FOR FURTHER INFORMATION CONTACT: Idalia Pérez, EPA Region IX, (415) 972–3248, perez.idalia@epa.gov.

SUPPLEMENTARY INFORMATION: This proposal addresses the following local rule: Rule 400, Visible Emissions. In the Rules and Regulations section of this Federal Register, we are approving this local rule in a direct final action without prior proposal because we believe these SIP revisions are not controversial. If we receive adverse comments, however, we will publish a timely withdrawal of the direct final rule and address the comments in subsequent action based on this proposed rule.

We do not plan to open a second comment period, so anyone interested in commenting should do so at this time. If we do not receive adverse comments, no further activity is planned. For further information, please see the direct final action.

Dated: October 26, 2012.

Jared Blumenfeld,
Regional Administrator, Region IX.

DEPARTMENT OF HOMELAND SECURITY
Federal Emergency Management Agency

44 CFR Part 67

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, DHS.
ACTION: Proposed rule; correction.
SUMMARY: On February 5, 2010, FEMA published a table under the authority of 44 CFR 67.4, entitled “Ballard County, Kentucky, and Incorporated Areas” addressed the following flooding sources: Cane Creek (backwater effects from Mississippi, Hazel Creek (backwater effects from Ohio River), Humphrey Creek (backwater effects from Ohio River), Lucy Creek (backwater effects from Ohio River), Mississippi River, Ohio River, and Stovall Creek (backwater effects from Mississippi River).

DATES: Comments are to be submitted on or before March 11, 2013.

SUPPLEMENTARY INFORMATION: The Federal Emergency Management Agency (FEMA) publishes proposed determinations of Base (1% annual-chance) Flood Elevations (BFEs) and modified BFEs for communities participating in the National Flood Insurance Program (NFIP), in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed BFEs and modified BFEs, together with the floodplain management criteria required by 44 CFR 60.3, are minimum requirements. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These proposed elevations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in those buildings.

Corrections

In the proposed rule published at 75 FR 5909, in the February 5, 2010, issue of the Federal Register, FEMA published a table under the authority of 44 CFR 67.4. The table, entitled “Ballard County, Kentucky, and Incorporated Areas” addressed the following flooding sources: Cane Creek (backwater effects from Mississippi, Hazel Creek (backwater effects from Ohio River), Humphrey Creek (backwater effects from Ohio River), Humphrey Creek Tributary 9 (backwater effects from Ohio River), Lucy Creek (backwater effects from Ohio River), Mississippi River, Ohio River, and Stovall Creek (backwater effects from Mississippi River). That table contained inaccurate information as to the communities affected for Ballard County, Kentucky, and Incorporated Areas.

The proposed elevations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings built after these elevations are made final, and for the contents in those buildings. This notice provides corrections to that table, to be used in lieu of the information published at 75 FR 5909. The table provided here represents the flooding source, location of referenced elevations, effective and modified elevations, and community affected for Ballard County, Kentucky, and Incorporated Areas. Specifically, it addresses the following flooding sources: Cane Creek (backwater effects from Mississippi, Hazel Creek (backwater effects from Ohio River), Humphrey Creek (backwater effects from Ohio River), Humphrey Creek Tributary 9 (backwater effects from Ohio River), Lucy Creek (backwater effects from Ohio River), Mississippi River, Ohio River, and Stovall Creek (backwater effects from Mississippi River).

Dated: October 26, 2012.

Jared Blumenfeld,
Regional Administrator, Region IX.

44 CFR Part 67

Proposed Flood Elevation Determinations

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Proposed rule; correction.

SUMMARY: On September 13, 2010, FEMA published in the Federal Register a proposed rule that contained an erroneous table. This notice provides corrections to that table, to be used in lieu of the information published at 75 FR 55515. The table provided here represents the flooding sources, location of referenced elevations, effective and modified elevations, and communities affected for Mercer County, Pennsylvania (All Jurisdictions). Specifically, it addresses the following flooding sources: Baker Run, Little Shenango River, Munnell Run, Neshannock Creek, Otter Creek, Sawmill Run, Shenango River, and Wolf Creek.

DATES: Comments are to be submitted on or before March 11, 2013.
