

the existing situation. The no-action alternative would maintain seasonal use of the floating bridge, which is 8 feet wide and about 320 feet long. The bridge would be used by both pedestrians and light-utility vehicles. The NPS would continue to install and remove the bridge each spring and fall. The existing barge landing and associated road would remain on the south side of the river.

Alternative 2: This alternative evaluates construction of a new bridge and boardwalk system across the Brooks. This alternative calls for a three-span bridge about 360 feet in length. This bridge would have an 8-foot-wide wooden bridge deck with a steel truss on each side, and span 120 feet between steel pile foundations. The bridge and boardwalk system would have a total estimated length of 1,600 feet. A barge landing would be located on the shore of Naknek Lake about 2,000 feet south of the existing barge landing. A new access road, approximately 1,500 feet long and 14 feet wide, would be constructed to intersect the Valley Road and extend to the new barge landing site on Naknek Lake.

Alternative 3: This alternative evaluates construction of a new bridge and boardwalk system across the Brooks River. The bridge would be a pre-engineered bridge approximately 415 feet in length. The bridge and boardwalk system would have a total estimated length of 850 feet. A new barge landing site would be located approximately 200 feet south of the mouth of the Brooks River. A new road segment (about 100 ft. long) would be constructed from the existing access road and extend to a new Naknek Lake barge landing site.

Alternative 4 (NPS Preferred Alternative): This alternative evaluates construction of a new wooden bridge and boardwalk system across the Brooks River. The bridge would be approximately 350 feet in length with a minimum distance of 24 feet between piles. The bridge and boardwalk system would have a total estimated length of 1,550 feet. A barge landing would be located on the shore of Naknek Lake about 2,000 feet south of the existing barge landing. A new access road, approximately 1,500 feet long and 14 feet wide, would intersect the Valley Road and extend to the new barge landing site on Naknek Lake. Alternative 4 is the environmentally preferred alternative.

Alternative 5: This alternative evaluates construction of a new wooden bridge and boardwalk system across the Brooks River. The bridge would be approximately 350 feet in length with a minimum distance of 24 feet between

piles and would follow the alignment of the floating bridge. The bridge and boardwalk system would have a total estimated length of 1,100 feet. A barge landing would be located on the shore of Naknek Lake about 2,000 feet south of the existing barge landing. A new access road, approximately 1,500 feet long and 14 feet wide, would intersect the Valley Road and extend to the new barge landing site on Naknek Lake.
