*Needs and Uses:* This request is for a new information collection.

The National Estuarine Research Reserve System (NERRS) Science Collaborative was created in 2009 to put Reserve-based science to work for coastal communities coping with the impacts of land use change, pollution, and habitat degradation in the context of a changing climate. The program operates on the belief that for science to be applied to solve coastal management problems, the people who need to use the science must be involved in its generation.

The projects funded by the NERRS Science Collaborative are designed to bring the intended users of the science into the research process so that their perspectives can inform problem definition, research design and implementation, and ultimately, application of the project results. This is what is meant by "collaboration," and it is the program's goal to use this process to ensure that the good science happening in and around the Reserves gets put to good use.

To help evaluate the efficacy of the NERRS Science Collaborative, NOAA is conducting a survey of the NERRS staff located in the 28 Reserves around the country to solicit their perspective about the program and how it has been implemented.

*Affected Public:* State, local or tribal government, not-for-profit institutions.

#### SUPPLEMENTARY INFORMATION:

##### I. Abstract

This request is for extension of a current information collection.

Participants in most Federally-managed fisheries in the Southeast Region are currently required to keep and submit catch and effort logbooks from their fishing trips. A subset of these vessels also provide information on the species and quantities of fish, shellfish, marine turtles, and marine mammals that are caught and discarded or have interacted with the vessel's fishing gear. A subset of these vessels also provide information about dockside prices, trip operating costs, and annual fixed costs.

The data are used for scientific analyses that support critical conservation and management decisions made by national and international fishery management organizations. Interaction reports are needed for fishery management planning and to help protect endangered species and marine mammals. Price and cost data will be used in analyses of the economic effects of proposed regulations.

## II. Method of Collection

The information is submitted on paper forms. Logbooks are completed daily and submitted on either a by trip or monthly basis, depending on the fishery. Fixed costs are submitted on an annual basis. Other information is submitted on a trip basis.
