Scoping Process
This notice of intent initiates the scoping process, which guides the development of the Environmental Impact Statement. It is important that reviewers provide their comments at such times and in such manner that they are useful to the agency’s preparation of the environmental impact statement. Therefore, comments should be provided prior to the close of the comment period and should clearly articulate the reviewer’s concerns and contentions.

Comments received in response to this solicitation, including names and addresses of those who comment, will become part of the public record for this proposed action. Comments submitted anonymously will be accepted and considered, however.

Keith Lannom,
Forest Supervisor.

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Title: Groundfish Tagging Program.

OMB Control Number: 0648–0276.

Form Number(s): NA.

Type of Request: Regular submission (extension of a current information collection).

Number of Respondents: 380.

Average Hours per Response: Spaghetti tags returns, 5 minutes; archival tag returns, 20 minutes.

Burden Hours: 78.

Needs and Uses: This request is for extension of a current information collection.

The groundfish tagging program provides scientists with information necessary for effective conservation, management, and scientific understanding of the groundfish fishery off Alaska and the Northwest Pacific. The program area includes the Pacific Ocean off Alaska (the Gulf of Alaska, the Bering Sea and Aleutian Islands Area, and the Alexander Archipelago of Southeast Alaska), California, Oregon, and Washington. Fish movement information from recovered tags is used in population dynamics models for stock assessment. There are two general categories of tags. Simple plastic tags (spaghetti tags) are external tags approximately two inches long printed with code numbers. When a tag is returned the tag number is correlated with databases of released, tagged fish to determine the net movement and growth rate of the tagged fish. Archival tags are microchips with sensors encased in plastic cylinders that record the depth, temperature or other data, which can be downloaded electronically from the recovered tags. The groundfish tagging and tag recovery program is part of the fishery resource assessment and data collection that the National Marine Fisheries Service conducts under the Magnuson-Stevens Act authority as codified in 16 U.S.C. 1801(a)(8).

Affected Public: Business or other for-profit organizations; individuals or households.

Frequency: On occasion.

Respondent’s Obligation: Voluntary.

OMB Desk Officer: OIRA Submission@omb.eop.gov.

Burden Hours: 78.

Needs and Uses: This request is for extension of a current information collection.
