	2,390–	3,269–	3,852–	4,216–	4,571–	5,101–	5,496–

	2010	856	1,264	1,994	2,600	3,104	3,405	3,830	4,267	4,612
Light trucks	2008	417–	1,041–	2,068–	2,944–	4,020–	4,425–	4,723–	5,171–	5,562–
	2010	331	635	1,576	2,439	3,583	3,929	4,453	4,981	5,434
Combined	2008	587–	1,207–	1,945–	2,699–	3,371–	3,693–	3,972–	4,391–	4,722–
	2010	670	1,042	1,847	2,544	3,269	3,584	4,041	4,506	4,885

As is the case with technology costs, accounting for the program's

compliance flexibilities reduces savings in lifetime fuel expenditures due to

lower levels of achieved fuel economy than are required under the standards.

Table I-18 NHTSA Estimated Lifetime Fuel Savings (\$), Discounted at 3% and 7% for MY 2017–2025 (Estimated Achieved)

	2010	723	1,044	1,856	2,366	3,043	3,338	3,769	4,214	4,403

The CAFE standards are projected to produce net benefits in a range from \$498 billion to \$507 billion at a 3 percent discount rate (a range of \$476 billion to \$483 billion, with compliance flexibilities), or between \$372 billion and \$377 billion at a 7 percent discount rate (a range of \$356 billion to \$362 billion, with compliance flexibilities), over the useful lives of the light duty vehicles sold during MYs 2017–2025.

While the estimated incremental technology outlays and incremental increases in average vehicle costs for the final MYs 2017–2021 standards in today’s analysis are similar to the estimates in the proposal, we note for the reader’s reference that the incremental cost estimates for the aural standards in MYs 2022–2025 are lower than in the proposal. The lower costs in those later model years result from the updated analysis used in this final rule. In MY 2021, the

estimated incremental technology outlays for the combined fleet range from \$14.9 billion to \$16.5 billion as compared to \$17 billion in the proposal, while the estimated incremental increases in average vehicle costs range from \$964 to \$1,043, as compared to \$1,104 in the proposal. In MY 2025, the estimated incremental technology outlays for the combined fleet range from \$23.3 billion to \$26.8 billion, as compared to \$32.4 billion in the proposal, while the estimated incremental increases in average vehicle costs range from \$1,461 to \$1,616, as compared to \$1,988 in the proposal. The changes in the MY 2025 incremental costs reflect the combined result of a number of changes and corrections to the CAFE model and inputs, including (but not limited to) the following items:

- Focused corrections were made to the MY2008-based market forecast;

- A new MY2010-based market forecast was introduced;
- Mild HEV technology and off-cycle technologies are now available in the analysis;
- The amount of mass reduction applied in the analysis¹⁰² has changed;
- The effectiveness of advanced transmissions when applied to conventional naturally aspirated engines has been revised based on a study completed by Argonne National Laboratory for NHTSA;
- Estimates of future fuel prices were updated;
- The model was corrected to ensure that post-purchase fuel prices are

¹⁰² The agencies limited the maximum amount of mass reduction technology that was applied to lighter vehicles in order that the analysis would show a way manufacturers could comply with the standards while maintaining overall societal safety, to demonstrate a path that industry could use to meet standards while maintaining societal safety

applied when calculating the effective cost of available options to add technologies to specific vehicle models; and

- The model was corrected to ensure that the incremental costs and fuel savings are fully accounted for when applying diesel engines.

These changes to the model and inputs are discussed in detail in Sections II.G, IV.C.2, and IV.C.4 of the preamble; Chapter V of NHTSA's FRIA, and Chapters 3 and 4 of the joint TSD.

Acting together, these changes and corrections caused technology costs attributable to the baseline MYs 2009–2016 CAFE standards to increase for both fleets in most model years. In addition, the changes and corrections had the combined effect of reducing the total technology costs (*i.e.*, including technology attributable to the baseline standards) in MYs 2022–2025, when greater levels of fuel economy-improving technologies would be required to comply with the aural standards. Because today's analysis applies these changes simultaneously, and because they likely interact in ways that would complicate attribution of impact, the agency has not attempted to quantify the extent to which each change impacted results. The combined effect of the increase in the baseline technology costs and reduction in the total technology costs in MYs 2022–2025 led to a reduction in the estimated incremental technology cost in MYs 2022–2025 in NHTSA's analysis, although estimated incremental technology costs were higher than or very similar to those reported in the NPRM for model years prior to MY 2022.

While the incremental costs for MYs 2022–2025 are lower than in the NPRM, the total estimated costs for compliance (inclusive of baseline costs) were reduced to a lesser extent. In assessing the appropriate level for maximum feasible standards, NHTSA takes into consideration a number of factors, including technological feasibility, economic practicability (which includes the consideration of cost as well as many other factors), the effect of other motor vehicle standards of the Government on fuel economy, the need of the United States to conserve energy, and safety, as well as other factors. Considering all of these factors, NHTSA continues to believe that the final standards are maximum feasible, as discussed below in Section IV.F.

2. Summary of Costs and Benefits for the EPA's GHG Standards

EPA has analyzed in detail the projected costs and benefits of the 2017–2025 GHG standards for light-duty vehicles. Table I–19 shows EPA's estimated lifetime discounted cost, fuel savings, and benefits for all such vehicles projected to be sold in model years 2017–2025. The benefits include impacts such as climate-related economic benefits from reducing emissions of CO₂ (but not other GHGs), reductions in energy security externalities caused by U.S. petroleum consumption and imports, the value of certain particulate matter-related health benefits (including premature mortality), the value of additional driving attributed to the VMT rebound effect, the value of reduced refueling time needed to fill up a more fuel efficient vehicle. The analysis also includes estimates of economic impacts stemming from additional vehicle use, such as the economic damages caused by accidents, congestion and noise (from increased VMT rebound driving).

TABLE I–19—EPA'S ESTIMATED 2017–2025 MODEL YEAR LIFETIME DISCOUNTED COSTS, BENEFITS, AND NET BENEFITS ASSUMING THE 3% DISCOUNT RATE SCC VALUE^{a b c}

[Billions of 2010 dollars]

[Billions of 2010 dollars]

Net benefits	24.4
--------------------	------

Notes:

^a The agencies estimated the benefits associated with four different values of a one ton CO₂ reduction (model average at 2.5% discount rate, 3%, and 5%; 95th percentile at 3%), which each increase over time. For the purposes of this overview presentation of estimated costs and benefits, however, we are showing the benefits associated with the marginal value deemed to be central by the inter-agency working group on this topic: the model average at 3% discount rate, in 2010 dollars. Section III.H provides a complete list of values for the 4 estimates.

^b Note that net present value of reduced GHG emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. Refer to Section III.H for more detail.

^c Projected results using 2008 based fleet projection analysis.

^d Present value is the total, aggregated amount that a series of monetized costs or benefits that occur over time is worth in a given year. For this analysis, lifetime present values are calculated for the first year of each model year for MYs 2017–2025 (in year 2010 dollar terms). The lifetime present values shown here are the present values of each MY in its first year summed across MYs.

^e Net benefits reflect the fuel savings plus benefits minus costs.

^f The annualized value is the constant annual value through a given time period (the lifetime of each MY in this analysis) whose summed present value equals the present value from which it was derived. Annualized SCC values are calculated using the same rate as that used to determine the SCC value, while all other costs and benefits are annualized at either 3% or 7%.

Table I–20 shows EPA's estimated lifetime fuel savings and CO₂ equivalent emission reductions for all light-duty vehicles sold in the model years 2017–2025. The values in Table I–20 are projected lifetime totals for each model year and are not discounted. As documented in EPA's RIA, the potential credit transfer between cars and trucks may change the distribution of the fuel savings and GHG emission impacts between cars and trucks.

^a Projected results using 2008 based fleet projection analysis.

Table I-21 shows EPA’s estimated lifetime discounted benefits for all light-duty vehicles sold in model years 2017–2025. Although EPA estimated the benefits associated with four different values of a one ton CO₂ reduction (\$6, \$26, \$41, \$79 in CY 2017 and in 2010 dollars, see Section III.H), for the purposes of this overview presentation of estimated benefits EPA is showing

the benefits associated with one of these marginal values, \$26 per ton of CO₂, in 2010 dollars and 2017 emissions. The values in Table I-21 are discounted values for each model year of vehicles throughout their projected lifetimes. The estimated benefits include GHG reductions, particulate matter-related health impacts (including premature mortality), energy security, reduced

refueling time and additional driving as well as the impacts of accidents, congestion and noise from VMT rebound driving. The values in Table I-21 do not include costs associated with new technology projected to be needed to meet the GHG standards and they do not include the fuel savings expected from that technology.

TABLE I-21—EPA’S ESTIMATED 2017–2025 MODEL YEAR LIFETIME DISCOUNTED BENEFITS ASSUMING THE \$26/TON SCC VALUE^{a b c d}

[Billions of 2010 dollars]

Discount rate	Model year									Sum of Present Values
	2017	2018	2019	2020	2021	2022	2023	2024	2025	
3%	\$1.81	\$4.05	\$6.37	\$9.0	\$13.4	\$17.3	\$20.9	\$24.7	\$28.6	\$126
7%	\$1.52	\$3.41	\$5.35	\$7.6	\$11.3	\$14.6	\$17.6	\$20.8	\$24.1	\$106

^a Note that net present value of reduced CO₂ emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. The estimates in this table are based on the average SCC at a 3 percent discount rate. Refer to Section III.H.6 for more detail.

^b As noted in Section III.H.6, the \$26/ton (2010\$) value applies to 2017 emissions and grows larger over time. The estimates in this table include monetized benefits for CO₂ impacts but exclude the monetized benefits of impacts on non-CO₂ GHG emissions (HFC, CH₄, N₂O). EPA has instead conducted a sensitivity analysis of the final rule’s monetized non-CO₂ GHG impacts in section III.H.6.

^c Model year values are discounted to the first year of each model year; the “Sum” represents those discounted values summed across model years.

^d Projected results using 2008 based fleet projection analysis.

Table I-22 shows EPA’s estimated lifetime fuel savings, lifetime CO₂ emission reductions, and the monetized net present values of those fuel savings and CO₂ emission reductions. The fuel savings and CO₂ emission reductions are projected lifetime values for all light-duty vehicles sold in the model

years 2017–2025. The estimated fuel savings in billions of gallons and the GHG reductions in million metric tons of CO₂ shown in Table I-22 are totals for the nine model years throughout these vehicles’ projected lifetime and are not discounted. The monetized values shown in Table I-22 are the summed

values of the discounted monetized fuel savings and monetized CO₂ reductions for the model years 2017–2025 vehicles throughout their lifetimes. The monetized values in Table I-22 reflect both a 3 percent and a 7 percent discount rate as noted.

TABLE I-22—EPA’S ESTIMATED 2017–2025 MODEL YEAR LIFETIME FUEL SAVINGS, CO₂ EMISSION REDUCTIONS, AND DISCOUNTED MONETIZED SCC BENEFITS USING THE \$26/TON SCC VALUE^{a,b,c}
[Monetized values in 2010 dollars]

	Amount	\$ value (billions)
Fuel savings (3% discount rate)	163 billion gallons (3.9 billion barrels)	\$475
Fuel savings (7% discount rate)	163 billion gallons (3.9 billion barrels)	\$364
CO ₂ e emission reductions (CO ₂ portion valued assuming \$22/ton CO ₂ in 2010)	1,956 MMT CO ₂ e	a, b \$46.6

^a \$46.6 billion for 1,747 MMT of reduced CO₂ emissions. As noted in Section III.H.6, the \$26/ton (2010\$) value applies to 2017 emissions and grows larger over time. The estimates in this table include monetized benefits for CO₂ impacts but exclude the monetized benefits of impacts on non-CO₂ GHG emissions (HFC, CH₄, N₂O). EPA has instead conducted a sensitivity analysis of the final rule’s monetized non-CO₂ GHG impacts in section III.H.6.

^b Note that net present value of reduced CO₂ emissions is calculated differently than other benefits. The same discount rate used to discount the value of damages from future emissions (SCC at 5, 3, and 2.5 percent) is used to calculate net present value of SCC for internal consistency. The estimates in this table are based on one of four SCC estimates (average SCC at a 3 percent discount rate). Refer to Section III.H.6 for more detail.

^c Projected results using 2008 based fleet projection analysis.

Table I-23 shows EPA’s estimated incremental and total technology outlays for cars and trucks for each of the model years 2017–2025. The technology outlays shown in Table I-21 are for the industry as a whole and do not account for fuel savings associated with the program. Also, the technology outlays shown in Table I-21 do not

include the estimated maintenance costs which are included in the program costs presented in Table I-19. Table I-24 shows EPA’s estimated incremental cost increase of the average new vehicle for each model year 2017–2025. The values shown are incremental to a baseline vehicle and are not cumulative. In other words, the estimated increase for 2017

model year cars is \$206 relative to a 2017 model year car meeting the MY 2016 standards. The estimated increase for a 2018 model year car is \$374 relative to a 2018 model year car meeting the MY 2016 standards (not \$206 plus \$374).

TABLE I-23—EPA’S ESTIMATED INCREMENTAL TECHNOLOGY OUTLAYS ASSOCIATED WITH THE STANDARDS^{a,b}
[Billions of 2010 dollars]

	2017 MY	2018 MY	2019 MY	2020 MY	2021 MY	2022 MY	2023 MY	2024 MY	2025 MY	Sum of present values
3% discount rate:										
Cars	\$2.03	\$3.65	\$5.02	\$6.43	\$7.94	\$11.4	\$14.7	\$18.0	\$19.6	\$88.8

3. Why are the EPA and NHTSA MY 2025 Estimated Per-Vehicle Costs Different?

In Section I.C.1 and I.C.2 NHTSA and EPA present the agencies' estimates of the incremental costs and benefits of the final CAFE and GHG standards, relative to costs and benefits estimated to occur absent the new standards. Taken as a whole, these represent the incremental costs and benefits of the National Program for Model Years 2017–2025. On a year-by-year comparison for model years 2017–2025, the two agencies' per-vehicle cost estimates are similar for the beginning years of the program, but in the last few model years, EPA's cost estimates are significantly higher than the NHTSA cost estimates. When comparing the CAFE required new vehicle cost estimate in Table I–15 with the GHG standard new vehicle cost estimate in Table I–24, we see that the model year 2025 CAFE incremental new vehicle cost estimate is \$1,461–\$1,616 per vehicle (when, as required by EISA/EPCA, NHTSA sets aside EVs, pre-MY2019 PHEVs, and credit-based CAFE flexibilities), and the GHG standard incremental cost estimate is \$1,836 per vehicle—a difference of \$220–\$375. The agencies have examined these cost estimate differentials, and as discussed below, it is principally explained by how the two agencies modeled future compliance with their respective standards, and by the application of low-GWP refrigerants attributable only to EPA's standards. As also described below, in reality auto companies will build a single fleet of vehicles to comply with both the CAFE and GHG standards, and the only significant real-world difference in the program costs are limited to the hydrofluorocarbon (HFC) reductions expected under the GHG standards, which EPA estimates at \$68/vehicle cost.

As documented below in Section IV, although NHTSA is precluded by EISA/EPCA from considering CAFE credits, EVs, and pre-MY2019 PHEVs when determining the maximum feasible stringency of new CAFE standards, NHTSA has conducted additional analysis that accounts for EISA/EPCA's provisions regarding CAFE credits, EVs, and PHEVs. Under that analysis, as shown in Table I–16, NHTSA's estimate of the incremental new vehicle costs attributable to the new CAFE standards ranges from \$1,257 to \$1,400. Insofar as EPA's analysis focuses on the agencies' MY 2008-based market forecast and attempts to account for some CAA-based flexibilities (most notably, unlimited credit transfers between the PC and LT fleets), NHTSA's \$1,400 result is based

on methods conceptually more similar to those applied by EPA. Therefore, although the difference in MY 2025 is considerably greater than differences in earlier model years, the agencies have focused on understanding the \$436 difference between NHTSA's \$1,400 result and EPA's \$1,836 result, both for the MY 2008-based market forecast.

Of this \$436 difference, \$247 is explained by NHTSA's simulation of EISA/EPCA's credit carry-forward provisions. EISA/EPCA allows manufacturers to “carry forward” credits up to five model years, applying those credits to offset compliance shortfalls and thereby avoid civil penalties.¹⁰³ In meetings with the agency, some manufacturers have indicated that, even under the preexisting MY 2012–2016 standards, they would make full use of these provisions, effectively entering MY 2017 with little, if any, credit “in reserve.”¹⁰⁴ As in the NPRM, NHTSA's analysis exercises its CAFE model in a manner that simulates manufacturers' carrying-forward and use of CAFE credits. This simulation of credit carry-forward acts in combination with the model's explicit simulation of multiyear planning—that is, the tendency of manufacturers to apply “extra” technology in earlier model years if doing so would economically facilitate compliance in later model years, considering estimated product cadence (*i.e.*, estimated timing of vehicle redesigns) facilitate. When the potential to carry forward CAFE credits is also simulated, multiyear planning simulation estimates the extent to which manufacturers could generate CAFE credits in earlier model years and use those credits in later model years. In meetings with the agency, manufacturers have often provided forward-looking plans exhibiting this type of strategic timing of investment in technology. For the NPRM, NHTSA estimated that in MY 2025, accounting for credit carry-forward (and other flexibilities offered under EISA/EPCA), manufacturers could, on average, achieve 47.0 mpg, 2.6 mpg less than the agency's 49.6 mpg estimate of the average of manufacturers' fuel economy requirements in that model year. Using the corrected MY 2008-based market forecast, NHTSA today estimates that in MY 2025, manufacturers could achieve

47.4 mpg, 2.3 mpg less than the agency's current 49.7 mpg estimate (also under the corrected MY 2008-based market forecast) of the average of the manufacturers' fuel economy requirements in MY 2025. This 47.4 mpg estimate corresponds to the incremental cost estimate of \$1,400 cited above. When credit carry-forward is excluded from this analysis, NHTSA's estimate of manufacturers' average achieved fuel economy in MY 2025 increases to 49.0 mpg, and NHTSA's estimate of the average incremental cost in MY 2025 increases to \$1,647, an increase of \$247. Although EPA's GHG standards allow manufacturers to bank (*i.e.*, carry forward) GHG-based credits up to five years, EPA's OMEGA model was designed to estimate the costs of a specific standard in a specific year and EPA for this action did not estimate the potential credit bank companies could have on a year-by-year basis. As explained, this difference in simulation capabilities explains \$247 of the \$436 difference mentioned above.

As it has in past rulemakings and in the NPRM preceding today's final rule, NHTSA has also applied its CAFE model in a manner that simulates the potential that, as allowed under EISA/EPCA and as suggested by their past CAFE levels, some manufacturers could elect to pay civil penalties rather than achieving compliance with future CAFE standards.¹⁰⁵ EISA/EPCA allows NHTSA to take this flexibility into account when determining the maximum feasible stringency of future CAFE standards. As in the NPRM, simulating this flexibility leads NHTSA to estimate that, under EISA/EPCA, some manufacturers (*e.g.*, BMW, Mercedes, Porsche, and Volkswagen) could achieve fuel economy levels 6 to 9 mpg or more short of their respective required CAFE levels in MY 2025. Having set aside the potential to carry forward CAFE credits, when NHTSA also sets aside the potential to pay civil penalties, NHTSA estimates that manufacturers could achieve a fuel economy average of 49.7 mpg in MY 2025, reflecting, on average, manufacturers' achievement of their respective required CAFE levels. For MY 2025, this analysis shows this 0.7 mpg increase in average achieved fuel economy accompanied by a \$119 increase in average incremental cost, increasing the average incremental cost to \$1,766. Because the Clean Air Act, unlike EISA/EPCA, does not allow manufacturers to pay civil penalties rather than achieving compliance with GHG standards, EPA's OMEGA model

¹⁰³ 49 U.S.C. 32903.

¹⁰⁴ On the other hand, although EISA/EPCA also allows manufacturers to carry back CAFE credits, most manufacturers have indicated extreme reluctance to make use of these provisions, insofar as doing so would constitute “borrowing against the future” and incurring risk of paying civil penalties in the future.

¹⁰⁵ 49 U.S.C. 32912.

does not simulate this type of flexibility.¹⁰⁶ Therefore, this further difference in simulation capabilities explains \$119 of the \$436 difference mentioned above, and results in an estimated average incremental cost of \$1,766 in MY 2025.

In addition to these differences in modeling of programmatic features, EPA projects that manufacturers will achieve significant GHG emissions reductions through the use of different air conditioning refrigerants (the HFC refrigerant in today's vehicles is a powerful greenhouse gas, with a global

warming potential 1,430 times that of CO₂).¹⁰⁷ EPA estimates that in 2025, the incremental cost of the substitute is \$68/vehicle. While all other technologies in the agencies' analyses are equally relevant to compliance with both CAFE and GHG standards, CAFE standards do not address HFC emissions, and NHTSA's analysis therefore does not include the costs of this HFC substitution. This factor results in the EPA 2025 cost estimate being \$68/vehicle higher than the NHTSA MY 2025 per-vehicle cost estimate.

Taken together, as shown in Table I-25, these three factors suggest a difference of \$434, based on \$247 and \$119 for NHTSA's simulation of EISA/EPCA's credit carry-forward and civil penalty provisions, respectively, and \$68 for EPA's estimate of HFC costs. While \$2 lower than the \$436 difference mentioned above, the agencies consider this remaining difference to be small (about 0.1% of average incremental cost) and well within the range of differences to be anticipated given other structural differences between the agencies analyses and modeling systems.

TABLE I—25—MAJOR FACTORS CONTRIBUTING TO DIFFERENCE IN EPA AND NHTSA ACHIEVED MY2025 PER-VEHICLE COST ESTIMATES (2010 DOLLARS)

Factor contributing to epa and nhtsa my2025 per-vehicle cost estimate difference	Average per-vehicle cost impact in MY 2025
Air conditioning refrigerant substitution	\$68
CAFE program provisions for civil penalties	119
CAFE program credit carry-forward value	247
Total impact on the difference between EPAs 2025 estimate and NHTSA's 2025 achieved estimate (sum of individual factors)	434

The agencies' estimates are based on each agency's different modeling tools for forecasting costs and benefits between now and MY 2025. As described in detail in the Joint Technical Support Document, the agencies harmonized inputs for our modeling tools. However, our modeling tools (the NHTSA-developed CAFE model and the EPA-developed OMEGA model), while similar in core function, were developed to estimate the program costs based on each agencies' respective statutory authorities, which in some cases include specific constraints. It is important to note that these are modeling tool differences, but that, while the models result in different estimates of the costs of compliance, manufacturers will ultimately produce a single fleet of vehicles to be sold in the United States that considers both EPA greenhouse gas emissions standards and NHTSA CAFE standards. Manufacturers are currently selling MY2012 and MY2013 vehicles based on considering these standards. Every technology an automotive company applies to its vehicles that improves fuel economy will also lower CO₂ emissions—thus each dollar of technology investment

will count towards the company's overall compliance with the CAFE standard as well as the CO₂ standard. The agencies' final footprint curve standards for passenger cars and for light trucks have been closely coordinated, with the principle difference being EPA's estimate of the application of HFC air conditioning refrigerant technology across a company's fleet of vehicles. Thus, within the entire fleet of vehicle models ultimately produced for sale in the United States, the agencies expect the only technology attributable solely to EPA's standards will be the low-GWP refrigerants, which EPA estimates at an average incremental unit cost of \$68 in 2025.

E. Background and Comparison of NHTSA and EPA Statutory Authority

Section I.E of the preamble contains a detailed overview discussion of the NHTSA and EPA respective statutory authorities. In addition, each agency discusses comments pertaining to its statutory authority and the agencies' responses in Sections III and IV, respectively and EPA responds as well in its response to comment documents.

1. NHTSA Statutory Authority

NHTSA establishes CAFE standards for passenger cars and light trucks for each model year under EPCA, as amended by EISA. EPCA mandates a motor vehicle fuel economy regulatory program to meet the various facets of the need to conserve energy, including the environmental and foreign policy implications of petroleum use by motor vehicles. EPCA allocates the responsibility for implementing the program between NHTSA and EPA as follows: NHTSA sets CAFE standards for passenger cars and light trucks; EPA establishes the procedures for testing, tests vehicles, collects and analyzes manufacturers' data, and calculates the individual and average fuel economy of each manufacturer's passenger cars and light trucks; and NHTSA enforces the standards based on EPA's calculations.

a. Standard Setting

We have summarized below the most important aspects of standard setting under EPCA, as amended by EISA. For each future model year, EPCA requires that NHTSA establish separate passenger car and light truck standards at "the maximum feasible average fuel

¹⁰⁶ See 75 FR 25341.
¹⁰⁷ As with the MY 2012–2016 Light Duty rule and the MY 2014–2018 Medium and Heavy Duty rule, the GWPs used in this rule are consistent with 100-year time frame values in the 2007 Intergovernmental Panel on Climate Change (IPCC)

Fourth Assessment Report (AR4). At this time, the 100-year GWP values from the 1995 IPCC Second Assessment Report are used in the official U.S. GHG inventory submission to the United Nations Framework Convention on Climate Change (UNFCCC) per the reporting requirements under

that international convention. The UNFCCC recently agreed on revisions to the national GHG inventory reporting requirements, and will begin using the 100-year GWP values from AR4 for inventory submissions in the future.

economy level that it decides the manufacturers can achieve in that model year," based on the agency's consideration of four statutory factors: technological feasibility, economic practicability, the effect of other standards of the Government on fuel economy, and the need of the nation to conserve energy. EPCA does not define these terms or specify what weight to give each concern in balancing them; thus, NHTSA defines them and determines the appropriate weighting that leads to the maximum feasible standards given the circumstances in each CAFE standard rulemaking.¹⁰⁸ For MYs 2011–2020, EPCA further requires that separate standards for passenger cars and for light trucks be set at levels high enough to ensure that the CAFE of the industry-wide combined fleet of new passenger cars and light trucks reaches at least 35 mpg not later than MY 2020. For model years after 2020, standards need simply be set at the maximum feasible level.

Because EPCA states that standards must be set for " * * * automobiles manufactured by manufacturers," and because Congress provided specific direction on how small-volume manufacturers could obtain exemptions from the passenger car standards, NHTSA has long interpreted its authority as pertaining to setting standards for the industry as a whole. Prior to this NPRM, some manufacturers raised with NHTSA the possibility of NHTSA and EPA setting alternate standards for part of the industry that met certain (relatively low) sales volume criteria—specifically, that separate standards be set so that "intermediate-size," limited-line manufacturers do not have to meet the same levels of stringency that larger manufacturers have to meet until several years later. NHTSA sought comment in the NPRM on whether or how EPCA, as amended by EISA, could be interpreted to allow such alternate standards for certain parts of the industry. Suzuki requested that NHTSA and EPA both adopt an approach similar to California's of providing more lead time to manufacturers with national average sales below 50,000 units, by allowing those "limited line manufacturers" to meet the MY 2017 standards in MY 2020, the MY 2018 standards in MY 2021, and so on, with a 3-year time lag

¹⁰⁸ See *Center for Biological Diversity v. NHTSA*, 538 F.3d 1172, 1195 (9th Cir. 2008) ("The EPCA clearly requires the agency to consider these four factors, but it gives NHTSA discretion to decide how to balance the statutory factors—as long as NHTSA's balancing does not undermine the fundamental purpose of the EPCA: energy conservation.").

in complying with the standards generally applicable for a compliance category. Suzuki stated simply that the standards are harder for small manufacturers to meet than for larger manufacturers, because the per-vehicle cost of developing or purchasing the necessary technology is higher, and that since the GHG emissions attributable to vehicles built by manufacturers who would be eligible for this option represent a very small portion of overall emissions, the impact should be minimal.¹⁰⁹

Although EPA is adopting such an approach as part of its final rule (*see* Section I.C.7.c above and III.X), no commenter provided legal analysis that might lead NHTSA to change its current interpretation of EPCA/EISA. Thus, NHTSA is not finalizing such an option for purposes of this rulemaking.

i. Factors That Must Be Considered in Deciding the Appropriate Stringency of CAFE Standards

(1) Technological Feasibility

"Technological feasibility" refers to whether a particular method of improving fuel economy can be available for commercial application in the model year for which a standard is being established. Thus, the agency is not limited in determining the level of new standards to technology that is already being commercially applied at the time of the rulemaking, a consideration which is particularly relevant for a rulemaking with a timeframe as long as the present one. For this rulemaking, NHTSA has considered all types of technologies that improve real-world fuel economy, including air-conditioner efficiency, due to EPA's decision to allow generation of fuel consumption improvement values for CAFE purposes based on improvements to air-conditioner efficiency that improves fuel efficiency.

(2) Economic Practicability

"Economic practicability" refers to whether a standard is one "within the financial capability of the industry, but not so stringent as to" lead to "adverse economic consequences, such as a significant loss of jobs or the unreasonable elimination of consumer choice."¹¹⁰ The agency has explained in the past that this factor can be especially important during rulemakings in which the automobile industry is facing significantly adverse economic conditions (with corresponding risks to

jobs). Consumer acceptability is also an element of economic practicability, one which is particularly difficult to gauge during times of uncertain fuel prices.¹¹¹ In a rulemaking such as the present one, looking out into the more distant future, economic practicability is a way to consider the uncertainty surrounding future market conditions and consumer demand for fuel economy in addition to other vehicle attributes. In an attempt to ensure the economic practicability of attribute-based standards, NHTSA considers a variety of factors, including the annual rate at which manufacturers can increase the percentage of their fleet that employ a particular type of fuel-saving technology, the specific fleet mixes of different manufacturers, and assumptions about the cost of the standards to consumers and consumers' valuation of fuel economy, among other things.

It is important to note, however, that the law does not preclude a CAFE standard that poses considerable challenges to any individual manufacturer. The Conference Report for EPCA, as enacted in 1975, makes clear, and the case law affirms, "a determination of maximum feasible average fuel economy should not be keyed to the single manufacturer which might have the most difficulty achieving a given level of average fuel economy."¹¹² Instead, NHTSA is compelled "to weigh the benefits to the nation of a higher fuel economy standard against the difficulties of individual automobile manufacturers."¹¹³ The law permits CAFE standards exceeding the projected capability of any particular manufacturer as long as the standard is economically practicable for the industry as a whole. Thus, while a particular CAFE standard may pose difficulties for one manufacturer, it may also present opportunities for another. NHTSA has long held that the CAFE program is not necessarily intended to maintain the competitive positioning of each particular company. Rather, it is intended to enhance the fuel economy of the vehicle fleet on American roads, while protecting motor vehicle safety and being mindful of the risk to the overall United States economy.

¹¹¹ See, e.g., *Center for Auto Safety v. NHTSA (CAS)*, 793 F.2d 1322 (D.C. Cir. 1986) (Administrator's consideration of market demand as component of economic practicability found to be reasonable); *Public Citizen v. NHTSA*, 848 F.2d 256 (Congress established broad guidelines in the fuel economy statute; agency's decision to set lower standard was a reasonable accommodation of conflicting policies).

¹¹² *CEI-I*, 793 F.2d 1322, 1352 (D.C. Cir. 1986).

¹¹⁰ 67 FR 77015, 77021 (Dec. 16, 2002).

(3) The Effect of Other Motor Vehicle Standards of the Government on Fuel Economy

“The effect of other motor vehicle standards of the Government on fuel economy,” involves an analysis of the effects of compliance with emission, safety, noise, or damageability standards on fuel economy capability and thus on average fuel economy. In previous CAFE rulemakings, the agency has said that pursuant to this provision, it considers the adverse effects of other motor vehicle standards on fuel economy. It said so because, from the CAFE program’s earliest years¹¹⁴ until present, the effects of such compliance on fuel economy capability over the history of the CAFE program have been negative ones. For example, safety standards that have the effect of increasing vehicle weight lower vehicle fuel economy capability and thus decrease the level of average fuel economy that the agency can determine to be feasible.

In the wake of *Massachusetts v. EPA*, 549 U.S. 497 (2007), and of EPA’s endangerment finding, granting of a waiver to California for its motor vehicle GHG standards, and its own establishment of GHG standards, NHTSA is confronted with the issue of how to treat those standards under EPCA/EISA, such as in the context of the “other motor vehicle standards” provision. To the extent the GHG standards result in increases in fuel economy, they would do so almost exclusively as a result of inducing manufacturers to install the same types of technologies used by manufacturers in complying with the CAFE standards.

In the NPRM, NHTSA sought comment on whether and in what way the effects of the California and EPA standards should be considered under EPCA/EISA, e.g., under the “other motor vehicle standards” provision, consistent with NHTSA’s independent obligation under EPCA/EISA to issue CAFE standards. NHTSA explained that the agency had already considered EPA’s proposal and the harmonization benefits of the National Program in developing its own proposal. The only comment received was from the Sierra Club, noting that the structure of the National Program accounts for both NHTSA’s and EPA’s authority and requires no separate action.¹¹⁵ NHTSA

¹¹⁴ 42 FR 63184, 63188 (Dec. 15, 1977). See also 42 FR 33534, 33537 (Jun. 30, 1977).

¹¹⁵ Sierra Club *et al.* comments, at 10. Available at <http://www.regulations.gov>, Docket No. ID No. EPA-HQ-OAR-2010-0799.

agrees that no further action is required as part of this rulemaking.

(4) The Need of the United States To Conserve Energy

“The need of the United States to conserve energy” means “the consumer cost, national balance of payments, environmental, and foreign policy implications of our need for large quantities of petroleum, especially imported petroleum.”¹¹⁶ Environmental implications principally include reductions in emissions of carbon dioxide and criteria pollutants and air toxics. Prime examples of foreign policy implications are energy independence and security concerns.

(5) Fuel Prices and the Value of Saving Fuel

Projected future fuel prices are a critical input into the economic analysis of alternative CAFE standards, because they determine the value of fuel savings both to new vehicle buyers and to society, which is related to the consumer cost (or rather, benefit) of our need for large quantities of petroleum. In this rule, NHTSA relies on fuel price projections from the U.S. Energy Information Administration’s (EIA) most recent Annual Energy Outlook (AEO) for this analysis. Federal government agencies generally use EIA’s projections in their assessments of future energy-related policies.

(6) Petroleum Consumption and Import Externalities

U.S. consumption and imports of petroleum products impose costs on the domestic economy that are not reflected in the market price for crude petroleum, or in the prices paid by consumers of petroleum products such as gasoline. These costs include (1) higher prices for petroleum products resulting from the effect of U.S. oil import demand on the world oil price; (2) the risk of disruptions to the U.S. economy caused by sudden reductions in the supply of imported oil to the U.S.; and (3) expenses for maintaining a U.S. military presence to secure imported oil supplies from unstable regions, and for maintaining the strategic petroleum reserve (SPR) to provide a response option should a disruption in commercial oil supplies threaten the U.S. economy, to allow the United States to meet part of its International Energy Agency obligation to maintain emergency oil stocks, and to provide a national defense fuel reserve. Higher U.S. imports of crude oil or refined petroleum products increase the

magnitude of these external economic costs, thus increasing the true economic cost of supplying transportation fuels above the resource costs of producing them. Conversely, reducing U.S. imports of crude petroleum or refined fuels or reducing fuel consumption can reduce these external costs.

(7) Air Pollutant Emissions

While reductions in domestic fuel refining and distribution that result from lower fuel consumption will reduce U.S. emissions of various pollutants, additional vehicle use associated with the rebound effect¹¹⁷ from higher fuel economy will increase emissions of these pollutants. Thus, the net effect of stricter CAFE standards on emissions of each pollutant depends on the relative magnitudes of its reduced emissions in fuel refining and distribution, and increases in its emissions from vehicle use. Fuel savings from stricter CAFE standards also result in lower emissions of CO₂, the main greenhouse gas emitted as a result of refining, distribution, and use of transportation fuels. Reducing fuel consumption reduces carbon dioxide emissions directly, because the primary source of transportation-related CO₂ emissions is fuel combustion in internal combustion engines.

NHTSA has considered environmental issues, both within the context of EPCA and the National Environmental Policy Act, in making decisions about the setting of standards from the earliest days of the CAFE program. As courts of appeal have noted in three decisions stretching over the last 20 years,¹¹⁸ NHTSA defined the “need of the Nation to conserve energy” in the late 1970s as including “the consumer cost, national balance of payments, environmental, and foreign policy implications of our need for large quantities of petroleum, especially imported petroleum.”¹¹⁹ In 1988, NHTSA included climate change concepts in its CAFE notices and prepared its first environmental assessment addressing that subject.¹²⁰ It cited concerns about climate change as

¹¹⁷ The “rebound effect” refers to the tendency of drivers to drive their vehicles more as the cost of doing so goes down, as when fuel economy improves.

¹¹⁸ *Center for Auto Safety v. NHTSA*, 793 F.2d 1322, 1325 n. 12 (D.C. Cir. 1986); *Public Citizen v. NHTSA*, 848 F.2d 256, 262–3 n. 27 (D.C. Cir. 1988) (noting that “NHTSA itself has interpreted the factors it must consider in setting CAFE standards as including environmental effects”); and *Center for Biological Diversity v. NHTSA*, 538 F.3d 1172 (9th Cir. 2007).

¹¹⁹ 42 FR 63184, 63188 (Dec. 15, 1977) (emphasis added).

¹²⁰ 53 FR 33080, 33096 (Aug. 29, 1988).

¹¹⁶ 42 FR 63184, 63188 (1977).

one of its reasons for limiting the extent of its reduction of the CAFE standard for MY 1989 passenger cars.¹²¹ Since then, NHTSA has considered the benefits of reducing tailpipe carbon dioxide emissions in its fuel economy rulemakings pursuant to the statutory requirement to consider the nation's need to conserve energy by reducing fuel consumption.

ii. Other Factors Considered by NHTSA

NHTSA considers the potential for adverse safety consequences when establishing CAFE standards. This practice is recognized approvingly in case law.¹²² Under the universal or "flat" CAFE standards that NHTSA was previously authorized to establish, the primary risk to safety came from the possibility that manufacturers would respond to higher standards by building smaller, less safe vehicles in order to "balance out" the larger, safer vehicles that the public generally preferred to buy. Under the attribute-based standards being presented in this final rule, that risk is reduced because building smaller vehicles tends to raise a manufacturer's overall CAFE obligation, rather than only raising its fleet average CAFE. However, even under attribute-based standards, there is still risk that manufacturers will rely on down-weighting to improve their fuel economy (for a given vehicle at a given footprint target) in ways that may reduce safety.¹²³

iii. Factors That NHTSA Is Statutorily Prohibited From Considering in Setting Standards

EPCA provides that in determining the level at which it should set CAFE standards for a particular model year, NHTSA may not consider the ability of manufacturers to take advantage of several EPCA provisions that facilitate compliance with the CAFE standards and thereby reduce the costs of compliance. Specifically, in determining the maximum feasible level of fuel economy for passenger cars and light trucks, NHTSA cannot consider the fuel economy benefits of "dedicated" alternative fuel vehicles

(like battery electric vehicles or natural gas vehicles), must consider dual-fueled automobiles to be operated only on gasoline or diesel fuel, and may not consider the ability of manufacturers to use, trade, or transfer credits.¹²⁴ This provision limits, to some extent, the fuel economy levels that NHTSA can find to be "maximum feasible"—if NHTSA cannot consider the fuel economy of electric vehicles, for example, NHTSA cannot set a standards predicated on manufacturers' usage of electric vehicles to meet the standards.

iv. Weighing and Balancing of Factors

NHTSA has broad discretion in balancing the above factors in determining the average fuel economy level that the manufacturers can achieve. Congress "specifically delegated the process of setting * * * fuel economy standards with *broad* guidelines concerning the factors that the agency must consider."¹²⁵ The breadth of those guidelines, the absence of any statutorily prescribed formula for balancing the factors, the fact that the relative weight to be given to the various factors may change from rulemaking to rulemaking as the underlying facts change, and the fact that the factors may often be conflicting with respect to whether they militate toward higher or lower standards give NHTSA discretion to decide what weight to give each of the competing policies and concerns and then determine how to balance them—"as long as NHTSA's balancing does not undermine the fundamental purpose of the EPCA: Energy conservation,"¹²⁶ and as long as that balancing reasonably accommodates "conflicting policies that were committed to the agency's care by the statute."¹²⁷ Thus, EPCA does not mandate that any particular number be

adopted when NHTSA determines the level of CAFE standards.

v. Other Requirements Related to Standard Setting

The standards for passenger cars and for light trucks must increase ratably each year through MY 2020.¹²⁸ This statutory requirement is interpreted, in combination with the requirement to set the standards for each model year at the level determined to be the maximum feasible level that manufacturers can achieve for that model year, to mean that the annual increases should not be disproportionately large or small in relation to each other.¹²⁹ Standards after 2020 must simply be set at the maximum feasible level.¹³⁰

The standards for passenger cars and light trucks must also be based on one or more vehicle attributes, like size or weight, which correlate with fuel economy and must be expressed in terms of a mathematical function.¹³¹ Fuel economy targets are set for individual vehicles and increase as the attribute decreases and vice versa. For example, footprint-based standards assign higher fuel economy targets to smaller-footprint vehicles and lower ones to larger footprint-vehicles. The fleetwide average fuel economy that a particular manufacturer is required to achieve depends on the footprint mix of its fleet, *i.e.*, the proportion of the fleet that is small-, medium- or large-footprint.

This approach can be used to require virtually all manufacturers to increase significantly the fuel economy of a broad range of both passenger cars and light trucks, *i.e.*, the manufacturer must improve the fuel economy of all the vehicles in its fleet. Further, this approach can do so without creating an incentive for manufacturers to make small vehicles smaller or large vehicles larger, with attendant implications for safety.

b. Test Procedures for Measuring Fuel Economy

EPCA provides EPA with the responsibility for establishing procedures to measure fuel economy and to calculate CAFE. Current test procedures measure the effects of nearly all fuel saving technologies. EPA is revising the procedures for measuring fuel economy and calculating average fuel economy for the CAFE program, however, to account for certain impacts on fuel economy not currently included

¹²¹ 53 FR 39275, 39302 (Oct. 6, 1988).

¹²² As the United States Court of Appeals pointed out in upholding NHTSA's exercise of judgment in setting the 1987–1989 passenger car standards, "NHTSA has always examined the safety consequences of the CAFE standards in its overall consideration of relevant factors since its earliest rulemaking under the CAFE program." *Competitive Enterprise Institute v. NHTSA (CEI I)*, 901 F.2d 107, 120 at n.11 (D.C. Cir. 1990).

¹²³ For example, by reducing the mass of the smallest vehicles rather than the largest, or by reducing vehicle overhang outside the space measured as "footprint," which results in less crush space.

¹²⁴ 49 U.S.C. 32902(h). We note, as discussed in greater detail in Section IV, that NHTSA interprets 32902(h) as reflecting Congress' intent that statutorily-mandated compliance flexibilities remain flexibilities. When a compliance flexibility is not statutorily mandated, therefore, or when it ceases to be available under the statute, we interpret 32902(h) as no longer binding the agency's determination of the maximum feasible levels of fuel economy. For example, when the manufacturing incentive for dual-fueled automobiles under 49 U.S.C. 32905 and 32906 expires in MY 2019, there is no longer a flexibility left to protect per 32902(h), so NHTSA considers the calculated fuel economy of plug-in hybrid electric vehicles for purposes of determining the maximum feasible standards in MYs 2020 and beyond.

¹²⁵ *Center for Auto Safety v. NHTSA*, 793 F.2d 1322, at 1341 (D.C. Cir. 1986).

¹²⁶ *CBD v. NHTSA*, 538 F.3d at 1195 (9th Cir. 2008).

¹²⁷ *Id.*

¹²⁸ 49 U.S.C. 32902(b)(2)(C).

¹²⁹ See 74 FR 14196, 14375–76 (Mar. 30, 2009).

¹³⁰ 49 U.S.C. 32902(b)(2)(B).

¹³¹ 49 U.S.C. 32902(b)(3).

in these procedures, specifically increases in fuel economy because of increases in efficiency of the air conditioning system; increases in fuel economy because of technology improvements that achieve “off-cycle” benefits; incentives for use of certain hybrid technologies in a significant percentage of pick-up trucks; and incentives for achieving fuel economy levels in a significant percentage pick-up trucks that exceeds the target curve by specified amounts, in the form of increased values assigned for fuel economy. NHTSA has considered manufacturers’ ability to comply with the CAFE standards using these efficiency improvements in determining the stringency of the fuel economy standards presented in this final rule. These changes would be the same as program elements that are part of EPA’s greenhouse gas performance standards, discussed in Section III.B.10. As discussed below, these three elements will be implemented in the same manner as in the EPA’s greenhouse gas program—a vehicle manufacturer would have the option to generate these fuel economy values for vehicle models that meet the criteria for these elements and to use these values in calculating their fleet average fuel economy. This revision to the CAFE calculations is discussed in more detail in Sections III.B.10 and III.C and IV.I.4 below.

c. Enforcement and Compliance Flexibility

NHTSA determines compliance with the CAFE standards based on measurements of automobile manufacturers’ CAFE from EPA. If a manufacturer’s passenger car or light truck CAFE level exceeds the applicable standard for that model year, the manufacturer earns credits for over-compliance. The amount of credit earned is determined by multiplying the number of tenths of a mpg by which a manufacturer exceeds a standard for a particular category of automobiles by the total volume of automobiles of that category manufactured by the manufacturer for a given model year. As discussed in more detail in Section IV.I, credits can be carried forward for 5 model years or back for 3, and can also be transferred between a manufacturer’s fleets or traded to another manufacturer.

If a manufacturer’s passenger car or light truck CAFE level does not meet the applicable standard for that model year, NHTSA notifies the manufacturer. The manufacturer may use “banked” credits to make up the shortfall, but if there are no (or not enough) credits available, then the manufacturer has the option to submit a “carry back plan” to NHTSA.

A carry back plan describes what the manufacturer plans to do in the following three model years to earn enough credits to make up for the shortfall through future over-compliance. NHTSA must examine and determine whether to approve the plan.

In the event that a manufacturer does not comply with a CAFE standard, even after the consideration of credits, EPCA provides for the assessing of civil penalties.¹³² The Act specifies a precise formula for determining the amount of civil penalties for such a noncompliance. The penalty, as adjusted for inflation by law, is \$5.50 for each tenth of a mpg that a manufacturer’s average fuel economy falls short of the standard for a given model year multiplied by the total volume of those vehicles in the affected fleet (*i.e.*, import or domestic passenger car, or light truck), manufactured for that model year.¹³³ The amount of the penalty may not be reduced except under the unusual or extreme circumstances specified in the statute, which have never been exercised by NHTSA in the history of the CAFE program.

Unlike the National Traffic and Motor Vehicle Safety Act, EPCA does not provide for recall and remedy in the event of a noncompliance. The presence of recall and remedy provisions¹³⁴ in the Safety Act and their absence in EPCA is believed to arise from the difference in the application of the safety standards and CAFE standards. A safety standard applies to individual vehicles; that is, each vehicle must possess the requisite equipment or feature that must provide the requisite type and level of performance. If a vehicle does not, it is noncompliant. Typically, a vehicle does not entirely lack an item or equipment or feature. Instead, the equipment or features fails to perform adequately. Recalling the vehicle to repair or replace the noncompliant equipment or feature can usually be readily accomplished.

In contrast, a CAFE standard applies to a manufacturer’s entire fleet for a model year. It does not require that a particular individual vehicle be equipped with any particular equipment or feature or meet a particular level of fuel economy. It does require that the manufacturer’s fleet, as a whole, comply. Further, although under the attribute-based approach to setting CAFE standards fuel economy targets

are established for individual vehicles based on their footprints, the individual vehicles are not required to meet or exceed those targets. However, as a practical matter, if a manufacturer chooses to design some vehicles that fall below their target levels of fuel economy, it will need to design other vehicles that exceed their targets if the manufacturer’s overall fleet average is to meet the applicable standard.

Thus, under EPCA, there is no such thing as a noncompliant vehicle, only a noncompliant fleet. No particular vehicle in a noncompliant fleet is any more, or less, noncompliant than any other vehicle in the fleet.

2. EPA Statutory Authority

Title II of the Clean Air Act (CAA) provides for comprehensive regulation of mobile sources, authorizing EPA to regulate emissions of air pollutants from all mobile source categories. Pursuant to these sweeping grants of authority, EPA considers such issues as technology effectiveness, its cost (both per vehicle, per manufacturer, and per consumer), the lead time necessary to implement the technology, and based on this the feasibility and practicability of potential standards; the impacts of potential standards on emissions reductions of both GHGs and non-GHGs; the impacts of standards on oil conservation and energy security; the impacts of standards on fuel savings by consumers; the impacts of standards on the auto industry; other energy impacts; as well as other relevant factors such as impacts on safety

Pursuant to Title II of the Clean Air Act, EPA has taken a comprehensive, integrated approach to mobile source emission control that has produced benefits well in excess of the costs of regulation. In developing the Title II program, the Agency’s historic, initial focus was on personal vehicles since that category represented the largest source of mobile source emissions. Over time, EPA has established stringent emissions standards for large truck and other heavy-duty engines, nonroad engines, and marine and locomotive engines, as well. The Agency’s initial focus on personal vehicles has resulted in significant control of emissions from these vehicles, and also led to technology transfer to the other mobile source categories that made possible the stringent standards for these other categories.

As a result of Title II requirements, new cars and SUVs sold today have emissions levels of hydrocarbons, oxides of nitrogen, and carbon monoxide that are 98–99% lower than new vehicles sold in the 1960s, on a per

¹³² EPCA does not provide authority for seeking to enjoin violations of the CAFE standards.

¹³³ 49 U.S.C. 32912(b), 49 CFR 578.6(h)(2).

¹³⁴ 49 U.S.C. 30120, Remedies for defects and noncompliance.

mile basis. Similarly, standards established for heavy-duty highway and nonroad sources require emissions rate reductions on the order of 90% or more for particulate matter and oxides of nitrogen. Overall ambient levels of automotive-related pollutants are lower now than in 1970, even as economic growth and vehicle miles traveled have nearly tripled. These programs have resulted in millions of tons of pollution reduction and major reductions in pollution-related deaths (estimated in the tens of thousands per year) and illnesses. The net societal benefits of the mobile source programs are large. In its annual reports on federal regulations, the Office of Management and Budget reports that many of EPA's mobile source emissions standards typically have projected benefit-to-cost ratios of 5:1 to 10:1 or more. Follow-up studies show that long-term compliance costs to the industry are typically lower than the cost projected by EPA at the time of regulation, which result in even more favorable real world benefit-to-cost ratios.¹³⁵ Pollution reductions attributable to Title II mobile source controls are critical components to attainment of primary National Ambient Air Quality Standards, significantly reducing the national inventory and ambient concentrations of criteria pollutants, especially PM_{2.5} and ozone. See e.g. 69 FR 38958, 38967–68 (June 29, 2004) (controls on non-road diesel engines expected to reduce entire national inventory of PM_{2.5} by 3.3% (86,000 tons) by 2020). Title II controls have also made enormous reductions in air toxics emitted by mobile sources. For example, as a result of EPA's 2007 mobile source air toxics standards, the cancer risk attributable to total mobile source air toxics will be reduced by 30% in 2030 and the risk from mobile source benzene (a leukemogen) will be reduced by 37% in 2030. (reflecting reductions of over three hundred thousand tons of mobile source air toxic emissions) 72 FR 8428, 8430 (Feb. 26, 2007).

Title II emission standards have also stimulated the development of a much broader set of advanced automotive technologies, such as on-board computers and fuel injection systems,

¹³⁵ OMB, 2011. 2011 Report to Congress on the Benefits and Costs of Federal Regulations and Unfunded Mandates on State, Local, and Tribal Entities. Office of Information and Regulatory Affairs. June, 2011. http://www.whitehouse.gov/omb/inforeg_regpol_reports_congress/ (Last accessed on August 12, 2012). Several commenters asserted that EPA had underestimated costs of rules controlling emissions of criteria pollutants from heavy duty diesel engines. These comments, which are incorrect and misplaced, are addressed in EPA's Response to Comments Section 18.2.

which are the building blocks of today's automotive designs and have yielded not only lower pollutant emissions, but improved vehicle performance, reliability, and durability.

This final rule implements a specific provision from Title II, section 202(a).¹³⁶ Section 202(a)(1) of the Clean Air Act (CAA) states that "the Administrator shall by regulation prescribe (and from time to time revise) * * * standards applicable to the emission of any air pollutant from any class or classes of new motor vehicles * * * which in his judgment cause, or contribute to, air pollution which may reasonably be anticipated to endanger public health or welfare." If EPA makes the appropriate endangerment and cause or contribute findings, then section 202(a) authorizes EPA to issue standards applicable to emissions of those pollutants. Indeed, EPA's obligation to do so is mandatory: "*Coalition for Responsible Regulation v. EPA*, No. 09–1322, slip op. at pp. 40–1 (D.C. Cir. June 26, 2012); *Massachusetts v. EPA*, 549 U.S. at 533. Moreover, EPA's mandatory legal duty to promulgate these emission standards derives from "a statutory obligation wholly independent of DOT's mandate to promote energy efficiency." *Massachusetts*, 549 U.S. at 532. Consequently, EPA has no discretion to decline to issue greenhouse standards under section 202(a), or to defer issuing such standards due to NHTSA's regulatory authority to establish fuel economy standards. Rather, "[j]ust as EPA lacks authority to refuse to regulate on the grounds of NHTSA's regulatory authority, EPA cannot defer regulation on that basis." *Coalition for Responsible Regulation v. EPA*, slip op. at p. 41.

Any standards under CAA section 202(a)(1) "shall be applicable to such vehicles * * * for their useful life." Emission standards set by the EPA under CAA section 202(a)(1) are technology-based, as the levels chosen must be premised on a finding of technological feasibility. Thus, standards promulgated under CAA section 202(a) are to take effect only "after providing such period as the Administrator finds necessary to permit the development and application of the requisite technology, giving appropriate consideration to the cost of compliance within such period" (section 202 (a)(2); see also *NRDC v. EPA*, 655 F. 2d 318, 322 (D.C. Cir. 1981)). EPA must consider costs to those entities which are directly subject to the standards. *Motor & Equipment Mfrs. Ass'n Inc. v. EPA*, 627 F. 2d 1095, 1118 (D.C. Cir. 1979). Thus,

¹³⁶ 42 U.S.C. 7521 (a)

"the [s]ection 202 (a)(2) reference to compliance costs encompasses only the cost to the motor-vehicle industry to come into compliance with the new emission standards." *Coalition for Responsible Regulation v. EPA*, slip op. p. 44; see also id. at pp. 43–44 rejecting arguments that EPA was required to, or should have considered costs to other entities, such as stationary sources, which are not directly subject to the emission standards. EPA is afforded considerable discretion under section 202(a) when assessing issues of technical feasibility and availability of lead time to implement new technology. Such determinations are "subject to the restraints of reasonableness", which "does not open the door to 'crystal ball' inquiry." *NRDC*, 655 F. 2d at 328, quoting *International Harvester Co. v. Ruckelshaus*, 478 F. 2d 615, 629 (D.C. Cir. 1973). However, "EPA is not obliged to provide detailed solutions to every engineering problem posed in the perfection of the trap-oxidizer. In the absence of theoretical objections to the technology, the agency need only identify the major steps necessary for development of the device, and give plausible reasons for its belief that the industry will be able to solve those problems in the time remaining. The EPA is not required to rebut all speculation that unspecified factors may hinder 'real world' emission control." *NRDC*, 655 F. 2d at 333–34. In developing such technology-based standards, EPA has the discretion to consider different standards for appropriate groupings of vehicles ("class or classes of new motor vehicles"), or a single standard for a larger grouping of motor vehicles (*NRDC*, 655 F. 2d at 338). Finally, with respect to regulation of vehicular greenhouse gas emissions, EPA is not "required to treat NHTSA's * * * regulations as establishing the baseline for the [section 202 (a) standards]." *Coalition for Responsible Regulation v. EPA*, slip op. at p. 42 (noting further that "the [section 202 (a) standards] provid[e] benefits above and beyond those resulting from NHTSA's fuel-economy standards".)

Although standards under CAA section 202(a)(1) are technology-based, they are not based exclusively on technological capability. EPA has the discretion to consider and weigh various factors along with technological feasibility, such as the cost of compliance (see section 202(a) (2)), lead time necessary for compliance (section 202(a)(2)), safety (see *NRDC*, 655 F. 2d at 336 n. 31) and other impacts on

consumers,¹³⁷ and energy impacts associated with use of the technology. See *George E. Warren Corp. v. EPA*, 159 F.3d 616, 623–624 (D.C. Cir. 1998) (ordinarily permissible for EPA to consider factors not specifically enumerated in the Act).

In addition, EPA has clear authority to set standards under CAA section 202(a) that are technology forcing when EPA considers that to be appropriate, but is not required to do so (as compared to standards set under provisions such as section 202(a)(3) and section 213(a)(3)). EPA has interpreted a similar statutory provision, CAA section 231, as follows:

While the statutory language of section 231 is not identical to other provisions in title II of the CAA that direct EPA to establish technology-based standards for various types of engines, EPA interprets its authority under section 231 to be somewhat similar to those provisions that require us to identify a reasonable balance of specified emissions reduction, cost, safety, noise, and other factors. See, e.g., *Husqvarna AB v. EPA*, 254 F.3d 195 (D.C. Cir. 2001) (upholding EPA's promulgation of technology-based standards for small non-road engines under section 213(a)(3) of the CAA). However, EPA is not compelled under section 231 to obtain the "greatest degree of emission reduction achievable" as per sections 213 and 202 of the CAA, and so EPA does not interpret the Act as requiring the agency to give subordinate status to factors such as cost, safety, and noise in determining what standards are reasonable for aircraft engines. Rather, EPA has greater flexibility under section 231 in determining what standard is most reasonable for aircraft engines, and is not required to achieve a "technology forcing" result.¹³⁸

This interpretation was upheld as reasonable in *NACAA v. EPA*, (489 F.3d 1221, 1230 (D.C. Cir. 2007)). CAA section 202(a) does not specify the degree of weight to apply to each factor, and EPA accordingly has discretion in choosing an appropriate balance among factors. See *Sierra Club v. EPA*, 325 F.3d 374, 378 (D.C. Cir. 2003) (even where a provision is technology-forcing, the provision "does not resolve how the Administrator should weigh all [the statutory] factors in the process of finding the 'greatest emission reduction achievable'"). Also see *Husqvarna AB v. EPA*, 254 F. 3d 195, 200 (D.C. Cir. 2001) (great discretion to balance statutory factors in considering level of

technology-based standard, and statutory requirement "to [give appropriate] consideration to the cost of applying * * * technology" does not mandate a specific method of cost analysis); see also *Hercules Inc. v. EPA*, 598 F. 2d 91, 106 (D.C. Cir. 1978) ("In reviewing a numerical standard we must ask whether the agency's numbers are within a zone of reasonableness, not whether its numbers are precisely right"); *Permian Basin Area Cases*, 390 U.S. 747, 797 (1968) (same); *Federal Power Commission v. Conway Corp.*, 426 U.S. 271, 278 (1976) (same); *Exxon Mobil Gas Marketing Co. v. FERC*, 297 F. 3d 1071, 1084 (D.C. Cir. 2002) (same).

One commenter mistakenly characterized section 202(a) as a "technology-forcing" provision. Comments of CBD p. 5. As just explained, it is not, but even if it were, EPA retains considerable discretion to balance the various relevant statutory factors, again as just explained. The same commenter maintained that the GHG standards should "protect the public health and welfare with an adequate margin of safety." *Id.* p. 2. The commenter paraphrases the statutory standard for issuing health-based National Ambient Air Quality Standards under section 109(b) of the CAA.¹³⁹ Section 202(a) is a technology-based provision with an entirely different legal standard. Moreover, the commenter's assertion that the standards must reduce the amount of greenhouse gases emitted by light duty motor vehicles (*id.* pp. 2–3) has no statutory basis. Section 202(a)(2) does not spell out any minimum level of effectiveness for standards, but instead directs EPA to set the standards at a level that is reasonable in light of applicable compliance costs and technology considerations. Nor is there any requirement that the GHG standards result in some specific quantum of amelioration of the endangerment to which light-duty vehicle emissions contribute. See *Coalition for Responsible Regulation v. EPA*, slip op. pp. 42–43. In addition, substantial GHG emission reductions required by section 202(a) standards in and of themselves constitute "meaningful mitigation of greenhouse gas emissions" without regard to the extent to which these reductions ameliorate the endangerment to public health and welfare caused by greenhouse gas emissions. *Coalition for Responsible Regulation v. EPA*, slip op. p. 43.

a. EPA's Testing Authority

Under section 203 of the CAA, sales of vehicles are prohibited unless the vehicle is covered by a certificate of conformity. EPA issues certificates of conformity pursuant to section 206 of the Act, based on (necessarily) pre-sale testing conducted either by EPA or by the manufacturer. The Federal Test Procedure (FTP or "city" test) and the Highway Fuel Economy Test (HFET or "highway" test) are used for this purpose. Compliance with standards is required not only at certification but throughout a vehicle's useful life, so that testing requirements may continue post-certification. Useful life standards may apply an adjustment factor to account for vehicle emission control deterioration or variability in use (section 206(a)).

Pursuant to EPCA, EPA is required to measure fuel economy for each model and to calculate each manufacturer's average fuel economy.¹⁴⁰ EPA uses the same tests—the FTP and HFET—for fuel economy testing. EPA established the FTP for emissions measurement in the early 1970s. In 1976, in response to the Energy Policy and Conservation Act (EPCA) statute, EPA extended the use of the FTP to fuel economy measurement and added the HFET.¹⁴¹ The provisions in the 1976 regulation, effective with the 1977 model year, established procedures to calculate fuel economy values both for labeling and for CAFE purposes. Under EPCA, EPA is required to use these procedures (or procedures which yield comparable results) for measuring fuel economy for cars for CAFE purposes, but not for labeling purposes.¹⁴² EPCA does not pose this restriction on CAFE test procedures for light trucks, but EPA does use the FTP and HFET for this purpose. EPA determines fuel economy by measuring the amount of CO₂ and all other carbon compounds (e.g. total hydrocarbons (THC) and carbon monoxide (CO)), and then, by mass balance, calculating the amount of fuel consumed. EPA's final changes to the procedures for measuring fuel economy and calculating average fuel economy are discussed in section III.B.10.

b. EPA Enforcement Authority

Section 207 of the CAA grants EPA broad authority to require manufacturers to remedy vehicles if EPA determines there are a substantial number of noncomplying vehicles. In addition, section 205 of the CAA

¹³⁷ Since its earliest Title II regulations, EPA has considered the safety of pollution control technologies. See 45 Fed.Reg. 14,496, 14,503 (1980). ("EPA would not require a particulate control technology that was known to involve serious safety problems. If during the development of the trap-oxidizer safety problems are discovered, EPA would reconsider the control requirements implemented by this rulemaking").

¹⁴¹ See 41 FR 38674 (Sept. 10, 1976), which is codified at 40 CFR Part 600.

¹⁴² See 49 U.S.C. 32904(c).

authorizes EPA to assess penalties of up to \$37,500 per vehicle for violations of various prohibited acts specified in the CAA. In determining the appropriate penalty, EPA must consider a variety of factors such as the gravity of the violation, the economic impact of the violation, the violator's history of compliance, and "such other matters as justice may require." Unlike EPCA, the CAA does not authorize vehicle manufacturers to pay fines in lieu of meeting emission standards.

c. Compliance

EPA oversees testing, collects and processes test data, and performs calculations to determine compliance with both CAA and CAFE standards. CAA standards apply not only at the time of certification but also throughout the vehicle's useful life, and EPA is accordingly finalizing in-use standards as well as standards based on testing performed at time of production. See section III.E. Both the CAA and EPCA provide for penalties should manufacturers fail to comply with their fleet average standards, but, unlike EPCA, there is no option for manufacturers to pay fines in lieu of compliance with the standards. Under the CAA, penalties are typically determined on a vehicle-specific basis by determining the number of a manufacturer's highest emitting vehicles that cause the fleet average standard violation. Penalties under Title II of the CAA are capped at \$25,000 per day of violation and apply on a per vehicle basis. See CAA section 205(a).

d. Test Procedures

EPA establishes the test procedures under which compliance with both the CAA GHG standards and the EPCA fuel economy standards are measured. EPA's testing authority under the CAA is flexible, but testing for fuel economy for passenger cars is by statute is limited to the Federal Test procedure (FTP) or test procedures which provide results which are equivalent to the FTP. 49 U.S.C. § 32904 and section III.B, below. EPA developed and established the FTP in the early 1970s and, after enactment of EPCA in 1976, added the Highway Fuel Economy Test (HFET) to be used in conjunction with the FTP for fuel economy testing. EPA has also developed tests with additional cycles (the so-called 5-cycle test) which test is used for purposes of fuel economy labeling and is also used in the EPA program for extending off-cycle credits under both the light-duty and (along with NHTSA) heavy-duty vehicle GHG programs. See 75 FR 25439; 76 FR 57252. In this rule, EPA is retaining the

FTP and HFET for purposes of testing the fleetwide average standards, and is further modifying the N2O measurement test procedures and the A/C CO₂ efficiency test procedures EPA initially adopted in the 2012–2016 rule.

3. Comparing the Agencies' Authority

As the above discussion makes clear, there are both important differences between the statutes under which each agency is acting as well as several important areas of similarity. One important difference is that EPA's authority addresses various GHGs, while NHTSA's authority addresses fuel economy as measured under specified test procedures and calculated by EPA. This difference is reflected in this rulemaking in the scope of the two standards: EPA's rule takes into account reductions of direct air conditioning emissions, and establishes standards for methane and N₂O, but NHTSA's do not, because these emissions generally do not relate to fuel economy. A second important difference is that EPA is adopting certain compliance flexibilities, such as the multiplier for advanced technology vehicles, and has taken those flexibilities into account in its technical analysis and modeling supporting the GHG standards. EPCA specifies a number of particular compliance flexibilities for CAFE, and expressly prohibits NHTSA from considering the impacts of those statutory compliance flexibilities in setting the CAFE standard so that the manufacturers' election to avail themselves of the permitted flexibilities remains strictly voluntary.¹⁴³ The Clean Air Act, on the other hand, contains no such prohibition. As explained earlier, these considerations result in some differences in the technical analysis and modeling used to support the agencies' respective standards.

Another important area where the two agencies' authorities are similar but not identical involves the transfer of credits between a single firm's car and truck fleets. EISA revised EPCA to allow for such credit transfers, but placed a cap on the amount of CAFE credits which can be transferred between the car and truck fleets. 49 U.S.C. 32903(g)(3). Under CAA section 202(a), EPA is continuing to allow CO₂ credit transfers between a single manufacturer's car and truck fleets, with no corresponding limits on such transfers. In general, the EISA limit on CAFE credit transfers is not expected to have the practical effect of limiting the amount of CO₂ emission credits manufacturers may be able to transfer under the CAA program,

recognizing that manufacturers must comply with both the CAFE standards and the GHG standards. However, it is possible that in some specific circumstances the EPCA limit on CAFE credit transfers could constrain the ability of a manufacturer to achieve cost savings through unlimited use of GHG emissions credit transfers under the CAA program.

These differences, however, do not change the fact that in many critical ways the two agencies are charged with addressing the same basic issue of reducing GHG emissions and improving fuel economy. The agencies are looking at the same set of control technologies (with the exception of the air conditioning leakage-related technologies). The standards set by each agency will drive the kind and degree of penetration of this set of technologies across the vehicle fleet. As a result, each agency is trying to answer the same basic question—what kind and degree of technology penetration is necessary to achieve the agencies' objectives in the rulemaking time frame, given the agencies' respective statutory authorities?

In making the determination of what standards are appropriate under the CAA and EPCA, each agency is to exercise its judgment and balance many similar factors. NHTSA's factors are provided by EPCA: Technological feasibility, economic practicability, the effect of other motor vehicle standards of the Government on fuel economy, and the need of the United States to conserve energy. EPA has the discretion under the CAA to consider many related factors, such as the availability of technologies, the appropriate lead time for introduction of technology, and based on this the feasibility and practicability of their standards; the impacts of their standards on emissions reductions (of both GHGs and non-GHGs); the impacts of their standards on oil conservation; the impacts of their standards on fuel savings by consumers; the impacts of their standards on the auto industry; as well as other relevant factors such as impacts on safety. Conceptually, therefore, each agency is considering and balancing many of the same concerns, and each agency is making a decision that at its core is answering the same basic question of what kind and degree of technology penetration is it appropriate to call for in light of all of the relevant factors in a given rulemaking, for the model years concerned. Finally, each agency has the authority to take into consideration impacts of the standards of the other agency. Among the other factors that is considers in determining maximum

¹⁴³ 49 U.S.C. 32902(h).

feasible standards, EPCA calls for NHTSA to take into consideration the effects of EPA's emissions standards on fuel economy capability (see 49 U.S.C. 32902(f)), and EPA has the discretion to take into consideration NHTSA's CAFE standards in determining appropriate action under section 202(a).¹⁴⁴ This is consistent with the Supreme Court's statement that EPA's mandate to protect public health and welfare is wholly independent from NHTSA's mandate to promote energy efficiency, but there is no reason to think the two agencies cannot both administer their obligations and yet avoid inconsistency. *Massachusetts v. EPA*, 549 U.S. 497, 532 (2007).

In this context, it is in the Nation's interest for the two agencies to continue to work together in developing these standards, and they have done so. For example, the agencies have committed considerable effort to develop a joint Technical Support Document that provides a technical basis underlying each agency's analyses. The agencies also have worked closely together in developing and reviewing their respective modeling, to develop the best analysis and to promote technical consistency. The agencies have developed a common set of attribute-based curves that each agency supports as appropriate both technically and from a policy perspective. The agencies have also worked closely to ensure that their respective programs will work in a coordinated fashion, and will provide regulatory compatibility that allows auto manufacturers to build a single national light-duty fleet that would comply with both the GHG and the CAFE standards. The resulting overall close coordination of the GHG and CAFE standards should not be surprising, however, as each agency is using a jointly developed technical basis to address the closely intertwined challenges of energy security and climate change.

As set out in detail in Sections III and IV of this notice, both EPA and NHTSA believe the agencies' standards are fully justified under their respective statutory criteria. The standards are feasible in each model year within the lead time provided, based on the agencies' projected increased use of various technologies which in most cases are already in commercial application in

the fleet to varying degrees. Detailed assessment of the technologies that could be employed by each manufacturer supports this conclusion. The agencies also carefully assessed the costs of the rules, both for the industry as a whole and per manufacturer, as well as the costs per vehicle, and consider these costs to be reasonable during the rulemaking time frame and recoverable (from fuel savings). The agencies recognize the significant increase in the application of technology that the standards would require across a high percentage of vehicles, which will require the manufacturers to devote considerable engineering and development resources before 2017 laying the critical foundation for the widespread deployment of upgraded technology across a high percentage of the 2017–2025 fleet. This clearly will be challenging for automotive manufacturers and their suppliers, especially in the current economic climate, and given the stringency of the recently-established MYs 2012–2016 standards. However, based on all of the analyses performed by the agencies, our judgment is that it is a challenge that can reasonably be met.

The agencies also evaluated the impacts of these standards with respect to the expected reductions in GHGs and oil consumption and, found them to be very significant in magnitude. The agencies considered other factors such as the impacts on noise, energy, and vehicular congestion. The impact on safety was also given careful consideration. Moreover, the agencies quantified the various costs and benefits of the standards, to the extent practicable. The agencies' analyses to date indicate that the overall quantified benefits of the standards far outweigh the projected costs. All of these factors support the reasonableness of the standards. See Section III (GHG standards) and Section IV (CAFE standards) for a detailed discussion of each agency's basis for its selection of its standards.

The fact that the benefits are estimated to considerably exceed their costs supports the view that the standards represent an appropriate balance of the relevant statutory factors.¹⁴⁵ In drawing this conclusion,

the agencies acknowledge the uncertainties and limitations of the analyses. For example, the analysis of the benefits is highly dependent on the estimated price of fuel projected out many years into the future. There is also significant uncertainty in the potential range of values that could be assigned to the social cost of carbon. There are a variety of impacts that the agencies are unable to quantify, such as non-market damages, extreme weather, socially contingent effects, or the potential for longer-term catastrophic events, or the impact on consumer choice. The cost-benefit analyses are one of the important things the agencies consider in making a judgment as to the appropriate standards to propose under their respective statutes. Consideration of the results of the cost-benefit analyses by the agencies, however, includes careful consideration of the limitations discussed above.

II. Joint Technical Work Completed for This Final Rule

A. Introduction

In this section, NHTSA and EPA discuss several aspects of our joint technical analyses. These analyses are common to the development of each agency's standards. Specifically we discuss: The development of the vehicle market forecasts used by each agency for assessing costs, benefits, and effects; the development of the attribute-based standard curve shapes; the technologies the agencies evaluated and their costs and effectiveness; the economic assumptions the agencies included in their analyses; a description of the credit programs for air conditioning; off-cycle technology, and full-sized pickup trucks; as well as the effects of the standards on vehicle safety. The Joint Technical Support Document (TSD) discusses the agencies' joint technical work in more detail.

The agencies have based this final rule on a very significant body of data and analysis that we believe is the best information currently available on the full range of technical and other inputs utilized in our respective analyses. As noted in various places throughout this preamble, the Joint TSD, the NHTSA RIA, and the EPA RIA, new information has become available since the proposal from a range of sources. These include work the agencies have completed (e.g., work on technology costs and effectiveness and creating a second future fleet forecast based on model year 2010 baseline data). In addition, information from other sources is now incorporated into our analyses, including the Energy Information

¹⁴⁴ It should be noted, however, that the D.C. Circuit noted the absence of an explicit obligation for EPA to consider NHTSA fuel economy standards as one basis for holding that the existence of NHTSA's fuel economy regulatory program provides no basis for EPA deferring regulation of vehicular greenhouse gas emissions. *Coalition for Responsible Regulation v. EPA*, slip op. pp. 41–42.

¹⁴⁵ The comment that the standards are insufficiently stringent because estimated benefits of the standards substantially exceed the estimated costs shows (Comment of CBD p.8) is misplaced. Neither EPCA/EISA nor the CAA dictates a particular weighing of costs and benefits, so the commenter's insistence that the respective statutes require "maximized societal benefits, where the benefits most optimally compare to the anticipated costs" (id. p. 23) is not correct.

Agency's Annual Energy Outlook 2012 Early Release, as well as other information from the public comment process. Wherever appropriate, and as summarized throughout this preamble, we have used inputs for the final rule based on information from the proposal as well as new data and information that has become available since the proposal (either through the comments or through the agencies' analyses).

B. Developing the Future Fleet for Assessing Costs, Benefits, and Effects

1. Why did the agencies establish baseline and reference vehicle fleets?

In order to calculate the impacts of the EPA and NHTSA regulations, it is necessary to estimate the composition of the future vehicle fleet absent regulatory action, to provide a reference point relative to which costs, benefits, and effects of the regulations are assessed. As in the NPRM, EPA and NHTSA have developed comparison fleets in two parts. The first step was to develop baseline estimates of the fleets of new vehicles to be produced for sale in the U.S. through MY2025, one starting with the actual MY 2008 fleet, and one starting with the actual MY 2010 fleet. These baselines include vehicle sales volumes, GHG/fuel economy performance levels, and contain listings of the base technologies on every MY 2008 or MY 2010 vehicle sold. This information comes from CAFE certification data submitted by manufacturers to EPA, and for purposes of rulemaking analysis, was supplemented with publicly and commercially available information regarding some vehicle characteristics (e.g., footprint). The second step was to project the baseline fleet volumes into model years 2017–2025. The vehicle volumes projected out to MY 2025 are referred to as the reference fleet volumes. The third step was to modify those MY 2017–2025 reference fleets such that they reflect the technology that manufacturers could apply if the MY 2016 standards were extended without change through MY 2025.¹⁴⁶ Each agency used its modeling system to develop modified or final reference fleets, or adjusted baselines, for use in its analysis of regulatory alternatives, as discussed below and in each agency's

¹⁴⁶ EPA's MY 2016 GHG standards under the CAA would continue into the future absent this final rule. While NHTSA must actively promulgate standards in order for CAFE standards to extend past MY 2016, the agency has, as in all recent CAFE rulemakings, defined a no-action (i.e., baseline) regulatory alternative as an indefinite extension of the last-promulgated CAFE standards for purposes of the main analysis of the standards in this preamble.

RIA. All of the agencies' estimates of emission reductions, fuel economy improvements, costs, and societal impacts are developed in relation to the respective reference fleets. This section discusses the first two steps, development of the baseline fleets and the reference fleets.

EPA and NHTSA used a transparent approach to developing the baseline and reference fleets, largely working from publicly available data. Because both input and output sheets from our modeling are public, stakeholders can verify and check EPA's and NHTSA's modeling, and perform their own analyses with these datasets.¹⁴⁷

2. What comments did the agencies receive regarding fleet projections for the NPRM?

During the comment period, the agencies also received formal comments regarding the NPRM baseline and reference fleets. Chrysler questioned the agencies' assumption that the company's sales would decline by 53% over 17 years, and stated that the forecast had implications not just for the agencies' analysis, but also, indirectly, for Chrysler's competitiveness, because suppliers and customers who "see [such] projections supported by Federal agencies * * * are potentially given a highly negative view of the viability of the company * * * [which] may result in less favorable contracts with suppliers and lower sales to customers." Chrysler requested that the agencies update their volume projections for the final rule.¹⁴⁸

The agencies' projection that Chrysler's sales would steadily decline was primarily attributable to the manufacturer- and segment-level forecasts provided in December 2009 by CSM. The agencies thought that forecast to have been credible at the time considering economic and industry conditions during the months before CSM provided the agencies with a long-range forecast, when the overall light vehicle market was severely depressed and Chrysler and GM were—with nascent federal assistance—in the process of reorganizing. We recognize that Chrysler's production has since recovered to levels suggesting much better long-term prospects than forecast by CSM in 2009. While the agencies are continuing to use the market forecast

¹⁴⁷ EPA's Omega Model and input sheets are available at <http://www.epa.gov/oms/climate/models.htm>; DOT/NHTSA's CAFE Compliance and Effects Modeling System (commonly known as the "Volpe Model") and input and output sheets are available at <http://www.nhtsa.gov/fuel-economy>.

¹⁴⁸ Chrysler, Docket No. NHTSA–2010–0131–0241, at 21.

developed for the NPRM (after minor corrections unrelated to Chrysler's comments), we are also using a second market forecast we have developed for today's final rule, making use of a newer forecast (in this case, from LMC) of manufacturer- and segment-level shares, a forecast that shows significantly higher sales (more than double that of the earlier forecast) for Chrysler in 2025.

Environmental Consultants of Michigan commented that use of 4-year-old certification data was "unconscionable" and unreflective of technology improvements already made to vehicles since then, requesting that the agencies delay the final rule until the market forecast can be updated with appropriate data.¹⁴⁹ As described in this chapter, even though the year of publication of this rule is 2012, model year 2010 was the most recent baseline dataset available due to the lag between the actual conclusion of a given model year and the submission (for CAFE compliance purposes) of production volumes for that model year. Moreover, as explained below in the joint TSD and in our respective RIAs, EPA and NHTSA measure the costs and benefits of new standards as incremental levels beyond those that would result from the application of technology given continuation of baseline standards (i.e., continuation of the standards that will be in place in MY 2016). Therefore, our analysis of manufacturers' capabilities is informed by analysis of technology that could be applied in the future even absent the new standards, not just technology that had been applied in 2008 or 2010. We further note that, while NHTSA has, in the past, made use of confidential product planning information provided to the agency by many manufacturers—information that typically extended roughly five years into the future—other stakeholders previously commented negatively regarding the agency's resultant inability to publish some of the detailed inputs to and outputs of its analysis. As during the rulemaking establishing the MYs 2012–2016 standards, EPA and NHTSA have determined that the benefits of a fully transparent market forecast outweigh the disbenefits of a market forecast that may not fully reflect likely forthcoming changes in manufacturers' products.

The agencies also received a comment from Volkswagen, stating that "Volkswagen sees *no evidence* that would suggest a *near 30% decline* in truck market share from domestic OEMs

¹⁴⁹ Environmental Consultants of Michigan, Docket No. NHTSA–2010–0131–0166, at 7.

[original emphasis].”¹⁵⁰ Volkswagen further suggested that the agencies’ forecast was based on confidential “strategic plans by [Volkswagen’s] competitors”. On the contrary, the agencies’ forecast was based on public and commercial information made fully available to all stakeholders, including Volkswagen. Also, while the agencies’ 2008 based fleet projection showed a decline in the share of light trucks expected to be produced by the aggregate of Chrysler, Ford, and General Motors, Volkswagen’s statement mischaracterized the magnitude and nature of the decline. Between MY2008 and MY2025, the agencies’ forecast showed declines from 17.8% to 5.8% for Chrysler, from 14.5% to 12.0% for Ford, from 26.8% to 27.8% from General Motors, and from 58.3% to 44.5% for the aggregate of these three manufacturers. The latter represents a 22.5% reduction, not the 30% reduction cited by Volkswagen, and is dominated by the underlying forecast regarding Chrysler’s overall position in the market; for General Motors, the agencies’ forecast showed virtually no loss of share in the light truck market. As discussed above, the agencies’ market forecast for the NPRM was informed by CSM’s forecast of manufacturer- and segment-level shares, and by EIA’s forecast of overall volumes of the passenger car and light truck markets, and CSM’s forecast, in particular, was provided at a time when market conditions were economically severe. While the agencies are continuing to use this forecast, this agency is also using a second forecast, informed by MY 2010 certification data, an updated AEO-based forecast of overall volumes of passenger cars and light trucks, and an updated manufacturer- and segment-level market forecast from LMC Automotive.

The Union of Concerned Scientists (UCS) expressed concern that if the light vehicle market does not shift toward passenger cars as indicated in the agencies’ market forecast, energy and environmental benefits of the new standards could be less than projected.¹⁵¹ As discussed below, our MY 2008-based and MY 2010-based market forecasts, while both subject to uncertainty, reflect passenger car market shares estimated using EIA’s National Energy Modeling System (NEMS). For both market forecasts, we re-ran NEMS by holding standards constant after MY 2016 and also preventing the model from increasing the passenger car

market share to achieve increases in fleetwide average fuel economy levels. Having done so, we obtained a somewhat lower passenger car market share than EIA obtained for AEO 2011 and AEO 2012, respectively. In our judgment, this approach provides a reasonable basis for developing a forecast of the overall sales of passenger cars and light trucks, while remaining consistent with our use of EIA’s reference case estimates of future fuel prices. In any event, we note that EPCA/EISA requires NHTSA to ensure that the overall new vehicle fleet achieves average fuel economy of at least 35 mpg by MY 2020. Our analysis, discussed below, indicates based on the information currently before us that the fleet could achieve 39.9–40.8 mpg by MY 2020 (accounting for flexibilities available under EPCA)—well above the 35 mpg statutory requirement. However, NHTSA will monitor the fleet’s progress and, if necessary, adjust standards to ensure that EPCA/EISA’s “35-by-2020” requirement is met, even if this requires issuing revised fuel economy standards before the planned joint mid-term evaluation process has been completed. However, insofar as NHTSA’s current analysis indicates the fleet could achieve 40–41 mpg by MY 2020, NHTSA currently expects the need for such a rulemaking to be unlikely. Beyond MY 2020, EPCA/EISA does not provide a minimum requirement for the overall fleet, but requires NHTSA to continue setting separate standards for passenger cars and light trucks, such that each standard is at the maximum feasible level in each model year. In other words, as long as the “35-by-2020” requirement is achieved, NHTSA is required to consider stringency for passenger cars and light trucks separately, not to set those standards at levels achieving any particular level of average performance for the overall fleet.

Nonetheless, the agencies recognize that overall fuel consumption and GHG emissions by the light vehicle fleet will depend on, among many other things, the relative market shares of passenger cars and light trucks. In its probabilistic uncertainty analysis, presented in NHTSA’s RIA accompanying today’s notice as required by OMB for significant rulemakings, NHTSA has varied the passenger car share (as a function of fuel price), such that the resultant distributions of estimated model results—including fuel savings and CO₂ emission reductions—reflect uncertainty regarding the relative market shares of passenger cars and light trucks. The results of the

probabilistic uncertainty analysis along with the other analysis in this rulemaking support that the NHTSA standards are maximum feasible standards. The probabilistic uncertainty analysis is discussed in NHTSA’s RIA Chapter XII. Like all other aspects of the outlook for the future light vehicle market, the agencies will closely monitor the relative market shares of passenger cars and light trucks in preparation for the planned midterm review.

3. Why were two fleet projections created for the FRM?

Although much of the discussion in this and following sections describes the methodology for creating a single baseline and reference fleet, for this final rule the agencies actually developed two baseline and reference fleets. In the NPRM, the agencies used MY 2008 CAFE certification data to establish the “2008-based fleet projection.”¹⁵² The agencies noted that MY 2009 CAFE certification data was not likely to be representative of future conditions since it was so dramatically influenced by the economic recession (Joint Draft TSD section 1.2.1). The agencies further noted that MY 2010 CAFE certification data might be available for use in the final rulemaking for purposes of developing a baseline fleet. The agencies stated that a copy of the MY 2010 CAFE certification data would be put in the public docket if it became available during the comment period. The MY 2010 data was reported by the manufacturers throughout calendar year 2011 as the final sales figures were compiled and submitted to the EPA database. Due to the lateness of the CAFE data submissions,¹⁵³ however, it was not possible to submit the new 2010 data into the docket during the public comment period. As explained below, however, consistent with the agencies’ expectations at proposal, and with the agencies’ standard practice of updating relevant information as practicable between proposals and final rules, the agencies are using these data in one of the two fleet-based projections we are using to estimate the impacts of the final rules.

For analysis supporting the NPRM, the agencies developed a forecast of the light vehicle market through MY 2025

¹⁵² “2008 based fleet projection” is a new term that is the same as the reference fleet. The term is added to clarify when we are using the 2008 baseline and reference fleet vs. the 2010 baseline and reference fleet.

¹⁵³ Partly due to the earthquake and tsunami in Japan and the significant impact this had on their facilities, some manufacturers requested and were granted an extension on the deadline to submit their CAFE data.

¹⁵⁰ Volkswagen, NHTSA–2010–0131–0247, at 9.

¹⁵¹ UCS, Docket No. EPA–HQ–OAR–2010–0799–9567, p. 8.

based on (a) the vehicle models in the MY 2008 CAFE certification data, (b) the AEO 2011 interim projection of future fleet sales volumes, and (c) the future fleet forecast conducted by CSM in 2009. In the proposal, the agencies stated we would consider using MY 2010 CAFE certification data, if available, for analysis supporting the final rule (Joint Draft TSD, p. 1–2). Shortly after the NPRM was issued, the agencies reiterated this intention in statements to *Automotive News* in response to a pending article by that publication.¹⁵⁴ The agencies also indicated our intention to, for analysis supporting the final rule, use the most recent version of EIA's AEO available, and a market forecast updated relative to that purchased from CSM (Joint Draft TSD section 1.3.5).

For this final rulemaking, the agencies have analyzed the costs and benefits of the standards using two different forecasts of the light vehicle fleet through MY 2025. The agencies have concluded that the significant uncertainty associated with forecasting sales volumes, vehicle technologies, fuel prices, consumer demand, and so forth out to MY 2025 makes it reasonable and appropriate to evaluate the impacts of the final CAFE and GHG standards using two baselines. One market forecast, similar to the one used for the NPRM, uses corrected data regarding the MY 2008 fleet, information from AEO 2011, and information purchased from CSM. As noted above, the agencies received comments regarding the market forecast used in the NPRM suggesting that updates in several respects could be helpful to the agencies' analysis of final standards; given those comments and since the agencies were already planning to produce an updated market forecast, the final rule also contains another market forecast using MY 2010 CAFE certification data, information from AEO 2012, and information purchased from LMC Automotive (formerly JD Powers Automotive).

The two market forecasts contain certain differences, although as will be discussed below, the differences are not significant enough to change the agencies' decision as to the structure and stringency of the final standards. For example, MY 2008 certification data represents the most recent model year for which the industry's offerings were not strongly affected by the subsequent economic recession, which may make it reasonable to use if we believe that the

future vehicle mix of models are more likely to be reflective of the pre-recession mix than mix of models produced after MY 2008 (e.g., in MY 2010). Also, the MY 2010-based fleet projection employs a future fleet forecast provided by LMC Automotive, which is more current than the projection provided by CSM in 2009. The CSM forecast, utilized for the MY 2008-based fleet projection, appears to have been influenced by the recession, in particular in predicting major declines in market share for some manufacturers (e.g., Chrysler) which the agencies do not believe are reasonably reflective of future trends.

The MY 2010 based fleet projection, which is used in EPA's alternative analysis and in NHTSA's co-analysis, employs a future fleet forecast provided by LMC Automotive, which is more current than the projection provided by CSM in 2009, and which reflects the post-proposal MY 2010 CAFE certification data. However, this MY 2010 CAFE data also shows effects of the economic recession. For example, industry-wide sales were skewed down 20% compared to MY 2008 levels. For some companies like Chrysler, Mitsubishi, and Subaru, sales were down by 30–40% from MY 2008 levels, as documented in today's joint TSD. For BMW, General Motors, Jaguar/Land Rover, Porsche, and Suzuki, sales were down by more than 40%. Employing the MY 2008 vehicle data avoids using these baseline market shifts when projecting the future fleet. On the other hand, it also perpetuates vehicle brands and models (and thus, their outdated fuel economy levels and engineering characteristics) that have since been discontinued. The MY 2010 CAFE certification data accounts for the phase-out of some brands (e.g., Saab, Pontiac, Hummer)¹⁵⁵ and the introduction of some technologies (e.g., Ford's Ecoboost engine), which may be more reflective of the future fleet in this respect.

Thus, given the volume of information that goes into creating a baseline forecast and given the significant uncertainty in any projection out to MY 2025, the agencies think that a reasonable way to illustrate the possible impacts of that uncertainty for purposes of this rulemaking is the approach taken here of analyzing the effects of the final standards under both the MY 2008-based baseline and the MY 2010-based baseline. The agencies'

analyses are presented in our respective RIAs and preamble sections.

4. How did the Agencies develop the MY 2008 baseline vehicle fleet?

NHTSA and EPA developed a baseline fleet comprised of model year 2008 data gathered from EPA's emission and fuel economy database. This baseline fleet was used for the NPRM and was updated for this FRM.

There was only one change since the NPRM. A contractor working on a market share model noted some problems with some of the 2008 MY vehicle wheelbase data. Each of the affected vehicle's wheelbase and footprint were corrected for the MY 2008-based fleet used for this final rule. A more complete discussion of these changes is available in Chapter 1.3.1 of the TSD.

The 2008 baseline fleet reflects all fuel economy technologies in use on MY 2008 light duty vehicles as reported by manufacturers in their CAFE certification data. The 2008 emission and fuel economy database included data on vehicle production volume, fuel economy, engine size, number of engine cylinders, transmission type, fuel type, etc.; however it did not contain complete information on technologies. Thus, the agencies relied on publicly available data like the more complete technology descriptions from Ward's Automotive Group.¹⁵⁶ In a few instances when required vehicle information (such as vehicle footprint) was not available from these two sources, the agencies obtained this information from publicly accessible internet sites such as Motortrend.com and Edmunds.com.¹⁵⁷ A description of all of the technologies used in modeling the 2008 vehicle fleet and how it was constructed are available in Chapter 1 of the Joint TSD.

5. How did the Agencies develop the projected MY 2017–2025 vehicle reference fleet for the 2008 model year based fleet?

As in the NPRM, EPA and NHTSA have based the projection of total car and total light truck sales for MYs 2017–2025 on projections made by the Department of Energy's Energy Information Administration (EIA/EIA publishes a mid-term projection of national energy use called the Annual Energy Outlook (AEO). This projection utilizes a number of technical and econometric models which are designed to reflect both economic and regulatory

¹⁵⁴ "For CAFE rules, feds look at aging sales data", *Automotive News*, December 22, 2011. Available at <http://www.autonews.com/article/20111222/OEM11/111229956> (last accessed Jun. 27, 2012).

¹⁵⁵ Based on our review of the CAFE certification, the MY 2010-based fleet contains no Saabs, and compared to the MY 2008-based fleet, about 90% fewer Hummers and about 75% fewer Pontiacs.

conditions expected to exist in the future. In support of its projection of fuel use by light-duty vehicles, EIA projects sales of new cars and light trucks. EIA published its Early Annual Energy Outlook for 2011 in December 2010. EIA released updated data to NHTSA in February (Interim AEO). The final release of AEO for 2011 came out in May 2011 and early release AEO came out in December of 2011, but for consistency with the NPRM, EPA and NHTSA chose to use the data from February 2011.

The agencies used the Energy Information Administration's (EIA's) National Energy Modeling System (NEMS) to estimate the future relative market shares of passenger cars and light trucks. However, NEMS methodology includes shifting vehicle sales volume, starting after 2007, away from fleets with lower fuel economy (the light truck fleet) towards vehicles with higher fuel economies (the passenger car fleet) in order to facilitate projected compliance with CAFE and GHG standards. Because we use our market projection as a baseline relative to which we measure the effects of new standards, and we attempt to estimate the industry's ability to comply with new standards without changing product mix (*i.e.*, we analyze the effects of the rules assuming manufacturers will not change fleet composition as a compliance strategy, as opposed to changes that might happen due to market forces), the Interim AEO 2011-

projected shift in passenger car market share as a result of required fuel economy improvements creates a circularity. Therefore, for the NPRM analysis, the agencies developed a new projection of passenger car and lighttruck sales shares by running scenarios from the Interim AEO 2011 reference case that first deactivate the above-mentioned sales-volume shifting methodology and then hold post-2017 CAFE standards constant at MY 2016 levels. As discussed in Chapter 1 of the agencies' joint Technical Support Document, incorporating these changes reduced the NEMS-projected passenger car share of the light vehicle market by an average of about 5% during 2017–2025.

In the AEO 2011 Interim data, EIA projects that total light-duty vehicle sales will gradually recover from their currently depressed levels by around 2013. In 2017, car sales are projected to be 8.4 million (53 percent) and truck sales are projected to be 7.3 million (47 percent). Although the total level of sales of 15.8 million units is similar to pre-2008 levels, the fraction of car sales is projected to be higher than that existing in the 2000–2007 timeframe. This projection reflects the impact of assumed higher fuel prices. Sales projections of cars and trucks for future model years can be found in Chapter 1 of the joint TSD.

In addition to a shift towards more car sales, sales of segments within both the car and truck markets have been

changing and are expected to continue to change. Manufacturers are introducing more crossover utility vehicles (CUVs), which offer much of the utility of sport utility vehicles (SUVs) but use more car-like designs. The AEO 2011 report does not, however, distinguish such changes within the car and truck classes. In order to reflect these changes in fleet makeup, EPA and NHTSA used a long range forecast¹⁵⁸ from CSM Worldwide (CSM) the firm which, at the time of proposal development, offered the most detailed forecasting for the model years in question. The long range forecast from CSM Worldwide is a custom forecast covering the years 2017–2025 which the agencies purchased from CSM in December of 2009. Since proposal, the agencies have worked with LMC Automotive (formerly J.D. Powers Forecasting) and found them to be capable of doing forecasting of equivalent detail and are using the LMC forecast for the 2010 baseline fleet projection.

The next step was to project the CSM forecasts for relative sales of cars and trucks by manufacturer and by market segment onto the total sales estimates of AEO 2011. Table II–1 and Table II–2 show the resulting projections for the reference 2025 model year and compare these to actual sales that occurred in the baseline 2008 model year. Both tables show sales using the traditional definition of cars and light trucks.

TABLE II–1—ANNUAL SALES OF LIGHT-DUTY VEHICLES BY MANUFACTURER IN 2008 AND ESTIMATED FOR 2025

			Small CUV	1,612,029	1,875,703
Total Sales**	6,981,307	9,836,330		6,870,454	7,414,129

* MAV—Multi-Activity Vehicle, or a vehicle with a tall roof and elevated seating positions such as a Mazda5. SUV—Sport Utility Vehicle, CUV—Crossover Utility Vehicle.
 **Total Sales are based on the classic Car/Truck definition.

NHTSA has changed the definition of a truck for 2011 model year and beyond. The new definition has moved some 2 wheel drive SUVs and CUVs to the car category. Table II-3 shows the different volumes for car and trucks based on the new and old NHTSA definition. The table shows the difference in 2008, 2021, and 2025 to give a feel for how the change in definition changes the car/truck split.

TABLE II-3—NEW AND OLD CAR AND TRUCK DEFINITION IN 2008, 2016, 2021, AND 2025

Vehicle type	2008	2016 ¹⁵⁹	2021	2025
Old Cars Definition	6,981,307	8,576,717	8,911,173	9,836,330
New Cars Definition	8,230,568	10,140,463	10,505,165	11,541,560
Old Truck Definition	6,870,454	7,618,459	7,277,894	7,414,129
New Truck Definition	5,621,193	6,054,713	5,683,902	5,708,899

The CSM forecast provides estimates of car and truck sales by segment and by manufacturer separately. The forecast was broken up into two tables: one table with manufacturer volumes by year and the other with vehicle segments percentages by year. Table II-4 and Table II-5 are examples of the data received from CSM. The task of estimating future sales using these tables is complex. We used the same methodology as in the previous rulemaking. A detailed description of how the projection process was done is found in Chapter 1.3.2 of the TSD.

TABLE II-4—CSM MANUFACTURER VOLUMES IN 2016, 2021, AND 2025

	2016	2021	2025
BMW	328,220	325,231	317,178
Chrysler/Fiat	391,165	346,960	316,043
Daimler	298,676	272,049	271,539
Ford*	971,617	893,528	858,215

Lotus	252	252	252
Porsche	12	12	12
Nissan	803,177	729,723	707,361
Suzuki	88,142	81,042	76,873
Tata/JLR	58,594	53,143	52,069
Toyota	1,751,661	1,576,499	1,564,975
Volkswagen	578,420	530,378	494,596

*Ford volumes include Volvo in this table.

TABLE II-5—CSM SEGMENT PERCENTAGES IN 2016, 2021, AND 2025

	2016 (percent)	2021 (percent)	2025 (percent)
Full-Size CUV	3.66	8.34	9.06
Full-Size Pickup	19.39	15.42	13.53
Full-Size SUV	3.27	0.90	0.63
Full-Size Van	0.92	1.29	1.19
Mid-Size CUV	19.29	16.88	16.99
Mid-Size MAV	1.63	5.93	7.40
Mid-Size Pickup	4.67	5.74	5.82
Mid-Size SUV	2.28	4.73	4.57
Mid-Size Van	11.80	11.63	11.32
Small CUV	30.67	25.06	25.30
Small MAV	0.88	2.98	3.22
Small Pickup	0.00	0.00	0.00
Small SUV	1.53	1.12	0.97

The overall result was a projection of car and truck sales for model years 2017–2025—the reference fleet—which

matched the total sales projections of the AEO forecast and the manufacturer and segment splits of the CSM forecast.

These sales splits are shown in Table II-6 below.

TABLE II-6—CAR AND TRUCK VOLUMES AND SPLIT BASED ON NHTSA NEW TRUCK DEFINITION

	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025

*In thousands

Given publicly- and commercially-available sources that can be made equally transparent to all reviewers, the forecast described above represented the agencies' best forecast available at the time of its publishing regarding the likely composition direction of the fleet. EPA and NHTSA recognize that it is impossible to predict with certainty how manufacturers' product offerings and sales volumes will evolve through MY 2025 under baseline conditions—that is, without further changes in standards after MY 2016. While the agencies have not included variations in the market forecast as aspects of our respective sensitivity analyses, we have

conducted our central analyses twice—once each for the MY 2008- and MY 2010-based market forecasts that reflect differences in available vehicle models, differences in manufacturer- and segment-level market shares, and differences in the overall volumes of passenger cars and light trucks. In addition, as discussed above, NHTSA's probabilistic uncertainty analysis accounts for uncertainty regarding the relative market shares of passenger cars and light trucks.

The final step in the construction of the 2008 based fleet projection involves applying additional technology to individual vehicle models—that is,

technology beyond that already present in MY 2008—reflecting already-promulgated standards through MY 2016, and reflecting the assumption that MY 2016 standards would apply through MY 2025. A description of the agencies' modeling work to develop their respective final reference (or adjusted baseline) fleets appear in the agencies' respective RIAs.

6. How did the agencies develop the model year 2010 baseline vehicle fleet as part of the 2010 based fleet projection?

NHTSA and EPA also developed a baseline fleet comprised of model year

2010 data gathered from EPA's emission and fuel economy database. This alternative baseline fleet has the model year 2010 vehicle volumes and attributes. The 2010 baseline fleet reflects all fuel economy technologies in use on MY 2010 light duty vehicles as reported by manufacturers in their CAFE certification data. The 2010 emission and fuel economy database included data on vehicle production volume, fuel economy, engine size, number of engine cylinders, transmission type, fuel type, etc.; however it did not contain complete information on technologies. Thus, as with the 2008 baseline fleet, the agencies relied on publicly available data like the more complete technology descriptions from Ward's Automotive Group. In a few instances when required vehicle information (such as vehicle footprint) was not available from these two sources, the agencies obtained this information from publicly accessible internet sites such as Motortrend.com and Edmunds.com. A description of all of the technologies used in modeling the 2010 vehicle fleet and how it was constructed are available in Chapter 1.4 of the Joint TSD.

7. How did the Agencies develop the projected my 2017–2025 vehicle reference fleet for the 2010 model year based fleet?

EPA and NHTSA have based the projection of total car and total light truck sales for MYs 2017–2025 on projections made by the Department of Energy's Energy Information Administration (EIA). EIA published its

Early Annual Energy Outlook for 2012 in December 2011. EIA released updated data to NHTSA in February (AEO Early Release). The final version of AEO 2012 was released June 25, 2012, after the agencies had already completed our analyses using the early release results.

As we did with the Interim 2011 AEO data, the agencies developed a new projection of passenger car and light truck sales shares by running scenarios from the Early Release AEO 2012 reference case that first deactivate the above-mentioned sales-volume shifting methodology and then hold post-2017 CAFE standards constant at MY 2016 levels. As discussed in Chapter 1 of the agencies' joint Technical Support Document, incorporating these changes reduced the NEMS-projected passenger car share of the light vehicle market by an average of about 5% during 2017–2025.

In the AEO 2012 Early Release data, EIA projects that total light-duty vehicle sales will gradually recover from their currently depressed levels by around 2013. In 2017, car sales are projected to be 8.7 million (55 percent) and truck sales are projected to be 7.1 million (45 percent). Although the total level of sales of 15.8 million units is similar to pre-2008 levels, the fraction of car sales is projected to be higher than that existing in the 2000–2007 timeframe. This projection reflects the impact of assumed higher fuel prices. Sales projections of cars and trucks for future model years can be found in Chapter 1.4.3 of the joint TSD.

In addition to a shift towards more car sales, sales of segments within both the

car and truck markets have been changing and are expected to continue to change. Manufacturers are introducing more crossover utility vehicles (CUVs), which offer much of the utility of sport utility vehicles (SUVs) but use more car-like designs. The AEO 2012 report does not, however, distinguish such changes within the car and truck classes. In order to reflect these changes in fleet makeup, EPA and NHTSA used a custom long range forecast purchased from LMC Automotive (formerly J.D. Powers Forecasting). NHTSA and EPA decided to use the forecast from LMC for the 2010 model year based fleet for several reasons discussed in Chapter 1 of the Joint TSD, and believe the projection provides a useful cross-check for the forecast used for the projections reflected in the 2008 model year based fleet. For the public's reference, a copy of LMC's long range forecast has been placed in the docket for this rulemaking.¹⁶⁰

The next step was to project the LMC forecasts for relative sales of cars and trucks by manufacturer and by market segment onto the total sales estimates of AEO 2012. Table II–7 and Table II–8 show the resulting projections for the reference 2025 model year and compare these to actual sales that occurred in the baseline 2010 model year. Both tables show sales using the traditional definition of cars and light trucks. As discussed above, the new forecast from LMC shown in Table II–7 shows a significant increase in Chrysler/Fiat's sales (1.6 million) from those projected by CSM (768 thousand).

			Midsize Van	508,491	492,280
Total Sales **	5,877,937	9,367,054		5,312,243	7,087,746

* Unity Class—Is a special class created by the EPA for luxury brands that were not covered by the forecast.

** Total Sales are based on the classic Car/Truck definition.

NHTSA has changed the definition of a truck for 2011 model year and beyond. The new definition has moved some 2 wheel drive SUVs and CUVs to the car

category. Table II-9 shows the different volumes for car and trucks based on the new and old NHTSA definition. The table shows the difference in 2010,

2021, and 2025 to give a feel for how the change in definition changes the car/truck split.

TABLE II-9—NEW AND OLD CAR AND TRUCK DEFINITION IN 2010, 2016, 2021, AND 2025

Vehicle type	2010	2016	2021	2025
Old Cars Definition	6,016,063	8,725,700	8,898,400	9,525,700
New Cars Definition	7,176,330	10,227,185	10,310,594	10,981,082
Old Truck Definition	5,174,117	7,136,500	6,831,700	6,929,100
New Truck Definition	4,013,850	5,635,015	5,419,506	5,473,718

The LMC forecast provides estimates of car and truck sales by manufacturer segment and by manufacturer separately. The forecast was broken up into two tables: one table with manufacturer volumes by year and the other with vehicle segments percentages

by year. Table II-10 is an example of the data received from LMC. The task of estimating future sales using these tables is complex. Table II-11 is the LMC projected volumes for each manufacturer.

Table II-12 has the LMC segment percentages for 2016, 2021, and 2025. We used a new methodology that is different than we used for the 2008 fleet projection. A detailed description of how the projection process was done is found in Chapter 1 of the TSD.

TABLE II-10—EXAMPLE OF THE LMC SEGMENTED CHRYSLER VOLUMES IN 2016, 2021, AND 2025

Manufacturer	LMC segment	2016	2021	2025

The final step in the construction of the 2010 model year based fleet involves applying additional technology to individual vehicle models—that is, technology beyond that already present in MY 2010—reflecting already-promulgated standards through MY 2016, and reflecting the assumption that MY 2016 standards would continue to apply in each model year through MY 2025. A description of the agencies’ modeling work to develop their respective final reference (or adjusted baseline) fleets appear in the agencies’ respective RIAs.

8. What are the Differences in the Sales Volumes and Characteristics of the MY 2008 Based and the MY 2010 Based Fleets Projections?

Table II-14 is the difference in actual and projected sales volumes between the 2010 based and the 2008 based fleet forecast. This summary table is the most convenient way to compare the projections from CSM and LMC, since the forecasting companies use different segmentations of vehicles. It also provides a comparison of the two AEO forecasts since the projections are normalized to AEO’s total volume of

cars and trucks in each year of the projection. The table shows a total projected reduction from the 2008 fleet to the 2010 fleet in 2025 of .5 million cars and .8 million trucks. The largest manufacturer changes in the 2025 model projections are for Chrysler and Toyota. The newer projection increases Chrysler’s total vehicles by .9 million vehicles, while it decreases Toyota’s total vehicles by .8 million.

The table also shows that the total actual reduction in cars from 2008 MY to 2010 MY is 1.0 million vehicles, and the reduction in trucks is 1.6 million vehicles.

TABLE II-14—DIFFERENCES IN ANNUAL SALES OF LIGHT-DUTY VEHICLES BY MANUFACTURER

Table II-15 shows the change in volumes between the two forecasts for cars and trucks based on the new and old NHTSA definition. The table shows

the change to give a feel for how the change in definition impacts the car/truck split. Many factors impact the changes shown here including

differences in AEO, differences in the number of SUV and CUV vehicles becoming cars, and the future volume projected by CSM and LMC.

TABLE II-15—DIFFERENCES IN NEW AND OLD CAR AND TRUCK DEFINITION IN 2008, 2016, 2021, AND 2025

Vehicle type	2010–2008	2016	2021	2025
Old Cars Definition	-965,244	148,983	-12,773	-310,630
New Cars Definition	-1,054,238	86,722	-194,571	-560,478
Old Truck Definition	-1,696,337	-481,959	-446,194	-485,029
New Truck Definition	-1,607,343	-419,698	-264,396	-235,181

Table II-16 is the changes in car and truck split due to the difference between the 2010 and 2008 forecast. The table

shows that the different AEO forecasts, CSM and LMC projections have an

insignificant impact on the car and truck split.

TABLE II-16—DIFFERENCES IN CAR AND TRUCK VOLUMES AND SPLIT BASED ON NHTSA NEW TRUCK DEFINITION

	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025

The joint TSD contains further comparisons of the two projections at the end of Chapter 1.

So, given all of the discussion above, the agencies have created these two baselines to illustrate possible uncertainty in the future market forecast. The industry-wide differences between the forecasts are relatively minor, even if there are some fairly significant differences for individual manufacturers. Analysis under both baselines supports the agencies' respective decisions as to the stringency of the final standards, as discussed further in Sections III and IV below.

C. Development of Attribute-Based Curve Shapes

1. Why are standards attribute-based and defined by a mathematical function?

As in the MYs 2012–2016 CAFE/GHG rules, and as NHTSA did in the MY

2011 CAFE rule, NHTSA and EPA are promulgating attribute-based CAFE and CO₂ standards that are defined by a mathematical function. EPCA, as amended by EISA, expressly requires that CAFE standards for passenger cars and light trucks be based on one or more vehicle attributes related to fuel economy, and be expressed in the form of a mathematical function.¹⁶¹ The CAA has no such requirement, although such an approach is permissible under section 202 (a) and EPA has used the attribute-based approach in issuing standards under analogous provisions of the CAA (e.g., criteria pollutant standards for non-road diesel engines using engine size as the attribute,¹⁶² in the recent GHG standards for heavy duty pickups and vans using a work factor attribute,¹⁶³ and in the MYs

2012–2016 GHG rule itself which used vehicle footprint as the attribute). As for the MYs 2012–2016 rulemaking, public comments on the MYs 2017–2025 proposal widely supported attribute-based standards for both agencies' standards as further discussed in section II.C.2.

Under an attribute-based standard, every vehicle model has a performance target (fuel economy and CO₂ emissions for CAFE and CO₂ emissions standards, respectively), the level of which depends on the vehicle's attribute (for this final rule, footprint, as discussed below). Each manufacturers' fleet average standard is determined by the production-weighted¹⁶⁴ average (for CAFE, harmonic average) of those targets.

The agencies believe that an attribute-based standard is preferable to a single-industry-wide average standard in the

¹⁶¹ 49 U.S.C. 32902(a)(3)(A).

¹⁶² 69 FR 38958 (June 29, 2004).

¹⁶³ 76 FR 57106, 57162–64, (Sept. 15, 2011).

¹⁶⁴ Production for sale in the United States.

context of CAFE and CO₂ standards for several reasons. First, if the shape is chosen properly, every manufacturer is more likely to be required to continue adding more fuel efficient technology each year across their fleet, because the stringency of the compliance obligation will depend on the particular product mix of each manufacturer. Therefore a maximum feasible attribute-based standard will tend to require greater fuel savings and CO₂ emissions reductions overall than would a maximum feasible flat standard (that is, a single mpg or CO₂ level applicable to every manufacturer).

Second, depending on the attribute, attribute-based standards reduce the incentive for manufacturers to respond to CAFE and CO₂ standards in ways harmful to safety.¹⁶⁵ Because each vehicle model has its own target (based on the attribute chosen), properly fitted attribute-based standards provide little, if any, incentive to build smaller vehicles simply to meet a fleet-wide average, because the smaller vehicles will be subject to more stringent compliance targets.¹⁶⁶

Third, attribute-based standards provide a more equitable regulatory framework for different vehicle manufacturers.¹⁶⁷ A single industry-wide average standard imposes disproportionate cost burdens and compliance difficulties on the manufacturers that need to change their product plans to meet the standards, and puts no obligation on those manufacturers that have no need to change their plans. As discussed above, attribute-based standards help to spread the regulatory cost burden for fuel economy more broadly across all of the vehicle manufacturers within the industry.

Fourth, attribute-based standards better respect economic conditions and consumer choice as compared to single-value standards. A flat, or single value, standard encourages a certain vehicle size fleet mix by creating incentives for manufacturers to use vehicle downsizing as a compliance strategy. Under a footprint-based standard, manufacturers have the incentive to invest in technologies that improve the

fuel economy of the vehicles they sell rather than shifting their product mix, because reducing the size of the vehicle is generally a less viable compliance strategy given that smaller vehicles have more stringent regulatory targets.

2. What attribute are the agencies adopting, and why?

As in the MYs 2012–2016 CAFE/GHG rules, and as NHTSA did in the MY 2011 CAFE rule, NHTSA and EPA are promulgating CAFE and CO₂ standard curves that are based on vehicle footprint, which has an observable correlation to fuel economy and emissions. There are several policy and technical reasons why NHTSA and EPA believe that footprint is the most appropriate attribute on which to base the standards for the vehicles covered by this rulemaking, even though some other vehicle attributes (notably curb weight) are better correlated to fuel economy and emissions.

First, in the agencies' judgment, from the standpoint of vehicle safety, it is important that the CAFE and CO₂ standards be set in a way that does not encourage manufacturers to respond by selling vehicles that are less safe. While NHTSA's research of historical crash data also indicates that reductions in vehicle mass tend to compromise overall highway safety, reductions in vehicle footprint do so to a much greater extent. If footprint-based standards are defined in a way that creates a relatively uniform burden for compliance for vehicles of all sizes, then footprint-based standards should not create incentives for manufacturers to downsize their fleets as a strategy for compliance which could compromise societal safety, or to upsize their fleets which might reduce the program's fuel savings and GHG emission reduction benefits. Footprint-based standards also enable manufacturers to apply weight-efficient materials and designs to their vehicles while maintaining footprint, as an effective means to improve fuel economy and reduce GHG emissions. On the other hand, depending on their design, weight-based standards can create disincentives for manufacturers to apply weight-efficient materials and designs. This is because weight-based standards would become more stringent as vehicle mass is reduced. The agencies discuss mass reduction and its relation to safety in more detail in Preamble section II.G.

Further, although we recognize that weight is better correlated with fuel economy and CO₂ emissions than is footprint, we continue to believe that there is less risk of "gaming" (changing the attribute(s) to achieve a more

favorable target) by increasing footprint under footprint-based standards than by increasing vehicle mass under weight-based standards—it is relatively easy for a manufacturer to add enough weight to a vehicle to decrease its applicable fuel economy target a significant amount, as compared to increasing vehicle footprint. We also continue to agree with concerns raised in 2008 by some commenters to the MY 2011 CAFE rulemaking that there would be greater potential for gaming under multi-attribute standards, such as those that also depend on weight, torque, power, towing capability, and/or off-road capability. The agencies agree with the assessment first presented in NHTSA's MY 2011 CAFE final rule¹⁶⁸ that the possibility of gaming an attribute-based standard is lowest with footprint-based standards, as opposed to weight-based or multi-attribute-based standards. Specifically, standards that incorporate weight, torque, power, towing capability, and/or off-road capability in addition to footprint would not only be more complex, but by providing degrees of freedom with respect to more easily-adjusted attributes, they could make it less certain that the future fleet would actually achieve the average fuel economy and CO₂ reduction levels projected by the agencies.¹⁶⁹ This is not to say that a footprint-based system will eliminate gaming, or that a footprint-based system eliminates the possibility that manufacturers will change vehicles in ways that compromise occupant protection. Such risks cannot be completely avoided, and in the agencies' judgment, footprint-based standards achieved the best balance among affected considerations.

The agencies recognize that based on economic and consumer demand factors that are external to this rule, the distribution of footprints in the future may be different (either smaller or larger) than what is projected in this rule. The agencies recognize that a recent independent analysis, discussed below, suggests that the NPRM form of the MY 2014 standards could, under some circumstances posited by the authors, induce some increases in vehicle footprint. Underlining the potential uncertainty, considering a range of scenarios, the authors obtained a wide range of results in their analyses. As discussed in later in this section,

¹⁶⁸ See 74 FR 14359 (Mar. 30, 2009).

¹⁶⁹ However, for heavy-duty pickups and vans not covered by today's standards, the agencies determined that use of footprint and work factor as attributes for heavy duty pickup and van GHG and fuel consumption standards could reasonably avoid excessive risk of gaming. See 76 FR 57106, 57161–62 (Sept. 15, 2011).

¹⁶⁵ The 2002 NAS Report described at length and quantified the potential safety problem with average fuel economy standards that specify a single numerical requirement for the entire industry. See 2002 NAS Report at 5, finding 12. Ensnuing analyses, including by NHTSA, support the fundamental conclusion that standards structured to minimize incentives to downsize all but the largest vehicles will tend to produce better safety outcomes than flat standards.

¹⁶⁶ Assuming that the attribute is related to vehicle size.

¹⁶⁷ 2002 NAS Report at 4–5, finding 10.

slopes of the linear relationships underlying today's standards are within the range of technically reasonable analyses of the relationships between fuel consumption and footprint, and the agencies continue to expect that there will not be significant shifts in the distribution of footprints as a direct consequence of this final rule. The agencies also recognize that some attribute-based standards in other countries/regions use attributes other than footprint and that there could be benefits for some manufacturers if there was greater international harmonization of fuel economy and GHG standards for light-duty vehicles, but this is largely a question of how stringent standards are and how they are tested and enforced. It is entirely possible that footprint-based and weight-based systems can coexist internationally and not present an undue burden for manufacturers if they are carefully crafted. Different countries or regions may find different attributes appropriate for basing standards, depending on the particular challenges they face—from fuel prices, to family size and land use, to safety concerns, to fleet composition and consumer preference, to other environmental challenges besides climate change. The agencies anticipate working more closely with other countries and regions in the future to consider how fuel economy and related GHG emissions test procedures and standards might be approached in ways that least burden manufacturers while respecting each country's need to meet its own particular challenges.

In the NPRM, the agencies stated that we continue to find that footprint is the most appropriate attribute upon which to base the proposed standards, but recognizing strong public interest in this issue, we sought comment on whether the agencies should consider setting standards for the final rule based on another attribute or another combination of attributes. The agencies also specifically requested that the commenters address the concerns raised in the paragraphs above regarding the use of other attributes, and explain how standards should be developed using the other attribute(s) in a way that contributes more to fuel savings and CO₂ reductions than the footprint-based standards, without compromising safety.

The agencies received several comments regarding the attribute(s) upon which post-MY 2016 CAFE and GHG standards should be based. The National Auto Dealers Association

(NADA)¹⁷⁰ and the Consumer Federation of America (CFA)¹⁷¹ expressed support for attribute-based standards, generally, indicating that such standards accommodate consumer preferences, level the playing field between manufacturers, and remove the incentive to push consumers into smaller vehicles. Many commenters, including automobile manufacturers, NGOs, trade associations and parts suppliers (e.g., General Motors,¹⁷² Ford,¹⁷³ American Chemistry Council,¹⁷⁴ Alliance of Automobile Manufacturers,¹⁷⁵ International Council on Clean Transportation,¹⁷⁶ Insurance Institute for Highway Safety,¹⁷⁷ Society of the Plastics Industry,¹⁷⁸ Aluminum Association,¹⁷⁹ Motor and Equipment Manufacturers Association,¹⁸⁰ and others) expressed support for the continued use of vehicle footprint as the attribute upon which to base CAFE and CO₂ standards, citing advantages similar to those mentioned by NADA and CFA. Conversely, the Institute for Policy Integrity (IPI) at the New York University School of Law questioned whether non-attribute-based (flat) or an alternative attribute basis would be preferable to footprint-based standards as a means to increase benefits, improve safety, reduce "gaming," and/or equitably distribute compliance obligations.¹⁸¹ IPI argued that, even under flat standards, credit trading provisions would serve to level the playing field between manufacturers. IPI acknowledged that NHTSA, unlike EPA, is required to promulgate attribute-based standards, and agreed that a footprint-based system could be at much less risk of gaming than a weight-based system. IPI suggested that the agencies consider a range of options, including a fuel-based system, and select the approach that maximizes net benefits.

Ferrari and BMW suggested that the agencies consider weight-based standards, citing the closer correlation between fuel economy and footprint, and BMW further suggested that weight-based standards might facilitate international harmonization (*i.e.*, between U.S. standards and related standards in other countries).¹⁸² Porsche commented that the footprint attribute is not well suited for manufacturers of high performance vehicles with a small footprint.¹⁸³

Regarding the comments from IPI, as IPI appears to acknowledge, EPCA/EISA expressly requires that CAFE standards be attribute-based and defined in terms of mathematical functions. Also, NHTSA has, in fact, considered and reconsidered options other than footprint, over the course of multiple CAFE rulemakings conducted throughout the past decade. When first contemplating attribute-based systems, NHTSA considered attributes such as weight, "shadow" (overall area), footprint, power, torque, and towing capacity. NHTSA also considered approaches that would combine two or potentially more than two such attributes. To date, every time NHTSA (more recently, with EPA) has considered options for light-duty vehicles, the agency has concluded that a properly designed footprint-based approach provides the best means of achieving the basic policy goals (*i.e.*, by reducing disparities between manufacturers' compliance burdens, increasing the likelihood of improved fuel economy and reduced GHG emissions across the entire spectrum of footprint targets; and by reducing incentives for manufacturers to respond to standards by reducing vehicle size in ways that could compromise overall highway safety) involved in applying an attribute-based standards, and at the same time structuring footprint-based standards in a way that furthers the energy and environmental policy goals of EPCA and the CAA by not creating inappropriate incentives to increase vehicle size in ways that could increase fuel consumption and GHG emissions. As to IPI's suggestion to use fuel type as an attribute, although neither NHTSA nor EPA have presented quantitative analysis of standards that differentiate between fuel type, such standards would effectively use fuel type to identify different subclasses of vehicles, thus requiring mathematical functions—not addressed by IPI's comments—to

¹⁸² BMW, Docket No. NHTSA-2010-0131-0250, at 3.

¹⁸³ Porsche, Docket No. EPA-HQ-OAR-2010-0799-9264.

recombine these fuel types into regulated classes. Insofar as EPCA/EISA already specifies how different fuel types are to be treated for purposes of calculating fuel economy and CAFE levels, and moreover, insofar as the EISA revisions to EPCA removed NHTSA's previously-clear authority to set separate CAFE standards for different classes of light trucks, using fuel type to further differentiate subclasses of vehicles could conflict with the intent, and possibly the letter, of NHTSA's governing statute. Finally, in the agencies' judgment, while regarding IPI's suggestion that the agencies select the attribute-based approach that maximizes net benefits may have merit, net benefits are but one of many considerations which lead to the setting of the standard. Also, such an undertaking would be impracticable at this time, considering that the mathematical forms applied under each attribute-based approach would also need to be specified, and that the agencies lack methods to reliably quantify the relative potential for induced changes in vehicle attributes.

Regarding Ferrari's and BMW's comments, as stated previously, in the agencies' judgment, footprint-based standards (a) discourage vehicle downsizing that might compromise occupant protection, (b) encourage the application of technology, including weight-efficient materials (*e.g.*, high-strength steel, aluminum, magnesium, composites, *etc.*), and (c) are less susceptible than standards based on other attributes to "gaming" that could lead to less-than-projected energy and environmental benefits. It is also important to note that there are many differences between both the standards and the on-road light-duty vehicle fleets in Europe and the United States. The stringency of standards, independent of the attribute used, is another factor that influences harmonization. While the agencies agree that international harmonization of test procedures, calculation methods, and/or standards could be a laudable goal, again, harmonization is not simply a function of the attribute upon which the standards are based. Given the differences in the on-road fleet, in fuel composition and availability, in regional consumer preferences for different vehicle characteristics, in other vehicle regulations besides for fuel economy/CO₂ emissions, and in the balance of program goals given all of these factors in the model years affected, among other things, it would not necessarily be expected that the CAFE and GHG emission standards would align with

standards of other countries. Thus, the agencies continue to judge vehicle footprint to be a preferable attribute for the same reasons enumerated in the proposal and reiterated above.

Finally, as explained in section III.B.6 and documented in section III.D.6 below, EPA agrees with Porsche that the MY2017 GHG standards, and the GHG standards for the immediately succeeding model years, pose special challenges of feasibility and (especially) lead time for intermediate volume manufacturers, in particular for limited-line manufacturers of smaller footprint, high performance passenger cars. It is for this reason that EPA has provided additional lead time to these manufacturers. NHTSA, however, is providing no such additional lead time. As required under EISA/EPCA, manufacturers continue—as since the 1970s—to have the option of paying civil penalties in lieu of achieving compliance with the standards, and NHTSA is uncertain as to what authority would allow it to promulgate separate standards for different classes of manufacturers, having raised this issue in the proposal and having received no legal analysis with suggestions from Porsche or other commenters.

3. How have the agencies changed the mathematical functions for the MYs 2017–2025 standards, and why?

By requiring NHTSA to set CAFE standards that are attribute-based and defined by a mathematical function, NHTSA interprets Congress as intending that the post-EISA standards to be data-driven—a mathematical function defining the standards, in order to be "attribute-based," should reflect the observed relationship in the data between the attribute chosen and fuel economy.¹⁸⁴ EPA is also setting attribute-based CO₂ standards defined by similar mathematical functions, for the reasonable technical and policy grounds discussed below and in Section II of the preamble to the proposed rule,¹⁸⁵ and which supports a harmonization with the CAFE standards.

The relationship between fuel economy (and GHG emissions) and footprint, though directionally clear

¹⁸⁴ A mathematical function can be defined, of course, that has nothing to do with the relationship between fuel economy and the chosen attribute—the most basic example is an industry-wide standard defined as the mathematical function *average required fuel economy* = X , where X is the single mpg level set by the agency. Yet a standard that is simply defined as a mathematical function that is not tied to the attribute(s) would not meet the requirement of EISA.

¹⁸⁵ See 76 FR 74913 *et seq.* (Dec. 1, 2011).

(*i.e.*, fuel economy tends to decrease and CO₂ emissions tend to increase with increasing footprint), is theoretically vague and quantitatively uncertain; in other words, not so precise as to *a priori* yield only a single possible curve.¹⁸⁶ There is thus a range of legitimate options open to the agencies in developing curve shapes. The agencies may of course consider statutory objectives in choosing among the many reasonable alternatives since the statutes do not dictate a particular mathematical function for curve shape. For example, curve shapes that might have some theoretical basis could lead to perverse outcomes contrary to the intent of the statutes to conserve energy and reduce GHG emissions.¹⁸⁷ Thus, the decision of how to set the target curves cannot always be just about most "clearly" using a mathematical function to define the relationship between fuel economy and the attribute; it often has to reflect legitimate policy judgments, where the agencies adjust the function that would define the relationship in order to achieve environmental goals, reduce petroleum consumption, encourage application of fuel-saving technologies, not adversely affect highway safety, reduce disparities of manufacturers' compliance burdens (increasing the likelihood of improved fuel economy and reduced GHG emissions across the entire spectrum of footprint targets), preserve consumer choice, *etc.* This is true both for the decisions that guide the mathematical function defining the sloped portion of the target curves, and for the separate decisions that guide the agencies' choice of "cutpoints" (if any) that define the fuel economy/CO₂ levels and footprints at each end of the curves where the curves become flat. Data informs these decisions, but how the agencies define and interpret the relevant data, and then the choice of methodology for fitting a curve to the data, must include a consideration of both technical data and policy goals.

The next sections examine the policy concerns that the agencies considered in developing the target curves that define

¹⁸⁶ In fact, numerous manufacturers have confidentially shared with the agencies what they describe as "physics based" curves, with each OEM showing significantly different shapes, and footprint relationships. The sheer variety of curves shown to the agencies further confirm the lack of an underlying principle of "fundamental physics" driving the relationship between CO₂ emission or fuel consumption and footprint, and the lack of an underlying principle to dictate any outcome of the agencies' establishment of footprint-based standards.

¹⁸⁷ For example, if the agencies set weight-based standards defined by a steep function, the standards might encourage manufacturers to keep adding weight to their vehicles to obtain less stringent targets.

the MYs 2017–2025 CAFE and CO₂ standards presented in this final rule, and the technical work supporting selection of the curves defining those standards.

4. What curves are the agencies promulgating for MYs 2017–2025?

The mathematical functions for the MYs 2017–2025 curves are somewhat changed from the functions for the MYs 2012–2016 curves, in response to comments received from stakeholders pre-proposal in order to address technical concerns and policy goals that the agencies judge more significant in this rulemaking than in the prior one, given their respective timeframes, and have retained those same mathematical functions for the final rule as supported by commenters. This section discusses the methodology the agencies selected as, at this time, best addressing those technical concerns and policy goals, given the various technical inputs to the agencies' current analyses. Below the agencies discuss how the agencies determined the cutpoints and the flat portions of the MYs 2017–2025 target curves. We also note that both of these sections address only how the curves were fit to fuel consumption and CO₂ emission values determined using the city and highway test procedures, and that in determining respective regulatory alternatives, the agencies made further adjustments to the curves to account for improvements to mobile air conditioners.

Thus, recognizing that there are many reasonable statistical methods for fitting curves to data points that define vehicles in terms of footprint and fuel economy, as in past rules, the agencies added equivalent levels of technology to the baseline fleet as a starting point for the curve analysis. The agencies continue to believe that this is a valid method to adjust for technology differences between actual vehicle models in the MY 2008 and MY 2010 fleets. The statistical method for fitting that curve, however, was revisited by the agencies in this rule. For the NPRM, the agencies chose to fit the proposed standard curves using an ordinary least-squares formulation, on sales-weighted data, using a fleet that has had technology applied, and after adjusting the data for the effects of weight-to-footprint, as described below. This represented a departure from the statistical approach for fitting the curves in MYs 2012–2016, as explained in the next section. The agencies considered a wide variety of reasonable statistical methods in order to better understand the range of uncertainty regarding the relationship between fuel consumption

(the inverse of fuel economy), CO₂ emission rates, and footprint, thereby providing a range within which decisions about standards would be potentially supportable. In preparing for analysis supporting today's final rule, the agencies updated analytical inputs, including by developing two market forecasts (as discussed above in Section II.B of the preamble and in Chapter 1 of the joint TSD). Using all of this information, the agencies repeated the curve fitting analysis, once for each market forecast. The agencies obtained results that were broadly similar, albeit not identical, to those supporting the NPRM. Results obtained for the NPRM and for today's final rule span similar regions in footprint—fuel economy space, areas within which it would be technically reasonable to select specific linear relationships upon which to base new attribute-based standards. The agencies thus believe it is reasonable to finalize the curves as proposed. This updated analysis is presented in Chapter 2 of the joint TSD.

a. What concerns were the agencies looking to address that led them to change from the approach used for the MYs 2012–2016 curves?

During the year and a half between when the MYs 2012–2016 final rule was issued and when the MYs 2017–2025 NPRM was issued, NHTSA and EPA received a number of comments from stakeholders on how curves should be fitted to the passenger car and light truck fleets. Some limited-line manufacturers have argued that curves should generally be flatter in order to avoid discouraging production of small vehicles, because steeper curves tend to result in more stringent targets for smaller vehicles. Most full-line manufacturers have argued that a passenger car curve similar in slope to the MY 2016 passenger car curve would be appropriate for future model years, but that the light truck curve should be revised to be less difficult for manufacturers selling the largest full-size pickup trucks. These manufacturers argued that the MY 2016 light truck curve was not “physics-based,” and that in order for future tightening of standards to be feasible for full-line manufacturers, the truck curve for later model years should be steeper and extended further (*i.e.*, made less stringent) into the larger footprints. The agencies do not agree that the MY 2016 light truck curve was somehow deficient in lacking a “physics basis,” or that it was somehow overly stringent for manufacturers selling large pickups—manufacturers making these arguments presented no “physics-based” model to

explain how fuel economy should depend on footprint.¹⁸⁸ The same manufacturers indicated that they believed that the light truck standard should be somewhat steeper after MY 2016, primarily because, after more than ten years of progressive increases in the stringency of applicable CAFE standards, large pickups would be less capable of achieving further improvements without compromising load carrying and towing capacity. The related issue of the stringency of the CAFE and GHG standards for light trucks is discussed in sections III.D and IV.F of the preamble to this final rule.

In developing the curve shapes for the proposed rule, the agencies were aware of the current and prior technical concerns raised by OEMs concerning the effects of the stringency on individual manufacturers and their ability to meet the standards with available technologies, while producing vehicles at a cost that allowed them to recover the additional costs of the technologies being applied. Although we continued to believe that the methodology for fitting curves for the MYs 2012–2016 standards was technically sound, we recognized manufacturers' concerns regarding their abilities to comply with a similarly shallow curve after MY 2016 given the anticipated mix of light trucks in MYs 2017–2025. As in the MYs 2012–2016 rules, the agencies considered these concerns in the analysis of potential curve shapes. The agencies also considered safety concerns which could be raised by curve shapes creating an incentive for vehicle downsizing as well as the economic losses that could be incurred if curve shapes unduly discourage market shifts—including vehicle upsizing—that have vehicle buyers value. In addition, the agencies sought to improve the balance of compliance burdens among manufacturers, and thereby increase the likelihood of improved fuel economy and reduced GHG emissions across the entire spectrum of footprint targets. Among the technical concerns and resultant policy trade-offs the agencies considered were the following:

- Flatter standards (*i.e.*, curves) increase the risk that both the weight and size of vehicles will be reduced, potentially compromising highway safety.
- Flatter standards potentially impact the utility of vehicles by providing an incentive for vehicle downsizing.
- Steeper footprint-based standards may create incentives to upsize

¹⁸⁸ See footnote 186

vehicles, thus increasing the possibility that fuel economy and greenhouse gas reduction benefits will be less than expected.

- Given the same industry-wide average required fuel economy or CO₂ level, flatter standards tend to place greater compliance burdens on full-line manufacturers.

- Given the same industry-wide average required fuel economy or CO₂ level, steeper standards tend to place greater compliance burdens on limited-line manufacturers (depending of course, on which vehicles are being produced).

- If cutpoints are adopted, given the same industry-wide average required fuel economy, moving small-vehicle cutpoints to the left (*i.e.*, up in terms of fuel economy, down in terms of CO₂ emissions) discourages the introduction of small vehicles, and reduces the incentive to downsize small vehicles in ways that could compromise overall highway safety.

- If cutpoints are adopted, given the same industry-wide average required fuel economy, moving large-vehicle cutpoints to the right (*i.e.*, down in terms of fuel economy, up in terms of CO₂ emissions) better accommodates the design requirements of larger vehicles—especially large pickups—and extends the size range over which downsizing is discouraged.

All of these were policy goals that required weighing and consideration. Ultimately, the agencies did not agree that the MY 2017 target curves for the proposal, on a relative basis, should be made significantly flatter than the MY 2016 curve,¹⁸⁹ as we believed that this would undo some of the safety-related incentives and balancing of compliance burdens among manufacturers—effects that attribute-based standards are intended to provide.

Nonetheless, the agencies recognized full-line OEM concerns and tentatively concluded that further increases in the stringency of the light truck standards would be more feasible if the light truck curve was made steeper than the MY 2016 truck curve and the right (large footprint) cut-point was extended over time to larger footprints. This conclusion was supported by the agencies' technical analyses of regulatory alternatives defined using the curves developed in the manner described below.

The Alliance, GM, and the UAW commented in support of the

reasonableness of the agencies' proposals regarding the shape and slope of the curves and how they were developed, although the Alliance stated that the weighting and regression analysis used to develop the curves for MYs 2022–2025 should be reviewed during the mid-term evaluation process.

Other commenters objected to specific aspects of the agencies' approach to developing the curves. ACEEE provided extensive comments, arguing generally that agencies appeared to be proposing curve choices in response to subjective policy concerns (namely, protecting large trucks) rather than on a sound technical basis.¹⁹⁰ ACEEE recommended that the agencies choose “the most robust technical approach,” and then make policy-driven adjustments to the curves for a limited time as necessary, and explain the curves in those terms, revisiting this issue for the final rule.¹⁹¹

The agencies reaffirm the reasonable technical and policy basis for selecting the truck curve. Three primary drivers form this technical basis: (a) The largest trucks have unique equipment and design, as described in the Ford comment referenced below in section II.C.4.f; (b) the agencies agree with those large truck manufacturers who indicated in discussions prior to the proposal that they believed that the light truck standard should be somewhat steeper after MY 2016, primarily because, after more than ten recent years of progressive increases in the stringency of applicable CAFE standards (after nearly ten years during which Congress did not allow NHTSA to increase light truck CAFE standards), manufacturers of large pickups would have limited options to comply with more stringent standards without resorting to compromising large truck load carrying and towing capacity; and (c) given the relatively few platforms which comprise the majority of the sales at the largest truck footprints, the agencies were concerned about requiring levels of average light truck performance that might lead to overly aggressive technology penetration rates in this important segment of the work fleet. Specifically, the agencies were concerned at proposal, and remain concerned about issues of lead time and cost with regard to manufacturers of these work vehicles. As noted later in this chapter, while the largest trucks are a small segment of the overall truck fleet, and an even smaller segment of

the overall fleet,¹⁹² these changes to the truck slope have been made in order to provide a clearer path toward compliance for manufacturers of these vehicles, and reduce the potential that new standards would lead these manufacturers to choose to downpower, modify the structure, or otherwise reduce the utility of these work vehicles.

As discussed in the NPRM and in Chapter 2 of the TSD, as well as in section III.D and IV.E below, we considered all of the utilized methods of normalizing (including not normalizing) fuel economy levels and the different methods for fitting functional forms to the footprint and fuel economy and CO₂ levels, to be technically reasonable options. We indicated that, within the range spanned by these technically reasonable options, the selection of curves for purposes of specifying standards involves consideration of technical concerns and policy implications. Having considered the above comments on the estimation and selection of curves, we have not changed our judgment about the process—that is, that the agencies can make of policy-informed selection within the range spanned by technically reasonable quantitative methods. We disagree with ACEEE's portrayal of this involving the “protection” of large trucks. We have selected a light truck slope that addresses real engineering aspects of large light trucks and real fleet aspects of the manufacturers producing these trucks, and sought to avoid creating an incentive for such manufacturers to reduce the hauling and towing capacity of these vehicles, an undesirable loss of utility. Such concerns are applicable much more directly to light trucks than to passenger cars. The resulting curves are well within the range of curves we have estimated. The steeper slope at the right hand of the truck curve recognizes the physical differences in these larger vehicles¹⁹³ and the fleet differences in

¹⁹² The agencies' market forecast used at proposal includes about 24 vehicle configurations above 74 square feet with a total volume of about 50,000 vehicles or less during any MY in the 2017–2025 time frame. In the MY2010 based market forecast, there are 14 vehicle configurations with a total volume of 130,000 vehicles or less during any MY in the 2017–2025 time frame. This is a similarly small portion of the overall number of vehicle models or vehicle sales.

¹⁹³ As Ford Motor Company detailed, in its public comments, “towing capability generally requires increased aerodynamic drag caused by a modified frontal area, increased rolling resistance, and a heavier frame and suspension to support this additional capability.” Ford further noted that these vehicles further require auxiliary transmission oil coolers, upgraded radiators, trailer hitch connectors

¹⁸⁹ While “significantly” flatter is subjective, the year over year change in curve shapes is discussed in greater detail in Section II.C.6.a and Chapter 2 of the joint TSD.

¹⁹⁰ ACEEE comments, Docket No. EPA–HQ–OAR–2010–0799–9528 at 6.

¹⁹¹ *Id.*

manufacturers that produce them. Further, we disagree with ACEEE's suggestion that the agencies should commit to a particular method for selecting curves; as the approaches we have considered demonstrate that the range of technically reasonable curve fitting methods spans a wide range, indicating uncertainty that could make it unwise to "lock in" a particular method for all future rulemakings. The agencies plan on observing fleet trends in the future to see if there are any unexpected shifts in the distribution of technology and utility within the footprint range for both cars and trucks.

We note that comments by CBD, ACEEE, NACAA, and an individual, Yegor Tarazevich, referenced a 2011 study by Whitefoot and Skerlos, "Design incentives to increase vehicle size created from the U.S. footprint-based fuel economy standards."¹⁹⁴ This study concluded that MY 2014 standards, as proposed, "create an incentive to increase vehicle size except when consumer preference for vehicle size is near its lower bound and preference for acceleration is near its upper bound."¹⁹⁵ The commenters who cited this study generally did so as part of arguments in favor of flatter standards (*i.e.*, curves that are flatter across the range of footprints) for MYs 2017–2025. While the agencies consider the concept of the Whitefoot and Skerlos analysis to have some potential merits, it is also important to note that, among other things, the authors assumed different inputs than the agencies actually used in the MYs 2012–2016 rule regarding the baseline fleet, the cost and efficacy of potential future technologies, and the relationship between vehicle footprint and fuel economy.

Were the agencies to use the Whitefoot and Skerlos methodology (*e.g.*, methods to simulate manufacturers' potential decisions to increase vehicle footprint) with the actual inputs to the MYs 2012–2016 rules, the agencies would likely obtain different findings. Underlining the potential uncertainty, the authors obtained a wide range of results in their analyses. Insofar as Whitefoot and Skerlos found, for some scenarios, that manufacturers might respond to footprint-based standards by

and wiring harness equipment, different steering ratios, upgraded rear bumpers and different springs for heavier tongue load (for upgraded towing packages), body-on-frame (vs. unibody) construction (also known as ladder frame construction) to support this capability and an aggressive duty cycle, and lower axle ratios for better pulling power/capability.

¹⁹⁴ Available at Docket No. EPA-HQ-OAR-2010-0799.

¹⁹⁵ page 410.

deliberately increasing vehicle footprint, these findings are attributable to a combination of (a) the assumed baseline market characteristics, (b) the assumed cost and fuel economy impacts involved in increasing vehicle footprint, (c) the footprint-based fuel economy targets, and (d) the assumed consumer preference for vehicle size. Changes in any of these assumptions could yield different analytic results, and potentially result in different technical implications for agency action. As the authors note when interpreting their results: "Designing footprint-based fuel-economy standards in practice such that manufacturers have no incentive to adjust the size of their vehicles appears elusive at best and impossible at worst."

Regarding the cost impacts of footprint increases, that authors make an *ad hoc* assumption that changes in footprint would incur costs linearly, such that a 1% change in footprint would entail a 1% increase in production costs. The authors refer to this as a conservative assumption, but present no supporting evidence. The agencies have not attempted to estimate the engineering cost to increase vehicle footprint, but we expect that it would be considerably nonlinear, with costs increasing rapidly once increases available through small incremental changes—most likely in track width—have been exhausted. Moreover, we expect that were a manufacturer to deliberately increase footprint in order to ease compliance burdens, it would confine any significant changes to coincide with vehicle redesigns, and engaging in multiyear planning, would consider how the shifts would impact compliance burdens and consumer desirability in ensuing model years. With respect to the standards promulgated today, the standards become flatter over time, thereby diminishing any "reward" for deliberately increasing footprint beyond normal market expectations.

Regarding the fuel economy impacts of footprint increases, the authors present a regression analysis based on which increases in footprint are estimated to entail increases in weight which are, in turn, estimated to entail increases in fuel consumption. However, this relationship was not the relationship the agencies used to develop the MY 2014 standards the authors examine in that study. Where the target function's slope is similar to that of the tendency for fuel consumption to increase with footprint, fuel economy should tend to decrease approximately in parallel with the fuel economy target, thereby obviating the "benefit" of deliberate increases in

vehicle footprint. The agencies' analysis supporting today's final rule indicates relatively wide ranges wherein the relationship between fuel consumption and footprint may reasonably be specified.

As part of the mid-term evaluation and future NHTSA rulemaking, the agencies plan to further investigate methods to estimate the potential that standards might tend to induce changes in the footprint. The agencies will also continue to closely monitor trends in footprint (and technology penetration) as manufacturers come into compliance with increasing levels of the footprint standards.

b. What methodologies and data did the agencies consider in developing the MYs 2017–2025 curves?

In considering how to address the various policy concerns discussed in the previous sections, the agencies revisited the data and performed a number of analyses using different combinations of the various statistical methods, weighting schemes, adjustments to the data and the addition of technologies to make the fleets less technologically heterogeneous. As discussed above, in the agencies' judgment, there is no single "correct" way to estimate the relationship between CO₂ or fuel consumption and footprint—rather, each statistical result is based on the underlying assumptions about the particular functional form, weightings and error structures embodied in the representational approach. These assumptions are the subject of the following discussion. This process of performing many analyses using combinations of statistical methods generates many possible outcomes, each embodying different potentially reasonable combinations of assumptions and each thus reflective of the data as viewed through a particular lens. The choice of a proposed standard developed by a given combination of these statistical methods was consequently a decision based upon the agencies' determination of how, given the policy objectives for this rulemaking and the agencies' MY 2008-based forecast of the market through MY 2025, to appropriately reflect the current understanding of the evolution of automotive technology and costs, the future prospects for the vehicle market, and thereby establish curves (*i.e.*, standards) for cars and light trucks. As discussed below, for today's final rule, the agencies used updated information to repeat these analyses, found that results were generally similar and spanned a similarly wide range, and found that the curves underlying the

proposed standards were well within this range.

c. What information did the agencies use to estimate a relationship between fuel economy, CO₂ and footprint?

For each fleet, the agencies began with the MY 2008-based market forecast developed to support the proposal (*i.e.*, the baseline fleet), with vehicles' fuel economy levels and technological characteristics at MY 2008 levels.¹⁹⁶ For today's final rule, the agencies made minor corrections to this market forecast, and also developed a MY 2010-based market forecast. The development, scope, and content of these market forecasts are discussed in detail in Chapter 1 of the joint Technical Support Document supporting the rulemaking.

d. What adjustments did the agencies evaluate?

The agencies believe one possible approach is to fit curves to the minimally adjusted data shown above (the approach still includes sales mix adjustments, which influence results of sales-weighted regressions), much as DOT did when it first began evaluating potential attribute-based standards in 2003.¹⁹⁷ However, the agencies have found, as in prior rulemakings, that the data are so widely spread (*i.e.*, when graphed, they fall in a loose "cloud" rather than tightly around an obvious line) that they indicate a relationship between footprint and CO₂ and fuel consumption that is real but not particularly strong. Therefore, as discussed below, the agencies also explored possible adjustments that could help to explain and/or reduce the ambiguity of this relationship, or could help to support policy outcomes the agencies judged to be more desirable.

i. Adjustment to Reflect Differences in Technology

As in prior rulemakings, the agencies consider technology differences between vehicle models to be a significant factor producing uncertainty regarding the relationship between CO₂/fuel consumption and footprint. Noting that attribute-based standards are intended to encourage the application of additional technology to improve fuel efficiency and reduce CO₂ emissions, the agencies, in addition to considering approaches based on the unadjusted engineering characteristics of MY 2008 vehicle models, therefore also considered approaches in which, as for

previous rulemakings, technology is added to vehicles for purposes of the curve fitting analysis in order to produce fleets that are less varied in technology content.

The agencies adjusted the baseline fleet for technology by adding all technologies considered, except for the most advanced high-BMEP (brake mean effective pressure) gasoline engines, diesel engines, ISGs, strong HEVs, PHEVs, EVs, and FCVs. The agencies included 15 percent mass reduction on all vehicles.¹⁹⁸

ii. Adjustments Reflecting Differences in Performance and "Density"

For the reasons discussed above regarding revisiting the shapes of the curves, the agencies considered adjustments for other differences between vehicle models (*i.e.*, inflating or deflating the fuel economy of each vehicle model based on the extent to which one of the vehicle's attributes, such as power, is higher or lower than average). Previously, NHTSA had rejected such adjustments because they imply that a multi-attribute standard may be necessary, and the agencies judged most multi-attribute standards to be more subject to gaming than a footprint-only standard.^{199,200} Having considered this issue again for purposes of this rulemaking, NHTSA and EPA conclude the need to accommodate in the target curves the challenges faced by manufacturers of large pickups currently outweighs these prior concerns. Therefore, the agencies also evaluated curve fitting approaches through which fuel consumption and CO₂ levels were adjusted with respect to weight-to-footprint alone, and in combination with power-to-weight. While the agencies examined these adjustments for purposes of fitting curves, the agencies are not promulgating a multi-attribute standard; the proposed fuel economy and CO₂ targets for each vehicle are still functions of footprint alone. No

adjustment will be used in the compliance process.

For the proposal, the agencies also examined some differences between the technology-adjusted car and truck fleets in order to better understand the relationship between footprint and CO₂/fuel consumption in the agencies' MY 2008 based forecast. The agencies investigated the relationship between HP/WT and footprint in the agencies' MY 2008-based market forecast. On a sales weighted basis, cars tend to become proportionally more powerful as they get larger. In contrast, there is a minimally positive relationship between HP/WT and footprint for light trucks, indicating that light trucks become only slightly more powerful as they get larger.

This analysis, presented in chapter 2.4.1.2 of the joint TSD, indicated that vehicle performance (power-to-weight ratio) and "density" (curb weight divided by footprint) are both correlated to fuel consumption (and CO₂ emission rate), and that these vehicle attributes are also both related to vehicle footprint. Based on these relationships, the agencies explored adjusting the fuel economy and CO₂ emission rates of individual vehicle models based on deviations from "expected" performance or weight/footprint at a given footprint; the agencies inflated fuel economy levels of vehicle models with higher performance and/or weight/footprint than the average of the fleet would indicate at that footprint, and deflated fuel economy levels with lower performance and/or weight. While the agencies considered this technique for purposes of fitting curves, the agencies are not promulgating a multi-attribute standard, as the proposed fuel economy and CO₂ targets for each vehicle are still functions of footprint alone. No adjustment will be used in the compliance process.

For today's final rule, the agencies repeated the above analyses, using the corrected MY 2008-based market forecast and, separately, the MY 2010-based market forecasts. As discussed in section 2.6 of the joint TSD and further detailed in a memorandum available at Docket No. NHTSA-2010-0131-0325, doing so produced results similar to the analysis used in the proposal.

The agencies sought comment on the appropriateness of the adjustments described in Chapter 2 of the joint TSD, particularly regarding whether these adjustments suggest that standards should be defined in terms of other attributes in addition to footprint, and whether they may encourage changes other than encouraging the application of technology to improve fuel economy

¹⁹⁶ While the agencies jointly conducted this analysis, the coefficients ultimately used in the slope setting analysis are from the CAFE model.

¹⁹⁷ 68 FR 74920-74926.

¹⁹⁸ As described in the preceding paragraph, applying technology in this manner helps to reduce the effect of technology differences across the vehicle fleet. The particular technologies used for the normalization were chosen as a reasonable selection of technologies which could potentially be used by manufacturers over this time period.

¹⁹⁹ For example, in comments on NHTSA's 2008 NPRM regarding MY 2011-2015 CAFE standards, Porsche recommended that standards be defined in terms of a "Summed Weighted Attribute", wherein the fuel economy target would be calculated as follows: $target = f(SWA)$, where $target$ is the fuel economy target applicable to a given vehicle model and $SWA = footprint + torque^{1/1.5} + weight^{1/2.5}$. (NHTSA-2008-0089-0174.)

²⁰⁰ 74 FR 14359.

and reduce CO₂ emissions. The agencies also sought comment regarding whether these adjustments effectively “lock in” through MY 2025 relationships that were observed in MY 2008.

ACEEE objected to the agencies’ adjustments to the truck curves, arguing that if the truck slope needs to be adjusted for “density,” then that suggests that the MY 2008-based market forecast used to build up the reference fleet must be “incorrect and show * * * unrealistically low pickup truck fuel consumption, due to the overstatement of the benefits of certain technologies.”²⁰¹ ACEEE stated that “If that is the case, the agencies should revisit the adjustments made to generate the reference fleet and remove technologies from pickups that are not suited to those trucks,” which “would be a far more satisfactory approach than the speculative and non-quantitative approach of adjusting for vehicle density.”²⁰²

ACEEE further stated that “the fuel consumption trend that the density adjustment is meant to correct appears in the unadjusted fleet as well as the technology-adjusted fleet of light trucks (TSD Figures 2–1 and 2–2),” which they argued is evidence that “the flattening of fuel consumption at higher footprints is not a byproduct of unrealistic technology adjustments, but rather a reflection of actual fuel economy trends in today’s market.”²⁰³ ACEEE stated that therefore it did not make sense to adjust the fuel consumption of “low-density” trucks upwards before fitting the curve.²⁰⁴ ACEEE pointed out that it would appear that trucks’ HP-to-weight ratio should be higher than the agencies’ analysis indicated, and stated that the weight-based EU CO₂ standard curves are adjusted for HP-to-weight, which resulted in flatter curves, and which are intended to avoid incentivizing up-weighting.²⁰⁵ ACEEE argued that by not choosing this approach and by adjusting for density, along with using sales-weighting and an OLS method instead of MAD, the proposed curves encourage vehicle upsizing.²⁰⁶

Thus, ACEEE stated, the deviations from the analytical approach previously adopted were not justified with data provided in the NPRM, and the resulting “*ad hoc* adjustments” to the curve-fitting process detracted from the agencies’ argument for the proposals.

ACEEE further commented that increasing the slope of the truck curve would be “counter-productive” from a policy perspective as well, implying that challenging light truck standards have helped manufacturers of light trucks to recover from the recent downturn in the light vehicle market.²⁰⁷ The Sierra Club and CBD also opposed increasing the slope of the truck curve for MYs 2017 and beyond as compared to the MY 2016 truck curve, on the basis that it would encourage upsizing and reduce fuel economy and CO₂ emissions improvements.²⁰⁸

Conversely, the UAW strongly supported the agencies’ balancing of “the challenges of adding fuel-economy improving technologies to the largest light trucks with the need to maintain the full functionality of these vehicles across a wide range of applications”²⁰⁹ through their approach to curve fitting. The Alliance also expressed support for the agencies’ analyses (including the consideration of different weightings), and the selected relationships between the fuel consumption and footprint for MYs 2017–2021.²¹⁰ Both ACEEE and the Alliance urged the agencies to revisit the estimation and selection of curves during the mid-term evaluation, and the agencies plan to do so.

In response, the agencies maintain that the adjustments (including no adjustments) considered in the NPRM are all reasonable to apply for purposes of developing potential fuel economy and GHG target curves, and that it is left to policy makers to determine an appropriate perspective involved in selecting weights (if any) to be applied, and to interpret the consequences of various alternatives. As described above and in Chapter 2 of the TSD, the agencies believe that the adjustments made to the truck curve are appropriate because work trucks provide utility (towing and load-carrying capability) that requires more torque and power, more cooling and braking capability, and more fuel-carrying capability (*i.e.*, larger fuel tanks) than would be the case for other vehicles of similar size and curb weight. Continuing the 2016 truck curve would disadvantage full-line manufacturers active in this portion of the fleet disproportionately to the rest of the trucks. The agencies do not include power to weight, density, towing, or hauling, as a technology. Neither does the agency consider them as part of a

multi-attribute standard. Considering these factors, the agencies believe that the “density” adjustment, as applied to the data developed for the NPRM, provided a reasonable basis to develop curves for light trucks. Having repeated our analysis using a corrected MY 2008-based market forecast and, separately, a new MY 2010-based market forecast, we obtained results spanning ranges similar to those covered by the analysis we performed for the NPRM. See section 2.6 of the Joint TSD. In the agencies’ judgment, considering the above comments (and others), the curves proposed in the NPRM strike a sound balance between the legitimate policy considerations discussed in section II.C. 2—the interest in discouraging manufacturers from responding to standards by reducing vehicle size in ways that might compromise highway safety, the interest in more equitably balancing compliance burdens among limited- and full-line manufacturers, and the interest in avoiding excessive risk that projected energy and environmental benefits might be less than expected due to regulation-incented increases in vehicle size.

Regarding ACEEE’s specific comments about the application of these adjustments to the light truck fleet, we disagree with the characterization of the adjustments as *ad hoc*. Choosing from among a range of legitimate possibilities based on relevant policy and technical considerations is not an arbitrary, *ad hoc* exercise. Throughout multiple rulemaking analyses, NHTSA (more recently, with EPA) has applied normalization to adjust for differences in technologies. Also, while the agencies have previously considered and declined to apply normalizations to reflect differences in other characteristics, such as power, our judgment that some such normalizations could be among the set of technically reasonable approaches was not *ad hoc*, but in fact based on further technical analysis and reconsideration. Moreover, that reconsideration occurred with respect to passenger cars as well as light trucks. Still, we recognize that results of the different methods we have examined depend on inputs that are subject to uncertainty; for example, normalization to adjust for differences in technology depend on uncertain estimates of technology efficacy, and sales-weighted regressions depend on uncertain forecasts of future market volumes. Such uncertainties support the agencies’ strong preference to avoid permanently “locking in” any particular curve estimation technique.

e. What statistical methods did the agencies evaluate?

For the NPRM, the above approaches resulted in three data sets each for (a) vehicles without added technology and (b) vehicles with technology added to reduce technology differences, any of which may provide a reasonable basis for fitting mathematical functions upon which to base the slope of the standard curves: (1) Vehicles without any further adjustments; (2) vehicles with adjustments reflecting differences in “density” (weight/footprint); and (3) vehicles with adjustments reflecting differences in “density,” and adjustments reflecting differences in performance (power/weight). Using these data sets, the agencies tested a range of regression methodologies, each judged to be possibly reasonable for application to at least some of these data sets. Beginning with the corrected MY 2008-based market forecast and the MY 2010-based market forecast developed for today’s final rule, the above approaches resulted in six data sets—three for each of the two market forecasts.

i. Regression Approach

In the MYs 2012–2016 final rules, the agencies employed a robust regression approach (minimum absolute deviation, or MAD), rather than an ordinary least squares (OLS) regression.²¹¹ MAD is generally applied to mitigate the effect of outliers in a dataset, and thus was employed in that rulemaking as part of our interest in attempting to best represent the underlying technology. NHTSA used OLS in early development of attribute-based CAFE standards, but NHTSA (and then NHTSA and EPA) subsequently chose MAD instead of OLS for both the MY 2011 and the MYs 2012–2016 rulemakings. These decisions on regression technique were made both because OLS gives additional emphasis to outliers²¹² and because the MAD approach helped achieve the agencies’ policy goals with regard to curve slope in those rulemakings.²¹³ In the interest of taking a fresh look at appropriate regression methodologies as promised in the 2012–2016 light duty rulemaking, in developing this rule, the agencies gave full consideration to both OLS and MAD. The OLS representation, as described, uses squared errors, while MAD employs absolute errors and thus weights outliers less.

As noted, one of the reasons stated for choosing MAD over least square regression in the MYs 2012–2016

rulemaking was that MAD reduced the weight placed on outliers in the data. However, the agencies have further considered whether it is appropriate to classify these vehicles as outliers. Unlike in traditional datasets, these vehicles’ performance is not mischaracterized due to errors in their measurement, a common reason for outlier classification. Being certification data, the chances of large measurement errors should be near zero, particularly towards high CO₂ or fuel consumption. Thus, they can only be outliers in the sense that the vehicle designs are unlike those of other vehicles. These outlier vehicles may include performance vehicles, vehicles with high ground clearance, 4WD, or boxy designs. Given that these are equally legitimate on-road vehicle designs, the agencies concluded that it would be appropriate to reconsider the treatment of these vehicles in the regression techniques.

Based on these considerations as well as the adjustments discussed above, the agencies concluded it was not meaningful to run MAD regressions on gpm data that had already been adjusted in the manner described above. Normalizing already reduced the variation in the data, and brought outliers towards average values. This was the intended effect, so the agencies deemed it unnecessary to apply an additional remedy to resolve an issue that had already been addressed, but we sought comment on the use of robust regression techniques under such circumstances. ACEEE stated that either MAD (*i.e.*, one robust regression technique) or OLS was “technically sound,”²¹⁴ and other stakeholders that commented on the agencies’ analysis supporting the selection of curves did not comment specifically on robust regression techniques. On the other hand, ACEEE did suggest that the application of multiple layers of normalization may provide tenuous results. For this rulemaking, we consider the range of methods we have examined to be technically reasonable, and our selected curves fall within those ranges. However, all else being equal, we agree that simpler or more stable methods are likely preferable to more complex or unstable methods, and as mentioned above, we agree with ACEEE and the Alliance that revisiting the selection of curves would be appropriate as part of the required future NHTSA rulemaking and mid-term evaluation.

ii. Sales Weighting

Likewise, the agencies reconsidered employing sales-weighting to represent the data. As explained below, the decision to sales weight or not is ultimately based upon a choice about how to represent the data, and not by an underlying statistical concern. Sales weighting is used if the decision is made to treat each (mass produced) unit sold as a unique physical observation. Doing so thereby changes the extent to which different vehicle model types are emphasized as compared to a non-sales weighted regression. For example, while total General Motors Silverado (332,000) and Ford F–150 (322,000) sales differed by less than 10,000 in the MY 2021 market forecast (in the MY 2008-based forecast), 62 F–150s models and 38 Silverado models were reported in the agencies baselines. Without sales-weighting, the F–150 models, because there are more of them, were given 63 percent more weight in the regression despite comprising a similar portion of the marketplace and a relatively homogenous set of vehicle technologies.

The agencies did not use sales weighting in the MYs 2012–2016 rulemaking analysis of the curve shapes. A decision to not perform sales weighting reflects judgment that each vehicle model provides an equal amount of information concerning the underlying relationship between footprint and fuel economy. Sales-weighted regression gives the highest sales vehicle model types vastly more emphasis than the lowest-sales vehicle model types thus driving the regression toward the sales-weighted fleet norm. For unweighted regression, vehicle sales do not matter. The agencies note that the MY 2008-based light truck market forecast shows MY 2025 sales of 218,000 units for Toyota’s 2WD Sienna, and shows 66 model configurations with MY 2025 sales of fewer than 100 units. Similarly, the agencies’ MY 2008-based market forecast shows MY 2025 sales of 267,000 for the Toyota Prius, and shows 40 model configurations with MY2025 sales of fewer than 100 units. Sales-weighted analysis would give the Toyota Sienna and Prius more than a thousand times the consideration of many vehicle model configurations. Sales-weighted analysis would, therefore, cause a large number of vehicle model configurations to be virtually ignored in the regressions.²¹⁵ The MY 2010-based market forecast includes similar examples of extreme disparities in production volumes, and therefore, degree of influence over sales-

²¹⁵ 75 FR 25362 and n. 64.

weighted regression results. Moreover, unlike unweighted approaches, sales-weighted approaches are subject to more uncertainties surrounding sales volumes. For example, in the MY 2008-based market forecast, Chrysler's production volumes are projected to decline significantly through MY 2025, in stark contrast to the prediction for that company in the MY 2010-based market forecast. Therefore, under a sales-weighted approach, Chrysler's vehicle models have considerably less influence on regression results for the MY 2008-based fleet than for the MY 2010-based fleet.

However, the agencies did note in the MYs 2012–2016 final rules that, “sales weighted regression would allow the difference between other vehicle attributes to be reflected in the analysis, and also would reflect consumer demand.”²¹⁶ In reexamining the sales-weighting for this analysis, the agencies note that there are low-volume model types account for many of the passenger car model types (50 percent of passenger car model types account for 3.3 percent of sales), and it is unclear whether the engineering characteristics of these model types should equally determine the standard for the remainder of the market. To expand on this point, low volume cars in the agencies' MY 2008 and 2010 baseline include specialty vehicles such as the Bugatti Veyron, Rolls Royce Phantom, and General Motors Funeral Coach Hearse. These vehicle models all represent specific engineering designs, and in a regression without sales weighting, they are given equal weighting to other vehicles with single models with more relevance to the typical vehicle buyer including mass market sedans like the Toyota Prius referenced above. Similar disparities exist on the truck side, where small manufacturers such as Roush manufacturer numerous low sale vehicle models that also represent specific engineering designs. Given that the curve fit is ultimately used in compliance, and compliance is based on sales-weighted average performance, although the agencies are not currently attempting to estimate consumer responses to today's standards, sales weighting could be a reasonable approach to fitting curves.

In the interest of taking a fresh look at appropriate methodologies as promised in the last final rule, in developing the proposal, the agencies gave full consideration to both sales-weighted and unweighted regressions.

iii. Analyses Performed

For the NPRM, we performed regressions describing the relationship between a vehicle's CO₂/fuel consumption and its footprint, in terms of various combinations of factors: Initial (raw) fleets with no technology, versus after technology is applied; sales-weighted versus non-sales weighted; and with and without two sets of normalizing factors applied to the observations. The agencies excluded diesels and dedicated AFVs because the agencies anticipate that advanced gasoline-fueled vehicles are likely to be dominant through MY 2025, based both on our own assessment of potential standards (see Sections III.D and IV.G below) as well as our discussions with large number of automotive companies and suppliers. Supporting today's final rule, we repeated all of this analysis twice—once for the corrected MY 2008-based market forecast, and once for the MY 2010-based market forecast. Doing so produced results generally similar to those documented in the joint TSD supporting the NPRM. See section 2.6 of the joint TSD and the docket memo.

Thus, the basic OLS regression on the initial data (with no technology applied) and no sales-weighting represents one perspective on the relation between footprint and fuel economy. Adding sales weighting changes the interpretation to include the influence of sales volumes, and thus steps away from representing vehicle technology alone. Likewise, MAD is an attempt to reduce the impact of outliers, but reducing the impact of outliers might perhaps be less representative of technical relationships between the variables, although that relationship may change over time in reality. Each combination of methods and data reflects a perspective, and the regression results simply reflect that perspective in a simple quantifiable manner, expressed as the coefficients determining the line through the average (for OLS) or the median (for MAD) of the data. It is left to policy makers to determine an appropriate perspective and to interpret the consequences of the various alternatives.

We sought comments on the application of the weights as described above, and the implications for interpreting the relationship between fuel efficiency (or CO₂) and footprint. As discussed above, ACEEE questioned adjustment of the light truck data. The Alliance, in contrast, generally supported the weightings applied by the agencies, and the resultant relationships between fuel efficiency and footprint. Both ACEEE and the Alliance

commented that the agencies should revisit the application of weights—and broader aspects of analysis to develop mathematical functions—in the future. We note that although ACEEE expressed concern regarding the outcomes of the application of the weight/footprint adjustment, ACEEE did not indicate that all adjustment would be problematic, rather, they endorsed the method of adjusting fuel economy data based on differences in vehicle models' levels of applied technology. As we have indicated above, considering the policy implications, the agencies have selected curves that fall within the range spanned by the many methods we have evaluated and consider to be technically reasonable. We disagree with ACEEE that we have selected curves that are, for light trucks, too steep. However, recognizing uncertainties in the estimates underlying our analytical results, and recognizing that our analytical results span a range of technically reasonable outcomes, we agree with ACEEE and the Alliance that revisiting the curve shape would be appropriate as part of the required future NHTSA rulemaking and planned mid-term evaluation.

f. What results did the agencies obtain and why were the selected curves reasonable?

For both the NPRM and today's final rule, both agencies analyzed the same statistical approaches. For regressions against data including technology normalization, NHTSA used the CAFE modeling system, and EPA used EPA's OMEGA model. The agencies obtained similar regression results, and have based today's joint rule on those obtained by NHTSA. Chapter 2 of the joint TSD contains a large set of illustrative figures which show the range of curves determined by the possible combinations of regression technique, with and without sales weighting, with and without the application of technology, and with various adjustments to the gpm variable prior to running a regression.

For the curves presented in the NPRM and finalized today, the choice among the alternatives presented in Chapter 2 of the draft Joint TSD was to use the OLS formulation, on sales-weighted data developed for the NPRM (with some errors not then known to the agencies), using a fleet that has had technology applied, and after adjusting the data for the effect of weight-to-footprint, as described above. The agencies believe that this represented a technically reasonable approach for purposes of developing target curves to define the proposed standards, and that

²¹⁶ 75 FR 25632/3.

it represented a reasonable trade-off among various considerations balancing statistical, technical, and policy matters, which include the statistical representativeness of the curves considered and the steepness of the curve chosen. The agencies judge the application of technology prior to curve fitting to have provided a reasonable means—one consistent with the rule's objective of encouraging manufacturers to add technology in order to increase fuel economy—of reducing variation in the data and thereby helping to estimate a relationship between fuel consumption/CO₂ and footprint.

Similarly, for the agencies' MY 2008-based market-forecast and the agencies' current estimates of future technology effectiveness, the inclusion of the weight-to-footprint data adjustment prior to running the regression also helped to improve the fit of the curves by reducing the variation in the data, and the agencies believe that the benefits of this adjustment for the proposed rule likely outweigh the potential that resultant curves might somehow encourage reduced load carrying capability or vehicle performance (note that we are not suggesting that we believe these adjustments will reduce load carrying capability or vehicle performance). In addition to reducing the variability, the truck curve is also steepened, and the car curve flattened compared to curves fitted to sales weighted data that do not include these normalizations. The agencies agreed with manufacturers of full-size pick-up trucks that in order to maintain towing and hauling utility, the engines on pick-up trucks must be more powerful, than their low "density" nature would statistically suggest based on the agencies' current MY 2008-based market forecast and the agencies' current estimates of the effectiveness of different fuel-saving technologies. Therefore, it may be more equitable (*i.e.*, in terms of relative compliance challenges faced by different light truck manufacturers) to have adjusted the slope of the curve defining fuel economy and CO₂ targets.

Several comments were submitted subsequent to the NPRM with regard to the non-homogenous nature of the truck fleet, and the "unique" attributes of pickup trucks. As noted above, Ford described the attributes of these vehicles, noting that "towing capability generally requires increased aerodynamic drag caused by a modified frontal area, increased rolling resistance, and a heavier frame and suspension to

support this additional capability."²¹⁷ Ford further noted that these vehicles further require auxiliary transmission oil coolers, upgraded radiators, trailer hitch connectors and wiring harness equipment, different steering ratios, upgraded rear bumpers and different springs for heavier tongue load (for upgraded towing packages), body-on-frame (vs. unibody) construction (also known as ladder frame construction) to support this capability and an aggressive duty cycle, and lower axle ratios for better pulling power/capability. ACEEE, as discussed above, objected to the adjustments to the truck curves.

In the agencies' judgment, the curves and cutpoints defining the light truck standards appropriately account for engineering differences between different types of vehicles. For example, the agencies' estimates of the applicability, cost, and effectiveness of different fuel-saving technologies differentiate between small, medium, and large light trucks. While we acknowledge that uncertainties regarding technology efficacy affect the outcome of methods including normalization to account for differences in technology, the other normalizations we have considered are not intended to somehow compensate for this uncertainty, but rather to reflect other analytical concepts that could be technically reasonable for purposes of estimating relationships between footprint and fuel economy. Furthermore, we agree with Ford that pickup trucks have distinct attributes that warrant consideration of slopes other than the flattest within the range spanned by technically reasonable options. We also note that, as documented in the joint TSD, even without normalizing light truck fuel economy values for *any* differences (even technology), unweighted MAD and OLS yielded slopes close to or steeper than those underlying today's light truck standards. We will revisit the estimation and selection of these curves as part of NHTSA's future rulemaking and the mid-term evaluation.

As described above, however, other approaches are also technically reasonable, and also represent a way of expressing the underlying relationships. The agencies revisited the analysis for the final rule, having corrected the underlying 2008-based market forecast, having developed a MY 2010-based market forecast, having updated estimates of technology effectiveness, and having considered relevant public

²¹⁷ Ford comments, Docket No. EPA-HQ-OAR-2010-0799-9463 at 5-6.

comments. In addition, the agencies updated the technology cost estimates, which altered the NPRM analysis results, but not the balance of the trade-offs being weighed to determine the final curves.

As discussed above, based in part on the Whitefoot/Skerlos paper and its findings regarding the implied potential for vehicle upsizing, some commenters, such as NACAA and Center for Biological Diversity, considered the slopes for both the car and truck curves to be too steep, and ACEEE, Sierra Club, Volkswagen, Toyota, and Honda more specifically commented that the truck slope was too steep. On the other hand, the UAW, Ford, GM, and Chrysler supported the slope of both the car and truck curves. ICCT commented, as they have in prior rulemakings, that the car and the truck curve should be identical, and UCS commented that the curves should be adjusted to minimize the "gap" in target stringency in the 45 ft² (+/- 3 ft²) range to avoid giving manufacturers an incentive to classify CUVs as trucks rather than as cars.²¹⁸

As also discussed above, the agencies continue to believe that the slopes for both the car and the truck curves finalized in this rulemaking remain appropriate. There is also good reason for the slopes of the car and truck curves potentially to be distinct from one another—for one, our analysis produces different results for these fleets based on their different characteristics, and more importantly for NHTSA, EPCA/EISA requires that standards for passenger cars and light trucks be established separately. The agencies agree with Ford (and others) that the properties of cars and trucks are different. The agencies agree with Ford's observation (and illustration) that " * * * cars and trucks have different functional characteristics, even if they have the same footprint and nearly the same base curb weights. For example, the Ford Edge and the Ford Taurus have the same footprint, but vastly different capabilities with respect to cargo space and towing capacity. Some of the key features incorporated on the Edge that enable the larger tow capability include an engine oil cooler, larger radiator and updated cooling fans. This is just one of the many examples that show the functional difference between cars and trucks * * *"²¹⁹ On balance, given the agencies' analysis, and all of the issues the agencies have taken into account, we believe that the slopes of cars and trucks have been

²¹⁸ UCS comments, Docket No. EPA-HQ-OAR-2010-0799-9567 at 9.

²¹⁹ Ford comment, Docket No. EPA-HQ-OAR-2010-0799-9463 at 5.

selected with proper consideration and represent a reasonable and appropriate balance of technical and policy factors.

g. Implications of the slope compared to MY 2016

The slope has several implications relative to the MY 2016 curves, with the majority of changes on the truck curve. For the NPRM, the agencies selected a car curve slope similar to that finalized in the MYs 2012–2016 final rulemaking (4.7 g/mile-ft² in MY 2016, vs. 4.5 g/mile-ft² proposed in MY 2017). By contrast, the selected truck curve is steeper in MY 2017 than in MY 2016 (4.0 g/mile-ft² in MY 2016 vs. 4.9 g/mile-ft² in MY 2017). As discussed previously, a steeper slope relaxes the stringency of targets for larger vehicles relative to those for smaller vehicles, thereby shifting relative compliance burdens among manufacturers based on their respective product mix.

5. Once the agencies determined the slope, how did the agencies determine the rest of the mathematical function?

The agencies continue to believe that without a limit at the smallest footprints, the function—whether logistic or linear—can reach values that would be unfairly burdensome for a manufacturer that elects to focus on the market for small vehicles; depending on the underlying data, an unconstrained form could result in stringency levels that are technologically infeasible and/or economically impracticable for those manufacturers that may elect to focus on the smallest vehicles. On the other side of the function, without a limit at the largest footprints, the function may provide no floor on required fuel economy. Also, the safety considerations that support the provision of a disincentive for downsizing as a compliance strategy apply weakly, if at all, to the very largest vehicles. Limiting the function's value for the largest vehicles thus leads to a function with an inherent absolute minimum level of performance, while remaining consistent with safety considerations.

Just as for slope, in determining the appropriate footprint and fuel economy values for the “cutpoints,” the places along the curve where the sloped portion becomes flat, the agencies took a fresh look for purposes of this rule, taking into account the updated market forecast and new assumptions about the availability of technologies. The next two sections discuss the agencies' approach to cutpoints for the passenger car and light truck curves separately, as the policy considerations for each vary somewhat.

a. Cutpoints for Passenger Car Curve

The passenger car fleet upon which the agencies based the target curves proposed for MYs 2017–2025 was derived from MY 2008 data, as discussed above. In MY 2008, passenger car footprints ranged from 36.7 square feet, the Lotus Exige 5, to 69.3 square feet, the Daimler Maybach 62. In that fleet, several manufacturers offer small, sporty coupes below 41 square feet, such as the BMW Z4 and Mini, Honda S2000, Mazda MX–5 Miata, Porsche Carrera and 911, and Volkswagen New Beetle. Because such vehicles represent a small portion (less than 10 percent) of the passenger car market, yet often have performance, utility, and/or structural characteristics that could make it technologically infeasible and/or economically impracticable for manufacturers focusing on such vehicles to achieve the very challenging average requirements that could apply in the absence of a constraint, EPA and NHTSA again proposed to cut off the sloped portion of the passenger car function at 41 square feet, consistent with the MYs 2012–2016 rulemaking. The agencies recognized that for manufacturers who make small vehicles in this size range, putting the cutpoint at 41 square feet creates some incentive to downsize (*i.e.*, further reduce the size, and/or increase the production of models currently smaller than 41 square feet) to make it easier to meet the target. Putting the cutpoint here may also create the incentive for manufacturers who do not currently offer such models to do so in the future. However, at the same time, the agencies believe that there is a limit to the market for cars smaller than 41 square feet—most consumers likely have some minimum expectation about interior volume, among other things. The agencies thus believe that the number of consumers who will want vehicles smaller than 41 square feet (regardless of how they are priced) is small, and that the incentive to downsize to less than 41 square feet in response to this rule, if present, will be at best minimal. On the other hand, the agencies note that some manufacturers are introducing mini cars not reflected in the agencies MY 2008-based market forecast, such as the Fiat 500, to the U.S. market, and that the footprint at which the curve is limited may affect the incentive for manufacturers to do so.

Above 56 square feet, the only passenger car models present in the MY 2008 fleet were four luxury vehicles with extremely low sales volumes—the Bentley Arnage and three versions of the Rolls Royce Phantom. The MY 2010

fleet was similar, with three BMW models, the Maybach 57S, the Rolls Royce Ghost, and four versions of the Rolls Royce Phantom in this size range. As in the MYs 2012–2016 rulemaking, NHTSA and EPA therefore proposed again to cut off the sloped portion of the passenger car function at 56 square feet.

While meeting with manufacturers prior to issuing the proposal, the agencies received comments from some manufacturers that, combined with slope and overall stringency, using 41 square feet as the footprint at which to cap the target for small cars would result in unduly challenging targets for small cars. The agencies do not agree. No specific vehicle need meet its target (because standards apply to fleet average performance), and maintaining a sloped function toward the smaller end of the passenger car market is important to discourage unsafe downsizing, the agencies thus proposed to again “cut off” the passenger car curve at 41 square feet, notwithstanding these comments.

The agencies sought comment on setting cutpoints for the MYs 2017–2025 passenger car curves at 41 square feet and 56 square feet. IIHS expressed some concern regarding the “breakpoint” of the fuel economy curve at the lower extreme where footprint is the smallest—that is, the leveling-off point on the fuel economy curve where the fuel economy requirement ceases to increase as footprint decreases.²²⁰ IIHS stated that moving this breakpoint farther to the left so that even smaller vehicles have increasing fuel economy targets would reduce the chance that manufacturers would downsize the lightest vehicles for further fuel economy credits.²²¹

The agencies agree with IIHS that moving the 41 square foot cutpoint to an even smaller value would additionally discourage downsizing of the smallest vehicles—that is, the vehicles for which downsizing would be most likely to compromise occupant protection. However, in the agencies' judgment, notwithstanding narrow market niches for some types vehicles (exemplified by, *e.g.*, the Smart Fortwo), consumer preferences are likely to remain such that manufacturers will be unlikely to deliberately respond to today's standards by downsizing the smallest vehicles. However, the agencies will monitor developments in the passenger car market and revisit this issue as part of NHTSA's future rulemaking to establish final MYs 2022–2025

²²¹ *Id.*

standards and the concurrent mid-term evaluation process.

b. Cutpoints for Light Truck Curve

The light truck fleet upon which the agencies based the proposed target curves for MYs 2017–2025, like the passenger car fleet, was derived from MY 2008 data, as discussed in Section 2.4 above. In MY 2008, light truck footprints ranged from 41.0 square feet, the Jeep Wrangler, to 77.5 square feet, the Toyota Tundra. For consistency with the curve for passenger cars, the agencies proposed to cut off the sloped portion of the light truck function at the same footprint, 41 square feet, although we recognized that no light trucks are currently offered below 41 square feet. With regard to the upper cutpoint, the agencies heard from a number of manufacturers during the discussions leading up to the proposal of the MY 2017–2025 standards that the location of the cutpoint in the MYs 2012–2016 rules, 66 square feet, resulted in challenging targets for the largest light trucks in the later years of that rulemaking. See 76 FR 74864–65. Those

manufacturers requested that the agencies extend the cutpoint to a larger footprint, to reduce targets for the largest light trucks which represent a significant percentage of those manufacturers light truck sales. At the same time, in re-examining the light truck fleet data, the agencies concluded that aggregating pickup truck models in the MYs 2012–2016 rule had led the agencies to underestimate the impact of the different pickup truck model configurations above 66 square feet on manufacturers’ fleet average fuel economy and CO₂ levels (as discussed immediately below). In disaggregating the pickup truck model data, the impact of setting the cutpoint at 66 square feet after model year 2016 became clearer to the agencies.

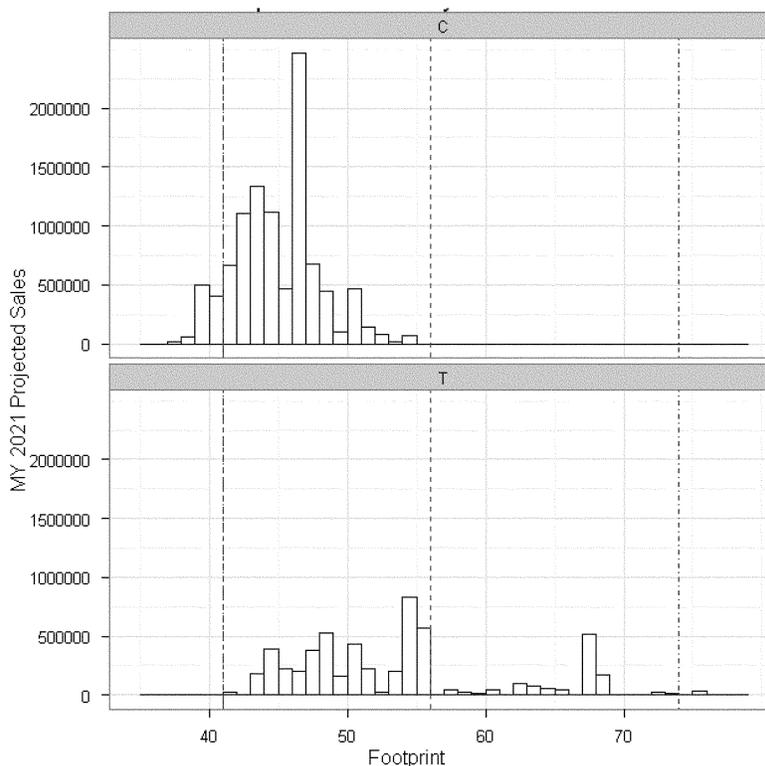

In the agencies’ view, there was legitimate basis for these comments. The agencies’ MY 2008-based market forecast supporting the NPRM included about 24 vehicle configurations above 74 square feet with a total volume of about 50,000 vehicles or less during any MY in the 2017–2025 time frame. While

a relatively small portion of the overall truck fleet, for some manufacturers, these vehicles are a non-trivial portion of sales. As noted above, the very largest light trucks have significant load-carrying and towing capabilities that make it particularly challenging for manufacturers to add fuel economy-improving/CO₂-reducing technologies in a way that maintains the full functionality of those capabilities.

Considering manufacturer CBI and our estimates of the impact of the 66 square foot cutpoint for future model years, the agencies determined to adopt curves that transition to a different cutpoint. While noting that no specific vehicle need meet its target (because standards apply to fleet average performance), we believe that the information provided to us by manufacturers and our own analysis supported the gradual extension of the cutpoint for large light trucks in the proposal from 66 square feet in MY 2016 out to a larger footprint square feet before MY 2025.

BILLING CODE 6560-50-P

Figure II-1 Footprint Distribution by Car and Truck (NPRM Analysis)*

*Proposed truck cutpoints for MY 2025 shown in red, car cutpoints shown in green

The agencies proposed to phase in the higher cutpoint for the truck curve in order to avoid any backsliding from the MY 2016 standard. A target that is feasible in one model year should never become less reasonable in a subsequent model year—manufacturers should have no reason to remove fuel economy-improving/CO₂-reducing technology from a vehicle once it has been applied. Put another way, the agencies proposed to not allow “curve crossing” from one model year to the next. In proposing MYs 2011–2015 CAFE standards and promulgating MY 2011 standards, NHTSA proposed and requested comment on avoiding curve crossing, as an “anti-backsliding measure.”²²² The MY 2016 2-cycle test curves are therefore a floor for the MYs 2017–2025 curves. For passenger cars, which have minimal change in slope from the MY 2012–2016 rulemakings and no change in cut points, there were no curve crossing issues in the proposed (or final) standards.

The agencies received some comments on the selection of these cutpoints. ACEEE commented that the extension of the light truck cutpoint upward from 66 square feet to 74 square feet would reduce stringency for large trucks even though there is no safety-related reason to discourage downsizing of these trucks.²²³ Sierra Club²²⁴ and Volkswagen commented that moving this cutpoint could encourage trucks to get larger and may be detrimental to societal fatalities, and the Sierra Club suggested that the agencies could mitigate this risk by providing an alternate emissions target for light trucks of 60 square feet or more that exceed the sales projected in the rule in the year that sales exceed the projection.²²⁵ ACEEE similarly suggested that the agencies include a provision to fix the upper bound for the light truck targets at the 66 square foot target once sales of trucks larger than that in a given year reach the level of MY 2008 sales, to discourage upsizing.²²⁶ Global Automakers commented that the cutpoint for the smallest light trucks should be set at approximately ten percent of sales (as for passenger cars) rather than at 41 square feet.²²⁷ Conversely, IIHS

commented that, for both passenger cars and light trucks, the 41 square foot cutpoint should be moved further to the left (*i.e.*, to even smaller footprints), to reduce the incentive for manufacturers to downsize the lightest vehicles.²²⁸

The agencies have considered these comments regarding the cutpoint applied to the high footprint end of the target function for light trucks, and we judge there to be minimal risk that manufacturers would respond to this upward extension of the cutpoint by deliberately increasing the size of light trucks that are already at the upper end of marketable vehicle sizes. Such vehicles have distinct size, maneuverability, fuel consumption, storage, and other characteristics as opposed to the currently more popular vehicles between 43 and 48 square feet, and are likely not suited for all consumers in all usage scenarios. Further, larger vehicles typically also have additional production costs that make it unlikely that these vehicles will become the predominant vehicles in the fleet. Therefore, we remain concerned that not to extend this cutpoint to 74 square feet would fail to take into adequate consideration the challenges to improving fuel economy and CO₂ emissions to the levels required by this final rule for vehicles with footprints larger than 66 square feet, given their increased utility. As noted above, because CAFE and GHG standards are based on average performance, manufacturers need not ensure that every vehicle model meets its CAFE and GHG targets. Still, the agencies are concerned that standards with stringent targets for large trucks would unduly burden full-line manufacturers active in the market for full-size pickups and other large light trucks, as discussed earlier, and evidenced by the agencies’ estimates of differences between compliance burdens faced by OEMs active and not active in the market for full-size pickups. While some manufacturers have recently indicated²²⁹ that buyers are currently willing to pay a premium for fuel economy improvements, the agencies are concerned that disparities in long-term regulatory requirements could lead to future market distortions undermining the economic practicability of the standards. Absent an upward extension of the cutpoint, such disparities would be even greater.

²²⁸ IIHS, Docket No. NHTSA–2010–0131–0222, at 1.

²²⁹ For example, in its June 11, 2012 edition, *Automotive News* quoted a Ford sales official saying that “fuel efficiency continues to be a top purchaser driver.” (“More MPG—ASAP”, *Automotive News*, Jun 11, 2012.)

For these reasons, the agencies do not expect that gradually extending the cutpoint to 74 square feet will create incentives to upsize large trucks and, thus, believe there will be no adverse effects on societal safety. Therefore, we are promulgating standards that, as proposed, gradually extend the cutpoint to 74 square feet. We have also considered the above comments by Global Automakers and IIHS on the cutpoints for the smallest passenger cars and light trucks. In our judgment, placing these cutpoints at 41 square feet continues to strike an appropriate balance between (a) not discouraging manufacturers from introducing new small vehicle models in the U.S. and (b) not encouraging manufacturers to downsize small vehicles.

We have considered the Sierra Club and ACEEE suggestion that the agencies provide an alternate emissions target for light trucks larger than 60 square feet (Sierra Club) or 66 square feet (ACEEE) that exceed the sales projected in the rule in the year that sales exceed the projection. Doing so would effectively introduce sales volume as a second “attribute”; in our judgment, this would introduce additional uncertainty regarding outcomes under the standards, and would not clearly be within the scope of notice provided by the NPRM.

6. Once the Agencies Determined the Complete Mathematical Function Shape, How Did the Agencies Adjust the Curves To Develop the Proposed Standards and Regulatory Alternatives?

The curves discussed above all reflect the addition of technology to individual vehicle models to reduce technology differences between vehicle models before fitting curves. This application of technology was conducted not to directly determine the proposed standards, but rather for purposes of technology adjustments, and set aside considerations regarding potential rates of application (*i.e.*, phase-in caps), and considerations regarding economic implications of applying specific technologies to specific vehicle models. The following sections describe further adjustments to the curves discussed above, that affected both the shape of the curve, and the location of the curve, that helped the agencies determine curves that defined the proposed standards.

The minimum stringency determination was done using the two cycle curves. Stringency adjustments for air conditioning and other credits were calculated after curves that did not cross were determined in two cycle space. The year over year increase in these

²²² 74 FR 14370 (Mar. 30, 2009).

adjustments cause neither the GHG nor CAFE curves (with A/C) to contact the 2016 curves when charted.

a. Adjusting for Year Over Year Stringency

As in the MYs 2012–2016 rules, the agencies developed curves defining regulatory alternatives for consideration by “shifting” these curves. For the MYs 2012–2016 rules, the agencies did so on an absolute basis, offsetting the fitted curve by the same value (in gpm or g/mi) at all footprints. In developing the proposal for MYs 2017–2025, the agencies reconsidered the use of this approach, and concluded that after MY 2016, curves should be offset on a relative basis—that is, by adjusting the entire gpm-based curve (and, equivalently, the CO₂ curve) by the same percentage rather than the same absolute value. The agencies’ estimates of the effectiveness of these technologies are all expressed in relative terms—that is, each technology (with the exception of A/C) is estimated to reduce fuel consumption (the inverse of fuel economy) and CO₂ emissions by a specific percentage of fuel consumption without the technology. It is, therefore, more consistent with the agencies’ estimates of technology effectiveness to develop standards and regulatory alternatives by applying a proportional offset to curves expressing fuel consumption or emissions as a function of footprint. In addition, extended indefinitely (and without other compensating adjustments), an absolute offset would eventually (*i.e.*, at very high average stringencies) produce negative (gpm or g/mi) targets. Relative offsets avoid this potential outcome. Relative offsets do cause curves to become, on a fuel consumption and CO₂ basis, flatter at greater average stringencies; however, as discussed above, this outcome remains consistent with the agencies’ estimates of technology effectiveness. In other words, given a relative decrease in average required fuel consumption or CO₂ emissions, a curve that is flatter by the same relative amount should be equally challenging in terms of the potential to achieve compliance through the addition of fuel-saving technology.

On this basis, and considering that the “flattening” occurs gradually for the regulatory alternatives the agencies have evaluated, the agencies tentatively concluded that this approach to offsetting the curves to develop year-by-year regulatory alternatives neither re-creates a situation in which manufacturers are likely to respond to standards in ways that compromise highway safety, nor undoes the

attribute-based standard’s more equitable balancing of compliance burdens among disparate manufacturers. The agencies invited comment on these conclusions, and on any other means that might avoid the potential outcomes—in particular, negative fuel consumption and CO₂ targets—discussed above. As indicated earlier, ACEEE²³⁰ and the Alliance²³¹ both expressed support for the application of relative adjustments in order to develop year-over-year increases in the stringency of fuel consumption and CO₂ targets, although the Alliance also commented that this approach should be revisited as part of the mid-term evaluation. EPCA/EISA requires NHTSA to establish the maximum feasible passenger car and light truck standards separately in each specific model year—a requirement that is not necessarily compatible with any predetermined approach to year-over-year changes in stringency. As part of the future NHTSA rulemaking to finalize standards for MYs 2022–2025 and the concurrent mid-term evaluation, the agencies plan to reexamine potential approaches to developing regulatory options for successive model years.

b. Adjusting for Anticipated Improvements to Mobile Air Conditioning Systems

The fuel economy values in the agencies’ market forecasts are based on the 2-cycle (*i.e.*, city and highway) fuel economy test and calculation procedures that do not reflect potential improvements in air conditioning system efficiency, refrigerant leakage, or refrigerant Global Warming Potential (GWP). Recognizing that there are significant and cost effective potential air conditioning system improvements available in the rulemaking timeframe (discussed in detail in Chapter 5 of the draft joint TSD), the agencies are increasing the stringency of the target curves based on the agencies’ assessment of the capability of manufacturers to implement these changes. For the proposed CAFE standards and alternatives, an offset was included based on air conditioning system efficiency improvements, as these improvements are the only improvements that effect vehicle fuel economy. For the proposed GHG standards and alternatives, a stringency increase was included based on air conditioning system efficiency, leakage and refrigerant improvements. As

²³⁰ ACEEE, Docket No. EPA–HQ–OAR–2010–0799–9528 at 6.

²³¹ Alliance, Docket No. NHTSA–2010–0131–0262, at 86.

discussed above in Chapter 5 of the joint TSD, the air conditioning system improvements affect a vehicle’s fuel efficiency or CO₂ emissions performance as an additive stringency increase, as compared to other fuel efficiency improving technologies which are multiplicative. Therefore, in adjusting target curves for improvements in the air conditioning system performance, the agencies adjusted the target curves by additive stringency increases (or vertical shifts) in the curves.

For the GHG target curves, the offset for air conditioning system performance is being handled in the same manner as for the MYs 2012–2016 rules. For the CAFE target curves, NHTSA for the first time is accounting for potential improvements in air conditioning system performance. Using this methodology, the agencies first use a multiplicative stringency adjustment for the sloped portion of the curves to reflect the effectiveness on technologies other than air conditioning system technologies, creating a series of curve shapes that are “fanned” based on two-cycle performance. Then the curves were offset vertically by the air conditioning improvement by an equal amount at every point.

While the agencies received many comments regarding the provisions for determining adjustments to reflect improvements to air conditioners, the agencies received no comments regarding how curves developed considering 2-cycle fuel economy and CO₂ values should be adjusted to reflect the inclusion of A/C adjustments in fuel economy and CO₂ values used to determine compliance with corresponding standards. For today’s final rule, the agencies have maintained the same approach as applied for the NPRM.

D. Joint Vehicle Technology Assumptions

For the past five years, the agencies have been working together closely to follow the development of fuel consumption- and GHG-reducing technologies, which continue to evolve rapidly. We based the proposed rule on the results of two major joint technology analyses that EPA and NHTSA had recently completed—the Technical Support Document to support the MYs 2012–2016 final rule and the 2010 Technical Analysis Report (which supported the 2010 Notice of Intent and was also done in conjunction with CARB). For this final rule, we relied on our joint analyses for the proposed rule, as well as new information and analyses, including information we

received during the public comment period.

In the proposal, we presented our assessments of the costs and effectiveness of all the technologies that we believe manufacturers are likely to use to meet the requirements of this rule, including the latest information on several quickly-changing technologies. The proposal included new estimates for hybrid costs based on a peer-reviewed ANL battery cost model. We also presented in the proposal new cost data and analyses relating to several technologies based on a study by FEV: an 8-speed automatic transmission replacing a 6-speed automatic transmission; an 8-speed dual clutch transmission replacing a 6-speed dual clutch transmission; a power-split hybrid powertrain with an I4 engine replacing a conventional engine powertrain with V6 engine; a mild hybrid with stop-start technology and an I4 engine replacing a conventional I4 engine; and the Fiat Multi-Air engine technology. Also in the proposal, we presented an updated assessment of our estimated costs associated with mass reduction.

As would be expected given that some of our cost estimates were developed several years ago, we have also updated all of our base direct manufacturing costs to put them in terms of more recent dollars (2010 dollars are used in this final rule while 2009 dollars were used in the proposal). As proposed, we have also updated our methodology for calculating indirect costs associated with new technologies since completing both the MYs 2012–2016 final rule and the TAR. We continue to use the indirect cost multiplier (ICM) approach used in those analyses, but have made important changes to the calculation methodology—changes done in response to ongoing staff evaluation and public input.

Since the MYs 2012–2016 rule and TAR, the agencies have updated many of the technologies' effectiveness estimates largely based on new vehicle simulation work conducted by Ricardo Engineering. This simulation work provides the effectiveness estimates for a number of the technologies most heavily relied on in the agencies' analysis of potential standards for MYs 2017–2025. Additionally for the final rule, NHTSA conducted a vehicle simulation project with Argonne National Laboratory (ANL), as described in NHTSA's FRIA, that performed additional analyses on mild hybrid technologies and advanced transmissions to help NHTSA develop effectiveness values better tailored for the CAFE model's incremental

structure. The effectiveness values for the mild hybrid vehicles were applied by both agencies for the final rule.²³² Additionally, NHTSA updated the effectiveness values of advanced transmissions coupled with naturally-aspirated engines for the final rule.²³³

The agencies also reviewed the findings and recommendations in the updated NAS report "Assessment of Fuel Economy Technologies for Light-Duty Vehicles" that was completed and issued after the MYs 2012–2016 final rule.²³⁴ NHTSA's sensitivity analysis examining the impact of using some of the NAS cost and effectiveness estimates on the proposed standards is presented in NHTSA's final RIA.

The agencies received comments to the proposal on some of these assessments as discussed further below. Also, since the time of the proposal, in some cases we have been able to improve on our earlier assessments. We note these comments and the improvements made in the assessments in the discussion of each technology, below. However, the agencies did not receive comments for most of the technical and cost assessments presented in the proposal, and the agencies have concluded the assessments in the proposal remain valid for this final rule.

Key changes in the final rule relative to the proposal are the use of 2010 dollars rather than 2009 dollars, updates to all battery pack and non-battery costs for hybrids, plug-in hybrids and full electric vehicles (because an updated version of the Argonne National Labs BatPaC model was available which more appropriately included a battery discharge safety system in the costs), and the inclusion of a mild hybrid technology that was not included in the proposal. NHTSA updated the effectiveness values of advanced transmissions coupled with naturally-aspirated engines based on ANL's simulation work. We describe these changes below and in Chapter 3 of the Joint TSD. We next provide a brief summary of the technologies that we considered for this final rule; Chapter 3 of the Joint TSD presents our assessments of these technologies in much greater detail.

²³² EPA's lumped parameter model gave similar results as ANL's model for three of five vehicle classes, which served as a valuable validation to the tool. However EPA used the same ANL effectiveness values for mild hybrids to be harmonized with NHTSA's inputs.

²³³ The Ricardo simulations did not include this technology combination, and EPA did not include this combination in their packages.

²³⁴ "Assessment of Fuel Economy Technologies for Light-Duty Vehicles", National Research Council of the National Academies, June 2010.

1. What technologies did the agencies consider?

The agencies conclude that manufacturers can add a variety of technologies to each of their vehicle models and/or platforms in order to improve the vehicles' fuel economy and GHG performance. In order to analyze a variety of regulatory alternative scenarios, it was essential to have a thorough understanding of the technologies available to the manufacturers. As was the case for the proposal, the analyses we performed for this final rule included an assessment of the cost, effectiveness, availability, development time, and manufacturability of various technologies within the normal redesign and refresh periods of a vehicle line (or in the design of a new vehicle). As we describe in the Joint TSD, the point in time when we project that a technology can be applied affects our estimates of the costs as well as the technology penetration rates ("phase-in caps").

The agencies considered dozens of vehicle technologies that manufacturers could use to improve the fuel economy and reduce CO₂ emissions of their vehicles during the MYs 2017–2025 timeframe. Many of the technologies we considered are available today, are in production of some vehicles, and could be incorporated into vehicles more widely as manufacturers make their product development decisions. These are "near-term" technologies and are identical or very similar to those anticipated in the agencies' analyses of compliance strategies for the MYs 2012–2016 final rule. For this rulemaking, given its time frame, we also considered other technologies that are not currently in production, but that are beyond the initial research phase, and are under development and expected to be in production in the next 5–10 years. Examples of these technologies are downsized and turbocharged engines operating at combustion pressures even higher than today's turbocharged engines, and an emerging hybrid architecture combined with an 8-speed dual clutch transmission, a combination that is not available today. These are technologies that the agencies believe that manufacturers can, for the most part, apply both to cars and trucks, and that we expect will achieve significant improvements in fuel economy and reductions in CO₂ emissions at reasonable costs in the MYs 2017 to 2025 timeframe. The agencies did not consider technologies that are currently in an initial stage of research because of the uncertainty involved in the availability and feasibility of

implementing these technologies with significant penetration rates for this analysis. The agencies recognize that due to the relatively long time frame between the date of this final rule and 2025, it is very possible that new and innovative technologies will make their way into the fleet, perhaps even in significant numbers, that we have not considered in this analysis. We expect to reconsider such technologies as part of the mid-term evaluation, as appropriate, and manufacturers may be able to use them to generate credits under a number of the flexibility and incentive programs provided in this final rule.

The technologies that we considered can be grouped into four broad categories: engine technologies; transmission technologies; vehicle technologies (such as mass reduction, tires and aerodynamic treatments); and electrification technologies (including hybridization and changing to full electric drive).²³⁵ We discuss the specific technologies within each broad group below. The list of technologies presented below and in the proposal is nearly identical to that presented in both the MYs 2012–2016 final rule and the 2010 TAR, with the following new technologies added to the list since the last final rule: the P2 hybrid, a newly emerging hybridization technology that was also considered in the 2010 TAR; mild hybrid technologies that were not included in the proposal; continued improvements in gasoline engines, with greater efficiencies and downsizing; continued significant efficiency improvements in transmissions; and ongoing levels of improvement to some of the seemingly more basic technologies such as lower rolling resistance tires and aerodynamic treatments, which are among the most cost effective technologies available for reducing fuel consumption and GHGs. Not included in the list below are technologies specific to air conditioning system improvements and off-cycle controls, which are presented in Section II.F of this preamble and in Chapter 5 of the Joint TSD.

Few comments were received specific to these technologies. The Alliance emphasized the agencies should examine the progress in the development of powertrain improvements as part of the mid-term evaluation and determine if researchers are making the kind of breakthroughs anticipated by the agencies for

technologies like high-efficiency transmissions. VW cautioned the agencies about the uncertainties with high BMEP engines, including the possible costs due to increased durability requirements and questioned the potential benefit for this type of engine of engine technology. VW commented that additional development is necessary to overcome the significant obstacles of these types of engines. ICCT emphasized that many of the powertrain effectiveness values, derived by Ricardo, were too conservative as technology in this area is expected to improve at a faster pace during the rulemaking period. As described in the joint TSD, the agencies relied on a number of technical sources for this engine technology. Additionally as described in the Ricardo report, Ricardo was tasked with extrapolating technologies to their expected performance and efficiency levels in the 2020–2025 timeframe to account for future improvements. The agencies continue to believe that the modeling and simulation conducted by Ricardo is robust, as they have built prototypes of these engines and used their knowledge to help inform the modeling. The agencies will, of course, continue to watch the development of this key technology in the future. For transparency purposes and full disclosure, it is important to note the ICCT partially funded the Ricardo study.

a. Types of Engine Technologies Considered

Low-friction lubricants including low viscosity and advanced low friction lubricant oils are now available with improved performance. If manufacturers choose to make use of these lubricants, they may need to make engine changes and conduct durability testing to accommodate the lubricants. The costs in our analysis consider these engine changes and testing requirements. This level of low friction lubricants is expected to exceed 85 percent penetration by MY 2017 and reach nearly 100 percent in MY 2025.²³⁶

Reduction of engine friction losses (first level) can be achieved through low-tension piston rings, roller cam followers, improved material coatings, more optimal thermal management, piston surface treatments, and other improvements in the design of engine components and subsystems that improve the efficiency of engine

operation. This level of engine friction reduction is expected to exceed 70 percent penetration by MY 2017

Advanced low friction lubricants and reduction of engine friction losses (second level) are new for our analysis for the proposal and this final rule. As technologies advance in the coming years, we expect that there will be further development in both low friction lubricants and engine friction reductions. The agencies grouped the development in these two related areas into a single technology and applied them for MY 2017 and beyond.

Cylinder deactivation disables the intake and exhaust valves and prevents fuel injection into some cylinders during light-load operation. The engine runs temporarily as though it were a smaller engine which substantially reduces pumping losses.

Variable valve timing alters the timing of the intake valves, exhaust valves, or both, primarily to reduce pumping losses, increase specific power, and control residual gases.

Discrete variable valve lift increases efficiency by optimizing air flow over a broader range of engine operation, which reduces pumping losses. This is accomplished by controlled switching between two or more cam profile lobe heights.

Continuous variable valve lift is an electromechanical or electro-hydraulic system in which valve timing is changed as lift height is controlled. This yields a wide range of opportunities for optimizing volumetric efficiency and performance, including enabling the engine to be valve-throttled.

Stoichiometric gasoline direct-injection technology injects fuel at high pressure directly into the combustion chamber to improve cooling of the air/fuel charge as well as combustion quality within the cylinder, which allows for higher compression ratios and increased thermodynamic efficiency.

Turbocharging and downsizing increases the available airflow and specific power level, allowing a reduced engine size while maintaining performance. Engines of this type use gasoline direct injection (GDI) and dual cam phasing. This reduces pumping losses at lighter loads in comparison to a larger engine. We continue to include an 18 bar brake mean effective pressure (BMEP) technology (as in the MYs 2012–2016 final rule) and are also including both 24 bar BMEP and 27 bar BMEP technologies. The 24 bar BMEP technology would use a single-stage, variable geometry turbocharger which would provide a higher intake boost pressure available across a broader

²³⁵ NHTSA's analysis considers these technologies in five groups rather than four—hybridization is one category, and "electrification/accessories" is another.

²³⁶ The penetration rates shown in this section are general results applicable to either the NHTSA or EPA analysis, to either the 2008 based or the 2010 based fleet projection.

range of engine operation than conventional 18 bar BMEP engines. The 27 bar BMEP technology would require higher boost levels and thus would use a two-stage turbocharger, necessitating use of cooled exhaust gas recirculation (EGR) as described below. The 18 bar BMEP technology is applied with 33 percent engine downsizing, 24 bar BMEP is applied with 50 percent engine downsizing, and 27 bar BMEP is applied with 56 percent engine downsizing.

Cooled exhaust-gas recirculation (EGR) reduces the incidence of knocking combustion with additional charge dilution and obviates the need for fuel enrichment at high engine power. This allows for higher boost pressure and/or compression ratio and further reduction in engine displacement and both pumping and friction losses while maintaining performance. Engines of this type use GDI and both dual cam phasing and discrete variable valve lift. The EGR systems considered in this assessment would use a dual-loop system with both high and low pressure EGR loops and dual EGR coolers. For the proposal and this final rule, cooled EGR is considered to be a technology that can be added to a 24 bar BMEP engine and is an enabling technology for 27 bar BMEP engines.

Diesel engines have several characteristics that give superior fuel efficiency, including reduced pumping losses due to lack of (or greatly reduced) throttling, high pressure direct injection of fuel, a combustion cycle that operates at a higher compression ratio, and a very lean air/fuel mixture relative to an equivalent-performance gasoline engine. This technology requires additional enablers, such as a NO_x adsorption catalyst system or a urea/ammonia selective catalytic reduction system for control of NO_x emissions during lean (excess air) operation.

b. Types of Transmission Technologies Considered

Improved automatic transmission controls optimize the shift schedule to maximize fuel efficiency under wide ranging conditions and minimizes losses associated with torque converter slip through lock-up or modulation. This technology is included because it exists in the baseline fleets, but its penetration is expected to decrease over time as it is replaced by other more efficient technologies.

Shift optimization is a strategy whereby the engine and/or transmission controller(s) emulates a CVT by continuously evaluating all possible gear options that would provide the necessary tractive power and selecting

the best gear ratio that lets the engine run in the most efficient operating zone.

Six-, seven-, and eight-speed automatic transmissions are optimized by changing the gear ratio span to enable the engine to operate in a more efficient operating range over a broader range of vehicle operating conditions. While a six speed transmission application was most prevalent for the MYs 2012–2016 final rule, eight speed transmissions are expected to be readily available and applied in the MYs 2017 through 2025 timeframe.

Dual clutch or automated shift manual transmissions are similar to manual transmissions, but the vehicle controls shifting and launch functions. A dual-clutch automated shift manual transmission (DCT) uses separate clutches for even-numbered and odd-numbered gears, so the next expected gear is pre-selected, which allows for faster and smoother shifting. The MYs 2012–2016 final rule limited DCT applications to a maximum of 6 speeds. For the proposal and this final rule, we have considered both 6-speed and 8-speed DCT transmissions.

Continuously variable transmission commonly uses V-shaped pulleys connected by a metal belt rather than gears to provide ratios for operation. Unlike manual and automatic transmissions with fixed transmission ratios, continuously variable transmissions can provide fully variable and an infinite number of transmission ratios that enable the engine to operate in a more efficient operating range over a broader range of vehicle operating conditions. The CVT is maintained for existing baseline vehicles and not considered for future vehicles in this rule due to the availability of more cost effective transmission technologies.

Manual 6-speed transmission offers an additional gear ratio, often with a higher overdrive gear ratio, than a 5-speed manual transmission.

High Efficiency Gearbox (automatic, DCT or manual) represents continuous improvement in seals, bearings and clutches; super finishing of gearbox parts; and development in the area of lubrication—all aimed at reducing frictional and other parasitic load in the system for an automatic or DCT type transmission.

c. Types of Vehicle Technologies Considered

Lower-rolling-resistance tires have characteristics that reduce frictional losses associated with the energy dissipated mainly in the deformation of the tires under load, thereby improving fuel economy and reducing CO₂ emissions. For the proposal and final

rule, we considered two levels of lower rolling resistance tires that reduce frictional losses even further. The first level of low rolling resistance tires would have 10 percent rolling resistance reduction while the 2nd level would have 20 percent rolling resistance reduction compared to 2008 baseline vehicle. This second level of development marks an advance over low rolling resistance tires considered during the MYs 2014–2018 medium- and heavy-duty vehicle greenhouse gas emissions and fuel efficiency rulemaking, see 76 FR 57207, 57229.) The first level of lower rolling resistance tires is expected to exceed 90 percent penetration by the 2017.

Low-drag brakes reduce the sliding friction of disc brake pads on rotors when the brakes are not engaged, because the brake pads are pulled away from the rotors.

Front or secondary axle disconnect for four-wheel drive systems provides a torque distribution disconnect between front and rear axles when torque is not required for the non-driving axle. This results in the reduction of associated parasitic energy losses.

Aerodynamic drag reduction can be achieved via two approaches, either reducing the drag coefficients or reducing vehicle frontal area. To reduce the drag coefficient, skirts, air dams, underbody covers, and more aerodynamic side view mirrors can be applied. In addition to the standard aerodynamic treatments, the agencies have included a second level of aerodynamic technologies, which could include active grill shutters, rear visors, and larger under body panels. We estimate that the first level of aerodynamic drag improvement will reduce aerodynamic drag by 10 percent relative to the baseline 2008 vehicle while the second level would reduce aerodynamic drag by 20 percent relative to 2008 baseline vehicles. The second level of aerodynamic technologies was not considered in the MYs 2012–2016 final rule.

Mass Reduction can be achieved through either substitution of lower density and/or higher strength materials, or changing the design to use less material. With design optimization, part consolidation, and improved manufacturing processes, these strategies can be applied while maintaining the performance attributes of the component, system, or vehicle. The agencies applied mass reduction of up to 20 percent relative to MY 2008 levels in this final rule compared to only 10 percent in the MYs 2012–2016 final rule. The agencies also determined effectiveness values for hybrid, plug-in

and electric vehicles based on net mass reduction, or the difference between the applied mass reduction (capped at 20 percent) and the added mass of electrification components. In assessing compliance strategies and in structuring the standards, the agencies only considered levels of vehicle mass reduction that, in our estimation, would not adversely affect overall fleet safety. An extensive discussion of mass reduction technologies and their associated costs is provided in Chapter 3 of the Joint TSD, and the discussion on safety is in Section II.G of the Preamble.

d. Types of Electrification/Accessory and Hybrid Technologies Considered

Electric power steering (EPS)/Electro-hydraulic power steering (EHPS) is an electrically-assisted steering system that has advantages over traditional hydraulic power steering because it replaces the engine-driven and continuously operated hydraulic pump, thereby reducing parasitic losses from the accessory drive. Manufacturers have informed the agencies that full EPS systems are being developed for all light-duty vehicles, including large trucks. However, lacking data about when these transitions will occur, the agencies have applied the EHPS technology to large trucks and the EPS technology to all other light-duty vehicles.

Improved accessories (IACC) may include high efficiency alternators and electrically driven (i.e., on-demand) water pumps and cooling fans. This excludes other electrical accessories such as electric oil pumps and electrically driven air conditioner compressors. New for this rule is a second level of IACC (IACC2), which consists of the IACC technologies with the addition of a mild regeneration strategy and a higher efficiency alternator. The first level of IACC improvements is expected to be at more than 50 percent penetration by the 2017MY.

12-volt Stop-Start, sometimes referred to as idle-stop or 12-volt micro hybrid, is the most basic hybrid system that facilitates idle-stop capability. These systems typically incorporate an enhanced performance battery and other features such as electric transmission and cooling pumps to maintain vehicle systems during idle-stop.

Higher Voltage Stop-Start/Belt Integrated Starter Generator (BISG) sometimes referred to as a mild hybrid, provides idle-stop capability and uses a higher voltage battery with increased energy capacity over typical automotive batteries. The higher system voltage

allows the use of a smaller, more powerful electric motor. This system replaces a standard alternator with an enhanced power, higher voltage, higher efficiency starter-alternator that is belt driven and that can recover braking energy while the vehicle slows down (regenerative braking). This technology was mentioned but not included in the proposal because the agencies had incomplete information at that time. Since the proposal, the agencies have obtained better data on the costs and effectiveness of this technology (see Chapter 3.4.3 of the joint TSD). Therefore, the agencies have revised their technical analysis on both the cost and effectiveness and found that the technology is now competitive with the others in NHTSA's technology decision trees and EPA's technology packages. EPA and NHTSA are providing incentives to encourage this and other hybrid technologies on full-size pick-up trucks, as described in Section II.F.3.

Integrated Motor Assist (IMA)/Crank integrated starter generator (CISG) provides idle-stop capability and uses a high voltage battery with increased energy capacity over typical automotive batteries. The higher system voltage allows the use of a smaller, more powerful electric motor and reduces the weight of the wiring harness. This system replaces a standard alternator with an enhanced power, higher voltage and higher efficiency starter-alternator that is crankshaft mounted and can recover braking energy while the vehicle slows down (regenerative braking). The IMA technology is not included by either agency as an enabling technology in the analysis supporting this rule because we believe that other technologies provide better cost effectiveness, although it is included as a baseline technology because it exists in our 2008 and 2010 baseline fleets.

P2 Hybrid is a newly emerging hybrid technology that uses a transmission integrated electric motor placed between the engine and a gearbox or CVT, much like the IMA system described above except with a wet or dry separation clutch which is used to decouple the motor/transmission from the engine. In addition, a P2 hybrid would typically be equipped with a larger electric machine. Disengaging the clutch allows all-electric operation and more efficient brake-energy recovery. Engaging the clutch allows efficient coupling of the engine and electric motor and, when combined with a DCT transmission, provides similar efficiency at lower cost than power-split or 2-mode hybrid systems.

2-Mode Hybrid is a hybrid electric drive system that uses an adaptation of

a conventional stepped-ratio automatic transmission by replacing some of the transmission clutches with two electric motors that control the ratio of engine speed to vehicle speed, while clutches allow the motors to be bypassed. This improves both the transmission torque capacity for heavy-duty applications and reduces fuel consumption and CO₂ emissions at highway speeds relative to other types of hybrid electric drive systems. The 2-mode hybrid technology is not included by either agency as an enabling technology in the analysis supporting this rule because we believe that other technologies provide better cost effectiveness, although it is included as a baseline technology because it exists in our 2008 and 2010 baseline fleets.

Power-split Hybrid is a hybrid electric drive system that replaces the traditional transmission with a single planetary gearset and two motor/generators. One motor/generator uses the engine to either charge the battery or supply additional power to the drive motor. A second, more powerful motor/generator is permanently connected to the vehicle's final drive and always turns with the wheels. The planetary gear splits engine power between the first motor/generator and the drive motor to either charge the battery or supply power to the wheels. The power-split hybrid technology is not included by either agency as an enabling technology in the analysis supporting this rule because we believe that other technologies provide better cost effectiveness, although it is included as a baseline technology because it exists in our 2008 baseline fleet.

Plug-in hybrid electric vehicles (PHEV) are hybrid electric vehicles with the means to charge their battery packs from an outside source of electricity (usually the electric grid). These vehicles have larger battery packs with more energy storage and a greater capability to be discharged than other hybrid electric vehicles. They also use a control system that allows the battery pack to be substantially depleted under electric-only or blended mechanical/electrical operation and batteries that can be cycled in charge-sustaining operation at a lower state of charge than is typical of other hybrid electric vehicles. These vehicles are sometimes referred to as Range Extended Electric Vehicles (REEV). In this MYs 2017–2025 analysis, the agencies have included PHEVs with several all-electric ranges as potential technologies. EPA's analysis includes a 20-mile and 40-mile range PHEVs, while NHTSA's analysis only includes a 30-mile PHEV.

Electric vehicles (EV) are equipped with all-electric drive and with systems powered by energy-optimized batteries charged primarily from grid electricity. For this rule, the agencies have included EVs with several ranges—75 miles, 100 miles, and 150 miles—as potential technologies.

e. Technologies Considered but Deemed “Not Ready” in the MYs 2017–2025 Timeframe

Fuel cell electric vehicles (FCEVs) utilize a full electric drive platform but consume electricity generated by an on-board fuel cell and hydrogen fuel. Fuel cells are electro-chemical devices that directly convert reactants (hydrogen and oxygen via air) into electricity, with the potential of achieving more than twice the efficiency of conventional internal combustion engines. Most automakers that currently have FCEVs under development use high-pressure gaseous hydrogen storage tanks. The high-pressure tanks are similar to those used for compressed gas storage in more than 10 million CNG vehicles worldwide, except that they are designed to operate at a higher pressure (350 bar or 700 bar vs. 250 bar for CNG). While we expect there will be some limited introduction of FCEVs into the marketplace in the time frame of this rule, we expect the total number of vehicles produced with this technology will be relatively small. Thus, the agencies did not consider FCEVs in the modeling analysis conducted for this rule.

There are a number of other potential technologies available to manufacturers in meeting the 2017–2025 standards that the agencies have evaluated but have not considered in our final analyses. These include HCCI, “multi-air”, and camless valve actuation, and other advanced engines currently under development.

2. How did the agencies determine the costs of each of these technologies?

As noted in the introduction to this section, most of the direct cost estimates for technologies carried over from the MYs 2012–2016 final rule and subsequently used in this final rule are fundamentally unchanged since the MYs 2012–2016 final rule analysis and/or the 2010 TAR. We say “fundamentally” unchanged since the basis of the direct manufacturing cost estimates have not changed; however, the costs have been updated to more recent dollars, our estimated learning effects have resulted in further cost reductions for some technologies, the indirect costs are calculated using a modified methodology, and the impact of long-term ICMs is now present during

the rulemaking timeframe. Besides these changes, there are also some other notable changes to the costs used in previous analyses. We highlight these changes in Section II.D.2.a, below. We highlight the changes to the indirect cost methodology and adjustments to more recent dollars in Sections II.D.2.b and c. Lastly, we present some updated terminology used for our approach to estimating learning effects in an effort to eliminate confusion with our past terminology. This is discussed in Section II.D.2.d, below.

New for the final rule relative to the proposal are the use of 2010 dollars rather than 2009 dollars, updates to all battery pack and non-battery costs for hybrids, plug-in and full electric vehicles because an updated version of the ANL BatPaC model was available and because we wanted to include a battery discharge safety system in the costs, and the inclusion of a mild hybrid technology that was not included in the proposal. We describe these changes below and in Chapter 3 of the Joint TSD.

The agencies note that the technology costs included in this final rule take into account those associated with the initial build of the vehicle. We received comments on the proposal for this rule suggesting that there could be additional maintenance required with some new technologies, and that additional maintenance costs could occur as a result because “the technology will be more complicated and time consuming for mechanics to repair.”²³⁷ For this final rule, the agencies have estimated such maintenance costs. The maintenance costs are not included as new vehicle costs and are not, therefore, used in either agency’s modeling work. However, the maintenance costs are included when estimating costs to society in each agency’s benefit-cost analyses. We discuss these maintenance costs briefly in section II.D.5 below, and in detail in Chapter 3 of the final Joint TSD and in sections III and IV of this preamble.

a. Direct Manufacturing Costs (DMC)

For direct manufacturing costs (DMC) related to turbocharging, downsizing, gasoline direct injection, transmissions, as well as non-battery-related costs on hybrid, plug-in hybrid, and electric vehicles, the agencies have relied on costs derived from “tear-down” studies (see below). For battery-related DMC for HEVs, PHEVs, and EVs, the agencies have relied on the BatPaC model developed by Argonne National Laboratory for the Department of

Energy. For mass reduction DMC, the agencies have relied on several studies as described in detail in Chapter 3 of the Joint TSD. We discuss each of these briefly here and in more detail in the Joint TSD. For the majority of the other technologies considered in this rule and described above, and where no new data were available, the agencies have relied on the MYs 2012–2016 final rule and sources described there for estimates of DMC.

i. Costs From Tear-Down Studies

As a general matter, the agencies believe that the best method to derive technology cost estimates is to conduct studies involving tear-down and analysis of actual vehicle components. A “tear-down” involves breaking down a technology into its fundamental parts and manufacturing processes by completely disassembling actual vehicles and vehicle subsystems and precisely determining what is required for its production. The result of the tear-down is a “bill of materials” for each and every part of the relevant vehicle systems. This tear-down method of costing technologies is often used by manufacturers to benchmark their products against competitive products. Historically, vehicle and vehicle component tear-down has not been done on a large scale by researchers and regulators due to the expense required for such studies. While tear-down studies are highly accurate at costing technologies for the year in which the study is intended, their accuracy, like that of all cost projections, may diminish over time as costs are extrapolated further into the future because of uncertainties in predicting commodities (and raw material) prices, labor rates, and manufacturing practices. The projected costs may be higher or lower than predicted.

Over the past several years, EPA has contracted with FEV, Inc. and its subcontractor Munro & Associates, to conduct tear-down cost studies for a number of key technologies evaluated by the agencies in assessing the feasibility of future GHG and CAFE standards. The analysis methodology included procedures to scale the tear-down results to smaller and larger vehicles, and also to different technology configurations. EPA documented FEV’s methodology in a report published as part of the MYs 2012–2016 rulemaking, detailing the costing of the first tear-down conducted in this work (#1 in the list below).²³⁸

²³⁷ See NADA (OAR–2009–0472–7182.1, p.10) and Dawn Brooks (OAR–2009–0472–3851, pp.1–2).

²³⁸ U.S. EPA, “Light-Duty Technology Cost Analysis Pilot Study,” Contract No. EP–C–07–069, Work Assignment 1–3, December 2009, EPA–420–

This report was peer reviewed by experts in the industry, who focused especially on the methodology used in the tear-down study, and revised by FEV in response to the peer review comments.²³⁹ EPA documented subsequent tear-down studies (#2–#5 in the list below) using the peer reviewed methodology in follow-up FEV reports made available in the public docket for the MYs 2012–2016 rulemaking, although the results for some of these additional studies were not peer reviewed.²⁴⁰

Since then, FEV's work under this contract has continued. Additional cost studies have been completed and are available for public review.²⁴¹ The most extensive study, performed after the MYs 2012–2016 final rule, involved whole-vehicle tear-downs of a 2010 Ford Fusion power-split hybrid and a conventional 2010 Ford Fusion. (The latter served as a baseline vehicle for comparison.) In addition to providing power-split HEV costs, the results for individual components in these vehicles were subsequently used by FEV/Munro to estimate the cost of another hybrid technology, the P2 hybrid, which employs similar hardware. This approach to costing P2 hybrids was undertaken because P2 HEVs were not yet in volume production at the time of hardware procurement for tear-down. Finally, an automotive lithium-polymer battery was torn down to provide supplemental battery costing information to that associated with the NiMH battery in the Fusion. FEV has extensively documented this HEV cost work, including the extension of results to P2 HEVs, in a new report.²⁴² Because of the complexity and comprehensive scope of this HEV analysis, EPA commissioned a separate peer review focused exclusively on the new tear down costs developed for the HEV analysis. Reviewer comments generally supported FEV's methodology and results, while including a number of suggestions for improvement, many of which were subsequently incorporated into FEV's analysis and final report. The peer review comments and responses

are available in the rulemaking docket.^{243,244}

Over the course of this contract, teardown-based studies have been performed thus far on the technologies listed below. These completed studies provide a thorough evaluation of the new technologies' costs relative to their baseline (or replaced) technologies.

1. Stoichiometric gasoline direct injection (SGDI) and turbocharging with engine downsizing (T-DS) on a DOHC (dual overhead cam) I4 engine, replacing a conventional DOHC I4 engine.

2. SGDI and T-DS on a SOHC (single overhead cam) on a V6 engine, replacing a conventional 3-valve/cylinder SOHC V8 engine.

3. SGDI and T-DS on a DOHC I4 engine, replacing a DOHC V6 engine.

4. 6-speed automatic transmission (AT), replacing a 5-speed AT.

5. 6-speed wet dual clutch transmission (DCT) replacing a 6-speed AT.

6. 8-speed AT replacing a 6-speed AT.

7. 8-speed DCT replacing a 6-speed DCT.

8. Power-split hybrid (Ford Fusion with I4 engine) compared to a conventional vehicle (Ford Fusion with V6). The results from this tear-down were extended to address P2 hybrids. In addition, costs from individual components in this tear-down study were used by the agencies in developing cost estimates for PHEVs and EVs.

9. Mild hybrid with stop-start technology (Saturn Vue with I4 engine), replacing a conventional I4 engine. New for this final rule, the agencies have used portions of this tear-down study in estimating mild hybrid costs.

10. Fiat Multi-Air engine technology. (Although results from this cost study are included in the rulemaking docket, they were not used by the agencies in this rulemaking's technical analyses because the technology is under a very recently awarded patent and we have chosen not to base our analyses on its widespread use across the industry in the 2017–2025 timeframe.)

Items 6 through 10 in the list above are new since the MYs 2012–2016 final rule.

In addition, FEV and EPA extrapolated the engine downsizing costs for the following scenarios that were based on the above study cases:

1. Downsizing a SOHC 2 valve/cylinder V8 engine to a DOHC V6.

2. Downsizing a DOHC V8 to a DOHC V6.

3. Downsizing a SOHC V6 engine to a DOHC 4 cylinder engine.

4. Downsizing a DOHC 4 cylinder engine to a DOHC 3 cylinder engine.

The agencies have relied on the findings of FEV for estimating the cost of the technologies covered by the tear-down studies.

ii. Costs of HEVs, EVs & PHEVs

The agencies have also reevaluated the costs for HEVs, PHEVs, and EVs since we issued the MYs 2012–2016 final rule and the 2010 TAR. In the proposal, we noted that electrified vehicle technologies were developing rapidly and the agencies sought to capture results from the most recent analysis. Further, we noted that the MYs 2012–2016 rule employed a single \$/kWh estimate and did not consider the specific vehicle and technology application for the battery when we estimated the cost of the battery. Specifically, batteries used in HEVs (high power density applications) versus EVs (high energy density applications) need to be considered appropriately to reflect the design differences, the chemical material usage differences, and differences in \$/kWh as the power to energy ratio of the battery varies for different applications.

To address those issues for the proposal, the agencies did two things. First, EPA developed a spreadsheet tool²⁴⁵ that the agencies used to size the motor and battery based on the different road loads of various vehicle classes. Second, the agencies used a battery cost model developed by Argonne National Laboratory (ANL) for the Vehicle Technologies Program of the Office of Energy Efficiency and Renewable Energy (U.S. Department of Energy (DOE)).²⁴⁶ The model developed by ANL allows users to estimate unique battery pack costs using user customized input sets for different hybridization applications, such as strong hybrid, PHEV and EV. The DOE has established long term industry goals and targets for advanced battery systems as it does for many energy efficient technologies. ANL was funded by DOE to provide an independent assessment of Li-ion battery costs because of ANL's expertise in the field as one of the primary DOE National Laboratories responsible for basic and applied battery

²⁴⁶ ANL BatPac model Docket number EPA-HQ-OAR-2010-0799.

energy storage technologies for future HEV, PHEV and EV applications. Since publication of the 2010 TAR, ANL's battery cost model underwent peer-review and ANL subsequently updated the model and documentation to incorporate suggestions from peer-reviewers, such as including a battery management system, a battery disconnect unit, a thermal management system, and other changes.²⁴⁷

Subsequent to the proposal for this rule, the agencies requested changes to the BatPaC model. These requests were that an option be added to select between liquid or air thermal management and that adequate surface area and cell spacing be determined accordingly. Also, the agencies requested a feature to allow battery packs to be configured as subpacks in parallel or modules in parallel, as additional options for staying within voltage and cell size limits for large packs. ANL added these features in a version of the model distributed March 1, 2012. This version of the model is used for the battery cost estimates in the final rule.

The agencies have chosen to use the ANL model as the basis for estimating the cost of large-format lithium-ion batteries for this assessment for several reasons. The model was developed by scientists at ANL who have significant experience in this area. Also, the model uses a bill of materials methodology for developing cost estimates. The ANL model appropriately considers the vehicle application's power and energy requirements, which are two of the fundamental parameters when designing a lithium-ion battery for an HEV, PHEV, or EV. The ANL model can estimate production costs based on user defined inputs for a range of production volumes. The ANL model's cost estimates, while generally lower than the estimates we received from the OEMs, are generally consistent with the supplier cost estimates that EPA received from large-format lithium-ion battery pack manufacturers. This includes data the EPA received during on-site visits in the 2008–2011 time frame. Finally, the agencies chose to use the ANL model because it has been described and presented in the public domain and does not rely upon confidential business information (which could not be reviewed by the public).

²⁴⁷ Nelson, P.A., Santini, D.J., Barnes, J. "Factors Determining the Manufacturing Costs of Lithium-Ion Batteries for PHEVs," 24th World Battery, Hybrid and Fuel Cell Electric Vehicle Symposium and Exposition EVS-24, Stavanger, Norway, May 13–16, 2009 (www.evs24.org).

The potential for future reductions in battery cost and improvements in battery performance relative to current batteries will play a major role in determining the overall cost and performance of future PHEVs and EVs. The U.S. Department of Energy manages major battery-related R&D programs and partnerships, and has done so for many years, including the ANL model utilized in this report. DOE has reviewed the updated BatPaC model and supports its use in this final rule.

As we did in the proposal, we have also estimated the costs (hardware and labor) associated with in-home electric vehicle charging equipment, which we expect to be necessary for PHEVs and EVs, and their installation. New for the final rule are costs associated with an on-vehicle battery discharge system. These battery discharge systems allow the batteries in HEVs, PHEVs and EVs to be discharged safely at the site of an accident prior to moving affected vehicles to storage or repair facilities. Charging equipment and battery discharge system costs are covered in more detail in Chapter 3 of the Joint TSD.

iii. Mass Reduction Costs

The agencies have revised the costs for mass reduction from the MYs 2012–2016 rule and the 2010 Technical Assessment Report. For this rule, the agencies are relying on a wide assortment of sources from the literature as well as data provided from a number of OEMs. Based on this review, the agencies have estimated a new cost curve such that the costs increase as the levels of mass reduction increase. Both agencies have mass reduction feasibility and cost studies that were completed in time for the final rule. However the results from these studies were not employed in the rulemaking analysis because the peer reviews had not been completed and changes to the studies based on the peer reviews were not completed. Both have since been completed. For the primary analyses, both agencies use the same mass reduction costs as were used in the proposal, although they have been updated to 2010 dollars. All of these studies are discussed in Chapter 3 of the Joint TSD as well as in the respective publications. The use of the new cost results from the studies would have made little difference to the final rule cost analysis for two reasons:

(1) The NPRM (+/– 40%) sensitivity analysis conducted by the agencies showed little difference in overall costs due to the change in mass reduction costs;

(2) The agencies project even less mass reduction levels in the final rule compared to the NPRM based on the use of revised fatality coefficients from NHTSA's updated study of the effects on vehicle mass and size on highway safety, which is discussed in section II.G of this preamble.

b. Indirect Costs (IC)

i. Markup Factors To Estimate Indirect Costs

As done in the proposal, the agencies have estimated the indirect costs by applying indirect cost multipliers (ICM) to direct cost estimates. EPA derived ICMs a basis for estimating the impact on indirect costs of individual vehicle technology changes that would result from regulatory actions. EPA derived separate ICMs for low-, medium-, and high-complexity technologies, thus enabling estimates of indirect costs that reflect the variation in research, overhead, and other indirect costs that can occur among different technologies. The agencies also applied ICMs in our MYs 2012–2016 rulemaking.

Prior to the development of the ICM methodology,²⁴⁸ EPA and NHTSA both applied a retail price equivalent (RPE) factor to estimate indirect costs. RPEs are estimated by dividing the total revenue of a manufacturer by the direct manufacturing costs. As such, it includes all forms of indirect costs for a manufacturer and assumes that the ratio applies equally for all technologies. ICMs are based on RPE estimates that are then modified to reflect only those elements of indirect costs that would be expected to change in response to a regulatory-induced technology change. For example, warranty costs would be reflected in both RPE and ICM estimates, while marketing costs might only be reflected in an RPE estimate but not an ICM estimate for a particular technology, if the new regulatory-induced technology change is not one expected to be marketed to consumers. Because ICMs calculated by EPA are for individual technologies, many of which are small in scale, they often reflect a subset of RPE costs; as a result, for low complexity technologies, the RPE is typically higher than the ICM. This is not always the case, as ICM estimates for particularly complex technologies, specifically hybrid technologies (for

²⁴⁸ The ICM methodology was developed by RTI International, under contract to EPA. The results of the RTI report were published in Alex Rogozhin, Michael Gallaher, Gloria Helfand, and Walter McManus, "Using Indirect Cost Multipliers to Estimate the Total Cost of Adding New Technology in the Automobile Industry." *International Journal of Production Economics* 124 (2010): 360–368.

near term ICMs), and plug-in hybrid battery and full electric vehicle technologies (for near term and long term ICMs), reflect higher than average indirect costs, with the resulting ICMs for those technologies equaling or exceeding the averaged RPE for the industry.

There is some level of uncertainty surrounding both the ICM and RPE markup factors. The ICM estimates used in this rule group all technologies into four broad categories in terms of complexity and treat them as if individual technologies within each of the categories (“low”, “medium”, “high1” and “high2” complexity) will have the same ratio of indirect costs to direct costs. This simplification means it is likely that the direct cost for some technologies within a category will be higher and some lower than the estimate for the category in general. More importantly, the ICM estimates have not been validated through a direct accounting of actual indirect costs for individual technologies. Rather, the ICM estimates were developed using adjustment factors developed in two separate occasions: the first, a consensus process, was reported in the RTI report; the second, a modified Delphi method, was conducted separately and reported in an EPA memo.²⁴⁹ Both of these processes were carried out by panels composed of EPA staff members with previous background in the automobile industry; the memberships of the two panels overlapped but were not identical.²⁵⁰ The panels evaluated each element of the industry’s RPE estimates and estimated the degree to which those elements would be expected to change in proportion to changes in direct manufacturing costs. The method used in the RTI report were peer reviewed by three industry experts and subsequently by reviewers for the International Journal of Production Economics.

RPEs themselves are inherently difficult to estimate because the accounting statements of manufacturers do not neatly categorize all cost elements as either direct or indirect costs. Hence, each researcher developing an RPE estimate must apply a certain amount of judgment to the allocation of the costs. Since empirical estimates of ICMs are ultimately derived

from the same data used to measure RPEs, this affects both measures. However, the value of RPE has not been measured for specific technologies, or for groups of specific technologies. Thus applying a single average RPE to any given technology by definition overstates costs for very simple technologies, or understates them for advanced technologies.

In every recent GHG and fuel economy rulemaking proposal, we have requested comment on our ICM factors and whether it is most appropriate to use ICMs or RPEs. We have generally received little to no comment on the issue specifically, other than basic comments that the ICM values are too low. In addition, in the June 2010 NAS report, NAS noted that the under the initial ICMs, no technology would be assumed to have indirect costs as high as the average RPE. NRC found that “RPE factors certainly do vary depending on the complexity of the task of integrating a component into a vehicle system, the extent of the required changes to other components, the novelty of the technology, and other factors. However, until empirical data derived by means of rigorous estimation methods are available, the committee prefers to use average markup factors.”²⁵¹ The committee also stated that “The EPA (Rogozhin et al., 2009), however, has taken the first steps in attempting to analyze this problem in a way that could lead to a practical method of estimating technology-specific markup factors” where “this problem” spoke to the issue of estimating technology-specific markup factors and indirect cost multipliers.²⁵²

As EPA has developed its ICM approach to indirect cost estimation, the agency has publicly discussed and responded to comment on its approach during the MYs 2012–2016 light-duty GHG rule, and also in the more recent heavy-duty GHG rule (see 76 FR 57106) and in the 2010 TAR. The agency published its work in the Journal of Production Economics²⁵³ and has also published a memorandum furthering the development of ICMs.²⁵⁴ As

thinking has matured, we have adjusted our ICM factors such that they are slightly higher and, importantly, we have changed the way in which the factors are applied. For the proposal for this rule, EPA concluded that ICMs are fully developed for regulatory purposes and used these factors in developing the indirect costs presented in the proposal.

The agencies received comments on the approach used to estimate indirect costs in the proposal. One commenter (NADA) argued that the ICM approach was not valid and an RPE approach was the only appropriate approach.²⁵⁵ Further, that commenter argued that the RPE factor should be 2.0 times direct costs rather than the 1.5 factor that is supported by filings to the Securities and Exchange Commission. Another commenter (ICCT) commented positively on the new ICM approach as presented in the proposal, but argued that sensitivity analyses examining the impact of using an RPE should be deleted from the final rule.²⁵⁶ Both agencies have conducted thorough analysis of the comments received on the RPE versus ICM approach. Regarding NADA’s concerns about the accuracy of ICMs, although the agencies recognize that there is uncertainty regarding the impact of indirect costs on vehicle prices, they have retained ICMs for use in the central analysis because it offers advantages of focusing cost estimates on only those costs impacted by a regulatory imposed change, and it provides a disaggregated approach that better differentiates among technologies. The agencies disagree with NADA’s contention that the correct factor to reflect the RPE should be 2.0, and we cite data in Chapter 3 of the joint TSD that demonstrates that the overall RPE should average about 1.5. Regarding ICCT’s contention that NHTSA should delete sensitivity analyses examining the impact of using an RPE, NHTSA rejects this proposal. OMB Circular No. A–94 establishes guidelines for conducting benefit-cost analysis of Federal programs and recommends sensitivity analyses to address uncertainty and imprecision in both underlying data and modeling assumptions. The agencies have addressed uncertainty in separate sensitivity analyses, with NHTSA examining uncertainty stemming from the shift away from the use of the RPE and EPA examining uncertainty around the ICM values. Further analysis of NADA’s comments is summarized in

²⁵¹ NRC, Finding 3–2 at page 3–23.

²⁵⁰ NHTSA staff participated in the development of the process for the second, modified Delphi panel, and reviewed the results as they were developed, but did not serve on the panel.

Chapter 3 of the Joint TSD and in Chapter 7 of NHTSA's FRIA and in EPA's Response to Comments document. NHTSA's full response to ICCT is also presented in chapter 7 of NHTSA's FRIA. For this final rule, each agency is using an ICM approach with ICM factors identical to those used in the proposal. The impact of using an RPE rather than ICMs to calculate indirect costs is examined in sensitivity and uncertainty analyses in chapters 7, 10, and 12 of NHTSA's FRIA where NHTSA shows that even under the higher cost estimates that result using the RPE, the rulemaking is highly cost beneficial. The impact of alternate ICMs is examined in Chapter 3 of EPA's RIA.

Note that our ICM, while identical to those used in the proposal, have changed since the MYs 2012–2016 rule. The first change—increased ICM factors—was done as a result of further thought among EPA and NHTSA that the ICM factors presented in the original RTI report for low and medium complexity technologies should no longer be used and that we should rely solely on the modified-Delphi values for these complexity levels. For that reason, we eliminated the averaging of original RTI values with modified-Delphi values and instead are relying solely on the modified-Delphi values for low and medium complexity technologies. The second change was a re-evaluation by agency staff of the complexity classification of each of the technologies that were not directly examined in the RTI and modified Delphi studies. As a result, more technologies have been classified as medium complexity and fewer as low complexity. The third change—the way the factors are applied—resulted in the warranty portion of the indirect costs being applied as a multiplicative factor (thereby decreasing going forward as direct manufacturing costs decrease due to learning), and the remainder of the indirect costs being applied as an additive factor (thereby remaining constant year-over-year and not being reduced due to learning). This third change has a comparatively large impact on the resultant technology costs and, we believe, more appropriately estimates costs over time. In addition to these changes, a secondary-level change was made as part of this ICM recalculation. That change was to revise upward the RPE level reported in the original RTI report from an original value of 1.46 to 1.5, to reflect the long term average RPE. The original RTI study was based on 2008 data. However, an analysis of historical RPE data indicates that, although there is year to

year variation, the average RPE has remained roughly constant at 1.5. ICMs are applied to future years' data and, therefore, NHTSA and EPA staffs believed that it would be appropriate to base ICMs on the historical average rather than a single year's result. Therefore, ICMs were adjusted to reflect this average level. These changes to the ICMs since the MYs 2012–2016 rule and the methodology are described in greater detail in Chapter 3 of the Joint TSD. NHTSA also has further discussion of ICMs in Chapter 7 of NHTSA's FRIA.

ii. Stranded Capital

Because the production of automotive components is capital-intensive, it is possible for substantial capital investments in manufacturing equipment and facilities to become “stranded” (where their value is lost, or diminished). This would occur when the capital is rendered useless (or less useful) by some factor that forces a major change in vehicle design, plant operations, or manufacturer's product mix, such as a shift in consumer demand for certain vehicle types. It can also be caused by new standards that phase in at a rate too rapid to accommodate planned replacement or redistribution of existing capital to other activities. The lost value of capital equipment is then amortized in some way over production of the new technology components.

It is difficult to quantify accurately any capital stranding associated with new technology phase-ins under the standards in this final rule because of the iterative dynamic involved—that is, the new technology phase-in rate strongly affects the potential for additional cost due to stranded capital, but that additional cost in turn affects the degree and rate of phase-in for other individual competing technologies. In addition, such an analysis is very company-, factory-, and manufacturing process-specific, particularly in regard to finding alternative uses for equipment and facilities. Nevertheless, in order to account for the possibility of stranded capital costs, the agencies asked FEV to perform a separate analysis of potential stranded capital costs associated with rapid phase-in of technologies due to new standards, using data from FEV's primary teardown-based cost analyses.²⁵⁷

²⁵⁷ FEV, Inc., “Potential Stranded Capital Analysis on EPA Light-Duty Technology Cost Analysis”, Contract No. EP-C-07-069 Work Assignment 3–3. November 2011.

The assumptions made in FEV's stranded capital analysis with potential for major impacts on results are:

- All manufacturing equipment was bought brand new when the old technology started production (no carryover of equipment used to make the previous components that the old technology itself replaced).
- 10-year normal production runs: Manufacturing equipment used to make old technology components is straight-line depreciated over a 10-year life.
- Factory managers do not optimize capital equipment phase-outs (that is, they are assumed to routinely repair and replace equipment without regard to whether or not it will soon be scrapped due to adoption of new vehicle technology).
- Estimated stranded capital is amortized over 5 years of annual production at 450,000 units (of the new technology components). This annual production is identical to that assumed in FEV's primary teardown-based cost analyses. The 5-year recovery period is chosen to help ensure a conservative analysis; the actual recovery would of course vary greatly with market conditions.

The stranded capital analysis was performed for three transmission technology scenarios, two engine technology scenarios, and one hybrid technology scenario. The methodology used by EPA in applying the results to the technology costs is described in Chapter 3.8.7 and Chapter 5.1 of EPA's RIA. The methodology used by NHTSA in applying the results to the technology costs is described in NHTSA's RIA section V.

In their written comments on the proposal, the Center for Biological Diversity and the International Council on Clean Transportation argued that the long lead times being provided for the phase-in of new standards, stretching out as they do over two complete redesign cycles, will virtually eliminate any capital stranding, making it inappropriate to carry over what they consider to be a “relic” from shorter-term rulemakings. As discussed above, it is difficult to quantify accurately any capital stranding associated with new technology phase-ins, especially given the projected and unprecedented deployment of technologies in the rulemaking timeframe. The FEV analysis attempted to define the possible stranded capital costs, for a select set of technologies, using the above set of assumptions. Since the direct manufacturing costs developed by FEV assumed a 10 year production life (*i.e.*, capital costs amortized over 10 years) the agencies applied the FEV

derived stranded capital costs whenever technologies were replaced prior to being utilized for the full 10 years. The other option would be to assume a 5 year product life (*i.e.*, capital costs amortized over 5 years), which would have increased the direct manufacturing costs. It seems only reasonable to account for stranded capital costs in the instances where the fleet modeling performed by the agencies replaced technologies before the capital costs were fully amortized. The agencies did

not derive or apply stranded capital costs to all technologies only the ones analyzed by FEV. While there is uncertainty about the possible stranded capital costs (*i.e.*, understated or overstated), their impact would not call into question the overall results of our cost analysis or otherwise affect the stringency of the standards, since costs of stranded capital are a relatively minor component of the total estimated costs of the rules.

c. Cost Adjustment to 2010 Dollars

This simple change from the earlier analyses and from the proposal is to update any costs presented in earlier analyses to 2010 dollars using the GDP price deflator as reported by the Bureau of Economic Analysis on January 27, 2011. The factors used to update costs from 2007, 2008 and 2009 dollars to 2010 dollars are shown below.

TABLE II-17—GDP PRICE DEFLATORS USED IN THIS FINAL RULE

	2007	2008	2009	2010
Price Index for Gross Domestic Product	106.2	108.6	109.7	111.0
Factor applied to convert to 2010 dollars	1.04	1.02	1.01	1.00

Source: Bureau of Economic Analysis, Table 1.1.4. Price Indexes for Gross Domestic Product, downloaded 2/9/2012, last revised 1/27/2012.

d. Cost Effects Due to Learning

The agencies have not changed the approach to manufacturer learning since the proposal. For many of the technologies considered in this rulemaking, the agencies expect that the industry should be able to realize reductions in their costs over time as a result of “learning effects,” that is, the fact that as manufacturers gain experience in production, they are able to reduce the cost of production in a variety of ways. For this rule, the agencies continue to apply learning effects in the same way as we did in both the MYs 2012–2016 final rule and in the 2010 TAR. However, in the proposal, we employed some new terminology in an effort to eliminate some confusion that existed with our old terminology. (This new terminology was described in the recent heavy-duty GHG final rule (see 76 FR 57320)). Our old terminology suggested we were accounting for two completely different learning effects—one based on volume production and the other based on time. This was not the case since, in fact, we were actually relying on just one learning phenomenon, that being the learning-by-doing phenomenon that results from cumulative production volumes.

As a result, the agencies have also considered the impacts of manufacturer learning on the technology cost estimates by reflecting the phenomenon of volume-based learning curve cost reductions in our modeling using two algorithms depending on where in the learning cycle (*i.e.*, on what portion of the learning curve) we consider a technology to be—“steep” portion of the curve for newer technologies and “flat” portion of the curve for more mature

technologies. The observed phenomenon in the economic literature which supports manufacturer learning cost reductions are based on reductions in costs as production volumes increase with the highest absolute cost reduction occurring with the first doubling of production. The agencies use the terminology “steep” and “flat” portion of the curve to distinguish among newer technologies and more mature technologies, respectively, and how learning cost reductions are applied in cost analyses.

Learning impacts have been considered on most but not all of the technologies expected to be used because some of the expected technologies are already used rather widely in the industry and, presumably, quantifiable learning impacts have already occurred. The agencies have applied the steep learning algorithm for only a handful of technologies considered to be new or emerging technologies such as PHEV and EV batteries which are experiencing heavy development and, presumably, rapid cost declines in coming years. For most technologies, the agencies have considered them to be more established and, hence, the agencies have applied the lower flat learning algorithm. For more discussion of the learning approach and the technologies to which each type of learning has been applied the reader is directed to Chapter 3 of the Joint TSD. NHTSA has further discussion in Chapter 7 of the NHTSA FRIA. Note that, since the agencies had to project how learning will occur with new technologies over a long period of time, we request comments on the assumptions of learning costs and methodology. In particular, we are interested in input on the assumptions

for advanced 27-bar BMEP cooled exhaust gas recirculation (EGR) engines, which are currently still in the experimental stage and not expected to be available in volume production until 2017. For our analysis, we have based estimates of the costs of this engine on current (or soon to be current) production technologies (*e.g.*, gasoline direct injection fuel systems, engine downsizing, cooled EGR, 18-bar BMEP capable turbochargers), and assumed that, since learning (and the associated cost reductions) begins in 2012 for them that it also does for the similar technologies used in 27-bar BMEP engines.

The agencies did not receive comments on the issue of manufacturer learning.

3. How did the agencies determine the effectiveness of each of these technologies?

For this final rule, EPA has conducted another peer reviewed study with the global engineering consulting firm, Ricardo, Inc., adding to and refining the results of the 2007 study, consistent with a longer-term outlook through model years MYs 2017–2025. The 2007 study was a detailed, peer reviewed vehicle simulation project to quantify the effectiveness of a multitude of technologies for the MYs 2012–2016 rule (as well as the 2010 NOI) published in 2008. The extent of the new study was vast, including hundreds of thousands of vehicle simulation runs. The results were, in turn, employed to calibrate and update EPA’s lumped parameter model, which is used to quantify the synergies and dis-synergies associated with combining technologies together for the purposes of generating

inputs for the agencies respective OMEGA and CAFE modeling.

Additionally, there were a number of technologies that Ricardo did not model explicitly. For these, the agencies relied on a variety of sources in the literature. A few of the values are identical to those presented in the MYs 2012–2016 final rule, while others were updated based on the newer version of the lumped parameter model. More details on the Ricardo simulation, lumped parameter model, as well as the effectiveness for supplemental technologies are described in Chapter 3 of the Joint TSD.

The agencies note that the effectiveness values estimated for the technologies considered in the modeling analyses may represent average values, and do not reflect the virtually unlimited spectrum of possible values that could result from adding the technology to different vehicles. For example, while the agencies have estimated an effectiveness of 0.6 to 0.8 percent for low-friction lubricants, depending on the vehicle class, each vehicle could have a unique effectiveness estimate depending on the baseline vehicle's oil viscosity rating. Similarly, the reduction in rolling resistance (and thus the improvement in fuel economy and the reduction in CO₂ emissions) due to the application of low rolling resistance tires depends not only on the unique characteristics of the tires originally on the vehicle, but on the unique characteristics of the tires being applied, characteristics that must be balanced between fuel efficiency, safety, and performance. Aerodynamic drag reduction is much the same—it can improve fuel economy and reduce CO₂ emissions, but it is also highly dependent on vehicle-specific functional objectives. For purposes of this rule, NHTSA and EPA believe that employing average values for technology effectiveness estimates, as adjusted depending on vehicle class, is an appropriate way of recognizing the potential variation in the specific benefits that individual manufacturers (and individual vehicles) might obtain from adding a fuel-saving technology.

As discussed in the proposal, the U.S. D.O.T. Volpe Center entered into a contract with Argonne National Laboratory (ANL) to provide full vehicle simulation modeling support for this MYs 2017–2025 rulemaking. While modeling was not complete in time for use in the NPRM, the ANL results were available for the final rule and were used to define the effectiveness of mild hybrids for both agencies, and NHTSA used the results to update the effectiveness of advanced transmission

technologies coupled with naturally-aspirated engines for the CAFE analysis, as discussed in the Joint TSD and more fully in NHTSA's RIA. This simulation modeling was accomplished using ANL's full vehicle simulation tool called "Autonomie," which is the successor to ANL's Powertrain System Analysis Toolkit (PSAT) simulation tool, and that includes sophisticated models for advanced vehicle technologies. The ANL simulation modeling process and results are documented in multiple reports and are peer reviewed. Both the ANL reports and peer review report can be found in NHTSA's docket.²⁵⁸

4. How did the agencies consider real-world limits when defining the rate at which technologies can be deployed?

a. Refresh and Redesign Schedules

During MYs 2017–2025 manufacturers are expected to go through the normal automotive business cycle of redesigning and upgrading their light-duty vehicle products, and in some cases introducing entirely new vehicles not in the market today. The MYs 2017–2025 standards timeframe allows manufacturers the time needed to incorporate GHG reduction and fuel-saving technologies into their normal business cycle while considering the requirements of the MYs 2012–2016 standards. This is important because it has the potential to avoid the much higher costs that could occur if manufacturers need to add or change technology at times other than their scheduled vehicle redesigns. This time period also provides manufacturers the opportunity to plan for compliance using a multi-year time frame, again consistent with normal business practice. Over these 9 model years, and the 5 prior model years that make up the MYs 2012–2016 standards, there will be an opportunity for manufacturers to evaluate, presumably, every one of their vehicle platforms and models and add technology in a cost effective way to control GHG emissions and improve fuel economy. This includes all the technologies considered here and the redesign of the air conditioner systems in ways that will further reduce GHG emissions and improve fuel economy.

Because of the complexities of the automobile manufacturing process, manufacturers are generally only able to add new technologies to vehicles on a specific schedule; just because a technology exists in the marketplace or is made available, does not mean that it is immediately available for

applications on all of a manufacturer's vehicles. In the automobile industry there are two terms that describe when technology changes to vehicles occur: redesign and refresh (i.e., freshening). Vehicle redesign usually refers to significant changes to a vehicle's appearance, shape, dimensions, and powertrain. Redesign is traditionally associated with the introduction of "new" vehicles into the market, often characterized as the "next generation" of a vehicle, or a new platform. Across the industry, redesign of models generally takes place about every 5 years. However, while 5 years is a typical design period, there are many instances where redesign cycles can be longer or shorter. For example, it has generally been the case that pickup trucks and full size vans have longer redesign cycles (*e.g.*, 6 to 7 years), while high-volume cars have shorter redesign cycles in order to remain competitive in the market. There are many other factors that can also affect redesign such as availability of capital and engineering resources and the extent of platform and component sharing between models, or even manufacturers.

We have a more detailed discussion in Chapter 3.4 of the joint TSD that describes how refresh and redesign cycles play into the modeling each agency has done in support of the final standards.

b. Vehicle Phase-In Caps

GHG-reducing and fuel-saving technologies for vehicle applications vary widely in function, cost, effectiveness and availability. Some of these attributes, like cost and availability vary from year to year. New technologies often take several years to become available across the entire market. The agencies use phase-in caps to manage the maximum rate that the CAFE and OMEGA models can apply new technologies.

Phase-in caps are intended to function as a proxy for a number of real-world limitations in deploying new technologies in the auto industry. These limitations can include but are not limited to, engineering resources at the OEM or supplier level, restrictions on intellectual property that limit deployment, and/or limitations in material or component supply as a market for a new technology develops. Without phase-in caps, the models may apply technologies at rates that are not representative of what the industry is actually capable of producing, which would suggest that more stringent standards might be feasible than actually would be.

²⁵⁸ Docket No: NHTSA–2010–0131.

EPA applies the caps on an OEM vehicle platform basis for most technologies. For a given technology with a cap of x%, this means that x% of a vehicle platform can receive that technology. On a fleet average basis, since all vehicle platforms can receive x% of this technology, x% of a manufacturer's fleet can also receive that technology. EVs and PHEVs are an exception to this rule as the agencies limit the availability of these technologies to some subclasses. Unlike other technologies, in order to maintain utility, EPA only allows non-towing vehicle types to be electrified in the OMEGA model. As a result, the PHEV and EV cap was applied so that the average manufacturer could produce to the cap levels. As would be expected, manufacturers that make more non-towing vehicles can have a higher fraction of their fleet converted to EVs and PHEVs, while those that make fewer non-towing vehicles have a lower potential maximum limit on EV and PHEV production.

NHTSA applies phase-in caps in addition to refresh/redesign cycles used in the CAFE model, which constrain the rate of technology application at the vehicle level so as to ensure a period of stability following any modeled technology applications. Unlike vehicle-level cycle settings, phase-in caps, defined on a percent per year basis, constrain technology application at the OEM level. As discussed above phase-

in caps are intended to reflect a manufacturer's overall resource capacity available for implementing new technologies (such as engineering and development personnel and financial resources) thereby ensuring that resource capacity is accounted for in the modeling process. At a high level, phase-in caps and refresh/redesign cycles work in conjunction with one another to avoid the CAFE modeling process out-pacing an OEM's limited pool of available resources during the rulemaking time frame, especially in years where many models may be scheduled for refresh or redesign. This helps to ensure technological feasibility and economic practicability in determining the stringency of the standards.

We have a more detailed discussion of phase-in caps in Chapter 3.4 of the joint TSD.

5. Maintenance and Repair Costs Associated With New Technologies

In the proposal, we requested comment on maintenance, repair, and other operating-costs and whether these might increase or decrease with the new technologies. (See 76 FR 74925) We received comments on this topic from NADA. These comments stated that the agencies should include maintenance and repair costs in estimates of total cost of ownership (i.e., in our payback analyses).²⁵⁹ NADA proffered their Web site²⁶⁰ as a place to find information on

operating costs that might be used in our final analyses. This Web site tool is meant to help consumers quantify the cost of ownership of a new vehicle. The tool includes estimates for depreciation, fees, financing, insurance, fuel maintenance, opportunity costs and repairs for the first five years of ownership. The agencies acknowledge that the tool may be useful for consumers; however, there is no information provided on how these estimates were determined. Without documentation of the basis for estimates, the Web site information is of limited use in this rulemaking where the agencies document the source and basis for each factual assertion. There are also evident substantive anomalies in the Web site information.²⁶¹ For these reasons, the agencies have performed an independent analysis to quantify maintenance costs.

For the first time in CAFE and GHG rulemaking, both agencies now include maintenance costs in their benefit-cost analyses and in their respective payback analyses. This analysis is presented in Chapter 3.6 of the joint TSD and the maintenance intervals and costs per maintenance event used by both agencies are summarized in Table II-18. For information on how each agency has folded the maintenance costs into their respective final analyses, please refer to each agency's respective RIA (Chapter 5 of EPA's RIA, Chapter VIII of NHTSA's FRIA).

TABLE II-18—MAINTENANCE EVENT COSTS & INTERVALS
[2010 dollars]

New technology	Reference case	Cost per maintenance event	Maintenance interval (mile)
Low rolling resistance tires level 1	Standard tires	\$6.44	40,000
Low rolling resistance tires level 2	Standard tires	43.52	40,000
Diesel fuel filter replacement	Gasoline vehicle	49.25	20,000
EV oil change	Gasoline vehicle	-38.67	7,500
EV air filter replacement	Gasoline vehicle	-28.60	30,000
EV engine coolant replacement	Gasoline vehicle	-59.00	100,000
EV spark plug replacement	Gasoline vehicle	-83.00	105,000
EV/PHEV battery coolant replacement	Gasoline vehicle	117.00	150,000
EV battery health check	Gasoline vehicle	38.67	15,000

Note: Negative values represent savings due to the EV not needing the maintenance required of the gasoline vehicle; EPA applied a battery coolant replacement cost to PHEVs and EVs, while NHTSA applied it to EVs only.

E. Joint Economic and Other Assumptions

The agencies' analysis of CAFE and GHG standards for the model years covered by this final rule rely on a range of forecast information, estimates of

economic variables, and input parameters. This section briefly describes the sources of the agencies' estimates of each of these values. These values play a significant role in

assessing the benefits of both CAFE and GHG standards.

In reviewing these variables and the agencies' estimates of their values for purposes of this final rule, NHTSA and EPA considered comments received in

²⁵⁹ See NADA (EPA-HQ-OAR-2010-0799-0639, p.10).

²⁶⁰ <http://www.nadaguides.com/Cars/Cost-to-Own>.

²⁶¹ For example, comparing the 2012 Hyundai Sonata showed the same cost for fuel (\$11,024) regardless of whether it is a hybrid option or not. The HEV fuel economy rating is 35/40 mpg City/Highway for the HEV and 2.4L non HEV rating is

24/35. Another example is the 2012 Ford Fusion SEL: the front wheel drive and the all-wheel drive versions have identical fuel cost despite having different fuel economies.

response to the proposed rule, and also reviewed newly available literature. For this final rule, we made several changes to the economic assumptions used in our proposed rule, including revised technology costs to reflect more recently available data; updated values of the cost of owning a vehicle based on new data; updated fuel price and transportation demand forecasts that reflect the Annual Energy Outlook (AEO) 2012 Early Release; and changes to vehicle miles travelled (VMT) schedules, survival rates, and projection methods. The final values summarized below are discussed in greater detail in Chapter 4 of the joint TSD and elsewhere in the preamble and in the agencies' respective RIAs.

• *Costs of fuel economy-improving technologies*—These inputs are discussed in summary form in Section II.D above and in more detail in the agencies' respective sections of this preamble, in Chapter 3 of the joint TSD, and in the agencies' respective RIAs. The direct manufacturing cost estimates for fuel economy improving and GHG emissions reducing technologies that are used in this analysis are intended to represent manufacturers' direct costs for high-volume production of vehicles equipped with these technologies in the year for which we state the cost is considered "valid." Technology direct manufacturing cost estimates are the same as those used to analyze the proposed rule, with the exception of those for hybrid electric vehicles, plug-in hybrid electric vehicle (PHEV) and electric vehicle (EV) battery costs which have been updated using an updated version of Argonne National Laboratory's (ANL's) BatPaC model.²⁶² Indirect costs are accounted for by applying near-term indirect cost multipliers ranging from 1.24 to 1.77 to the estimates of vehicle manufacturers' direct costs for producing or acquiring each technology, depending on the complexity of the technology and the time frame over which costs are estimated. These values are reduced to 1.19 to 1.50 over the long run as some aspects of indirect costs decline. As explained at proposal, the indirect cost markup factors have been revised from the MYs 2012–2016 rulemaking and the Interim Joint TAR to reflect the agencies' current thinking regarding a number of

issues. The final rules use the same factors the agencies used at proposal. These factors are discussed in detail in Section II.D.2 of this preamble and in Chapter 3 of the joint TSD, where we also discuss comments received on the proposal and our response to them. Details of the agencies' technology cost assumptions and how they were derived can be found in Chapter 3 of the joint TSD. We did not receive specific comments on our estimated technology direct manufacturing costs.

• *Potential opportunity costs of improved fuel economy*—This issue addresses the possibility that achieving the fuel economy improvements required by alternative CAFE or GHG standards would require manufacturers to compromise the performance, carrying capacity, safety, or comfort of their vehicle models. If this were the case, the resulting sacrifice in the value of these attributes to consumers would represent an additional cost of achieving the required improvements, and thus of manufacturers' compliance with stricter standards. Currently the agencies assume that these vehicle attributes will not change as a result of these rules. Section II.C above and Chapter 2 of the joint TSD describe how the agencies carefully selected an attribute-based standard to minimize manufacturers' incentive to reduce vehicle capabilities. While manufacturers may choose to do this for other reasons, the agencies continue to believe that the rules themselves will not result in such changes. Importantly, EPA and NHTSA have sought to include the cost of maintaining these attributes as part of the cost and effectiveness estimates for technologies that are included in the analysis for this final rule. For example, downsized engines are assumed to be turbocharged, so that they provide the same performance and utility even though they are smaller, and the costs of turbocharging and downsizing are included in the agencies' cost estimates.²⁶³ The two instances where

the rules might result in loss of vehicle utility, as described in Section III.D.3, III.H.1.b, and Section IV.G, involve cases where vehicles are converted to hybrid or full electric vehicles (EVs) and some buyers may experience a loss of welfare due to the reduced range of driving on a single charge compared to the range of an otherwise similar gasoline vehicle. However, in such cases, we believe that sufficient options would exist for consumers concerned about the possible loss of this utility (e.g., they could purchase the non-hybridized version of the vehicle or not buy an EV) that the agencies do not attribute a welfare loss for these vehicles resulting from the final rules. Though some comments raised concerns over consumer acceptance of EVs, other comments expressed optimism that consumer interest in EVs would be sufficient for the low levels of adoption projected in these rules to be used for compliance with the standards. The agencies maintain their assumption that purchasers of EVs will not incur welfare losses given that they will have sought out vehicles with these properties. Moreover, given the modest levels of EV penetration which the agencies project as a compliance strategy for manufacturers, the agencies likewise do not project any general loss of societal welfare since many other compliance alternatives remain available to manufacturers and thus to vehicle purchasers.

Consumer vehicle choice modeling is a method to understand and predict what vehicles consumers might buy. In principle these models can be used to estimate the effects of these rules on vehicle sales and fleet mix. In practice, though, past analyses using such models have not produced consistent estimates of how buyers might respond to improved fuel economy, and it is difficult to decide whether one data source, model specification, or estimation procedure is clearly preferable over another. Thus, for these final rules, the agencies continue to use forecasts of total industry sales, the share of total sales accounted for by passenger cars, and the market shares of individual models for all years between 2010 and 2025 that do not vary among regulatory alternatives.

The agencies requested comment on how to estimate explicitly the changes in vehicle buyers' choices and welfare from the combination of higher prices for new vehicle models, increases in their fuel economy, and any accompanying changes in vehicle attributes such as performance, passenger- and cargo-carrying capacity, or other dimensions of utility. Some

²⁶² Technology direct manufacturing cost estimates for most technologies are fundamentally unchanged from those used by the agencies in the MYs 2012–2016 final rule, the heavy-duty truck rule (to the extent relevant), and TAR, although the agencies have revised costs for mass reduction, transmissions, and a few other technologies from those used in these earlier regulatory actions and analyses.

²⁶³ The modeling work underlying the agencies' estimates of technology effectiveness build in the need to maintain vehicle performance (utility). See chapter 3.2 of the Joint TSD for details behind these effectiveness estimates. Our technology costs include all costs of implementing the technologies required to achieve these effectiveness values while maintaining performance and other utility. Thus, the costs of maintaining performance and other utility are an inherent element of the agencies' cost estimation process. The agencies consequently believe it reasonable to conclude that there will be no loss of vehicle utility as a direct result of these final rules. The agencies also do not believe that adding fuel-saving technology should preclude future improvements in performance, safety, or other attributes, though it is possible that the costs of these additions may be affected by the presence of fuel-saving technology.

commenters considered vehicle choice models too uncertain for use in this rulemaking, while another requested that we conduct explicit consumer vehicle choice modeling (although without providing a justification as to which models to use or why any particular modeling approach is likely to generate superior estimates). Because the agencies have not yet developed sufficient confidence in their vehicle choice modeling efforts, we believe it is premature to use them in this rulemaking. The agencies have continued to explore the possible use of these models, as discussed in Sections III.H.1.a and IV.G.6, below.

- *The on-road fuel economy “gap”*—Actual fuel economy levels achieved by light-duty vehicles in on-road driving fall somewhat short of their levels measured under the laboratory test conditions used by EPA to establish compliance with CAFE and GHG standards (and which is mandated by statute for measuring compliance with CAFE passenger car standards)²⁶⁴. The modeling approach in this final rule is consistent with the proposal, and also follows the MYs 2012–2016 final rule and the Interim Joint TAR. In calculating benefits of the program, the agencies estimate that actual on-road fuel economy attained by light-duty models that operate on liquid fuels will be 20 percent lower than their fuel economy ratings as measured for purposes of CAFE fuel economy testing. For example, if the measured CAFE fuel economy value of a light truck is 20 mpg, the on-road fuel economy actually achieved by a typical driver of that vehicle is expected to be 16 mpg (20*.80).²⁶⁵ Based on manufacturer confidential business information, as well as data derived from the 2006 EPA fuel economy label rule, the agencies use a 30 percent gap for consumption of wall electricity for electric vehicles and plug-in hybrid electric vehicles.²⁶⁶ The U.S. Coalition for Advanced Diesel Cars suggested that the on-road gap used in

the proposal was overly conservative at 20%, and that advanced technology vehicles may have on-road gaps that are larger than current vehicles. The agencies recognize the potential for future changes in driver behavior or vehicle technology to change the on-road gap to be either larger or smaller. The agencies continue to use the same estimates of the on-road gap as in the proposed rule for estimating fuel savings and other impacts, and will monitor the EPA fuel economy database as these future model year vehicles enter the fleet.

- *Fuel prices and the value of saving fuel*—Projected future fuel prices are a critical input into the preliminary economic analysis of alternative standards, because they determine the value of fuel savings both to new vehicle buyers and to society, and fuel savings account for the majority of the rule’s estimated benefits. For these rules, the agencies are using the most recent fuel price projections from the U.S. Energy Information Administration’s (EIA) Annual Energy Outlook (AEO) 2012 Early Release reference case. The projections of fuel prices reported in EIA’s AEO 2012 Early Release extend through 2035. Fuel prices beyond the time frame of AEO’s forecast were estimated by applying the average growth rate for the years 2017–2035 for each year after 2035. This is the same general methodology used by the agencies in the analysis for the proposed rule, as well as in the MYs 2012–2016 rulemaking, in the heavy duty truck and engine rule (76 FR 57106), and in the Interim Joint TAR. For example, the AEO 2012 Early Release projections of gasoline fuel prices (in constant 2010\$) are \$3.63 per gallon in 2017, \$3.76 in 2020, and \$4.09 in 2035. Extrapolating as described above, retail gasoline prices are projected to reach \$4.57 per gallon in 2050 (measured in constant 2010 dollars). Several commenters (Volkswagen, Consumer Federation of America, Environmental Defense Fund, Consumer’s Union, National Resources Defense Council, Union of Concerned Scientists) stated that the EIA AEO 2011 future fuel price projections used in the proposal were similar to current prices, and thus were modest, or lower than expected. The agencies note that if a higher fuel prices projection were used, it would increase the value of the fuel savings from the rule, while a lower fuel price projection would decrease the value of the fuel savings from the rule. Another commenter noted the uncertainty projecting automotive fuel prices during this extended time period (National Auto Dealers’ Association). As

discussed in Chapter 4 of the Joint TSD, while the agencies believe that EIA’s AEO reference case generally represents a reasonable forecast of future fuel prices for use in our analysis of the benefits of this rule, we recognize that there is a great deal of uncertainty in future fuel prices. However, given that no commenters offered alternative sources for fuel price projections, and the agencies have found no better source since the NPRM, in this final rulemaking the agencies continue to rely upon EIA projections of future gasoline and diesel prices.

- *Consumer cost of ownership and payback period*—The agencies provide, in Sections III.H.3 and IV.G.4, estimates of the impacts of these rules on the net costs of owning new vehicles, as well as the time period necessary for the fuel savings to outweigh the expected increase in prices for the new vehicles (i.e., the payback period). These analyses focus specifically on the buyers’ perspectives, and therefore take into account the effect of the rule on insurance premiums, sales tax, and finance charges. From a social perspective, these are transfers of money from one group to another, rather than net gains or losses, and thus have no net effect on the net benefits of the rules. For instance, a sales tax is a cost to a vehicle buyer, but the money does not represent economic resources that are consumed; instead, it goes to finance state and local government activities, such as schools or roads. The role of finance charges is to spread payments over time, taking into account the opportunity cost of financing; this is just a reversal of the process of discounting, and thus does not affect the present value of the vehicle cost. Though the net benefits analysis is not affected by these payments, from the buyers’ viewpoint, these are additional costs. In the NPRM, EPA included these factors in its payback period analysis and asked for comment on them; no comments were received. The agencies have updated these values for these final rules; the details of the estimation of these factors are found in TSD Chapter 4.2.13. Though the agencies use these common values for their respective cost of ownership and payback period analyses, each agency’s estimates for the cost of ownership and the payback period differ due to somewhat different estimates for vehicle cost increases and fuel savings. Some comments encouraged our inclusion of maintenance and repair costs in these calculations and the agencies have responded by including maintenance costs in that analysis of the final rule.

²⁶⁶ See 71 FR 77887, and U.S. Environmental Protection Agency, Final Technical Support Document, Fuel Economy Labeling of Motor Vehicle Revisions to Improve Calculation of Fuel Economy Estimates, EPA420-R-06-017, December 2006 for general background on the analysis. See also EPA’s Response to Comments (EPA-420-R-11-005, Docket No. EPA-HQ-OAR-2010-0799-1113) to the 2011 labeling rule, page 189, first paragraph, specifically the discussion of the derived five cycle equation and the non-linear adjustment with increasing MPG.

The potential effects of the rule on maintenance and repair costs are discussed in Sections III.H.2, IV.C.2, and Chapter 3.6 of the Joint TSD. When a new vehicle is destroyed in an accident, the higher costs of the replacement vehicle are already accounted for in the technology costs of new vehicles sold, since some of these are purchased to replace vehicles destroyed in accidents.²⁶⁷

- *Vehicle sales assumptions*—The first step in estimating lifetime fuel consumption by vehicles produced during a model year is to calculate the number of vehicles that are expected to be produced and sold. The agencies relied on the AEO 2011 and AEO 2012 Early Release Reference Cases for forecasts of total vehicle sales, while the baseline market forecast developed by the agencies (discussed in Section II.B and in Chapter 1 of the TSD) divided total projected sales into sales of cars and light trucks.

- *Vehicle lifetimes and survival rates*—As in the analysis for the proposed rule (and as in the MYs 2012–2016 final rule and Interim Joint TAR), we apply updated values of age-specific survival rates for cars and light trucks to the adjusted forecasts of passenger car and light truck sales to determine the number of these vehicles expected to remain in use during each year of their lifetimes. Since the proposal, these values were updated using the same methodology with which the original estimates were developed, together with recent vehicle registration data obtained from R.L. Polk. No comments were received on the vehicle lifetime and survival rates in the proposal.

- *Vehicle miles traveled (VMT)*—We calculated the total number of miles that cars and light trucks produced in each model year will be driven during each year of their lifetimes using estimates of annual vehicle use by age tabulated from the Federal Highway Administration's 2009 National Household Travel Survey (NHTS).²⁶⁸ In order to insure that the resulting

mileage schedules imply reasonable estimates of future growth in *total* car and light truck use, we calculated the rate of future growth in annual mileage at each age that would be necessary for total car and light truck travel to meet the levels projected in the AEO 2012 Early Release Reference Case. The growth rate in average annual car and light truck use produced by this calculation is approximately 0.6 percent per year, and is applied in the agencies' modeling through 2050. We applied this growth rate to the mileage figures derived from the 2009 NHTS to estimate annual mileage by vehicle age during each year of the expected lifetimes of MY 2017–2025 vehicles. A generally similar approach to estimating future vehicle use was used in the MYs 2012–2016 final rules and Interim Joint TAR, but the future growth rates in average vehicle use have been revised for this rule. No substantive technical comments were received on this approach.

- *Accounting for the fuel economy rebound effect*—The fuel economy rebound effect refers to the increase in vehicle use (VMT) that results if an increase in fuel economy lowers the cost of driving. The agencies are continuing to use a 10 percent fuel economy rebound effect, consistent with the proposal, in their analyses of fuel savings and other benefits from more stringent standards. This value is also consistent with that used in the MYs 2012–2016 light-duty vehicle rulemaking and the Interim Joint TAR. That is, we assume that a 10 percent decrease in fuel cost per mile resulting from our standards would result in a 1 percent increase in the annual number of miles driven at each age over a vehicle's lifetime. We received comments recommending values both higher and lower than our proposed value of 10 percent for the fuel economy rebound effect, as well as comments maintaining that there were indirect rebound effects for which the agencies should account. The agencies discuss comments on this topic in more detail in sections III.H.4 and IV.C.3 of the preamble. The agencies do not regard any of these comments as providing new data or analysis that justify revising the 10 percent value. In Chapter 4 of the joint TSD, we provide a detailed explanation of the basis for our fuel economy rebound estimate, including a summary of new literature published since the MYs 2012–2016 rulemaking that lends further support to the 10 percent rebound estimate. We also refer the reader to Chapters X and XII of NHTSA's RIA and Chapter 4 of EPA's

RIA for sensitivity and uncertainty analyses of alternative fuel economy rebound assumptions.

- *Benefits from increased vehicle use*—The increase in vehicle use from the rebound effect results from vehicle buyers' decisions to make more frequent trips or travel farther to reach more desirable destinations. This additional travel provides benefits to drivers and their passengers by improving their access to social and economic opportunities away from home. The analysis estimates the economic benefits from increased rebound-effect driving as the sum of the fuel costs they incur during that additional travel, plus the consumer surplus drivers receive from the improved accessibility their travel provides. No comments were received on this particular issue. As in the analysis for the proposed rule (and as in the MYs 2012–2016 final rule) we estimate the economic value of this consumer surplus using the conventional approximation, which is one half of the product of the decline in operating costs per vehicle-mile and the resulting increase in the annual number of miles driven.

- *Added costs from congestion, accidents, and noise*—Although it provides benefits to drivers as described above, increased vehicle use associated with the fuel economy rebound effect also contributes to increased traffic congestion, motor vehicle accidents, and highway noise. Depending on how the additional travel is distributed over the day and where it takes place, additional vehicle use can contribute to traffic congestion and delays by increasing the number of vehicles using facilities that are already heavily traveled. These added delays impose higher costs on drivers and other vehicle occupants in the form of increased travel time and operating expenses. At the same time, this additional travel also increases costs associated with traffic accidents and vehicle noise. No comments were received on the specific economic assumptions employed in the proposal. The agencies are using the same methodology as used in the analysis for the proposed rule, relying on estimates of congestion, accident, and noise costs imposed by automobiles and light trucks developed by the Federal Highway Administration to estimate these increased external costs caused by added driving.²⁶⁹ This method is also

²⁶⁷ The agencies do not have information to estimate the effect of the rule on repair costs for vehicles that are damaged but not destroyed. Some repairs, such as minor dents, may be unaffected by changes in vehicles; others may be more or less expensive. Insurance premiums in principle could provide insight into the costs of damages associated with more expensive vehicles, but, because insurance premiums include costs for destroyed vehicles, which are already implicitly covered in the sales estimates, it is not possible to separately estimate the costs for repairs from insurance data. See Joint TSD Chapter 3.6 for further discussion of this issue.

²⁶⁸ For a description of the Survey, see http://www.bts.gov/programs/national_household_travel_survey/ (last accessed Sept. 9, 2011).

²⁶⁹ These estimates were developed by FHWA for use in its 1997 *Federal Highway Cost Allocation Study*; <http://www.fhwa.dot.gov/policy/hcas/final/index.htm> (last accessed July 8, 2012).

consistent with the MYs 2012–2016 final rules.

- *Petroleum consumption and import externalities*—U.S. consumption of imported petroleum products imposes costs on the domestic economy that are not reflected in the market price for crude oil, or in the prices paid by consumers of petroleum products such as gasoline (often referred to as “energy security” costs). These costs include (1) higher prices for petroleum products resulting from the effect of increased U.S. demand for imported oil on the world oil price (the “monopsony effect”); (2) the expected costs associated with the risk of disruptions to the U.S. economy caused by sudden reductions in the supply of imported oil to the U.S. (often referred to as “macroeconomic disruption and adjustment costs”); and (3) expenses for maintaining a U.S. military presence to secure imported oil supplies from unstable regions, and for maintaining the strategic petroleum reserve (SPR) to cushion the U.S. economy against the effects of oil supply disruptions (i.e., “military/SPR costs”).²⁷⁰ While the agencies received a number of comments regarding these energy security costs, particularly the treatment of military costs, we continue to use the same methodology from the proposal. Further discussion of these comments and the agencies’ responses can be found in Sections III.H.8 and IV.3.

- *Monopsony Component*—The energy security analysis conducted for this rule estimates that the world price of oil will fall modestly in response to lower U.S. demand for refined fuel.^{271,272} Although the reduction in the global price of crude oil and refined petroleum products due to decreased demand for fuel in the U.S. resulting from this rule represents a benefit to the U.S. economy, it simultaneously represents an economic loss to sellers of crude petroleum and refined products from other countries. Recognizing the

redistributive nature of this “monopsony effect” when viewed from a global perspective (which is consistent with the agencies’ use of a global estimate for the social cost of carbon to value reductions in CO₂ emissions), the energy security benefits estimated to result from this program exclude the value of this monopsony effect.

- *Macroeconomic Disruption Component*: In contrast to monopsony costs, the macroeconomic disruption and adjustment costs that arise from sudden reductions in the supply of imported oil to the U.S. do not have offsetting impacts outside of the U.S., so we include the estimated reduction in their expected value stemming from reduced U.S. petroleum imports in our energy security benefits estimated for this program.

- *Military and SPR Component*: We recognize that there may be significant (if unquantifiable) benefits in improving national security by reducing U.S. oil imports, and public comments supported the agencies inclusion of such benefits. Quantification of military security benefits is challenging because attribution to particular missions or activities is difficult and because it is difficult to anticipate the impact of reduced U.S. oil imports on military spending. The agencies do not have a robust way to calculate these benefits at this time, and thus exclude U.S. military costs from the analysis.

Similarly, since the size of the SPR, or other factors affecting the cost of maintaining the SPR, historically have not varied in response to changes in U.S. oil import levels, we exclude changes in the cost of maintaining the SPR from the estimates of the energy security benefits of the program. The agencies continue to examine appropriate methodologies for estimating the impacts on military and SPR costs as U.S. oil imports are reduced.

To summarize, the agencies have included *only* the macroeconomic disruption and adjustment costs portion of potential energy security benefits to estimate the monetary value of the total energy security benefits of this program. The energy security premium values in this final rule have been updated since the proposal to reflect the AEO2012 Early Release Reference Case projection of future world oil prices. Otherwise, the methodology for estimating the energy security benefits is consistent with that used in the proposal. Based on an update of an earlier peer-reviewed Oak Ridge National Laboratory study that was used in support of the both the MYs 2012–2016 light duty vehicle and the MYs 2014–2018 medium- and

heavy-duty vehicle rulemakings, we estimate that each gallon of fuel saved will reduce the expected macroeconomic disruption and adjustment costs of sudden reductions in the supply of imported oil to the U.S. economy by \$0.197 (2010\$) in 2025. Each gallon of fuel saved as a consequence of higher standards is anticipated to reduce total U.S. imports of crude oil or refined fuel by 0.95 gallons.²⁷³

- *Air pollutant emissions*—
- *Impacts on criteria air pollutant emissions*—Criteria air pollutants emitted by vehicles, during fuel production and distribution, and during electricity generation include carbon monoxide (CO), hydrocarbon compounds (usually referred to as “volatile organic compounds,” or VOC), nitrogen oxides (NO_x), fine particulate matter (PM_{2.5}), and sulfur oxides (SO_x). Although reductions in domestic fuel refining and distribution that result from lower fuel consumption will reduce U.S. emissions of these pollutants, additional vehicle use associated with the rebound effect, and additional electricity generation to power PHEVs and EVs will increase emissions. Thus the net effect of more stringent GHG and fuel economy standards on emissions of each criteria pollutant depends on the relative magnitudes of reduced emissions from fuel refining and distribution, and increases in emissions resulting from added vehicle use. The agencies’ analysis assumes that the per-mile criteria pollutant emission rates for cars and light trucks produced during the model years affected by the rule will remain constant at the levels resulting from EPA’s Tier 2 light duty vehicle emissions standards. The agencies’ approach to estimating criteria air pollutant emissions is consistent with the method used in the proposal and in the MYs 2012–2016 final rule (where the agencies received no significant adverse comments), although the agencies employ a more recent version of the EPA’s MOVES (Motor Vehicle Emissions Simulator) model, as well as new estimates of the emission rates from electricity generation. No comments were received on the use of the MOVES model. The agencies analyses of

²⁷³ Each gallon of fuel saved is assumed to reduce imports of refined fuel by 0.5 gallons, and the volume of fuel refined domestically by 0.5 gallons. Domestic fuel refining is assumed to utilize 90 percent imported crude petroleum and 10 percent domestically-produced crude petroleum as feedstocks. Together, these assumptions imply that each gallon of fuel saved will reduce imports of refined fuel and crude petroleum by 0.50 gallons + 0.50 gallons * 90 percent = 0.50 gallons + 0.45 gallons = 0.95 gallons.

²⁷² Note that this change in world oil price is not reflected in the AEO fuel price projections described earlier in this section.

emissions from electric power plants are discussed in EPA RIA chapter 4, NHTSA RIA chapter VIII and NHTSA's EIS.

- *Economic value of reductions in criteria pollutant emissions*—To evaluate benefits from reducing emissions of criteria pollutants over the lifetimes of MY 2017–2025 vehicles, EPA and NHTSA estimate the economic value of the human health impacts associated with reducing population exposure to PM_{2.5} using a “dollar-per-ton” method. These PM_{2.5}-related dollar-per-ton estimates provide the total monetized impacts to human health (the sum of changes in the incidence of premature mortality and morbidity) that result from eliminating or adding one ton of directly emitted PM_{2.5}, or one ton of PM_{2.5} precursor (such as NO_x, SO_x, and VOCs, which are emitted as gases but form PM_{2.5} as a result of atmospheric reactions), from a specified source. These unit values remain unchanged from the proposal. Note that the agencies' joint analysis of criteria air pollutant impacts over the model year lifetimes of 2017–2025 vehicles includes no estimates of the direct health or other impacts associated with emissions of criteria pollutants other than PM_{2.5} (as distinguished from their indirect effects as precursors to PM_{2.5}). The agencies did receive comments arguing that the agencies should have included these impacts in their analyses, however, no “dollar-per-ton” method exists for ozone or toxic air pollutants due to complexity associated with atmospheric chemistry (for ozone and toxics) and a lack of economic valuation data and methods (for air toxics).

For the final rule, however, EPA and NHTSA also conducted full scale, photochemical air quality modeling to estimate the change in ambient concentrations of ozone, PM_{2.5} and air toxics (i.e., hazardous air pollutants listed in section 112(b) of the Clean Air Act) for the year 2030, and used these results as the basis for estimating the human health impacts and their economic value of the rule in 2030. However, the agencies have not conducted such modeling over the complete life spans of the vehicle model years subject to this rulemaking, due to timing and resource limitations. Section III.H.7 below and Appendix E of NHTSA's Final EIS present these impact estimates.

- *Impacts on greenhouse gas (GHG) emissions*—NHTSA estimates reductions in emissions of carbon dioxide (CO₂) from passenger car and light truck use by multiplying the estimated reduction in consumption of

fuel (gasoline and diesel) by the quantity or mass of CO₂ emissions released per gallon of fuel consumed. EPA directly calculates reductions in total CO₂ emissions from the projected reductions in CO₂ emissions by each vehicle subject to these rules.²⁷⁴ Both agencies also calculate the impact on CO₂ emissions that occur during fuel production and distribution resulting from lower fuel consumption, as well as the emission impacts due to changes in electricity production. Although CO₂ emissions account for nearly 95 percent of total GHG emissions that result from fuel combustion during vehicle use, emissions of other GHGs are potentially significant as well because of their higher “potency” as GHGs than that of CO₂ itself. EPA and NHTSA therefore also estimate the changes in emissions of non-CO₂ GHGs that occur during fuel production, electricity use, and vehicle use due to their respective standards.²⁷⁵ The agencies approach to estimating GHG emissions is consistent with the method used at proposal (and in the MYs 2012–2016 final rule and the Interim Joint TAR). No comments were received on the method for calculating impacts on greenhouse gas emissions, although several commenters discussed the emission factors used for electricity generation. These comments are discussed in section III.C and IV.X.

- *Economic value of reductions in CO₂ emissions*—EPA and NHTSA assigned a dollar value to reductions in CO₂ emissions, consistent with the proposal, using recent estimates of the “social cost of carbon” (SCC) developed by a federal interagency group that included representatives from both agencies and reported the results of its work in February 2010. As that group's report observed, “The SCC is an estimate of the monetized damages associated with an incremental increase in carbon emissions in a given year. It is intended to include (but is not limited to) changes in net agricultural productivity, human health, property damages from increased flood risk, and the value of ecosystem services due to climate change.”²⁷⁶ Published estimates

²⁷⁴ The weighted average CO₂ content of certification gasoline is estimated to be 8,887 grams per gallon, while that of diesel fuel is estimated to be approximately 10,180 grams per gallon.

²⁷⁵ There is, however, an exception. NHTSA does not and cannot claim benefit from reductions in downstream emissions of HFCs because they do not relate to fuel economy, while EPA does because all GHGs are relevant for purposes of EPA's Clean Air Act standards.

²⁷⁶ SCC TSD, see page 2. Docket ID EPA–HQ–OAR–2010–0799–0737, *Technical Support Document: Social Cost of Carbon for Regulatory Impact Analysis Under Executive Order 12866*, Interagency Working Group on Social Cost of

of the SCC, as well as those developed by the interagency group, vary widely as a result of uncertainties about future economic growth, climate sensitivity to GHG emissions, procedures used to model the economic impacts of climate change, and the choice of discount rates.²⁷⁷ The SCC Technical Support Document (SCC TSD) provides a complete discussion of the methods used by the federal interagency group to develop its SCC estimates. Several commenters expressed support for using SCC to value reductions in CO₂ emissions and provided detailed recommendations directed at improving the estimates. One commenter disagreed with the use of SCC. However, as discussed in III.H.6 and IV.C.3 of the preamble, the SCC estimates were developed using a reasonable set of input assumptions that are supported by published literature. As noted in the SCC TSD, the U.S. government intends to revise these estimates over time, if appropriate, taking into account new research findings that were not available in 2010.

Several commenters also recommended presenting monetized estimates of the benefits of reductions in non-CO₂ GHG emissions (i.e., methane, nitrous oxides, and hydrofluorocarbons) expected to result from the final rule. Although the agencies are not basing their primary analyses on this suggested approach, they have conducted sensitivity analyses of the final rule's monetized non-CO₂ GHG impacts in preamble section III.H.6 and Chapter X of NHTSA's FRIA. Preamble sections III.H.6 and IV.C.3 also provide a more detailed discussion about the response to comments on SCC.

- *The value of changes in driving range*—By reducing the frequency with which drivers typically refuel their vehicles and by extending the upper limit of the range they can travel before requiring refueling, improving fuel efficiency provides additional benefits to vehicle owners. The primary benefits from reducing the required frequency of refueling are the value of time saved by drivers and other vehicle occupants, as well as the value of the minor savings in fuel that would have been consumed during refueling trips that are no longer

Carbon, with participation by Council of Economic Advisers, Council on Environmental Quality, Department of Agriculture, Department of Commerce, Department of Energy, Department of Transportation, Environmental Protection Agency, National Economic Council, Office of Energy and Climate Change, Office of Management and Budget, Office of Science and Technology Policy, and Department of Treasury (February 2010). Also available at <http://epa.gov/otaq/climate/regulations.htm>.

²⁷⁷ SCC TSD, see pages 6–7.

required. Using recent data on vehicle owners' refueling patterns gathered from a survey conducted by the National Automotive Sampling System (NASS), NHTSA was able to more accurately estimate the characteristics of refueling trips. NASS data provided NHTSA with the ability to estimate the average time required for a refueling trip, the average time and distance drivers typically travel out of their way to reach fueling stations, the average number of adult vehicle occupants during refueling trips, the average quantity of fuel purchased, and the distribution of reasons given by drivers for refueling. From these estimates, NHTSA constructed a revised set of assumptions to update those used in the MYs 2012–2016 FRM for calculating refueling-related benefits. The MYs 2012–2016 FRM discussed NHTSA's intent to utilize the NASS data on refueling trip characteristics in future rulemakings. While the NASS data improve the precision of the inputs used in the analysis of benefits resulting from less frequent refueling, the framework of the analysis remains essentially the same as in the MYs 2012–2016 final rule. Note that this topic and associated benefits were not covered in the Interim Joint TAR. No comments were received on the refueling analysis presented in the NPRM. Detailed discussion and examples of the agencies' approaches are provided in Chapter VIII of NHTSA's FRIA and Chapter 7 of EPA's RIA.

- *Discounting future benefits and costs*—Discounting future fuel savings and other benefits is intended to account for the reduction in their value

to society when they are deferred until some future date, rather than received immediately.²⁷⁸ The discount rate expresses the percent decline in the value of these future fuel-savings and other benefits—as viewed from today's perspective—for each year they are deferred into the future. In evaluating the non-climate related benefits of the final standards, the agencies have employed discount rates of both 3 percent and 7 percent, consistent with the proposal. One commenter (UCS) agreed with the agencies' use of 3 and 7 percent discount rates, while another (API) stated that the Energy Information Administration (EIA) uses a 15 percent “consumer-relevant discount rate when evaluating the economic cost-effectiveness of new vehicle efficiency technology,” which it noted would affect the agencies' assumptions of benefits if employed. The agencies have continued to employ the 3 and 7 percent discount rate values for the final rule analysis, as discussed further below in section IV.C.3 and in Chapter 4 of the Joint TSD.

For the reader's reference, Table II–19 and Table II–20 below summarize the values used by both agencies to calculate the impacts of the final standards. The values presented in these tables are summaries of the inputs used for the models; specific values used in the agencies' respective analyses may be aggregated, expanded, or have other relevant adjustments. See the Joint TSD, Chapter 4, and each agency's respective RIA for details.

A wide range of estimates is available for many of the primary inputs that are used in the agencies' CAFE and GHG

emissions models. The agencies recognize that each of these values has some degree of uncertainty, which the agencies further discuss in the Joint TSD. The agencies tested the sensitivity of their estimates of costs and benefits to a range of assumptions about each of these inputs, and found that the magnitude of these variations would not have changed the final standards. For example, NHTSA conducted separate sensitivity analyses for, among other things, discount rates, fuel prices, the social cost of carbon, the fuel economy rebound effect, consumers' valuation of fuel economy benefits, battery costs, mass reduction costs, energy security costs, and the indirect cost markup factor. This list is similar in scope to the list that was examined in the proposal, but includes post-warranty repair costs and transmission shift optimizer effectiveness as well. NHTSA's sensitivity analyses are contained in Chapter X of NHTSA's RIA.

Similarly, EPA conducted sensitivity analyses on discount rates, the social cost of carbon, the rebound effect, battery costs, mass reduction costs, the indirect cost markup factor and on the cost learning curves used in this analysis. These analyses are found in Chapters 3, 4, and 7 of the EPA RIA. In addition, NHTSA performed a probabilistic uncertainty analysis examining simultaneous variation in the major model inputs including technology costs, technology benefits, fuel prices, the rebound effect, and military security costs. This information is provided in Chapter XII of NHTSA's RIA.

TABLE II–19—ECONOMIC VALUES FOR BENEFITS COMPUTATIONS (2010\$)

Rebound effect	10%
“Gap” between test and on-road MPG for liquid-fueled vehicles	20%.
“Gap” between test and on-road electricity consumption for electric and plug-in hybrid electric vehicles	30%.
Annual growth in average vehicle use	0.6.
Fuel Prices (2017–50 average, \$/gallon)	
Retail gasoline price	\$4.13.
Pre-tax gasoline price	3.78.
Economic Benefits from Reducing Oil Imports (\$/gallon)	
“Monopsony” Component	\$ 0.0.0.
Macroeconomic Disruption Component	0.197 in 2025.
Military/SPR Component	0.00.
Total Economic Costs (\$/gallon)	0.197 in 2025.
Emission Damage Costs (2020, \$/short ton, 3% discount rate)	
Carbon monoxide	\$ 0.

²⁷⁸ Because all costs associated with improving vehicles' fuel economy and reducing CO₂ emissions are assumed to be incurred at the time they are produced, these costs are already expressed in their

present values as of each model year affected by the rule, and require discounting only for the purpose of expressing them as present values as of a common year (2012 for the Calendar Year analysis;

the first year of production for each MY vehicle—2017 through 2025—for the Model Year analysis).

TABLE II-19—ECONOMIC VALUES FOR BENEFITS COMPUTATIONS (2010\$)—Continued

Rebound effect	10%
Nitrogen oxides (NO _x)—vehicle use	5,600.
Nitrogen oxides (NO _x)—fuel production and distribution	5,400.
Particulate matter (PM _{2.5})—vehicle use	310,000.
Particulate matter (PM _{2.5})—fuel production and distribution	250,000.
Sulfur dioxide (SO ₂)	33,000.
Annual CO ₂ Damage Cost (per metric ton)	Variable, depending on discount rate and year (see Table II-20 for 2017 estimate).
External Costs from Additional Automobile Use (\$/vehicle-mile)	
Congestion	\$ 0.056.
Accidents	0.024.
Noise	0.001.
Total External Costs	\$ 0.081.
External Costs from Additional Light Truck Use (\$/vehicle-mile)	
Congestion	\$0.050.
Accidents	0.027.
Noise	0.001.
Total External Costs	0.078.
Discount Rates Applied to Future Benefits	3%, 7%.

TABLE II-20—SOCIAL COST OF CO₂ (\$/METRIC TON), 2017 (2010\$)

Discount rate	5%	3%	2.5%	3%
Source of Estimate	Mean of Estimated Values			95th percentile estimate.
2017 Estimate	\$6	\$26	\$41	\$79.

F. CO₂ Credits and Fuel Consumption Improvement Values for Air Conditioning Efficiency, Off-Cycle Reductions, and Full-Size Pickup Trucks

For the MYs 2012–2016 rule, EPA provided an option for manufacturers to generate credits for complying with GHG standards by incorporating efficiency-improving vehicle technologies that would reduce CO₂ and fuel consumption from air conditioning (A/C) operation. EPA also provided another credit generating option for vehicle operation that is not captured by the Federal Test Procedure (FTP) and Highway Fuel Economy Test (HFET), also collectively known as the “two-cycle” test procedure. EPA referred to these credits as “off-cycle credits.” See 76 FR 74937, 74998, 75020.

EPA proposed to continue these credit mechanisms in the MYs 2017–2025 GHG program, and is finalizing these proposals in this notice. EPA also proposed that certain of the A/C credits and the off-cycle credits be included under the CAFE program. See *id.* and 76 FR 74995–998. For this rule, under EPA’s EPCA authority, EPA is allowing manufacturers to generate fuel

consumption improvement values for purposes of CAFE compliance based on the use of A/C efficiency and the other off-cycle technologies. These fuel consumption improvement values will not apply to compliance with the CAFE program for MYs 2012–2016. Also, reductions in direct A/C emissions resulting from leakage of HFCs from air conditioning systems, which are generally unrelated to fuel consumption reductions, will not apply to compliance with the CAFE program. Thus, as discussed below, credits for refrigerant leakage emission reductions will continue to apply only to the EPA GHG program.
