

did not meet the stated purpose and need for the action or were not practicable, for the reasons stated in the EA. The only practicable alternative is described in the "Proposed Action" section. The no-action alternative is the same as the proposed action; discontinuing DLA Energy's mobility fuel purchase programs is not reasonable.

Potential Environmental Impacts: The attached EA presents assessments of potential impacts to human health and the human environment. DLA Energy evaluated the following resources for potential impacts associated with the proposed action, as described below: Energy; transportation and infrastructure; air quality, including greenhouse gas (GHG) emissions; safety and human health; aquatic and terrestrial resources; and cultural resources.

Energy—With DLA Energy mobility fuel procurements representing 2 percent of the domestic mobility fuels market, and DLA Energy's continued efforts to procure, certify, and approve alternative fuels, the proposed action would have a negligible effect on the national energy market. The proposed action would have a negligible effect on the acquisition, handling, and processing of any crude oil feedstock including heavy crudes.

Transportation and Infrastructure—Under the proposed action, DLA would continue using existing transport systems and does not propose any specific structural changes to the national transportation infrastructure; any future structural modifications would undergo NEPA review on a case-by-case basis. In compliance with established regulations, the proposed action would have a negligible effect on transportation and infrastructure.

Air Quality—Unlike emissions from specific DOD services, emissions associated with the proposed action would not be attributable to a particular installation; emissions associated with the distribution of fuel to DLA Energy customers would be transient and distributed nationally. Forty-nine percent of DLA domestic fuel transport, by volume, occurs through pipelines, which have negligible GHG emissions in comparison to other transportation modes. The other 51 percent of DLA domestic fuel, by volume, is transported using mobile sources (truck, rail, and marine). DLA Energy's implementation of a systemic change to the use of commercial standard Jet A aviation fuel in most aircraft could significantly reduce fuel transport distances and associated emissions. Within the project scope and in compliance with federal,

state, and local regulations, criteria air pollutant and GHG emissions would be negligible.

Safety and Human Health—Risks to health and safety are minimal if the operations comply with applicable regulations, release detection is properly planned, and response actions are undertaken swiftly. Under the proposed action, DLA would continue to use existing and highly regulated methods of fuel transportation and storage, including the current safety policies. The proposed action would have a negligible impact on human health and safety.

Aquatic, Terrestrial, and Cultural Resources—Transport and storage of fuel products is highly regulated. DLA Energy's customers are military installations and federal agencies that comply separately with biological and cultural resource protection requirements. Under the proposed action, DLA would continue using existing commercial methods for fuel distribution; any future structural modifications would undergo NEPA review on a case-by-case basis. Within the project scope and in compliance with established regulations, the proposed action would have no effects on aquatic and terrestrial resources, including threatened and endangered species. The proposed action would have no effects on cultural resources, including historic properties. Based on the analysis of the potential impacts to the human environment, the EA concludes that the proposed action would produce no significant adverse impacts.

Determination: Based on the results of the analyses performed during the preparation of the EA, I conclude that the proposed action does not constitute a major federal action significantly affecting the quality of the human environment within the context of NEPA. Therefore, an EIS for the proposed action is not required.
