[1] These figures were prepared by the U.S. Census Bureau, U.S. Department of Commerce (Census Bureau), from 3-year estimates from the 2009, 2010, and 2011 American Community Surveys (ACSs). These estimates, like those derived from any survey, are subject to two types of error: (1) Non-sampling Error, which consists of random errors that increase the variability of the data and non-random errors that consistently direct the data in a specific direction; and (2) Sampling Error, which consists of the error that arises from the use of probability sampling to create the sample.

[2] These figures were calculated by the U.S. Department of Health and Human Services, Administration for Children and Families, Office of Community Services, Division of Energy Assistance by multiplying the estimated state median income for a four-person family for each state by 60 percent.

[3] To adjust for different sizes of households for LIHEAP purposes, 45 CFR 96.85 calls for multiplying 60 percent of a state's estimated median income for a four-person family by the following percentages: 52 percent for a one-person household, 68 percent for a two-person household, 84 percent for a three-person household, 100 percent for a four-person household, 116 percent for a five-person household, and 132 percent for a six-person household. For each additional household member above six people, 45 CFR 96.85 calls for adding 3 percentage points to the percentage for a six-person household (132 percent) and multiply the new percentage by 60 percent of the median income for a four-person family.
