#### **SUPPLEMENTARY INFORMATION:**

##### **I. Background**

NHTSA published a notice of proposed rulemaking (NPRM) on December 30, 2005<sup>1</sup> to reorganize FMVSS No. 108, *Lamps, Reflective Devices and Associated Equipment*, and improve the clarity of the standard's

requirements thereby increasing its utility for regulated parties. It was the agency's goal during the rewrite process to make no substantive changes to the requirements of the standard.

Based on the comments received in response to the NPRM, NHTSA published a final rule on December 4, 2007,<sup>2</sup> amending FMVSS No. 108 by reorganizing the regulatory text so that it provides a more straightforward and logical presentation of the applicable regulatory requirements; incorporating important agency interpretations of the existing requirements; and reducing reliance on third-party documents incorporated by reference. The preamble of the final rule again stated that the rewrite of FMVSS No. 108 was administrative in nature and would have no impact on the substantive requirements of the standard.

##### *A. 2005 Administrative Rewrite NPRM*

On December 30, 2005, NHTSA published a NPRM to amend FMVSS No. 108 by reorganizing the regulatory text so that it provides a more straightforward and logical presentation of the applicable regulatory requirements.<sup>3</sup> NHTSA explained in the 2005 NPRM that reorganizing the regulatory text and importing requirements from applicable SAE International standards incorporated by reference into the regulatory text would assist various stakeholders in easily finding and comprehending the requirements contained in the standard. The agency also explained that this rewrite was administrative in nature and that the proposed requirements were not being increased, decreased, or substantively modified. The proposed text for the photometric requirements for side marker lamps, read as follows:

S7.4.1.1 Inboard photometry. For each motor vehicle less than 30 feet in overall length and less than 2032 mm. in overall width, the minimum photometric intensity requirements for a side marker lamp may be met for all inboard test points at a distance of 15 feet from the vehicle and on a vertical plane that is perpendicular to the longitudinal axis of the vehicle and located midway between the front and rear side marker lamps.

The Agency provided an analysis within Appendix B of the NPRM showing that this requirement was derived from both the regulatory text of FMVSS No. 108 S5.1.1.3 and SAE J592e, Jul 1972, Table I, Footnote b.<sup>4</sup>

<sup>2</sup> 72 FR 68234, (Dec. 4, 2007).
