Vol. 78                      Tuesday,  
No. 98                      May 21, 2013

Pages 29559–30196

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see [www.ofr.gov](http://www.ofr.gov).

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at [www.fdsys.gov](http://www.fdsys.gov), a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, [gpo@custhelp.com](mailto:gpo@custhelp.com).

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see [bookstore.gpo.gov](http://bookstore.gpo.gov).

There are no restrictions on the republication of material appearing in the **Federal Register**.

**How To Cite This Publication:** Use the volume number and the page number. Example: 77 FR 12345.

**Postmaster:** Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

## SUBSCRIPTIONS AND COPIES

### PUBLIC

#### Subscriptions:

### FEDERAL REGISTER WORKSHOP

#### THE FEDERAL REGISTER: WHAT IT IS AND HOW TO USE IT

**FOR:** Any person who uses the Federal Register and Code of Federal Regulations.

**WHO:** Sponsored by the Office of the Federal Register.

**WHAT:** Free public briefings (approximately 3 hours) to present:

1. The regulatory process, with a focus on the Federal Register system and the public's role in the development of regulations.
2. The relationship between the Federal Register and Code of Federal Regulations.
3. The important elements of typical Federal Register documents.
4. An introduction to the finding aids of the FR/CFR system.

**WHY:** To provide the public with access to information necessary to research Federal agency regulations which directly affect them. There will be no discussion of specific agency regulations.

**WHEN:** Tuesday, June 11, 2013  
9 a.m.-12:30 p.m.

**WHERE:** Office of the Federal Register  
Conference Room, Suite 700  
800 North Capitol Street, NW.  
Washington, DC 20002

**RESERVATIONS:** (202) 741-6008

**Title 3—****Executive Order 13643 of May 15, 2013****The President****2013 Amendments to the Manual for Courts-Martial, United States**

By the authority vested in me as President by the Constitution and the laws of the United States of America, including chapter 47 of title 10, United States Code (Uniform Code of Military Justice, 10 U.S.C. 801–946), and in order to prescribe amendments to the Manual for Courts-Martial, United States, prescribed by Executive Order 12473, as amended, it is hereby ordered as follows:

**Section 1.** Parts III and IV of the Manual for Courts-Martial, United States, are amended as described in the Annex attached and made a part of this order.

**Sec. 2.** These amendments shall take effect as of the date of this order, subject to the following:

(a) Nothing in these amendments shall be construed to make punishable any act done or omitted prior to the effective date of this order that was not punishable when done or omitted.

(b) Nothing in these amendments shall be construed to invalidate any nonjudicial punishment proceedings, restraint, investigation, referral of charges, trial in which arraignment occurred, or other action begun prior to the effective date of this order, and any such nonjudicial punishment, restraint, investigation, referral of charges, trial, or other action may proceed in the same manner and with the same effect as if these amendments had not been prescribed.

THE WHITE HOUSE,  
May 15, 2013.

## ANNEX

**Section 1.** Part III of the Manual for Courts-Martial, United States, is revised to read as follows:

**Rule 101. Scope**

(a) *Scope.* These rules apply to court-martial proceedings to the extent and with the exceptions stated in Mil. R. Evid. 1101.

(b) *Sources of Law.* In the absence of guidance in this Manual or these rules, courts-martial will apply:

(1) first, the Federal Rules of Evidence and the case law interpreting them; and

(2) second, when not inconsistent with subdivision (b)(1), the rules of evidence at common law.

(c) *Rule of Construction.* Except as otherwise provided in these rules, the term “military judge” includes the president of a special court-martial without a military judge and a summary court-martial officer.

**Rule 102. Purpose**

These rules should be construed so as to administer every proceeding fairly, eliminate unjustifiable expense and delay, and promote the development of evidence law, to the end of ascertaining the truth and securing a just determination.

**Rule 103. Rulings on Evidence**

(a) *Preserving a Claim of Error.* A party may claim error in a ruling to admit or exclude evidence only if the error materially prejudices a substantial right of the party and:

(1) if the ruling admits evidence, a party, on the record:

(A) timely objects or moves to strike; and

(B) states the specific ground, unless it was apparent from the context; or

(2) if the ruling excludes evidence, a party informs the military judge of its substance by an offer of proof, unless the substance was apparent from the context.

(b) *Not Needing to Renew an Objection or Offer of Proof.* Once the military judge rules definitively on the record admitting or excluding evidence, either before or at trial, a party need not renew an objection or offer of proof to preserve a claim of error for appeal.

(c) *Review of Constitutional Error.* The standard provided in subdivision (a)(2) does not apply to errors implicating the United States Constitution as it applies to members of the armed forces, unless the error arises under these rules and subdivision (a)(2) provides a standard that is more advantageous to the accused than the constitutional standard.

(d) *Military Judge's Statement about the Ruling; Directing an Offer of Proof.* The military judge may make any statement about the character or form of the evidence, the objection made, and the ruling. The military judge may direct that an offer of proof be made in question-and-answer form.

(e) *Preventing the Members from Hearing Inadmissible Evidence.* In a court-martial composed of a military judge and members, to the extent practicable, the military judge must conduct a trial so that inadmissible evidence is not suggested to the members by any means.

(f) *Taking Notice of Plain Error.* A military judge may take notice of a plain error that materially prejudices a substantial right, even if the claim of error was not properly preserved.

**Rule 104. Preliminary Questions**

(a) *In General.* The military judge must decide any preliminary question about whether a witness is available or qualified, a privilege exists, a continuance should be granted, or evidence is admissible. In so deciding, the military judge is not bound by evidence rules, except those on privilege.

(b) *Relevance that Depends on a Fact.* When the relevance of evidence depends on whether a fact exists, proof must be introduced sufficient to support a finding that the fact does exist. The military judge may admit the proposed evidence on the condition that the proof be introduced later. A ruling on the sufficiency of evidence to support a finding of fulfillment of a condition of fact is the sole responsibility of the military judge, except where these rules or this Manual provide expressly to the contrary.

(c) *Conducting a Hearing so that the Members Cannot Hear It.* Except in cases tried before a special court-martial without a military judge, the military judge must conduct any hearing on a preliminary question so that the members cannot hear it if:

- (1) the hearing involves the admissibility of a statement of the accused under Mil. R. Evid. 301–306;
- (2) the accused is a witness and so requests; or
- (3) justice so requires.

(d) *Cross-Examining the Accused.* By testifying on a preliminary question, the accused does not become subject to cross-examination on other issues in the case.

(e) *Evidence Relevant to Weight and Credibility.* This rule does not limit a party's right to introduce before the members evidence that is relevant to the weight or credibility of other evidence.

#### **Rule 105. Limiting Evidence that Is Not Admissible against Other Parties or for Other Purposes**

If the military judge admits evidence that is admissible against a party or for a purpose – but not against another party or for another purpose – the military judge, on timely request, must restrict the evidence to its proper scope and instruct the members accordingly.

#### **Rule 106. Remainder of or Related Writings or Recorded Statements**

If a party introduces all or part of a writing or recorded statement, an adverse party may require the introduction, at that time, of any other part – or any other writing or recorded statement – that in fairness ought to be considered at the same time.

#### **Rule 201. Judicial Notice of Adjudicative Facts**

(a) *Scope.* This rule governs judicial notice of an adjudicative fact only, not a legislative fact.

(b) *Kinds of Facts that May Be Judicially Noticed.* The military judge may judicially notice a fact that is not subject to reasonable dispute because it:

- (1) is generally known universally, locally, or in the area pertinent to the event; or
- (2) can be accurately and readily determined from sources whose accuracy cannot reasonably be questioned.

(c) *Taking Notice.* The military judge:

- (1) may take judicial notice whether requested or not; or
- (2) must take judicial notice if a party requests it and the military judge is supplied with the necessary information.

The military judge must inform the parties in open court when, without being requested, he or she takes judicial notice of an adjudicative fact essential to establishing an element of the case.

(d) *Timing.* The military judge may take judicial notice at any stage of the proceeding.

(e) *Opportunity to Be Heard.* On timely request, a party is entitled to be heard on the propriety of taking judicial notice and the nature of the fact to be noticed. If the military judge takes judicial notice before notifying a party, the party, on request, is still entitled to be heard.

(f) *Instructing the Members.* The military judge must instruct the members that they may or may not accept the noticed fact as conclusive.

#### **Rule 202. Judicial Notice of Law**

(a) *Domestic Law.* The military judge may take judicial notice of domestic law. If a domestic law is a fact that is of consequence to the determination of the action, the procedural requirements of Mil. R. Evid. 201 – except Rule 201(f) – apply.

(b) *Foreign Law.* A party who intends to raise an issue concerning the law of a foreign country must give reasonable written notice. The military judge, in determining foreign law, may consider any relevant material or source, in accordance with Mil. R. Evid. 104. Such a determination is a ruling on a question of law.

#### **Rule 301. Privilege Concerning Compulsory Self-Incrimination**

(a) *General Rule.* An individual may claim the most favorable privilege provided by the Fifth Amendment to the United States Constitution, Article 31, or these rules. The privileges against self-incrimination are applicable only to evidence of a testimonial or communicative nature.

(b) *Standing*. The privilege of a witness to refuse to respond to a question that may tend to incriminate the witness is a personal one that the witness may exercise or waive at his or her discretion.

(c) *Limited Waiver*. An accused who chooses to testify as a witness waives the privilege against self-incrimination only with respect to the matters about which he or she testifies. If the accused is on trial for two or more offenses and on direct examination testifies about only one or some of the offenses, the accused may not be cross-examined as to guilt or innocence with respect to the other offenses unless the cross-examination is relevant to an offense concerning which the accused has testified. This waiver is subject to Mil. R. Evid. 608(b).

(d) *Exercise of the Privilege*. If a witness states that the answer to a question may tend to incriminate him or her, the witness cannot be required to answer unless the military judge finds that the facts and circumstances are such that no answer the witness might make to the question would tend to incriminate the witness or that the witness has, with respect to the question, waived the privilege against self-incrimination. A witness may not assert the privilege if he or she is not subject to criminal penalty as a result of an answer by reason of immunity, running of the statute of limitations, or similar reason.

(1) *Immunity Requirements*. The minimum grant of immunity adequate to overcome the privilege is that which under either R.C.M. 704 or other proper authority provides that neither the testimony of the witness nor any evidence obtained from that testimony may be used against the witness at any subsequent trial other than in a prosecution for perjury, false swearing, the making of a false official statement, or failure to comply with an order to testify after the military judge has ruled that the privilege may not be asserted by reason of immunity.

(2) *Notification of Immunity or Leniency*. When a prosecution witness before a court-martial has been granted immunity or leniency in exchange for testimony, the grant must be reduced to writing and must be served on the accused prior to arraignment or within a reasonable time before the witness testifies. If notification is not made as required by this rule, the military judge may grant a continuance until notification is made, prohibit or strike the testimony of the witness, or enter such other order as may be required.

(e) *Waiver of the Privilege*. A witness who answers a self-incriminating question without having asserted the privilege against self-incrimination may be required to answer questions relevant to the disclosure, unless the questions are likely to elicit additional self-incriminating information.

(1) If a witness asserts the privilege against self-incrimination on cross-examination, the military judge, upon motion, may strike the direct testimony of the witness in whole or in part, unless the matters to which the witness refuses to testify are purely collateral.

(2) Any limited waiver of the privilege under subdivision (e) applies only at the trial in which the answer is given, does not extend to a rehearing or new or other trial, and is subject to Mil. R. Evid. 608(b).

(f) *Effect of Claiming the Privilege*.

(1) *No Inference to Be Drawn*. The fact that a witness has asserted the privilege against self-incrimination cannot be considered as raising any inference unfavorable to either the accused or the government.

(2) *Pretrial Invocation Not Admissible*. The fact that the accused during official questioning and in exercise of rights under the Fifth Amendment to the United States Constitution or Article 31 remained silent, refused to answer a certain question, requested counsel, or requested that the questioning be terminated, is not admissible against the accused.

(3) *Instructions Regarding the Privilege*. When the accused does not testify at trial, defense counsel may request that the members of the court be instructed to disregard that fact and not to draw any adverse inference from it. Defense counsel may request that the members not be so instructed. Defense counsel's election will be binding upon the military judge except that the military judge may give the instruction when the instruction is necessary in the interests of justice.

### **Rule 302. Privilege Concerning Mental Examination of an Accused**

(a) *General Rule*. The accused has a privilege to prevent any statement made by the accused at a mental examination ordered under R.C.M. 706 and any derivative evidence obtained through use of such a statement from being received into evidence against the accused on the issue of guilt or innocence or during sentencing proceedings. This privilege may be claimed by the accused notwithstanding the fact that the accused may have been warned of the rights provided by Mil. R. Evid. 305 at the examination.

(b) *Exceptions*.

(1) There is no privilege under this rule when the accused first introduces into evidence such statements or derivative evidence.

(2) If the court-martial has allowed the defense to present expert testimony as to the mental condition of the accused, an expert witness for the prosecution may testify as to the reasons for his or her conclusions, but such testimony may not extend to statements of the accused except as provided in subdivision (b)(1).

(c) *Release of Evidence from an R.C.M. 706 Examination.* If the defense offers expert testimony concerning the mental condition of the accused, the military judge, upon motion, must order the release to the prosecution of the full contents, other than any statements made by the accused, of any report prepared pursuant to R.C.M. 706. If the defense offers statements made by the accused at such examination, the military judge, upon motion, may order the disclosure of such statements made by the accused and contained in the report as may be necessary in the interests of justice.

(d) *Noncompliance by the Accused.* The military judge may prohibit an accused who refuses to cooperate in a mental examination authorized under R.C.M. 706 from presenting any expert medical testimony as to any issue that would have been the subject of the mental examination.

(e) *Procedure.* The privilege in this rule may be claimed by the accused only under the procedure set forth in Mil. R. Evid. 304 for an objection or a motion to suppress.

### Rule 303. Degrading Questions

Statements and evidence are inadmissible if they are not material to the issue and may tend to degrade the person testifying.

### Rule 304. Confessions and Admissions

(a) *General Rule.* If the accused makes a timely motion or objection under this rule, an involuntary statement from the accused, or any evidence derived therefrom, is inadmissible at trial except as provided in subdivision (e).

(1) *Definitions.* As used in this rule:

(A) "Involuntary statement" means a statement obtained in violation of the self-incrimination privilege or Due Process Clause of the Fifth Amendment to the United States Constitution, Article 31, or through the use of coercion, unlawful influence, or unlawful inducement.

(B) "Confession" means an acknowledgment of guilt.

(C) "Admission" means a self-incriminating statement falling short of an acknowledgment of guilt, even if it was intended by its maker to be exculpatory.

(2) Failure to deny an accusation of wrongdoing is not an admission of the truth of the accusation if at the time of the alleged failure the person was under investigation or was in confinement, arrest, or custody for the alleged wrongdoing.

(b) *Evidence Derived from a Statement of the Accused.* When the defense has made an appropriate and timely motion or objection under this rule, evidence allegedly derived from a statement of the accused may not be admitted unless the military judge finds by a preponderance of the evidence that:

(1) the statement was made voluntarily,

(2) the evidence was not obtained by use of the accused's statement, or

(3) the evidence would have been obtained even if the statement had not been made.

(c) *Corroboration of a Confession or Admission.*

(1) An admission or a confession of the accused may be considered as evidence against the accused on the question of guilt or innocence only if independent evidence, either direct or circumstantial, has been admitted into evidence that corroborates the essential facts admitted to justify sufficiently an inference of their truth.

(2) Other uncorroborated confessions or admissions of the accused that would themselves require corroboration may not be used to supply this independent evidence. If the independent evidence raises an inference of the truth of some but not all of the essential facts admitted, then the confession or admission may be considered as evidence against the accused only with respect to those essential facts stated in the confession or admission that are corroborated by the independent evidence.

(3) Corroboration is not required for a statement made by the accused before the court by which the accused is being tried, for statements made prior to or contemporaneously with the act, or for statements offered under a rule of evidence other than that pertaining to the admissibility of admissions or confessions.

(4) *Quantum of Evidence Needed.* The independent evidence necessary to establish corroboration need not be sufficient of itself to establish beyond a reasonable doubt the truth of facts stated in the admission or confession. The independent evidence need raise only an inference of the truth of the essential facts admitted. The amount and type

of evidence introduced as corroboration is a factor to be considered by the trier of fact in determining the weight, if any, to be given to the admission or confession.

(5) *Procedure.* The military judge alone is to determine when adequate evidence of corroboration has been received. Corroborating evidence must be introduced before the admission or confession is introduced unless the military judge allows submission of such evidence subject to later corroboration.

(d) *Disclosure of Statements by the Accused and Derivative Evidence.* Before arraignment, the prosecution must disclose to the defense the contents of all statements, oral or written, made by the accused that are relevant to the case, known to the trial counsel, and within the control of the armed forces, and all evidence derived from such statements, that the prosecution intends to offer against the accused.

(e) *Limited Use of an Involuntary Statement.* A statement obtained in violation of Article 31 or Mil. R. Evid. 305(b)-(c) may be used only:

(1) to impeach by contradiction the in-court testimony of the accused; or

(2) in a later prosecution against the accused for perjury, false swearing, or the making of a false official statement.

(f) *Motions and Objections.*

(1) Motions to suppress or objections under this rule, or Mil. R. Evid. 302 or 305, to any statement or derivative evidence that has been disclosed must be made by the defense prior to submission of a plea. In the absence of such motion or objection, the defense may not raise the issue at a later time except as permitted by the military judge for good cause shown. Failure to so move or object constitutes a waiver of the objection.

(2) If the prosecution seeks to offer a statement made by the accused or derivative evidence that was not disclosed before arraignment, the prosecution must provide timely notice to the military judge and defense counsel. The defense may object at that time and the military judge may make such orders as are required in the interests of justice.

(3) The defense may present evidence relevant to the admissibility of evidence as to which there has been an objection or motion to suppress under this rule. An accused may testify for the limited purpose of denying that the accused made the statement or that the statement was made voluntarily.

(A) Prior to the introduction of such testimony by the accused, the defense must inform the military judge that the testimony is offered under subdivision (f)(3).

(B) When the accused testifies under subdivision (f)(3), the accused may be cross-examined only as to the matter on which he or she testifies. Nothing said by the accused on either direct or cross-examination may be used against the accused for any purpose other than in a prosecution for perjury, false swearing, or the making of a false official statement.

(4) *Specificity.* The military judge may require the defense to specify the grounds upon which the defense moves to suppress or object to evidence. If defense counsel, despite the exercise of due diligence, has been unable to interview adequately those persons involved in the taking of a statement, the military judge may make any order required in the interests of justice, including authorization for the defense to make a general motion to suppress or general objection.

(5) *Rulings.* The military judge must rule, prior to plea, upon any motion to suppress or objection to evidence made prior to plea unless, for good cause, the military judge orders that the ruling be deferred for determination at trial or after findings. The military judge may not defer ruling if doing so adversely affects a party's right to appeal the ruling. The military judge must state essential findings of fact on the record when the ruling involves factual issues.

(6) *Burden of Proof.* When the defense has made an appropriate motion or objection under this rule, the prosecution has the burden of establishing the admissibility of the evidence. When the military judge has required a specific motion or objection under subdivision (f)(4), the burden on the prosecution extends only to the grounds upon which the defense moved to suppress or object to the evidence.

(7) *Standard of Proof.* The military judge must find by a preponderance of the evidence that a statement by the accused was made voluntarily before it may be received into evidence. When trial is by a special court-martial without a military judge, a determination by the president of the court that a statement was made voluntarily is subject to objection by any member of the court. When such objection is made, it will be resolved pursuant to R.C.M. 801(e)(3)(C).

(8) *Effect of Guilty Plea.* Except as otherwise expressly provided in R.C.M. 910(a)(2), a plea of guilty to an offense that results in a finding of guilty waives all privileges against self-incrimination and all motions and objections under this rule with respect to that offense regardless of whether raised prior to plea.

(g) *Weight of the Evidence.* If a statement is admitted into evidence, the military judge must permit the defense to present relevant evidence with respect to the voluntariness of the statement and must instruct the members to give such weight to the statement as it deserves under all the circumstances.

(h) *Completeness.* If only part of an alleged admission or confession is introduced against the accused, the defense, by cross-examination or otherwise, may introduce the remaining portions of the statement.

(i) *Evidence of an Oral Statement.* A voluntary oral confession or admission of the accused may be proved by the testimony of anyone who heard the accused make it, even if it was reduced to writing and the writing is not accounted for.

(j) *Refusal to Obey an Order to Submit a Body Substance.* If an accused refuses a lawful order to submit for chemical analysis a sample of his or her blood, breath, urine or other body substance, evidence of such refusal may be admitted into evidence on:

- (1) a charge of violating an order to submit such a sample; or
- (2) any other charge on which the results of the chemical analysis would have been admissible.

### **Rule 305. Warnings about Rights**

(a) *General Rule.* A statement obtained in violation of this rule is involuntary and will be treated under Mil. R. Evid. 304.

(b) *Definitions.* As used in this rule:

(1) "Person subject to the code" means a person subject to the Uniform Code of Military Justice as contained in Chapter 47 of Title 10, United States Code. This term includes, for purposes of subdivision (c) of this rule, a knowing agent of any such person or of a military unit.

(2) "Interrogation" means any formal or informal questioning in which an incriminating response either is sought or is a reasonable consequence of such questioning.

(3) "Custodial interrogation" means questioning that takes place while the accused or suspect is in custody, could reasonably believe himself or herself to be in custody, or is otherwise deprived of his or her freedom of action in any significant way.

(c) *Warnings Concerning the Accusation, Right to Remain Silent, and Use of Statements.*

(1) *Article 31 Rights Warnings.* A statement obtained from the accused in violation of the accused's rights under Article 31 is involuntary and therefore inadmissible against the accused except as provided in subdivision (d). Pursuant to Article 31, a person subject to the code may not interrogate or request any statement from an accused or a person suspected of an offense without first:

(A) informing the accused or suspect of the nature of the accusation;

(B) advising the accused or suspect that the accused or suspect has the right to remain silent; and

(C) advising the accused or suspect that any statement made may be used as evidence against the accused or suspect in a trial by court-martial.

(2) *Fifth Amendment Right to Counsel.* If a person suspected of an offense and subjected to custodial interrogation requests counsel, any statement made in the interrogation after such request, or evidence derived from the interrogation after such request, is inadmissible against the accused unless counsel was present for the interrogation.

(3) *Sixth Amendment Right to Counsel.* If an accused against whom charges have been preferred is interrogated on matters concerning the preferred charges by anyone acting in a law enforcement capacity, or the agent of such a person, and the accused requests counsel, or if the accused has appointed or retained counsel, any statement made in the interrogation, or evidence derived from the interrogation, is inadmissible unless counsel was present for the interrogation.

(4) *Exercise of Rights.* If a person chooses to exercise the privilege against self-incrimination, questioning must cease immediately. If a person who is subjected to interrogation under the circumstances described in subdivisions (c)(2) or (c)(3) of this rule chooses to exercise the right to counsel, questioning must cease until counsel is present.

(d) *Presence of Counsel.* When a person entitled to counsel under this rule requests counsel, a judge advocate or an individual certified in accordance with Article 27(b) will be provided by the United States at no expense to the person and without regard to the person's indigency and must be present before the interrogation may proceed. In addition to counsel supplied by the United States, the person may retain civilian counsel at no expense to the United States. Unless otherwise provided by regulations of the Secretary concerned, an accused or suspect does not have a right under this rule to have military counsel of his or her own selection.

(e) *Waiver.*

(1) *Waiver of the Privilege Against Self-Incrimination.* After receiving applicable warnings under this rule, a person may waive the rights described therein and in Mil. R. Evid. 301 and make a statement. The waiver must be made freely, knowingly, and intelligently. A written waiver is not required. The accused or suspect must affirmatively acknowledge that he or she understands the rights involved, affirmatively decline the right to counsel, and affirmatively consent to making a statement.

(2) *Waiver of the Right to Counsel.* If the right to counsel is applicable under this rule and the accused or suspect does not affirmatively decline the right to counsel, the prosecution must demonstrate by a preponderance of the evidence that the individual waived the right to counsel.

(3) *Waiver After Initially Invoking the Right to Counsel.*

(A) *Fifth Amendment Right to Counsel.* If an accused or suspect subjected to custodial interrogation requests counsel, any subsequent waiver of the right to counsel obtained during a custodial interrogation concerning the same or different offenses is invalid unless the prosecution can demonstrate by a preponderance of the evidence that:

(i) the accused or suspect initiated the communication leading to the waiver; or

(ii) the accused or suspect has not continuously had his or her freedom restricted by confinement, or other means, during the period between the request for counsel and the subsequent waiver.

(B) *Sixth Amendment Right to Counsel.* If an accused or suspect interrogated after prefferal of charges as described in subdivision (c)(1) requests counsel, any subsequent waiver of the right to counsel obtained during an interrogation concerning the same offenses is invalid unless the prosecution can demonstrate by a preponderance of the evidence that the accused or suspect initiated the communication leading to the waiver.

(f) *Standards for Nonmilitary Interrogations.*

(1) *United States Civilian Interrogations.* When a person subject to the code is interrogated by an official or agent of the United States, of the District of Columbia, or of a State, Commonwealth, or possession of the United States, or any political subdivision of such a State, Commonwealth, or possession, the person's entitlement to rights warnings and the validity of any waiver of applicable rights will be determined by the principles of law generally recognized in the trial of criminal cases in the United States district courts involving similar interrogations.

(2) *Foreign Interrogations.* Warnings under Article 31 and the Fifth and Sixth Amendments to the United States Constitution are not required during an interrogation conducted outside of a State, district, Commonwealth, territory, or possession of the United States by officials of a foreign government or their agents unless such interrogation is conducted, instigated, or participated in by military personnel or their agents or by those officials or agents listed in subdivision (f)(1). A statement obtained from a foreign interrogation is admissible unless the statement is obtained through the use of coercion, unlawful influence, or unlawful inducement. An interrogation is not "participated in" by military personnel or their agents or by the officials or agents listed in subdivision (f)(1) merely because such a person was present at an interrogation conducted in a foreign nation by officials of a foreign government or their agents, or because such a person acted as an interpreter or took steps to mitigate damage to property or physical harm during the foreign interrogation.

**Rule 306. Statements by One of Several Accused**

When two or more accused are tried at the same trial, evidence of a statement made by one of them which is admissible only against him or her or only against some but not all of the accused may not be received in evidence unless all references inculcating an accused against whom the statement is inadmissible are deleted effectively or the maker of the statement is subject to cross-examination.

**Rule 311. Evidence Obtained from Unlawful Searches and Seizures**

(a) *General Rule.* Evidence obtained as a result of an unlawful search or seizure made by a person acting in a governmental capacity is inadmissible against the accused if:

(1) the accused makes a timely motion to suppress or an objection to the evidence under this rule; and

(2) the accused had a reasonable expectation of privacy in the person, place or property searched; the accused had a legitimate interest in the property or evidence seized when challenging a seizure; or the accused would otherwise have grounds to object to the search or seizure under the Constitution of the United States as applied to members of the armed forces.

(b) *Definition.* As used in this rule, a search or seizure is "unlawful" if it was conducted, instigated, or participated in by:

(1) military personnel or their agents and was in violation of the Constitution of the United States as applied to members of the armed forces, a federal statute applicable to trials by court-martial that requires exclusion of evidence obtained in violation thereof, or Mil. R. Evid. 312–317;

(2) other officials or agents of the United States, of the District of Columbia, or of a State, Commonwealth, or possession of the United States or any political subdivision of such a State, Commonwealth, or possession, and was in violation of the Constitution of the United States, or is unlawful under the principles of law generally applied in the trial of criminal cases in the United States district courts involving a similar search or seizure; or

(3) officials of a foreign government or their agents, where evidence was obtained as a result of a foreign search or seizure that subjected the accused to gross and brutal maltreatment. A search or seizure is not “participated in” by a United States military or civilian official merely because that person is present at a search or seizure conducted in a foreign nation by officials of a foreign government or their agents, or because that person acted as an interpreter or took steps to mitigate damage to property or physical harm during the foreign search or seizure.

(c) *Exceptions.*

(1) *Impeachment.* Evidence that was obtained as a result of an unlawful search or seizure may be used to impeach by contradiction the in-court testimony of the accused.

(2) *Inevitable Discovery.* Evidence that was obtained as a result of an unlawful search or seizure may be used when the evidence would have been obtained even if such unlawful search or seizure had not been made.

(3) *Good Faith Execution of a Warrant or Search Authorization.* Evidence that was obtained as a result of an unlawful search or seizure may be used if:

(A) the search or seizure resulted from an authorization to search, seize or apprehend issued by an individual competent to issue the authorization under Mil. R. Evid. 315(d) or from a search warrant or arrest warrant issued by competent civilian authority;

(B) the individual issuing the authorization or warrant had a substantial basis for determining the existence of probable cause; and

(C) the officials seeking and executing the authorization or warrant reasonably and with good faith relied on the issuance of the authorization or warrant. Good faith is to be determined using an objective standard.

(d) *Motions to Suppress and Objections.*

(1) *Disclosure.* Prior to arraignment, the prosecution must disclose to the defense all evidence seized from the person or property of the accused, or believed to be owned by the accused, or evidence derived therefrom, that it intends to offer into evidence against the accused at trial.

(2) *Time Requirements.*

(A) When evidence has been disclosed prior to arraignment under subdivision (d)(1), the defense must make any motion to suppress or objection under this rule prior to submission of a plea. In the absence of such motion or objection, the defense may not raise the issue at a later time except as permitted by the military judge for good cause shown. Failure to so move or object constitutes a waiver of the motion or objection.

(B) If the prosecution intends to offer evidence described in subdivision (d)(1) that was not disclosed prior to arraignment, the prosecution must provide timely notice to the military judge and to counsel for the accused. The defense may enter an objection at that time and the military judge may make such orders as are required in the interest of justice.

(3) *Specificity.* The military judge may require the defense to specify the grounds upon which the defense moves to suppress or object to evidence described in subdivision (d)(1). If defense counsel, despite the exercise of due diligence, has been unable to interview adequately those persons involved in the search or seizure, the military judge may enter any order required by the interests of justice, including authorization for the defense to make a general motion to suppress or a general objection.

(4) *Challenging Probable Cause.*

(A) *Relevant Evidence.* If the defense challenges evidence seized pursuant to a search warrant or search authorization on the ground that the warrant or authorization was not based upon probable cause, the evidence relevant to the motion is limited to evidence concerning the information actually presented to or otherwise known by the authorizing officer, except as provided in subdivision (d)(4)(B).

(B) *False Statements.* If the defense makes a substantial preliminary showing that a government agent included a false statement knowingly and intentionally or with reckless disregard for the truth in the information presented to the authorizing officer, and if the allegedly false statement is necessary to the finding of probable cause, the defense, upon request, is entitled to a hearing. At the hearing, the defense has the burden of establishing by a preponderance of the evidence the allegation of knowing and intentional falsity or reckless disregard for the truth. If

the defense meets its burden, the prosecution has the burden of proving by a preponderance of the evidence, with the false information set aside, that the remaining information presented to the authorizing officer is sufficient to establish probable cause. If the prosecution does not meet its burden, the objection or motion must be granted unless the search is otherwise lawful under these rules.

(5) *Burden and Standard of Proof.*

(A) *In general.* When the defense makes an appropriate motion or objection under subdivision (d), the prosecution has the burden of proving by a preponderance of the evidence that the evidence was not obtained as a result of an unlawful search or seizure, that the evidence would have been obtained even if the unlawful search or seizure had not been made, or that the evidence was obtained by officials who reasonably and with good faith relied on the issuance of an authorization to search, seize, or apprehend or a search warrant or an arrest warrant.

(B) *Statement Following Apprehension.* In addition to subdivision (d)(5)(A), a statement obtained from a person apprehended in a dwelling in violation R.C.M. 302(d)(2) and (e), is admissible if the prosecution shows by a preponderance of the evidence that the apprehension was based on probable cause, the statement was made at a location outside the dwelling subsequent to the apprehension, and the statement was otherwise in compliance with these rules.

(C) *Specific Grounds of Motion or Objection.* When the military judge has required the defense to make a specific motion or objection under subdivision (d)(3), the burden on the prosecution extends only to the grounds upon which the defense moved to suppress or objected to the evidence.

(6) *Defense Evidence.* The defense may present evidence relevant to the admissibility of evidence as to which there has been an appropriate motion or objection under this rule. An accused may testify for the limited purpose of contesting the legality of the search or seizure giving rise to the challenged evidence. Prior to the introduction of such testimony by the accused, the defense must inform the military judge that the testimony is offered under subdivision (d). When the accused testifies under subdivision (d), the accused may be cross-examined only as to the matter on which he or she testifies. Nothing said by the accused on either direct or cross-examination may be used against the accused for any purpose other than in a prosecution for perjury, false swearing, or the making of a false official statement.

(7) *Rulings.* The military judge must rule, prior to plea, upon any motion to suppress or objection to evidence made prior to plea unless, for good cause, the military judge orders that the ruling be deferred for determination at trial or after findings. The military judge may not defer ruling if doing so adversely affects a party's right to appeal the ruling. The military judge must state essential findings of fact on the record when the ruling involves factual issues.

(8) *Informing the Members.* If a defense motion or objection under this rule is sustained in whole or in part, the court-martial members may not be informed of that fact except when the military judge must instruct the members to disregard evidence.

(e) *Effect of Guilty Plea.* Except as otherwise expressly provided in R.C.M. 910(a)(2), a plea of guilty to an offense that results in a finding of guilty waives all issues under the Fourth Amendment to the Constitution of the United States and Mil. R. Evid. 311-317 with respect to the offense, whether or not raised prior to plea.

### **Rule 312. Body Views and Intrusions**

(a) *General Rule.* Evidence obtained from body views and intrusions conducted in accordance with this rule is admissible at trial when relevant and not otherwise inadmissible under these rules.

(b) *Visual Examination of the Body.*

(1) *Consensual Examination.* Evidence obtained from a visual examination of the unclothed body is admissible if the person consented to the inspection in accordance with Mil. R. Evid. 314(e).

(2) *Involuntary Examination.* Evidence obtained from an involuntary display of the unclothed body, including a visual examination of body cavities, is admissible only if the inspection was conducted in a reasonable fashion and authorized under the following provisions of the Military Rules of Evidence:

- (A) inspections and inventories under Mil. R. Evid. 313;
- (B) searches under Mil. R. Evid. 314(b) and 314(c) if there is a reasonable suspicion that weapons, contraband, or evidence of crime is concealed on the body of the person to be searched;
- (C) searches incident to lawful apprehension under Mil. R. Evid. 314(g);
- (D) searches within a jail, confinement facility, or similar facility under Mil. R. Evid. 314(h) if reasonably necessary to maintain the security of the institution or its personnel;
- (E) emergency searches under Mil. R. Evid. 314(i); and

(F) probable cause searches under Mil. R. Evid. 315.

(c) *Intrusion into Body Cavities.*

(1) *Mouth, Nose, and Ears.* Evidence obtained from a reasonable nonconsensual physical intrusion into the mouth, nose, and ears is admissible under the same standards that apply to a visual examination of the body under subdivision (b).

(2) *Other Body Cavities.* Evidence obtained from nonconsensual intrusions into other body cavities is admissible only if made in a reasonable fashion by a person with appropriate medical qualifications and if:

(A) at the time of the intrusion there was probable cause to believe that a weapon, contraband, or other evidence of crime was present;

(B) conducted to remove weapons, contraband, or evidence of crime discovered under subdivisions (b) or (c)(2)(A) of this rule;

(C) conducted pursuant to Mil. R. Evid. 316(c)(5)(C);

(D) conducted pursuant to a search warrant or search authorization under Mil. R. Evid. 315; or

(E) conducted pursuant to Mil. R. Evid. 314(h) based on a reasonable suspicion that the individual is concealing a weapon, contraband, or evidence of crime.

(d) *Extraction of Body Fluids.* Evidence obtained from nonconsensual extraction of body fluids is admissible if seized pursuant to a search warrant or a search authorization under Mil. R. Evid. 315. Evidence obtained from nonconsensual extraction of body fluids made without such a warrant or authorization is admissible, notwithstanding Mil. R. Evid. 315(g), only when probable cause existed at the time of extraction to believe that evidence of crime would be found and that the delay necessary to obtain a search warrant or search authorization could have resulted in the destruction of the evidence. Evidence obtained from nonconsensual extraction of body fluids is admissible only when executed in a reasonable fashion by a person with appropriate medical qualifications.

(e) *Other Intrusive Searches.* Evidence obtained from a nonconsensual intrusive search of the body, other than searches described in subdivisions (c) or (d), conducted to locate or obtain weapons, contraband, or evidence of crime is admissible only if obtained pursuant to a search warrant or search authorization under Mil. R. Evid. 315 and conducted in a reasonable fashion by a person with appropriate medical qualifications in such a manner so as not to endanger the health of the person to be searched.

(f) *Intrusions for Valid Medical Purposes.* Evidence or contraband obtained in the course of a medical examination or an intrusion conducted for a valid medical purpose is admissible. Such an examination or intrusion may not, for the purpose of obtaining evidence or contraband, exceed what is necessary for the medical purpose.

(g) *Medical Qualifications.* The Secretary concerned may prescribe appropriate medical qualifications for persons who conduct searches and seizures under this rule.

### **Rule 313. Inspections and Inventories in the Armed Forces**

(a) *General Rule.* Evidence obtained from lawful inspections and inventories in the armed forces is admissible at trial when relevant and not otherwise inadmissible under these rules. An unlawful weapon, contraband, or other evidence of a crime discovered during a lawful inspection or inventory may be seized and is admissible in accordance with this rule.

(b) *Lawful Inspections.* An “inspection” is an examination of the whole or part of a unit, organization, installation, vessel, aircraft, or vehicle, including an examination conducted at entrance and exit points, conducted as an incident of command the primary purpose of which is to determine and to ensure the security, military fitness, or good order and discipline of the unit, organization, installation, vessel, aircraft, or vehicle. Inspections must be conducted in a reasonable fashion and, if applicable, must comply with Mil. R. Evid. 312. Inspections may utilize any reasonable natural or technological aid and may be conducted with or without notice to those inspected.

(1) *Purpose of Inspections.* An inspection may include, but is not limited to, an examination to determine and to ensure that any or all of the following requirements are met: that the command is properly equipped, functioning properly, maintaining proper standards of readiness, sea or airworthiness, sanitation and cleanliness; and that personnel are present, fit, and ready for duty. An order to produce body fluids, such as urine, is permissible in accordance with this rule.

(2) *Searches for Evidence.* An examination made for the primary purpose of obtaining evidence for use in a trial by court-martial or in other disciplinary proceedings is not an inspection within the meaning of this rule.

(3) *Examinations to Locate and Confiscate Weapons or Contraband.*

(A) An inspection may include an examination to locate and confiscate unlawful weapons and other contraband provided that the criteria set forth in subdivision (b)(3)(B) are not implicated.

(B) The prosecution must prove by clear and convincing evidence that the examination was an inspection within the meaning of this rule if a purpose of an examination is to locate weapons or contraband, and if:

- (i) the examination was directed immediately following a report of a specific offense in the unit, organization, installation, vessel, aircraft, or vehicle and was not previously scheduled;
- (ii) specific individuals are selected for examination; or
- (iii) persons examined are subjected to substantially different intrusions during the same examination.

(c) *Lawful Inventories.* An "inventory" is a reasonable examination, accounting, or other control measure used to account for or control property, assets, or other resources. It is administrative and not prosecutorial in nature, and if applicable, the inventory must comply with Mil. R. Evid. 312. An examination made for the primary purpose of obtaining evidence for use in a trial by court-martial or in other disciplinary proceedings is not an inventory within the meaning of this rule.

#### **Rule 314. Searches Not Requiring Probable Cause**

(a) *General Rule.* Evidence obtained from reasonable searches not requiring probable cause is admissible at trial when relevant and not otherwise inadmissible under these rules or the Constitution of the United States as applied to members of the armed forces.

(b) *Border Searches.* Evidence from a border search for customs or immigration purposes authorized by a federal statute is admissible.

(c) *Searches Upon Entry to or Exit from United States Installations, Aircraft, and Vessels Abroad.* In addition to inspections under Mil. R. Evid. 313(b), evidence is admissible when a commander of a United States military installation, enclave, or aircraft on foreign soil, or in foreign or international airspace, or a United States vessel in foreign or international waters, has authorized appropriate personnel to search persons or the property of such persons upon entry to or exit from the installation, enclave, aircraft, or vessel to ensure the security, military fitness, or good order and discipline of the command. A search made for the primary purpose of obtaining evidence for use in a trial by court-martial or other disciplinary proceeding is not authorized by subdivision (c).

(d) *Searches of Government Property.* Evidence resulting from a search of government property without probable cause is admissible under this rule unless the person to whom the property is issued or assigned has a reasonable expectation of privacy therein at the time of the search. Normally a person does not have a reasonable expectation of privacy in government property that is not issued for personal use. Wall or floor lockers in living quarters issued for the purpose of storing personal possessions normally are issued for personal use, but the determination as to whether a person has a reasonable expectation of privacy in government property issued for personal use depends on the facts and circumstances at the time of the search.

(e) *Consent Searches.*

(1) *General Rule.* Evidence of a search conducted without probable cause is admissible if conducted with lawful consent.

(2) *Who May Consent.* A person may consent to a search of his or her person or property, or both, unless control over such property has been given to another. A person may grant consent to search property when the person exercises control over that property.

(3) *Scope of Consent.* Consent may be limited in any way by the person granting consent, including limitations in terms of time, place, or property, and may be withdrawn at any time.

(4) *Voluntariness.* To be valid, consent must be given voluntarily. Voluntariness is a question to be determined from all the circumstances. Although a person's knowledge of the right to refuse to give consent is a factor to be considered in determining voluntariness, the prosecution is not required to demonstrate such knowledge as a prerequisite to establishing a voluntary consent. Mere submission to the color of authority of personnel performing law enforcement duties or acquiescence in an announced or indicated purpose to search is not a voluntary consent.

(5) *Burden and Standard of Proof.* The prosecution must prove consent by clear and convincing evidence. The fact that a person was in custody while granting consent is a factor to be considered in determining the voluntariness of consent, but it does not affect the standard of proof.

(f) *Searches Incident to a Lawful Stop.*

(1) *Lawfulness.* A stop is lawful when conducted by a person authorized to apprehend under R.C.M. 302(b) or others performing law enforcement duties and when the person making the stop has information or observes unusual conduct that leads him or her reasonably to conclude in light of his or her experience that criminal activity may be afoot. The stop must be temporary and investigatory in nature.

(2) *Stop and Frisk*. Evidence is admissible if seized from a person who was lawfully stopped and who was frisked for weapons because he or she was reasonably suspected to be armed and dangerous. Contraband or evidence that is located in the process of a lawful frisk may be seized.

(3) *Vehicles*. Evidence is admissible if seized in the course of a search for weapons in the areas of the passenger compartment of a vehicle in which a weapon may be placed or hidden, so long as the person lawfully stopped is the driver or a passenger and the official who made the stop has a reasonable suspicion that the person stopped is dangerous and may gain immediate control of a weapon.

(g) *Searches Incident to Apprehension*.

(1) *General Rule*. Evidence is admissible if seized in a search of a person who has been lawfully apprehended or if seized as a result of a reasonable protective sweep.

(2) *Search for Weapons and Destructible Evidence*. A lawful search incident to apprehension may include a search for weapons or destructible evidence in the area within the immediate control of a person who has been apprehended. "Immediate control" means that area in which the individual searching could reasonably believe that the person apprehended could reach with a sudden movement to obtain such property.

(3) *Protective Sweep for Other Persons*.

(A) *Area of Potential Immediate Attack*. Apprehending officials may, incident to apprehension, as a precautionary matter and without probable cause or reasonable suspicion, look in closets and other spaces immediately adjoining the place of apprehension from which an attack could be immediately launched.

(B) *Wider Protective Sweep*. When an apprehension takes place at a location in which another person might be present who might endanger the apprehending officials or others in the area of the apprehension, a search incident to arrest may lawfully include a reasonable examination of those spaces where a person might be found. Such a reasonable examination is lawful under subdivision (g) if the apprehending official has a reasonable suspicion based on specific and articulable facts that the area to be examined harbors an individual posing a danger to those in the area of the apprehension.

(h) *Searches within Jails, Confinement Facilities, or Similar Facilities*. Evidence obtained from a search within a jail, confinement facility, or similar facility is admissible even if conducted without probable cause provided that it was authorized by persons with authority over the institution.

(i) *Emergency Searches to Save Life or for Related Purposes*. Evidence obtained from emergency searches of persons or property conducted to save life, or for a related purpose, is admissible provided that the search was conducted in a good faith effort to render immediate medical aid, to obtain information that will assist in the rendering of such aid, or to prevent immediate or ongoing personal injury.

(j) *Searches of Open Fields or Woodlands*. Evidence obtained from a search of an open field or woodland is admissible provided that the search was not unlawful within the meaning of Mil. R. Evid. 311.

### **Rule 315. Probable Cause Searches**

(a) *General Rule*. Evidence obtained from reasonable searches conducted pursuant to a search warrant or search authorization, or under the exigent circumstances described in this rule, is admissible at trial when relevant and not otherwise inadmissible under these rules or the Constitution of the United States as applied to members of the armed forces.

(b) *Definitions*. As used in these rules:

(1) "Search authorization" means express permission, written or oral, issued by competent military authority to search a person or an area for specified property or evidence or for a specific person and to seize such property, evidence, or person. It may contain an order directing subordinate personnel to conduct a search in a specified manner.

(2) "Search warrant" means express permission to search and seize issued by competent civilian authority.

(c) *Scope of Search Authorization*. A search authorization may be valid under this rule for a search of:

(1) the physical person of anyone subject to military law or the law of war wherever found;

(2) military property of the United States or of nonappropriated fund activities of an armed force of the United States wherever located;

(3) persons or property situated on or in a military installation, encampment, vessel, aircraft, vehicle, or any other location under military control, wherever located; or

(4) nonmilitary property within a foreign country.

(d) *Who May Authorize*. A search authorization under this rule is valid only if issued by an impartial individual in one of the categories set forth in subdivisions (d)(1) and (d)(2). An otherwise impartial authorizing official does not

lose impartiality merely because he or she is present at the scene of a search or is otherwise readily available to persons who may seek the issuance of a search authorization; nor does such an official lose impartial character merely because the official previously and impartially authorized investigative activities when such previous authorization is similar in intent or function to a pretrial authorization made by the United States district courts.

(1) *Commander*. A commander or other person serving in a position designated by the Secretary concerned as either a position analogous to an officer in charge or a position of command, who has control over the place where the property or person to be searched is situated or found, or, if that place is not under military control, having control over persons subject to military law or the law of war; or

(2) *Military Judge or Magistrate*. A military judge or magistrate if authorized under regulations prescribed by the Secretary of Defense or the Secretary concerned.

(e) *Who May Search*.

(1) *Search Authorization*. Any commissioned officer, warrant officer, petty officer, noncommissioned officer, and, when in the execution of guard or police duties, any criminal investigator, member of the Air Force security forces, military police, or shore patrol, or person designated by proper authority to perform guard or police duties, or any agent of any such person, may conduct or authorize a search when a search authorization has been granted under this rule or a search would otherwise be proper under subdivision (g).

(2) *Search Warrants*. Any civilian or military criminal investigator authorized to request search warrants pursuant to applicable law or regulation is authorized to serve and execute search warrants. The execution of a search warrant affects admissibility only insofar as exclusion of evidence is required by the Constitution of the United States or an applicable federal statute.

(f) *Basis for Search Authorizations*.

(1) *Probable Cause Requirement*. A search authorization issued under this rule must be based upon probable cause.

(2) *Probable Cause Determination*. Probable cause to search exists when there is a reasonable belief that the person, property, or evidence sought is located in the place or on the person to be searched. A search authorization may be based upon hearsay evidence in whole or in part. A determination of probable cause under this rule will be based upon any or all of the following:

(A) written statements communicated to the authorizing official;

(B) oral statements communicated to the authorizing official in person, via telephone, or by other appropriate means of communication; or

(C) such information as may be known by the authorizing official that would not preclude the officer from acting in an impartial fashion. The Secretary of Defense or the Secretary concerned may prescribe additional requirements through regulation.

(g) *Exigencies*. Evidence obtained from a probable cause search is admissible without a search warrant or search authorization when there is a reasonable belief that the delay necessary to obtain a search warrant or search authorization would result in the removal, destruction, or concealment of the property or evidence sought. Military operational necessity may create an exigency by prohibiting or preventing communication with a person empowered to grant a search authorization.

#### **Rule 316. Seizures**

(a) *General Rule*. Evidence obtained from reasonable seizures is admissible at trial when relevant and not otherwise inadmissible under these rules or the Constitution of the United States as applied to members of the armed forces.

(b) *Apprehension*. Apprehension is governed by R.C.M. 302.

(c) *Seizure of Property or Evidence*.

(1) *Based on Probable Cause*. Evidence is admissible when seized based on a reasonable belief that the property or evidence is an unlawful weapon, contraband, evidence of crime, or might be used to resist apprehension or to escape.

(2) *Abandoned Property*. Abandoned property may be seized without probable cause and without a search warrant or search authorization. Such seizure may be made by any person.

(3) *Consent*. Property or evidence may be seized with consent consistent with the requirements applicable to consensual searches under Mil. R. Evid. 314.

(4) *Government Property*. Government property may be seized without probable cause and without a search warrant or search authorization by any person listed in subdivision (d), unless the person to whom the property is

issued or assigned has a reasonable expectation of privacy therein, as provided in Mil. R. Evid. 314(d), at the time of the seizure.

(5) *Other Property*. Property or evidence not included in subdivisions (c)(1)-(4) may be seized for use in evidence by any person listed in subdivision (d) if:

(A) *Authorization*. The person is authorized to seize the property or evidence by a search warrant or a search authorization under Mil. R. Evid. 315;

(B) *Exigent Circumstances*. The person has probable cause to seize the property or evidence and under Mil. R. Evid. 315(g) a search warrant or search authorization is not required; or

(C) *Plain View*. The person while in the course of otherwise lawful activity observes in a reasonable fashion property or evidence that the person has probable cause to seize.

(6) *Temporary Detention*. Nothing in this rule prohibits temporary detention of property on less than probable cause when authorized under the Constitution of the United States.

(d) *Who May Seize*. Any commissioned officer, warrant officer, petty officer, noncommissioned officer, and, when in the execution of guard or police duties, any criminal investigator, member of the Air Force security forces, military police, or shore patrol, or individual designated by proper authority to perform guard or police duties, or any agent of any such person, may seize property pursuant to this rule.

(e) *Other Seizures*. Evidence obtained from a seizure not addressed in this rule is admissible provided that its seizure was permissible under the Constitution of the United States as applied to members of the armed forces.

### **Rule 317. Interception of Wire and Oral Communications**

(a) *General Rule*. Wire or oral communications constitute evidence obtained as a result of an unlawful search or seizure within the meaning of Mil. R. Evid. 311 when such evidence must be excluded under the Fourth Amendment to the Constitution of the United States as applied to members of the armed forces or if such evidence must be excluded under a federal statute applicable to members of the armed forces.

(b) *When Authorized by Court Order*. Evidence from the interception of wire or oral communications is admissible when authorized pursuant to an application to a federal judge of competent jurisdiction under the provisions of a federal statute.

(c) *Regulations*. Notwithstanding any other provision of these rules, evidence obtained by members of the armed forces or their agents through interception of wire or oral communications for law enforcement purposes is not admissible unless such interception:

(1) takes place in the United States and is authorized under subdivision (b);

(2) takes place outside the United States and is authorized under regulations issued by the Secretary of Defense or the Secretary concerned; or

(3) is authorized under regulations issued by the Secretary of Defense or the Secretary concerned and is not unlawful under applicable federal statutes.

### **Rule 321. Eyewitness Identification**

(a) *General Rule*. Testimony concerning a relevant out-of-court identification by any person is admissible, subject to an appropriate objection under this rule, if such testimony is otherwise admissible under these rules. The witness making the identification and any person who has observed the previous identification may testify concerning it. When in testimony a witness identifies the accused as being, or not being, a participant in an offense or makes any other relevant identification concerning a person in the courtroom, evidence that on a previous occasion the witness made a similar identification is admissible to corroborate the witness's testimony as to identity even if the credibility of the witness has not been attacked directly, subject to appropriate objection under this rule.

(b) *When Inadmissible*. An identification of the accused as being a participant in an offense, whether such identification is made at the trial or otherwise, is inadmissible against the accused if:

(1) The identification is the result of an unlawful lineup or other unlawful identification process, as defined in subdivision (c), conducted by the United States or other domestic authorities and the accused makes a timely motion to suppress or an objection to the evidence under this rule; or

(2) Exclusion of the evidence is required by the Due Process Clause of the Fifth Amendment to the Constitution of the United States as applied to members of the armed forces. Evidence other than an identification of the accused that is obtained as a result of the unlawful lineup or unlawful identification process is inadmissible against the accused if the accused makes a timely motion to suppress or an objection to the evidence under this rule and if

exclusion of the evidence is required under the Constitution of the United States as applied to members of the armed forces.

(c) *Unlawful Lineup or Identification Process.*

(1) *Unreliable.* A lineup or other identification process is unreliable, and therefore unlawful, if the lineup or other identification process is so suggestive as to create a substantial likelihood of misidentification.

(2) *In Violation of Right to Counsel.* A lineup is unlawful if it is conducted in violation of the accused's rights to counsel.

(A) *Military Lineups.* An accused or suspect is entitled to counsel if, after prefferal of charges or imposition of pretrial restraint under R.C.M. 304 for the offense under investigation, the accused is required by persons subject to the code or their agents to participate in a lineup for the purpose of identification. When a person entitled to counsel under this rule requests counsel, a judge advocate or a person certified in accordance with Article 27(b) will be provided by the United States at no expense to the accused or suspect and without regard to indigency or lack thereof before the lineup may proceed. The accused or suspect may waive the rights provided in this rule if the waiver is freely, knowingly, and intelligently made.

(B) *Nonmilitary Lineups.* When a person subject to the code is required to participate in a lineup for purposes of identification by an official or agent of the United States, of the District of Columbia, or of a State, Commonwealth, or possession of the United States, or any political subdivision of such a State, Commonwealth, or possession, and the provisions of subdivision (c)(2)(A) do not apply, the person's entitlement to counsel and the validity of any waiver of applicable rights will be determined by the principles of law generally recognized in the trial of criminal cases in the United States district courts involving similar lineups.

(d) *Motions to Suppress and Objections.*

(1) *Disclosure.* Prior to arraignment, the prosecution must disclose to the defense all evidence of, or derived from, a prior identification of the accused as a lineup or other identification process that it intends to offer into evidence against the accused at trial.

(2) *Time Requirement.* When such evidence has been disclosed, any motion to suppress or objection under this rule must be made by the defense prior to submission of a plea. In the absence of such motion or objection, the defense may not raise the issue at a later time except as permitted by the military judge for good cause shown. Failure to so move constitutes a waiver of the motion or objection.

(3) *Continuing Duty.* If the prosecution intends to offer such evidence and the evidence was not disclosed prior to arraignment, the prosecution must provide timely notice to the military judge and counsel for the accused. The defense may enter an objection at that time and the military judge may make such orders as are required in the interests of justice.

(4) *Specificity.* The military judge may require the defense to specify the grounds upon which the defense moves to suppress or object to evidence. If defense counsel, despite the exercise of due diligence, has been unable to interview adequately those persons involved in the lineup or other identification process, the military judge may enter any order required by the interests of justice, including authorization for the defense to make a general motion to suppress or a general objection.

(5) *Defense Evidence.* The defense may present evidence relevant to the issue of the admissibility of evidence as to which there has been an appropriate motion or objection under this rule. An accused may testify for the limited purpose of contesting the legality of the lineup or identification process giving rise to the challenged evidence. Prior to the introduction of such testimony by the accused, the defense must inform the military judge that the testimony is offered under subdivision (d). When the accused testifies under subdivision (d), the accused may be cross-examined only as to the matter on which he or she testifies. Nothing said by the accused on either direct or cross-examination may be used against the accused for any purpose other than in a prosecution for perjury, false swearing, or the making of a false official statement.

(6) *Burden and Standard of Proof.* When the defense has raised a specific motion or objection under subdivision (d)(3), the burden on the prosecution extends only to the grounds upon which the defense moved to suppress or object to the evidence.

(A) *Right to Counsel.*

(i) *Initial Violation of Right to Counsel at a Lineup.* When the accused raises the right to presence of counsel under this rule, the prosecution must prove by a preponderance of the evidence that counsel was present at the lineup or that the accused, having been advised of the right to the presence of counsel, voluntarily and intelligently waived that right prior to the lineup.

(ii) *Identification Subsequent to a Lineup Conducted in Violation of the Right to Counsel.* When the military judge determines that an identification is the result of a lineup conducted without the presence of counsel or

an appropriate waiver, any later identification by one present at such unlawful lineup is also a result thereof unless the military judge determines that the contrary has been shown by clear and convincing evidence.

(B) *Unreliable Identification.*

(i) *Initial Unreliable Identification.* When an objection raises the issue of an unreliable identification, the prosecution must prove by a preponderance of the evidence that the identification was reliable under the circumstances.

(ii) *Identification Subsequent to an Unreliable Identification.* When the military judge determines that an identification is the result of an unreliable identification, a later identification may be admitted if the prosecution proves by clear and convincing evidence that the later identification is not the result of the inadmissible identification.

(7) *Rulings.* A motion to suppress or an objection to evidence made prior to plea under this rule will be ruled upon prior to plea unless the military judge, for good cause, orders that it be deferred for determination at the trial of the general issue or until after findings, but no such determination will be deferred if a party's right to appeal the ruling is affected adversely. Where factual issues are involved in ruling upon such motion or objection, the military judge will state his or her essential findings of fact on the record.

(e) *Effect of Guilty Pleas.* Except as otherwise expressly provided in R.C.M. 910(a)(2), a plea of guilty to an offense that results in a finding of guilty waives all issues under this rule with respect to that offense whether or not raised prior to the plea.

#### **Rule 401. Test for Relevant Evidence**

Evidence is relevant if:

- (a) it has any tendency to make a fact more or less probable than it would be without the evidence; and
- (b) the fact is of consequence in determining the action.

#### **Rule 402. General Admissibility of Relevant Evidence**

- (a) Relevant evidence is admissible unless any of the following provides otherwise:
  - (1) the United States Constitution as it applies to members of the armed forces ;
  - (2) a federal statute applicable to trial by courts-martial;
  - (3) these rules; or
  - (4) this Manual.
- (b) Irrelevant evidence is not admissible.

#### **Rule 403. Excluding Relevant Evidence for Prejudice, Confusion, Waste of Time, or Other Reasons**

The military judge may exclude relevant evidence if its probative value is substantially outweighed by a danger of one or more of the following: unfair prejudice, confusing the issues, misleading the members, undue delay, wasting time, or needlessly presenting cumulative evidence.

#### **Rule 404. Character Evidence; Crimes or Other Acts**

(a) *Character Evidence.*

(1) *Prohibited Uses.* Evidence of a person's character or character trait is not admissible to prove that on a particular occasion the person acted in accordance with the character or trait.

(2) *Exceptions for an Accused or Victim.*

(A) The accused may offer evidence of the accused's pertinent trait, and if the evidence is admitted, the prosecution may offer evidence to rebut it.

(B) Subject to the limitations in Mil. R. Evid. 412, the accused may offer evidence of an alleged victim's pertinent trait, and if the evidence is admitted, the prosecution may:

- (i) offer evidence to rebut it; and
- (ii) offer evidence of the accused's same trait; and

(C) in a homicide or assault case, the prosecution may offer evidence of the alleged victim's trait of peacefulness to rebut evidence that the victim was the first aggressor.

(3) *Exceptions for a Witness.* Evidence of a witness's character may be admitted under Mil R. Evid. 607, 608, and 609.

(b) *Crimes, Wrongs, or Other Acts.*

(1) *Prohibited Uses.* Evidence of a crime, wrong, or other act is not admissible to prove a person's character in order to show that on a particular occasion the person acted in accordance with the character.

(2) *Permitted Uses; Notice.* This evidence may be admissible for another purpose, such as proving motive, opportunity, intent, preparation, plan, knowledge, identity, absence of mistake, or lack of accident. On request by the accused, the prosecution must:

(A) provide reasonable notice of the general nature of any such evidence that the prosecution intends to offer at trial; and

(B) do so before trial – or during trial if the military judge, for good cause, excuses lack of pretrial notice.

**Rule 405. Methods of Proving Character**

(a) *By Reputation or Opinion.* When evidence of a person's character or character trait is admissible, it may be proved by testimony about the person's reputation or by testimony in the form of an opinion. On cross-examination of the character witness, the military judge may allow an inquiry into relevant specific instances of the person's conduct.

(b) *By Specific Instances of Conduct.* When a person's character or character trait is an essential element of a charge, claim, or defense, the character or trait may also be proved by relevant specific instances of the person's conduct.

(c) *By Affidavit.* The defense may introduce affidavits or other written statements of persons other than the accused concerning the character of the accused. If the defense introduces affidavits or other written statements under this subdivision, the prosecution may, in rebuttal, also introduce affidavits or other written statements regarding the character of the accused. Evidence of this type may be introduced by the defense or prosecution only if, aside from being contained in an affidavit or other written statement, it would otherwise be admissible under these rules.

(d) *Definitions.* "Reputation" means the estimation in which a person generally is held in the community in which the person lives or pursues a business or profession. "Community" in the armed forces includes a post, camp, ship, station, or other military organization regardless of size.

**Rule 406. Habit; Routine Practice**

Evidence of a person's habit or an organization's routine practice may be admitted to prove that on a particular occasion the person or organization acted in accordance with the habit or routine practice. The military judge may admit this evidence regardless of whether it is corroborated or whether there was an eyewitness.

**Rule 407. Subsequent Remedial Measures**

(a) When measures are taken that would have made an earlier injury or harm less likely to occur, evidence of the subsequent measures is not admissible to prove:

- (1) negligence;
- (2) culpable conduct;
- (3) a defect in a product or its design; or
- (4) a need for a warning or instruction.

(b) The military judge may admit this evidence for another purpose, such as impeachment or – if disputed – proving ownership, control, or the feasibility of precautionary measures.

**Rule 408. Compromise Offers and Negotiations**

(a) *Prohibited Uses.* Evidence of the following is not admissible – on behalf of any party – either to prove or disprove the validity or amount of a disputed claim or to impeach by a prior inconsistent statement or a contradiction:

(1) furnishing, promising, or offering – or accepting, promising to accept, or offering to accept – a valuable consideration in order to compromise the claim; and

(2) conduct or a statement made during compromise negotiations about the claim – except when the negotiations related to a claim by a public office in the exercise of its regulatory, investigative, or enforcement authority.

(b) *Exceptions.* The military judge may admit this evidence for another purpose, such as proving witness bias or prejudice, negating a contention of undue delay, or proving an effort to obstruct a criminal investigation or prosecution.

**Rule 409. Offers to Pay Medical and Similar Expenses**

Evidence of furnishing, promising to pay, or offering to pay medical, hospital, or similar expenses resulting from an injury is not admissible to prove liability for the injury.

**Rule 410. Pleas, Plea Discussions, and Related Statements**

(a) *Prohibited Uses.* Evidence of the following is not admissible against the accused who made the plea or participated in the plea discussions:

- (1) a guilty plea that was later withdrawn;
- (2) a nolo contendere plea;
- (3) any statement made in the course of any judicial inquiry regarding either of the foregoing pleas; or
- (4) any statement made during plea discussions with the convening authority, staff judge advocate, trial counsel or other counsel for the government if the discussions did not result in a guilty plea or they resulted in a later-withdrawn guilty plea.

(b) *Exceptions.* The military judge may admit a statement described in subdivision (a)(3) or (a)(4):

- (1) when another statement made during the same plea or plea discussions has been introduced, if in fairness the statements ought to be considered together; or
- (2) in a proceeding for perjury or false statement, if the accused made the statement under oath, on the record, and with counsel present.

(c) *Request for Administrative Disposition.* A "statement made during plea discussions" includes a statement made by the accused solely for the purpose of requesting disposition under an authorized procedure for administrative action in lieu of trial by court-martial; "on the record" includes the written statement submitted by the accused in furtherance of such request.

**Rule 411. Liability Insurance**

Evidence that a person was or was not insured against liability is not admissible to prove whether the person acted negligently or otherwise wrongfully. The military judge may admit this evidence for another purpose, such as proving witness bias or prejudice or proving agency, ownership, or control.

**Rule 412. Sex Offense Cases: The Victim's Sexual Behavior or Predisposition**

[No change to current version of M.R.E. 412]

**Rule 413. Similar Crimes in Sexual Offense Cases**

(a) *Permitted Uses.* In a court-martial proceeding for a sexual offense, the military judge may admit evidence that the accused committed any other sexual offense. The evidence may be considered on any matter to which it is relevant.

(b) *Disclosure to the Accused.* If the prosecution intends to offer this evidence, the prosecution must disclose it to the accused, including any witnesses' statements or a summary of the expected testimony. The prosecution must do so at least 5 days prior to entry of pleas or at a later time that the military judge allows for good cause.

(c) *Effect on Other Rules.* This rule does not limit the admission or consideration of evidence under any other rule.

(d) *Definition.* As used in this rule, "sexual offense" means an offense punishable under the Uniform Code of Military Justice, or a crime under federal or state law (as "state" is defined in 18 U.S.C. § 513), involving:

- (1) any conduct prohibited by Article 120;
- (2) any conduct prohibited by 18 U.S.C. chapter 109A;
- (3) contact, without consent, between any part of the accused's body, or an object held or controlled by the accused, and another person's genitals or anus;
- (4) contact, without consent, between the accused's genitals or anus and any part of another person's body;
- (5) contact with the aim of deriving sexual pleasure or gratification from inflicting death, bodily injury, or physical pain on another person; or
- (6) an attempt or conspiracy to engage in conduct described in subdivisions (d)(1)-(5).

**Rule 414. Similar Crimes in Child-Molestation Cases**

- (a) *Permitted Uses.* In a court-martial proceeding in which an accused is charged with an act of child molestation, the military judge may admit evidence that the accused committed any other offense of child molestation. The evidence may be considered on any matter to which it is relevant.
- (b) *Disclosure to the Accused.* If the prosecution intends to offer this evidence, the prosecution must disclose it to the accused, including witnesses' statements or a summary of the expected testimony. The prosecution must do so at least 5 days prior to entry of pleas or at a later time that the military judge allows for good cause.
- (c) *Effect on Other Rules.* This rule does not limit the admission or consideration of evidence under any other rule.
- (d) *Definitions.* As used in this rule:
- (1) "Child" means a person below the age of 16; and
  - (2) "Child molestation" means an offense punishable under the Uniform Code of Military Justice, or a crime under federal law or under state law (as "state" is defined in 18 U.S.C. § 513), that involves:
    - (A) any conduct prohibited by Article 120 and committed with a child;
    - (B) any conduct prohibited by 18 U.S.C. chapter 109A and committed with a child;
    - (C) any conduct prohibited by 18 U.S.C. chapter 110;
    - (D) contact between any part of the accused's body, or an object held or controlled by the accused, and a child's genitals or anus;
    - (E) contact between the accused's genitals or anus and any part of a child's body;
    - (F) contact with the aim of deriving sexual pleasure or gratification from inflicting death, bodily injury, or physical pain on a child; or
    - (G) an attempt or conspiracy to engage in conduct described in subdivisions (d)(2)(A)-(F).

**Rule 501. Privilege in General**

- (a) A person may not claim a privilege with respect to any matter except as required by or provided for in:
- (1) the United States Constitution as applied to members of the armed forces;
  - (2) a federal statute applicable to trials by courts-martial;
  - (3) these rules;
  - (4) this Manual; or
  - (4) the principles of common law generally recognized in the trial of criminal cases in the United States district courts under rule 501 of the Federal Rules of Evidence, insofar as the application of such principles in trials by courts-martial is practicable and not contrary to or inconsistent with the Uniform Code of Military Justice, these rules, or this Manual.
- (b) A claim of privilege includes, but is not limited to, the assertion by any person of a privilege to:
- (1) refuse to be a witness;
  - (2) refuse to disclose any matter;
  - (3) refuse to produce any object or writing; or
  - (4) prevent another from being a witness or disclosing any matter or producing any object or writing.
- (c) The term "person" includes an appropriate representative of the Federal Government, a State, or political subdivision thereof, or any other entity claiming to be the holder of a privilege.
- (d) Notwithstanding any other provision of these rules, information not otherwise privileged does not become privileged on the basis that it was acquired by a medical officer or civilian physician in a professional capacity.

**Rule 502. Lawyer-Client Privilege**

- (a) *General Rule.* A client has a privilege to refuse to disclose and to prevent any other person from disclosing confidential communications made for the purpose of facilitating the rendition of professional legal services to the client:
- (1) between the client or the client's representative and the lawyer or the lawyer's representative;
  - (2) between the lawyer and the lawyer's representative;
  - (3) by the client or the client's lawyer to a lawyer representing another in a matter of common interest;
  - (4) between representatives of the client or between the client and a representative of the client; or
  - (5) between lawyers representing the client.
- (b) *Definitions.* As used in this rule:

(1) "Client" means a person, public officer, corporation, association, organization, or other entity, either public or private, who receives professional legal services from a lawyer, or who consults a lawyer with a view to obtaining professional legal services from the lawyer.

(2) "Lawyer" means a person authorized, or reasonably believed by the client to be authorized, to practice law; or a member of the armed forces detailed, assigned, or otherwise provided to represent a person in a court-martial case or in any military investigation or proceeding. The term "lawyer" does not include a member of the armed forces serving in a capacity other than as a judge advocate, legal officer, or law specialist as defined in Article 1, unless the member:

(A) is detailed, assigned, or otherwise provided to represent a person in a court-martial case or in any military investigation or proceeding;

(B) is authorized by the armed forces, or reasonably believed by the client to be authorized, to render professional legal services to members of the armed forces; or

(C) is authorized to practice law and renders professional legal services during off-duty employment.

(3) "Lawyer's representative" means a person employed by or assigned to assist a lawyer in providing professional legal services.

(4) A communication is "confidential" if not intended to be disclosed to third persons other than those to whom disclosure is in furtherance of the rendition of professional legal services to the client or those reasonably necessary for the transmission of the communication.

(c) *Who May Claim the Privilege.* The privilege may be claimed by the client, the guardian or conservator of the client, the personal representative of a deceased client, or the successor, trustee, or similar representative of a corporation, association, or other organization, whether or not in existence. The lawyer or the lawyer's representative who received the communication may claim the privilege on behalf of the client. The authority of the lawyer to do so is presumed in the absence of evidence to the contrary.

(d) *Exceptions.* There is no privilege under this rule under any of the following circumstances:

(1) *Crime or Fraud.* If the communication clearly contemplated the future commission of a fraud or crime or if services of the lawyer were sought or obtained to enable or aid anyone to commit or plan to commit what the client knew or reasonably should have known to be a crime or fraud;

(2) *Claimants through Same Deceased Client.* As to a communication relevant to an issue between parties who claim through the same deceased client, regardless of whether the claims are by testate or intestate succession or by inter vivos transaction;

(3) *Breach of Duty by Lawyer or Client.* As to a communication relevant to an issue of breach of duty by the lawyer to the client or by the client to the lawyer;

(4) *Document Attested by the Lawyer.* As to a communication relevant to an issue concerning an attested document to which the lawyer is an attesting witness; or

(5) *Joint Clients.* As to a communication relevant to a matter of common interest between two or more clients if the communication was made by any of them to a lawyer retained or consulted in common, when offered in an action between any of the clients.

#### **Rule 503. Communications to Clergy**

(a) *General Rule.* A person has a privilege to refuse to disclose and to prevent another from disclosing a confidential communication by the person to a clergyman or to a clergyman's assistant, if such communication is made either as a formal act of religion or as a matter of conscience.

(b) *Definitions.* As used in this rule:

(1) "Clergyman" means a minister, priest, rabbi, chaplain, or other similar functionary of a religious organization, or an individual reasonably believed to be so by the person consulting the clergyman.

(2) "Clergyman's assistant" means a person employed by or assigned to assist a clergyman in his capacity as a spiritual advisor.

(3) A communication is "confidential" if made to a clergyman in the clergyman's capacity as a spiritual adviser or to a clergyman's assistant in the assistant's official capacity and is not intended to be disclosed to third persons other than those to whom disclosure is in furtherance of the purpose of the communication or to those reasonably necessary for the transmission of the communication."

(c) *Who May Claim the Privilege.* The privilege may be claimed by the person, guardian, or conservator, or by a personal representative if the person is deceased. The clergyman or clergyman's assistant who received the

communication may claim the privilege on behalf of the person. The authority of the clergyman or clergyman's assistant to do so is presumed in the absence of evidence to the contrary.

#### **Rule 504. Husband-Wife Privilege**

(a) *Spousal Incapacity.* A person has a privilege to refuse to testify against his or her spouse.

(b) *Confidential Communication Made During the Marriage.*

(1) *General Rule.* A person has a privilege during and after the marital relationship to refuse to disclose, and to prevent another from disclosing, any confidential communication made to the spouse of the person while they were husband and wife and not separated as provided by law.

(2) *Definition.* As used in this rule, a communication is "confidential" if made privately by any person to the spouse of the person and is not intended to be disclosed to third persons other than those reasonably necessary for transmission of the communication.

(3) *Who May Claim the Privilege.* The privilege may be claimed by the spouse who made the communication or by the other spouse on his or her behalf. The authority of the latter spouse to do so is presumed in the absence of evidence of a waiver. The privilege will not prevent disclosure of the communication at the request of the spouse to whom the communication was made if that spouse is an accused regardless of whether the spouse who made the communication objects to its disclosure.

(c) *Exceptions.*

(1) *To Spousal Incapacity Only.* There is no privilege under subdivision (a) when, at the time the testimony of one of the parties to the marriage is to be introduced in evidence against the other party, the parties are divorced or the marriage has been annulled.

(2) *To Spousal Incapacity and Confidential Communications.* There is no privilege under subdivisions (a) or (b):

(A) In proceedings in which one spouse is charged with a crime against the person or property of the other spouse or a child of either, or with a crime against the person or property of a third person committed in the course of committing a crime against the other spouse;

(B) When the marital relationship was entered into with no intention of the parties to live together as spouses, but only for the purpose of using the purported marital relationship as a sham, and with respect to the privilege in subdivision (a), the relationship remains a sham at the time the testimony or statement of one of the parties is to be introduced against the other; or with respect to the privilege in subdivision (b), the relationship was a sham at the time of the communication; or

(C) In proceedings in which a spouse is charged, in accordance with Article 133 or 134, with importing the other spouse as an alien for prostitution or other immoral purpose in violation of 18 U.S.C. §1328; with transporting the other spouse in interstate commerce for immoral purposes or other offense in violation of 18 U.S.C. §§ 2421–2424; or with violation of such other similar statutes under which such privilege may not be claimed in the trial of criminal cases in the United States district courts.

(D) Where both parties have been substantial participants in illegal activity, those communications between the spouses during the marriage regarding the illegal activity in which they have jointly participated are not marital communications for purposes of the privilege in subdivision (b) and are not entitled to protection under the privilege in subdivision (b).

(d) *Definitions.* As used in this rule:

(1) "A child of either" means a biological child, adopted child, or ward of one of the spouses and includes a child who is under the permanent or temporary physical custody of one of the spouses, regardless of the existence of a legal parent-child relationship. For purposes of this rule only, a child is:

(A) an individual under the age of 18; or

(B) an individual with a mental handicap who functions under the age of 18.

(2) "Temporary physical custody" means a parent has entrusted his or her child with another. There is no minimum amount of time necessary to establish temporary physical custody, nor is a written agreement required. Rather, the focus is on the parent's agreement with another for assuming parental responsibility for the child. For example, temporary physical custody may include instances where a parent entrusts another with the care of their child for recurring care or during absences due to temporary duty or deployments.

**Rule 505. Classified Information**

(a) *General Rule.* Classified information must be protected and is privileged from disclosure if disclosure would be detrimental to the national security. Under no circumstances may a military judge order the release of classified information to any person not authorized to receive such information. The Secretary of Defense may prescribe security procedures for protection against the compromise of classified information submitted to courts-martial and appellate authorities.

(b) *Definitions.* As used in this rule:

(1) "Classified information" means any information or material that has been determined by the United States Government pursuant to an executive order, statute, or regulations, to require protection against unauthorized disclosure for reasons of national security, and any restricted data, as defined in 42 U.S.C. § 2014(y).

(2) "National security" means the national defense and foreign relations of the United States.

(3) "In camera hearing" means a session under Article 39(a) from which the public is excluded.

(4) "In camera review" means an inspection of documents or other evidence conducted by the military judge alone in chambers and not on the record.

(5) "Ex parte" means a discussion between the military judge and either the defense counsel or prosecution, without the other party or the public present. This discussion can be on or off the record, depending on the circumstances. The military judge will grant a request for an ex parte discussion or hearing only after finding that such discussion or hearing is necessary to protect classified information or other good cause. Prior to granting a request from one party for an ex parte discussion or hearing, the military judge must provide notice to the opposing party on the record. If the ex parte discussion is conducted off the record, the military judge should later state on the record that such ex parte discussion took place and generally summarize the subject matter of the discussion, as appropriate.

(c) *Access to Evidence.* Any information admitted into evidence pursuant to any rule, procedure, or order by the military judge must be provided to the accused.

(d) *Declassification.* Trial counsel should, when practicable, seek declassification of evidence that may be used at trial, consistent with the requirements of national security. A decision not to declassify evidence under this section is not subject to review by a military judge or upon appeal.

(e) *Action Prior to Referral of Charges.*

(1) Prior to referral of charges, upon a showing by the accused that the classified information sought is relevant and necessary to an element of the offense or a legally cognizable defense, the convening authority must respond in writing to a request by the accused for classified information if the privilege in this rule is claimed for such information. In response to such a request, the convening authority may:

(A) delete specified items of classified information from documents made available to the accused;

(B) substitute a portion or summary of the information for such classified documents;

(C) substitute a statement admitting relevant facts that the classified information would tend to prove;

(D) provide the document subject to conditions that will guard against the compromise of the information disclosed to the accused; or

(E) withhold disclosure if actions under (A) through (D) cannot be taken without causing identifiable damage to the national security.

(2) An Article 32 investigating officer may not rule on any objection by the accused to the release of documents or information protected by this rule.

(3) Any objection by the accused to the withholding of information or to the conditions of disclosure must be raised through a motion for appropriate relief at a pretrial conference.

(f) *Actions after Referral of Charges.*

(1) *Pretrial Conference.* At any time after referral of charges, any party may move for a pretrial conference under Article 39(a) to consider matters relating to classified information that may arise in connection with the trial. Following such a motion, or when the military judge recognizes the need for such conference, the military judge must promptly hold a pretrial conference under Article 39(a).

(2) *Ex Parte Permissible.* Upon request by either party and with a showing of good cause, the military judge must hold such conference ex parte to the extent necessary to protect classified information from disclosure.

(3) *Matters to be Established at Pretrial Conference.*

(A) *Timing of Subsequent Actions.* At the pretrial conference, the military judge must establish the timing of:

- (i) requests for discovery;
- (ii) the provision of notice required by subdivision (i) of this rule; and
- (iii) the initiation of the procedure established by subdivision (j) of this rule.

(B) *Other Matters.* At the pretrial conference, the military judge may also consider any matter that relates to classified information or that may promote a fair and expeditious trial.

(4) *Convening Authority Notice and Action.* If a claim of privilege has been made under this rule with respect to classified information that apparently contains evidence that is relevant and necessary to an element of the offense or a legally cognizable defense and is otherwise admissible in evidence in the court-martial proceeding, the matter must be reported to the convening authority. The convening authority may:

- (A) institute action to obtain the classified information for the use by the military judge in making a determination under subdivision (j);
- (B) dismiss the charges;
- (C) dismiss the charges or specifications or both to which the information relates; or
- (D) take such other action as may be required in the interests of justice.

(5) *Remedies.* If, after a reasonable period of time, the information is not provided to the military judge in circumstances where proceeding with the case without such information would materially prejudice a substantial right of the accused, the military judge must dismiss the charges or specifications or both to which the classified information relates.

(g) *Protective Orders.* Upon motion of the trial counsel, the military judge must issue an order to protect against the disclosure of any classified information that has been disclosed by the United States to any accused in any court-martial proceeding or that has otherwise been provided to, or obtained by, any such accused in any such court-martial proceeding. The terms of any such protective order may include, but are not limited to, provisions:

- (1) prohibiting the disclosure of the information except as authorized by the military judge;
- (2) requiring storage of material in a manner appropriate for the level of classification assigned to the documents to be disclosed;
- (3) requiring controlled access to the material during normal business hours and at other times upon reasonable notice;
- (4) mandating that all persons requiring security clearances will cooperate with investigatory personnel in any investigations that are necessary to obtain a security clearance;
- (5) requiring the maintenance of logs regarding access by all persons authorized by the military judge to have access to the classified information in connection with the preparation of the defense;
- (6) regulating the making and handling of notes taken from material containing classified information; or
- (7) requesting the convening authority to authorize the assignment of government security personnel and the provision of government storage facilities.

(h) *Discovery and Access by the Accused.*

(1) *Limitations.*

(A) *Government Claim of Privilege.* In a court-martial proceeding in which the government seeks to delete, withhold, or otherwise obtain other relief with respect to the discovery of or access to any classified information, the trial counsel must submit a declaration invoking the United States' classified information privilege and setting forth the damage to the national security that the discovery of or access to such information reasonably could be expected to cause. The declaration must be signed by the head, or designee, of the executive or military department or government agency concerned.

(B) *Standard for Discovery or Access by the Accused.* Upon the submission of a declaration under subdivision (h)(1)(A), the military judge may not authorize the discovery of or access to such classified information unless the military judge determines that such classified information would be noncumulative and relevant to a legally cognizable defense, rebuttal of the prosecution's case, or to sentencing. If the discovery of or access to such classified information is authorized, it must be addressed in accordance with the requirements of subdivision (h)(2).

(2) *Alternatives to Full Discovery.*

(A) *Substitutions and Other Alternatives.* The military judge, in assessing the accused's right to discover or access classified information under subdivision (h), may authorize the government:

- (i) to delete or withhold specified items of classified information;
- (ii) to substitute a summary for classified information; or

(iii) to substitute a statement admitting relevant facts that the classified information or material would tend to prove, unless the military judge determines that disclosure of the classified information itself is necessary to enable the accused to prepare for trial.

(B) *In Camera Review*. The military judge must, upon the request of the prosecution, conduct an in camera review of the prosecution's motion and any materials submitted in support thereof and must not disclose such information to the accused.

(C) *Action by Military Judge*. The military judge must grant the request of the trial counsel to substitute a summary or to substitute a statement admitting relevant facts, or to provide other relief in accordance with subdivision (h)(2)(A), if the military judge finds that the summary, statement, or other relief would provide the accused with substantially the same ability to make a defense as would discovery of or access to the specific classified information.

(3) *Reconsideration*. An order of a military judge authorizing a request of the trial counsel to substitute, summarize, withhold, or prevent access to classified information under subdivision (h) is not subject to a motion for reconsideration by the accused, if such order was entered pursuant to an ex parte showing under subdivision (h).

(i) *Disclosure by the Accused*.

(1) *Notification to Trial Counsel and Military Judge*. If an accused reasonably expects to disclose, or to cause the disclosure of, classified information in any manner in connection with any trial or pretrial proceeding involving the prosecution of such accused, the accused must, within the time specified by the military judge or, where no time is specified, prior to arraignment of the accused, notify the trial counsel and the military judge in writing.

(2) *Content of Notice*. Such notice must include a brief description of the classified information.

(3) *Continuing Duty to Notify*. Whenever the accused learns of additional classified information the accused reasonably expects to disclose, or to cause the disclosure of, at any such proceeding, the accused must notify trial counsel and the military judge in writing as soon as possible thereafter and must include a brief description of the classified information.

(4) *Limitation on Disclosure by Accused*. The accused may not disclose, or cause the disclosure of, any information known or believed to be classified in connection with a trial or pretrial proceeding until:

(A) notice has been given under subdivision (i); and

(B) the government has been afforded a reasonable opportunity to seek a determination pursuant to the procedure set forth in subdivision (j).

(5) *Failure to comply*. If the accused fails to comply with the requirements of subdivision (i), the military judge:

(A) may preclude disclosure of any classified information not made the subject of notification; and

(B) may prohibit the examination by the accused of any witness with respect to any such information.

(j) *Procedure for Use of Classified Information in Trials and Pretrial Proceedings*.

(1) *Hearing on Use of Classified Information*.

(A) *Motion for Hearing*. Within the time specified by the military judge for the filing of a motion under this rule, either party may move for a hearing concerning the use at any proceeding of any classified information. Upon a request by either party, the military judge must conduct such a hearing and must rule prior to conducting any further proceedings.

(B) *Request for In Camera Hearing*. Any hearing held pursuant to subdivision (j) (or any portion of such hearing specified in the request of a knowledgeable United States official) must be held in camera if a knowledgeable United States official possessing authority to classify information submits to the military judge a declaration that a public proceeding may result in the disclosure of classified information.

(C) *Notice to Accused*. Before the hearing, trial counsel must provide the accused with notice of the classified information that is at issue. Such notice must identify the specific classified information at issue whenever that information previously has been made available to the accused by the United States. When the United States has not previously made the information available to the accused in connection with the case the information may be described by generic category, in such forms as the military judge may approve, rather than by identification of the specific information of concern to the United States.

(D) *Standard for Disclosure*. Classified information is not subject to disclosure under subdivision (j) unless the information is relevant and necessary to an element of the offense or a legally cognizable defense and is otherwise admissible in evidence. In presentencing proceedings, relevant and material classified information pertaining to the appropriateness of, or the appropriate degree of, punishment must be admitted only if no unclassified version of such information is available.

(E) *Written Findings*. As to each item of classified information, the military judge must set forth in writing the basis for the determination.

(2) *Alternatives to Full Disclosure*.

(A) *Motion by the Prosecution*. Upon any determination by the military judge authorizing the disclosure of specific classified information under the procedures established by subdivision (j), the trial counsel may move that, in lieu of the disclosure of such specific classified information, the military judge order:

- (i) the substitution for such classified information of a statement admitting relevant facts that the specific classified information would tend to prove;
  - (ii) the substitution for such classified information of a summary of the specific classified information;
- or
- (iii) any other procedure or redaction limiting the disclosure of specific classified information.

(B) *Declaration of Damage to National Security*. The trial counsel may, in connection with a motion under subdivision (j), submit to the military judge a declaration signed by the head, or designee, of the executive or military department or government agency concerned certifying that disclosure of classified information would cause identifiable damage to the national security of the United States and explaining the basis for the classification of such information. If so requested by the trial counsel, the military judge must examine such declaration during an in camera review.

(C) *Hearing*. The military judge must hold a hearing on any motion under subdivision (j). Any such hearing must be held in camera at the request of a knowledgeable United States official possessing authority to classify information.

(D) *Standard for Use of Alternatives*. The military judge must grant such a motion of the trial counsel if the military judge finds that the statement, summary, or other procedure or redaction will provide the accused with substantially the same ability to make his or her defense as would disclosure of the specific classified information.

(3) *Sealing of Records of In Camera Hearings*. If at the close of an in camera hearing under subdivision (j) (or any portion of a hearing under subdivision (j) that is held in camera), the military judge determines that the classified information at issue may not be disclosed or elicited at the trial or pretrial proceeding, the record of such in camera hearing must be sealed in accordance with R.C.M. 1103A and preserved for use in the event of an appeal. The accused may seek reconsideration of the military judge's determination prior to or during trial.

(4) *Remedies*.

(A) If the military judge determines that alternatives to full disclosure may not be used and the prosecution continues to object to disclosure of the information, the military judge must issue any order that the interests of justice require, including but not limited to, an order:

- (i) striking or precluding all or part of the testimony of a witness;
- (ii) declaring a mistrial;
- (iii) finding against the government on any issue as to which the evidence is relevant and material to the defense;
- (iv) dismissing the charges, with or without prejudice; or
- (v) dismissing the charges or specifications or both to which the information relates.

(B) The government may avoid the sanction for nondisclosure by permitting the accused to disclose the information at the pertinent court-martial proceeding.

(5) *Disclosure of Rebuttal Information*. Whenever the military judge determines that classified information may be disclosed in connection with a trial or pretrial proceeding, the military judge must, unless the interests of fairness do not so require, order the prosecution to provide the accused with the information it expects to use to rebut the classified information.

(A) *Continuing Duty*. The military judge may place the prosecution under a continuing duty to disclose such rebuttal information.

(B) *Sanction for Failure to Comply*. If the prosecution fails to comply with its obligation under subdivision (j), the military judge:

- (i) may exclude any evidence not made the subject of a required disclosure; and
- (ii) may prohibit the examination by the prosecution of any witness with respect to such information.

(6) *Disclosure at Trial of Previous Statements by a Witness*.

(A) *Motion for Production of Statements in Possession of the Prosecution*. After a witness called by the trial counsel has testified on direct examination, the military judge, on motion of the accused, may order production

of statements of the witness in the possession of the prosecution that relate to the subject matter as to which the witness has testified. This paragraph does not preclude discovery or assertion of a privilege otherwise authorized.

(B) *Invocation of Privilege by the Government.* If the government invokes a privilege, the trial counsel may provide the prior statements of the witness to the military judge for in camera review to the extent necessary to protect classified information from disclosure.

(C) *Action by Military Judge.* If the military judge finds that disclosure of any portion of the statement identified by the government as classified would be detrimental to the national security in the degree required to warrant classification under the applicable Executive Order, statute, or regulation, that such portion of the statement is consistent with the testimony of the witness, and that the disclosure of such portion is not necessary to afford the accused a fair trial, the military judge must excise that portion from the statement. If the military judge finds that such portion of the statement is inconsistent with the testimony of the witness or that its disclosure is necessary to afford the accused a fair trial, the military judge must, upon the request of the trial counsel, consider alternatives to disclosure in accordance with subdivision (j)(2).

(k) *Introduction into Evidence of Classified Information.*

(1) *Preservation of Classification Status.* Writings, recordings, and photographs containing classified information may be admitted into evidence in court-martial proceedings under this rule without change in their classification status.

(A) *Precautions.* The military judge in a trial by court-martial, in order to prevent unnecessary disclosure of classified information, may order admission into evidence of only part of a writing, recording, or photograph, or may order admission into evidence of the whole writing, recording, or photograph with excision of some or all of the classified information contained therein, unless the whole ought in fairness be considered.

(B) *Classified Information Kept Under Seal.* The military judge must allow classified information offered or accepted into evidence to remain under seal during the trial, even if such evidence is disclosed in the court-martial proceeding, and may, upon motion by the government, seal exhibits containing classified information in accordance with R.C.M. 1103A for any period after trial as necessary to prevent a disclosure of classified information when a knowledgeable United States official possessing authority to classify information submits to the military judge a declaration setting forth the damage to the national security that the disclosure of such information reasonably could be expected to cause.

(2) *Testimony.*

(A) *Objection by Trial Counsel.* During the examination of a witness, trial counsel may object to any question or line of inquiry that may require the witness to disclose classified information not previously found to be admissible.

(B) *Action by Military Judge.* Following an objection under subdivision (k), the military judge must take such suitable action to determine whether the response is admissible as will safeguard against the compromise of any classified information. Such action may include requiring trial counsel to provide the military judge with a proffer of the witness's response to the question or line of inquiry and requiring the accused to provide the military judge with a proffer of the nature of the information sought to be elicited by the accused. Upon request, the military judge may accept an ex parte proffer by trial counsel to the extent necessary to protect classified information from disclosure.

(3) *Closed session.* The military judge may, subject to the requirements of the United States Constitution, exclude the public during that portion of the presentation of evidence that discloses classified information.

(l) *Record of Trial.* If under this rule any information is withheld from the accused, the accused objects to such withholding, and the trial is continued to an adjudication of guilt of the accused, the entire unaltered text of the relevant documents as well as the prosecution's motion and any materials submitted in support thereof must be sealed in accordance with R.C.M. 1103A and attached to the record of trial as an appellate exhibit. Such material must be made available to reviewing authorities in closed proceedings for the purpose of reviewing the determination of the military judge. The record of trial with respect to any classified matter will be prepared under R.C.M. 1103(h) and 1104(b)(1)(D).

#### **Rule 506. Government Information Other than Classified Information**

(a) *Protection of Government Information.* Except where disclosure is required by a federal statute, government information is privileged from disclosure if disclosure would be detrimental to the public interest.

(b) *Scope.* "Government information" includes official communication and documents and other information within the custody or control of the Federal Government. This rule does not apply to classified information (Mil. R. Evid. 505) or to the identity of an informant (Mil. R. Evid. 507).

(c) *Definitions.* As used in this rule:

(1) "In camera hearing" means a session under Article 39(a) from which the public is excluded.

(2) "In camera review" means an inspection of documents or other evidence conducted by the military judge alone in chambers and not on the record.

(3) "Ex parte" means a discussion between the military judge and either the defense counsel or prosecution, without the other party or the public present. This discussion can be on or off the record, depending on the circumstances. The military judge will grant a request for an ex parte discussion or hearing only after finding that such discussion or hearing is necessary to protect government information or other good cause. Prior to granting a request from one party for an ex parte discussion or hearing, the military judge must provide notice to the opposing party on the record. If the ex parte discussion is conducted off the record, the military judge should later state on the record that such ex parte discussion took place and generally summarize the subject matter of the discussion, as appropriate.

(d) *Who May Claim the Privilege.* The privilege may be claimed by the head, or designee, of the executive or military department or government agency concerned. The privilege for records and information of the Inspector General may be claimed by the immediate superior of the inspector general officer responsible for creation of the records or information, the Inspector General, or any other superior authority. A person who may claim the privilege may authorize a witness or the trial counsel to claim the privilege on his or her behalf. The authority of a witness or the trial counsel to do so is presumed in the absence of evidence to the contrary.

(e) *Action Prior to Referral of Charges.*

(1) Prior to referral of charges, upon a showing by the accused that the government information sought is relevant and necessary to an element of the offense or a legally cognizable defense, the convening authority must respond in writing to a request by the accused for government information if the privilege in this rule is claimed for such information. In response to such a request, the convening authority may:

(A) delete specified items of government information claimed to be privileged from documents made available to the accused;

(B) substitute a portion or summary of the information for such documents;

(C) substitute a statement admitting relevant facts that the government information would tend to prove;

(D) provide the document subject to conditions similar to those set forth in subdivision (g) of this rule; or

(E) withhold disclosure if actions under subdivisions (e)(1)(1)-(4) cannot be taken without causing identifiable damage to the public interest.

(2) Any objection by the accused to withholding of information or to the conditions of disclosure must be raised through a motion for appropriate relief at a pretrial conference.

(f) *Action After Referral of Charges.*

(1) *Pretrial Conference.* At any time after referral of charges, any party may move for a pretrial conference under Article 39(a) to consider matters relating to government information that may arise in connection with the trial. Following such a motion, or when the military judge recognizes the need for such conference, the military judge must promptly hold a pretrial conference under Article 39(a).

(2) *Ex Parte Permissible.* Upon request by either party and with a showing of good cause, the military judge must hold such conference ex parte to the extent necessary to protect government information from disclosure.

(3) *Matters to be Established at Pretrial Conference.*

(A) *Timing of Subsequent Actions.* At the pretrial conference, the military judge must establish the timing of:

(i) requests for discovery;

(ii) the provision of notice required by subdivision (i) of this rule; and

(iii) the initiation of the procedure established by subdivision (j) of this rule.

(B) *Other Matters.* At the pretrial conference, the military judge may also consider any matter which relates to government information or which may promote a fair and expeditious trial.

(4) *Convening Authority Notice and Action.* If a claim of privilege has been made under this rule with respect to government information that apparently contains evidence that is relevant and necessary to an element of the offense or a legally cognizable defense and is otherwise admissible in evidence in the court-martial proceeding, the matter must be reported to the convening authority. The convening authority may:

(A) institute action to obtain the information for use by the military judge in making a determination under subdivision (j);

(B) dismiss the charges;

(C) dismiss the charges or specifications or both to which the information relates; or

(D) take such other action as may be required in the interests of justice.

(5) *Remedies.* If after a reasonable period of time the information is not provided to the military judge in circumstances where proceeding with the case without such information would materially prejudice a substantial right of the accused, the military judge must dismiss the charges or specifications or both to which the information relates.

(g) *Protective Orders.* Upon motion of the trial counsel, the military judge must issue an order to protect against the disclosure of any government information that has been disclosed by the United States to any accused in any court-martial proceeding or that has otherwise been provided to, or obtained by, any such accused in any such court-martial proceeding. The terms of any such protective order may include, but are not limited to, provisions:

(1) prohibiting the disclosure of the information except as authorized by the military judge;

(2) requiring storage of the material in a manner appropriate for the nature of the material to be disclosed;

(3) requiring controlled access to the material during normal business hours and at other times upon reasonable notice;

(4) requiring the maintenance of logs recording access by persons authorized by the military judge to have access to the government information in connection with the preparation of the defense;

(5) regulating the making and handling of notes taken from material containing government information; or

(6) requesting the convening authority to authorize the assignment of government security personnel and the provision of government storage facilities.

(h) *Discovery and Access by the Accused.*

(1) *Limitations.*

(A) *Government Claim of Privilege.* In a court-martial proceeding in which the government seeks to delete, withhold, or otherwise obtain other relief with respect to the discovery of or access to any government information subject to a claim of privilege, the trial counsel must submit a declaration invoking the United States' government information privilege and setting forth the detriment to the public interest that the discovery of or access to such information reasonably could be expected to cause. The declaration must be signed by a knowledgeable United States official as described in subdivision (d) of this rule.

(B) *Standard for Discovery or Access by the Accused.* Upon the submission of a declaration under subdivision (h)(1)(A), the military judge may not authorize the discovery of or access to such government information unless the military judge determines that such government information would be noncumulative, relevant, and helpful to a legally cognizable defense, rebuttal of the prosecution's case, or to sentencing. If the discovery of or access to such government information is authorized, it must be addressed in accordance with the requirements of subdivision (h)(2).

(2) *Alternatives to Full Disclosure.*

(A) *Substitutions and Other Alternatives.* The military judge, in assessing the accused's right to discover or access government information under subdivision (h), may authorize the government:

(i) to delete or withhold specified items of government information;

(ii) to substitute a summary for government information; or

(iii) to substitute a statement admitting relevant facts that the government information or material would tend to prove, unless the military judge determines that disclosure of the government information itself is necessary to enable the accused to prepare for trial.

(B) *In Camera Review.* The military judge must, upon the request of the prosecution, conduct an in camera review of the prosecution's motion and any materials submitted in support thereof and must not disclose such information to the accused.

(C) *Action by Military Judge.* The military judge must grant the request of the trial counsel to substitute a summary or to substitute a statement admitting relevant facts, or to provide other relief in accordance with subdivision (h)(2)(A), if the military judge finds that the summary, statement, or other relief would provide the accused with substantially the same ability to make a defense as would discovery of or access to the specific government information.

(i) *Disclosure by the Accused.*

(1) *Notification to Trial Counsel and Military Judge.* If an accused reasonably expects to disclose, or to cause the disclosure of, government information subject to a claim of privilege in any manner in connection with any trial or pretrial proceeding involving the prosecution of such accused, the accused must, within the time specified by the

military judge or, where no time is specified, prior to arraignment of the accused, notify the trial counsel and the military judge in writing.

(2) *Content of Notice.* Such notice must include a brief description of the government information.

(3) *Continuing Duty to Notify.* Whenever the accused learns of additional government information the accused reasonably expects to disclose, or to cause the disclosure of, at any such proceeding, the accused must notify trial counsel and the military judge in writing as soon as possible thereafter and must include a brief description of the government information.

(4) *Limitation on Disclosure by Accused.* The accused may not disclose, or cause the disclosure of, any information known or believed to be subject to a claim of privilege in connection with a trial or pretrial proceeding until:

(A) notice has been given under subdivision (i); and

(B) the government has been afforded a reasonable opportunity to seek a determination pursuant to the procedure set forth in subdivision (j).

(5) *Failure to Comply.* If the accused fails to comply with the requirements of subdivision (i), the military judge:

(A) may preclude disclosure of any government information not made the subject of notification; and

(B) may prohibit the examination by the accused of any witness with respect to any such information.

(j) *Procedure for Use of Government Information Subject to a Claim of Privilege in Trials and Pretrial Proceedings.*

(1) *Hearing on Use of Government Information.*

(A) *Motion for Hearing.* Within the time specified by the military judge for the filing of a motion under this rule, either party may move for an in camera hearing concerning the use at any proceeding of any government information that may be subject to a claim of privilege. Upon a request by either party, the military judge must conduct such a hearing and must rule prior to conducting any further proceedings.

(B) *Request for In Camera Hearing.* Any hearing held pursuant to subdivision (j) must be held in camera if a knowledgeable United States official described in subdivision (d) of this rule submits to the military judge a declaration that disclosure of the information reasonably could be expected to cause identifiable damage to the public interest.

(C) *Notice to Accused.* Subject to subdivision (j)(2) below, the prosecution must disclose government information claimed to be privileged under this rule for the limited purpose of litigating, in camera, the admissibility of the information at trial. The military judge must enter an appropriate protective order to the accused and all other appropriate trial participants concerning the disclosure of the information according to subdivision (g), above. The accused may not disclose any information provided under subdivision (j) unless, and until, such information has been admitted into evidence by the military judge. In the in camera hearing, both parties may have the opportunity to brief and argue the admissibility of the government information at trial.

(D) *Standard for Disclosure.* Government information is subject to disclosure at the court-martial proceeding under subdivision (j) if the party making the request demonstrates a specific need for information containing evidence that is relevant to the guilt or innocence or to punishment of the accused, and is otherwise admissible in the court-martial proceeding.

(E) *Written Findings.* As to each item of government information, the military judge must set forth in writing the basis for the determination.

(2) *Alternatives to Full Disclosure.*

(A) *Motion by the Prosecution.* Upon any determination by the military judge authorizing disclosure of specific government information under the procedures established by subdivision (j), the prosecution may move that, in lieu of the disclosure of such information, the military judge order:

(i) the substitution for such government information of a statement admitting relevant facts that the specific government information would tend to prove;

(ii) the substitution for such government information of a summary of the specific government information; or

(iii) any other procedure or redaction limiting the disclosure of specific government information.

(B) *Hearing.* The military judge must hold a hearing on any motion under subdivision (j). At the request of the trial counsel, the military judge will conduct an in camera hearing.

(C) *Standard for Use of Alternatives.* The military judge must grant such a motion of the trial counsel if the military judge finds that the statement, summary, or other procedure or redaction will provide the accused with substantially the same ability to make his or her defense as would disclosure of the specific government information.

(3) *Sealing of Records of In Camera Hearings.* If at the close of an in camera hearing under subdivision (j) (or any portion of a hearing under subdivision (j) that is held in camera), the military judge determines that the government information at issue may not be disclosed or elicited at the trial or pretrial proceeding, the record of such in camera hearing must be sealed in accordance with R.C.M. 1103A and preserved for use in the event of an appeal. The accused may seek reconsideration of the military judge's determination prior to or during trial.

(4) *Remedies.*

(A) If the military judge determines that alternatives to full disclosure may not be used and the prosecution continues to object to disclosure of the information, the military judge must issue any order that the interests of justice require, including but not limited to, an order:

- (i) striking or precluding all or part of the testimony of a witness;
- (ii) declaring a mistrial;
- (iii) finding against the government on any issue as to which the evidence is relevant and necessary to the defense;
- (iv) dismissing the charges, with or without prejudice; or
- (v) dismissing the charges or specifications or both to which the information relates.

(B) The government may avoid the sanction for nondisclosure by permitting the accused to disclose the information at the pertinent court-martial proceeding.

(5) *Disclosure of Rebuttal Information.* Whenever the military judge determines that government information may be disclosed in connection with a trial or pretrial proceeding, the military judge must, unless the interests of fairness do not so require, order the prosecution to provide the accused with the information it expects to use to rebut the government information.

(A) *Continuing Duty.* The military judge may place the prosecution under a continuing duty to disclose such rebuttal information.

(B) *Sanction for Failure to Comply.* If the prosecution fails to comply with its obligation under subdivision (j), the military judge may make such ruling as the interests of justice require, to include:

- (i) excluding any evidence not made the subject of a required disclosure; and
- (ii) prohibiting the examination by the prosecution of any witness with respect to such information.

(k) *Appeals of Orders and Rulings.* In a court-martial in which a punitive discharge may be adjudged, the government may appeal an order or ruling of the military judge that terminates the proceedings with respect to a charge or specification, directs the disclosure of government information, or imposes sanctions for nondisclosure of government information. The government may also appeal an order or ruling in which the military judge refuses to issue a protective order sought by the United States to prevent the disclosure of government information, or to enforce such an order previously issued by appropriate authority. The government may not appeal an order or ruling that is, or amounts to, a finding of not guilty with respect to the charge or specification.

(l) *Introduction into Evidence of Government Information Subject to a Claim of Privilege.*

(1) *Precautions.* The military judge in a trial by court-martial, in order to prevent unnecessary disclosure of government information after there has been a claim of privilege under this rule, may order admission into evidence of only part of a writing, recording, or photograph or admit into evidence the whole writing, recording, or photograph with excision of some or all of the government information contained therein, unless the whole ought in fairness to be considered.

(2) *Government Information Kept Under Seal.* The military judge must allow government information offered or accepted into evidence to remain under seal during the trial, even if such evidence is disclosed in the court-martial proceeding, and may, upon motion by the prosecution, seal exhibits containing government information in accordance with R.C.M. 1103A for any period after trial as necessary to prevent a disclosure of government information when a knowledgeable United States official described in subdivision (d) submits to the military judge a declaration setting forth the detriment to the public interest that the disclosure of such information reasonably could be expected to cause.

(3) *Testimony.*

(A) *Objection by Trial Counsel.* During examination of a witness, trial counsel may object to any question or line of inquiry that may require the witness to disclose government information not previously found admissible if such information has been or is reasonably likely to be the subject of a claim of privilege under this rule.

(B) *Action by Military Judge.* Following such an objection, the military judge must take such suitable action to determine whether the response is admissible as will safeguard against the compromise of any government information. Such action may include requiring trial counsel to provide the military judge with a proffer of the witness's response to the question or line of inquiry and requiring the accused to provide the military judge with a proffer of the nature of the information sought to be elicited by the accused. Upon request, the military judge may accept an ex parte proffer by trial counsel to the extent necessary to protect government information from disclosure.

(m) *Record of Trial.* If under this rule any information is withheld from the accused, the accused objects to such withholding, and the trial is continued to an adjudication of guilt of the accused, the entire unaltered text of the relevant documents as well as the prosecution's motion and any materials submitted in support thereof must be sealed in accordance with R.C.M. 1103A and attached to the record of trial as an appellate exhibit. Such material must be made available to reviewing authorities in closed proceedings for the purpose of reviewing the determination of the military judge.

#### **Rule 507. Identity of Informants**

(a) *General Rule.* The United States or a State or subdivision thereof has a privilege to refuse to disclose the identity of an informant. Unless otherwise privileged under these rules, the communications of an informant are not privileged except to the extent necessary to prevent the disclosure of the informant's identity.

(b) *Definitions.* As used in this rule:

(1) "Informant" means a person who has furnished information relating to or assisting in an investigation of a possible violation of law to a person whose official duties include the discovery, investigation, or prosecution of crime.

(2) "In camera review" means an inspection of documents or other evidence conducted by the military judge alone in chambers and not on the record.

(c) *Who May Claim the Privilege.* The privilege may be claimed by an appropriate representative of the United States, regardless of whether information was furnished to an officer of the United States or a State or subdivision thereof. The privilege may be claimed by an appropriate representative of a State or subdivision if the information was furnished to an officer thereof, except the privilege will not be allowed if the prosecution objects.

(d) *Exceptions.*

(1) *Voluntary Disclosures; Informant as a Prosecution Witness.* No privilege exists under this rule:

(A) if the identity of the informant has been disclosed to those who would have cause to resent the communication by a holder of the privilege or by the informant's own action; or

(B) if the informant appears as a witness for the prosecution.

(2) *Informant as a Defense Witness.* If a claim of privilege has been made under this rule, the military judge must, upon motion by the accused, determine whether disclosure of the identity of the informant is necessary to the accused's defense on the issue of guilt or innocence. Whether such a necessity exists will depend on the particular circumstances of each case, taking into consideration the offense charged, the possible defense, the possible significance of the informant's testimony, and other relevant factors. If it appears from the evidence in the case or from other showing by a party that an informant may be able to give testimony necessary to the accused's defense on the issue of guilt or innocence, the military judge may make any order required by the interests of justice.

(3) *Informant as a Witness regarding a Motion to Suppress Evidence.* If a claim of privilege has been made under this rule with respect to a motion under Mil. R. Evid. 311, the military judge must, upon motion of the accused, determine whether disclosure of the identity of the informant is required by the United States Constitution as applied to members of the armed forces. In making this determination, the military judge may make any order required by the interests of justice.

(e) *Procedures.*

(1) *In Camera Review.* If the accused has articulated a basis for disclosure under the standards set forth in this rule, the prosecution may ask the military judge to conduct an in camera review of affidavits or other evidence relevant to disclosure.

(2) *Order by the Military Judge.* If a claim of privilege has been made under this rule, the military judge may make any order required by the interests of justice.

(3) *Action by the Convening Authority.* If the military judge determines that disclosure of the identity of the informant is required under the standards set forth in this rule, and the prosecution elects not to disclose the identity of the informant, the matter must be reported to the convening authority. The convening authority may institute

action to secure disclosure of the identity of the informant, terminate the proceedings, or take such other action as may be appropriate under the circumstances.

(4) *Remedies.* If, after a reasonable period of time disclosure is not made, the military judge, sua sponte or upon motion of either counsel and after a hearing if requested by either party, may dismiss the charge or specifications or both to which the information regarding the informant would relate if the military judge determines that further proceedings would materially prejudice a substantial right of the accused.

#### **Rule 508. Political Vote**

A person has a privilege to refuse to disclose the tenor of the person's vote at a political election conducted by secret ballot unless the vote was cast illegally.

#### **Rule 509. Deliberations of Courts and Juries**

Except as provided in Mil. R. Evid. 606, the deliberations of courts, courts-martial, military judges, and grand and petit juries are privileged to the extent that such matters are privileged in trial of criminal cases in the United States district courts, but the results of the deliberations are not privileged.

#### **Rule 510. Waiver of Privilege by Voluntary Disclosure**

(a) A person upon whom these rules confer a privilege against disclosure of a confidential matter or communication waives the privilege if the person or the person's predecessor while holder of the privilege voluntarily discloses or consents to disclosure of any significant part of the matter or communication under such circumstances that it would be inappropriate to allow the claim of privilege. This rule does not apply if the disclosure is itself a privileged communication.

(b) Unless testifying voluntarily concerning a privileged matter or communication, an accused who testifies in his or her own behalf or a person who testifies under a grant or promise of immunity does not, merely by reason of testifying, waive a privilege to which he or she may be entitled pertaining to the confidential matter or communication.

#### **Rule 511. Privileged Matter Disclosed Under Compulsion or Without Opportunity to Claim Privilege**

(a) *General Rule.* Evidence of a statement or other disclosure of privileged matter is not admissible against the holder of the privilege if disclosure was compelled erroneously or was made without an opportunity for the holder of the privilege to claim the privilege.

(b) *Use of Communications Media.* The telephonic transmission of information otherwise privileged under these rules does not affect its privileged character. Use of electronic means of communication other than the telephone for transmission of information otherwise privileged under these rules does not affect the privileged character of such information if use of such means of communication is necessary and in furtherance of the communication.

#### **Rule 512. Comment upon or Inference from Claim of Privilege; Instruction**

(a) *Comment or Inference Not Permitted.*

(1) The claim of a privilege by the accused whether in the present proceeding or upon a prior occasion is not a proper subject of comment by the military judge or counsel for any party. No inference may be drawn therefrom.

(2) The claim of a privilege by a person other than the accused whether in the present proceeding or upon a prior occasion normally is not a proper subject of comment by the military judge or counsel for any party. An adverse inference may not be drawn therefrom except when determined by the military judge to be required by the interests of justice.

(b) *Claiming a Privilege Without the Knowledge of the Members.* In a trial before a court-martial with members, proceedings must be conducted, to the extent practicable, so as to facilitate the making of claims of privilege without the knowledge of the members. Subdivision (b) does not apply to a special court-martial without a military judge.

(c) *Instruction.* Upon request, any party against whom the members might draw an adverse inference from a claim of privilege is entitled to an instruction that no inference may be drawn therefrom except as provided in subdivision (a)(2).

**Rule 513. Psychotherapist—Patient Privilege**

(a) *General Rule.* A patient has a privilege to refuse to disclose and to prevent any other person from disclosing a confidential communication made between the patient and a psychotherapist or an assistant to the psychotherapist, in a case arising under the Uniform Code of Military Justice, if such communication was made for the purpose of facilitating diagnosis or treatment of the patient's mental or emotional condition.

(b) *Definitions.* As used in this rule:

(1) "Patient" means a person who consults with or is examined or interviewed by a psychotherapist for purposes of advice, diagnosis, or treatment of a mental or emotional condition.

(2) "Psychotherapist" means a psychiatrist, clinical psychologist, or clinical social worker who is licensed in any State, territory, possession, the District of Columbia or Puerto Rico to perform professional services as such, or who holds credentials to provide such services from any military health care facility, or is a person reasonably believed by the patient to have such license or credentials.

(3) "Assistant to a psychotherapist" means a person directed by or assigned to assist a psychotherapist in providing professional services, or is reasonably believed by the patient to be such.

(4) A communication is "confidential" if not intended to be disclosed to third persons other than those to whom disclosure is in furtherance of the rendition of professional services to the patient or those reasonably necessary for such transmission of the communication.

(5) "Evidence of a patient's records or communications" means testimony of a psychotherapist, or assistant to the same, or patient records that pertain to communications by a patient to a psychotherapist, or assistant to the same, for the purposes of diagnosis or treatment of the patient's mental or emotional condition.

(c) *Who May Claim the Privilege.* The privilege may be claimed by the patient or the guardian or conservator of the patient. A person who may claim the privilege may authorize trial counsel or defense counsel to claim the privilege on his or her behalf. The psychotherapist or assistant to the psychotherapist who received the communication may claim the privilege on behalf of the patient. The authority of such a psychotherapist, assistant, guardian, or conservator to so assert the privilege is presumed in the absence of evidence to the contrary.

(d) *Exceptions.* There is no privilege under this rule:

(1) when the patient is dead;

(2) when the communication is evidence of child abuse or of neglect, or in a proceeding in which one spouse is charged with a crime against a child of either spouse;

(3) when federal law, state law, or service regulation imposes a duty to report information contained in a communication;

(4) when a psychotherapist or assistant to a psychotherapist believes that a patient's mental or emotional condition makes the patient a danger to any person, including the patient;

(5) if the communication clearly contemplated the future commission of a fraud or crime or if the services of the psychotherapist are sought or obtained to enable or aid anyone to commit or plan to commit what the patient knew or reasonably should have known to be a crime or fraud;

(6) when necessary to ensure the safety and security of military personnel, military dependents, military property, classified information, or the accomplishment of a military mission;

(7) when an accused offers statements or other evidence concerning his mental condition in defense, extenuation, or mitigation, under circumstances not covered by R.C.M. 706 or Mil. R. Evid. 302. In such situations, the military judge may, upon motion, order disclosure of any statement made by the accused to a psychotherapist as may be necessary in the interests of justice; or

(8) when admission or disclosure of a communication is constitutionally required.

(e) *Procedure to Determine Admissibility of Patient Records or Communications.*

(1) In any case in which the production or admission of records or communications of a patient other than the accused is a matter in dispute, a party may seek an interlocutory ruling by the military judge. In order to obtain such a ruling, the party must:

(A) file a written motion at least 5 days prior to entry of pleas specifically describing the evidence and stating the purpose for which it is sought or offered, or objected to, unless the military judge, for good cause shown, requires a different time for filing or permits filing during trial; and

(B) serve the motion on the opposing party, the military judge and, if practical, notify the patient or the patient's guardian, conservator, or representative that the motion has been filed and that the patient has an opportunity to be heard as set forth in subdivision (e)(2).

(2) Before ordering the production or admission of evidence of a patient's records or communication, the military judge must conduct a hearing. Upon the motion of counsel for either party and upon good cause shown, the military judge may order the hearing closed. At the hearing, the parties may call witnesses, including the patient, and offer other relevant evidence. The patient must be afforded a reasonable opportunity to attend the hearing and be heard at the patient's own expense unless the patient has been otherwise subpoenaed or ordered to appear at the hearing. However, the proceedings may not be unduly delayed for this purpose. In a case before a court-martial composed of a military judge and members, the military judge must conduct the hearing outside the presence of the members.

(3) The military judge may examine the evidence or a proffer thereof in camera, if such examination is necessary to rule on the motion.

(4) To prevent unnecessary disclosure of evidence of a patient's records or communications, the military judge may issue protective orders or may admit only portions of the evidence.

(5) The motion, related papers, and the record of the hearing must be sealed in accordance with R.C.M. 1103A and must remain under seal unless the military judge or an appellate court orders otherwise.

#### **Rule 514. Victim Advocate—Victim Privilege**

(a) *General Rule.* A victim has a privilege to refuse to disclose and to prevent any other person from disclosing a confidential communication made between the alleged victim and a victim advocate, in a case arising under the Uniform Code of Military Justice, if such communication was made for the purpose of facilitating advice or supportive assistance to the alleged victim.

(b) *Definitions.* As used in this rule:

(1) "Victim" means any person who is alleged to have suffered direct physical or emotional harm as the result of a sexual or violent offense.

(2) "Victim advocate" means a person who:

(A) is designated in writing as a victim advocate in accordance with service regulation;

(B) is authorized to perform victim advocate duties in accordance with service regulation and is acting in the performance of those duties; or

(C) is certified as a victim advocate pursuant to federal or state requirements.

(3) A communication is "confidential" if made in the course of the victim advocate - victim relationship and not intended to be disclosed to third persons other than those to whom disclosure is made in furtherance of the rendition of advice or assistance to the alleged victim or those reasonably necessary for such transmission of the communication.

(4) "Evidence of a victim's records or communications" means testimony of a victim advocate, or records that pertain to communications by a victim to a victim advocate, for the purposes of advising or providing supportive assistance to the victim.

(c) *Who May Claim the Privilege.* The privilege may be claimed by the victim or the guardian or conservator of the victim. A person who may claim the privilege may authorize trial counsel or a defense counsel representing the victim to claim the privilege on his or her behalf. The victim advocate who received the communication may claim the privilege on behalf of the victim. The authority of such a victim advocate, guardian, conservator, or a defense counsel representing the victim to so assert the privilege is presumed in the absence of evidence to the contrary.

(d) *Exceptions.* There is no privilege under this rule:

(1) when the victim is dead;

(2) when federal law, state law, or service regulation imposes a duty to report information contained in a communication;

(3) when a victim advocate believes that a victim's mental or emotional condition makes the victim a danger to any person, including the victim;

(4) if the communication clearly contemplated the future commission of a fraud or crime, or if the services of the victim advocate are sought or obtained to enable or aid anyone to commit or plan to commit what the victim knew or reasonably should have known to be a crime or fraud;

(5) when necessary to ensure the safety and security of military personnel, military dependents, military property, classified information, or the accomplishment of a military mission; or

(6) when admission or disclosure of a communication is constitutionally required.

(e) *Procedure to Determine Admissibility of Victim Records or Communications.*

(1) In any case in which the production or admission of records or communications of a victim is a matter in dispute, a party may seek an interlocutory ruling by the military judge. In order to obtain such a ruling, the party must:

(A) file a written motion at least 5 days prior to entry of pleas specifically describing the evidence and stating the purpose for which it is sought or offered, or objected to, unless the military judge, for good cause shown, requires a different time for filing or permits filing during trial; and

(B) serve the motion on the opposing party, the military judge and, if practicable, notify the victim or the victim's guardian, conservator, or representative that the motion has been filed and that the victim has an opportunity to be heard as set forth in subdivision (e)(2).

(2) Before ordering the production or admission of evidence of a victim's records or communication, the military judge must conduct a hearing. Upon the motion of counsel for either party and upon good cause shown, the military judge may order the hearing closed. At the hearing, the parties may call witnesses, including the victim, and offer other relevant evidence. The victim must be afforded a reasonable opportunity to attend the hearing and be heard at the victim's own expense unless the victim has been otherwise subpoenaed or ordered to appear at the hearing. However, the proceedings may not be unduly delayed for this purpose. In a case before a court-martial composed of a military judge and members, the military judge must conduct the hearing outside the presence of the members.

(3) The military judge may examine the evidence or a proffer thereof in camera, if such examination is necessary to rule on the motion.

(4) To prevent unnecessary disclosure of evidence of a victim's records or communications, the military judge may issue protective orders or may admit only portions of the evidence.

(5) The motion, related papers, and the record of the hearing must be sealed in accordance with R.C.M. 1103A and must remain under seal unless the military judge or an appellate court orders otherwise.

#### **Rule 601. Competency to Testify in General**

Every person is competent to be a witness unless these rules provide otherwise.

#### **Rule 602. Need for Personal Knowledge**

A witness may testify to a matter only if evidence is introduced sufficient to support a finding that the witness has personal knowledge of the matter. Evidence to prove personal knowledge may consist of the witness's own testimony. This rule does not apply to a witness's expert testimony under Mil. R. Evid. 703.

#### **Rule 603. Oath or Affirmation to Testify Truthfully**

Before testifying, a witness must give an oath or affirmation to testify truthfully. It must be in a form designed to impress that duty on the witness's conscience.

#### **Rule 604. Interpreter**

An interpreter must be qualified and must give an oath or affirmation to make a true translation.

#### **Rule 605. Military Judge's Competency as a Witness**

(a) The presiding military judge may not testify as a witness at any proceeding of that court-martial. A party need not object to preserve the issue.

(b) This rule does not preclude the military judge from placing on the record matters concerning docketing of the case.

#### **Rule 606. Member's Competency as a Witness**

(a) *At the Trial by Court-Martial.* A member of a court-martial may not testify as a witness before the other members at any proceeding of that court-martial. If a member is called to testify, the military judge must – except in a special court-martial without a military judge – give the opposing party an opportunity to object outside the presence of the members.

(b) *During an Inquiry into the Validity of a Finding or Sentence.*

(1) *Prohibited Testimony or Other Evidence.* During an inquiry into the validity of a finding or sentence, a member of a court-martial may not testify about any statement made or incident that occurred during the

deliberations of that court-martial; the effect of anything on that member's or another member's vote; or any member's mental processes concerning the finding or sentence. The military judge may not receive a member's affidavit or evidence of a member's statement on these matters.

(2) *Exceptions.* A member may testify about whether:

- (A) extraneous prejudicial information was improperly brought to the members' attention;
- (B) unlawful command influence or any other outside influence was improperly brought to bear on any member; or
- (C) a mistake was made in entering the finding or sentence on the finding or sentence forms.

#### **Rule 607. Who May Impeach a Witness**

Any party, including the party that called the witness, may attack the witness's credibility.

#### **Rule 608. A Witness's Character for Truthfulness or Untruthfulness**

(a) *Reputation or Opinion Evidence.* A witness's credibility may be attacked or supported by testimony about the witness's reputation for having a character for truthfulness or untruthfulness, or by testimony in the form of an opinion about that character. Evidence of truthful character is admissible only after the witness's character for truthfulness has been attacked.

(b) *Specific Instances of Conduct.* Except for a criminal conviction under Mil. R. Evid. 609, extrinsic evidence is not admissible to prove specific instances of a witness's conduct in order to attack or support the witness's character for truthfulness. The military judge may, on cross-examination, allow them to be inquired into if they are probative of the character for truthfulness or untruthfulness of:

- (1) the witness; or
- (2) another witness whose character the witness being cross-examined has testified about.

By testifying on another matter, a witness does not waive any privilege against self-incrimination for testimony that relates only to the witness's character for truthfulness.

(c) *Evidence of Bias.* Bias, prejudice, or any motive to misrepresent may be shown to impeach the witness either by examination of the witness or by evidence otherwise adduced.

#### **Rule 609. Impeachment by Evidence of a Criminal Conviction**

(a) *In General.* The following rules apply to attacking a witness's character for truthfulness by evidence of a criminal conviction:

(1) For a crime that, in the convicting jurisdiction, was punishable by death, dishonorable discharge, or by imprisonment for more than one year, the evidence:

- (A) must be admitted, subject to Mil. R. Evid. 403, in a court-martial in which the witness is not the accused; and
- (B) must be admitted in a court-martial in which the witness is the accused, if the probative value of the evidence outweighs its prejudicial effect to that accused; and

(2) For any crime regardless of the punishment, the evidence must be admitted if the court can readily determine that establishing the elements of the crime required proving – or the witness's admitting – a dishonest act or false statement.

(3) In determining whether a crime tried by court-martial was punishable by death, dishonorable discharge, or imprisonment in excess of one year, the maximum punishment prescribed by the President under Article 56 at the time of the conviction applies without regard to whether the case was tried by general, special, or summary court-martial.

(b) *Limit on Using the Evidence After 10 Years.* Subdivision (b) applies if more than 10 years have passed since the witness's conviction or release from confinement for it, whichever is later. Evidence of the conviction is admissible only if:

- (1) its probative value, supported by specific facts and circumstances, substantially outweighs its prejudicial effect; and
- (2) the proponent gives an adverse party reasonable written notice of the intent to use it so that the party has a fair opportunity to contest its use.

(c) *Effect of a Pardon, Annulment, or Certificate of Rehabilitation.* Evidence of a conviction is not admissible if:

(1) the conviction has been the subject of a pardon, annulment, certificate of rehabilitation, or other equivalent procedure based on a finding that the person has been rehabilitated, and the person has not been convicted of a later crime punishable by death, dishonorable discharge, or imprisonment for more than one year; or

(2) the conviction has been the subject of a pardon, annulment, or other equivalent procedure based on a finding of innocence.

(d) *Juvenile Adjudications*. Evidence of a juvenile adjudication is admissible under this rule only if:

(1) the adjudication was of a witness other than the accused;

(2) an adult's conviction for that offense would be admissible to attack the adult's credibility; and

(3) admitting the evidence is necessary to fairly determine guilt or innocence.

(e) *Pendency of an Appeal*. A conviction that satisfies this rule is admissible even if an appeal is pending, except that a conviction by summary court-martial or special court-martial without a military judge may not be used for purposes of impeachment until review has been completed under Article 64 or Article 66, if applicable. Evidence of the pendency is also admissible.

(f) *Definition*. For purposes of this rule, there is a "conviction" in a court-martial case when a sentence has been adjudged.

#### **Rule 610. Religious Beliefs or Opinions**

Evidence of a witness's religious beliefs or opinions is not admissible to attack or support the witness's credibility.

#### **Rule 611. Mode and Order of Examining Witnesses and Presenting Evidence**

(a) *Control by the Military Judge; Purposes*. The military judge should exercise reasonable control over the mode and order of examining witnesses and presenting evidence so as to:

(1) make those procedures effective for determining the truth;

(2) avoid wasting time; and

(3) protect witnesses from harassment or undue embarrassment.

(b) *Scope of Cross-Examination*. Cross-examination should not go beyond the subject matter of the direct examination and matters affecting the witness's credibility. The military judge may allow inquiry into additional matters as if on direct examination.

(c) *Leading Questions*. Leading questions should not be used on direct examination except as necessary to develop the witness's testimony. Ordinarily, the military judge should allow leading questions:

(1) on cross-examination; and

(2) when a party calls a hostile witness or a witness identified with an adverse party.

(d) *Remote live testimony of a child*.

(1) In a case involving domestic violence or the abuse of a child, the military judge must, subject to the requirements of subdivision (d)(3) of this rule, allow a child victim or witness to testify from an area outside the courtroom as prescribed in R.C.M. 914A.

(2) *Definitions*. As used in this rule:

(A) "Child" means a person who is under the age of 16 at the time of his or her testimony.

(B) "Abuse of a child" means the physical or mental injury, sexual abuse or exploitation, or negligent treatment of a child.

(C) "Exploitation" means child pornography or child prostitution.

(D) "Negligent treatment" means the failure to provide, for reasons other than poverty, adequate food, clothing, shelter, or medical care so as to endanger seriously the physical health of the child.

(E) "Domestic violence" means an offense that has as an element the use, or attempted or threatened use of physical force against a person by a current or former spouse, parent, or guardian of the victim; by a person with whom the victim shares a child in common; by a person who is cohabiting with or has cohabited with the victim as a spouse, parent, or guardian; or by a person similarly situated to a spouse, parent, or guardian of the victim.

(3) Remote live testimony will be used only where the military judge makes the following three findings on the record:

(A) that it is necessary to protect the welfare of the particular child witness;

(B) that the child witness would be traumatized, not by the courtroom generally, but by the presence of the defendant; and

(C) that the emotional distress suffered by the child witness in the presence of the defendant is more than *de minimis*.

(4) Remote live testimony of a child will not be used when the accused elects to absent himself from the courtroom in accordance with R.C.M. 804(d).

(5) In making a determination under subdivision (d)(3), the military judge may question the child in chambers, or at some comfortable place other than the courtroom, on the record for a reasonable period of time, in the presence of the child, a representative of the prosecution, a representative of the defense, and the child's attorney or guardian ad litem.

#### **Rule 612. Writing Used to Refresh a Witness's Memory**

(a) *Scope*. This rule gives an adverse party certain options when a witness uses a writing to refresh memory:

(1) while testifying; or

(2) before testifying, if the military judge decides that justice requires the party to have those options.

(b) *Adverse Party's Options; Deleting Unrelated Matter*. An adverse party is entitled to have the writing produced at the hearing, to inspect it, to cross-examine the witness about it, and to introduce in evidence any portion that relates to the witness's testimony. If the producing party claims that the writing includes unrelated or privileged matter, the military judge must examine the writing in camera, delete any unrelated or privileged portion, and order that the rest be delivered to the adverse party. Any portion deleted over objection must be preserved for the record.

(c) *Failure to Produce or Deliver the Writing*. If a writing is not produced or is not delivered as ordered, the military judge may issue any appropriate order. If the prosecution does not comply, the military judge must strike the witness's testimony or – if justice so requires – declare a mistrial.

(d) *No Effect on Other Disclosure Requirements*. This rule does not preclude disclosure of information required to be disclosed under other provisions of these rules or this Manual.

#### **Rule 613. Witness's Prior Statement**

(a) *Showing or Disclosing the Statement During Examination*. When examining a witness about the witness's prior statement, a party need not show it or disclose its contents to the witness. The party must, on request, show it or disclose its contents to an adverse party's attorney.

(b) *Extrinsic Evidence of a Prior Inconsistent Statement*. Extrinsic evidence of a witness's prior inconsistent statement is admissible only if the witness is given an opportunity to explain or deny the statement and an adverse party is given an opportunity to examine the witness about it, or if justice so requires. Subdivision (b) does not apply to an opposing party's statement under Mil R. Evid. 801(d)(2).

#### **Rule 614. Court-Martial's Calling or Examining a Witness**

(a) *Calling*. The military judge may – sua sponte or at the request of the members or the suggestion of a party – call a witness. Each party is entitled to cross-examine the witness. When the members wish to call or recall a witness, the military judge must determine whether the testimony would be relevant and not barred by any rule or provision of this Manual.

(b) *Examining*. The military judge or members may examine a witness regardless of who calls the witness. Members must submit their questions to the military judge in writing. Following the opportunity for review by both parties, the military judge must rule on the propriety of the questions, and ask the questions in an acceptable form on behalf of the members. When the military judge or the members call a witness who has not previously testified, the military judge may conduct the direct examination or may assign the responsibility to counsel for any party.

(c) *Objections*. A party may object to the court-martial's calling or examining a witness either at that time or at the next opportunity when the members are not present.

#### **Rule 615. Excluding Witnesses**

At a party's request, the military judge must order witnesses excluded so that they cannot hear other witnesses' testimony, or the military judge may do so *sua sponte*. This rule does not authorize excluding:

(a) the accused;

(b) a member of an armed service or an employee of the United States after being designated as a representative of the United States by the trial counsel;

(c) a person whose presence a party shows to be essential to presenting the party's case;

- (d) a person authorized by statute to be present; or
- (e) a victim of an offense from the trial of an accused for that offense, when the sole basis for exclusion would be that the victim may testify or present information during the presentencing phase of the trial.

**Rule 701. Opinion Testimony by Lay Witnesses**

If a witness is not testifying as an expert, testimony in the form of an opinion is limited to one that is:

- (a) rationally based on the witness's perception;
- (b) helpful to clearly understanding the witness's testimony or to determining a fact in issue; and
- (c) not based on scientific, technical, or other specialized knowledge within the scope of Mil. R. Evid. 702.

**Rule 702. Testimony by Expert Witnesses**

A witness who is qualified as an expert by knowledge, skill, experience, training, or education may testify in the form of an opinion or otherwise if:

- (a) the expert's scientific, technical, or other specialized knowledge will help the trier of fact to understand the evidence or to determine a fact in issue;
- (b) the testimony is based on sufficient facts or data;
- (c) the testimony is the product of reliable principles and methods; and
- (d) the expert has reliably applied the principles and methods to the facts of the case.

**Rule 703. Bases of an Expert's Opinion Testimony**

An expert may base an opinion on facts or data in the case that the expert has been made aware of or personally observed. If experts in the particular field would reasonably rely on those kinds of facts or data in forming an opinion on the subject, they need not be admissible for the opinion to be admitted. If the facts or data would otherwise be inadmissible, the proponent of the opinion may disclose them to the members of a court-martial only if the military judge finds that their probative value in helping the members evaluate the opinion substantially outweighs their prejudicial effect.

**Rule 704. Opinion on an Ultimate Issue**

An opinion is not objectionable just because it embraces an ultimate issue.

**Rule 705. Disclosing the Facts or Data Underlying an Expert's Opinion**

Unless the military judge orders otherwise, an expert may state an opinion – and give the reasons for it – without first testifying to the underlying facts or data. The expert may be required to disclose those facts or data on cross-examination.

**Rule 706. Court-Appointed Expert Witnesses**

- (a) *Appointment Process.* The trial counsel, the defense counsel, and the court-martial have equal opportunity to obtain expert witnesses under Article 46 and R.C.M. 703.
- (b) *Compensation.* The compensation of expert witnesses is governed by R.C.M. 703.
- (c) *Accused's Choice of Experts.* This rule does not limit an accused in calling any expert at the accused's own expense.

**Rule 707. Polygraph Examinations**

- (a) *Prohibitions.* Notwithstanding any other provision of law, the result of a polygraph examination, the polygraph examiner's opinion, or any reference to an offer to take, failure to take, or taking of a polygraph examination is not admissible.
- (b) *Statements Made During a Polygraph Examination.* This rule does not prohibit admission of an otherwise admissible statement made during a polygraph examination.

**Rule 801. Definitions that Apply to this Section; Exclusions from Hearsay**

- (a) *Statement.* "Statement" means a person's oral assertion, written assertion, or nonverbal conduct, if the person intended it as an assertion.

- (b) *Declarant*. “Declarant” means the person who made the statement.
- (c) *Hearsay*. “Hearsay” means a statement that:
- (1) the declarant does not make while testifying at the current trial or hearing; and
  - (2) a party offers in evidence to prove the truth of the matter asserted in the statement.
- (d) *Statements that Are Not Hearsay*. A statement that meets the following conditions is not hearsay:
- (1) *A Declarant-Witness's Prior Statement*. The declarant testifies and is subject to cross-examination about a prior statement, and the statement:
    - (A) is inconsistent with the declarant's testimony and was given under penalty of perjury at a trial, hearing, or other proceeding or in a deposition;
    - (B) is consistent with the declarant's testimony and is offered to rebut an express or implied charge that the declarant recently fabricated it or acted from a recent improper influence or motive in so testifying; or
    - (C) identifies a person as someone the declarant perceived earlier.
  - (2) *An Opposing Party's Statement*. The statement is offered against an opposing party and:
    - (A) was made by the party in an individual or representative capacity;
    - (B) is one the party manifested that it adopted or believed to be true;
    - (C) was made by a person whom the party authorized to make a statement on the subject;
    - (D) was made by the party's agent or employee on a matter within the scope of that relationship and while it existed; or
    - (E) was made by the party's co-conspirator during and in furtherance of the conspiracy.
- The statement must be considered but does not by itself establish the declarant's authority under (C); the existence or scope of the relationship under (D); or the existence of the conspiracy or participation in it under (E).

#### **Rule 802. The Rule against Hearsay**

Hearsay is not admissible unless any of the following provides otherwise:

- (a) a federal statute applicable in trial by courts-martial; or
- (b) these rules.

#### **Rule 803. Exceptions to the Rule against Hearsay – Regardless of Whether the Declarant Is Available as a Witness**

The following are not excluded by the rule against hearsay, regardless of whether the declarant is available as a witness:

- (1) *Present Sense Impression*. A statement describing or explaining an event or condition, made while or immediately after the declarant perceived it.
- (2) *Excited Utterance*. A statement relating to a startling event or condition, made while the declarant was under the stress of excitement that it caused.
- (3) *Then-Existing Mental, Emotional, or Physical Condition*. A statement of the declarant's then-existing state of mind (such as motive, intent, or plan) or emotional, sensory, or physical condition (such as mental feeling, pain, or bodily health), but not including a statement of memory or belief to prove the fact remembered or believed unless it relates to the validity or terms of the declarant's will.
- (4) *Statement Made for Medical Diagnosis or Treatment*. A statement that –
  - (A) is made for – and is reasonably pertinent to – medical diagnosis or treatment; and
  - (B) describes medical history; past or present symptoms or sensations; their inception; or their general cause.
- (5) *Recorded Recollection*. A record that:
  - (A) is on a matter the witness once knew about but now cannot recall well enough to testify fully and accurately;
  - (B) was made or adopted by the witness when the matter was fresh in the witness's memory; and
  - (C) accurately reflects the witness's knowledge.

If admitted, the record may be read into evidence but may be received as an exhibit only if offered by an adverse party.

- (6) *Records of a Regularly Conducted Activity*. A record of an act, event, condition, opinion, or diagnosis if:
  - (A) the record was made at or near the time by – or from information transmitted by – someone with knowledge;

(B) the record was kept in the course of a regularly conducted activity of a uniformed service, business, institution, association, profession, organization, occupation, or calling of any kind, whether or not conducted for profit;

(C) making the record was a regular practice of that activity;

(D) all these conditions are shown by the testimony of the custodian or another qualified witness, or by a certification that complies with Mil. R. Evid. 902(11) or with a statute permitting certification in a criminal proceeding in a court of the United States; and

(E) neither the source of information nor the method or circumstances of preparation indicate a lack of trustworthiness.

Records of regularly conducted activities include, but are not limited to, enlistment papers, physical examination papers, fingerprint cards, forensic laboratory reports, chain of custody documents, morning reports and other personnel accountability documents, service records, officer and enlisted qualification records, logs, unit personnel diaries, individual equipment records, daily strength records of prisoners, and rosters of prisoners.

(7) *Absence of a Record of a Regularly Conducted Activity.* Evidence that a matter is not included in a record described in paragraph (6) if:

(A) the evidence is admitted to prove that the matter did not occur or exist;

(B) a record was regularly kept for a matter of that kind; and

(C) neither the possible source of the information nor other circumstances indicate a lack of trustworthiness.

(8) *Public Records.* A record or statement of a public office if:

(A) it sets out:

(i) the office's activities;

(ii) a matter observed while under a legal duty to report, but not including a matter observed by law-enforcement personnel and other personnel acting in a law enforcement capacity; or

(iii) against the government, factual findings from a legally authorized investigation; and

(B) neither the source of information nor other circumstances indicate a lack of trustworthiness.

Notwithstanding subdivision (8)(A)(ii), the following are admissible as a record of a fact or event if made by a person within the scope of the person's official duties and those duties included a duty to know or to ascertain through appropriate and trustworthy channels of information the truth of the fact or event and to record such fact or event: enlistment papers, physical examination papers, fingerprint cards, forensic laboratory reports, chain of custody documents, morning reports and other personnel accountability documents, service records, officer and enlisted qualification records, court-martial conviction records, logs, unit personnel diaries, individual equipment records, daily strength records of prisoners, and rosters of prisoners.

(9) *Public Records of Vital Statistics.* A record of a birth, death, or marriage, if reported to a public office in accordance with a legal duty.

(10) *Absence of a Public Record.* Testimony – or a certification under Mil. R. Evid. 902 – that a diligent search failed to disclose a public record or statement if the testimony or certification is admitted to prove that:

(A) the record or statement does not exist; or

(B) a matter did not occur or exist, if a public office regularly kept a record or statement for a matter of that kind.

(11) *Records of Religious Organizations Concerning Personal or Family History.* A statement of birth, legitimacy, ancestry, marriage, divorce, death, relationship by blood or marriage, or similar facts of personal or family history, contained in a regularly kept record of a religious organization.

(12) *Certificates of Marriage, Baptism, and Similar Ceremonies.* A statement of fact contained in a certificate:

(A) made by a person who is authorized by a religious organization or by law to perform the act certified;

(B) attesting that the person performed a marriage or similar ceremony or administered a sacrament; and

(C) purporting to have been issued at the time of the act or within a reasonable time after it.

(13) *Family Records.* A statement of fact about personal or family history contained in a family record, such as a Bible, genealogy, chart, engraving on a ring, inscription on a portrait, or engraving on an urn or burial marker.

(14) *Records of Documents that Affect an Interest in Property.* The record of a document that purports to establish or affect an interest in property if:

(A) the record is admitted to prove the content of the original recorded document, along with its signing and its delivery by each person who purports to have signed it;

(B) the record is kept in a public office; and

(C) a statute authorizes recording documents of that kind in that office.

(15) *Statements in Documents that Affect an Interest in Property.* A statement contained in a document that purports to establish or affect an interest in property if the matter stated was relevant to the document's purpose unless later dealings with the property are inconsistent with the truth of the statement or the purport of the document.

(16) *Statements in Ancient Documents.* A statement in a document that is at least 20 years old and whose authenticity is established.

(17) *Market Reports and Similar Commercial Publications.* Market quotations, lists (including government price lists), directories, or other compilations that are generally relied on by the public or by persons in particular occupations.

(18) *Statements in Learned Treatises, Periodicals, or Pamphlets.* A statement contained in a treatise, periodical, or pamphlet if:

(A) the statement is called to the attention of an expert witness on cross-examination or relied on by the expert on direct examination; and

(B) the publication is established as a reliable authority by the expert's admission or testimony, by another expert's testimony, or by judicial notice.

If admitted, the statement may be read into evidence but not received as an exhibit.

(19) *Reputation Concerning Personal or Family History.* A reputation among a person's family by blood, adoption, or marriage – or among a person's associates or in the community – concerning the person's birth, adoption, legitimacy, ancestry, marriage, divorce, death, relationship by blood, adoption, or marriage, or similar facts of personal or family history.

(20) *Reputation Concerning Boundaries or General History.* A reputation in a community – arising before the controversy – concerning boundaries of land in the community or customs that affect the land, or concerning general historical events important to that community, State, or nation.

(21) *Reputation Concerning Character.* A reputation among a person's associates or in the community concerning the person's character.

(22) *Judgment of a Previous Conviction.* Evidence of a final judgment of conviction if:

(A) the judgment was entered after a trial or guilty plea, but not a nolo contendere plea;

(B) the conviction was for a crime punishable by death, dishonorable discharge, or by imprisonment for more than a year;

(C) the evidence is admitted to prove any fact essential to the judgment; and

(D) when offered by the prosecutor for a purpose other than impeachment, the judgment was against the accused.

The pendency of an appeal may be shown but does not affect admissibility. In determining whether a crime tried by court-martial was punishable by death, dishonorable discharge, or imprisonment for more than one year, the maximum punishment prescribed by the President under Article 56 of the Uniform of Military Justice at the time of the conviction applies without regard to whether the case was tried by general, special, or summary court-martial.

(23) *Judgments Involving Personal, Family, or General History, or a Boundary.* A judgment that is admitted to prove a matter of personal, family, or general history, or boundaries, if the matter:

(A) was essential to the judgment; and

(B) could be proved by evidence of reputation.

#### **Rule 804. Exceptions to the Rule Against Hearsay – When the Declarant Is Unavailable as a Witness**

(a) *Criteria for Being Unavailable.* A declarant is considered to be unavailable as a witness if the declarant:

(1) is exempted from testifying about the subject matter of the declarant's statement because the military judge rules that a privilege applies;

(2) refuses to testify about the subject matter despite the military judge's order to do so;

(3) testifies to not remembering the subject matter;

(4) cannot be present or testify at the trial or hearing because of death or a then-existing infirmity, physical illness, or mental illness; or

(5) is absent from the trial or hearing and the statement's proponent has not been able, by process or other reasonable means, to procure:

(A) the declarant's attendance, in the case of a hearsay exception under subdivision (b)(1) or (b)(5);

(B) the declarant's attendance or testimony, in the case of a hearsay exception under subdivision (b)(2), (b)(3), or (b)(4); or

(6) is unavailable within the meaning of Article 49(d)(2).

Subdivision (a) does not apply if the statement's proponent procured or wrongfully caused the declarant's unavailability as a witness in order to prevent the declarant from attending or testifying.

(b) *The Exceptions*. The following are exceptions to the rule against hearsay, and are not excluded by that rule if the declarant is unavailable as a witness:

(1) *Former Testimony*. Testimony that:

(A) was given by a witness at a trial, hearing, or lawful deposition, whether given during the current proceeding or a different one; and

(B) is now offered against a party who had an opportunity and similar motive to develop it by direct, cross-, or redirect examination.

Subject to the limitations in Articles 49 and 50, a record of testimony given before a court-martial, court of inquiry, military commission, other military tribunal, or pretrial investigation under Article 32 is admissible under subdivision (b)(1) if the record of the testimony is a verbatim record.

(2) *Statement under the Belief of Imminent Death*. In a prosecution for any offense resulting in the death of the alleged victim, a statement that the declarant, while believing the declarant's death to be imminent, made about its cause or circumstances.

(3) *Statement against Interest*. A statement that:

(A) a reasonable person in the declarant's position would have made only if the person believed it to be true because, when made, it was so contrary to the declarant's proprietary or pecuniary interest or had so great a tendency to invalidate the declarant's claim against someone else or to expose the declarant to civil or criminal liability; and

(B) is supported by corroborating circumstances that clearly indicate its trustworthiness, if it tends to expose the declarant to criminal liability and is offered to exculpate the accused.

(4) *Statement of Personal or Family History*. A statement about:

(A) the declarant's own birth, adoption, legitimacy, ancestry, marriage, divorce, relationship by blood or marriage, or similar facts of personal or family history, even though the declarant had no way of acquiring personal knowledge about that fact; or

(B) another person concerning any of these facts, as well as death, if the declarant was related to the person by blood, adoption, or marriage or was so intimately associated with the person's family that the declarant's information is likely to be accurate.

(5) *Other Exceptions*. [Transferred to Mil.R.Evid. 807]

(6) *Statement Offered against a Party that Wrongfully Caused the Declarant's Unavailability*. A statement offered against a party that wrongfully caused or acquiesced in wrongfully causing the declarant's unavailability as a witness, and did so intending that result.

#### **Rule 805. Hearsay Within Hearsay**

Hearsay within hearsay is not excluded by the rule against hearsay if each part of the combined statements conforms with an exception or exclusion to the rule.

#### **Rule 806. Attacking and Supporting the Declarant's Credibility**

When a hearsay statement – or a statement described in Mil. R. Evid. 801(d)(2)(C), (D), or (E) – has been admitted in evidence, the declarant's credibility may be attacked, and then supported, by any evidence that would be admissible for those purposes if the declarant had testified as a witness. The military judge may admit evidence of the declarant's inconsistent statement or conduct, regardless of when it occurred or whether the declarant had an opportunity to explain or deny it. If the party against whom the statement was admitted calls the declarant as a witness, the party may examine the declarant on the statement as if on cross-examination.

#### **Rule 807. Residual Exception**

(a) *In General*. Under the following circumstances, a hearsay statement is not excluded by the rule against hearsay even if the statement is not specifically covered by a hearsay exception in Mil. R. Evid. 803 or 804:

(1) the statement has equivalent circumstantial guarantees of trustworthiness;

(2) it is offered as evidence of a material fact;

(3) it is more probative on the point for which it is offered than any other evidence that the proponent can obtain through reasonable efforts; and

(4) admitting it will best serve the purposes of these rules and the interests of justice.

(b) *Notice*. The statement is admissible only if, before the trial or hearing, the proponent gives an adverse party reasonable notice of the intent to offer the statement and its particulars, including the declarant's name and address, so that the party has a fair opportunity to meet it.

#### **Rule 901. Authenticating or Identifying Evidence**

(a) *In General*. To satisfy the requirement of authenticating or identifying an item of evidence, the proponent must produce evidence sufficient to support a finding that the item is what the proponent claims it is.

(b) *Examples*. The following are examples only – not a complete list – of evidence that satisfies the requirement:

(1) *Testimony of a Witness with Knowledge*. Testimony that an item is what it is claimed to be.

(2) *Nonexpert Opinion about Handwriting*. A nonexpert's opinion that handwriting is genuine, based on a familiarity with it that was not acquired for the current litigation.

(3) *Comparison by an Expert Witness or the Trier of Fact*. A comparison with an authenticated specimen by an expert witness or the trier of fact.

(4) *Distinctive Characteristics and the Like*. The appearance, contents, substance, internal patterns, or other distinctive characteristics of the item, taken together with all the circumstances.

(5) *Opinion about a Voice*. An opinion identifying a person's voice -- whether heard firsthand or through mechanical or electronic transmission or recording -- based on hearing the voice at any time under circumstances that connect it with the alleged speaker.

(6) *Evidence about a Telephone Conversation*. For a telephone conversation, evidence that a call was made to the number assigned at the time to:

(A) a particular person, if circumstances, including self-identification, show that the person answering was the one called; or

(B) a particular business, if the call was made to a business and the call related to business reasonably transacted over the telephone.

(7) *Evidence about Public Records*. Evidence that:

(A) a document was recorded or filed in a public office as authorized by law; or

(B) a purported public record or statement is from the office where items of this kind are kept.

(8) *Evidence about Ancient Documents or Data Compilations*. For a document or data compilation, evidence that it:

(A) is in a condition that creates no suspicion about its authenticity;

(B) was in a place where, if authentic, it would likely be; and

(C) is at least 20 years old when offered.

(9) *Evidence about a Process or System*. Evidence describing a process or system and showing that it produces an accurate result.

(10) *Methods Provided by a Statute or Rule*. Any method of authentication or identification allowed by a federal statute, a rule prescribed by the Supreme Court, or an applicable regulation prescribed pursuant to statutory authority.

#### **Rule 902. Evidence that Is Self-Authenticating**

The following items of evidence are self-authenticating; they require no extrinsic evidence of authenticity in order to be admitted:

(1) *Domestic Public Documents that are Sealed and Signed*. A document that bears:

(A) a seal purporting to be that of the United States; any State, district, Commonwealth, territory, or insular possession of the United States; the former Panama Canal Zone; the Trust Territory of the Pacific Islands; a political subdivision of any of these entities; or a department, agency, or officer of any entity named above; and

(B) a signature purporting to be an execution or attestation.

(2) *Domestic Public Documents that are Not Sealed but are Signed and Certified*. A document that bears no seal if:

(A) it bears the signature of an officer or employee of an entity named in subdivision (1)(A) above; and

- (B) another public officer who has a seal and official duties within that same entity certifies under seal – or its equivalent – that the signer has the official capacity and that the signature is genuine.
- (3) *Foreign Public Documents*. A document that purports to be signed or attested by a person who is authorized by a foreign country's law to do so. The document must be accompanied by a final certification that certifies the genuineness of the signature and official position of the signer or attester – or of any foreign official whose certificate of genuineness relates to the signature or attestation or is in a chain of certificates of genuineness relating to the signature or attestation. The certification may be made by a secretary of a United States embassy or legation; by a consul general, vice consul, or consular agent of the United States; or by a diplomatic or consular official of the foreign country assigned or accredited to the United States. If all parties have been given a reasonable opportunity to investigate the document's authenticity and accuracy, the military judge may, for good cause, either:
- (A) order that it be treated as presumptively authentic without final certification; or
  - (B) allow it to be evidenced by an attested summary with or without final certification.
- (4) *Certified Copies of Public Records*. A copy of an official record -- or a copy of a document that was recorded or filed in a public office as authorized by law -- if the copy is certified as correct by:
- (A) the custodian or another person authorized to make the certification; or
  - (B) a certificate that complies with subdivision (1), (2), or (3) above, a federal statute, a rule prescribed by the Supreme Court, or an applicable regulation prescribed pursuant to statutory authority.
- (4a) *Documents or Records of the United States Accompanied by Attesting Certificates*. Documents or records kept under the authority of the United States by any department, bureau, agency, office, or court thereof when attached to or accompanied by an attesting certificate of the custodian of the document or record without further authentication.
- (5) *Official Publications*. A book, pamphlet, or other publication purporting to be issued by a public authority.
- (6) *Newspapers and Periodicals*. Printed material purporting to be a newspaper or periodical.
- (7) *Trade Inscriptions and the Like*. An inscription, sign, tag, or label purporting to have been affixed in the course of business and indicating origin, ownership, or control.
- (8) *Acknowledged Documents*. A document accompanied by a certificate of acknowledgment that is lawfully executed by a notary public or another officer who is authorized to take acknowledgments.
- (9) *Commercial Paper and Related Documents*. Commercial paper, a signature on it, and related documents, to the extent allowed by general commercial law.
- (10) *Presumptions under a Federal Statute or Regulation*. A signature, document, or anything else that a federal statute, or an applicable regulation prescribed pursuant to statutory authority, declares to be presumptively or prima facie genuine or authentic.
- (11) *Certified Domestic Records of a Regularly Conducted Activity*. The original or a copy of a domestic record that meets the requirements of Mil. R. Evid. 803(6)(A)-(C), as shown by a certification of the custodian or another qualified person that complies with a federal statute or a rule prescribed by the Supreme Court. Before the trial or hearing, or at a later time that the military judge allows for good cause, the proponent must give an adverse party reasonable written notice of the intent to offer the record and must make the record and certification available for inspection so that the party has a fair opportunity to challenge them.

### **Rule 903. Subscribing Witness's Testimony**

A subscribing witness's testimony is necessary to authenticate a writing only if required by the law of the jurisdiction that governs its validity.

### **Rule 1001. Definitions That Apply to This Section**

In this section:

- (a) A "writing" consists of letters, words, numbers, or their equivalent set down in any form.
- (b) A "recording" consists of letters, words, numbers, or their equivalent recorded in any manner.
- (c) A "photograph" means a photographic image or its equivalent stored in any form.
- (d) An "original" of a writing or recording means the writing or recording itself or any counterpart intended to have the same effect by the person who executed or issued it. For electronically stored information, "original" means any printout or other output readable by sight if it accurately reflects the information. An "original" of a photograph includes the negative or a print from it.
- (e) A "duplicate" means a counterpart produced by a mechanical, photographic, chemical, electronic, or other equivalent process or technique that accurately reproduces the original.

**Rule 1002. Requirement of the Original**

An original writing, recording, or photograph is required in order to prove its content unless these rules, this Manual, or a federal statute provides otherwise.

**Rule 1003. Admissibility of Duplicates**

A duplicate is admissible to the same extent as the original unless a genuine question is raised about the original's authenticity or the circumstances make it unfair to admit the duplicate.

**Rule 1004. Admissibility of Other Evidence of Content**

An original is not required and other evidence of the content of a writing, recording, or photograph is admissible if:

- (a) all the originals are lost or destroyed, and not by the proponent acting in bad faith;
- (b) an original cannot be obtained by any available judicial process;
- (c) the party against whom the original would be offered had control of the original; was at that time put on notice, by pleadings or otherwise, that the original would be a subject of proof at the trial or hearing; and fails to produce it at the trial or hearing; or
- (d) the writing, recording, or photograph is not closely related to a controlling issue.

**Rule 1005. Copies of Public Records to Prove Content**

The proponent may use a copy to prove the content of an official record – or of a document that was recorded or filed in a public office as authorized by law – if these conditions are met: the record or document is otherwise admissible; and the copy is certified as correct in accordance with Mil. R. Evid. 902(4) or is testified to be correct by a witness who has compared it with the original. If no such copy can be obtained by reasonable diligence, then the proponent may use other evidence to prove the content.

**Rule 1006. Summaries to Prove Content**

The proponent may use a summary, chart, or calculation to prove the content of voluminous writings, recordings, or photographs that cannot be conveniently examined in court. The proponent must make the originals or duplicates available for examination or copying, or both, by other parties at a reasonable time or place. The military judge may order the proponent to produce them in court.

**Rule 1007. Testimony or Statement of a Party to Prove Content**

The proponent may prove the content of a writing, recording, or photograph by the testimony, deposition, or written statement of the party against whom the evidence is offered. The proponent need not account for the original.

**Rule 1008. Functions of the Military Judge and the Members**

Ordinarily, the military judge determines whether the proponent has fulfilled the factual conditions for admitting other evidence of the content of a writing, recording, or photograph under Mil. R. Evid. 1004 or 1005. When a court-martial is composed of a military judge and members, the members determine – in accordance with Mil. R. Evid. 104(b) – any issue about whether:

- (a) an asserted writing, recording, or photograph ever existed;
- (b) another one produced at the trial or hearing is the original; or
- (c) other evidence of content accurately reflects the content.

**Rule 1101. Applicability of these Rules**

(a) *In General.* Except as otherwise provided in this Manual, these rules apply generally to all courts-martial, including summary courts-martial, Article 39(a) sessions, limited factfinding proceedings ordered on review, proceedings in revision, and contempt proceedings other than contempt proceedings in which the judge may act summarily.

(b) *Rules Relaxed.* The application of these rules may be relaxed in presentencing proceedings as provided under R.C.M. 1001 and otherwise as provided in this Manual.

(c) *Rules on Privilege.* The rules on privilege apply at all stages of a case or proceeding.

(d) *Exceptions.* These rules – except for Mil. R. Evid. 412 and those on privilege – do not apply to the following:

- (1) the military judge's determination, under Rule 104(a), on a preliminary question of fact governing admissibility;
- (2) pretrial investigations under Article 32;
- (3) proceedings for vacation of suspension of sentence under Article 72; and
- (4) miscellaneous actions and proceedings related to search authorizations, pretrial restraint, pretrial confinement, or other proceedings authorized under the Uniform Code of Military Justice or this Manual that are not listed in subdivision (a).

**Rule 1102. Amendments**

(a) *General Rule.* Amendments to the Federal Rules of Evidence – other than Articles III and V – will amend parallel provisions of the Military Rules of Evidence by operation of law 18 months after the effective date of such amendments, unless action to the contrary is taken by the President.

(b) *Rules Determined Not to Apply.* The President has determined that the following Federal Rules of Evidence do not apply to the Military Rules of Evidence: Rules 301, 302, 415, and 902(12).

**Rule 1103. Title**

These rules may be cited as the Military Rules of Evidence.

**Sec. 2.** Part IV of the Manual for Courts-Martial, United States, is amended as follows:

(a) Paragraph 45, Article 120, Rape and sexual assault generally, subparagraph e is amended to read as follows:

“e. *Maximum punishment.*

- (1) *Rape.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for life without eligibility for parole.
- (2) *Sexual assault.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 30 years.
- (3) *Aggravated sexual contact.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 20 years.
- (4) *Abusive sexual contact.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 7 years.”

(b) Paragraph 45b, Article 120b, Rape and sexual assault of a child, is amended by inserting the following new subparagraph e:

“e. *Maximum punishment.*

- (1) *Rape of a child.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for life without eligibility for parole.
- (2) *Sexual assault of a child.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 30 years.
- (3) *Sexual abuse of a child.*
  - (a) *Cases involving sexual contact.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 20 years.

(b) *Other cases.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 15 years.”

(c) Paragraph 45c, Article 120c, Other sexual misconduct, is amended by inserting the following new subparagraph e:

“e. *Maximum punishment.*

(1) *Indecent viewing.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 1 year.

(2) *Indecent visual recording.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 5 years.

(3) *Broadcasting or distribution of an indecent visual recording.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 7 years.

(4) *Forcible pandering.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 12 years.

(5) *Indecent exposure.* Dishonorable discharge, forfeiture of all pay and allowances, and confinement for 1 year.”

Changes to the Discussion accompanying the Manual for Courts Martial, United States

(a) A new Discussion is added following Mil. R. Evid. 101(c):

**“DISCUSSION**

Discussion was added to these Rules in 2013. The Discussion itself does not have the force of law, even though it may describe legal requirements derived from other sources. It is in the nature of treatise, and may be used as secondary authority. If a matter is included in a rule, it is intended that the matter be binding, unless it is clearly expressed as precatory. The Discussion will be revised from time to time as warranted by changes in applicable law. *See* Composition of the Manual for Courts-Martial in Appendix 21.

Practitioners should also refer to the Analysis of the Military Rules of Evidence contained in Appendix 22 of this Manual. The Analysis is similar to Committee Notes accompanying the Federal Rules of Evidence and is intended to address the basis of the rule, deviation from the Federal Rules of Evidence, relevant precedent, and drafters’ intent.”

(b) A new Discussion is added following Mil. R. Evid. 301(c):

**“DISCUSSION**

A military judge is not required to provide Article 31 warnings. If a witness who seems uninformed of the privileges under this rule appears likely to incriminate himself or herself, the military judge may advise the witness of the right to decline to make any answer that might tend to incriminate the witness and that any self-incriminating answer the witness might make can later be used as evidence against the witness. Counsel for any party or for the witness may ask the military judge to so advise a witness if such a request is made out of the hearing of the witness and the members, if present. Failure to so advise a witness does not make the testimony of the witness inadmissible.”

(c) A new Discussion is added following Mil. R. Evid. 312(b)(2)(F):

**“DISCUSSION**

An examination of the unclothed body under this rule should be conducted whenever practicable by a person of the same sex as that of the person being examined; however, failure to comply with this requirement does not make an examination an unlawful search within the meaning of Mil. R. Evid. 311.”

(d) A new Discussion is added following Mil. R. Evid. 312(e):

**“DISCUSSION**

Compelling a person to ingest substances for the purposes of locating the property described above or to compel the bodily elimination of such property is a search within the meaning of this section.”

(e) A new Discussion is added following Mil. R. Evid. 312(f):

**“DISCUSSION**

Nothing in this rule will be deemed to interfere with the lawful authority of the armed forces to take whatever action may be necessary to preserve the health of a servicemember.”

(f) A new Discussion is added following Mil. R. Evid. 314(c):

**“DISCUSSION**

Searches under subdivision (c) may not be conducted at a time or in a manner contrary to an express provision of a treaty or agreement to which the United States is a party; however, failure to comply with a treaty or agreement does not render a search unlawful within the meaning of Mil. R. Evid. 311.”

(g) A new Discussion is added following Mil. R. Evid. 314(e)(2):

**“DISCUSSION**

Where a co-occupant of property is physically present at the time of the requested search and expressly states his refusal to consent to the search, a warrantless search is unreasonable as to that co-occupant and evidence from the search is inadmissible as to that co-occupant. *Georgia v. Randolph*, 547 U.S. 103 (2006).”

(h) A new Discussion is added following Mil. R. Evid. 314(f)(2):

**“DISCUSSION**

Subdivision (f)(2) requires that the official making the stop have a reasonable suspicion based on specific and articulable facts that the person being frisked is armed and dangerous. Officer safety is a factor, and the officer need not be absolutely certain that the individual detained is armed for the purposes of frisking or patting down that person’s outer clothing for weapons. The test is whether a reasonably prudent person in similar circumstances would be warranted in a belief that his or her safety was in danger. The purpose of a frisk is to search for weapons or other dangerous items, including but not limited to: firearms, knives, needles, or razor blades. A limited search of outer clothing for weapons serves to protect both the officer and the public; therefore, a frisk is reasonable under the Fourth Amendment.”

(i) A new Discussion is added following Mil. R. Evid. 314(f)(3):

**“DISCUSSION**

The scope of the search is similar to the "stop and frisk" defined in subdivision (f)(2) of this rule. During the search for weapons, the official may seize any item that is immediately apparent as contraband or as evidence related to the offense serving as the basis for the stop. As a matter of safety, the official may, after conducting a lawful stop of a vehicle, order the driver and any passengers out of the car without any additional suspicion or justification.”

(j) A new Discussion is added following Mil. R. Evid. 314(g)(2):

**“DISCUSSION**

The scope of the search for weapons is limited to that which is necessary to protect the arresting official. The official may not search a vehicle for weapons if there is no possibility that the arrestee could reach into the searched area, for example, after the arrestee is handcuffed and removed from the vehicle. The scope of the search is broader for destructible evidence related to the offense for which the individual is being arrested. Unlike a search for weapons, the search for destructible offense-related evidence may take place after the arrestee is handcuffed and removed from a vehicle. If, however, the official cannot expect to find destructible offense-related evidence, this exception does not apply.”

(k) A new Discussion is added following Mil. R. Evid. 315(a):

**“DISCUSSION**

Although military personnel should adhere to procedural guidance regarding the conduct of searches, violation of such procedural guidance does not render evidence inadmissible unless the search is unlawful under these rules or the Constitution of the United States as applied to members of the armed forces. For example, if the person whose property is to be searched is present during a search conducted pursuant to a search authorization granted under this rule, the person conducting the search should notify him or her of the fact of authorization and the general substance of the authorization. Such notice may be made prior to or contemporaneously with the search. Property seized should be inventoried at the time of a seizure or as soon thereafter as practicable. A copy of the inventory should be given to a person from whose possession or premises the property was taken. Failure to provide notice, make an inventory, furnish a copy thereof, or otherwise comply with this guidance does not render a search or seizure unlawful within the meaning of Mil. R. Evid. 311.”

(l) A new Discussion is added following Mil. R. Evid. 315(c)(4):

**“DISCUSSION**

If nonmilitary property within a foreign country is owned, used, occupied by, or in the possession of an agency of the United States other than the Department of Defense, a search should be conducted in coordination with an appropriate representative of the agency concerned, although failure to obtain such coordination would not render a search unlawful within the meaning of Mil. R. Evid. 311. If other nonmilitary property within a foreign country is to be searched, the search should be conducted in accordance with any relevant treaty or agreement or in coordination with an appropriate representative of the foreign country, although failure to obtain such coordination or noncompliance with a treaty or agreement would not render a search unlawful within the meaning of Mil. R. Evid. 311.”

(m) A new Discussion is added following Mil. R. Evid. 317(b):

**“DISCUSSION**

Pursuant to 18 U.S.C. § 2516(1), the Attorney General, Deputy Attorney General, Associate Attorney General, or any Assistant Attorney General, any acting Assistant Attorney General, or any Deputy Assistant Attorney General or acting Deputy Assistant Attorney General in the Criminal Division or National Security Division specially designated by the Attorney General, may authorize an application to a Federal judge of competent jurisdiction for, and such judge may grant in conformity with 18 U.S.C. §2518, an order authorizing or approving the interception of wire or oral communications by the Federal Bureau of Investigation, or a Federal agency having responsibility for the investigation of the offense as to which the application is made, for purposes of obtaining evidence concerning the offenses enumerated in 18 U.S.C. §2516(1), to the extent such offenses are punishable under the Uniform Code of Military Justice.”

(n) A new Discussion is added following Mil. R. Evid. 505(k)(3):

**“DISCUSSION**

In addition to the Sixth Amendment right of an accused to a public trial, the Supreme Court has held that the press and general public have a constitutional right under the First Amendment to access to criminal trials. *United States v. Hershey*, 20 M.J. 433, 436 (C.M.A. 1985) (citing *Richmond Newspapers, Inc. v. Virginia*, 448 U.S. 555 (1980)). The test that must be met before closure of a criminal trial to the public is set out in *Press-Enterprise Co. v. Superior Court*, 464 U.S. 501 (1984), to wit: the presumption of openness “may be overcome by an overriding interest based on findings that closure is essential to preserve higher values and is narrowly tailored to serve that interest. The military judge must consider reasonable alternatives to closure and must make adequate findings supporting the closure to aid in review.”

# Rules and Regulations

Federal Register

Vol. 78, No. 98

Tuesday, May 21, 2013

This section of the FEDERAL REGISTER contains regulatory documents having general applicability and legal effect, most of which are keyed to and codified in the Code of Federal Regulations, which is published under 50 titles pursuant to 44 U.S.C. 1510.

The Code of Federal Regulations is sold by the Superintendent of Documents. Prices of new books are listed in the first FEDERAL REGISTER issue of each week.

## OFFICE OF PERSONNEL MANAGEMENT

### 5 CFR Part 532

RIN 3206-AM84

### Prevailing Rate Systems; Redefinition of the Clayton-Cobb-Fulton, Georgia, Nonappropriated Fund Federal Wage System Wage Area

**AGENCY:** U.S. Office of Personnel Management.

**ACTION:** Interim rule with request for comments.

**SUMMARY:** The U.S. Office of Personnel Management (OPM) is issuing an interim rule to redefine the Clayton-Cobb-Fulton, GA, nonappropriated fund (NAF) Federal Wage System (FWS) wage area by removing Clarke, Clayton, and Fulton Counties, GA, from the wage area definition. The name of the wage area will be Cobb, GA. These changes are necessary because by the end of October 2013 there will no longer be NAF employment in Clarke, Clayton, and Fulton Counties. In addition, this interim rule updates the name of the Columbus Consolidated Government in the Columbus NAF wage area to Columbus.

**DATES:** *Effective date:* This regulation is effective on May 21, 2013. We must receive comments on or before June 20, 2013.

**ADDRESSES:** You may submit comments, identified by "RIN 3206-AM84," using any of the following methods:

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Mail:* Jeanne Jacobson, Acting Deputy Associate Director for Pay and Leave, Employee Services, U.S. Office of Personnel Management, Room 7H31, 1900 E Street NW., Washington, DC 20415-8200.

*Email:* [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

### FOR FURTHER INFORMATION CONTACT:

Madeline Gonzalez, by telephone at (202) 606-2838 or by email at [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

**SUPPLEMENTARY INFORMATION:** The Clayton-Cobb-Fulton, GA, NAF FWS wage area is presently composed of three survey area counties (Clayton, Cobb, and Fulton Counties, GA) and three area of application counties (Bartow, Clarke, and DeKalb Counties, GA). The Department of Defense (DOD) requested that OPM remove Clarke, Clayton, and Fulton Counties, GA, from the wage area definition and change the Clayton-Cobb-Fulton, GA, wage area's name to Cobb, GA. These changes are necessary because the September 2011 closures of the Navy Supply School in Clarke County and of Fort McPherson in Fulton County will leave these two counties with no NAF employment. In addition, the Army and Air Force Exchange Service—Southeast Distribution Center, the wage area's current host installation, will cease operations in October 2013, leaving Clayton County without NAF employment. Under 5 U.S.C. 5343(a)(1)(B)(i), NAF wage areas "shall not extend beyond the immediate locality in which the particular prevailing rate employees are employed." Therefore, Clarke, Clayton, and Fulton Counties should not be defined as part of an NAF wage area.

The Cobb wage area will consist of one survey county (Cobb County) and two area of application counties (Bartow and DeKalb Counties). Host installation responsibility for the June 2013 full-scale survey has been reassigned to Dobbins Air Reserve Base in Cobb County. DOD reports that there are 109 NAF FWS employees remaining in the Cobb wage area.

These changes will be effective for the next full-scale wage survey in the Cobb wage area, which is scheduled to begin on June 10, 2013. Any employees in the current Clayton-Fulton-Cobb wage area will be paid from the new Cobb wage schedule beginning on August 17, 2013, the effective date of the new Cobb wage schedule—the same date a new Clayton-Fulton-Cobb wage schedule would have become effective. The Federal Prevailing Rate Advisory Committee, the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, has reviewed and

recommended these changes by consensus.

### Correction

In addition, this interim rule updates the name of the Columbus Consolidated Government in the Columbus, GA, NAF FWS wage area because Columbus is the official name of the entity resulting from the consolidation of the City of Columbus and Muscogee County in 1971.

### Waiver of Notice of Proposed Rulemaking and Delay in Effective Date

Pursuant to 5 U.S.C. 553(b)(3)(B) and (d)(3), I find that good cause exists to waive the general notice of proposed rulemaking. Also pursuant to 5 U.S.C. 553(d)(3), I find that good cause exists for making this rule effective in less than 30 days. This notice is being waived and the regulation is being made effective in less than 30 days because the cessation of operations in Clayton and Fulton Counties, two of the three current survey counties, will leave these two counties without NAF employment. Under law and regulation, Clayton and Fulton Counties should no longer be defined as part of an NAF wage area. This change is urgent because the next scheduled wage survey in the wage area will occur in June 2013, and the lead agency must begin planning and coordination phases for the survey as soon as possible.

### Regulatory Flexibility Act

I certify that these regulations will not have a significant economic impact on a substantial number of small entities because they will affect only Federal agencies and employees.

OFFICE OF PERSONNEL MANAGEMENT

5 CFR Part 532 RIN 3206-AM75

Prevailing Rate Systems; Redefinition of the Minneapolis-St. Paul, MN, and Southwestern Wisconsin Appropriated Fund Federal Wage System Wage Areas

AGENCY: U.S. Office of Personnel Management. ACTION: Final rule.

SUMMARY: The U.S. Office of Personnel Management is issuing a final rule to redefine the geographic boundaries of the Minneapolis-St. Paul, MN, and Southwestern Wisconsin appropriated fund Federal Wage System (FWS) wage areas. The final rule redefines Wabasha County, MN, from the Southwestern Wisconsin wage area to the Minneapolis-St. Paul wage area. This change is based on a recent consensus

recommendation of the Federal Prevailing Rate Advisory Committee to best match Wabasha County to a nearby FWS survey area.

DATES: This regulation is effective on May 21, 2013.

FOR FURTHER INFORMATION CONTACT: Madeline Gonzalez, by telephone at (202) 606-2838, or by email at pay-leave-policy@opm.gov.

SUPPLEMENTARY INFORMATION: On December 21, 2012, the U.S. Office of Personnel Management (OPM) issued a proposed rule (77 FR 75589) to redefine the geographic boundaries of the Minneapolis-St. Paul, MN, and Southwestern Wisconsin appropriated fund Federal Wage System (FWS) wage areas. The final rule redefines Wabasha County, MN, from the Southwestern Wisconsin wage area to the Minneapolis-St. Paul wage area. The Federal Prevailing Rate Advisory Committee (FPRAC), the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, recommended this change by consensus. FPRAC recommended no other changes in the geographic definitions of the Minneapolis-St. Paul and Southwestern Wisconsin wage areas. This change would be effective on the first day of the first applicable pay period beginning on or after 30 days following publication of the final regulations. The proposed rule had a 30-day comment period, during which OPM received no comments.

Regulatory Flexibility Act

I certify that these regulations will not have a significant economic impact on a substantial number of small entities because they will affect only Federal agencies and employees.

List of Subjects in 5 CFR Part 532

Administrative practice and procedure, Freedom of information, Government employees, Reporting and recordkeeping requirements, Wages.

U.S. Office of Personnel Management.

Elaine Kaplan, Acting Director.

Accordingly, the U.S. Office of Personnel Management amends 5 CFR part 532 as follows:

PART 532—PREVAILING RATE SYSTEMS

- 1. The authority citation for part 532 continues to read as follows:

Authority: 5 U.S.C. 5343, 5346; § 532.707 also issued under 5 U.S.C. 552.

- 2. Appendix C to subpart B is amended by revising the wage area

listings for the Minneapolis-St. Paul, MN, and Southwestern Wisconsin wage areas to read as follows:

Appendix C to Subpart B of Part 532— Appropriated Fund Wage and Survey Areas

Table with 5 columns of asterisks and section headers: MINNESOTA Minneapolis-St. Paul Survey Area

**Modification and Revocation of Air Traffic Service Routes; Jackson, MS**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final rule.

**SUMMARY:** This action modifies two jet routes and seven VOR Federal airways; and removes two VOR Federal airways in the vicinity of Jackson, MS. The FAA is taking this action due to the scheduled decommissioning of the Jackson, MS, VORTAC, and the commissioning of the Magnolia, MS, VORTAC.

**DATES:** Effective date 0901 UTC, August 22, 2013. The Director of the **Federal Register** approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

**FOR FURTHER INFORMATION CONTACT:** Paul Gallant, Airspace, Policy and ATC Procedures Group, Office of Airspace Services, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-8783.

**SUPPLEMENTARY INFORMATION:**

**History**

The FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to amend two jet routes and seven VOR Federal airways; and cancel two VOR Federal airways in the vicinity of Jackson, MS (78 FR 10560, February 14, 2013). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. One comment was received and the commenter expressed support for the proposal.

**The Rule**

This action amends Title 14, Code of Federal Regulations (14 CFR) part 71 by modifying two jet routes and seven VOR Federal airways; and cancelling two VOR Federal airways in the vicinity of Jackson, MS. Specifically, this action makes the following changes to the routes:

Jet Route J-4 is amended by removing “Jackson, MS” from the description and inserting “Magnolia, MS” in its place.

Jet Route J-20 is amended by removing “Jackson, MS” from the description and inserting “Magnolia, MS” in its place. Also, the J-20 description in FAA Order 7400.9 contains an editorial error whereby “Montgomery, AL” is listed before “Meridian, MS” instead of following it. This action corrects the description by moving “Montgomery, AL” to follow “Meridian, MS” to match its proper geographic position along the route. It should be noted that this editorial error appears only in the route description in FAA Order 7400.9. J-20 is correct in the NAS database and on IFR Enroute High Altitude chart H-6.

VOR Federal Airways V-9 and V-11 are amended by removing “Jackson, MS” and inserting “Magnolia, MS” and by inserting radial intersections using the new Magnolia VORTAC.

VOR Federal Airway V-18 is amended by removing “Jackson, MS” and inserting “Magnolia, MS” in its place and by correcting the spelling of “Talladega” in the route description listed in FAA Order 7400.9.

VOR Federal Airway V-74 is amended so that the last route segment proceeds from the Greenville, MS, VOR/DME direct to the new Magnolia VORTAC instead of the Jackson VORTAC.

VOR Federal Airway V-245 is amended by removing “Jackson, MS” and substituting “Magnolia, MS,” in the description.

Currently, V-417 extends from Monroe, LA, to Charleston, SC. This action cancels the portion of V-417 that lies between Monroe, LA, and Meridian, MS. Between those two points, V-417 serves as an alternate airway to V-18. However, V-18 provides direct, more efficient routing between Monroe and Meridian, while V-417 includes two doglegs to the south of V-18, resulting in additional flying miles between Monroe and Meridian. The V-417 segments between Monroe and Meridian have been deemed obsolete and of little value to the National Airspace System (NAS), therefore, V-417 is amended to begin at Meridian and then proceed along the currently published route to Charleston.

V-427 is removed. V-427 currently extends between Monroe, LA and Jackson, MS. Similar to V-417 (above) V-427 also serves as an alternate airway to V-18, but to the north side of V-18. Since V-18 provides a direct and more efficient route between Monroe, LA, and the Jackson, MS/Magnolia, MS, area, the FAA has determined that V-427 is obsolete and of little value to the NAS.

V-555 currently extends between Picayune, MS, and Sidon, MS, and serves as an alternate route to the east of V-9, between McComb, MS, and Sidon. Since V-9 provides direct, more efficient routing between McComb and Sidon, this action modifies V-555 by removing the segment between McComb and Sidon, which has been determined to be of minimal value to the NAS. As a result, the modified V-555 extends between Picayune and McComb.

V-557 currently extends between McComb, MS and Sidon, MS and is an alternate route to the west of V-9. However, V-9 provides direct, more efficient routing between those points; therefore, the FAA has determined that V-557 is of minimal value to the NAS, and is therefore removed.

Except for editorial changes, this rule is the same as published in the NPRM.

Jet routes are published in paragraph 2004, and VOR Federal airways are published in paragraph 6010, respectively, of FAA Order 7400.9W dated August 8, 2012, and effective September 15, 2012, which is incorporated by reference in 14 CFR 71.1. The jet routes and VOR Federal airways listed in this document will be subsequently published in the Order.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation because the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator.

Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority because it modifies the route structure as required to preserve the safe and efficient flow of air traffic.

#### Environmental Review

The FAA has determined that this action is categorically excluded from further environmental documentation according to FAA Order 1050.1E, paragraph 311a. The implementation of this action will not result in any extraordinary circumstances in accordance with paragraph 304 of Order 1050.1E.

#### List of Subjects in 14 CFR Part 71

Airspace, Incorporation by reference, Navigation (air).

#### Adoption of the Amendment

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

#### PART 71—DESIGNATION OF CLASS A, B, C, D, AND E AIRSPACE AREAS; AIR TRAFFIC SERVICE ROUTES; AND REPORTING POINTS

- 1. The authority citation for part 71 continues to read as follows:

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 71**[Docket No. FAA-2013-0081; Airspace  
Docket No. 12-AEA-5]

RIN 2120-AA66

**Establishment of Area Navigation  
(RNAV) Routes; Washington, DC****AGENCY:** Federal Aviation  
Administration (FAA), DOT.**ACTION:** Final rule.

**SUMMARY:** This action establishes five new RNAV routes in support of the Washington, DC, Optimization of Airspace and Procedures in a Metroplex project. The routes increase National Airspace System (NAS) efficiency and allow easier transition into the high altitude structure for departures from the Washington, DC Metropolitan area airports.

**DATES:** Effective date 0901 UTC, August 22, 2013. The Director of the Federal Register approves this incorporation by reference action under 1 CFR part 51, subject to the annual revision of FAA Order 7400.9 and publication of conforming amendments.

**FOR FURTHER INFORMATION CONTACT:** Paul Gallant, Airspace Policy and ATC Procedures Group, Office of Airspace Services, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591; telephone: (202) 267-8783.

**SUPPLEMENTARY INFORMATION:****History**

The FAA published in the **Federal Register** a notice of proposed rulemaking (NPRM) to establish three high altitude RNAV routes, designated Q-68, Q-72 and Q-80; and two low altitude RNAV routes, designated T-291 and T-295, in the Washington, DC area (78 FR 10562, February 14, 2013). Interested parties were invited to participate in this rulemaking effort by submitting written comments on the proposal. One comment was received and the commenter expressed support for the proposal.

**The Rule**

The FAA is amending Title 14, Code of Federal Regulations (14 CFR) part 71 by establishing three high altitude RNAV routes, designated Q-68, Q-72 and Q-80; and two low altitude RNAV routes, designated T-291 and T-295, in the Washington, DC area. The new Q-routes facilitate the divergence of aircraft departures from the Washington,

DC, Metropolitan area airports, produce shorter routings and allow easier transition into the high altitude route structure. The Q-routes are one-way routes going westward and serve primarily as feeders and alternate dispersion routes for aircraft departing the DC Metro area to the west. The new T-routes reduce ATC complexity and provide shorter routes of flight in some cases.

The following routes are established. Q-68 extends between the Charleston, WV, VHF omnidirectional range tactical air navigation (VORTAC) aid and the OTTTO, VA, waypoint (WP). Q-72 extends between the HACKS, WV, intersection and the RAMAY, VA, WP. It provides an alternate route for jet route J-149 via a direct routing to the HACKS intersection, thus reducing miles flown for RNAV-equipped aircraft. Q-80 extends between the FAREV, KY, WP and the OTTTO, VA, WP to serve aircraft headed to the southwest.

T-291 extends between the LOUIE, MD, navigation fix and the Harrisburg, PA, VORTAC. T-295 extends between the LOUIE fix and the Lancaster, PA, VORTAC. T-291 and T-295 have a maximum assigned altitude (MAA) of 11,000 feet MSL. The new T-routes provide more efficient and predictable routing for aircraft utilizing airports near Harrisburg, PA, and the airports south of Patuxent River, MD, that normally fly VOR Federal airways V-31, V-33, V-93 and V-499 near the area. The T-routes also enhance segregation of those aircraft utilizing those airways from the DC Metro arrivals coming from the northeast and from the DC Metro departures headed eastbound.

The above routes increase NAS efficiency and advance the use of NextGen technology.

High altitude RNAV routes are published in paragraph 2006, and low altitude RNAV routes are published in paragraph 6011, respectively, of FAA Order 7400.9W dated August 8, 2012, and effective September 15, 2012, which is incorporated by reference in 14 CFR 71.1. The RNAV routes listed in this document would be subsequently published in the Order. The RNAV routes listed in this document will be published subsequently in the Order.

The FAA has determined that this regulation only involves an established body of technical regulations for which frequent and routine amendments are necessary to keep them operationally current. Therefore, this regulation: (1) is not a "significant regulatory action" under Executive Order 12866; (2) is not a "significant rule" under Department of Transportation (DOT) Regulatory

Policies and Procedures (44 FR 11034; February 26, 1979); and (3) does not warrant preparation of a regulatory evaluation as the anticipated impact is so minimal. Since this is a routine matter that only affects air traffic procedures and air navigation, it is certified that this rule, when promulgated, does not have a significant economic impact on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

The FAA's authority to issue rules regarding aviation safety is found in Title 49 of the United States Code. Subtitle I, Section 106 describes the authority of the FAA Administrator. Subtitle VII, Aviation Programs, describes in more detail the scope of the agency's authority.

This rulemaking is promulgated under the authority described in Subtitle VII, Part A, Subpart I, Section 40103. Under that section, the FAA is charged with prescribing regulations to assign the use of the airspace necessary to ensure the safety of aircraft and the efficient use of airspace. This regulation is within the scope of that authority as it establishes RNAV routes to enhance the safe and efficient flow of traffic in the Washington, DC Metropolitan area.

**Environmental Review**

The FAA has determined that this action qualifies for categorical exclusion under the National Environmental Policy Act in accordance with FAA Order 1050.1E, "Environmental Impacts: Policies and Procedures," paragraph 311a. This airspace action is not expected to cause any potentially significant environmental impacts, and no extraordinary circumstances exist that warrant preparation of an environmental assessment.

**List of Subjects in 14 CFR Part 71**

Airspace, Incorporation by reference, Navigation (air).

**Adoption of the Amendment**

In consideration of the foregoing, the Federal Aviation Administration amends 14 CFR part 71 as follows:

**PART 71—DESIGNATION OF CLASS A,  
B, C, D, AND E AIRSPACE AREAS; AIR  
TRAFFIC SERVICE ROUTES; AND  
REPORTING POINTS**

- 1. The authority citation for part 71 continues to read as follows:

BILLING CODE 4910-13-P

**SECURITIES AND EXCHANGE COMMISSION**

**17 CFR Part 232**

[Release Nos. 33-9403; 34-69568; 39-2490; IC-30515]

**Adoption of Updated EDGAR Filer Manual**

**AGENCY:** Securities and Exchange Commission.

**ACTION:** Final rule.

**SUMMARY:** The Securities and Exchange Commission (the Commission) is adopting revisions to the Electronic Data

Gathering, Analysis, and Retrieval System (EDGAR) Filer Manual and related rules to reflect updates to the EDGAR system. The revisions are being made primarily to implement the new Form 13F online application and to support US GAAP 2013 Taxonomy. The EDGAR system is scheduled to be upgraded to support this functionality on May 20, 2013.

**DATES:** Effective May 21, 2013. The incorporation by reference of the EDGAR Filer Manual is approved by the Director of the Federal Register as of May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** In the Division of Investment Management, for questions concerning Form 13F contact Judith Gechter at (202) 551-6860; in the Division of Risk, Strategy, and Financial Innovation for questions concerning XBRL Taxonomies contact Matthew Carruth at (202) 551-2033; and in the Office of Information Technology,

contact Vanessa Anderson at (202) 551-8800.

**SUPPLEMENTARY INFORMATION:** We are adopting an updated EDGAR Filer Manual, Volume I, Volume II, and Volume III. The Filer Manual describes the technical formatting requirements for the preparation and submission of electronic filings through the EDGAR system.<sup>1</sup> It also describes the requirements for filing using EDGARLink Online and the Online Forms/XML Web site.

The revisions to the Filer Manual reflect changes within Volume I entitled EDGAR Filer Manual, Volume I: "General Information," Version 15 (May 2013), Volume II entitled EDGAR Filer Manual, Volume II: "EDGAR Filing," Version 23 (May 2013), and Volume III

<sup>1</sup> We originally adopted the Filer Manual on April 1, 1993, with an effective date of April 26, 1993. Release No. 33-6986 (April 1, 1993) [58 FR 18638]. We implemented the most recent update to the Filer Manual on January 14, 2013. See Release No. 33-9382 (January 23, 2013) [77 FR 54806].

entitled EDGAR Filer Manual Volume III: "N-SAR Supplement" Version 2 (August 2011).<sup>2</sup> The updated manual will be incorporated by reference into the Code of Federal Regulations.

The Filer Manual contains all the technical specifications for filers to submit filings using the EDGAR system. Filers must comply with the applicable provisions of the Filer Manual in order to assure the timely acceptance and processing of filings made in electronic format.<sup>3</sup> Filers may consult the Filer Manual in conjunction with our rules governing mandated electronic filing when preparing documents for electronic submission.<sup>4</sup>

The EDGAR system will be upgraded to Release 13.1 on May 20, 2013 and will introduce the following changes: EDGAR will be updated to implement the new Form 13F online application. Form 13F will no longer be available on the EDGARLink Online application. Form 13F may only be filed using the new online version of the form available on the EDGAR Filing Web site or constructed by filers according to the new 'EDGAR Form 13F XML Technical Specification' document. The submission form types 13F-HR, 13-HR/A, 13F-NT, and 13-NT/A will be accessible by selecting the 'File Form 13F' link on the EDGAR Filing Web site.

Instructions to file the online version of Form 13F are included in two new sections of Chapter 9 (Preparing and Transmitting Online Submissions) of the "EDGAR Filer Manual, Volume II: EDGAR Filing" to guide filers through the filing process. These sections will replace Appendix G, Form 13F Special Electronic Filing Instructions.

EDGAR will be upgraded to support the US GAAP 2013 Taxonomy. In addition EDGAR will no longer provide support for the US GAAP 2011 Taxonomy. Please see a complete listing of supported standard taxonomies on the Commission's public Web site (<http://www.sec.gov/info/edgar/edgartaxonomies.shtml>).

The Commission is no longer pursuing its existing project to modify the method of filing Form N-SAR from a DOS-based application to an online

(XML) application. The draft Form N-SAR XML Technical Specification document will be removed from the Web site and the references to the new application will be removed from the EDGAR Filer Manual. Filers should continue to use the DOS-based application to create Form N-SAR submissions and the EDGAR Filer Manual, Volume III: "N-SAR Supplement" as comprehensive enhancements to the form are being considered. Please see "Notice to EDGAR Form N-SAR Filers" posted on the Commission's public Web site's "Information for EDGAR Filers" page (<http://www.sec.gov/info/edgar.shtml>) for additional information.

Along with the adoption of the Filer Manual, we are amending Rule 301 of Regulation S-T to provide for the incorporation by reference into the Code of Federal Regulations of today's revisions. This incorporation by reference was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR part 51.

You may obtain paper copies of the updated Filer Manual at the following address: Public Reference Room, U.S. Securities and Exchange Commission, 100 F Street NE., Room 1543, Washington DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. We will post electronic format copies on the Commission's Web site; the address for the Filer Manual is <http://www.sec.gov/info/edgar.shtml>.

Since the Filer Manual and the corresponding rule changes relate solely to agency procedures or practice, publication for notice and comment is not required under the Administrative Procedure Act (APA).<sup>5</sup> It follows that the requirements of the Regulatory Flexibility Act<sup>6</sup> do not apply.

The effective date for the updated Filer Manual and the rule amendments is May 21, 2013. In accordance with the APA,<sup>7</sup> we find that there is good cause to establish an effective date less than 30 days after publication of these rules. The EDGAR system upgrade to Release 13.1 is scheduled to become available on May 20, 2013. The Commission believes that establishing an effective date less than 30 days after publication of these rules is necessary to coordinate the effectiveness of the updated Filer Manual with the system upgrade.

#### Statutory Basis

We are adopting the amendments to Regulation S-T under Sections 6, 7, 8,

10, and 19(a) of the Securities Act of 1933,<sup>8</sup> Sections 3, 12, 13, 14, 15, 23, and 35A of the Securities Exchange Act of 1934,<sup>9</sup> Section 319 of the Trust Indenture Act of 1939,<sup>10</sup> and Sections 8, 30, 31, and 38 of the Investment Company Act of 1940.<sup>11</sup>

#### List of Subjects in 17 CFR Part 232

Incorporation by reference, Reporting and recordkeeping requirements, Securities.

#### Text of the Amendment

In accordance with the foregoing, Title 17, Chapter II of the Code of Federal Regulations is amended as follows:

#### PART 232—REGULATION S-T—GENERAL RULES AND REGULATIONS FOR ELECTRONIC FILINGS

■ 1. The authority citation for part 232 continues to read in part as follows:

**Authority:** 15 U.S.C. 77f, 77g, 77h, 77j, 77s(a), 77z-3, 77sss(a), 78c(b), 78l, 78m, 78n, 78o(d), 78w(a), 78ll, 80a-6(c), 80a-8, 80a-29, 80a-30, 80a-37, and 7201 *et seq.*; and 18 U.S.C. 1350.

\* \* \* \* \*

■ 2. Section 232.301 is revised to read as follows:

#### § 232.301 EDGAR Filer Manual.

Filers must prepare electronic filings in the manner prescribed by the EDGAR Filer Manual, promulgated by the Commission, which sets out the technical formatting requirements for electronic submissions. The requirements for becoming an EDGAR Filer and updating company data are set forth in the updated EDGAR Filer Manual, Volume I: "General Information," Version 15 (May 2013). The requirements for filing on EDGAR are set forth in the updated EDGAR Filer Manual, Volume II: "EDGAR Filing," Version 23 (May 2013). Additional provisions applicable to Form N-SAR filers are set forth in the EDGAR Filer Manual, Volume III: "N-SAR Supplement," Version 2 (August 2011). All of these provisions have been incorporated by reference into the Code of Federal Regulations, which action was approved by the Director of the Federal Register in accordance with 5 U.S.C. 552(a) and 1 CFR Part 51. You must comply with these requirements in order for documents to be timely received and accepted. You can obtain paper copies of the EDGAR Filer Manual from the following address:

<sup>8</sup> 15 U.S.C. 77f, 77g, 77h, 77j, and 77s(a).

<sup>9</sup> 15 U.S.C. 78c, 78l, 78m, 78n, 78o, 78w, and 78ll.

<sup>10</sup> 15 U.S.C. 77sss.

<sup>11</sup> 15 U.S.C. 80a-8, 80a-29, 80a-30, and 80a-37.

<sup>2</sup> EDGAR Filer Manual Volume III: "N-SAR Supplement" Version 2 (August 2011) was previously removed in preparation of conversion of the DOS based Form N-SAR application to an online application. See Release No 33-9303. The Commission is no longer pursuing this conversion as comprehensive enhancements to the form are being considered.

<sup>3</sup> See Rule 301 of Regulation S-T (17 CFR 232.301).

<sup>4</sup> See Release No. 33-9382 (January 23, 2013) [78 FR 4766] in which we implemented EDGAR Release 13.0. For additional history of Filer Manual rules, please see the cites therein.

<sup>5</sup> 5 U.S.C. 553(b).

<sup>6</sup> 5 U.S.C. 601-612.

<sup>7</sup> 5 U.S.C. 553(d)(3).

Public Reference Room, U.S. Securities and Exchange Commission, 100 F Street NE., Room 1543, Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Electronic copies are available on the Commission's Web site. The address for the Filer Manual is <http://www.sec.gov/info/edgar.shtml>. You can also inspect the document at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202-741-6030, or go to: [http://www.archives.gov/federal-register/code-of-federal-regulations/ibr\\_locations.html](http://www.archives.gov/federal-register/code-of-federal-regulations/ibr_locations.html).

By the Commission.

Dated: May 14, 2013.

**Elizabeth M. Murphy**,  
Secretary.

BILLING CODE 8011-01-P

## INTERNATIONAL TRADE COMMISSION

### 19 CFR Part 210

#### Rules of Adjudication and Enforcement

**AGENCY:** International Trade Commission.

**ACTION:** Final rule.

**SUMMARY:** The United States International Trade Commission ("Commission") amends its Rules of Practice and Procedure concerning adjudication and enforcement. The amendments address concerns that have arisen about the scope of discovery in Commission proceedings under section 337 of the Tariff Act of 1930. The intended effect of the amendments is to reduce expensive, inefficient, unjustified, or unnecessary discovery practices in agency proceedings while preserving the opportunity for fair and efficient discovery for all parties.

**DATES:** *Effective Date:* June 20, 2013.

*Applicability Date:* This regulation is applicable to investigations instituted after June 20, 2013.

**FOR FURTHER INFORMATION CONTACT:**

Cathy Chen, telephone 202-205-2392, or Clark S. Cheney, telephone 202-205-2661, Office of the General Counsel, United States International Trade Commission. Hearing-impaired individuals are advised that information on this matter can be obtained by contacting the Commission's TDD terminal at 202-205-1810. General information concerning the Commission

may also be obtained by accessing its Internet server at <http://www.usitc.gov>.

**SUPPLEMENTARY INFORMATION:**

**Background**

Section 335 of the Tariff Act of 1930 (19 U.S.C. 1335) authorizes the Commission to adopt such reasonable procedures, rules, and regulations as it deems necessary to carry out its functions and duties. This rulemaking was undertaken to address concerns that have arisen about the scope of discovery in Commission proceedings under section 337 of the Tariff Act of 1930 (19 U.S.C. 1337) ("section 337"). The Commission is amending its rules governing investigations under section 337 in order to increase the efficiency of its section 337 investigations.

For some time, the Commission has been considering proposals to improve procedures relating to discovery in proceedings under section 337 generally and to improve procedures relating to the discovery of electronically stored information ("e-discovery") specifically. On July 19, 2011, The George Washington University Law School hosted a forum on e-discovery in section 337 investigations. Presenters at the forum stated that parties to section 337 investigations often search and produce large volumes of information stored in electronic format to satisfy discovery obligations in section 337 proceedings but that only a small fraction of that information is admitted into the investigation record. Presenters questioned whether the potential benefit of discovered materials outweighs the costs associated with current discovery obligations. Presenters also compared e-discovery procedures in various district courts with discovery procedures at the Commission and made various proposals for improving the Commission's procedures.

The Commission has considered, *inter alia*, e-discovery proposals from the International Trade Commission Trial Lawyers Association; a draft proposal on e-discovery from the International Trade Commission Committee of the American Bar Association Intellectual Property section; a model e-discovery order prepared by the Federal Circuit Advisory Council; e-discovery provisions in a pilot program underway in the U.S. District Court for the Southern District of New York; e-discovery standards promulgated by the U.S. District Court for the District of Delaware; a model order regarding e-discovery in patent cases issued by the U.S. District Court for the Eastern District of Texas; ground rules promulgated by administrative law judges at the Commission; and

analogous portions of the Federal Rules of Civil Procedure that concern limitations on discovery and that concern e-discovery.

Some of the materials considered by the Commission describe a risk of inadvertent disclosure of privileged information or attorney work product during the production of electronically stored information. Accordingly, the Commission has also considered provisions in the Federal Rules of Civil Procedure and the Federal Rules of Evidence concerning the discovery of privileged or protected information.

After reviewing the foregoing materials and other information, the Commission published a notice of proposed rulemaking (NOPR) in the **Federal Register** at 77 FR 60952 (Oct. 5, 2012), proposing to amend the Commission's Rules of Practice and Procedure to adopt certain rules relating to discovery generally, to e-discovery specifically, and to the discovery of privileged information and attorney work product.

Although the Commission considered the proposed rules to be procedural rules which are excepted from notice-and-comment under 5 U.S.C. 553(b), the Commission invited the public to comment on all of the proposed rules. The NOPR requested public comment on the proposed rules within 60 days of publication of the NOPR. The Commission received a total of eight (8) sets of comments, one each from the American Bar Association, Section of Intellectual Property Law ("ABA"); the American Intellectual Property Law Association ("AIPLA"); Aderant; the law firm of Adduci, Mastriani & Schaumberg LLP ("AMS"); the law firm of Weil, Gotshal & Manges LLP on behalf of Cisco Systems, Inc., Dell Inc., Ford Motor Company, Hewlett-Packard Company, Intel Corporation, Micron Technology, Inc., and Toyota Motor Corporation and its U.S. subsidiary Toyota Motor Sales, U.S.A., Inc. (collectively, "the Submitting Companies"); the Association of Corporate Counsel ("ACC"); Ms. Rosa Concepcion; and the ITC Trial Lawyers Association ("ITC TLA").

The Commission carefully considered all comments that it received. The Commission's response is provided below in a section-by-section analysis. The Commission appreciates the time and effort the commentators devoted to providing comments on the NOPR.

#### Regulatory Analysis of the Amendments to the Commission's Rules

The Commission has determined that the final rules do not meet the criteria described in section 3(f) of Executive

Order 12866 (58 FR 51735, Oct. 4, 1993) and thus do not constitute a significant regulatory action for purposes of the Executive Order.

The Regulatory Flexibility Act (5 U.S.C. 601 et seq.) is inapplicable to this rulemaking because it is not one for which a notice of final rulemaking is required under 5 U.S.C. 553(b) or any other statute. Although the Commission chose to publish a notice of proposed rulemaking, these rules are “agency rules of procedure and practice,” and thus are exempt from the notice-and-comment requirement imposed by 5 U.S.C. 553(b).

These final rules do not contain federalism implications warranting the preparation of a federalism summary impact statement pursuant to Executive Order 13132 (64 FR 43255, Aug. 4, 1999).

No actions are necessary under the Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1501 et seq.) because the final rules will not result in expenditure in the aggregate by State, local, and tribal governments, or by the private sector, of \$100,000,000 or more in any one year, and will not significantly or uniquely affect small governments, as defined in 5 U.S.C. 601(5).

The final rules are not major rules as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996 (5 U.S.C. 801 et seq.). Moreover, they are exempt from the reporting requirements of the Contract With America Advancement Act of 1996 (Pub. L. 104–121) because they concern rules of agency organization, procedure, or practice that do not substantially affect the rights or obligations of non-agency parties.

The amendments are not subject to section 3507(d) of the Paperwork Reduction Act (44 U.S.C. 3507(d)) because no new collection of information is being conducted.

### Overview of the Amendments to the Commission’s Rules

Many of the final rules set forth in this notice are identical to the correspondingly numbered proposed rules published in the NOPR on October 5, 2012. For many of the proposed rules, only positive comments were received or no comment was received. The Commission found no reason to change those proposed rules on its own (except for certain technical, non-substantive changes) before adopting them as final rules. Thus, the preamble to those unchanged proposed rules is as set forth in the section-by-section analysis of the proposed rules found in the **Federal Register** at 77 FR 60952 (Oct. 5, 2012).

The final rules contain eight changes from those proposed in the NOPR. These changes are summarized here.

First, with regard to § 210.27(d)(3), relating to general limitations on discovery, the Commission has determined to replace the phrase “the responding person . . . has stipulated to the facts pertaining to the issue” with “the responding person . . . has stipulated to the particular facts pertaining to a disputed issue.”

Second, with regard to § 210.27(d)(4), relating to general limitations on discovery, the Commission has determined to replace the phrase “the public interest” with “matters of public concern.”

Third, the Commission has determined to limit § 210.27(e)(2), relating to claiming privilege or work product protection, to “document[s] produced in discovery.” Accordingly, the word “information” has been replaced with “document” where appropriate.

Fourth, also with regard to § 210.27(e)(2), relating to claiming privilege or work product protection, the Commission has determined to replace the phrase “[w]ithin five 5 days after the conference” with the phrase “[w]ithin 5 days after the conference,” and replace all other phrases “within 5 days” and “[w]ithin five 5 days after the notice” with the phrase “[w]ithin 7 days of service of the notice.”

Fifth, with regard to § 210.27(e)(2)(i), relating to claiming privilege or work product protection, the Commission has determined to replace the phrase “[t]he notice shall identify the information subject to the claim using a privilege log” with “[t]he notice shall identify the information in the document subject to the claim, preferably using a privilege log.”

Sixth, with regard to § 210.27(e)(2)(ii), relating to claiming privilege or work product protection, the Commission has determined to add the sentence: “In connection with the motion to compel, the party may submit the document *in camera* for consideration by the administrative law judge.”

Seventh, with regard to § 210.27(e)(3), relating to claiming privilege or work product protection, the Commission has determined to replace the phrase “[t]he administrative law judge may deny any motion to compel information claimed to be subject to the agreement” with “[t]he administrative law judge may decline to entertain any motion based on information claimed to be subject to the agreement.”

Eighth, with regard to § 210.27(e)(4), relating to claiming privilege or work product protection, the Commission has

determined to explicitly clarify that: “Parties may enter into a written agreement to set a different period of time for compliance with any requirement of this section without approval by the administrative law judge unless the administrative law judge has ordered a different period of time for compliance, in which case the parties’ agreement must be approved by the administrative law judge.”

A comprehensive explanation of the differences between the final rules and the proposed rules is provided in the section-by-section analysis below. The section-by-section analysis includes a discussion of all modifications suggested by the commenters. The commentary in the NOPR published on October 5, 2012, is considered part of the preamble to these final rules, to the extent that such commentary is not inconsistent with the discussion below. This notice concludes with amendatory language to effect the amendments to the Commission rules. The amendatory language includes certain technical, non-substantive changes required for formal purposes by the Office of the Federal Register.

### Section-by-Section Analysis of the Amendments to the Commission’s Rules

#### Part 210

#### Subpart E—Discovery and Compulsory Process

##### Section 210.27

The current section 210.27(b) is similar to Federal Rule of Civil Procedure 26(b)(1) and provides that the scope of discovery in section 337 investigations includes any matter, not privileged, that is relevant to a claim or defense of any party. The current rule also provides that a person may not object to a discovery request as seeking inadmissible evidence if the request appears reasonably calculated to lead to the discovery of admissible evidence. Unlike Federal Rule of Civil Procedure 26(b), however, the current rule contains no limitations on e-discovery and provides little guidance on when it would be appropriate for an administrative law judge to limit discovery generally. Therefore, the NOPR proposed to amend section 210.27(b) to state that the scope of discovery in a Commission investigation may be limited in certain ways, as discussed further in the amendments. Only positive comments were received regarding this amendment and, therefore, the final rule is unchanged from the proposed rule.

The NOPR proposed to add to section 210.27 new paragraphs (c), (d), and (e),

which address certain concerns associated with discovery generally, with e-discovery specifically, and with the discovery of privileged information and attorney work product. The NOPR, therefore, proposed to renumber current paragraphs (c) and (d) as paragraphs (f) and (g).

Paragraph (c) provides specific limitations on electronically stored information. As discussed in the Committee Notes on the 2006 Amendments to Federal Rule of Civil Procedure 26(b)(2), electronic storage systems often make it easier to locate and retrieve information. These advantages are properly taken into account in determining the reasonable scope of discovery in a particular case. But some sources of electronically stored information can be accessed only with substantial burden and cost. In a particular case, these burdens and costs may make the information on such sources not reasonably accessible.

Similar to Federal Rule of Civil Procedure 26(b)(2)(B), paragraph (c) states that a “person need not provide discovery of electronically stored information from sources that the person identifies as not reasonably accessible because of undue burden or cost.” Nevertheless, if electronically stored information is withheld from discovery because it is not reasonably accessible, the party seeking the information may file a motion to compel discovery of the electronically stored information. Paragraph (c) provides that a person from whom discovery is sought must show, in response to a motion to compel discovery or in a motion for a protective order, that the information is not reasonably accessible because of undue burden or cost. If that showing is made, the proposal would allow the administrative law judge to order discovery from such sources if the party seeking the discovery shows good cause, considering certain limitations found in paragraph (d). Paragraph (c) also allows the administrative law judge to specify conditions for e-discovery.

The AIPLA, the ITC TLA, and the ABA generally support the adoption of proposed paragraph (c). Ms. Rosa Concepcion is concerned that the new rule will delay the discovery process and increase the inefficiency of section 337 investigations if parties are forced to file motions to compel under proposed paragraph (c). As with Federal Rule of Civil Procedure 26(b)(2)(B), the “good cause” requirement in paragraph (c) will encourage the parties to focus their discovery requests on information that is available from accessible sources and that is relevant to the issues in Rule 210.27(b)(1)–(4). The “good cause”

requirement will also encourage the parties to evaluate potential benefits against any burdens and costs before burdensome e-discovery is requested. Therefore, the final rule is unchanged from the proposed rule (except that the word “paragraph” has been substituted for the word “section” and vice versa).

The Submitting Companies support the Commission’s adoption of the “not reasonably accessible” standard for objecting to discovery requests, but argue that more explicit limitations are also necessary to ensure that e-discovery is appropriately focused. Specifically, the Submitting Companies suggest that the proposed rule should be modified to limit the number of document custodians to five per party with narrowly-tailored search term limitations, absent good cause shown. The Commission declines to adopt the suggested change. Paragraph (d) requires the administrative law judge to limit the frequency or extent of discovery if, for example, the discovery sought is duplicative, the discovery can be obtained from a less burdensome source, or the burden of the proposed discovery outweighs its likely benefit. When the circumstances of paragraph (d) are met, the mandatory limitations under that paragraph may take a variety of forms, including, as the Submitting Companies suggest, a limit on the number of document custodians whose electronic files will be searched and a limit on the search terms used in such a search. Furthermore, under paragraph (c), the administrative law judge may, by order, impose conditions for and limits on discovery as required by the specific circumstances of a given investigation. Thus, paragraphs (c) and (d) provide the administrative law judge with appropriate flexibility in setting conditions for and limits on discovery without tying those conditions to a specific number that may be inappropriate in some circumstances.

The Submitting Companies also suggest that proposed paragraph (c) should be modified to explicitly define sources that are “not reasonably accessible” as including but not limited to the following: disaster recovery media; forensic data (such as slack space, deleted files, or fragments); archival electronic media, or other electronic information created or used by electronic media no longer in use, maintained in redundant electronic storage media, or for which retrieval otherwise involves undue burden of substantial cost; voicemails; instant messages (IMs); and cell phone text messages. The Submitting Companies further suggest that the proposed rule should be modified to prohibit

discovery from personal computers, absent good cause shown. The Commission declines to adopt the suggested changes. The Commission does not believe an explicit identification of categories of sources that may be “not reasonably accessible” is necessary. As stated in the NOPR, it is difficult to define comprehensively in a rule the different types of technological features that may affect the burdens and costs of accessing electronically stored information. The Commission notes that even active electronic information typically stored on local hard drives, networked servers, and distributed devices can be unduly burdensome to discover under certain circumstances. The Commission intends that the discovery provisions in paragraph (c) will be utilized by parties and administrative law judges in a variety of circumstances.

AMS suggests adding the requirement that responding persons specifically identify which sources of electronically stored information were not searched for responsive information because they are considered “not reasonably accessible.” The Commission believes the proposed rule and the associated commentary in the NOPR already address this concern and, therefore, the Commission declines to adopt this suggested modification. Paragraph (c) requires the person responding to the discovery request to “identify[] as not reasonably accessible” the sources of electronically stored information. Like the Federal Rule of Civil Procedure 26(b)(2)(B), the rule does not spell out exactly when or how the identification must occur. However, as explained in the Committee Notes on the 2006 Amendments to Federal Rule of Civil Procedure 26(b)(2), the “identification should, to the extent possible, provide enough detail to enable the requesting party to evaluate the burdens and costs of providing the discovery and the likelihood of finding responsive information on the identified sources.” Identification of the sources of electronically stored information under paragraph (c) should likewise provide such detail.

In addition, the ABA suggests that the commentary make clear that an administrative law judge has the authority to order cost-shifting. The commentary in the NOPR addresses this issue, explaining that the administrative law judge may, in appropriate circumstances, exercise his discretion to condition discovery upon payment by the requesting party of part or all of the reasonable costs of obtaining information from sources that are not reasonably accessible. Thus, while the

ordinary practice is for the producing party to bear any costs associated with responding to a discovery request, there may be circumstances in which the administrative law judge may require the party requesting the discovery to bear the costs associated with responding to the request.

The NOPR states that proposed paragraph (d) requires the administrative law judge to limit discovery otherwise allowed under the Commission's rules in certain circumstances. As with the Federal Rule of Civil Procedure 26(b)(2)(C), paragraph (d) requires limitations on discovery if the administrative law judge determines that the discovery sought is duplicative or can be obtained from a less burdensome source; the party seeking discovery has had ample opportunity to obtain the information; or the burden of the proposed discovery outweighs its likely benefit. The ITC TLA and AMS state that proposed paragraph (d)(2) should not be adopted because the compressed discovery schedule and speed of section 337 proceedings obviate the need for this new rule. The Commission responds that the prompt timeline of Commission investigations does not excuse wasteful discovery practices. The Commission believes paragraph (d)(2) will promote more efficient discovery practices in section 337 proceedings.

The ITC TLA and AMS also believe the language of proposed paragraph (d)(2) is vague and could lead to unnecessary motions practice. As to these concerns, the Commission contemplates that the case law developed under Federal Rule of Civil Procedure 26(b)(2)(C) may provide guidance for the application of paragraph (d)(2) and aid in curtailing unwarranted motion practice. Since the Commission believes that paragraph (d)(2) will reduce undue costs and burdens of discovery in section 337 investigations, the final paragraph (d)(2) is unchanged from the proposed rule.

The NOPR also states that proposed paragraph (d) differs from Federal Rule of Civil Procedure 26(b)(2)(C) in two respects. First, the NOPR states that proposed paragraph (d) requires the administrative law judge to limit discovery when the person from whom discovery is sought has waived the legal position that justified the discovery or has stipulated to the facts pertaining to the issue to which the discovery is directed. The AIPLA states that the Commission should clarify situations in which stipulations to certain facts would limit the scope or extent of discovery. In particular, the AIPLA suggests modifying the language of

proposed paragraph (d) to recite: "the responding person has waived the legal position that justified the discovery or has stipulated to the particular facts to which the discovery is directed." The AIPLA believes that its proposed change would clarify that a stipulation will obviate the need for discovery of a particular fact (e.g., that an accused product has been imported), but that it will not obviate the need for discovery of other facts pertaining to a disputed issue (e.g., the characteristics of that product at the time of importation). Similarly, the ITC TLA and AMS are concerned that a stipulation or a unilateral waiver of a legal position on a single issue will foreclose discovery that is common or relevant to more than one issue. The ITC TLA and AMS propose to add to proposed paragraph (d)(3) the requirement that "the requesting party has failed to show good cause for pursuing the discovery." Having considered the suggested changes and concerns raised by the AIPLA, the ITC TLA and AMS, the Commission has determined to modify proposed paragraph (d)(3) to clarify that the restriction on discovery would be limited only as to the "particular facts" that are the subject of the stipulation and that pertain to a disputed issue to which the discovery is directed. The Commission notes that discovery as to other facts pertaining to the disputed issue or relevant to a different issue would not be restricted under subparagraph (d)(3) of the final rule.

Second, proposed paragraph (d)(4) required the administrative law judge to limit discovery where the burden or expense of the proposed discovery outweighs its likely benefit, considering the needs of the investigation, the importance of the discovery in resolving the issues to be decided by the Commission, and the public interest. The ABA and AMS suggest deleting the clause "considering the needs . . . public interest" because, in their view, it is not clear what this clause adds to the proposed rule considering that the proposed rule already mandates consideration of whether "the burden or expense of the proposed discovery outweighs its likely benefit." In the alternative, the ABA asks the Commission for guidance on interpreting and distinguishing between "needs of the investigation" and the "importance of the discovery in resolving the issues to be decided by the Commission." The AIPLA, the ABA and AMS also suggest that the Commission clarify the reference to the "public interest" in proposed paragraph (d)(4) because it is unclear whether the

proposed paragraph would invoke the public interest factors identified in 19 U.S.C. 1337(d) and (e).

In response to the comments received, the Commission has determined to modify proposed paragraph (d)(4) to state that the administrative law judge must evaluate, *inter alia*, whether the burden or expense of the proposed discovery outweighs its likely benefit, considering "matters of public concern." This language is adopted to avoid confusion with the statutory public interest factors identified in 19 U.S.C. 1337(d), (e), (f), and (g). Those statutory public interest factors may be relevant to an analysis under paragraph (d)(4), but the "matters of public concern" in the adopted rule are not limited to the factors listed in section 337. Paragraph (d)(4), as proposed and as adopted, is similar to Federal Rule of Civil Procedure 26(b)(2)(C)(iii). The Advisory Committee notes on the 1983 amendments to Federal Rule of Civil Procedure 26(b) state that Rule 26(b) is intended to address the problem of discovery that is disproportionate to the individual investigation as measured by such matters as its nature and complexity, the limitations on a financially weak litigant to withstand extensive opposition to its discovery requests, and the potential relationship between the substantive issues in the investigation and matters of public concern. The Commission anticipates that the 1983 Advisory Committee notes on Federal Rule of Civil Procedure 26(b) and relevant federal case law interpreting that Rule may inform the interpretation of "matters of public concern" in paragraph (d)(4).

In response to other comments on proposed paragraph (d)(4), the Commission responds that the phrases "the needs of the investigation" and the "importance of the discovery in resolving the issues to be decided" are similar to phrases found in Federal Rule of Civil Procedure 26(b)(2)(C)(iii). Federal case law interpreting Rule 26 may therefore inform the interpretation of those phrases in adopted paragraph (d)(4). The Commission also adds that "the needs of the investigation" may include the procedural schedule and the investigation target date. Additionally, when evaluating "the importance of the discovery in resolving the issues to be decided," the administrative law judge may consider whether a request seeks documents or information necessary for the disposition of the claims and defenses asserted in the investigation.

The NOPR states that proposed paragraph (e) would add new provisions concerning privileged information and attorney work product. As explained in

the Advisory Committee Notes concerning Federal Rule of Evidence 502, litigation costs necessary to protect against waiver of attorney-client privilege or attorney work product have become prohibitive due to the concern that any disclosure (however innocent or minimal) will operate as a subject matter waiver of all protected communications or information. This concern is especially troubling in cases involving e-discovery. Adding to this uncertainty, no Commission rule requires the production of a privilege log when a person withholds materials from discovery based on an assertion of privilege or work product protection. Privilege log provisions are currently ordered by the administrative law judges in their respective ground rules.

The NOPR also states that proposed paragraph (e) would mitigate these concerns by providing a uniform set of procedures under which persons can make claims of privilege or work product production using a privilege log. Paragraph (e)(1)(i) requires the person withholding information to “expressly make the claim” of privilege or work product protection at the time the person responds to the discovery request. Paragraph (e)(1)(ii) requires a person who has made a claim of privilege or work product protection to produce within 10 days of making the claim a written privilege log. The rule does not specify the format or style of the log, so long as it identifies the information that has been withheld sufficiently to enable the requester to assess the claim without revealing the information at issue.

The AIPLA states that the language “within 10 days of making the claim” in proposed paragraph (e)(1)(ii) is potentially unclear and suggests modifying the language to recite “within 10 days of the date on which the document is withheld or provided in redacted form.” The ABA and AMS recommend amending paragraph (e)(1)(ii) to recite “within 10 days of withholding the information” produce to the requester a privilege log in order to better comport with the realities of discovery practice. The Commission declines to adopt these changes. The Commission believes discovery will be most efficient when relevant privilege and work product issues are identified as soon as possible. The temporal requirements found in proposed paragraph (e) are unambiguous. The claim of privilege or work product protection under paragraph (e)(1)(i) must be express and must be made at the time that a person responds to a discovery request. When a person responds to a discovery request in

writing, such as in a response to written interrogatories or a response to written requests for admission, the claim of privilege or work product protection should be made in the same writing. When a person responds to a discovery request orally, such as in a deposition, the claim of privilege or work product protection should be made orally. Claims of privilege or work product protection should not be made frivolously. A claim of privilege or work product protection under paragraph (e)(1)(i) should be made with an appropriate amount of specificity considering the circumstances at the time of making the claim.

The ITC TLA and AMS suggest amending proposed paragraph (e)(1)(ii) to state “within 10 days of making the claim, or by such other time as the parties may agree, produce to the requester a privilege log . . . .” The commentators’ amendment permits the parties to enter into a procedural agreement or stipulation without the need for approval by the administrative law judge to produce a privilege log later than 10 days after making a claim and/or jointly waive the obligation to produce privileged documents generated or obtained after the filing of the complaint. The Commission declines to adopt this suggested modification. Paragraph (e)(3) allows the parties to enter into an agreement to waive compliance with proposed paragraph (e)(1) for documents, communications, and items created or communicated within a time period specified in the agreement without the need for approval by the administrative law judge. Should parties wish the assistance of the administrative law judge in resolving privilege disputes, however, the Commission believes that parties should be required to promptly present their disputes to each other and to the administrative law judge as required under the rule.

The NOPR states that some proposals considered by the Commission contained a so-called “claw-back” rule that would categorically preclude a finding of a waiver of privilege or work product protection when otherwise protected materials are inadvertently produced in discovery. The “claw-back” proposals considered by the Commission left some question as to whether, in order to avoid a finding of waiver, the holder of the privilege or protection must take reasonable steps to prevent disclosure, as is required by Federal Rule of Evidence 502. Paragraph (e) is not a categorical “claw-back” rule, and would not supplant any applicable waiver doctrine. The Commission expects administrative law judges to

apply federal and common law when determining the consequences of any allegedly inadvertent disclosure. That law would include consideration of whether the holder of the privilege or protection took reasonable steps to prevent disclosure of the information and other considerations found in Federal Rule of Evidence 502.

Proposed paragraph (e)(2) outlines procedures for addressing information that is produced in discovery but is later asserted to be privileged or protected work product. As proposed, paragraph (e)(2) does not distinguish between information produced in documents or information given in answer to a question during an oral deposition. The AIPLA believes that it may not always be practical at the time when the privilege or attorney work product issue is first discovered (e.g., in a deposition) for the person making the claim to provide notice using a privilege log as required by proposed paragraph (e)(2). While the AIPLA agrees that the notice should include at least the same level of detail of information as defined under proposed paragraph (e)(1), the AIPLA suggests modifying proposed paragraph (e)(2) to recite that the notice is “preferably in writing when the circumstances permit” and that use of a privilege log is not required so long as the notice provides “a reasonably detailed description of the information subject to the claim in sufficient detail to allow the person(s) who received the information to understand the basis for the claim and facts surrounding whether waiver occurred.”

In response to the comments received, the Commission has determined to limit paragraph (e)(2) to apply only to documents produced in response to a discovery request. As stated in the NOPR, the Commission proposed paragraph (e)(2) in response to concerns from the public that privilege or work product protection may be waived when an otherwise privileged or protected document is allegedly inadvertently produced in response to a request that requires searching and producing a large volume of information. Those concerns are not usually justified when a deponent answers a question at an oral deposition or when counsel prepares written answers to interrogatories or requests for admission. Accordingly, the Commission has determined that the procedures in paragraph (e)(2) will only apply to documents produced in discovery. In addition, paragraph (e)(2) provides that the notice is preferably made using a privilege log as defined under paragraph (e)(1). When circumstances do not permit using a privilege log, the notice should be made

in writing and identify the same level of detail of information as required in a privilege log.

The AIPLA also states that given the international character of section 337 proceedings, five days is insufficient time to address privilege or attorney work product issues relating to documents that have already been produced. Furthermore, Aderant and AMS comment that clarity is needed with respect to the event triggering the five day deadlines in proposed paragraph (e)(2) (e.g., the date of the notice itself, the date the notice is received, or the date of service of the notice). The Commission has determined to amend proposed paragraph (e)(2) to clarify that “service of the notice” triggers the deadlines by which a party must “return, sequester, or destroy the specified information and any copies,” “take reasonable steps to retrieve the information if the person disclosed it to others before being notified,” and by which “the claimant and the parties shall meet and confer.” In addition, the final rule changes these deadlines from within 5 days to “[w]ithin 7 days of service of the notice.”

In connection with proposed paragraph (e)(2), the AIPLA also states that the person who received the information subject to the claim should be permitted to use the content of the information to challenge the claim before the administrative law judge to the extent permitted by applicable rules and the laws of professional responsibility, privilege, and protection for trial preparation material. In the alternative, the AIPLA suggests that the person who received the information subject to the claim be able to submit the information *in camera* for consideration by the administrative law judge in connection with a motion for compel. The Commission has determined to adopt in the final rule the AIPLA’s suggestion of allowing the already-produced document subject to the claim to be submitted *in camera* for consideration by the administrative law judge in connection with a motion to compel.

Proposed paragraph (e)(3) would allow parties to enter into a written agreement to waive compliance with paragraph (e)(1), including the requirement of producing a privilege log. The AIPLA believes that the exemption from proposed paragraph (e)(1) provided in proposed paragraph (e)(3) is too narrow, and suggests revising the proposed rule to allow the parties to agree in writing to exempt specified categories of documents. Relatedly, the ITC TLA and AMS are

concerned that proposed paragraph (e)(3) would eliminate any claw-back of privilege documents that are not logged on a party’s privilege log by agreement among the parties. The Commission has determined to modify the proposed rule in response to the comments received. When appropriate precautions are taken, documents and information protected by privilege or work product protection are generally not discoverable. Established state and federal laws require a claimant to take reasonable steps to prevent disclosure of privileged or protected information. The Commission considers the maintenance and production of a privilege log to be a reasonable requirement for those who (1) wish to maintain privilege or work product protection for withheld materials, and (2) wish the assistance of an administrative law judge in resolving privilege or work product disputes. In view of these underlying principles, the Commission determined that administrative law judges should have the discretion to find a waiver of privilege or work product protection when allegedly privileged or protected information is produced and the parties have agreed to relieve themselves of the duty to maintain a privilege log. The Commission notes that nothing in the final rule prohibits the parties from implementing their own claw-back procedure for privileged documents that are not logged on a party’s privilege log as part of the parties’ agreement. The final rule clarifies, however, that when parties have agreed among themselves to relieve themselves of the duty of maintaining a privilege log, the administrative law judge has the discretion to decline to entertain motions based on disputes over information that should otherwise be logged under paragraph (e)(1).

The AIPLA states that the Commission should adopt an additional provision that would allow the parties to enter agreements, and/or the administrative law judge to enter orders, specifying times for compliance with the requirements of paragraph (e) that may differ from the proposed rule. To that end, the Commission has determined to clarify in the final paragraph (e)(4) that parties may enter into a written agreement regarding deadlines for resolving privilege disputes. The parties’ written agreement would not need the approval of the administrative law judge unless the judge has ordered a different period of time for compliance. In the absence of an agreement or order, the deadlines specified in the rule control.

Finally, the ACC suggests that further guidance may be necessary as to (1)

whether the use of advanced analytical software applications could be characterized as “reasonable steps” to avoid inadvertent disclosure; (2) how inadvertent disclosures should be treated as a matter of waiver doctrine; (3) how the costs of discovery should be imposed on the requestor of the information; and (4) whether the objectives of the Commission’s discovery reform are being met by conducting regular, transparent reviews. With respect to the first and second topics, the NOPR states that the Commission expects administrative law judges to look to established federal and common law regarding waiver of privilege when deciding specific waiver disputes. Each dispute should be decided on its own facts. The Commission believes it would be inappropriate to state in a rule that a specific technological practice is reasonable, particularly as information technology changes rapidly. With respect to the third topic, the Commission believes that administrative law judges are in the best position to determine how cost shifting should be implemented, if at all, based on the specific facts of a particular discovery dispute. Accordingly, the Commission declines to mandate a particular cost-shifting paradigm by rule. With respect to the fourth topic, the Commission has determined that the ACC suggestion is beyond the scope of the proposed rule, which may be a topic for a future rulemaking.

#### List of Subjects in 19 CFR Part 210

Administration practice and procedure, Business and industry, Customs duties and inspection, Imports, Investigations.

For the reasons stated in the preamble, the United States International Trade Commission amends 19 CFR Part 210 as follows:

#### PART 210—ADJUDICATION AND ENFORCEMENT

- 1. The authority citation for part 210 continues to read as follows:

**Authority:** 19 U.S.C. 1333, 1335, and 1337.

#### Subpart E—Discovery and Compulsory Process

- 2. Amend § 210.27 by:
  - a. Adding one sentence at the end of paragraph (b);
  - b. Redesignating paragraphs (c) and (d) as paragraphs (f) and (g); and
  - c. Adding new paragraphs (c), (d), and (e).

The additions and revisions read as follows:

**§ 210.27 General provisions governing discovery.**

\* \* \* \* \*

(b) \* \* \* All discovery is subject to the limitations of paragraph (d) of this section.

(c) *Specific Limitations on Electronically Stored Information.* A person need not provide discovery of electronically stored information from sources that the person identifies as not reasonably accessible because of undue burden or cost. The party seeking the discovery may file a motion to compel discovery pursuant to § 210.33(a). In response to the motion to compel discovery, or in a motion for a protective order filed pursuant to § 210.34, the person from whom discovery is sought must show that the information is not reasonably accessible because of undue burden or cost. If that showing is made, the administrative law judge may order discovery from such sources if the requesting party shows good cause, considering the limitations found in paragraph (d) of this section. The administrative law judge may specify conditions for the discovery.

(d) *General Limitations on Discovery.* In response to a motion made pursuant to §§ 210.33(a) or 210.34 or *sua sponte*, the administrative law judge must limit by order the frequency or extent of discovery otherwise allowed in this subpart if the administrative law judge determines that:

(1) The discovery sought is unreasonably cumulative or duplicative, or can be obtained from some other source that is more convenient, less burdensome, or less expensive;

(2) The party seeking discovery has had ample opportunity to obtain the information by discovery in the investigation;

(3) The responding person has waived the legal position that justified the discovery or has stipulated to the particular facts pertaining to a disputed issue to which the discovery is directed; or

(4) The burden or expense of the proposed discovery outweighs its likely benefit, considering the needs of the investigation, the importance of the discovery in resolving the issues to be decided by the Commission, and matters of public concern.

(e) *Claiming Privilege or Work Product Protection.* (1) When, in response to a discovery request made under this subpart, a person withholds information otherwise discoverable by claiming that the information is privileged or subject to protection as attorney work product, the person must:

(i) Expressly make the claim when responding to a relevant question or request; and

(ii) Within 10 days of making the claim produce to the requester a privilege log that describes the nature of the information not produced or disclosed, in a manner that will enable the requester to assess the claim without revealing the information at issue. The privilege log must separately identify each withheld document, communication, or item, and to the extent possible must specify the following for each entry:

(A) The date the information was created or communicated;

(B) The author(s) or speaker(s);

(C) All recipients;

(D) The employer and position for each author, speaker, or recipient, including whether that person is an attorney or patent agent;

(E) The general subject matter of the information; and

(F) The type of privilege or protection claimed.

(2) If a document produced in discovery is subject to a claim of privilege or of protection as attorney work product, the person making the claim may notify any person that received the document of the claim and the basis for it.

(i) The notice shall identify the information in the document subject to the claim, preferably using a privilege log as defined under paragraph (e)(1) of this section. After being notified, a person that received the document must do the following:

(A) Within 7 days of service of the notice return, sequester, or destroy the specified document and any copies it has;

(B) Not use or disclose the document until the claim is resolved; and

(C) Within 7 days of service of the notice take reasonable steps to retrieve the document if the person disclosed it to others before being notified.

(ii) Within 7 days of service of the notice, the claimant and the parties shall meet and confer in good faith to resolve the claim of privilege or protection. Within 5 days after the conference, a party may file a motion to compel the production of the document and may, in the motion to compel, use a description of the document from the notice produced under this paragraph. In connection with the motion to compel, the party may submit the document *in camera* for consideration by the administrative law judge. The person that produced the document must preserve the document until the claim of privilege or protection is resolved.

(3) Parties may enter into a written agreement to waive compliance with paragraph (e)(1) of this section for documents, communications, and items created or communicated within a time period specified in the agreement. The administrative law judge may decline to entertain any motion based on information claimed to be subject to the agreement. If information claimed to be subject to the agreement is produced in discovery then the administrative law judge may determine that the produced information is not entitled to privilege or protection.

(4) For good cause, the administrative law judge may order a different period of time for compliance with any requirement of this section. Parties may enter into a written agreement to set a different period of time for compliance with any requirement of this section without approval by the administrative law judge unless the administrative law judge has ordered a different period of time for compliance, in which case the parties' agreement must be approved by the administrative law judge.

Issued: May 15, 2013.

By Order of the Commission.

**Lisa R. Barton,**

*Acting Secretary to the Commission.*

[FR Doc. 2013-11998 Filed 5-20-13; 8:45 am]

**BILLING CODE 7020-02-P**

**SOCIAL SECURITY ADMINISTRATION**

[Docket No. SSA 2007-0044]

**20 CFR Parts 404, 405, and 416**

**RIN 0960-AH40**

**Rules on Determining Hearing Appearances**

**AGENCY:** Social Security Administration.

**ACTION:** Final rule.

**SUMMARY:** This final rule is another step in our continual efforts to handle workloads more effectively and efficiently. We are publishing final rules for portions of the rules we proposed in October 2007 that relate to persons, other than the claimant or any other party to the hearing, appearing by telephone. We are also clarifying that the administrative law judge (ALJ) will allow the claimant or any other party to a hearing to appear by telephone under certain circumstances when the claimant or other party requests to make his or her appearance in that manner. We expect that these final rules will make the hearings process more efficient and help us continue to reduce

the hearings backlog. In addition, we made some minor editorial changes to our regulations that do not have any effect on the rights of claimants or any other parties.

**DATES:** This rule is effective June 20, 2013.

**FOR FURTHER INFORMATION CONTACT:** Brent Hillman, Social Security Administration, 5107 Leesburg Pike, Falls Church, VA 22041-3260, (703) 605-8280 for information about this notice. For information on eligibility or filing for benefits, call our national toll-free number, 1-800-772-1213 or TTY 1-800-325-0778, or visit our Internet site, Social Security Online, at <http://www.socialsecurity.gov>.

**SUPPLEMENTARY INFORMATION:**

**Background**

As part of our ongoing commitment to improve the way we process claims for benefits under the old age, survivors, and disability insurance programs under title II of the Social Security Act (Act) and the supplemental security income (SSI) program under title XVI of the Act, we are revising some of the procedures we follow at the ALJ hearing level. To address recent court cases, we are making final the rules that allow the ALJ to determine that a person other than the claimant or any other party to the hearing may appear at the hearing by telephone. In a recent Federal case, a District Court Judge held that we could not take a medical expert's testimony by telephone without prior notice to the claimant, and over the claimant's objections, unless we amended our regulations to allow witnesses to appear by telephone. *Edwards v. Astrue*, No. 3:10cv1017, 2011 WL 3490024 (D. Conn. Aug. 10, 2011). Other courts have made similar rulings. These final rules address concerns raised in *Edwards* and other cases.

We proposed these changes in a notice of proposed rulemaking (NPRM) we published in the **Federal Register** on October 29, 2007 (72 FR 61218). The preamble to the NPRM discussed the changes from the current rules and our reasons for proposing those changes.<sup>1</sup> We also have made changes to these final rules to make them consistent with final rules we published in the **Federal Register** on December 18, 2008 (73 FR

76940)<sup>2</sup> and July 8, 2010 (75 FR 39154).<sup>3</sup>

**Appearing at the ALJ Hearing by Telephone**

Our final rules provide that the ALJ will determine how any person other than the claimant or any other party to the hearing will appear at the hearing, whether in person, by video teleconferencing, or by telephone. If the ALJ determines that any person will appear at the hearing by telephone, the ALJ will notify the claimant and any other party to the hearing in advance of the hearing. If the claimant or any other party to the hearing objects to any other person appearing by video teleconferencing or by telephone, the ALJ will decide how that person will appear. Our final rules also clarify that the claimant or any other party to the hearing may request to appear at the hearing by telephone. The ALJ will allow the claimant or other party to appear by telephone if the ALJ determines that extraordinary circumstances exist which prevent the claimant or other party from appearing in person or by video teleconferencing.

**Other Provisions From the NPRM**

At this time, we are not proceeding with the other proposed rules in the October 2007 NPRM.

**Public Comments on the NPRM**

On October 29, 2007, we published an NPRM in the **Federal Register** at 72 FR 61218 and provided a 60-day comment period, which ended on December 28, 2007. We received 111 public comments on telephone testimony. Nine of the comments related to testimony provided by telephone by someone other than the claimant or any other party to the hearing.

*Comment:* Several commenters suggested that telephone appearances by witnesses would impede the claimant's ability to adequately examine, observe and be observed by, or question experts and other witnesses. Regarding expert witnesses, one commenter believed that an expert testifying via telephone would need to provide the underlying documentation for his or her testimony at the hearing, and suggested that, if requested, the expert witnesses could be obligated to fax such documentation to the claimant or representative. Other commenters expressed concern that it would be difficult for claimants or

representatives to verify the qualifications or investigate disciplinary problems relating to expert witnesses testifying via telephone. Another commenter said that an appearance of bias is introduced when experts from one area of the country testify via telephone in cases located in another area of the country. With respect to lay witnesses, one commenter believed the proposed rule needed additional clarity to convey that ALJs could not use it to prevent the claimant from calling other witnesses to testify on his or her behalf.

*Response:* We disagree with the concerns raised in this comment. Under these final rules, the claimant can object to a witness appearing by telephone, and the ALJ has discretion to determine that the appearance of any witness be conducted in person. Thus, to the extent that circumstances could arise in which it would be advisable to schedule an in-person appearance by a witness even though a telephonic appearance would be possible, the ALJ may schedule such an appearance.

All claimants or representatives are entitled to conduct questioning and cross-examination as needed to inquire fully into the matters at issue. If witnesses appear by telephone, we will continue to provide the claimant and any other party to the hearing the same right to question and cross-examine witnesses, as well as access to the hearing record.

In addition, the final rules do not change the standard procedures we use when medical experts (MEs) and vocational experts (VEs) testify. Before MEs and VEs testify as impartial witnesses at the hearing, ALJs must "qualify" them by eliciting information including, but not limited to, impartiality, expertise, and professional qualifications. Furthermore, MEs and VEs will continue to submit their professional qualifications into the written record. The claimant and any other party to the hearing will have the same access to this information if the ME or VE is appearing in person, by video teleconferencing, or by telephone. ME and VE testimony is based on the evidence entered into the record and not on any examination or personal evaluation of the claimant. Thus, a claimant or representative will have a complete opportunity to confront and examine an expert witness on qualifications or adverse testimony regarding the matters that are important with respect to expert testimony—i.e., the expertise of the witness and the accuracy of his or her testimony. In addition, the claimant and any other party to the hearing retain the right to

<sup>2</sup> The final rules are available at: <http://www.gpo.gov/fdsys/pkg/FR-2008-12-18/pdf/E8-30056.pdf>.

<sup>3</sup> The final rules are available at: <http://www.gpo.gov/fdsys/pkg/FR-2010-07-08/pdf/2010-16549.pdf>.

<sup>1</sup> The NPRM is available at: <http://www.gpo.gov/fdsys/pkg/FR2007-1029/pdf/E7-20690.pdf>.

object to a witness based on bias or qualifications.

**Regulatory Procedures**

*Executive Order 12866 as Supplemented by Executive Order 13563*

We consulted with the Office of Management and Budget (OMB) and determined that these final rules meet

the requirements for a significant regulatory action under Executive Order 12866 as supplemented by Executive Order 13563. Thus, OMB reviewed these final rules.

*Regulatory Flexibility Act*

We certify that these final rules will not have a significant economic impact on a substantial number of small entities because they only affect individuals.

Accordingly, a regulatory flexibility analysis as provided in the Regulatory Flexibility Act, as amended, is not required.

*Paperwork Reduction Act*

These final rules contain public reporting requirements in the regulation sections listed below, which we did not previously clear through an existing Information Collection Request.

Regulation section	Description of public reporting requirement	Number of respondents (annually)	Frequency of response	Average burden per response (minutes)	Estimated annual burden (hours)
404.936(c)(1); 404.938(b); 405.315(c)(1); 416.1436(c)(1); 416.1438(b).	You or any other party may request to appear at the hearing by telephone; ALJ will allow telephone hearing when extraordinary circumstances prevent appearance in person or by video teleconference.	1,000	1	30	500

SSA submitted an Information Collection Request for clearance to OMB. We are soliciting comments on the burden estimate; the need for the information; its practical utility; ways to enhance its quality, utility, and clarity; and ways to minimize the burden on respondents, including the use of automated techniques or other forms of information technology. If you would like to submit comments, please send them to the following locations:

Office of Management and Budget, Attn: Desk Officer for SSA, Fax Number: 202-395-6974, Email address: *OIRA\_Submission@omb.eop.gov*.  
 Social Security Administration, Attn: Reports Clearance Officer, 1333 Annex, 6401 Security Blvd., Baltimore, MD 21235-0001, Fax Number: 410-965-6400, Email: *OR.Reports.Clearance@ssa.gov*.

You can submit comments until June 20, 2013, which is 30 days after the publication of this notice. To receive a copy of the OMB clearance package, contact the SSA Reports Clearance Officer using any of the above contact methods. We prefer to receive comments by email or fax.

(Catalog of Federal Domestic Assistance Program Nos. 96.001, Social Security—Disability Insurance; 96.002, Social Security—Retirement Insurance; 96.004, Social Security—Survivors Insurance; and 96.006, Supplemental Security Income)

*20 CFR Part 416*

Administrative practice and procedure; Aged, Blind, Disability benefits, Public Assistance programs; Reporting and recordkeeping requirements; Supplemental Security Income (SSI).

Dated: May 9, 2013.

**Carolyn W. Colvin,**

*Acting Commissioner of Social Security.*

For the reasons set out in the preamble, we are amending 20 CFR chapter III parts 404, 405, and part 416 as set forth below:

**PART 404—FEDERAL OLD-AGE, SURVIVORS AND DISABILITY INSURANCE (1950—)**

**Subpart J—[Amended]**

■ 1. The authority citation for subpart J of part 404 continues to read as follows

**Authority:** Secs. 201(j), 204(f), 205(a)–(b), (d)–(h), and (j), 221, 223(i), 225, and 702(a)(5) of the Social Security Act (42 U.S.C. 401(j), 404(f), 405(a)–(b), (d)–(h), and (j), 421, 423(i), 425, and 902(a)(5)); sec. 5, Pub. L. 97–455, 96 Stat. 2500 (42 U.S.C. 405 note); secs. 5, 6(c)–(e), and 15, Pub. L. 98–460, 98 Stat. 1802 (42 U.S.C. 421 note); sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

■ 2. In § 404.936, revise the reference to “paragraph (c)” in the first sentence of

paragraph (h) to “paragraph (c)(1)” and revise paragraph (c) to read as follows:

**§ 404.936 Time and place for a hearing before an administrative law judge.**

\* \* \* \* \*

(c) *Determining how appearances will be made.* In setting the time and place of the hearing, we will consider the following:

(1) We will consult with the administrative law judge to determine the status of case preparation and to determine whether your appearance, or the appearance of any other party to the hearing, will be made in person or by video teleconferencing. The administrative law judge will determine that your appearance, or the appearance of any other party to the hearing, be conducted by video teleconferencing if video teleconferencing equipment is available to conduct the appearance, use of video teleconferencing to conduct the appearance would be more efficient than conducting the appearance in person, and the administrative law judge determines that there is no circumstance in the particular case that prevents the use of video teleconferencing to conduct the appearance. You or any other party to the hearing may request to appear at the hearing by telephone. The administrative law judge will allow you or any other party to the hearing to appear by telephone if the administrative law judge determines that extraordinary circumstances prevent you or the other party who makes the request from appearing at the hearing in person or by video teleconferencing.

(2) The administrative law judge will determine whether any person other

than you or any other party to the hearing, including a medical expert or a vocational expert, will appear at the hearing in person, by video teleconferencing, or by telephone. If you or any other party to the hearing objects to any other person appearing by video teleconferencing or by telephone, the administrative law judge will decide, either in writing or at the hearing, whether to have that person appear in person, by video teleconferencing, or by telephone. The administrative law judge will direct a person, other than you or any other party to the hearing if we are notified as provided in paragraph (e) of this section that you or any other party to the hearing objects to appearing by video teleconferencing, to appear by video teleconferencing or telephone when the administrative law judge determines:

- (i) Video teleconferencing or telephone equipment is available;
- (ii) Use of video teleconferencing or telephone equipment would be more efficient than conducting an examination of a witness in person, and;
- (iii) The ALJ determines there is no other reason why video teleconferencing or telephone should not be used.

\* \* \* \* \*

■ 3. In § 404.938, revise paragraph (b) to read as follows:

**§ 404.938 Notice of a hearing before an administrative law judge.**

\* \* \* \* \*

(b) *Notice information.* The notice of hearing will contain a statement of the specific issues to be decided and tell you that you may designate a person to represent you during the proceedings. The notice will also contain an explanation of the procedures for requesting a change in the time or place of your hearing, a reminder that if you fail to appear at your scheduled hearing without good cause the administrative law judge may dismiss your hearing request, and other information about the scheduling and conduct of your hearing. You will also be told if your appearance or that of any other person is scheduled to be made in person, by video teleconferencing, or, for a person other than you or any other party to the hearing, by telephone. If we have scheduled you to appear at the hearing by video teleconferencing, the notice of hearing will tell you that the scheduled place for the hearing is a video teleconferencing site and explain what it means to appear at your hearing by video teleconferencing. The notice will also tell you how you may let us know if you do not want to appear by video teleconferencing and want, instead, to have your hearing at a time and place

where you may appear in person before the administrative law judge. The notice will also tell you that you may ask us if you want to appear by telephone, and that the administrative law judge will grant your request if he or she determines that extraordinary circumstances prevent you from appearing in person or by video teleconferencing.

\* \* \* \* \*

■ 4. In § 404.950, revise paragraphs (a) and (e) to read as follows:

**§ 404.950 Presenting evidence at a hearing before an administrative law judge**

(a) *The right to appear and present evidence.* Any party to a hearing has a right to appear before the administrative law judge, either in person, or, when the conditions in § 404.936(c)(1) exist, by video teleconferencing or telephone, to present evidence and to state his or her position. A party may also make his or her appearance by means of a designated representative, who may make the appearance in person, or, when the conditions in § 404.936(c)(1) exist, by video teleconferencing or telephone.

\* \* \* \* \*

(e) *Witnesses at a hearing.* Witnesses may appear at a hearing in person or, when the conditions in § 404.936(c)(2) exist, by video teleconferencing or telephone. They will testify under oath or affirmation unless the administrative law judge finds an important reason to excuse them from taking an oath or affirmation. The administrative law judge may ask the witness any questions material to the issues and will allow the parties or their designated representatives to do so.

\* \* \* \* \*

**PART 405—ADMINISTRATIVE REVIEW PROCESS FOR ADJUDICATING INITIAL DISABILITY CLAIMS**

■ 5. The authority citation for part 405 continues to read as follows:

**Authority:** Secs. 201(j), 205(a)–(b), (d)–(h), and (s), 221, 223(a)–(b), 702(a)(5), 1601, 1602, 1631, and 1633 of the Social Security Act (42 U.S.C. 401(j), 405(a)–(b), (d)–(h), and (s), 421, 423(a)–(b), 902(a)(5), 1381, 1381a, 1383, and 1383b).

■ 6. In § 405.315, revise paragraph (c) to read as follows:

**§ 405.315 Time and place for a hearing before an administrative law judge.**

\* \* \* \* \*

(c) *Determining how appearances will be made.* In setting the time and place of the hearing, we will consider the following:

(1) The administrative law judge will determine whether your appearance will be made in person or by video teleconferencing. The administrative law judge will determine that your appearance be conducted by video teleconferencing if video teleconferencing equipment is available to conduct the appearance, use of video teleconferencing to conduct the appearance would be more efficient than conducting the appearance in person, and the administrative law judge determines that there is no circumstance in the particular case that prevents the use of video teleconferencing to conduct the appearance. If you object to appearing personally by video teleconferencing, we will re-schedule the hearing to a time and place at which you may appear in person before the administrative law judge. You may request to appear at the hearing by telephone. The administrative law judge will allow you to appear by telephone if the administrative law judge determines that extraordinary circumstances prevent you from appearing at the hearing in person or by video teleconferencing.

(2) The administrative law judge will determine whether any person other than you, including a medical expert or a vocational expert, will appear at the hearing in person, by video teleconferencing, or by telephone. If you object to any other person appearing by video teleconferencing or telephone, the administrative law judge will decide, either in writing or at the hearing, whether to have that person appear in person, by video teleconferencing, or by telephone. The administrative law judge will direct a person, other than you if you object to your appearing by video teleconferencing as provided in paragraph (c)(1) of this section, to appear by video teleconferencing or telephone when the administrative law judge determines:

- (i) Video teleconferencing or telephone equipment is available,
- (ii) Use of video teleconferencing or telephone equipment would be more efficient than conducting an examination of a witness in person, and
- (iii) The administrative law judge determines that there is no other reason why video teleconferencing or telephone should not be used.

**PART 416—SUPPLEMENTAL SECURITY INCOME FOR THE AGED, BLIND, AND DISABLED**

**Subpart N—[Amended]**

■ 7. The authority citation for subpart N of part 416 continues to read as follows

**Authority:** Secs. 702(a)(5), 1631, and 1633 of the Social Security Act (42 U.S.C. 902(a)(5), 1383, and 1383b); sec. 202, Pub. L. 108–203, 118 Stat. 509 (42 U.S.C. 902 note).

■ 8. In § 416.1436, revise the reference in paragraph (h) from the “first sentence of paragraph (c)” to the “first sentence of paragraph (c)(1)” and revise paragraph (c) to read as follows:

**§ 416.1436 Time and place for a hearing before an administrative law judge.**

\* \* \* \* \*

(c) *Determination how appearances will be made.* In setting the time and place of the hearing, we will consider the following:

(1) We will consult with the administrative law judge to determine the status of case preparation and to determine whether your appearance, or the appearance of any other party to the hearing, will be made in person or by video teleconferencing. The administrative law judge will determine that your appearance, or the appearance of any other party to the hearing, be conducted by video teleconferencing if video teleconferencing equipment is available to conduct the appearance, use of video teleconferencing to conduct the appearance would be more efficient than conducting the appearance in person, and the administrative law judge determines there is no circumstance in the particular case that prevents the use of video teleconferencing to conduct the appearance. You or any other party to the hearing may request to appear at the hearing by telephone. The administrative law judge will allow you or any other party to the hearing to appear by telephone if the administrative law judge determines that extraordinary circumstances prevent you or the other party who makes the request from appearing at your hearing in person or by video teleconferencing.

(2) The administrative law judge will determine whether any person, other than you or any other party to the hearing, including a medical expert or a vocational expert, will appear at the hearing in person, by video teleconferencing, or by telephone. If you or any other party to the hearing objects to any other person appearing by video teleconferencing or by telephone, the administrative law judge will decide,

either in writing or at the hearing, whether to have that person appear in person, by video teleconferencing, or by telephone. The administrative law judge will direct a person, other than you or any other party to the hearing if we are notified as provided in paragraph (e) of this section that you or any other party to the hearing objects to appearing by video teleconferencing, to appear by video teleconferencing or telephone when the administrative law judge determines:

- (i) Video teleconferencing or telephone equipment is available,
- (ii) Use of video teleconferencing or telephone equipment would be more efficient than conducting an examination of a witness in person, and
- (iii) The administrative law judge determines there is no other reason why video teleconferencing or telephone should not be used.

\* \* \* \* \*

■ 9. In § 416.1438, revise paragraph (b) to read as follows:

**§ 416.1438 Notice of a hearing before an administrative law judge.**

\* \* \* \* \*

(b) *Notice information.* The notice of hearing will contain a statement of the specific issues to be decided and tell you that you may designate a person to represent you during the proceedings. The notice will also contain an explanation of the procedures for requesting a change in the time or place of your hearing, a reminder that if you fail to appear at your scheduled hearing without good cause the administrative law judge may dismiss your hearing request, and other information about the scheduling and conduct of your hearing. You will also be told if your appearance or that of any other person is scheduled to be made in person, by video teleconferencing, or, for a person other than you or any other party to the hearing, by telephone. If we have scheduled you to appear at the hearing by video teleconferencing, the notice of hearing will tell you the scheduled place for the hearing is a video teleconferencing site and explain what it means to appear at your hearing by video teleconferencing. The notice will also tell you how you may let us know if you do not want to appear by video teleconferencing and want, instead, to have your hearing at a time and place where you may appear in person before the administrative law judge. The notice will also tell you that you may ask us if you want to appear by telephone, and that the administrative law judge will grant your request if he or she determines that extraordinary circumstances prevent you from

appearing in person or by video teleconferencing.

\* \* \* \* \*

■ 10. In § 416.1450, revise paragraphs (a) and (e) to read as follows:

**§ 416.1450 Presenting evidence at a hearing before an administrative law judge**

(a) *The right to appear and present evidence.* Any party to a hearing has a right to appear before the administrative law judge, either in person, or, when the conditions in § 416.1436(c)(1) exist, by video teleconferencing or telephone, to present evidence and to state his or her position. A party may also make his or her appearance by means of a designated representative, who may make the appearance in person, or, when the conditions in § 416.1436(c)(1) exist, by video teleconferencing or telephone.

\* \* \* \* \*

(e) *Witnesses at a hearing.* Witnesses may appear at a hearing in person or, when the conditions in § 416.1436(c)(2) exist, by video teleconferencing or telephone. They will testify under oath or affirmation unless the administrative law judge finds an important reason to excuse them from taking an oath or affirmation. The administrative law judge may ask the witness any questions material to the issues and will allow the parties or their designated representatives to do so.

[REG–106499–12]

RIN 1545–BL30

**Community Health Needs Assessments for Charitable Hospitals; Correction**

**AGENCY:** Internal Revenue Service (IRS), Treasury.

**ACTION:** Correction to a notice of proposed rulemaking.

**SUMMARY:** This document contains corrections to a notice of proposed rulemaking that was published in the **Federal Register** on Friday, April 5, 2013. The proposed regulations provide guidance to charitable hospital organizations on the community health needs assessment requirements, and related excise tax and reporting obligations, enacted as part of the

Patient Protection and Affordable Care Act of 2010. These proposed regulations also clarify the consequences for failing to meet these and other requirements for charitable hospital organizations.

**FOR FURTHER INFORMATION CONTACT:** Amy F. Giuliano at (202) 622-6070 (not a toll free number).

**SUPPLEMENTARY INFORMATION:**

**Background**

The notice of proposed rulemaking (REG-106499-12) that is the subject of these corrections provides guidance to charitable hospital organizations under sections 501(r), 4959, 6012, and 6033 of the Internal Revenue Code.

**Need for Correction**

As published April 5, 2013 (78 FR 20523), the notice of proposed rulemaking (REG-106499-12) contains errors that may prove to be misleading and are in need of clarification.

**Correction of Publication**

Accordingly, the notice of proposed rulemaking (REG-106499-12), that was the subject of FR Doc. 2013-07959, is corrected as follows:

1. On page 20523, in the preamble, column 3, under the paragraph heading "Paperwork Reduction Act", line 3 from the top of the paragraph, the language "Return of Organization Exempt from" is corrected to read "Return of Organization Exempt From".

2. On page 20526, in the preamble, column 2, under the paragraph heading "e. Activities Unrelated to the Operation of a Hospital Facility", lines 11 and 12 of the first full paragraph, the language "organization operates. Similarly, section 1.501(r)-2 of these proposed regulations" is corrected to read "organization operates. Similarly, § 1.501(r)-2 of these proposed regulations".

3. On page 20537, in the preamble, column 3, under the paragraph heading "Special Analyses", line 9 from the top of the page, the language "§ 1.501(r)-3 and § 1.6033-2(a)(2)(ii)(l) of" is corrected to read "Effective/Applicability Dates", line 9 from the top of the page, the language "§ 1.501(r)-3 and § 1.6033-2(a)(2)(ii)(l) of".

4. On page 20537, in the preamble, column 3, under the paragraph heading "Special Analyses", line 3 of the second full paragraph, the language "2(a)(2)(ii)(l) of the regulations requires" is corrected to read "2(a)(2)(ii)(l) of the regulations requires".

**PART 26 [CORRECTED]**

**§ 1.501(r)-1 [Corrected]**

■ 5. On Page 20539, column 1, paragraph (c)(3), the last sentence of the paragraph, the language "In addition, a partnership agreement includes provisions of Federal, state, or local law, as in effect before March 23, 2010, that govern the affairs of the partnership or are considered under such law to be part of the agreement." is corrected to read "In addition, a partnership agreement includes provisions of federal, state, or local law, as in effect before March 23, 2010, that govern the affairs of the partnership or are considered under such law to be part of the agreement.".

**§ 1.6012-3 [Corrected]**

■ 6. On page 20543, column 3, paragraph (a)(10) in the heading, the language "Hospital organizations organized as trust with noncompliant hospital facilities." is corrected to read "Hospital organizations organized as trusts with noncompliant hospital facilities.".

**Special Local Regulations and Safety Zones; Recurring Marine Events and Fireworks Displays Within the Fifth Coast Guard District**

**AGENCY:** Coast Guard, DHS.

**ACTION:** Final rule.

**SUMMARY:** The Coast Guard is issuing a final rule that revises the list of special local regulations and safety zones established for recurring marine events and fireworks displays at various locations within the geographic boundary of the Fifth Coast Guard District. This adds 15 new annual recurring marine events and fireworks display locations; it revises event date(s) and coordinates for 31 previously established locations within the geographic boundary of the Fifth Coast

Guard District. This rule also deletes 21 previously listed marine events, fireworks displays and corresponding regulated areas that no longer occur. Entry into or movement within the regulated areas during the enforcement periods is prohibited without approval of the appropriate Captain of the Port.

**DATES:** This rule is effective June 20, 2013.

**ADDRESSES:** Documents mentioned in this preamble are part of docket [USCG-2012-0970]. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this rule, call or email, Dennis Sens, Prevention Division, Fifth Coast Guard District; telephone (757) 398-6204, email [Dennis.M.Sens@uscg.mil](mailto:Dennis.M.Sens@uscg.mil). If you have questions on viewing or submitting material to the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone (202) 366-9826.

**Table of Acronyms**

DHS Department of Homeland Security  
FR Federal Register  
NPRM Notice of Proposed Rulemaking

**A. Regulatory History and Information**

Previously, the special local regulations listed in 33 CFR 100.501 were amended in the January 19, 2012, issue of the **Federal Register** (77 FR 2632). The purpose of the rulemaking was to revise the Table to 33 CFR 100.501 by adding new annual recurring marine events, modifying event dates for previously established locations within the geographic boundary of the Fifth Coast Guard District; and deleting previously listed marine events and corresponding regulated areas that no longer occur.

The safety zones at 33 CFR 165.506 were previously amended in the March 23, 2012, issue of the **Federal Register** (77 FR 16932). The Coast Guard revised the list of permanent safety zones in the Table to 33 CFR 165.506, for recurring fireworks displays, by adding new locations, deleting previously established locations and modifying

previously established locations within the geographic boundary of the Fifth Coast Guard District.

On February 28, 2013, we published a notice of proposed rulemaking (NPRM) entitled “Special Local Regulations and Safety Zones; Recurring Marine Events and Fireworks Displays within the Fifth Coast Guard District” in the **Federal Register** (78 FR 13576). We received no comments on the proposed rule.

### B. Basis and Purpose

The Coast Guard is revising the list of permanent special local regulations at 33 CFR 100.501 and safety zones at 33 CFR 165.506, established for recurring marine events and fireworks displays at various locations within the geographic boundary of the Fifth Coast Guard District. The Fifth Coast Guard District is comprised of the land areas and U.S. navigable waters adjacent to North Carolina, Virginia, District of Columbia, Maryland, Delaware and portions of Pennsylvania and New Jersey. For a detailed description of the geographical area of the district and each Coast Guard Sector—Captain of the Port Zone, please see 33 CFR 3.25.

This rulemaking updates existing regulations in an effort to reflect the most current information provided to the Fifth Coast Guard District for marine events within its area of operations.

The purpose of this rulemaking is to ensure the safety of life on navigable waters during marine events, fireworks displays and provide the marine community the opportunity to comment on regulated area and safety zone locations, size, and length of time the zones will be active.

### Special Local Regulations

Under 33 CFR 100.35, the Coast Guard District Commander has authority to promulgate certain special local regulations deemed necessary to ensure the safety of life on the navigable waters immediately before, during, and immediately after an approved regatta or marine parade. Currently there are 59 special local regulations that are established and enforced at various periods throughout the year that are held on an annual basis. This rule will decrease the total number of special local regulations to 51 locations for marine events within the boundary of the Fifth Coast Guard District. This regulation includes events such as sailing regattas, power boat races, swim races, holiday parades, crew and other paddle craft races. The Coast Guard is revising the list of special local regulations at 33 CFR 100.501, established for various marine events,

by adding 7 new annual recurring events and revising 13 previously established locations within the geographic boundary of the Fifth Coast Guard District. This rule also deletes 15 previously listed marine events and corresponding regulated areas that are no longer occurring.

### Safety Zones

Under 33 CFR 165.23, the Coast Guard District Commander has authority to promulgate certain safety zones deemed necessary to ensure the safety of life on the navigable waters immediately before, during, and immediately after an approved fireworks displays. In this rule the Coast Guard revises the list of permanent safety zones at 33 CFR 165.506, established for fireworks displays at various locations within the geographic boundary of the Fifth Coast Guard District. Currently there are 74 permanent safety zones established for fireworks displays within the geographic boundaries of the Fifth Coast Guard District. This rule will increase the total number of permanent safety zones to 76 locations for fireworks displays within the boundary of the Fifth Coast Guard District. The Coast Guard is revising the list of permanent safety zones at 33 CFR 165.506, established for fireworks displays, by adding 8 new locations, modifying 18 previously established locations and deleting 6 previously established locations within the geographic boundary of the Fifth Coast Guard District.

### C. Discussion of Comments, Changes and the Final Rule

The Coast Guard did not receive comments in response to the notice of proposed rulemaking (NPRM) published in the **Federal Register**. Accordingly, the Coast Guard is establishing 51 Special local regulations for marine events and 76 safety zones on the specified navigable waters as listed within the Table to § 100.501 and § 165.506 respectively.

Subsequent to publication of the NPRM the Coast Guard received additional information from marine event sponsors who desire to change date(s) for their specified events. Change of dates for two marine events listed in the Table to § 100.501 were made by the Coast Guard. This change included the “TriRock Triathlon Series” race sponsored by Competitor Group Inc. and listed as (b.)3 in the Table to § 100.501 was changed to “July—3rd or 4th Saturday”. The “Swim Across the Potomac” sponsored by U.S. Open Water Swimming Association—Wave

One Swimming and listed as (b.)16 in the Table to § 100.501 was changed to “June—1st Sunday”. These changes will be included in marine information broadcasts, notice to local mariners as well as event updates provided by local media outlets.

### D. Discussion of the Final Rule

This rule will apply to each event listed in the attached tables to this rule. Events listed in the tables are events that recur annually in the Fifth Coast Guard District. The tables provide the event name and sponsor, as well as an approximate date and location of the event.

For each event listed in the table, an event patrol, with a Patrol Commander in charge, may be assigned. The Patrol Commander may control the movement of all vessels in the regulated area(s). When hailed or signaled by an official patrol vessel, a vessel in these areas would be required to immediately comply with the directions given. Failure to do so may result in expulsion from the area, citation for failure to comply, or both. The Coast Guard Patrol Commander may terminate the event, or the operation of any vessel participating in the event, at any time it is deemed necessary for the protection of life or property. Only event organizers, designated participants, and official patrol vessels will be allowed to enter a regulated area. All persons and vessels not registered with the event sponsor or organizer as participants or official patrol vessels are considered spectators. Spectators may not enter the regulated area and may be confined to a designated spectator area to view the event. Spectators may contact the Coast Guard Patrol Commander to request permission to pass through the regulated area. If permission is granted, spectators would be required to pass directly through the regulated area at safe speed and without loitering.

### E. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

#### 1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866

or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

We expect the economic impact of this rule to be so minimal that a full Regulatory Evaluation is unnecessary. This finding is based on the short amount of time that vessels would be restricted from regulated areas, and the small size of these areas that are typically positioned away from high vessel traffic zones. Vessels would not be precluded from getting underway, or mooring at any piers or marinas currently located in the vicinity of the regulated areas. Advance notifications would also be made to the local maritime community by issuing Local Notice to Mariners, Marine information and facsimile broadcasts so mariners can adjust their plans accordingly. Notifications to the public for most events will usually be made by local newspapers, radio and TV stations. The Coast Guard anticipates that these special local regulated areas and safety zones will only be enforced 1 to 3 times per year.

## 2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard did not receive comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities. This rule will affect the following entities some of which may be small entities: The owners and operators of vessels intending to transit or anchor in the regulated areas during the times these zones are enforced.

These regulated areas and safety zones will not have a significant economic impact on a substantial number of small entities for the following reasons: The Coast Guard will ensure that small entities are able to operate in the areas where events are occurring to the extent possible while ensuring the safety of event participants and spectators. The enforcement period will be short in duration and, in many of the areas, vessels can transit safely around the regulated area. Generally, blanket permission to enter, remain in,

or transit through these regulated areas will be given except during the period that the Coast Guard patrol vessel is present. Before the enforcement period, we will issue maritime advisories widely.

## 3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

## 4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

## 5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

## 6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

## 7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

## 8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

## 9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

## 10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

## 11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

## 12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

## 13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

## 14. Environment

We have analyzed this rule under Department of Homeland Security

Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321-4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves implementation of regulations under 33 CFR part 100 that apply to organized marine events on the navigable waters of the United States that may have potential for negative impact on the safety or other interest of waterway users and shore side activities in the event area. The category of water activities includes but is not limited to sail boat regattas, boat parades, power boat racing, swimming events, crew racing, and sail board racing. This section of the rule is categorically excluded from further review under paragraph 34(h) of Figure 2-1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a

Categorical Exclusion Determination are not required for this section of the rule.

This rule involves implementation of regulations under 33 CFR part 165 that establish safety zones on navigable waters of the United States for fireworks events. These safety zones are enforced for the duration of fireworks display events. The fireworks are launched from or immediately adjacent to navigable waters of the United States. The category of activities includes fireworks launched from barges or near the shoreline that generally rely on the use of navigable waters as a safety buffer. This section of the rule is categorically excluded from further review under paragraph 34(g) of Figure 2-1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**.

**List of Subjects**

*33 CFR Part 100*

Marine safety, Navigation (water), Reporting and recordkeeping requirements, Waterways.

*33 CFR Part 165*

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR parts 100 and part 165 as follows:

**PART 100—SAFETY OF LIFE ON NAVIGABLE WATERS**

■ 1. The authority citation for part 100 continues to read as follows:

**Authority:** 33 U.S.C. 1233.

■ 2. Amend § 100.501 by revising the Table to § 100.501 to read as follows:

**§ 100.501 Special Local Regulations; Marine Events in the Fifth Coast Guard District.**

\* \* \* \* \*

All coordinates listed in the Table to § 100.501 reference Datum NAD 1983.

TABLE TO § 100.501

No.	Date	Event	Sponsor	Location
<b>(a.) Coast Guard Sector Delaware Bay—COTP Zone</b>				
1. ....	June—1st Sunday .....	Atlantic County Day at the Bay.	Atlantic County, New Jersey.	The waters of Great Egg Harbor Bay, adjacent to Somers Point, New Jersey, bounded by a line drawn along the following boundaries: the area is bounded to the north by the shoreline along John F. Kennedy Park and Somers Point, New Jersey; bounded to the east by the State Route 52 bridge; bounded to the south by a line that runs along latitude 39°18'00" N; and bounded to the west by a line that runs along longitude 074°37'00" W.
2. ....	May—3rd Sunday .....	Annual Escape from Fort Delaware Triathlon.	Escape from Fort Delaware Triathlon, Inc.	All waters of the Delaware River between Pea Patch Island and Delaware City, Delaware, bounded by a line connecting the following points: latitude 39°36'35.7" N, longitude 075°35'25.6" W, to latitude 39°34'57.3" N, longitude 075°33'23.1" W, to latitude 39°34'11.9" N, longitude 075°34'28.6" W, to latitude 39°35'52.4" N, longitude 075°36'33.9" W.
3. ....	June—Last Saturday .....	Westville Parade of Lights.	Borough of Westville and Westville Power Boat.	All waters of Big Timber Creek in Westville, NJ from shoreline to shoreline bounded on the south from the Route 130 Bridge and to the north by the entrance of the Delaware River.
4. ....	July—3rd Sunday .....	OPA Atlantic City Grand Prix.	Offshore Performance Assn. (OPA).	The waters of the Atlantic Ocean, adjacent to Atlantic City, New Jersey, bounded by a line drawn between the following points: southeasterly from a point along the shoreline at latitude 39°21'50" N, longitude 074°24'37" W, to latitude 39°20'40" N, longitude 074°23'50" W, thence southwesterly to latitude 39°19'33" N, longitude 074°26'52" W, thence northwesterly to a point along the shoreline at latitude 39°20'43" N, longitude 074°27'40" W, thence northeasterly along the shoreline to latitude 39°21'50" N, longitude 074°24'37" W.

TABLE TO § 100.501—Continued

No.	Date	Event	Sponsor	Location
5. ....	July—On or about July 4th.	U.S. holiday celebrations	City of Philadelphia .....	The waters of the Delaware River, adjacent to Philadelphia, PA and Camden, NJ, from shoreline to shoreline, bounded on the south by the Walt Whitman Bridge and bounded on the north by the Benjamin Franklin Bridge.
6. ....	August—2nd Friday, Saturday and Sunday.	Point Pleasant OPA/NJ Offshore Grand Prix.	Offshore Performance Association (OPA) and New Jersey Offshore Racing Assn.	The waters of the Atlantic Ocean bounded by a line drawn from a position along the shoreline near Normandy Beach, NJ at latitude 40°00'00" N, longitude 074°03'30" W, thence easterly to latitude 39°59'40" N, longitude 074°02'00" W, thence southwesterly to latitude 39°56'35" N, longitude 074°03'00" W, thence westerly to a position near the Seaside Heights Pier at latitude 39°56'35" N, longitude 074°04'15" W, thence northerly along the shoreline to the point of origin.
7. ....	July—3rd Wednesday and Thursday.	New Jersey Offshore Grand Prix.	Offshore Performance Assn. & New Jersey Offshore Racing Assn.	The waters of the Manasquan River from the New York and Long Branch Railroad to Manasquan Inlet, together with all of the navigable waters of the United States from Asbury Park, New Jersey, latitude 40°14'00" N; southward to Seaside Park, New Jersey, latitude 39°55'00" N, from the New Jersey shoreline seaward to the limits of the Territorial Sea. The race course area extends from Asbury Park to Seaside Park from the shoreline, seaward to a distance of 8.4 nautical miles.
8. ....	August—3rd Friday .....	Thunder Over the Boardwalk Air show.	Atlantic City Chamber of Commerce.	The waters of the Atlantic Ocean, adjacent to Atlantic City, New Jersey, bounded by a line drawn between the following points: southeasterly from a point along the shoreline at latitude 39°21'31" N, longitude 074°25'04" W, thence to latitude 39°21'08" N, longitude 074°24'48" W, thence southwesterly to latitude 39°20'16" N, longitude 074°27'17" W, thence northwesterly to a point along the shoreline at latitude 39°20'44" N, longitude 074°27'31" W, thence northeasterly along the shoreline to latitude 39°21'31" N, longitude 074°25'04" W.
9. ....	September—3rd Saturday.	Annual Escape from Fort Delaware Triathlon.	Escape from Fort Delaware Triathlon, Inc.	All waters of the Delaware River between Pea Patch Island and Delaware City, Delaware, bounded by a line connecting the following points: latitude 39°36'35.7" N, longitude 075°35'25.6" W, to latitude 39°34'57.3" N, longitude 075°33'23.1" W, to latitude 39°34'11.9" N, longitude 075°34'28.6" W, to latitude 39°35'52.4" N, longitude 075°36'33.9" W.
10. ....	September—last Friday, Saturday and Sunday; October—first Friday, Saturday and Sunday.	Sunset Lake Hydrofest ...	Sunset Lake Hydrofest Assn.	All waters of Sunset Lake, New Jersey, from shoreline to shoreline, south of latitude 38°58'32" N.
11. ....	October—2nd Saturday and Sunday.	The Liberty Grand Prix ...	Offshore Performance Assn. (OPA).	The waters of the Delaware River, adjacent to Philadelphia, PA and Camden, NJ, from shoreline to shoreline, bounded on the south by the Walt Whitman Bridge and bounded on the north by the Benjamin Franklin Bridge.
12. ....	October—1st Monday (Columbus Day).	U.S. holiday celebrations	City of Philadelphia .....	The waters of the Delaware River, adjacent to Philadelphia, PA and Camden, NJ, from shoreline to shoreline, bounded on the south by the Walt Whitman Bridge and bounded on the north by the Benjamin Franklin Bridge.
13. ....	December—On December 31st (New Year's Eve).	U.S. holiday celebrations	City of Philadelphia .....	The waters of the Delaware River, adjacent to Philadelphia, PA and Camden, NJ, from shoreline to shoreline, bounded on the south by the Walt Whitman Bridge and bounded on the north by the Benjamin Franklin Bridge.

14. ....	September—Third Sunday.	Ocean City Air Show .....	Ocean City, NJ .....	All waters of the New Jersey Intracoastal Waterway (ICW) bounded by a line connecting the following points; latitude 39°15'57" N, longitude 074°35'09" W thence northeast to latitude 39°16'34" N, longitude 074°33'54" W thence southeast to latitude 39°16'17" N, longitude 074°33'29" W thence southwest to latitude 39°15'40" N, longitude 074°34'46" W thence northwest to point of origin, near Ocean City, NJ.
15. ....	September—3rd Sunday	Atlantic City International Triathlon.	Atlantic City, NJ .....	All waters of the New Jersey Intracoastal Waterway (ICW) bounded by a line connecting the following points; latitude 39°21'20" N, longitude 074°27'18" W thence northeast to latitude 39°21'27.47" N, longitude 074°27'10.31" W thence northeast to latitude 39°21'33" N, longitude 074°26'57" W thence northwest to latitude 39°21'37" N, longitude 074°27'03" W thence southwest to latitude 39°21'29.88" N, longitude 074°27'14.31" W thence south to latitude 39°21'19" N, longitude 074°27'22" W thence east to latitude 39°21'18.14" N, longitude 074°27'19.25" W thence north to point of origin, near Atlantic City, NJ.

(b.) Coast Guard Sector Baltimore—COTP Zone

1. ....	March—4th or last Saturday; or April—1st Saturday.	Safety at Sea Seminar ...	U.S. Naval Academy .....	All waters of the Severn River from shoreline to shoreline, bounded to the northwest by the Naval Academy (SR-450) Bridge and bounded to the southeast by a line drawn from the Naval Academy Light at latitude 38°58'39.5" N, longitude 076°28'49" W thence easterly to Carr Point, MD at latitude 38°58'58" N, longitude 076°27'41" W.
2. ....	March—3rd, 4th or last Friday, Saturday and Sunday; April and May—every Friday, Saturday and Sunday.	USNA Crew Races .....	U.S. Naval Academy .....	All waters of the Severn River from shoreline to shoreline, bounded to the northwest by a line drawn from the south shoreline at latitude 39°00'58" N, longitude 076°31'32" W thence to the north shoreline at latitude 39°01'11" N, longitude 076°31'10" W. The regulated area is bounded to the southeast by a line drawn from the Naval Academy Light at latitude 38°58'39.5" N, longitude 076°28'49" W thence easterly to Carr Point, MD at latitude 38°58'58" N, longitude 076°27'41" W.
3. ....	July—3rd or 4th Saturday	TriRock Triathlon Series	The Competitor Group ....	The waters of Spa Creek and Annapolis Harbor, from shoreline to shoreline, bounded by a line drawn near entrance of Spa Creek originating at USNA seawall, latitude 38°58'40" N, longitude 076°28'49" W, thence south to latitude 38°58'32" N, longitude 076°28'45" W near Sycamore Point. The regulated area is bounded to the southwest by a line drawn from entrance of Annapolis Market Slip, latitude 38°58'34" N, longitude 076°29'05" W thence south to latitude 38°58'27" N, longitude 076°28'56" W near Chart House pier, Annapolis, MD.
4. ....	May—1st Sunday .....	Nanticoke River Swim and Triathlon.	Nanticoke River Swim and Triathlon, Inc.	All waters of the Nanticoke River, including Bivalve Channel and Bivalve Harbor, bounded by a line drawn from a point on the shoreline at latitude 38°18'00" N, longitude 075°54'00" W, thence westerly to latitude 38°18'00" N, longitude 075°55'00" W, thence northerly to latitude 38°20'00" N, longitude 075°53'48" W, thence easterly to latitude 38°19'42" N, longitude 075°52'54" W.

TABLE TO § 100.501—Continued

No.	Date	Event	Sponsor	Location
5. ....	May—Saturday before Memorial Day.	Chestertown Tea Party Re-enactment Festival.	Chestertown Tea Party Festival.	All waters of the Chester River, within a line connecting the following positions: latitude 39°12'27" N, longitude 076°03'46" W; thence to latitude 39°12'19" N, longitude 076°03'53" W; thence to latitude 39°12'15" N, longitude 076°03'41" W; thence to latitude 39°12'26" N, longitude 076°03'38" W; thence to the point of origin at latitude 39°12'27" N, longitude 076°03'46" W.
6. ....	May—3rd Friday, Saturday and Sunday.	Dragon Boat Races at Georgetown, Washington, D.C.	Washington, D.C. Dragon Boat Festival, Inc.	The waters of the Upper Potomac River, Washington, DC, from shoreline to shoreline, bounded upstream by the Francis Scott Key Bridge and downstream by the Roosevelt Memorial Bridge.
7. ....	May—Tuesday and Wednesday before Memorial Day (observed).	USNA Blue Angels Air Show.	U.S. Naval Academy .....	All waters of the Severn River from shoreline to shoreline, bounded to the northwest by a line drawn from the south shoreline at latitude 39°00'38.9" N, longitude 076°31'05.2" W thence to the north shoreline at latitude 39°00'54.7" N, longitude 076°30'44.8" W, this line is approximately 1300 yards northwest of the U.S. 50 fixed highway bridge. The regulated area is bounded to the southeast by a line drawn from the Naval Academy Light at latitude 38°58'39.5" N, longitude 076°28'49" W thence southeast to a point 700 yards east of Chinks Point, MD at latitude 38°58'1.9" N, longitude 076°28'1.7" W thence northeast to Greenbury Point at latitude 38°58'29" N, longitude 076°27'16" W.
8. ....	June—2nd Sunday .....	The Great Chesapeake Bay Bridges Swim Races.	Great Chesapeake Bay Swim, Inc.	The waters of the Chesapeake Bay between and adjacent to the spans of the William P. Lane Jr. Memorial Bridge shore to shore 500 yards north of the north span of the bridge from the western shore at latitude 39°00'36" N, longitude 076°23'05" W and the eastern shore at latitude 38°59'14" N, longitude 076°20'00" W, and 500 yards south of the south span of the bridge from the western shore at latitude 39°00'16" N, longitude 076°24'30" W and the eastern shore at latitude 38°58'38.5" N, longitude 076°20'06" W.
9. ....	June—3rd, 4th or last Saturday or July—2nd or 3rd Saturday.	Maryland Swim for Life ...	District of Columbia Aquatics Club.	The waters of the Chester River from shoreline to shoreline, bounded on the south by a line drawn at latitude 39°10'16" N, near the Chester River Channel Buoy 35 (LLN-26795) and bounded on the north at latitude 39°12'30" N by the Maryland S.R. 213 Highway Bridge.
10. ....	June—last Saturday and Sunday or July—2nd Saturday and Sunday.	Bo Bowman Memorial—Sharptown Regatta.	Virginia/Carolina Racing Assn.	All waters of the Nanticoke River near Sharptown, MD, from shoreline to shoreline, bounded to the south by Maryland S.R. 313 Highway Bridge and bounded to the north by a line drawn from latitude 38°33'09" N, longitude 075°42'45" W, thence southeasterly to latitude 38°33'04" N, longitude 075°42'37" W.
11. ....	June—2nd, 3rd, 4th or last Saturday and Sunday or August—1st Saturday and Sunday.	Thunder on the Narrows	Kent Narrows Racing Assn.	All waters of Prospect Bay enclosed by the following points: latitude 38°57'52.0" N, longitude 076°14'48.0" W, to latitude 38°58'02.0" N, longitude 076°15'05.0" W, to latitude 38°57'38.0" N, longitude 076°15'29.0" W, to latitude 38°57'28.0" N, longitude 076°15'23.0" W, to latitude 38°57'52.0" N, longitude 076°14'48.0" W.
12. ....	Labor Day weekend—Saturday and Sunday, or Monday.	Ragin on the River .....	Port Deposit, MD, Chamber of Commerce.	The waters of the Susquehanna River, adjacent to Port Deposit, Maryland, from shoreline to shoreline, bounded on the south by the U.S. I-95 fixed highway bridge, and bounded on the north by a line running southwesterly from a point along the shoreline at latitude 39°36'22" N, longitude 076°07'08" W, thence to latitude 39°36'00" N, longitude 076°07'46" W.
13. ....	September—2nd Saturday or the Saturday after Labor Day.	Dragon Boat Races in the Inner Harbor.	Associated Catholic Charities, Inc.	The waters of the Patapsco River, Baltimore, MD, Inner Harbor from shoreline to shoreline, bounded on the east by a line drawn along longitude 076°36'30" W.

TABLE TO § 100.501—Continued

No.	Date	Event	Sponsor	Location
14. ....	June—3rd, 4th or last Saturday or Sunday.	Baltimore Dragon Boat Challenge.	Baltimore Dragon Boat Club.	The waters of Patapsco River, Northwest Harbor, in Baltimore, MD, from shoreline to shoreline, within an area bounded on the east by a line drawn along longitude 076°35' W and bounded on the west by a line drawn along longitude 076°36'.
15. ....	May—2nd or 3rd Saturday or June—1st, 2nd or 3rd Saturday.	Potomac River Sharkfest Swim.	Enviro-Sports Productions Inc.	The waters of the Potomac River, from shoreline to shoreline, bounded by a line drawn parallel and north of the Harry W. Nice Memorial Bridge (U.S. Route 301) originating at the eastern shoreline latitude 38°22'05" N, longitude 076°59'03" W, thence west to latitude 38°21'50" N, longitude 077°00'54" W, at the western shoreline. The regulated area is bounded by a line drawn parallel and south of the U.S. Route 301 highway bridge, originating at the eastern shoreline latitude 38°21'45" N, longitude 076°58'58" W thence west to latitude 38°21'29" N, longitude 077°00'54" W, at the western shoreline of Potomac River.
16. ....	June—1st Sunday .....	Swim Across the Potomac.	U.S. Open Water Swimming Assn.—Wave One Swimming.	The waters of the Potomac River, from shoreline to shoreline, bounded to the north by a line drawn that originates at Jones Point Park, VA at the west shoreline latitude 38°47'35" N, longitude 077°02'22" W, thence east to latitude 38°47'12" N, longitude 077°00'58" W, at east shoreline near National Harbor, MD. The regulated area is bounded to the south by a line drawn originating at George Washington Memorial Parkway highway overpass and Cameron Run, west shoreline latitude 38°47'23" N, longitude 077°03'03" W thence east to latitude 38°46'52" N, longitude 077°01'13" W, at east shoreline near National Harbor, MD.
17. ....	October—last Saturday or November—1st Saturday.	MRE Tug of War .....	Maritime Republic of Eastport.	The waters of Spa Creek from shoreline to shoreline, extending 400 feet from either side of a rope spanning Spa Creek from a position at latitude 38°58'36.9" N, longitude 076°29'03.8" W on the Annapolis shoreline to a position at latitude 38°58'26.4" N, longitude 076°28'53.7" W on the Eastport shoreline.
18. ....	December—2nd Saturday.	Eastport Yacht Club Lighted Boat Parade.	Eastport Yacht Club .....	The approaches to Annapolis Harbor, the waters of Spa Creek, and the Severn River, shore to shore, bounded on the south by a line drawn from Carr Point, at latitude 38°58'58.0" N, longitude 076°27'40.0" W, thence to Horn Point Warning Light (LLNR 17935), at 38°58'24.0" N, longitude 076°28'10.0" W, thence to Horn Point, at 38°58'20.0" N, longitude 076°28'27.0" W, and bounded on the north by the State Route 450 Bridge.

2. ....	May—last Friday, Saturday and Sunday or June—1st Friday, Saturday and Sunday.	Blackbeard Festival .....	City of Hampton .....	<p>The waters of Sunset Creek and Hampton River shore to shore bounded to the north by the C &amp; O Railroad Bridge and to the south by a line drawn from Hampton River Channel Light 16 (LL 5715), located at latitude 37°01'03.0" N, longitude 76°20'26.0" W, to the finger pier across the river at Fisherman's Wharf, located at latitude 37°01'01.5" N, longitude 76°20'32.0" W.</p> <p>Spectator Vessel Anchorage Areas—Area A: Located in the upper reaches of the Hampton River, bounded to the south by a line drawn from the western shore at latitude 37°01'48.0" N, longitude 76°20'22.0" W, across the river to the eastern shore at latitude 37°01'44.0" N, longitude 76°20'13.0" W, and to the north by the C &amp; O Railroad Bridge. The anchorage area will be marked by orange buoys.</p> <p>Area B: Located on the eastern side of the channel, in the Hampton River, south of the Queen Street Bridge, near the Riverside Health Center. Bounded by the shoreline and a line drawn between the following points: Latitude 37°01'26.0" N, longitude 76°20'24.0" W, latitude 37°01'22.0" N, longitude 76°20'26.0" W, and latitude 37°01'22.0" N, longitude 76°20'23.0" W. The anchorage area will be marked by orange buoys.</p>
3. ....	June—1st Friday, Saturday and Sunday or 2nd Friday, Saturday and Sunday.	Norfolk Harborfest .....	Norfolk Festevents, Ltd ..	<p>The waters of the Elizabeth River and its branches from shore to shore, bounded to the northwest by a line drawn across the Port Norfolk Reach section of the Elizabeth River between the northern corner of the landing at Hospital Point, Portsmouth, Virginia, latitude 36°50'51.0" N, longitude 076°18'09.0" W and the north corner of the City of Norfolk Mooring Pier at the foot of Brooks Avenue located at latitude 36°51'00.0" N, longitude 076°17'52.0" W; bounded on the southwest by a line drawn from the southern corner of the landing at Hospital Point, Portsmouth, Virginia, at latitude 36°50'50.0" N, longitude 076°18'10.0" W, to the northern end of the easternmost pier at the Tidewater Yacht Agency Marina, located at latitude 36°50'29.0" N, longitude 076°17'52.0" W; bounded to the south by a line drawn across the Lower Reach of the Southern Branch of the Elizabeth River, between the Portsmouth Lightship Museum located at the foot of London Boulevard, in Portsmouth, Virginia at latitude 36°50'10.0" N, longitude 076°17'47.0" W, and the northwest corner of the Norfolk Shipbuilding &amp; Drydock, Berkley Plant, Pier No. 1, located at latitude 36°50'08.0" N, longitude 076°17'39.0" W; and to the southeast by the Berkley Bridge which crosses the Eastern Branch of the Elizabeth River between Berkley at latitude 36°50'21.5" N, longitude 076°17'14.5" W, and Norfolk at latitude 36°50'35.0" N, longitude 076°17'10.0" W.</p>

TABLE TO § 100.501—Continued

No.	Date	Event	Sponsor	Location
4. ....	May—Last Saturday and Sunday or June—1st Saturday and Sunday.	Ocean City Maryland Off-shore Grand Prix.	Offshore Performance Assn. Racing, LLC.	The waters of the Atlantic Ocean commencing at a point on the shoreline at latitude 38°25'42" N, longitude 075°03'06" W; thence east southeast to latitude 38°25'30" N, longitude 075°02'12" W, thence south southwest parallel to the Ocean City shoreline to latitude 38°19'12" N, longitude 075°03'48" W; thence west northwest to the shoreline at latitude 38°19'30" N, longitude 075°05'00" W. The waters of the Atlantic Ocean bounded by a line drawn from a position along the shoreline near Ocean City, MD at latitude 38°22'25.2" N, longitude 075°03'49.4" W, thence easterly to latitude 38°22'00.4" N, longitude 075°02'34.8" W, thence southwesterly to latitude 38°19'35.9" N, longitude 075°03'35.4" W, thence westerly to a position near the shoreline at latitude 38°20'05" N, longitude 075°04'48.4" W, thence northerly along the shoreline to the point of origin.
5. ....	June—3rd or 4th Saturday.	Cock Island Race .....	Portsmouth Boat Club & City of Portsmouth, VA.	The waters of the Elizabeth River and its branches from shore to shore, bounded to the northwest by a line drawn across the Port Norfolk Reach section of the Elizabeth River between the northern corner of the landing at Hospital Point, Portsmouth, Virginia, latitude 36°50'51.0" N, longitude 076°18'09.0" W and the north corner of the City of Norfolk Mooring Pier at the foot of Brooks Avenue located at latitude 36°51'00.0" N, longitude 076°17'52.0" W; bounded on the southwest by a line drawn from the southern corner of the landing at Hospital Point, Portsmouth, Virginia, at latitude 36°50'50.0" N, longitude 076°18'10.0" W, to the northern end of the easternmost pier at the Tidewater Yacht Agency Marina, located at latitude 36°50'29.0" N, longitude 076°17'52.0" W; bounded to the south by a line drawn across the Lower Reach of the Southern Branch of the Elizabeth River, between the Portsmouth Lightship Museum located at the foot of London Boulevard, in Portsmouth, Virginia at latitude 36°50'10.0" N, longitude 076°17'47.0" W, and the northwest corner of the Norfolk Shipbuilding & Drydock, Berkley Plant, Pier No. 1, located at latitude 36°50'08.0" N, longitude 076°17'39.0" W; and to the southeast by the Berkley Bridge which crosses the Eastern Branch of the Elizabeth River between Berkley at latitude 36°50'21.5" N, longitude 076°17'14.5" W, and Norfolk at latitude 36°50'35.0" N, longitude 076°17'10.0" W.
6. ....	June—last Saturday or July—1st Saturday.	RRBA Spring Radar Shootout.	Rappahannock River Boaters Association (RRBA).	The waters of the Rappahannock River, adjacent to Layton, VA, from shoreline to shoreline, bounded on the west by a line running along longitude 076°58'30" W, and bounded on the east by a line running along longitude 076°56'00" W.
7. ....	July—last Wednesday and following Friday or August—first Wednesday and following Friday.	Pony Penning Swim .....	Chincoteague Volunteer Fire Department.	The waters of Assateague Channel from shoreline to shoreline, bounded to the east by a line drawn from latitude 37°55'01" N, longitude 075°22'40" W, to latitude 37°54'50" N, longitude 075°22'46" W, and to the west by a line drawn from latitude 37°54'54.0" N, longitude 075°23'00" W, to latitude 37°54'49" N, longitude 075°22'49" W.
8. ....	August—2nd Friday, Saturday and Sunday.	Hampton Cup Regatta ....	Hampton Cup Regatta Boat Club.	The waters of Mill Creek, adjacent to Fort Monroe, Hampton, Virginia, enclosed by the following boundaries: to the north, a line drawn along latitude 37°01'00" N, to the east a line drawn along longitude 076°18'30" W, to the south a line parallel with the shoreline adjacent to Fort Monroe, and the west boundary is parallel with the Route 258—Mercury Boulevard Bridge.

TABLE TO § 100.501—Continued

No.	Date	Event	Sponsor	Location
9. ....	September—2nd Friday, Saturday and Sunday or 3rd Friday, Saturday and Sunday.	Hampton Bay Days Festival.	Hampton Bay Days Inc ...	The waters of Sunset Creek and Hampton River shore to shore bounded to the north by the C & O Railroad Bridge and to the south by a line drawn from Hampton River Channel Light 16 (LL 5715), located at latitude 37°01'03.0" N, longitude 076°20'26.0" W, to the finger pier across the river at Fisherman's Wharf, located at latitude 37°01'01.5" N, longitude 076°20'32.0" W.
10. ....	October—2nd Sunday or 3rd Sunday.	Poquoson Seafood Festival Workboat Races.	City of Poquoson .....	The waters of the Back River, Poquoson, Virginia, bounded on the north by a line drawn along latitude 37°06'30" N, bounded on the south by a line drawn along latitude 37°06'15" N, bounded on the east by a line drawn along longitude 076°18'52" W and bounded on the west by a line drawn along longitude 076°19'30" W.
11. ....	August—3rd Saturday and Sunday or 4th Saturday and Sunday.	Mattaponi Drag Boat Race.	Mattaponi Volunteer Rescue Squad and Dive Team.	All waters of Mattaponi River immediately adjacent to Rainbow Acres Campground, King and Queen County, Virginia. The regulated area includes a section of the Mattaponi River approximately three-quarter mile long and bounded in width by each shoreline, bounded to the east by a line that runs parallel along longitude 076°52'43" W, near the mouth of Mitchell Hill Creek, and bounded to the west by a line that runs parallel along longitude 076°53'41" W just north of Wakema, Virginia.

## (d.) Coast Guard Sector North Carolina—COTP Zone

1. ....	June—1st Saturday and Sunday.	Carolina Cup Regatta ....	Virginia Boat Racing Assn.	The waters of the Pasquotank River, adjacent to Elizabeth City, NC, from shoreline to shoreline, bounded on the west by the Elizabeth City Draw Bridge and bounded on the east by a line originating at a point along the shoreline at latitude 36°17'54" N, longitude 076°12'00" W, thence southwesterly to latitude 36°17'35" N, longitude 076°12'18" W at Cottage Point.
2. ....	August—1st Friday, Saturday and Sunday.	SBIP—Fountain Powerboats Kilo Run and Super Boat Grand Prix.	Super Boat International Productions (SBIP), Inc..	The waters of the Pamlico River including Chocowinity Bay, from shoreline to shoreline, bounded on the south by a line running northeasterly from Camp Hardee at latitude 35°28'23" N, longitude 076°59'23" W, to Broad Creek Point at latitude 35°29'04" N, longitude 076°58'44" W, and bounded on the north by the Norfolk Southern Railroad Bridge.

■ 4. Amend § 165.506 by revising the section heading and Table to § 165.506 to read as follows:

**§ 165.506 Safety Zones; Fireworks Displays in the Fifth Coast Guard District.**

\* \* \* \* \*

All coordinates listed in the Table to § 165.506 reference Datum NAD 1983.

TABLE TO § 165.506

No.	Date	Location	Regulated area
<b>(a.) Coast Guard Sector Delaware Bay—COTP Zone</b>			
1. ....	July 4th .....	North Atlantic Ocean, Bethany Beach, DE, Safety Zone.	The waters of the North Atlantic Ocean within a 500 yard radius of the fireworks barge in approximate position latitude 38°32'08" N, longitude 075°03'15" W, adjacent to shoreline of Bethany Beach, DE.
2. ....	Labor Day .....	Indian River Bay, DE, Safety Zone.	All waters of the Indian River Bay within a 700 yard radius of the fireworks launch location on the pier in approximate position latitude 38°36'42" N, longitude 075°08'18" W.

TABLE TO § 165.506—Continued

No.	Date	Location	Regulated area
3. ....	July 4th .....	North Atlantic Ocean, Rehoboth Beach, DE, Safety Zone.	All waters of the Atlantic Ocean within a 360 yard radius of the fireworks barge in approximate position latitude 38°43'01.2" N, longitude 075°04'21" W, approximately 400 yards east of Rehoboth Beach, DE.
4. ....	July 4th .....	North Atlantic Ocean, Avalon, NJ, Safety Zone.	The waters of the North Atlantic Ocean within a 500 yard radius of the fireworks barge in approximate location latitude 39°06'19.5" N, longitude 074°42'02.15" W, in the vicinity of the shoreline at Avalon, NJ.
5. ....	July 4th. September—2nd Saturday.	Barnegat Bay, Barnegat Township, NJ, Safety Zone.	The waters of Barnegat Bay within a 500 yard radius of the fireworks barge in approximate position latitude 39°44'50" N, longitude 074°11'21" W, approximately 500 yards north of Conklin Island, NJ.
6. ....	July 4th .....	North Atlantic Ocean, Cape May, NJ, Safety Zone.	The waters of the North Atlantic Ocean within a 500 yard radius of the fireworks barge in approximate location latitude 38°55'36" N, longitude 074°55'26" W, immediately adjacent to the shoreline at Cape May, NJ.
7. ....	July 3rd .....	Delaware Bay, North Cape May, NJ, Safety Zone.	All waters of the Delaware Bay within a 360 yard radius of the fireworks barge in approximate position latitude 38°58'00" N, longitude 074°58'30" W.
8. ....	August—3rd Sunday .....	Great Egg Harbor Inlet, Margate City, NJ, Safety Zone.	All waters within a 500 yard radius of the fireworks barge in approximate location latitude 39°19'33" N, longitude 074°31'28" W, on the Intracoastal Waterway near Margate City, NJ.
9. ....	July 4th. August—every Thursday. September—1st Thursday.	Metedeconk River, Brick Township, NJ, Safety Zone.	The waters of the Metedeconk River within a 300 yard radius of the fireworks launch platform in approximate position latitude 40°03'24" N, longitude 074°06'42" W, near the shoreline at Brick Township, NJ.
10. ....	July—1st Friday .....	North Atlantic Ocean, Atlantic City, NJ, Safety Zone.	The waters of the North Atlantic Ocean within a 500 yard radius of the fireworks barge located at latitude 39°20'58" N, longitude 074°25'58" W, near the shoreline at Atlantic City, NJ.
11. ....	July 4th. October—1st Saturday	North Atlantic Ocean, Ocean City, NJ, Safety Zone.	The waters of the North Atlantic Ocean within a 500 yard radius of the fireworks barge in approximate location latitude 39°16'22" N, longitude 074°33'54" W, in the vicinity of the shoreline at Ocean City, NJ.
12. ....	May—4th Saturday .....	Barnegat Bay, Ocean Township, NJ, Safety Zone.	All waters of Barnegat Bay within a 500 yard radius of the fireworks barge in approximate position latitude 39°47'33" N, longitude 074°10'46" W.
13. ....	July 4th .....	Little Egg Harbor, Parker Island, NJ, Safety Zone.	All waters of Little Egg Harbor within a 500 yard radius of the fireworks barge in approximate position latitude 39°34'18" N, longitude 074°14'43" W, approximately 100 yards north of Parkers Island.
14. ....	September—3rd Saturday .....	Delaware River, Chester, PA, Safety Zone.	All waters of the Delaware River near Chester, PA just south of the Commodore Barry Bridge within a 250 yard radius of the fireworks barge located in approximate position latitude 39°49'43.2" N, longitude 075°22'42" W.
15. ....	September—3rd Saturday .....	Delaware River, Essington, PA, Safety Zone.	All waters of the Delaware River near Essington, PA, west of Little Tincum Island within a 250 yard radius of the fireworks barge located in the approximate position latitude 39°51'18" N, longitude 075°18'57" W.
16. ....	July 3rd, 4th or 5th, Columbus Day, December 31st, January 1st.	Delaware River, Philadelphia, PA, Safety Zone.	All waters of Delaware River, adjacent to Penns Landing, Philadelphia, PA, bounded from shoreline to shoreline, bounded on the south by a line running east to west from points along the shoreline at latitude 39°56'31.2" N, longitude 075°08'28.1" W; thence to latitude 39°56'29.1" N, longitude 075°07'56.5" W, and bounded on the north by the Benjamin Franklin Bridge.

**(b.) Coast Guard Sector Baltimore—COTP Zone**

1. ....	April—1st or 2nd Saturday .....	Washington Channel, Upper Potomac River, Washington, DC, Safety Zone.	All waters of the Upper Potomac River within a 150 yard radius of the fireworks barge in approximate position latitude 38°52'20" N, longitude 077°01'17" W, located within the Washington Channel in Washington Harbor, DC.
2. ....	July 4th. December—1st and 2nd Saturday, December 31st.	Severn River and Spa Creek, Annapolis, MD, Safety Zone.	All waters of the Severn River and Spa Creek within an area bounded by a line drawn from latitude 38°58'40" N, longitude 076°28'49" W; thence to latitude 38°58'33" N, longitude 076°28'49" W; thence to latitude 38°58'45" N, longitude 076°28'07" W; thence to latitude 38°59'01" N, longitude 076°28'37" W, thence to latitude 38°58'57" N, longitude 076°28'40" W, thence to latitude 38°58'53" N, longitude 076°28'34" W, thence to point of origin; located near the entrance to Spa Creek and Severn River, Annapolis, MD.

TABLE TO § 165.506—Continued

No.	Date	Location	Regulated area
3. ....	Saturday before Independence Day holiday.	Middle River, Baltimore County, MD, Safety Zone.	All waters of the Middle River within a 300 yard radius of the fireworks barge in approximate position latitude 39°17'45" N, longitude 076°23'49" W, approximately 300 yards east of Rockaway Beach, near Turkey Point.
4. ....	June—last Saturday. July—3rd, 4th or last Saturday or Sunday.	Potomac River, Charles County, MD—Newburg, Safety Zone.	All waters of the Potomac River within a 200 yard radius of the fireworks barge in approximate position latitude 38°23'41" N, longitude 076°59'30" W, located near Newburg, Maryland.
5. ....	June 14th, July 4th. September—2nd Saturday. December 31st.	Northwest Harbor (East Channel), Patapsco River, MD, Safety Zone.	All waters of the Patapsco River within a 300 yard radius of the fireworks barge in approximate position 39°15'55" N, 076°34'33" W, located adjacent to the East Channel of Northwest Harbor.
6. ....	May—2nd or 3rd Thursday or Friday. July 4th. December 31st.	Baltimore Inner Harbor, Patapsco River, MD, Safety Zone.	All waters of the Patapsco River within a 100 yard radius of the fireworks barge in approximate position latitude 39°17'01" N, longitude 076°36'31" W, located at the entrance to Baltimore Inner Harbor, approximately 125 yards southwest of pier 3.
7. ....	May—2nd or 3rd Thursday or Friday. July 4th. December 31st.	Baltimore Inner Harbor, Patapsco River, MD, Safety Zone.	The waters of the Patapsco River within a 100 yard radius of approximate position latitude 39°17'04" N, longitude 076°36'36" W, located in Baltimore Inner Harbor, approximately 125 yards southeast of pier 1.
8. ....	July 4th. December 31st .....	Northwest Harbor (West Channel) Patapsco River, MD, Safety Zone.	All waters of the Patapsco River within a 300 yard radius of the fireworks barge in approximate position latitude 39°16'21" N, longitude 076°34'38" W, located adjacent to the West Channel of Northwest Harbor.
9. ....	July 4th .....	Patuxent River, Calvert County, MD, Safety Zone.	All waters of the Patuxent River within a 200 yard radius of the fireworks barge located at latitude 38°19'17" N, longitude 076°27'45" W, approximately 800 feet from shore at Solomons Island, MD.
10. ....	July 3rd .....	Chesapeake Bay, Chesapeake Beach, MD, Safety Zone.	All waters of the Chesapeake Bay within a 150 yard radius of the fireworks barge in approximate position latitude 38°41'36" N, longitude 076°31'30" W, and within a 150 yard radius of the fireworks barge in approximate position latitude 38°41'28" N, longitude 076°31'29" W, located near Chesapeake Beach, Maryland.
11. ....	July 4th .....	Choptank River, Cambridge, MD, Safety Zone.	All waters of the Choptank River within a 300 yard radius of the fireworks launch site at Great Marsh Point, located at latitude 38°35'06" N, longitude 076°04'46" W.
12. ....	July—2nd or 3rd Saturday and last Saturday.	Potomac River, Fairview Beach, Charles County, MD, Safety Zone.	All waters of the Potomac River within a 300 yard radius of the fireworks barge in approximate position latitude 38°19'57" N, longitude 077°14'40" W, located north of the shoreline at Fairview Beach, Virginia.
13. ....	May—last Saturday. July 4th .....	Potomac River, Charles County, MD—Mount Vernon, Safety Zone.	All waters of the Potomac River within an area bound by a line drawn from the following points: latitude 38°42'30" N, longitude 077°04'47" W; thence to latitude 38°42'18" N, longitude 077°04'42" W; thence to latitude 38°42'11" N, longitude 077°05'10" W; thence to latitude 38°42'22" N, longitude 077°05'12" W; thence to point of origin located along the Potomac River shoreline at George Washington's Mount Vernon Estate, Fairfax County, VA.
14. ....	October—1st Saturday .....	Dukeharts Channel, Potomac River, MD, Safety Zone.	All waters of the Potomac River within a 300 yard radius of the fireworks barge in approximate position latitude 38°13'27" N, longitude 076°44'48" W, located adjacent to Dukeharts Channel near Coltons Point, Maryland.
15. ....	July—Day before Independence Day holiday and July 4th. November—3rd Thursday, 3rd Saturday and last Friday. December—1st, 2nd and 3rd Friday.	Potomac River, National Harbor, MD, Safety Zone.	All waters of the Potomac River within an area bound by a line drawn from the following points: latitude 38°47'13" N, longitude 077°00'58" W; thence to latitude 38°46'51" N, longitude 077°01'15" W; thence to latitude 38°47'25" N, longitude 077°01'33" W; thence to latitude 38°47'32" N, longitude 077°01'08" W; thence to the point of origin, located at National Harbor, Maryland.
16. ....	Sunday before July 4th, July 4th	Susquehanna River, Havre de Grace, MD, Safety Zone.	All waters of the Susquehanna River within a 300 yard radius of approximate position latitude 39°32'06" N, longitude 076°05'22" W, located on the island at Millard Tydings Memorial Park.
17. ....	June and July—Saturday before Independence Day holiday.	Miles River, St. Michaels, MD, Safety Zone.	All waters of the Miles River within a 200 yard radius of approximate position latitude 38°47'42" N, longitude 076°12'51" W, located at the entrance to Long Haul Creek.
18. ....	July 3rd .....	Tred Avon River, Oxford, MD, Safety Zone.	All waters of the Tred Avon River within a 150 yard radius of the fireworks barge in approximate position latitude 38°41'24" N, longitude 076°10'37" W, approximately 500 yards northwest of the waterfront at Oxford, MD.

TABLE TO § 165.506—Continued

No.	Date	Location	Regulated area
19. ....	July 3rd .....	Northeast River, North East, MD, Safety Zone.	All waters of the Northeast River within a 300 yard radius of the fireworks barge in approximate position latitude 39°35'26" N, longitude 075°57'00" W, approximately 400 yards south of North East Community Park.
20. ....	June—2nd or 3rd Saturday. July—1st, 2nd or 3rd Saturday. September—1st or 2nd Saturday. December 31st.	Upper Potomac River, Washington, D.C., Safety Zone.	All waters of the Upper Potomac River within a 300 yard radius of the fireworks barge in approximate position 38°48'40" N, 077°02'07" W, located near the waterfront of Alexandria, Virginia.
21. ....	March through October, at the conclusion of evening MLB games at Washington Nationals Ball Park.	Anacostia River, Washington, D.C., Safety Zone.	All waters of the Anacostia River within a 150 yard radius of the fireworks barge in approximate position latitude 38°52'13" N, longitude 077°00'16" W, located near the Washington Nationals Ball Park.
22. ....	June—last Saturday or July—first Saturday. July—3rd, 4th or last Saturday or Sunday.	Potomac River, Prince William County, VA, Safety Zone.	All waters of the Potomac River within a 200 yard radius of the fireworks barge in approximate position latitude 38°34'10" N, longitude 077°15'36" W, located near Cherry Hill, Virginia.

(c.) Coast Guard Sector Hampton Roads—COTP Zone

1. ....	July 4th .....	North Atlantic Ocean, Ocean City, MD, Safety Zone.	All waters of the Atlantic Ocean in an area bound by the following points: latitude 38°19'39.9" N, longitude 075°05'03.2" W; thence to latitude 38°19'36.7" N, longitude 075°04'53.5" W; thence to latitude 38°19'45.6" N, longitude 075°04'49.3" W; thence to latitude 38°19'49.1" N, longitude 075°05'00.5" W; thence to point of origin. The size of the safety zone extends approximately 300 yards offshore from the fireworks launch area located at the high water mark on the beach.
2. ....	May—4th Sunday. June—3rd Monday, and June 29th. July 4th. August—1st and 4th Sunday. September—1st and 4th Sunday.	Isle of Wight Bay, Ocean City, MD, Safety Zone.	All waters of Isle of Wight Bay within a 350 yard radius of the fireworks barge in approximate position latitude 38°22'32" N, longitude 075°04'30" W.
3. ....	July 4th .....	Assawoman Bay, Fenwick Island—Ocean City, MD, Safety Zone.	All waters of Assawoman Bay within a 360 yard radius of the fireworks launch location on the pier at the West end of Northside Park, in approximate position latitude 38°25'57.6" N, longitude 075°03'55.8" W.
4. ....	July 4th .....	Broad Bay, Virginia Beach, VA, Safety Zone.	All waters of the Broad Bay within a 400 yard radius of the fireworks display in approximate position latitude 36°52'7" N, longitude 076°00'23" W, located on the shoreline near the Cavalier Golf and Yacht Club, Virginia Beach, Virginia.
5. ....	October—1st Friday .....	York River, West Point, VA, Safety Zone.	All waters of the York River near West Point, VA within a 400 yard radius of the fireworks display located in approximate position latitude 37°31'25" N, longitude 076°47'19" W.
6. ....	July 4th .....	York River, Yorktown, VA, Safety Zone.	All waters of the York River within a 400 yard radius of the fireworks display in approximate position latitude 37°14'14" N, longitude 076°30'02" W, located near Yorktown, Virginia.
7. ....	May—1st Friday. July 4th .....	James River, Newport News, VA, Safety Zone.	All waters of the James River within a 325 yard radius of the fireworks barge in approximate position latitude 36°58'30" N, longitude 076°26'19" W, located in the vicinity of the Newport News Shipyard, Newport News, Virginia.
8. ....	June—4th Friday. July—1st Friday. July 4th.	Chesapeake Bay, Norfolk, VA, Safety Zone.	All waters of the Chesapeake Bay within a 400 yard radius of the fireworks display located in position latitude 36°57'21" N, longitude 076°15'00" W, located near Ocean View Fishing Pier.
9. ....	July 4th .....	Chesapeake Bay, Virginia Beach, VA, Safety Zone.	All waters of the Chesapeake Bay 400 yard radius of the fireworks display in approximate position latitude 36°55'02" N, longitude 076°03'27" W, located at the First Landing State Park at Virginia Beach, Virginia.
10. ....	Memorial Day. June—1st and 2nd Friday, Saturday and Sunday. July 4th. November—4th Saturday. December—1st Saturday and December 31st. January—1st.	Elizabeth River, Southern Branch, Norfolk, VA, Safety Zone.	All waters of the Elizabeth River Southern Branch in an area bound by the following points: latitude 36°50'54.8" N, longitude 076°18'10.7" W; thence to latitude 36°51'7.9" N, longitude 076°18'01" W; thence to latitude 36°50'45.6" N, longitude 076°17'44.2" W; thence to latitude 36°50'29.6" N, longitude 076°17'23.2" W; thence to latitude 36°50'7.7" N, longitude 076°17'32.3" W; thence to latitude 36°49'58" N, longitude 076°17'28.6" W; thence to latitude 36°49'52.6" N, longitude 076°17'43.8" W; thence to latitude 36°50'27.2" N, longitude 076°17'45.3" W thence to the point of origin.
11. ....	July—3rd Saturday .....	John H. Kerr Reservoir, Clarksville, VA, Safety Zone.	All waters of John H. Kerr Reservoir within a 400 yard radius of approximate position latitude 36°37'51" N, longitude 078°32'50" W, located near the center span of the State Route 15 Highway Bridge.

BILLING CODE 9110-04-P

**DEPARTMENT OF HOMELAND SECURITY**

**Coast Guard**

**33 CFR Part 117**

[Docket No. USCG-2013-0356]

**Drawbridge Operation Regulations; Merrimack River, Haverhill and West Newbury, MA**

**AGENCY:** Coast Guard, DHS.

**ACTION:** Notice of temporary deviation from regulations.

**SUMMARY:** The Commander, First Coast Guard District, has issued a temporary deviation from the regulation governing the operation of the Rocks Village

Bridge, mile 12.6, across the Merrimack River between Haverhill and West Newbury, Massachusetts. The deviation is necessary to facilitate bridge rehabilitation and repairs. This deviation allows the bridge to remain in the closed position for 5 days.

**DATES:** This deviation is effective from 7 a.m. on June 3, 2013 through 4 p.m. on June 7, 2013.

**ADDRESSES:** Documents mentioned in this preamble as being available in the docket are part of docket USCG-2013-0356 and are available online at [www.regulations.gov](http://www.regulations.gov), inserting USCG-2013-0356 in the "Keyword" and then clicking "Search". They are also available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this rule, call or

email Mr. John McDonald, Project Officer, First Coast Guard District, [john.w.mcdonald@uscg.mil](mailto:john.w.mcdonald@uscg.mil) or telephone (617) 223-8364. If you have questions on viewing the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone 202-366-9826.

**SUPPLEMENTARY INFORMATION:** The Rocks Village Bridge, across the Merrimack River, mile 12.6, between Haverhill and West Newbury, Massachusetts, has a vertical clearance in the closed position of 17 feet at mean high water and 23 feet at mean low water. The drawbridge operation regulations are listed at 33 CFR 117.605(c).

The waterway is predominantly transited by small recreational vessels at the location of the Rocks Village Bridge.

The bridge is required to open upon a two hour advance notice as a result of infrequent requests to open the draw.

The owner of the bridge, Massachusetts Department of Transportation, requested a temporary

deviation from the regulations to facilitate bridge rehabilitation, replacement of the highway deck on the swing span.

Under this temporary deviation the bridge may remain in the closed position from 7 a.m. on June 3, 2013 through 4 p.m. on June 7, 2013. Vessels that can pass under the closed draw may do so at all times.

In accordance with 33 CFR 117.35(e), the bridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: May 9, 2013.

## DEPARTMENT OF HOMELAND SECURITY

### Coast Guard

#### 33 CFR Part 117

[Docket No. USCG-2013-0375]

#### **Drawbridge Operation Regulation; New Jersey Intracoastal Waterway (NJICW), Atlantic City, NJ**

**AGENCY:** Coast Guard, DHS.

**ACTION:** Notice of deviation from drawbridge regulations.

**SUMMARY:** The Coast Guard has issued a temporary deviation from the operating schedules that govern the Route 30/ Absecon Boulevard Bridge across Beach Thorofare, NJICW mile 67.2 and the US40-322 (Albany Avenue) across Inside Thorofare, NJICW mile 70.0, both at Atlantic City, NJ. This deviation allows the drawbridges to remain closed-to-navigation to accommodate the free movement of vehicles during the re-scheduled 2013 Atlantic City Air Show.

**DATES:** This deviation is effective on Wednesday June 26, 2013, from 9 a.m. until 12 noon and again from 3 p.m. until 6 p.m.

**ADDRESSES:** The docket for this deviation, USCG-2013-0375, is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH". Click on Open Docket Folder on the line associated with this deviation. You may also visit the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey

Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this rule, call or email Terrance Knowles, Environmental Protection Specialist, Fifth Coast Guard District; telephone 757-398-6587, email [Terrance.A.Knowles@uscg.mil](mailto:Terrance.A.Knowles@uscg.mil). If you have questions on viewing the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone 202-366-9826.

**SUPPLEMENTARY INFORMATION:** The New Jersey Department of Transportation requested a temporary deviation from the current operating regulations of the Route 30/Absecon Boulevard Bridge across Beach Thorofare, NJICW mile 67.2 and the US40-322 (Albany Avenue) across Inside Thorofare, NJICW mile 70.0, both at Atlantic City, NJ. The temporary deviation has been requested to ensure the safety of the heavy numbers of pedestrians and vehicular traffic that would be transiting over the bridges for the re-scheduled air show at Bader Field located within the city limits. Under this temporary deviation, both bridges will be closed, effective on Wednesday June 26, 2013, from 9 a.m. until 12 noon and again from 3 p.m. until 6 p.m. Between 12 noon and 3 p.m. on Wednesday June 26, 2013 both bridges will return to their regular operating schedules.

#### **Route 30/Absecon Boulevard Bridge**

The current operating regulation for the Route 30/Absecon Boulevard Bridge across Beach Thorofare is outlined at 33 CFR 117.733(e) which requires that the bridge shall open on signal if at least four hours of notice is given; except that from April 1 through October 31, from 7 a.m. to 11 p.m., the draw need only open on the hour; on July 4, the draw need not open from 9:40 p.m. until 11:15 p.m. to accommodate the annual July 4th fireworks show. Should inclement weather prevent the fireworks event from taking place as planned, the draw need not open from 9:40 p.m. until 11:15 p.m. on July 5th to accommodate the annual July 4th fireworks show; and on the third or fourth Wednesday of August the draw will open every two hours on the hour from 10 a.m. until 4 p.m. and need not open from 4 p.m. until 8 p.m. to accommodate the annual Air Show. In the closed position to vessels, the vertical clearance for this bascule-type bridge is 20 feet, above mean high water.

#### **US40-322 (Albany Avenue) Bridge**

The current operating regulation for the US40-322 (Albany Avenue) Bridge

across Inside Thorofare is outlined at 33 CFR 117.733(f) shall open on signal except that year-round, from 11 p.m. to 7 a.m.; and from November 1 through March 31 from 3 p.m. to 11 p.m., the draw need only open if at least four hours notice is given; from June 1 through September 30, from 9 a.m. to 4 p.m. and from 6 p.m. to 9 p.m., the draw need only open on the hour and half hour; and from 4 p.m. to 6 p.m., the draw need not open; on July 4, the draw need not open from 9:40 p.m. until 11:15 p.m., to accommodate the annual July 4th fireworks show. Should inclement weather prevent the fireworks event from taking place as planned, the draw need not open from 9:40 p.m. until 11:15 p.m. on July 5th to accommodate the annual July 4th fireworks show; and on the third or fourth Wednesday of August, the draw will open every two hours on the hour from 10 a.m. until 4 p.m. and need not open from 4 p.m. until 8 p.m. to accommodate the annual Air Show. In the closed position to vessels, the vertical clearance for this bascule-type bridge is 10 feet, above mean high water.

The majority of the vessels that transit the bridges this time of the year are recreational boats. Vessels able to pass through the bridges in the closed positions may do so at anytime. Both bridges will be able to open for emergencies. The Atlantic Ocean is an alternate route for vessels unable to pass through the bridges in closed positions. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the closure periods for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridges must return to their regular operating schedules immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: May 10, 2013.

vessels, the vertical clearance for this bascule-type bridge is 10 feet, above mean high water.

The majority of the vessels that transit the bridges this time of the year are recreational boats. Vessels able to pass through the bridges in the closed positions may do so at anytime. Both bridges will be able to open for emergencies. The Atlantic Ocean is an alternate route for vessels unable to pass through the bridges in closed positions. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the closure periods for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridges must return to its regular operating schedules immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: May 7, 2013.

Waverly W. Gregory, Jr.,

*Bridge Program Manager, Fifth Coast Guard District.*

BILLING CODE 9110–04–P

**DEPARTMENT OF HOMELAND SECURITY****Coast Guard****33 CFR Part 165**

[Docket Number USCG–2012–0394]

RIN 1625–AA11

**Regulated Navigation Area; Waldo-Hancock Bridge Demolition, Penobscot River, Between Prospect and Verona, ME****AGENCY:** Coast Guard, DHS.**ACTION:** Temporary final rule.

**SUMMARY:** The United States Coast Guard is establishing a regulated navigation area (RNA) on the navigable waters of the Penobscot River between Prospect and Verona, ME, under and surrounding the Waldo-Hancock Bridge in order to facilitate the removal of the trusses, cables, and towers of the Waldo-Hancock Bridge. This temporary final rule (TFR) is necessary to provide for the safety of life on the navigable waters during bridge demolition operations which include hot work and heavy lift operations. This rule implements certain safety measures, including speed restrictions and the temporary suspension of vessel traffic, during

demolition operations that could be hazardous to nearby vessels.

**DATES:** This rule is effective with actual notice on May 10, 2013 through April 30, 2014. This rule is effective in the CFR on May 21, 2013 through April 30, 2014.

**ADDRESSES:** Documents mentioned in this preamble are part of docket [USCG–2012–0394]. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this temporary rule, call or email Ensign Elizabeth V. Morris, Waterways Management Division, Coast Guard Sector Northern New England, telephone 207–767–0398, email [Elizabeth.V.Morris@uscg.mil](mailto:Elizabeth.V.Morris@uscg.mil) or BMC Craig D. Lapiejko, First Coast Guard District, telephone 617–223–8351, email [Craig.D.Lapiejko@uscg.mil](mailto:Craig.D.Lapiejko@uscg.mil). If you have questions on viewing or submitting material to the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone 202–366–9826.

**SUPPLEMENTARY INFORMATION:**

**Table of Acronyms**

COTP Captain of the Port  
 DHS Department of Homeland Security  
 FR Federal Register  
 NPRM Notice of Proposed Rulemaking  
 RNA Regulated Navigation Area  
 TFR Temporary Final Rule

**A. Regulatory History and Information**

On July 16, 2012 the Coast Guard provided the public with prior notice and opportunity to comment when it published a notice of proposed rulemaking (NPRM) entitled Regulated Navigation Area; Original Waldo-Hancock Bridge Removal, Penobscot River, Bucksport, ME, in the **Federal Register** (77 FR 41717). No comments were received. This TFR is the outgrowth of that NPRM. As compared to the NPRM, Coast Guard seeks only to adjust the dates of the originally proposed RNA so as to account for the delay in demolition efforts as reported by The Maine Department of Transportation. This adjustment does not substantially change the intent of the RNA and does not necessitate a new

comment period. In addition, the Coast Guard has determined there is a public safety need to enforce this regulation during the demolition activities, which may begin fewer than 30 days after publication in the **Federal Register**. For this reason, the Coast Guard finds that good cause exists for making this rule effective fewer than 30 days after publication in the **Federal Register** under 5 U.S.C. 553(d)(3).

**B. Basis and Purpose**

Under the Ports and Waterways Safety Act, the Coast Guard has the authority to establish RNAs in defined water areas that are determined to have hazardous conditions and in which vessel traffic can be regulated in the interest of safety. See 33 U.S.C. 1231 and Department of Homeland Security Delegation No. 0170.1.

The purpose of this proposed rule is to ensure the safe transit of vessels in the area, and to protect all persons, vessels, and the marine environment during demolition operations of the original Waldo-Hancock Bridge.

**C. Discussion of the Final Rule**

The removal of the Waldo-Hancock Bridge involves large machinery and construction vessel operations above and in the navigable waters of the Penobscot River. The ongoing operations are, by their nature, hazardous and pose risks both to recreational and commercial traffic as well as to the construction crew. In order to mitigate the inherent risks involved with the removal of a bridge, it is necessary to control vessel movement through the area. The purpose of this TFR is to ensure the safety of waterway users, the public, and construction workers for the duration of the Waldo-Hancock Bridge demolition. Heavy-lift operations are sensitive to water movement, and wake from passing vessels could pose significant risk of injury or death to construction workers.

In order to minimize such unexpected or uncontrolled movement of water, the RNA limits vessel speed and wake of all vessels operating in the vicinity of the bridge removal zone. A five knot speed limit and “NO WAKE” zone will be enforced in the vicinity of the Waldo-Hancock Bridge demolition and will allow for the Captain of the Port (COTP) to suspend all vessel traffic for emergent situations that pose imminent threat to waterway users in the area. The RNA will also protect vessels desiring to transit the area by ensuring that vessels are only permitted to transit when it is safe to do so.

The Coast Guard may close the regulated area described in this rule to all vessel traffic during circumstances that pose an imminent threat to waterway users operating in the area. Complete waterway closures will be made with as much advanced notice as possible. Please note that specific closure dates and times will be posted in the Local Notice to Mariners and disseminated via a Safety Marine Information Broadcast during each closure.

The COTP Sector Northern New England will cause notice of enforcement, suspension of enforcement, or closure of this RNA to be made by appropriate means to ensure the widest distribution among the affected segments of the public. Such means of notification may include, but are not limited to, Broadcast Notice to Mariners and Local Notice to Mariners. In addition, the COTP maintains a telephone line that is staffed 24 hours a day, seven days a week. The public can obtain information concerning enforcement of the regulated navigation area by contacting Coast Guard Sector Northern New England Command Center at 207–767–0303.

**D. Regulatory Analyses**

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

*1. Regulatory Planning and Review*

This TFR is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

We expect the economic impact of this rule to be minimal because this regulated navigation area only requires vessels to reduce speed through a limited portion of the Penobscot River, therefore causing only a minimal delay to a vessel’s transit. In addition, periods when the RNA is closed to all traffic are expected to be of limited number and duration, and we will give advance notice of such closures.

*2. Impact on Small Entities*

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended,

requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received zero comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

(1) This rule will affect the following entities, some of which might be small entities: owners or operators of vessels intending to transit, fish, or anchor in the vicinity of the Waldo-Hancock Bridge.

(2) The rule will not have a significant economic impact on a substantial number of small entities for the following reasons: periods when the RNA is closed to all traffic are expected to be during seasons of low traffic volume, also, vessels will be required to reduce speed through a limited portion of the Penobscot River, and, therefore, will only be caused a minimal delay. Notifications will include, but are not limited to, the Local Notice to Mariners and Broadcast Notice to Mariners to inform the public before, during, and at the conclusion of any RNA enforcement period.

### 3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we want to assist small entities in understanding this rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain

about this rule or any policy or action of the Coast Guard.

### 4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

### 5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

### 6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

### 7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

### 8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

### 9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

### 10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and

does not create an environmental risk to health or risk to safety that may disproportionately affect children.

### 11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

### 12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

### 13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

### 14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.1D, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and find that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves the establishment of an RNA and we have determined that this action will not result in significant environmental impacts. Therefore, it is categorically excluded from further review under paragraph 34(g) of Figure 2–1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and the Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**.

We seek any comments or information that may lead to the discovery of a significant environmental impact from this final rule.

### List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR Part 165 as follows:

**PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS**

■ 1. The authority citation for Part 165 continues to read as follows:

**Authority:** 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T01–0394 to read as follows:

**§ 165.T01–0394 Regulated Navigation Area; Waldo-Hancock Bridge Demolition, Penobscot River, between Prospect and Verona, ME.**

(a) *Location.* The following area is a Regulated Navigation Area (RNA): All navigable waters of Penobscot River between Prospect, ME and Verona, ME, from surface to bottom, within a 300 yard radius of position 44°33'38" N, 068°48'05" W.

(b) *Regulations.*

(1) The general regulations contained in 33 CFR 165.10, 165.11, and 165.13 apply within the RNA.

(2) In accordance with the general regulations, entry into or movement within this zone, during periods of enforcement, is prohibited unless authorized by the Captain of the Port (COTP) Sector Northern New England.

(3) Persons and vessels may request permission to enter the RNA during periods of enforcement by contacting the COTP or the COTP's on-scene representative on VHF–16 or via phone at 207–767–0303.

(4) During periods of enforcement, a speed limit of five knots will be in effect within the regulated area and all vessels must proceed through the area with caution and operate in such a manner as to produce no wake.

(5) During periods of enforcement, vessels must comply with all directions given to them by the COTP or the COTP's on-scene representative. The "on-scene representative" of the COTP

is any Coast Guard commissioned, warrant or petty officer who has been designated by the COTP to act on the COTP's behalf. The on-scene representative may be on a Coast Guard vessel; Maine State Police, Maine Marine Patrol or other designated craft; or may be ashore and communicating with vessels via VHF–FM radio or loudhailer. Members of the Coast Guard Auxiliary may be present to inform vessel operators of this regulation.

(6) During periods of enforcement, upon being hailed by a U.S. Coast Guard vessel by siren, radio, flashing light or other means, the operator of the vessel must proceed as directed.

(7) All other relevant regulations, including but not limited to the Rules of the Road (33 CFR part 84—subchapter E, Inland Navigational Rules) remain in effect within the regulated area and must be strictly followed at all times.

(c) *Enforcement Period.* This regulation is enforceable 24 hours a day with actual notice from May 10, 2013 through April 30, 2014, and enforceable based on constructive notice from May 21, 2013 through April 30, 2014.

(1) Prior to commencing or suspending enforcement of this regulation, the COTP and designated on-scene patrol personnel will notify the public whenever the regulation is being enforced and whenever enforcement is lifted, to include dates and times. The means of notification will include, but are not limited to, Broadcast Notice to Mariners and Local Notice to Mariners, Marine Safety Information Bulletins, or other appropriate means.

(2) Violations of this RNA may be reported to the COTP at 207–767–0303 or on VHF–Channel 16.

Dated: May 10, 2013.

**V.B. Gifford,**

*Captain, U.S. Coast Guard, Acting, First Coast Guard District.*

[Docket No. USCG–2013–0282]

**Safety Zone; Fireworks Events in Captain of the Port New York Zone**

**AGENCY:** Coast Guard, DHS.

**ACTION:** Notice of enforcement of regulation.

**SUMMARY:** The Coast Guard will enforce safety zones in the Captain of the Port New York Zone on the specified dates and times. This action is necessary to ensure the safety of vessels and spectators from hazards associated with fireworks displays. During the enforcement period, no person or vessel may enter the safety zones without permission of the Captain of the Port (COTP).

**DATES:** The regulation for the safety zones described in 33 CFR 165.160 will be enforced on the dates and times listed in the table in **SUPPLEMENTARY INFORMATION**.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this notice, call or email Lieutenant Junior Grade Kristopher Kesting, Coast Guard Sector New York; telephone 718–354–4154, email [Kristopher.R.Kesting@uscg.mil](mailto:Kristopher.R.Kesting@uscg.mil).

**SUPPLEMENTARY INFORMATION:** The Coast Guard will enforce the safety zones listed in 33 CFR 165.160 on the specified dates and times as indicated in Table 1 below. This regulation was published in the **Federal Register** on November 9, 2011 (76 FR 69614).

TABLE 1

1. Heritage of Pride Fireworks Display, Pier D, Hudson River Safety Zone, 33 CFR 165.160(4.2).	<ul style="list-style-type: none"> <li>• Launch site: A barge located in approximate position 40°42'57.5" N, 074°01'34" W (NAD 1983), approximately 375 yards southeast of Pier D, Jersey City, New Jersey. This Safety Zone is a 360-yard radius from the barge.</li> <li>• Date: June 30, 2013.</li> <li>• Time: 9:00 p.m.–10:10 p.m.</li> </ul>
2. Chad Hudson Events Fireworks Display, Pier 90, Hudson River Safety Zone, 33 CFR 165.160(3.8).	<ul style="list-style-type: none"> <li>• Launch site: A barge located in approximate position 40°46'11.8" N, 074°00'14.8" W (NAD 1983), approximately 375 yards west of Pier 90, Manhattan, New York. This Safety Zone is a 360-yard radius from the barge.</li> <li>• Date: July 14, 2013.</li> <li>• Time: 22:00 p.m.–23:10 p.m.</li> </ul>

Under the provisions of 33 CFR 165.160, a vessel may not enter the regulated area unless given express permission from the COTP or the designated representative. Spectator vessels may transit outside the regulated area but may not anchor, block, loiter in, or impede the transit of other vessels. The Coast Guard may be assisted by other Federal, State, or local law enforcement agencies in enforcing this regulation.

This notice is issued under authority of 33 CFR 165.160(a) and 5 U.S.C. 552(a). In addition to this notice in the **Federal Register**, the Coast Guard will provide mariners with advanced notification of enforcement periods via the Local Notice to Mariners and marine information broadcasts. If the COTP determines that the regulated area need not be enforced for the full duration stated in this notice, a Broadcast Notice to Mariners may be used to grant general permission to enter the regulated area.

Dated: May 6, 2013.

**G. Loehl,**

*Captain, U.S. Coast Guard, Captain of the Port New York.*

## DEPARTMENT OF EDUCATION

### 34 CFR Part 600

RIN 1840-AD02

#### **Institutional Eligibility Under the Higher Education Act of 1965, as Amended; Delay of Implementation Date**

**AGENCY:** Office of Postsecondary Education, Department of Education.

**ACTION:** Final regulations; delay of implementation date.

**SUMMARY:** This document provides for a further delay until July 1, 2014, of the implementation date for certain State authorization regulations when an institution's State authorization does not meet the requirements of these regulations by the earlier delayed implementation date of July 1, 2013.

**DATES:** The implementation date is delayed to July 1, 2014, as discussed in the Supplementary Information section of this document.

**FOR FURTHER INFORMATION CONTACT:** Sophia McArdle, U.S. Department of Education, 1990 K Street NW., Room 8019, Washington, DC 20006-8542. Telephone: (202) 219-7078 or via the Internet at: [Sophia.McArdle@ed.gov](mailto:Sophia.McArdle@ed.gov).

**SUPPLEMENTARY INFORMATION:** This document further delays until July 1,

2014, the implementation date of the changes to 34 CFR 600.9(a) and (b) (State authorization regulations) published in the **Federal Register** on October 29, 2010 (75 FR 66833) when an institution's State authorization does not meet the requirements of these regulations by July 1, 2013. The October 29, 2010, final regulations provided for delayed implementation until July 1, 2013, for institutions in States that could not implement the changes in § 600.9 prior to that date and obtained from the State an explanation of how a one-year extension would permit the State to modify its procedures to comply with amended § 600.9. The Department is providing this further extension to qualifying institutions because several States have notified us that they need additional time to develop or complete processes in order for some institutions to be able to comply with the State authorization provisions in § 600.9(a) and (b).

In order for an institution that cannot demonstrate it meets the State authorization requirements under the Department's regulations to receive an extension until July 1, 2014, to implement § 600.9(a) and (b), the institution must obtain from the State an explanation of how an additional one-year extension will permit the State to modify its procedures to comply with amended § 600.9. This explanation must be provided to Department staff upon request.

**Accessible Format:** Individuals with disabilities can obtain this document in an accessible format (e.g., braille, large print, audiotope, or compact disc) on request to the program contact person listed under **FOR FURTHER INFORMATION CONTACT**.

**Electronic Access to This Document:** The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: [www.gpo.gov/fdsys](http://www.gpo.gov/fdsys). At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: [www.federalregister.gov](http://www.federalregister.gov). Specifically, through the advanced search feature of this site, you can limit your search to documents published by the Department.

## DEPARTMENT OF HOMELAND SECURITY

### Federal Emergency Management Agency

#### 44 CFR Part 67

[Docket ID FEMA-2013-0002]

#### Final Flood Elevation Determinations

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Final rule.

**SUMMARY:** Base (1% annual-chance) Flood Elevations (BFEs) and modified BFEs are made final for the communities listed below. The BFEs and modified BFEs are the basis for the floodplain management measures that each community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

**DATES:** The date of issuance of the Flood Insurance Rate Map (FIRM) showing BFEs and modified BFEs for each community. This date may be obtained by contacting the office where the maps are available for inspection as indicated in the table below.

**ADDRESSES:** The final BFEs for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the table below.

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C

Street SW., Washington, DC 20472, (202) 646-4064, or (email) Luis.Rodriguez3@fema.dhs.gov.

**SUPPLEMENTARY INFORMATION:** The Federal Emergency Management Agency (FEMA) makes the final determinations listed below for the modified BFEs for each community listed. These modified elevations have been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67. FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and FIRM available at the address cited below for

each community. The BFEs and modified BFEs are made final in the communities listed below. Elevations at selected locations in each community are shown.

*National Environmental Policy Act.* This final rule is categorically excluded from the requirements of 44 CFR part 10, Environmental Consideration. An environmental impact assessment has not been prepared.

*Regulatory Flexibility Act.* As flood elevation determinations are not within the scope of the Regulatory Flexibility Act, 5 U.S.C. 601-612, a regulatory flexibility analysis is not required.

*Regulatory Classification.* This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

*Executive Order 13132, Federalism.* This final rule involves no policies that have federalism implications under Executive Order 13132.

*Executive Order 12988, Civil Justice Reform.* This final rule meets the applicable standards of Executive Order 12988.

**List of Subjects in 44 CFR Part 67**

Administrative practice and procedure, Flood insurance, Reporting and recordkeeping requirements.

Accordingly, 44 CFR part 67 is amended as follows:

**PART 67—[AMENDED]**

■ 1. The authority citation for part 67 continues to read as follows:

**Authority:** 42 U.S.C. 4001 *et seq.*; Reorganization Plan No. 3 of 1978, 3 CFR, 1978 Comp., p. 329; E.O. 12127, 44 FR 19367, 3 CFR, 1979 Comp., p. 376.

**§ 67.11 [Amended]**

■ 2. The tables published under the authority of § 67.11 are amended as follows:

Flooding source(s)	Location of referenced elevation	* Elevation in feet (NGVD) + Elevation in feet (NAVD) # Depth in feet above ground ^ Elevation in meters (MSL) Modified	Communities affected

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

**44 CFR Part 67**

[Docket ID FEMA-2013-0002]

**Final Flood Elevation Determinations**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Final rule.

**SUMMARY:** Base (1% annual-chance) Flood Elevations (BFEs) and modified BFEs are made final for the communities listed below. The BFEs and modified BFEs are the basis for the floodplain management measures that each community is required either to adopt or to show evidence of being already in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

**DATES:** The date of issuance of the Flood Insurance Rate Map (FIRM) showing BFEs and modified BFEs for each community. This date may be obtained by contacting the office where the maps are available for inspection as indicated in the table below.

**ADDRESSES:** The final BFEs for each community are available for inspection at the office of the Chief Executive Officer of each community. The respective addresses are listed in the table below.

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov).

**SUPPLEMENTARY INFORMATION:** The Federal Emergency Management Agency (FEMA) makes the final determinations listed below for the modified BFEs for each community listed. These modified elevations have been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

This final rule is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67. FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the proof Flood Insurance Study and FIRM available at the address cited below for each community. The BFEs and modified BFEs are made final in the communities listed below. Elevations at selected locations in each community are shown.

*National Environmental Policy Act.* This final rule is categorically excluded

from the requirements of 44 CFR part 10, Environmental Consideration. An environmental impact assessment has not been prepared.

*Regulatory Flexibility Act.* As flood elevation determinations are not within the scope of the Regulatory Flexibility Act, 5 U.S.C. 601-612, a regulatory flexibility analysis is not required.

*Regulatory Classification.* This final rule is not a significant regulatory action under the criteria of section 3(f) of Executive Order 12866 of September 30, 1993, Regulatory Planning and Review, 58 FR 51735.

*Executive Order 13132, Federalism.* This final rule involves no policies that have federalism implications under Executive Order 13132.

*Executive Order 12988, Civil Justice Reform.* This final rule meets the applicable standards of Executive Order 12988.

**List of Subjects in 44 CFR Part 67**

# Proposed Rules

Federal Register

Vol. 78, No. 98

Tuesday, May 21, 2013

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

## OFFICE OF PERSONNEL MANAGEMENT

### 5 CFR Part 532

RIN 3206-AM82

#### Prevailing Rate Systems; Definition of Vanderburgh County, Indiana, to a Nonappropriated Fund Federal Wage System Wage Area

**AGENCY:** U.S. Office of Personnel Management.

**ACTION:** Proposed rule with request for comments.

**SUMMARY:** The U.S. Office of Personnel Management is issuing a proposed rule that would define Vanderburgh County, Indiana, as an area of application county to the St. Clair, IL, nonappropriated fund (NAF) Federal Wage System (FWS) wage area. This change is necessary because there are two NAF FWS employees working in Vanderburgh County and the county is not currently defined to a NAF wage area.

**DATES:** We must receive comments on or before June 20, 2013.

**ADDRESSES:** You may submit comments, identified by "RIN 3206-AM82," using either of the following methods:

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Mail:* Jeanne Jacobson, Acting Deputy Associate Director for Pay and Leave, Employee Services, U.S. Office of Personnel Management, Room 7H31, 1900 E Street NW., Washington, DC 20415-8200, or email [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

**FOR FURTHER INFORMATION CONTACT:** Madeline Gonzalez, by telephone at (202) 606-2838, or by email at [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

**SUPPLEMENTARY INFORMATION:** The U.S. Office of Personnel Management (OPM) is issuing a proposed rule that would define Vanderburgh County, Indiana, as an area of application to the St. Clair, IL, nonappropriated fund (NAF) Federal Wage System (FWS) wage area. The Department of Veterans Affairs (VA)

Evansville Outpatient Clinic in Vanderburgh County has a new Veterans Canteen Service staffed with two NAF FWS employees.

Under section 532.219 of title 5, Code of Federal Regulations, each NAF wage area "shall consist of one or more survey areas, along with nonsurvey areas, if any, having nonappropriated fund employees." Vanderburgh County does not meet the regulatory criteria under 5 CFR 532.219 to be established as a separate NAF wage area; however, nonsurvey counties may be combined with a survey area to form a wage area. Section 532.219 lists the regulatory criteria that OPM considers when defining FWS wage area boundaries:

- Proximity of largest facilities activity in each county;
- Transportation facilities and commuting patterns; and
- Similarities of the counties in:
  - Overall population;
  - Private employment in major industry categories; and
  - Kinds and sizes of private industrial establishments.

Based on an analysis of the regulatory criteria for defining NAF wage areas, we recommend that Vanderburgh, IN, be defined as an area of application to the St. Clair, IL, NAF FWS wage area. The proximity criterion favors the Christian, KY-Montgomery, TN, wage area more than the Hardin-Jefferson, KY or St. Clair, IL, wage areas. The transportation facilities and commuting patterns criterion does not favor one wage area more than another. Although the overall population, employment sizes, and kinds and sizes of private industrial establishments criterion does not favor one wage area more than another, the industrial distribution pattern for Vanderburgh County is similar to both the Christian-Montgomery and Hardin-Jefferson survey areas.

However, the two NAF FWS employees in Vanderburgh County work at the VA Evansville Outpatient Clinic, which is a satellite activity of the Marion VA Medical Center in Williamson County, IL. Williamson County is already defined to the St. Clair NAF wage area. Although a standard review of regulatory criteria shows that the proximity criterion favors defining Vanderburgh County to the Christian-Montgomery wage area, we believe the organizational relationship between the Evansville VA

Outpatient Clinic and its parent facility, the Marion VA Medical Center, supports defining Vanderburgh County to the St. Clair wage area. An additional factor to consider is the relative proximity of the Outpatient Clinic to the Medical Center. The distance between the Evansville VA Outpatient Clinic and the Marion VA Medical Center is 87 miles (140 km). The distance between the Outpatient Clinic and the host activity in the Christian-Montgomery wage area is 100 miles (160 km). The Outpatient Clinic is closer by 13 miles (21 km) to its Medical Center than it is to the host activity in the Christian-Montgomery wage area. Based on our analysis of the organizational relationship and geographic proximity of the Medical Center and its Outpatient Clinic, OPM proposes to redefine Vanderburgh County to the St. Clair NAF wage area.

The proposed St. Clair NAF wage area would consist of one survey county, St. Clair County, IL; one area of application city, St. Louis City, MO; and five area of application counties, Madison and Williamson Counties, IL; Vanderburgh County, IN; and Jefferson and Pulaski Counties, MO.

The Federal Prevailing Rate Advisory Committee, the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, recommended this change by consensus. This change would be effective on the first day of the first applicable pay period beginning on or after 30 days following publication of the final regulations.

#### Regulatory Flexibility Act

I certify that these regulations would not have a significant economic impact on a substantial number of small entities because they would affect only Federal agencies and employees.

#### List of Subjects in 5 CFR Part 532

Administrative practice and procedure, Freedom of information, Government employees, Reporting and recordkeeping requirements, Wages.

U.S. Office of Personnel Management.

**Elaine Kaplan,**  
*Acting Director.*

Accordingly, the U.S. Office of Personnel Management is amending 5 CFR part 532 as follows:

**PART 532—PREVAILING RATE SYSTEMS**

■ 1. The authority citation for part 532 continues to read as follows:

**Authority:** 5 U.S.C. 5343, 5346; § 532.707 also issued under 5 U.S.C. 552.

**Appendix D to Subpart B of Part 532—Nonappropriated Fund Wage and Survey Areas**

■ 2. Appendix D to subpart B is amended by revising the wage area listing for the St. Clair, IL, NAF wage areas to read as follows:

*	*	*	*	*
		<b>Illinois</b>		
*	*	*	*	*
		<b>St. Clair</b>		
		<i>Survey Area</i>		

Illinois:

St. Clair

*Area of Application. Survey area plus:*

Illinois:

Madison

Williamson

Indiana:

Vanderburgh

Missouri: (city)

St. Louis

Missouri: (counties)

Jefferson

Pulaski

**BILLING CODE 6325-39-P**

**OFFICE OF PERSONNEL MANAGEMENT**

**5 CFR Part 532**

**RIN 3206-AM83**

**Prevailing Rate Systems; Definition of Broward County, Florida, to a Nonappropriated Fund Federal Wage System Wage Area**

**AGENCY:** U.S. Office of Personnel Management.

**ACTION:** Proposed rule with request for comments.

**SUMMARY:** The U.S. Office of Personnel Management is issuing a proposed rule that would define Broward County, Florida, as an area of application county to the Miami-Dade, FL, nonappropriated fund (NAF) Federal Wage System (FWS) wage area. This change is necessary because there are three NAF FWS employees working in Broward County and the county is not currently defined to a NAF wage area.

**DATES:** We must receive comments on or before June 20, 2013.

**ADDRESSES:** You may submit comments, identified by “RIN 3206-AM83,” using either of the following methods:

*Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

*Mail:* Jeanne Jacobson, Acting Deputy Associate Director for Pay and Leave, Employee Services, U.S. Office of Personnel Management, Room 7H31, 1900 E Street NW., Washington, DC 20415-8200, or email [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

**FOR FURTHER INFORMATION CONTACT:** Madeline Gonzalez, by telephone at (202) 606-2838, or by email at [pay-leave-policy@opm.gov](mailto:pay-leave-policy@opm.gov).

**SUPPLEMENTARY INFORMATION:** The U.S. Office of Personnel Management (OPM) is issuing a proposed rule that would define Broward County, Florida, as an area of application to the Miami-Dade, FL, nonappropriated fund (NAF) Federal Wage System (FWS) wage area. The Broward County VA Outpatient Clinic in Sunrise, FL, has a new Veterans Canteen Service staffed with three NAF FWS employees.

Under section 532.219 of title 5, Code of Federal Regulations, each NAF wage area “shall consist of one or more survey areas, along with nonsurvey areas, if any, having nonappropriated fund employees.” Broward County does not meet the regulatory criteria under 5 CFR 532.219 to be established as a separate NAF wage area; however, nonsurvey counties may be combined with a survey area to form a wage area. Section 532.219 lists the regulatory criteria that OPM considers when defining FWS wage area boundaries:

- Proximity of largest facilities activity in each county;
- Transportation facilities and commuting patterns; and
- Similarities of the counties in:
  - Overall population;
  - Private employment in major industry categories; and
  - Kinds and sizes of private industrial establishments.

Based on an analysis of the regulatory criteria for defining NAF wage areas, we recommend that Broward County, FL, be defined as an area of application to the Miami-Dade, FL, NAF FWS wage area. The proximity criterion, transportation facilities and commuting patterns criterion, and the overall population, employment sizes, and kinds and sizes of private industrial establishments criterion all favor the Miami-Dade wage area. In addition, the NAF FWS employees in Broward County work at the Broward County VA Outpatient Clinic, which is a satellite activity attached to the Bruce W. Carter

VA Medical Center in Miami-Dade County. Miami-Dade County is the survey county in the Miami-Dade NAF wage area. Based on this analysis, we recommend that Broward County be defined to the Miami-Dade NAF wage area.

The proposed Miami-Dade NAF wage area would consist of one survey county, Miami-Dade County, FL, and two area of application counties, Broward and Palm Beach Counties, FL. The Federal Prevailing Rate Advisory Committee, the national labor-management committee responsible for advising OPM on matters concerning the pay of FWS employees, recommended this change by consensus. This change would be effective on the first day of the first applicable pay period beginning on or after 30 days following publication of the final regulations.

**Regulatory Flexibility Act**

I certify that these regulations would not have a significant economic impact on a substantial number of small entities because they would affect only Federal agencies and employees.

## DEPARTMENT OF AGRICULTURE

### Animal and Plant Health Inspection Service

#### 7 CFR Part 356

[Docket No. APHIS-2007-0086]

RIN 0579-AD50

#### Forfeiture Procedures Under the Endangered Species Act and the Lacey Act Amendments

**AGENCY:** Animal and Plant Health Inspection Service, USDA.

**ACTION:** Proposed rule.

**SUMMARY:** The Animal and Plant Health Inspection Service is one of the agencies that administers the provisions of the Endangered Species Act of 1973, as amended (ESA), and the Lacey Act Amendments of 1981, as amended, that pertain to plants. We are proposing to update our regulations that set forth our forfeiture procedures with regard to plants or plant products seized under the authority of the ESA and the Lacey Act. The proposed changes would make our regulations conform to the requirements of the Civil Asset Forfeiture Reform Act of 2000, increase the monetary threshold of those cases proceeding through judicial forfeiture, provide for the assessment of storage costs of seized property, and make the regulations easier to understand.

**DATES:** We will consider all comments that we receive on or before July 22, 2013.

**ADDRESSES:** You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:*

Federal eRulemaking Portal: Go to <http://www.regulations.gov/>#!/documentDetail;D=APHIS-2007-0086-0001.

- *Postal Mail/Commercial Delivery:*

Send your comment to Docket No. APHIS-2007-0086, Regulatory Analysis and Development, PPD, APHIS, Station

3A-03.8, 4700 River Road Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket may be viewed at <http://www.regulations.gov/#!/docketDetail;D=APHIS-2007-0086> or in our reading room, which is located in Room 1141 of the USDA South Building, 14th Street and Independence Avenue SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799-7039 before coming.

**FOR FURTHER INFORMATION CONTACT:** Dr. John C. Veremis; National CITES Coordinator; PPQ, APHIS, 4700 River Road, Unit 52, Riverdale, MD 20737; (301) 851-2347.

#### SUPPLEMENTARY INFORMATION:

##### Background

The Endangered Species Act (ESA) of 1973, as amended (16 U.S.C. 1531 *et seq.*), was passed to prevent the extinction of native and non-native animals and plants by providing measures to help alleviate the loss of species and their habitats. With certain exceptions, the ESA prohibits activities with these protected species unless authorized by a permit from the U.S. Department of the Interior's Fish and Wildlife Service. The Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES, 27 U.S.T. 1087) is implemented in the United States through the ESA. CITES is a multinational agreement that entered into force on July 1, 1975, to prevent species of wild animals and plants from becoming endangered or extinct because of international trade. The CITES treaty is currently signed by 176 countries. It regulates international trade in specimens of wild animals and plants in order to protect against over-exploitation. Regulations implementing CITES for both wildlife and plants have been promulgated by the Division of Management Authority located within the U.S. Department of Interior, Fish and Wildlife Service. These regulations are found at 50 CFR parts 13, 17, and 23. The Animal and Plant Health Inspection Service (APHIS) of the U.S. Department of Agriculture, as well as the Office of Law Enforcement of the U.S. Fish and Wildlife Service of the Department of Interior, enforces those regulations with regard to plant imports.

Species regulated under CITES are listed in one of three appendices to CITES. Species listed in Appendix I are subject to the most restrictions and species listed in Appendix III are

subject to the fewest. Depending upon the appendix in which the species is listed, its trade is controlled through the issuance of various permits or certificates by the exporting and/or importing countries' management authorities. When a CITES-regulated species is imported into the United States, it must be accompanied by the required permit or certificate. If it is not, the commodity is subject to seizure by, and forfeiture to, the U.S. Government. APHIS, as part of its enforcement work, initiates, with the assistance of other agencies, seizures at U.S. ports of entry, of plants and plant products imported in violation of CITES. APHIS initiates approximately 100 seizures each year for CITES-regulated products imported without the proper CITES documentation. Wood, wood products, medicinal items, and live plants constitute the bulk of property that has been seized in the past. The seizures of these commodities are governed by the forfeiture regulations currently found in APHIS' regulations in 7 CFR part 356, which are the subject of this proposed rule.

The current procedures in part 356 also apply to seizures by APHIS authorized by the Lacey Act Amendments of 1981, as amended (16 U.S.C. 3371 *et seq.*) (Lacey Act). The Lacey Act is the United States' oldest wildlife protection statute. It was first enacted in 1900 and was significantly amended in 1981. The Lacey Act combats trafficking in "illegal" wildlife, fish and plants. The Food, Conservation, and Energy Act of 2008, effective May 22, 2008, amended the Lacey Act by expanding its protection to a broader range of plants and plant products. The Lacey Act makes it unlawful to import, export, transport, sell, receive, acquire, or purchase in interstate or foreign commerce certain plants taken, possessed, transported or sold in violation of the laws of a U.S. State or any foreign law that protects plants. It also makes it unlawful to import, export, transport, sell, receive, acquire or purchase certain plants taken, possessed, transported or sold, in violation of the laws of the United States or an Indian tribe. The Lacey Act also makes it unlawful to make or submit any false record, account, or label for, or any false identification of, any plant that has been or is intended to be moved in interstate or foreign commerce. Additionally, certain plants and plant products must be accompanied at the time of importation with a declaration providing, in part, the scientific name of the plant and where the plant was harvested. The

Lacey Act authorizes the seizure of plants and plant products that are traded contrary to the Lacey Act. The proposed forfeiture procedures described below would apply to these types of seizures when conducted by APHIS.

Another statute bearing on our forfeiture regulations is the Civil Asset Forfeiture Reform Act of 2000 (CAFRA, 18 U.S.C. 983). CAFRA was enacted to provide a more just and uniform procedure for Federal civil forfeitures. Among other things, CAFRA enacted time requirements spanning from the point of seizure to the effective date of forfeiture. CAFRA also eliminated the requirement that a property owner post a bond in order to be able to file a claim.

Because our forfeiture regulations in part 356 predate CAFRA, we are proposing to revise those regulations to bring them into conformity with CAFRA requirements. In addition, we are proposing to amend the requirements for determining the value of seized property, to increase the monetary threshold of those cases proceeding through judicial forfeiture, to provide for the assessment of storage costs of seized property, and to make the regulations easier to understand. A section-by-section analysis of the proposed changes follows.

#### Definitions

The existing regulations in part 356 do not include a section in which key terms used in the regulatory text are defined. In proposed § 356.1, we would define the applicable terms used in the regulatory text of the proposed regulations. These proposed definitions would be in accordance with the way the terms are defined in our existing regulations.

We would define the person and the program responsible for enforcing the proposed rule, namely the *Administrator* and *Plant Protection and Quarantine*. Specifically, we would define *Administrator* as the Administrator, Animal and Plant Health Inspection Service, U. S. Department of Agriculture, or any other person authorized to act for the Administrator. This proposed definition is consistent with the definition of Administrator that we employ elsewhere in the regulations. We would define *Plant Protection and Quarantine (PPQ)* as the Plant Protection and Quarantine program of the Animal and Plant Health Inspection Service, U.S. Department of Agriculture, or any agency delegated to act in its place.

We would define the property that could be seized under the proposed rule. *Property* would be defined as any

plant, plant product, equipment or means of transportation seized under the authority of the ESA or the Lacey Act.

We would define the two types of forfeiture actions that could occur under the proposed regulations. We would define *administrative forfeiture* as a forfeiture action initiated by the Administrator. A *judicial forfeiture* would be defined as a forfeiture action initiated in a U.S. District Court.

We would define the components of notices of proposed forfeiture and notices of seizure. Specifically, we would define *notice of proposed forfeiture* as a document alerting someone with an ownership interest in property valued at less than \$15,000 of PPQ's initiation of an administrative forfeiture action. *Notice of seizure* would be defined as a document alerting an owner that PPQ has taken custody of certain property. The notice would set forth when and where the property was seized, a description of the property, the reason for seizure, and the determined value of the property.

We would define the three written requests that may be filed to request the return of seized property, to request that the forfeiture cease or be mitigated, and to effectuate relinquishment of property. *Claim* would be defined as a written request to the Administrator for the return of property that is the subject of an administrative forfeiture action. The definition would further state that submittal of a claim in an administrative forfeiture action mandates that the matter proceed through judicial forfeiture. A *petition for remission or mitigation of forfeiture* would be defined as a written request to the Administrator that the proposed forfeiture not be completed, or in the alternative, be mitigated. *Waiver of title* would be defined as the divestiture of an owner's right, title, and interest in the property to the United States. If a waiver is signed, the United States becomes the owner of the property and the signatory is relinquishing *all right, title and interest in the property*. Signing a waiver of title would eliminate the need for administrative or judicial forfeiture proceedings, since, upon signature, the property would become that of the United States.

#### Scope of the Regulations

Proposed § 356.2 would outline the scope of the regulations. Specifically, the section would state that the regulations set forth the procedures relating to the forfeiture of any property that is seized by APHIS under the authority of the ESA and the Lacey Act by the Administrator and that is in

PPQ's active or constructive custody. This proposed section is consistent with the corresponding section in the existing regulations.

#### Determination of Property Value

Current § 356.2, which pertains to appraisal of seized property, states that if the property may be lawfully sold in the United States, its value shall be determined by ascertaining the price at which the property or similar property in the ordinary course of trade is freely offered for sale at the time of appraisal, and at a principal market as close as possible to the place of appraisal. The section further states that if the property may not lawfully be sold in the United States, the value thereof shall be determined by other reasonable means.

Under this proposed rule, § 356.3 would provide for the manner in which the Administrator determines the value of seized property. To simplify and streamline our procedures, we are proposing that the value would be the amount shown on the import's associated invoice. We understand that by using this amount, we would likely undervalue the seized commodity. We have taken this factor into account in determining when a forfeiture should proceed administratively versus judicially. Judicial forfeiture would apply to property of greater value, i.e., \$15,000 or higher. In the uncommon event that an invoice is unavailable, or if the invoice is determined by the Administrator not to represent a reasonable value, the value of the property would be determined by ascertaining the price at which similar property is offered for sale at or as near as possible to the time and place of seizure.

#### Notice Upon Seizure; Distribution of Forms

Proposed § 356.4 concerns the notice of seizure and the distribution of forms upon seizure. Some of the requirements contained in this section are incorporated from the existing regulations, but we are also proposing amendments to conform to current practice or to comply with CAFRA.

Proposed paragraph (a) states the purpose of a notice of seizure, when it is to be completed, and the elements to be included. A notice of seizure would be completed by PPQ when the property is seized and would alert the property owner of the seizure. The notice would include information on when and where the property was seized, a description of the property, the reason for seizure, and the property's value. These provisions

are incorporated from the existing regulations.

Proposed paragraph (b) provides that the notice be posted at the port office of the seizing agency for 35 calendar days. The existing regulations also provide for public posting of the notice; however, we are proposing to increase the duration of the posting from 21 to 35 days. If the property is valued at less than \$15,000, administrative forfeiture proceedings would be commenced, and a notice of proposed forfeiture would be posted with the notice of seizure. Under the existing regulations, administrative forfeiture applies to property valued at under \$10,000. Property valued at \$10,000 or more is subject to judicial forfeiture. We are proposing to raise the threshold for judicial forfeiture to \$15,000 in order to account for inflation and to allow for the most cost-effective use of the U.S. Attorney's resources in pursuing judicial forfeiture cases. We welcome comment on raising the threshold for judicial forfeiture up to \$500,000.

Proposed paragraph (c) provides that if the owner of the property is present when property is seized for forfeiture, the owner would be given a copy of the notice of seizure; a form providing for a waiver of title; a form providing for the petition for remission or mitigation of forfeiture; and, if the property is valued at less than \$15,000, a copy of the notice of proposed forfeiture and a form providing for the filing of a claim. This proposed paragraph would codify in the regulations procedures that are already being employed in the field.

In the alternative, if the owner of the property is not present, proposed paragraph (d) would provide that all applicable notices and forms be sent by certified or registered mail, return receipt requested, to the owner and to any other persons having an interest in the property. The forms would be mailed not more than 60 calendar days after the date of seizure. The proposed 60-day notice of seizure is incorporated from CAFRA.

#### *Waiver of Title*

Proposed § 356.5 provides for a waiver of title. Under the existing regulations, such a waiver, referred to as a waiver of forfeiture, occurs when an owner voluntarily decides not to challenge the forfeiture of his or her property and instead to divest the property to the United States. The owner must sign a statement indicating that he or she is waiving his or her rights to any procedures relating to the forfeiture. Under this proposed rule, we would continue to allow for the waiver of forfeiture proceedings. We would use

the term waiver of title, however, which we view as more precise than waiver of forfeiture. Provided that the value of the property does not exceed \$500,000, in which case judicial forfeiture would be required, the owner of the seized property may waive his or her title to the property by submitting a waiver of title form to the port office of the seizing agency or to the Administrator. Once the form has been submitted, all right, title, and interest in the property would be forfeited to the United States, thus eliminating the need for any further action by the Administrator with regard to the forfeiture.

#### *Judicial Forfeiture; Property Valued at \$15,000 or Greater*

Proposed § 356.6 would elevate the current monetary threshold for a case to be referred to a U.S. Attorney's Office for institution of judicial forfeiture in U.S. District Court. Currently, property having a retail value over \$10,000 will proceed through judicial forfeiture. We propose that the value be increased to \$15,000, as discussed above, in order to account for inflation and to allow for the most efficient use of the U.S. Attorney's resources. Also, as discussed earlier, appraisal of the value of the property would be based upon the readily accessible invoice price, which presumably would be below retail value. We anticipate that more cases will fall below the \$15,000 threshold and, consequently, be forfeited administratively. We welcome comment on raising the threshold for judicial forfeiture up to \$500,000, which would likely result in even more cases being forfeited administratively.

#### *Administrative Forfeiture; Property Valued at Less Than \$15,000*

Proposed § 356.7 sets forth the administrative forfeiture procedure for property valued at less than \$15,000.

Proposed paragraph (a) relates to the notice of proposed forfeiture, which alerts any interested party that PPQ is initiating an administrative forfeiture action. Proposed paragraph (a)(1) states that the notice of seizure referred to in § 356.4 shall be accompanied by a notice of proposed forfeiture but also indicates that the two notices may be consolidated into one document.

Proposed paragraph (a)(2) indicates that the notice would have to include information on when and where the property was seized, a description of the seized property, including its value, and the reason for seizure. The notice would indicate that interested parties would have the option to file a petition for remission or mitigation of forfeiture. The notice also would provide that

unless a claim is filed, the property will be forfeited to the United States. Lastly, the notice would indicate the time period allowed for filing a claim. If a claim were to be filed, the administrative forfeiture would cease and, instead, the matter would be referred for judicial forfeiture. The proposed requirements pertaining to the notice are incorporated from the existing regulations.

Proposed § 356.7(b) states that, in the absence of a claim, forfeiture would occur 36 calendar days after the owner was handed or mailed the notice of seizure and proposed forfeiture. In the event that the notice of seizure and proposed forfeiture was not received (as indicated by return of the notice sent by certified or registered mail), the property would be forfeited to the United States in 66 calendar days, which is 31 calendar days after the date the notice of seizure is no longer required to be posted. These proposed timeframes stem from the time requirements to file a claim, as enacted by CAFRA. Once property is forfeited to the United States, the owner would no longer have any right or title to, or interest in, the property.

Proposed § 356.7(c)(1) states that although the administrative forfeiture is effective upon the conclusion of the time period specified in proposed paragraph (b) and that no other action would be required, PPQ nonetheless would complete a declaration of forfeiture. Proposed paragraphs (c)(2) and (c)(3) set forth the type of information that is to be included in the declaration and how (certified or registered mail) and to whom (the owner and any other persons known by the Administrator to have an interest in the property) the declaration is mailed. These proposed requirements closely parallel the ones pertaining to notices of seizure and forfeiture and are adapted from the existing regulations.

Proposed § 356.7(d) addresses how a claim may be filed to contest the forfeiture of property valued at less than \$15,000. Proposed paragraph (d)(1) states that a document would be considered to be a claim only when it is clearly labeled with the word "Claim," identifies the specific property being claimed, states the claimant's interest in the property, and is made under oath and subject to penalty of perjury. These proposed requirements would conform to CAFRA's description of what items shall be included in a claim. Proposed paragraph (d)(2) would state that the claim must be filed with the Administrator via the National CITES Coordinator located in Riverdale, MD. The claim would be considered

“filed” when it is received by the National CITES Coordinator. It would have to be filed within 35 calendar days after the notice of seizure had either been personally handed or mailed to the owner. If the owner did not receive the notice of seizure, then the claim may be filed within 65 calendar days of seizure, which is 30 calendar days after the date the notice of seizure is no longer required to be posted. These proposed timeframes are in compliance with CAFRA. Proposed paragraph (d)(3) states that if a claim is filed, the administrative forfeiture is terminated, and the matter will be referred to the U.S. Attorney’s Office for the district in which the property was seized for institution of judicial forfeiture in U.S. District Court. These procedures are incorporated from the existing regulations. To make the regulations compliant with CAFRA, however, the proposed paragraph would not include the existing requirement that a claimant post a bond in order to be eligible to contest a forfeiture.

#### *Petition for Remission or Mitigation of Forfeiture*

Proposed § 356.8 sets forth the procedures with regard to filing a petition for remission or mitigation of administrative forfeiture. The petition is a written request to the Administrator that the proposed forfeiture not be completed, or in the alternative, be mitigated.

As in the corresponding section of the existing regulations, proposed paragraph (a) would provide that any person who has an interest in the property may file a petition for remission or mitigation of forfeiture. The proposed paragraph clarifies the procedures for submitting such a petition by providing an address. The petition is to be filed with the Administrator by submitting it to the National CITES Coordinator in Riverdale, MD. It is considered “filed” when it is received by the National CITES Coordinator.

Proposed paragraph (b) describes the information required for a petition, namely that it be marked “Petition for Remission or Mitigation of Forfeiture” and contain a description of the property, when and where it was seized, evidence of the petitioner’s interest in the property, and all facts and circumstances relied upon by the petitioners to justify remission or mitigation of forfeiture. These requirements are incorporated from the existing regulations.

Proposed paragraph (c) states that the petition shall be signed by the petitioner or the petitioner’s attorney under oath

and upon penalty of perjury. If the petitioner is a business, the petition shall be signed by a partner, officer, or the petitioner’s attorney under oath and upon penalty of perjury. These requirements are incorporated from the existing regulations.

Proposed paragraph (d) provides that the Administrator would decide whether to grant relief. In making the decision, he or she would consider the petitioner’s submission and any other available information relating to the matter. The Administrator also is authorized to take testimony. This paragraph is also incorporated from the existing regulations.

Proposed paragraph (e) states that if the Administrator finds that there are mitigating circumstances justifying remission or mitigation, the Administrator may remit or mitigate with terms and conditions as he or she deems reasonable and just. However, remission or mitigation will not be granted if such action would frustrate the purposes of the act under which authority the property had been seized. As an example, remission or mitigation typically will not be granted with respect to plants that are without documentation required by CITES. This paragraph is also incorporated from the existing regulations, albeit with some minor editorial changes.

Proposed paragraphs (f) through (h) provide that the Administrator shall notify the petitioner in writing whether the petition was granted or denied, and the reason for the decision. The notification would be sent by registered or certified mail, return receipt requested. If the petition is denied fully or in part, the petitioner may file a supplemental petition within 14 calendar days from the date the petitioner received the denial. The Administrator would notify the petitioner in writing as to whether the supplemental petition was granted or denied and would provide the reason for the decision. The Administrator’s decision would be discretionary and unreviewable. If a petition is received within 30 calendar days of the initial posting of a notice of seizure, the applicable property would not be forfeited until the Administrator makes his or her initial determination on the petition. These procedures do not differ substantively from the ones in the existing regulations, except for the insertion of specified time periods and for the statement clarifying the point that the Administrator’s decision is discretionary and unreviewable.

Proposed paragraph (i) makes clear that submitting a petition for property valued at less than \$15,000 does not

trigger the matter’s being referred for judicial forfeiture. In order for the administrative forfeiture to be terminated and the matter referred for judicial forfeiture, a claim must be filed in accordance with § 356.7(d).

#### *Storage and Care; Recovery of Costs*

The existing regulations provide that seized property shall be stored and, if living maintained and cared for, in a place determined by the Administrator to be most appropriate and convenient with due regard to the expense involved. The regulations do not, however, provide for the recovery of these costs by APHIS. The cost of transporting, storing, caring for, maintaining, and disposing of seized property is staggering, and we are unable to continue to assume this financial burden.

Proposed § 356.9, therefore, would provide for the recovery of these costs. Proposed paragraph (a) provides that the Administrator determines where the seized property will be stored or maintained, as do the existing regulations. Proposed paragraph (b) stipulates who will be responsible for handling, maintenance, and storage costs associated with seized property. If the property is seized and forfeited under the ESA, by statute any person whose act or omission was the basis for the seizure would be responsible for the cost of the transfer, board, handling, or storage of such property. If the property is seized with regard to a violation of the Lacey Act, by statute any person convicted or assessed a civil penalty thereof, would be responsible for the cost of the storage, care, and maintenance of the property at issue in the violation. These regulations reflect those provisions. Proposed paragraph (c) states that APHIS shall send to the responsible party an itemized invoice for the amount of the expenses and include instructions on the time and manner of payment. Proposed paragraph (d) allows for the recipient of the invoice to file a written objection, provided it is filed within 30 calendar days of the date upon which the invoice is received. An objection is deemed “filed” when it is received by the National CITES Coordinator in Riverdale, MD. Finally, proposed paragraph (e) states that the Administrator will promptly review the objections and mail his or her final decision to the party who filed the objection. That decision would constitute the final administrative action on the matter.

### Disposal of Property

The existing regulations do not set forth requirements for disposal of seized property. Proposed § 356.10 would contain such requirements. The section would provide that upon a waiver of title or upon forfeiture, the property would be disposed of in a manner that is most convenient, appropriate, and in accordance with law. Additionally, the person responsible for the violation that was the basis of the seizure would not benefit from the disposal. This proposed provision would prevent the violator from attempting to repurchase the property if the Government, after gaining title to the property, subsequently auctions it.

### Computation of Time

Lastly, proposed § 356.11 makes clear that the references in part 356 to “calendar days” mean that Saturdays, Sundays, and Federal holidays are included in computing the time allowances for meeting the various time-sensitive requirements, such as for filing a claim, described above; however, if time requirements expire on a Saturday, Sunday, or Federal holiday, the time period is extended to the next business day. The requirements contained in this section are incorporated from the existing regulations.

### Executive Orders 12866 and 13563 and Regulatory Flexibility Act

This proposed rule has been determined to be significant for the purposes of Executive Order 12866 and, therefore, has been reviewed by the Office of Management and Budget.

We have prepared an economic analysis for this rule. The economic analysis provides a cost-benefit analysis, as required by Executive Orders 12866 and 13563, which direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. The economic analysis also examines the potential economic effects of this rule on small entities, as required by the Regulatory Flexibility Act. The economic analysis is summarized below. Copies of the full analysis are available by contacting the person listed under **FOR FURTHER INFORMATION CONTACT** or on the Regulations.gov Web site (see **ADDRESSES** above for

instructions for accessing Regulations.gov).

This proposed rule would amend the forfeiture regulations in 7 CFR part 356. Among other things, the proposed rule would change the basis for appraising the value of seized property; increase the monetary threshold of seized items requiring judicial forfeiture from \$10,000 to \$15,000; provide for the assessment and recovery of the costs of transferring, storing, caring for and maintaining seized plants and plant products; and prohibit a violator from attempting to buy the unlawfully imported item if it is sold at auction by APHIS.

Among the expected benefits of this proposed rule is that forfeiture provisions would be made easier to understand by importers and the general public than are the current ones. An example is the proposed streamlining of the appraisal process for seized property. Under this proposed rule, the value of the property would be that shown on the imported item’s invoice, which is a much simpler formula for determining value than that specified under the current regulations.

The increase in the threshold value for judicial forfeiture would allow for more efficient use of U.S. Attorney resources. We anticipate that more cases will proceed through administrative forfeiture, rather than judicial, as a result of this proposed change.

This proposed rule would also relieve APHIS and U.S. taxpayers of the financial burden associated with the transfer, storage, care, and maintenance of seized property by requiring the person whose act or omission was the basis for the seizure to bear these costs.

Costs of the proposed rule would be minimal. Because the threshold for a case proceeding through judicial forfeiture would be raised from \$10,000 to \$15,000, there would be more cases proceeding through administrative forfeiture. However, any additional demands on administrative resources are expected to be manageable, and would not represent a net increase in costs for the Federal Government. Costs incurred with regard to the transfer, storage, care, and maintenance costs of seized property would be appropriately directed from the Federal Government to persons responsible for violating the ESA or Lacey Act.

It is clear that most entities covered by the proposed rule are considered small, as most importers are considered small. However, the only entities affected would be ones that violate the Endangered Species Act or the Lacey Act, such as by attempting to import illegal plants or submitting false records

for plant or plant product imports. The majority of the imports are consistent with these Acts.

Under these circumstances, the Administrator of the Animal and Plant Health Inspection Service has determined that this action would not have a significant economic impact on a substantial number of small entities.

### Executive Order 12372

This program/activity is listed in the Catalog of Federal Domestic Assistance under No. 10.025 and is subject to Executive Order 12372, which requires intergovernmental consultation with State and local officials. (See 7 CFR part 3015, subpart V.)

### Executive Order 12988

This proposed rule has been reviewed under Executive Order 12988, Civil Justice Reform. If this proposed rule is adopted: (1) All State and local laws and regulations that are inconsistent with this rule will be preempted; (2) no retroactive effect will be given to this rule; and (3) administrative proceedings will not be required before parties may file suit in court challenging this rule.

### Paperwork Reduction Act

This proposed rule contains no new information collection or recordkeeping requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). The information collection or recordkeeping requirements included in the regulations that would be amended by this proposed rule have been approved by the Office of Management and Budget (OMB) under OMB control numbers 0579-0076 and 0579-0349.

### List of Subjects in 7 CFR Part 356

Administrative practice and procedure, Endangered and threatened species, Exports, Imports, Law enforcement, Plants (agriculture), Reporting and recordkeeping requirements, Seizures and forfeitures.

■ Accordingly, we propose to revise 7 CFR part 356 to read as follows:

### PART 356—FORFEITURE PROCEDURES

- Sec.
- 356.1 Definitions.
  - 356.2 Property subject to forfeiture procedures.
  - 356.3 Determination of property value.
  - 356.4 Notice upon seizure; distribution of forms.
  - 356.5 Waiver of title.
  - 356.6 Judicial forfeiture; property valued at \$15,000 or greater.
  - 356.7 Administrative forfeiture; property valued at less than \$15,000.
  - 356.8 Petition for remission or mitigation of forfeiture.

356.9 Storage; recovery of costs.

356.10 Disposal of property.

356.11 Computation of time.

**Authority:** 16 U.S.C. 1540(f); 16 U.S.C. 3374; 7 CFR 2.22, 2.80, and 371.3.

### § 356.1 Definitions.

*Administrative forfeiture.* A forfeiture action initiated by the Administrator.

*Administrator.* The Administrator, Animal and Plant Health Inspection Service, U.S. Department of Agriculture, or any other person authorized to act for the Administrator.

*Claim.* A written request to the Administrator for the return of property that is the subject of an administrative forfeiture action. Submittal of a claim in an administrative forfeiture action mandates that the matter proceed through judicial forfeiture.

*Judicial forfeiture.* A forfeiture action initiated in a U.S. District Court.

*Notice of proposed forfeiture.* A document alerting someone with an ownership interest in property valued at less than \$15,000 that Plant Protection and Quarantine is initiating an administrative forfeiture action against that property.

*Notice of seizure.* A document alerting someone with an ownership interest in property that Plant Protection and Quarantine has taken custody of that property. The notice sets forth when and where the property was seized, a description of the property, the reason for seizure, and the determined value of the property.

*Petition for remission or mitigation of forfeiture.* A written request to the Administrator that the proposed forfeiture not be completed, or in the alternative, be mitigated.

*Plant Protection and Quarantine (PPQ).* The Plant Protection and Quarantine program of the Animal and Plant Health Inspection Service, U.S. Department of Agriculture, or any agency delegated to act in its place.

*Property.* Any plant, plant product, equipment, or means of transportation seized under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), or the Lacey Act Amendments of 1981, as amended (16 U.S.C. 3371 *et seq.*).

*Waiver of title.* The divestiture of an owner's right, title and interest in the property to the United States. If a waiver is signed, the United States becomes the owner of the property and the signatory relinquishes *all right, title and interest in the property.*

### § 356.2 Property subject to forfeiture procedures.

This part sets forth the procedures relating to the forfeiture of any property

seized by APHIS under the authority of the Endangered Species Act of 1973, as amended (16 U.S.C. 1531 *et seq.*), or the Lacey Act Amendments of 1981, as amended (16 U.S.C. 3371 *et seq.*), by the Administrator, and is in PPQ's actual or constructive custody.

### § 356.3 Determination of property value.

Promptly following seizure of the property, the Administrator shall determine the value of the seized property. If an invoice of the property is available, the value is the amount as represented on the invoice. If an invoice is not available, or is determined by the Administrator not to represent a reasonable value, the value of the property shall be determined by ascertaining the price at which similar property is offered for sale at or as near as possible to the time and place of seizure.

### § 356.4 Notice upon seizure; distribution of forms.

(a) A notice of seizure shall be completed when the property is seized. This notice alerts an owner that PPQ has taken custody of certain property. The notice sets forth the date, time, and place the property was seized; a description of the seized property, including any identifying information; the reason for seizure, including the provisions of the act, permit, certificate, or regulations allegedly violated and under which the property is subject to forfeiture; and the determined value of the property.

(b) A notice of seizure shall be posted in a publicly accessible location at the port office of the seizing agency and shall remain displayed for a period of 35 calendar days. The date and time the notice is posted shall be indicated on the notice. If the property is valued at less than \$15,000, a notice of proposed forfeiture shall be posted with the notice of seizure. The notice of seizure and notice of proposed forfeiture may be consolidated into one document.

(c) If the owner of the property is present at seizure, the owner shall receive a copy of the notice of seizure. The owner also shall receive copies of forms providing for filing, at the owner's discretion, a waiver of title and a petition for remission or mitigation of forfeiture. If the property is valued at less than \$15,000, the owner furthermore shall receive a copy of the notice of proposed forfeiture and a form providing for filing, at the owner's discretion, a claim.

(d) If the owner of the property is not present at seizure, the notices and forms provided under paragraph (c) of this section shall be sent by certified or

registered mail, return receipt requested, to the owner and to any other persons having an interest in the property, to their addresses last known to PPQ. The forms shall be mailed as soon as is practical and not more than 60 calendar days after the date of seizure.

### § 356.5 Waiver of title.

(a) A waiver of title is the divestiture of an owner's rights, title, and interest in the property to the United States. Provided the value of the property does not exceed \$500,000, the owner of any seized property may waive title by completing and signing a waiver of title form provided to the owner at the time of seizure. The form shall be submitted to the port office of the seizing agency or to the Administrator by submitting it to the National CITES Coordinator, PPQ, APHIS, 4700 River Road Unit 52, Riverdale, MD 20737.

(b) Upon submittal of the waiver of title to the port office or to the Administrator, all right, title, and interest in the property by the owner of the property is fully and finally forfeited to the United States. By submitting the waiver of title, the owner also waives and relinquishes all rights to judicial review of the seizure and forfeiture and any further rights or proceedings relative to the property. Once property is thus forfeited to the United States, no other right, title, or interest of the owner shall exist therein, and no further notice or declaration by the Administrator shall be required.

### § 356.6 Judicial forfeiture; property valued at \$15,000 or greater.

Promptly following the seizure of any property appraised at a value of \$15,000 or greater, the matter will be referred to the U.S. Attorney's Office for the district in which the property was seized for institution of judicial forfeiture proceedings in U.S. District Court.

### § 356.7 Administrative forfeiture; property valued at less than \$15,000.

(a) *Notice of proposed forfeiture.* (1) For property valued at less than \$15,000, the notice of seizure shall also be accompanied by a notice of proposed forfeiture, which notifies any interested party that PPQ is initiating the administrative forfeiture process. The notice of seizure and notice of proposed forfeiture may be consolidated into one document.

(2) The notice of proposed forfeiture shall set forth the date, time, and place the property was seized; a description of the seized property, including any identification information; the reason for seizure, including the provisions of the act, permit, certificate, or regulations

allegedly violated and under which the property is subject to forfeiture; the determined value of the property; the option for interested parties to file a petition for remission or mitigation of forfeiture; and a notice providing that the property will be forfeited to the United States unless a claim is filed. The notice shall also set forth the time period during which a claim must be filed and shall indicate that if a claim is filed, the matter will be adjudicated in U.S. District Court.

(b) *Forfeiture.* If a claim is not filed in accordance with paragraph (d) of this section, the property is forfeited to the United States 36 calendar days after the owner either was handed in person or mailed the notice of seizure and proposed forfeiture. In the event that the notice of seizure and proposed forfeiture was not received, as evidenced by return receipt, the property will be forfeited to the United States 31 calendar days after the date the notice of seizure is no longer required to be posted at the port office (i.e., 66 calendar days after seizure). Once property is forfeited to the United States, the owner no longer retains any right or title to, or interest in, the property.

(c) *Declaration of forfeiture.* (1) Administrative forfeiture is effective upon the conclusion of the time period specified in paragraph (b) of this section. No other action is required to effectuate forfeiture. Within a reasonable time after forfeiture, PPQ shall complete a declaration of forfeiture.

(2) The declaration of forfeiture shall be sent by certified or registered mail, return receipt requested, to the owner and to any other persons having an interest in the property known to the Administrator, to their addresses last known to PPQ.

(3) The declaration of forfeiture shall include the date, time, and place the property was seized; a description of the seized property, including any identification information; the reason for seizure, including the provisions of the act, permit, certificate, or regulations violated and under which the property was forfeited; and the duration and place the notice of proposed forfeiture was posted and to whom and the manner in which service was effectuated. The declaration also shall state that no claim was received and, therefore, through default, the allegations contained in the notice of proposed forfeiture are admitted as true. The declaration shall conclude with an order providing that the property is condemned and forfeited to the United

States and that no other right, title, or interest exists therein.

(d) *Claim.* (1) An owner may contest the forfeiture of property valued at less than \$15,000 by filing a claim, which is a written request for the return of property. A claim shall be labeled a "Claim" and identify the specific property being claimed, state the claimant's interest in the property, and be made under oath and subject to penalty of perjury.

(2) A claim shall be filed with the Administrator by submitting it to the National CITES Coordinator, PPQ, APHIS, 4700 River Road Unit 52, Riverdale, MD 20737. The claim is deemed filed when it is received by the National CITES Coordinator. It shall be filed within 35 calendar days after the notice of seizure was either personally handed or mailed to the owner. If the owner did not receive the notice of seizure, then the claim may be filed no later than 30 calendar days after the date the notice of seizure is no longer required to be posted (i.e., 65 calendar days after seizure).

(3) If a claim is filed, the administrative forfeiture is terminated, and the matter will be referred to the U.S. Attorney's Office for the district in which the property was seized for institution of judicial forfeiture in U.S. District Court.

#### **§ 356.8 Petition for remission or mitigation of forfeiture.**

(a) Once a notice of seizure has been issued for property valued at \$15,000 or less, any person who has an interest in the property may file a petition for remission or mitigation of forfeiture. A petition shall be filed with the Administrator by submitting it to the National CITES Coordinator, PPQ, APHIS, 4700 River Road Unit 52, Riverdale, MD 20737. The petition is deemed filed when it is received by the National CITES Coordinator.

(b) A petition shall be labeled a "Petition for Remission or Mitigation of Forfeiture" and contain the following information:

(1) A description of the property;

(2) The time, date, and place of seizure;

(3) Evidence of the petitioner's interest in the property, such as contracts, bills of sale, invoices, security interests, certificates of title; and

(4) A statement of all facts and circumstances relied upon by the petitioners to justify remission or mitigation of forfeiture.

(c) The petition shall be signed by the petitioner or the petitioner's attorney under oath and upon penalty of perjury. If the petitioner is a business, the

petition shall be signed by a partner, officer, or petitioner's attorney under oath and upon penalty of perjury.

(d) Upon receiving the petition, the Administrator shall decide whether to grant relief. In making his or her decision, the Administrator shall consider the information submitted by the petitioner, as well as any other available information relating to the matter, and may require that testimony be taken.

(e) If the Administrator finds that there are mitigating circumstances justifying remission or mitigation, the Administrator may remit or mitigate with terms and conditions as he or she deems reasonable and just. However, remission or mitigation will not be granted if such action would frustrate the purposes of the act under which authority the property had been seized. As an example, this section typically would not allow for remission or mitigation with respect to plants that are without documentation required by the Convention on International Trade in Endangered Species of Wild Fauna and Flora.

(f) The Administrator shall notify the petitioner in writing as to whether the petition was granted or denied and shall state the reason for the decision. The notification shall be sent by registered or certified mail, return receipt requested.

(g) If the petition is denied fully or in part, the petitioner may file a supplemental petition, but a supplemental petition will not be considered unless it is received within 14 calendar days from the date on which the petitioner received the denial. The Administrator shall notify the petitioner in writing as to whether the supplemental petition was granted or denied and shall state the reason for the decision. The Administrator's decision is discretionary and unreviewable.

(h) If a petition is received within 30 calendar days of the initial posting of a notice of seizure, no property will be forfeited until the Administrator makes his or her initial determination on the petition.

(i) If a petition is submitted for property valued at less than \$15,000, the matter will not be referred for judicial forfeiture; in order for that to occur, a claim must be filed in accordance with § 356.7(d).

#### **§ 356.9 Storage and care; recovery of costs.**

(a) Seized property shall be stored in a place that, in the opinion of the Administrator, is most convenient and

appropriate, with due regard to the expense involved.

(b) If any property is seized and forfeited under the Endangered Species Act, 16 U.S.C. 1531 *et seq.*, any person whose act or omission was the basis for the seizure shall be assessed the amount of the expenses incurred in connection with the transfer, board, handling (including care and maintenance of live plants), or storage of such property. If any property is seized with regard to a violation of the Lacey Act Amendments of 1981, 16 U.S.C. 3371 *et seq.*, any person convicted or assessed a civil penalty under the Lacey Act shall be assessed the amount of the expenses incurred in connection with the storage, care, and maintenance of the property at issue in the violation.

(c) Within a reasonable time after forfeiture, APHIS shall send to such person by registered or certified mail, return receipt requested, an invoice for the amount of the expenses. The invoice shall contain an itemized statement of the applicable expenses, together with instructions on the time and manner of payment. Payment shall be made in accordance with the invoice.

(d) The recipient of any assessment of expenses under this section who has an objection to the reasonableness of the expenses described in the invoice may file, within 30 calendar days of the date upon which the invoice is received, written objections with the Administrator by submitting it to the National CITES Coordinator, PPQ, APHIS, 4700 River Road Unit 52 Riverdale, MD 20737. An objection is deemed filed when it is received by the National CITES Coordinator.

(e) The Administrator will promptly review the objections and mail his or her final decision to the party who filed the objection. The Administrator's decision shall constitute the final administrative action on the matter.

#### **§ 356.10 Disposal of property.**

Upon a waiver of title or upon forfeiture of property to the United States under this part, such property shall be disposed of in a manner that is most convenient, appropriate, and in accordance with law. The person responsible for the violation that was the basis of the seizure shall not receive financial or other gain from the disposal.

#### **§ 356.11 Computation of time.**

Saturdays, Sundays, and Federal holidays shall be included in computing the time allowed for in this part, provided that, when such time expires on a Saturday, Sunday, or Federal holiday, such period shall be extended

to include the next following business day.

Done in Washington, DC, this 14th day of May 2013.

**Max Holtzman,**

*Acting Deputy Under Secretary for Marketing and Regulatory Programs.*

[FR Doc. 2013-12048 Filed 5-20-13; 8:45 am]

**BILLING CODE 3410-34-P**

## **DEPARTMENT OF TRANSPORTATION**

### **Federal Aviation Administration**

#### **14 CFR Part 39**

**[Docket No. FAA-2013-0422; Directorate Identifier 2012-NM-097-AD]**

**RIN 2120-AA64**

#### **Airworthiness Directives; Airbus Airplanes**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** We propose to adopt a new airworthiness directive (AD) for certain Airbus Model A330-200 and -300 series airplanes; Model A340-200 and -300 series airplanes; and Model A340-541 and -642 airplanes. This proposed AD was prompted by reports of wing tip brakes (WTBs) losing their braking function in service due to heavy wear on the brake discs. WTBs are designed to stop and hold the mechanical transmission of slats and flaps in certain failure cases. This proposed AD would require repetitive operational tests of certain WTB pressure-off-brakes (POBs) for performance on the flap and slat systems, and replacement of any affected WTB with a new or serviceable part if the test fails. This proposed AD would also require eventual replacement of all affected WTBs with a new part, which would terminate the repetitive tests. We are proposing this AD to prevent loss of the WTB braking function, and consequent inability of the flap or slat system to be stopped and held in position during operation, which could result in loss of control of the airplane.

**DATES:** We must receive comments on this proposed AD by July 5, 2013.

**ADDRESSES:** You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the Accomplishment Instructions for submitting comments.
- *Fax:* (202) 493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations,

M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.

• *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Airbus SAS—Airworthiness Office—EAL, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email [account.airworth-eas@airbus.com](mailto:account.airworth-eas@airbus.com); Internet <http://www.airbus.com>. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425-227-1221.

#### **Examining the AD Docket**

You may examine the AD docket on the Internet at <http://www.regulations.gov>; or in person at the Docket Operations office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone (800) 647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

**FOR FURTHER INFORMATION CONTACT:** Vladimir Ulyanov, Aerospace Engineer, International Branch, ANM-116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, Washington 98057-3356; telephone (425) 227-1138; fax (425) 227-1149.

#### **SUPPLEMENTARY INFORMATION:**

##### **Comments Invited**

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2013-0422; Directorate Identifier 2012-NM-097-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We

will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

### Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA Airworthiness Directive 2012–0082, dated May 15, 2012 (referred to after this as the Mandatory Continuing Airworthiness Information, or “the MCAI”), to correct an unsafe condition for the specified products. The MCAI states:

Several wing tip brakes (WTB) have lost their braking function in service. Inspection by the manufacturer of these units revealed that the drive shaft was found free to rotate and the braking discs worn. Investigations are still on-going to determine the exact root cause.

The WTB is a Pressure-Off-Brake (POB) with a multi-plate friction device operated by a spring pack. In operation, the brakes are released by dual hydraulic pistons controlled by electro-hydraulic solenoid valves, energized by the Slat Flap Control Computers (SFCC). The purpose of the WTBs (4 per aeroplane) is to stop and hold the mechanical transmission in position in some specific failure cases. In such cases, the SFCCs de-energize their WTB solenoids, which remove the hydraulic pressure and lead to the application of the brakes.

This condition, if not detected and corrected, could, in some specific failure cases, result in loss of control of the aeroplane.

For the reasons described above, EASA issued AD 2010–0267 to require a one-time Operational Test of the WTB/POB performance on the flap and slat systems to detect any dormant failure and, depending on findings, applicable corrective actions. This AD also required the reporting of findings, including none, to the TC holder.

Since issuance of EASA AD 2010–0267, additional occurrences have been reported. The results of the investigations revealed that WTB fitted with brake plates manufactured by JURID (Part Number (P/N) 1007A0000–03, P/N 1007A0000–04, or P/N 1007A0000–05) are more sensitive to wear than those manufactured by MIBA (P/N 1007A0000–06 or P/N 1007B0000–01).

For the reason described above, this AD retains the requirements of EASA AD 2010–0267, which is superseded, and requires:

- a repetitive Operational Test of the WTB/POB performance on the flap and slat systems, and
- embodiment of the terminating action which consists in the installation of WTB standard build on brake plates manufactured by MIBA.

You may obtain further information by examining the MCAI in the AD docket.

### Relevant Service Information

Airbus has issued Alert Operators Transmission A27L001–12, Revision 01, dated April 27, 2012.

The actions described in the service information are intended to correct the unsafe condition identified in the MCAI.

### FAA’s Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of the same type design.

### Costs of Compliance

Based on the service information, we estimate that this proposed AD would affect about 65 products of U.S. registry. We also estimate that it would take about 2 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is \$85 per work-hour. Based on these figures, we estimate the cost of the proposed AD on U.S. operators to be \$11,050, or \$170 per product.

In addition, we estimate that any necessary follow-on actions would take about 4 work-hours and require parts costing \$9,987 (per unit—four units per airplane), for a cost of \$10,327 per product. We have no way of determining the number of products that may need these actions.

### Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. “Subtitle VII: Aviation Programs,” describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in “Subtitle VII, Part A, Subpart III, Section 44701: General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

### Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a “significant regulatory action” under Executive Order 12866;
2. Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

We prepared a regulatory evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket.

### List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

### The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

### PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:

**Authority:** 49 U.S.C. 106(g), 40113, 44701.

#### § 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new AD:

**Airbus:** Docket No. FAA–2013–0422; Directorate Identifier 2012–NM–097–AD.

#### (a) Comments Due Date

We must receive comments by July 5, 2013.

#### (b) Affected ADs

None.

#### (c) Applicability

This AD applies to Airbus Model A330–201, –202, –203, –223, –243, –223F, –243F, –301, –302, –303, –321, –322, –323, –341, –342, and –343 airplanes; Model A340–211, –212, –213, –311, –312, and –313 airplanes; and Model A340–541 and Model A340–642 airplanes; certificated in any category; all manufacturer serial numbers.

**(d) Subject**

Air Transport Association (ATA) of America Code 27, Flight controls.

**(e) Reason**

This AD was prompted by reports of wing tip brakes (WTBs) losing their braking function in service due to heavy wear on the brake discs. We are issuing this AD to detect and correct failure of the WTB and consequent loss of control of the airplane.

**(f) Compliance**

You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

**(g) Part Number Determination**

Within 30 days after the effective date of this AD: Inspect to determine the part number (P/N) of the four WTBs of the flap and slat systems, in accordance with the Instructions of Airbus Alert Operators Transmission (AOT) A27L001-12, Revision 01, dated April 27, 2012. A review of the Airbus airplane inspection report (AIR) or airplane maintenance records is acceptable to identify the part number of the WTB installed, provided that part number can be conclusively determined from that review.

**(h) Repetitive Operational Tests**

For any WTB having P/N 1007A0000-03, P/N 1007A0000-04, or P/N 1007A0000-05, as determined by paragraph (g) of this AD: At the later of the times specified in paragraphs (h)(1) and (h)(2) of this AD, and thereafter at intervals not to exceed 1,000 flight hours, perform an operational test of the WTB on the affected flap and/or slat systems in accordance with the Instructions of Airbus AOT A27L001-12, Revision 01, dated April 27, 2012.

(1) Within 1,000 flight hours since the last accomplishment of A330/A340 Maintenance Review Board Report (MRBR) tasks 27.50.00/14 and 27.80.00/10, or since first flight of the airplane, whichever occurs later.

(2) Within 30 days after the effective date of this AD.

**(i) Replacement of WTBs That Fail the Operational Test**

If any WTB operational test fails, before further flight, replace the affected WTB with a serviceable WTB, in accordance with the Instructions of Airbus AOT A27L001-12, Revision 01, dated April 27, 2012.

Installation of a WTB having P/N 1007A0000-03, P/N 1007A0000-04, or P/N 1007A0000-05, does not constitute terminating action for the repetitive tests required by paragraph (h) of this AD.

**(j) Replacement of WTBs**

Within 26 months after the effective date of this AD, replace each WTB having P/N 1007A0000-03, P/N 1007A0000-04, or P/N 1007A0000-05 with a WTB having P/N 1007A0000-06, in accordance with the Instructions of Airbus AOT A27L001-12, Revision 01, dated April 27, 2012. Accomplishing the replacement required by this paragraph constitutes terminating action for the repetitive operational tests required by paragraph (h) of this AD.

**(k) Optional Installation**

As an alternative to accomplishing the replacement required by paragraph (j) of this AD, installation of a WTB having P/N 1007B0000-01, in accordance with the Instructions of Airbus AOT A27L001-12, Revision 01, dated April 27, 2012, is acceptable for compliance with the requirements of paragraph (j) of this AD and constitutes terminating action for the repetitive operational tests required by paragraph (h) of this AD.

**(l) Parts Installation Prohibition and Limitation**

(1) For airplanes on which Airbus Modification 43512 has been embodied in production: As of the effective date of this AD, installing a WTB having P/N 1007A0000-03, P/N 1007A0000-04, or P/N 1007A0000-05 is not allowed.

(2) For airplanes on which Airbus Modification 43512 has not been embodied in production: Installing a WTB having P/N 1007A0000-03, P/N 1007A0000-04, or P/N 1007A0000-05 is allowed; provided that after its installation the operational test is performed before further flight, and passed successfully, in accordance with the Instructions of Airbus AOT A27L001-12, Revision 01, dated April 27, 2012.

**(m) Credit for Previous Actions**

This paragraph provides credit for actions required by paragraphs (g), (h), (i), (j), and (k) of this AD, if those actions were performed before the effective date of this AD using Airbus AOT A27L001-12, dated April 26, 2012, which is not incorporated by reference in this AD.

**(n) Reporting to Airbus**

Submit a report of the initial identification of the part numbers of the WTBs required by paragraph (g) of this AD, and a report of the findings of each operational test required by paragraph (h) of this AD (both positive and negative), to Airbus, Customer Services, Engineering and Technical Support, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex France, Attn: Daniel Lopez-Fernandez, SEEL6; fax: (+33) 5 61 93 04 52; email: [daniel.lopez-fernandez@airbus.com](mailto:daniel.lopez-fernandez@airbus.com); at the applicable time specified in paragraph (n)(1) or (n)(2) of this AD.

(1) If the action was done on or after the effective date of this AD: Submit the report within 90 days after accomplishing the action.

(2) If the action was done before the effective date of this AD: Submit the report within 90 days after the effective date of this AD.

**(o) Other FAA AD Provisions**

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs)*: The Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as

appropriate. If sending information directly to the International Branch, send it to ATTN: Vladimir Ulyanov, Aerospace Engineer, International Branch, ANM-116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, Washington 98057-3356; telephone (425) 227-1138; fax (425) 227-1149. Information may be emailed to: [9-ANM-116-AMOC-REQUESTS@faa.gov](mailto:9-ANM-116-AMOC-REQUESTS@faa.gov). Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) *Airworthy Product*: For any requirement in this AD to obtain corrective actions from a manufacturer or other source, use these actions if they are FAA-approved. Corrective actions are considered FAA-approved if they are approved by the State of Design Authority (or their delegated agent). You are required to assure the product is airworthy before it is returned to service.

(3) *Reporting Requirements*: A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120-0056. Public reporting for this collection of information is estimated to be approximately 5 minutes per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW., Washington, DC 20591, Attn: Information Collection Clearance Officer, AES-200.

**(p) Related Information**

(1) Refer to Mandatory Continuing Airworthiness Information, European Aviation Safety Agency Airworthiness Directive 2012-0082, dated May 15, 2012; and Airbus Alert Operators Transmission A27L001-12, Revision 01, dated April 27, 2012, for related information.

(2) For service information identified in this AD, contact Airbus SAS—Airworthiness Office—EAL, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 45 80; email [airworthiness.A330-A340@airbus.com](mailto:airworthiness.A330-A340@airbus.com); Internet <http://www.airbus.com>. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425-227-1221.

Issued In Renton, Washington, on May 13, 2013.

**Ali Bahrami,**

Manager, Transport Airplane Directorate, Aircraft Certification Service.

[FR Doc. 2013-12076 Filed 5-20-13; 8:45 am]

**BILLING CODE 4910-13-P**

**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****14 CFR Part 39**

[Docket No. FAA-2013-0423; Directorate Identifier 2012-NM-176-AD]

RIN 2120-AA64

**Airworthiness Directives; DASSAULT AVIATION Airplanes****AGENCY:** Federal Aviation Administration (FAA), DOT.**ACTION:** Notice of proposed rulemaking (NPRM).

**SUMMARY:** We propose to adopt a new airworthiness directive (AD) for all DASSAULT AVIATION Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; Model MYSTERE-FALCON 200 airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes. This proposed AD was prompted by reports of a manufacturing defect in the charge indicator on fire extinguisher bottles. This proposed AD would require repetitive weighing of fire extinguisher bottles having a certain part number, and eventual replacement of those bottles to terminate the repetitive weighing. We are proposing this AD to detect and correct a dormant failure in the fire suppression system, which could result in the inability to put out a fire in an engine, auxiliary power unit, or rear compartment.

**DATES:** We must receive comments on this proposed AD by July 5, 2013.

**ADDRESSES:** You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.

- *Fax:* 202-493-2251.

- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.

- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact

Dassault Falcon Jet, P.O. Box 2000, South Hackensack, NJ 07606; telephone 201-440-6700; Internet <http://www.dassaultfalcon.com>. You may review copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue

SW., Renton, WA. For information on the availability of this material at the FAA, call 425-227-1221.

**Examining the AD Docket**

You may examine the AD docket on the Internet at <http://www.regulations.gov>; or in person at the Docket Operations office between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone (800) 647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

**FOR FURTHER INFORMATION CONTACT:** Tom Rodriguez, Aerospace Engineer, International Branch, ANM-116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057-3356; phone: 425-227-1137; fax: 425-227-1149.

**SUPPLEMENTARY INFORMATION:****Comments Invited**

We invite you to send any written relevant data, views, or arguments about this proposal. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2013-0423; Directorate Identifier 2012-NM-176-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD because of those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

**Discussion**

The European Aviation Safety Agency (EASA), which is the Technical Agent for Member States of the European Community, has issued EASA Airworthiness Directive 2012-0189, dated September 24, 2012 (referred to after this as "the MCAI"), to correct an unsafe condition for the specified products. The MCAI states:

A manufacturing defect of the charge indicator of fire extinguisher bottles has been reported on Dassault Aviation Fan Jet Falcon and Mystere-Falcon 20 series aeroplanes.

The results of the investigations concluded that this defect may lead to corrosion of the charge indicator, causing improper

indication of loss of pressure inside the bottle. In addition, the Part Numbers (P/N) of the fire extinguishers and batch numbers of the affected charge indicators have been identified.

This condition, if not detected and corrected, could constitute a dormant failure that might impact the capability to extinguish a fire, either in an engine or the Auxiliary Power Unit (APU) or the rear compartment, possibly resulting in damage to the aeroplane and injury to the occupants.

For the reasons described above, this [EASA] AD requires repetitive weighing of the affected fire extinguishers bottles and, ultimately replacement of the affected bottles with serviceable bottles. In addition, this AD prohibits installation of an affected fire extinguisher bottle.

You may obtain further information by examining the MCAI in the AD docket.

**Relevant Service Information**

Dassault Aviation has issued the following service information:

- Mandatory Service Bulletin F20-785, dated June 11, 2012 (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes);
- Mandatory Service Bulletin F200-131, dated June 11, 2012 (for Model MYSTERE-FALCON 200 airplanes);
- Dassault Maintenance Procedure 26-20-3, "Weighing of Engine Freon Fire Extinguishers," dated October 2009, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes);
- Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes);
- Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06), dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual (for Model MYSTERE-FALCON 200 airplanes); and
- Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance

Manual (for Model MYSTERE-FALCON 200 airplanes).

The actions described in this service information are intended to correct the unsafe condition identified in the MCAI.

**FAA’s Determination and Requirements of This Proposed AD**

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of the same type design.

**Costs of Compliance**

Based on the service information, we estimate that this proposed AD would affect about 185 products of U.S. registry. We also estimate that it would take about 4 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is \$85 per work-hour. Required parts would cost about \$6,400 per product. Where the service information lists required parts costs that are covered under warranty, we have assumed that there will be no charge for these parts. As we do not control warranty coverage for affected parties, some parties may incur costs higher than estimated here. Based on these figures, we estimate the cost of the proposed AD on U.S. operators to be up to \$1,246,900, or \$6,740 per product.

**Authority for This Rulemaking**

Title 49 of the United States Code specifies the FAA’s authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. Subtitle VII: Aviation Programs, describes in more detail the scope of the Agency’s authority.

We are issuing this rulemaking under the authority described in Subtitle VII, Part A, Subpart III, Section 44701: “General requirements.” Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on

products identified in this rulemaking action.

**Regulatory Findings**

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

- (1) Is not a “significant regulatory action” under Executive Order 12866,
  - (2) Is not a “significant rule” under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979),
  - (3) Will not affect intrastate aviation in Alaska, and
  - (4) Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.
- We prepared a regulatory evaluation of the estimated costs to comply with this proposed AD and placed it in the AD docket.

**List of Subjects in 14 CFR Part 39**

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

**The Proposed Amendment**

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

**PART 39—AIRWORTHINESS DIRECTIVES**

- 1. The authority citation for part 39 continues to read as follows:  
**Authority:** 49 U.S.C. 106(g), 40113, 44701.

**§ 39.13 [Amended]**

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

**Dassault Aviation:** Docket No. FAA-2013-0423; Directorate Identifier 2012-NM-176-AD.

**(a) Comments Due Date**

We must receive comments by July 5, 2013.

**(b) Affected ADs**

None.

**(c) Applicability**

This AD applies to DASSAULT AVIATION Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; Model MYSTERE-FALCON 200 airplanes; and

Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes, certificated in any category, all serial numbers.

**(d) Subject**

Joint Aircraft System Component (JASC)/ Air Transport Association (ATA) of America Code 26, Fire protection.

**(e) Reason**

This AD was prompted by reports of a manufacturing defect in the charge indicator on fire extinguisher bottles. We are issuing this AD to detect and correct a dormant failure in the fire suppression system, which could result in the inability to put out a fire in an engine, auxiliary power unit, or rear compartment.

**(f) Compliance**

You are responsible for having the actions required by this AD performed within the compliance times specified, unless the actions have already been done.

**(g) Definitions**

For the purposes of this AD the following definitions apply:

(1) An affected fire extinguisher bottle is any fire extinguisher bottle having a part number (P/N) included in table 1 to paragraph (h) of this AD and having a manufacturing batch number 168 through 200 inclusive on the data plate of the charge indicator.

(2) A serviceable fire extinguisher bottle is any fire extinguisher bottle having a manufacturing batch number lower than 168 or higher than 200 on the charge indicator data plate.

**(h) Determining Charge Indicator Batch Number**

Within 30 days or 100 flight hours after the effective date of this AD, whichever occurs first: Determine the manufacturing batch number for the charge indicator installed on each engine and auxiliary power unit (APU) fire extinguisher bottle having a part number (P/N) included in table 1 to paragraph (h) of this AD, in accordance with the Accomplishment Instructions of Dassault Mandatory Service Bulletin F20-785, dated June 11, 2012 (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes); or Dassault Mandatory Service Bulletin F200-131, dated June 11, 2012 (for Model MYSTERE-FALCON 200 airplanes).

**TABLE 1 TO PARAGRAPH (h) OF THIS AD—AFFECTED FIRE EXTINGUISHER BOTTLES**

Type of Bottle—	P/N—
Engine Fire Extinguisher Bottle.	P/N 111-1555-324-12A. P/N 811456. P/N 111-355-32142A.
APU Fire Extinguisher Bottle.	P/N 111-011-324-12A. P/N 811475.

(1) For fire extinguisher bottles with P/Ns that are not included in table 1 to paragraph (h) of this AD, no further action is required by this paragraph.

(2) For any affected charge indicator, as identified in paragraph (g)(1) of this AD: Before further flight, weigh each affected fire extinguisher bottle, in accordance with the instructions specified in Dassault Maintenance Procedure 26-20-3, "Weighing of Engine Freon Fire Extinguishers," dated October 2009, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes); or Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual (for Model MYSTERE-FALCON 200 airplanes). Weigh the fire extinguishers thereafter at intervals not to exceed 12 months until the replacement specified in paragraph (h)(2)(i), (h)(2)(ii), (h)(2)(iii), (h)(2)(iv), or (j) of this AD is accomplished. If it is determined that the fire extinguisher weighs less than the lowest weight limit indicated on the fire extinguisher's data plate, before further flight, replace any affected fire extinguisher bottle and charge indicator cartridge, with a serviceable part, in accordance with the applicable service information or method specified in paragraph (h)(2)(i), (h)(2)(ii), (h)(2)(iii), or (h)(2)(iv) of this AD.

(i) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with the instructions specified in Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual.

(ii) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the fire extinguisher bottle with a serviceable part, in accordance with a method approved by the Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA) (or its delegated agent).

(iii) For Model MYSTERE-FALCON 200 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

(iv) For Model MYSTERE-FALCON 200 airplanes: Replace the fire extinguisher bottle with a serviceable part, in accordance with the instructions specified in Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear

compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

**(i) Repetitive Inspection To Determine If Charge Indicator Cartridge Was Fired**

Within 6 months after the effective date of this AD: Do an inspection to determine if the charge indicator cartridge installed on each engine and APU fire extinguisher bottle, as identified in table 1 to paragraph (h) of this AD, was fired, in accordance with the instructions specified in Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual (for Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20 F5 airplanes); or Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual (for Model MYSTERE-FALCON 200 airplanes). Repeat the inspection thereafter at intervals not to exceed 6 months until the replacement specified in paragraph (i)(1), (i)(2), (i)(3), (i)(4), or (j) of this AD is accomplished. If it is determined that any charge indicator cartridge was fired, before further flight, replace the affected fire extinguisher bottle and charge indicator cartridge with a serviceable part in accordance with the applicable service information or method specified in paragraph (i)(1), (i)(2), (i)(3), or (i)(4) of this AD.

(1) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with the instructions specified in Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual.

(2) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the fire extinguisher bottle with a serviceable part, in accordance with a method approved by the Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA) (or its delegated agent).

(3) For Model MYSTERE-FALCON 200 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with the instructions specified in Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

(4) For Model MYSTERE-FALCON 200 airplanes: Replace the fire extinguisher bottle

with a serviceable part, in accordance with the instructions specified in Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

**(j) Replacement of Fire Extinguisher Bottle and Charge Indicator Cartridge**

Unless previously accomplished as specified in paragraphs (h) or (i) of this AD: Within 60 months after the effective date of this AD, replace any affected fire extinguisher bottle and charge indicator cartridge, as specified in paragraph (g)(1) of this AD, with a serviceable part, in accordance with the applicable service information or method specified in paragraph (j)(1), (j)(2), (j)(3), or (j)(4) of this AD. Replacement of any affected fire extinguisher bottle and charge indicator cartridge with a serviceable part terminates the repetitive actions specified in paragraphs (h) and (i) of this AD.

(1) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with the instructions specified in Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual.

(2) For Model FAN JET FALCON, FAN JET FALCON SERIES C, D, E, F, and G airplanes; and Model MYSTERE-FALCON 20-C5, 20-D5, 20-E5, and 20-F5 airplanes: Replace the fire extinguisher bottle with a serviceable part, in accordance with a method approved by the Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA; or the EASA (or its delegated agent).

(3) For Model MYSTERE-FALCON 200 airplanes: Replace the charge indicator cartridge with a serviceable part, in accordance with the instructions specified in Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

(4) For Model MYSTERE-FALCON 200 airplanes: Replace the fire extinguisher bottle with a serviceable part, in accordance with the instructions specified in Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

**(k) Parts Installation Prohibition**

As of the effective date of this AD, no person may install, on any airplane, a fire extinguisher bottle having a P/N included in table 1 to paragraph (h) of this AD, fitted with a charge indicator having a manufacturing batch number on the data plate of 168 through 200 inclusive.

**(l) Other FAA AD Provisions**

The following provisions also apply to this AD:

(1) *AMOCs*: The Manager, International Branch, ANM-116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as appropriate. If sending information directly to the International Branch, send it to ATTN: Tom Rodriguez, Aerospace Engineer, International Branch; ANM-116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, Washington 98057-3356; telephone 425-227-1137; fax 425-227-1137. Information may be emailed to: 9-ANM-116-AMOC-REQUESTS@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) *Airworthy Product*: For any requirement in this AD to obtain corrective actions from a manufacturer or other source, use these actions if they are FAA-approved. Corrective actions are considered FAA-approved if they are approved by the State of Design Authority (or their delegated agent). You are required to assure the product is airworthy before it is returned to service.

**(m) Related Information**

(1) Refer to MCAI EASA Airworthiness Directive 2012-0189, dated September 24, 2012, and the following service information for related information.

(i) Dassault Mandatory Service Bulletin F20-785, dated June 11, 2012.

(ii) Dassault Mandatory Service Bulletin F200-131, dated June 11, 2012.

(iii) Dassault Aviation Maintenance Procedure 26-20-2, "Removal of Pyrotechnical Cartridge for Check/Replacement," dated October 2010, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual.

(iv) Dassault Maintenance Procedure 26-20-3, "Weighing of Engine Freon Fire Extinguishers," dated October 2009, of Chapter 26 of Book 2 of the Falcon 20 Maintenance Manual.

(v) Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Removal/Installation (ATA 26-20-06)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

(vi) Dassault Aviation Falcon 200 Maintenance Requirement Card 171.0, "Engine/Rear compartment Extinguisher (14W1-14W2)—Check/Replacement of Percussion Cartridge (ATA 26-20-08)," dated December 2011, of Chapter 26 of Book 1 of the Falcon 200 Maintenance Manual.

(2) For service information identified in this AD, contact Dassault Falcon Jet, P.O. Box 2000, South Hackensack, NJ 07606; telephone 201-440-6700; Internet <http://www.dassaultfalcon.com>. You may review

copies of the referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425-227-1221.

Issued in Renton, Washington, on May 13, 2013.

**SUPPLEMENTARY INFORMATION:****Errata Notice**

On January 17, 2013, the Commission issued an order in the above-referenced docket. *Small Generator Interconnection Agreements and Procedures*, 142 FERC ¶ 61,049 (2013). The order is revised as follows:

The fourth sentence of paragraph 45 should read, "This requirement was included in Order No. 2006<sup>62</sup> but was not made clear in the *pro forma* SGIP."

Footnote 62 should read, "Order No. 2006, FERC Stats. & Regs. ¶ 31,180 at P 140."

In FR Doc. 2013-01366 appearing on page 7523 in the *Federal Register* of Friday, February 1, 2013, the same corrections are made:

1. On page 7531, the fourth sentence of paragraph 45 should read, "This requirement was included in Order No. 2006<sup>62</sup> but was not made clear in the *pro forma* SGIP."

2. On page 7531, Footnote 62 should read, "Order No. 2006, FERC Stats. & Regs. ¶ 31,180 at P 140."

Dated: April 25, 2013.

**Kimberly D. Bose,**

Secretary.

**BILLING CODE 6717-01-P**

**DEPARTMENT OF HEALTH AND HUMAN SERVICES****Food and Drug Administration****21 CFR Part 870**

[Docket No. FDA-2013-N-0487]

**Cardiovascular Devices; Reclassification of External Counter-Pulsating Devices for Treatment of Chronic Stable Angina; Effective Date of Requirement for Premarket Approval for External Counter-Pulsating Devices for Other Specified Intended Uses**

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Proposed order.

**SUMMARY:** The Food and Drug Administration (FDA) is issuing a proposed administrative order to reclassify external counter-pulsating (ECP) devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization, which is a preamendments class III device, into class II (special controls) based on new information. FDA is also proposing to require the filing of a premarket approval application (PMA) or a notice of completion of a product development protocol (PDP) for ECP devices for other intended uses specified in this proposed order. The Agency is also summarizing its proposed findings regarding the degree of risk of illness or injury designed to be eliminated or reduced by

requiring the devices to meet the statute's approval requirements for other intended uses specified in this proposed order. In addition, FDA is announcing the opportunity for interested persons to request that the Agency change the classification of any of the devices mentioned in this document based on new information. This action implements certain statutory requirements.

**DATES:** Submit either electronic or written comments on this proposed order by August 19, 2013. FDA intends that, if a final order based on this proposed order is issued, anyone who wishes to continue to market ECP devices for specified intended uses listed in section IX will need to file a PMA or a notice of completion of a PDP within 90 days of the effective date of the final order. See section XVII for the proposed effective date of any final order based on this proposed order.

**ADDRESSES:** You may submit comments, identified by Docket No. FDA-2013-N-0487, by any of the following methods:

#### Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

#### Written Submissions

Submit written submissions in the following ways:

- *Mail/Hand delivery/Courier (for paper or CD-ROM submissions):* Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

*Instructions:* All submissions received must include the Agency name and Docket No. FDA-2013-N-0487 for this rulemaking. All comments received may be posted without change to <http://www.regulations.gov>, including any personal information provided. For additional information on submitting comments, see the "Comments" heading of the **SUPPLEMENTARY INFORMATION** section.

*Docket:* For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

**FOR FURTHER INFORMATION CONTACT:** Angela Krueger, Center for Devices and Radiological Health, Food and Drug

Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 1666, Silver Spring, MD 20993, 301-796-6380, [angela.krueger@fda.hhs.gov](mailto:angela.krueger@fda.hhs.gov).

#### SUPPLEMENTARY INFORMATION:

##### I. Background—Regulatory Authorities

The Federal Food, Drug, and Cosmetic Act (the FD&C Act), as amended by the Medical Device Amendments of 1976 (the 1976 amendments) (Pub. L. 94-295), the Safe Medical Devices Act of 1990 (Pub. L. 101-629), the Food and Drug Administration Modernization Act of 1997 (FDAMA) (Pub. L. 105-115), the Medical Device User Fee and Modernization Act of 2002 (Public Law 107-250), the Medical Devices Technical Corrections Act (Pub. L. 108-214), the Food and Drug Administration Amendments Act of 2007 (Pub. L. 110-85), and the Food and Drug Administration Safety and Innovation Act (FDASIA) (Pub. L. 112-144), establishes a comprehensive system for the regulation of medical devices intended for human use. Section 513 of the FD&C Act (21 U.S.C. 360c) established three categories (classes) of devices, reflecting the regulatory controls needed to provide reasonable assurance of their safety and effectiveness. The three categories of devices are class I (general controls), class II (special controls), and class III (premarket approval).

Under section 513 of the FD&C Act, devices that were in commercial distribution before the enactment of the 1976 amendments, May 28, 1976 (generally referred to as preamendments devices), are classified after FDA has: (1) Received a recommendation from a device classification panel (an FDA advisory committee); (2) published the panel's recommendation for comment, along with a proposed regulation classifying the device; and (3) published a final regulation classifying the device. FDA has classified most preamendments devices under these procedures.

Devices that were not in commercial distribution prior to May 28, 1976 (generally referred to as postamendments devices), are automatically classified by section 513(f) of the FD&C Act into class III without any FDA rulemaking process. Those devices remain in class III and require premarket approval unless, and until, the device is reclassified into class I or II or FDA issues an order finding the device to be substantially equivalent, in accordance with section 513(i) of the FD&C Act, to a predicate device that does not require premarket approval. The Agency determines whether new

devices are substantially equivalent to predicate devices by means of premarket notification procedures in section 510(k) of the FD&C Act (21 U.S.C. 360(k)) and part 807 (21 CFR part 807).

A preamendments device that has been classified into class III and devices found substantially equivalent by means of premarket notification (510(k)) procedures to such a preamendments device or to a device within that type may be marketed without submission of a PMA until FDA issues a final order under section 515(b) of the FD&C Act (21 U.S.C. 360e(b)) requiring premarket approval or until the device is subsequently reclassified into class I or class II.

Although, under the FD&C Act, the manufacturer of class III preamendments device may respond to the call for PMAs by filing a PMA or a notice of completion of a PDP, in practice, the option of filing a notice of completion of a PDP has not been used. For simplicity, although corresponding requirements for PDPs remain available to manufacturers in response to a final order under section 515(b) of the FD&C Act, this document will refer only to the requirement for the filing and receiving approval of a PMA.

On July 9, 2012, FDASIA was enacted. Section 608(a) of FDASIA (126 Stat. 1056) amended section 513(e) of the FD&C Act, changing the process for reclassifying a device from rulemaking to an administrative order. Section 608(b) of FDASIA (126 Stat. 1056) amended section 515(b) of the FD&C Act, changing the process for requiring premarket approval for a preamendments class III device from rulemaking to an administrative order.

##### A. Reclassification

FDA is publishing this document to propose the reclassification of ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization from class III to class II.

Section 513(e) of the FD&C Act governs reclassification of classified preamendments devices. This section provides that FDA may, by administrative order, reclassify a device based upon "new information." FDA can initiate a reclassification under section 513(e) of the FD&C Act or an interested person may petition FDA to reclassify a preamendments device. The term "new information," as used in section 513(e) of the FD&C Act, includes information developed as a result of a reevaluation of the data before the Agency when the device was originally

classified, as well as information not presented, not available, or not developed at that time. (See, e.g., *Holland-Rantos Co. v. United States Department of Health, Education, and Welfare*, 587 F.2d 1173, 1174 n.1 (D.C. Cir. 1978); *Upjohn v. Finch*, 422 F.2d 944 (6th Cir. 1970); *Bell v. Goddard*, 366 F.2d 177 (7th Cir. 1966).)

Reevaluation of the data previously before the Agency is an appropriate basis for subsequent action where the reevaluation is made in light of newly available authority (see *Bell*, 366 F.2d at 181; *Ethicon, Inc. v. FDA*, 762 F.Supp. 382, 388–391 (D.D.C. 1991)), or in light of changes in “medical science” (*Upjohn*, 422 F.2d at 951). Whether data before the Agency are old or new data, the “new information” to support reclassification under section 513(e) must be “valid scientific evidence,” as defined in section 513(a)(3) of the FD&C Act and § 860.7(c)(2) (21 CFR 860.7(c)(2)). (See, e.g., *General Medical Co. v. FDA*, 770 F.2d 214 (D.C. Cir. 1985); *Contact Lens Association v. FDA*, 766 F.2d 592 (D.C. Cir.), cert. denied, 474 U.S. 1062 (1985).)

FDA relies upon “valid scientific evidence” in the classification process to determine the level of regulation for devices. To be considered in the reclassification process, the “valid scientific evidence” upon which the Agency relies must be publicly available. Publicly available information excludes trade secret and/or confidential commercial information, e.g., the contents of a pending PMA. (See section 520(c) of the FD&C Act (21 U.S.C. 360j(c)).) Section 520(h)(4) of the FD&C Act, added by FDAMA, provides that FDA may use, for reclassification of a device, certain information in a PMA 6 years after the application has been approved. This can include information from clinical and preclinical tests or studies that demonstrate the safety or effectiveness of the device but does not include descriptions of methods of manufacture or product composition and other trade secrets.

Section 513(e)(1) of the FD&C Act sets forth the process for issuing a final order. Specifically, prior to the issuance of a final order reclassifying a device, the following must occur: (1) Publication of a proposed order in the **Federal Register**; (2) a meeting of a device classification panel described in section 513(b) of the FD&C Act; and (3) consideration of comments to a public docket. FDA has held a meeting of a device classification panel described in section 513(b) of the FD&C Act with respect to external-counter pulsating devices, and therefore, has met this

requirement under section 515(b)(1) of the FD&C Act.

FDAMA added section 510(m) to the FD&C Act. Section 510(m) of the FD&C Act provides that a class II device may be exempted from the premarket notification requirements under section 510(k) of the FD&C Act, if the Agency determines that premarket notification is not necessary to assure the safety and effectiveness of the device.

#### *B. Requirement for Premarket Approval Application*

FDA is proposing to require PMAs for ECP devices for Certain Specified Intended Uses.<sup>1</sup>

Section 515(b)(1) of the FD&C Act sets forth the process for issuing a final order. Specifically, prior to the issuance of a final order requiring premarket approval for a preamendments class III device, the following must occur: (1) Publication of a proposed order in the **Federal Register**; (2) a meeting of a device classification panel described in section 513(b) of the FD&C Act; and (3) consideration of comments from all affected stakeholders, including patients, payors, and providers. FDA has held a meeting of a device classification panel described in section 513(b) of the FD&C Act with respect to external-counter pulsating devices, and therefore, has met this requirement under section 515(b)(1) of the FD&C Act.

Section 515(b)(2) of the FD&C Act provides that a proposed order to require premarket approval shall contain: (1) The proposed order, (2) proposed findings with respect to the degree of risk of illness or injury designed to be eliminated or reduced by

<sup>1</sup>For the purposes of this proposed order, the term “Certain Specified Intended Uses” includes the following intended uses:

- Unstable angina pectoris;
- Acute myocardial infarction;
- Cardiogenic shock;
- Congestive heart failure;
- Postoperative treatment of patients who have undergone coronary artery bypass surgery;
- Peripheral arterial disease associated with the following: Ischemic ulcers rest pain or claudication; threatened gangrene; insufficient blood supply at an amputation site; persisting ischemia after embolectomy or bypass surgery; and/or pre- and post-arterial reconstruction to improve runoff;
- Diabetes complicated by peripheral arterial disease or other conditions possibly related to arterial insufficiency including the following: Nocturnal leg cramps and/or necrobiosis diabetorum;
- Venous diseases, including the following: Prophylaxis of deep vein thrombophlebitis; edema (e.g., chronic lymphedema) and/or induration (e.g., stasis dermatitis) associated with chronic venous stasis; venous stasis ulcers; and/or thrombophlebitis;
- Athletic injuries, including the following: Charley horses, pulled muscles, and/or edematous muscles; and
- Necrotizing cellulitis.

requiring the device to have an approved PMA or a declared completed PDP and the benefit to the public from the use of the device, (3) an opportunity for the submission of comments on the proposed order and the proposed findings, and (4) an opportunity to request a change in the classification of the device based on new information relevant to the classification of the device.

Section 515(b)(3) of the FD&C Act provides that FDA shall, after the close of the comment period on the proposed order, consideration of any comments received, and a meeting of a device classification panel described in section 513(b) of the FD&C Act, issue a final order to require premarket approval or publish a document terminating the proceeding together with the reasons for such termination. If FDA terminates the proceeding, FDA is required to initiate reclassification of the device under section 513(e) of the FD&C Act, unless the reason for termination is that the device is a banned device under section 516 of the FD&C Act (21 U.S.C. 360f)

A preamendments class III device may be commercially distributed without a PMA until 90 days after FDA issues a final order (a final rule issued under section 515(b) of the FD&C Act prior to the enactment of FDASIA is considered to be a final order for purposes of section 501(f) of the FD&C Act (21 U.S.C. 351(f))) requiring premarket approval for the device, or 30 months after final classification of the device under section 513 of the FD&C Act, whichever is later. For ECP devices, the preamendments class III devices that are the subject of this proposal, the later of these two time periods is the 90-day period. Since these devices were classified in 1980, the 30-month period has expired (45 FR 7966; February 5, 1980). Therefore, if the proposal to require premarket approval for ECP devices for Certain Specified Intended Uses is finalized, section 501(f)(2)(B) of the FD&C Act requires that a PMA for such device be filed within 90 days of the date of issuance of the final order. If a PMA is not filed for such device within 90 days after the issuance of a final order, the device would be deemed adulterated under section 501(f) of the FD&C Act.

Also, a preamendments device subject to the order process under section 515(b) of the FD&C Act is not required to have an approved investigational device exemption (IDE) (see part 812 (21 CFR part 812)) contemporaneous with its interstate distribution until the date identified by FDA in the final order requiring the filing of a PMA for the device. At that time, an IDE is required

only if a PMA has not been filed. If the manufacturer, importer, or other sponsor of the device submits an IDE application and FDA approves it, the device may be distributed for investigational use. If a PMA is not filed by the later of the two dates, and the device is not distributed for investigational use under an IDE, the device is deemed to be adulterated within the meaning of section 501(f)(1)(A) of the FD&C Act, and subject to seizure and condemnation under section 304 of the FD&C Act (21 U.S.C. 334) if its distribution continues. Other enforcement actions include, but are not limited to, the following: Shipment of devices in interstate commerce will be subject to injunction under section 302 of the FD&C Act (21 U.S.C. 332), and the individuals responsible for such shipment will be subject to prosecution under section 303 of the FD&C Act (21 U.S.C. 333). In the past, FDA has requested that manufacturers take action to prevent the further use of devices for which no PMA has been filed and may determine that such a request is appropriate for the class III devices that are the subject of this proposed order, if finalized.

In accordance with section 515(b)(2) of the FD&C Act, interested persons are being offered the opportunity to request reclassification of ECP devices for Certain Specified Intended Uses.

## II. Regulatory History of the Device

In the preamble to the proposed rule (44 FR 13426, March 9, 1979), the Cardiovascular Device Classification Panel (the 1979 Panel) recommended that ECP devices be classified into class III because the device is life-supporting and is potentially hazardous to life or health even when properly used. The 1979 Panel noted that the device surrounds the limbs to which it is attached, is in direct contact with the skin, and is used in a clinical environment where excessive leakage current can be a serious hazard. As a result the electrical characteristics of this device need to meet certain requirements. The 1979 Panel further noted that the performance characteristics, including accuracy, reproducibility, and any limitations on the device's cardiac synchronization and pressure application should be maintained at a generally accepted satisfactory level and should be made known to the user through special labeling. In addition, the device is used with other devices in a system that may be hazardous if not satisfactorily assembled, used, and maintained. The 1979 Panel indicated that general controls alone would not provide

sufficient control over the performance characteristics of the device, and that there was not sufficient information to establish a performance standard to provide assurance of the safety and effectiveness of the device.

Consequently, the 1979 Panel believed that premarket approval was necessary to assure the safety and effectiveness of the device. In 1980, FDA classified external counter-pulsating devices into class III after receiving no comments on the proposed rule (45 FR 7966, February 5, 1980).

In 1987, FDA published a clarification by codifying a statement that no effective date had been established for the requirement for premarket approval for external counter-pulsating devices (52 FR 17732 at 17737, May 11, 1987).

In 2009, FDA published an order for the submission of information on external counter-pulsating devices by August 7, 2009 (74 FR 16214, April 9, 2009). FDA received five responses to that order from device manufacturers recommending that ECP devices be reclassified to class II. The manufacturers stated that safety and effectiveness of these devices may be assured by device design, performance testing, and labeling (special controls).

As explained further in sections VII and XI, a meeting of the Circulatory System Devices Panel (the 2012 Panel) took place December 5, 2012, to discuss whether ECP devices should be reclassified or remain in class III. The 2012 Panel recommended that ECP devices intended for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization be reclassified to class II with special controls and ECP devices for Certain Specified Intended Uses remain in class III. Because the safety and effectiveness of ECP devices for Certain Specified Intended Uses has not been established through adequate scientific evidence, the device presents a potential unreasonable risk of injury given that the benefit of ECP devices for these uses is unknown. In addition, there was insufficient information to establish special controls for these uses. FDA is not aware of new information that would provide a basis for a different recommendation or findings.

## III. Device Description

An external counter-pulsating device is a noninvasive device used to assist the heart by applying positive or negative pressure to one or more of the body's limbs in synchrony with the heart cycle. An ECP system typically consists of a treatment table, a set of pressure cuffs, and a control console.

The control console controls a pneumatic circuit that inflates and deflates the pressure cuffs. The inflatable pressure cuffs are wrapped around the calves, the lower and upper thighs, and/or the buttocks. They are rapidly and sequentially inflated, starting from the calves and moving proximally during the diastolic phase of a cardiac cycle. This creates an arterial retrograde flow of blood towards the heart and increases blood flow to the coronary arteries at a time when resistance to the coronary blood flow is low. The inflation of the cuffs also simultaneously increases the volume of venous blood returned to the right side of the heart, providing greater filling of the ventricle for ejection. The synchronization between the cardiac cycle and the inflation/deflation cycle of the cuffs is coordinated by custom software contained within the control console that monitors and interprets the patient's electrocardiogram and heart rhythm.

## IV. Proposed Reclassification

FDA is proposing that ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization be reclassified from class III to class II. In this proposed order, the Agency has identified special controls under section 513(a)(1)(B) of the FD&C Act that, together with general controls applicable to the devices, would provide reasonable assurance of their safety and effectiveness. Absent the special controls identified in this proposed order, general controls applicable to the device are insufficient to provide reasonable assurance of the safety and effectiveness of the device.

Therefore, in accordance with sections 513(e) and 515(i) of the FD&C Act and § 860.130, based on new information with respect to the devices and taking into account the public health benefit of the use of the device and the nature and known incidence of the risk of the device, FDA, on its own initiative, is proposing to reclassify this preamendments class III device into class II for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. FDA believes that this new information is sufficient to demonstrate that the proposed special controls can effectively mitigate the risks to health identified in the next section, and that these special controls, together with general controls, will provide a reasonable assurance of safety and effectiveness for ECP devices for treatment of chronic stable angina that

is refractory to optimal anti-anginal medical therapy and without options for revascularization.

Section 510(m) of the FD&C Act authorizes the Agency to exempt class II devices from premarket notification (510(k)) submission. FDA has considered ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization in accordance with the reserved criteria set forth in section 513(a) of the FD&C Act and decided that the device does require premarket notification. Therefore, the Agency does not intend to exempt this proposed class II device from premarket notification (510(k)) submission.

#### V. Risks to Health

After considering available information, including the recommendations of the advisory committees (panels) for the classification of these devices, FDA has evaluated the risks to health associated with the use of ECP devices and determined that the following risks to health are associated with its use:

- *Cardiac arrhythmias*—Excessive electrical leakage current may disturb the normal electrophysiology of the heart, leading to the onset of cardiac arrhythmias.
- *Trauma/Irritation to the limb*—Improper mechanical design, including selection of materials, may cause bruising, blistering, muscle aches, and/or pain to the limb(s).
- *Ineffective cardiac assistance*—Improper timing or failure to synchronize the device with the appropriate phase of the cardiac cycle may lead to ineffective cardiac assistance by the device.

#### VI. Summary of Reasons for Reclassification

If properly manufactured and used, ECP devices can provide a treatment option for patients with chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization, especially patients who are not candidates for treatment by revascularization and who are refractory to medical therapy, by increasing blood flow to the coronary arteries and increasing the volume of venous blood returned to the right side of the heart, providing greater filling of the ventricle for ejection. FDA believes that ECP devices intended for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization should be reclassified from class III to class II because special

controls, in addition to general controls, can be established to provide reasonable assurance of the safety and effectiveness of the device, and because general controls themselves are insufficient to provide reasonable assurance of its safety and effectiveness. In addition, there is now adequate effectiveness information sufficient to establish special controls to provide such assurance.

#### VII. Summary of Data Upon Which the Reclassification Is Based

Since the time of the 1979 Panel recommendation, sufficient evidence has been developed to support a reclassification of ECP devices to class II with special controls for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. FDA has been reviewing these devices for many years and their risks are well known. FDA conducted a comprehensive review of available literature for ECP devices for treatment of chronic stable angina. FDA's review found 4 randomized controlled trials (Refs. 1 to 4), 21 observational studies, and a meta-analysis of 13 individual studies that provided consistent evidence of the effectiveness of ECP devices for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. Although all of the studies of ECP for the treatment of angina considered individually have various limitations, the consistency of the study results, the wide range of angina-related endpoints involved in the studies, the large magnitude of the demonstrated beneficial outcomes, the long duration (up to 3 years) of some of the beneficial outcomes, and the fact that many or most of the subjects had a disease that was refractory to the effects of any other treatment, all support a conclusion of reasonable evidence for the effectiveness of ECP in the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. The safety profile of ECP devices has been established based on the few relevant adverse events reported in the literature or through FDA's Manufacturer and User Facility Device Experience (MAUDE) database. In addition, bench studies designed to demonstrate the devices' ability to function as intended have been well characterized.

The 2012 Panel discussed and made recommendations regarding the regulatory classification of ECP devices to either reconfirm to class III (subject

to premarket approval application) or reclassify to class II (subject to special controls) as directed by section 515(i) of the FD&C Act.

FDA's presentation to the 2012 Panel included a summary of the available safety and effectiveness information for ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization, including adverse event reports from the MAUDE database and available literature. Based on the available scientific literature that supports that ECP may be beneficial for patients with chronic stable angina who are not revascularization candidates and who are refractory to optimal medical therapy, FDA recommended to the 2012 Panel that ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization be reclassified to class II (special controls). The 2012 Panel agreed with FDA's conclusion that the available scientific evidence is adequate to support the safety and effectiveness of ECP devices for treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization.

The 2012 Panel also agreed with the identified risks to health outlined in section V. FDA recommended that a fourth risk to health, failure to identify the correct patient population, be considered in the 2012 Panel's deliberations. FDA proposed this risk to health to capture situations in which the device was used properly but patients experienced adverse events associated with their underlying comorbidities. For example, based on FDA's evaluation of Medical Device Reporting Regulations more than half were associated with patients with congestive heart failure who experience exacerbation of the condition following use of the device. However, the 2012 Panel questioned whether failure to identify the correct patient population was really a risk to health and noted that the risk is vague and too broad. FDA agreed with the 2012 Panel's recommendation and removed the proposed fourth risk. The 2012 Panel agreed with FDA's proposed special controls outlined in section VIII. In addition, the 2012 Panel also agreed with FDA that ECP devices are not considered to be life-supporting. This differs from the 1979 Panel's recommendation outlined in the proposed rule for this device type (44 FR 13426, March 9, 1979). The 2012 Panel transcript and other meeting

materials are available on FDA's Web site (Ref. 5).

### VIII. Proposed Special Controls

FDA believes that the following special controls, together with general controls, are sufficient to mitigate the risks to health described in section V:

(1) Nonclinical performance evaluation of the device must demonstrate a reasonable assurance of safety and effectiveness for applied pressure, synchronization of therapy with the appropriate phase of the cardiac cycle, and functionality of alarms during a device malfunction or an abnormal patient condition;

(2) Reliabilities of the mechanical and electrical systems must be established through bench testing under simulated use conditions and matched by appropriate maintenance schedules;

(3) Software design and verification and validation must be appropriately documented;

(4) The skin-contacting components of the device must be demonstrated to be biocompatible;

(5) Appropriate analysis and testing must be conducted to verify electrical safety and electromagnetic compatibility of the device; and

(6) Labeling must bear all information required for the safe and effective use of the device, including a detailed summary of the device-related and procedure-related complications pertinent to use of the device.

ECP devices are prescription devices restricted to patient use only upon the authorization of a practitioner licensed by law to administer or use the device. (Proposed § 870.5225(a) (21 CFR 870.5225(a)); see section 520(e) of the FD&C Act and 21 CFR 801.109 (Prescription devices)). Prescription-use requirements are a type of general control authorized under section 520(e) of the FD&C Act and defined as a general control in section 513(a)(1)(A)(i) of the FD&C Act; and under § 807.81, the device would continue to be subject to 510(k) notification requirements.

### IX. Dates New Requirements Apply

In accordance with section 515(b) of the FD&C Act, FDA is proposing to require that a PMA be filed with the Agency within 90 days after issuance of any final order based on this proposal for ECP devices intended for the following uses (Certain Specified Intended Uses):

- Unstable angina pectoris;
- Acute myocardial infarction;
- Cardiogenic shock;
- Congestive heart failure;
- Postoperative treatment of patients

who have undergone coronary artery bypass surgery;

- Peripheral arterial disease associated with the following: Ischemic ulcers rest pain or claudication, threatened gangrene, insufficient blood supply at an amputation site, persisting ischemia after embolectomy or bypass surgery, and/or pre and post-arterial reconstruction to improve runoff;

- Diabetes complicated by peripheral arterial disease or other conditions possibly related to arterial insufficiency including the following: Nocturnal leg cramps and/or necrobiosis diabetorum;

- Venous diseases, including the following: Prophylaxis of deep vein thrombophlebitis, edema (e.g., chronic lymphedema) and/or induration (e.g., stasis dermatitis) associated with chronic venous stasis, venous stasis ulcers, and/or thrombophlebitis;

- Athletic injuries, including the following: Charley horses, pulled muscles, and/or edematous muscles; and

- Necrotizing cellulitis.

An applicant whose device was legally in commercial distribution before May 28, 1976, or whose device has been found to be substantially equivalent to such a device, will be permitted to continue marketing such class III devices during FDA's review of the PMA provided that the PMA is timely filed. FDA intends to review any PMA for the device within 180 days of the date of filing. FDA cautions that under section 515(d)(1)(B)(i) of the FD&C Act, the Agency may not enter into an agreement to extend the review period for a PMA beyond 180 days unless the Agency finds that "the continued availability of the device is necessary for the public health."

An applicant whose device was legally in commercial distribution before May 28, 1976, or whose device has been found to be substantially equivalent to such a device, who does not intend to market such device for any one or more Certain Specified Intended Uses, may remove such intended uses from the device's labeling by initiating a correction within 90 days after issuance of any final order based on this proposal. 21 CFR 806.10(a)(2) requires a device manufacturer or importer initiating a correction to remedy a violation of the FD&C Act that may present a risk to health to submit a written report of the correction to FDA.

FDA intends that under § 812.2(d), the preamble to any final order based on this proposal will state that, as of the date on which the filing of a PMA is required to be filed, the exemptions from the requirements of the IDE regulations for preamendments class III devices in § 812.2(c)(1) and (c)(2) will

cease to apply to any device that is: (1) Not legally on the market on or before that date or (2) legally on the market on or before that date but for which a PMA is not filed by that date, or for which PMA approval has been denied or withdrawn.

If a PMA for a class III device is not filed with FDA within 90 days after the date of issuance of any final order requiring premarket approval for the device, the device would be deemed adulterated under section 501(f) of the FD&C Act. The device may be distributed for investigational use only if the requirements of the IDE regulations are met. The requirements for significant risk devices include submitting an IDE application to FDA for review and approval. An approved IDE is required to be in effect before an investigation of the device may be initiated or continued under § 812.30. FDA, therefore, recommends that IDE applications be submitted to FDA at least 30 days before the end of the 90-day period after the issuance of the final order to avoid interrupting any ongoing investigations.

Because ECP devices intended for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization can currently be marketed after receiving clearance of an application for premarket notification, and FDA is proposing to reclassify these devices as class II requiring clearance of an application for premarket notification, this order, if finalized, will not require a new premarket submission for ECP devices intended for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization.

### X. Proposed Findings With Respect to Risks and Benefits

As required by section 515(b) of the FD&C Act, FDA is publishing its proposed findings regarding: (1) The degree of risk of illness or injury designed to be eliminated or reduced by requiring that this device have an approved PMA for Certain Specified Intended Uses and (2) the benefits to the public from the use of ECP devices for Certain Specified Intended Uses.

These findings are based on the reports and recommendations of the advisory committees (panels) for the classification of these devices along with information submitted in response to the 515(i) order (74 FR 16214, April 9, 2009) and any additional information that FDA has obtained. Additional information regarding the risks as well as classification associated with this

device type can be found in 44 FR 13426, 45 FR 7966, and 52 FR 17732 at 17737.

**XI. Device Subject to the Proposal to Require a PMA—External Counter-Pulsating Devices for Uses Other Than Treatment of Chronic Stable Angina That Is Refractory to Optimal Anti-Anginal Medical Therapy and Without Options for Revascularization (§ 870.5225(c))**

*A. Identification*

An external counter-pulsating device is a noninvasive, prescription device used to assist the heart by applying positive or negative pressure to one or more of the body's limbs in synchrony with the heart cycle.

*B. Summary of Data*

For uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization as specified in section IX, FDA concludes that the safety and effectiveness of these devices have not been established by adequate scientific evidence. There is limited scientific evidence regarding the effectiveness of ECP devices for uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. Review of the published scientific literature revealed a lack of valid scientific evidence to support indications other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. There were few studies that discussed other uses and those studies did not provide evidence of reasonable assurance of effectiveness due to lack of relevant details regarding study design, conduct and results, use of flawed study designs, and publication bias (Refs. 6 to 11). FDA presented the findings of our literature search for ECP devices for uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization to the Circulatory System Devices Panel (the Panel) on December 5, 2012. Based on FDA's findings, the Panel concluded that available scientific evidence is not adequate to support the effectiveness of ECP devices for uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. The Panel also recommended that ECP devices for Certain Specified Intended Uses should

remain in class III (subject to premarket approval application). Although the Panel noted that ECP devices are not life-supporting, the devices present a potential unreasonable risk of injury given that risks to health exist that are not balanced by a benefit that has been established through adequate scientific evidence to demonstrate safety and effectiveness.

The Panel transcript and other meeting materials are available on FDA's Web site (Ref. 5).

*C. Risks to Health*

The risks to health for ECP devices for uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization are the same as outlined in section V.

*D. Benefits of ECP Devices*

As discussed previously, there is limited scientific evidence regarding the effectiveness of ECP devices for uses other than treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. Because the benefits of these devices for such uses are unknown, it is impossible to estimate the direct effect of the devices on patient outcomes. However, claims for the devices state that the devices have the potential to benefit the public by augmenting cardiac output, increasing coronary blood flow, and stimulating circulation in the lower extremities.

**XII. PMA Requirements**

A PMA for ECP devices for Certain Specified Intended Uses must include the information required by section 515(c)(1) of the FD&C Act. Such a PMA should also include a detailed discussion of the risks identified previously, as well as a discussion of the effectiveness of the device for which premarket approval is sought. In addition, a PMA must include all data and information on: (1) Any risks known, or that should be reasonably known, to the applicant that have not been identified in this document; (2) the effectiveness of the device that is the subject of the application; and (3) full reports of all preclinical and clinical information from investigations on the safety and effectiveness of the device for which premarket approval is sought.

A PMA must include valid scientific evidence to demonstrate reasonable assurance of the safety and effectiveness of the device for its intended use (see § 860.7(c)(1)). Valid scientific evidence is "evidence from well-controlled

investigations, partially controlled studies, studies and objective trials without matched controls, well-documented case histories conducted by qualified experts, and reports of significant human experience with a marketed device, from which it can fairly and responsibly be concluded by qualified experts that there is reasonable assurance of the safety and effectiveness of a device under its conditions of use \* \* \* Isolated case reports, random experience, reports lacking sufficient details to permit scientific evaluation, and unsubstantiated opinions are not regarded as valid scientific evidence to show safety or effectiveness." (See § 860.7(c)(2).)

**XIII. Opportunity To Request a Change in Classification**

Before requiring the filing of a PMA for a device, FDA is required by section 515(b)(2)(D) of the FD&C Act to provide an opportunity for interested persons to request a change in the classification of the device based on new information relevant to the classification. Any proceeding to reclassify the device will be under the authority of section 513(e) of the FD&C Act.

A request for a change in the classification of ECP devices for Certain Specified Intended Uses is to be in the form of a reclassification petition containing the information required by § 860.123, including new information relevant to the classification of the device.

**XIV. Codification of Orders**

Prior to the amendments by FDASIA, section 513(e) of the FD&C Act provided for FDA to issue regulations to reclassify devices and section 515(b) of the FD&C Act provided for FDA to issue regulations to require approval of an application for premarket approval for preamendments devices or devices found to be substantially equivalent to preamendments devices. Because sections 513(e) and 515(b) as amended require FDA to issue final orders rather than regulations, FDA will continue to codify reclassifications and requirements for approval of an application for premarket approval, resulting from changes issued in final orders, in the Code of Federal Regulations. Therefore, under section 513(e)(1)(A)(i) of the FD&C Act, as amended by FDASIA, in this proposed order, we are proposing to revoke the requirements in § 870.5225 related to the classification of external counter-pulsating devices for chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization as class III

devices and to codify the reclassification of external counter-pulsating devices for chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization into class II.

#### XV. Environmental Impact

The Agency has determined under 21 CFR 25.34(b) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

#### XVI. Paperwork Reduction Act of 1995

This proposed order refers to collections of information that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

The collections of information in 21 CFR part 814 have been approved under OMB control number 0910–0231. The collections of information in part 807, subpart E, have been approved under OMB control number 0910–0120.

The effect of this order, if finalized, is to shift certain devices from the 510(k) premarket notification process to the PMA process. FDA estimates that there will be two fewer 510(k) submissions as a result of this order, if finalized. Based on FDA's most recent estimates, this will result in a 91-hour burden decrease to OMB control number 0910–0120, which is the control number for the 510(k) premarket notification process. However, because FDA does not expect to receive any new PMAs as a result of this order, we estimate no burden increase to OMB control number 0910–0231 based on this order, if finalized. Therefore, on net, FDA expects a burden hour decrease of 91 due to this proposed regulatory change.

The collections of information in part 812 have been approved under OMB control number 0910–0078.

#### XVII. Proposed Effective Date

FDA is proposing that any final order based on this proposed order become effective 90 days after date of publication of the final order in the **Federal Register**.

#### XVIII. Comments

Interested persons may submit either electronic comments regarding this document to <http://www.regulations.gov> or written comments to the Division of Dockets Management (see **ADDRESSES**). It is only necessary to submit one set of comments. Identify comments with the

docket number found in the brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at <http://www.regulations.gov>.

#### XIX. References

The following references have been placed on display in the Division of Dockets Management (see **ADDRESSES**) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday, and are available electronically at <http://www.regulations.gov>. (FDA has verified the Web site address in this reference section, but FDA is not responsible for any subsequent changes to the Web site after this document publishes in the **Federal Register**.)

#### List of Subjects in 21 CFR Part 870

Medical devices, Cardiovascular devices.

Therefore, under the Federal Food, Drug, and Cosmetic Act and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR part 870 be amended as follows:

#### PART 870—CARDIOVASCULAR DEVICES

- 1. The authority citation for 21 CFR part 870 continues to read as follows:

**Authority:** 21 U.S.C. 351, 360, 360c, 360e, 360j, 371.

- 2. Revise § 870.5225 to read as follows:

#### § 870.5225 External counter-pulsating device.

(a) *Identification.* An external counter-pulsating device is a noninvasive, prescription device used to assist the heart by applying positive or negative pressure to one or more of the body's limbs in synchrony with the heart cycle.

(b) *Classification.* (1) Class II (special controls) when the device is intended for the treatment of chronic stable angina that is refractory to optimal anti-anginal medical therapy and without options for revascularization. The special controls for this device are:

(i) Nonclinical performance evaluation of the device must demonstrate a reasonable assurance of safety and effectiveness for applied pressure, synchronization of therapy with the appropriate phase of the cardiac cycle, and functionality of

alarms during a device malfunction or an abnormal patient condition;

(ii) Reliabilities of the mechanical and electrical systems must be established through bench testing under simulated use conditions and matched by appropriate maintenance schedules;

(iii) Software design and verification and validation must be appropriately documented;

(iv) The skin-contacting components of the device must be demonstrated to be biocompatible;

(v) Appropriate analysis and testing must be conducted to verify electrical safety and electromagnetic compatibility of the device; and

(vi) Labeling must bear all information required for the safe and effective use of the device, including a detailed summary of the device-related and procedure-related complications pertinent to use of the device.

(2) Class III (premarket approval) for the following intended uses: Unstable angina pectoris; acute myocardial infarction; cardiogenic shock; congestive heart failure; postoperative treatment of patients who have undergone coronary artery bypass surgery; peripheral arterial disease associated with ischemic ulcers rest pain or claudication, threatened gangrene, insufficient blood supply at an amputation site, persisting ischemia after embolectomy or bypass surgery, and/or pre- and post-arterial reconstruction to improve runoff; diabetes complicated by peripheral arterial disease or other conditions possibly related to arterial insufficiency including nocturnal leg cramps and/or necrobiosis diabetorum; venous diseases, including phlebitis of deep vein thrombophlebitis, edema (e.g., chronic lymphedema) and/or induration (e.g., stasis dermatitis) associated with chronic venous stasis, venous stasis ulcers, and/or thrombophlebitis; athletic injuries, including Charley horses, pulled muscles and/or edematous muscles; necrotizing cellulitis.

(c) *Date premarket approval application (PMA) or notice of completion of product development protocol (PDP) is required.* A PMA or notice of completion of a PDP is required to be filed with FDA on or before [A DATE WILL BE ADDED THAT WILL BE 90 DAYS AFTER DATE OF PUBLICATION OF A FUTURE FINAL ORDER IN THE **FEDERAL REGISTER**], for any external counter-pulsating device, with an intended use described in (b)(2) of this section, that was in commercial distribution before May 28, 1976, or that has, on or before [A DATE WILL BE ADDED THAT WILL BE 90 DAYS AFTER DATE OF PUBLICATION OF A FUTURE FINAL

**ORDER IN THE FEDERAL REGISTER**], been found to be substantially equivalent to any external counter-pulsating device, with an intended use described in (b)(2) of this section, that was in commercial distribution before May 28, 1976. Any other external counter-pulsating device with an intended use described in (b)(2) of this section shall have an approved PMA or declared completed PDP in effect before being placed in commercial distribution.

Dated: May 15, 2013.

**Leslie Kux,**

*Assistant Commissioner for Policy.*

## DEPARTMENT OF HOMELAND SECURITY

### Coast Guard

#### 33 CFR Part 165

[Docket No. USCG-2013-0320]

RIN 1625-AA00

#### Safety Zone; Chicago Harbor, Navy Pier Southeast, Chicago, IL

**AGENCY:** Coast Guard, DHS.

**ACTION:** Notice of proposed rulemaking.

**SUMMARY:** The Coast Guard proposes to amend the Safety Zone for Chicago Harbor, Navy Pier Southeast, Chicago, IL. This Zone is intended to restrict vessels from a portion of Chicago Harbor during fireworks displays, races, and other marine events that occur throughout each calendar year. The safety zone established by this proposed rule is necessary to protect spectators, participants, and vessels from the hazards associated with these fireworks displays, boat races, and other events.

**DATES:** Comments and related materials must be received by the Coast Guard on or before June 20, 2013.

**ADDRESSES:** You may submit comments identified by docket number USCG-2013-0320 using any one of the following methods:

(1) *Federal eRulemaking Portal:* <http://www.regulations.gov>.

(2) *Fax:* 202-493-2251.

(3) *Mail:* Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590-0001.

(4) *Hand delivery:* Same as mail address above, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The telephone number is 202-366-9329.

To avoid duplication, please use only one of these four methods. See the "Public Participation and Request for Comments" portion of the **SUPPLEMENTARY INFORMATION** section below for instructions on submitting comments.

**FOR FURTHER INFORMATION CONTACT:** If you have questions on this proposed rule, call or email Petty Officer Joseph McCollum, U.S. Coast Guard Sector Lake Michigan; telephone 414-747-7148, email [Joseph.P.McCollum@uscg.mil](mailto:Joseph.P.McCollum@uscg.mil). If you have questions on viewing or submitting material to the docket, call Barbara Hairston, Program Manager, Docket Operations, telephone (202) 366-9826.

#### SUPPLEMENTARY INFORMATION:

##### Table of Acronyms

DHS Department of Homeland Security

FR Federal Register

NPRM Notice of Proposed Rulemaking

CFR Code of Federal Regulations

#### A. Public Participation and Request for Comments

We encourage you to participate in this rulemaking by submitting comments and related materials. All comments received will be posted without change to <http://www.regulations.gov> and will include any personal information you have provided.

##### 1. Submitting Comments

If you submit a comment, please include the docket number for this rulemaking, indicate the specific section of this document to which each comment applies, and provide a reason for each suggestion or recommendation. You may submit your comments and material online at <http://www.regulations.gov>, or by fax, mail, or hand delivery, but please use only one of these means. If you submit a comment online, it will be considered received by the Coast Guard when you successfully transmit the comment. If you fax, hand deliver, or mail your comment, it will be considered as having been received by the Coast Guard when it is received at the Docket Management Facility. We recommend that you include your name and a mailing address, an email address, or a telephone number in the body of your document so that we can contact you if we have questions regarding your submission.

To submit your comment online, go to <http://www.regulations.gov>, type the docket number (USCG-2012-0320) in the "SEARCH" box and click

“SEARCH.” Click on “Submit a Comment” on the line associated with this rulemaking.

If you submit your comments by mail or hand delivery, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. If you submit comments by mail and would like to know that they reached the Facility, please enclose a stamped, self-addressed postcard or envelope. We will consider all comments and material received during the comment period and may change the rule based on your comments.

### 2. Viewing Comments and Documents

To view comments, as well as documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number (USCG–2012–0320) in the “SEARCH” box and click “SEARCH.” Click on “OPEN DOCKET FOLDER” on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

### 3. Privacy Act

Anyone can search the electronic form of comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review a Privacy Act notice regarding our public dockets in the January 17, 2008 issue of the **Federal Register** (73 FR 3316).

### 4. Public Meeting

We do not now plan to hold a public meeting, but you may submit a request for one using one of the four methods specified under **ADDRESSES**. Please explain why you believe a public meeting would be beneficial. If we determine that one would aid this rulemaking, we will hold one at a time and place announced by a later notice in the **Federal Register**.

### B. Basis and Purpose

Each year dozens of fireworks displays are launched from barges in positions just south of the Navy Pier in Chicago. These fireworks displays, along with other marine events, take place on a monthly and sometimes weekly basis. The Captain of the Port, Lake Michigan, has determined that these fireworks displays and other

events such as races or air shows pose a significant risk to public safety and property. Such hazards include falling debris and collisions among spectator vessels. To address these hazards, the Coast Guard established a permanent safety zone for the protection of spectators during these displays and events in 33 CFR 165.931. This year, however, the Coast Guard was informed by Melrose Pyrotechnics that a new launch position will be used for some of the fireworks displays. This new position launches a display from a break wall south of the Navy Pier and would impact portions of Chicago Harbor hundreds of feet beyond the boundaries of the zone as it is currently listed. To address this new launch position, and to ensure safety of spectators and vessels, this rule proposes to extend the boundaries of the safety zone within 33 CFR 165.931.

### C. Discussion of Proposed Rule

The Captain of the Port, Lake Michigan, has determined that a safety zone is necessary to mitigate the aforementioned safety risks. Thus, this rule proposes to amend 33 CFR 165.931 to establish the following area as a safety zone: The waters of Lake Michigan within Chicago Harbor bounded by coordinates beginning at 41°53′26.5″ N, 087°35′26.5″ W; then south to 41°53′7.6″ N, 087°35′26.3″ W; then west to 41°53′7.6″ N, 087°36′23.2″ W; then north to 41°53′26.5″ N, 087°36′24.6″ W; then east back to the point of origin (NAD 83).

This proposed rule will amend 33 CFR 165.931 and update the permanent safety zone on Lake Michigan within Chicago harbor. The Captain of the Port, Lake Michigan will notify the public when the safety zone in this proposed rule will be enforced. Consistent with 33 CFR 165.7(a), such means may include, among other things, publication in the **Federal Register**, Broadcast Notice to Mariners, Local Notice to Mariners, or, upon request, by facsimile (fax). Also, the Captain of the Port will issue a Broadcast Notice to Mariners notifying the public if enforcement these safety zones in this section are cancelled prematurely.

Entry into, transiting, or anchoring within the proposed safety zone during the period of enforcement is prohibited unless authorized by the Captain of the Port, Lake Michigan, or his designated representative. The Captain of the Port, Lake Michigan, or his designated representative may be contacted via VHF Channel 16.

### D. Regulatory Analyses

We developed this proposed rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes or executive orders.

#### 1. Regulatory Planning and Review

This proposed rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order. It is not “significant” under the regulatory policies and procedures of the Department of Homeland Security. We conclude that this proposed rule is not a significant regulatory action because we anticipate that it will have minimal impact on the economy, will not interfere with other agencies, will not adversely alter the budget of any grant or loan recipients, and will not raise any novel legal or policy issues. The safety zone established by this proposed rule will be enforced in short periods immediately before, during, and after the time the displays and events occur. Also, the safety zone is designed to minimize its impact on navigable waters and has been designed to allow vessels to transit unrestricted to portions of the waterways not affected by the safety zones. Thus, restrictions on vessel movements within any particular area are expected to be minimal. Under certain conditions, moreover, vessels may still transit through the safety zone when permitted by the Captain of the Port. On the whole, the Coast Guard expects insignificant adverse impact to mariners from the enforcement of this safety zone.

#### 2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601–612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard certifies under 5 U.S.C. 605(b) that this proposed rule will not have a significant economic impact on a substantial number of small entities.

This proposed rule would affect the following entities, some of which might be small entities: the owners and

operators of vessels intending to transit or anchor in portions of Chicago Harbor when this safety zone is being enforced.

This proposed safety zone will not have a significant economic impact on a substantial number of small entities for the following reasons discussed in the above Regulatory Planning and Review section. If you think that your business, organization, or governmental jurisdiction qualifies as a small entity and that this proposed rule would have a significant economic impact on it, please submit a comment (see **ADDRESSES**) explaining why you think it qualifies and how and to what degree this rule would economically affect it.

### 3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Public Law 104–121), we want to assist small entities in understanding this proposed rule. If the rule would affect your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above. The Coast Guard will not retaliate against small entities that question or complain about this proposed rule or any policy or action of the Coast Guard.

### 4. Collection of Information

This proposed rule would call for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

### 5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this proposed rule under that Order and determined that this rule does not have implications for federalism.

### 6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

### 7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this proposed rule would not result in such an expenditure, we do discuss the effects of this proposed rule elsewhere in this preamble.

### 8. Taking of Private Property

This proposed rule would not affect a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

### 9. Civil Justice Reform

This proposed rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

### 10. Protection of Children From Environmental Health Risks

We have analyzed this proposed rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This proposed rule is not an economically significant rule and would not create an environmental risk to health or risk to safety that might disproportionately affect children.

### 11. Indian Tribal Governments

This proposed rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

### 12. Energy Effects

This proposed rule is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

### 13. Technical Standards

This proposed rule does not use technical standards. Therefore, we did

not consider the use of voluntary consensus standards.

### 14. Environment

We have analyzed this proposed rule under Department of Homeland Security Management Directive 023–01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321–4370f), and have made a preliminary determination that this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This proposed rule involves the establishment of safety zones and thus, is categorically excluded under paragraph (34)(g) of the Instruction. An environmental analysis checklist supporting this determination is available in the docket where indicated under **ADDRESSES**. We seek any comments or information that may lead to the discovery of a significant environmental impact from this proposed rule.

### List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and record keeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard proposes to amend 33 CFR part 165 as follows:

### PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

- 1. The authority citation for part 165 continues to read as follows:

**Authority:** 33 U.S.C. 1231; 46 U.S.C. Chapters 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05–1, 6.04–1, 6.04–6, and 160.5; Pub. L. 107–295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

- 2. Revise § 165.931 to read as follows:

#### § 165.931 Safety Zone; Chicago Harbor, Navy Pier Southeast, Chicago, IL.

(a) *Location.* The following area is a safety zone: The waters of Lake Michigan within Chicago Harbor bounded by coordinates beginning at 41°53′26.5″ N, 087°35′26.5″ W; then south to 41°53′7.6″ N, 087°35′26.3″ W; then west to 41°53′7.6″ N, 087°36′23.2″ W; then north to 41°53′26.5″ N, 087°36′24.6″ W then east back to the point of origin (NAD 83).

(b) *Definitions.* The following definitions apply to this section:

(1) “Designated representative” means any Coast Guard Commissioned, warrant, or petty officer designated by the Captain of the Port, Lake Michigan to monitor a safety zone, permit entry

into the zone, give legally enforceable orders to persons or vessels within the zone, and take other actions authorized by the Captain of the Port.

(2) "Public vessel" means vessels owned, chartered, or operated by the United States, or by a State or political subdivision thereof.

(c) *Regulations.* (1) In accordance with the general regulations in 33 CFR 165.23 of this part, entry into, transiting, or anchoring within this safety zone is prohibited unless authorized by the Captain of the Port, Lake Michigan, or his designated representative.

(2) This safety zone is closed to all vessel traffic, excepted as may be permitted by the Captain of the Port, Lake Michigan or his designated representative. All persons and vessels must comply with the instructions of the Coast Guard Captain of the Port or his designated representative. Upon being hailed by the U.S. Coast Guard by siren, radio, flashing light or other means, the operator of a vessel shall proceed as directed.

(3) All vessels must obtain permission from the Captain of the Port or his designated representative to enter, move within, or exit the safety zone established in this section when this safety zone is enforced. Vessels and persons granted permission to enter the safety zone must obey all lawful orders or directions of the Captain of the Port or a designated representative. While within a safety zone, all vessels must operate at the minimum speed necessary to maintain a safe course.

(d) *Notice of enforcement or suspension of enforcement.* The safety zone established by this section will be enforced only upon notice of the Captain of the Port. The Captain of the Port will cause notice of enforcement of the safety zone established by this section to be made by all appropriate means to the affected segments of the public including publication in the **Federal Register** as practicable, in accordance with 33 CFR 165.7(a). Such means of notification may also include, but are not limited to Broadcast Notice to Mariners or Local Notice to Mariners.

(e) *Exemption.* Public vessels, as defined in paragraph (b) of this section, are exempt from the requirements in this section.

(f) *Waiver.* For any vessel, the Captain of the Port Lake Michigan or his designated representative may waive any of the requirements of this section, upon finding that operational conditions or other circumstances are such that application of this section is unnecessary or impractical for the purposes of public or environmental safety.

Dated: May 3, 2013.

**M.W. Sibley,**

*Captain, U.S. Coast Guard, Captain of the Port, Lake Michigan.*

## ENVIRONMENTAL PROTECTION AGENCY

### 40 CFR Part 52

[EPA-R04-OAR-2013-0272; FRL-9816-1]

#### Approval and Promulgation of Implementation Plans; Kentucky; Approval of Revisions to the Jefferson County Portion of the Kentucky SIP; Emissions During Startups, Shutdowns, and Malfunctions

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Proposed rule.

**SUMMARY:** EPA is proposing to approve part of a revision to the Kentucky State Implementation Plan (SIP), submitted by the Commonwealth of Kentucky, through the Kentucky Division for Air Quality (KDAQ), on March 22, 2011. The proposed revision was submitted by KDAQ on behalf of the Louisville Metro Air Pollution Control District (District), which has jurisdiction over Jefferson County, Kentucky. The portion of the revision that EPA is proposing for approval modifies the Regulation entitled, "Emissions During Startups, Shutdowns, Malfunctions and Emergencies" in the Jefferson County portion of the Kentucky SIP. EPA is proposing approval of this portion of the March 22, 2011, SIP revision because the Agency has determined that it is in accordance with the requirements for SIP provisions under the Clean Air Act (CAA or Act). EPA will act on the other portions of KDAQ's March 22, 2011, submittal, which are severable and unrelated, in a separate action.

**DATES:** Comments must be received on or before June 20, 2013.

**ADDRESSES:** Submit your comments, identified by Docket ID No. EPA-R04-OAR-2013-0272, by one of the following methods:

1. *www.regulations.gov:* Follow the on-line instructions for submitting comments.

2. *Email:* R4-RDS@epa.gov.

3. *Fax:* (404) 562-9019.

4. *Mail:* EPA-R04-OAR-2013-0272, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960.

5. *Hand Delivery or Courier:* Lynora Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Such deliveries are only accepted during the Regional Office normal hours of operation, and special arrangements should be made for deliveries of boxed information. The Regional Office official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

*Instructions:* Direct your comments to Docket ID No. "EPA-R04-OAR-2013-0272." EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *www.regulations.gov* or email. The *www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov*, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at <http://www.epa.gov/epahome/dockets.htm>.

*Docket:* All documents in the electronic docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy

form. Publicly available docket materials are available either electronically in [www.regulations.gov](http://www.regulations.gov) or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. EPA requests that, if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office's official hours of business are Monday through Friday, 8:30 to 4:30, excluding federal holidays.

**FOR FURTHER INFORMATION CONTACT:** Joel Huey, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303-8960. Mr. Huey may be reached by phone at (404) 562-9104 or via electronic mail at [huey.joel@epa.gov](mailto:huey.joel@epa.gov).

### I. What action is EPA proposing?

EPA is proposing to approve a revision to the Jefferson County portion of the Kentucky SIP to incorporate revisions to Jefferson County Regulation 1.07, "Emissions During Startups, Shutdowns, Malfunctions and Emergencies" (referred to hereafter as the "Jefferson County SSM rule").<sup>1</sup> The revision modifies all seven sections of the existing version of Regulation 1.07 currently in the EPA-approved SIP for Jefferson County. EPA believes that the changes to the Jefferson County SSM rule are consistent with CAA requirements that apply to excess

<sup>1</sup> In 2003, the City of Louisville and Jefferson County governments merged and the "Jefferson County Air Pollution Control District" was renamed the "Louisville Metro Air Pollution Control District." However, each of the regulations in the Jefferson County portion of the Kentucky SIP still has the subheading "Air Pollution Control District of Jefferson County." Thus, to be consistent with the terminology used in the SIP, we refer throughout this notice to regulations contained in Jefferson County portion of the Kentucky SIP as the "Jefferson County" regulations.

emissions during startup, shutdown and malfunction (SSM) events. In addition, EPA believes that these changes will correct existing concerns about the prior version of the Jefferson County SSM rule in the SIP for this Area, as explained below. Please refer to the docket for this rulemaking for the complete text of the adopted provisions.

### II. What is the background of the Jefferson County Rule on startups, shutdowns, malfunctions (SSM) and emergencies?

The regulation of emissions from stationary sources is a part of the Louisville Metro Air Pollution Control District's program for attaining and maintaining compliance with the national ambient air quality standards (NAAQS) and for meeting other CAA requirements. The current EPA-approved SIP for the Jefferson County area incorporates a prior version of the Jefferson County SSM rule that includes certain provisions applicable to excess emissions from such sources during startup, shutdown, malfunction, and emergency events. EPA published approval of the original version of this rule on January 25, 1980. See 45 FR 6092. On February 11, 1999, Kentucky submitted multiple changes to the Jefferson County portion of the Kentucky SIP, which EPA approved on October 23, 2001. See 66 FR 53658. Among other elements, Kentucky's February 11, 1999, submittal included several changes to the Jefferson County SSM rule. The submittal added to this rule a definition of "Emergency" in Section 1, *Definitions*, and a new Section 5, *Emergencies*, which contains an affirmative defense provision for emergencies that is very similar to the affirmative defense provision of the title V operating permit regulations. See 40 CFR 70.7(g). Additionally, the February 11, 1999, submittal modified Section 2, *Excess Emissions*, of the rule such that excess emissions would not be deemed in violation of otherwise applicable emission limits in the SIP if, based upon a showing by the owner or operator of the source and an affirmative determination by the District, certain requirements regarding startups and shutdowns, malfunctions, and emergencies are satisfied. Those requirements, as revised by the February 11, 1999, submittal, are specified in the following sections of the Jefferson County SSM rule: Section 3, *Startup or Shutdown*; Section 4, *Malfunctions*; Section 5, *Emergencies*; Section 6, *Initial Notification and Reporting Requirements for Malfunctions and Emergencies*; and Section 7, *Extended Malfunctions and Emergencies*.

Acknowledging deficiencies in the Jefferson County SSM rule, the District proactively adopted changes on June 21, 2005. The District adopted these changes with the intent of correcting inconsistencies between its rule and the CAA and EPA guidance,<sup>2</sup> regarding SIP provisions that apply to the treatment of excess emissions that may occur during source startup, shutdown, maintenance, and malfunction events. These changes were included in the March 22, 2011, SIP revision provided to EPA by KDAQ. The most salient features of these latest changes to Jefferson County Regulation 1.07 include: (1) Changing the name of the regulation from "Emissions During Startups, Shutdowns, Malfunctions and Emergencies" to "Excess Emissions During Startups, Shutdowns, and Upset Conditions;" (2) clarifying that excess emissions from a process or process equipment due to startup, shutdown or upset condition shall be deemed in violation of the applicable emission standards; (3) removing the authority of the District to grant discretionary exemptions from compliance with SIP emission standards during SSM events; (4) augmenting the source excess emission reporting requirements to assist the District in evaluating whether ambient standards and goals have been exceeded and whether enforcement actions are needed to protect public health and welfare; and (5) removing the provisions that created exemptions for excess emissions during emergencies based upon factors comparable to an affirmative defense.

### III. What is EPA's evaluation of the revisions to the Jefferson County SSM Rule?

EPA has evaluated the revised version of the Jefferson County SSM rule submitted as part of the March 22, 2011, SIP submission from KDAQ on behalf of the District. Based upon this evaluation, EPA believes that the District has made several significant changes that make the Jefferson County SSM rule consistent with CAA requirements and with EPA guidance on SIP provisions relevant to the treatment of excess emissions during SSM events.

<sup>2</sup> The District's Regulatory Impact Analysis for the June 21, 2005, changes to the SSM rule references the following memoranda as part of the basis for the revisions to its SSM rule: "Policy on Excess Emissions During Startup, Shutdown, Maintenance, and Malfunctions," Kathleen M. Bennett, September 28, 1982; "Policy on Excess Emissions During Startup, Shutdown, Maintenance, and Malfunctions," Kathleen M. Bennett, February 15, 1983; and "State Implementation Plans: Policy Regarding Excess Emissions During Malfunctions, Startup, and Shutdown," Steven A. Herman, September 20, 1999.

First, the District has explicitly provided that excess emissions from sources due to startup, shutdown, or upset (i.e., malfunction) events are not exempt from compliance with applicable emission limits. Revised Section 2.2 of the Jefferson County SSM rule clearly provides that excess emissions during such events “shall be deemed in violation of the applicable emission standard.” This provision is consistent with EPA’s longstanding interpretation of the CAA to prohibit SIP provisions that include any exemptions for excess emissions during SSM events and requiring that such emissions be treated as violations.<sup>3</sup>

Second, the District has substantially revised the Jefferson County SSM rule in order to alter provisions that previously had the effect of providing an exemption for emissions during SSM events through the exercise of director’s discretion by the District. The prior version of the rule contained factors that the District could consider in the decision whether or not to grant such a discretionary exemption. Revised Section 2.3 removes the authority of the District to grant discretionary exemptions from compliance with SIP emission standards and in its place provides an “enforcement discretion” provision that provides specific factors for state personnel in their own exercise of enforcement discretion for violations related to startup, shutdown, and upset events. These factors are intended to apply only to the District and do not affect EPA enforcement or citizen enforcement—both of which are separately authorized by the CAA.<sup>4</sup> These factors include consideration of the duration and frequency of the emissions; operation/maintenance practices; whether there is a recurring pattern; certain public health impacts associated with the excess emissions, among other factors. Notably, these factors are also not intended to, and do not, operate as an affirmative defense.<sup>5</sup>

<sup>3</sup> See, e.g., “State Implementation Plans (SIPs): Policy Regarding Excess Emissions During Malfunctions, Startup, and Shutdown,” sent by Steven A. Herman, Assistant Administrator for Enforcement and Compliance Assurance, and Robert Perciasepe, Assistant Administrator for Air and Radiation, to the Regional Administrators, Regions I–X, on Sept. 20, 1999.

<sup>4</sup> On May 9, 2013, Jefferson County provided EPA with a letter clarifying and confirming that the factors included in Regulation 1.07, Section 2.3, are intended to be discretionary factors that Jefferson County may consider as part of its own enforcement discretion and that the rule does not intend to or purport to apply to any other agency or the public. This letter is a part of the basis for EPA’s action upon the SIP submission and part of the record for the action to be appropriately reflected in the CFR.

<sup>5</sup> EPA notes that revised Section 3.4 of the Jefferson County SSM rule provides that either

This revised provision is consistent with EPA’s longstanding interpretation of the CAA to permit SIP provisions that address the exercise of enforcement discretion by state personnel, so long as they do not impinge upon the enforcement discretion of EPA or citizens.<sup>6</sup>

Third, the District has also substantially revised the Jefferson County SSM rule to remove provisions that previously included specific treatment for excess emissions during emergencies. The prior version of the rule included provisions that together appeared to provide an exemption for excess emissions that occurred during emergencies, if the source could meet certain factors that were structured as an affirmative defense. The District has removed the definition of “emergency” that previously appeared in Section 1.1 and removed the provisions applicable to emergencies in Section 5. The prior version of the Jefferson County SSM rule could have operated to exempt excess emissions during such events, and to provide a bar not just to monetary penalties, but also a bar to injunctive relief for the resulting violations of SIP emission standards. Moreover, the factors for the affirmative defense were not consistent with EPA’s guidance for affirmative defense provisions for malfunctions.<sup>7</sup> Removal of these provisions from the Jefferson County SSM rule is thus consistent with EPA’s longstanding guidance concerning SIP provisions, both with respect to exemptions for excess emissions and with respect to affirmative defense provisions that

startup or shutdown that is necessitated by an upset shall be considered part of the upset. Provision 2.3, which sets forth enforcement discretion factors, refers to Section 3.6 and 4.4 and thus the Jefferson County SSM rule treats startups following a malfunction event in the same manner as it treats all excess emissions for purposes of enforcement discretion. In the context of an enforcement discretion provision, as opposed to an affirmative defense provision for malfunctions, the Jefferson County SSM rule is consistent with the CAA and EPA’s policy and guidance.

<sup>6</sup> See “Policy on Excess Emissions During Startup, Shutdown, Maintenance, and Malfunctions,” sent by Kathleen M. Bennett, Assistant Administrator for Air, Noise, and Radiation, to the Regional Administrators, Regions I–X on Feb. 15, 1983 (indicating the CAA would allow appropriately drawn enforcement discretion provisions in SIPs).

<sup>7</sup> See “State Implementation Plans (SIPs): Policy Regarding Excess Emissions During Malfunctions, Startup, and Shutdown,” sent by Steven A. Herman, Assistant Administrator for Enforcement and Compliance Assurance, and Robert Perciasepe, Assistant Administrator for Air and Radiation, to the Regional Administrators, Regions I–X, on Sept. 20, 1999 (indicating that the CAA would allow appropriately drawn affirmative defense provisions in SIPs).

would be consistent with CAA requirements.

Fourth, the District has revised the provisions of the Jefferson County SSM rule to update and expand the notification requirements for sources in the event of excess emissions related to startup, shutdown, and upset conditions. These provisions relate to the timing and nature of notification that the source is required to make to the District and may be germane to the District’s exercise of enforcement discretion under revised Section 2.3. EPA believes that these updated notification provisions will likely enhance compliance and enforcement efforts within the Jefferson County area and that they otherwise are consistent with CAA requirements because they do not purport to affect the exercise of enforcement discretion by EPA or other parties.

Finally, the District substantially revised the Jefferson County SSM rule with respect to “extended” malfunctions and emergencies. Section 9 of the prior version of the rule appeared to allow sources to continue to operate for extended periods of time in the event of a malfunction or emergency, without legal consequence, so long as the source obtained prior authorization from the District. Revised Section 5 of the rule now makes unequivocally clear that, even if the District authorizes continued operation during such an event following a specified process, the excess emissions that occur during that extended period of time remain violations of the applicable SIP emission standards. The revised provision states that the authorization by the District “shall neither constitute an affirmative defense for violations caused by excess emissions nor preempt the rights of the EPA or any person to take action under federal, state, or local law.” EPA believes Revised Section 5 in conjunction with revised Section 2.2 thus makes clear that any excess emissions during such periods constitute violations of the applicable SIP emission standards and that the District, EPA, or others using the citizen suit provision of the CAA may still pursue appropriate enforcement action against the source. The revised provision is thus consistent with EPA’s longstanding interpretation of the CAA to prohibit SIP provisions that include exemptions for excess emissions during SSM events and requiring that such emissions be treated as violations.

EPA believes that the revisions to the Jefferson County SSM rule are consistent with the requirements of both section 110(l) and section 193. Under

section 110(l), EPA is prohibited from approving any SIP revision that would interfere with any applicable requirement concerning attainment and reasonable further progress or any other applicable requirements of the CAA. In this action, EPA believes that the revisions do not interfere with such requirements and in fact strengthen the existing SIP by removing or revising various provisions related to excess emissions during SSM events that included automatic exemptions, director discretion exemptions, affirmative defense provisions, and other provisions that were inconsistent with CAA requirements and would have interfered with effective enforcement of the SIP. Because all of these changes are improvements to the prior version of the Jefferson County SSM rule, and because they are themselves consistent with the requirements of the CAA as interpreted in EPA guidance for SIP provisions, EPA is proposing to find that the revision is consistent with the requirements of section 110(l).

Similarly, CAA section 193 prohibits EPA from approving SIP revisions to certain SIP control requirements in effect prior to November 15, 1990, unless the modification insures equivalent or greater emission reductions. The revision at issue in this action does pertain to control requirements that, at least in part, predate November 15, 1990, and thus compliance with section 193 is required. Because all of the revisions are improvements to the prior version of the Jefferson County SSM rule, and because the revised provisions are themselves consistent with the requirements of the CAA as interpreted in EPA guidance for SIP provisions, EPA is proposing that the revision is also consistent with the requirements of section 193. As a result of the improved effectiveness of the enforcement program associated with emissions during SSM, and the explicit determination that such emissions are violations of applicable emission limits, the revision is expected to produce equivalent or greater emission reductions and is thus consistent with CAA section 193.

Based upon the foregoing analysis, EPA is proposing to approve the changes to the Jefferson County SSM rule contained in the March 22, 2011, SIP submission from KDAQ on behalf of the District. EPA has determined that the specific changes to the rule are consistent with CAA requirements for SIP provisions that address excess emissions during SSM events, and with EPA guidance concerning such provisions. EPA requests comment on this proposal, and in particular requests

comments on its view that the revisions to the Jefferson County SSM rule are consistent with CAA requirements for SIP provisions.

EPA notes that in a separate rulemaking action, published on February 22, 2013, EPA identified several deficiencies associated with the Jefferson County SSM rule including: (1) the rule did not consider all excess emissions above SIP emission limits to be “violations;” (2) the rule included insufficiently bounded director’s discretion provisions regarding whether an excess emissions event constituted a violation and thus creating impermissible discretionary exemptions from SIP emission limits; (3) the rule provided an impermissible exemption for excess emissions that occur during “emergencies;” and (4) the rule contained affirmative defense provisions that are not consistent with CAA requirements. *See* 78 FR 12460, 12507–12508. Today’s action proposing approval of Jefferson County’s revised SSM rule is separate from the February 22, 2013, action. EPA’s action in this proposal does not reopen the public comment period associated with the separate February 22, 2013, action; nor does today’s action purport to revise or amend that separate proposed action. EPA will be taking a separate final action on the February 22, 2013, proposed rulemaking. Today’s action only proposes to approve the revised Jefferson County SSM Rule into the SIP as consistent with the CAA and CAA policy and guidance, for the reasons explained above.

#### **IV. Why is EPA proposing this action and what is the effect of this proposed action?**

The purpose of today’s action is to propose approval of changes to Regulation 1.07 in the Jefferson County portion of the Kentucky SIP. The District determined that the current SIP-approved rule required changes in light of EPA policy memoranda regarding excess emissions from stationary sources, and voluntarily provided a revision to KDAQ who submitted the revised rule to EPA for approval in 2011. The changes to Regulation 1.07, which are being proposed for inclusion into the SIP today, revise the Jefferson County SSM rule to make it consistent with the CAA.

If finalized, today’s action would approve part of the revision to the Jefferson County portion of the Kentucky SIP submitted by KDAQ, on behalf of the District, on March 22, 2011. Approval of this revision would change the name of the regulation to “Excess Emissions During Startups,

Shutdowns, and Upset Conditions;” clarify that excess emissions due to startup, shutdown or upset condition shall be deemed in violation of the applicable emission standards; augment the source excess emission reporting requirements to improve air quality management; remove the authority of the District to grant discretionary exemptions from compliance with SIP emission standards during SSM events; remove the affirmative defense provision for emergencies; and explicitly state that the District’s decision not to exercise its own enforcement discretion would not preempt enforcement by EPA or other parties. Today’s action does not make any changes or propose any findings related to EPA’s completely separate rulemaking action regarding the current SIP-approved version of the Jefferson County SSM rule proposed on February 22, 2013 (78 FR 12460).

#### **V. Proposed Action**

EPA is proposing to approve the portion of Kentucky’s March 22, 2011, SIP revision pertaining to Jefferson County Regulation 1.07, “Emissions During Startups, Shutdowns, Malfunctions and Emergencies.” This revision renames the regulation “Excess Emissions During Startups, Shutdowns, and Upset Conditions” and makes numerous changes to the Jefferson County SSM rule to bring it into compliance with the CAA and EPA guidance regarding SIP provisions for the correct treatment of excess emissions from sources during SSM events.

#### **VI. Statutory and Executive Order Reviews**

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by Commonwealth law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);

- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);

- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);

- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);

- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the Commonwealth, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

## ENVIRONMENTAL PROTECTION AGENCY

### 40 CFR Part 228

[EPA–R06–OW–2013–0221; FRL–9814–7]

#### Ocean Dumping; Atchafalaya-West Ocean Dredged Material Disposal Site Designation

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Proposed rule.

**SUMMARY:** The EPA is proposing to re-designate the existing Marine Protection, Research, and Sanctuaries Act of 1972 (MPRSA) Section 103(b) Atchafalaya-West Ocean Disposal Site (ODMDS-West) as a permanent MPRSA Section 102(c) ocean dredged material disposal site (ODMDS) located adjacent to and west of the Atchafalaya River Bar Channel (ARBC) of Louisiana. The approval for the ODMDS-West use expired in August 2012; therefore, the site can no longer accept shoal material dredged from the ARBC unless it is re-designated as a MPRSA Section 102(c) site by EPA. Studies have shown that use of the ODMDS-West reduces the amount and rate of shoal material runback into the ARBC, and thus, decreases the overall annual maintenance dredging effort needed for the ARBC while providing vessels with a longer period of safe navigation access prior to a maintenance dredging event. Therefore, there is a need to designate a permanent ODMDS on the west side of the ARBC. Approximately 10.8 million cubic yards will be placed every 7 months and must be conducted in accordance with the Site Management and Monitoring Plan. The proposed ODMDS will be monitored periodically to ensure that the site operates as expected.

**DATES:** *Comments.* Comments on this proposed rule and draft Environmental Impact Statement must be received on or before July 5, 2013.

**ADDRESSES:** Submit your comments, identified by Docket No. EPA–R06–OW–2013–0221, by one of the following methods:

- *Federal e-Rulemaking Portal:* <http://www.regulations.gov>; follow the online instruction for submitting comments.

- *Email:* Dr. Jessica Franks at [franks.jessica@epa.gov](mailto:franks.jessica@epa.gov).

- *Fax:* Dr. Jessica Franks, Marine and Coastal Section (6WQ–EC) at fax number 214–665–6689.

- *Mail:* Dr. Jessica Franks, Marine and Coastal Section (6WQ–EC), Environmental Protection Agency, Mailcode: (6WQ–EC), 1445 Ross

Avenue, Suite 1200, Dallas, Texas 75202–2733.

**Instructions:** Direct your comments to Docket No. EPA–R06–OW–2013–0221. EPA’s policy is that all comments received will be included in the public docket without change and may be made available online at [www.regulations.gov](http://www.regulations.gov), including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through [www.regulations.gov](http://www.regulations.gov) or email. The [www.regulations.gov](http://www.regulations.gov) Web site is an “anonymous access” system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through [www.regulations.gov](http://www.regulations.gov) your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

**Docket:** All documents in the docket are listed in the [www.regulations.gov](http://www.regulations.gov) index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in [www.regulations.gov](http://www.regulations.gov) or in hard copy at the Marine and Coastal Section (6WQ–EC), Environmental Protection Agency, 1445 Ross Avenue, Suite 1200, Dallas, Texas 75202–2733. The file will be made available by appointment for public inspection in the Region 6 FOIA Review Room between the hours of 8:30 a.m. and 4:30 p.m. weekdays except for legal holidays. Contact the person listed in the **FOR FURTHER INFORMATION CONTACT** paragraph below. If possible, please make the appointment at least two working days in advance of your visit. There will be a 15 cent per page fee for making photocopies of

documents. On the day of the visit, please check in at the EPA Region 6 reception area at 1445 Ross Avenue, Suite 700, Dallas, Texas.

**FOR FURTHER INFORMATION CONTACT:** Jessica Franks, Ph.D., Marine and Coastal Section (6WQ-EC), Environmental Protection Agency, Region 6, 1445 Ross Avenue, Suite 700, Dallas, Texas 75202-2733, telephone (214) 665-8335, fax number (214) 665-6689; email address [franks.jessica@epa.gov](mailto:franks.jessica@epa.gov).

**A. Potentially Affected Entities**

Entities potentially affected by this action are persons, organizations, or government bodies seeking to dispose of dredged material in ocean waters at the ODMDS-West, under the Marine Protection Research and Sanctuaries Act, 33 U.S.C. 1401 *et seq.* This Rule would be primarily of relevance to parties seeking permits from the USACE to transport dredged material for the purpose of disposal into ocean waters at the ODMDS-West, as well as the USACE itself (when proposing to dispose of dredged material at the ODMDS-West). Potentially affected categories and entities seeking to use the Atchafalaya ODMDS-West and thus subject to this Rule include:

Category	Examples of potentially regulated persons
Federal government .....	USACE Civil Works and O & M projects; other Federal agencies, including the Department of Defense.
Industry and general public .....	Port authorities, marinas and harbors, shipyards and marine repair facilities, berth owners.
State, local and tribal governments .....	Governments owning and/or responsible for ports, harbors, and/or berths, Government agencies requiring disposal of dredged material associated with public works projects.

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be affected by this action. EPA notes, however, that nothing in this Rule alters in any way, the jurisdiction of EPA, or the types of entities regulated under the Marine Protection Research and Sanctuaries Act. To determine if you or your organization may be potentially affected by this action, you should carefully consider whether you expect to propose ocean disposal of dredged material, in accordance with the Purpose and Scope provisions of 40 CFR 220.1, and if you wish to use the ODMDS-West. For any questions regarding the applicability of this action to a particular entity, please refer to the contact person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

**B. Background**

Ocean disposal of dredged materials is regulated under Title I of the Marine Protection, Research and Sanctuaries Act (MPRSA; 33 U.S.C. 1401 *et seq.*). The EPA and the USACE share responsibility for the management of ocean disposal of dredged material. Under Section 102 of MPRSA; EPA is responsible for designating an acceptable location for the ODMDS. With concurrence from EPA, the USACE issues permits under MPRSA Section 103 for ocean disposal of dredged material deemed suitable according to EPA criteria in MPRSA Section 102 and EPA regulations in Title 40 of the Code of Federal Regulations Part 227 (40 CFR part 227). In lieu of the permit procedure for a federal project involving dredged material, the USACE may issue and abide by regulations using the same criteria, other factors to be evaluated,

same procedures and same requirements that apply to the issuance of permits.

Pursuant to its voluntary NEPA policy, published at 63 FR 58045 (October 29, 1998), EPA typically relies on the EIS process to enhance public participation on the proposed designation of an ODMDS. A site designation EIS evaluates alternative sites and examines the potential environmental impacts associated with disposal of dredged material at various locations. Such an EIS first demonstrates the need for the ODMDS designation action (40 CFR 6.203(a) and 40 CFR 1502.13) by describing available or potential aquatic and non-aquatic (*i.e.*, land-based) alternatives and the consequences of not designating a site—the No Action Alternative. Once the need for an ocean disposal site is established, potential sites are screened for feasibility through a “Zone of Siting Feasibility” (ZSF) process. Potential alternative sites are then evaluated

using EPA's ocean disposal criteria at 40 CFR Part 228 and compared in the EIS. Of the sites that satisfy these criteria, the site that best complies is selected as the preferred alternative for designation through a rulemaking proposal published in the **Federal Register** (FR), as here.

Formal designation of an ODMDS in the **Federal Register** and codification in the Code of Federal Regulations does not constitute approval of dredged material for ocean disposal. Site designation merely identifies a suitable ocean location in the event that dredged material is later approved for ocean disposal. Designation of an ODMDS provides an ocean disposal alternative for consideration in the review of each proposed dredging project. Before any ocean disposal may take place, the dredging project proponent must demonstrate a need for ocean disposal, including consideration of alternatives. Alternatives to ocean disposal, including the option for beneficial reuse of dredged material, are evaluated for each dredging project that may result in the ocean disposal of dredged materials from such project. Ocean disposal of dredged material is only allowed after both EPA and USACE determine that the proposed activity is environmentally acceptable under criteria codified at 40 CFR Part 227 and 33 CFR Part 336, respectively. In addition, ongoing management of these ODMDSs would be subject to Site Management and Monitoring Plans (SMMPs) required by MPRSA section 102(c)(3)(F) and (c)(4), which are discussed more fully below. Decisions to allow ocean disposal are made on a case-by-case basis through the MPRSA Section 103 permitting process, resulting in a USACE permit or its equivalent process for USACE's Civil Works projects. Material proposed for disposal at a designated ODMDS must conform to EPA's permitting criteria for acceptable quality (40 CFR Parts 225 and 227), as determined from physical, chemical, and bioassay/bioaccumulation tests prescribed by national sediment testing protocols (EPA and USACE 1991). Only clean non-toxic dredged material is acceptable for ocean disposal. The proposed ODMDS will be subject to ongoing monitoring and management to ensure continued protection of the marine environment. This ocean disposal site designation is based on EPA's general and specific criteria as evaluated in the March 2013 "Draft Environmental Impact Statement, Designation of the Atchafalaya River Bar Channel Ocean Dredged Material Disposal Site Pursuant

to Section 102(c) of the Marine Protection, Research and Sanctuaries Act of 1972, St. Mary Parish, Louisiana" (Draft EIS).

The Atchafalaya River and Bayous Chene, Boeuf, and Black, Louisiana (Figure 1-1), project was authorized by the Rivers and Harbors Act of 1968 (Pub. L. 90-483). Historically, the Atchafalaya River and Bayous Chene, Boeuf, and Black, Louisiana, navigation channel has been dredged to 24 feet Mean Low Gulf (MLG) which includes 20 feet for the authorized channel dimension plus 2 feet advanced maintenance and 2 feet of allowable overdepth. Material removed from the ARBC suitable for beneficial use (i.e., between ARBC Stations 475+00 and 650+00) has been placed in one of two adjacent Bird Island disposal sites, pursuant to Section 404 of the Clean Water Act (CWA) of 1977. Material that could not be used beneficially (i.e., between ARBC Stations 650+00 and 1340+00) has been placed (prior to 2002) at the existing Marine Protection, Research, and Sanctuaries Act of 1972 (MPRSA) Section 102(c) Ocean Dredged Material Disposal Site (ODMDS) on the east side of the channel. This ODMDS is referred to as ODMDS-East. Since 2002, however, material not suitable for beneficial use has been placed at a temporary (i.e., 5-year) ODMDS on the west side of the channel under the authority of MPRSA Section 103(b) (the ODMDS-West). In 2007, the U.S. Army Corps of Engineers, New Orleans District (MVN) requested, and received, from the U.S. Environmental Protection Agency, Region 6 (EPA), a 5-year extension for the continued use of the MPRSA Section 103(b) ODMDS-West. The approval for the ODMDS-West use expired in August 2012; therefore, the site can no longer accommodate shoal material dredged from the ARBC unless it is re-designated as a MPRSA Section 102(c) site by EPA.

EPA has determined that the ODMDS-West alternative identified in the draft EIS is the environmentally preferred site, and this action proposes to designate the ODMDS-West as an ocean dredged material disposal site, located in Atchafalaya Bay, approximately 19 miles from the mainland coast and the mouth of the Atchafalaya River. The proposed ODMDS-West is rectangular, approximately 3 miles wide by 16 miles long, located west of and parallel to the ARBC. The depth of the site ranges from 4 to 23 feet MLG, and the total area is approximately 48 square miles. The action provides for adequate, environmentally-acceptable ocean disposal site capacity for suitable dredged material generated from

dredging projects in and along the ARBC by formally designating the Atchafalaya ODMDS-West.

### C. Disposal Volume Limit

The proposed action would formally designate the Atchafalaya ODMDS-West for placement of approximately 10.8 cubic yards (cy) of maintenance material from the ARBC on an annual basis. The need for ongoing ocean disposal capacity is based on average historical dredging volumes from the ARBC navigational channel since 2002.

### D. Site Management and Monitoring Plan

Continuing use of the site requires verification that significant impacts do not occur outside of the disposal site boundaries through implementation of the Site Management and Monitoring Plan (SMMP) developed as part of the proposed action and included as Appendix A to the draft EIS developed for the proposed designation of the ODMDS-West. The main purpose of the SMMP is to provide a structured framework to ensure that dredged material disposal activities will not unreasonably degrade or endanger human health, welfare, the marine environment, or economic potentialities (MPRSA Section 103(a)). Two main objectives for management of the Atchafalaya ODMDS-West are: (1) to ensure that only dredged material that satisfies the criteria set forth in 40 CFR part 227 Subparts B, C, D, E, and G and Part 228.4(e) and is suitable for unrestricted placement at the ODMDS and; (2) avoidance of excessive mounding, either within the site boundaries or in areas adjacent to the site, as a direct result of placement operations.

The EPA and USACE New Orleans District personnel would achieve these SMMP objectives by jointly administering the following activities: (1) Regulation and administration of ocean dumping permits; (2) development and maintenance of a site monitoring program; (3) evaluation of permit compliance and monitoring results.

The SMMP includes periodic physical monitoring to confirm that disposal material is deposited within the seafloor disposal boundary, as well as bathymetric surveys to confirm that there is no excessive mounding or short-term transport of material beyond the limits of the ODMDS-West. Physical and chemical sediment and biological monitoring requirements are described in the SMMP and are required to be conducted based on the Evaluation of Dredged Material Proposed for Ocean

Disposal Testing Manual, EPA 503/8-91/001 and the Joint EPA-USACE Regional Implementation Agreement (RIA) procedures. Results will be used to confirm that dredged material actually disposed at the site satisfies the criteria set forth in 40 CFR part 227 Subparts B, C, D, E, and G and Part 228.4(e) and is suitable for unrestricted ocean disposal. Other activities implemented through the SMMP to achieve these objectives include: (1) Regulating quantities and types of material to be disposed, including the time, rates, and methods of disposal; and (2) recommending changes to site use requirements, including disposal amounts or timing, based on periodic evaluation of site monitoring results.

### E. Ocean Dumping Site Designation Criteria

Five general criteria and 11 specific site selection criteria are used in the selection and approval of ocean disposal sites for continued use (40 CFR 228.5 and 40 CFR 228.6(a)).

#### General Selection Criteria

1. *The dumping of materials into the ocean will be permitted only at sites or in areas selected to minimize the interference of disposal activities with other activities in the marine environment, particularly avoiding areas of existing fisheries or shellfisheries, and regions of heavy commercial or recreational navigation.*

The Atchafalaya ODMDS-West is located adjacent to and parallel to the ARBC. This location reduces the distance that the maintenance-dredged material must be transported, minimizing interference with other activities in the marine environment. There may be some short-term interference with fishing activities during placement operations. No interference with these or other marine activities is expected outside the brief periods of placement operations. There have been no impacts to existing oyster leases located northeast of the ODMDS area near Point au Fer from the use of the existing ODMDS-East, or ODMDS-West (which has been used since 2002), and no impact is expected to occur in the future as a result of using the proposed ODMDS-West.

2. *Locations and boundaries of disposal sites will be so chosen that temporary perturbations in water quality or other environmental conditions during initial mixing caused by disposal operations anywhere within the site can be expected to be reduced to normal ambient seawater levels or to undetectable contaminant concentrations or effects before reaching*

*any beach, shoreline, marine sanctuary, or known geographically limited fishery or shellfishery.*

Placement of maintenance-dredged material will produce a turbidity plume. This plume will disperse to the point where it would be indistinguishable from the turbidity naturally occurring in the area. Turbidity resulting from maintenance-dredged material placement is not expected to be distinguishable from the natural turbidity occurring in the vicinity of North Point and in Atchafalaya Bay, except temporarily. There are no marine sanctuaries in the immediate vicinity of the ODMDS (USFWS 1981). Fishnet Bank, the nearest protected Area of Biological Significance, is approximately 104 miles south of the ODMDS. Any impacts from placement of dredged material are expected to be minor. Based on the current regime noted in Section 3.1.3.2, the transport of suspended materials from the ODMDS would mainly be parallel to the coastline, and concentrations of suspended materials produced during dredging operations are expected to be within background levels within a few miles or so of the ODMDS (May 1973). There are no Public Oyster Areas within the ODMDS-East or ODMDS-West, and the nearest oyster leases are approximately 4 miles east of the ARBC and ODMDSs, near Point au Fer (LDNR 2012). The potential impact on oyster beds in nearby Atchafalaya Bay is expected to be minimal. These organisms, as well as others in the region, are naturally subjected to periodic episodes of high, suspended-solids concentrations from wave-induced resuspension of nearshore sediments and from the waters of the Atchafalaya River.

3. *If at any time during or after disposal site evaluation studies, it is determined that existing disposal sites presently approved on an interim basis for ocean dumping do not meet the criteria for site selection set forth in Sections 228.5 through 228.6, the use of such sites will be terminated as soon as suitable alternate disposal sites can be designated.*

This criterion does not apply to the proposed ODMDS-West since it is not an existing site approved on an interim basis. However, studies to date indicate that the proposed ODMDS-West meets the requirements of the MPRSA. Surveys of the site and vicinity indicated that water quality, sediments, and biological life were generally similar to surrounding areas. An existing designated ODMDS (the ODMDS-East) is located immediately across the navigation channel from the

proposed site. No adverse environmental effects were detected outside the site boundaries during site investigation surveys (IEC 1983; Dettmann and Tracey 1990; Flemer et al. 1994; Trulli 1996) of ODMDS-West.

4. *The sizes of the ocean disposal sites will be limited in order to localize for identification and control any immediate adverse impacts and permit the implementation of effective monitoring and surveillance programs to prevent adverse long-range impacts. The size, configuration, and location of any disposal site will be determined as a part of the disposal site evaluation or designation study.*

The size of the ODMDS-West has been identified to cover an area as small as possible to reasonably meet the criteria stated at 40 CFR 228.6(a) for the ARBC project and for efficient placement of material dredged from the ARBC. The size and location of the proposed ODMDS-West also minimizes the return of dredged material from the ODMDS to the channel. This consideration led to the establishment of a long site parallel to the channel with an area of 54 square miles. The site lends itself to surveillance of individual dredged material placement operations and long-term monitoring. The configuration of the ODMDS-West limits its overall area to a dimension of 18.0 miles long by 3.0 miles wide. The width of 3.0 miles is typically the pumping distance at which a hydraulic pipeline cutterhead suction dredge may no longer be cost effective without a booster pump, depending on the size of the dredge. Teeter (2003) recommended westward disposal at the greatest practicable distance from the channel to minimize runback into the channel. The orientation of the ODMDS-West broadside to the prevailing currents in the area increases the chance that material placed in the ODMDS-West will be moved from the site before undesirable mounding can occur.

5. *The EPA will, wherever feasible, designate ocean dumping sites beyond the edge of the continental shelf and other such sites that have been historically used.*

In this area of the Gulf of Mexico, an ODMDS beyond the continental shelf would be at least 84 miles from the area to be dredged. A dredged material placement site beyond the continental shelf would not be feasible due to, among other things, increased safety risks, increased cost of dredged material transportation, and increased costs for site characterization, monitoring, and surveillance studies.

### *Specific Selection Criteria*

#### *1. Geographical position, depth of water, bottom topography, and distance from the coast.*

The proposed ODMDS-West is a 16.0-mile long by 3.0 mile-wide rectangular area located west of and parallel to the ARBC and bound by the following coordinates (NAD 83): 29°22'06" N, 91°27'38" W; 29°20' 30" N, 91°25'13" W; 29°09'16" N, 91° 35'12" W; and 29°10'52" N, 91°37'33" W. The depth of the site ranges from 4 to 23 feet MLG, and the total area is approximately 48 square miles. The center of the ODMDS-West is approximately 19 miles from the mouth of the Atchafalaya River. The ODMDS-West is located in the nearshore area of the plain. Except for being located adjacent to the dredged channel, the area occupied by the ODMDS is typical in depth and bottom topography to the continental shelf in the vicinity of the Atchafalaya River Delta.

#### *2. Location in relation to breeding, spawning, nursery, feeding, or passage areas of living resources in adult or juvenile phases.*

The northwestern Gulf of Mexico is a breeding, spawning, nursery, and feeding area for shrimp, menhaden, and bottom fish. Many of the species migrate seasonally between estuaries and the Gulf. Because the timing of species movements vary, some migration can occur at almost any time of the year (Day et al., 1989).

The proposed ODMDS-West is located in a region dominated by species that are estuarine-dependent (Darnell et al., 1983; Phillips and James, 1988; Day et al., 1989). Commercially important species likely found in the area include white shrimp, brown shrimp, Gulf menhaden, and sand sea trout. Commercially important shellfish and fish that inhabit the nearby bay environment include oyster, blue crab, black drum, white shrimp, and brown shrimp.

Limited interferences with nearshore fisheries may occur during placement of maintenance-dredged material. The Atchafalaya estuary has a broader expanse of direct connection with the open Gulf of Mexico than any other estuary along the Louisiana coast. A small portion of this passage route may impede movement/migration of some marine organisms (e.g., shrimp) during periods of active dredging and placement. The settling of dredged material and the sediment plume in and near the ODMDS might also impede localized movement/migration of marine organisms on the continental shelf. However, the effect of these

impediments on the movement/migration of marine organism populations affected would be very small and probably undetectable. The stress and possible mortality of individual organisms encountering adverse conditions during dredging and placement operations in the ODMDS would be negligible compared to the passage of the far greater majority of individuals crossing into or out of the estuary and at other locations. Additionally, any impact would also occur at any other ODMDS location near the ARBC.

Placement of material at the proposed ODMDS-West would have negligible effects on endangered and threatened species. Occurrences of whales off Louisiana are considered rare and because the animals generally inhabit waters far deeper than those in the proposed ODMDS, it is unlikely that maintenance-dredged material placement operations would impact whales.

Sea turtles could potentially be found in the proposed ODMDS-West, although the persistent high turbidity makes the area unsuitable for regular use of this area by sea turtles, which generally depend on their sight to feed. Dredging operations might affect sea turtles through incidental take. Hopper dredging has been identified as a source of mortality to sea turtles in inshore waters (Dickerson and Nelson 1990; Magnuson et al. 1990; U.S. Fish and Wildlife Service [USFWS] and NMFS 1991, 1992), not placement operations. Designation of the ODMDS-West has been requested for the placement of future maintenance material dredged from the ARBC by hydraulic cutterhead pipeline dredging and hopper dredging. If hopper dredges are used, there is a possibility of impact to sea turtles, as there would be no matter where the ODMDS is located. Hydraulic cutterhead pipeline dredging operations have not been identified as a source of sea turtle mortality. Hopper dredging will be conducted in accordance with all reasonable and prudent measures and implementing terms and conditions provided to MVN by NMFS in its 2007 Biological Opinion (NMFS 2007) and any subsequent Biological Opinion, to avoid sea turtle mortality.

#### *3. Location in relation to beaches and other amenity areas.*

The nearest point of land is North Point of Point au Fer Island that is approximately 2.5 miles from the northeast end of the proposed ODMDS-West. There are no recreational parks or beaches near the proposed ODMDS-West. It may be possible to observe the placement plume from boats in the

vicinity during the active period of maintenance-dredged material placement within the site. The plume resulting from the placement of dredged material is not expected to be visible from land because of the distance from land and the existing turbid nature of the water in the area. The plume is expected to dissipate quickly after completion of the placement operations. Except for the minor effects of these limited observations, there should be no effects to the aesthetics of the area.

#### *4. Types and quantities of wastes proposed to be disposed of, and proposed methods of release, including methods of packaging the waste, if any.*

Material dredged from the ARBC is mainly comprised of silt, with lesser amounts of sand and clay (Dettmann and Tracey 1990; PBS&J 2002; PBS&J 2002). Sediment sampling as part of the contaminant assessments conducted by PBS&J (2008) found dredged material from the ARBC consisting of approximately 7–12 percent sand, 81–88 percent silt, and 6–7 percent clay. Based on dredging records since 2002, the volume of maintenance-dredged material to be removed from the ARBC for disposal to the ODMDS-West is approximately 10.8 mcy per fiscal year. Material is removed from the ARBC using a hydraulic cutterhead pipeline dredge and released within the ODMDS as uncohesive slurry. The ARBC is dredged annually and the average length of the dredging contract is 60 to 90 days. It is expected that future disposal operations will follow the past disposal pattern with respect to types, quantities, and methods of release. Any material disposed of at the site would be required to comply with the criteria of the Ocean Dumping Regulations (40 CFR Parts 220 to 229). None of the material will be packaged in any way.

#### *5. Feasibility of surveillance and monitoring.*

The proposed ODMDS-West is in relatively shallow water and is close to shore, which facilitates surveillance and monitoring of the site. Operational observations can be made using shore-based radar, aircraft, and day-use boats. A draft Site Management and Monitoring Plan (SMMP) incorporating monitoring requirements has been developed jointly by EPA and MVN for the proposed ODMDS-West and existing ODMDS-East. The primary purpose of the Site Monitoring Program is to evaluate the impact of dredged material on the marine environment. The SMMP is included in Appendix A of this draft EIS.

#### *6. Dispersal, horizontal transport, and vertical mixing characteristics of the*

area, including prevailing current direction and velocity, if any.

Current patterns in the vicinity of the proposed ODMDS are highly complex. Although tides, Loop current intrusions, and river flow may affect the local currents, these currents are influenced predominately by winds (Phillips and James, 1988). Thus, the direction and velocity of the currents vary throughout the year. Winds are a particularly strong driving force in late autumn, winter, and early spring. Net water flow in the winter is to the northwest; however, rapid flow reversals to the southeast occur periodically in concert with wind direction (Crout and Hamiter 1981; Phillips and James 1988; Walker and Hammack 2000). The near shore current patterns are somewhat more complex in summer. In the absence of strong winds and the presence of a stratified water column, current patterns become considerably less distinct. Net flow in summer can be either to the east or west (Crout and Hamiter 1981; Phillips and James 1988; Walker and Hammack 2000). Spinoff eddies from the Loop current occasionally enter the region, producing flows to the southeast near the ARBC (Weissberg et al. 1980a, 1980b).

Current speeds generally range from 10 to 30 centimeters per second (cm/s) in the vicinity of the proposed ODMDS. Minimum speeds of 5 to 30 cm/s occur in June, July, and August; whereas the highest recorded current speeds in the vicinity range from 70 to 140 cm/s and occur during strong winter storms (Weissberg et al. 1980a, 1980b). Stagnant periods with little or no current motion, lasting as long as 6 days, have been recorded in April, May, and July (Weissberg et al. 1980a, 1980b). Current speeds may reach 200 cm/s during hurricanes, which occur, on average, approximately once every four years (Weissberg et al. 1980a, 1980b; Phillips and James 1988; NOAA 2013a).

In the absence of strong currents, the bulk of the maintenance-dredged material settles on the bottom of the particular area of a site being used at that time. A portion of the plume (fines) will be transported in the direction of the current over a wider area of the disposal site and, to some extent, outside the disposal site. This material will eventually settle over a wide area. Plume measurements were taken by Schubel et al. (1978) during dredged material disposal operations at the ODMDS-East. Background suspended solids concentrations were approximately 100 mg/L and currents were to the southwest at 9 to 19 cm/s. During placement operations, suspended solids concentrations as high

as 300 mg/L were found a quarter of a mile downcurrent from the end of the discharge pipe. During another set of observations made when current directions were to the west and to the northeast, suspended solids concentrations of 300 mg/L were measured at 0.6 to 1.0 mile downcurrent from the end of the discharge pipe. For comparison purposes, total suspended solids (TSS) concentrations in this area of the continental shelf normally range between 250 to 400 mg/L.

The maintenance-dredged material is proportionally very small compared to the sediment load delivered by the discharge of the Atchafalaya River to the area. During disposal operations, a temporary mound of maintenance-dredged material may be initially formed within the ODMDS. However, flow of the noncohesive slurry and resuspension of the maintenance-dredged material results in the disappearance of the mound through dispersal and horizontal transport. The net result would be the remixing of maintenance-dredged material with other materials from the original source. The natural sediment load of the Atchafalaya is estimated to be approximately 40 to 50 percent of the combined discharge from the Mississippi and Atchafalaya Rivers, which is 210 million tons/year (Walker and Hammack 2000).

According to a sediment budget modeled by Teeter et al. (2003) for a hypothetical 10-mcy shoal in the ARBC, placement of material in the ODMDS-West would reduce runback to the channel by 5 mcy but increase lateral inflow by the same amount, when compared to placement in ODMDS-East. Although placement in ODMDS-West reduced runback to the channel, within approximately 10 weeks, the difference was made up through lateral inflow. Based on this analysis, the annual potential lateral source is estimated at approximately 30 mcy, which is a reasonable rate, given the parameters identified during the study (Teeter et al. 2003). Thus, while placing material on the west side of the ARBC did not eliminate shoaling, it did reduce runback of material into the channel, when compared to placing material on the east side of the channel. The 10-week decrease in the amount of time it takes material to reenter the ARBC, then, would decrease the overall annual maintenance dredging effort (i.e., dredging frequency) needed for the ARBC while providing vessels with a longer period of safe navigation access between maintenance dredging events.

7. *Existence and effects of current and previous discharges and dumping in the area (including cumulative effects).*

The area proposed for selection has been used for the disposal of maintenance-dredged material since 2002. Bathymetric surveys taken prior to and after disposal operations indicate there is no persistent mounding and the maintenance-dredged material is relatively quickly dispersed. No measurable effects from previous disposals have been noticed.

Studies conducted on the ODMDS-East in the early 1980s and 1990s did not identify effects from dredged material placement in the water column, sediments, or benthos of the site. These studies were conducted during placement activities, as well as 10 and 15 months following placement activities (USAC, 1996). Although these studies were conducted at the ODMDS-East, it is reasonable to expect that, because of the proximity of the proposed ODMDS-West, there would also be no effects from placement at ODMDS-West.

8. Interference with shipping, fishing, recreation, mineral extraction, desalination, fish and shellfish culture, areas of special scientific importance, and other legitimate uses of the ocean.

The proposed ODMDS-West is outside the navigation channel and therefore does not interfere with shipping. The shallow nature of the continental shelf in the area requires ships to remain in the navigation channels away from the ODMDS-West. Smaller recreational and commercial fishing vessels will pass over the ODMDS-West without interference from dredged material mounds that may temporarily form and that are expected to be relatively low and to disperse relatively quickly. Hydraulic cutterhead dredges and disposal pipelines may cause minor interference, but are not expected to interfere with shipping traffic. All dredging and placement operations are closely coordinated with the USCG with issuance of a Notice to Mariners to dredging operators and the shipping interests to avoid interference with traffic.

Recreational fishing and boating takes place throughout the area of the ODMDS-West. Ship Shoal is located approximately 29 miles east of the ODMDS-West; Trinity and Tiger Shoals are about 28 miles west of the site. Smaller fishing shoals are within 2.9 miles of the ODMDS-West and Point au Fer Reef is located just north of the site. There may be some short-term interference with recreational activities at the ODMDS-West, particularly during disposal operations. The plumes of

maintenance-dredged material and activities associated with the dredging operations could have a minor impact on targeted fish stocks, which may tend to avoid the area of active placement, temporarily affecting recreational fishing in the area. This interference would be short-term and restricted to the relatively small area of the ODMDS-West being used for dredged material placement at any particular time. Trawling and crabbing in the channel and near the placement area may experience interference during dredging operations.

There are numerous active oil and gas platforms located in the west and south end of the ODMDS-West and other platforms are located adjacent to the east, south, and west of the site. Additionally, several large natural gas pipelines cross the ODMDS-West. Because of the dispersive nature of the site, past experience with dredged material placement has not indicated interference with oil and gas exploration or production. No other types of mineral extraction are taking place either within the site or within the general vicinity of the site. It is not expected that use of the site for placement of maintenance-dredged material would interfere with any other legitimate use of the ocean in this general area.

No desalination or artificial finfish or shellfish culture facilities are located within the site. The nearest oyster leases are located approximately 4 miles east of the ODMDS-West, near Point au Fer (Ernie Dugas 1995, personal communication, Oyster Survey Section LDWF; USACE 1996; LDNR 2012). Fish and shellfish that naturally occur within the site may be affected by placement of dredge material at the site, particularly bottom-dwelling organisms that may be trapped and smothered. Material dispersed from the site is expected to settle in thin layers and be mixed with the naturally occurring sediments in the region. Thus, dispersion and transport of this material outside of the site should not adversely affect the fish and shellfish in the area. Additionally, because the transport of suspended material from the ODMDS-West would be primarily parallel to the coastline and in a generally westward direction for much of the year, effect of placement operations on oyster lease areas near Point au Fer would be minimal and consistent with natural conditions. There have been no impacts to oyster leases from the use of the interim-designated ODMDS-West, thus no impact is expected from its continued use.

Two areas designated as wildlife management areas or wildlife refuges

and that are used for recreational use are located in the project area. The 140,000-acre Atchafalaya Delta WMA, managed by the LDWF, encompasses the developing delta in Atchafalaya Bay. The Atchafalaya Delta WMA is located immediately adjacent to the upper end of the existing Section 103(b) ODMDS-West. The Shell Keys National Wildlife Refuge and Russell Sage—Marsh Island State Wildlife Refuge is located approximately 29 miles west of the ODMDS-West. The transport of suspended materials from the ODMDS-West would mainly be parallel to the coastline, and concentrations of suspended materials produced during dredging operations are expected to be within background levels within a few miles or so of the ODMDS-West (May 1973). Suspended materials originating from the ODMDS-West may drift into adjacent portions of the Atchafalaya Delta WMA; however, the effects of these suspended materials would likely be indiscernible from ambient conditions in these areas. There have been no significant impacts to these areas from use of the interim-designated ODMDS-West, and no impacts are expected from its continued use.

Various universities and state and Federal agencies have studied the biological, geomorphological, and hydrological development of the Atchafalaya Delta. This includes scientific studies that are periodically carried out in the offshore region and the bays of the area. As the Atchafalaya Delta progrades from the Atchafalaya Bay into the Gulf of Mexico, it is likely that scientific interest in the area will continue. Placement of dredged material into the ODMDS-West is not expected to interfere with any such studies.

*9. Existing water quality and ecology of the site as determined by available data or by trend assessment or baseline surveys.*

The water quality and ecology of the proposed ODMDS-West generally reflect that of the nearshore region off the Louisiana coast affected by discharges from the Atchafalaya River. The variations in water quality depend on the amount and mixing of freshwater runoff that is highly variable (Phillips and James 1988). Data collected during the IEC (1983) surveys and the EPA-ERLN (Dettmann and Tracey 1990) survey are generally comparable to historic data for the area as summarized in Phillips and James (1988). Neither the IEC (1983) nor the EPA-ERLN (Dettmann and Tracey 1990) water column data were taken during maintenance-dredged material placement operations; therefore, these data reflect ambient conditions.

Similarly, water quality and sediment contaminant data from the 2008, 2002 and 1996 contaminant assessments all indicated no water quality impacts related to the placement of dredged material. Additional detail regarding these data, as well as additional discussion of water quality can be found in sections 4.1.4 and 4.1.5.

Macrofaunal assemblages near the ARBC ODMDSs have been examined during benthic investigations of several proposed salt dome brine diffuser sites (Parker et al., 1980; Weissberg et al., 1980a, 1980b). These studies characterized nearshore assemblages typical of estuarine areas, with communities dominated by polychaete worms, small molluscs, and macrocrustaceans. Most species displayed seasonal population fluctuations, with recruitment during winter and spring. Stations sampled by IEC (1983) in the vicinity of the ODMDS-East were further inshore and shallower than the proposed brine diffuser sites; however, the same general macrofaunal assemblage was found. During both surveys, polychaetes dominated the macrofauna.

Central Louisiana Gulf coastal waters are inhabited by numerous species of finfish and shellfish that can be characterized as estuary-related or demersal shelf inhabitants. Nektonic species and fast swimmers that may occur within the area of the ODMDS are attracted to oil rigs, which provide reef-like environments in the Gulf. Most, but not all, of the larger predators occur seasonally on the northern Gulf shelf, appearing in spring and leaving in the fall (Darnell et al. 1983). The density distribution of total fish and Penaeid shrimp catch in the northwestern Gulf has historically been highest off Louisiana (NMFS 2012). This may be directly attributable to the extensive estuarine nursery areas of Louisiana (Darnell et al. 1983; Darnell and Kleypas 1987). Recreational fishing, including fishing, crabbing, and shrimping, is popular in the vicinity of the ODMDSs.

*10. Potentiality for the development or recruitment of nuisance species in the disposal site.*

Past placement of maintenance-dredged material at the existing ODMDS-East and ODMDS-West has not resulted in the development or recruitment of nuisance species. Therefore, placement of maintenance-dredged material at the proposed ODMDS-West is not expected to result in development or recruitment of nuisance species.

*11. Existence at or in close proximity to the site of any significant natural or*

*cultural features of historical importance.*

The USACE Submerged Cultural Resource Database contains historical accounts of 52 shipwrecks in the Atchafalaya River and 7 shipwrecks in Atchafalaya Bay. These records indicate historical use of the Atchafalaya Basin. In 1996, a remote sensing survey was conducted in the ODMDS-East. This study found that while several anomaly clusters existed, which may represent shipwrecks, the geomorphologic and bathymetric data indicates that between 17 and 21 feet of sedimentation had occurred in the area between 1839 and 1996. A vessel wrecked more than 157 years ago may have at least 17 feet of sediment covering it. As a result of this survey, it was concluded that the placement of maintenance-dredged materials in the proposed ODMDS-West would not add appreciably to the impact already induced by progradation of the Atchafalaya Delta during the last century. There is no other information suggesting the presence of significant natural or cultural resources of historical importance in the vicinity of the proposed ODMDS-West. The results of the 1996 remote sensing study can be applied to the present study given its proximity to the previously designated ODMDS-East.

## F. Regulatory Requirements

### 1. National Environmental Policy Act (NEPA)

Pursuant to section 102(2)(C) of the National Environmental Policy Act of 1969 (NEPA) federal agencies are generally required to prepare an environmental impact statement (EIS) on major federal actions significantly affecting the quality of the human environment. Due to the doctrine of functional equivalency, EPA designations of ODMDS under MPRSA are not subject to NEPA's requirements. EPA believes the NEPA process enhances public participation on such designations, however, and the potential effects of these proposed designations are fully analyzed in a draft EIS on the Designation of the Atchafalaya River Bar Channel Ocean Dredged Material Disposal Site Pursuant to Section 102(c) of the Marine Protection, Research, and Sanctuaries Act of 1972, St. Mary Parish, Louisiana. The EPA is the lead agency on the draft EIS and Corps of Engineers a cooperating agency.

A Notice of Intent to prepare an EIS was published in the **Federal Register** on July 21, 2011 requesting comments or names for the project mailing list to be submitted by August 22, 2011. A Scoping Input Request Letter requesting

comments regarding the scope of the study was sent to Federal, state and local agencies; and interested groups and individuals on September 15, 2011; comments were received through October 31, 2011. Scoping comments were received from 11 entities and will be considered during the study process and in preparation of the draft EIS. A Scoping Report was prepared and is appended to the draft EIS. EPA has relied on information from the draft EIS and Scoping Report in its consideration and application of ocean dumping criteria to the Atchafalaya ODMDS-West it proposes to designate.

### 2. Endangered Species Act Consultation

During development of the site designation draft EIS, EPA and the USACE consulted with the U.S. Fish and Wildlife Service (USFWS) pursuant to the provisions of the Endangered Species Act (ESA), regarding the potential for designation and use of the ocean disposal sites to adversely affect any threatened or endangered species or their critical habitat. By letter dated January 26, 2012, the USFWS concurred with the determination of EPA and the USACE that the proposed action is not likely to adversely affect the West Indian manatee, pallid sturgeon, or the piping plover or its critical habitat. This consultation process is fully documented in the site designation draft EIS.

### 3. Magnuson-Stevens Fishery Conservation and Management Act of 1996

The Magnuson-Stevens Fishery Conservation and Management Act of 1996 (MSFCMA) defines Essential Fish Habitat (EFH) as "those waters and substrate necessary to fish for spawning, breeding, feeding or growth to maturity." The estuarine and marine waters in St. Mary Parish, as well as the northern Gulf of Mexico, are designated as EFH. In particular, EFH identified by the Gulf of Mexico Fishery Management Plan (FMP) in St. Mary Parish and adjoining waters—including Atchafalaya Bay—include estuarine water column and estuarine water bottoms, including mud, rock, sand, intertidal vegetation, and shell substrates. No "Habitat Areas of Particular Concern" have been identified in the project vicinity. By letter dated October 19, 2011, the National Marine Fisheries Service (NMFS) confirmed this subtidal habitat is categorized as essential fish habitat (EFH) under provisions of the Magnuson-Stevens fishery Conservation and Management Act (Magnuson-Stevens Act). NMFS concurs with the

initial evaluation provided in the September 15, 2011 information package that material removed from the bar channel is not suitable for wetland development and its disposal at the proposed location is not expected to have significant impacts to EFH and related marine fishery resources. Coordination with NMFS will be fulfilled through their review and comment on the draft EIS.

### 4. Coastal Zone Management Act

Pursuant to section 307(c)(1) of the Coastal Zone Management Act, federal activities that affect a state's coastal zone must be consistent to the maximum extent practicable with the enforceable policies of the state's approved coastal zone management program. To implement that requirement, federal agencies prepare coastal consistency determinations and submit them to the appropriate state agencies, which may concur in or object to a consistency determination. In connection with its preparation of the draft EIS on the Designation of the Atchafalaya River Bar Channel Ocean Dredged Material Disposal Site Pursuant to Section 102(c) of the Marine Protection, Research, and Sanctuaries Act of 1972, St. Mary Parish, Louisiana, the EPA prepared a coastal consistency determination the proposed Atchafalaya ODMDS-West designation, which it submitted to the Louisiana Department of Natural Resources (LDNR). By letter of April 30, 2012 LDNR agreed that the proposed designation of the Atchafalaya ODMDS-West was not inconsistent with the approved Louisiana Coastal Resources Program (LCRP). More detailed plans and descriptions of the proposed navigation projects may be needed for LDNR and the Corps to resolve potential issues on the practicability of beneficial use of dredged materials in Louisiana's coastal zone. Such issues are independent of EPA's proposed ODMDS designations, however, which only make an offshore disposal option available when the Corps deems beneficial use that might otherwise be required by a state CZM program impracticable. EPA supports beneficial use of dredged material, but ODMDS designations do not in any way require that the Corps forego beneficial use in favor of ocean disposal.

### 5. Coastal Barrier Improvement Act of 1990

The disposal of dredged materials related to maintenance and construction is an exception to Federal expenditure restrictions related to Coastal Barrier Resources Act of 1982; therefore, project activities related to disposal are exempt

from the prohibitions set forth in this act.

## H. Administrative Review

This rule proposes the designation of an ocean dredged material disposal site pursuant to Section 102 of the MPRSA. This proposed action complies with applicable executive orders and statutory provisions as follows:

### 1. Executive Order 12866

Under Executive order 12866 (58 FR 51735, October 4, 1993) EPA must determine whether the regulatory action is ‘significant’, and therefore subject to office of Management and Budget (OMB) review and other requirements of the Executive Order. The Order defines ‘significant regulatory action’ as one that is likely to lead to a rule that may:

(a) Have an annual effect on the economy of \$100 million or more, or adversely affect in a material way, the economy, a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or State, local or Tribal governments or communities;

(b) Create a serious inconsistency or otherwise interfere with an action taken or planned by another agency;

(c) Materially alter the budgetary impact of entitlements, grants, user fees, or loan programs, or the rights and obligations of recipients thereof; or

(d) Raise novel legal or policy issues arising out of legal mandates, the President’s priorities, or the principles set forth in the Executive Order.

This Proposed Rule should have minimal impact on State, local or Tribal governments or communities. Consequently, EPA has determined that this Proposed Rule is not a ‘significant regulatory action’ under the terms of Executive Order 12866.

### 2. Paperwork Reduction Act

The Paperwork Reduction Act, 44 U.S.C. 3501 *et seq.*, is intended to minimize the reporting and recordkeeping burden on the regulated community, as well as to minimize the cost of Federal information collection and dissemination. In general, the Act requires that information requests and record-keeping requirements affecting ten or more non-Federal respondents be approved by OMB. EPA anticipates that few, if any, non-federal entities will use the site as none have in the past.

### 3. Regulatory Flexibility Act, as Amended by the Small Business Regulatory Enforcement Fairness Act of 1996

The Regulatory Flexibility Act (RFA) provides that whenever an agency

promulgates a final rule under 5 U.S.C. 553, the agency must prepare a regulatory flexibility analysis (RFA) unless the head of the agency certifies that the final rule will not have a significant economic impact on a substantial number of small entities (5 U.S.C. 604 and 605). The site designation and management actions would only have the effect of setting maximum annual disposal volume and providing a continuing disposal option for dredged material. Consequently, EPA’s action will not impose any additional economic burden on small entities. For this reason, the Regional Administrator certifies, pursuant to section 605(b) of the RFA, that the Proposed Rule will not have a significant economic impact on a substantial number of small entities

### 4. Unfunded Mandates

Title II of the Unfunded Mandates Reform Act (UMRA) of 1995 (Pub. L. 104–4) establishes requirements for Federal agencies to assess the effects of their regulatory actions on State, local, and Tribal governments and the private sector. Under section 202 of the UMRA, EPA generally must prepare a written statement, including a cost-benefit analysis for proposed and final rules with ‘Federal mandates’ that may result in expenditures to State, local and Tribal governments, in the aggregate, or to the private sector, of \$10 million or more in any year.

This Proposed Rule contains no Federal mandates (under the regulatory provisions of Title II of the UMRA) for State, local or Tribal governments or the private sector. The Proposed rule would only provide a continuing disposal option for dredged material. Consequently, it imposes no new enforceable duty on any State, local or Tribal governments or the private sector. EPA anticipates that few, if any, non-federal entities will use the site as none have in the past.

### 5. Executive Order 13132: Federalism

Executive Order 13132, entitled ‘Federalism’ (64 FR 43255, August 10, 1999), requires EPA to develop an accountable process to ensure ‘meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications.’ ‘Policies that have federalism implications’ is defined in the Executive Order to include regulations that have ‘substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government.’

This Proposed Rule does not have federalism implications. It will not have substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government, as specified in Executive Order 13132. The Proposed Rule would only have the effect of providing a continuing disposal option for dredged material. Thus, Executive Order 13132 does not apply to this Proposed Rule.

### 6. Executive Order 13175: Consultation and Coordination With Indian Tribal Governments

Executive Order 13175, entitled ‘Consultation and Coordination with Indian Tribal Governments’ (65 FR 67249, November 9, 2000), requires EPA to develop an accountable process to ensure ‘meaningful and timely input by Tribal officials in the development of regulatory policies that have Tribal implications.’ This Proposed Rule does not have Tribal implications, as specified in Executive Order 13175. The Proposed Rule would only have the effect of providing a continuing disposal option for dredged material. Thus, Executive Order 13175 does not apply to this Proposed Rule.

### 7. Executive Order 13045: Protection of Children From Environmental Health and Safety Risks

This Executive Order (62 FR 19885, April 23, 1997) applies to any rule that: (1) Is determined to be ‘economically significant’ as defined under Executive Order 12866, and (2) concerns an environmental health or safety risk that EPA has reason to believe may have a disproportionate effect on children. If the regulatory action meets both criteria, EPA must evaluate the environmental health or safety effects of the planned rule on children, and explain why the planned regulation is preferable to other potentially effective and reasonably feasible alternatives considered by EPA. This Proposed Rule is not subject to the Executive Order because it is not economically significant as defined in Executive Order 12866, and because EPA does not have reason to believe the environmental health or safety risks addressed by this action present a disproportionate risk to children.

### 8. Executive Order 13211: Actions That Significantly Affect Energy Supply, Distribution, or Use Compliance With Administrative Procedure Act

This Proposed Rule is not subject to Executive Order 13211, ‘Actions Concerning Regulations That

Significantly Affect Energy Supply, Distribution, or Use” (66 FR 28355 (May 22, 2001)) because it is not a significant regulatory action under Executive Order 12866. The Proposed Rule would only have the effect of providing a continuing disposal option for dredged material. Thus, EPA concluded that this Proposed Rule is not likely to have any adverse energy effects.

9. National Technology Transfer Advancement Act

Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (“NTTAA”), Public Law 104–113, 12(d) (15 U.S.C. 272 note) directs EPA to use voluntary consensus standards in its regulatory activities unless to do so would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., material specifications, test methods, sampling procedures, and business practices) that are developed or adopted by voluntary consensus standards bodies. The NTTAA directs EPA to provide Congress, through OMB, explanations when the Agency decides not to use available and applicable voluntary consensus standards. This Proposed Rule does not involve technical standards. Therefore, EPA is not considering the use of any voluntary consensus standards.

10. Executive Order 12898: Federal Actions To Address Environmental Justice in Minority Populations and Low Income Populations

Executive Order 12898 (59 FR 7629) establishes Federal executive policy on environmental justice. Its main provision directs Federal agencies, to the greatest extent practicable and permitted by law, to make environmental justice part of their mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of their programs, policies, and activities on minority populations and low-income populations in the United States. EPA determined that this proposed rule will not have disproportionately high and adverse human health or environmental effects on minority or low-income populations because it does not affect the level of protection provided to human health or the environment. EPA has assessed the overall protectiveness of designating the disposal site against the criteria established pursuant to the MPRSA to ensure that any adverse impact to the environment will be mitigated to the greatest extent practicable.

List of subjects in 40 CFR part 228

Environmental protection, Water pollution control.

Dated: May 7, 2013.

Samuel Coleman, P.E.,

Acting Regional Administrator, Region 6.

In consideration of the foregoing, EPA is proposing to amend part 228, chapter I of title 40 of the Code of Federal Regulations as follows:

**PART 228—[CRITERIA FOR THE MANAGEMENT OF DISPOSAL SITES FOR OCEAN DUMPING]**

■ 1. The authority citation for part 228 continues to read as follows:

Authority: 33 U.S.C. 1412 and 1418.

■ 2. Section 228.15 is amended by adding paragraph (j)(22) to read as follows:

**§ 228.15 Dumping sites designated on a final basis.**

\* \* \* \* \*

(j) \* \* \*

(22) Atchafalaya River and Bayous Chene, Boeuf, and Black, LA (ODMDS-West)

(i) Location (NAD83): 29°22’06” N, 91°27’38” W; 29°20’30” N, 91°25’13” W; 29°09’16” N, 91°35’12” W; 29°10’52” N, 91°37’33” W; thence to point of beginning.

(ii) Size: 48 square miles

(iii) Depth: Ranges from 4 to 23 feet

(iv) Primary Use: Dredged material.

(v) Period of Use: Continuing use.

(vi) Restrictions: Disposal shall be limited to dredged material from the Atchafalaya River Bar channel that complies with EPA’s Ocean Dumping Regulations. Dredged material that does not meet the criteria set forth in 40 CFR part 227 shall not be placed at the site. Disposal operations shall be conducted in accordance with requirements specified in a Site Management and Monitoring Plan developed by EPA and USACE, to be reviewed periodically, at least every 10 years.

**44 CFR Part 67**

[Docket ID FEMA–2013–0002; Internal Agency Docket No. FEMA–B–1196]

**Proposed Flood Elevation Determinations for Lake County, Illinois, and Incorporated Areas**

AGENCY: Federal Emergency Management Agency, DHS.

ACTION: Proposed rule; withdrawal.

**SUMMARY:** The Federal Emergency Management Agency (FEMA) is withdrawing its proposed rule concerning proposed flood elevation determinations for Lake County, Illinois, and Incorporated Areas

**DATES:** This withdrawal is effective on May 21, 2013.

**ADDRESSES:** You may submit comments, identified by Docket No. FEMA–B–1196, to Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) Luis.Rodriguez3@fema.dhs.gov.

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, Federal Emergency Management Agency, 500 C Street SW., Washington, DC 20472, (202) 646–4064, or (email) Luis.Rodriguez3@fema.dhs.gov.

**SUPPLEMENTARY INFORMATION:** On July 5, 2011, FEMA published a proposed rulemaking at 76 FR 39063, proposing flood elevation determinations along one or more flooding sources in Lake County, Illinois. Because FEMA has issued a Revised Preliminary Flood Insurance Rate Map, and a Flood Insurance Study report, featuring no new flood hazard analysis and unchanged base flood elevations, the proposed rulemaking is being withdrawn.

Authority: 42 U.S.C. 4104; 44 CFR 67.4.

**Roy E. Wright,**  
Deputy Associate Administrator for Mitigation, Department of Homeland Security, Federal Emergency Management Agency.

## DEPARTMENT OF AGRICULTURE

### Submission for OMB Review; Comment Request

May 15, 2013.

The Department of Agriculture has submitted the following information collection requirement(s) to OMB for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104-13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques and other forms of information technology.

Comments regarding this information collection received by June 20, 2013 will be considered. Written comments should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), New Executive Office Building, 725-17th Street NW., Washington, DC 20503. Commentors are encouraged to submit their comments to OMB via email to: [OIRA\\_Submission@OMB.EOP.GOV](mailto:OIRA_Submission@OMB.EOP.GOV) or fax (202) 395-5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250-7602. Copies of the submission(s) may be obtained by calling (202) 720-8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such

persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

### Forest Service

*Title:* Youth Conservation Corps Application & Medical History Forms.

*OMB Control Number:* 0596-0084.

*Summary of Collection:* The Youth Conservation Corps Act of 1970, as amended (Pub. L. 93-408), and 16 U.S.C. 1701-1706, Chapter 37, Youth Conservation Corps and Public Lands Corps, authorizes the USDA Forest Service (FS) and Department of the Interior agencies Fish and Wildlife Service and National Park Service to collect information on applications and medical history forms to evaluate the eligibility of youths 15 to 18 years old for employment with the Youth Conservation Corps (YCC). FS and the Department of Interior cooperate to provide seasonal employment for eligible youth and in doing so prepare the young adults of this country for the ultimate responsibility of maintaining and managing these resources for the American people.

*Need and Use of the Information:* Youth, ages 15-18, who seek training and employment with participating agencies through the YCC must complete an application form (FS-1800-18) and once selected for employment must complete a medical history form (FS-1800-3). The applicant's parents or guardian must sign both forms. The application form is used in the random selection process and the medical history form provides information needed to determine certification of suitability, any special medical or medication needs, and a file record for the Federal Government and participants. If these forms were not used, the Federal government's ability to oversee the Youth Conservation Corps program would be greatly impaired. The organizational and liability issues that would result from inability to collect this information needed to manage the program would be virtually insurmountable.

*Description of Respondents:* Individuals.

*Number of Respondents:* 12,010.

*Frequency of Responses:* Annually.

*Total Burden Hours: 3,704.*

**Charlene Parker,**

*Departmental Information Collection  
Clearance Officer.*

## DEPARTMENT OF AGRICULTURE

### Submission for OMB Review; Comment Request

May 15, 2013.

The Department of Agriculture has submitted the following information collection requirement(s) to Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995, Public Law 104-13. Comments regarding (a) whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (b) the accuracy of the agency's estimate of burden including the validity of the methodology and assumptions used; (c) ways to enhance the quality, utility and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology should be addressed to: Desk Officer for Agriculture, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, 725 - 17th Street NW., Washington, DC 20502. Commenters are encouraged to submit their comments to OMB via email to: [OIRA\\_Submission@OMB.EOP.GOV](mailto:OIRA_Submission@OMB.EOP.GOV) or fax (202) 395-5806 and to Departmental Clearance Office, USDA, OCIO, Mail Stop 7602, Washington, DC 20250-7602. Comments regarding these information collections are best assured of having their full effect if received within 30 days of this notification. Copies of the submission(s) may be obtained by calling (202) 720-8681.

An agency may not conduct or sponsor a collection of information unless the collection of information displays a currently valid OMB control number and the agency informs potential persons who are to respond to the collection of information that such persons are not required to respond to the collection of information unless it displays a currently valid OMB control number.

## Rural Utilities Service

*Title:* Request for Release of Lien and/or Approval of Sale.

*OMB Control Number:* 0572-0041.

*Summary of Collection:* The Rural Utilities Service (RUS) is a credit agency of the U.S. Department of Agriculture (USDA) that makes mortgage loans and loan guarantees to finance electric, telecommunications, and water and waste facilities in rural areas. RUS manages loan programs in accordance with the Rural Electrification Act (RE Act) of 1936, 7 U.S.C. 901 *et seq.*, as amended (RE Act). A 1949 amendment to the RE Act established the telephone program in RUS with the purpose of making loans to furnish and improve rural telephone service. Section 201 of the RE Act provides that loans shall not be made unless RUS finds and certifies that the security for the loan is reasonably adequate and that the loan will be repaid within the time agreed. In addition to providing loans and loan guarantees, one of RUS main objectives is to safeguard loan security until the loan is repaid.

*Need and Use of the Information:* A borrower's assets provide the security for a Government loan. The selling of assets reduces the security and increases the risk of loss to the Government. A borrower seeking permission to sell some of its assets uses RUS Form 793. The form contains detailed information regarding the proposed sale. If the information in Form 793 is not collected when capital assets are sold, the capital assets securing the Government's loans could be liquidated and the Government's security either eliminated entirely or diluted to an undesirable level. This increases the risk of loss to the Government in the case of a default.

*Description of Respondents:* Not-for-profit institutions; State, Local or Tribal Government.

*Number of Respondents:* 40.

*Frequency of Responses:* Reporting: On occasion.

*Total Burden Hours:* 110.

**Charlene Parker,**

*Departmental Information Collection  
Clearance Officer.*

## DEPARTMENT OF AGRICULTURE

### Animal and Plant Health Inspection Service

[Docket No. APHIS-2013-0033]

### Availability of an Environmental Assessment for Field Testing a Canine Lymphoma Vaccine, DNA

**AGENCY:** Animal and Plant Health Inspection Service, USDA.

**ACTION:** Notice of availability.

**SUMMARY:** We are advising the public that the Animal and Plant Health Inspection Service has prepared an environmental assessment concerning authorization to ship for the purpose of field testing, and then to field test, an unlicensed Canine Lymphoma Vaccine, DNA. The environmental assessment, which is based on a risk analysis prepared to assess the risks associated with the field testing of this vaccine and related information, examines the potential effects that field testing this veterinary vaccine could have on the quality of the human environment. Based on the risk analysis and other relevant data, we have reached a preliminary determination that field testing this veterinary vaccine will not have a significant impact on the quality of the human environment, and that an environmental impact statement need not be prepared. We intend to authorize shipment of this vaccine for field testing following the close of the comment period for this notice unless new substantial issues bearing on the effects of this action are brought to our attention. We also intend to issue a U.S. Veterinary Biological Product license for this vaccine, provided the field test data support the conclusions of the environmental assessment and the issuance of a finding of no significant impact and the product meets all other requirements for licensing.

**DATES:** We will consider all comments that we receive on or before June 20, 2013.

**ADDRESSES:** You may submit comments by either of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov/#!documentDetail;D=APHIS-2013-0033-0001>.
- *Postal Mail/Commercial Delivery:* Send your comment to Docket No. APHIS-2013-0033, Regulatory Analysis and Development, PPD, APHIS, Station 3A-03.8, 4700 River Road, Unit 118, Riverdale, MD 20737-1238.

Supporting documents and any comments we receive on this docket may be viewed at <http://>

[www.regulations.gov/](http://www.regulations.gov/)  
 #!docketDetail;D=APHIS-2013-0033 or  
 in our reading room, which is located in  
 room 1141 of the USDA South Building,  
 14th Street and Independence Avenue  
 SW., Washington, DC. Normal reading  
 room hours are 8 a.m. to 4:30 p.m.,  
 Monday through Friday, except  
 holidays. To be sure someone is there to  
 help you, please call (202) 7997039  
 before coming.

**FOR FURTHER INFORMATION CONTACT:** Dr.  
 Donna Malloy, Operational Support  
 Section, Center for Veterinary Biologics,  
 Policy, Evaluation, and Licensing, VS,  
 APHIS, 4700 River Road, Unit 148,  
 Riverdale, MD 20737-1231; phone (301)  
 851-3426, fax (301) 734-4314.

For information regarding the  
 environmental assessment or the risk  
 analysis, or to request a copy of the  
 environmental assessment (as well as  
 the risk analysis with confidential  
 business information removed), contact  
 Dr. Patricia L. Foley, Risk Manager,  
 Center for Veterinary Biologics, Policy,  
 Evaluation, and Licensing VS, APHIS,  
 1920 Dayton Avenue, P.O. Box 844,  
 Ames, IA 50010; phone (515) 337-6100,  
 fax (515) 337-6120.

**SUPPLEMENTARY INFORMATION:** Under the  
 Virus-Serum-Toxin Act (21 U.S.C. 151  
*et seq.*), a veterinary biological product  
 must be shown to be pure, safe, potent,  
 and efficacious before a veterinary  
 biological product license may be  
 issued. A field test is generally  
 necessary to satisfy prelicensing  
 requirements for veterinary biological  
 products. Prior to conducting a field test  
 on an unlicensed product, an applicant  
 must obtain approval from the Animal  
 and Plant Health Inspection Service  
 (APHIS), as well as obtain APHIS'  
 authorization to ship the product for  
 field testing.

To determine whether to authorize  
 shipment and grant approval for the  
 field testing of the unlicensed product  
 referenced in this notice, APHIS  
 considers the potential effects of this  
 product on the safety of animals, public  
 health, and the environment. Using the  
 risk analysis and other relevant data,  
 APHIS has prepared an environmental  
 assessment (EA) concerning the field  
 testing of the following unlicensed  
 veterinary biological product:

*Requester:* Merial, Inc.

*Product:* Canine Lymphoma Vaccine,  
 DNA.

*Possible Field Test Locations:*

Arizona, Florida, Georgia, New York,  
 North Carolina, Tennessee, and Texas.

The above-mentioned product is a  
 replication-incompetent DNA vaccine  
 consisting of a plasmid vector with an  
 inserted therapeutic gene. The vaccine

is intended for the therapeutic  
 immunization of dogs diagnosed with B-  
 cell lymphoma concurrent with or  
 following chemotherapy.

The EA has been prepared in  
 accordance with: (1) The National  
 Environmental Policy Act of 1969  
 (NEPA), as amended (42 U.S.C. 4321 *et*  
*seq.*), (2) regulations of the Council on  
 Environmental Quality for  
 implementing the procedural provisions  
 of NEPA (40 CFR parts 1500-1508), (3)  
 USDA regulations implementing NEPA  
 (7 CFR part 1b), and (4) APHIS' NEPA  
 Implementing Procedures (7 CFR part  
 372).

Unless substantial issues with adverse  
 environmental impacts are raised in  
 response to this notice, APHIS intends  
 to issue a finding of no significant  
 impact (FONSI) based on the EA and  
 authorize shipment of the above product  
 for the initiation of field tests following  
 the close of the comment period for this  
 notice.

Because the issues raised by field  
 testing and by issuance of a license are  
 identical, APHIS has concluded that the  
 EA that is generated for field testing  
 would also be applicable to the  
 proposed licensing action. Provided that  
 the field test data support the  
 conclusions of the original EA and the  
 issuance of a FONSI, APHIS does not  
 intend to issue a separate EA and FONSI  
 to support the issuance of the product  
 license, and would determine that an  
 environmental impact statement need  
 not be prepared. APHIS intends to issue  
 a veterinary biological product license  
 for this vaccine following completion of  
 the field test provided no adverse  
 impacts on the human environment are  
 identified and provided the product  
 meets all other requirements for  
 licensing.

**Authority:** 21 U.S.C. 151-159.

Done in Washington, DC, this 15th day of  
 May 2013.

## DEPARTMENT OF AGRICULTURE

### Forest Service

#### Transfer of Administrative Jurisdiction: Marine Corps Mountain Warfare Training Center Interchange Humboldt-Toiyabe National Forest, CA

**AGENCY:** Forest Service, USDA.

**ACTION:** Notice of Joint Jurisdictional  
 Interchange of lands between the Forest  
 Service and the Department of the Navy.

**SUMMARY:** On October 22, 2012, and  
 March 18, 2013, respectively, the Acting  
 Principal Deputy Assistant Secretary of  
 Navy, Energy, Installations &  
 Environment and the Secretary of  
 Agriculture signed a joint interchange  
 order authorizing the transfer of  
 administrative jurisdiction from the  
 Department of Agriculture to the  
 Department of the Navy for 346.49  
 acres, more or less located in Mono  
 County, California and generally  
 described as: Portions of Sections 13,  
 23, and 24, Township 6 North, Range 22  
 East, Mount Diablo Meridian, lying  
 within the Marine Corps Mountain  
 Warfare Training Center and the  
 Humboldt-Toiyabe National Forest and  
 more particularly described according to  
 the map and legal description on file in  
 the Forest Service office noted below.  
 Furthermore, the order transfers  
 jurisdiction from the Department of the  
 Navy to the Department of Agriculture  
 for inclusion in the Humboldt-Toiyabe  
 National Forest, being 240 acres, more  
 or less located in Mono County,  
 California and generally described as:  
 Portions of Section 14 and 15,  
 Township 7 North, Range 22 East,  
 Mount Diablo Meridian, within the  
 proclamation boundaries of the  
 Humboldt-Toiyabe National Forest, and  
 more particularly described according to  
 the map and legal description on file in  
 the Forest Service office noted below.

**DATES:** The 45-day Congressional  
 oversight requirement of the Act of July  
 26, 1956 (70 Stat. 656; 16 U.S.C. 505a,  
 505b) has been met. The order is  
 effective May 21, 2013.

**ADDRESSES:** Copies of the maps with  
 adjoining legal descriptions showing the  
 lands included in this joint interchange  
 are on file and available for public  
 inspection in the Office of the Regional  
 Forester, Intermountain Region, USDA,  
 Forest Service, 324 25th Street, Ogden,  
 UT 84401, between the hours of 8:30  
 a.m. and 4:30 p.m. on business days.  
 Those wishing to inspect the maps with  
 adjoining legal descriptions are  
 encouraged to call ahead to (801) 625-  
 5800.

**FOR FURTHER INFORMATION CONTACT:** A.L.  
 Richard, Washington Office Lands and  
 Realty Staff, USDA, Forest Service, 201  
 14th Street SW., Washington, DC 20250,  
 Telephone: (202) 205-1792 or

## DEPARTMENT OF COMMERCE

### Bureau of Industry and Security

#### President's Export Council; Subcommittee on Export Administration; Notice of Open Meeting

The President's Export Council Subcommittee on Export Administration (PECSEA) will meet on June 4, 2013, 9:30 a.m. (pacific daylight time), at Boeing Defense, Space and Security, Space and Intelligence Systems, Building S24, Conference Center, 2020 East Imperial Highway, El Segundo, California 90245 and via video teleconferencing at the Herbert C. Hoover Building, Room 3884, 14th Street between Constitution and Pennsylvania Avenues NW., Washington, DC at 12:30 p.m. (eastern daylight time). The PECSEA provides advice on matters pertinent to those portions of the Export Administration Act, as amended, that deal with United States policies of encouraging trade with all countries with which the United States has diplomatic or trading relations and of controlling trade for national security and foreign policy reasons.

#### Agenda (Subject to Change)

*Tuesday, June 4*

#### Open Session

1. Welcome and remarks by Chairman and Vice Chair
2. Export Control Reform Update
3. Panel Discussions on Reform of Controls on Satellites
4. Presentation of Papers or Comments by the Public
5. Subcommittee Updates

The open session will be accessible via teleconference to 20 participants on a first come, first served basis. To join the conference, submit inquiries to Ms. Yvette Springer at [Yvette.Springer@bis.doc.gov](mailto:Yvette.Springer@bis.doc.gov), no later than May 29, 2013.

A limited number of seats will be available for the public. Reservations are not accepted. If attending in person, please forward your name (to appear on badge), Title, Citizenship, Organization Name, Organization Address, Email, and Phone to Ms. Springer no later than May 29, 2013. Early arrival (30 minutes)

is requested for entry into the facility. Name and citizenship will be verified at Boeing upon entry. Verification requires a driver's license or a passport.

To the extent time permits, members of the public may present oral statements to the PECSEA. Written statements may be submitted at any time before or after the meeting. However, to facilitate distribution of public presentation materials to PECSEA members, the PECSEA suggest that these materials or comments be forwarded before the meeting to Ms. Springer via email.

For more information, contact Yvette Springer on 202-482-2813.

Dated: May 15, 2013.

**Kevin J. Wolf,**

*Assistant Secretary for Export Administration.*

## DEPARTMENT OF COMMERCE

### International Trade Administration

**[A-520-803]**

#### Polyethylene Terephthalate Film, Sheet, and Strip From the United Arab Emirates: Final Results of Antidumping Duty Administrative Review; 2010-2011

**AGENCY:** Import Administration, International Trade Administration, Department of Commerce.

**SUMMARY:** On December 7, 2012, the Department of Commerce (the Department) published the preliminary results of administrative review of the antidumping duty order on polyethylene terephthalate film (PET Film) from the United Arab Emirates.<sup>1</sup> This review covers two producers/exporters of subject merchandise: JBF RAK LLC (JBF) and FLEX Middle East FZE (FLEX). Based on our analysis of the comments received, we have made changes to the preliminary results which are discussed below. The final weighted-average dumping margins are listed below in the section titled "Final Results of Review."

**DATES:** *Effective Date:* May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** Andrew Huston, or Gene Calvert, AD/CVD Operations, Office 6, Import Administration, International Trade Administration, U.S. Department of

Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482-4261, or (202) 428-3586, respectively.

#### SUPPLEMENTARY INFORMATION:

##### Background

Since the preliminary results, the following events have taken place. The Department received timely case briefs from Mitsubishi Polyester Film, Inc., SKC, Inc., and Toray Plastics (America), Inc. (collectively, Petitioners) and JBF on January 14, 2013. Petitioners filed a timely rebuttal brief with the Department on January 22, 2013.

On March 8, 2013, the Department released a post-preliminary analysis memorandum of JBF which addressed Petitioners' targeted dumping allegation.<sup>2</sup> At that time, we invited interested parties to comment on the Post-Preliminary Analysis.<sup>3</sup> JBF submitted comments on the Post-Preliminary Analysis on March 18, 2013, and Petitioners submitted rebuttal comments on March 25, 2013.

##### Period of Review

The period of review is November 1, 2010, through October 31, 2011.

##### Scope of the Order

The products covered by the order are all gauges of raw, pre-treated, or primed polyethylene terephthalate film (PET Film), whether extruded or co-extruded. Excluded are metallized films and other finished films that have had at least one of their surfaces modified by the application of a performance-enhancing resinous or inorganic layer more than 0.00001 inches thick. Also excluded is roller transport cleaning film which has at least one of its surfaces modified by application of 0.5 micrometers of SBR latex. Tracing and drafting film is also excluded. PET Film is classifiable under subheading 3920.62.00.90 of the Harmonized Tariff Schedule of the United States (HTSUS). While HTSUS subheadings are provided for convenience and customs purposes, our written description of the scope of the order is dispositive.

##### Analysis of Comments Received

All issues raised by parties in the case and rebuttal briefs, as well as in the comments and rebuttal comments related to the Post-Preliminary Analysis,

<sup>2</sup> See Memorandum to Paul Piquado, "2010-2011 Administrative Review of the Antidumping Duty Order on Polyethylene Terephthalate Film, Sheet, and Strip from the United Arab Emirates: Post-Preliminary Analysis and Calculation Memorandum of JBF RAK LLC" (Post-Preliminary Analysis), dated March 8, 2013.

<sup>3</sup> See *id.* at 4.

<sup>1</sup> See *Polyethylene Terephthalate Film, Sheet, and Strip from the United Arab Emirates: Preliminary Results of Antidumping Duty Administrative Review; 2010-2011*, 77 FR 73010 (December 7, 2012), and accompanying Preliminary Decision Memorandum.

are addressed in the Memorandum to Paul Piquado, Assistant Secretary for Import Administration, from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, "Antidumping Duty Administrative Review of Polyethylene Terephthalate Film, Sheet, and Strip from the United Arab Emirates: Issues and Decision Memorandum for the Final Results" (Decision Memorandum), dated concurrently with, and hereby adopted by, this notice. A list of the issues addressed in the Decision Memorandum is appended to this notice. The Decision Memorandum is a public document and is available electronically via Import Administration's Antidumping and Countervailing Duty Centralized Electronic Services System (IA ACCESS). IA ACCESS is available to registered users at <http://iaaccess.trade.gov> and is available in the Central Records Unit of the main Commerce Building, Room 7046. In addition, a complete version of the Decision Memorandum is also accessible on the internet at <http://ia.ita.doc.gov/frn/index.html>. The signed Decision Memorandum and the electronic versions of the Decision Memorandum are identical in content.

### Changes Since the Preliminary Results

Based on our analysis of the comments received, we have made adjustments to our margin calculations for JBF and FLEX. Specifically, in response to Petitioners' targeted dumping allegation and consistent with the Post-Preliminary Analysis, we have adopted the alternative average-to-transaction methodology for JBF.<sup>4</sup> Moreover, in response to comments by Petitioners, we have made changes to the SAS programming to correct certain clerical errors in FLEX's margin calculation.

### Final Results of Review

As a result of this review, we determine that the following weighted-average dumping margins exist for the period November 1, 2010, through October 31, 2011:

Manufacturer/exporter	Weighted average margin
JBF RAK LLC .....	9.80 percent <i>ad valorem</i> .
FLEX Middle East FZE.	0.00 percent <i>ad valorem</i> (i.e., <i>de minimis</i> .)

<sup>4</sup> See *id.* at 2 and 3.

### Disclosure

We will disclose to interested parties the calculations performed in connection with these final results within five days of the publication of this notice, consistent with 19 CFR 351.224(b).

### Assessment Rates

The Department shall determine, and U.S. Customs and Border Protection (CBP) shall assess, antidumping duties on all appropriate entries of subject merchandise in accordance with the final results of this review.<sup>5</sup> The Department intends to issue appropriate assessment instructions directly to CBP 15 days after the date of publication of these final results of review.

For assessment purposes, where the respondent reported the entered value for its sales, we calculated importer-specific (or customer-specific) *ad valorem* assessment rates based on the ratio of the total amount of the dumping duties calculated for the examined sales to the total entered value of those same sales. See 19 CFR 351.212(b)(1). However, where the respondent did not report the entered value for its sales, we have calculated importer-specific (or customer-specific) per-unit assessment rates by aggregating the total amount of antidumping duties calculated for the examined sales and dividing this amount by the total quantity of those sales. We will instruct CBP to assess antidumping duties on all appropriate entries covered by this review if any importer-specific assessment rate calculated in the final results of this review is above *de minimis* (i.e., at or above 0.50 percent). Pursuant to 19 CFR 351.106(c)(2), we will instruct CBP to liquidate, without regard to antidumping duties, any entries for which the assessment rate is *de minimis*.

The Department clarified its "automatic assessment" regulation on May 6, 2003.<sup>6</sup> This clarification applies to entries of subject merchandise during the period of review produced by companies under review in these final results for which the reviewed companies did not know their merchandise was destined for the United States. In such instances, we will instruct CBP to liquidate non-reviewed entries at the all-others rate of 4.05

<sup>5</sup> The Department applied the assessment rate calculation method adopted in *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Proceedings: Final Modification*, 77 FR 8101 (February 14, 2012).

<sup>6</sup> See *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003).

percent from the investigation if there is no rate for the intermediate company(ies) involved in the transaction.<sup>7</sup>

### Cash Deposit Requirements

The following deposit requirements will be effective upon publication of the final results of this administrative review for all shipments of subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of these final results, as provided by section 751(a)(2)(C) of the Tariff Act of 1930, as amended (the Act): (1) For the companies covered by this review, the cash deposit rate will be the rate listed above in the section "Final Results of Review"; (2) for merchandise exported by producers or exporters not covered in this review but covered in a previous segment of this proceeding, the cash deposit rate will continue to be the company-specific rate published in the most recent final results in which that producer or exporter participated; (3) if the exporter is not a firm covered in this review or in any previous segment of this proceeding, but the producer is, the cash deposit rate will be that established for the producer of the merchandise in these final results of review or in the most recent final results in which that producer participated; and (4) if neither the exporter nor the producer is a firm covered in this review or in any previous segment of this proceeding, the cash deposit rate will be 4.05 percent, the all-others rate established in the less than fair value investigation.<sup>8</sup> These cash deposit requirements, when imposed, shall remain in effect until further notice.

### Notification Regarding Administrative Protective Order

This notice is the only reminder to parties subject to the administrative protective order (APO) of their responsibility concerning the return or destruction of proprietary information disclosed under the APO in accordance with 19 CFR 351.305(a)(3). Timely written notification of the return or destruction of APO materials, or conversion to judicial protective order, is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

<sup>7</sup> See *id.*; see also *Polyethylene Terephthalate Film, Sheet, and Strip From Brazil, the People's Republic of China and the United Arab Emirates: Antidumping Duty Orders and Amended Final Determination of Sales at Less Than Fair Value for the United Arab Emirates*, 73 FR 66595, 66596 (November 10, 2008).

<sup>8</sup> See *id.*

**Notification to Importers**

This notice also serves as a final reminder to importers of their responsibility under 19 CFR 351.402(f)(2) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Department's presumption that reimbursement of antidumping duties occurred and in the subsequent assessment of double antidumping duties.

We are issuing and publishing these final results and this notice in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: May 13, 2013.

**Ball Bearings and Parts Thereof From Germany: Final Results of Antidumping Duty Administrative Review; 2011-2011**

**AGENCY:** Import Administration, International Trade Administration, Department of Commerce.

**SUMMARY:** On February 11, 2013, the Department of Commerce (the Department) published the preliminary results and partial rescission of its administrative review of the antidumping duty order on ball bearings and parts thereof from Germany. The period of review (POR) is May 1, 2011, through September 14, 2011.<sup>1</sup> We received no comments from interested parties. Accordingly, for the final results we continue to find that subject

<sup>1</sup> On September 15, 2011, the Department revoked the order on ball bearings and parts thereof from Germany as the conclusion of a sunset review. See *Ball Bearings and Parts Thereof From France, Germany and Italy: Final Results of Sunset Reviews and Revocation of Antidumping Duty Orders*, 76 FR 57019, (September 15, 2011) (*Third Sunset Review*). Therefore, the POR ends on September 14, 2011.

merchandise has not been sold at less than normal value.

**DATES:** *Effective Date:* May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** Catherine Cartsos or Minoo Hatten, AD/CVD Operations, Office 1, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230, telephone: (202) 482-1757 or (202) 482-1690, respectively.

**SUPPLEMENTARY INFORMATION:**

**Background**

On February 11, 2013, the Department published the preliminary results of its administrative review and partial rescission of the antidumping duty order on ball bearings and parts thereof from Germany. See *Ball Bearings and Parts Thereof from Germany: Preliminary Results of Antidumping Duty Administrative Review and Partial Rescission; 2011-2011*, 78 FR 9764 (February 11, 2013) (*Preliminary Results*). We invited interested parties to comment on the *Preliminary Results*. We received no comments from interested parties.

The Department has conducted this administrative review in accordance with section 751 of the Tariff Act of 1930, as amended (the Act).

**Scope of the Order**

The products covered by the order are ball bearings and parts thereof. These products include all antifriction bearings that employ balls as the rolling element. Imports of these products are classified under the following categories: antifriction balls, ball bearings with integral shafts, ball bearings (including radial ball bearings) and parts thereof, and housed or mounted ball bearing units and parts thereof.

Imports of these products are classified under the following Harmonized Tariff Schedule of the United States (HTSUS) subheadings: 3926.90.45, 4016.93.10, 4016.93.50, 6909.19.50.10, 8414.90.41.75, 8431.20.00, 8431.39.00.10, 8482.10.10, 8482.10.50, 8482.80.00, 8482.91.00, 8482.99.05, 8482.99.35, 8482.99.25.80, 8482.99.65.95, 8483.20.40, 8483.20.80, 8483.30.40, 8483.30.80, 8483.50.90, 8483.90.20, 8483.90.30, 8483.90.70, 8708.50.50, 8708.60.50, 8708.60.80, 8708.93.30, 8708.93.60.00, 8708.99.06, 8708.99.31.00, 8708.99.40.00, 8708.99.49.60, 8708.99.58, 8708.99.80.15, 8708.99.80.80, 8803.10.00, 8803.20.00, 8803.30.00, 8803.90.30, 8803.90.90, 8708.30.50.90, 8708.40.75.70, 8708.40.75.80,

8708.50.79.00, 8708.50.89.00, 8708.50.91.50, 8708.50.99.00, 8708.70.60.60, 8708.80.65.90, 8708.93.75.00, 8708.94.75, 8708.95.20.00, 8708.99.55.00, 8708.99.68, and 8708.99.81.80. Although the HTSUS item numbers above are provided for convenience and customs purposes, the written descriptions of the scope of the order remain dispositive.

The size or precision grade of a bearing does not influence whether the bearing is covered by one of the order. The order covers all the subject bearings and parts thereof (inner race, outer race, cage, rollers, balls, seals, shields, etc.) outlined above with certain limitations. With regard to finished parts, all such parts are included in the scope of the order. For unfinished parts, such parts are included if they have been heat-treated or if heat treatment is not required to be performed on the part. Thus, the only unfinished parts that are not covered by the order are those that will be subject to heat treatment after importation. The ultimate application of a bearing also does not influence whether the bearing is covered by the order. Bearings designed for highly specialized applications are not excluded. Any of the subject bearings, regardless of whether they may ultimately be utilized in aircraft, automobiles, or other equipment, are within the scope of the order.

**Changes Since the Preliminary Results**

We have not revised our calculations since our publication of the *Preliminary Results*. Thus, the weighted-average dumping margins for the companies under review for our final results remain unchanged.

**Final Results of the Review**

As a result of the administrative review, we determine that the following weighted-average dumping margins exist for the respondents for the period May 1, 2011, through September 14, 2011.

Manufacturer/exporter	Weighted-average dumping margin (percent)
Audi AG .....	0.00
Bayerische Motoren Werke AG ..	0.00
myonic GmbH .....	0.00
Volkswagen AG .....	0.00
Volkswagen Zubehor GmbH .....	0.00
W&H Dentalwerk Burmoos GmbH .....	0.00

## Assessment Rates

In accordance with the *Final Modification*,<sup>2</sup> we will instruct U.S. Customs and Border Protection (CBP) to liquidate entries covered in this review without regard to antidumping duties.

The Department clarified its “automatic assessment” regulation on May 6, 2003. This clarification will apply to entries of subject merchandise during the POR produced by myonic GmbH for which it did not know its merchandise was destined for the United States. In such instances, we will instruct CBP to liquidate unreviewed entries at the country-specific all-others rate if there is no rate for the intermediate company(ies) involved in the transaction. For a full discussion of this clarification, see *Antidumping and Countervailing Duty Proceedings: Assessment of Antidumping Duties*, 68 FR 23954 (May 6, 2003).

We intend to issue liquidation instructions to CBP 15 days after publication of the final results of this review.

## Cash Deposit Requirements

Because the antidumping duty order on ball bearings and parts thereof from Germany has been revoked as a result of the *Third Sunset Review*, the Department will not issue cash deposit instructions at the conclusion of this administrative review.

## Notifications to Parties

This notice serves as a reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Department’s presumption that reimbursement of antidumping duties occurred and the subsequent assessment of doubled antidumping duties.

This notice also serves as a reminder to parties subject to administrative protective order (APO) of their responsibility concerning the disposition of proprietary information disclosed under APO in accordance with 19 CFR 351.305(a)(3). Timely notification of the destruction of APO materials or conversion to judicial protective order is hereby requested. Failure to comply with the regulations and the terms of an APO is a sanctionable violation.

<sup>2</sup> See *Antidumping Proceedings: Calculation of the Weighted-Average Dumping Margin and Assessment Rate in Certain Antidumping Duty Proceedings; Final Modification*, 77 FR 8101 (February 14, 2012) (*Final Modification*).

These final results of administrative review are issued and published in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: May 14, 2013.

**Paul Piquado**,  
Assistant Secretary for Import  
Administration.

## DEPARTMENT OF COMMERCE

### International Trade Administration

[A–583–844]

#### Narrow Woven Ribbons With Woven Selvage From Taiwan: Preliminary Results of Antidumping Duty Administrative Review; 2011–2012

**AGENCY:** Import Administration, International Trade Administration, Department of Commerce.

**SUMMARY:** The Department of Commerce (the Department) is conducting an administrative review of the antidumping duty order on narrow woven ribbons with woven selvage (narrow woven ribbons) from Taiwan. Two of the companies for which this administrative review was requested, Intercontinental Skyline and Pacific Imports, failed to respond to the Department’s quantity and value questionnaire. As a result, we have preliminarily assigned these companies a margin based on adverse facts available (AFA). The period of review (POR) is September 1, 2011, through August 31, 2012.

If these preliminary results are adopted in the final results of this review, we will instruct U.S. Customs and Border Protection (CBP) to assess antidumping duties on all appropriate entries.

**DATES:** *Effective Date:* May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** David Crespo or Elizabeth Eastwood, AD/CVD Operations, Office 2, Import Administration, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: (202) 482–3693, or (202) 482–3874, respectively.

#### SUPPLEMENTARY INFORMATION:

##### Scope of the Order

The merchandise subject to this order covers narrow woven ribbons with woven selvage.<sup>1</sup> The merchandise

<sup>1</sup> See the “Decision Memorandum for the Preliminary Results of Antidumping Duty Administrative Review on Narrow Woven Ribbons

subject to this order is classifiable under the HTSUS statistical categories 5806.32.1020; 5806.32.1030; 5806.32.1050 and 5806.32.1060. Subject merchandise also may enter under subheadings 5806.31.00; 5806.32.20; 5806.39.20; 5806.39.30; 5808.90.00; 5810.91.00; 5810.99.90; 5903.90.10; 5903.90.25; 5907.00.60; and 5907.00.80 and under statistical categories 5806.32.1080; 5810.92.9080; 5903.90.3090; and 6307.90.9889. The HTSUS statistical categories and subheadings are provided for convenience and customs purposes; however, the written description of the merchandise covered by this order is dispositive.

## Methodology

The Department has conducted this review in accordance with section 751(a)(2) of the Tariff Act of 1930, as amended (the Act). In these preliminary results, we have relied on facts available and, because the respondents did not act to the best of their abilities to respond to the Department’s request for information, we have drawn an adverse inference in selecting from among the facts otherwise available.<sup>2</sup>

Pursuant to section 776(b) of the Act, we are relying on information from the petition in order to ensure that the AFA rate is sufficiently adverse so as to induce cooperation. Accordingly, we have preliminarily determined to apply a 137.20 percent rate as AFA for Intercontinental Skyline and Pacific Imports. For a full description of the methodology underlying our conclusions, see the Preliminary Decision Memorandum, which is hereby adopted by this notice. The Preliminary Decision Memorandum is a public document and is on file electronically via Import Administration’s Antidumping and Countervailing Duty Centralized Electronic Service System (IA ACCESS). IA ACCESS is available to registered users at <http://iaaccess.trade.gov> and in the Central Records Unit (CRU), room 7046 of the main Department of Commerce building. In addition, a complete version of the Preliminary Decision Memorandum can be accessed directly on the Internet at <http://www.trade.gov/ia/>. The signed Preliminary Decision Memorandum and the electronic

with Woven Selvage from Taiwan,” (Preliminary Decision Memorandum) from Gary Taverman, Senior Advisor for Antidumping and Countervailing Duty Operations, to Paul Piquado, Assistant Secretary for Import Administration, dated concurrently with these results, for a complete description of the scope of the order.

<sup>2</sup> See sections 776(a) and (b) of the Act.

version of the Preliminary Decision Memorandum are identical in content.

### Preliminary Results of the Review

We preliminarily determine that the following weighted-average dumping margins exist for the period September 1, 2011, through August 31, 2012, as follows:

Manufacturer/exporter	Percent margin
Intercontinental Skyline .....	137.20
Pacific Imports .....	137.20

### Public Comment

Pursuant to 19 CFR 351.309(c), interested parties may submit case briefs not later than 30 days after the date of publication of this notice. Rebuttal briefs, limited to issues raised in the case briefs, may be filed not later than five days after the date for filing case briefs.<sup>3</sup> Parties who submit case briefs or rebuttal briefs in this proceeding are encouraged to submit with each argument: (1) A statement of the issue; (2) a brief summary of the argument; and (3) a table of authorities.<sup>4</sup> Case and rebuttal briefs should be filed using IA ACCESS.<sup>5</sup>

Pursuant to 19 CFR 351.310(c), interested parties who wish to request a hearing, or to participate if one is requested, must submit a written request to the Assistant Secretary for Import Administration, filed electronically via IA ACCESS. An electronically filed document must be received successfully in its entirety by the Department's electronic records system, IA ACCESS, by 5 p.m. Eastern Standard Time within 30 days after the date of publication of this notice.<sup>6</sup> Requests should contain: (1) The party's name, address and telephone number; (2) the number of participants; and (3) a list of issues to be discussed. Issues raised in the hearing will be limited to those raised in the respective case briefs. The Department intends to issue the final results of this administrative review, including the results of its analysis of issues raised in any written briefs, not later than 120 days after the date of publication of this notice, pursuant to section 751(a)(3)(A) of the Act.

### Assessment Rates

Upon issuance of the final results, the Department shall determine, and CBP shall assess, antidumping duties on all

appropriate entries covered by this review, in accordance with 19 CFR 351.212(b)(1). The Department intends to issue assessment instructions to CBP 15 days after the date of publication of the final results of this review.

Where assessments are based upon total facts available, including total AFA, we instruct CBP to assess duties at the AFA margin rate. If these preliminary results are unchanged in the final results, then the Department intends to instruct CBP to assess antidumping duties on POR entries of the subject merchandise produced or exported by Intercontinental Skyline and Pacific Imports at the rate of 137.20 percent of the entered value.<sup>7</sup> The final results of this review shall be the basis for the assessment of antidumping duties on entries of merchandise covered by the final results of this review and for future deposits of estimated duties, where applicable.<sup>8</sup>

### Cash Deposit Requirements

The following cash deposit requirements will be effective for all shipments of the subject merchandise entered, or withdrawn from warehouse, for consumption on or after the publication date of the final results of this administrative review, as provided by section 751(a)(2)(C) of the Act: (1) The cash deposit rates for Intercontinental Skyline and Pacific Imports will be those established in the final results of this review; (2) for previously reviewed or investigated companies not participating in this review, the cash deposit rate will continue to be the company-specific rate published for the most recent period; (3) if the exporter is not a firm covered in this review, or the original less than fair value (LTFV) investigation, but the manufacturer is, the cash deposit rate will be the rate established for the most recent period for the manufacturer of the merchandise; and (4) the cash deposit rate for all other manufacturers or exporters will continue to be 4.37 percent, the all-others rate made effective by the LTFV investigation.<sup>9</sup> These deposit requirements, when imposed, shall remain in effect until further notice.

### Notification to Importers

This notice also serves as a preliminary reminder to importers of their responsibility under 19 CFR 351.402(f) to file a certificate regarding

the reimbursement of antidumping duties prior to liquidation of the relevant entries during this review period. Failure to comply with this requirement could result in the Secretary's presumption that reimbursement of antidumping duties occurred and the subsequent assessment of double antidumping duties.

We are issuing and publishing these results in accordance with sections 751(a)(1) and 777(i)(1) of the Act.

Dated: May 14, 2013.

## DEPARTMENT OF COMMERCE

### National Institute of Standards and Technology

#### Visiting Committee on Advanced Technology

**AGENCY:** National Institute of Standards and Technology, Department of Commerce.

**ACTION:** Notice of Public Meeting.

**SUMMARY:** The Visiting Committee on Advanced Technology (VCAT or Committee), National Institute of Standards and Technology (NIST), will meet in open session on Tuesday, June 11, 2013, from 8:00 a.m. to 5:00 p.m. Eastern Time and Wednesday, June 12, 2013, from 8:30 a.m. to 11:45 a.m. Eastern Time. The VCAT is composed of fifteen members appointed by the Under Secretary of Commerce for Standards and Technology who are eminent in such fields as business, research, new product development, engineering, labor, education, management consulting, environment, and international relations.

**DATES:** The VCAT will meet on Tuesday, June 11, 2013, from 8:00 a.m. to 5:00 p.m. Eastern Time and Wednesday, June 12, 2013, from 8:30 a.m. to 11:45 a.m. Eastern Time.

**ADDRESSES:** The meeting will be held in the Portrait Room, Administration Building, at NIST, 100 Bureau Drive, Gaithersburg, Maryland, 20899. Please note admittance instructions under the **SUPPLEMENTARY INFORMATION** section of this notice.

**FOR FURTHER INFORMATION CONTACT:** Stephanie Shaw, VCAT, NIST, 100 Bureau Drive, Mail Stop 1060, Gaithersburg, Maryland 20899-1060, telephone number 301-975-2667. Ms. Shaw's email address is [stephanie.shaw@nist.gov](mailto:stephanie.shaw@nist.gov).

<sup>3</sup> See 19 CFR 351.309(d).

<sup>4</sup> See 19 CFR 351.309(c)(2) and (d)(2).

<sup>5</sup> See 19 CFR 351.303.

<sup>6</sup> See 19 CFR 351.310(c).

<sup>7</sup> See 19 CFR 351.212(b)(1).

<sup>8</sup> See section 751(a)(2)(C) of the Act.

<sup>9</sup> See *Notice of Final Determination of Sales at Less than Fair Value: Narrow Woven Ribbons with Woven Selvedge from Taiwan*, 75 FR 41804 (July 19, 2010).

**SUPPLEMENTARY INFORMATION:**

**Authority:** 15 U.S.C. 278 and the Federal Advisory Committee Act, as amended, 5 U.S.C. App.

The purpose of this meeting is for the VCAT to review and make recommendations regarding general policy for NIST, its organization, its budget, and its programs within the framework of applicable national policies as set forth by the President and the Congress. The agenda will include an update on NIST and presentations and discussions on NIST's safety metrics, the Advanced Manufacturing Technology Consortia, and NIST's activities related to advanced manufacturing, cybersecurity, forensics, and advanced communications. The meeting will conclude with a wrap-up discussion of action items and plans for the October 2013 VCAT meeting. The agenda may change to accommodate Committee business. The final agenda will be posted on the NIST Web site at <http://www.nist.gov/director/vcat/agenda.cfm>.

Individuals and representatives of organizations who would like to offer comments and suggestions related to the Committee's affairs are invited to request a place on the agenda. On June 12, approximately one-half hour will be reserved in the morning for public comments and speaking times will be assigned on a first-come, first-serve basis. The amount of time per speaker will be determined by the number of requests received, but is likely to be about 3 minutes each. The exact time for public comments will be included in the final agenda that will be posted on the NIST Web site at <http://www.nist.gov/director/vcat/agenda.cfm>. Questions from the public will not be considered during this period. Speakers who wish to expand upon their oral statements, those who had wished to speak, but could not be accommodated on the agenda, and those who were unable to attend in person are invited to submit written statements to VCAT, NIST, 100 Bureau Drive, MS 1060, Gaithersburg, Maryland, 20899, via fax at 301-216-0529 or electronically by email to [gail.ehrlich@nist.gov](mailto:gail.ehrlich@nist.gov).

All visitors to the NIST site are required to pre-register to be admitted. Please submit your name, time of arrival, email address and phone number to Stephanie Shaw by 5:00 p.m. Eastern Time, Wednesday, June 5, 2013. Non-U.S. citizens must also submit their country of citizenship, title, employer/sponsor, and address. Ms. Shaw's email address is [stephanie.shaw@nist.gov](mailto:stephanie.shaw@nist.gov) and her phone number is 301-975-2667.

Dated: May 16, 2013.

**DEPARTMENT OF COMMERCE****National Oceanic and Atmospheric Administration**

**RIN 0648-XC646**

**Takes of Marine Mammals Incidental to Specified Activities; Taking Marine Mammals Incidental to a Wharf Construction Project**

**AGENCY:** National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

**ACTION:** Notice; proposed incidental harassment authorization; request for comments.

**SUMMARY:** NMFS has received an application from the U.S. Navy (Navy) for an Incidental Harassment Authorization (IHA) to take marine mammals, by harassment, incidental to construction activities as part of a wharf construction project. Pursuant to the Marine Mammal Protection Act (MMPA), NMFS is requesting comments on its proposal to issue an IHA to the Navy to take, by Level B Harassment only, six species of marine mammals during the specified activity.

**DATES:** Comments and information must be received no later than June 20, 2013.

**ADDRESSES:** Comments on the application should be addressed to Michael Payne, Chief, Permits and Conservation Division, Office of Protected Resources, National Marine Fisheries Service, 1315 East-West Highway, Silver Spring, MD 20910. The mailbox address for providing email comments is [ITP.Laws@noaa.gov](mailto:ITP.Laws@noaa.gov). NMFS is not responsible for email comments sent to addresses other than the one provided here. Comments sent via email, including all attachments, must not exceed a 10-megabyte file size.

Instructions: All comments received are a part of the public record. All Personal Identifying Information (e.g., name, address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information.

A copy of the application as well as a list of the references used in this document may be obtained by writing to the address specified above, telephoning the contact listed below (see **FOR**

**FURTHER INFORMATION CONTACT**), or visiting the Internet at: <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>. Supplemental documents provided by the U.S. Navy may be found at the same web address. Documents cited in this notice may also be viewed, by appointment only, at the aforementioned physical address.

**FOR FURTHER INFORMATION CONTACT:** Ben Laws, Office of Protected Resources, NMFS, (301) 427-8401.

**SUPPLEMENTARY INFORMATION:****Background**

Sections 101(a)(5)(A) and (D) of the MMPA (16 U.S.C. 1361 *et seq.*) direct the Secretary of Commerce to allow, upon request, the incidental, but not intentional, taking of small numbers of marine mammals by U.S. citizens who engage in a specified activity (other than commercial fishing) within a specified geographical region if certain findings are made and either regulations are issued or, if the taking is limited to harassment, a notice of a proposed authorization is provided to the public for review.

Authorization for incidental takings shall be granted if NMFS finds that the taking will have a negligible impact on the species or stock(s), will not have an unmitigable adverse impact on the availability of the species or stock(s) for subsistence uses (where relevant), and if the permissible methods of taking and requirements pertaining to the mitigation, monitoring and reporting of such takings are set forth. NMFS has defined "negligible impact" in 50 CFR 216.103 as ". . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival."

Section 101(a)(5)(D) of the MMPA established an expedited process by which citizens of the U.S. can apply for an authorization to incidentally take small numbers of marine mammals by harassment. Section 101(a)(5)(D) establishes a 45-day time limit for NMFS review of an application followed by a 30-day public notice and comment period on any proposed authorizations for the incidental harassment of marine mammals. Within 45 days of the close of the comment period, NMFS must either issue or deny the authorization. Except with respect to certain activities not pertinent here, the MMPA defines "harassment" as "any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment];

or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].”

### Summary of Request

We received an application on December 10, 2012, from the Navy for the taking of marine mammals incidental to pile driving and removal in association with a wharf construction project in the Hood Canal at Naval Base Kitsap in Bangor, WA (NBKB). The Navy submitted a revised version of the application on May 6, 2013, which we deemed adequate and complete. The wharf construction project is a multi-year project; this IHA would cover only the second year of the project, from July 16, 2013, through July 15, 2014. Pile driving and removal activities would occur only within an approved in-water work window from July 16-February 15. Six species of marine mammals are expected to be affected by the specified activities: Steller sea lion (*Eumetopias jubatus monteriensis*), California sea lion (*Zalophus californianus californianus*), harbor seal (*Phoca vitulina richardii*), killer whale (transient only; *Orcinus orca*), Dall's porpoise (*Phocoenoides dalli dalli*), and harbor porpoise (*Phocoena phocoena vomerina*). These species may occur year-round in the Hood Canal, with the exception of the Steller sea lion, which is present only from fall to late spring (October to mid-April), and the California sea lion, which is only present from late summer to late spring (August to early June).

NBKB provides berthing and support services to Navy submarines and other fleet assets. The Navy proposes to continue construction of the Explosive Handling Wharf #2 (EHW-2) facility at NBKB in order to support future program requirements for submarines berthed at NBKB. The Navy has determined that construction of EHW-2 is necessary because the existing EHW alone will not be able to support future program requirements. Under the proposed action—which includes only the portion of the project that would be completed under this proposed 1-year IHA—a maximum of 195 pile driving days would occur. All piles would be driven with a vibratory hammer for their initial embedment depths, while select piles may be finished with an impact hammer for proofing, as necessary. Proofing involves striking a driven pile

with an impact hammer to verify that it provides the required load-bearing capacity, as indicated by the number of hammer blows per foot of pile advancement. Sound attenuation measures (*i.e.*, bubble curtain) would be used during all impact hammer operations.

For pile driving activities, the Navy used thresholds recommended by NMFS for assessing project impacts, outlined later in this document. The Navy assumed practical spreading loss and used empirically-measured source levels from other 30–72 in diameter pile driving events to estimate potential marine mammal exposures. Predicted exposures are outlined later in this document. The calculations predict that only Level B harassment would occur associated with pile driving or construction activities.

### Description of the Specified Activity

NBKB is located on the Hood Canal approximately twenty miles (32 km) west of Seattle, Washington (see Figures 2–1 through 2–4 in the Navy's application). The proposed actions with the potential to cause harassment of marine mammals within the waterways adjacent to NBKB, under the MMPA, are vibratory and impact pile driving operations, as well as vibratory removal of falsework piles, associated with the wharf construction project. The proposed activities that would be authorized by this IHA would occur between July 16, 2013, and July 15, 2014. All in-water construction activities within the Hood Canal are only permitted during July 16-February 15 in order to protect spawning fish populations.

### Specific Geographic Region

The Hood Canal is a long, narrow fjord-like basin of the western Puget Sound. Throughout its 67-mile length, the width of the canal varies from one to two miles and exhibits strong depth/elevation gradients and irregular seafloor topography in many areas. Although no official boundaries exist along the waterway, the northeastern section of the canal extending from the mouth of the canal at Admiralty Inlet to the southern tip of Toandos Peninsula is referred to as the northern Hood Canal. NBKB is located within this region (see Figures 2–1 through 2–4 of the Navy's application). Please see Section 2 of the Navy's application for more information about the specific geographic region, including physical and oceanographic characteristics.

### Project Description

Development of necessary facilities for handling of explosive materials is part of the Navy's sea-based strategic deterrence mission. The EHW-2 would consist of two components: (1) The wharf proper (or Operations Area), including the warping wharf; and (2) two access trestles. Please see Figures 1–1 and 1–2 of the Navy's application for conceptual and schematic representations of the proposed EHW-2.

The wharf proper would lie approximately 600 ft (183 m) offshore at water depths of 60–100 ft (18–30 m), and would consist of the main wharf, a warping wharf, and lightning protection towers, all pile-supported. It would include a slip (docking area) for submarines, surrounded on three sides by operational wharf area. The access trestles would connect the wharf to the shore. There would be an entrance trestle and an exit trestle; these would be combined over shallow water to reduce overwater area. The trestles would be pile-supported on 24-in (0.6-m) steel pipe piles driven approximately 30 ft (9 m) into the seafloor. Spacing between bents (rows of piles) would be 25 ft (8 m). Concrete pile caps would be cast in place and would support pre-cast concrete deck sections.

For the entire project, a total of up to 1,250 permanent piles ranging in size between 24–48 in (0.6–1.2 m) in diameter would be driven in-water to construct the wharf, with up to three vibratory rigs and one impact driving rig operating simultaneously. Construction would also involve temporary installation of up to 150 falsework piles used as an aid to guide permanent piles to their proper locations. Falsework piles, which would be removed upon installation of the permanent piles, would likely be steel pipe piles and would be driven and removed using a vibratory driver. It has not been determined exactly what parts or how much of the project would be constructed in any given year; however, a maximum of 195 days of pile driving would occur per in-water work window. The analysis contained herein is based upon the maximum of 195 pile driving days, rather than any specific number of piles driven. Table 1 summarizes the number and nature of piles required for the entire project, rather than what subset of piles may be expected to be driven during the second year of construction proposed for this IHA.

TABLE 1—SUMMARY OF PILES REQUIRED FOR WHARF CONSTRUCTION  
[In total]

Feature	Quantity
Total number of permanent in-water piles .....	Up to 1,250.
Size and number of main wharf piles .....	24-in: 140. 36-in (0.9-m): 157. 48-in: 263.
Size and number of warping wharf piles .....	24-in: 80. 36-in: 190.
Size and number of lightning tower piles .....	24-in: 40. 36-in: 90.
Size and number of trestle piles .....	24-in: 57. 36-in: 233.
Falsework piles .....	Up to 150, 18- to 24-in.
Maximum pile driving duration .....	195 days (under 1-year IHA).

Pile installation would utilize vibratory pile drivers to the greatest extent possible, and the Navy anticipates that most piles would be able to be vibratory driven to within several feet of the required depth. Pile drivability is, to a large degree, a function of soil conditions and the type of pile hammer. The soil conditions encountered during geotechnical explorations at NBKB indicate existing conditions generally consist of fill or sediment of very dense glacially overridden soils. Recent experience at two other construction locations along the NBKB waterfront indicates that most piles should be able to be driven with a vibratory hammer to proper embedment depth. However, difficulties during pile driving may be encountered as a result of obstructions that may exist throughout the project area. Such obstructions may consist of rocks or boulders within the glacially overridden soils. If difficult driving conditions occur, increased usage of an impact hammer would occur.

Unless difficult driving conditions are encountered, an impact hammer will only be used to proof the load-bearing capacity of approximately every fourth or fifth pile. The industry standard is to proof every pile with an impact hammer; however, in an effort to reduce blow counts from the impact hammer, the engineer of record has agreed to only proof every fourth or fifth pile. A maximum of 200 strikes would be required to proof each pile. Pile production rates are dependent upon required embedment depths, the potential for encountering difficult driving conditions, and the ability to drive multiple piles without a need to relocate the driving rig. Under best-case scenarios (*i.e.*, shallow piles, driving in optimal conditions, using multiple driving rigs), it may be possible to install enough pilings with the vibratory hammer that proofing may be required

for up to five piles in a day. Under this likely scenario, with a single impact hammer used to proof up to five piles per day at 200 strikes per pile, it is estimated that up to a maximum of 1,000 strikes from an impact hammer would be required per day.

If difficult subsurface driving conditions (*i.e.*, cobble/boulder zones) are encountered that cause refusal with the vibratory equipment, it may be necessary to use an impact hammer to drive some piles for the remaining portion of their required depth. The worst-case scenario is that a pile would be driven for its entire length using an impact hammer. Given the uncertainty regarding the types and quantities of boulders or cobbles that may be encountered, and the depth at which they may be encountered, the number of strikes necessary to drive a pile its entire length could be approximately 1,000 to 2,000 strikes per pile. The Navy estimates that a possible worst-case daily scenario would require driving three piles full length (at a worst-case of 2,000 strikes per pile) after the piles have become hung on large boulders early in the installation process, with proofing of an additional two piles (at 200 strikes each) that were able to be installed primarily via vibratory means. This worst-case scenario would therefore result in a maximum of 6,400 strikes per day. All piles driven or struck with an impact hammer would be surrounded by a bubble curtain or other sound attenuation device over the full water column to minimize in-water sound. Up to three vibratory rigs and one impact rig would be used at a time. Pile production rate (number of piles driven per day) is affected by many factors: size, type (vertical vs. angled), and location of piles; weather; number of driver rigs operating; equipment reliability; geotechnical (subsurface) conditions; and work stoppages for

security or environmental reasons (such as presence of marine mammals).

Pile driving would typically take place 6 days per week. The allowable season for in-water work, including pile driving, at NBKB is July 16 through February 15, which was established by the Washington Department of Fish and Wildlife in coordination with NMFS and the U.S. Fish and Wildlife Service (USFWS) to protect juvenile salmon. Impact pile driving during the first half of the in-water work window (July 16 to September 15) would only occur between 2 hours after sunrise and 2 hours before sunset to protect breeding marbled murrelets (an ESA-listed bird under the jurisdiction of USFWS). Between September 16 and February 15, construction activities occurring in the water would occur during daylight hours (sunrise to sunset). Other construction (not in-water) may occur between 7:00 a.m. and 10:00 p.m., year-round.

#### Description of Work Accomplished

During the first in-water work season, the contractor completed installation of 184 piles to support the main segment of the access trestle. Driven piles ranged in size from 24–36 inches in diameter in depths ranging from 0 to 50 ft. A maximum of two vibratory rigs were operated concurrently and only one impact hammer rig was operated at a time. During the second season, installation of pilings for the wharf deck is expected to be completed. The overall intensity of pile driving will remain unchanged from season one. The project is scheduled for completion in January 2016.

#### Description of Sound Sources

Sound travels in waves, the basic components of which are frequency, wavelength, velocity, and amplitude. Frequency is the number of pressure waves that pass by a reference point per

unit of time and is measured in Hz or cycles per second. Wavelength is the distance between two peaks of a sound wave; lower frequency sounds have longer wavelengths than higher frequency sounds and attenuate more rapidly in shallower water. Amplitude is the height of the sound pressure wave or the 'loudness' of a sound and is typically measured using the decibel (dB) scale. A dB is the ratio between a measured pressure (with sound) and a reference pressure (sound at a constant pressure, established by scientific standards). It is a logarithmic unit that accounts for large variations in amplitude; therefore, relatively small changes in dB ratings correspond to large changes in sound pressure. When referring to SPLs (SPLs; the sound force per unit area), sound is referenced in the context of underwater sound pressure to 1 microPascal (µPa). One pascal is the pressure resulting from a force of one newton exerted over an area of one square meter. The source level represents the sound level at a distance of 1 m from the source (referenced to 1 µPa). The received level is the sound level at the listener's position.

Root mean square (rms) is the quadratic mean sound pressure over the duration of an impulse. Rms is calculated by squaring all of the sound amplitudes, averaging the squares, and then taking the square root of the average (Urick, 1983). Rms accounts for both positive and negative values; squaring the pressures makes all values positive so that they may be accounted for in the summation of pressure levels (Hastings and Popper, 2005). This

measurement is often used in the context of discussing behavioral effects, in part because behavioral effects, which often result from auditory cues, may be better expressed through averaged units than by peak pressures.

When underwater objects vibrate or activity occurs, sound-pressure waves are created. These waves alternately compress and decompress the water as the sound wave travels. Underwater sound waves radiate in all directions away from the source (similar to ripples on the surface of a pond), except in cases where the source is directional. The compressions and decompressions associated with sound waves are detected as changes in pressure by aquatic life and man-made sound receptors such as hydrophones.

Underwater sound levels ('ambient sound') are comprised of multiple sources, including physical (e.g., waves, earthquakes, ice, atmospheric sound), biological (e.g., sounds produced by marine mammals, fish, and invertebrates), and anthropogenic sound (e.g., vessels, dredging, aircraft, construction). Even in the absence of anthropogenic sound, the sea is typically a loud environment. A number of sources of sound are likely to occur within Hood Canal, including the following (Richardson *et al.*, 1995):

- Wind and waves: The complex interactions between wind and water surface, including processes such as breaking waves and wave-induced bubble oscillations and cavitation, are a main source of naturally occurring ambient noise for frequencies between 200 Hz and 50 kHz (Mitson, 1995). In

general, ambient noise levels tend to increase with increasing wind speed and wave height. Surf noise becomes important near shore, with measurements collected at a distance of 8.5 km (5.3 mi) from shore showing an increase of 10 dB in the 100 to 700 Hz band during heavy surf conditions.

- Precipitation noise: Noise from rain and hail impacting the water surface can become an important component of total noise at frequencies above 500 Hz, and possibly down to 100 Hz during quiet times.

- Biological noise: Marine mammals can contribute significantly to ambient noise levels, as can some fish and shrimp. The frequency band for biological contributions is from approximately 12 Hz to over 100 kHz.

- Anthropogenic noise: Sources of ambient noise related to human activity include transportation (surface vessels and aircraft), dredging and construction, oil and gas drilling and production, seismic surveys, sonar, explosions, and ocean acoustic studies (Richardson *et al.*, 1995). Shipping noise typically dominates the total ambient noise for frequencies between 20 and 300 Hz. In general, the frequencies of anthropogenic sounds are below 1 kHz and, if higher frequency sound levels are created, they will attenuate (decrease) rapidly (Richardson *et al.*, 1995). Known sound levels and frequency ranges associated with anthropogenic sources similar to those that would be used for this project are summarized in Table 2. Details of each of the sources are described in the following text.

TABLE 2—REPRESENTATIVE SOUND LEVELS OF ANTHROPOGENIC SOURCES

Sound source	Frequency range (Hz)	Underwater sound level (dB re 1 µPa)	Reference
Small vessels .....	250–1,000	151 dB rms at 1 m (3.3 ft) .....	Richardson <i>et al.</i> , 1995.
Tug docking gravel barge .....	200–1,000	149 dB rms at 100 m (328 ft) .....	Blackwell and Greene, 2002.
Vibratory driving of 72-in (1.8 m) steel pipe pile.	10–1,500	180 dB rms at 10 m (33 ft) .....	Reyff, 2007.
Impact driving of 36-in steel pipe pile .....	10–1,500	195 dB rms at 10 m .....	Laughlin, 2007.
Impact driving of 66-in cast-in-steel-shell pile.	10–1,500	195 dB rms at 10 m .....	Reviewed in Hastings and Popper, 2005.

In-water construction activities associated with the project would include impact pile driving and vibratory pile driving and removal. The sounds produced by these activities fall into one of two sound types: pulsed and non-pulsed (defined in next paragraph). The distinction between these two general sound types is important because they have differing potential to cause physical effects, particularly with

regard to hearing (e.g., Ward, 1997 in Southall *et al.*, 2007). Please see Southall *et al.*, (2007) for an in-depth discussion of these concepts.

Pulsed sounds (e.g., explosions, gunshots, sonic booms, and impact pile driving) are brief, broadband, atonal transients (ANSI, 1986; Harris, 1998) and occur either as isolated events or repeated in some succession. Pulsed sounds are all characterized by a

relatively rapid rise from ambient pressure to a maximal pressure value followed by a decay period that may include a period of diminishing, oscillating maximal and minimal pressures. Pulsed sounds generally have an increased capacity to induce physical injury as compared with sounds that lack these features.

Non-pulse (intermittent or continuous sounds) can be tonal, broadband, or

both. Some of these non-pulse sounds can be transient signals of short duration but without the essential properties of pulses (e.g., rapid rise time). Examples of non-pulse sounds include those produced by vessels, aircraft, machinery operations such as drilling or dredging, vibratory pile driving, and active sonar systems. The duration of such sounds, as received at a distance, can be greatly extended in a highly reverberant environment.

Impact hammers operate by repeatedly dropping a heavy piston onto a pile to drive the pile into the substrate. Sound generated by impact hammers is characterized by rapid rise times and high peak levels, a potentially injurious combination (Hastings and Popper, 2005). Vibratory hammers install piles by vibrating them and allowing the weight of the hammer to push them into the sediment. Vibratory hammers produce significantly less sound than impact hammers. Peak SPLs may be 180 dB or greater, but are generally 10 to 20 dB lower than SPLs generated during impact pile driving of the same-sized pile (Oestman *et al.*, 2009). Rise time is slower, reducing the probability and severity of injury, and sound energy is distributed over a greater amount of time (Nedwell and Edwards, 2002; Carlson *et al.*, 2005).

#### Ambient Sound

The underwater acoustic environment consists of ambient sound, defined as environmental background sound levels lacking a single source or point (Richardson *et al.*, 1995). The ambient underwater sound level of a region is defined by the total acoustical energy being generated by known and unknown sources, including sounds from both natural and anthropogenic sources. The sum of the various natural and anthropogenic sound sources at any given location and time depends not only on the source levels (as determined by current weather conditions and levels of biological and shipping activity) but also on the ability of sound to propagate through the environment. In turn, sound propagation is dependent on the spatially and temporally varying properties of the water column and sea floor, and is frequency-dependent. As a result of the dependence on a large number of varying factors, the ambient sound levels at a given frequency and location can vary by 10–20 dB from day to day (Richardson *et al.*, 1995).

Underwater ambient noise was measured at approximately 113 dB re 1 $\mu$ Pa rms between 50 Hz and 20 kHz during the recent Test Pile Program (TPP) project, approximately 1.85 mi from the project area (Illingworth &

Rodkin, Inc., 2012). In 2009, the average broadband ambient underwater noise levels were measured at 114 dB re 1 $\mu$ Pa between 100 Hz and 20 kHz (Slater, 2009). Peak spectral noise from industrial activity was noted below the 300 Hz frequency, with maximum levels of 110 dB re 1 $\mu$ Pa noted in the 125 Hz band. In the 300 Hz to 5 kHz range, average levels ranged between 83 and 99 dB re 1 $\mu$ Pa. Wind-driven wave noise dominated the background noise environment at approximately 5 kHz and above, and ambient noise levels flattened above 10 kHz.

#### Sound Attenuation Devices

Sound levels can be greatly reduced during impact pile driving using sound attenuation devices. There are several types of sound attenuation devices including bubble curtains, cofferdams, and isolation casings (also called temporary noise attenuation piles [TNAP]), and cushion blocks. The Navy proposes to use bubble curtains, which create a column of air bubbles rising around a pile from the substrate to the water surface. The air bubbles absorb and scatter sound waves emanating from the pile, thereby reducing the sound energy. Bubble curtains may be confined or unconfined. An unconfined bubble curtain may consist of a ring seated on the substrate and emitting air bubbles from the bottom. An unconfined bubble curtain may also consist of a stacked system, that is, a series of multiple rings placed at the bottom and at various elevations around the pile. Stacked systems may be more effective than non-stacked systems in areas with high current and deep water (Oestman *et al.*, 2009).

A confined bubble curtain contains the air bubbles within a flexible or rigid sleeve made from plastic, cloth, or pipe. Confined bubble curtains generally offer higher attenuation levels than unconfined curtains because they may physically block sound waves and they prevent air bubbles from migrating away from the pile. For this reason, the confined bubble curtain is commonly used in areas with high current velocity (Oestman *et al.*, 2009).

Both environmental conditions and the characteristics of the sound attenuation device may influence the effectiveness of the device. According to Oestman *et al.* (2009):

- In general, confined bubble curtains attain better sound attenuation levels in areas of high current than unconfined bubble curtains. If an unconfined device is used, high current velocity may sweep bubbles away from the pile, resulting in reduced levels of sound attenuation.

- Softer substrates may allow for a better seal for the device, preventing leakage of air bubbles and escape of sound waves. This increases the effectiveness of the device. Softer substrates also provide additional attenuation of sound traveling through the substrate.

- Flat bottom topography provides a better seal, enhancing effectiveness of the sound attenuation device, whereas sloped or undulating terrain reduces or eliminates its effectiveness.

- Air bubbles must be close to the pile; otherwise, sound may propagate into the water, reducing the effectiveness of the device.

- Harder substrates may transmit ground-borne sound and propagate it into the water column.

The literature presents a wide array of observed attenuation results for bubble curtains (e.g., Oestman *et al.*, 2009, Coleman, 2011, Caltrans, 2012). The variability in attenuation levels is due to variation in design, as well as differences in site conditions and difficulty in properly installing and operating in-water attenuation devices. As a general rule, reductions of greater than 10 dB cannot be reliably predicted. The TPP reported a range of measured values for realized attenuation mostly within 6 to 12 dB (Illingworth & Rodkin, Inc., 2012). For 36-inch piles the average peak and rms reduction with use of the bubble curtain was 8 dB, where the averages of all bubble-on and bubble-off data were compared. For 48-inch piles, the average SPL reduction with use of a bubble curtain was 6 dB for average peak values and 5 dB for rms values (see Table 3). To avoid loss of attenuation from design and implementation errors, the Navy has required specific bubble curtain design specifications, including testing requirements for air pressure and flow prior to initial impact hammer use, and a requirement for placement on the substrate. We considered TPP measurements (approximately 7 dB overall) and other monitored projects (typically at least 8 dB realized attenuation), and determined that 8 dB may be the best estimate of average SPL (rms) reduction. In looking at other monitored projects prior to completion of the TPP, the Navy determined with our concurrence that an assumption of 10 dB realized attenuation was realistic. Therefore, a 10 dB reduction was used in the Navy's analysis of pile driving noise in the initial environmental analyses for the EHW-2 project, and the Navy included a contract performance requirement to achieve a 10 dB reduction during EHW-2 pile driving. The Navy is currently reviewing acoustical data from the first year of

EHW-2 construction to determine whether the contractor successfully met the requirement. If the data show that the 10 dB assumption is not consistently achievable, this assumption will be changed to 8 dB in assessing the potential effects of pile driving during future years of EHW-2 construction.

**Sound Thresholds**

NMFS uses generic sound exposure thresholds to determine when an activity that produces sound might result in impacts to a marine mammal such that a take by harassment might occur. To date, no studies have been conducted that examine impacts to marine mammals from pile driving sounds from which empirical sound thresholds have been established. Current NMFS practice (in relation to the MMPA) regarding exposure of marine mammals to sound is that cetaceans and pinnipeds exposed to impulsive sounds of 180 and 190 dB rms or above, respectively, are considered to have been taken by Level A (i.e., injurious) harassment. Behavioral harassment (Level B) is considered to have occurred when marine mammals are exposed to sounds at or above 160 dB rms for impulse sounds (e.g., impact pile driving) and 120 dB rms for continuous sound (e.g., vibratory pile driving), but below injurious thresholds. For airborne sound, pinniped disturbance from haul-outs has been documented at 100 dB (unweighted) for pinnipeds in general, and at 90 dB (unweighted) for harbor seals. NMFS uses these levels as guidelines to estimate when harassment may occur.

*Distance to Sound Thresholds*

*Underwater Sound Propagation Formula*—Pile driving would generate underwater noise that potentially could result in disturbance to marine mammals in the project area.

Transmission loss (TL) is the decrease in acoustic intensity as an acoustic pressure wave propagates out from a source. TL parameters vary with frequency, temperature, sea conditions, current, source and receiver depth, water depth, water chemistry, and bottom composition and topography. The general formula for underwater TL is:

$$TL = B * \log_{10}(R_1/R_2),$$

Where

R<sub>1</sub> = the distance of the modeled SPL from the driven pile, and

R<sub>2</sub> = the distance from the driven pile of the initial measurement.

This formula neglects loss due to scattering and absorption, which is assumed to be zero here. The degree to which underwater sound propagates away from a sound source is dependent on a variety of factors, most notably by the water bathymetry and presence or absence of reflective or absorptive conditions including in-water structures and sediments. Spherical spreading occurs in a perfectly unobstructed (free-field) environment not limited by depth or water surface, resulting in a 6 dB reduction in sound level for each doubling of distance from the source (20\*log[range]). Cylindrical spreading occurs in an environment in which sound propagation is bounded by the water surface and sea bottom, resulting in a reduction of 3 dB in sound level for each doubling of distance from the

source (10\*log[range]). A practical spreading value of 15 is often used under conditions, such as Hood Canal, where water increases with depth as the receiver moves away from the shoreline, resulting in an expected propagation environment that would lie between spherical and cylindrical spreading loss conditions. Practical spreading loss (4.5 dB reduction in sound level for each doubling of distance) is assumed here.

*Underwater Sound*—The intensity of pile driving sounds is greatly influenced by factors such as the type of piles, hammers, and the physical environment in which the activity takes place. A large quantity of literature regarding SPLs recorded from pile driving projects is available for consideration. In order to determine reasonable SPLs and their associated effects on marine mammals that are likely to result from pile driving at NBKB, studies with similar properties to the proposed action were evaluated, including measurements conducted for driving of steel piles at NBKB as part of the TPP (Illingworth & Rodkin, Inc., 2012). During the TPP, SPLs from driving of 24-, 36-, and 48-in piles by impact and vibratory hammers were measured. Sound levels associated with vibratory pile removal are assumed to be the same as those during vibratory installation (Reyff, 2007)—which is likely a conservative assumption—and have been taken into consideration in the modeling analysis. Overall, studies which met the following parameters were considered: (1) Pile size and materials: Steel pipe piles (30–72 in diameter); (2) Hammer machinery: Vibratory and impact hammer; and (3) Physical environment: shallow depth (less than 100 ft [30 m]).

TABLE 3—UNDERWATER SPLS FROM MONITORED CONSTRUCTION ACTIVITIES USING IMPACT HAMMERS

Project and location	Pile size and type	Water depth	Measured SPLs
Eagle Harbor Maintenance Facility, WA <sup>1</sup> .	30-in (0.8 m) steel pipe pile .....	10 m (33 ft) .....	192 dB re 1 μPa (rms) at 10 m (33 ft).
Friday Harbor Ferry Terminal, WA <sup>2</sup> .	30-in steel pipe pile .....	10 m .....	196 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup> .....	36-in steel pipe pile .....	10 m .....	193 dB re 1 μPa (rms) at 10 m.
Mukilteo Test Piles, WA <sup>4</sup> .....	36-in steel pipe pile .....	7.3 m (24 ft) .....	195 dB re 1 μPa (rms) at 10 m.
Anacortes Ferry, WA <sup>5</sup> .....	36-in steel pipe pile .....	12.8 m (42 ft) .....	199 dB re 1 μPa (rms) at 10 m.
Carderock Pier, NBKB, WA <sup>6</sup> .....	42-in steel pipe pile .....	14–22 m (48–70 ft) .....	195 dB re 1 μPa (rms) at 10 m.
Russian River, CA <sup>3</sup> .....	48-in steel pipe pile .....	2 m (6.6 ft) .....	195 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup> .....	60-in cast-in-steel-shell .....	10 m .....	195 dB re 1 μPa (rms) at 10 m.
Richmond-San Rafael Bridge, CA <sup>3</sup> .	66-in steel pipe pile .....	4 m (13 ft) .....	195 dB re 1 μPa (rms) at 10 m.
Test Pile Program, NBKB <sup>7</sup> .....	36-in steel pipe pile .....	Avg of mid- and deep-depth .....	196 dB re 1 μPa (rms) at 10 m.
Test Pile Program, NBKB <sup>7</sup> .....	48-in steel pipe pile .....	Avg of mid- and deep-depth .....	194 dB re 1 μPa (rms) at 10 m.

Sources: <sup>1</sup> MacGillivray and Racca, 2005; <sup>2</sup> Laughlin, 2005; <sup>3</sup> Reyff, 2007; <sup>4</sup> MacGillivray, 2007; <sup>5</sup> Sexton, 2007; <sup>6</sup> Navy, 2009; <sup>7</sup> Illingworth & Rodkin, Inc., 2012.

The tables presented here detail representative pile driving SPLs that

have been recorded from similar construction activities in recent years.

Due to the similarity of these actions and the Navy's proposed action, these

values represent reasonable SPLs which could be anticipated, and which were used in the acoustic modeling and analysis. Table 3 represents SPLs that may be expected during pile installation using an impact hammer. Table 4 represents SPLs that may be expected during pile installation using a vibratory hammer. For impact driving, a source value of 195 dB RMS re 1 μPa at 10 m was the average value reported from the

listed studies, and is consistent with measurements from the TPP and Carderock Pier pile driving projects at NBKB, which had similar pile materials (48- and 42-inch hollow steel piles, respectively), water depth, and substrate type as the EHW-2 project site. For vibratory pile driving, the Navy selected the most conservative value (72-inch piles; 180 dB rms re 1 μPa at 10 m) available when initially assessing EHW-

2 project impacts, prior to the first year of the project. Since then, data from the TPP have become available that indicate, on average, a lower source level for vibratory pile driving (172 dB rms re 1 μPa for 48-inch steel piles). However, for consistency we have maintained the initial conservative assumption regarding source level for vibratory driving.

TABLE 4—UNDERWATER SPLS FROM MONITORED CONSTRUCTION ACTIVITIES USING VIBRATORY HAMMERS

Project and location	Pile size and type	Water depth	Measured SPLs
Vashon Terminal, WA <sup>1</sup>	30-in (0.8 m) steel pipe pile	6 m	165 dB re 1 μPa (rms) at 11 m.
Keystone Terminal, WA <sup>2</sup>	30-in steel pipe pile	8 m	165 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup>	36-in steel pipe pile	5 m	170 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup>	36-in steel pipe pile	5 m	175 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup>	72-in steel pipe pile	5 m	170 dB re 1 μPa (rms) at 10 m.
California <sup>3</sup>	72-in steel pipe pile	5 m	180 dB re 1 μPa (rms) at 10 m.
Test Pile Program, NBKB <sup>4</sup>	36-in steel pipe pile	Avg of mid- and deep-depth	169 dB re 1 μPa (rms) at 10 m.
Test Pile Program, NBKB <sup>4</sup>	48-in steel pipe pile	Avg of mid- and deep-depth	172 dB re 1 μPa (rms) at 10 m.

As described previously in this document, sound attenuation measures, including bubble curtains, can be employed during impact pile driving to reduce the high source pressures. For the wharf construction project, the Navy intends to employ sound reduction techniques during impact pile driving, including the use of sound attenuation systems (e.g., bubble curtain). See “Proposed Mitigation”, later in this document, for more details on the impact reduction and mitigation measures proposed. The calculations of the distances to the marine mammal sound thresholds were calculated for impact installation with the assumption of a 10 dB reduction in source levels from the use of sound attenuation devices, and the Navy used the mitigated distances for impact pile driving for all analysis in their application.

All calculated distances to and the total area encompassed by the marine mammal sound thresholds are provided in Table 5. The Navy used source values of 185 dB for impact driving (the mean SPL of the values presented in Table 3, less 10 dB of sound attenuation from use of a bubble curtain or similar device) and 180 dB for vibratory driving (the worst-case value from Table 4). Under likely construction scenarios, up to three vibratory drivers would operate simultaneously with one impact driver. Although radial distance and area associated with the zone ensonified to 160 dB (the behavioral harassment threshold for pulsed sounds, such as those produced by impact driving) are presented in Table 5, this zone would be subsumed by the 120 dB zone produced by vibratory driving. Thus, behavioral harassment of marine mammals associated with impact driving is not considered further here. Since the 160

dB threshold and the 120 dB threshold both indicate behavioral harassment, pile driving effects in the two zones are equivalent. Although such a day is not planned, if only the impact driver was operated on a given day, incidental take on that day would likely be lower because the area ensonified to levels producing Level B harassment would be smaller (although actual take would be determined by the numbers of marine mammals in the area on that day). The use of multiple vibratory rigs at the same time would result in a small additive effect with regard to produced SPLs; however, because the sound field produced by vibratory driving would be truncated by land in the Hood Canal, no increase in actual sound field produced would occur. There would be no overlap in the 190/180-dB sound fields produced by rigs operating simultaneously.

TABLE 5—CALCULATED DISTANCE(S) TO AND AREA ENCOMPASSED BY UNDERWATER MARINE MAMMAL SOUND THRESHOLDS DURING PILE INSTALLATION

Threshold	Distance	Area, km <sup>2</sup>
Impact driving, pinniped injury (190 dB)	4.9 m	0.0001
Impact driving, cetacean injury (180 dB)	22 m	0.002
Impact driving, disturbance (160 dB) <sup>2</sup>	724 m	1.65
Vibratory driving, pinniped injury (190 dB)	2.1 m	< 0.0001
Vibratory driving, cetacean injury (180 dB)	10 m	0.0003
Vibratory driving, disturbance (120 dB)	13,800 m <sup>3</sup>	41.4

<sup>1</sup> SPLs used for calculations were: 185 dB for impact and 180 dB for vibratory driving.

<sup>2</sup> Area of 160-dB zone presented for reference. Estimated incidental take calculated on basis of larger 120-dB zone.

<sup>3</sup> Hood Canal average width at site is 2.4 km (1.5 mi), and is fetch limited from N to S at 20.3 km (12.6 mi). Calculated range (over 222 km) is greater than actual sound propagation through Hood Canal due to intervening land masses. 13.8 km (8.6 mi) is the greatest line-of-sight distance from pile driving locations unimpeded by land masses, which would block further propagation of sound.

Hood Canal does not represent open water, or free field, conditions. Therefore, sounds would attenuate as they encounter land masses or bends in the canal. As a result, the calculated distance and areas of impact for the 120 dB threshold cannot actually be attained at the project area. See Figure 6–1 of the Navy’s application for a depiction of the size of areas in which each underwater sound threshold is predicted to occur at the project area due to pile driving.

**Airborne Sound**—Pile driving can generate airborne sound that could potentially result in disturbance to marine mammals (specifically, pinnipeds) which are hauled out or at the water’s surface. As a result, the Navy analyzed the potential for pinnipeds

hauled out or swimming at the surface near NBKB to be exposed to airborne SPLs that could result in Level B behavioral harassment. NMFS assumes for purposes of the MMPA that behavioral disturbance can occur upon exposure to sounds above 100 dB re 20 μPa rms (unweighted) for all pinnipeds, except harbor seals. For harbor seals, the threshold is 90 dB re 20 μPa rms (unweighted).

As was discussed for underwater sound from pile driving, the intensity of pile driving sounds is greatly influenced by factors such as the type of piles, hammers, and the physical environment in which the activity takes place. In order to determine reasonable airborne SPLs and their associated effects on

marine mammals that are likely to result from pile driving at NBKB, studies with similar properties to the proposed action, as described previously, were evaluated. Table 6 details representative pile driving activities that have occurred in recent years. Due to the similarity of these actions and the Navy’s proposed action, they represent reasonable SPLs which could be anticipated. During the TPP, vibratory driving was measured at 102 dB re 20 μPa rms at 15 m and impact driving at 109 dB re 20 μPa rms at 15 m. The values shown in Table 6 were retained for impact assessment because the value for impact driving, as used in the combined rig scenario, results in a more conservative ZOI than does the TPP measurement.

TABLE 6—AIRBORNE SPLS FROM SIMILAR CONSTRUCTION ACTIVITIES

Project & location	Pile size & type	Method	Water depth	Measured SPLs
Northstar Island, AK <sup>1</sup> ....	42-in (1.1 m) steel pipe pile.	Impact .....	Approximately 12 m (40 ft).	97 dB re 20 μPa (rms) at 160 m (525 ft).
Keystone Ferry Terminal, WA <sup>3</sup> .	30-in (0.8 m) steel pipe pile.	Vibratory .....	Approximately 9 m (30 ft).	97 dB re 20 μPa (rms) at 13 m (40 ft).

Sources: Blackwell *et al.*, 2004; Laughlin, 2010b.

Based on these values and the assumption of spherical spreading loss, distances to relevant thresholds and associated areas of ensonification under the multi-rig scenario (*i.e.*, combined impact and vibratory driving) are presented in Table 7. There are no haul-out locations within these zones, which are encompassed by the zones estimated for underwater sound. Protective measures would be in place out to the distances calculated for the underwater

thresholds, and the distances for the airborne thresholds would be covered fully by mitigation and monitoring measures in place for underwater sound thresholds. Construction sound associated with the project would not extend beyond the buffer zone for underwater sound that would be established to protect pinnipeds. No haul-outs or rookeries are located within the airborne harassment radii. See Figure 6–2 of the Navy’s application for

a depiction of the size of areas in which each airborne sound threshold is predicted to occur at the project area due to pile driving. We recognize that pinnipeds in water that are within the area of ensonification for airborne sound could be incidentally taken by either underwater or airborne sound or both. We consider these incidences of harassment to be accounted for in the take estimates for underwater sound.

TABLE 7—DISTANCES TO RELEVANT SOUND THRESHOLDS AND AREAS OF ENSONIFICATION, AIRBORNE SOUND

Group	Threshold, re 20 μPa rms (unweighted)	Distance to threshold (m) and associated area of ensonification (km <sup>2</sup> ); combined rig scenario (worst-case)
Harbor seals .....	90 dB .....	361, 0.07
California sea lions .....	100 dB .....	114, 0.005

**Description of Marine Mammals in the Area of the Specified Activity**

There are seven marine mammal species, four cetaceans and three pinnipeds, which may inhabit or transit through the waters nearby NBKB in the Hood Canal. These include the transient killer whale, harbor porpoise, Dall’s porpoise, Steller sea lion, California sea lion, harbor seal, and humpback whale (*Megaptera novaeangliae*). The Steller sea lion and humpback whale are the only marine mammals that may occur

within the Hood Canal that are listed under the Endangered Species Act (ESA); the humpback whale is listed as endangered and the eastern distinct population segment (DPS) of Steller sea lion is listed as threatened. The humpback whale is not typically present in Hood Canal, with no confirmed sightings found in the literature or the Orca Network database (<http://www.orcanetwork.org/>) prior to January and February 2012, when one individual was observed repeatedly over a period of several weeks. No sightings

have been recorded since that time and we consider the humpback whale to be a rare visitor to Hood Canal at most. While the southern resident killer whale is resident to the inland waters of Washington and British Columbia, it has not been observed in the Hood Canal in over 18 years. These two species have therefore been excluded from further analysis.

This section summarizes the population status and abundance of these species. We have reviewed the Navy’s detailed species descriptions,

including life history information, for accuracy and completeness and refer the reader to Sections 3 and 4 of the Navy's application instead of reprinting the

information here. Table 9 lists the marine mammal species with expected potential for occurrence in the vicinity of NBKB during the project timeframe.

The following information is summarized largely from NMFS Stock Assessment Reports.

TABLE 8—MARINE MAMMALS PRESENT IN THE HOOD CANAL IN THE VICINITY OF NBKB

Species	Stock abundance <sup>1</sup> (CV, N <sub>min</sub> )	Relative occurrence in Hood Canal	Season of occurrence
Steller sea lion Eastern U.S. DPS	58,334–72,223 <sup>2</sup> .....	Seasonal; Occasional .....	Fall to late spring (Oct to May).
California sea lion U.S. Stock .....	296,750 (n/a, 153,337) .....	Seasonal; Common .....	Fall to late spring (Aug to early June).
Harbor seal WA inland waters stock.	14,612 <sup>2</sup> (0.15, 12,844) .....	Common .....	Year-round; resident species in Hood Canal.
Killer whale West Coast transient stock.	354 (n/a) .....	Rare .....	Year-round (but last observed in 2005).
Dall's porpoise CA/OR/WA stock ..	42,000 (0.33, 32,106) .....	Rare .....	Year-round (but last observed in 2008)
Harbor porpoise WA inland waters stock.	10,682 .....	Possible regular to occasional presence.	Year-round.

<sup>1</sup> NMFS marine mammal stock assessment reports at: <http://www.nmfs.noaa.gov/pr/sars/species.htm>. CV is coefficient of variation; N<sub>min</sub> is the minimum estimate of stock abundance.

<sup>2</sup> This abundance estimate is greater than eight years old and is therefore not considered current.

### Steller Sea Lion

Steller sea lions are distributed mainly around the coasts to the outer continental shelf along the North Pacific rim from northern Hokkaido, Japan through the Kuril Islands and Okhotsk Sea, Aleutian Islands and central Bering Sea, southern coast of Alaska and south to California. Based on distribution, population response, phenotypic, and genotypic data, two separate stocks of Steller sea lions are recognized within U.S. waters, with the population divided into western and eastern distinct population segments (DPSs) at 144° W (Cape Suckling, Alaska) (Loughlin, 1997). The eastern DPS extends from California to Alaska, including the Gulf of Alaska, and is the only stock that may occur in the Hood Canal.

Steller sea lions were listed as threatened range-wide under the ESA in 1990. After division into two stocks, the western stock was listed as endangered in 1997, while the eastern stock remained classified as threatened. NMFS proposed on April 18, 2012, that the eastern stock is recovered and should be delisted. Pending a final decision on that proposal, the stock remains designated as depleted under the MMPA by default due to its threatened status under the ESA. However, the minimum estimated annual level of human-caused mortality (59.1) is significantly less than the calculated potential biological removal (PBR) of 2,378 animals. The stock has shown a consistent, long-term rate of increase, which may indicate that it is reaching optimum sustainable population (OSP) size (Allen and Angliss, 2013).

The most recent population estimate for the eastern stock is estimated to be within the range 58,334 to 72,223 (Allen and Angliss, 2013). Calkins and Pitcher (1982) and Pitcher *et al.*, (2007) concluded that the total Steller sea lion population could be estimated by multiplying pup counts by a factor based on the birth rate, sex and age structure, and growth rate of the population. This range is determined by multiplying the most recent pup counts available by region, from 2006 (British Columbia) and 2009 (U.S.), by pup multipliers of either 4.2 or 5.2 (Pitcher *et al.*, 2007). The pup multipliers varied depending on the vital rate parameter that resulted in the growth rate: As low as 4.2 if it were due to high fecundity, and as high as 5.2 if it were due to low juvenile mortality. These are not minimum population estimates, since they are extrapolated from pup counts from photographs taken in 2006–2009, and demographic parameters are estimated for an increasing population. The minimum population, which is estimated at 52,847 individuals, was calculated by adding the most recent non-pup and pup counts from all sites surveyed; this estimate is not corrected for animals at sea. The most recent minimum count for Steller sea lions in Washington was 516 in 2001 (Pitcher *et al.*, 2007).

The abundance of the Eastern DPS of Steller sea lions is increasing throughout the northern portion of its range (Southeast Alaska and British Columbia; Merrick *et al.*, 1992; Sease *et al.*, 2001; Olesiuk and Trites, 2003; Olesiuk, 2008; NMFS, 2008), and stable or increasing slowly in the central portion (Oregon through central

California; NMFS, 2008). In the southern end of its range (Channel Islands in southern California; LeBoeuf *et al.*, 1991), it has declined significantly since the late 1930s, and several rookeries and haul-outs have been abandoned. Changes in ocean conditions (*e.g.*, warmer temperatures) may be contributing to habitat changes that favor California sea lions over Steller sea lions in the southern portion of the Steller's range (NMFS, 2008). Between the 1970s and 2002, the average annual population growth rate of eastern Steller sea lions was 3.1 percent (Pitcher *et al.*, 2007). Pitcher *et al.* (2007) concluded this rate did not represent a maximum rate of increase, though, and the maximum theoretical net productivity rate for pinnipeds (12 percent) is considered appropriate (Allen and Angliss, 2013).

Data from 2005–10 show a total mean annual mortality rate of 5.71 (CV = 0.23) sea lions per year from observed fisheries and 11.25 reported takes per year that could not be assigned to specific fisheries, for a total from all fisheries of 17 eastern Steller sea lions (Allen and Angliss, 2013). In addition, opportunistic observations and stranding data indicate that an additional 28.8 animals are killed or seriously injured each year through interaction with commercial and recreational troll fisheries and by entanglement. For the most recent years from which data are available (2004–08), 11.9 animals were taken per year by subsistence harvest in Alaska. Sea lion deaths are also known to occur because of illegal shooting, vessel strikes, or capture in research gear and other traps, totaling 1.4 animals per year from 2006–

10. The total annual human-caused mortality is a minimum estimate because takes via fisheries interactions and subsistence harvest in Canada are poorly known, although are believed to be small.

The eastern stock breeds in rookeries located in southeast Alaska, British Columbia, Oregon, and California. There are no known breeding rookeries in Washington (Allen and Angliss, 2013) but eastern stock Steller sea lions are present year-round along the outer coast of Washington, including immature animals or non-breeding adults of both sexes. In Washington, Steller sea lions primarily occur at haul-out sites along the outer coast from the Columbia River to Cape Flattery and in inland waters sites along the Vancouver Island coastline of the Strait of Juan de Fuca (Jeffries *et al.*, 2000; COSEWIC, 2003; Olesiuk, 2008). Numbers vary seasonally in Washington waters with peak numbers present during the fall and winter months (Jeffries *et al.*, 2000). At NBKB, Steller sea lions have been observed hauled out on submarines at Delta Pier on several occasions during fall through spring months, beginning in 2008, with up to six individuals observed.

#### Harbor Seal

Harbor seals inhabit coastal and estuarine waters and shoreline areas of the northern hemisphere from temperate to polar regions. The eastern North Pacific subspecies is found from Baja California north to the Aleutian Islands and into the Bering Sea. Multiple lines of evidence support the existence of geographic structure among harbor seal populations from California to Alaska (Carretta *et al.*, 2011). However, because stock boundaries are difficult to meaningfully draw from a biological perspective, three separate harbor seal stocks are recognized for management purposes along the west coast of the continental U.S.: (1) Inland waters of Washington (including Hood Canal, Puget Sound, and the Strait of Juan de Fuca out to Cape Flattery), (2) outer coast of Oregon and Washington, and (3) California (Carretta *et al.*, 2011). Multiple stocks are recognized in Alaska. Samples from Washington, Oregon, and California demonstrate a high level of genetic diversity and indicate that the harbor seals of Washington inland waters possess unique haplotypes not found in seals from the coasts of Washington, Oregon, and California (Lamont *et al.*, 1996). Only the Washington inland waters stock may be found in the project area.

Washington inland waters harbor seals are not protected under the ESA or

listed as depleted under the MMPA. Because there is no current abundance estimate for this stock, there is no current estimate of potential biological removal (PBR). However, because annual human-caused mortality (13) is significantly less than the previously calculated PBR (771) the stock is not considered strategic under the MMPA. The stock is considered to be within its optimum sustainable population (OSP) level.

The best abundance estimate of the Washington inland waters stock of harbor seals is 14,612 (CV = 0.15) and the minimum population size of this stock is 12,884 individuals (Carretta *et al.*, 2011). Aerial surveys of harbor seals in Washington were conducted during the pupping season in 1999, during which time the total numbers of hauled-out seals (including pups) were counted (Jeffries *et al.*, 2003). Radio-tagging studies conducted at six locations collected information on harbor seal haul-out patterns in 1991–92, resulting in a correction factor of 1.53 (CV = 0.065) to account for animals in the water which are missed during the aerial surveys (Huber *et al.*, 2001), which, coupled with the aerial survey counts, provides the abundance estimate. Because the estimate is greater than eight years old, NMFS does not consider it current. However, it does represent the best available information regarding stock abundance. Harbor seal counts in Washington State increased at an annual rate of ten percent from 1991–96 (Jeffries *et al.*, 1997). However, a logistic model fit to abundance data from 1978–99 resulted in an estimated maximum net productivity rate of 12.6 percent (95% CI = 9.4–18.7%) and the population is thought to be stable (Jeffries *et al.*, 2003).

Historical levels of harbor seal abundance in Washington are unknown. The population was apparently greatly reduced during the 1940s and 1950s due to a state-financed bounty program and remained low during the 1970s before rebounding to current levels (Carretta *et al.*, 2011). Data from 2004–08 indicate that a minimum of 3.8 harbor seals are killed annually in Washington inland waters commercial fisheries (Carretta *et al.*, 2011). Animals captured east of Cape Flattery are assumed to belong to this stock. The estimate is considered a minimum because there are likely additional animals killed in unobserved fisheries and because not all animals stranding as a result of fisheries interactions are likely to be recorded. Another 9.2 harbor seals per year are estimated to be killed as a result of various non-fisheries human interactions (Carretta *et al.*, 2011). Tribal

subsistence takes of this stock may occur, but no data on recent takes are available.

Harbor seals are the most abundant marine mammal in Hood Canal, where they can occur anywhere year-round, and are the only pinniped that breeds in inland Washington waters and the only species of marine mammal that is considered resident in the Hood Canal (Jeffries *et al.*, 2003). They are year-round, non-migratory residents, pup (*i.e.*, give birth) in Hood Canal, and the population is considered closed, meaning that they do not have much movement outside of Hood Canal (London, 2006). Surveys in the Hood Canal from the mid-1970s to 2000 show a fairly stable population between 600–1,200 seals, and the abundance of harbor seals in Hood Canal has likely stabilized at its carrying capacity of approximately 1,000 seals (Jeffries *et al.*, 2003).

Harbor seals were consistently sighted during Navy surveys and were found in all marine habitats including nearshore waters and deeper water, and have been observed hauled out on manmade objects such as buoys. Harbor seals were commonly observed in the water during monitoring conducted for other projects at NBKB in 2011. During most of the year, all age and sex classes (except newborn pups) could occur in the project area throughout the period of construction activity. Since there are no known pupping sites in the vicinity of the project area, harbor seal neonates would not generally be expected to be present during pile driving. Otherwise, during most of the year, all age and sex classes could occur in the project area throughout the period of construction activity. Harbor seal numbers increase from January through April and then decrease from May through August as the harbor seals move to adjacent bays on the outer coast of Washington for the pupping season. From April through mid-July, female harbor seals haul out on the outer coast of Washington at pupping sites to give birth. The main haul-out locations for harbor seals in Hood Canal are located on river delta and tidal exposed areas, with the closest haul-out to the project area being approximately ten miles (16 km) southwest of NBKB at Dosewallips River mouth, outside the potential area of effect for this project (London, 2006; see Figure 4–1 of the Navy's application).

#### California Sea Lion

California sea lions range from the Gulf of California north to the Gulf of Alaska, with breeding areas located in the Gulf of California, western Baja California, and southern California. Five

genetically distinct geographic populations have been identified: (1) Pacific Temperate, (2) Pacific Subtropical, (3) Southern Gulf of California, (4) Central Gulf of California and (5) Northern Gulf of California (Schramm *et al.*, 2009). Rookeries for the Pacific Temperate population are found within U.S. waters and just south of the U.S.-Mexico border, and animals belonging to this population may be found from the Gulf of Alaska to Mexican waters off Baja California. For management purposes, a stock of California sea lions comprising those animals at rookeries within the U.S. is defined (*i.e.*, the U.S. stock of California sea lions) (Carretta *et al.*, 2011). Pup production at the Coronado Islands rookery in Mexican waters is considered an insignificant contribution to the overall size of the Pacific Temperate population (Lowry and Maravilla-Chavez, 2005).

California sea lions are not protected under the ESA or listed as depleted under the MMPA. Total annual human-caused mortality (at least 431) is substantially less than the potential biological removal (PBR, estimated at 9,200 per year); therefore, California sea lions are not considered a strategic stock under the MMPA. There are indications that the California sea lion may have reached or is approaching carrying capacity, although more data are needed to confirm that leveling in growth persists (Carretta *et al.*, 2011).

The best abundance estimate of the U.S. stock of California sea lions is 296,750 and the minimum population size of this stock is 153,337 individuals (Carretta *et al.*, 2011). The entire population cannot be counted because all age and sex classes are never ashore at the same time; therefore, the best abundance estimate is determined from the number of births and the proportion of pups in the population, with censuses conducted in July after all pups have been born. Specifically, the pup count for rookeries in southern California from 2008 was adjusted for pre-census mortality and then multiplied by the inverse of the fraction of newborn pups in the population (Carretta *et al.*, 2011). The minimum population size was determined from counts of all age and sex classes that were ashore at all the major rookeries and haul-out sites in southern and central California during the 2007 breeding season, including all California sea lions counted during the July 2007 census at the Channel Islands in southern California and at haul-out sites located between Point Conception and Point Reyes, California (Carretta *et al.*, 2011). An additional unknown number

of California sea lions are at sea or hauled out at locations that were not censused and are not accounted for in the minimum population size.

Trends in pup counts from 1975 through 2008 have been assessed for four rookeries in southern California and for haul-outs in central and northern California. During this time period counts of pups increased at an annual rate of 5.4 percent, excluding six El Niño years when pup production declined dramatically before quickly rebounding (Carretta *et al.*, 2011). The maximum population growth rate was 9.2 percent when pup counts from the El Niño years were removed. However, the apparent growth rate from the population trajectory underestimates the intrinsic growth rate because it does not consider human-caused mortality occurring during the time series; the default maximum net productivity rate for pinnipeds (12 percent per year) is considered appropriate for California sea lions (Carretta *et al.*, 2011).

Historic exploitation of California sea lions include harvest for food by Native Americans in pre-historic times and for oil and hides in the mid-1800s, as well as exploitation for a variety of reasons more recently (Carretta *et al.*, 2011). There are few historical records to document the effects of such exploitation on sea lion abundance (Lowry *et al.*, 1992). Data from 2003–09 indicate that a minimum of 337 (CV = 0.56) California sea lions are killed annually in commercial fisheries. In addition, a summary of stranding database records for 2005–09 shows an annual average of 65 such events, which is likely a gross underestimate because most carcasses are not recovered. California sea lions may also be removed because of predation on endangered salmonids (17 per year, 2008–10) or incidentally captured during scientific research (3 per year, 2005–09) (Carretta *et al.*, 2011). Sea lion mortality has also been linked to the algal-produced neurotoxin domoic acid (Scholin *et al.*, 2000). There is currently an Unusual Mortality Event (UME) declaration in effect for California sea lions. Future mortality may be expected to occur, due to the sporadic occurrence of such harmful algal blooms. Beginning in January 2013, elevated strandings of California sea lion pups have been observed in Southern California, with live sea lion strandings nearly three times higher than the historical average. The causes of this UME are under investigation (<http://www.nmfs.noaa.gov/pr/health/mmume/californiasealions2013.htm>; accessed April 10, 2013).

An estimated 3,000 to 5,000 California sea lions migrate northward along the coast to central and northern California, Oregon, Washington, and Vancouver Island during the non-breeding season from September to May (Jeffries *et al.*, 2000) and return south the following spring (Mate, 1975; Bonnell *et al.*, 1983). Peak numbers of up to 1,000 California sea lions occur in Puget Sound (including Hood Canal) during this time period (Jeffries *et al.*, 2000).

California sea lions are present in Hood Canal during much of the year with the exception of mid-June through August, and occur regularly at NBKB, as observed during Navy waterfront surveys conducted from April 2008 through June 2010 (Navy, 2010). They are known to utilize a diversity of man-made structures for hauling out (Riedman, 1990) and, although there are no regular California sea lion haul-outs known within the Hood Canal (Jeffries *et al.*, 2000), they are frequently observed hauled out at several opportune areas at NBKB (*e.g.*, submarines, floating security fence, barges). As many as 81 California sea lions have been observed hauled out on a single day at NBKB (Agness and Tannenbaum, 2009a; Tannenbaum *et al.*, 2009a; Navy, 2011). All documented instances of California sea lions hauling out at NBKB have been on submarines docked at Delta Pier, approximately 0.85 mi north of Service Pier, and on pontoons of the security fence. California sea lions have also been observed swimming near the Explosives Handling Wharf on several occasions, approximately 1.85 mi north of Service Pier (Tannenbaum *et al.* 2009; Navy 2010), and likely forage in both nearshore and inland marine deeper water habitats in the vicinity.

#### Killer Whale

Killer whales are one of the most cosmopolitan marine mammals, found in all oceans with no apparent restrictions on temperature or depth, although they do occur at higher densities in colder, more productive waters at high latitudes and are more common in nearshore waters (Leatherwood and Dahlheim, 1978; Forney and Wade, 2006; Allen and Angliss, 2011). Killer whales are found throughout the North Pacific, including the entire Alaska coast, in British Columbia and Washington inland waterways, and along the outer coasts of Washington, Oregon, and California. On the basis of differences in morphology, ecology, genetics, and behavior, populations of killer whales have largely been classified as “resident”, “transient”, or “offshore” (*e.g.*,

Dahlheim *et al.*, 2008). Several studies have also provided evidence that these ecotypes are genetically distinct, and that further genetic differentiation is present between subpopulations of the resident and transient ecotypes (*e.g.*, Barrett-Lennard, 2000). The taxonomy of killer whales is unresolved, with expert opinion generally following one of two lines: killer whales are either (1) a single highly variable species, with locally differentiated ecotypes representing recently evolved and relatively ephemeral forms not deserving species status, or (2) multiple species, supported by the congruence of several lines of evidence for the distinctness of sympatrically occurring forms (Krahn *et al.*, 2004). Resident and transient whales are currently considered to be unnamed subspecies (Committee on Taxonomy, 2011).

The resident and transient populations have been divided further into different subpopulations on the basis of genetic analyses, distribution, and other factors. Recognized stocks in the North Pacific include Alaska Residents, Northern Residents, Southern Residents, Gulf of Alaska, Aleutian Islands, and Bering Sea Transients, and West Coast Transients, along with a single offshore stock. West Coast Transient killer whales, which occur from California through southeastern Alaska, are the only type expected to potentially occur in the project area.

West Coast Transient killer whales are not protected under the ESA or listed as depleted under the MMPA. The estimated annual level of human-caused mortality (0) does not exceed the calculated PBR (3.5); therefore, West Coast Transient killer whales are not considered a strategic stock under the MMPA. It is thought that the stock grew rapidly from the mid-1970s to mid-1990s as a result of a combination of high birth rate, survival, as well as greater immigration of animals into the nearshore study area (DFO, 2009). The rapid growth of the population during this period coincided with a dramatic increase in the abundance of the whales' primary prey, harbor seals, in nearshore waters. Population growth began slowing in the mid-1990s and has continued to slow in recent years (DFO, 2009). Population trends and status of this stock relative to its OSP level are currently unknown, as is the actual maximum productivity rate. Analyses in DFO (2009) estimated a rate of increase of about six percent per year from 1975 to 2006, but this included recruitment of non-calf whales into the population. The default maximum net growth rate for cetaceans (4 percent) is considered

appropriate pending additional information (Carretta *et al.*, 2011).

The West Coast transient stock is a trans-boundary stock, with minimum counts for the population of transient killer whales coming from various photographic datasets. Combining these counts of cataloged transient whales gives an abundance estimate of 354 individuals for the West Coast transient stock (Allen and Angliss, 2011). Although this direct count of individually identifiable animals does not necessarily represent the number of live animals, it is considered a conservative minimum estimate (Allen and Angliss, 2011). However, the number in Washington waters at any one time is probably fewer than twenty individuals (Wiles, 2004). The West Coast transient killer whale stock is not designated as depleted under the MMPA or listed under the ESA. The estimated annual level of human-caused mortality and serious injury does not exceed the PBR. Therefore, the West Coast Transient stock of killer whales is not classified as a strategic stock.

The estimated minimum mortality rate incidental to U.S. commercial fisheries is zero animals per year (Allen and Angliss, 2011). However, this could represent an underestimate as regards total fisheries-related mortality due to a lack of data concerning marine mammal interactions in Canadian commercial fisheries known to have potential for interaction with killer whales. Any such interactions are thought to be few in number (Allen and Angliss, 2011). Other mortality, as a result of shootings or ship strikes, has been of concern in the past. However, no ship strikes have been reported for this stock, and shooting of transients is thought to be minimal because their diet is based on marine mammals rather than fish. There are no reports of a subsistence harvest of killer whales in Alaska or Canada.

Transient occurrence in inland waters appears to peak during August and September which is the peak time for harbor seal pupping, weaning, and post-weaning (Baird and Dill, 1995). In 2003 and 2005, small groups of transient killer whales (eleven and six individuals, respectively) were present in Hood Canal for significant periods of time (59 and 172 days, respectively) between the months of January and July. While present, the whales preyed on harbor seals in the subtidal zone of the nearshore marine and inland marine deeper water habitats (London, 2006).

#### *Dall's Porpoise*

Dall's porpoises are endemic to temperate waters of the North Pacific, typically in deeper waters between 30–

62° N, and are found from northern Baja California to the northern Bering Sea. Stock structure for Dall's porpoises is not well known; because there are no cooperative management agreements with Mexico or Canada for fisheries which may take this species, Dall's porpoises are divided for management purposes into two discrete, noncontiguous areas: (1) waters off California, Oregon, and Washington, and (2) Alaskan waters (Carretta *et al.*, 2011). Only individuals from the CA/OR/WA stock may occur within the project area.

Dall's porpoises are not protected under the ESA or listed as depleted under the MMPA. The minimum estimate of annual human-caused mortality (0.4) is substantially less than the calculated PBR (257); therefore, Dall's porpoises are not considered a strategic stock under the MMPA. The status of Dall's porpoises in California, Oregon and Washington relative to OSP is not known (Carretta *et al.*, 2011).

Dall's porpoise distribution on the U.S. west coast is highly variable between years and appears to be affected by oceanographic conditions (Forney and Barlow, 1998); animals may spend more or less time outside of U.S. waters as oceanographic conditions change. Therefore, a multi-year average of 2005 and 2008 summer/autumn vessel-based line transect surveys of California, Oregon, and Washington waters was used to estimate a best abundance of 42,000 (CV = 0.33) animals (Forney, 2007; Barlow, 2010). The minimum population is considered to be 32,106 animals. Dall's porpoises also occur in the inland waters of Washington, but the most recent estimate was obtained in 1996 (900 animals; CV = 0.40; Calambokidis *et al.*, 1997) and is not included in the overall estimate of abundance for this stock. Because distribution and abundance of this stock is so variable, population trends are not available (Carretta *et al.*, 2011). No information is available regarding productivity rates, and the default maximum net growth rate for cetaceans (4 percent) is considered appropriate (Carretta *et al.*, 2011).

Data from 2002–08, from all fisheries for which mortality data are available, indicate that a minimum of 0.4 animals are killed per year (Carretta *et al.*, 2011). Species-specific information is not available for Mexican fisheries, which could be an additional source of mortality for animals beyond the stock boundaries delineated for management purposes. No other sources of human-caused mortality are known.

In Washington, Dall's porpoises are most abundant in offshore waters where

they are year-round residents, although interannual distribution is highly variable (Green *et al.*, 1992). Dall's porpoises are observed throughout the year in the Puget Sound north of Seattle, are seen occasionally in southern Puget Sound, and may also occasionally occur in Hood Canal. However, only a single Dall's porpoise has been observed at NBKB, in deeper water during a 2008 summer survey (Tannenbaum *et al.*, 2009a).

#### Harbor Porpoise

Harbor porpoises are found primarily in inshore and relatively shallow coastal waters (< 100 m) from Point Barrow to Point Conception. Various genetic analyses and investigation of pollutant loads indicate a low mixing rate for harbor porpoise along the west coast of North America and likely fine-scale geographic structure along an almost continuous distribution from California to Alaska (*e.g.*, Calambokidis and Barlow, 1991; Osmeck *et al.*, 1994; Chivers *et al.*, 2002, 2007). However, stock boundaries are difficult to draw because any rigid line is generally arbitrary from a biological perspective. On the basis of genetic data and density discontinuities identified from aerial surveys, eight stocks have been identified in the eastern North Pacific, including northern Oregon/Washington coastal and inland Washington stocks (Carretta *et al.*, 2011). The Washington inland waters stock includes individuals found east of Cape Flattery and is the only stock that may occur in the project area.

Harbor porpoises of Washington inland waters are not protected under the ESA or listed as depleted under the MMPA. Because there is no current abundance estimate for this stock, there is no current estimate of PBR. However, because annual human-caused mortality (2.6) is less than the previously calculated PBR (63) the stock is not considered strategic under the MMPA. The status of harbor porpoises in Washington inland waters relative to OSP is not known (Carretta *et al.*, 2011).

The best estimate of abundance for this stock is derived from aerial surveys of the inland waters of Washington and southern British Columbia conducted during August of 2002 and 2003. When corrected for availability and perception bias, the average of the 2002–03 estimates of abundance for U.S. waters resulted in an estimated abundance for the Washington Inland Waters stock of harbor porpoise of 10,682 (CV = 0.38) animals (Laake *et al.*, 1997; Carretta *et al.*, 2011), with a minimum population estimate of 7,841 animals. Because the estimate is greater than eight years old,

NMFS does not consider it current. However, it does represent the best available information regarding stock abundance.

Although long-term harbor porpoise sightings in southern Puget Sound declined from the 1940s through the 1990s, sightings and strandings have increased in Puget Sound and northern Hood Canal in recent years and harbor porpoise are now considered to regularly occur year-round in these waters (Carretta *et al.*, 2011). Reasons for the apparent decline, as well as the apparent rebound, are unknown. Recent observations may represent a return to historical conditions, when harbor porpoises were considered one of the most common cetaceans in Puget Sound (Scheffer and Slipp, 1948). No information regarding productivity is available for this stock and NMFS considers the default maximum net productivity rate for cetaceans (4 percent) to be appropriate.

Data from 2005–09 indicate that a minimum of 2.2 Washington inland waters harbor seals are killed annually in U.S. commercial fisheries (Carretta *et al.*, 2011). Animals captured in waters east of Cape Flattery are assumed to belong to this stock. This estimate is considered a minimum because the Washington Puget Sound Region salmon set/drift gillnet fishery has not been observed since 1994, and because of a lack of knowledge about the extent to which harbor porpoise from U.S. waters frequent the waters of British Columbia and are, therefore, subject to fishery-related mortality. However, harbor porpoise takes in the salmon drift gillnet fishery are unlikely to have increased since the fishery was last observed, when few interactions were recorded, due to reductions in the number of participating vessels and available fishing time. Fishing effort and catch have declined throughout all salmon fisheries in the region due to management efforts to recover ESA-listed salmonids (Carretta *et al.*, 2011). In addition, an estimated 0.4 animals per year are killed by non-fishery human causes (*e.g.*, ship strike, entanglement). In 2006, a UME was declared for harbor porpoises throughout Oregon and Washington, and a total of 114 strandings were reported in 2006–07. The cause of the UME has not been determined and several factors, including contaminants, genetics, and environmental conditions, are still being investigated (Carretta *et al.*, 2011).

Prior to recent construction projects conducted by the Navy at NBKB, harbor porpoises were considered to have only occasional occurrence in the project

area. A single harbor porpoise had been sighted in deeper water at NBKB during 2010 field observations (Tannenbaum *et al.*, 2011). However, while implementing monitoring plans for work conducted from July–October, 2011, the Navy recorded multiple sightings of harbor porpoise in the deeper waters of the project area (HDR, Inc., 2012). Following these sightings, the Navy conducted dedicated line transect surveys, recording multiple additional sightings of harbor porpoise, and have revised local density estimates accordingly.

#### Potential Effects of the Specified Activity on Marine Mammals

We have determined that pile driving, as outlined in the project description, has the potential to result in behavioral harassment of marine mammals present in the project area. Pinnipeds spend much of their time in the water with heads held above the surface and therefore are not subject to underwater noise to the same degree as cetaceans (although they are correspondingly more susceptible to exposure to airborne sound). For purposes of this assessment, however, pinnipeds are conservatively assumed to be available to be exposed to underwater sound 100 percent of the time that they are in the water.

#### Marine Mammal Hearing

The primary effect on marine mammals anticipated from the specified activities would result from exposure of animals to underwater sound. Exposure to sound can affect marine mammal hearing. When considering the influence of various kinds of sound on the marine environment, it is necessary to understand that different kinds of marine life are sensitive to different frequencies of sound. Based on available behavioral data, audiograms derived using auditory evoked potential techniques, anatomical modeling, and other data, Southall *et al.* (2007) designate functional hearing groups for marine mammals and estimate the lower and upper frequencies of functional hearing of the groups. The functional groups and the associated frequencies are indicated below (though animals are less sensitive to sounds at the outer edge of their functional range and most sensitive to sounds of frequencies within a smaller range somewhere in the middle of their functional hearing range):

- Low frequency cetaceans (thirteen species of mysticetes): functional hearing is estimated to occur between approximately 7 Hz and 22 kHz;
- Mid-frequency cetaceans (32 species of dolphins, six species of larger

toothed whales, and nineteen species of beaked and bottlenose whales): functional hearing is estimated to occur between approximately 150 Hz and 160 kHz;

- High frequency cetaceans (six species of true porpoises, four species of river dolphins, two members of the genus *Kogia*, and four dolphin species of the genus *Cephalorhynchus*): functional hearing is estimated to occur between approximately 200 Hz and 180 kHz; and

- Pinnipeds in water: functional hearing is estimated to occur between approximately 75 Hz and 75 kHz, with the greatest sensitivity between approximately 700 Hz and 20 kHz.

Three pinniped and three cetacean species could potentially occur in the proposed project area during the project timeframe. Of the cetacean species that may occur in the project area, the killer whale is classified as a mid-frequency cetacean and the two porpoises are classified as high-frequency cetaceans (Southall *et al.*, 2007).

#### Underwater Sound Effects

*Potential Effects of Pile Driving Sound*—The effects of sounds from pile driving might result in one or more of the following: temporary or permanent hearing impairment, non-auditory physical or physiological effects, behavioral disturbance, and masking (Richardson *et al.*, 1995; Gordon *et al.*, 2004; Nowacek *et al.*, 2007; Southall *et al.*, 2007). The effects of pile driving on marine mammals are dependent on several factors, including the size, type, and depth of the animal; the depth, intensity, and duration of the pile driving sound; the depth of the water column; the substrate of the habitat; the standoff distance between the pile and the animal; and the sound propagation properties of the environment. Impacts to marine mammals from pile driving activities are expected to result primarily from acoustic pathways. As such, the degree of effect is intrinsically related to the received level and duration of the sound exposure, which are in turn influenced by the distance between the animal and the source. The further away from the source, the less intense the exposure should be. The substrate and depth of the habitat affect the sound propagation properties of the environment. Shallow environments are typically more structurally complex, which leads to rapid sound attenuation. In addition, substrates that are soft (*e.g.*, sand) would absorb or attenuate the sound more readily than hard substrates (*e.g.*, rock) which may reflect the acoustic wave. Soft porous substrates would also likely require less time to

drive the pile, and possibly less forceful equipment, which would ultimately decrease the intensity of the acoustic source.

In the absence of mitigation, impacts to marine species would be expected to result from physiological and behavioral responses to both the type and strength of the acoustic signature (Viada *et al.*, 2008). The type and severity of behavioral impacts are more difficult to define due to limited studies addressing the behavioral effects of impulsive sounds on marine mammals. Potential effects from impulsive sound sources can range in severity, ranging from effects such as behavioral disturbance, tactile perception, physical discomfort, slight injury of the internal organs and the auditory system, to mortality (Yelverton *et al.*, 1973).

*Hearing Impairment and Other Physical Effects*—Marine mammals exposed to high intensity sound repeatedly or for prolonged periods can experience hearing threshold shift (TS), which is the loss of hearing sensitivity at certain frequency ranges (Kastak *et al.*, 1999; Schlundt *et al.*, 2000; Finneran *et al.*, 2002, 2005). TS can be permanent (PTS), in which case the loss of hearing sensitivity is not recoverable, or temporary (TTS), in which case the animal's hearing threshold would recover over time (Southall *et al.*, 2007). Marine mammals depend on acoustic cues for vital biological functions, (*e.g.*, orientation, communication, finding prey, avoiding predators); thus, TTS may result in reduced fitness in survival and reproduction. However, this depends on the frequency and duration of TTS, as well as the biological context in which it occurs. TTS of limited duration, occurring in a frequency range that does not coincide with that used for recognition of important acoustic cues, would have little to no effect on an animal's fitness. Repeated sound exposure that leads to TTS could cause PTS. PTS, in the unlikely event that it occurred, would constitute injury, but TTS is not considered injury (Southall *et al.*, 2007). It is unlikely that the project would result in any cases of temporary or especially permanent hearing impairment or any significant non-auditory physical or physiological effects for reasons discussed later in this document. Some behavioral disturbance is expected, but it is likely that this would be localized and short-term because of the short project duration.

Several aspects of the planned monitoring and mitigation measures for this project (see the "Proposed Mitigation" and "Proposed Monitoring and Reporting" sections later in this document) are designed to detect

marine mammals occurring near the pile driving to avoid exposing them to sound pulses that might, in theory, cause hearing impairment. In addition, many cetaceans are likely to show some avoidance of the area where received levels of pile driving sound are high enough that hearing impairment could potentially occur. In those cases, the avoidance responses of the animals themselves would reduce or (most likely) avoid any possibility of hearing impairment. Non-auditory physical effects may also occur in marine mammals exposed to strong underwater pulsed sound. It is especially unlikely that any effects of these types would occur during the present project given the brief duration of exposure for any given individual and the planned monitoring and mitigation measures. The following subsections discuss in somewhat more detail the possibilities of TTS, PTS, and non-auditory physical effects.

*Temporary Threshold Shift*—TTS is the mildest form of hearing impairment that can occur during exposure to a strong sound (Kryter, 1985). While experiencing TTS, the hearing threshold rises, and a sound must be stronger in order to be heard. In terrestrial mammals, TTS can last from minutes or hours to days (in cases of strong TTS). For sound exposures at or somewhat above the TTS threshold, hearing sensitivity in both terrestrial and marine mammals recovers rapidly after exposure to the sound ends. Few data on sound levels and durations necessary to elicit mild TTS have been obtained for marine mammals, and none of the published data concern TTS elicited by exposure to multiple pulses of sound. Available data on TTS in marine mammals are summarized in Southall *et al.* (2007).

Given the available data, the received level of a single pulse (with no frequency weighting) might need to be approximately 186 dB re 1  $\mu\text{Pa}^2\text{-s}$  (*i.e.*, 186 dB sound exposure level [SEL] or approximately 221–226 dB pk-pk) in order to produce brief, mild TTS. Exposure to several strong pulses that each have received levels near 190 dB re 1  $\mu\text{Pa}$  rms (175–180 dB SEL) might result in cumulative exposure of approximately 186 dB SEL and thus slight TTS in a small odontocete, assuming the TTS threshold is (to a first approximation) a function of the total received pulse energy. Levels greater than or equal to 190 dB re 1  $\mu\text{Pa}$  rms are expected to be restricted to radii no more than 5 m (16 ft) from the pile driving. For an odontocete closer to the surface, the maximum radius with

greater than or equal to 190 dB re 1  $\mu$ Pa rms would be smaller.

The above TTS information for odontocetes is derived from studies on the bottlenose dolphin (*Tursiops truncatus*) and beluga whale (*Delphinapterus leucas*). There is no published TTS information for other species of cetaceans. However, preliminary evidence from a harbor porpoise exposed to pulsed sound suggests that its TTS threshold may have been lower (Lucke *et al.*, 2009). To avoid the potential for injury, NMFS has determined that cetaceans should not be exposed to pulsed underwater sound at received levels exceeding 180 dB re 1  $\mu$ Pa rms. As summarized above, data that are now available imply that TTS is unlikely to occur unless odontocetes are exposed to pile driving pulses stronger than 180 dB re 1  $\mu$ Pa rms.

**Permanent Threshold Shift**—When PTS occurs, there is physical damage to the sound receptors in the ear. In severe cases, there can be total or partial deafness, while in other cases the animal has an impaired ability to hear sounds in specific frequency ranges (Kryter, 1985). There is no specific evidence that exposure to pulses of sound can cause PTS in any marine mammal. However, given the possibility that mammals close to pile driving activity might incur TTS, there has been further speculation about the possibility that some individuals occurring very close to pile driving might incur PTS. Single or occasional occurrences of mild TTS are not indicative of permanent auditory damage, but repeated or (in some cases) single exposures to a level well above that causing TTS onset might elicit PTS.

Relationships between TTS and PTS thresholds have not been studied in marine mammals but are assumed to be similar to those in humans and other terrestrial mammals. PTS might occur at a received sound level at least several decibels above that inducing mild TTS if the animal were exposed to strong sound pulses with rapid rise time. Based on data from terrestrial mammals, a precautionary assumption is that the PTS threshold for impulse sounds (such as pile driving pulses as received close to the source) is at least 6 dB higher than the TTS threshold on a peak-pressure basis and probably greater than 6 dB (Southall *et al.*, 2007). On an SEL basis, Southall *et al.* (2007) estimated that received levels would need to exceed the TTS threshold by at least 15 dB for there to be risk of PTS. Thus, for cetaceans, Southall *et al.* (2007) estimate that the PTS threshold might be an M-weighted SEL (for the sequence of received pulses) of approximately 198

dB re 1  $\mu$ Pa<sup>2</sup>-s (15 dB higher than the TTS threshold for an impulse). Given the higher level of sound necessary to cause PTS as compared with TTS, it is considerably less likely that PTS could occur.

Measured source levels from impact pile driving can be as high as 214 dB re 1  $\mu$ Pa at 1 m (3.3 ft). Although no marine mammals have been shown to experience TTS or PTS as a result of being exposed to pile driving activities, captive bottlenose dolphins and beluga whales exhibited changes in behavior when exposed to strong pulsed sounds (Finneran *et al.*, 2000, 2002, 2005). The animals tolerated high received levels of sound before exhibiting aversive behaviors. Experiments on a beluga whale showed that exposure to a single watergun impulse at a received level of 207 kPa (30 psi) p-p, which is equivalent to 228 dB p-p re 1  $\mu$ Pa, resulted in a 7 and 6 dB TTS in the beluga whale at 0.4 and 30 kHz, respectively. Thresholds returned to within 2 dB of the pre-exposure level within four minutes of the exposure (Finneran *et al.*, 2002). Although the source level of pile driving from one hammer strike is expected to be much lower than the single watergun impulse cited here, animals being exposed for a prolonged period to repeated hammer strikes could receive more sound exposure in terms of SEL than from the single watergun impulse (estimated at 188 dB re 1  $\mu$ Pa<sup>2</sup>-s) in the aforementioned experiment (Finneran *et al.*, 2002). However, in order for marine mammals to experience TTS or PTS, the animals have to be close enough to be exposed to high intensity sound levels for a prolonged period of time. Based on the best scientific information available, these SPLs are far below the thresholds that could cause TTS or the onset of PTS.

**Non-auditory Physiological Effects**—Non-auditory physiological effects or injuries that theoretically might occur in marine mammals exposed to strong underwater sound include stress, neurological effects, bubble formation, resonance effects, and other types of organ or tissue damage (Cox *et al.*, 2006; Southall *et al.*, 2007). Studies examining such effects are limited. In general, little is known about the potential for pile driving to cause auditory impairment or other physical effects in marine mammals. Available data suggest that such effects, if they occur at all, would presumably be limited to short distances from the sound source and to activities that extend over a prolonged period. The available data do not allow identification of a specific exposure level above which non-auditory effects

can be expected (Southall *et al.*, 2007) or any meaningful quantitative predictions of the numbers (if any) of marine mammals that might be affected in those ways. Marine mammals that show behavioral avoidance of pile driving, including some odontocetes and some pinnipeds, are especially unlikely to incur auditory impairment or non-auditory physical effects.

#### Disturbance Reactions

Disturbance includes a variety of effects, including subtle changes in behavior, more conspicuous changes in activities, and displacement. Behavioral responses to sound are highly variable and context-specific and reactions, if any, depend on species, state of maturity, experience, current activity, reproductive state, auditory sensitivity, time of day, and many other factors (Richardson *et al.*, 1995; Wartzok *et al.*, 2003/2004; Southall *et al.*, 2007).

Habituation can occur when an animal's response to a stimulus wanes with repeated exposure, usually in the absence of unpleasant associated events (Wartzok *et al.*, 2003/04). Animals are most likely to habituate to sounds that are predictable and unvarying. The opposite process is sensitization, when an unpleasant experience leads to subsequent responses, often in the form of avoidance, at a lower level of exposure. Behavioral state may affect the type of response as well. For example, animals that are resting may show greater behavioral change in response to disturbing sound levels than animals that are highly motivated to remain in an area for feeding (Richardson *et al.*, 1995; NRC, 2003; Wartzok *et al.*, 2003/04).

Controlled experiments with captive marine mammals showed pronounced behavioral reactions, including avoidance of loud sound sources (Ridgway *et al.*, 1997; Finneran *et al.*, 2003). Observed responses of wild marine mammals to loud pulsed sound sources (typically seismic guns or acoustic harassment devices, but also including pile driving) have been varied but often consist of avoidance behavior or other behavioral changes suggesting discomfort (Morton and Symonds, 2002; Thorson and Reyff, 2006; see also Gordon *et al.*, 2004; Wartzok *et al.*, 2003/04; Nowacek *et al.*, 2007). Responses to continuous sound, such as vibratory pile installation, have not been documented as well as responses to pulsed sounds.

With both types of pile driving, it is likely that the onset of pile driving could result in temporary, short term changes in an animal's typical behavior and/or avoidance of the affected area.

These behavioral changes may include (Richardson *et al.*, 1995): changing durations of surfacing and dives, number of blows per surfacing, or moving direction and/or speed; reduced/increased vocal activities; changing/cessation of certain behavioral activities (such as socializing or feeding); visible startle response or aggressive behavior (such as tail/fluke slapping or jaw clapping); avoidance of areas where sound sources are located; and/or flight responses (*e.g.*, pinnipeds flushing into water from haul-outs or rookeries). Pinnipeds may increase their haul-out time, possibly to avoid in-water disturbance (Thorson and Reyff, 2006). Since pile driving would likely only occur for a few hours a day, over a short period of time, it is unlikely to result in permanent displacement. Any potential impacts from pile driving activities could be experienced by individual marine mammals, but would not be likely to cause population level impacts, or affect the long-term fitness of the species.

The biological significance of many of these behavioral disturbances is difficult to predict, especially if the detected disturbances appear minor. However, the consequences of behavioral modification could be expected to be biologically significant if the change affects growth, survival, or reproduction. Significant behavioral modifications that could potentially lead to effects on growth, survival, or reproduction include:

- Drastic changes in diving/surfacing patterns (such as those thought to be causing beaked whale stranding due to exposure to military mid-frequency tactical sonar);
- Habitat abandonment due to loss of desirable acoustic environment; and
- Cessation of feeding or social interaction.

The onset of behavioral disturbance from anthropogenic sound depends on both external factors (characteristics of sound sources and their paths) and the specific characteristics of the receiving animals (hearing, motivation, experience, demography) and is difficult to predict (Southall *et al.*, 2007).

#### *Auditory Masking*

Natural and artificial sounds can disrupt behavior by masking, or interfering with, a marine mammal's ability to hear other sounds. Masking occurs when the receipt of a sound is interfered with by another coincident sound at similar frequencies and at similar or higher levels. Chronic exposure to excessive, though not high-intensity, sound could cause masking at particular frequencies for marine

mammals that utilize sound for vital biological functions. Masking can interfere with detection of acoustic signals such as communication calls, echolocation sounds, and environmental sounds important to marine mammals. Therefore, under certain circumstances, marine mammals whose acoustical sensors or environment are being severely masked could also be impaired from maximizing their performance fitness in survival and reproduction. If the coincident (masking) sound were man-made, it could be potentially harassing if it disrupted hearing-related behavior. It is important to distinguish TTS and PTS, which persist after the sound exposure, from masking, which occurs during the sound exposure. Because masking (without resulting in TS) is not associated with abnormal physiological function, it is not considered a physiological effect, but rather a potential behavioral effect.

The frequency range of the potentially masking sound is important in determining any potential behavioral impacts. Because sound generated from in-water pile driving is mostly concentrated at low frequency ranges, it may have less effect on high frequency echolocation sounds made by porpoises. However, lower frequency man-made sounds are more likely to affect detection of communication calls and other potentially important natural sounds such as surf and prey sound. It may also affect communication signals when they occur near the sound band and thus reduce the communication space of animals (*e.g.*, Clark *et al.*, 2009) and cause increased stress levels (*e.g.*, Foote *et al.*, 2004; Holt *et al.*, 2009).

Masking has the potential to impact species at population, community, or even ecosystem levels, as well as at individual levels. Masking affects both senders and receivers of the signals and can potentially have long-term chronic effects on marine mammal species and populations. Recent research suggests that low frequency ambient sound levels have increased by as much as 20 dB (more than three times in terms of SPL) in the world's ocean from pre-industrial periods, and that most of these increases are from distant shipping (Hildebrand, 2009). All anthropogenic sound sources, such as those from vessel traffic, pile driving, and dredging activities, contribute to the elevated ambient sound levels, thus intensifying masking. However, the sum of sound from the proposed activities is confined in an area of inland waters (Hood Canal) that is bounded by landmass; therefore, the sound generated is not expected to

contribute to increased ocean ambient sound.

The most intense underwater sounds in the proposed action are those produced by impact pile driving. Given that the energy distribution of pile driving covers a broad frequency spectrum, sound from these sources would likely be within the audible range of marine mammals present in the project area. Impact pile driving activity is relatively short-term, with rapid pulses occurring for approximately fifteen minutes per pile. The probability for impact pile driving resulting from this proposed action masking acoustic signals important to the behavior and survival of marine mammal species is likely to be negligible. Vibratory pile driving is also relatively short-term, with rapid oscillations occurring for approximately one and a half hours per pile. It is possible that vibratory pile driving resulting from this proposed action may mask acoustic signals important to the behavior and survival of marine mammal species, but the short-term duration and limited affected area would result in insignificant impacts from masking. Any masking event that could possibly rise to Level B harassment under the MMPA would occur concurrently within the zones of behavioral harassment already estimated for vibratory and impact pile driving, and which have already been taken into account in the exposure analysis.

#### *Airborne Sound Effects*

Marine mammals that occur in the project area could be exposed to airborne sounds associated with pile driving that have the potential to cause harassment, depending on their distance from pile driving activities. Airborne pile driving sound would have less impact on cetaceans than pinnipeds because sound from atmospheric sources does not transmit well underwater (Richardson *et al.*, 1995); thus, airborne sound would only be an issue for hauled-out pinnipeds in the project area. Most likely, airborne sound would cause behavioral responses similar to those discussed above in relation to underwater sound. For instance, anthropogenic sound could cause hauled-out pinnipeds to exhibit changes in their normal behavior, such as reduction in vocalizations, or cause them to temporarily abandon their habitat and move further from the source. Studies by Blackwell *et al.* (2004) and Moulton *et al.* (2005) indicate a tolerance or lack of response to unweighted airborne sounds as high as 112 dB peak and 96 dB rms.

### Anticipated Effects on Habitat

The proposed activities at NBKB would not result in permanent impacts to habitats used directly by marine mammals, such as haul-out sites, but may have potential short-term impacts to food sources such as forage fish and salmonids. There are no rookeries or major haul-out sites within 10 km, foraging hotspots, or other ocean bottom structure of significant biological importance to marine mammals that may be present in the marine waters in the vicinity of the project area. Therefore, the main impact issue associated with the proposed activity would be temporarily elevated sound levels and the associated direct effects on marine mammals, as discussed previously in this document. The most likely impact to marine mammal habitat occurs from pile driving effects on likely marine mammal prey (*i.e.*, fish) near NBKB and minor impacts to the immediate substrate during installation and removal of piles during the wharf construction project.

#### *Pile Driving Effects on Potential Prey (Fish)*

Construction activities would produce both pulsed (*i.e.*, impact pile driving) and continuous (*i.e.*, vibratory pile driving) sounds. Fish react to sounds which are especially strong and/or intermittent low-frequency sounds. Short duration, sharp sounds can cause overt or subtle changes in fish behavior and local distribution. Hastings and Popper (2005, 2009) identified several studies that suggest fish may relocate to avoid certain areas of sound energy. Additional studies have documented effects of pile driving (or other types of continuous sounds) on fish, although several are based on studies in support of large, multiyear bridge construction projects (*e.g.*, Scholik and Yan, 2001, 2002; Popper and Hastings, 2009). Sound pulses at received levels of 160 dB re 1  $\mu$ Pa may cause subtle changes in fish behavior. SPLs of 180 dB may cause noticeable changes in behavior (Pearson *et al.*, 1992; Skalski *et al.*, 1992). SPLs of sufficient strength have been known to cause injury to fish and fish mortality. The most likely impact to fish from pile driving activities at the project area would be temporary behavioral avoidance of the area. The duration of fish avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. In general, impacts to marine mammal prey species are expected to be minor and temporary due to the short timeframe for the wharf construction

project. However, adverse impacts may occur to a few species of rockfish (bocaccio [*Sebastes paucispinis*], yelloweye [*S. ruberrimus*] and canary [*S. pinniger*] rockfish) and salmon (chinook [*Oncorhynchus tshawytscha*] and summer run chum) which may still be present in the project area despite operating in a reduced work window in an attempt to avoid important fish spawning time periods. Impacts to these species could result from potential impacts to their eggs and larvae.

#### *Pile Driving Effects on Potential Foraging Habitat*

The area likely impacted by the project is relatively small compared to the available habitat in the Hood Canal. Avoidance by potential prey (*i.e.*, fish) of the immediate area due to the temporary loss of this foraging habitat is also possible. The duration of fish avoidance of this area after pile driving stops is unknown, but a rapid return to normal recruitment, distribution and behavior is anticipated. Any behavioral avoidance by fish of the disturbed area would still leave significantly large areas of fish and marine mammal foraging habitat in the Hood Canal and nearby vicinity.

Given the short daily duration of sound associated with individual pile driving events and the relatively small areas being affected, pile driving activities associated with the proposed action are not likely to have a permanent, adverse effect on any fish habitat, or populations of fish species. Therefore, pile driving is not likely to have a permanent, adverse effect on marine mammal foraging habitat at the project area.

### Proposed Mitigation

In order to issue an incidental take authorization (ITA) under Section 101(a)(5)(D) of the MMPA, we must, where applicable, set forth the permissible methods of taking pursuant to such activity, and other means of effecting the least practicable impact on such species or stock and its habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance, and on the availability of such species or stock for taking for certain subsistence uses (where relevant).

Measurements from similar pile driving events were coupled with practical spreading loss to estimate zones of influence (ZOIs; see "Estimated Take by Incidental Harassment"); these values were used to develop mitigation measures for pile driving activities at NBKB. The ZOIs effectively represent the mitigation zone that would be

established around each pile to prevent Level A harassment to marine mammals, while providing estimates of the areas within which Level B harassment might occur. While the ZOIs vary between the different diameter piles and types of installation methods, the Navy is proposing to establish mitigation zones for the maximum ZOI for all pile driving conducted in support of the wharf construction project. In addition to the measures described later in this section, the Navy would employ the following standard mitigation measures:

(a) Conduct briefings between construction supervisors and crews, marine mammal monitoring team, acoustical monitoring team, and Navy staff prior to the start of all pile driving activity, and when new personnel join the work, in order to explain responsibilities, communication procedures, marine mammal monitoring protocol, and operational procedures.

(b) Comply with applicable equipment sound standards and ensure that all construction equipment has sound control devices no less effective than those provided on the original equipment.

(c) For in-water heavy machinery work other than pile driving (using, *e.g.*, standard barges, tug boats, barge-mounted excavators, or clamshell equipment used to place or remove material), if a marine mammal comes within 10 m, operations shall cease and vessels shall reduce speed to the minimum level required to maintain steerage and safe working conditions. This type of work could include the following activities: (1) Movement of the barge to the pile location; (2) positioning of the pile on the substrate via a crane (*i.e.*, stabbing the pile); (3) removal of the pile from the water column/ substrate via a crane (*i.e.*, deadpull); or (4) the placement of sound attenuation devices around the piles. For these activities, monitoring would take place from 15 minutes prior to initiation until the action is complete.

#### *Monitoring and Shutdown for Pile Driving*

The following measures would apply to the Navy's mitigation through shutdown and disturbance zones:

**Shutdown Zone**—For all pile driving and removal activities, the Navy will establish a shutdown zone intended to contain the area in which SPLs equal or exceed the 180/190 dB rms acoustic injury criteria. The purpose of a shutdown zone is to define an area within which shutdown of activity would occur upon sighting of a marine mammal (or in anticipation of an animal

entering the defined area), thus preventing injury, serious injury, or death of marine mammals. Modeled distances for shutdown zones are shown in Table 5. However, during impact pile driving, the Navy would implement a minimum shutdown zone of 85 m radius for cetaceans and 20 m for pinnipeds around all pile driving activity. The modeled injury threshold distances are approximately 22 and 5 m, respectively, but the distances are increased based on in-situ recorded sound pressure levels during the TPP. During vibratory driving, the shutdown zone would be 10 m distance from the source for all animals. These precautionary measures are intended to act conservatively in the implementation of the measure and further reduce any possibility of acoustic injury. In addition, a minimum shutdown zone of 10 m would be in place for other construction activities in order to prevent the possibility of physical interaction. These activities may include (1) The movement of the barge to the pile location, (2) the positioning of the pile on the substrate via a crane (*i.e.*, “stabbing” the pile), (3) the removal of the pile from the water column/substrate via a crane (*i.e.* “deadpull”), or (4) the placement of sound attenuation devices around the piles.

**Disturbance Zone**—Disturbance zones are the areas in which SPLs equal or exceed 160 and 120 dB rms (for pulsed and non-pulsed sound, respectively). Disturbance zones provide utility for monitoring conducted for mitigation purposes (*i.e.*, shutdown zone monitoring) by establishing monitoring protocols for areas adjacent to the shutdown zones. Monitoring of disturbance zones enables observers to be aware of and communicate the presence of marine mammals in the project area but outside the shutdown zone and thus prepare for potential shutdowns of activity. However, the primary purpose of disturbance zone monitoring is for documenting incidents of Level B harassment; disturbance zone monitoring is discussed in greater detail later (see “Proposed Monitoring and Reporting”). Nominal radial distances for disturbance zones are shown in Table 5. Given the size of the disturbance zone for vibratory pile driving, it is impossible to guarantee that all animals would be observed or to make comprehensive observations of fine-scale behavioral reactions to sound, and only a portion of the zone (*e.g.*, what may be reasonably observed by visual observers stationed within the WRA) would be observed. However,

these are reasonable measures that will enable the monitoring of take from vibratory pile driving. In order to document observed incidences of harassment, monitors record all marine mammal observations, regardless of location. The observer’s location, as well as the location of the pile being driven, is known from a GPS. The location of the animal is estimated as a distance from the observer, which is then compared to the location from the pile. If acoustic monitoring is being conducted for that pile, a received SPL may be estimated, or the received level may be estimated on the basis of past or subsequent acoustic monitoring. It may then be determined whether the animal was exposed to sound levels constituting incidental harassment in post-processing of observational and acoustic data, and a precise accounting of observed incidences of harassment created. Therefore, although the predicted distances to behavioral harassment thresholds are useful for estimating incidental harassment for purposes of authorizing levels of incidental take, actual take may be determined in part through the use of empirical data. That information may then be used to extrapolate observed takes to reach an approximate understanding of actual total takes.

**Monitoring Protocols**—Monitoring would be conducted before, during, and after pile driving activities. In addition, observers shall record all incidences of marine mammal occurrence, regardless of distance from activity, and shall document any behavioral reactions in concert with distance from piles being driven. Observations made outside the shutdown zone will not result in shutdown; that pile segment would be completed without cessation, unless the animal approaches or enters the shutdown zone, at which point all pile driving activities would be halted. Monitoring will take place from 15 minutes prior to initiation through 15 minutes post-completion of pile driving activities. Pile driving activities include the time to remove a single pile or series of piles, as long as the time elapsed between uses of the pile driving equipment is no more than 30 minutes. The following additional measures apply to visual monitoring:

(1) Monitoring will be conducted by qualified observers, who will be placed at the best vantage point(s) practicable to monitor for marine mammals and implement shutdown/delay procedures when applicable by calling for the shutdown to the hammer operator. Qualified observers are trained biologists, with the following minimum qualifications:

- Visual acuity in both eyes (correction is permissible) sufficient for discernment of moving targets at the water’s surface with ability to estimate target size and distance; use of binoculars may be necessary to correctly identify the target;
  - Advanced education in biological science, wildlife management, mammalogy, or related fields (bachelor’s degree or higher is required);
  - Experience and ability to conduct field observations and collect data according to assigned protocols (this may include academic experience);
  - Experience or training in the field identification of marine mammals, including the identification of behaviors;
  - Sufficient training, orientation, or experience with the construction operation to provide for personal safety during observations;
  - Writing skills sufficient to prepare a report of observations including but not limited to the number and species of marine mammals observed; dates and times when in-water construction activities were conducted; dates and times when in-water construction activities were suspended to avoid potential incidental injury from construction sound of marine mammals observed within a defined shutdown zone; and marine mammal behavior; and
  - Ability to communicate orally, by radio or in person, with project personnel to provide real-time information on marine mammals observed in the area as necessary.
- (2) Prior to the start of pile driving activity, the shutdown zone will be monitored for 15 minutes to ensure that it is clear of marine mammals. Pile driving will only commence once observers have declared the shutdown zone clear of marine mammals; animals will be allowed to remain in the shutdown zone (*i.e.*, must leave of their own volition) and their behavior will be monitored and documented. The shutdown zone may only be declared clear, and pile driving started, when the entire shutdown zone is visible (*i.e.*, when not obscured by dark, rain, fog, etc.). In addition, if such conditions should arise during impact pile driving that is already underway, the activity would be halted.
- (3) If a marine mammal approaches or enters the shutdown zone during the course of pile driving operations, activity will be halted and delayed until either the animal has voluntarily left and been visually confirmed beyond the shutdown zone or 15 minutes have passed without re-detection of the animal. Monitoring will be conducted

throughout the time required to drive a pile.

#### *Sound Attenuation Devices*

Bubble curtains shall be used during all impact pile driving. The device will distribute air bubbles around 100 percent of the piling perimeter for the full depth of the water column, and the lowest bubble ring shall be in contact with the mudline for the full circumference of the ring. Testing of the device by comparing attenuated and unattenuated strikes is not possible because of requirements in place to protect marbled murrelets (an ESA-listed bird species under the jurisdiction of the USFWS). However, in order to avoid loss of attenuation from design and implementation errors in the absence of such testing, a performance test of the device shall be conducted prior to initial use. The performance test shall confirm the calculated pressures and flow rates at each manifold ring. In addition, the contractor shall also train personnel in the proper balancing of air flow to the bubblers and shall submit an inspection/performance report to the Navy within 72 hours following the performance test.

#### *Timing Restrictions*

In Hood Canal, designated exist timing restrictions for pile driving activities to avoid in-water work when salmonids and other spawning forage fish are likely to be present. The in-water work window is July 16–February 15. The initial months (July to September) of the timing window overlap with times when Steller sea lions are not expected to be present within the project area. Until July 16, impact pile driving will only occur starting two hours after sunrise and ending two hours before sunset due to marbled murrelet nesting season. After July 16, in-water construction activities will occur during daylight hours (sunrise to sunset).

#### *Soft Start*

The use of a soft-start procedure is believed to provide additional protection to marine mammals by warning or providing a chance to leave the area prior to the hammer operating at full capacity, and typically involves a requirement to initiate sound from vibratory hammers for fifteen seconds at reduced energy followed by a 30-second waiting period. This procedure is repeated two additional times. However, implementation of soft start for vibratory pile driving during previous pile driving work at NBKB has led to equipment failure and serious human safety concerns. Project staff have

reported that, during power down from the soft start, the energy from the hammer is transferred to the crane boom and block via the load fall cables and rigging resulting in unexpected damage to both the crane block and crane boom. This differs from what occurs when the hammer is powered down after a pile is driven to refusal in that the rigging and load fall cables are able to be slacked prior to powering down the hammer, and the vibrations are transferred into the substrate via the pile rather than into the equipment via the rigging. One dangerous incident of equipment failure has already occurred, with a portion of the equipment shearing from the crane and falling to the deck. Subsequently, the crane manufacturer has inspected the crane booms and discovered structural fatigue in the boom lacing and main structural components, which will ultimately result in a collapse of the crane boom. All cranes were new at the beginning of the job. In addition, the vibratory hammer manufacturer has attempted to install dampers to mitigate the problem, without success. As a result of this dangerous situation, the measure will not be required for this project. This information was provided to us after the Navy submitted their request for authorization and is not reflected in that document.

For impact driving, soft start will be required, and contractors will provide an initial set of three strikes from the impact hammer at 40 percent energy, followed by a 30-second waiting period, then two subsequent three strike sets.

We have carefully evaluated the applicant's proposed mitigation measures and considered a range of other measures in the context of ensuring that we prescribe the means of effecting the least practicable impact on the affected marine mammal species and stocks and their habitat. Our evaluation of potential measures included consideration of the following factors in relation to one another: (1) The manner in which, and the degree to which, the successful implementation of the measure is expected to minimize adverse impacts to marine mammals; (2) the proven or likely efficacy of the specific measure to minimize adverse impacts as planned; and (3) the practicability of the measure for applicant implementation, including consideration of personnel safety, and practicality of implementation.

Based on our evaluation of the applicant's proposed measures, as well as other measures considered, we have preliminarily determined that the proposed mitigation measures provide the means of effecting the least practicable impact on marine mammal

species or stocks and their habitat, paying particular attention to rookeries, mating grounds, and areas of similar significance.

#### **Proposed Monitoring and Reporting**

In order to issue an ITA for an activity, section 101(a)(5)(D) of the MMPA states that we must, where applicable, set forth "requirements pertaining to the monitoring and reporting of such taking". The MMPA implementing regulations at 50 CFR 216.104 (a)(13) indicate that requests for ITAs must include the suggested means of accomplishing the necessary monitoring and reporting that would result in increased knowledge of the species and of the level of taking or impacts on populations of marine mammals that are expected to be present in the proposed action area.

#### *Visual Marine Mammal Observations*

The Navy will collect sighting data and behavioral responses to construction for marine mammal species observed in the region of activity during the period of activity. All observers will be trained in marine mammal identification and behaviors and are required to have no other construction-related tasks while conducting monitoring. The Navy will monitor the shutdown zone and disturbance zone before, during, and after pile driving, with observers located at the best practicable vantage points. Based on our requirements, the Marine Mammal Monitoring Plan would implement the following procedures for pile driving:

- MMOs would be located at the best vantage point(s) in order to properly see the entire shutdown zone and as much of the disturbance zone as possible.

- During all observation periods, observers will use binoculars and the naked eye to search continuously for marine mammals.

- If the shutdown zones are obscured by fog or poor lighting conditions, pile driving at that location will not be initiated until that zone is visible. Should such conditions arise while impact driving is underway, the activity would be halted.

- The shutdown and disturbance zones around the pile will be monitored for the presence of marine mammals before, during, and after any pile driving or removal activity.

Individuals implementing the monitoring protocol will assess its effectiveness using an adaptive approach. Monitoring biologists will use their best professional judgment throughout implementation and seek improvements to these methods when

deemed appropriate. Any modifications to protocol will be coordinated between NMFS and the Navy.

#### *Data Collection*

We require that observers use approved data forms. Among other pieces of information, the Navy will record detailed information about any implementation of shutdowns, including the distance of animals to the pile and description of specific actions that ensued and resulting behavior of the animal, if any. In addition, the Navy will attempt to distinguish between the number of individual animals taken and the number of incidences of take. We require that, at a minimum, the following information be collected on the sighting forms:

- Date and time that monitored activity begins or ends;
- Construction activities occurring during each observation period;
- Weather parameters (*e.g.*, percent cover, visibility);
- Water conditions (*e.g.*, sea state, tide state);
- Species, numbers, and, if possible, sex and age class of marine mammals;
- Description of any observable marine mammal behavior patterns, including bearing and direction of travel, and if possible, the correlation to SPLs;
- Distance from pile driving activities to marine mammals and distance from the marine mammals to the observation point;
- Locations of all marine mammal observations; and
- Other human activity in the area.

#### *Reporting*

A draft report would be submitted to NMFS within 90 calendar days of the completion of the in-water work window. The report will include marine mammal observations pre-activity, during-activity, and post-activity during pile driving days, and will also provide descriptions of any problems encountered in deploying sound attenuating devices, any adverse responses to construction activities by marine mammals and a complete description of all mitigation shutdowns and the results of those actions and a refined take estimate based on the number of marine mammals observed during the course of construction. A final report would be prepared and submitted within 30 days following resolution of comments on the draft report.

#### **Estimated Take by Incidental Harassment**

With respect to the activities described here, the MMPA defines

“harassment” as: “any act of pursuit, torment, or annoyance which (i) has the potential to injure a marine mammal or marine mammal stock in the wild [Level A harassment]; or (ii) has the potential to disturb a marine mammal or marine mammal stock in the wild by causing disruption of behavioral patterns, including, but not limited to, migration, breathing, nursing, breeding, feeding, or sheltering [Level B harassment].”

All anticipated takes would be by Level B harassment, involving temporary changes in behavior. The proposed mitigation and monitoring measures are expected to minimize the possibility of injurious or lethal takes such that take by Level A harassment, serious injury or mortality is considered discountable. However, as noted earlier, it is unlikely that injurious or lethal takes would occur even in the absence of the planned mitigation and monitoring measures.

If a marine mammal responds to an underwater sound by changing its behavior (*e.g.*, through relatively minor changes in locomotion direction/speed or vocalization behavior), the response may or may not constitute taking at the individual level, and is unlikely to affect the stock or the species as a whole. However, if a sound source displaces marine mammals from an important feeding or breeding area for a prolonged period, impacts on animals or on the stock or species could potentially be significant (Lusseau and Bejder, 2007; Weilgart, 2007). Given the many uncertainties in predicting the quantity and types of impacts of sound on marine mammals, it is common practice to estimate how many animals are likely to be present within a particular distance of a given activity, or exposed to a particular level of sound. This practice potentially overestimates the numbers of marine mammals actually subject to disturbance that would correctly be considered a take under the MMPA. For example, during the past ten years, transient killer whales have been observed within the project area twice. On the basis of that information, an estimated amount of potential takes for killer whales is presented here. However, while a pod of killer whales could potentially visit again during the project timeframe, and thus be taken, it is more likely that they would not. Although incidental take of killer whales and Dall’s porpoises was authorized for 2011–12 activities at NBKB on the basis of past observations of these species, no such takes were recorded and no individuals of these species were observed. Similarly, estimated actual take levels (observed takes extrapolated to the remainder of

unobserved but ensounded area) were significantly less than authorized levels of take for the remaining species.

The project area is not believed to be particularly important habitat for marine mammals, nor is it considered an area frequented by marine mammals, although harbor seals are year-round residents of Hood Canal and sea lions are known to haul-out on submarines and other man-made objects at the NBKB waterfront (although typically at a distance of a mile or greater from the project site). Therefore, behavioral disturbances that could result from anthropogenic sound associated with these activities are expected to affect relatively small numbers of individual marine mammals, although those effects could be recurring over the life of the project if the same individuals remain in the project vicinity.

The Navy has requested authorization for the incidental taking of small numbers of Steller sea lions, California sea lions, harbor seals, transient killer whales, Dall’s porpoises, and harbor porpoises in the Hood Canal that may result from pile driving during construction activities associated with the wharf construction project described previously in this document. The takes requested are expected to have no more than a minor effect on individual animals and no effect at the population level for these species. Any effects experienced by individual marine mammals are anticipated to be limited to short-term disturbance of normal behavior or temporary displacement of animals near the source of the sound.

#### *Marine Mammal Densities*

The Navy is in the process of developing, with input from regional marine mammal experts, estimates of marine mammal densities in Washington inland waters for the Navy Marine Species Density Database (NMSDD). A technical report will describe methodologies used to derive these densities, which are generally considered the best available information for Washington inland waters, except where specific local abundance information is available. Initial take estimates and impact assessment for the EHW–2 project relied on data available at the time the application was submitted, including survey efforts in the project area. For future projects at NBKB, it is likely that the NMSDD densities will be used in assessing project impacts. However, because the NMSDD report is not complete, and because use of the previous density or abundance information results in more conservative take estimates, the approach to take

estimation used for the first year of EHW-2 construction is largely retained here. Please see Appendix B of the Navy's application for more information on the NMSDD information.

For all species, the most appropriate information available was used to estimate the number of potential incidences of take. For harbor seals, this involved published literature describing harbor seal research conducted in Washington and Oregon as well as more specific counts conducted in Hood Canal (Huber *et al.*, 2001; Jeffries *et al.*, 2003). Killer whales are known from two periods of occurrence (2003 and 2005) and are not known to preferentially use any specific portion of the Hood Canal. Therefore, density was calculated as the maximum number of individuals present at a given time during those occurrences (London, 2006), divided by the area of Hood Canal. The best information available for the remaining species in Hood Canal came from surveys conducted by the Navy at the NBKB waterfront or in the vicinity of the project area.

Beginning in April 2008, Navy personnel have recorded sightings of marine mammals occurring at known haul-outs along the NBKB waterfront, including docked submarines or other structures associated with NBKB docks and piers and the nearshore pontoons of the floating security fence. Sightings of marine mammals within the waters adjoining these locations were also recorded. Sightings were attempted whenever possible during a typical work week (*i.e.*, Monday through Friday), but inclement weather, holidays, or security constraints often precluded surveys. These sightings took place frequently, although without a formal survey protocol. During the surveys, staff visited each of the above-mentioned locations and recorded observations of marine mammals. Surveys were conducted using binoculars and the naked eye from shoreline locations or the piers/wharves themselves. Because these surveys consist of opportunistic sighting data from shore-based observers, largely of hauled-out animals, there is no associated survey area appropriate for use in calculating a density from the abundance data. Data were compiled for the period from April 2008 through December 2012 for analysis in this proposed IHA, and these data provide the basis for take estimation for Steller and California sea lions. Other information, including sightings data from other Navy survey efforts at NBKB, is available for these two species, but these data provide the most conservative (*i.e.*, highest) local

abundance estimates (and thus the highest estimates of potential take).

In addition, vessel-based marine wildlife surveys were conducted according to established survey protocols during July through September 2008 and November through May 2009–10 (Tannenbaum *et al.*, 2009, 2011). Eighteen complete surveys of the nearshore area resulted in observations of four marine mammal species (harbor seal, California sea lion, harbor porpoise, and Dall's porpoise). These surveys operated along pre-determined transects parallel to the shoreline from the nearshore out to approximately 1,800 ft (549 m) from shoreline, at a spacing of 100 yd, and covered the entire NBKB waterfront (approximately 3.9 km<sup>2</sup> per survey) at a speed of 5 kn or less. Two observers recorded sightings of marine mammals both in the water and hauled out, including date, time, species, number of individuals, age (juvenile, adult), behavior (swimming, diving, hauled out, avoidance dive), and haul-out location. Positions of marine mammals were obtained by recording distance and bearing to the animal with a rangefinder and compass, noting the concurrent location of the boat with GPS, and, subsequently, analyzing these data to produce coordinates of the locations of all animals detected. These surveys resulted in the only observation of a Dall's porpoise near NBKB.

The Navy also conducted vessel-based line transect surveys in Hood Canal on non-construction days during the 2011 TPP in order to collect additional data for species present in Hood Canal. These surveys detected three marine mammal species (harbor seal, California sea lion, and harbor porpoise), and included surveys conducted in both the main body of Hood Canal, near the project area, and baseline surveys conducted for comparison in Dabob Bay, an area of Hood Canal that is not affected by sound from Navy actions at the NBKB waterfront. The surveys operated along pre-determined transects that followed a double saw-tooth pattern to achieve uniform coverage of the entire NBKB waterfront. The vessel traveled at a speed of approximately 5 kn when transiting along the transect lines. Two observers recorded sightings of marine mammals both in the water and hauled out, including the date, time, species, number of individuals, and behavior (swimming, diving, etc.). Positions of marine mammals were obtained by recording the distance and bearing to the animal(s), noting the concurrent location of the boat with GPS, and subsequently analyzing these data to produce coordinates of the

locations of all animals detected. Sighting information for harbor porpoises was corrected for detectability ( $g(0) = 0.54$ ; Barlow, 1988; Calambokidis *et al.*, 1993; Carretta *et al.*, 2001). Distance sampling methodologies were used to estimate densities of animals for the data. This information provides the best information for harbor porpoises.

The cetaceans, as well as the harbor seal, appear to range throughout Hood Canal; therefore, the analysis in this proposed IHA assumes that harbor seal, transient killer whale, harbor porpoise, and Dall's porpoise are uniformly distributed in the project area. However, it should be noted that there have been no observations of cetaceans within the floating security barriers at NBKB; these barriers thus appear to effectively prevent cetaceans from approaching the shutdown zones. Although the Navy will implement a precautionary shutdown zone for cetaceans, anecdotal evidence suggests that cetaceans are not at risk of Level A harassment at NBKB even from louder activities (*e.g.*, impact pile driving). The remaining species that occur in the project area, Steller sea lion and California sea lion, do not appear to utilize most of Hood Canal. The sea lions appear to be attracted to the man-made haul-out opportunities along the NBKB waterfront while dispersing for foraging opportunities elsewhere in Hood Canal. California sea lions were not reported during aerial surveys of Hood Canal (Jeffries *et al.*, 2000), and Steller sea lions have only been documented at the NBKB waterfront.

#### Description of Take Calculation

The take calculations presented here rely on the best data currently available for marine mammal populations in the Hood Canal. The formula was developed for calculating take due to pile driving activity and applied to each group-specific sound impact threshold. The formula is founded on the following assumptions:

- Mitigation measures (*e.g.*, bubble curtain) would be utilized, as discussed previously;
- All marine mammal individuals potentially available are assumed to be present within the relevant area, and thus incidentally taken;
- An individual can only be taken once during a 24-h period;
- There were will be 195 total days of activity;
- Exposure modeling assumes that one impact pile driver and three vibratory pile drivers are operating concurrently; and,
- Exposures to sound levels above the relevant thresholds equate to take, as defined by the MMPA.

The calculation for marine mammal takes is estimated by:  
 Exposure estimate = (n \* ZOI) \* days of total activity

Where:

n = density estimate used for each species/season

ZOI = sound threshold ZOI impact area; the area encompassed by all locations where the SPLs equal or exceed the threshold being evaluated

n \* ZOI produces an estimate of the abundance of animals that could be present in the area for exposure, and is rounded to the nearest whole number before multiplying by days of total activity.

The ZOI impact area is the estimated range of impact to the sound criteria. The distances specified in Table 5 were used to calculate ZOIs around each pile. All impact pile driving take calculations were based on the estimated threshold ranges assuming attenuation of 10 dB from use of a bubble curtain. The ZOI impact area took into consideration the possible affected area of the Hood Canal from the pile driving site furthest from shore with attenuation due to land shadowing from bends in the canal. Because of the close proximity of some of the piles to the shore, the narrowness of the canal at the project area, and the maximum fetch, the ZOIs for each threshold are not necessarily spherical and may be truncated.

While pile driving can occur any day throughout the in-water work window, and the analysis is conducted on a per day basis, only a fraction of that time (typically a matter of hours on any given day) is actually spent pile driving. Acoustic monitoring conducted as part of the TPP demonstrated that Level B harassment zones for vibratory pile driving are likely to be significantly smaller than the zones estimated through modeling based on measured source levels and practical spreading loss. Also of note is the fact that the effectiveness of mitigation measures in reducing takes is typically not quantified in the take estimation process. Here, we do explicitly account for an assumed level of efficacy for use of the bubble curtain, but not for the soft start associated with impact driving. In

addition, equating exposure with response (*i.e.*, a behavioral response meeting the definition of take under the MMPA) is simplistic and conservative assumption. For these reasons, these take estimates are likely to be conservative.

*Airborne Sound*—No incidents of incidental take resulting solely from airborne sound are likely, as distances to the harassment thresholds would not reach areas where pinnipeds may haul out. Harbor seals can haul out at a variety of natural or manmade locations, but the closest known harbor seal haul-out is at the Dosewallips River mouth (London, 2006) and Navy waterfront surveys and boat surveys have found it rare for harbor seals to haul out along the NBKB waterfront (Agness and Tannenbaum, 2009; Tannenbaum *et al.*, 2009, 2011; Navy, 2010). Individual seals have occasionally been observed hauled out on pontoons of the floating security fence within the restricted areas of NBKB, but this area is not with the airborne disturbance ZOI. Nearby piers are elevated well above the surface of the water and are inaccessible to pinnipeds, and seals have not been observed hauled out on the adjacent shoreline. Sea lions typically haul out on submarines docked at Delta Pier, approximately one mile from the project site.

We recognize that pinnipeds in the water could be exposed to airborne sound that may result in behavioral harassment when looking with heads above water. However, these animals would previously have been ‘taken’ as a result of exposure to underwater sound above the behavioral harassment thresholds, which are in all cases larger than those associated with airborne sound. Thus, the behavioral harassment of these animals is already accounted for in these estimates of potential take. Multiple incidents of exposure to sound above NMFS’ thresholds for behavioral harassment are not believed to result in increased behavioral disturbance, in either nature or intensity of disturbance reaction. Therefore, we do not believe that authorization of incidental take resulting from airborne sound for pinnipeds is warranted.

*California Sea Lion*—California sea lions occur regularly in the vicinity of the project site from August through mid-June, as determined by Navy waterfront surveys conducted from April 2008 through December 2011 (Table 9). With regard to the range of this species in Hood Canal and the project area, it is assumed on the basis of waterfront observations (Agness and Tannenbaum, 2009; Tannenbaum *et al.*, 2009, 2011) that the opportunity to haul out on submarines docked at Delta Pier is a primary attractant for California sea lions in Hood Canal, as they are not typically observed elsewhere in Hood Canal. Abundance is calculated as the monthly average of the maximum number observed in a given month, as opposed to the overall average (Table 9). That is, the maximum number of animals observed on any one day in a given month was averaged for 2008–11, providing a monthly average of the maximum daily number observed. The largest monthly average (58 animals) was recorded in November, as was the largest single daily count (81 in 2011). The first California sea lion was observed at NBKB in August 2009, and their occurrence has been increasing since that time (Navy, 2012).

California sea lion density for Hood Canal was calculated to be 0.28 animals/km<sup>2</sup> for purposes of the Navy Marine Species Density Database (Navy, 2013). However, this density was derived by averaging data collected year-round. This project will occur during the designated in-water work window, so it is more appropriate to use data collected at the NBKB waterfront during those months (July–February). The average of the monthly averages for maximum daily numbers observed (in a given month, during the in-water work window) is 31.2 animals (see Table 9). Exposures were calculated assuming 31 individuals could be present, and therefore exposed to sound exceeding the behavioral harassment threshold, on each day of pile driving. This methodology is conservative in that it assumes that all individuals potentially would be taken on any given day of activity.

TABLE 9—CALIFORNIA SEA LION SIGHTING INFORMATION FROM NBKB, APRIL 2008–DECEMBER 2012

Month	Number of surveys	Number of surveys with animals present	Frequency of presence <sup>1</sup>	Abundance <sup>2</sup>
January .....	47	36	0.77	31.0

September .....	54	31	0.57	20.4
October .....	65	61	0.94	51.8
November .....	56	56	1	60.2
December .....	54	44	0.81	49.6
Total or average (in-water work season only) .....	452	284	0.63	31.2

Totals (number of surveys) and averages (frequency and abundance) presented for in-water work season (July–February) only. Information from March–June presented for reference.

<sup>1</sup> Frequency is the number of surveys with California sea lions present/number of surveys conducted.

<sup>2</sup> Abundance is calculated as the monthly average of the maximum daily number observed in a given month.

### Steller Sea Lion

Steller sea lions were first documented at the NBKB waterfront in November 2008, while hauled out on submarines at Delta Pier and have been periodically observed from October to April since that time. Based on waterfront observations, Steller sea lions appear to use available haul-outs (typically in the vicinity of Delta Pier, approximately one mile south of the project area) and habitat similarly to California sea lions, although in lesser numbers. On occasions when Steller sea lions are observed, they typically occur in mixed groups with California sea lions also present, allowing observers to confirm their identifications based on discrepancies in size and other physical characteristics.

Vessel-based survey effort in NBKB nearshore waters have not detected any Steller sea lions (Agness and Tannenbaum, 2009; Tannenbaum *et al.*, 2009, 2011). Opportunistic sightings data provided by Navy personnel since April 2008 have continued to document sightings of Steller sea lions at Delta Pier from October through April (Table 10). Steller sea lions have only been observed hauled out on submarines docked at Delta Pier. Delta Pier and other docks at NBKB are not accessible to pinnipeds due to the height above water, although the smaller California sea lions and harbor seals are able to haul out on pontoons that support the floating security barrier. One to two animals are typically seen hauled out with California sea lions; the maximum Steller sea lion group size seen at any

given time was six individuals (observed on four occasions).

The calculation for exposure analysis is similar to that used for California sea lions. The average of the monthly averages for maximum daily numbers observed (in a given month, during the in-water work window) is 1.7 animals (see Table 10). Therefore, exposures were calculated assuming that two individuals could be present, and therefore exposed to sound exceeding the behavioral harassment threshold, on each day of pile driving. This methodology is conservative in that Steller sea lions are unlikely to be present on every day of pile driving and because it assumes that all individuals potentially would be taken on any given day of activity.

TABLE 10—STELLER SEA LION SIGHTING INFORMATION FROM NBKB, APRIL 2008–JUNE 2010; OCTOBER 2011

December .....	54	18	0.33	2.6
Total or average (in-water work season only) .....	452	93	0.21	1.7

Totals (number of surveys) and averages (frequency and abundance) presented for in-water work season (July–February) only. Information from March–June presented for reference.

<sup>1</sup> Frequency is the number of surveys with Steller sea lions present/number of surveys conducted.

<sup>2</sup> Abundance is calculated as the monthly average of the maximum daily number observed in a given month.

Local abundance information, rather than density, was used in estimating

take for Steller sea lions. Please see the discussion provided previously for

California sea lions. Steller sea lions are known only from haul-outs over one

mile from the project area, and would not be subject to harassment from airborne sound. Table 10 depicts the number of estimated behavioral harassments.

*Harbor Seal*—Jeffries *et al.* (2003) conducted aerial surveys of the harbor seal population in Hood Canal in 1999 for the Washington Department of Fish and Wildlife and reported 711 harbor seals hauled out. The authors adjusted this abundance with a correction factor of 1.53 to account for seals in the water, which were not counted, and estimated that there were 1,088 harbor seals in Hood Canal. The correction factor (1.53) was based on the proportion of time seals spend on land versus in the water over the course of a day, and was derived by dividing one by the percentage of time harbor seals spent on land. These data came from tags (VHF transmitters) applied to harbor seals at six areas (Grays Harbor, Tillamook Bay, Umpqua River, Gertrude Island, Protection/Smith Islands, and Boundary Bay, BC) within two different harbor seal stocks (the coastal stock and the inland waters of WA stock) over four survey years. The Hood Canal population is part of the inland waters stock, and while not specifically sampled, Jeffries *et al.* (2003) found the VHF data to be broadly applicable to the entire stock. The tagging research in 1991 and 1992 conducted by Huber *et al.* (2001) and Jeffries *et al.* (2003) used the same methods for the 1999 and 2000 survey years. These surveys indicated that approximately 35 percent of harbor seals are in the water versus hauled out on a daily basis (Huber *et al.*, 2001; Jeffries *et al.*, 2003). Exposures were calculated using a density derived from the number of harbor seals that are present in the water at any one time (35 percent of 1,088, or approximately 381 individuals), divided by the area of the Hood Canal (358.44 km<sup>2</sup>) and the formula presented previously. The aforementioned area of Hood Canal represents a change from that cited previously for authorizations associated with Navy activities in Hood Canal, and represents a correction to our understanding of the methodology used in Jeffries *et al.* (2003).

We recognize that over the course of the day, while the proportion of animals in the water may not vary significantly, different individuals may enter and exit the water. However, fine-scale data on harbor seal movements within the project area on time durations of less than a day are not available. Previous monitoring experience from Navy actions conducted in the same project area has indicated that this density provides an appropriate estimate of

potential exposures. The density of harbor seals calculated in this manner (1.06 animals/km<sup>2</sup>) is corroborated by results of the Navy's vessel-based marine mammal surveys at NBKB in 2008 and 2009–10, in which an average of five individual harbor seals per survey was observed in the 3.9 km<sup>2</sup> survey area (density = 1.3 animals/km<sup>2</sup>) (Tannenbaum *et al.*, 2009, 2011). For this analysis, we retain the previous estimate of 1.3 animals/km<sup>2</sup> (based on the erroneous understanding of the size of the sampling area used by Jeffries *et al.* (2003)), because the use of the older estimate is larger, therefore resulting in a conservative take estimate, and because incorporation of this correction here would result in unnecessary delay.

*Killer Whales*—Transient killer whales are uncommon visitors to Hood Canal, and may be present anytime during the year. Transient pods (six to eleven individuals per event) were observed in Hood Canal for lengthy periods of time (59–172 days) in 2003 (January–March) and 2005 (February–June), feeding on harbor seals (London, 2006). These whales used the entire expanse of Hood Canal for feeding. West Coast transient killer whales most often travel in small pods (Baird and Dill 1996). Houghton reported to the Navy, from unpublished data, that the most commonly observed group size in Puget Sound (defined as from Admiralty Inlet south and up through Skagit Bay) from 2004–2010 data is six whales.

The density value derived for the Navy Marine Species Density Database is 0.0019 animals/km<sup>2</sup> (Navy, 2013), which would result in a prediction that zero animals would be harassed by the project activities. However, while transient killer whales are rare in the Hood Canal, it is possible that a pod of animals could be present. In the event that this occurred, the animals would not assume a uniform distribution as is implied by the density estimate. For a separate activity occurring at NBKB (the barge mooring project), we conservatively assumed that a single pod of whales (defined as six whales) could be present in the vicinity of the project for the entire duration. However, the duration for that project is only twenty days, whereas the duration for EHW-2 is 195 days. While it is possible that killer whales could be present in Hood Canal for 195 days, we believe that it is unlikely even in the absence of a harassing stimulus on the basis of past observations. Further, in the absence of any overriding contextual element (*e.g.*, NBKB is not important as a breeding area, and provides no unusual concentration of prey), it is reasonable to assume that whales would leave the

area if exposed to potentially harassing levels of sound on each day that they were present. In the absence of such potentially harassing stimuli, killer whales were observed in Hood Canal in 2003 and 2005 for a minimum of 59 days. We assume here that a pod of whales would remain present for approximately half the time in the presence of pile driving (*i.e.*, a pod of six whales present for 30 days).

#### *Dall's Porpoise*

Dall's porpoises may be present in the Hood Canal year-round and could occur as far south as the project site. Their use of inland Washington waters, however, is mostly limited to the Strait of Juan de Fuca. One individual has been observed by Navy staff in deeper waters of Hood Canal (Tannenbaum *et al.*, 2009, 2011). The Navy Marine Species Density Database assumes a negligible value of 0.001 animals/1,000 km<sup>2</sup> for Dall's porpoises in the Hood Canal, which represents species that have historically been observed in an area but have no regular presence. Use of this density value results in a prediction that zero animals would be exposed to sound above the behavioral harassment threshold. However, given the lengthy project duration it is possible that a Dall's porpoise could be present. While it is unlikely that Dall's porpoise would be present frequently, there is no information to indicate an appropriate proportion of days, and the Navy is requesting authorization for one incidence of incidental take per day for Dall's porpoise.

#### *Harbor Porpoise*

During vessel-based line transect surveys on non-construction days during the TPP, harbor porpoises were frequently sighted within several kilometers of the base, mostly to the north or south of the project area, but occasionally directly across from the Bangor waterfront on the far side of Toandos Peninsula. Harbor porpoise presence in the immediate vicinity of the base (*i.e.*, within 1 km) remained low. These data were used to generate a density for Hood Canal. Based on guidance from other line transect surveys conducted for harbor porpoises using similar monitoring parameters (*e.g.*, boat speed, number of observers) (Barlow, 1988; Calambokidis *et al.*, 1993; Carretta *et al.*, 2001), the Navy determined the effective strip width for the surveys to be one kilometer, or a perpendicular distance of 500 m from the transect to the left or right of the vessel. The effective strip width was set at the distance at which the detection probability for harbor porpoises was

equivalent to one, which assumes that all individuals on a transect are detected. Only sightings occurring within the effective strip width were used in the density calculation. By multiplying the trackline length of the surveys by the effective strip width, the total area surveyed during the surveys was 471.2 km<sup>2</sup>. Thirty-eight individual harbor porpoises were sighted within this area, resulting in a density of 0.0806 animals per km<sup>2</sup>. To account for availability bias, or the animals which are unavailable to be detected because they are submerged, the Navy utilized a g(0) value of 0.54, derived from other

similar line transect surveys (Barlow, 1988; Calambokidis *et al.*, 1993; Carretta *et al.*, 2001). This resulted in a corrected density of 0.149 harbor porpoises per km<sup>2</sup>. For comparison, 274.27 km<sup>2</sup> of trackline survey effort in nearby Dabob Bay produced a corrected density estimate of 0.203 harbor porpoises per km<sup>2</sup>. However, the Navy has elected to retain an earlier density estimate, derived from only preliminary data, for the exposure analysis. This estimate is larger than the current best estimate and therefore overestimates the number of potential takes.

Potential takes could occur if individuals of these species move through the area on foraging trips when pile driving is occurring. Individuals that are taken could exhibit behavioral changes such as increased swimming speeds, increased surfacing time, or decreased foraging. Most likely, individuals may move away from the sound source and be temporarily displaced from the areas of pile driving. Potential takes by disturbance would likely have a negligible short-term effect on individuals and not result in population-level impacts.

TABLE 11—NUMBER OF POTENTIAL INCIDENTAL TAKES OF MARINE MAMMALS WITHIN VARIOUS ACOUSTIC THRESHOLD ZONES

Species	Density/ Abundance	Underwater		Airborne	Total proposed authorized takes
		Impact injury threshold <sup>1</sup>	Vibratory disturbance threshold (120 dB) <sup>2</sup>	Impact disturbance threshold <sup>3</sup>	
California sea lion .....	<sup>4</sup> 28.4	0	6,045	0	6,045
Steller sea lion .....	<sup>4</sup> 1.1	0	390	0	390
Harbor seal .....	<sup>5</sup> 1.06	0	10,530	0	10,530
Killer whale .....	<sup>6</sup> 0.0019	0	180	N/A	180
Dall's porpoise .....	<sup>6</sup> 0.000001	0	195	N/A	195
Harbor porpoise .....	<sup>7</sup> 0.149	0	1,950	N/A	1,950

<sup>1</sup> Acoustic injury threshold for impact pile driving is 190 dB for pinnipeds and 180 dB for cetaceans.

<sup>2</sup> The 160-dB acoustic harassment zone associated with impact pile driving would always be subsumed by the 120-dB harassment zone produced by vibratory driving. Therefore, takes are not calculated separately for the two zones.

<sup>3</sup> Acoustic disturbance threshold is 100 dB for sea lions and 90 dB for harbor seals. We do not believe that pinnipeds would be available for airborne acoustic harassment because they are not known to regularly haul-out at locations inside the zone in which airborne acoustic harassment could occur.

<sup>4</sup> Figures presented are abundance numbers, not density, and are calculated as the average of average daily maximum numbers per month. Abundance numbers are rounded to the nearest whole number for take estimation. The Steller sea lion abundance was doubled.

<sup>5</sup> An uncorrected estimate of 1.3 animals/km<sup>2</sup> was used for the exposure analysis.

<sup>6</sup> These densities resulted in zero take estimates. We assumed that a single pod of six killer whales could be present for as many as 30 days of the duration and that one Dall's porpoise could be present on each day of the project.

<sup>7</sup> The preliminary density estimate of 0.250 animals/km<sup>2</sup> was used for the exposure analysis.

### Negligible Impact and Small Numbers Analyses and Preliminary Determinations

NMFS has defined "negligible impact" in 50 CFR 216.103 as ". . . an impact resulting from the specified activity that cannot be reasonably expected to, and is not reasonably likely to, adversely affect the species or stock through effects on annual rates of recruitment or survival." In making a negligible impact determination, we consider a variety of factors, including but not limited to: (1) The number of anticipated mortalities; (2) the number and nature of anticipated injuries; (3) the number, nature, intensity, and duration of Level B harassment; and (4) the context in which the take occurs.

Pile driving activities associated with the wharf construction project, as outlined previously, have the potential to disturb or displace marine mammals. Specifically, the proposed activities may result in take, in the form of Level B

harassment (behavioral disturbance) only, from airborne or underwater sounds generated from pile driving. No mortality, serious injury, or Level A harassment is anticipated given the methods of installation and measures designed to minimize the possibility of injury to marine mammals and Level B harassment would be reduced to the level of least practicable adverse impact. Specifically, vibratory hammers, which do not have significant potential to cause injury to marine mammals due to the relatively low source levels (less than 190 dB), would be the primary method of installation. Also, no impact pile driving will occur without the use of a sound attenuation system (*e.g.*, bubble curtain), and pile driving will either not start or be halted if marine mammals approach the shutdown zone. The pile driving activities analyzed here are similar to other similar construction activities, including recent projects conducted by the Navy in the Hood

Canal as well as work conducted in 2005 for the Hood Canal Bridge (SR-104) by the Washington Department of Transportation, which have taken place with no reported injuries or mortality to marine mammals.

The proposed numbers of animals authorized to be taken for Steller and California sea lions and for Dall's porpoises would be considered small relative to the relevant stocks or populations (each less than two percent) even if each estimated taking occurred to a new individual—an extremely unlikely scenario. For harbor porpoises, the number of incidences of take relative to the stock abundance (approximately eighteen percent) is higher, although still within the bounds of what we consider to be small numbers. Little is known about harbor porpoise use of Hood Canal, and prior to monitoring associated with recent pile driving projects at NBKB it was believed that harbor porpoise were

infrequent visitors to the area. It is unclear from the limited information available what relationship harbor porpoise occurrence in Hood Canal may hold to the regional stock or whether similar usage of Hood Canal may be expected to be recurring. It is unknown how many unique individuals are represented by sightings in Hood Canal, although it is unlikely that these animals represent a large proportion of the overall stock. Nevertheless, the estimated take of harbor porpoises is likely an overestimate, as sightings to date have occurred only at significant distance from the project area (both inside and outside of the predicted 120-dB zone).

The proposed numbers of authorized take for harbor seals, transient killer whales, and harbor porpoises are somewhat higher relative to the total stocks. However, these numbers represent the instances of take, not the number of individuals taken. While it is unlikely that all animals in the Hood Canal population would be exposed to sound created by project activities, the approximately 1,088 harbor seals resident in Hood Canal are approximately seven percent of the regional stock, and represent small numbers of Washington inland waters harbor seals. For transient killer whales, we estimate take based on an assumption that a single pod of whales, comprising six individuals, is present in the vicinity of the project area for the entire duration of the project. These six individuals represent a small number of transient killer whales.

For pinnipeds, no rookeries are present in the project area, there are no haul-outs other than those provided opportunistically by man-made objects, and the project area is not known to provide foraging habitat of any special importance. Repeated exposures of individuals to levels of sound that may cause Level B harassment are unlikely to result in hearing impairment or to significantly disrupt foraging behavior. Thus, even repeated Level B harassment of some small subset of the overall stock is unlikely to result in any significant realized decrease in viability, and thus would not result in any adverse impact to the stock as a whole in terms of adverse effects on rates of recruitment or survival. The potential for multiple exposures of a small portion of the overall stock to levels associated with Level B harassment in this area is expected to have a negligible impact on the affected stocks.

We have preliminarily determined that the impact of the previously described project may result, at worst, in a temporary modification in behavior

(Level B harassment) of small numbers of marine mammals. No mortality or injuries are anticipated as a result of the specified activity, and none are proposed to be authorized.

Additionally, animals in the area are not expected to incur hearing impairment (*i.e.*, TTS or PTS) or non-auditory physiological effects. For pinnipeds, the absence of any major rookeries and only a few isolated and opportunistic haul-out areas near or adjacent to the project site means that potential takes by disturbance would have an insignificant short-term effect on individuals and would not result in population-level impacts. Similarly, for cetacean species the absence of any known regular occurrence adjacent to the project site means that potential takes by disturbance would have an insignificant short-term effect on individuals and would not result in population-level impacts. Due to the nature, degree, and context of behavioral harassment anticipated, the activity is not expected to impact rates of recruitment or survival.

For reasons stated previously in this document, the negligible impact determination is also supported by the likelihood that marine mammals are expected to move away from a sound source that is annoying prior to its becoming potentially injurious, and the likelihood that marine mammal detection ability by trained observers is high under the environmental conditions described for Hood Canal, enabling the implementation of shutdowns to avoid injury, serious injury, or mortality. As a result, no take by injury or death is anticipated, and the potential for temporary or permanent hearing impairment is very low and would be avoided through the incorporation of the proposed mitigation measures.

While the numbers of marine mammals potentially incidentally harassed would depend on the distribution and abundance of marine mammals in the vicinity of the survey activity, the numbers are estimated to be small relative to the affected species or population stock sizes, and have been mitigated to the lowest level practicable through incorporation of the proposed mitigation and monitoring measures mentioned previously in this document. This activity is expected to result in a negligible impact on the affected species or stocks. The Eastern DPS of the Steller sea lion is listed as threatened under the ESA; no other species for which take authorization is requested are either ESA-listed or considered depleted under the MMPA. No take would be authorized for humpback whales or

southern resident killer whales, and the Navy would take appropriate action to avoid unauthorized incidental take should one of these species be observed in the project area.

Based on the analysis contained herein of the likely effects of the specified activity on marine mammals and their habitat, and taking into consideration the implementation of the mitigation and monitoring measures, we preliminarily find that the proposed barge mooring project would result in the incidental take of small numbers of marine mammals, by Level B harassment only, and that the total taking from the activity would have a negligible impact on the affected species or stocks.

#### **Impact on Availability of Affected Species for Taking for Subsistence Uses**

No tribal subsistence hunts are held in the vicinity of the project area; thus, temporary behavioral impacts to individual animals will not affect any subsistence activity. Further, no population or stock level impacts to marine mammals are anticipated or authorized. As a result, no impacts to the availability of the species or stock to the Pacific Northwest treaty tribes are expected as a result of the proposed activities. Therefore, no relevant subsistence uses of marine mammals are implicated by this action.

#### **Endangered Species Act (ESA)**

There are two ESA-listed marine mammal species with known occurrence in the project area: The Eastern DPS of the Steller sea lion, listed as threatened, and the humpback whale, listed as endangered. Because of the potential presence of these species, the Navy engaged in a formal consultation with the NMFS Northwest Regional Office (NWR) under Section 7 of the ESA. We also initiated separate consultation with NWR because of our proposal to authorize the incidental take of Steller sea lions under the first IHA for EHW-2 construction. NWR's Biological Opinion, issued on September 29, 2011, concluded that the effects of pile driving activities at NBKB were likely to adversely affect, but not likely to jeopardize the continued existence of the eastern DPS of Steller sea lion. The Steller sea lion does not have critical habitat in the action area. Subsequent to the completion of the biological opinion, NWR prepared an Incidental Take Statement (ITS) to be appended to the opinion.

NWR compared the ITS, as well as the effects analysis and conclusions in the Biological Opinion, with the amount of and conditions on take proposed in the

IHA and determined that the effects of issuing an IHA to the Navy for the taking of Steller sea lions incidental to construction activities are consistent with those described in the opinion. The September 29, 2011 Biological Opinion remains valid and this proposed MMPA authorization provides no new information about the effects of the action, nor does it change the extent of effects of the action, or any other basis to require reinitiation of the opinion. Therefore, the September 29, 2011 Biological Opinion meets the requirements of section 7(a)(2) of the ESA and implementing regulations at 50 CFR 402 for both the Navy construction action, as well as our proposed action to issue an IHA under the MMPA, and no further consultation is required. NWR will issue a new ITS and append it to the 2011 Biological Opinion upon issuance of the IHA, if appropriate.

### National Environmental Policy Act (NEPA)

The Navy prepared an Environmental Impact Statement and issued a Record of Decision for this project. We acted as a cooperating agency in the preparation of that document, and reviewed the EIS and the public comments received and determined that preparation of additional NEPA analysis was not necessary. We subsequently adopted the Navy's EIS and issued our own Record of Decision for the issuance of the first IHA on July 6, 2012.

We have reviewed the Navy's application for a renewed IHA for ongoing construction activities for 2013–14 and the 2012–13 monitoring report. Based on that review, we have determined that the proposed action follows closely the previous IHA and does not present any substantial changes, or significant new circumstances or information relevant to environmental concerns which would require preparation of a new or supplemental NEPA document. Therefore, we have preliminarily determined that a new or supplemental Environmental Assessment or EIS is unnecessary, and will, after review of public comments determine whether or not to reaffirm our 2012 ROD. The 2012 NEPA documents are available for review at <http://www.nmfs.noaa.gov/pr/permits/incidental.htm>.

### Proposed Authorization

As a result of these preliminary determinations, we propose to authorize the take of marine mammals incidental to the Navy's wharf construction project, provided the previously mentioned mitigation, monitoring, and reporting requirements are incorporated.

Dated: May 16, 2013.

## CONSUMER PRODUCT SAFETY COMMISSION

[Docket No. CPSC–2013–0020]

### Agency Information Collection Activities; Proposed Collection; Comment Request; CPSC National Awareness Survey

**AGENCY:** Consumer Product Safety Commission.

**ACTION:** Notice.

**SUMMARY:** The Consumer Product Safety Commission (CPSC or Commission) is announcing an opportunity for public comment on the proposed collection of certain information by the agency. Under the Paperwork Reduction Act of 1995 (PRA), federal agencies are required to publish notice in the **Federal Register** concerning each proposed collection of information and to allow 60 days for public comment in response to the notice. This notice solicits comments on a generic clearance to conduct national awareness surveys regarding the CPSC and CPSC activities.

**DATES:** Submit written or electronic comments on the collection of information by July 22, 2013.

**ADDRESSES:** You may submit comments, identified by Docket No. CPSC–2013–0020, by any of the following methods:

*Electronic Submissions:* Submit electronic comments to the Federal eRulemaking Portal at: <http://www.regulations.gov>. Follow the instructions for submitting comments. The Commission does not accept comments submitted by electronic mail (email), except through [www.regulations.gov](http://www.regulations.gov). The Commission encourages you to submit electronic comments by using the Federal eRulemaking Portal, as described above.

*Written Submissions:* Submit written submissions in the following way: Mail/Hand delivery/Courier (for paper, disk, or CD-ROM submissions), preferably in five copies, to: Office of the Secretary, Consumer Product Safety Commission, Room 820, 4330 East-West Highway, Bethesda, MD 20814; telephone (301) 504–7923.

*Instructions:* All submissions received must include the agency name and docket number for this notice. All comments received may be posted

without change, including any personal identifiers, contact information, or other personal information provided, to: <http://www.regulations.gov>. Do not submit confidential business information, trade secret information, or other sensitive or protected information that you do not want to be available to the public. If furnished at all, such information should be submitted in writing.

*Docket:* For access to the docket to read background documents or comments received, go to: <http://www.regulations.gov>, and insert the docket number, CPSC–2013–0020, into the “Search” box, and follow the prompts. A copy of the draft survey is available at <http://www.regulations.gov> under Docket No. CPSC–2013–0020, Supporting and Related Materials.

**FOR FURTHER INFORMATION CONTACT:** For further information contact: Robert H. Squibb, Consumer Product Safety Commission, 4330 East-West Highway, Bethesda, MD 20814; (301) 504–7815, or by email to: [rsquibb@cpsc.gov](mailto:rsquibb@cpsc.gov).

**SUPPLEMENTARY INFORMATION:** Under the PRA (44 U.S.C. 3501–3520), federal agencies must obtain approval from the Office of Management and Budget (OMB) for each collection of information they conduct or sponsor. “Collection of information” is defined in 44 U.S.C. 3502(3) and 5 CFR 1320.3(c) and includes agency requests or requirements that members of the public submit reports, keep records, or provide information to a third party. Section 3506(c)(2)(A) of the PRA (44 U.S.C. 3506(c)(2)(A)) requires federal agencies to provide a 60-day notice in the **Federal Register** concerning each proposed collection of information before submitting the collection to OMB for approval. Accordingly, the CPSC is publishing notice of the proposed collection of information set forth in this document.

### A. National Awareness Survey

The Commission is authorized under section 5(a) of the Consumer Product Safety Act (CPSA), 15 U.S.C. 2054(a), to conduct studies and investigations relating to the causes and prevention of deaths, accidents, injuries, illnesses, other health impairments, and economic losses associated with consumer products. Section 5(b) of the CPSA, 15 U.S.C. 2054(b), further provides that the Commission may conduct research, studies, and investigations on the safety of consumer products or test consumer products and develop product safety test methods and testing devices. To increase awareness about the CPSC and to communicate more effectively and

efficiently with the public regarding information related to consumer product safety, such as product recalls and the reporting of hazardous incidents, the Commission must evaluate current awareness and benchmark changes in public awareness brought about through agency efforts. Using a national awareness survey (NAS), the Commission will benchmark current levels of awareness and, through two proposed surveys each year, measure changes in awareness. As agency staff acquires data, the CPSC's Office of Communications will adjust its communications plans to increase the effectiveness of the Commission's efforts. The Commission is seeking a generic clearance approval from OMB to streamline the process for approval of subsequent surveys which may be needed to be adjusted or modified to obtain the most relevant awareness data.

The first two national awareness surveys will provide baseline data on the awareness of the agency, the CPSC's programs, and recalls—information about which there currently is relatively little systematic data collection. Periodic surveys will be conducted with new respondents at intervals to be determined by agency resources and needs. Analysis of subsequent surveys will assess changes in awareness. Additional surveys also will provide assessment of the effects of temporal events, such as product recalls with wide media coverage, or seasonal use of fireworks or Christmas tree lights. To gauge the extent of the public's awareness of the agency and its activities, the NAS will measure awareness of sources for product safety information, awareness of procedures for hazardous incident reporting, and awareness of product recall enforcement activity. In addition, the CPSC will learn how awareness varies with key respondent characteristics, such as age, or whether there are children in the household.

With the information obtained through the NAS, the CPSC intends to adjust its communications efforts to achieve a greater impact on consumer behavior. The CPSC's activities aim to serve a broad range of consumers with differing needs. Reaching all target audiences requires varying communications approaches. The survey is designed to assess which audiences are being reached and which messages are being communicated effectively. Results will indicate which messages and methods of communication require further development. For example, awareness in households with children ages 5 and younger is expected to be different from

awareness in households comprising only seniors. The need to include diverse respondents necessitates contacting a large number of households to obtain adequate sample sizes for all key subpopulations.

The first two survey data collections will be conducted with sufficient numbers and at different time points to establish baseline estimates of consumer awareness and use of CPSC services. The data also may be used to support other aspects of agency operations and communications programs.

The survey will be administered using a computer-assisted telephone interview (CATI) system, in a secure location, to which only authorized personnel have access. The interview will be conducted using a random (cell and landline) telephone number dialing protocol. Interviewers will collect data from a randomly selected adult member of each household. Participation is voluntary, and all responses will be confidential. The operators dialing and conducting the survey are trained interviewers. The initial screening is short, taking less than a minute at the longest. The brevity of the screening will reduce the burden to nonparticipants. Respondents who are aware of the CPSC will be presented with 23 substantive questions. Those who are not familiar with the agency will be presented with 18 substantive questions. All participants will be asked 13 demographic questions and be invited to participate in a brief follow-up phone discussion to provide context and detail on the CPSC and product safety information awareness. No more than nine respondents will actually participate in follow-up discussions. Follow-up topics and questions will be based on baseline results. To minimize respondent burden, the CATI system will ensure that interviewers ask each respondent survey items appropriate for the respondent's level of awareness only. The system's automatic survey control also will produce status reports to allow ongoing monitoring of the survey's progress. The CATI scheduler will be used to route telephone numbers to interviewers, maintain a schedule of callback appointments, and reschedule unsuccessful contact attempts to an appropriate day and time.

#### B. Burden Hours

The telephone interview will take approximately 15–20 minutes to complete. Each cognitive interview will take approximately 1 hour; and each usability test will also take approximately 1 hour. The survey will be administered twice a year with 640 respondents for each survey. Follow-up interviews with nine respondents for

each round will take approximately 30 minutes (0.5 hours) each. The total annual burden hours for respondents is estimated to be 455.9 hours. The hourly cost is estimated to be \$51.03 (U.S. Bureau of Labor Statistics, "Employer Costs for Employee Compensation," December 2012, Table 9, total compensation for all management, professional, and related workers in goods-producing private industries: <http://www.bls.gov/ncs/>). Accordingly, the estimated total annual cost burden to all respondents is \$23,264.58 (455.9 hours × \$51.03, or \$23,264.58).

The annual cost to the federal government is estimated to be the cost of administering the survey (\$162,952), plus \$3,976, based on 6 days of staff time (3 days for each survey) at an average level of GS–14 step 5 (((\$119,238/.692) ÷ 2080 total hours per year) × 48 hours per year), using a 69.2 percent ratio of wages and salary to total compensation (from Table 1 of the September 2012 Employer Costs for Employee Compensation, published by the Bureau of Labor Statistics). Therefore, total estimated cost to the government is \$162,951.94 plus \$3,976 in government labor costs for the first round of surveys and, without initial set-up costs in subsequent years, about \$130,000, plus about \$3,976 for two surveys per year in future years to be adjusted for inflation.

#### C. Request for Comments

The CPSC invites comments on these topics:

- Whether the proposed collection of information is necessary for the proper performance of CPSC's functions, including whether the information will have practical utility;
- The accuracy of CPSC's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

Dated: May 16, 2013.

**BILLING CODE P**

**DEPARTMENT OF EDUCATION****Applications for New Awards;  
Promoting the Readiness of Minors in  
Supplemental Security Income  
(PROMISE)**

**AGENCY:** Office of Special Education and Rehabilitative Services, Department of Education.

**ACTION:** Notice.

**Overview Information**

Promoting the Readiness of Minors in Supplemental Security Income (PROMISE)

Notice inviting applications for new awards for fiscal year (FY) 2013.

Catalog of Federal Domestic Assistance (CFDA) Number: 84.418P.

**DATES:**

*Applications Available:* May 21, 2013.

*Deadline for Notice of Intent to Apply:* June 20, 2013.

*Dates of Pre-Application Webinars:* May 30, 2013 and June 4, 2013.

*Date of Pre-Application*

*Teleconference:* June 27, 2013. For further information about the pre-application webinars and teleconference, see the PROMISE Web site at [www.ed.gov/promise](http://www.ed.gov/promise).

*Deadline for Transmittal of Applications:* August 19, 2013.

**Full Text of Announcement****I. Funding Opportunity Description**

*Purpose of Program:* Promoting the Readiness of Minors in Supplemental Security Income (PROMISE) is a joint initiative of the U.S. Department of Education (ED), the U.S. Social Security Administration (SSA), the U.S. Department of Health and Human Services (DHHS), and the U.S. Department of Labor (DOL). Under PROMISE, ED will fund States to develop and implement model demonstration projects (MDPs) that promote positive outcomes for children who receive Supplemental Security Income (SSI) and their families. Specifically, PROMISE is intended to improve the provision and coordination of services and supports for child SSI recipients and their families to enable them to achieve improved outcomes. These outcomes include graduating from high school ready for college and a career, completing postsecondary education and job training, and obtaining competitive employment in an integrated setting and, as a result, achieving long-term reductions in the child recipients' reliance on SSI.

*Priority:* We are establishing this priority for the FY 2013 grant

competition and any subsequent year in which we make awards from the list of unfunded applicants from this competition, in accordance with section 437(d)(1) of the General Education Provisions Act (GEPA), 20 U.S.C. 1232(d)(1).

*Absolute Priority:* This priority is an absolute priority. Under 34 CFR 75.105(c)(3) we consider only applications that meet this priority. Applications submitted under this absolute priority may be from a single State or a multi-State consortium.<sup>1</sup>

This priority is:

*Promoting the Readiness of Minors in Supplemental Security Income (PROMISE)*

**Background**

The Supplemental Security Income (SSI) program for children provides cash payments to low-income families that have a child with a severe disability under SSA disability eligibility criteria. This means-tested cash payment is a vital source of income for families of children under the age of 18. To qualify for SSI, children and their families must meet income, asset, and disability eligibility criteria. To meet the SSI disability eligibility criteria, a child must have a medically determinable physical or mental impairment that results in marked and severe functional limitations, and that can be expected to result in death or that has lasted, or can be expected to last, for a continuous period of not less than 12 months (42 U.S.C. 1382(c)). In 2011, SSA paid roughly \$9.4 billion to 1.3 million children, an average monthly payment of \$592 per child. In 2013, the maximum monthly SSI payment is \$710 per child ([www.ssa.gov/oact/cola/SSI.html](http://www.ssa.gov/oact/cola/SSI.html)).

Under the Personal Responsibility and Work Opportunity Reconciliation Act of 1996, when they reach the age of 18, child SSI recipients must have their eligibility for SSI redetermined using more stringent adult eligibility criteria. Using the adult program rules, eligibility is based on the inability to perform substantial gainful activity (Hemmeter & Gilby, 2009).

Approximately 60 percent of child SSI recipients receive SSI as adults (Hemmeter, Kauff, & Wittenburg, 2009). Of those who leave the program at age 18, either because they did not meet the adult SSI disability criteria or for other

reasons, about one-fourth of the SSI recipients return to the program within four years (Hemmeter & Gilby, 2009). The probability of remaining on SSI varies substantially among individuals and especially by the type and significance of impairment (Hemmeter, Kauff, & Wittenburg, 2009).

Child SSI recipients who become adult SSI recipients continue to face many challenges. Rangarajan et al. (2009) report the following data (from 2000) for young adults, ages 19 to 23, receiving SSI payments:

- *Low educational attainment rates:* 39 percent did not have a high school diploma and were not currently attending school.

- *Low employment rates:* 22 percent were employed compared with 69 percent for all adults ages 20 to 24.

- *Low postsecondary enrollment rates:* 6 percent were enrolled in some form of postsecondary education after graduating from high school, compared with 41 percent of all youth ages 18 to 23.

- *Low enrollment rates in vocational rehabilitation (VR):* Only 13 percent had ever received services from a State VR agency.

- *High arrest rates:* Approximately one-fifth had been arrested, which is fairly consistent with other reports (e.g., Quinn, Rutherford, Leone, Osher, & Poirier, 2005) indicating that 30 to 50 percent of all incarcerated youth have disabilities that could qualify them for support services, such as special education.

- *High rates of disconnection overall:* 57 percent were not enrolled in education programs, not receiving VR services, and not employed.

Parents and other family members of child SSI recipients also face many challenges and are in need of support services. According to Davies, Rupp, and Wittenburg (2009), about one-third of the parents of child SSI recipients have less than a high school education, and almost half of child SSI recipients live in a household with at least one other person with a disability. There also is evidence that child SSI recipients and their families lack information about various work incentives available to them to help them pursue activities that would increase self-sufficiency (Fraker & Rangarajan, 2009; Loprest & Wittenburg, 2005).<sup>2</sup>

The structure of services to help children with disabilities who are SSI recipients transition from school to

<sup>1</sup> Applicants are invited to form consortia consistent with the Education Department General Administrative Regulations in 34 CFR 75.127 through 75.129. A consortium is any combination of eligible entities. See the *Eligibility Information* section of this notice for further requirements for consortia.

<sup>2</sup> SSI programs include a number of employment support provisions commonly referred to as "work incentives." Additional information about SSI work incentives is available at [www.socialsecurity.gov/redbook/eng/ssi-only-employment-supports.htm#2](http://www.socialsecurity.gov/redbook/eng/ssi-only-employment-supports.htm#2).

postsecondary education and competitive employment may also be a barrier to achieving self-sufficiency and independence. Not all child SSI recipients receive transition support services as adults because many services, including VR and mental health services, are not entitlements (Hemmeter, Kauff, & Wittenburg, 2009). In addition, there are concerns about gaps (e.g., differing eligibility requirements and goals) in the coordination of transition support services provided by Federal, State, and local governments, as noted in a series of U.S. Government Accountability Office (GAO) reports over the past decade (GAO, 2003, 2008, 2012).

To address these gaps and improve postsecondary education and employment outcomes for children with disabilities, there is a need to strengthen coordination among agencies through the development of interagency partnerships that integrate educational and employment services, supports, and resources. It is also essential to provide coordinated individual and family-centered interventions that use evidence-based transition support services (SSA, 2003). The Individuals with Disabilities Education Act (IDEA) requires that, beginning at age 16, or younger if determined appropriate by the individualized education program (IEP) Team, a child with a disability, including child SSI recipients served under the IDEA, receive transition services, which are a coordinated set of activities to facilitate the child's movement from school to post-school activities.<sup>3</sup> Transition services could include services available through the VR State Grants program, SSA's Ticket to Work Program and Work Incentives Program, Medicaid's care coordination services, Job Corps, and other Workforce Investment Act programs.

Unfortunately, there is no strong evidence of the effectiveness of specific services for youth with disabilities who are transitioning from school to post-school activities. More research is needed to identify effective interventions, although there are some suggestive findings (Cobb et al., in review). For example, the National Survey of SSI Children and Families found that the probability of remaining on SSI was substantially lower for those who were employed prior to age 18 (Hemmeter, Kauff, & Wittenburg, 2009). Other correlational studies suggest that better post-school outcomes for children with disabilities may be linked to the

following: (1) Primary and secondary school activities such as inclusion in general education, exposure to career awareness and community activities, and education in skills such as self-awareness, self-advocacy, and independent living; (2) interagency collaboration; and (3) education and supports for the families, including ways to encourage parental participation in IEP Team meetings, financial and career planning courses, and transition plans for moving off of SSI (Test et al., 2009).

To address these concerns about barriers, to encourage new ways of providing supports, and to build an evidence base on the effectiveness of promising interventions, the Consolidated Appropriations Act, 2012 (P.L. 112-74) provided funds for activities aimed at improving the outcomes for child SSI recipients and their families. Specifically, the FY 2012 appropriation for Special Education included \$2 million to support activities needed to plan and begin implementing PROMISE. In addition, the FY 2012 Consolidated Appropriations Act allows the Secretary to use amounts that remain available subsequent to the reallocation of funds to States under the VR State Grants program pursuant to section 110(b) of the Rehabilitation Act of 1973, as amended (Rehabilitation Act), for improving the outcomes of child SSI recipients and their families under PROMISE. These funds, which remain available for Federal obligation until September 30, 2013, will be used to support PROMISE grant awards and related activities.

Children receiving payments under the SSI program need a continuum of coordinated services and supports to prepare for the transition to postsecondary education and competitive employment and to continue on a path to economic self-sufficiency. Through the PROMISE program, States will develop and implement MDPs that are designed to improve the educational and employment outcomes of child SSI recipients and their families, and SSA will evaluate these MDPs in order to help build an evidence base of practices that improve these outcomes.

Based on our review of the available research, extensive public input, and consultation with experts, ED believes that effective partnerships among agencies responsible for programs that provide key services to child SSI recipients and their families will increase the likelihood of success of the PROMISE MDPs. Effective partnerships can improve the coordination of services, integrate multiple funding

sources and other resources at the State and local levels, and enhance the ability of the State to effectively serve child SSI recipients and their families. We also believe that focusing on the needs of both children and their families will help further the long-term goal of independence and self-sufficiency for child SSI recipients. In particular, we are interested in testing whether initiating interventions with the child and family when the child is 14 to 16 years of age will lead to better outcomes.

For this reason, each PROMISE project must have several core features: (1) Strong and effective partnerships with agencies responsible for programs that play a key role in providing services to child SSI recipients and their families; (2) a plan to provide a set of coordinated services and supports, and implement effective practices, targeted to the needs of child SSI recipients and their families; and (3) the capacity to achieve results, including the capacity to implement the required project design and adhere to data collection protocols that allow for the testing and rigorous evaluation of the project.

The first four months of the project period will be used for planning and finalizing all aspects of the MDP, such as establishing formal partnerships, securing memoranda of understanding (MOUs) with the lead coordinating entity as described in the *Eligibility Information* section of this notice, and collaborating with the national evaluator<sup>4</sup> to plan for and initiate participant outreach and recruitment.

ED expects States, in developing their MDPs, to draw on their knowledge and experience in working with children and families with similar characteristics (i.e., those living in poverty and those with family members with disabilities), as well as on the relevant literature, to identify innovative methods of providing services and supports that show potential to improve the economic self-sufficiency of child SSI recipients and their families. In addition, based on the review of literature, input from non-Federal experts, and expertise of the Federal PROMISE partners, we have identified a small subset of services that each project will be required to provide. Furthermore, we have identified examples of other services and supports that we ask States to consider as they develop their MDPs (see *Services and Supports* under paragraph (b) of the *Project Activities* section of this notice).

<sup>4</sup> A national evaluator, funded under a contract with SSA, will conduct a rigorous evaluation using randomized controlled trials to determine the effectiveness of the projects at improving the outcomes of participating youth and reducing their dependence on SSI.

<sup>3</sup> See 20 U.S.C. 1401(34) and 34 CFR 300.43; see also 20 U.S.C. 1414(d)(1)(A)(i)(VIII) and 34 CFR 300.320(b).

ED and its Federal PROMISE partners intend to use the findings and results of these projects to inform public policy and to build an evidence base for improving postsecondary education and employment outcomes for child SSI recipients and their families.

### Priority

The purpose of this priority is to fund three to six cooperative agreements for five years, to establish and operate State MDPs designed to improve the education and employment outcomes of child SSI recipients and their families, and eventually lead to increased economic self-sufficiency and a reduction in their dependence on SSI payments. At a minimum, the MDPs must—

(a) Develop and implement interventions for child SSI recipients between the ages of 14 and 16 at the time the project services are initiated for them and their families. The MDP interventions should be based on the best available research evidence or data from State experience relating to coordinating, arranging, and providing services and supports for child SSI recipients and their families.

The MDP interventions must be designed to meet PROMISE's goals (for both the children and their families), which include:

- Increased educational attainment for the child SSI recipients and their parents;
- Improved rates of employment, wages/earnings, and job retention for the child SSI recipients and their parents;
- Increased total household income; and
- Long-term reduction in SSI payments.

(b) Establish partnerships (through subgrants subcontracts, memoranda of understanding, or other formal agreements) with State and local agencies and other entities to improve interagency collaboration in carrying out the MDP interventions and in developing innovative methods of providing services and supports that will lead to better outcomes for child SSI recipients and their families. For

example, these methods could include better use of existing services, identification of gaps in services, and sharing resources, data, or other information so long as such sharing of data or information is permitted under any applicable Federal or State laws or regulations that protect the confidentiality or privacy of personally identifiable information or records;

(c) Participate, and require any subgrantees or partners to participate, in collaboration with the national evaluator, in ongoing data collection and analysis, in a manner consistent with any applicable Federal or State laws or regulations that protect the confidentiality or privacy of personally identifiable information or records, both to determine the effectiveness of the MDP, including specific interventions, and to allow for mid-course corrections in the project as needed during the demonstration period, including by—

(1) Cooperating with the national evaluator in the random assignment of eligible child participants and their families either to the group that receives the MDP interventions (treatment group) or to the group that does not receive the MDP interventions, but receives services they would ordinarily receive (control group), and in the collection of data for the evaluation as permitted under applicable Federal or State laws or regulations; and

(2) Designing and implementing a plan for continually assessing the progress of the MDP interventions, for the purpose of ongoing program evaluation.

*Project Activities.* To meet the requirements of this priority, the MDP, at a minimum, must conduct the following activities:

#### (a) Partnerships

(1) Establish a formal partnership with agencies and organizations in the State that play, or have the potential to play, a substantial role in the development and implementation of policies and practices affecting child SSI recipients and their families and in the provision of services and supports to those children and their families.

(i) At a minimum, partners must include the State agencies or equivalents responsible for administering programs that provide the following services:

- State VR services under Title I of the Rehabilitation Act;
- Special education and related services under Part B of the IDEA;
- Workforce Development services under Title I of the Workforce Investment Act (WIA), including Youth

Services described in the WIA (Section 129(c)(2));

- Medicaid services under Title XIX of the Social Security Act;
- Temporary Assistance for Needy Families under the Personal Responsibility and Work Opportunity Reconciliation Act;
- Developmental/intellectual disabilities services; and
- Mental health services.

(ii) An applicant may propose a partnership that excludes a required State partner described in paragraph (a)(1)(i) of this section if the applicant provides a strong justification for doing so. A strong justification for excluding a required State partner would be if the applicant can provide the required services and supports and other proposed services and supports (described in *Services and Supports* under paragraph (b) of the *Project Activities* section of this notice) to the child participants and their families without the participation of the required partner. However, at least three of the required partners, including the lead coordinating entity, must participate in the partnership.

(iii) In order to meet the requirements described in paragraph (a)(1)(i) or (a)(1)(ii) of this section, applicants may propose to include an established State-level interagency entity such as a State Transition Coordinating Council.

(iv) Applicants may propose other partners that they believe would facilitate the success of the project, such as Employment Networks under the Ticket to Work Program, employers or employer organizations, community colleges, institutions of higher education, independent living centers, and agencies that administer or carry out adult education programs, career and technical education programs, and maternal and child welfare programs.

(v) Applicants must establish procedures governing the exchange of information by the partners in accordance with any applicable Federal or State laws or regulations that protect the confidentiality or privacy of personally identifiable information or records. This includes establishing procedures to ensure that personally identifiable information from education records is exchanged among the partners in compliance with the requirements of the Family Educational Rights and Privacy Act (FERPA),<sup>5</sup> 20

<sup>5</sup> Applicants must ensure the confidentiality of individual data, consistent with the requirements of FERPA, 20 U.S.C. 1232g, the confidentiality of information provisions in section 617(c) of the IDEA, and any other applicable Federal or State laws or regulations that protect the privacy or confidentiality of personally identifiable

U.S.C. 1232g, and its implementing regulations in 34 CFR part 99, and the IDEA confidentiality of information provisions in 20 U.S.C. 1417(c) and 34 CFR 300.622, which protect the privacy of personally identifiable information in education records and generally require the prior consent of the parent or eligible student for the disclosure of such information to third parties, unless there is an exception that would permit the disclosure without consent.

(b) Services and Supports for Participants in the Treatment Group

(1) Develop and implement interventions for child SSI recipients and their families that include a coordinated set of services and supports designed to improve the education and employment outcomes (described under *Performance Measures* in paragraph (c) of the *Evaluation and Project Assessment Activities* section of this notice) of child SSI recipients and their families. The MDP must also develop innovative methods of providing these services and supports, including coordinating and using resources available through existing programs or funding streams.

In selecting the services and supports to be provided, the applicant must consider the best available information on promising strategies and practices, including, where available, evidence of the effectiveness of the proposed strategies and practices.

(i) As a subset of the proposed services and supports, each MDP must provide or arrange for the following—

(A) *Case management*: Each MDP must provide case management services for the duration of the project to ensure that services for the participating children and their families are appropriately planned and coordinated and to assist project participants in navigating through the services, supports, and benefits available from

information or records. FERPA generally prohibits school districts and schools that receive Federal funds from the U.S. Department of Education from disclosing, without the prior written consent of a parent or an eligible student, personally identifiable information from education records. See 20 U.S.C. 1232g and 34 CFR 99.30. (An eligible student is a student who is 18 years of age or older or attends a postsecondary institution at any age). However, certain disclosures may occur, without the prior written consent of a parent or an eligible student, under one of FERPA's specific exceptions to the prior consent requirement. See 34 CFR 99.31. In general and consistent with FERPA, IDEA's confidentiality of information provisions require prior written consent for disclosures of personally identifiable information contained in education records, unless a specific exception applies (20 U.S.C. 1417(c) and 34 CFR 300.622). Questions about FERPA can be forwarded to the Family Policy Compliance Office (www.ed.gov/fpco) at (202) 260-3887 or FERPA@ed.gov.

the larger service delivery system. Case management services must include, at a minimum:

(1) Identifying, locating, and arranging for needed services and supports for the children and their families;

(2) Coordinating services provided directly by the MDP with other services that are available in the larger service delivery system; and

(3) Transition planning to assist the participating children in setting post-school goals and to facilitate their transition to an appropriate post-school setting, including postsecondary education, training, or competitive employment in an integrated setting. Transition planning must be conducted in coordination with the local educational agency<sup>6</sup> and, as appropriate, with the consent of the parents or a child who has reached the age of majority under State law, with other agency partners, such as the VR agency, the State Medicaid Agency or other public insurance program, and workforce investment agencies;

(B) *Benefits counseling and financial capability services*: Each MDP must include ongoing training for the child participants and their families on SSA work incentives, eligibility requirements of various programs, earnings rules, asset accumulation, and financial literacy and planning;

(C) *Career and work-based learning experiences*: At least one paid work experience in an integrated setting must be provided for children participating in the project before leaving high school. In addition, other skill development opportunities must be provided in an integrated setting, such as volunteering or participating in internships, community services, and on-the-job training experiences, including experiences designed to improve

<sup>6</sup> Under the IDEA, beginning not later than the first IEP to be in effect when the child turns 16, or younger if determined appropriate by the IEP Team and updated annually thereafter, the IEP must include (1) appropriate measurable postsecondary goals based upon age appropriate transition assessments related to training, education, employment, and where appropriate, independent living skills; and (2) the transition services (including courses of study) needed to assist the child in reaching those goals. 34 CFR 300.320(b). These determinations are made through the IEP process in a meeting of the IEP Team. If a purpose of an IEP Team meeting is the consideration of the child's postsecondary goals and the transition services needed to assist the child in reaching those goals, the requirements in 34 CFR 300.321(b) apply to the participants at that meeting. Section 300.321(b)(3) provides that: To the extent appropriate, with the consent of the parents or a child who has reached the age of majority under State law, the public agency, a term that includes the local educational agency, must invite a representative of any participating agency that is likely to be responsible for providing or paying for transition services.

workplace basic skills (sometimes called "soft skills"); and

(D) *Parent training and information:*

At a minimum, the project must provide information and training to the family of participating children with respect to:

(1) The parents' role in supporting and advocating for their children's education and employment goals, including the importance of high expectations for their children's participation in education and competitive employment;

(2) Resources for improving the education and employment outcomes of the parents and the economic self-sufficiency of the family, including through—

(i) The acquisition of basic education, literacy, and job-readiness skills, and

(ii) Job training and employment services.

(ii) The MDPs also must provide, or arrange for the provision of, other services and supports designed, in combination with the required services, to improve education and employment outcomes for participating children and their parents. Examples of other services include:

(A) Youth development activities: Examples include training in job-seeking skills, life skills, independent living skills, self-advocacy, self-determination, and conflict resolution; exposure to personal leadership development and mentoring opportunities; and exposure to post-school supports through structured arrangements with postsecondary education programs and adult service agencies;

(B) Career development/preparatory activities: Examples include career assessments to help identify career preferences, interests, and skills; career counseling and exploration, including structured exposure to postsecondary education and other life-long learning opportunities; exposure to career opportunities that ultimately lead to a living wage; and information about educational requirements, entry requirements, and income and benefits potential;

(iii) Extended and experiential learning opportunities in integrated settings;

(iv) Job search and job placement assistance, job development, and post-placement employment supports;

(v) Activities designed to engage employers in providing work experiences and in employing participants of the project;

(vi) Health and behavioral management and wellness services, including transition to adult services;

(vii) Literacy training;

(viii) Training in the use of technology and assistive technology services and devices, including the use of assistive technology for education, training, and employment purposes; and

(ix) Independent living activities such as assistance in locating and obtaining housing, health care, and personal attendant services; transportation training and subsidies; child care services; and other community supports.

(c) *Participant Outreach and Recruitment*

Within two years of the initiation of the project:

(1) Plan for and conduct outreach and recruitment activities (such activities may include mailings, phone calls, informational meetings at State or local agencies or schools, home visits, and other efforts targeted to this population);<sup>7</sup>

(2) Obtain consent for the participation of a minimum of 2,000 child SSI recipients;

(3) Initiate services to participants in the treatment group who must be between the ages of 14 and 16 at the time that project services are initiated; and

(4) As part of the plan for outreach and recruitment, prepare and provide potential participants with a recruitment packet that includes—

(i) A description of the full scope of the project and the goals and objectives of the project with respect to participant outcomes and evaluation activities, including the use of random assignment to determine who will receive MDP interventions, and an explanation of what will be expected of the control group members (e.g., participation in surveys at 18 months, and potentially 60 months after random assignment);

(ii) An MDP enrollment form developed by the national evaluator that includes sufficient demographic and other information to classify the participants into subgroups for further analysis; and

(iii) A written consent form to participate in the project for the parent and, if applicable, the child, that will be developed jointly by the MDP and the national evaluator. As part of the consent, the project requirements must be fully explained to the parent and, if appropriate, to the child. If appropriate, a child who has reached the age of majority under State law must sign the consent form. The consent form must

<sup>7</sup> To assist in these efforts, SSA will, upon completion of an MOU between SSA and the State, provide a list of child SSI recipients and the available contact information in order to assist each funded project in identifying potential participants.

obtain from the parent or child, if appropriate, written consent to participate in the program and to permit the disclosure of personally identifiable information from relevant, privacy-protected records either to the national evaluator or to the project partners in order for them to share data needed to carry out project activities.

All outreach and recruitment materials and forms must be developed and provided in accessible formats for individuals with disabilities, using jargon-free, easily comprehended language, and provided in the family's native language or through another mode of communication, unless it is clearly not feasible to do so.

(d) *Technical Assistance and Training*

(1) Provide or arrange for the provision of technical assistance, professional development, and training for State and local staff who will carry out project and evaluation activities to ensure that the interventions are implemented in accordance with the MDP design and the needs of the national evaluation. At a minimum, the MDP must provide for the following:

(i) Development of all necessary information and materials about the MDP interventions and project assessments, including the roles and responsibilities of all partners and staff at the State and local levels;

(ii) Twice-a-year meetings in which local site staff are required to participate and for which their participation is supported with project funds. For single State applicants, conduct these meetings either at the location of the lead coordinating entity or at a central location in the State. For consortia, conduct these meetings at a mutually agreeable location. The types of professional development and training to carry out the MDP interventions will be determined by the lead coordinating entity, its partners, and ED. The professional development will be provided by personnel from those entities or other experts. One or more sessions at the semi-annual meetings will be led by the national evaluator in order to train appropriate State and local staff on the evaluation requirements, including the random assignment and data collection processes consistent with any applicable Federal or State laws or regulations that protect the privacy or confidentiality of any relevant data. The first semi-annual meeting must occur early in the first year of the project before random assignment begins; and

(iii) Other ongoing technical assistance that the lead coordinating entity and its partners, including the

national evaluator, determine is necessary for fidelity of implementation of the MDP interventions and the evaluation and project assessment activities.<sup>8</sup>

*Evaluation and Project Assessment Activities.* Each MDP must be designed to show progress in the key outcome measures to be evaluated under the PROMISE initiative (described in the *Performance Measures* under paragraph (c) of the *Evaluation and Project Assessment Activities* section of this notice), as well as the other outcomes that a project proposes to measure. To meet the requirements of this priority, each MDP, at a minimum, must participate in the following activities.

(a) Rigorous Program Evaluation

(1) SSA, in collaboration with ED, will conduct a rigorous evaluation of the PROMISE program using a randomized controlled trial design for each project to obtain evidence of the effectiveness of the MDP interventions carried out under the PROMISE program. MDPs and their designated partners at the State and local levels must:

(i) Agree to allow random assignment to determine which half of the at least 2,000 children and their families recruited for the project will receive the MDP interventions (treatment group) and which half of the children and families will receive the services they ordinarily would receive and will not receive the MDP interventions (control group);

(ii) Ensure that State or local site staff, wherever MDP enrollment forms are being collected, assist in the random assignment process. Staff will be required to provide information from each child's enrollment form (e.g., name, Social Security number, gender, disability, age) to the national evaluator through a secure Web-based random assignment system or a secure phone system. The Web or phone systems will be developed by the national evaluator. After staff provide the data items that are necessary to conduct the random assignment, the results of the random assignment will be made available to the project staff;

(iii) Ensure that State or local staff communicate the results of the random assignment (i.e., whether the participants have been assigned to the treatment group or the control group) to the child SSI recipients and their families;

(iv) Provide the MDP interventions only to the children and their families assigned to the treatment group; and

(v) Require State and local staff involved in the random assignment process to receive training from the national evaluator at the technical assistance and training meetings (described in paragraph (d)(1) of the *Technical Assistance and Training* section of this notice) arranged by the State.

(b) Formative Evaluation

(1) Each MDP must develop and implement a plan for conducting a formative evaluation of the project's activities and model, consistent with the proposed logic model and data collection plan, to assess the project's performance and progress in achieving its goals and inform decision making (as outlined in paragraph (j) in the *Application Requirements* section of this notice).

(c) Performance Measures

(1) Each project must be designed to track its progress on the key outcomes to be evaluated under the PROMISE program as well as the other outcomes that a project proposes to measure.

(2) In collaboration with the national evaluator, the performance of the PROMISE program will be assessed on the basis of established key outcome measures for participating child SSI recipients and their families, as reflected in the goals of the program provided in the priority:

(i) Increased educational attainment (high school completion, diploma or equivalent) and enrollment and persistence in postsecondary education or training by child SSI recipients and their parents;

(ii) Increased number of individuals, including both child SSI recipients and their parents, earning credentials after high school (e.g., postsecondary degree, technical certification, occupational licensure, or other industry-recognized credential);

(iii) Improved employment outcomes (e.g., competitive employment and increased earnings, number of hours worked per week, job retention) for child SSI recipients and their parents;

(iv) Reduced use of public benefits provided to the individual or family (e.g., cash benefits and other benefits with directly measurable economic value);

(v) Increased total gross income of all the members of a household who are 15 years old and older (included in the total are amounts reported separately for wage or salary income; net self-employment income; interest,

dividends, or net rental or royalty income or income from estates and trusts; Social Security or Railroad Retirement income; Supplemental Security Income; public assistance or welfare payments; retirement, survivor, or disability pensions; and all other income); and

(vi) Post-program reduction in SSI payments as a result of participation in the MDP (i.e., amounts paid to children and their families who participate in the MDP interventions are expected to be less than amounts paid to participants randomly assigned to receive services they typically receive).

(3) In addition to the key program outcome measures, each MDP must develop project measures that assess the project's performance in achieving its goals consistent with the purpose of the priority and the project's logic model.

(i) The set of project measures must include interim measures that assess the progress toward achieving the project's outcomes, including the attainment of milestones and benchmarks consistent with the logic model. For example, the applicant may consider measures related to school attendance, project attrition, work experiences, enrollment in education or workforce development programs, or the use of partner-provided services for which the child participants and their families are eligible.

(ii) The MDP must report progress and performance on its measures at least quarterly to the Office of Special Education Programs (OSEP) and the national evaluator and use this information to inform decision making consistent with any applicable Federal or State laws or regulations that protect the privacy or confidentiality of any personally identifiable information or records.

(d) Data Collection

(1) Each MDP must develop and implement a plan for collecting data and for cooperating with the national evaluator in its efforts to obtain data and other information on the MDP. The plan must be designed to ensure that the MDP will:

(i) Assist in collecting baseline (pre-program) data using the MDP enrollment form provided by the national evaluator;

(ii) Require project partners and staff at the State and local levels to cooperate with the national evaluator's efforts to obtain descriptive information on project implementation such as through surveys, focus groups, or other methods.

(iii) Have the capacity to track and manage project information, such as referrals and service participation, and document the services and supports

<sup>8</sup> ED and SSA plan to fund technical assistance to PROMISE projects on program implementation, data collection, and evaluation fidelity. Projects should provide or arrange for technical assistance beyond what will be funded by ED and SSA.

received by the child participants and their families.

(iv) Ensure the State administrative data collected by various State agency PROMISE partners are shared with the national evaluator, subject to obtaining required consent under FERPA and the IDEA confidentiality of information provisions and any other applicable Federal or State laws or regulations that protect the privacy or confidentiality of personally identifiable information or records. These State data may include information related to services provided, interim and long-term outcomes, and project progress and performance. Examples of State administrative data include education records maintained by a State educational agency through its statewide longitudinal data system (e.g., transcripts, State assessment data, attendance records, high school completion data, postsecondary enrollment information), employment and earnings information obtained through the State Unemployment Insurance system, service data collected by the State VR system, and health records maintained by the State Medicaid office;

(v) Collect data to evaluate the performance of the MDP on the key outcome measures (described in the *Performance Measures* under paragraph (c)(1) of the *Evaluation and Project Assessment Activities* section of this notice), and develop and implement a process to identify and collect the data needed to support project measures that assess the MDP's progress and performance, including by making data available from its statewide longitudinal data system(s); and

(vi) Use unique program identifiers that can be matched to various data systems.

*Other Project Activities.* To meet the requirements of this priority, each MDP, at a minimum, must conduct the following activities:

(a) Maintain ongoing telephone and email communication with the OSEP project officer;

(b) Maintain detailed documentation sufficient for model replication purposes, should the model be successful, including the sources of support for services to participants (other than direct project funds) such as services provided through existing State and local programs;

(c) Communicate and collaborate on an ongoing basis with other federally funded projects, including other MDPs funded under this priority, to share information on successful strategies and implementation challenges regarding the coordination of services and

supports for child SSI recipients and their families. ED will encourage ED-funded projects to cooperate with, and provide technical assistance to, PROMISE MDPs when appropriate. The following are examples of federally funded technical assistance centers and projects the MDPs are encouraged to contact: The National Dropout Prevention Center for Students with Disabilities ([www.ndpc-sd.org](http://www.ndpc-sd.org)), National Secondary Transition Technical Assistance Center ([www.nsttac.org](http://www.nsttac.org)), State Implementation and Scaling-up of Evidence-based Practices Center (<http://sisep.fpg.unc.edu>), Postsecondary Education Programs Network ([www.pepnet.org](http://www.pepnet.org)), IDEA Partnership ([www.ideapartnership.org](http://www.ideapartnership.org)), National and Regional Parent TA Centers ([www.parentcenternetwork.org](http://www.parentcenternetwork.org)), Parent Training and Information Centers and Community Parent Resource Centers ([www.parentcenternetwork.org](http://www.parentcenternetwork.org)), Independent Living Research and Utilization Project ([www.ilru.org](http://www.ilru.org)), National Collaborative on Workforce and Disability for Youth ([www.ncwd-youth.info](http://www.ncwd-youth.info)), Rehabilitation Research and Training Centers (<http://www2.ed.gov/programs/rrtc/index.html>), The National Technical Assistance Center for Children's Mental Health (<http://gucchdtacenter.georgetown.edu>), The Solutions Desk on Helping Youth Transition ([www.syvsd.ou.edu](http://www.syvsd.ou.edu)), Healthy & Ready to Work National Resource Center ([www.syntiro.org/hrtw](http://www.syntiro.org/hrtw)), TA Partnership for Child and Family Mental Health ([www.tapartnership.org](http://www.tapartnership.org)), and the National Center for Mental Health Promotion and Youth Violence Prevention ([www.promoteprevent.org](http://www.promoteprevent.org));

(d) Maintain contact and cooperate with the national evaluator throughout the project period and for one year after the close of the project for follow-up data collection and other needs; and

(e) Contribute relevant MDP information to a central PROMISE Web site that OSEP will make available.

*Application Requirements.* To be considered for funding under this absolute priority, an applicant must include in its application—

(a) A description of the proposed project, including the applicant's plan for implementing the project. The description must include—

(1) A cohesive, articulated model of partnership and coordination among the participating agencies and organizations;

(2) A logic model that depicts, at a minimum, the goals, activities, outputs, and outcomes of the proposed project. The logic model must specify the contributions of each partner to the activities, outputs, and outcomes of the

proposed project. A logic model communicates how a project will achieve its outcomes and provides a framework for the formative evaluation of the project;

**Note:** The following Web sites provide more information on logic models: [www.researchutilization.org/matrix/logicmodel\\_resource3c.html](http://www.researchutilization.org/matrix/logicmodel_resource3c.html) and [http://archive.tadnet.org/model\\_and\\_performance?format=html](http://archive.tadnet.org/model_and_performance?format=html); and

(3) A timeline for implementing the model and achieving project milestones and outcomes consistent with the logic model and the requirements of this priority.

(b) A description of the coordinated set of required and other services and supports that the project proposes to provide to the participating children and their families in order to meet the project's objectives. The description must describe how the services and supports, including the four required services and other services chosen by the project, will be provided, including whether the project will provide the services directly or will arrange for the services to be provided through its partners or other entities (described in *Services and Supports* under paragraph (b) of the *Project Activities* section of this notice).

(c) A detailed description of any evidence that the services and supports proposed by the applicant have been implemented previously with the targeted populations of child SSI recipients and their families, or similar populations, albeit on a limited scale or in a limited setting, and have yielded promising results that suggest that more formal and systematic study is warranted. An applicant must provide a rationale for the coordinated set of services or supports that is based on research findings or reasonable hypotheses, including related research or theories in education and other disciplines.

(d) A detailed description of the project's proposed partners (including required partners described in paragraph (a)(1) of the *Project Activities* section of this notice) that will play a key role in coordinating services and implementing the interventions in the proposed model, including a description of—

(1) The proposed partners' roles and responsibilities under the project;

(2) The proposed partners' commitment to the project, including letters of intent from all proposed partners to enter into an MOU with the lead coordinating entity as described in the *Eligibility Information* section of this notice;

(3) The plan to coordinate services among partner agencies and other entities to ensure that project resources are used efficiently and effectively; and

(4) The justification to exclude a required State partner, if applicable.

(e) A description of the proposed outreach and recruitment plan, including—

(1) The methods for ensuring that, within two years of the start of the MDP, the project will obtain consent from at least 2,000 child SSI recipients who will be between the ages of 14 and 16 at the time that project services are initiated, and their families.

(2) An assurance that the applicant will secure a signed written consent to participate in the project from the parent or, if applicable, the child; that the consent form will be provided to the parent and the child in an accessible format; and that, as part of the consent, project requirements will be fully explained to the parent and child, including that participation in the program is voluntary on the part of the child and family (described in *Participant Outreach and Recruitment* under paragraph (c) of the *Project Activities* section of this notice). The MDP must also obtain any necessary written consent from the parent or, if applicable, the child for the disclosure of personally identifiable information from relevant records, consistent with FERPA, the IDEA confidentiality of information provisions, and any other applicable Federal or State laws or regulations that protect the privacy or confidentiality of personally identifiable information or records, such as the Health Insurance Portability and Accountability Act, which contains specific privacy and security rules protecting health information. In addition, under the State VR Services Program, the requirements in 34 CFR 361.38 (protection, use, and release of personal information) would apply to any records of participants in that VR Services program.<sup>9</sup>

(f) A description of the applicant's commitment to work with ED, SSA, and the national evaluator for PROMISE to ensure that random assignment and data collection are completed in a manner that supports ED's and SSA's efforts to conduct a rigorous national evaluation

<sup>9</sup> 34 CFR 361.38(e)(1) provides: Upon receiving the informed written consent of the individual or, if appropriate, the individual's representative, the State unit may release personal information to another agency or organization for its program purposes only to the extent that the information may be released to the involved individual or the individual's representative and only to the extent that the other agency or organization demonstrates that the information requested is necessary for its program.

of the PROMISE program and the specific interventions and strategies implemented by individual grantees. The application must include an assurance that—

(1) Project staff will assist with the random assignment of recruited children and their families; and

(2) Through MOUs with partners and other participating entities, the national evaluator, ED, and SSA will be provided access to relevant program and project data (e.g., administrative data and program and project performance data) and that, if requested, ED and SSA will be provided data quarterly.

(g) An assurance that the applicant will provide or arrange for the provision of technical assistance and training to ensure consistency in the implementation and evaluation of the MDP, including the fidelity of implementation of the MDP interventions (described in *Technical Assistance and Training* under paragraph (d) of the *Project Activities* section of this notice).

(h) A description of the performance measures (and performance targets), including interim measures, the MDP will use to assess its performance and progress toward achieving its goals, consistent with the logic model and the formative evaluation plan.

(i) A description of the data collection plan that—

(1) Outlines the process for assessing, collecting, and sharing project data and other information among the collaborating partners and the national evaluator (described in *Data Collection and Project Assessment Activities* section of this notice), in a manner consistent with any Federal or State laws or regulations that protect the confidentiality or privacy of personally identifiable information or records; and

(2) Identifies the systems or tools that will be used for storing, managing, analyzing, and reporting data, including a description of the applicant's capacity to track and manage project information (e.g., referrals and service participation) and document the services and supports received by the children and their families, and for the partners or other participating entities to communicate about, and collaborate on, the MDP's services, processes, and data collection plan.

(j) A description of the applicant's plan, consistent with the proposed logic model and data collection plan, for conducting a formative evaluation of the proposed project's activities and model, including—

(1) The data to be periodically collected for the formative evaluation,

including data related to the fidelity of implementation, stakeholder acceptability, and descriptions of the site context;

(2) The methods the applicant will use to collect these data;

(3) How these data will be reviewed by the project, when they will be reviewed (consistent with the timeline required in paragraph (a)(3) of the *Application Requirements* section of this notice), and how they will be used during the course of the project to adjust the model or its implementation to increase the model's usefulness, generalizability, and potential for sustainability; and

(4) How the formative evaluation will use clear performance objectives to ensure continuous improvement in the operation of the proposed project, including objective measures of progress in implementing the project and ensuring the quality of products and services.

(k) A plan for attendance at the following:

(1) A one and one-half day kick-off meeting to be held in Washington, DC, after receipt of the award and an annual planning meeting to be held in Washington, DC, with the OSEP project officer during each subsequent year of the project period.

**Note:** Within 30 days of the receipt of the award, a post-award teleconference must be held between the OSEP project officer and the grantee's project director or other authorized representative.

(2) A three-day project directors' conference in Washington, DC, during each year of the project period;

(3) Three, two-day trips annually to attend Department briefings, Department-sponsored conferences, and other meetings, as requested by OSEP; and

(4) A one-day intensive review meeting in Washington, DC, that will be held during the last half of the third year of the project period.

#### *Fourth and Fifth Years of the Project*

In deciding whether to continue funding the project for the fourth and fifth years, the Secretary will consider the requirements of 34 CFR 75.253(a), and in addition—

(a) The recommendation of a review team consisting of experts selected by the Secretary. This review will be conducted during a one-day intensive meeting in Washington, DC, that will be held during the second half of the third year of the project period;

(b) The timeliness and effectiveness with which all requirements of the negotiated cooperative agreement have

been or are being met by the project including successfully obtaining consent from at least 2,000 child SSI recipients and their families;

(c) The number of child SSI recipients and their families still being served and the duration of their participation in project services; and

(d) The quality, relevance, and usefulness of the project's activities and products; the degree to which the project's activities and products are aligned with the project's objectives; and the likelihood that current performance and progress will result in the project achieving its proposed outcomes.

#### Waivers

Applicants may apply for waivers that are currently authorized under existing Federal programs if the applicant believes having one or more waivers would enable the applicant to achieve better outcomes for the project participants. Applicants may request waivers under authorities administered by any of the Federal agencies participating in this interagency initiative—ED, DOL, DHHS, and SSA. Applicants seeking waivers must apply directly to the agency that administers the relevant waiver authority. However, to assist us in ensuring that the effect on PROMISE projects is carefully considered in processing any waiver request, we are asking applicants to submit to the Department of Education an explanation of the waivers the applicant is requesting, why the applicant believes the waivers are needed for the PROMISE project, and how project outcomes might be enhanced with the approval of such waivers. The applicant should not refer to the requested waivers in its application narrative for PROMISE. The waiver content will not be considered as part of the application scoring process. The approval of any requested waivers will be at the sole discretion of the relevant Federal agency. For example, waivers of SSA program rules will be approved or denied by SSA. For further information about waivers see [www.ed.gov/promise](http://www.ed.gov/promise). Information on waivers requested by the applicant should be sent by August 19, 2013 as an email attachment to Corinne Weidenthal at [corinne.weidenthal@ed.gov](mailto:corinne.weidenthal@ed.gov).

Within this absolute priority, we are particularly interested in applications that address the following invitational priority.

#### Invitational Priority

Under 34 CFR 75.105(c)(1) we do not give an application that meets this invitational priority a competitive or

absolute preference over other applications.

This priority is:

**Outcome-Based Payments.** The Secretary is especially interested in applicants that propose to incorporate into their PROMISE MDPs an Outcome-based Payment (OBP) model that ties payments to service providers to the achievement of outcomes or established milestones.

Although the OBP model is distinct from the fee-for-service payment model, the OBP model has been used in the health-care arena to offer financial rewards to providers that achieve, improve, or exceed their performance on specified quality, cost, and other benchmarks. Under an OBP arrangement, providers are rewarded for meeting pre-established targets for delivery of services, thus creating an incentive to meet performance objectives. However, for OBP arrangements to be effective, all the factors that affect performance must be considered including: Motivation, skills, an understanding of the goals, and the ability to measure progress. For example, one type of OBP model is performance-based contracting. Performance-based contracts typically:

- Emphasize results related to output, quality, and outcomes rather than how the work is performed;
- Specify deliverables, measurable performance standards, and clearly defined objectives and timeframes;
- Use quality assurance plans;
- Provide performance incentives and consequences for nonperformance; and
- Tie payment to deliverables, performance measures, and outcomes.

In inviting OBP models, ED is interested in demonstrating how payment models can help achieve positive outcomes for child SSI recipients and their families, consistent with those identified in the absolute priority. ED's objectives in establishing this OBP invitational priority are to:

- Test a model that limits at least part of the risk of government funding for unachieved outcomes by clearly defining performance-based consequences (rewards or sanctions) for service providers.

- Learn whether the OBP concept is feasible in this arena given the complexity of needs and number of agencies involved in serving child SSI recipients and their families.

- Determine whether paying only for specific outcomes achieved at predetermined milestones within the project period creates an incentive structure that promotes the achievement of PROMISE's goals.

Applicants that address this invitational priority must include a plan for implementing the OBP model during the project. The plan must describe a validation methodology and a payment plan that (a) is derived from quantifiable data and (b) measures performance against outcome targets for the target population relative to a well-defined comparison population. The applicant must describe the terms of the payment arrangement between the applicant and the provider, including the agreed performance milestones and targeted outcomes and the payments due upon their achievement.

For more information, see the following Web site: <http://www.mass.gov/chia/docs/pc/2009-02-13-pay-for-performance-c3.pdf>.

#### Definitions

##### Background

The following definitions are provided to ensure that applicants have a clear understanding of how we are using these terms in the priority. These definitions apply in any year in which this program is in effect. These definitions are based on definitions that ED uses or relies on in other contexts.

**Competitive employment** means work:

- (a) In the competitive labor market that is performed on a full-time or part-time basis in an integrated setting; and
- (b) For which an individual is compensated at or above the minimum wage, but not less than the customary wage and level of benefits paid by the employer for the same or similar work performed by individuals who are not disabled.

Source: State Vocational Rehabilitation Services Program, 34 CFR 361.5(b)(11).

**Education records** means those records that are directly related to a student and maintained by an educational agency or institution or by a party acting for the agency or institution. Source: FERPA (20 U.S.C. 1232g(a)(4)(A)) and the FERPA regulations at 34 CFR 99.3 (definition of "Education records.")

**Experiential learning** means learning through experience. The individual is encouraged to be directly involved in the experience and then reflect on the experience using analytic skills, in order to gain a better understanding of the new knowledge and retain the information. For further information: [www.infed.org/biblio/b-explrn.htm](http://www.infed.org/biblio/b-explrn.htm).

**Extended learning opportunities** (ELOs) means safe, structured learning environments for students outside the traditional school day. ELOs include after-school, before-school, evening,

weekend, and summer learning programs. ELOs come in many forms and can include tutoring, volunteering, academic support, community service, organized sports, homework help, and art and music programs. Source: [www.ccsso.org/Documents/2009/The\\_Quality\\_Imperative\\_a\\_2009.pdf](http://www.ccsso.org/Documents/2009/The_Quality_Imperative_a_2009.pdf).

*Families* includes a wide range of relationships, including spouse, parents, parents-in-law, children, brothers, sisters, grandparents, grandchildren, stepparents, stepchildren, foster parents, foster children, guardianship relationships, same-sex and opposite-sex domestic partners, and spouses or domestic partners of the aforementioned, as applicable. Source: [www.opm.gov/oca/leave/html/FamilyDefs.asp](http://www.opm.gov/oca/leave/html/FamilyDefs.asp).

*Fidelity of implementation* means the accurate and consistent delivery of the intervention in the way in which it was designed to be delivered. Source: [www.nrclid.org/rti\\_manual/pages/RTIManualSection4](http://www.nrclid.org/rti_manual/pages/RTIManualSection4).

*Integrated setting*, as used in the context of education or employment, means a setting typically found in the community in which individuals with disabilities interact with non-disabled individuals, other than non-disabled individuals who are providing services to such individuals, to the same extent that non-disabled individuals in comparable positions interact with other persons. Source: State Vocational Rehabilitation Services Program, 34 CFR 361.5(b)(33)(ii).

*Logic model* means a well-specified conceptual framework that identifies key components of the proposed project, practice, strategy, or intervention (i.e., the active “ingredients” that are hypothesized to be critical to achieving the relevant outcomes) and describes the relationships among the key components and outcomes, theoretically and operationally. For further information:

[www.researchutilization.org/matrix/logicmodel\\_resource3c.html](http://www.researchutilization.org/matrix/logicmodel_resource3c.html); and [www.tadnet.org/pages/589](http://www.tadnet.org/pages/589).

*Parent* means (from 34 CFR 300.30):

(a) Parent means—

(1) A biological or adoptive parent of a child;

(2) A foster parent, unless State law, regulations, or contractual obligations with a State or local entity prohibit a foster parent from acting as a parent;

(3) A guardian generally authorized to act as the child’s parent, or authorized to make educational decisions for the child (but not the State if the child is a ward of the State);

(4) An individual acting in the place of a biological or adoptive parent (including a grandparent, stepparent, or

other relative) with whom the child lives, or an individual who is legally responsible for the child’s welfare; or

(5) A surrogate parent who has been appointed in accordance with section 300.519 or section 639(a)(5) of the Act.

(b) (1) Except as provided in paragraph (b)(2) of this section, the biological or adoptive parent, when attempting to act as the parent under this part and when more than one party is qualified under paragraph (a) of this section to act as a parent, must be presumed to be the parent for purposes of this section unless the biological or adoptive parent does not have legal authority to make educational decisions for the child.

(2) If a judicial decree or order identifies a specific person or persons under paragraphs (a)(1) through (4) of this section to act as the “parent” of a child or to make educational decisions on behalf of a child, then such person or persons shall be determined to be the “parent” for purposes of this section.

Source: 34 CFR 300.30 of the IDEA regulations.

*Personally identifiable information* includes, but is not limited to, the following—

(a) The student’s name;

(b) The name of the student’s parent or other family members;

(c) The address of the student or student’s family;

(d) A personal identifier, such as the student’s Social Security number, student number, or biometric record;

(e) Other indirect identifiers, such as the student’s date of birth, place of birth, and mother’s maiden name;

(f) Other information that, alone or in combination, is linked or linkable to a specific student that would allow a reasonable person in the school community, who does not have personal knowledge of the relevant circumstances, to identify the student with reasonable certainty; or

(g) Information requested by a person who the educational agency or institution reasonably believes knows the identity of the student to whom the education record relates.

Source: 34 CFR 99.3 of the FERPA regulations; see also 34 CFR 300.32 of the IDEA regulations.

*Waiver of Proposed Rulemaking:* Under the Administrative Procedure Act (5 U.S.C. 553), ED generally offers interested parties the opportunity to comment on proposed priorities, definitions, requirements, and selection criteria. Section 437(d)(1) of GEPA, however, allows the Secretary to exempt from rulemaking requirements regulations governing the first grant competition under a new or

substantially revised program authority. This is the first grant competition for this initiative, as authorized under the Fiscal Year 2012 Consolidated Appropriations Act, and therefore qualifies for this exemption. Due to the extensive public input received in the development of this priority, and in order to ensure timely grant awards, the Secretary has decided to forego formal public comment on the priority, definitions, requirements, and selection criteria under section 437(d)(1) of GEPA. The Secretary has gathered input on the priority, definitions, requirements, and selection criteria through a public input notice, which is posted on the following Web site: [www.ed.gov/promise](http://www.ed.gov/promise). The priority, definitions, requirements, and selection criteria will apply to the FY 2013 grant competition and any subsequent year in which we make awards from the list of unfunded applicants from this competition.

**Program Authority:** Consolidated Appropriations Act, 2012 (Pub. L. 112–74).

**Applicable Regulations:** (a) The Education Department General Administrative Regulations (EDGAR) in 34 CFR parts 74, 75, 77, 79, 80, 81, 82, 84, 86, 97, 98, and 99. (b) The Education Department debarment and suspension regulations in 2 CFR part 3485.

## II. Award Information

**Type of Award:** Cooperative agreements.

**Estimated Available Funds:** \$100,000,000. Dependent upon the number of awards that are made, these funds would largely be used to support years one and two, and possibly year three, of PROMISE project activities.

**Estimated Range of Awards:** \$22,500,000–\$50,000,000 for 5 years.

**Estimated Average Award Size:** \$37,500,000 for 5 years.

**Estimated Number of Awards:** 3 to 6. Contingent upon the quality of applications, the Secretary will make an award to at least one consortium applicant in this competition.

**Maximum Award:** \$50,000,000 for 5 years. We will not consider any application that proposes an award size for a project period of up to 60 months exceeding an annual average of \$6,500 per child SSI recipient and his or her family served. Therefore, an applicant proposing to serve the minimum treatment group size of 1,000 child SSI recipients and their families for five years may request an annual average funding level of up to \$6,500 per child and his or her family, which corresponds to a five-year award of up to \$32,500,000.

An applicant requesting the maximum award of \$50,000,000 must propose to serve at least 1,539 child SSI recipients and their families in the treatment group for a five year project period. Projects may spend more than \$6,500 per year to serve a particular child and his or her family during the operation of the project. Projects may also propose a funding level for a single 12-month budget period that exceeds \$6,500 per child and his or her family served. However, the average annual funding level for all of the project's budget periods may not exceed \$6,500 per child SSI recipient and his or her family served. The Assistant Secretary for Special Education and Rehabilitative Services may change the maximum amount through a notice published in the **Federal Register**.

**Note:** The Department is not bound by any estimates in this notice.

**Project Period:** Up to 60 months. Grants awarded under this competition may be for a project period of up to five years. Depending on the availability of funds, the Department will make continuation awards for years two and three of the project period in accordance with section 75.253 of EDGAR (34 CFR 75.253). However, to ensure that continuation funds will be used only for high-quality and effective projects, in determining whether to award continuation grants for years four and five the Department will consider whether: (1) Funds are available; (2) the grantee meets the requirements in section 75.253 of EDGAR; and (3) the grantee is achieving the intended outcomes of the grant (see specific factors to be considered in the *Fourth and Fifth Years* section of this notice).

### III. Eligibility Information

1. **Eligible Applicants:** Eligible applicants are the 50 States and the District of Columbia. A consortium of States may also apply. A grantee, subgrantee, or partner under this program is not eligible to receive funding for the SSA national evaluation contract. An applicant must meet the following requirements to be eligible to compete for funding under this program:

(a) **Single State applicant.** A single State with adequate child SSI recipients, as described in paragraph (d) of this section, may apply. The State applicant must:

(1) Designate a lead coordinating entity, which must be a State agency; and

(2) Submit an application that has been signed by the State's Governor and

the administrative head of the State's lead coordinating entity.

(b) **Consortium of States applicant.** A consortium of States may apply in order to meet the minimum sample size eligibility requirement, as described in paragraph (d) of this section.

(1) One of the States participating in the consortium must submit an application on behalf of the consortium;

(2) Each of the consortium States must designate a lead coordinating entity, which must be a State agency;

(3) The application must be signed by the Governor of each State and the administrative head of each State's lead coordinating entity;

(4) The applicant on behalf of the consortium is the grantee and is legally responsible for the use of all grant funds and ensuring that the project is carried out by the consortium in accordance with Federal requirements;

(5) Each member of the consortium is legally responsible to carry out the activities it agrees to perform (EDGAR, 34 CFR 75.129); and

(6) Each State participating in the consortium must have partnerships with at least three common agencies (or equivalent for administering common programs). (Described in *Partnerships* under paragraph (a) of the *Project Activities* section of this notice.)

(7) Each State participating in the consortium must provide the coordinated set of required and other services and supports as proposed in the application (described in paragraph (b) of the *Application Requirements* section of this notice.) This set of coordinated services and supports must be the same across all States in the consortium.

(c) **Lead coordinating entity.** The lead coordinating entity must partner with other State agencies and is encouraged to partner with local agencies and organizations that play or have the potential to play a substantial role in the development and implementation of policies and practices affecting child SSI recipients and their families (see *Partnerships* under the *Project Activities* section of this notice and the related application requirements).

(d) **Minimum sample size.** The State or consortium of States must have a sufficient number of children between the ages of 14 and 16 who receive SSI to, within two years of the start of the project, recruit the minimum sample size of 2,000 child SSI recipients into the MDP and begin providing MDP interventions to half of those recruited. This sample size is necessary to assess the effectiveness of each MDP. If the MDP chooses to exceed the minimum sample size, half of the child SSI recipients must still be assigned to the

treatment group and half to the control group. Each MDP will be evaluated separately because ED and its Federal PROMISE partners expect grantees to vary in their approaches to implementing PROMISE (see the *Evaluation and Project Assessment Activities* section of this notice).

2. **Cost Sharing or Matching:** This program does not require cost sharing or matching.

3. **Other General Requirements:**

(a) The projects funded under this competition must make positive efforts to employ and advance in employment qualified individuals with disabilities (see section 606 of IDEA).

(b) Applicants and the grant recipients funded under this competition must involve individuals with disabilities or parents of individuals with disabilities ages birth through 26 in planning, implementing, and evaluating the projects (see section 682(a)(1)(A) of IDEA).

### IV. Application and Submission Information

1. **Address to Request Application Package:** You can obtain an application package via the Internet, from the Education Publications Center (ED Pubs), or from the program office.

To obtain a copy via the Internet, use the following address: [www.ed.gov/fund/grant/apply/grantapps/index.html](http://www.ed.gov/fund/grant/apply/grantapps/index.html). To obtain a copy from ED Pubs, write, fax, or call the following: ED Pubs, U.S. Department of Education, P.O. Box 22207, Alexandria, VA 22304. Telephone, toll free:

1-877-433-7827. FAX: (703) 605-6794. If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call, toll free: 1-877-576-7734.

You can contact ED Pubs at its Web site, also: [www.EDPubs.gov](http://www.EDPubs.gov) or at its email address: [edpubs@inet.ed.gov](mailto:edpubs@inet.ed.gov).

If you request an application package from ED Pubs, be sure to identify this competition as follows: CFDA number 84.418P.

To obtain a copy from the program office, contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice.

Individuals with disabilities can obtain a copy of the application package in an accessible format (e.g., braille, large print, audiotape, or compact disc) by contacting the person or team listed under *Accessible Format* in section VIII of this notice.

2. **Notice of Intent To Apply:** ED will be able to develop a more efficient process for reviewing grant applications if it has a better understanding of the number of entities that intend to apply

for funding under this competition. Therefore, we strongly encourage each potential applicant to notify ED by sending a short email message indicating the applicant's intent to submit an application for funding. If the applicant is submitting an application on behalf of a consortium also indicate the States that will be involved. The email need not include information regarding the content of the proposed application. This email notification should be sent to Corinne Weidenthal at [corinne.weidenthal@ed.gov](mailto:corinne.weidenthal@ed.gov).

Applicants that fail to provide this email notification may still apply for funding.

**3. Content and Form of Application Submission:** Requirements concerning the content of an application, together with the forms you must submit, are in the application package for this competition. Page Limit: The application narrative (Part III of the application) is where you, the applicant, address the selection criteria that reviewers use to evaluate your application. You must limit Part III to the equivalent of no more than 100 pages, using the following standards:

- A "page" is 8.5" x 11", on one side only, with 1" margins at the top, bottom, and both sides.

- Double space (no more than three lines per vertical inch) all text in the application narrative, including titles, headings, footnotes, quotations, references, and captions, as well as all text in charts, tables, figures, and graphs.

- Use a font that is either 12 point or larger or no smaller than 10 pitch (characters per inch).

- Use one of the following fonts: Times New Roman, Courier, Courier New, or Arial. An application submitted in any other font (including Times Roman or Arial Narrow) will not be accepted.

The page limit does not apply to Part I, the cover sheet; Part II, the budget section, including the narrative budget justification; Part IV, the assurances and certifications; or the one-page abstract, the resumes, the bibliography, or the letters of support. However, the page limit does apply to all of the application narrative section (Part III).

We will reject your application if you exceed the page limit; or if you apply other standards and exceed the equivalent of the page limit.

**4. Submission Dates and Times:**

*Applications Available:* May 21, 2013.

*Deadline for Notice of Intent to Apply:* June 20, 2013.

*Dates of Pre-Application Webinars:*

Interested parties are invited to participate in pre-application webinars.

The pre-application webinars with staff from ED and its Federal PROMISE partners will be held on May 30, 2013 and June 4, 2013; and a teleconference will be held on June 27, 2013, between 2:00 p.m. and 3:30 p.m., Washington, DC time.

For further information about the pre-application webinars and teleconference, see the PROMISE Web site at [www.ed.gov/promise](http://www.ed.gov/promise).

*Deadline for Transmittal of Applications:* August 19, 2013.

Applications for grants under this competition must be submitted electronically using the Grants.gov Apply site (Grants.gov). For information (including dates and times) about how to submit your application electronically, or in paper format by mail or hand delivery if you qualify for an exception to the electronic submission requirement, please refer to section IV. 8. *Other Submission Requirements* of this notice.

We do not consider an application that does not comply with the deadline requirements.

Individuals with disabilities who need an accommodation or auxiliary aid in connection with the application process should contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice. If the Department provides an accommodation or auxiliary aid to an individual with a disability in connection with the application process, the individual's application remains subject to all other requirements and limitations in this notice.

**5. Intergovernmental Review:** This program is subject to Executive Order 12372 and the regulations in 34 CFR part 79. Information about Intergovernmental Review of Federal Programs under Executive Order 12372 is in the application package for this competition. Please note that, under 34 CFR 79.8(a), we have waived the standard 60-day intergovernmental review period in order to make awards by the end of FY 2013.

**6. Funding Restrictions:** We reference regulations outlining funding restrictions in the *Applicable Regulations* section of this notice.

**7. Data Universal Numbering System Number, Taxpayer Identification Number, Central Contractor Registry, and System for Award Management:** To do business with the Department of Education, you must—

- a. Have a Data Universal Numbering System (DUNS) number and a Taxpayer Identification Number (TIN);

- b. Register both your DUNS number and TIN with the Central Contractor

Registry (CCR)—and, after July 24, 2012, with the System for Award Management (SAM), the Government's primary registrant database;

- c. Provide your DUNS number and TIN on your application; and

- d. Maintain an active CCR or SAM registration with current information while your application is under review by the Department and, if you are awarded a grant, during the project period.

You can obtain a DUNS number from Dun and Bradstreet. A DUNS number can be created within one business day.

If you are a corporate entity, agency, institution, or organization, you can obtain a TIN from the Internal Revenue Service. If you are an individual, you can obtain a TIN from the Internal Revenue Service or the Social Security Administration. If you need a new TIN, please allow 2–5 weeks for your TIN to become active.

The CCR or SAM registration process may take five or more business days to complete. If you are currently registered with the CCR, you may not need to make any changes. However, please make certain that the TIN associated with your DUNS number is correct. Also note that you will need to update your registration annually. This may take three or more business days to complete. Information about SAM is available at [SAM.gov](http://SAM.gov).

In addition, if you are submitting your application via Grants.gov, you must (1) be designated by your organization as an Authorized Organization Representative (AOR); and (2) register yourself with Grants.gov as an AOR. Details on these steps are outlined at the following Grants.gov Web page: [www.grants.gov/applicants/get\\_registered.jsp](http://www.grants.gov/applicants/get_registered.jsp).

**8. Other Submission Requirements:**

Applications for grants under this competition must be submitted electronically unless you qualify for an exception to this requirement in accordance with the instructions in this section.

*a. Electronic Submission of Applications*

Applications for grants under the PROMISE competition, CFDA number 84.418P, must be submitted electronically using the Governmentwide Grants.gov Apply site at [www.Grants.gov](http://www.Grants.gov). Through this site, you will be able to download a copy of the application package, complete it offline, and then upload and submit your application. You may not email an electronic copy of a grant application to us.

We will reject your application if you submit it in paper format unless, as

described elsewhere in this section, you qualify for one of the exceptions to the electronic submission requirement and submit, no later than two weeks before the application deadline date, a written statement to the Department that you qualify for one of these exceptions. Further information regarding calculation of the date that is two weeks before the application deadline date is provided later in this section under *Exception to Electronic Submission Requirement*.

You may access the electronic grant application for the PROMISE competition at [www.Grants.gov](http://www.Grants.gov). You must search for the downloadable application package for this competition by the CFDA number. Do not include the CFDA number's alpha suffix in your search (e.g., search for 84.418, not 84.418P).

Please note the following:

- When you enter the Grants.gov site, you will find information about submitting an application electronically through the site, as well as the hours of operation.
- Applications received by Grants.gov are date and time stamped. Your application must be fully uploaded and submitted and must be date and time stamped by the Grants.gov system no later than 4:30:00 p.m., Washington, DC time, on the application deadline date. Except as otherwise noted in this section, we will not accept your application if it is received—that is, date and time stamped by the Grants.gov system—after 4:30:00 p.m., Washington, DC time, on the application deadline date. We do not consider an application that does not comply with the deadline requirements. When we retrieve your application from Grants.gov, we will notify you if we are rejecting your application because it was date and time stamped by the Grants.gov system after 4:30:00 p.m., Washington, DC time, on the application deadline date.
- The amount of time it can take to upload an application will vary depending on a variety of factors, including the size of the application and the speed of your Internet connection. Therefore, we strongly recommend that you do not wait until the application deadline date to begin the submission process through Grants.gov.
- You should review and follow the Education Submission Procedures for submitting an application through Grants.gov that are included in the application package for this competition to ensure that you submit your application in a timely manner to the Grants.gov system. You can also find the Education Submission Procedures pertaining to Grants.gov under News

and Events on the Department's G5 system home page at [www.G5.gov](http://www.G5.gov).

- You will not receive additional point value because you submit your application in electronic format, nor will we penalize you if you qualify for an exception to the electronic submission requirement, as described elsewhere in this section, and submit your application in paper format.
  - You must submit all documents electronically, including all information you typically provide on the following forms: The Application for Federal Assistance (SF 424), the Department of Education Supplemental Information for SF 424, Budget Information—Non-Construction Programs (ED 524), and all necessary assurances and certifications.
  - You must upload any narrative sections and all other attachments to your application as files in a PDF (Portable Document) read-only, non-modifiable format. Do not upload an interactive or fillable PDF file. If you upload a file type other than a read-only, non-modifiable PDF or submit a password-protected file, we will not review that material. Additional, detailed information on how to attach files is in the application instructions.
  - Your electronic application must comply with any page-limit requirements described in this notice.
  - After you electronically submit your application, you will receive from Grants.gov an automatic notification of receipt that contains a Grants.gov tracking number. (This notification indicates receipt by Grants.gov only, not receipt by the Department.) The Department then will retrieve your application from Grants.gov and send a second notification to you by email. This second notification indicates that the Department has received your application and has assigned your application a PR/Award number (an ED-specified identifying number unique to your application).
  - We may request that you provide us original signatures on forms at a later date.
- Application Deadline Date Extension in Case of Technical Issues with the Grants.gov System:* If you are experiencing problems submitting your application through Grants.gov, please contact the Grants.gov Support Desk, toll free, at 1-800-518-4726. You must obtain a Grants.gov Support Desk Case Number and must keep a record of it.
- If you are prevented from electronically submitting your application on the application deadline date because of technical problems with the Grants.gov system, we will grant you an extension until 4:30:00 p.m., Washington, DC time, the following

business day to enable you to transmit your application electronically or by hand delivery. You also may mail your application by following the mailing instructions described elsewhere in this notice.

If you submit an application after 4:30:00 p.m., Washington, DC time, on the application deadline date, please contact the person listed under **FOR FURTHER INFORMATION CONTACT** in section VII of this notice and provide an explanation of the technical problem you experienced with Grants.gov, along with the Grants.gov Support Desk Case Number. We will accept your application if we can confirm that a technical problem occurred with the Grants.gov system and that that problem affected your ability to submit your application by 4:30:00 p.m., Washington, DC time, on the application deadline date. The Department will contact you after a determination is made on whether your application will be accepted.

**Note:** The extensions to which we refer in this section apply only to the unavailability of, or technical problems with, the Grants.gov system. We will not grant you an extension if you failed to fully register to submit your application to Grants.gov before the application deadline date and time or if the technical problem you experienced is unrelated to the Grants.gov system.

*Exception to Electronic Submission Requirement:* You qualify for an exception to the electronic submission requirement, and may submit your application in paper format, if you are unable to submit an application through the Grants.gov system because—

- You do not have access to the Internet; or
  - You do not have the capacity to upload large documents to the Grants.gov system; and
  - No later than two weeks before the application deadline date (14 calendar days or, if the fourteenth calendar day before the application deadline date falls on a Federal holiday, the next business day following the Federal holiday), you mail or fax a written statement to the Department, explaining which of the two grounds for an exception prevents you from using the Internet to submit your application.
- If you mail your written statement to the Department, it must be postmarked no later than two weeks before the application deadline date. If you fax your written statement to the Department, we must receive the faxed statement no later than two weeks before the application deadline date.

Address and mail or fax your statement to: Corinne Weidenthal, U.S. Department of Education, 400 Maryland

Avenue SW., Room 4115, Potomac Center Plaza (PCP), Washington, DC 20202–2600. FAX: (202) 245–7617.

Your paper application must be submitted in accordance with the mail or hand delivery instructions described in this notice.

*b. Submission of Paper Applications by Mail*

If you qualify for an exception to the electronic submission requirement, you may mail (through the U.S. Postal Service or a commercial carrier) your application to the Department. You must mail the original and two copies of your application, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.418P), LBJ Basement Level 1, 400 Maryland Avenue SW., Washington, DC 20202–4260.

You must show proof of mailing consisting of one of the following:

- (1) A legibly dated U.S. Postal Service postmark.
- (2) A legible mail receipt with the date of mailing stamped by the U.S. Postal Service.
- (3) A dated shipping label, invoice, or receipt from a commercial carrier.
- (4) Any other proof of mailing acceptable to the Secretary of the U.S. Department of Education.

If you mail your application through the U.S. Postal Service, we do not accept either of the following as proof of mailing:

- (1) A private metered postmark.
- (2) A mail receipt that is not dated by the U.S. Postal Service.

If your application is postmarked after the application deadline date, we will not consider your application.

**Note:** The U.S. Postal Service does not uniformly provide a dated postmark. Before relying on this method, you should check with your local post office.

*c. Submission of Paper Applications by Hand Delivery*

If you qualify for an exception to the electronic submission requirement, you (or a courier service) may deliver your paper application to the Department by hand. You must deliver the original and two copies of your application by hand, on or before the application deadline date, to the Department at the following address: U.S. Department of Education, Application Control Center, Attention: (CFDA Number 84.418P), 550 12th Street SW., Room 7041, Potomac Center Plaza, Washington, DC 20202–4260.

The Application Control Center accepts hand deliveries daily between

8:00 a.m. and 4:30:00 p.m., Washington, DC time, except Saturdays, Sundays, and Federal holidays.

**Note for Mail or Hand Delivery of Paper Applications:** If you mail or hand deliver your application to the Department—

(1) You must indicate on the envelope and—if not provided by the Department—in Item 11 of the SF 424 the CFDA number, including suffix letter, if any, of the competition under which you are submitting your application; and

(2) The Application Control Center will mail to you a notification of receipt of your grant application. If you do not receive this notification within 15 business days from the application deadline date, you should call the U.S. Department of Education Application Control Center at (202) 245–6288.

**V. Application Review Process and Evaluation Criteria**

1. *Selection Criteria:* The selection criteria for this competition are based on 34 CFR 75.210 and include selection criteria established for PROMISE. They are:

(a) Quality of the project design (35 points).

(1) The extent to which the MDP identifies and plans to address gaps and weaknesses in current State service systems for child SSI recipients and their families.

(2) The extent to which the MDP's interventions are likely to meet the needs of child SSI recipients and their families and achieve the desired outcomes.

(3) The extent to which the applicant documents that proposed services and supports are based on the best available evidence including, where available, research that has demonstrated statistically significant positive effects using the strongest possible study designs such as those that meet the standards of the What Works Clearinghouse.<sup>10</sup>

(4) The extent to which the budget is adequate to support the proposed MDP, including whether costs are reasonable in relation to the objectives, design, and potential significance of the proposed project.

(5) The extent to which the MDP has clearly articulated a model of partnership, coordination, and service delivery that includes:

(i) An explicit and comprehensive strategy, with actions that are expected to result in achieving the goals,

<sup>10</sup> The What Works Clearinghouse uses objective and transparent standards and procedures to make its assessment of the scientific merit of studies of the effectiveness of education interventions, and then summarizes the results of its systematic reviews in a set of products. For further information: <http://ies.ed.gov/ncee/wwc>.

objectives, and desired outcomes of the proposed project; and

(ii) Measurable goals and benchmarks that are supported by quantitative projections of the accomplishments for each activity and that are attainable given the number of activities to be accomplished and the project period, as well as a timetable with target dates for achievement of the benchmarks and goals.

(6) Quality of the logic model, project implementation plan, and timeline, including the extent to which there is a conceptual framework underlying the demonstration activities and the quality of that framework.

(b) Quality of participant recruitment plan (25 points).

(1) The extent to which the MDP has clearly articulated a realistic outreach and recruitment plan that is likely to lead to at least 2000 child SSI recipients and their families giving consent to participate in the MDP.

(c) Quality of management plan and personnel (35 points).

(1) The adequacy of the management plan that is designed to achieve the objectives of the proposed project on time and within budget.

(2) The adequacy of partnerships within the State or consortium that are designed to achieve project objectives, including:

(i) An overall management plan for the partnerships, including mechanisms for coordinating across agencies and organizations. The plan should also describe how the partnership will be organized to carry out the project, including clearly defined roles and responsibilities for each partner;

(ii) The extent to which the services to be provided by the proposed project involve the collaboration of appropriate partners, including at least three of the required partners, to maximize the impact of the MDP;

(iii) The relevance and demonstrated commitment of each partner in the proposed project to the implementation and success of the project. Partner commitment should be demonstrated in the form of MOUs, substantive non-form letters of intent, or other documents that show strategic relationships are preferably already in place, that the partners have prior experience collaborating to serve low-income children with disabilities, that each partner understands its roles and responsibilities, and that the leadership of each partner supports the proposed activities; and

(iv) A system for holding partners accountable for performance in accordance with the MOU, letters of

intent, or other commitments among the partners.

(3) The capacity of the project to execute necessary data collection protocols and requirements in a high-quality manner, including:

(i) Implementing a process to collect the data needed to track the required outcome measures, project-specific measures, and other necessary information over time and across partner agencies and organizations;

(ii) Adequately documenting project activities, referrals, services, and supports received by each child SSI recipient and his or her family, and any resulting State systems change; and

(iii) Cooperating with the national evaluator on all matters necessary to undertake rigorous evaluation and measurement of the project.

(4) The quality of key personnel, including:

(i) A qualified and sufficient staff to accomplish the goals of the project, including the techniques proposed to ensure that an adequate supply of qualified staff are enlisted in a timely manner;

(ii) The extent to which there is evidence that key project staff, by virtue of their training or professional experience, have the requisite knowledge to design, implement, and manage projects of the size and scope of the proposed project; and

(iii) The extent to which the identified key personnel have the requisite authority to commit their agency and its resources to the implementation of the project.

(d) Significance (20 points).

(1) The extent to which the proposed project will result in systems change and improvement.

(2) The potential contribution of the proposed project to the development and advancement of knowledge and practices in the field.

(3) The extent to which the project is designed to raise the expectations held by, and about, participating child SSI recipients regarding their education and employment outcomes.

(4) The importance or magnitude of the results or outcomes likely to be attained by the proposed project.

(e) Capacity for continuous feedback and improvement (10 points).

(1) The adequacy of plans and procedures for ensuring continuous feedback and improvement in the implementation of the proposed project.

(2) The capacity for incorporating participating child SSI recipient and family feedback, including:

(i) The extent to which the proposed project seeks, encourages, and includes parental involvement and feedback; and

(ii) The extent to which the proposed project seeks, encourages, and includes feedback from participating child SSI recipients and encourages their self-determination.

2. *Review and Selection Process:* The Department will screen applications submitted in accordance with the requirements in this notice, and will determine which applications have met eligibility requirements and other requirements in this notice. Additional information about the review process will be published on the program's Web site.

We remind potential applicants that in reviewing applications in any discretionary grant competition, the Secretary may consider, under 34 CFR 75.217(d)(3), the past performance of the applicant in carrying out a previous award, such as the applicant's use of funds, achievement of project objectives, and compliance with grant conditions. The Secretary may also consider whether the applicant failed to submit a timely performance report or submitted a report of unacceptable quality.

In addition, in making a competitive grant award, the Secretary also requires various assurances including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department of Education (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

3. *Additional Review and Selection Process Factors:* In the past, the Department has had difficulty finding peer reviewers for certain competitions because so many individuals who are eligible to serve as peer reviewers have conflicts of interest. The standing panel requirements under section 682(b) of IDEA also have placed additional constraints on the availability of reviewers. Therefore, the Department has determined that, for some discretionary grant competitions, applications may be separated into two or more groups and ranked and selected for funding within specific groups. This procedure will make it easier for the Department to find peer reviewers by ensuring that greater numbers of individuals who are eligible to serve as reviewers for any particular group of applicants will not have conflicts of interest. It also will increase the quality, independence, and fairness of the review process, while permitting panel members to review applications under discretionary grant competitions for which they also have submitted applications. However, if the Department decides to select an equal number of applications in each group

for funding, this may result in different cut-off points for fundable applications in each group.

4. *Special Conditions:* Under 34 CFR 74.14 and 80.12, the Secretary may impose special conditions on a grant if the applicant or grantee is not financially stable; has a history of unsatisfactory performance; has a financial or other management system that does not meet the standards in 34 CFR parts 74 or 80, as applicable; has not fulfilled the conditions of a prior grant; or is otherwise not responsible.

## VI. Award Administration Information

1. *Award Notices:* If your application is successful, we notify your U.S. Representative and U.S. Senators and send you a Grant Award Notification (GAN); or we may send you an email containing a link to access an electronic version of your GAN. We may notify you informally, also.

If your application is not evaluated or not selected for funding, we notify you.

2. *Administrative and National Policy Requirements:* We identify administrative and national policy requirements in the application package and reference these and other requirements in the *Applicable Regulations* section of this notice.

We reference the regulations outlining the terms and conditions of an award in the *Applicable Regulations* section of this notice and include these and other specific conditions in the GAN. The GAN also incorporates your approved application as part of your binding commitments under the grant.

3. *Reporting:* (a) If you apply for a grant under this competition, you must ensure that you have in place the necessary processes and systems to comply with the reporting requirements in 2 CFR part 170 should you receive funding under the competition. This does not apply if you have an exception under 2 CFR 170.110(b).

(b) At the end of your project period, you must submit a final performance report, including financial information, as directed by the Secretary. If you receive a multi-year award, you must submit an annual performance report that provides the most current performance and financial expenditure information as directed by the Secretary under 34 CFR 75.118. The Secretary may also require more frequent performance reports under 34 CFR 75.720(c). For specific requirements on reporting, please go to [www.ed.gov/fund/grant/apply/appforms/appforms.html](http://www.ed.gov/fund/grant/apply/appforms/appforms.html).

4. *Continuation Awards:* In making a continuation award, the Secretary may consider, under 34 CFR 75.253, the

extent to which a grantee has made “substantial progress toward meeting the objectives in its approved application.” This consideration includes the review of a grantee’s progress in meeting the targets and projected outcomes in its approved application, and whether the grantee has expended funds in a manner that is consistent with its approved application and budget. In making a continuation grant, the Secretary also considers whether the grantee is operating in compliance with the assurances in its approved application, including those applicable to Federal civil rights laws that prohibit discrimination in programs or activities receiving Federal financial assistance from the Department (34 CFR 100.4, 104.5, 106.4, 108.8, and 110.23).

## VII. Agency Contact

### FOR FURTHER INFORMATION CONTACT:

Corinne Weidenthal, U.S. Department of Education, 400 Maryland Avenue SW., room 4115, PCP, Washington, DC 20202–2600. Telephone: (202) 245–6529 or by email: [corinne.weidenthal@ed.gov](mailto:corinne.weidenthal@ed.gov).

If you use a TDD or a TTY, call the Federal Relay Service (FRS), toll free, at 1–800–877–8339.

## VIII. Other Information

**Accessible Format:** Individuals with disabilities can obtain this document and a copy of the application package in an accessible format (e.g., braille, large print, audiotope, or compact disc) by contacting the Grants and Contracts Services Team, U.S. Department of Education, 400 Maryland Avenue SW., room 5075, PCP, Washington, DC 20202–2550. Telephone: (202) 245–7363. If you use a TDD or a TTY, call the FRS, toll free, at 1–800–877–8339.

**Electronic Access to This Document:** The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: [www.gpo.gov/fdsys](http://www.gpo.gov/fdsys). At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: [www.federalregister.gov](http://www.federalregister.gov). Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

## DEPARTMENT OF EDUCATION

### Privacy Act of 1974; Computer Matching Program Between the Department of Education and the Department of Justice

**AGENCY:** Department of Education.

**ACTION:** Notice.

**SUMMARY:** This document provides notice of the continuation of a computer matching program between the Department of Education and the Department of Justice. The continuation is effective on the date in paragraph 5.

**SUPPLEMENTARY INFORMATION:** Section 421(a)(1) of the Controlled Substances Act (21 U.S.C. 862(a)(1)) includes provisions regarding the judicial denial of Federal benefits. Section 421 of the Controlled Substances Act, which was originally enacted as section 5301 of the Anti-Drug Abuse Act of 1988, and which was amended and redesignated as section 421 of the Controlled Substances Act by section 1002(d) of the Crime Control Act of 1990, Pub. L. 101–647 (hereinafter referred to as “section 5301”), authorizes Federal and State judges to deny certain Federal benefits (including student financial assistance under title IV of the Higher Education Act of 1965, as amended (HEA)) to individuals convicted of drug trafficking or possession of a controlled substance.

In order to ensure that title IV, HEA student financial assistance is not awarded to individuals subject to denial of benefits under court orders issued pursuant to section 5301, the Department of Justice and the Department of Education implemented a computer matching program. The 18-month computer matching agreement (CMA) was recertified for an additional 12 months on June 20, 2012. The 12-month recertification of the CMA will automatically expire on June 19, 2013.

For the purpose of ensuring that title IV, HEA student financial assistance is not awarded to individuals denied benefits by court orders issued under the Denial of Federal Benefits Program, the Department of Education must continue to obtain from the Department of Justice identifying information regarding individuals who are the subject of section 5301 denial of benefits

court orders. The purpose of this notice is to announce the continued operation of the computer matching program and to provide certain required information concerning the computer matching program.

In accordance with the Privacy Act of 1974 (5 U.S.C. 552a), as amended by the Computer Matching and Privacy Protection Act of 1988 (Pub. L. 100–503), the Office of Management and Budget (OMB) Guidelines on the Conduct of Matching Programs (54 FR 25818, June 19, 1989), and OMB Circular A–130, the following information is provided:

### 1. Names of Participating Agencies

The Department of Education (ED) and the Department of Justice (DOJ).

### 2. Purpose of the Match

The purpose of this matching program is to ensure that the requirements of section 421 of the Controlled Substances Act (originally enacted as section 5301 of the Anti-Drug Abuse Act of 1988, Pub. L. 100–690, 21 U.S.C. 853a, which was amended and redesignated as section 421 of the Controlled Substances Act by section 1002(d) of the Crime Control Act of 1990, Pub. L. 101–647) (hereinafter referred to as “section 5301”), are met.

DOJ is the lead contact agency for information related to section 5301 violations and, as such, provides this data to ED. ED seeks access to the information contained in the DOJ Denial of Federal Benefits Clearinghouse System (DEBARS) database that is authorized under section 5301 for the purpose of ensuring that title IV, HEA student financial assistance is not awarded to individuals subject to denial of benefits under court orders issued pursuant to the Denial of Federal Benefits Program.

### 3. Authority for Conducting the Matching Program

Under section 5301, ED must deny Federal benefits to any individual upon whom a Federal or State court order has imposed a penalty denying eligibility for those benefits. Student financial assistance under title IV of the HEA is a Federal benefit under section 5301, and ED must, in order to meet its obligations under the HEA, have access to information about individuals who have been declared ineligible under section 5301.

While DOJ provides information about section 5301 individuals who are ineligible for Federal benefits to the General Services Administration (GSA) for inclusion in GSA’s List of Parties Excluded from Federal Procurements

and Nonprocurement Programs, DOJ and ED have determined that matching against the DOJ database is more efficient and effective than matching against the GSA List. The DOJ database has specific information about the title IV, HEA programs for which individuals are ineligible, as well as the expiration of the debarment period, making the DOJ database more complete than the GSA List. Both of these elements are essential for a successful match.

#### 4. Categories of Records and Individuals Covered by the Match

ED will submit, for verification, records from its Central Processing System files (Federal Student Aid Application File (18-11-01)), the Social Security number (SSN), and other identifying information for each applicant for title IV, HEA student financial assistance. ED will use the SSN, date of birth, and the first two letters of an applicant's last name for the match.

The DOJ DEBARs system contains the names, SSNs, dates of birth, and other identifying information regarding individuals convicted of Federal or State offenses involving drug trafficking or possession of a controlled substance who have been denied Federal benefits by Federal or State courts. This system of records also contains information concerning the specific program or programs for which benefits have been denied, as well as the duration of the period of ineligibility. DOJ will make available for the matching program the records of only those individuals who have been denied Federal benefits under one or more of the title IV, HEA programs.

#### 5. Effective Dates of the Matching Program

The matching program will be effective on the latest of the following three dates: (A) June 20, 2013; (B) thirty (30) days after notice of the matching program has been published in the **Federal Register**; or (C) forty (40) days after a report concerning the matching program has been transmitted to OMB and transmitted to the Congress along with a copy of this agreement, unless OMB waives 10 days of this 40-day period for compelling reasons, in which case, 30 days after transmission of the report to OMB and Congress.

The matching program will continue for 18 months after the effective date of the CMA and may be extended for an additional 12 months thereafter, if the conditions specified in 5 U.S.C. 552a(o)(2)(D) have been met.

#### 6. Address for Receipt of Public Comments or Inquiries

Individuals wishing to comment on this matching program or obtain additional information about the program, including requesting a copy of the computer matching agreement between ED and DOJ, may contact Franka Dennis, Management and Program Analyst, U.S. Department of Education, Federal Student Aid, Union Center Plaza, 830 First Street NE., Washington, DC 20202-5454. Telephone: (202) 377-4067.

**Accessible Format:** If you use a telecommunications device for the deaf (TDD) or a text telephone (TTY), call the Federal Relay Service, toll free, at 1-800-877-8339.

Individuals with disabilities can obtain this document in an accessible format (e.g., Braille, large print, audiotape, or compact disc) by contacting the contact person listed in the preceding paragraph.

**Electronic Access to This Document:** The official version of this document is the document published in the **Federal Register**. Free Internet access to the official edition of the **Federal Register** and the Code of Federal Regulations is available via the Federal Digital System at: [www.gpo.gov/fdsys](http://www.gpo.gov/fdsys). At this site you can view this document, as well as all other documents of this Department published in the **Federal Register**, in text or Adobe Portable Document Format (PDF). To use PDF you must have Adobe Acrobat Reader, which is available free at the site.

You may also access documents of the Department published in the **Federal Register** by using the article search feature at: [www.federalregister.gov](http://www.federalregister.gov). Specifically, through the advanced search feature at this site, you can limit your search to documents published by the Department.

**Authority:** 5 U.S.C. 552a; 21 U.S.C. 862(a)(1).

Dated: May 10, 2013.

#### DEPARTMENT OF ENERGY

##### Office of Energy Efficiency and Renewable Energy; Agency Information Collection Extension

**AGENCY:** Office of Energy Efficiency and Renewable Energy, U.S. Department of Energy (DOE).

**ACTION:** Submission for Office of Management and Budget (OMB) review; comment request.

**SUMMARY:** The Department of Energy has submitted an information collection package to the OMB for extension under the provisions of the Paperwork Reduction Act of 1995. The package requests a three-year extension of its "Annual Alternative Fuel Vehicle Acquisition Report for State and Alternative Fuel Provider Fleets," OMB Control Number 1910-5101. This information collection package covers information necessary to ensure the compliance of regulated fleets with the alternative fueled vehicle acquisition requirements imposed by the Energy Policy Act of 1992, as amended, (EPAct).

**DATES:** Comments regarding this collection must be received on or before June 20, 2013. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the OMB Desk Officer of your intention to make a submission as soon as possible. The Desk Officer may be telephoned at 202-395-4650 or contacted by email at [chad\\_s\\_whiteman@omb.eop.gov](mailto:chad_s_whiteman@omb.eop.gov).

**ADDRESSES:** Written comments should be sent to:

Desk Officer for the Department of Energy, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW., Washington, DC 20503

And to

Mr. Dana O'Hara, Office of Energy Efficiency and Renewable Energy (EE-2G), U.S. Department of Energy, 1000 Independence Avenue SW., Washington, DC 20585-0121, or by fax at 202-586-1600, or by email at [dana.o'hara@ee.doe.gov](mailto:dana.o'hara@ee.doe.gov).

**FOR FURTHER INFORMATION CONTACT:**

Requests for additional information or copies of the information collection instrument and instructions should be directed to Mr. Dana O'Hara at the address listed above in **ADDRESSES**. The information collection instrument itself is available online at [http://www1.eere.energy.gov/vehiclesandfuels/epact/docs/reporting\\_spreadsheet.xls](http://www1.eere.energy.gov/vehiclesandfuels/epact/docs/reporting_spreadsheet.xls).

**SUPPLEMENTARY INFORMATION:** This package contains: (1) OMB No. 1910-5101; (2) *Information Collection Request Title: Annual Alternative Fuel Vehicle Acquisition Report for State Government and Alternative Fuel Provider Fleets*; (3) *Type of Review:*

renewal; (4) *Purpose*: the information is required so that DOE can determine whether alternative fuel provider and State government fleets are in compliance with the alternative fueled vehicle acquisition mandates of sections 501 and 507(o) of the EPCAct, whether such fleets should be allocated credits under section 508 of EPCAct, and whether fleets that opted into the alternative compliance program under section 514 of EPCAct are in compliance with the applicable requirements; (5) *Annual Estimated Number of Respondents*: approximately 300; (6) *Annual Estimated Number of Burden Hours*: 1,651; (7) *Annual Estimated Reporting and Recordkeeping Cost Burden*: Beyond costs associated with undertaking the work, there are no additional costs to respondents of either information collection other than the burden hours for reporting and recordkeeping. Costs to undertake the work for the collection are approximated at \$47.73/hour of effort ([http://www.bls.gov/oes/current/oes\\_nat.htm#11-0000](http://www.bls.gov/oes/current/oes_nat.htm#11-0000)), for a total of \$283 in labor to research, collect, and respond to the collection.

**Statutory Authority:** 42 U.S.C. 13251 et seq.

Issued in Washington, DC, on: May 9, 2013.

**Patrick B. Davis,**

*Director, Vehicle Technologies Office, Energy Efficiency and Renewable Energy.*

BILLING CODE 6717-01-P

## ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OAR-2013-0246; EPA-HQ-OAR-2006-0895; FRL-9815-7]

### Agency Information Collection Activities: Proposed Collections; Request for Comment on Two Proposed Information Collection Requests (ICRs)

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice.

**SUMMARY:** The Environmental Protection Agency is planning to submit two information collection requests (ICRs), (see the item specific information provided in the text), to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*). Before doing so, EPA is soliciting public comments on specific aspects of the proposed information collection as described below. This is a proposed extension of both ICRs, which are currently approved through July 31, 2013 and October 31, 2013, as specified for each item in the text below. An Agency may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number.

**DATES:** Comments must be submitted on or before July 22, 2013.

**ADDRESSES:** Submit your comments, referencing the Docket ID numbers provided for each item in the text, online using [www.regulations.gov](http://www.regulations.gov) (our preferred method), by email to [a-and-r-Docket@epa.gov](mailto:a-and-r-Docket@epa.gov) or by mail to: EPA Docket Center, Environmental Protection Agency, Mail Code 28221T, 1200 Pennsylvania Ave. NW., Washington, DC 20460.

EPA's policy is that all comments received will be included in the public docket without change including any personal information provided, unless the comment includes profanity, threats, information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute.

### FOR FURTHER INFORMATION CONTACT:

Nydia Yanira Reyes-Morales, Environmental Protection Agency, 1200 Pennsylvania Avenue NW., Mail Code 6403J, Washington, DC 20460; telephone number: 202-343-9264; fax number: 202-343-2804; email address: [reyes-morales.nydia@epa.gov](mailto:reyes-morales.nydia@epa.gov).

### SUPPLEMENTARY INFORMATION:

Supporting documents which explain in detail the information that the EPA will be collecting are available in the public docket for this ICR. The docket can be viewed online at [www.regulations.gov](http://www.regulations.gov) or in person at the EPA Docket Center, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The telephone number for the Docket Center is 202-566-1744. For additional information about EPA's public docket, visit <http://www.epa.gov/dockets>.

Pursuant to section 3506(c)(2)(A) of the Paperwork Reduction Act, EPA is soliciting comments and information to enable it to: (i) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (ii) evaluate the accuracy of the Agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used; (iii) enhance the quality, utility, and clarity of the information to be collected; and (iv) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses. EPA will consider the comments received and amend the ICR as appropriate. The final ICR package will then be submitted to OMB for review and approval. At that time, EPA will issue another **Federal Register** notice to announce the submission of the ICR to OMB and the opportunity to submit additional comments to OMB.

### ICR #1: Information Requirements for New Marine Compression Ignition Engines at or Above 30 Liters per Cylinder (Revision to an Existing Package), Expiring July 31, 2013. (EPA ICR No. 2345.03, OMB Control No. 2060-0641); Docket ID Number: EPA-HQ-OAR-2013-0246

**Abstract:** For this ICR, EPA is seeking a revision to an existing package with a three year extension. Title II of the Clean Air Act, (42 U.S.C. 7521 *et seq.*; CAA), charges the Environmental

Protection Agency (EPA) with issuing certificates of conformity for those engines that comply with applicable emission standards. Such a certificate must be issued before engines may be legally introduced into commerce. Under this ICR, EPA collects information necessary to (1) issue certificates of compliance with emission statements, and (2) verify compliance with various programs and regulatory provisions pertaining to marine compression-ignition engines with a specific engine displacement at or above 30 liters per cylinder, also referred to as Category 3 engines. To apply for a certificate of conformity, manufacturers are required to submit descriptions of their planned production engines, including detailed descriptions of emission control systems and test data. This information is organized by "engine family" groups expected to have similar emission characteristics. There are recordkeeping requirements of up to eight years.

The Act also mandates EPA to verify that manufacturers have successfully translated their certified prototypes into mass produced engines, and that these engines comply with emission standards throughout their useful lives. Under the Production Line Testing Program ("PLT Program"), manufacturers of Category 3 engines are required to test each engine at the sea trial of the vessel in which the engine is installed or within the first 300 hours of operation, whichever comes first. This self-audit program allows manufacturers to monitor compliance and minimize the cost of correcting errors through early detection. In addition, owners and operators of marine vessels with Category 3 engines must record certain information and send minimal annual notifications to EPA to show that engine maintenance and adjustments have not caused engines to be noncompliant. From time to time, EPA may test in-use engines to verify compliance with emission standards throughout the marine engine's useful life and may ask for information about the engine family to be tested.

The information requested is collected by the Diesel Engine Compliance Center (DECC), Compliance Division (CD), Office of Transportation and Air Quality, Office of Air and Radiation, EPA. Besides DECC and CD, this information could be used by the Office of Enforcement and Compliance Assurance and the Department of Justice for enforcement purposes. Proprietary information is kept confidential in accordance with the Freedom of Information Act (FOIA), EPA

regulations at 40 CFR Parts 2 and 1042.915, and class determinations issued by EPA's Office of General Counsel. Non-confidential business information may be disclosed as requested under FOIA. That information may be used by trade associations, environmental groups, and the public. Most of the information is collected in electronic format and stored in CD's databases.

**Form Numbers:** 5900-90 (Annual Production Report template); PLT reporting template. EPA is in the process of obtaining a form number for the PLT reporting template.

**Respondents/affected entities:** Respondents are manufacturers and owners or operators of marine compression-ignition engines above 30 liters per cylinder and the vessels in which those engines are installed. Respondents are within the following North American Industry Classification System (NAICS) codes: 333618 (Other Engine Equipment Manufacturing), 336611 (Manufacturers of Marine Vessels); 811310 (Engine Repair and Maintenance); 483 (Water transportation, freight and passenger).

**Respondent's obligation to respond:** Required to obtain or retain a benefit. Manufacturers must respond to this collection if they wish to sell and/or operate their Category 3 engines in the U.S., as prescribed by Section 206(a) of the CAA (42 U.S.C. 7521) and 40 CFR Part 1042. Certification reporting is mandatory (Section 206(a) of CAA (42 U.S.C. 7521) and 40 CFR Part 1042, Subpart C). PLT reporting is mandatory (Section 206(b)(1) of CAA and 40 CFR Part 1042, Subpart D).

**Estimated number of respondents:** 200 (total, including engine manufacturers, owners and operators).

**Frequency of response:** Quarterly, Annually, On Occasion, depending on the program.

**Total estimated burden:** 3,012 hours per year. Burden is defined at 5 CFR 1320.03(b)

**Total estimated cost:** Estimated total annual costs: \$200,000 (per year), includes an estimated \$65,155 annualized capital or maintenance and operational costs.

**Changes in Estimates:** To date, there are no changes in the total estimated respondent burden compared with the ICR currently approved by OMB. However, EPA is evaluating information that may lead to a change in the estimates. After EPA has evaluated this information, burden estimates may slightly decrease due to the fact that EPA has received fewer applications for certification of Category 3 engine families than previously estimated. Cost

estimates may increase due to inflation and labor rate changes.

**ICR#2 Engine Emission Defect Information Reports and Voluntary Emission Recall Reports (Revision to an Existing Package),” Expiring October 31, 2013; EPA ICR No. 0282.15, OMB Control No. 2060-0048; Docket ID Number: EPA-HQ-OAR-2006-0895**

**Abstract:** For this ICR, EPA is seeking a revision to an existing package with a three year extension. Under the provisions of the Clean Air Act (CAA), EPA is required to promulgate regulations to control emissions of air pollutants from motor vehicles and nonroad engines, as defined in the CAA. Per Sections 207(d)(1) and 213 of the CAA, when a substantial number of properly maintained and used engines produced by the same manufacturer do not conform to emission requirements, the manufacturer is required to recall the engines. When emission-related defects are found on a number of engines of the same model year and that defect may cause the engine emissions to exceed the standards, the engine manufacturer is required to submit an Emission Defect Information Report (EDIR). EDIRs allow EPA to target potentially nonconforming classes of engines for future testing, to monitor compliance with applicable regulations and to order a recall, if necessary. Engine manufacturers can also initiate a recall voluntarily by submitting a Voluntary Emission Recall Report (VERR). VERRs and VERR updates allow EPA to determine whether the manufacturer conducting the recall is acting in accordance with the CAA and to monitor the effectiveness of the recall campaign.

The information requested is collected by the Diesel Engine Compliance Center (DECC), Compliance Division (CD), Office of Transportation and Air Quality, Office of Air and Radiation, EPA. Besides DECC and CD, this information could be used by the Office of Enforcement and Compliance Assurance and the Department of Justice for enforcement purposes. Proprietary information is kept confidential in accordance with the Freedom of Information Act (FOIA), EPA regulations at 40 CFR Parts 2, and class determinations issued by EPA's Office of General Counsel. Non-confidential business information may be disclosed as requested under FOIA. That information may be used by trade associations, environmental groups, and the public.

**Form Numbers:** Emissions Defect Information Report Form; Voluntary Emissions Recall Report Form; and

Quarterly Recall Report Form. EPA is in the process of obtaining form numbers for these three forms.

**Respondents/affected entities:** Entities potentially affected by this action are manufacturers of on-highway heavy-duty engines, nonroad engines, fuel system components, marine engines, recreational vehicles, locomotives and locomotive engines.

**Respondent's obligation to respond:** Per sections 207(c)(1) and 213 of the Clean Air Act (CAA), engine manufacturers must submit EDIRs once a certain threshold is met. The threshold varies according to the type of engine and the part under which it is regulated. VERRs are submitted voluntarily.

**Estimated number of respondents:** 40 (total).

**Frequency of response:** EDIRs and VERRs are submitted on occasion, whereas VERR updates are submitted quarterly by some respondents.

**Total estimated burden:** 15,084 hours (per year). Burden is defined at 5 CFR 1320.03(b).

**Total estimated cost:** \$1,187,132 (per year), includes \$9,800 annualized capital or operation & maintenance costs.

**Changes in Estimates:** To date, there is a decrease of 11,479 hours in the total estimated respondent burden compared with the ICR currently approved by OMB. However, EPA is evaluating information that may lead to a change in this estimate. The expected decrease is due to the fact that EPA has received far fewer EDIRs and VERRs than previously expected.

Dated: May 13, 2013.

**ENVIRONMENTAL PROTECTION AGENCY**

[FRL-9815-8]

**Notification of a Public Teleconference of the Clean Air Act Advisory Committee (CAAAC)**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Notice of meeting.

**SUMMARY:** The Environmental Protection Agency (EPA) announces a public teleconference of the Clean Air Act Advisory Committee (CAAAC). The EPA established the CAAAC on November 19, 1990, to provide

independent advice and counsel to EPA on policy issues associated with implementation of the Clean Air Act of 1990. The Committee advises on economic, environmental, technical, scientific and enforcement policy issues.

**DATES & ADDRESSES:** Pursuant to 5 U.S.C. App. 2 Section 10(a) (2), notice is hereby given that the CAAAC will hold its next meeting via teleconference on June 25, 2013, from 3:00 p.m. to 5:00 p.m. (Eastern Time).

**Inspection of Committee Documents:** The Committee agenda and any documents prepared for the meeting will be publicly available on the CAAAC Web site at <http://www.epa.gov/oar/caaac/> prior to the meeting. Thereafter, these documents, together with CAAAC meeting minutes, will be available by contacting the Office of Air and Radiation Docket and requesting information under docket EPA-HQ-OAR-2004-0075. The Docket office can be reached by email at: [a-and-r-Docket@epa.gov](mailto:a-and-r-Docket@epa.gov) or FAX: 202-566-9744.

**FOR FURTHER INFORMATION CONTACT:** Any member of the public who wants further information concerning the CAAAC's public teleconference may contact Jeneva Craig, Designated Federal Officer (DFO), Office of Air and Radiation, U.S. EPA by telephone at (202) 564-1674 or by email at [craig.jeneva@epa.gov](mailto:craig.jeneva@epa.gov). Additional information on these meetings can be found on the CAAAC Web site: <http://www.epa.gov/oar/caaac/>.

For information on access or services for individuals with disabilities, please contact Ms. Jeneva Craig at (202) 564-1674 or [craig.jeneva@epa.gov](mailto:craig.jeneva@epa.gov), preferably at least 10 days prior to the meeting to give EPA as much time as possible to process your request.

Dated: May 14, 2013.

**Jeneva Craig,**

**BILLING CODE 1505-01-D**

**OFFICE OF GOVERNMENT ETHICS**

**Agency Information Collection Activities; Proposed Collection; Comment Request for an Unmodified OGE Form 450 Executive Branch Confidential Financial Disclosure Report**

**AGENCY:** Office of Government Ethics (OGE).

**ACTION:** Notice of request for agency and public comments.

**SUMMARY:** After this first round notice and public comment period, OGE plans to submit an unmodified OGE Form 450 Executive Branch Confidential Financial Disclosure Report to the Office of Management and Budget (OMB) for review and approval of a three-year extension under the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35).

**DATES:** Written comments by the public and the agencies on this proposed extension are invited and must be received by July 22, 2013.

**ADDRESSES:** You may submit comments to OGE on this paperwork notice by any of the following methods:

*Email:* [usoge@oge.gov](mailto:usoge@oge.gov) (Include reference to "OGE Form 450 paperwork comment" in the subject line of the message).

*FAX:* 202-482-9237.

*Mail, Hand Delivery/Courier:* Office of Government Ethics, Suite 500, 1201 New York Avenue NW., Washington, DC 20005-3917, Attention: Paul D. Ledvina, Agency Clearance Officer.

**FOR FURTHER INFORMATION CONTACT:** Mr. Ledvina at the Office of Government Ethics; telephone: 202-482-9247; TTY: 800-877-8339; FAX: 202-482-9237; Email: [paul.ledvina@oge.gov](mailto:paul.ledvina@oge.gov). An electronic copy of the OGE Form 450 is available in the Forms Library section of OGE's Web site at <http://www.oge.gov>. A paper copy may also be obtained, without charge, by contacting Mr. Ledvina.

**SUPPLEMENTARY INFORMATION:**

*Title:* Executive Branch Confidential Financial Disclosure Report.

*Agency Form Number:* OGE Form 450.

*OMB Control Number:* 3209-0006.

*Type of Information Collection:*

Extension without change of a currently approved collection.

*Type of Review Request:* Regular.

*Respondents:* Private citizens who are potential (incoming) regular Federal employees whose positions are designated for confidential disclosure filing, and special Government employees whose agencies require that they file new entrant disclosure reports prior to assuming Government responsibilities.

*Estimated Annual Number of Respondents:* 19,847.

*Estimated Time per Response:* 1 hour.

*Estimated Total Annual Burden:*

19,847 hours.

*Abstract:* The OGE Form 450 collects information from covered department and agency employees as required under OGE's executive branchwide regulatory provisions in subpart I of 5 CFR part 2634. The basis for the OGE reporting regulation is section 201(d) of Executive Order 12674 of April 12, 1989 (as modified by Executive Order 12731 of October 17, 1990, 3 CFR, 1990 Comp., pp. 306-311, at p. 308) and section 107(a) of the Ethics in Government Act, 5 U.S.C. app., sec. 107(a).

*Request for Comments:* Public comment is invited specifically on the need for and practical utility of this information collection, the accuracy of OGE's burden estimate, the enhancement of quality, utility and clarity of the information collected, and the minimization of burden (including the use of information technology). Comments received in response to this notice will be summarized for, and may be included with, the OGE request for extension of OMB paperwork approval. The comments will also become a matter of public record.

Approved: April 24, 2013.

**Walter M. Shaub, Jr.,**

*Director, Office of Government Ethics.*

[FR Doc. 2013-12001 Filed 5-20-13; 8:45 am]

**DEPARTMENT OF HEALTH AND HUMAN SERVICES**

**Agency for Healthcare Research and Quality**

**Notice of Meeting**

**AGENCY:** Agency for Healthcare Research and Quality, HHS.

**ACTION:** Notice.

**SUMMARY:** In accordance with section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App. 2), announcement is made of an Agency for Healthcare Research and Quality (AHRQ) Special Emphasis Panel (SEP) meeting on “Estimating the Costs of Supporting Primary Care Practice Transformation (R03)”.

**DATES:** July 11–12, 2013 (Open on July 11 from 8:00 a.m. to 8:30 a.m. and closed for the remainder of the meeting).

**ADDRESSES:** Hyatt Regency Hotel Bethesda, One Metro Center, Bethesda, MD 20814.

**FOR FURTHER INFORMATION CONTACT:** Anyone wishing to obtain a roster of members, agenda or minutes of the non-confidential portions of this meeting should contact: Mrs. Bonnie Campbell, Committee Management Officer, Office of Extramural Research, Education and Priority Populations, AHRQ, 540 Gaither Road, Room 2038, Rockville, Maryland 20850, Telephone: (301) 427–1554.

Agenda items for this meeting are subject to change as priorities dictate.

**SUPPLEMENTARY INFORMATION:** A Special Emphasis Panel is a group of experts in fields related to health care research who are invited by the Agency for Healthcare Research and Quality (AHRQ), and agree to be available, to conduct on an as needed basis, scientific reviews of applications for AHRQ support. Individual members of the Panel do not attend regularly-scheduled meetings and do not serve for fixed terms or a long period of time. Rather, they are asked to participate in particular review meetings which require their type of expertise.

Substantial segments of the SEP meeting referenced above will be closed to the public in accordance with the provisions set forth in 5 U.S.C. App. 2, section 10(d), 5 U.S.C. 552b(c)(4), and 5 U.S.C. 552b(c)(6). Grant applications for “AHRQ RESEARCH SERVICE AWARDS (NRSA) INSTITUTIONAL RESEARCH TRAINING GRANTS (T32) Special Emphasis Award” are to be reviewed and discussed at this meeting. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Dated: May 8, 2013.

**Carolyn M. Clancy,**  
AHRQ Director.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Agency for Healthcare Research and Quality

#### Notice of Meetings

**AGENCY:** Agency for Healthcare Research and Quality (AHRQ), HHS.

**ACTION:** Notice of Five AHRQ Subcommittee Meetings.

**SUMMARY:** The subcommittees listed below are part of AHRQ’s Health Services Research Initial Review Group Committee. Grant applications are to be reviewed and discussed at these meetings. These meetings will be closed to the public in accordance with 5 U.S.C. App. 2 section 10(d), 5 U.S.C. section 552b(c)(4), and 5 U.S.C. section 552b(c)(6).

**DATES:** See below for dates of meetings:

1. Healthcare Safety and Quality Improvement Research (HSQR)  
Date: June 19–20, 2013 (Open from 8:00 a.m. to 8:30 a.m. on June 19 and closed for remainder of the meeting)
2. Healthcare Effectiveness and Outcomes Research (HEOR)  
Date: June 19–20, 2013 (Open from 8:00 a.m. to 8:30 a.m. on June 19 and closed for remainder of the meeting)
3. Healthcare Information Technology Research (HITR)  
Date: June 19–21, 2013 (Open from 8:00 a.m. to 8:30 a.m. on June 19 and closed for remainder of the meeting)
4. Health Care Research and Training (HCRT)  
Date: June 20, 2013 (Open from 8:00 a.m. to 8:30 a.m. on June 20 and closed for remainder of the meeting)
5. Health System and Value Research (HSVR)  
Date: July 09–10, 2013 (Open from 8:00 a.m. to 8:30 a.m. on July 09 and closed for remainder of the meeting)

**ADDRESSES:** The five meetings will take place at the following locations:

#### HSQR, HEOR, HITR, HCRT

Gaithersburg Marriott Washingtonian Center, 9751 Washingtonian Boulevard, Gaithersburg, Maryland 20878.

#### HSVR

Hyatt Regency Hotel Bethesda, One Metro Center, Bethesda, MD 20814.

**FOR FURTHER INFORMATION CONTACT:** (To obtain a roster of members, agenda or

minutes of the non-confidential portions of the meetings.)

Mrs. Bonnie Campbell, Committee Management Officer, Office of Extramural Research Education and Priority Populations, AHRQ, 540 Gaither Road, Suite 2000, Rockville, Maryland 20850, Telephone (301) 427–1554.

**SUPPLEMENTARY INFORMATION:** In accordance with section 10(a)(2) of the Federal Advisory Committee Act (5 U.S.C. App. 2), AHRQ announces meetings of the scientific peer review groups listed above, which are subcommittees of AHRQ’s Health Services Research Initial Review Group Committee. The subcommittee meetings will be closed to the public in accordance with the provisions set forth in 5 U.S.C. App. 2 section 10(d), 5 U.S.C. 552b(c)(4), and 5 U.S.C. 552b(c)(6). The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Agenda items for these meetings are subject to change as priorities dictate.

Dated: May 8, 2013.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Centers for Disease Control and Prevention

#### Board of Scientific Counselors, National Center for Injury Prevention and Control, (BSC, NCIPC)

In accordance with Section 10(a)(2) of the Federal Advisory Committee Act (Pub. L. 92–463), the Centers for Disease Control and Prevention (CDC) announces the following meeting of the aforementioned committee:

*Times and Dates:*

8:30 a.m.–7:00 p.m., June 13, 2013 (Open).  
8:30 a.m.–2:00 p.m., June 14, 2013 (Closed).

*Place:* CDC, Century Center, 1825 Century Boulevard NE., Room 1042–1B, Atlanta, Georgia 30345

*Status:* Portions of the meeting as designated above will be closed to the public in accordance with the provisions set forth in Section 552b(c)(4) and (6), Title 5 U.S.C., and the Determination of the Director, Management Analysis and Services Office, CDC, pursuant to Public Law 92–463.

*Purpose:* The Board will: (1) Conduct, encourage, cooperate with, and assist other appropriate public health authorities, scientific institutions, and scientists in the conduct of research, investigations, experiments, demonstrations, and studies relating to the causes, diagnosis, treatment, control, and prevention of physical and mental diseases, and other impairments; (2) assist States and their political subdivisions in preventing and suppressing communicable and non-communicable diseases and other preventable conditions and in promoting health and well-being; and (3) conduct and assist in research and control activities related to injury.

The Board of Scientific Counselors makes recommendations regarding policies, strategies, objectives, and priorities; and reviews progress toward injury prevention goals and provides evidence in injury prevention-related research and programs. The Board also provides advice on the appropriate balance of intramural and extramural research, the structure, progress and performance of intramural programs. The Board is designed to provide guidance on extramural scientific program matters, including the: (1) Review of extramural research concepts for funding opportunity announcements; (2) conduct of Secondary Peer Review of extramural research grants, cooperative agreements, and contracts applications received in response to the funding opportunity announcements as it relates to the Center's programmatic balance and mission; (3) submission of secondary review recommendations to the Center Director of applications to be considered for funding support; (4) review of research portfolios, and (5) review of program proposals.

*Matters to be Discussed:* The Board of Scientific Counselors will discuss science matters to include research strategies needed to guide the Center's focus, as well as updates on the current research portfolio review and the Pediatric mild-Traumatic Injury Workgroup. There will be 15 minutes allotted for public comments at the end of the open session.

*Closed Session:* On the second day of the meeting, the Board will conduct the Secondary Peer Review of extramural research grant applications received in response to Funding Opportunity Announcement CE-13-002 Research Grants for Preventing Violence and Violence Related Injury. Applications will be assessed as it relates to the Center's mission and programmatic balance. The Board will discuss and vote on the secondary review recommendations to be provided to the Center Director for applications to be considered for funding support.

Agenda items are subject to change as priorities dictate.

*Contact Person for More Information:* Gwendolyn H. Cattledge, Ph.D., M.S.E.H., Deputy Associate Director for Science, NCIPC, CDC, 4770 Buford Highway NE., Mailstop F-63, Atlanta, Georgia 30341, Telephone (770) 488-1430.

The Director, Management Analysis and Services Office, has been delegated the authority to sign **Federal Register** notices

pertaining to announcements of meetings and other committee management activities, for both the Centers for Disease Control and Prevention and the Agency for Toxic Substances and Disease Registry.

**Elaine L. Baker,**

*Director, Management Analysis and Services Office, Centers for Disease Control and Prevention.*

### Food and Drug Administration

[Docket No. FDA-2013-N-0473]

#### Human Immunodeficiency Virus Patient-Focused Drug Development and Human Immunodeficiency Virus Cure Research: Public Meeting

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Notice of public meeting; request for comments.

**SUMMARY:** The Food and Drug Administration (FDA) is announcing a public meeting and an opportunity for public comment on human immunodeficiency virus (HIV) Patient-Focused Drug Development and HIV Cure Research. Patient-Focused Drug Development is part of FDA's performance commitments in the fifth authorization of the Prescription Drug User Fee Act (PDUFA V). FDA is interested in obtaining patient input on the impact of HIV on daily life, available therapies to treat the condition, and patients' views on issues related to HIV cure research, such as perceived benefits and acceptable risks for participating in HIV cure research and clear communication of benefits and risks through informed consent.

**DATES:** The public meeting will be held on Friday, June 14, 2013, from 9:30 a.m. to 5:30 p.m. Registration to attend the meeting must be received by Wednesday, June 5, 2013. Submit electronic or written comments by July 14, 2013. See the **SUPPLEMENTARY INFORMATION** section for information on how to register for the meeting.

**ADDRESSES:** The meeting will be held at the FDA White Oak Campus, 10903 New Hampshire Ave., Building 31 Conference Center, in section A of the Great Room (Room 1503), Silver Spring, MD 20993. Entrance for the public meeting participants is through Building 1, where routine security check procedures will be performed. For parking and security information, please

refer to <http://www.fda.gov/AboutFDA/WorkingatFDA/BuildingsandFacilities/WhiteOakCampusInformation/ucm241740.htm>.

Submit electronic comments to [www.regulations.gov](http://www.regulations.gov). Submit written comments to the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, Rm 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FDA will post the complete agenda and additional meeting background material approximately 5 days before the meeting at: <http://www.fda.gov/ForIndustry/UserFees/PrescriptionDrugUserFee/ucm348598.htm>.

#### FOR FURTHER INFORMATION CONTACT:

Pujita Vaidya, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 1199, Silver Spring, MD 20993, 301-796-0684, FAX: 301-847-8443, email: [Pujita.Vaidya@fda.hhs.gov](mailto:Pujita.Vaidya@fda.hhs.gov).

#### SUPPLEMENTARY INFORMATION:

##### I. Background on Patient-Focused Drug Development

FDA has selected HIV to be the focus of a meeting under Patient-Focused Drug Development, an initiative that involves obtaining a better understanding of patients' perspectives on the severity of the disease and the available therapies for the condition. Patient-Focused Drug Development is being conducted to fulfill FDA performance commitments made as part of the authorization of PDUFA under Title I of the Food and Drug Safety and Innovation Act (FDASIA) (Pub. L. 112-144). The full set of performance commitments is available on the FDA Web site at <http://www.fda.gov/downloads/forindustry/userfees/prescriptiondruguserfee/ucm270412.pdf>.

FDA has committed to obtain the patient perspective in 20 disease areas during the course of PDUFA V. For each disease area, the Agency will conduct a public meeting to discuss the disease and its impact on patients' daily lives, the types of treatment benefit that matter most to patients, and patients' perspectives on the adequacy of the available therapies. These meetings will include participation of FDA review divisions, the relevant patient community, and other interested stakeholders.

In the **Federal Register** of April 11, 2013 (78 FR 21613), FDA published a document that announced the disease

areas for meetings in fiscal years (FY) 2013 to 2015, the first 3 years of the 5-year PDUFA V timeframe. The Agency used several criteria to develop the list of disease areas, outlined in the April 11, 2013, **Federal Register** document. Public comment on the Agency's proposed criteria and potential disease areas was gathered through a **Federal Register** document for public comment that was published on September 24, 2012 (77 FR 58849), and a public meeting that was convened on October 25, 2012. In selecting the set of disease areas, FDA carefully considered the public comments received and the perspectives of review divisions at FDA. By the end of FY 2015, FDA will initiate another public process for determining the disease areas for FY 2016 to 2017. More information, including the list of disease areas and a general schedule of meetings, is posted on FDA's Web site at <http://www.fda.gov/ForIndustry/UserFees/PrescriptionDrugUserFee/ucm326192.htm>.

## II. Public Meeting Information

### A. Purpose and Scope of the Meeting

As part of Patient-Focused Drug Development, FDA will gather input from HIV patients and patient advocates on current approaches to managing HIV and on symptoms experienced because of HIV or its treatment. FDA is also interested in understanding patients' perspective on issues related to HIV cure research. For the purposes of this meeting, FDA considers HIV cure research to be any investigation that evaluates a therapeutic intervention intended to control or eliminate HIV infection to the point that no further medical interventions are needed to maintain health. HIV cure research is in early stages of testing in patients, but the products being evaluated may represent important approaches to treating HIV. As in many areas of research, clinical trials studying HIV cure interventions may not provide direct benefit to a participant but may provide scientific information that could guide future research and drug development. Understanding patients' perspectives on the potential benefits and risks of participating in HIV cure research studies will help FDA evaluate sponsors' study protocols and informed consent procedures.

For each of these topics, a brief initial patient panel discussion will begin the dialogue and will be followed by a facilitated discussion inviting comments from other patient and patient advocates. The draft questions for both meeting topics are as follows:

*Topic 1: Patients' perspective on current approaches to managing HIV and on symptoms experienced because of HIV or its treatment*

1. What are you currently doing to help manage your HIV and any symptoms you experience because of your condition or other therapies? (Examples may include prescription medicines, over-the-counter products, and non-drug therapies such as diet modification.)

1.1 What specific symptoms do your therapies or treatments address?

1.2 How long have you been on treatment and how has your treatment regimen changed over time?

2. How well does your current treatment regimen treat any significant symptoms of your condition?

2.1 How well have these treatments worked for you as your condition has changed over time?

2.2 Are there symptoms that your current regimen does not address at all, or does not treat as well as you would like?

3. What are the most significant downsides to your current therapies or treatments, and how do they affect your daily life? (Examples of downsides could include bothersome side effects, physical change to your body because of treatment, going to the hospital for treatment, etc.)

4. Of all the symptoms that you experience because of your condition or because of your therapy or treatment, provide one to three symptoms that have the most significant impact on your life? (Examples could include diarrhea, insomnia, difficulty concentrating, etc.)

4.1 Are there specific activities that are important to you but that you cannot do at all or as fully as you would like because of your condition? (Examples of activities may include sleeping through the night, daily hygiene, driving, etc.)

5. Assuming there is currently no complete cure for your condition, what specific things would you look for in an ideal therapy or treatment to manage your condition?

*Topic 2: Patients' perspectives on HIV Cure Research*

1. What do you believe are the benefits of participating in an HIV cure research study?

2. What would motivate you to participate or to not participate in an HIV cure research study?

3. What risks would you find unacceptable for participating in an HIV cure research study, and why? (Examples of risks that may be associated with participation in an HIV cure research study include common side effects such as nausea and fatigue,

and less common but serious adverse events such as blood clots, infection, seizures and cancer.)

4. In certain HIV cure research studies, you would be asked to stop any other HIV medications that you are currently taking. How would this affect your decision whether to participate in an HIV cure research study?

5. The process of informed consent is an important way for the researchers to communicate the purpose of an HIV research study, as well as its expected benefits and potential risks, so that people can make an informed decision whether to participate in the study.

5.1 How should the informed consent clearly communicate to you the purpose of an HIV cure research study, particularly when a study is designed only to provide scientific information that could guide future research and development of treatments?

5.2 How should the informed consent clearly communicate to you the potential benefits of an HIV cure research study? In particular, how should the informed consent describe benefit when we do not think that participants in the study may gain any direct health benefits?

5.3 How should informed consent communicate clearly to you the potential risks of participating in an HIV cure research study? In particular, how should the informed consent describe a study if there is very limited understanding about how the medications or interventions may affect participants or what are the potential risks of those interventions or medications?

5.4 Is there any other information that you would find helpful when deciding whether to enter an HIV cure research study?

6. What else do you want FDA to know about HIV Cure Research from your perspective?

### B. Attendance and/or Participation in the Meeting

If you wish to attend this meeting, visit <http://patientfocusedhiv.eventbrite.com>. Please register by June 7, 2013. Those who are unable to attend the meeting in person can register to view a live Web cast of the meeting. You will be asked to indicate in your registration if you plan to attend in person or via the Web cast. Your registration will also contain your complete contact information, including name, title, affiliation, address, email address, and phone number. Seating will be limited, so early registration is recommended. Registration is free and will be on a first-come, first-served basis. However, FDA

may limit the number of participants from each organization based on space limitations. Registrants will receive confirmation once they have been accepted. Onsite registration on the day of the meeting will be based on space availability. If you need special accommodations because of disability, please contact Pujita Vaidya (see **FOR FURTHER INFORMATION CONTACT**) at least 7 days before the meeting.

Patients who are interested in presenting comments as part of the initial panel discussions will be asked to indicate in their registration which topic(s) they wish to address. They will also be asked to send via email to [PatientFocused@fda.hhs.gov](mailto:PatientFocused@fda.hhs.gov) a brief summary of responses to the topic(s) questions. Panelists will be notified of their selection soon after the close of registration on June 5. FDA will try to accommodate all patients and patient advocate participants who wish to speak, either through the panel discussion or audience participation; however the duration of comments may be limited by time constraints.

More information will be posted on the meeting Web site at least 5 days before the meeting date. Interested members of the public, including those who attend the meeting in person or through the Web cast, are invited to provide electronic or written responses to any or all of the questions pertaining to Topics 1 and 2 to the Division of Dockets Management (see **ADDRESSES**). Comments may be submitted until July 14, 2013.

Dated: May 15, 2013.

**Leslie Kux,**

*Assistant Commissioner for Policy.*

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### Food and Drug Administration

[Docket No. FDA-2013-N-0001]

### Request for Nominations for Voting Members on Public Advisory Panels or Committees

**AGENCY:** Food and Drug Administration, HHS.

**ACTION:** Notice.

**SUMMARY:** The Food and Drug Administration (FDA) is requesting nominations for voting members on the Food Advisory Committee with expertise in microbiology, nutrition, food science, food technology, pediatric development, or nanotechnology in

food. Nominations will be accepted for current vacancies and those that will or may occur through June 30, 2013.

FDA seeks to include the views of women and men, members of all racial and ethnic groups, and individuals with and without disabilities on its advisory committees, and therefore encourages nominations of appropriately qualified candidates from these groups.

**DATES:** Nominations received on or before July 22, 2013 will be given first consideration for membership on the Food Advisory Committee. Nominations received after July 22, 2013 will be considered for nomination to the committee if nominees are still needed.

**ADDRESSES:** All nominations for membership should be sent electronically to [cv@oc.fda.gov](mailto:cv@oc.fda.gov), or by mail to Advisory Committee Oversight & Management Staff, 10903 New Hampshire Avenue, Bldg. 32, Rm. 5103, Silver Spring, MD 20993-0002. Information about becoming a member on a FDA advisory committee can also be obtained by visiting FDA's Web site by using the following link <http://www.fda.gov/AdvisoryCommittees/default.htm>.

**FOR FURTHER INFORMATION CONTACT:** Karen Strambler, Center of Food Safety and Applied Nutrition, Food and Drug Administration, 5100 Paint Branch Ave., Room 1C-016, College Park, MD 20740, 240-402-1913, FAX: 301-436-2657, email: [FoodAdvisoryCommittee@fda.hhs.gov](mailto:FoodAdvisoryCommittee@fda.hhs.gov).

**SUPPLEMENTARY INFORMATION:** FDA is requesting nomination for voting members on the Food Advisory Committee.

### I. General Description of the Committee Duties

The Committee provides advice to the Commissioner of Food and Drugs and other appropriate officials, on emerging food safety, food science, nutrition, and other food-related health issues that the FDA considers of primary importance for its food and cosmetics programs.

The Committee may be charged with reviewing and evaluating available data and making recommendations on matters such as those relating to: (1) Broad scientific and technical food- or cosmetic-related issues; (2) the safety of new foods and food ingredients; (3) labeling of foods and cosmetics; (4) nutrient needs and nutritional adequacy; and (5) safe exposure limits for food contaminants.

The Committee may also be asked to provide advice and make recommendations on ways of communicating to the public the potential risks associated with these

issues and on approaches that might be considered for addressing the issues.

### II. Criteria for Voting Members

Members and the Chair are selected by the Commissioner or designee from among individuals knowledgeable in the fields of physical sciences, biological and life sciences, food science, risk assessment, nutrition, food technology, molecular biology, and other relevant scientific and technical disciplines.

Members will be invited to serve for terms of up to 4 years. The Committee consists of 17 standing members; of that 15 are voting members, which 2 are technically qualified members identified with consumer interest. In addition to the voting members the Committee has two nonvoting members who are identified with industry interests.

### III. Nomination Procedures

Any interested person may nominate one or more qualified individuals for membership on the advisory committee. Self-nominations are also accepted. Nominations must include a current, complete resume or curriculum vitae for each nominee, including current business address and/or home address, telephone number, and email address if available. Nominations must also specify the advisory committee for which the nominee recommended. Nominations must also acknowledge that the nominee is aware of the nomination unless self-nominated. FDA will ask potential candidates to provide detailed information concerning such matters related to financial holdings, employment, and research grants and/or contracts to permit evaluation of possible sources of conflicts of interest.

This notice is issued under the Federal Advisory Committee Act (5 U.S.C. app. 2) and 21 CFR part 14, relating to advisory committees.

Dated: May 15, 2013.

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### National Institutes of Health

### Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as

amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

*Name of Committee:* Center for Scientific Review Special Emphasis Panel Program Project Supplement: Electron Detector.

*Date:* June 6, 2013.

*Time:* 8:00 a.m. to 5:00 p.m.

*Agenda:* To review and evaluate grant applications.

*Place:* Warwick Seattle Hotel, 401 Lenora Street, Seattle, WA 98121.

*Contact Person:* Wallace Ip, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5128, MSC 7840, Bethesda, MD 20892, 301-435-1191, [ipws@mail.nih.gov](mailto:ipws@mail.nih.gov).

*Name of Committee:* Infectious Diseases and Microbiology Integrated Review Group; Bacterial Pathogenesis Study Section.

*Date:* June 11, 2013.

*Time:* 8:00 a.m. to 6:00 p.m.

*Agenda:* To review and evaluate grant applications.

*Place:* Hilton Garden Inn Washington DC/ Bethesda, 7301 Waverly Street, Bethesda, MD 20814.

*Contact Person:* Richard G. Kostriken, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3192, MSC 7808, Bethesda, MD 20892, 301-402-4454, [kostrikr@csr.nih.gov](mailto:kostrikr@csr.nih.gov).

*Name of Committee:* Center for Scientific Review Special Emphasis Panel; Bacterial Pathogens.

*Date:* June 11, 2013.

*Time:* 1:00 p.m. to 2:00 p.m.

*Agenda:* To review and evaluate grant applications.

*Place:* Hilton Garden Inn Washington DC/ Bethesda, 7301 Waverly Street, Bethesda, MD 20814.

*Contact Person:* Alexander D. Politis, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3210, MSC 7808, Bethesda, MD 20892, (301) 435-1150, [politisa@csr.nih.gov](mailto:politisa@csr.nih.gov).

*Name of Committee:* Center for Scientific Review Special Emphasis Panel; PAR-13-009: Secondary Dataset Analyses in Heart, Lung, and Blood Diseases and Sleep Disorders.

*Date:* June 17, 2013

*Time:* 8:00 a.m. to 6:00 p.m.

*Agenda:* To review and evaluate grant applications

*Place:* Courtyard by Marriott, 5520 Wisconsin Avenue, Chevy Chase, MD 20815.

*Contact Person:* Julia Krushkal, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3148, MSC 7770, Bethesda, MD 20892, 301-435-1782, [krushkalj@csr.nih.gov](mailto:krushkalj@csr.nih.gov).

*Name of Committee:* Center for Scientific Review Special Emphasis Panel; PAR-13-009: Secondary Dataset Analyses in Heart, Lung, and Blood Diseases and Sleep Disorders: Conflicts.

*Date:* June 17, 2013

*Time:* 8:30 a.m. to 6:00 p.m.

*Agenda:* To review and evaluate grant applications

*Place:* Courtyard by Marriott, 5520 Wisconsin Avenue, Chevy Chase, MD 20815.

*Contact Person:* George Vogler, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3140, MSC 7770, Bethesda, MD 20892, (301) 237-2693, [voglergp@csr.nih.gov](mailto:voglergp@csr.nih.gov).

## DEPARTMENT OF HEALTH AND HUMAN SERVICES

### National Institutes of Health

#### National Cancer Institute Notice of Meeting

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. Appendix 2), notice is hereby given of meeting of the National Cancer Advisory Board and NCI Board of Scientific Advisors.

The meeting will be open to the public as indicated below, with attendance limited to space available. Individuals who plan to attend and need special assistance, such as sign language interpretation or other

reasonable accommodations, should notify the Contact Person listed below in advance of the meeting.

A portion of the National Cancer Advisory Board meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4), and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

*Name of Committee:* National Cancer Advisory Board; *Ad hoc* Subcommittee on Global Cancer Research.

*Open:* June 23, 2013, 5:00 p.m. to 6:30 p.m.

*Agenda:* Discussion on Global Cancer Research.

*Place:* Hyatt Regency Bethesda, One Bethesda Metro Center, Bethesda, Maryland 20814.

*Contact Person:* Dr. Edward Trimble, Executive Secretary, NCAB *Ad hoc* Subcommittee on Global Cancer Research, National Cancer Institute, National Institutes of Health, 9609 Medical Center Drive, Room 3W-562, Bethesda, MD 20892, (240) 276-5796, [trimble@mail.nih.gov](mailto:trimble@mail.nih.gov).

*Name of Committee:* National Cancer Advisory Board, *Ad hoc* Subcommittee on Communications.

*Open:* June 23, 2013, 6:40 p.m. to 8:10 p.m.

*Agenda:* Discussion on Communications.

*Place:* Hyatt Regency Bethesda, One Bethesda Metro Center, Bethesda, Maryland 20814.

*Contact Person:* Dr. Lenora Johnson, Executive Secretary, NCAB *Ad hoc* Subcommittee on Communications National Cancer Institute, National Institutes of Health, 9606 Medical Center Drive, Room 2E-454, Bethesda, MD 20892, (240) 276-6680, [johnslen@mail.nih.gov](mailto:johnslen@mail.nih.gov).

*Name of Committee:* National Cancer Advisory Board and NCI Board of Scientific Advisors.

*Open:* June 24, 2013, 9:00 a.m. to 3:30 p.m.

*Agenda:* Joint meeting of the National Cancer Advisory Board, and NCI Board of Scientific Advisors; NCI Board of Scientific Advisors Concepts Review and NCI Director's reports and NCAB presentations.

*Place:* National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

*Contact Person:* Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 9606 Medical Center Drive, Room 7W-444, Bethesda, MD 20892, (240) 276-6340.

*Name of Committee:* National Cancer Advisory Board.

*Closed:* June 24, 2013, 3:30 p.m. to 5:00 p.m.

*Agenda:* Review of NCAB Grant Applications.

*Place:* National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

*Contact Person:* Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 9606 Medical Center Drive, Room 7W-444, Bethesda, MD 20892, (240) 276-6340.

*Name of Committee:* National Cancer Advisory Board.

*Open:* June 25, 2013, 9:00 a.m. to 12:00 p.m.

*Agenda:* Joint meeting of the National Cancer Advisory Board and NCI Board of Scientific Advisors.

*Place:* National Institutes of Health, 9000 Rockville Pike, Building 31, C Wing, 6th Floor, Conference Room 10, Bethesda, MD 20892.

*Contact Person:* Dr. Paulette S. Gray, Executive Secretary, National Cancer Institute, National Institutes of Health, 9606 Medical Center Drive, Room 7W-444, Bethesda, MD 20892, (240) 276-6340.

Any interested person may file written comments with the committee by forwarding the statement to the Contact Person listed on this notice. The statement should include the name, address, telephone number and when applicable, the business or professional affiliation of the interested person.

In the interest of security, NIH has instituted stringent procedures for entrance onto the NIH campus. All visitor vehicles, including taxicabs, hotel, and airport shuttles will be inspected before being allowed on campus. Visitors will be asked to show one form of identification (for example, a government-issued photo ID, driver's license, or passport) and to state the purpose of their visit.

Information is also available on the Institute's/Center's home page: NCAB: [deainfo.nci.nih.gov/advisory/ncab.htm](http://deainfo.nci.nih.gov/advisory/ncab.htm), BSA: [deainfo.nci.nih.gov/advisory/bsa/bsa.htm](http://deainfo.nci.nih.gov/advisory/bsa/bsa.htm), where an agenda and any additional information for the meeting will be posted when available. (Catalogue of Federal Domestic Assistance Program Nos. 93.392, Cancer Construction; 93.393, Cancer Cause and Prevention Research; 93.394, Cancer Detection and Diagnosis Research; 93.395, Cancer Treatment Research; 93.396, Cancer Biology Research; 93.397, Cancer Centers Support; 93.398, Cancer Research Manpower; 93.399, Cancer Control, National Institutes of Health, HHS)

Dated: May 15, 2013.

## DEPARTMENT OF HOMELAND SECURITY

[Docket No. DHS-2012-0061]

### Chemical Facility Anti-Terrorism Standards Personnel Surety Program

**AGENCY:** National Protection and Programs Directorate, DHS.

**ACTION:** Information collection request; extension of comment period.

**SUMMARY:** The Department of Homeland Security (DHS), National Protection and Programs Directorate (NPPD), Office of Infrastructure Protection (IP), Infrastructure Security Compliance Division (ISCD) is extending the comment period for the CFATS Personnel Surety Program Notice and Request for Comments published on March 22, 2013, at 78 FR 17680, entitled "Information Collection Request; Chemical Facility Anti-Terrorism Standards Personnel Surety Program" for 14 days.<sup>1</sup> This extension of the comment period is designed to accommodate requests from the public for more time to review the Notice and Request for Comments.

**DATES:** The comment period for the CFATS Personnel Surety Program Notice and Request for Comments published on March 22, 2013, at 78 FR 17680, is extended. Comments and related material must be submitted to the docket by June 4, 2013.

**ADDRESSES:** Interested persons are invited to submit comments on the proposed information collection through the Federal eRulemaking Portal at <http://www.regulations.gov>. All submissions received must include the words "Department of Homeland Security" and the docket number DHS-2012-0061. Except as provided below, comments received will be posted without alteration at <http://www.regulations.gov>, including any personal information provided.

Comments that include trade secrets, confidential commercial or financial information, Chemical-terrorism Vulnerability Information (CVI),<sup>2</sup> Sensitive Security Information (SSI),<sup>3</sup> or Protected Critical Infrastructure Information (PCII)<sup>4</sup> should not be

<sup>1</sup> The 60-day CFATS Personnel Surety Program Notice and Request for Comments may be viewed at <https://federalregister.gov/a/2013-06184>.

<sup>2</sup> For more information about CVI see 6 CFR 27.400 and the CVI Procedural Manual at [http://www.dhs.gov/xlibrary/assets/chemsec\\_cvi\\_proceduresmanual.pdf](http://www.dhs.gov/xlibrary/assets/chemsec_cvi_proceduresmanual.pdf).

<sup>3</sup> For more information about SSI see 49 CFR Part 1520 and the SSI Program Web page at <http://www.tsa.gov/ssi>.

<sup>4</sup> For more information about PCII see 6 CFR Part 29 and the PCII Program Web page at <http://www.dhs.gov/protected-critical-infrastructure-information-pcii-program>.

submitted to the public regulatory docket. Please submit such comments separately from other comments in response to this notice. Comments containing trade secrets, confidential commercial or financial information, CVI, SSI, or PCII should be appropriately marked and packaged in accordance with applicable requirements and submitted by mail to the DHS/NPPD/IP/ISCD CFATS Program Manager at the Department of Homeland Security, 245 Murray Lane SW., Mail Stop 0610, Arlington, VA 20528-0610. Comments must be identified by docket number DHS-2012-0061.

**SUPPLEMENTARY INFORMATION:** On March 22, 2013, the Department published a notice entitled "Information Collection Request; Chemical Facility Anti-Terrorism Standards Personnel Surety Program" at 78 FR 17680. In the March 22, 2013 notice, the Department stated that it will submit a new Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act (PRA) of 1995 (Pub. L. 104-13, 44 U.S.C. Chapter 35). The purpose of the March 22, 2013 notice was to solicit comments prior to the submission of the ICR to OMB. The March 22, 2013 notice described the nature of the information collection, the categories of respondents, the estimated burden (in hours), and the estimated burden cost necessary to implement the Chemical Facility Anti-Terrorism Standards (CFATS) Personnel Surety Program pursuant to 6 CFR 27.230(a)(12)(iv).

The Department believes that the public would benefit from additional time to provide comments on the March 22, 2013 CFATS Personnel Surety Program Notice and Request for Comments. For that reason, the Department is extending the comment period for a period of 14 days. Comments will now be accepted until June 4, 2013.

Dated: May 15, 2013.

## DEPARTMENT OF HOMELAND SECURITY

### Federal Emergency Management Agency

[Docket ID FEMA-2013-0002]

#### Final Flood Hazard Determinations

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Final Notice.

**SUMMARY:** Flood hazard determinations, which may include additions or modifications of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or regulatory floodways on the Flood Insurance Rate Maps (FIRMs) and where applicable, in the supporting Flood Insurance Study (FIS) reports have been made final for the communities listed in the table below.

The FIRM and FIS report are the basis of the floodplain management measures that a community is required either to adopt or to show evidence of having in

effect in order to qualify or remain qualified for participation in the Federal Emergency Management Agency's (FEMA's) National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report are used by insurance agents and others to calculate appropriate flood insurance premium rates for buildings and the contents of those buildings.

**DATES:** The effective date of September 27, 2013 which has been established for the FIRM and, where applicable, the supporting FIS report showing the new or modified flood hazard information for each community.

**ADDRESSES:** The FIRM, and if applicable, the FIS report containing the final flood hazard information for each community is available for inspection at the respective Community Map Repository address listed in the tables below and will be available online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov) by the effective date indicated above.

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov); or visit the FEMA Map Information eXchange (FMIX) online at [www.floodmaps.fema.gov/fhm/fmx\\_main.html](http://www.floodmaps.fema.gov/fhm/fmx_main.html).

**SUPPLEMENTARY INFORMATION:** The Federal Emergency Management Agency (FEMA) makes the final determinations listed below for the new or modified flood hazard information for each community listed. Notification of these changes has been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

This final notice is issued in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR part 67. FEMA has developed criteria for floodplain management in floodprone areas in accordance with 44 CFR part 60.

Interested lessees and owners of real property are encouraged to review the new or revised FIRM and FIS report available at the address cited below for each community or online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov). The flood hazard determinations are made final in the watersheds and/or communities listed in the table below.

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

[Docket ID FEMA-2013-0002; Internal Agency Docket No. FEMA-B-1316]

**Changes in Flood Hazard Determinations**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Notice.

**SUMMARY:** This notice lists communities where the addition or modification of Base Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, or the regulatory floodway (hereinafter referred to as flood hazard determinations), as shown on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports, prepared by the Federal Emergency Management Agency (FEMA) for each community, is appropriate because of new scientific or technical data. The FIRM, and where applicable, portions of the FIS report, have been revised to reflect these flood hazard determinations through issuance of a Letter of Map Revision (LOMR), in accordance with Title 44, Part 65 of the Code of Federal Regulations (44 CFR Part 65). The LOMR will be used by insurance agents and others to calculate appropriate flood insurance premium rates for new buildings and the contents

of those buildings. For rating purposes, the currently effective community number is shown in the table below and must be used for all new policies and renewals.

**DATES:** These flood hazard determinations will become effective on the dates listed in the table below and revise the FIRM panels and FIS report in effect prior to this determination for the listed communities.

From the date of the second publication of notification of these changes in a newspaper of local circulation, any person has ninety (90) days in which to request through the community that the Deputy Associate Administrator for Mitigation reconsider the changes. The flood hazard determination information may be changed during the 90-day period.

**ADDRESSES:** The affected communities are listed in the table below. Revised flood hazard information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov) for comparison.

Submit comments and/or appeals to the Chief Executive Officer of the community as listed in the table below. **FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov); or visit the FEMA Map Information eXchange (FMIX) online at [www.floodmaps.fema.gov/fhm/fmx\\_main.html](http://www.floodmaps.fema.gov/fhm/fmx_main.html).

**SUPPLEMENTARY INFORMATION:** The specific flood hazard determinations are not described for each community in this notice. However, the online

location and local community map repository address where the flood hazard determination information is available for inspection is provided.

Any request for reconsideration of flood hazard determinations must be submitted to the Chief Executive Officer of the community as listed in the table below.

The modifications are made pursuant to section 201 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR Part 65.

The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP).

These flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. The flood hazard determinations are in accordance with 44 CFR 65.4.

The affected communities are listed in the following table. Flood hazard determination information for each community is available for inspection at both the online location and the respective community map repository address listed in the table below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov) for comparison.

(Catalog of Federal Domestic Assistance No. 97.022, "Flood Insurance.")

**Roy E. Wright,**

Deputy Associate Administrator for Mitigation, Department of Homeland Security, Federal Emergency Management Agency.

[FR Doc. 2013-12017 Filed 5-20-13; 8:45 am]

**BILLING CODE 9110-12-P**

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

[Docket ID FEMA-2013-0002]

**Changes in Flood Hazard Determinations**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Final Notice.

**SUMMARY:** New or modified Base (1% annual-chance) Flood Elevations (BFEs), base flood depths, Special Flood Hazard Area (SFHA) boundaries or zone designations, and/or the regulatory floodway (hereinafter referred to as flood hazard determinations) as shown on the indicated Letter of Map Revision (LOMR) for each of the communities listed in the table below are finalized. Each LOMR revises the Flood Insurance Rate Maps (FIRMs), and in some cases the Flood Insurance Study (FIS) reports, currently in effect for the listed communities. The flood hazard determinations modified by each LOMR will be used to calculate flood insurance

premium rates for new buildings and their contents.

**DATES:** The effective date for each LOMR is indicated in the table below.

**ADDRESSES:** Each LOMR is available for inspection at both the respective Community Map Repository address listed in the table below and online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov).

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov); or visit the FEMA Map Information eXchange (FMIX) online at [www.floodmaps.fema.gov/fhm/fmx\\_main.html](http://www.floodmaps.fema.gov/fhm/fmx_main.html).

**SUPPLEMENTARY INFORMATION:** The Federal Emergency Management Agency (FEMA) makes the final flood hazard determinations as shown in the LOMRs for each community listed in the table below. Notice of these modified flood hazard determinations has been published in newspapers of local circulation and ninety (90) days have elapsed since that publication. The Deputy Associate Administrator for Mitigation has resolved any appeals resulting from this notification.

The modified flood hazard determinations are made pursuant to section 206 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4105, and are in accordance with the National Flood Insurance Act of 1968, 42 U.S.C. 4001 *et seq.*, and with 44 CFR part 65.

For rating purposes, the currently effective community number is shown and must be used for all new policies and renewals.

The new or modified flood hazard determinations are the basis for the floodplain management measures that the community is required either to adopt or to show evidence of being already in effect in order to remain qualified for participation in the National Flood Insurance Program (NFIP).

These new or modified flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities.

These new or modified flood hazard determinations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings, and for the contents in those buildings. The changes in flood hazard determinations are in accordance with 44 CFR 65.4.

Interested lessees and owners of real property are encouraged to review the final flood hazard information available at the address cited below for each community or online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov).

**DEPARTMENT OF HOMELAND SECURITY**

**Federal Emergency Management Agency**

[Docket ID FEMA-2013-0002; Internal Agency Docket No. FEMA-B-1311]

**Proposed Flood Hazard Determinations**

**AGENCY:** Federal Emergency Management Agency, DHS.

**ACTION:** Notice.

**SUMMARY:** Comments are requested on proposed flood hazard determinations, which may include additions or modifications of any Base Flood Elevation (BFE), base flood depth, Special Flood Hazard Area (SFHA) boundary or zone designation, or regulatory floodway on the Flood Insurance Rate Maps (FIRMs), and where applicable, in the supporting Flood Insurance Study (FIS) reports for the communities listed in the table below. The purpose of this notice is to seek general information and comment regarding the preliminary FIRM, and where applicable, the FIS report that the Federal Emergency Management Agency (FEMA) has provided to the affected communities. The FIRM and FIS report are the basis of the floodplain management measures that the community is required either to adopt or to show evidence of having in effect in order to qualify or remain qualified for participation in the National Flood Insurance Program (NFIP). In addition, the FIRM and FIS report, once effective, will be used by insurance agents and

others to calculate appropriate flood insurance premium rates for new buildings and the contents of those buildings.

**DATES:** Comments are to be submitted on or before August 19, 2013.

**ADDRESSES:** The Preliminary FIRM, and where applicable, the FIS report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the tables below. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov) for comparison.

You may submit comments, identified by Docket No. FEMA-B-1311, to Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov).

**FOR FURTHER INFORMATION CONTACT:** Luis Rodriguez, Chief, Engineering Management Branch, Federal Insurance and Mitigation Administration, FEMA, 500 C Street SW., Washington, DC 20472, (202) 646-4064, or (email) [Luis.Rodriguez3@fema.dhs.gov](mailto:Luis.Rodriguez3@fema.dhs.gov); or visit the FEMA Map Information eXchange (FMIX) online at [www.floodmaps.fema.gov/fhm/fmx\\_main.html](http://www.floodmaps.fema.gov/fhm/fmx_main.html).

**SUPPLEMENTARY INFORMATION:** FEMA proposes to make flood hazard determinations for each community listed below, in accordance with section 110 of the Flood Disaster Protection Act of 1973, 42 U.S.C. 4104, and 44 CFR 67.4(a).

These proposed flood hazard determinations, together with the floodplain management criteria required by 44 CFR 60.3, are the minimum that are required. They should not be construed to mean that the community must change any existing ordinances that are more stringent in their floodplain management requirements. The community may at any time enact

stricter requirements of its own or pursuant to policies established by other Federal, State, or regional entities. These flood hazard determinations are used to meet the floodplain management requirements of the NFIP and also are used to calculate the appropriate flood insurance premium rates for new buildings built after the FIRM and FIS report become effective.

The communities affected by the flood hazard determinations are provided in the tables below. Any request for reconsideration of the revised flood hazard information shown on the Preliminary FIRM and FIS report that satisfies the data requirements outlined in 44 CFR 67.6(b) is considered an appeal. Comments unrelated to the flood hazard determinations also will be considered before the FIRM and FIS report become effective.

Use of a Scientific Resolution Panel (SRP) is available to communities in support of the appeal resolution process. SRPs are independent panels of experts in hydrology, hydraulics, and other pertinent sciences established to review conflicting scientific and technical data and provide recommendations for resolution. Use of the SRP only may be exercised after FEMA and local communities have been engaged in a collaborative consultation process for at least 60 days without a mutually acceptable resolution of an appeal. Additional information regarding the SRP process can be found online at [http://floodsrp.org/pdfs/srp\\_fact\\_sheet.pdf](http://floodsrp.org/pdfs/srp_fact_sheet.pdf).

The watersheds and/or communities affected are listed in the tables below. The Preliminary FIRM, and where applicable, FIS report for each community are available for inspection at both the online location and the respective Community Map Repository address listed in the tables. Additionally, the current effective FIRM and FIS report for each community are accessible online through the FEMA Map Service Center at [www.msc.fema.gov](http://www.msc.fema.gov) for comparison.

[Docket No. FR-5321-N-05]

**Notice of Fund Availability (NOFA) for the Neighborhood Stabilization Program 2 (NSP2) Under the American Recovery and Reinvestment Act, 2009: Announcement of Availability of Updated Foreclosure Information**

**AGENCY:** Office of the Assistant Secretary for Community Development and Planning, HUD.

**ACTION:** Notice; announcement of updated information.

**SUMMARY:** On May 4, 2009, HUD posted its Fiscal Year (FY) 2009 NSP2 NOFA. This document makes changes to the NSP2 NOFA to allow NSP2 grantees to use an updated foreclosure needs map and associated needs index score in selecting geographic target areas.

**DATES:** Effective Date: May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** Stanley Gimont, Director, Office of Block Grant Assistance, Office of Community Planning and Development,

Department of Housing and Urban Development, 451 Seventh Street, SW., Room 7286, Washington, DC 20410, telephone number 202-708-3587. Persons with hearing or speech impairments may access this number via TTY by calling the Federal Relay Service at 800-877-8339. FAX inquiries may be sent to Mr. Gimont at 202-401-2044. (Except for the "800" number, these telephone numbers are not toll-free.)

**SUPPLEMENTARY INFORMATION:**

**Background**

On May 4, 2009, HUD posted its FY 2009 NSP2 NOFA on the Grants.Gov Web site<sup>1</sup> and on HUD's own Web site.<sup>2</sup> The NOFA announced the availability of up to \$1.93 billion for HUD's FY2009 NSP2 Program. The purpose of the program is to stabilize communities that have suffered from foreclosures and abandonment through the purchase and redevelopment of foreclosed and abandoned homes and residential properties. NSP2 is authorized by the Housing and Economic Recovery Act (Public Law 110-289) (HERA), as amended by Title XII of Division A of the American Reinvestment and Recovery Act of 2009 (Public Law 111-005) (Recovery Act).

The NSP2 NOFA requires grantees to carry out NSP2 activities in a HUD-

approved target area. HUD developed a foreclosure needs map Web site to assist grantees in selecting target areas that meet the criteria for NSP2 funding. For NSP2, the foreclosure needs map provides foreclosure-related needs scores at the census tract level and grantees select one or more census tracts that have an average combined index score of 18 or greater as indicated by the map. The needs scores were generated with foreclosure data from 2005-2008. This data is now dated and in many cases it no longer reflects the foreclosure market in NSP2 target areas. Further, HUD updated mapping capabilities for its Neighborhood Stabilization Program 3 (NSP3), allowing NSP3 grantees to draw the outline of a targeted neighborhood rather than selecting best-fit census tracts. This method allows a better correlation between the data provided and the target geography.

**Updated Foreclosure Data for Use by NSP2 Grantees**

To take advantage of the refreshed data and improved maps, HUD has updated the foreclosure needs map with more recent data that combines foreclosures, pre-foreclosures, real-estate-owned, and vacant property transactions in the past 18 months. From the effective date of this notice published in today's edition of the **Federal Register**, all NSP2 grantees must begin using the updated foreclosure needs map Web site when amending their currently approved target areas. Grantees may continue

<sup>1</sup> See <http://www07.grants.gov/search/search.do?oppId=47326&mode=VIEW>.

<sup>2</sup> See [http://portal.hud.gov/hudportal/documents/huddoc?id=DOC\\_14161.pdf](http://portal.hud.gov/hudportal/documents/huddoc?id=DOC_14161.pdf).

working in target areas approved by HUD prior to the effective date of this notice, but any amendments made to NSP2 for new target areas must qualify based on information from the new data.

#### Amendment to FY 2009 NSP2 NOFA

The FY2009 NSP2 NOFA posted on May 4, 2009, under Docket No. FR-5321-N-01, as modified by Docket No. FR-5321-C-02, issued June 11, 2009,<sup>3</sup> is amended by revising Paragraph II.B.8.b., pertaining to Geographic Need to replace paragraph b.2. in its entirety so that paragraph 8.b. reads as follows:

b. For applicants proposing to carry out NSP2 activities, the neighborhoods identified must meet one or the other of the following requirements (you may only select one method):

(1) The average foreclosure needs index score for the identified target geography must be 18 or greater, as indicated by the index; or

(2) For any target area change after May 21, 2013, the individual or average combined index score for all new target areas in the grantee's geography must be not less than the lesser of 17 or the twentieth percentile most needy score in an individual state. The scores for target areas approved prior to May 21, 2013 will not be included in the average combined index score for the new target areas and grantees may continue to use NSP2 funds in those prior approved target areas.

Dated: May 10, 2013.

## DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5447-N-02]

### Notice of Formula Allocations and Program Requirements for Neighborhood Stabilization Programs 1 and 3 (NSP1 and NSP3) Formula Grants; Amendment

**AGENCY:** Office of the Assistant Secretary for Community Planning and Development, HUD.

**ACTION:** Notice of allocation method, waivers granted, alternative requirements applied, and statutory program requirements; amendment.

**SUMMARY:** On October 19, 2010, HUD published a notice regarding formulation allocations made under two NSP grant (formula grant) programs—

NSP1 and NSP3. This document makes changes to the notice to allow NSP1 and require NSP3 grantees to use an updated foreclosure needs map and associated needs index score in selecting geographic target areas.

**DATES:** *Effective Date:* May 21, 2013.

**FOR FURTHER INFORMATION CONTACT:** Stanley Gimont, Director, Office of Block Grant Assistance, Office of Community Planning and Development, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7286, Washington, DC 20410, telephone number 202-708-3587.

Persons with hearing or speech impairments may access this number via TTY by calling the Federal Relay Service at 800-877-8339. FAX inquiries may be sent to Mr. Gimont at 202-401-2044. (Except for the "800" number, these telephone numbers are not toll-free.)

#### SUPPLEMENTARY INFORMATION:

##### Background

On October 19, 2010, at 75 FR 64322, HUD published in the **Federal Register** a notice pertaining to both NSP1 and NSP3 (referred to as the Unified Notice), which advised the public of the allocation formula and allocation amounts, the list of grantees, alternative requirements, and the waivers of regulations granted to grantees under Section 2301(b) of the Housing and Economic Recovery Act of 2008 (Pub. L. 110-289, approved July 30, 2008) (HERA), as amended, and an additional allocation of funds provided under Section 1497 of the Dodd-Frank Wall Street Reform and Consumer Protection Act of 2010 (Pub. L. 111-203, approved July 21, 2010) (Dodd-Frank Act) for the purpose of assisting in the redevelopment of abandoned and foreclosed homes. Except where provided for otherwise, these amounts are distributed based on funding formulas for such amounts established by the Secretary in accordance with HERA.

HUD's notice pertaining to NSP1, published in the **Federal Register** on October 6, 2008, at 73 FR 58330, gave NSP1 grantees the flexibility to carry out activities in area(s) of greatest need as defined by the grantee. The notice asked grantees to describe in the NSP1 substantial amendment to the Annual Action Plan how the funds would be distributed to meet the requirements of Section 2301(c)(2) of HERA. At the time of publication of the NSP1 notice, HUD was not able to provide national data on home foreclosures to assist grantees in selecting NSP1 target areas. However, HUD encouraged NSP1 grantees to use

publicly available data, if such data covered their communities, and to use the nationwide data by neighborhood when HUD launched the needs mapping tool in June 2009.

HUD's Unified Notice requires NSP3 grantees to carry out activities in a HUD-approved target area. HUD developed a foreclosure needs map Web site to assist grantees in selecting target areas that meet the criteria for NSP3 funding. NSP1 grantees were encouraged to use the Web site as they adjusted their plans. The foreclosure needs map provides foreclosure-related needs scores based on grantee-selected target geography. A grantee uses the tool to draw the outline of a targeted neighborhood. When the grantee saves its selection, the tool produces a report that indicates whether the selected area meets the NSP3 criteria. The data that produces the needs scores is now dated and in many cases the data no longer reflects the effects of foreclosures on the housing markets in NSP1 or NSP3 target areas.

#### Updated Foreclosure Data for Use by NSP1 and NSP3 Grantees

HUD has updated this data and it is now available for use by NSP1 and NSP3 grantees. The data combines foreclosures, pre-foreclosures, real-estate-owned, and vacant property transactions from March 2011 through September 2012.

*For NSP1 Grantees:* The updated data is available to NSP1 grantees for use in determining and designating areas of greatest need.

*For NSP3 Grantees:* From the effective date of this notice published in today's edition of the **Federal Register**, all NSP3 grantees must begin using the updated foreclosure needs map Web site when amending their currently approved target areas. NSP3 grantees may continue to work in target areas approved by HUD prior to the effective date of this Notice, but any amendments made to select new NSP3 target areas from the effective date of this Notice must qualify based on information from the new maps and data.

#### Amendment to Unified Notice

Paragraph II. B.2.a.ii of HUD's Unified Notice, at 75 FR 64327, pertaining to contents of the NSP Action Plan, and, with respect to subparagraph ii, pertaining to the neighborhood or neighborhoods identified by the NSP3 grantee as being the areas of greatest need, is revised by adding the following undesignated paragraph:

Effective for any target area change after May 21, 2013, the individual or average combined index score for all

<sup>3</sup> [http://portal.hud.gov/hudportal/documents/huddoc?id=DOC\\_14165.pdf](http://portal.hud.gov/hudportal/documents/huddoc?id=DOC_14165.pdf).

new target areas in the grantee's geography must be not less than the lesser of 17 or the 20th percentile most needy score in an individual state. The scores for target areas approved prior to May 21, 2013 will not be included in the average combined index score for the new target areas and grantees may continue to use NSP3 funds in those prior approved target areas.

Dated: May 10, 2013.

**Mark Johnston,**

*Deputy Assistant Secretary for Special Needs.*

## DEPARTMENT OF THE INTERIOR

### Bureau of Safety and Environmental Enforcement

[Docket ID BSEE-2013-0001; OMB Control Number 1014-0010; 134E1700D2 EEEE500000 ET1SF0000.DAQ000]

#### Information Collection Activities: Decommissioning Activities, Proposed Collection; Comment Request

**ACTION:** 60-day notice.

**SUMMARY:** To comply with the Paperwork Reduction Act of 1995 (PRA), Bureau of Safety and Environmental Enforcement (BSEE) is inviting comments on a collection of information that we will submit to the Office of Management and Budget (OMB) for review and approval. The information collection request (ICR) concerns a renewal to the paperwork requirements in the regulations under Subpart Q, *Decommissioning Activities*.

**DATES:** You must submit comments by July 22, 2013.

**ADDRESSES:** You may submit comments by either of the following methods listed below.

- Electronically: Go to <http://www.regulations.gov>. In the entry titled *Enter Keyword or ID*, enter BSEE-2013-0001 then click search. Follow the instructions to submit public comments and view all related materials. We will post all comments.

- Email [nicole.mason@bsee.gov](mailto:nicole.mason@bsee.gov). Mail or hand-carry comments to the Department of the Interior; BSEE; Regulations and Standards Branch; Attention: Nicole Mason; 381 Elden Street, HE3313; Herndon, Virginia 20170-4817. Please reference ICR 1014-0010 in your comment and include your name and return address.

**FOR FURTHER INFORMATION CONTACT:** Nicole Mason, Regulations and

Standards Branch at (703) 787-1605 to request additional information about this ICR.

#### SUPPLEMENTARY INFORMATION:

*Title:* 30 CFR Part 250, Subpart Q, Decommissioning Activities.

*OMB Control Number:* 1014-0010.

*Abstract:* The Outer Continental Shelf (OCS) Lands Act, as amended (43 U.S.C. 1331 *et seq.* and 43 U.S.C. 1801 *et seq.*), authorizes the Secretary of the Interior to prescribe rules and regulations necessary for the administration of the leasing provisions of that Act related to mineral resources on the OCS.

In addition to the general authority of OCSLA, section 301(a) of the Federal Oil and Gas Royalty Management Act (FOGRMA), 30 U.S.C. 1751(a), grants authority to the Secretary to prescribe such rules and regulations as are reasonably necessary to carry out FOGRMA's provisions. While the majority of FOGRMA is directed to royalty collection and enforcement, some provisions apply to offshore operations. For example, section 109(c)(2) and (d)(1), 30 U.S.C. 1719(c)(2) and (d)(1), impose substantial civil penalties for failure to permit lawful inspections and for knowing or willful preparation or submission of false, inaccurate, or misleading reports, records, or other information. The Secretary has delegated some of the authority under FOGRMA to BSEE.

The Independent Offices Appropriations Act (31 U.S.C. 9701), the Omnibus Appropriations Bill (Pub. L. 104-133, 110 Stat. 1321, April 26, 1996), and OMB Circular A-25, authorize Federal agencies to recover the full cost of services that confer special benefits. Applications for permits to drill and modification approvals are subject to cost recovery, and BSEE regulations specify service fees for these requests.

This authority and responsibility are among those delegated BSEE. The regulations at 30 CFR 250, subpart Q, concern decommissioning of platforms, wells, and pipelines, as well as site clearance and platform removal and are the subject of this collection. This request also covers the related Notices to Lessees and Operators (NLTs) that BSEE issues to clarify, supplement, or provide additional guidance on some aspects of our regulations.

Regulations at 30 CFR 250, Subpart Q, implement these statutory requirements. We use the information for the following reasons:

- To determine the necessity for allowing a well to be temporarily abandoned, the lessee/operator must

demonstrate that there is a reason for not permanently abandoning the well, and the temporary abandonment will not constitute a significant threat to fishing, navigation, or other uses of the seabed. We use the information and documentation to verify that the lessee is diligently pursuing the final disposition of the well, and the lessee has performed the temporary plugging of the wellbore.

- The information submitted in initial decommissioning plans in the Alaska and Pacific OCS Regions will permit BSEE to become involved on the ground floor planning of platform removals anticipated to occur in these OCS regions.

- Site clearance and platform or pipeline removal information ensures that all objects (wellheads, platforms, etc.) installed on the OCS are properly removed using procedures that will protect marine life and the environment during removal operations, and the site cleared so as not to conflict with or harm other uses of the OCS.

- Decommissioning a pipeline in place is needed to ensure that it will not constitute a hazard to navigation and commercial fishing operations, unduly interfere with other uses of the OCS, or have adverse environmental effects.

- The information is necessary to verify that decommissioning activities comply with approved applications and procedures and are satisfactorily completed.

We will protect information from respondents considered proprietary under the Freedom of Information Act (5 U.S.C. 552) and its implementing regulations (43 CFR part 2) and under regulations at 30 CFR 250.197, *Data and information to be made available to the public or for limited inspection*. No items of a sensitive nature are collected. Responses are mandatory.

*Frequency:* On occasion.

*Description of Respondents:* Potential respondents comprise Federal oil, gas, or sulphur lessees and/or operators.

*Estimated Reporting and Recordkeeping Hour Burden:* The currently approved annual reporting burden for this collection is 19,613 hours. The following chart details the individual components and respective hour burden estimates of this ICR. In calculating the burdens, we assumed that respondents perform certain requirements in the normal course of their activities. We consider these to be usual and customary and took that into account in estimating the burden.

Citation 30 CFR 250 Subpart Q	Reporting requirement	Hour burden
<b>General</b>		
1700 thru 1754 .....	General departure and alternative compliance requests not specifically covered elsewhere in subpart Q regulations.	3.
1703; 1704 .....	Request approval for decommissioning .....	Burden included below.
1704(g); 1707(d); 1712; 1715; 1716; 1717; 1721(a), (d), (f), (g); 1722(a), (b), (d); 1723(b); 1743(a) .....	Submit form BSEE-0124 to plug wells; provide subsequent report; request alternate depth departure; request procedure to protect obstructions above seafloor; report within 30 days, results of trawling; certify area cleared of obstructions; remove casing stub or mud line suspension equipment and subsea protective covering; other departures; and all supporting or additional information required.	Burden covered under 1014-0018.
1705 .....	Submit a description of your Blowout Preventer (BOP) and its components; schematic drawings; independent third party verification and all supporting information (evidence showing appropriate licenses, has expertise/experience necessary to perform required verifications, etc.) with your Application for Permit to Modify (APM).	15.
1705(e)(2)(ii) .....	Allow BSEE access to witness testing, inspections, and information verification. Notify District Manager at least 72 hours prior to shearing ram tests.	0.25.
1706(a) .....	Request approval of well abandonment operations; procedures indicating how the annular preventer will be utilized and how pressure limitations will be applied during each mode of pressure control, with your APM.	0.25.
1706(f)(4) .....	Request approval of the District Manager to conduct operations without downhole check values; describe procedures/equipment in APM.	1.
1707(a)(2) .....	Request approval from District Manager to test all BOP system components to rated working pressure; annular BOP less than 70 percent rated working pressure.	0.25.
1707(b)(2) .....	State reason for postponing test in operations logs .....	0.25.
1707(b)(2) .....	Request approval from District Manager for alternate test frequencies if condition/ BOP warrant.	0.25.
1707(f) .....	Request alternative method to record test pressures .....	0.25.
1707(f) .....	Record test pressures during BOP and coiled tubing on a pressure chart or w/digital recorder; certify charts are correct.	1.
1707(g) .....	Record or reference in operations log all pertinent information listed in this requirement; make all documents pertaining to BOP tests, actuations and inspections available for BSEE review at facility for duration of well abandonment activity; retain all records for 2 years at a location conveniently available for the District Manager.	0.5.
1707(h)(1) .....	Submit test procedures with your APM for District Manager approval .....	1.
1707(h)(1)(ii) .....	Document all ROV intervention test results; make available to BSEE upon request	0.5.
1707(h)(2)(ii) .....	Document all autoshear and deadman function test results; make available to BSEE upon request.	0.25.
1708(a), (b) .....	Document BOP inspection and maintenance procedures used; record results of BOP inspections and maintenance actions; maintain records for 2 years or longer if directed by BSEE; make available to BSEE upon request.	1.
1708(a) .....	Request alternative method to inspect marine risers .....	0.25.
1709 .....	Request approval from the District Manager to displace kill-weight fluids in an unbalanced state; submit detailed written procedures with your APM.	2.
<b>Permanently Plugging Wells</b>		
1711 .....	Required data if permanently plugging a well. Requirement not considered Information Collection under 5 CFR 1320.3(h)(9).	0.
1712(f), (g); 1721(h) .....	Submit with your APM, archaeological and sensitive biological features; professional engineer certification.	Burden covered under 1014-0018.
1712(g); 1721(h) .....	Submit evidence from the Registered Professional Engineer/firm of the well abandonment design and procedures; plugs in the annuli meet requirements of §250.1715; 2 independent barriers etc; has the expertise and experience necessary to perform the verification(s), submit with the APM.	1.
1713 .....	Notify BSEE 48 hours before beginning operations to permanently plug a well .....	0.5.
<b>Temporary Abandoned Wells</b>		
1721(e); 1722(e), (h)(1); 1741(c) .....	Identify and report subsea wellheads, casing stubs, or other obstructions; mark wells protected by a dome; mark location to be cleared as navigation hazard.	U.S. Coast Guard requirements.
1722(c), (g)(2) .....	Notify BSEE within 5 days if trawl does not pass over protective device or causes damages to it; or if inspection reveals casing stub or mud line suspension is no longer protected.	1.
1722(f), (g)(3) .....	Submit annual report on plans for re-entry to complete or permanently abandon the well and inspection report.	2.5.
1722(h) .....	Request waiver of trawling test .....	2.
<b>Removing Platforms and Other Facilities</b>		
1726; 1704(a) .....	Submit initial decommissioning application in the Pacific and Alaska OCS Regions.	20.

Citation 30 CFR 250 Sub-part Q	Reporting requirement	Hour burden
1725; 1727; 1728; 1730; 1704(b).	Submit final application and appropriate data to remove platform or other subsea facility structures (including alternate depth departure) or approval to maintain, to conduct other operations, or to convert to artificial reef.	22.
1725(e) .....	Notify BSEE 48 hours before beginning removal of platform and other facilities .....	\$4,342 fee. 0.5.
1729; 1704(c) .....	Submit post platform or other facility removal report; supporting documentation; signed statements, etc.	9.
1731(c) .....	Request deferral of facility removal subject to RUE issued under 30 CFR 556 .....	1.
<b>Site Clearance for Wells, Platforms, and Other Facilities</b>		
1740; 1741(g) .....	Request approval to use alternative methods of well site, platform, or other facility clearance; contact pipeline owner/operator before trawling to determine its condition.	15.
1743(b); 1704(f) .....	Verify permanently plugged well, platform, or other facility removal site cleared of obstructions; supporting documentation; and submit certification letter.	5.
<b>Pipeline Decommissioning</b>		
1750; 1751; 1752; 1754; 1704(d).	Submit application to decommission pipeline in place or remove pipeline (Lease Term (L/T) or Right-of-Way (ROW)).	10.
.....	.....	\$1,059 L/T decommission fee.
.....	.....	\$2,012 ROW decommission fee.
1753; 1704(e) .....	Submit post pipeline decommissioning report .....	3.

*Estimated Reporting and Recordkeeping Non-Hour Cost Burden:* We have identified three non-hour paperwork cost burdens for this collection. Respondents pay cost recovery fees when removing a platform or other facility under § 250.1727 for \$4,342, or for decommissioning a pipeline under § 250.1751(a)—L/T for \$1,059 or a ROW for \$2,012. The fees are required to recover the Federal Government’s processing costs, and we have not identified any others. We estimate a total reporting non-hour cost burden of \$1,677,782 for this collection.

*Public Disclosure Statement:* The PRA (44 U.S.C. 3501, *et seq.*) provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

*Comments:* Before submitting an ICR to OMB, PRA section 3506(c)(2)(A) requires each agency “. . . to provide notice . . . and otherwise consult with members of the public and affected agencies concerning each proposed collection of information . . .”. Agencies must specifically solicit comments to: (a) evaluate whether the collection is necessary or useful; (b) evaluate the accuracy of the burden of the proposed collection of information; (c) enhance the quality, usefulness, and clarity of the information to be collected; and (d) minimize the burden on the respondents, including the use of technology.

Agencies must also estimate the non-hour paperwork cost burdens to respondents or recordkeepers resulting from the collection of information. Therefore, if you have other than hour burden costs to generate, maintain, and disclose this information, you should comment and provide your total capital and startup cost components or annual operation, maintenance, and purchase of service components. For further information on this burden, refer to 5 CFR 1320.3(b)(1) and (2), or contact the Bureau representative listed previously in this notice.

We will summarize written responses to this notice and address them in our submission for OMB approval. As a result of your comments, we will make any necessary adjustments to the burden in our submission to OMB.

*Public Comment Procedures:* Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

*BSEE Information Collection Clearance Officer:* Cheryl Blundon (703) 787–1607.

Dated: May 14, 2013.

**Fish and Wildlife Service**

**[FWS–R6–ES–2013–N113; 60120–1113–0000–C2]**

**Endangered and Threatened Wildlife and Plants; Draft Revised Supplement to the Grizzly Bear Recovery Plan; Extension of Public Comment Period**

**AGENCY:** Fish and Wildlife Service, Interior.

**ACTION:** Notice of availability; extension of comment period.

**SUMMARY:** We, the U.S. Fish and Wildlife Service (Service), are extending the public comment period for a Draft Revised Supplement to the Grizzly Bear Recovery Plan in the greater Yellowstone area. If you have previously submitted comments, please do not resubmit them, because we have already incorporated them in the public record and will fully consider them in our final Supplement.

**DATES:** Written comments must be submitted by June 20, 2013.

**ADDRESSES:** Send comments by U.S. mail to Chris Servheen, U.S. Fish and Wildlife Service, University Hall—

Room 309, Missoula, MT 59812, or via email to [FerretsSHA@fws.gov](mailto:FerretsSHA@fws.gov). An electronic copy of the draft Revised Supplement to the Grizzly Bear Recovery Plan is available at <http://www.fws.gov/mountain-prairie/species/mammals/grizzly/yellowstoneindex.html>.

If you do not have access to the Web site, you may request hard copies by telephone at (406) 243-4903 or by letter to the address above.

**FOR FURTHER INFORMATION CONTACT:** Chris Servheen, Grizzly Bear Recovery Coordinator, U.S. Fish and Wildlife Service, (406) 243-4903.

**SUPPLEMENTARY INFORMATION:** On March 22, 2013 we published a **Federal Register** notice (78 FR 17708) announcing the availability of a draft Revised Supplement to the Grizzly Bear Recovery Plan. This supplement proposes to revise the demographic recovery criteria for the Yellowstone Ecosystem. We are providing the public more time to review these documents by extending the public comment period for another 30 days in response to a request from Earthjustice, on behalf of Defenders of Wildlife, the Greater Yellowstone Coalition, the Natural Resources Defense Council, and the Sierra Club. For information on where to view the documents and how to submit comments, please see the **ADDRESSES** section above.

#### Public Availability of Comments

Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

#### Authority

We provide this notice under section 4(f) of the Endangered Species Act (16 U.S.C. 1531 *et seq.*) and its implementing regulations (50 CFR 17.1 *et seq.*) and the National Environmental Policy Act (NEPA) (42 U.S.C. 4371 *et seq.*) and its implementing regulations (40 CFR 1500 *et seq.*)

Dated: May 9, 2013.

### National Park Service

[NPS-MWR-CR-12046; PPMWUGRR00, PPMRSCR1Y.CU0000]

#### Information Collection Request Sent to the Office of Management and Budget (OMB) for Approval; National Underground Railroad Network to Freedom Program

**AGENCY:** National Park Service, Interior.

**ACTION:** Notice; request for comments.

**SUMMARY:** We (National Park Service) have sent an Information Collection Request (ICR) to OMB for review and approval. We summarize the ICR below and describe the nature of the collection and the estimated burden and cost. This information collection is scheduled to expire on May 31, 2013. We may not conduct or sponsor and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. However, under OMB regulations, we may continue to conduct or sponsor this information collection while it is pending at OMB.

**DATES:** You must submit comments on or before June 20, 2013.

**ADDRESSES:** Send your comments and suggestions on this information collection to the Desk Officer for the Department of the Interior at OMB-OIRA at (202) 395-5806 (fax) or [OIRA\\_Submission@omb.eop.gov](mailto:OIRA_Submission@omb.eop.gov) (email). Please provide a copy of your comments to Madonna L. Baucum, Information Collection Clearance Officer, National Park Service, 1201 I Street NW., MS 1237, Washington, DC 20005 (mail); or [madonna\\_baucum@nps.gov](mailto:madonna_baucum@nps.gov) (email). Please include "1024-0232" in the subject line of your comments.

**FOR FURTHER INFORMATION CONTACT:** To request additional information about this ICR, contact Diane Miller, National Manager, National Underground Railroad Network to Freedom Program, National Park Service, Midwest Regional Office, 601 Riverfront Drive, Omaha, Nebraska 68102; via fax at (402) 661-1982; or via email at [diane\\_miller@nps.gov](mailto:diane_miller@nps.gov). You may review the ICR online at <http://www.reginfo.gov>. Follow the instructions to review Department of the Interior collections under review by OMB.

#### SUPPLEMENTARY INFORMATION:

*OMB Control Number:* 1024-0232.

*Title:* National Underground Railroad Network to Freedom Program.

*Service Form Number(s):* None.

*Type of Request:* Revision of a currently approved collection.

*Description of Respondents:* Individuals; businesses; nonprofit organizations; and Federal, State, tribal, and local governments.

*Respondent's Obligation:* Required to obtain or retain a benefit.

*Frequency of Collection:* On occasion.

Activity	Number of respondents	Number of responses	Completion time per response (hours)	Total annual burden hours
Network Applications .....	35	35	25	875
Partner Requests .....	2	2	.5	1
Totals .....	37	37	26	876

*Estimated Annual Nonhour Burden Cost:* None.

*Abstract:* Public Law 105–203 (National Underground Railroad Network to Freedom Act of 1998) authorizes the Secretary of the Interior to establish the Network to Freedom (Network). The Network is a collection of sites, facilities, and programs, both governmental and nongovernmental, around the United States. All entities must have a verifiable association with the historic Underground Railroad movement. The National Park Service administers the National Underground Railroad Network to Freedom Program. The program coordinates preservation and education efforts Nationwide and integrates local historical places, museums, and interpretive programs associated with the Underground Railroad into a mosaic of community, regional, and national stories.

Individuals; businesses; organizations; State, tribal and local governments; and Federal agencies that want to join the Network must complete an application form. The application and instructions are available on our Web site at <http://www.nps.gov/subjects/ugrr/index.htm>. Respondents must (1) verify associations and characteristics through descriptive texts that are the result of historical research and (2) submit supporting documentation; e.g., copies of rare documents, photographs, and maps. Much of the information is submitted in electronic format, but, at the present time, there is no automated way to gather all of the required information. We use the information collected to determine eligibility to become part of the Network.

In reviewing this IC for renewal, we discovered an information collection requirement not previously approved by OMB. One of the principal components of the Network to Freedom Program is to validate the efforts of local and regional organizations, and to make it easier for them to share expertise and communicate with us and each other. The vehicle through which this can happen is for these local entities to become Network Partners. Partners of the Network to Freedom Program work alongside and often in cooperation with

us to fulfill the program’s mission. Prospective partners must submit a letter with the following information:

- Name and address of the agency, company or organization;
- Name, address, and phone, fax, and email information of principal contact;
- Abstract not to exceed 200 words describing the partner’s activity or mission statement; and
- Brief description of the entity’s association to the Underground Railroad.

*Comments:* On November 16, 2012, we published in the **Federal Register** (77 FR 68817) a notice of our intent to request that OMB renew approval for this information collection. In that notice, we solicited comments for 60 days, ending on January 15, 2013. We did not receive any comments in response to that notice.

We again invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our estimate of the burden for this collection of information;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden of the collection of information on respondents.

Comments that you submit in response to this notice are a matter of public record. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment, including your personal identifying information, may be made publicly available at any time. While you can ask OMB in your comment to withhold your personal identifying information from public review, we cannot guarantee that it will be done.

Dated: May 15, 2013.

**Madonna L. Baucum,**  
Information Collection Clearance Officer,  
National Park Service.

[FR Doc. 2013–12075 Filed 5–20–13; 8:45 am]

**BILLING CODE 4310–EH–P**

**INTERNATIONAL TRADE COMMISSION**

[Investigation No. 337–TA–858]

**Certain Devices With Secure Communication Capabilities, Components Thereof, and Products Containing Same; Commission Determination Not To Review an Initial Determination Denying Respondent’s Motion for Sanctions and Granting Complainants’ Motion To Terminate the Investigation in its Entirety; Termination of Investigation**

**AGENCY:** U.S. International Trade Commission.

**ACTION:** Notice.

**SUMMARY:** Notice is hereby given that the U.S. International Trade Commission has determined not to review an initial determination (“ID”) (Order No. 20) of the presiding administrative law judge (“ALJ”) denying respondent’s motion for sanctions and granting complainants’ motion to terminate the above-referenced investigation in its entirety. The investigation is terminated in its entirety.

**FOR FURTHER INFORMATION CONTACT:** Jia Chen, Office of the General Counsel, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 708–4737. Copies of non-confidential documents filed in connection with this investigation are or will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. General information concerning the Commission may also be obtained by accessing its Internet server at <http://www.usitc.gov>. The public record for this investigation may be viewed on the Commission’s electronic docket (EDIS) at <http://edis.usitc.gov>. Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission’s TDD terminal on (202) 205–1810.

**SUPPLEMENTARY INFORMATION:** The Commission instituted this investigation

on October 22, 2012, based on a complaint filed by VirnetX, Inc. (“VirnetX”) of Zephyr Cove, Nevada and Science Applications International Corporation (“SAIC”) of Mclean, Virginia (collectively, “Complainants”). 77 FR 64,546 (Oct. 22, 2012). The complaint alleges violations of section 337 of the Tariff Act of 1930, as amended, 19 U.S.C. 1337, by reason of infringement of certain claims of U.S. Patent No. 8,051,181 (“the ‘181 patent”). The complaint further alleges the existence of a domestic industry. The notice of investigation named Apple Inc. (“Apple”) of Cupertino, California as the sole respondent.

On March 4, 2013, Complainants filed a motion seeking to terminate the investigation in its entirety based upon withdrawal of the complaint so that Complainants may focus on their district court litigation. Apple opposed the motion in part on March 14, 2013. On March 26, 2013, Apple filed a related motion seeking sanctions against complainants. On April 15, 2013, Apple withdrew its sanctions motion with respect to SAIC.

On January 22, 2013, the ALJ issued the subject ID denying Apple’s motion for sanctions and granting Complainants’ motion to terminate the investigation in its entirety. The ALJ found that no extraordinary circumstances prevent Complainants’ withdrawal of the complaint and that termination would be in the public interest. No petitions for review were filed.

The Commission has determined not to review the subject ID.

The authority for the Commission’s determination is contained in Section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and in sections 210.4 and 210.42 of the Commission’s Rules of Practice and Procedure (19 CFR 210.4 & 210.42).

By order of the Commission.

Issued: May 15, 2013.

**Lisa R. Barton,**

*Acting Secretary to the Commission.*

BILLING CODE 7020–02–P

## DEPARTMENT OF JUSTICE

[OMB Number 1122–NEW]

### Agency Information Collection Activities: New Collection; Survey of Supervised Visitation and Safe Exchange Programs Grantees and Partners

**ACTION:** 60-Day Notice.

The Department of Justice, Office on Violence Against Women (OVW) will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. Comments are encouraged and will be accepted for “sixty days” until July 22, 2013. This process is conducted in accordance with 5 CFR 1320.10.

Written comments concerning this information collection should be sent to the Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: DOJ Desk Officer. The best way to ensure your comments are received is to email them to [aira\\_submission@omb.eop.gov](mailto:aira_submission@omb.eop.gov) or fax them to 202–395–7285. All comments should reference the 8 digit OMB number for the collection or the title of the collection. If you have questions concerning the collection, please Cathy Poston, Office on Violence Against Women, at 202–514–5430.

Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

(1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;

(3) Enhance the quality, utility, and clarity of the information to be collected; and

(4) Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

### Overview of This Information Collection

(1) *Type of Information Collection:* New collection.

(2) *Title of the Form/Collection:* Survey of Supervised Visitation and Safe Exchange Program Grantees and Partners.

(3) *Agency form number, if any, and the applicable component of the Department of Justice sponsoring the collection:* Form Number: 1122–XXXX.

U.S. Department of Justice, Office on Violence Against Women.

(4) *Affected public who will be asked or required to respond, as well as a brief abstract:* The affected public includes the approximately past and current 800 Safe Havens: Supervised Visitation and Safe Exchange Grant Program (Supervised Visitation Program) grantees and their current and former grant partners. The Supervised Visitation Program provides an opportunity for communities to support the supervised visitation and safe exchange of children in situations involving domestic violence, dating violence, child abuse, sexual assault, or stalking.

(5) *An estimate of the total number of respondents and the amount of time estimated for an average respondent to respond/reply:* It is estimated that it will take the approximately 800 respondents (approximately past and current 800 Supervised Visitation Program grantees and their current and former grant partners) approximately 30 minutes to complete the survey. The survey will include 10 questions that will address demographics of families served, type of grant, significant outcomes for their community, and successes and challenges experienced either under the grant program or in general. Most of the questions will be multiple choice or involve a rating scale while a few will include narrative responses.

(6) *An estimate of the total public burden (in hours) associated with the collection:*

The total annual hour burden to complete the data collection forms is 400 hours, that is approximately 800 respondents with an estimated completion time for the form being 30 minutes.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., Washington, DC 20530.

Dated: May 15, 2013.

**Jerri Murray,**

*Department Clearance Officer for PRA, United States Department of Justice.*

**DEPARTMENT OF LABOR****Office of the Secretary****Agency Information Collection Activities; Submission for OMB Review; Comment Request; Prohibited Transaction Class Exemption 88–59, Residential Mortgage Financing Arrangements Involving Employee Benefit Plans****ACTION:** Notice.

**SUMMARY:** The Department of Labor (DOL) is submitting the Employee Benefits Security Administration (EBSA) sponsored information collection request (ICR) titled, “Prohibited Transaction Class Exemption 88–59, Residential Mortgage Financing Arrangements Involving Employee Benefit Plans,” to the Office of Management and Budget (OMB) for review and approval for continued use without change, in accordance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501 et seq.).

**DATES:** Submit comments on or before June 20, 2013.

**ADDRESSES:** A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the *RegInfo.gov* Web site, <http://www.reginfo.gov/public/do/PRAMain>, on the day following publication of this notice or by contacting Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or sending an email to [DOL\\_PRA\\_PUBLIC@dol.gov](mailto:DOL_PRA_PUBLIC@dol.gov).

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL–EBSA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503, Fax: 202–395–6881 (this is not a toll-free number), email: [OIRA\\_submission@omb.eop.gov](mailto:OIRA_submission@omb.eop.gov).

**FOR FURTHER INFORMATION:** Contact Michel Smyth by telephone at 202–693–4129 (this is not a toll-free number) or by email at [DOL\\_PRA\\_PUBLIC@dol.gov](mailto:DOL_PRA_PUBLIC@dol.gov).

**Authority:** 44 U.S.C. 3507(a)(1)(D).

**SUPPLEMENTARY INFORMATION:** The Prohibited Transaction Class Exemption applicable to residential mortgage financing arrangements involving employee benefit plans (PTE 88–59) permits an employee benefit plan to enter into specified transactions involving residential mortgage loans with parties in interest without violating the prohibited transaction provisions of the Employee Retirement Income

Security Act of 1974, provided that plan meets specified conditions. Among other conditions, the plan must maintain records pertaining to covered transactions for the duration of the loan and must make the records available upon request to plan trustees, investment managers, participants and beneficiaries, and DOL and Internal Revenue Service agents.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1210–0095. OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on May 31, 2013. The DOL seeks OMB to extend PRA authorization for this information collection for three (3) more years without any change to existing requirements. It should be noted that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on November 27, 2012 (77 FR 70828).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1210–0095. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency’s estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and

- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

*Agency:* DOL–EBSA.

*Title of Collection:* Prohibited Transaction Class Exemption 88–59, Residential Mortgage Financing Arrangements Involving Employee Benefit Plans.

*OMB Control Number:* 1210–0095.

*Affected Public:* Private Sector—businesses or other for-profits and not-for-profit institutions.

*Total Estimated Number of Respondents:* 2,187.

*Total Estimated Number of Responses:* 10,936.

*Total Estimated Annual Burden Hours:* 911.

*Total Estimated Annual Other Costs Burden:* \$0.

Dated: May 13, 2013.

**Michel Smyth,**

*Departmental Clearance Officer.*

**SUMMARY:** The Department of Labor (DOL) is submitting the Office of Labor-Management Standards (OLMS) sponsored information collection request (ICR) titled, “Notification of Employee Rights under Federal Labor Laws,” to the Office of Management and Budget (OMB) for review and approval for continued use without change in accordance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501 et seq.).

**DATES:** Submit comments on or before June 20, 2013.

**ADDRESSES:** A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the *RegInfo.gov* Web site, <http://www.reginfo.gov/public/do/PRAMain>, on the day following publication of this

notice or by contacting Michel Smyth by telephone at 202-693-4129 (this is not a toll-free number) or sending an email to [DOL\\_PRA\\_PUBLIC@dol.gov](mailto:DOL_PRA_PUBLIC@dol.gov).

Submit comments about this request to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OLMS, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503, Fax: 202-395-6881 (this is not a toll-free number), email: [OIRA\\_submission@omb.eop.gov](mailto:OIRA_submission@omb.eop.gov).

**FOR FURTHER INFORMATION CONTACT:** Michel Smyth by telephone at 202-693-4129 (this is not a toll-free number) or by email at [DOL\\_PRA\\_PUBLIC@dol.gov](mailto:DOL_PRA_PUBLIC@dol.gov).

**Authority:** 44 U.S.C. 3507(a)(1)(D).

**SUPPLEMENTARY INFORMATION:** President Barack Obama signed Executive Order 13496 (E.O. 13496) on January 30, 2009, requiring certain Government contractors and subcontractors to post notices informing their employees of their rights as employees under Federal labor laws. Regulations 29 CFR 471.11 provides for DOL to accept a written complaint alleging that a contractor doing business with the Federal government has failed to post the notice required by E.O. 13496. The section establishes that no special complaint form is required; however, a complaint must be in writing. In addition, the complaint must contain certain information, including the name, address, and telephone number of the person submitting the complaint and the name and address of the Federal contractor alleged to have violated the rule. The section also establishes that a written complaint may be submitted to either the Office of Federal Contract Compliance Programs or OLMS.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1245-0004. OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on May 31, 2013. The DOL seeks OMB to extend PRA authorization for this information

collection for three (3) more years without any change to existing requirements. It should be noted that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional information, see the related notice published in the **Federal Register** on February 25, 2013 (78 FR 12798).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within 30 days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1245-0004. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

*Agency:* DOL-OLMS.

*Title of Collection:* Notification of Employee Rights under Federal Labor Laws.

*OMB Control Number:* 1245-0003.

*Affected Public:* Individuals or households.

*Total Estimated Number of Respondents:* 25.

*Total Estimated Number of Responses:* 25.

*Total Estimated Annual Burden Hours:* 32.

*Total Estimated Annual Other Costs Burden:* \$13.

Dated: May 14, 2013.

## DEPARTMENT OF LABOR

### Office of the Secretary

#### Labor Affairs Council of the United States-Colombia Trade Promotion Agreement; Notice of Public Session Meeting

**AGENCY:** International Labor Affairs Bureau (ILAB), U.S. Department of Labor.

**ACTION:** Notice of Public Session Meeting, Rescheduled for June 5, 2013.

**SUMMARY:** Pursuant to Article 17.5 of the U.S.-Colombia Trade Promotion Agreement (TPA), the International Labor Affairs Bureau (ILAB) of the U.S. Department of Labor gives notice of the public session of the meeting of the Labor Affairs Council ("Council" or "LAC"). The LAC public session has been rescheduled and will be held the morning of June 5, 2013. The purpose of the public session is to provide an opportunity for the Council to meet with the public to discuss matters related to the implementation of Chapter 17 (the Labor Chapter) of the U.S.-Colombia TPA, including activities of the Labor Cooperation Mechanism established under Article 17.6 of the TPA.

**DATES:** The LAC public session will be held on Wednesday, June 5, 2013, from 10:30 a.m. to 12:30 p.m. DOL requests those interested in attending provide their name, title, and any organizational affiliation to Ryan Carrington, Office of Trade and Labor Affairs, ILAB, U.S. Department of Labor, 200 Constitution Avenue NW., Room S-5303, Washington, DC 20210; phone (202) 693-4873; fax (202) 693-4851 (this is not a toll free number); email ([carrington.ryan@dol.gov](mailto:carrington.ryan@dol.gov)) by Tuesday, May 28, 2013.

**ADDRESSES:** The LAC will meet at the U.S. Department of Labor, 200 Constitution Avenue NW., Washington, DC 20210. Exact room information will be provided upon arrival.

**FOR FURTHER INFORMATION CONTACT:** Ryan Carrington, Office of Trade and Labor Affairs, Bureau of International Labor Affairs, U.S. Department of Labor, 200 Constitution Avenue NW., Room S-5303, Washington, DC 20210; phone (202) 693-4873; [carrington.ryan@dol.gov](mailto:carrington.ryan@dol.gov). Individuals with disabilities wishing to attend the meeting should contact Mr. Carrington no later than May 28, 2013, to obtain appropriate accommodations.

**SUPPLEMENTARY INFORMATION:** The LAC meeting is open to the public on a first-come, first-served basis, as seating is

limited. Attendees must present valid identification and will be subject to security screening to access the Department of Labor for the meeting.

**Agenda:** Agenda items will include a presentation by the Council on the discussions held during the ministerial LAC meeting, and an opportunity for questions from the public on matters related to the implementation of the Labor Chapter of the U.S.-Colombia TPA.

**Public Participation:** The LAC will receive oral comments and questions on the agenda listed above from the audience during the meeting. The Department of Labor is also open to written comments or questions, submitted to Ryan Carrington at the address listed above, by May 28, 2013. Such written submissions will be provided to Council members and will be included in the record of the meeting.

Signed at Washington, DC, the 14th day of May 2013.

**Carol Pier,**

*Acting Deputy Undersecretary, Bureau of International Labor Affairs.*

## DEPARTMENT OF LABOR

### Mine Safety and Health Administration

#### Fees for Testing, Evaluation, and Approval of Mining Products

**AGENCY:** Mine Safety and Health Administration, Labor.

**ACTION:** Notice.

**SUMMARY:** The Mine Safety and Health Administration (MSHA) is using new authority to collect fees for services performed under 30 CFR parts 6 through 36. Section 1503 of the Consolidated and Further Continuing Appropriations Act of 2013 (Pub. L. 113-6) contains new authority for 30 CFR part 5, *Fees for testing, evaluation, and approval of mining products*; it allows MSHA to collect fees up to \$2,499,000 for the testing, evaluation, and approval of certain mining equipment. MSHA is continuing to collect these fees for 2013 as calculated according to existing 30 CFR part 5.

**FOR FURTHER INFORMATION CONTACT:** George F. Triebisch, Director, Office of Standards, Regulations, and Variances, MSHA, at [triebisch.george@dol.gov](mailto:triebisch.george@dol.gov) (email); 202-693-9440 (voice); or 202-693-9441 (facsimile). (These are not toll-free numbers.)

Dated: May 16, 2013.

**Joseph A. Main,**

*Assistant Secretary of Labor for Mine Safety and Health.*

## OFFICE OF MANAGEMENT AND BUDGET

### Draft 2013 Report to Congress on the Benefits and Costs of Federal Regulations and Unfunded Mandates on State, Local, and Tribal Entities

**AGENCY:** Executive Office of the President, Office of Management and Budget.

**ACTION:** Notice of availability and request for comments.

**SUMMARY:** The Office of Management and Budget (OMB) requests comments on its Draft 2013 Report to Congress on the Benefits and Costs of Federal Regulations, available at: [http://www.whitehouse.gov/omb/inforeg\\_regpol\\_reports\\_congress/](http://www.whitehouse.gov/omb/inforeg_regpol_reports_congress/). The Draft Report is divided into three chapters. Chapter I examines the benefits and costs of major Federal regulations issued in fiscal year 2012 and summarizes the benefits and costs of major regulations issued between October 2002 and September 2012. It also discusses regulatory impacts on State, local, and tribal governments, small business, wages, and economic growth. Chapter II offers recommendations for regulatory reform. Chapter III summarizes agency compliance with the Unfunded Mandates Reform Act.

OMB requests that comments be submitted electronically to OMB by July 31, 2013 through [www.regulations.gov](http://www.regulations.gov).

**DATES:** To ensure consideration of comments as OMB prepares this Draft Report for submission to Congress, comments must be in writing and received by July 31, 2013.

**ADDRESSES:** Submit comments by one of the following methods:

- [www.regulations.gov](http://www.regulations.gov): Direct comments to Docket ID OMB-2010-0008.

- **Fax:** (202) 395-7285.

- **Mail:** Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: Mabel Echols, NEOB, Room 10202, 725 17th Street NW., Washington, DC 20503. To ensure that your comments are received, we recommend that comments on this draft report be electronically submitted.

All comments and recommendations submitted in response to this notice will be made available to the public,

including by posting them on OMB's Web site. For this reason, please do not include in your comments information of a confidential nature, such as sensitive personal information or proprietary information. The [www.regulations.gov](http://www.regulations.gov) Web site is an "anonymous access" system, which means OMB will not know your identity or contact information unless you provide it in the body of your comment. For further information, contact: Mabel Echols, Office of Information and Regulatory Affairs, Office of Management and Budget, NEOB, Room 10202, 725 17th Street NW., Washington, DC 20503. Telephone: (202) 395-3741.

**SUPPLEMENTARY INFORMATION:** Congress directed the Office of Management and Budget (OMB) to prepare an annual Report to Congress on the Costs and Benefits of Federal Regulations. Specifically, Section 624 of the FY 2001 Treasury and General Government Appropriations Act, also known as the "Regulatory Right-to-Know Act," (the Act) requires OMB to submit a report on the costs and benefits of Federal regulations together with recommendations for reform. The Act states that the report should contain estimates of the costs and benefits of regulations in the aggregate, by agency and agency program, and by major rule, as well as an analysis of impacts of Federal regulation on State, local, and tribal governments, small businesses, wages, and economic growth. The Act also states that the report should be subject to notice and comment and peer review.

## NATIONAL SCIENCE FOUNDATION

### Proposal Review Panel Physics; Notice of Meeting

In accordance with the Federal Advisory Committee Act (Pub. L. 92-463, as amended), the National Science Foundation announces the following meeting.

**Name:** NSF Site Visit Review of the National Superconducting Cyclotron Laboratory, #1208.

**Date and Time:** June 18, 2013—8:00 a.m. to 6:00 p.m.; June 19, 2013—8:30 a.m. to 1:00 p.m.

**Place:** Michigan State University; East Lansing, MI.

**Type of Meeting:** Partial Closed.

*Contact Person:* Dr. Gail Dodge, Program Director for Nuclear Physics; National Science Foundation, 4201 Wilson Blvd., Arlington, VA 22230. Telephone: (703) 292-8958.

*Purpose of Meeting:* Annual Site Visit as per the terms of the Laboratory's Five-year Cooperative Agreement.

#### Agenda

June 18, 2013

8:00 a.m.–10:15 a.m. Closed—Executive Session, Laboratory, Operations, Upgrades and Commissioning Overview  
 10:15 a.m.–11:15 a.m. Open—Accelerator Physics Research, and Research, Education and Mentoring Overview  
 11:15 a.m.–11:45 a.m. Closed—Executive Session  
 12:00 p.m.–12:45 p.m. Open—Meet with President and Provost  
 12:45 p.m.–1:00 p.m. Closed—Executive Session  
 1:00 p.m.–3:00 p.m. Open—ReA3, Astrophysics, GRETINA, MoNA Decay Studies, BECOLA, and LEBIT  
 3:00 p.m.–3:40 p.m. Open—Meet with Students and Postdocs  
 3:40 p.m.–5:00 p.m. Open—Tour  
 5:00 p.m.–6:00 p.m. Closed—Executive Session

June 19, 2013

8:30 a.m.–1:00 p.m. Closed—Executive Session and Report Writing

*Reason for Closing:* The work being reviewed includes information of a proprietary or confidential nature, including technical information; financial data, such as salaries; and personal information concerning individuals associated with the proposals. These matters are exempt under (4) and (6) of 5 U.S.C. 552b(c), the Government in the Sunshine Act.

Dated: May 15, 2013.

**Susanne Bolton,**

*Committee Management Officer.*

## NATIONAL TRANSPORTATION SAFETY BOARD

### Sunshine Act Meeting

**TIME AND DATE:** 9:30 a.m., Tuesday, June 4, 2013

**PLACE:** NTSB Conference Center, 429 L'Enfant Plaza SW., Washington, DC 20594.

**STATUS:** The one item is open to the public.

#### MATTERS TO BE CONSIDERED:

8492 *Safety Study—Characteristics of Single-Unit Truck Accidents Resulting in Injuries and Deaths*  
*News Media Contact: Telephone: (202) 314-6100.*

The press and public may enter the NTSB Conference Center one hour prior to the meeting for set up and seating.

Individuals requesting reasonable accommodations should contact Rochelle Hall at (202) 314-6305 or by email at [Rochelle.Hall@ntsb.gov](mailto:Rochelle.Hall@ntsb.gov) by Friday, May 31, 2013.

The public may view the meeting via a live or archived webcast by accessing a link under "News & Events" on the NTSB home page at [www.nts.gov](http://www.nts.gov).

Schedule updates including weather-related cancellations are also available at [www.nts.gov](http://www.nts.gov).

**FOR MORE INFORMATION CONTACT:** Candi Bing, (202) 314-6403 or by email at [bingc@ntsb.gov](mailto:bingc@ntsb.gov).

**FOR MEDIA INFORMATION CONTACT:** Keith Holloway, at (202) 314-6100 or by email at [hollowk@ntsb.gov](mailto:hollowk@ntsb.gov).

Dated: Friday, May 17, 2013.

## NUCLEAR REGULATORY COMMISSION

### Atomic Safety and Licensing Board

[Docket No. 52-033-COL; ASLBP No. 09-880-05-COL-BD01]

**Before Administrative Judges: Ronald M. Spritzer, Chairman, Dr. Anthony J. Baratta, Dr. Randall J. Charbeneau; In the Matter of Detroit Edison Company (Fermi Nuclear Power Plant, Unit 3); Notice of Hearing (Notice of Evidentiary Hearing and Opportunity To Provide Oral and Written Limited Appearance Statements)**

May 15, 2013.

Pursuant to 10 CFR 2.312, the Atomic Safety and Licensing Board hereby provides notice that it will convene an evidentiary session to receive testimony and exhibits in the contested portion of this proceeding. In addition, the Board gives notice that, in accordance with 10 CFR 2.315(a), it will entertain oral and written limited appearance statements from members of the public in connection with this proceeding.

#### A. Matters To Be Considered

This combined license ("COL") contested proceeding involves the application of DTE Electric Company (formerly the Detroit Edison Company) ("Applicant") under 10 CFR part 52, Subpart C, to construct and to operate a GE-Hitachi Economic Simplified Boiling Water Reactor ("ESBWR"), designated Unit 3, on its existing Fermi

nuclear facility site in Monroe County, Michigan.<sup>1</sup>

This evidentiary hearing will consider two contentions.

#### i. Contention 8

Contention 8, as restated by the Board, alleges that

the ER fails to adequately assess [Fermi Unit 3]'s impacts on the eastern fox snake and to consider alternatives that would reduce or eliminate those impacts.<sup>2</sup>

#### ii. Contention 15 (Including Subparts A & B)

Contention 15, as restated by the Board, alleges that

Detroit Edison (DTE) failed to comply with Appendix B to 10 C.F.R Part 50 to establish and implement its own quality assurance (QA) program when it entered into a contract with Black and Veatch (B&V) for the conduct of safety-related combined license (COL) application activities and to retain overall control of safety-related activities performed by B&V. This violation began in March 2007 and continued through at least February 2008. Further, DTE failed to complete internal audits of QA programmatic areas implemented for the Fermi 3 COL Application, and DTE also has failed to document trending of corrective actions to identify recurring conditions adverse to quality since the beginning of the Fermi Unit 3 project in March 2007.

#### Contention 15A:

These deficiencies adversely impact the quality of the safety related design information in the FSAR that is based on B&V's tests, investigations, or other safety-related activities. Because the NRC may base its licensing decision on safety-related design information in the FSAR only if it has reasonable assurance of the quality of that information, it may not lawfully issue the COL until the deficiencies have been adequately corrected by the Applicant, or until the Applicant demonstrates that the deficiencies do not affect the quality of safety-related design information in the FSAR.

#### Contention 15B:

Although DTE claims that in February 2008 it adopted a QA program that conforms to Appendix B, DTE has failed to implement that program in the manner required to properly oversee the safety-related design activities of B&V. This demonstrates an ongoing lack of commitment on the part of DTE's management to compliance with NRC QA regulations. The NRC cannot support a finding of reasonable assurance that the plant, as built, can and will be operated

<sup>1</sup> Letter from Jack M. Davis, DTE, to NRC, Detroit Edison Company Submittal of a Combined License Application for Fermi 3 (NRC Project No. 757) (Sept. 18, 2008) (ADAMS Accession No. ML082730763).

<sup>2</sup> See *Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), LBP-09-16, 70 NRC 227, 286 *aff'd*, CLI-09-22, 70 NRC 932 (2009).

without endangering the public health and safety until DTE provides satisfactory proof of a fully-implemented QA program that will govern the design, construction, and operation of Fermi Unit 3 in conformity with all relevant NRC regulations.<sup>3</sup>

#### **B. Date, Time, and Location for Evidentiary Hearing**

The evidentiary hearing will commence at 9:30 a.m., Eastern Daylight Time (EDT) on Wednesday, October 30, 2013, and continue through Friday, November 1, 2013, if necessary, in the Monroe County Courthouse's Board Meeting Room, 125 East Second Street, Monroe, MI 48161.

Members of the public and representatives of the media are welcome to attend and observe this evidentiary hearing. However, signs, banners, posters, and displays are prohibited in accordance with NRC policy.<sup>4</sup>

All individuals attending the evidentiary hearing are advised that security measures will be employed at the entrance to the facility. As such, all individuals attending the evidentiary hearing should bring at least one form of government issued photo identification, refrain from bringing any unnecessary hand-carried items that might need to be examined individually, and allow sufficient time for security screening.

#### **C. Date, Time, and Location of Oral Limited Appearance Statement Sessions**

Two oral limited appearance statement sessions regarding this evidentiary hearing proceeding will be held Tuesday, October 29, 2013, from 1:00 p.m. to 3:00 p.m. EDT (first limited appearance session), and from 7:00 p.m. to 8:30 p.m. (second limited appearance session) at Monroe County Community College, La-Z-Boy Center, Meyer Theater, 1555 S. Raisinville Road, Monroe, MI 48161.

Members of the public and representatives of the media are welcome to attend, observe, and participate in these oral limited appearance statement sessions, as outlined below. As required by NRC policy, signs, banners, posters, and displays not larger than 18" x 18" will be permitted at the oral limited appearance statement session, but may not be waved or held over one's head. Any sign, banner, poster or display

affixed to a stick, or similar device, will not be permitted at the oral limited appearance statement sessions.<sup>5</sup>

All individuals attending the oral limited appearance statement sessions are advised that security measures will be employed at the entrance to the facility. As such, all individuals attending the oral limited appearance statement sessions should bring at least one form of government issued photo identification, refrain from bringing any unnecessary hand-carried items that might need to be examined individually, and allow sufficient time for security screening.

#### **D. Participation Guidelines for Oral Limited Appearance Statements**

Any person not a party, or representative of a party, to this evidentiary hearing will be permitted to make an oral statement in regards to his or her position on a matter of concern relating to the proceeding. Though these statements do not constitute testimony or evidence, they nonetheless may aid the Board and/or the parties in their consideration of the issues involved in this evidentiary hearing.

Oral limited appearance statements will be entertained during the hours specified above. In the event that all scheduled and unscheduled speakers present at the session have made a presentation, the Board reserves the right to terminate the sessions prior to the ending time listed above.

The time allotted for each limited appearance statement will be five minutes, but may be further limited depending on the number of written requests to make an oral statement that are submitted in accordance with section E below and/or the number or persons present at the designated time, so as to ensure that everyone will have an opportunity to speak.

#### **E. Submitting a Request To Make an Oral Limited Appearance Statement**

Although a request to make an oral limited appearance statement may be submitted either prior to or at the limited appearance sessions, those who have submitted timely written requests prior to the limited appearance sessions will be given priority over those who have not filed such requests. To be considered timely, a written request to make an oral statement must either be mailed, faxed, or sent by email so as to be received by 5:00 p.m. EDT on Friday, October 18, 2013.

Written requests to make an oral statement should be submitted to:

*Mail:* Administrative Judge Ronald M. Spritzer, Atomic Safety and Licensing Board Panel, Mail Stop T-3F23, U.S. Nuclear Regulatory Commission, Washington, DC 20555-0001.

*Fax:* (301) 415-5599.

*Email:* [onika.williams@nrc.gov](mailto:onika.williams@nrc.gov) and [ronald.spritzer@nrc.gov](mailto:ronald.spritzer@nrc.gov).

#### **F. Submitting Written Limited Appearance Statements**

As provided in 10 CFR 2.315(a), any person not a party, or a representative of a party, to the proceeding may submit a written statement setting forth his or her position on matters of concern relating to this proceeding. Although these statements do not constitute testimony or evidence, they nonetheless may assist the Board or the parties in their consideration of the issues in this proceeding.

A written limited appearance statement may be submitted at any time and should be sent to the Office of the Secretary using one of the methods prescribed below:

*Mail:* Office of the Secretary, Rulemaking and Adjudications Staff, U.S. Nuclear Regulatory Commission, Washington, DC 20444-0001.

*Fax:* (301) 415-1101.

*Email:* [hearingdocket@nrc.gov](mailto:hearingdocket@nrc.gov).

In addition, using the same method of service, a copy of the written limited appearance statement should be sent to the Chairman of this Licensing Board as follows:

*Mail:* Administrative Judge Ronald M. Spritzer, Atomic Safety and Licensing Board Panel, Mail Stop T-3F23, U.S. Nuclear Regulatory Commission.

*Fax:* (301) 415-5599.

*Email:* [ronald.spritzer@nrc.gov](mailto:ronald.spritzer@nrc.gov).

#### **G. Availability of Documentary Information Regarding the Proceeding**

Applicant's application, and various NRC Staff documents relating to the application, are available on the NRC Web site at <http://www.nrc.gov/reactors/new-reactors/col/fermi.html>. These and other documents relating to this proceeding are available for public inspection at the Commission's Public Document Room (PDR), located at One White Flint North, 11555 Rockville Pike (first floor), Rockville, Maryland 20852 or electronically from the publicly-available records component of the NRC's document system (ADAMS). ADAMS is accessible from the NRC Web site at <http://www.nrc.gov/reading-rm/adams.html> (the Public Electronic Reading Room).<sup>6</sup> Persons who do not

<sup>3</sup> See *Detroit Edison Co.* (Fermi Nuclear Power Plant, Unit 3), LBP-10-9, 71 NRC 493, 510-11 (2010).

<sup>4</sup> See Procedures for Providing Security Support for NRC Public Meetings/Hearings, 66 Fed. Reg. 31,719 (June 12, 2001) [hereinafter Meeting Security Guidelines].

<sup>5</sup> See Meeting Security Guidelines.

<sup>6</sup> Some documents determined by the NRC Staff to contain "sensitive" information are publicly available only in redacted form; non-sensitive

have access to ADAMS or who encounter problems in accessing the documents located in ADAMS should contact the NRC PDR reference staff by telephone at (800) 397-4209 or (301) 415-4737 (available between 8:00 a.m. and 4:00 p.m. Eastern Time, Monday through Friday except federal holidays), or by email to [pdr@nrc.gov](mailto:pdr@nrc.gov).

#### H. Conference Call

The Board intends on holding a conference call with the parties in early October 2013 to discuss further administrative details regarding this evidentiary hearing.

It is so ordered.

Dated: May 15, 2013, Rockville, Maryland.

For the Atomic Safety and Licensing Board.

#### NUCLEAR REGULATORY COMMISSION

[Docket Nos.: 50-275 and 50-323; NRC-2013-0100]

#### Diablo Canyon Power Plant, Units 1 and 2; Application for Amendment to Facility Operating License

**AGENCY:** Nuclear Regulatory Commission.

**ACTION:** License amendment application; withdrawal.

**SUMMARY:** The U.S. Nuclear Regulatory Commission (NRC) has granted the request of the Pacific Gas and Electric Company (the licensee) to withdraw its application dated December 29, 2009, as supplemented by letter dated November 22, 2011 (ADAMS Accession Nos. ML100040087 and ML113270063, respectively), for a proposed amendment to Facility Operating License Nos. DPR-80 and DPR-82 for the Diablo Canyon Power Plant, Units 1 and 2, located in San Luis Obispo County, California.

**ADDRESSES:** Please refer to Docket ID NRC-2013-0100 when contacting the NRC about the availability of information regarding this document. You may access information related to this document, which the NRC possesses and are publicly available, using any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search

documents are publicly available in their complete form. In addition, some documents that may contain proprietary information may be publicly available only in redacted form.

for Docket ID NRC-2013-0100. Address questions about NRC dockets to Carol Gallagher; telephone: 301-492-3668; email: [Carol.Gallagher@nrc.gov](mailto:Carol.Gallagher@nrc.gov). For technical questions, contact the individual(s) listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *NRC's Agencywide Documents Access and Management System (ADAMS):* You may access publicly available documents online in the NRC Library at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select "ADAMS Public Documents" and then select "Begin Web-based ADAMS Search." For problems with ADAMS, please contact the NRC's Public Document Room (PDR) reference staff at 1-800-397-4209, 301-415-4737, or by email to [pdr.resource@nrc.gov](mailto:pdr.resource@nrc.gov). The ADAMS accession number for each document referenced in this notice (if that document is available in ADAMS) is provided the first time that a document is referenced.

- *NRC's PDR:* You may examine and purchase copies of public documents at the NRC's PDR, Room O1-F21, One White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

#### FOR FURTHER INFORMATION CONTACT:

James T. Polickoski, Project Manager, Office of Nuclear Reactor Regulation, U.S. Nuclear Regulatory Commission, Washington, DC 20555; telephone: 301-415-5430; email: [james.polickoski@nrc.gov](mailto:james.polickoski@nrc.gov).

**SUPPLEMENTARY INFORMATION:** The proposed amendment would revise the licensing basis as described in the Final Safety Analysis Report Update to discuss the conformance of the delayed access offsite power circuit (the 500-kV delayed access circuit) to the General Design Criterion 17 requirement that each of the offsite power circuits be designed to be available in sufficient time following a loss of all onsite alternating current power supplies and the other offsite electric power circuit, to assure that specified acceptable fuel design limits and design conditions of the reactor coolant pressure boundary are not exceeded.

The Commission had previously issued a Notice of Consideration of Issuance of Amendment published in the **Federal Register** on March 23, 2010 (75 FR 13790). However, by letter dated March 14, 2013, the licensee withdrew the proposed change.

For further details with respect to this action, see the application for amendment dated December 29, 2009, as supplemented by letter dated November 22, 2011, and the licensee's letter dated March 14, 2013, which

withdrew the application for license amendment (ADAMS Accession No. ML13074A092).

Dated at Rockville, Maryland, this 13th day of May 2013.

For the Nuclear Regulatory Commission.

**POSTAL REGULATORY COMMISSION**

[Docket No. CP2013-62; Order No. 1716]

**New Postal Product**

**AGENCY:** Postal Regulatory Commission.

**ACTION:** Notice

**SUMMARY:** The Commission is noticing a recent Postal Service filing concerning the addition of Global Expedited Package Services 3 Contract to the competitive product list. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

**DATES:** *Comments are due:* May 22, 2013.

**ADDRESSES:** Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

**FOR FURTHER INFORMATION CONTACT:** Stephen L. Sharfman, General Counsel, at 202-789-6820.

**SUPPLEMENTARY INFORMATION:**

**Table of Contents**

- I. Introduction
- II. Contents of Filing
- III. Commission Action
- IV. Ordering Paragraphs

**I. Introduction**

*Notice of filing.* On May 10, 2013, the Postal Service filed a notice announcing that it is entering into an additional Global Expedited Package Services (GEPS) 3 contract (Agreement).<sup>1</sup> The Postal Service seeks to have the Agreement included within the GEPS 3 product on grounds of functional equivalence to a previously approved baseline agreement. *Id.* at 2.

*Background.* Customers for GEPS contracts are small- or medium-sized businesses that mail products directly to foreign destinations using Express Mail International, Priority Mail

International, or both. *Id.* at 4. The Commission added GEPS 1 to the competitive product list, based on Governors' Decision No. 08-7, by operation of Order No. 86. *Id.* at 1. It later approved the addition of GEPS 3 contracts to the competitive product list as a result of Docket No. MC2010-28.<sup>2</sup> The Commission designated the contract filed in companion Docket No. CP2010-71 as the baseline agreement for purposes of establishing the functional equivalency of other agreements proposed for inclusion within the GEPS 3 product. Notice at 1-2.

**II. Contents of Filing**

The filing includes a Notice, along with the following attachments:

- Attachment 1—a redacted copy of the Agreement;
- Attachment 2—a redacted copy of the certification required under 39 CFR 3015.5(c)(2);
- Attachment 3—a redacted copy of Governors' Decision No. 08-7; and
- Attachment 4—an application for non-public treatment of material filed under seal.

The material filed under seal consists of unredacted copies of the Agreement and supporting financial documents. *Id.* at 2.

*Functional equivalency.* The Postal Service asserts that the instant Agreement and the baseline agreement are functionally equivalent because they share similar cost and market characteristics. *Id.* at 3. It notes that the pricing formula and classification established in Governors' Decision No. 08-7 ensure that each GEPS contract meets the criteria of 39 U.S.C. 3633 and related regulations. *Id.* The Postal Service further asserts that the functional terms of the two agreements are the same and the benefits are comparable. *Id.*

The Postal Service states that prices may differ, depending on when an agreement is signed, due to updated costing information. *Id.* at 4. It also identifies other differences in contractual terms, but asserts that the differences do not affect either the fundamental service being offered or the fundamental structure of the Agreement.<sup>3</sup> *Id.* at 6.

*Effective date; term.* The Postal Service will inform its contracting

<sup>2</sup> See Docket Nos. MC2010-28 and CP2010-71, Order No. 503, Order Approving Global Expedited Package Services 3 Negotiated Service Agreement, July 29, 2010.

<sup>3</sup> The list includes, among other things, deletion of an article that appears in the baseline agreement, the addition and revision of articles, the addition of an annex, and related renumbering of articles. See *id.* at 4-6.

<sup>1</sup> Notice of United States Postal Service of Filing a Functionally Equivalent Global Expedited Package Services 3 Negotiated Service Agreement and Application for Non-Public Treatment of Materials Filed Under Seal, May 10, 2013 (Notice). The Notice was filed in accordance with 39 CFR 3015.5. *Id.* at 1.

partner of the effective date of the Agreement via notice provided as soon as possible, but no later than, 30 days after receiving all necessary regulatory approvals. *Id.* Attachment 1 at 7. The Agreement is to remain in effect for one calendar year, unless terminated sooner. *Id.*

### III. Commission Action

The Commission establishes Docket No. CP2013–62 for consideration of matters raised in the Notice. Interested persons may submit comments on whether the Agreement is consistent with the requirements of 39 CFR 3015.5 and the policies of 39 U.S.C. 3632 and 3633. Comments are due no later than May 22, 2013. The public portions of the Postal Service's filing can be accessed via the Commission's Web site at <http://www.prc.gov>. Information on how to obtain access to nonpublic material appears at 39 CFR 3007.40.

The Commission appoints James F. Callow to represent the interest of the general public (Public Representative) in this case.

### IV. Ordering Paragraphs

*It is ordered:*

1. The Commission establishes Docket No. CP2013–62 for consideration of matters raised in the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, the Commission designates James F. Callow to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments are due no later than May 22, 2013.

4. The Secretary shall arrange for publication of this Order in the **Federal Register**.

By the Commission.

**Shoshana M. Grove,**  
*Secretary.*

## POSTAL REGULATORY COMMISSION

[Docket No. R2013–7; Order No. 1714]

### Priority Mail Pricing

**AGENCY:** Postal Regulatory Commission.

**ACTION:** Notice.

**SUMMARY:** The Commission is noticing a recently-filed Postal Service notice announcing a proposal to include, for no additional charge, insurance up to \$100 on most Priority Mail pieces. This notice addresses procedural steps associated with this filing.

**ADDRESSES:** Submit comments electronically by accessing the “Filing Online” link in the banner at the top of the Commission's Web site (<http://www.prc.gov>) or by directly accessing the Commission's Filing Online system at <https://www.prc.gov/prc-pages/filing-online/login.aspx>. Commenters who cannot submit their views electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section as the source for case-related information for advice on alternatives to electronic filing.

**DATES:** *Comments are due:* May 30, 2013.

**FOR FURTHER INFORMATION CONTACT:** Stephen L. Sharfman, General Counsel, at 202–789–6820 (case-related information) or [DocketAdmins@prc.gov](mailto:DocketAdmins@prc.gov) (electronic filing assistance).

### SUPPLEMENTARY INFORMATION:

#### Table of Contents

- I. Overview
- II. Administrative Actions
- III. Ordering Paragraphs

#### I. Overview

On May 10, 2013, the Postal Service filed notice, pursuant to 39 U.S.C. 3622 and 39 CFR 3010, announcing a plan to automatically include, at no additional charge, \$50 or \$100 of insurance coverage with most Priority Mail pieces.<sup>1</sup> The price change is scheduled to take effect July 28, 2013.

*Price adjustment description.* Currently, the Postal Service charges Priority Mail users a fee of \$1.95 for insurance coverage up to \$50 and \$2.45 for insurance coverage between \$50.01 and \$100. Notice at 2. The Postal Service's principal domestic competitors, FedEx and UPS, include insurance coverage up to \$100 at no extra charge. *Id.* The Postal Service asserts that this provides a competitive advantage with shippers, particularly large volume shippers. *Id.* By offering insurance coverage up to \$100, for no additional charge, on most Priority Mail pieces, the Postal Service hopes to improve the competitiveness of Priority Mail and potentially grow its overall market share. *Id.*

The Postal Service plans to offer automatic insurance coverage up to \$100 for no extra charge on all domestic Priority Mail pieces that bear an Intelligent Mail package barcode (IMpb) and for which the mailer pays Commercial Plus prices or uses a “Qualifying Payment Method.”<sup>2</sup> The

Postal Service plans to offer automatic insurance coverage up to \$50 in value on all other domestic Priority Mail pieces that bear an IMpb or other USPS retail tracking barcode.<sup>3</sup> *Id.* at 2–3.

*Price cap compliance.* For the Special Services class of mail, the Postal Service states that it has inflation-based price adjustment authority of 1.053 percent<sup>4</sup> and unused price adjustment authority of 2.114 percent,<sup>5</sup> neither of which the Postal Service intends to utilize in this docket. *Id.* at 3–4. The Postal Service indicates that by eliminating the fees for the first \$100 (or \$50) of insurance coverage for most Priority Mail pieces, the prices for Special Services class will decrease by 0.452 percent. *Id.* at 5. The Postal Service indicates that after the price change, the unused pricing authority available for the Special Services class will be 3.619. *Id.*

*Workshare discounts and preferred rates.* The Postal Service asserts the price change does not affect workshare discounts. *Id.* at 7. Apart from basing the amount of automatic insurance on the mailer's use of certain postage payment methods, the Postal Service asserts that the price change does not exclude any mailers and will therefore not affect compliance with any preferred rate requirements. *Id.*

*Mail Classification Schedule (MCS).* Proposed changes to the MCS, which describe the price change, appear in Attachment A of the Postal Service's Notice.

#### II. Administrative Actions

*Initiation of proceedings.* The Commission hereby establishes Docket No. R2013–7, to review the Postal Service's planned price adjustment. The Postal Service's Notice and any subsequent filings in this docket will be posted to the Commission's Web site at <http://www.prc.gov>.

*Public comment period.* The Commission's rules provide a period of 20 days from the date of the Postal Service's filing for public comment. 39 CFR 3010.13(a)(5). Comments by interested persons are due no later than May 30, 2013.

*Appointment of Public Representative.* In conformance with 39 U.S.C. 505, the Commission appoints

Hardcopy Manifest, or an approved Manifest Mailing System. *Id.* at 3 n.2.

<sup>3</sup> Automatic insurance coverage will not be offered with Priority Mail pieces sent using Merchandise Return Service, Priority Mail Open and Distribute, or Premium Forwarding Service. *Id.* at 3 n.3.

<sup>4</sup> This is based on the Consumer Price Index—All Urban Consumers, U.S. All Items (the “CUUR0000SAO” series). *Id.* at 3.

<sup>5</sup> See Docket No. R2013–1, Order No. 1541 (November 16, 2012), at 72.

<sup>1</sup> United States Postal Service Notice of Market-Dominant Price Adjustment, May 10, 2013 (Notice).

<sup>2</sup> Qualifying Payment Methods are limited to ePostage, Electronic Verification System (eVS),

Kenneth E. Richardson to represent the interests of the general public in this proceeding.

### III. Ordering Paragraphs

*It is ordered:*

1. The Commission establishes Docket No. R2013-7 to consider the price adjustment to insurance identified in the Postal Service's May 10, 2013 Notice.

2. Comments by interested persons on the planned price adjustments are due no later than May 30, 2013.

3. Pursuant to 39 U.S.C. 505, the Commission appoints Kenneth E. Richardson to represent the interests of the general public in this proceeding.

4. The Commission directs the Secretary of the Commission to arrange for publication of this notice in the **Federal Register**.

By the Commission.

**Shoshana M. Grove,**  
*Secretary.*

## RAILROAD RETIREMENT BOARD

### Computer Matching and Privacy Protection Act of 1988; Report of Matching Program: RRB and State Medicare Agencies (Renewal)

**AGENCY:** U.S. Railroad Retirement Board (RRB).

**ACTION:** Notice of a renewal of an existing computer matching program due to expire on May 24, 2013.

**SUMMARY:** As required by the *Privacy Act of 1974*, as amended, the RRB is issuing a public notice in the **Federal Register** of its intent to renew an ongoing computer matching program. In this match, we provide certain Medicare and benefit rate information to state agencies allowing them to review and if necessary, adjust amounts of benefits in their public assistance programs as well as to coordinate Medicare/Medicaid payments for public assistance recipients.

The purpose of this notice is to advise individuals receiving benefits under the Railroad Retirement Act that the RRB plans to share this computer matching data with state agencies.

**DATES:** Submit comments on or before July 1, 2013, at which time matching activities may continue.

**ADDRESSES:** Address any comments concerning this notice to Ms. Martha P. Rico, Secretary to the Board, Railroad Retirement Board, 844 North Rush Street, Chicago, Illinois 60611-2092.

**FOR FURTHER INFORMATION CONTACT:** Mr. Timothy S. Grant, Chief Privacy Officer, Railroad Retirement Board, 844 North Rush Street, Chicago, Illinois 60611-2092.

#### SUPPLEMENTARY INFORMATION:

##### A. General

The *Privacy Act of 1974* (5 U.S.C. 552a), as amended, regulates Federal agencies when they conduct computer matching activities in a system of records with other Federal, State, or local government records. It requires Federal agencies involved in computer matching programs to:

(1) Negotiate written agreements with the other agency or agencies participating in the matching programs;

(2) Obtain approval of the matching agreement by the Data Integrity Boards of the participating Federal agencies;

(3) Publish notice of the computer matching program in the **Federal Register**;

(4) Furnish reports about matching programs to Congress and Office of Management and Budget;

(5) Notify beneficiaries and applicants that their records are subject to matching; and

(6) Verify match findings before reducing, suspending, terminating, or denying a person's benefits or payments.

##### B. RRB Computer Matches Subject to the Privacy Act

We have taken action to ensure that our computer matching programs comply with the requirements of the *Privacy Act of 1974*, as amended.

##### C. Notice of Computer Matching Program: RRB with State Medicare Agencies (Renewal):

*Name of Participating Agencies:* The Railroad Retirement Board and state public aid/public assistance agencies.

*Purpose of the Match:* The match has several purposes allowing state agencies to:

(1) Accurately identify qualified Railroad Retirement Beneficiaries;

(2) Make necessary adjustments required under state law in public aid payments due to cost of living or other adjustments in RRB annuities;

(3) Coordinate benefits of dually eligible Medicare and Medicaid beneficiaries; and

(4) To identify individuals who are eligible for Part B Medicare and not enrolled in order to enroll such individuals in the State Buy-In program.

*Authority for Conducting the Match:* 20 CFR 200.5(j)(1), 20 CFR 200.8(g)(10), 42 CFR 435.940 through 435.965.

*Categories of Records and Individuals Covered:* All beneficiaries under the Railroad Retirement Act who have been identified by a state as a recipient of public aid will have information about their RRB benefits and Medicare enrollment furnished to the requesting state agency. This information is covered as a routine disclosure under the Privacy Act system of records RRB-20, *Health Insurance and Supplementary Medical Insurance Enrollment and Premium Payment System (MEDICARE)*, or RRB-21, *Railroad Unemployment and Sickness Insurance Benefit System*, which were published in the **Federal Register** on July 26, 2010 (75 FR 43710). You can also find all RRB Privacy Act Systems of Records notices on our public Web site at: ([http://www.rrb.gov/bis/privacy\\_act/SORNList.asp](http://www.rrb.gov/bis/privacy_act/SORNList.asp)).

*Inclusive Dates of the Matching Program:* Agreements with the individual states will run for a maximum length of 18 months with a provision for an automatic, one-time 12 month renewal, for a maximum length of 30 months. In order to qualify for the renewal, both parties must certify to the RRB Data Integrity Board, three months prior to the expiration of the agreement that:

(1) The program will continue to be conducted without change, and

(2) Each party certifies to the board in writing that the program has been conducted in compliance with the agreement.

The number of matches conducted with each state during the period of the match will vary from state to state, but typically are 2 to 4 matches per calendar year.

*Procedure:* The state agency will provide the RRB with a file of records. The data elements in the records will consist of beneficiary identifying information such as: name, Social Security Number (SSN), date of birth, and RRB Claim Number, if known. The RRB will then conduct a computer match on the state provided identifying information.

If the matching operation reveals that an individual who received benefits under the Railroad Retirement Act also received benefits from the state for any days in the period, the RRB will notify the state agency and provide benefit payment and Medicare Entitlement data for those matched individuals. The state agency will then make adjustments, as necessary by law or regulation for those matched records.

*Other information:* The notice we are giving here is in addition to any individual notice. We will furnish a copy of this notice to both Houses of

Congress and the Office of Management and Budget.

Dated: May 14, 2013.

By Authority of the Board.

**Martha P. Rico,**

*Secretary to the Board.*

BILLING CODE 7905-01-P

## SECURITIES AND EXCHANGE COMMISSION

[Investment Company Act Release No. 30519; 812-13884]

### ALPS ETF Trust, *et al.*; Notice of Application

May 14, 2013.

**AGENCY:** Securities and Exchange Commission (“Commission”).

**ACTION:** Notice of an application for an order under section 6(c) of the Investment Company Act of 1940 (“Act”) for an exemption from sections 2(a)(32), 5(a)(1), 22(d) and 22(e) of the Act and rule 22c-1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and (a)(2) of the Act, and under section 12(d)(1)(f) of the Act for an exemption from sections 12(d)(1)(A) and (B) of the Act.

**APPLICANTS:** ALPS ETF Trust (“Trust”), ALPS Advisors, Inc. (“Adviser”), and ALPS Distributors, Inc. (the “Distributor”).

**SUMMARY:** *Summary of Application:*

Applicants request an order that permits: (a) actively-managed series of certain open-end management investment companies to issue shares (“Shares”) redeemable in large aggregations only (“Creation Units”); (b) secondary market transactions in Shares to occur at negotiated market prices; (c) certain series to pay redemption proceeds, under certain circumstances, more than seven days from the tender of Shares for redemption; (d) certain affiliated persons of the series to deposit securities into, and receive securities from, the series in connection with the purchase and redemption of Creation Units; and (e) certain registered management investment companies and unit investment trusts outside of the same group of investment companies as the series to acquire Shares.

**DATES:** *Filing Dates:* The application was filed on March 30, 2011, and amended on June 14, 2012, October 26, 2012, and March 18, 2013.

**HEARING OR NOTIFICATION OF HEARING:** An order granting the requested relief will be issued unless the Commission orders

a hearing. Interested persons may request a hearing by writing to the Commission’s Secretary and serving applicants with a copy of the request, personally or by mail. Hearing requests should be received by the Commission by 5:30 p.m. on June 10, 2013, and should be accompanied by proof of service on applicants, in the form of an affidavit or, for lawyers, a certificate of service. Hearing requests should state the nature of the writer’s interest, the reason for the request, and the issues contested. Persons who wish to be notified of a hearing may request notification by writing to the Commission’s Secretary.

**ADDRESSES:** Elizabeth M. Murphy, Secretary, U.S. Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090. Applicants, 1290 Broadway, Suite 1100, Denver, CO 80203.

**FOR FURTHER INFORMATION CONTACT:** Christine Y. Greenlees, Senior Counsel, at (202) 551-6879 or David P. Bartels, Branch Chief, at (202) 551-6821 (Division of Investment Management, Office of Investment Company Regulation).

**SUPPLEMENTARY INFORMATION:** The following is a summary of the application. The complete application may be obtained via the Commission’s Web site by searching for the file number, or for an applicant using the Company name box, at <http://www.sec.gov/search/search.htm> or by calling (202) 551-8090.

#### Applicants’ Representations

1. The Trust is registered as an open-end management investment company under the Act and is a statutory trust organized under the laws of Delaware. The Trust initially will offer a newly created series (the “Initial Fund”), which applicants state will seek total return, with an emphasis on income as the source of that total return. The Initial Fund will seek to achieve its investment objective by investing in a global portfolio of fixed income securities of various maturities, ratings and currency denominations.

2. The Adviser, a Colorado corporation, is registered as an investment adviser under the Investment Advisers Act of 1940 (“Advisers Act”) and will serve as investment adviser to each of the Funds (as defined below). The Adviser may enter into sub-advisory agreements with one or more investment advisers, each of which will serve as sub-adviser to a Fund (each, a “Sub-Adviser”). Any Sub-Adviser will be registered under the Advisers Act. The Distributor, a

Colorado corporation, is a registered broker-dealer (“Broker”) under the Securities Exchange Act of 1934 (“Exchange Act”) and will act as the distributor and principal underwriter of the Funds (as defined below).

3. Applicants request that the order apply to the Initial Fund as well as to future series of the Trust and any future open-end management investment companies or series thereof that would operate as actively-managed exchange-traded funds (“Future Funds”). Any Future Fund will (a) be advised by the Adviser or an entity controlling, controlled by, or under common control with the Adviser and (b) comply with the terms and conditions of the application.<sup>1</sup> The Initial Fund and Future Funds together are the “Funds.”<sup>2</sup> Each Fund will operate as an actively managed exchange-traded fund (“ETF”).

4. Applicants state that the Funds may invest in equity securities (“Equity Funds”) and/or fixed income securities (“Fixed Income Funds”) traded in the U.S. or non-U.S. markets or a combination of equity and fixed income securities. Funds that invest in foreign equity and/or fixed income securities are “Foreign Funds.” Foreign Funds may also include Funds that invest in a combination of foreign and domestic equity and/or fixed income securities. The Equity Funds and Fixed Income Funds that invest in domestic equity and/or fixed income securities together are “Domestic Funds.” Applicants state that the Funds may also invest in a broad variety of other instruments<sup>3</sup> and that a Foreign Fund may invest a significant portion of its assets in depositary receipts representing foreign securities in which they seek to invest (“Depositary Receipts”).<sup>4</sup> Applicants

<sup>1</sup> All entities that currently intend to rely on the order are named as applicants. Any other entity that relies on the order in the future will comply with the terms and conditions of the application.

<sup>2</sup> Applicants further request that the order apply to any future distributor of the Funds, which would be a registered broker-dealer under the Exchange Act and would comply with the terms and conditions of the Application (“Future Distributor”). Applicants state that a Future Distributor of any Fund may be an affiliated person of the Adviser and/or Sub-Advisers.

<sup>3</sup> If a Fund invests in derivatives, then (a) the board of trustees (“Board”) of the Fund will periodically review and approve the Fund’s use of derivatives and how the Adviser assesses and manages risk with respect to the Fund’s use of derivatives and (b) the Fund’s disclosure of its use of derivatives in its offering documents and periodic reports will be consistent with relevant Commission and staff guidance.

<sup>4</sup> Depositary Receipts are typically issued by a financial institution, a “depository”, and evidence ownership in a security or pool of securities that have been deposited with the depository. A Fund

further state that, in order to implement each Fund's investment strategy, the Adviser and/or Sub-Advisers of a Fund may review and change the securities, other assets and other positions held by the Fund ("Portfolio Instruments") daily.

5. With respect to Section 12(d)(1), Applicants are requesting relief ("Fund of Funds Relief") to permit management investment companies and unit investment trusts ("UITs") registered under the Act that are not part of the same "group of investment companies," within the meaning of Section 12(d)(1)(G)(ii) of the Act, as the Funds (such registered management investment companies are referred to as "Investing Management Companies," such UITs are referred to as "Investing Trusts," and Investing Management Companies and Investing Trusts are collectively referred to as "Funds of Funds"), to acquire Shares beyond the limitations in Section 12(d)(1)(A) and to permit the Funds, and any principal underwriter for the Funds, and any Broker, to sell Shares beyond the limitations in Section 12(d)(1)(B) to Funds of Funds. Applicants request that any exemption under Section 12(d)(1)(J) from Sections 12(d)(1)(A) and (B) apply to: (1) Each Fund that is currently or subsequently part of the same "group of investment companies" as the Initial Fund within the meaning of Section 12(d)(1)(G)(ii) of the Act, as well as any principal underwriter for the Funds and any Brokers selling Shares of a Fund to Funds of Funds; and (2) each Fund of Funds that enters into a participation agreement ("FOF Participation Agreement") with a Fund. "Funds of Funds" do not include the Funds. Each Investing Management Company's investment adviser within the meaning of Section 2(a)(20)(A) of the Act is the "Fund of Funds Adviser." Similarly, each Investing Trust's sponsor is the "Sponsor." Applicants represent that each Fund of Funds Adviser will be registered as an investment adviser under the Advisers Act and that no Fund of Funds Adviser or Sponsor will control, be controlled by, or be under common control with the Adviser.<sup>5</sup>

6. Each Fund will issue, on a continuous offering basis, its Shares in one or more groups of a fixed number

will not invest in any Depositary Receipts that the Adviser or Sub-Adviser deems to be illiquid or for which pricing information is not readily available. No affiliated persons of applicants, any Future Fund or any Sub-Adviser will serve as the depositary bank for any Depositary Receipts held by a Fund.

<sup>5</sup> A Fund of Funds may rely on the order only to invest in Funds and not in any other registered investment company.

of Shares (e.g., at least 25,000 Shares). Applicants believe that a conventional trading range will be between \$20-\$100 per Share. All orders to purchase Creation Units must be placed with the Distributor by or through a party that has entered into a participant agreement with the Distributor and the transfer agent of the Fund ("Authorized Participant") with respect to the creation and redemption of Creation Units. An Authorized Participant is either: (a) A Broker or other participant in the Continuous Net Settlement System of the National Securities Clearing Corporation ("NSCC"), a clearing agency registered with the Commission or (b) a participant in the DTC (such participant, "DTC Participant").

7. In order to keep costs low and permit each Fund to be as fully invested as possible, Shares will be purchased and redeemed in Creation Units and generally on an in-kind basis. Except where the purchase or redemption will include cash under the limited circumstances specified below, purchasers will be required to purchase Creation Units by making an in-kind deposit of specified instruments ("Deposit Instruments"), and shareholders redeeming their Shares will receive an in-kind transfer of specified instruments ("Redemption Instruments").<sup>6</sup> On any given Business Day<sup>7</sup> the names and quantities of the instruments that constitute the Deposit Instruments and the names and quantities of the instruments that constitute the Redemption Instruments will be identical, and these instruments may be referred to, in the case of either a purchase or redemption, as the "Creation Basket." In addition, the Creation Basket will correspond pro rata to the positions in a Fund's portfolio (including cash positions),<sup>8</sup> except: (a) In the case of bonds, for minor differences when it is impossible to break up bonds beyond certain minimum sizes needed for transfer and settlement; (b) for minor differences

<sup>6</sup> The Funds must comply with the federal securities laws in accepting Deposit Instruments and satisfying redemptions with Redemption Instruments, including that the Deposit Instruments and Redemption Instruments are sold in transactions that would be exempt from registration under the Securities Act. In accepting Deposit Instruments and satisfying redemptions with Redemption Instruments that are restricted securities eligible for resale pursuant to Rule 144A under the Securities Act, the Funds will comply with the conditions of Rule 144A.

<sup>7</sup> Each Fund will sell and redeem Creation Units on any day the Trust is open, including as required by section 22(e) of the Act (each, a "Business Day").

<sup>8</sup> The portfolio used for this purpose will be the same portfolio used to calculate the Fund's net asset value ("NAV") for that Business Day.

when rounding is necessary to eliminate fractional shares or lots that are not tradeable round lots;<sup>9</sup> or (c) TBA Transactions,<sup>10</sup> short positions and other positions that cannot be transferred in kind<sup>11</sup> will be excluded from the Creation Basket.<sup>12</sup> If there is a difference between NAV attributable to a Creation Unit and the aggregate market value of the Creation Basket exchanged for the Creation Unit, the party conveying instruments with the lower value will also pay to the other an amount in cash equal to that difference (the "Balancing Amount").

8. Purchases and redemptions of Creation Units may be made in whole or in part on a cash basis, rather than in kind, solely under the following circumstances: (a) To the extent there is a Balancing Amount, as described above; (b) if, on a given Business Day, a Fund announces before the open of trading that all purchases, all redemptions or all purchases and redemptions on that day will be made entirely in cash; (c) if, upon receiving a purchase or redemption order from an Authorized Participant, a Fund determines to require the purchase or redemption, as applicable, to be made entirely in cash; (d) if, on a given Business Day, a Fund requires all Authorized Participants purchasing or redeeming Shares on that day to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments or Redemption Instruments, respectively, solely because: (i) Such instruments are not eligible for transfer through either the NSCC or DTC; or (ii) in the case of Funds holding non-U.S. investment ("Global Funds"), such instruments are not eligible for trading due to local trading restrictions, local restrictions on securities transfers or other similar circumstances; or (e) if a Fund permits an Authorized Participant to deposit or receive (as applicable) cash in lieu of some or all of the Deposit Instruments or Redemption Instruments, respectively, solely because: (i) Such instruments are, in the case of the purchase of a Creation Unit, not

<sup>9</sup> A tradeable round lot for a security will be the standard unit of trading in that particular type of security in its primary market.

<sup>10</sup> A TBA Transaction is a method of trading mortgage-backed securities. In a TBA Transaction, the buyer and seller agree on general trade parameters such as agency, settlement date, par amount and price.

<sup>11</sup> This includes instruments that can be transferred in kind only with the consent of the original counterparty to the extent the Fund does not intend to seek such consents.

<sup>12</sup> Because these instruments will be excluded from the Creation Basket, their value will be reflected in the determination of the Balancing Amount (defined below).

available in sufficient quantity; (ii) such instruments are not eligible for trading by an Authorized Participant or the investor on whose behalf the Authorized Participant is acting; or (iii) a holder of Shares of a Global Fund would be subject to unfavorable income tax treatment if the holder receives redemption proceeds in kind.<sup>13</sup>

9. Each Business Day, before the open of trading on a national securities exchange, as defined in section 2(a)(26) of the Act (“Exchange”), on which Shares are listed, each Fund will cause to be published through the NSCC the names and quantities of the instruments comprising the Creation Basket, as well as the estimated Balancing Amount (if any), for that day. The published Creation Basket will apply until a new Creation Basket is announced on the following Business Day, and there will be no intra-day changes to the Creation Basket except to correct errors in the published Creation Basket. The Exchange will disseminate every 15 seconds throughout the trading day an amount representing, on a per Share basis, the sum of the current value of the Portfolio Instruments that were publicly disclosed prior to the commencement of trading in Shares on the Exchange.

10. Transaction expenses, including operational processing and brokerage costs, may be incurred by a Fund when investors purchase or redeem Creation Units “in-kind” and such costs have the potential to dilute the interests of the Fund’s existing Beneficial Owners. Accordingly, applicants state that each Fund may impose purchase or redemption transaction fees (“Transaction Fees”) in connection with effecting such purchases or redemptions. Applicants further state that, because the Transaction Fees are intended to defray the transaction expenses, as well as to prevent possible shareholder dilution resulting from the purchase or redemption of Creation Units, the Transaction Fees will be borne only by purchasers or redeemers of Creation Units and will be limited to amounts that have been determined appropriate by the Fund.<sup>14</sup> The

<sup>13</sup> A “custom order” is any purchase or redemption of Shares made in whole or in part on a cash basis in reliance on clause (e)(i) or (e)(ii).

<sup>14</sup> In those instances in which a Fund permits an “in-kind” purchaser to substitute cash in lieu of depositing one or more of the requisite Deposit Instruments or Redemption Securities, as set forth under Section III.D.2, above, the purchaser or seller may be assessed a higher Transaction Fee on the “cash in lieu” portion of its investment to cover the cost of purchasing the necessary securities, including operational processing and brokerage costs, and part or all of the spread between the expected bid and offer side of the market relating to such Deposit Instruments or Redemption

Distributor will be responsible for delivering a Fund’s current prospectus (“Prospectus”) or Summary Prospectus, if applicable, to purchasers of Shares in Creation Units and for maintaining records of both the orders placed with it and the confirmations of acceptance furnished by it.

11. Shares will be listed and traded at negotiated prices on an Exchange and traded in the secondary market. When NYSE Arca, Inc. is the principal secondary market on which the Shares are listed and traded (the “Primary Listing Exchange”), it is expected that one or more Exchange member firms will be designated by the Exchange to act as a market maker (a “Market Maker”).<sup>15</sup> The price of Shares trading on the Exchange will be based on a current bid/offer in the secondary market. Transactions involving the purchases and sales of Shares on the Exchange will be subject to customary brokerage commissions and charges.

12. Applicants expect that purchasers of Creation Units will include institutional investors and arbitrageurs. Market Makers, acting in their role to provide a fair and orderly secondary market for Shares, also may purchase Creation Units for use in their own market making activities. Applicants expect that secondary market purchasers of Shares will include both institutional and retail investors.<sup>16</sup> Applicants expect that arbitrage opportunities created by the ability to continually purchase or redeem Creation Units should ensure that the Shares will not trade at a material discount or premium in relation to their NAV.

13. Shares will not be individually redeemable, and only Shares combined into Creation Units of a specified size

Instruments. In all cases, such Transaction Fees will be limited in accordance with requirements of the Commission applicable to management investment companies offering redeemable securities.

<sup>15</sup> If Shares are listed on The NASDAQ Stock Market LLC (“Nasdaq”) or a similar electronic Exchange (including NYSE Arca), one or more member firms of that Exchange will act as Market Maker and maintain a market for Shares trading on that Exchange. On Nasdaq, no particular Market Maker would be contractually obligated to make a market in Shares. However, the listing requirements on Nasdaq, for example, stipulate that at least two Market Makers must be registered in Shares to maintain a listing. In addition, on Nasdaq and NYSE Arca, registered Market Makers are required to make a continuous two-sided market or subject themselves to regulatory sanctions. No Market Maker will be an affiliated person, or a second-tier affiliate, of the Funds, except within Section 2(a)(3)(A) or (C) of the Act due solely to ownership of Shares as discussed below.

<sup>16</sup> Shares will be registered in book-entry form only. DTC or its nominee will be the record or registered owner of all outstanding Shares. Beneficial ownership of Shares will be shown on the records of DTC or DTC Participants.

will be redeemable. Redemption requests must be placed by or through an Authorized Participant.

14. Neither the Trust nor any Fund will be marketed or otherwise held out as a “mutual fund.” Instead, each Fund will be marketed as an “actively-managed exchange-traded fund.” In any advertising material where features of obtaining, buying or selling Shares traded on the Exchange are described there will be an appropriate statement to the effect that Shares are not individually redeemable.

15. On each Business Day, before the commencement of trading in Shares on the Fund’s Primary Listing Exchange, the Fund will disclose on the Trust’s Web site (“Web site”) the identities and quantities of the Portfolio Instruments that will form the basis of the Fund’s calculation of NAV at the end of the Business Day, the Fund’s per Share NAV and the market closing price or the midpoint of the bid/ask spread at the time of the calculation of such NAV (“Bid/Ask Price”), and a calculation of the premium or discount of the market closing price or Bid/Ask Price against such NAV, all as of the prior Business Day.<sup>17</sup>

#### Applicants’ Legal Analysis

1. Applicants request an order under section 6(c) of the Act for an exemption from sections 2(a)(32), 5(a)(1), 22(d) and 22(e) of the Act and rule 22c-1 under the Act, under sections 6(c) and 17(b) of the Act for an exemption from sections 17(a)(1) and 17(a)(2) of the Act, and under section 12(d)(1)(f) of the Act for an exemption from sections 12(d)(1)(A) and (B) of the Act.

2. Section 6(c) of the Act provides that the Commission may exempt any person, security or transaction, or any class of persons, securities or transactions, from any provisions of the Act, if and to the extent that such exemption is necessary or appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act. Section 17(b) of the Act authorizes the Commission to exempt a proposed transaction from section 17(a) of the Act if evidence establishes that the terms of the transaction, including the consideration to be paid or received, are reasonable and fair and do not involve overreaching on the part of any person

<sup>17</sup> Under accounting procedures followed by the Funds, trades made on the prior Business Day (“T”) will be booked and reflected in NAV on the current Business Day (“T+1”). Accordingly, the Funds will be able to disclose at the beginning of the Business Day the portfolio that will form the basis for the NAV calculation at the end of the Business Day.

concerned, and the proposed transaction is consistent with the policies of the registered investment company and the general provisions of the Act. Section 12(d)(1)(J) of the Act provides that the Commission may exempt any person, security, or transaction, or any class or classes of persons, securities or transactions, from any provision of section 12(d)(1) if the exemption is consistent with the public interest and the protection of investors.

*Sections 5(a)(1) and 2(a)(32) of the Act*

3. Section 5(a)(1) of the Act defines an "open-end company" as a management investment company that is offering for sale or has outstanding any redeemable security of which it is the issuer. Section 2(a)(32) of the Act defines a redeemable security as any security, other than short-term paper, under the terms of which the holder, upon its presentation to the issuer, is entitled to receive approximately a proportionate share of the issuer's current net assets, or the cash equivalent. Because Shares will not be individually redeemable, applicants request an order that would permit the Trust to register as an open-end management investment company and issue Shares that are redeemable in Creation Units only. Applicants state that investors may purchase Shares in Creation Units from each Fund and redeem Creation Units from each Fund. Applicants further state that, because of the arbitrage possibilities created by the redeemability of Creation Units, they expect that the market price of individual Shares will not deviate materially from NAV.

*Section 22(d) of the Act and Rule 22c-1 Under the Act*

4. Section 22(d) of the Act, among other things, prohibits a dealer from selling a redeemable security that is currently being offered to the public by or through a principal underwriter, except at a current public offering price described in the prospectus. Rule 22c-1 under the Act generally requires that a dealer selling, redeeming, or repurchasing a redeemable security do so only at a price based on its NAV. Applicants state that secondary market trading in Shares will take place at negotiated prices, not at a current offering price described in the Prospectus, and not at a price based on NAV. Thus, purchases and sales of Shares in the secondary market will not comply with section 22(d) of the Act and rule 22c-1 under the Act. Applicants request an exemption under section 6(c) from these provisions.

5. Applicants state that, while there is little legislative history regarding section 22(d), its provisions, as well as those of rule 22c-1, appear to have been designed to (a) to prevent dilution caused by certain riskless-trading schemes by principal underwriters and contract dealers, (b) to prevent unjust discrimination or preferential treatment among buyers and (c) to ensure an orderly distribution system of shares by contract dealers by eliminating price competition from non-contract dealers who could offer investors shares at less than the published sales price and who could pay investors a little more than the published redemption price.

6. Applicants assert that the protections intended to be afforded by Section 22(d) and rule 22c-1 are adequately addressed by the proposed methods for creating, redeeming and pricing Creation Units and pricing and trading Shares. Applicants state that (a) secondary market trading in Shares does not involve the Funds as parties and cannot result in dilution of an investment in Shares and (b) to the extent different prices exist during a given trading day, or from day to day, such variances occur as a result of third-party market forces but do not occur as a result of unjust or discriminatory manipulation. Finally, applicants assert that competitive forces in the marketplace should ensure that the margin between NAV and the price for the Shares in the secondary market remains narrow.

*Section 22(e) of the Act*

7. Section 22(e) of the Act generally prohibits a registered investment company from suspending the right of redemption or postponing the date of payment of redemption proceeds for more than seven days after the tender of a security for redemption. Applicants observe that settlement of redemptions for Foreign Funds is contingent not only on the settlement cycle of the U.S. securities markets but also on the delivery cycles present in foreign markets in which those Funds invest. Applicants have been advised that the delivery cycles for transferring Redemption Instruments to redeeming investors, coupled with local market holiday schedules, will require a delivery process longer than seven calendar days. Applicants therefore request relief from the requirement imposed by Section 22(e) to provide payment or satisfaction of redemptions within seven (7) calendar days

following the tender of a Creation Unit of such Funds.<sup>18</sup>

8. Applicants state that section 22(e) was designed to prevent unreasonable, undisclosed and unforeseen delays in the actual payment of redemption proceeds. Applicants assert that the protections intended to be afforded by Section 22(e) are adequately addressed by the proposed method and securities delivery cycles for redeeming Creation Units. Applicants state that allowing redemption payments for Creation Units of a Fund to be made within a maximum of 14 calendar days would not be inconsistent with the spirit and intent of section 22(e). Applicants represent that each Fund's prospectus and/or statement of additional information will identify those instances in a given year where, due to local holidays, more than seven calendar days, up to a maximum of fourteen (14) calendar days, will be needed to deliver redemption proceeds and will list such holidays Applicants are not seeking relief from section 22(e) with respect to Foreign Funds that do not effect redemptions in-kind.

*Section 12(d)(1) of the Act*

9. Section 12(d)(1)(A) of the Act prohibits a registered investment company from acquiring shares of an investment company if the securities represent more than 3% of the total outstanding voting stock of the acquired company, more than 5% of the total assets of the acquiring company, or, together with the securities of any other investment companies, more than 10% of the total assets of the acquiring company. Section 12(d)(1)(B) of the Act prohibits a registered open-end investment company, its principal underwriter, or any other broker or dealer from selling its shares to another investment company if the sale will cause the acquiring company to own more than 3% of the acquired company's voting stock, or if the sale will cause more than 10% of the acquired company's voting stock to be owned by investment companies generally.

10. Applicants request relief to permit Funds of Funds to acquire Shares in excess of the limits in section 12(d)(1)(A) of the Act and to permit the Funds, their principal underwriters and any Broker to sell Shares to Funds of Funds in excess of the limits in section 12(d)(1)(B) of the Act. Applicants submit

<sup>18</sup> Applicants acknowledge that no relief obtained from the requirements of section 22(e) will affect any obligations that it may otherwise have under rule 15c6-1 under the Exchange Act. Rule 15c6-1 requires that most securities transactions be settled within three business days of the trade date.

that the proposed conditions to the requested relief address the concerns underlying the limits in section 12(d)(1), which include concerns about undue influence, excessive layering of fees and overly complex structures.

11. Applicants submit that certain of their proposed conditions address concerns about potential for undue influence. To limit the control that a Fund of Funds may have over a Fund, applicants propose a condition prohibiting the Fund of Funds Adviser, Sponsor, any person controlling, controlled by, or under common control with the Fund of Funds Adviser or Sponsor, and any investment company or issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act that is advised or sponsored by the Fund of Funds Adviser, the Sponsor, or any person controlling, controlled by, or under common control with the Fund of Funds Adviser or Sponsor (“Fund of Funds Advisory Group”) from controlling (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of the Act. The same prohibition would apply to any sub-adviser to an Investing Management Company (“Fund of Funds Sub-Adviser”), any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser, and any investment company or issuer that would be an investment company but for sections 3(c)(1) or 3(c)(7) of the Act (or portion of such investment company or issuer) advised or sponsored by the Fund of Funds Sub-Adviser or any person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser (“Fund of Funds Sub-Advisory Group”).

12. Applicants propose a condition to ensure that no Fund of Funds or Fund of Funds Affiliate<sup>19</sup> (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund to purchase a security in an offering of securities during the existence of an underwriting or selling syndicate of which a principal underwriter is an Underwriting Affiliate (“Affiliated Underwriting”).<sup>20</sup>

<sup>19</sup> A “Fund of Funds Affiliate” is any Fund of Funds Adviser, Fund of Funds Sub-Adviser, Sponsor, promoter or principal underwriter of a Fund of Funds, and any person controlling, controlled by or under common control with any of these entities. A “Fund Affiliate” is the Adviser, Sub-Adviser, promoter, or principal underwriter of a Fund or any person controlling, controlled by or under common control with any of these entities.

<sup>20</sup> An “Underwriting Affiliate” is a principal underwriter in any underwriting or selling syndicate that is an officer, director, member of an advisory board, Fund of Funds Adviser, Fund of Funds Sub-Adviser, employee or Sponsor of the

13. Applicants propose several conditions to address the potential for layering of fees. Applicants note that the board of directors or trustees of any Investing Management Company, including a majority of the directors or trustees who are not “interested persons” within the meaning of section 2(a)(19) of the Act (“independent Board members”), will be required to find that the advisory fees charged under the contract are based on services provided that will be in addition to, rather than duplicative of, services provided under the advisory contract of any Fund in which the Investing Management Company may invest. Applicants also state that any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.<sup>21</sup>

14. In order to address concerns about complexity, Applicants propose condition B.12, which will prohibit Funds from acquiring securities of any investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the Act, except to the extent permitted by exemptive relief from the Commission permitting a Fund to purchase shares of other investment companies for short-term cash management purposes.

15. Finally, each Fund of Funds must enter into an FOF Participation Agreement with the respective Funds, which will include an acknowledgement from the Fund of Funds that it may rely on the order only to invest in a Fund and not in any other investment company.

#### *Sections 17(a)(1) and (2) of the Act*

16. Section 17(a) of the Act generally prohibits an affiliated person of a registered investment company, or an affiliated person of such a person (“second tier affiliate”), from selling any security to or purchasing any security from the company. Section 2(a)(3) of the Act defines “affiliated person” to include any person directly or indirectly owning, controlling, or holding with power to vote, 5% or more of the outstanding voting securities of the other person and any person directly or

Fund of Funds, or a person of which any such officer, director, member of an advisory board, Fund of Funds Adviser, Fund of Funds Sub-Adviser, employee or Sponsor is an affiliated person (except any person whose relationship to the Fund is covered by section 10(f) of the Act is not an Underwriting Affiliate).

<sup>21</sup> Any reference to NASD Conduct Rule 2830 includes any successor or replacement rule that may be adopted by the Financial Industry Regulatory Authority.

indirectly controlling, controlled by, or under common control with, the other person. Section 2(a)(9) of the Act defines “control” as the power to exercise a controlling influence over the management or policies of a company and provides that a control relationship will be presumed where one person owns more than 25% of another person’s voting securities. Each Fund may be deemed to be controlled by the Adviser and hence affiliated persons of each other. In addition, the Funds may be deemed to be under common control with any other registered investment company (or series thereof) advised by the Adviser (an “Affiliated Fund”).

17. Applicants request an exemption under sections 6(c) and 17(b) of the Act from sections 17(a)(1) and 17(a)(2) of the Act to permit in-kind purchases and redemptions of Creation Units by persons that are affiliated persons or second tier affiliates of the Funds solely by virtue of one or more of the following: (a) Holding 5% or more, or in excess of 25% of the outstanding Shares of one or more Funds; (b) having an affiliation with a person with an ownership interest described in (a); or (c) holding 5% or more, or more than 25% of the Shares of one or more Affiliated Funds.<sup>22</sup> Applicants also request an exemption in order to permit a Fund to sell its Shares to and redeem its Shares from, and engage in the in-kind transactions that would accompany such sales and redemptions with, certain Funds of Funds of which the Funds are affiliated persons or second-tier affiliates.<sup>23</sup>

18. Applicants assert that no useful purpose would be served by prohibiting such affiliated persons from making in-kind purchases or in-kind redemptions of Shares of a Fund in Creation Units. The deposit procedures for in-kind purchases of Creation Units and the redemption procedures for in-kind redemptions will be the same for all purchases and redemptions. Deposit Instruments and Redemption Instruments will be valued in the same manner as those Portfolio Instruments currently held by the relevant Funds,

<sup>22</sup> Applicants are not seeking relief from section 17(a) for, and the requested relief will not apply to, transactions where a Fund could be deemed an affiliated person, or an affiliated person of an affiliated person, of a Fund of Funds because the Adviser, or an entity controlling, controlled by or under common control with the Adviser is also an investment adviser to the Fund of Funds.

<sup>23</sup> To the extent that purchases and sales of Shares occur in the secondary market (and not through principal transactions directly between a Fund of Funds and a Fund), relief from section 17(a) would not be necessary. The requested relief is intended to cover, however, transactions directly between Funds and Funds of Funds.

and the valuation of the Deposit Instruments and Redemption Instruments will be made in the same manner and on the same terms for all, regardless of the identity of the purchaser or redeemer. Applicants do not believe that in-kind purchases and redemptions will result in abusive self-dealing or overreaching of the Fund.

19. Applicants also submit that the sale of Shares to and redemption of Shares from a Fund of Funds meets the standards for relief under sections 17(b) and 6(c) of the Act. Applicants note that any consideration paid for the purchase or redemption of Shares directly from a Fund will be based on the NAV of the Fund in accordance with policies and procedures set forth in the Fund's registration statement.<sup>24</sup> The FOF Participation Agreement will require any Fund of Funds that purchases Creation Units directly from a Fund to represent that the purchase of Creation Units from a Fund by a Fund of Funds will be accomplished in compliance with the investment restrictions of the Fund of Funds and will be consistent with the investment policies set forth in the Fund of Funds' registration statement. Applicants also state that the relief requested is appropriate in the public interest and consistent with the protection of investors and the purposes fairly intended by the policy and provisions of the Act.

#### Applicants' Conditions

Applicants agree that any order of the Commission granting the requested relief will be subject to the following conditions:

##### A. ETF Relief

1. The requested relief to permit ETF operations will expire on the effective date of any Commission rule under the Act that provides relief permitting the operation of actively-managed ETFs.

2. As long as a Fund operates in reliance on the requested order, the Shares of the Fund will be listed on an Exchange.

3. Neither the Trust nor any Fund will be advertised or marketed as an open-end investment company or a mutual fund. Any advertising material that describes the purchase or sale of Creation Units or refers to redeemability will prominently disclose that the

<sup>24</sup> Applicants acknowledge that the receipt of compensation by (a) an affiliated person of a Fund of Funds, or an affiliated person of such person, for the purchase by the Fund of Funds of Shares of the Fund or (b) an affiliated person of a Fund, or an affiliated person of such person, for the sale by the Fund of its Shares to a Fund of Funds, may be prohibited by section 17(e)(1) of the Act. The FOF Participation Agreement also will include this acknowledgment.

Shares are not individually redeemable and that owners of the Shares may acquire Shares from the Fund and tender Shares for redemption to the Fund in Creation Units only.

4. The Web site, which is and will be publicly accessible at no charge, will contain, on a per Share basis for the Fund, the prior Business Day's NAV and the market closing price or Bid/Ask Price, and a calculation of the premium or discount of the market closing price or Bid/Ask Price against such NAV.

5. No Adviser or Sub-Adviser, directly or indirectly, will cause any Authorized Participant (or any investor on whose behalf an Authorized Participant may transact with the Fund) to acquire any Deposit Instrument for the Fund through a transaction in which the Fund could not engage directly.

6. On each Business Day, before the commencement of trading in Shares on the Fund's Primary Listing Exchange, the Fund will disclose on the Web site the identities and quantities of the Portfolio Instruments that will form the basis of the Fund's calculation of NAV at the end of the Business Day.

##### B. Section 12(d)(1) Relief

1. The members of the Fund of Funds Advisory Group will not control (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of the Act. The members of the Fund of Funds Sub-Advisory Group will not control (individually or in the aggregate) a Fund within the meaning of section 2(a)(9) of the Act. If, as a result of a decrease in the outstanding voting securities of a Fund, the Fund of Funds Advisory Group or the Fund of Funds Sub-Advisory Group, each in the aggregate, becomes a holder of more than 25 percent of the outstanding voting securities of a Fund, it will vote its Shares of the Fund in the same proportion as the vote of all other holders of the Fund's Shares. This condition does not apply to the Fund of Funds Sub-Advisory Group with respect to a Fund for which the Fund of Funds Sub-Adviser or a person controlling, controlled by or under common control with the Fund of Funds Sub-Adviser acts as the investment adviser within the meaning of section 2(a)(20)(A) of the Act.

2. No Fund of Funds or Fund of Funds Affiliate will cause any existing or potential investment by the Fund of Funds in a Fund to influence the terms of any services or transactions between the Fund of Funds or a Fund of Funds Affiliate and the Fund or a Fund Affiliate.

3. The board of directors or trustees of an Investing Management Company,

including a majority of the independent directors or trustees, will adopt procedures reasonably designed to ensure that the Fund of Funds Adviser and any Fund of Funds Sub-Adviser are conducting the investment program of the Investing Management Company without taking into account any consideration received by the Investing Management Company or a Fund of Funds Affiliate from a Fund or a Fund Affiliate in connection with any services or transactions.

4. Once an investment by a Fund of Funds in the Shares of a Fund exceeds the limit in section 12(d)(1)(A)(i) of the Act, the Board, including a majority of the independent Board members, will determine that any consideration paid by the Fund to the Fund of Funds or a Fund of Funds Affiliate in connection with any services or transactions: (i) Is fair and reasonable in relation to the nature and quality of the services and benefits received by the Fund; (ii) is within the range of consideration that the Fund would be required to pay to another unaffiliated entity in connection with the same services or transactions; and (iii) does not involve overreaching on the part of any person concerned. This condition does not apply with respect to any services or transactions between a Fund and its investment adviser(s), or any person controlling, controlled by or under common control with such investment adviser(s).

5. The Fund of Funds Adviser, or trustee or Sponsor of an Investing Trust, as applicable, will waive fees otherwise payable to it by the Fund of Funds in an amount at least equal to any compensation (including fees received pursuant to any plan adopted by a Fund pursuant to rule 12b-1 under the Act) received from a Fund by the Fund of Funds' Adviser, or trustee or Sponsor of the Investing Trust, or an affiliated person of the Fund of Funds' Adviser, or trustee or Sponsor of the Investing Trust, other than any advisory fees paid to the Fund of Funds' Adviser, or trustee, or Sponsor of an Investing Trust, or its affiliated person by the Fund, in connection with the investment by the Fund of Funds in the Fund. Any Fund of Funds Sub-Adviser will waive fees otherwise payable to the Fund of Funds Sub-Adviser, directly or indirectly, by the Investing Management Company in an amount at least equal to any compensation received from a Fund by the Fund of Funds Sub-Adviser, or an affiliated person of the Fund of Funds Sub-Adviser, other than any advisory fees paid to the Fund of Funds Sub-Adviser or its affiliated person by the Fund, in connection with the investment by the Investing

Management Company in the Fund made at the direction of the Fund of Funds Sub-Adviser. In the event that the Fund of Funds Sub-Adviser waives fees, the benefit of the waiver will be passed through to the Investing Management Company.

6. No Fund of Funds or Fund of Funds Affiliate (except to the extent it is acting in its capacity as an investment adviser to a Fund) will cause a Fund to purchase a security in an Affiliated Underwriting.

7. The Board, including a majority of the independent Board members, will adopt procedures reasonably designed to monitor any purchases of securities by the Fund in an Affiliated Underwriting, once an investment by a Fund of Funds in the securities of the Fund exceeds the limit of section 12(d)(1)(A)(i) of the Act, including any purchases made directly from an Underwriting Affiliate. The Board will review these purchases periodically, but no less frequently than annually, to determine whether the purchases were influenced by the investment by the Fund of Funds in the Fund. The Board will consider, among other things: (i) whether the purchases were consistent with the investment objectives and policies of the Fund; (ii) how the performance of securities purchased in an Affiliated Underwriting compares to the performance of comparable securities purchased during a comparable period of time in underwritings other than Affiliated Underwritings or to a benchmark such as a comparable market index; and (iii) whether the amount of securities purchased by the Fund in Affiliated Underwritings and the amount purchased directly from an Underwriting Affiliate have changed significantly from prior years. The Board will take any appropriate actions based on its review, including, if appropriate, the institution of procedures designed to ensure that purchases of securities in Affiliated Underwritings are in the best interest of beneficial owners of the Fund.

8. Each Fund will maintain and preserve permanently in an easily accessible place a written copy of the procedures described in the preceding condition, and any modifications to such procedures, and will maintain and preserve for a period of not less than six years from the end of the fiscal year in which any purchase in an Affiliated Underwriting occurred, the first two years in an easily accessible place, a written record of each purchase of securities in Affiliated Underwritings once an investment by a Fund of Funds in the securities of the Fund exceeds the

limit of section 12(d)(1)(A)(i) of the Act, setting forth from whom the securities were acquired, the identity of the underwriting syndicate's members, the terms of the purchase, and the information or materials upon which the Board's determinations were made.

9. Before investing in a Fund in excess of the limits in section 12(d)(1)(A), a Fund of Funds will execute a FOF Participation Agreement with the Fund stating that their respective boards of directors or trustees and their investment advisers, or trustee and Sponsor, as applicable, understand the terms and conditions of the order, and agree to fulfill their responsibilities under the order. At the time of its investment in Shares of a Fund in excess of the limit in section 12(d)(1)(A)(i), a Fund of Funds will notify the Fund of the investment. At such time, the Fund of Funds will also transmit to the Fund a list of the names of each Fund of Funds Affiliate and Underwriting Affiliate. The Fund of Funds will notify the Fund of any changes to the list as soon as reasonably practicable after a change occurs. The Fund and the Fund of Funds will maintain and preserve a copy of the order, the FOF Participation Agreement, and the list with any updated information for the duration of the investment and for a period of not less than six years thereafter, the first two years in an easily accessible place.

10. Before approving any advisory contract under section 15 of the Act, the board of directors or trustees of each Investing Management Company, including a majority of the independent directors or trustees, will find that the advisory fees charged under such contract are based on services provided that will be in addition to, rather than duplicative of, the services provided under the advisory contract(s) of any Fund in which the Investing Management Company may invest. These findings and their basis will be recorded fully in the minute books of the appropriate Investing Management Company.

11. Any sales charges and/or service fees charged with respect to shares of a Fund of Funds will not exceed the limits applicable to a fund of funds as set forth in NASD Conduct Rule 2830.

12. No Fund will acquire securities of an investment company or company relying on section 3(c)(1) or 3(c)(7) of the Act in excess of the limits contained in section 12(d)(1)(A) of the Act, except to the extent permitted by exemptive relief from the Commission permitting a Fund to purchase shares of other investment companies for short-term cash management purposes.

For the Commission, by the Division of Investment Management, under delegated authority.

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69587; File No. S7-24-89]

**Joint Industry Plan; Notice of Filing and Immediate Effectiveness of Amendment No. 29 to the Joint Self-Regulatory Organization Plan Governing the Collection, Consolidation and Dissemination of Quotation and Transaction Information for Nasdaq-Listed Securities Traded on Exchanges on an Unlisted Trading Privileges Basis Submitted by the BATS Exchange, Inc., BATS Y-Exchange, Inc., Chicago Board Options Exchange, Incorporated, Chicago Stock Exchange, Inc., EDGA Exchange, Inc., EDGX Exchange, Inc., Financial Industry Regulatory Authority, Inc., International Securities Exchange LLC, NASDAQ OMX BX, Inc., NASDAQ OMX PHLX LLC, Nasdaq Stock Market LLC, National Stock Exchange, Inc., New York Stock Exchange LLC, NYSE MKT LLC, and NYSE Arca, Inc.**

May 15, 2013.

Pursuant to Section 11A of the Securities Exchange Act of 1934 ("Act"),<sup>1</sup> and Rule 608 thereunder,<sup>2</sup> notice is hereby given that on May 10, 2013, the operating committee ("Operating Committee" or "Committee")<sup>3</sup> of the Joint Self-Regulatory Organization Plan Governing the Collection, Consolidation, and Dissemination of Quotation and Transaction Information for Nasdaq-Listed Securities Traded on Exchanges on an Unlisted Trading Privilege Basis ("Nasdaq/UTP Plan" or "Plan") filed with the Securities and Exchange Commission ("Commission") an amendment to the Plan.<sup>4</sup> This

<sup>1</sup> 15 U.S.C. 78k-1.

<sup>2</sup> 17 CFR 242.608.

<sup>3</sup> The Plan Participants (collectively, "Participants") are the: BATS Exchange, Inc.; BATS Y-Exchange, Inc.; Chicago Board Options Exchange, Incorporated; Chicago Stock Exchange, Inc.; EDGA Exchange, Inc.; EDGX Exchange, Inc.; Financial Industry Regulatory Authority, Inc.; International Securities Exchange LLC; NASDAQ OMX BX, Inc.; NASDAQ OMX PHLX LLC; Nasdaq Stock Market LLC; National Stock Exchange, Inc.; New York Stock Exchange LLC; NYSE MKT LLC; and NYSE Arca, Inc.

<sup>4</sup> The Plan governs the collection, processing, and dissemination on a consolidated basis of quotation

Continued

amendment represents Amendment No. 29 (“Amendment No. 29”) to the Plan and proposes to reverse the changes (the “Fee Changes”) that the Participants made in Amendment No. 27<sup>5</sup> to the Nasdaq/UTP Plan and Amendment No. 28<sup>6</sup> to the Nasdaq/UTP Plan (the “Fee Change Filings”). Under the Fee Change Filings, the Fee Changes became effective on April 1, 2013. Amendment No. 29 would cause the Fee Changes not to have become effective as of April 1, 2013. Pursuant to Rule 608(b)(3)(i) under the Act, the Participants designated the Amendment No. 29 as establishing or changing a fee or other charge collected on behalf of all of the Participants in connection with access to, or use of, the facilities contemplated by the Amendment. As a result, Amendment No. 29 has been put into effect upon filing with the Commission. Accordingly, the Participants would not implement the Fee Changes for the month of April 2013 or otherwise.

At any time within 60 days of the filing of Amendment No. 29, the Commission may summarily abrogate Amendment No. 29 and require that the Amendment be refiled in accordance with paragraph (a)(1) of Rule 608 and reviewed in accordance with paragraph (b)(2) of Rule 608, if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or the maintenance of fair and orderly markets, to remove impediments to, and perfect the mechanisms of, a national market system or otherwise in furtherance of the purposes of the Act. The Commission is publishing this notice to solicit comments from interested persons.

#### **I. Rule 608(a)**

##### *A. Purpose of the Amendments*

On March 22, 2013, the Participants filed with the Commission Amendment No. 27. That amendment revised the metric by which the Participants calculate the annual increase in the Enterprise Maximum.

information and transaction reports in Eligible Securities for each of its Participants. This consolidated information informs investors of the current quotation and recent trade prices of Nasdaq securities. It enables investors to ascertain from one data source the current prices in all the markets trading Nasdaq securities. The Plan serves as the required transaction reporting plan for its Participants, which is a prerequisite for their trading Eligible Securities. See Securities Exchange Act Release No. 55647 (April 19, 2007), 72 FR 20891 (April 26, 2007).

<sup>5</sup> See Securities Exchange Act Release No. 69215 (March 22, 2013), 78 FR 19029 (March 28, 2013) (“Amendment No. 27”).

<sup>6</sup> See Securities Exchange Act Release No. 69361 (April 10, 2013), 78 FR 22588 (April 16, 2013) (“Amendment No. 28”).

On March 27, 2013, the Participants filed with the Commission Amendment No. 28. That amendment increased the professional subscriber device fee from \$20 to \$25, introduced a new redistribution fee and established a net reporting program.

Amendment No. 27 and Amendment No. 28 made the Fee Changes effective as of April 1, 2013.

After consultation with Commission staff,<sup>7</sup> the Participants propose to reverse all of the Fee Changes. As a result of the reversal, the Fee Changes would not be deemed to have taken effect on April 1, 2013, meaning that the Participants would not implement the Fee Changes for the month of April 2013 or otherwise. The Participants anticipate re-examining the Fee Change Filings and re-filing them at a later date.

##### *B. Governing or Constituent Documents*

Not applicable.

##### *C. Implementation of Amendment*

All of the Participants have manifested their approval of the proposed amendment by means of their execution of Amendment No. 29. Amendment No. 29 shall be effective when this Agreement has been executed on behalf of each Participant and the amendment has been filed with the Commission. Once effective, Amendment No. 29 would cause the changes set forth in the Fee Change Filings *not* to have become effective on April 1, 2013. This means that the Participants would not implement the Fee Changes for the month of April 2013 or otherwise, although the Participants may elect to re-file the Fee Changes at a later date.

##### *D. Development and Implementation Phases*

Not applicable.

##### *E. Analysis of Impact on Competition*

The proposed amendment does not impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act.

The Participants do not believe that the proposed plan amendment introduces terms that are unreasonably

Not Applicable.

### III. Solicitation of Comments

The Commission seeks general comments on Amendment No. 29. Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

#### Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number S7-24-89 on the subject line.

#### Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number S7-24-89. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all written statements with respect to the proposed Plan Amendment that are filed with the Commission, and all written communications relating to the proposed Plan Amendment between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for Web site viewing and printing at the Office of the Secretary of the Committee, currently located at the CBOE, 400 S. LaSalle Street, Chicago, IL 60605. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number S7-24-89 and should be submitted on or before June 11, 2013.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>9</sup>

Kevin M. O'Neill,

Deputy Secretary.

### SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69576; File No. SR-BX-2013-036]

#### Self-Regulatory Organizations; NASDAQ OMX BX, Inc.; Notice of Filing of Proposed Rule Change for Permanent Approval of a Pilot To Permit BX Options To Accept Inbound Options Orders From NASDAQ OMX PHLX LLC and NASDAQ Options Services LLC

May 15, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act")<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on May 7, 2013, NASDAQ OMX BX, Inc. (the "Exchange" or "BX") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I, II and III below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange has submitted a proposal for the permanent approval of the Exchange's pilot program to permit the BX Options System to accept inbound options orders routed by Nasdaq Options Services LLC ("NOS") from NASDAQ OMX PHLX LLC ("Phlx") and The NASDAQ Stock Market LLC's NASDAQ Options Market ("NOM").

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the

places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

#### A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

##### 1. Purpose

In conjunction with PHLX and NOM providing outbound routing services to all options markets using its affiliated routing broker, NOS,<sup>4</sup> BX proposed that NOS be permitted to route orders from PHLX and NOM to BX Options on a pilot basis, subject to certain limitations and conditions, as described below.<sup>5</sup> The current pilot program expires June 26, 2013.

NOS is a broker-dealer and member of NASDAQ, PHLX and BX. NOS provides all routing functions for NOM, BX Options and PHLX. BX, NASDAQ, NOM, PHLX and NOS are affiliates.<sup>6</sup> Accordingly, the affiliate relationship between BX and NOS, its member, raises the issue of an exchange's affiliation with a member of such exchange. Specifically, in connection with prior filings, the Commission has expressed concern that the affiliation of an exchange with one of its members raises the potential for unfair competitive advantage and potential conflicts of interest between an exchange's self-regulatory obligations and its commercial interests.<sup>7</sup>

Recognizing that the Commission has previously expressed concern regarding the potential for conflicts of interest in instances where a member firm is affiliated with an exchange of which it is a member, the Exchange previously proposed, and the Commission approved, limitations and conditions on

<sup>4</sup> See Securities Exchange Act Release Nos. 59995 (May 28, 2009), 74 FR 26750 (June 3, 2009) (SR-Phlx-2009-32); and 57478 (March 12, 2008), 73 FR 14521 (March 18, 2008) (order approving File Nos. SR-NASDAQ-2007-004 and SR-NASDAQ-2007-080).

<sup>5</sup> Securities Exchange Act Release No. 67256 (June 26, 2012), 77 FR 39277 (July 2, 2012) (SR-BX-2012-030).

<sup>6</sup> See Securities Exchange Act Release Nos. 58324 (August 7, 2008), 73 FR 46936 (August 12, 2008) (SR-BSE-2008-02; SR-BSE-2008-23; SR-BSE-2008-25; SR-BSECC-2008-01) (order approving NASDAQ OMX's acquisition of BX); and 58179 (July 17, 2008), 73 FR 42874 (July 23, 2008) (SR-Phlx-2008-31) (order approving NASDAQ OMX's acquisition of PHLX).

<sup>7</sup> See Securities Exchange Act Release Nos. 59153 (December 23, 2008), 73 FR 80485 (December 31, 2008) (SR-NASDAQ-2008-098); and 62736 (August 17, 2010), 75 FR 51861 (August 23, 2010) (SR-NASDAQ-2010-100). See also Securities Exchange Act Release No. 58135 (July 10, 2008), 73 FR 40898 (July 16, 2008) (SR-NASDAQ-2008-061) (Permitting NOS to be affiliated with PHLX).

<sup>9</sup> 17 CFR 200.30-3(a)(27).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

NOS's affiliation with the Exchange.<sup>8</sup> Also recognizing that the Commission has expressed concern regarding the potential for conflicts of interest in instances where a member firm is affiliated with an exchange to which it is routing orders, the Exchange previously proposed, and the Commission approved,<sup>9</sup> NOS's affiliation with the Exchange to permit the Exchange to accept inbound orders that NOS routes in its capacity as a facility of PHLX and NOM, subject to the certain limitations and conditions. The Exchange now proposes to permit BX to accept inbound options orders that NOS routes in its capacity as a facility of PHLX and NOM on a permanent basis, subject to the limitations and conditions of this pilot:

- First, the Exchange and FINRA maintain a Regulatory Contract, as well as an agreement pursuant to Rule 17d-2 under the Act ("17d-2 Agreement").<sup>10</sup> Pursuant to the Regulatory Contract and the 17d-2 Agreement, FINRA is allocated regulatory responsibilities to review NOS's compliance with certain Exchange rules.<sup>11</sup> Pursuant to the Regulatory Contract, however, BX retains ultimate responsibility for enforcing its rules with respect to NOS.

- Second, FINRA monitors NOS for compliance with the Exchange's trading rules, and collects and maintains certain related information.<sup>12</sup>

- Third, FINRA provides a report to the Exchange's chief regulatory officer ("CRO"), on a quarterly basis, that: (i) Quantifies all alerts (of which FINRA is aware) that identify NOS as a participant that has potentially violated Commission or Exchange rules, and (ii) lists all investigations that identify NOS as a participant that has potentially violated Commission or Exchange rules.

- Fourth, the Exchange has in place BX Rule 2140(c), which requires The NASDAQ OMX Group, Inc., as the holding company owning both the

Exchange and NOS, to establish and maintain procedures and internal controls reasonably designed to ensure that NOS does not develop or implement changes to its system, based on non-public information obtained regarding planned changes to the Exchange's systems as a result of its affiliation with the Exchange, until such information is available generally to similarly situated Exchange members, in connection with the provision of inbound order routing to the Exchange.<sup>13</sup>

The Exchange has met all the above-listed conditions. By meeting the above conditions, the Exchange has set up mechanisms that protect the independence of the Exchange's regulatory responsibility with respect to NOS, as well as demonstrate that NOS cannot use any information advantage it may have because of its affiliation with the Exchange. Because the Exchange has met all the above-listed conditions, it now seeks permanent approval of this inbound routing relationship. The Exchange will continue to comply with the conditions 1-4 stated above.

## 2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,<sup>14</sup> in general, and with Sections 6(b)(5) of the Act,<sup>15</sup> in particular, in that the proposal is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest, because the proposed rule change will allow the Exchange to continue to receive inbound orders from NOS, acting in its capacity as a facility of PHLX and NOM, in a manner consistent with prior approvals and established protections. The Exchange believes that these conditions establish mechanisms that protect the independence of the Exchange's regulatory responsibility with respect to NOS, as well as ensure that NOS cannot use any information it may have because of its affiliation with the Exchange to its advantage.

## B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended. Permanent approval of the current pilot program does not raise any issues of intra-market competition because it involves inbound routing from an affiliated exchange. Nor does it result in a burden on competition among exchanges, because there are many competing options exchanges that provide routing services, including through an affiliate.

## C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

## III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Within 45 days of the date of publication of this notice in the **Federal Register** or within such longer period (i) as the Commission may designate up to 90 days of such date if it finds such longer period to be appropriate and publishes its reasons for so finding or (ii) as to which the Exchange consents, the Commission shall: (a) By order approve or disapprove such proposed rule change, or (b) institute proceedings to determine whether the proposed rule change should be disapproved.

## IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

### Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-BX-2013-036 on the subject line.

### Paper Comments

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-BX-2013-036. This file number should be included on the

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69586; File No. SR-Phlx-2013-50]

### Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Relating to FLEX Options

May 15, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act"),<sup>1</sup> and Rule 19b-4<sup>2</sup> thereunder, notice is hereby given that on May 2, 2013, NASDAQ OMX PHLX LLC ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed

rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend Exchange Rule 1079 entitled "FLEX, Index, Equity and Currency Options" and Option Floor Procedure Advice ("OFPA") F-28 entitled "Trading FLEX Index, Equity and Currency Options."

The text of the proposed rule change is available on the Exchange's Web site at <http://www.nasdaqtrader.com/micro.aspx?id=PHLXRulefilings>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

##### A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

###### 1. Purpose

The purpose of the proposed rule change is to amend Exchange Rule 1079(a) which concerns the characteristics applicable to FLEX options and 1079(b) and eliminate OFPA F-28 which concerns the procedures for quoting and trading FLEX options.<sup>3</sup> The Exchange is proposing to amend its FLEX rules in Rule 1079 to establish the same procedures for quoting and trading FLEX options as exist today on NYSE MKT LLC ("Amex").<sup>4</sup>

<sup>3</sup> The term "FLEX option" means a FLEX option contract that is traded subject to this Rule. Although FLEX options are generally subject to the rules in this section, to the extent that the provisions of this Rule are inconsistent with other applicable Exchange rules, this Rule takes precedence with respect to FLEX options.

<sup>4</sup> See Amex Rule 904G (FLEX Trading Procedures and Principles).

Today, a Requesting Member shall obtain quotes and execute trades in certain non-listed FLEX options at the specialist post of the non-FLEX option on the Exchange. The Requesting Member is a Phlx member qualified to trade FLEX options pursuant to paragraph (c) of Rule 1079 who initiates a FLEX Request For Quotes ("RFQ") pursuant to paragraph (b) of Rule 1079. FLEX options are not continuously quoted and series are not pre-established.<sup>5</sup> Today a Requesting Member may initiate an RFQ by first announcing all of the following contract terms to the trading crowd of the non-FLEX option and then submitting an RFQ ticket to that specialist post: (1) Underlying index, security or foreign currency, (2) type, size and crossing intention (3) in the case of FLEX index options and FLEX equity options, exercise style, (4) expiration date, (5) exercise price, and, (6) respecting index options, the settlement value. Thereafter, on receipt of an RFQ in proper form, the assigned specialist or Requesting Member shall cause the terms of the RFQ to be disseminated as an administrative text message through the Options Price Reporting Authority ("OPRA").

The Exchange proposes to adopt rules, similar to Amex, which requires a Requesting Member to submit to the FLEX Specialist an RFQ utilizing for that purpose the forms, formats and procedures established by the Exchange. Thereafter, on receipt of an RFQ in proper form, the assigned FLEX Specialist shall cause the terms and specifications of the RFQ to be immediately announced at the post. Such communication shall be disseminated as an administrative text message through the Options Price Reporting Authority ("OPRA").<sup>6</sup>

Today, following the RFQ announcement, a preset response time will begin, during which members may provide responsive quotes. The response time, between two and 15 minutes, will be determined by the Exchange. During the response time, members may provide responsive quotes to the RFQ, which may be entered, modified or withdrawn during such response time. Each assigned ROT

<sup>5</sup> The Exchange's electronic quoting and trading system is not available for FLEX options. The variable terms of FLEX options shall be established through the process described in Rule 1079. All transactions must be in compliance with Section 11 of the Securities Exchange Act of 1934 and the rules promulgated thereunder, which may include yielding priority to customer orders.

<sup>6</sup> See proposed Rule 1079(b)(1).

<sup>16</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

and assigned specialist<sup>7</sup> who responds is required to respond with a market of the minimum size, but is not required to provide continuous quotes or a minimum bid-offer differential (quotation spread parameters).

The Exchange proposes to adopt rules, similar to Amex, which provide that Members may enter at the FLEX post FLEX Quotes responsive to each Request for Quotes. FLEX Quotes must be entered during the Request Response Time.<sup>8</sup> Each FLEX Quote shall refer to a reference indicator as the Exchange determines appropriate from time to time. All FLEX Quotes may be entered, modified or withdrawn at any point during the Request Response Time. At the expiration of the Request Response Time, the best bid or offer ("BBO") shall be identified in accordance with the price and time priority principles set forth by the Exchange.<sup>9</sup>

Today, with respect to the BBO, at the end of the response time, the assigned specialist, or if none, the Requesting Member shall determine the BBO, based on price, but not time or size. However, where two or more bids/offers are at parity, bids/offers submitted by an assigned specialist, assigned ROT or customer will have priority over bids/offers submitted by non-assigned ROTs and by controlled accounts as defined in Rule 1014(g)(i). The BBO shall be disseminated with reference to the corresponding RFQ. Further, if the Requesting Member rejects the BBO or the BBO is for less than the entire size requested, the BBO Improvement Interval provides a two minute time period during which the BBO may be matched or improved. An assigned ROT or assigned specialist who responded with a market during the response time may immediately join any new BBO. The new BBO shall be determined, and disseminated with reference to the corresponding RFQ.

The Exchange proposes to amend this portion of the rule to instead state,

<sup>7</sup> Pursuant to Rule 1079(c), a ROT or specialist may apply on a form prescribed by the Exchange to be assigned in FLEX options. At least two members shall be assigned to each FLEX option. Only the specialist in the non-FLEX option may be the assigned specialist in that FLEX option ("FLEX Specialist"). The provisions of Rule 1014(c) regarding market making obligations shall be applicable to assigned ROTs and assigned specialists, such that a market must be provided in any FLEX option when requested by an Options Exchange Official. The Exchange proposes to define "FLEX Specialist" within Rule 1079(c).

<sup>8</sup> The Exchange proposes to notify its members of the time period for the Request Response Time by issuing a memorandum to the Exchange members on the trading floor. The Exchange intends to provide a reasonable notice period to members if it determines to change the Request Response Time.

<sup>9</sup> See proposed Rule 1079(b)(2).

similar to Amex, that at the expiration of the Request Response Time, the BBO shall be displayed on such market data systems as are available. If the Requesting Member has not indicated an intention to cross or act as principal with respect to any part of the FLEX trade, the member shall promptly accept or reject the displayed BBO: Provided, however, that if such a Requesting Member either rejects the BBO or is given a BBO for less than the entire size requested, all FLEX participating members other than the Requesting Member will have an opportunity during the BBO Improvement Interval in which to match, or improve, (as applicable), the BBO. At the expiration of any such BBO Improvement Interval, the Requesting Member must promptly accept or reject the BBO(s). If the Requesting Member has indicated an intention to cross or act as principal with respect to any part of the FLEX trade, acceptance of the displayed BBO shall be automatically delayed until the expiration of the BBO Improvement Interval. Prior to the BBO Improvement Interval, the Requesting Member must indicate at the post the price at which the member expects to trade. In these circumstances, the Requesting Member may participate with all other FLEX-participating members in attempting to improve or match the BBO during the BBO Improvement Interval. At expiration of the BBO Improvement Interval, the Requesting Member must promptly accept or reject the BBO(s). The Requesting Member has no obligation to accept any FLEX bid or offer. Whenever, following the completion of FLEX bidding and offering responsive to a given RFQs, the Requesting Member rejects the BBO or the BBO size exceeds the FLEX transaction size indicated in the RFQs, members may accept the entire order or the unfilled balance of the BBO. The highest bid shall have priority, but where the two or more best bids are submitted at the same price, the bid(s) submitted first in time will have priority. The lowest offer shall have priority, but where the two or more best offers are submitted at the same price, the offer(s) submitted first in time will have priority. In the case of FLEX equity options only and notwithstanding Rule 1079(b)(4), whenever the Requesting Member has indicated an intention to cross or act as principal on the trade and has matched or improved the BBO during the BBO Improvement Interval, the Requesting Member will be permitted to execute the contra side of the trade that is the subject of the RFQs, to the extent of at least 40% of the trade,

provided the order is a public customer order or an order respecting the Requesting Member's firm proprietary account. Notwithstanding the foregoing, all market participants may effect crossing transactions.<sup>10</sup>

The Exchange would eliminate the provisions that today describe trading, such that a trade in FLEX options cannot be executed until the end of the response time or BBO Improvement Interval. Today, once the response time or Improvement Interval ends, the Requesting Member is given the first opportunity to trade on the market, by voicing a bid/offer in the trading crowd. The Requesting Member has no obligation to accept any bid or offer for a FLEX option. If the Requesting Member rejects the BBO or the BBO size exceeds the entire size requested, another member may promptly accept such BBO or the unfilled balance of the BBO. Once the BBO is established and no trade has occurred, the RFQ remains open during that trading day, such that a member may re-quote the market with respect to the open RFQ, as opposed to submitting an additional RFQ. An assigned ROT or assigned specialist who responded to the open RFQ during the response time or BBO Improvement Interval may immediately join the re-quoted market, thus matching for parity purposes. The original Requesting Member is not given the first opportunity to trade on the re-quoted market, nor is the re-quoting member. If a trade occurs, that RFQ is no longer open and a new RFQ is required. The specialist in the listed non-FLEX equity, index or U.S. dollar-settled foreign currency option, whether or not assigned in FLEX options, must accept FLEX orders on the FLEX book after completion of the RFQ process. Only customer day limit orders may be placed on the FLEX index, equity or U.S. dollar-settled foreign currency option book. Booked orders expire at the end of each trading day. The limit price and size must be written on the RFQ ticket and submitted for dissemination. In order to trade with the book, an executing member must quote the market and announce the trade.<sup>11</sup>

Today, the Exchange has procedures for crossing which require that whenever a Requesting Member intends to cross, after the BBO is determined, with or without a BBO Improvement Interval, the Requesting Member, having announced an intention to cross, must bid and offer at or better than the BBO. If the Requesting Member's bid/offer is

<sup>10</sup> See proposed Rule 1079(b)(3).

<sup>11</sup> Acceptance of a bid/offer creates a binding contract under Exchange Rules.

at the BBO, the Requesting Member may execute 25% or a fair split, whichever is greater, of the contra-side of the order that is the subject of the RFQ. The remainder of the contra-side is split in accordance with the parity/priority provision of subparagraph (3) of Rule 1079(b). If the Requesting Member's bid/offer improves the existing BBO, an assigned ROT or assigned specialist who responded with a market during the response time or BBO Improvement Interval, may immediately join the Requesting Member's improved bid or offer, thus matching for parity purposes. However, the Requesting Member may execute 25% or a fair split, whichever is greater, of the contra-side of the order that is the subject of the RFQ. The remainder of the contra-side is split in accordance with the parity/priority provision of sub-paragraph (3) of Rule 1079. Broker-dealer crosses and solicited orders, as defined in Rule 1064, are not eligible for the split afforded by sub-paragraphs (A) and (B) of Rule 1079(6), and instead, are, after the announcement of an intention to cross, executable in accordance with sub-paragraph (5) of Rule 1079.

The Exchange proposes to amend the crossing rules, similar to Amex, in that the Requesting Member would be entitled to cross a transaction where the BBO was matched or improved and could execute the contra side to the extent of at least 40% of the trade, provided the order is a public customer order or an order respecting the Requesting Member's firm proprietary account.<sup>12</sup> The Exchange would not otherwise limit a market participant's ability to cross an order, other market participants other than public customer and firm proprietary orders would not be entitled to execute the contra side of the trade to the extent of at least 40% of the trade.

The Exchange does not propose to amend the current reporting requirements which require RFQs, responsive quotes and completed trades to be promptly reported to OPRA and disseminated as an administrative text message.<sup>13</sup> Nor does the Exchange propose to amend the provisions related to trading rotations which provide that there will be no trading rotations in FLEX options, either at the opening or at the close of trading.<sup>14</sup> Finally, the Exchange does not propose to amend the hours of trading most currently state that FLEX options trading must be effected during the hours established by the Exchange.

Such hours shall be within regular Exchange trading hours (for the non-FLEX option) on each business day, except that the Exchange in its discretion may determine at any time to narrow or expand FLEX trading hours to encompass, but not exceed, the trading hours of the non-FLEX option.<sup>15</sup>

Provision (c) of Rule 1079 related to who may trade FLEX Options, provision (d) relating to position limits and position (e) related to exercise limits are not being amended. Section (f) which provides that FLEX equity and currency options shall be subject to the exercise-by-exercise procedure of Rule 805 of the Options Clearing Corporation ("OCC") is being amended to capitalize the OCC title.

The Exchange is also proposing to amend Rule 1079(a) to add certain defined terms in connection with the proposed amendments to Rule 1079(b). Specifically, the Exchange proposes to define the term "Request for Quotes" as the initial request supplied by a Requesting Member to initiate FLEX bidding and offering. The Exchange proposes to define the term "Request Response Time" as the minimum period of time established by the Exchange, during which Exchange members participating in FLEX options may provide FLEX Quotes in response to a Request for Quotes. The Exchange proposes to define the term "FLEX Quote" as (i) FLEX bids and offers entered by specialists<sup>16</sup> and Registered Options Traders<sup>17</sup> and (ii) orders to purchase and orders to sell FLEX Options entered by Floor Brokers, in each case in response to a Request for Quotes. The Exchange proposes to define the term "BBO" as the best bid or offer, or both, as applicable, entered in response to a Request for Quotes. The Exchange proposes to define the term "BBO Improvement Interval" as the minimum period of time, to be established by the Exchange, during which members may submit FLEX Quotes to meet or improve the BBO established during the Request Response Time.

Finally, the Exchange proposes to eliminate OFPA F-28, which reiterates the procedures for quoting and trading

FLEX options similar to Rule 1079, as this rule is no longer necessary. OFPA-F28 was enacted to parallel most of the provisions in Rule 1079(b), including those pertaining to requesting quotations, responses, determining the BBO, the BBO Improvement Interval, executing a trade and crossing. OFPA F-28 does not contain a fine schedule and is not included in the Exchange's minor rule violation enforcement and reporting plan.<sup>18</sup> The Exchange noted in its rule change that the purpose of adopting OFPA F-28 was to incorporate it into the Floor Procedure Advice Handbook for easy reference on the trading floor.<sup>19</sup>

The Exchange believes that these amendments to the FLEX rules to model the rules after the current Amex rules, streamlines the current process for quoting and trading FLEX Options. Amex initially amended its rule in 2006<sup>20</sup> to increase the participation guarantee of a Requesting Member from 25% to 40% of the order.<sup>21</sup> Amex noted in its filing that they believed that providing Requesting Members or Requesting Member firms who are eligible to trade FLEX options and are seeking to cross or facilitate a trade with an across-the-board 40% member firm guarantee will provide an additional incentive for such Requesting Member or Requesting Member firm to bring large FLEX orders to the floor of the Amex rather than to the floor of another options exchange or to the over-the-counter ("OTC") market.<sup>22</sup> Additionally, Amex noted that the liquidity provided by such Requesting Member or Requesting Member firm seeking to facilitate their orders gives the Exchange the ability to provide deep liquid markets for investors.

The Exchange believes that the amendments proposed to Rule 1079(b) would also allow Phlx to remain competitive with other options exchanges. The proposal streamlines the current FLEX rules related to quoting and trading FLEX options and creates new opportunities for members and member organizations to trade FLEX options on the floor of the Exchange. The proposal provides for transparency in displaying the terms and specifications of the RFQ at the post and continues to provide for the dissemination of information through

<sup>15</sup> See Rule 1079(b)(9).

<sup>16</sup> A specialist is an Exchange member who is registered as an options specialist pursuant to Rule 1020(a).

<sup>17</sup> A Registered Options Trader ("ROT") includes a Streaming Quote Trader ("SQT"), a Remote Streaming Quote Trader and a Non-SQT, which by definition is neither a SQT or a RSQT. A Registered Option Trader is defined in Exchange Rule 1014(b) as a regular member of the Exchange located on the trading floor who has received permission from the Exchange to trade in options for his own account. See Exchange Rule 1014 (b)(i) and (ii).

<sup>18</sup> See Securities Exchange Act Release No. 39549 (January 14, 1998), 63 FR 3601 (January 23, 1998) (SR-Phlx-96-38).

<sup>19</sup> *Id.*

<sup>20</sup> See Securities Exchange Act Release No. 54104 (July 5, 2006), 71 FR 39374 (July 12, 2006) (SR-Amex-2006-47).

<sup>21</sup> *Id.*

<sup>22</sup> *Id.*

<sup>12</sup> See proposed Rule 1079(b)(5).

<sup>13</sup> See Rule 1079(b)(7).

<sup>14</sup> See Rule 1079(b)(8).

OPRA. The proposal eliminates the minimum response times imposed by the current rules and instead adopts Amex's more flexible approach to permit responses during the Request Response Time as designated by the Exchange. The amendments provide for opportunities to match or improve the BBO and sets priority rules as first in time as compared to price, as is the case today. The Exchange believes that these rules will permit the Exchange to remain competitive and will continue to encourage market participants to shift OTC options trading to the Exchange in order to eliminate counter-party risk. The Exchange is proposing to increase its guarantee from 25% to 40% consistent with current firm facilitation guarantees and, similar to Amex, offer requesting members that cross public customer and firm proprietary orders the opportunity to participate in 40% of the trade.<sup>23</sup> The Exchange believes that, as noted in the Amex filing, the liquidity provided by such Requesting Member or Requesting Member firm seeking to facilitate their orders gives the Exchange the ability to provide deep liquid markets for investors. The Exchange believes this proposal will allow the Exchange to remain competitive with other options exchanges and provide a comparable alternative to the OTC market.

The Exchange proposes, similar to Amex Rule 904G(f), to limit crossing orders that are entitled to participate in the trade and be guaranteed at least 40% of the trade to public customer orders and firm proprietary orders. Unlike Amex, the Exchange would not otherwise limit a market participant's ability to effect a crossing transaction. The Exchange is proposing to permit all market participants to cross a transaction, as is the case today. The Exchange does not believe this proposal would amend the current practice of permitting market participants to participate in crossing orders, except for Broker-Dealer crosses which today are not eligible for the split referenced in current Rule 1079(b)(6)(A) and (B),<sup>24</sup> but they are executable as described in

current Rule 1079(b)(5). The proposal would permit all market participants to effect crossing transactions, which is not a departure from the current rule, but would limit crossing orders that are entitled to participate in the trade and receive the 40% guarantee to public customer orders and firm proprietary orders, which is not a change for Broker-Dealers but is a change for other market participants that today may be eligible for the 25% guarantee in the current rule.

The Exchange is not adopting language in Amex Rule 904(G)(g). The Exchange does not trade the particular currencies listed in 904(G)(g) and is therefore not adopting language similar to section 904G(g).<sup>25</sup>

In addition, the Exchange proposes in Rule 1079(b)(1) to immediately announce the terms and specifications of the RFQ at the specialist post instead of posting the terms and specifications. The practice of announcing terms at the post is in line with current practices on Phlx's floor. The Exchange will continue to disseminate an administrative text message through OPRA, as is the case today.

## 2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the provisions of Section 6 of the Securities and Exchange Act of 1934 ("Exchange Act"),<sup>26</sup> in general, and with Section 6(b)(5) of the Exchange Act,<sup>27</sup> in particular, in that the proposal is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to remove impediments to and perfect the mechanism of a free and open market and a national market system and, in general, to protect investors and the public interest.

FLEX options permit customization of certain variable terms as agreed between the buyer and seller. The Exchange believes that its proposed rules allow market participants to continue to trade FLEX options in a transparent environment with the same requisite disclosure requirements in order to ensure that presence of a price discovery process for such orders on the Exchange's trading floor. The Exchange believes that the proposed amendments will create new opportunities for members and member organizations to trade FLEX options. The amendments create clear guidelines for transacting

FLEX options, which are complicated customized options. Additionally, the amendments streamline the process and adopt procedures for quoting and trading FLEX options similar to Amex.<sup>28</sup> The Exchange desires to provide investors deep liquid markets in which to trade FLEX options and believes that adopting rules similar to Amex will allow the Exchange to provide investors the tools to transact FLEX options in a transparent environment.

## B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. The Exchange proposes to adopt rules to permit the quoting and trading of FLEX options on the Exchange's trading floor similar to Amex.<sup>29</sup> The Exchange believes that its ability to remain competitive and provide market participants multiple venues in which to trade FLEX options in a similar manner benefits market participants by providing them choices in which to seek markets to transact these products. The Exchange believes that this filing does not impose a burden on competition in as much as the rules are not novel but rather are the same as the rules of Amex.

## C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were either solicited or received.

## III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the foregoing proposed rule change does not: (i) Significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate, it has become effective pursuant to Section 19(b)(3)(A)(ii) of the Act<sup>30</sup> and subparagraph (f)(6) of Rule 19b-4 thereunder.<sup>31</sup>

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is: (i) Necessary or appropriate in

<sup>23</sup> See Exchange Rule 1064 at Commentary .02.

<sup>24</sup> Today, if the Requesting Member's bid/offer is at the BBO, the Requesting Member may execute 25% or a fair split, whichever is greater, of the contra-side of the order that is the subject of the RFQ. If the Requesting Member's bid/offer improves the existing BBO, an assigned ROT or assigned Specialist who responded with a market during the response time or BBO Improvement Interval, may immediately join the Requesting Member's improved bid or offer, thus matching for parity purposes. However, the Requesting Member may execute 25% or a fair split, whichever is greater, of the contra-side of the order that is the subject of the RFQ.

<sup>25</sup> The Exchange has separate rules relating to trading FLEX foreign currencies minimum increments. See Exchange Rule 1005C.

<sup>26</sup> 15 U.S.C. 78f.

<sup>27</sup> 15 U.S.C. 78f(b)(5).

<sup>28</sup> See note 19. [sic]

<sup>29</sup> *Id.*

<sup>30</sup> 15 U.S.C. 78s(b)(3)(a)(ii). [sic]

the public interest; (ii) for the protection of investors; or (iii) otherwise in furtherance of the purposes of the Act. If the Commission takes such action, the Commission shall institute proceedings to determine whether the proposed rule should be approved or disapproved. The Exchange has provided the Commission written notice of its intent to file the proposed rule change, along with a brief description and text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change.

#### IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

##### *Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-Phlx-2013-50 on the subject line.

##### *Paper Comments*

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-Phlx-2013-50. This file number should be included on the subject line if email is used.

To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the

Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-Phlx-2013-50, and should be submitted on or before June 11, 2013.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>32</sup>

**Kevin M. O'Neill,**

*Deputy Secretary.*

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69588; File No. SR-Phlx-2013-51]

### Self-Regulatory Organizations; NASDAQ OMX PHLX LLC; Notice of Filing of Proposed Rule Change to Its Schedule of Fees and Rebates for Execution of Quotes and Orders on NASDAQ OMX PSX

May 15, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 ("Act")<sup>1</sup> and Rule 19b-4 thereunder,<sup>2</sup> notice is hereby given that, on May 3, 2013, NASDAQ OMX PHLX LLC ("Phlx" or "Exchange") filed with the Securities and Exchange Commission ("SEC" or "Commission") the proposed rule change as described in Items I, II, and III, below, which Items have been prepared by the Exchange. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes changes to its schedule of fees and rebates for execution of quotes and orders on NASDAQ OMX PSX ("PSX"). Phlx proposes to implement the proposed rule change on May 3, 2013. The text of the proposed rule change is available on the Exchange's Web site at <http://nasdaqomxphlx.cchwallstreet.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

<sup>32</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant aspects of such statements.

##### A. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

###### 1. Purpose

The Commission recently approved modifications to the rules governing the operation of Phlx's PSX trading platform in order to replace its price/size/pro rata allocation model with a price/time model, and to permit member organizations to register as market makers in securities traded on PSX.<sup>3</sup> Phlx is now proposing to modify its schedule of fees and rebates for transactions occurring on PSX.

Currently, the Exchange charges the following fees for execution of orders that access liquidity on PSX: A volume-based discounted fee of \$0.0028 per share executed for an order entered through a market participant identifier ("MPID") through which a member organization provides shares of liquidity that represent more than 0.10% of Consolidated Volume<sup>4</sup> during the month; \$0.0028 per share executed for an order that is designated as eligible for routing, and \$0.0030 per share executed for other orders. The Exchange is proposing to reduce significantly the criterion for the volume-based discounted fee, from 0.10% of Consolidated Volume to an average daily volume of 10,000 or more shares of liquidity provided. Moreover, for securities listed on the NASDAQ Stock Market ("NASDAQ") or the New York Stock Exchange ("NYSE"), Phlx proposes to lower the volume-based discounted fee to \$0.00275 per share executed. For securities listed on exchanges other than NASDAQ or NYSE, the Exchange proposes to make

<sup>3</sup> Securities Exchange Act Release No. 69452 (April 25, 2013), 78 FR 25512 (May 1, 2013) (SR-Phlx-2013-24).

<sup>4</sup> "Consolidated Volume" is defined as the total consolidated volume reported to all consolidated transaction reporting plans by all exchanges and trade reporting facilities.

the discounted fee applicable to routed orders and orders entered through an MPID qualifying for the volume-based discount \$0.0025 per share executed rather than \$0.0028 per share executed.

With respect to orders that provide liquidity, the Exchange currently provides a rebate of \$0.0010 per share executed for non-displayed orders. The Exchange proposes to modify this rebate such that \$0.0010 per share executed would be paid with respect to midpoint pegged or midpoint peg post-only orders ("midpoint orders"), while \$0.0005 per share executed would be paid with respect to other forms of non-displayed orders. For displayed orders that provide liquidity, the Exchange currently provides a rebate of \$0.0028 per share executed for orders entered through an MPID through which a member organization provides shares of liquidity that represent more than 0.10% of Consolidated Volume; \$0.0028 per share executed for orders entered through a PSX MPID through which the member organization provides shares of liquidity that represent more than 0.05% of Consolidated Volume, provided that the member organization and any affiliated member organizations also have an average daily volume during the month of 1,000 or more electronically delivered and executed customer contracts that add liquidity on the Exchange's Options Market; and \$0.0026 per share executed for other orders.

The Exchange proposes to lower the basic rebate for orders to which no other pricing applies from \$0.0026 to \$0.0020 per share executed. In addition, the Exchange proposes to reduce the requirement for an enhanced rebate based on volume of liquidity provision from 0.10% of Consolidated Volume to an average daily volume of 100,000 or more shares of liquidity provided, while also reducing the associated rebate from \$0.0028 per share executed to \$0.0026 per share executed. The Exchange is also proposing to eliminate the rebate tier that requires participation in the Exchange's Options Market. Finally, the Exchange proposes a rebate tier of \$0.0028 per share executed for quotes/orders entered by a member organization that provides an average daily volume of 2 million or more shares of liquidity during the month.

In addition to the foregoing changes, Phlx is also replacing the term "order" with the term "quote/order" where appropriate in the PSX fee schedule to reflect the introduction of quoting on PSX. Phlx is also adding new headings to the fee schedule to delineate sections for fees applicable to quotes/orders in securities listed on NASDAQ, NYSE,

and other exchanges, respectively, and for fees applicable to routing. Finally, Phlx is deleting a footnote describing conditions under which member organizations may be deemed affiliates, since it relates solely to the pricing tier relating to trading on the Phlx Options Market, which Phlx is eliminating.

## 2. Statutory Basis

Phlx believes that the proposed rule change is consistent with the provisions of Section 6 of the Act,<sup>5</sup> in general, and with Sections 6(b)(4) and 6(b)(5) of the Act,<sup>6</sup> in particular, in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and issuers and other persons using any facility or system which Phlx operates or controls, and is not designed to permit unfair discrimination between customers, issuers, brokers, or dealers.

The proposed new rebate tier of \$0.0028 per share executed for members that provide an average daily volume of liquidity of 2 million shares or more is reasonable because it will reduce fees for member organizations that make significant contributions to PSX and its market quality by providing high volumes of liquidity. Moreover, the proposed rebate is consistent with an equitable allocation of fees because the rebate is provided to member organizations that benefit the market through high levels of liquidity provision. As such, the proposal is consistent with volume-based pricing tiers in effect at many other national securities exchanges. Finally, the proposal is not unreasonably discriminatory because the rebate is consistent with the benefits provided by market participants receiving it, and because the Exchange offers alternative means to receive a rebate that is only slightly lower and that has very modest liquidity requirements associated with it.

The proposed changes with respect to the existing volume-based tiers for accessing and providing liquidity are reasonable because the reduction in the liquidity-provision criterion for achieving the tier—from 0.10% of Consolidated Volume to an average daily volume of 10,000 or more shares for the take fee discount, or 100,000 or more shares for the higher rebate<sup>7</sup>—will make it easier for a broader range of market participants to achieve the tier, thereby resulting in price reductions for PSX participants who may not qualify

for the tier at present. In addition, the applicable fee for accessing liquidity in securities listed on NASDAQ or NYSE will be reduced from \$0.0028 to \$0.00275 per share executed, and to \$0.0025 per share executed for other securities.<sup>8</sup> The cost of enhancing the tiers in this manner will be offset by reducing the rebate for liquidity provision from \$0.0028 to \$0.0026 per share executed, but the Exchange believes that this change is reasonable in light of the significant broadening of the tiers. The Exchange further believes that these changes reflect an equitable allocation of fees and are not unreasonably discriminatory, because they are consistent with pricing at many other national securities exchanges under which discounts are provided to members that achieve specified volumes of liquidity provision. In addition, the changes should make the applicable fees and rebates available to a wider range of market participants, and the Exchange offers other means by which a member organization may achieve comparable or better rates.

The proposed change with respect to the basic rebate to which no other pricing applies from \$0.0026 to \$0.0020 per share executed is reasonable because the rate is comparable to the base rebate payable on several other national securities exchanges, including NASDAQ (\$0.0020), NYSEArca (\$0.0021), and the EDGX Exchange (\$0.0021). The change is consistent with an equitable allocation of fees and not unreasonably discriminatory because it is consistent with providing a rebate to all liquidity providers, regardless of volume or other factors, while paying higher rebates to member organizations that do more to support the Exchange through higher volumes and/or contributions to market quality.

The elimination of the rebate tier that requires participation in both PSX and the Exchange's Options Market is reasonable, consistent with an equitable allocation of fees, and not unreasonably

<sup>8</sup> The rate reductions, as well as the rate reduction for routable orders in securities listed on exchanges other than NASDAQ and NYSE, are reasonable because they will reduce costs to market participants. The changes are consistent with an equitable allocation of fees and not unfairly discriminatory because they are assessed against members that either achieve specified volume tiers or that assist the development of PSX's routing services by making use of its router. To the extent that fees differ depending on the listing venue of the security, the change is not unfairly discriminatory because it is consistent with established practices on other national securities exchanges of using security-specific discounts as a means to promote the exchange as a venue for trading certain types of securities. See e.g., <http://usequities.nyx.com/markets/nyse-arca-equities/trading-fees>.

<sup>5</sup> 15 U.S.C. 78f.

<sup>6</sup> 15 U.S.C. 78f(b)(4) and (5).

<sup>7</sup> By contrast, on a trading day with a Consolidated Volume of 6 billion shares, the current tier would require a member to provide 6 million shares of liquidity.

discriminatory because any PSX Participant that qualifies for the tier at present would be required to have a volume of liquidity provision of at least 0.05% of Consolidated Volume.

Following the implementation of the proposed change, any such market participant would also likely qualify for the proposed new rebate tier requiring an average daily volume of liquidity provision of at least 2 million shares, and receive the same rebate of \$0.0028 per share executed. Accordingly, the change will not alter the rebate for which such participants qualify.

The changes with respect to rebates payable for non-displayed orders is reasonable because the rebate will remain unchanged for midpoint orders that provide liquidity, and therefore will be reduced only for other forms of non-displayed orders, which are expected to constitute only a small percentage of liquidity-providing orders. The fees reflect an equitable allocation of fees and are not unreasonably discriminatory because they reflect the Exchange's belief that all market participants benefit from pricing that encourages the use of displayed orders, which promote active price discovery. Accordingly, as is the case with other national securities exchanges, such as NASDAQ, the Exchange pays a lower rebate with respect to non-displayed orders than displayed orders. However, the change adopts a distinction between midpoint orders, which provide price improvement by executing at the midpoint between the national best bid and national best offer, and other forms of non-displayed orders, which do not provide such a benefit.

#### *B. Self-Regulatory Organization's Statement on Burden on Competition*

Phlx does not believe that the proposed rule change will result in any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act, as amended.<sup>9</sup> Phlx notes that it operates in a highly competitive market in which market participants can readily favor competing venues if they deem fee levels at a particular venue to be excessive, or rebate opportunities available at other venues to be more favorable. In such an environment, Phlx must continually adjust its fees to remain competitive with other exchanges and with alternative trading systems that have been exempted from compliance with the statutory standards applicable to exchanges. Because competitors are free to modify their own fees in response, and because market participants may

readily adjust their order routing practices, Phlx believes that the degree to which fee changes in this market may impose any burden on competition is extremely limited. In this instance, Phlx is introducing new pricing to accompany changes to PSX's market structure. These changes were necessitated by the failure of PSX's former price/size execution algorithm to garner significant market share, and therefore reflect an effort to increase PSX's competitiveness. If the changes are unattractive to market participants, it is likely that PSX will fail to increase its share of executions. Conversely, to the extent that the proposed changes broaden the availability of favorable pricing, if they are successful in attracting additional order flow, they will reduce costs to market participants and possibly encouraging [sic] competitive responses from other trading venues. Accordingly, Phlx believes that the proposed changes will promote greater competition, but will not impair the ability of members or competing order execution venues to maintain their competitive standing in the financial markets.

#### *C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others*

No written comments were either solicited or received.

### **III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action**

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act<sup>10</sup> and paragraph (f) of Rule 19b-4 thereunder.<sup>11</sup> At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

### **IV. Solicitation of Comments**

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

#### *Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-Phlx-2013-51 on the subject line.

#### *Paper Comments*

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-Phlx-2013-51. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-Phlx-2013-51 and should be submitted on or before June 11, 2013.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>12</sup>

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69584; File No. SR-NYSEArca-2013-50]

### Self-Regulatory Organizations; NYSE Arca, Inc.; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending the Listing Standards for Equity Index-Linked Securities in NYSE Arca Equities Rule 5.2(j)(6)

May 15, 2013.

Pursuant to Section 19(b)(1)<sup>1</sup> of the Securities Exchange Act of 1934 (the “Act”)<sup>2</sup> and Rule 19b-4 thereunder,<sup>3</sup> notice is hereby given that, on May 8, 2013, NYSE Arca, Inc. (the “Exchange” or “NYSE Arca”) filed with the Securities and Exchange Commission (the “Commission”) the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization’s Statement of the Terms of the Substance of the Proposed Rule Change

The Exchange proposes to amend the listing standards for Equity Index-Linked Securities in NYSE Arca Equities Rule 5.2(j)(6). The text of the proposed rule change is available on the Exchange’s Web site at [www.nyse.com](http://www.nyse.com), at the principal office of the Exchange, and at the Commission’s Public Reference Room.

#### II. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below, of the most significant parts of such statements.

#### A. Self-Regulatory Organization’s Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

##### 1. Purpose

The Exchange proposes to amend the listing standards for Equity Index-Linked Securities in NYSE Arca Equities Rule 5.2(j)(6).

Currently, NYSE Arca Equities Rule 5.2(j)(6)(B)(I)(1) provides that the Exchange will consider listing Equity Index-Linked Securities if the payment at maturity or earlier redemption is based on an index or indexes of equity securities, securities of closed-end management investment companies registered under the Investment Company Act of 1940 and/or investment company units. The issue must meet certain initial listing criteria including, among other criteria, that each underlying index have at least ten component securities of different issuers.

The Exchange proposes to amend the initial listing criteria to eliminate the requirement that the ten component securities be of different issuers. The Exchange believes that the current requirement is unnecessarily restrictive. At least one other exchange does not impose such a requirement in its listing standards for Equity Index-Linked Securities.<sup>4</sup>

##### 2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b)<sup>5</sup> of the Act, in general, and furthers the objectives of Section 6(b)(5),<sup>6</sup> in particular, in that it is designed to prevent fraudulent and manipulative acts and practices, to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in facilitating transactions in securities, and to remove impediments to and perfect the mechanisms of a free and open market and a national market system, and, in general, to protect investors and the public interest.

The Exchange believes that the proposed rule change would remove impediments to and perfect the mechanisms of a free and open market and a national market system because it would provide greater flexibility to issuers to list Equity Index-Linked Securities with a wider variety of component securities that may meet the investment objectives of investors.

Offering such products enhance competition, which may benefit of investors and the marketplace. Furthermore, the Exchange’s listing requirements as proposed herein are at least as stringent as those of another national securities exchange and, consequently, the proposed rule change is consistent with the protection of investors and the public interest.<sup>7</sup>

Additionally, the proposal is designed to prevent fraudulent and manipulative acts and practices, as Equity Index-Linked Securities are subject to existing trading rules, together with specific requirements for market participants, books and record production, surveillance procedures, and requisite Exchange approvals.

Lastly, the proposal is designed to remove impediments to and perfect the mechanism of a free and open market and a national market system by adopting listing standards that would permit the trading of additional Equity Index-Linked Securities on the Exchange that are already currently traded on at least one other exchange.

#### B. Self-Regulatory Organization’s Statement on Burden on Competition

The Exchange does not believe that the proposed rule change will impose any burden on competition that is not necessary or appropriate in furtherance of the purposes of the Act. The Exchange notes that while the current variance in the listing standards among exchanges limits competition, the proposal would allow the listing of additional Equity Index-Linked Securities on the Exchange, thereby promoting increased competition across markets and liquidity on the Exchange.

#### C. Self-Regulatory Organization’s Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

#### III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

Because the proposed rule change does not (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative for 30 days from the date on which it was filed, or such shorter time as the Commission may designate if consistent with the protection of investors and the public interest, the proposed rule change has become

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 15 U.S.C. 78a.

<sup>3</sup> 17 CFR 240.19b-4.

<sup>4</sup> See NASDAQ Stock Market LLC (“NASDAQ”) Rule 5710(k)(i)(A).

<sup>5</sup> 15 U.S.C. 78f(b).

<sup>6</sup> 15 U.S.C. 78f(b)(5).

<sup>7</sup> See *supra* n.4.

effective pursuant to Section 19(b)(3)(A) of the Act<sup>8</sup> and Rule 19b-4(f)(6)(iii) thereunder.<sup>9</sup>

The Exchange has asked the Commission to waive the 30-day operative delay so that the proposal may become operative immediately upon filing. The Commission believes that waiving the 30-day operative delay is consistent with the protection of investors and the public interest, as it will allow the Exchange to immediately harmonize its listing requirements with other national securities exchanges enabling the Exchange to compete for listings of products on the same basis as other national securities exchanges. For this reason, the Commission waives the operative delay and designates the proposed rule change to be operative upon filing.<sup>10</sup>

At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

#### IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

##### *Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File Number SR-NYSEArca-2013-50 on the subject line.

##### *Paper Comments*

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEArca-2013-50. This

file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing also will be available for inspection and copying at the principal offices of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEArca-2013-50, and should be submitted on or before June 11, 2013.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>11</sup>

**Kevin M. O'Neill,**

*Deputy Secretary.*

## SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-69585; File No. SR-BATS-2013-026]

### Self-Regulatory Organizations; BATS Exchange, Inc.; Notice of Filing and Immediate Effectiveness of a Proposed Rule Change Related to Fees for Use of BATS Exchange, Inc.

May 15, 2013.

Pursuant to Section 19(b)(1) of the Securities Exchange Act of 1934 (the "Act"),<sup>1</sup> and Rule 19b-4 thereunder,<sup>2</sup> notice is hereby given that on May 7, 2013, BATS Exchange, Inc. (the "Exchange" or "BATS") filed with the Securities and Exchange Commission ("Commission") the proposed rule

change as described in Items I, II and III below, which Items have been prepared by the Exchange. The Exchange has designated the proposed rule change as one establishing or changing a member due, fee, or other charge imposed by the Exchange under Section 19(b)(3)(A)(ii) of the Act<sup>3</sup> and Rule 19b-4(f)(2) thereunder,<sup>4</sup> which renders the proposed rule change effective upon filing with the Commission. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

#### I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange filed a proposal to amend the fee schedule applicable to Members<sup>5</sup> and non-members of the Exchange pursuant to BATS Rules 15.1(a) and (c). Changes to the fee schedule pursuant to this proposal are effective upon filing.

The text of the proposed rule change is available at the Exchange's Web site at <http://www.batstrading.com>, at the principal office of the Exchange, and at the Commission's Public Reference Room.

#### II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the Exchange included statements concerning the purpose of and basis for the proposed rule change and discussed any comments it received on the proposed rule change. The text of these statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in Sections A, B, and C below, of the most significant parts of such statements.

##### (A) Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

###### 1. Purpose

The purpose of the proposed to modify fees applicable to Members and non-members in order to encourage use of connectivity that provides redundant access to the Exchange by eliminating any potential fees for logical ports<sup>6</sup> in

<sup>3</sup> 15 U.S.C. 78s(b)(3)(A)(ii).

<sup>4</sup> 17 CFR 240.19b-4(f)(2).

<sup>5</sup> A Member is any registered broker or dealer that has been admitted to membership in the Exchange.

<sup>6</sup> A logical port is commonly referred to as a TCP/IP port, and represents a port established by the Exchange within the Exchange's system for trading and billing purposes. Each logical port established

<sup>8</sup> 15 U.S.C. 78s(b)(3)(A).

<sup>9</sup> 17 CFR 240.19b-4(f)(6)(iii). As required under Rule 19b-4(f)(6)(iii), the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change, or such shorter time as designated by the Commission.

<sup>10</sup> For purposes only of waiving the 30-day operative delay, the Commission has also considered the proposed rule's impact on efficiency, competition, and capital formation. See 15 U.S.C. 78c(f).

<sup>11</sup> 17 CFR 200.30-3(a)(12).

<sup>1</sup> 15 U.S.C. 78s(b)(1).

<sup>2</sup> 17 CFR 240.19b-4.

connection with such redundant access. The Exchange proposes to modify its fee schedule related to logical ports for BATS Equities and to make necessary changes so that the logical port fee sections of its fee schedule applicable to BATS Options is identical.<sup>7</sup>

The Exchange currently charges a monthly fee for ports used to enter orders in the Exchange's trading system and to receive data from the Exchange. With respect to BATS Equities, the Exchange currently charges \$400.00 per month per "pair" of any port type other than a Multicast PITCH Spin Server Port or a GRP Port.<sup>8</sup> Each pair of ports consists of one port at the Exchange's primary data center and one port at the Exchange's secondary data center. With respect to BATS Options, the Exchange also charges \$400 per month for any port other than a Multicast PITCH Spin Server Port, GRP Port or logical port with bulk-quoting capabilities,<sup>9</sup> and \$1,500 for a port with bulk-quoting capabilities. The Exchange recently began offering connectivity to the Exchange at its secondary data center, enabling BATS Options participants to obtain redundant connectivity, and has not commenced billing for any such connectivity.

Rather than stating that the fee for logical ports with respect to BATS Equities or BATS Options is per "pair", the Exchange proposes to simplify the fee schedule by adding a footnote that states that logical port fees are limited to logical ports in the Exchange's primary data center and that no logical port fees will be assessed for redundant secondary data center ports. Although this change to fee schedule language will not result in any substantive change to Members or non-members, as the Exchange is already providing secondary data center ports free of charge, the Exchange believes that this is a simpler way to bill for ports rather than billing in pairs. Further, this will allow the Exchange to include the concept of a "primary" Multicast PITCH data feed, as described below, without confusion as related to the Exchange's primary data center.

In addition, the Exchange proposes to modify the description of the billing for

is specific to a Member or non-member and grants that Member or non-member the ability to operate a specific application, such as FIX order entry or Multicast PITCH data receipt.

<sup>7</sup> BATS Equities is the Exchange's platform for trading cash equity securities whereas BATS Options is the Exchange's platform for trading equity options.

<sup>8</sup> Thus, the charges apply to all BATS Equities FIX, FIXDROP, BOE, DROP, TCP PITCH, and TOP ports.

<sup>9</sup> Thus, the charges apply to all BATS Options FIX, FIXDROP, BOE, and DROP ports.

ports related to the Exchange's Multicast PITCH data feed.<sup>10</sup> The Exchange currently provides 32 pairs of Multicast PITCH Spin Server Ports free of charge and, if such ports are used, one free pair of GRP Ports.<sup>11</sup> The Exchange charges customers \$400.00 per month per additional set of 32 Multicast PITCH Spin Server Ports or additional pair of GRP Ports. Consistent with the change described above, the Exchange proposes to eliminate the concept of port "pairs" and instead maintain a fee schedule that imposes fees only for logical ports at the Exchange's primary data center. Thus, for both BATS Equities and BATS Options the Exchange will continue to provide at the Exchange's primary data center 32 Multicast PITCH Spin Server Ports free of charge and, if such ports are used, one free GRP Port and all redundant Multicast PITCH Spin Server Ports and GRP Ports at the secondary data center will be free of charge. Again, although not a substantive change for Members and non-members, the Exchange believes that this change simplifies the fee schedule and also indicates the Exchange's support for Members and non-members to establish sufficient connectivity for business continuity purposes.

Similarly, the Exchange proposes to modify its fee schedule in order to allow Members and non-members to take redundant Multicast PITCH data feeds from the Exchange. The Exchange's Multicast PITCH data feed for both BATS Equities and BATS Options is currently offered through two primary feeds, identified as the "A feed" and the "C feed", which contain the same information but differ only in the way such feeds are received. The Exchange is in the process of commencing to offer redundant versions of the Multicast PITCH data feed and does not intend for Members and non-members that connect to such feeds to incur additional port fees. As such, the

<sup>10</sup> The Multicast PITCH data feed with respect to BATS Equities is defined in Rule 11.22(c) as "an uncompressed data feed that offers depth of book quotations and execution information based on equity orders entered into the System." The Multicast PITCH data feed with respect to BATS Options is defined in Rule 21.15 as "uncompressed data feed that offers depth of book quotations and execution information based on options orders entered into the System."

<sup>11</sup> The Exchange notes that its fees for Multicast PITCH customers, including the current provision of certain ports free of charge, are designed to encourage use of the Exchange's Multicast PITCH data feed because the Exchange believes that the feed is its most efficient feed, and thus, will reduce infrastructure costs for both the Exchange and those who utilize the feed. Any Member or non-member that has entered into the appropriate agreements with the Exchange is permitted to receive Multicast PITCH Spin Server Ports and GRP Ports from the Exchange.

Exchange is proposing to modify its description of Multicast PITCH logical port fees so that only ports necessary to take a primary feed (either A or C), and not redundant versions of such feed, are subject to logical port fees. Again, the Exchange wishes to encourage Members and non-members to establish connectivity for business continuity purposes, including in the event the Exchange's data center is fully operational but a specific version of an Exchange data feed becomes unavailable.

Based on the proposal, the change applies to Members that obtain ports for direct access to the Exchange, Sponsored Participants sponsored by Members to receive direct access to the Exchange, non-member service bureaus that act as a conduit for orders entered by Exchange Members that are their customers, and market data recipients.

## 2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with the requirements of the Act and the rules and regulations thereunder that are applicable to a national securities exchange, and, in particular, with the requirements of Section 6 of the Act.<sup>12</sup> Specifically, the Exchange believes that the proposed rule change is consistent with Section 6(b)(4) of the Act,<sup>13</sup> in that it provides for the equitable allocation of reasonable dues, fees and other charges among members and other persons using any facility or system which the Exchange operates or controls.

The Exchange believes that its proposed changes to logical port fees are reasonable in light of the fact that all such changes are intended to ensure that Members and non-members are able to establish redundant connections to the Exchange without incurring additional logical port fees. In addition, the Exchange believes that the proposed changes to fees are equitably allocated among Exchange constituents as the cost savings for redundant connectivity will be available to all such constituents. The Exchange reiterates that the change to limit logical port fees [sic] to logical port fees at the primary data center is not a substantive change in that Exchange constituents currently receive without charge a corresponding port at the secondary data center for any port established at the primary data center.

The Exchange also believes that providing financial incentives to use Exchange technology that the Exchange believes is the most technologically

<sup>12</sup> 15 U.S.C. 78f.

<sup>13</sup> 15 U.S.C. 78f(b)(4).

efficient for the Exchange and its constituents is a fair and equitable approach to pricing. Accordingly, the Exchange believes that promotion of its Multicast PITCH data feed through the continued offering of free logical ports is fair and equitable. The Multicast PITCH data feed is available to all Members, and as such, all Members have the ability to receive applicable Multicast PITCH ports free of charge. Further, the Exchange believes that promoting the use of redundant connectivity is reasonable, fair and equitable and not unreasonably discriminatory as it is uniform in application amongst Members and non-members and should enable such participants to enhance their business continuity planning.

*(B) Self-Regulatory Organization's Statement on Burden on Competition*

The Exchange does not believe that the proposed rule change will impose any burden on competition not necessary or appropriate in furtherance of the purposes of the Act. As discussed above, the Exchange believes that fees for connectivity are constrained by the robust competition for order flow among exchanges and non-exchange markets. Further, excessive fees for connectivity, including logical port fees, would serve to impair an exchange's ability to compete for order flow rather than burdening competition.

*(C) Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants or Others*

The Exchange has neither solicited nor received written comments on the proposed rule change.

**III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action**

The foregoing rule change has become effective pursuant to Section 19(b)(3)(A) of the Act<sup>14</sup> and paragraph (f)(2) of Rule 19b-4 thereunder.<sup>15</sup> At any time within 60 days of the filing of the proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

**IV. Solicitation of Comments**

Interested persons are invited to submit written data, views and arguments concerning the foregoing,

including whether the proposal is consistent with the Act. Comments may be submitted by any of the following methods:

*Electronic Comments*

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to [rule-comments@sec.gov](mailto:rule-comments@sec.gov). Please include File No. SR-BATS-2013-026 on the subject line.

*Paper Comments*

- Send paper comments in triplicate to Elizabeth M. Murphy, Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File No. SR-BATS-2013-026. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule changes between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549, on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of such filing will also be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File No. SR-BATS-2013-026 and should be submitted on or before June 11, 2013.

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.<sup>16</sup>

**Federal Aviation Administration**

[Summary Notice No. PE-2013-21]

**Petition for Exemption; Summary of Petition Received**

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Notice of petition for exemption received.

**SUMMARY:** This notice contains a summary of a petition seeking relief from specified requirements of Title 14, Code of Federal Regulations (14 CFR). The purpose of this notice is to improve the public's awareness of, and participation in, this aspect of the FAA's regulatory activities. Neither publication of this notice nor the inclusion or omission of information in the summary is intended to affect the legal status of the petition or its final disposition.

**DATE:** Comments on this petition must identify the petition docket number involved and must be received on or before June 10, 2013.

**ADDRESSES:** You may send comments identified by Docket Number FAA-2013-0322 using any of the following methods:

- *Government-wide rulemaking Web site:* Go to <http://www.regulations.gov> and follow the instructions for sending your comments digitally.
- *Mail:* Send comments to the Docket Management Facility; U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12-140, Washington, DC 20590.
- *Fax:* Fax comments to the Docket Management Facility at 202-493-2251.
- *Hand Delivery:* Bring comments to the Docket Management Facility in Room W12-140 of the West Building Ground Floor at 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

*Privacy:* We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. Using the search function of our docket Web site, anyone can find and read the comments received into any of our dockets, including the name of the individual sending the comment (or signing the comment for an association, business, labor union, etc.). You may review the DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78).

*Docket:* To read background documents or comments received, go to

<sup>14</sup> 15 U.S.C. 78s(b)(3)(A).

#### Petition for Exemption

*Docket No.:* FAA-2013-0322.

*Petitioner:* The Boeing Company.

*Sections of 14 CFR Affected:* 14 CFR 25.981(a)(3) and 25.901(c).

*Description of Relief Sought:* To allow installation of the improved fuel pump electrical connector independently of the Fault Current Detector (FCD) or conversely, to allow installation of the FCD independently of the improved electrical connector. The FCD will provide an overall fuel pump electrical circuit. It includes the fuel pump electrical connector and will provide protection against ignition sources as required by the Equivalent Level of Safety (ELOS) and § 25.901(c), Amendment 25-46. Boeing seeks this exemption until such time as both the FCD and the electrical connector are installed. Compliance to Special Federal Aviation Regulation (SFAR) 88 for the identified unsafe condition at a fuel system level will be achieved at that time.

## DEPARTMENT OF TRANSPORTATION

### National Highway Traffic Safety Administration

[Docket No. NHTSA-2012-0141, Notice 1]

#### Notice of Receipt of Petition for Decision That Nonconforming 2012 Lita GLE-6 Low-Speed Vehicles Are Eligible for Importation

**AGENCY:** National Highway Traffic Safety Administration, DOT

**ACTION:** Notice of receipt of petition.

**SUMMARY:** This document announces receipt by the National Highway Traffic Safety Administration (NHTSA) of a petition for a decision that 2012 Lita GLE-6 low-speed vehicles (LSV) that were not originally manufactured to comply with all applicable Federal Motor Vehicle Safety Standards (FMVSS) are eligible for importation into the United States because they have safety features that comply with, or are capable of being altered to comply with, all such standards.

**DATES:** The closing date for comments on the petition is June 20, 2013.

**ADDRESSES:** Comments should refer to the docket and notice numbers above and be submitted by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the

online instructions for submitting comments.

- **Mail:** Docket Management Facility: U.S. Department of Transportation, 1200 New Jersey Avenue SE., West Building Ground Floor, Room W12-140, Washington, DC 20590-0001.

- **Hand Delivery or Courier:** West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., between 9 a.m. and 5 p.m. ET, Monday through Friday, except Federal holidays.

- **Fax:** 202-493-2251

**Instructions:** Comments must be written in the English language, and be no greater than 15 pages in length, although there is no limit to the length of necessary attachments to the comments. If comments are submitted in hard copy form, please ensure that two copies are provided. If you wish to receive confirmation that your comments were received, please enclose a stamped, self-addressed postcard with the comments. Note that all comments received will be posted without change to <http://www.regulations.gov>, including any personal information provided. Please see the Privacy Act heading below.

**Privacy Act:** Anyone is able to search the electronic form of all comments received into any of our dockets by the name of the individual submitting the comment (or signing the comment, if submitted on behalf of an association, business, labor union, etc.). You may review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000 (65 FR 19477-78).

**How to Read Comments submitted to the Docket:** You may read the comments received by Docket Management at the address and times given above. You may also view the documents from the Internet at <http://www.regulations.gov>.

Follow the online instructions for accessing the dockets. The docket ID number and title of this notice are shown at the heading of this document notice. Please note that even after the comment closing date, we will continue to file relevant information in the Docket as it becomes available. Further, some people may submit late comments. Accordingly, we recommend that you periodically search the Docket for new material.

**FOR FURTHER INFORMATION CONTACT:** Coleman Sachs, Office of Vehicle Safety Compliance, NHTSA (202-366-3151).

**SUPPLEMENTARY INFORMATION:**

**Background**

Under 49 U.S.C. 30141(a)(1)(B), a motor vehicle, that was not originally manufactured to conform to all

applicable FMVSS, and has no substantially similar U.S.-certified counterpart, shall be refused admission into the United States unless NHTSA has decided that the motor vehicle has safety features that comply with, or are capable of being altered to comply with, all applicable FMVSS based on destructive test data or such other evidence as NHTSA decides to be adequate.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register**.

US SPECS of Havre de Grace, Maryland (Registered Importer 03-321) has petitioned NHTSA to decide whether nonconforming 2012 Lita GLE-6 LSVs are eligible for importation into the United States. US SPECS believes these vehicles are capable of being modified to meet all applicable FMVSS.

US SPECS submitted information with its petition intended to demonstrate that while 2012 Lita GLE-6 LSVs do not conform to any FMVSS as originally manufactured, they are capable of being altered to comply with all applicable FMVSS.

Specifically, the petitioner contends that the nonconforming 2012 Lita GLE-6 LSVs are capable of being readily altered to meet FMVSS No. 500 as follows:

1. Installation of headlights if not already so equipped.
2. Installation of turn signals if not already so equipped.
3. Installation of taillamps if not already so equipped.
4. Installation of stop lamps if not already so equipped.
5. Installation of reflex reflectors if the vehicle is not already so equipped.
6. Installation of driver and passenger mirrors if not already so equipped.
7. Installation of a parking brake if not already so equipped.
8. Installation of a windshield that meets the requirements of FMVSS No. 205 if not already so equipped.
9. Installation of Type 1 or Type 2 Seat belts that meet the requirements of FMVSS No. 209 at each designated seating position if not already so equipped.

10. Every vehicle must be weighed. Any vehicle exceeding the gross vehicle weight rating (GVWR) limit for low speed vehicles (3,000 lbs.) must have a sufficient number of designated seating positions removed to bring the GVWR below that limit.

11. Every vehicle must be checked to ensure that it does not exceed the maximum (25 MPH) speed requirement. Any vehicle that does not meet the requirement must have its control system reprogrammed to ensure that the vehicle meets the maximum speed requirement.

12. Every vehicle must be checked to ensure that it can meet the minimum (20 mph) speed requirement. Any vehicle that does not meet the requirement must have its control system reprogrammed to ensure that the vehicle meets the minimum speed requirement.

In addition, the petitioner states that a vehicle identification number plate or label must be installed to meet the requirements of 49 CFR part 565 if the vehicle is not already so equipped.

It should be noted that the publication of this notice is not an acknowledgment that the vehicle that is the subject of the petition, the 2012 Lita GLE-6, is a low speed vehicle. In addition, in NHTSA's view, a vehicle that is not a low speed vehicle may not be converted to one by installing a governor (electronic or mechanical) or by removing weight such as by removing a seat, which may be reinstalled. The vehicle at issue is the 2012 Lita GLE-6. Comments are invited on these matters.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above addresses both before and after that date. To the extent possible, comments filed after the closing date will also be considered. Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

**Authority:** 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.95 and 501.8.

Issued on: May 14, 2013.

Accordingly, we recommend that you periodically search the Docket for new material.

**FOR FURTHER INFORMATION CONTACT:** Coleman Sachs, Office of Vehicle Safety Compliance, NHTSA (202–366–3151).

**SUPPLEMENTARY INFORMATION:****Background**

Under 49 U.S.C. 30141(a)(1)(A), a motor vehicle that was not originally manufactured to conform to all applicable FMVSS shall be refused admission into the United States unless NHTSA has decided that the motor vehicle is substantially similar to a motor vehicle originally manufactured for sale in the United States, certified under 49 U.S.C. 30115, and of the same model year as the model of the motor vehicle to be compared, and is capable of being readily altered to conform to all applicable FMVSS.

Petitions for eligibility decisions may be submitted by either manufacturers or importers who have registered with NHTSA pursuant to 49 CFR part 592. As specified in 49 CFR 593.7, NHTSA publishes notice in the **Federal Register** of each petition that it receives, and affords interested persons an opportunity to comment on the petition. At the close of the comment period, NHTSA decides, on the basis of the petition and any comments that it has received, whether the vehicle is eligible for importation. The agency then publishes this decision in the **Federal Register**.

Wallace Environmental Testing Laboratories, Inc (“WETL”), of Houston,

Texas (Registered Importer R–09–005) has petitioned NHTSA to decide whether non-U.S. certified 2003 BMW K 1200 GT motorcycles are eligible for importation into the United States. The vehicles that WETL believes are substantially similar are 2003 BMW K 1200 GT motorcycles that were manufactured for sale in the United States and certified by their manufacturer as conforming to all applicable FMVSS.

The petitioner claims that it carefully compared non-U.S. certified 2003 BMW K 1200 GT motorcycles to their U.S. certified counterparts, and found the vehicles to be substantially similar with respect to compliance with most FMVSS.

WETL submitted information with its petition intended to demonstrate that non-U.S. certified 2003 BMW K 1200 GT motorcycles, as originally manufactured, conform to many FMVSS in the same manner as their U.S. certified counterparts, or are capable of being readily altered to conform to those standards. Specifically, the petitioner claims that non-U.S. certified 2003 BMW K 1200 GT motorcycles are identical to their U.S. certified counterparts with respect to compliance with Standard Nos. 106 *Brake Hoses*, 116 *Brake Fluid*, 119 *New Pneumatic Tires for Vehicles other than Passenger Cars*, 122 *Motorcycle Brake Systems*, 205 *Glazing Materials*.

The petitioner further contends that the vehicles are capable of being readily altered to meet the following standards, in the manner indicated below:

Standard No. 108 *Lamps, Reflective Devices and Associated Equipment:* installation of the following U.S.-certified components: front amber reflectors, rear red reflectors, and front running lights.

Standard No. 111 *Rearview Mirrors:* installation of U.S.-model mirrors.

Standard No. 120 *Tire Selection and Rims for Vehicles other than Passenger Cars:* installation of a tire information placard and inspection of each vehicle to assure compliance with rim marking requirements.

Standard No. 123 *Motorcycle Controls and Displays:* installation of a U.S.-model speedometer/odometer unit.

WETL further states that labels will be affixed to conform to the requirements of 49 CFR part 567: *Certification*.

All comments received before the close of business on the closing date indicated above will be considered, and will be available for examination in the docket at the above addresses both before and after that date. To the extent possible, comments filed after the closing date will also be considered.

Notice of final action on the petition will be published in the **Federal Register** pursuant to the authority indicated below.

**Authority:** 49 U.S.C. 30141(a)(1)(A) and (b)(1); 49 CFR 593.8; delegations of authority at 49 CFR 1.95 and 501.8.

Issued On: May 14, 2013.

## DEPARTMENT OF THE TREASURY

### Submission for OMB Review; Comment Request

May 15, 2013.

The Department of the Treasury will submit the following information collection requests to the Office of Management and Budget (OMB) for review and clearance in accordance with the Paperwork Reduction Act of 1995, Public Law 104-13, on or after the date of publication of this notice.

**DATES:** Comments should be received on or before June 20, 2013 to be assured of consideration.

**ADDRESSES:** Send comments regarding the burden estimate, or any other aspect of the information collection, including suggestion for reducing the burden, to (1) Office of Information and Regulatory Affairs, Office of Management and Budget, Attention: Desk Officer for Treasury, New Executive Office Building, Room 10235, Washington, DC 20503, or email at [OIRA\\_Submission@OMB.EOP.GOV](mailto:OIRA_Submission@OMB.EOP.GOV) and (2) Treasury PRA Clearance Officer, 1750 Pennsylvania Ave. NW., Suite 8140, Washington, DC 20220, or email at [PRA@treasury.gov](mailto:PRA@treasury.gov).

**FOR FURTHER INFORMATION CONTACT:** Copies of the submission(s) may be obtained by calling (202) 927-5331, email at [PRA@treasury.gov](mailto:PRA@treasury.gov), or the entire information collection request maybe found at [www.reginfo.gov](http://www.reginfo.gov).

#### Internal Revenue Service (IRS)

*OMB Number:* 1545-0138.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* U.S. Departing Alien Income Tax Statement.

*Form:* 2063.

*Abstract:* Form 2063 is used by a departing resident alien against whom a termination assessment has not been made, or a departing non-resident alien who has no taxable income from United States sources, to certify that they have satisfied all U.S. income tax obligations. The data is used by the IRS to certify that departing aliens have complied with U.S. income tax laws.

*Affected Public:* Individuals or Households.

*Estimated Annual Burden Hours:* 17,049.

*OMB Number:* 1545-0236.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* Occupational Tax and Registration Return for Wagering.

*Form:* 11-C

*Abstract:* Form 11-C is used to register persons accepting wagers (IRC section 4412). IRS uses this form to register the respondent, collect the annual stamp tax (IRC section 4411), and to verify that the tax on wagers is reported on Form 730.

*Affected Public:* Private Sector: Businesses or other for-profits.

*Estimated Annual Burden Hours:* 81,190.

*OMB Number:* 1545-1130.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* Special Loss Discount Account and Special Estimated Tax Payments for Insurance Companies.

*Form:* 8816.

*Abstract:* Form 8816 is used by insurance companies claiming an additional deduction under IRC section 847 to reconcile their special loss discount and special estimated tax payments, and to determine their tax benefit associated with the deduction. The information is needed by the IRS to determine that the proper additional deduction was claimed and to insure the proper amount of special estimated tax was computed and deposited.

*Affected Public:* Private Sector: Businesses or other for-profits.

*Estimated Annual Burden Hours:* 19,830.

*OMB Number:* 1545-1299.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* TD 8459—Settlement Funds (REG-IA-54-90).

*Abstract:* The reporting requirements affect taxpayers that are qualified

settlement funds; they will be required to file income tax returns, estimated income tax returns, and withholding tax returns. The information will facilitate taxpayer examinations.

*Affected Public:* Private Sector: Businesses or other for-profits.

*Estimated Annual Burden Hours:* 3,542.

*OMB Number:* 1545-1451.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* TD 8712—Definition of Private Activity Bonds.

*Abstract:* Section 103 provides generally that interest on certain State or local bonds is excluded from gross income. However, under sections 103(b)(1) and 141, interest on private activity bonds (other than qualified bonds) is not excluded. The regulations provide rules, for purposes of section 141, to determine how bond proceeds are measured and used and how debt service for those bonds is paid or secured.

*Affected Public:* State, Local, and Tribal Governments.

*Estimated Annual Burden Hours:* 30,100.

*OMB Number:* 1545-1724.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* TD 9076—Special Rules Under Section 417(a)(7) for Written Explanations Provided by Qualified Retirement Plans After Annuity Starting Dates (REG-109481-99).

*Abstract:* The collection of information requirement in sections 1.417(e)-1(b)(3)(iv)(B) and 1.417(e)-1(b)(3)(v)(A) is required to ensure that a participant and the participant's spouse consent to a form of distribution from a qualified plan that may result in reduced periodic payments.

*Affected Public:* Individuals or Households.

*Estimated Annual Burden Hours:* 12,500.

*OMB Number:* 1545-1732.

*Type of Review:* Extension without change of a currently approved collection.

*Title:* TD 8995—Mid-Contract Change in Taxpayer (REG-105946-00).

*Abstract:* The information is needed by taxpayers who assume the obligation to account for the income from long-term contracts as the result of certain nontaxable transactions.

*Affected Public:* Private Sector: Businesses or other for-profits.

*Estimated Annual Burden Hours:* 10,000.

OMB Number: 1545-2154.

Type of Review: Extension without change of a currently approved collection.

Title: Short Form Request for Individual Tax Return Transcript.

Form: 4506T-EZ, 4506T-EZ (SP).

Abstract: Form 4506T-EZ is used to request tax return transcripts. A taxpayer may designate a third party to receive the transcript.

Affected Public: Individuals or Households.

Estimated Annual Burden Hours: 870,000.

Dawn D. Wolfgang,

Treasury PRA Clearance Officer.

BILLING CODE 4830-01-P

## DEPARTMENT OF THE TREASURY

### Office of Foreign Assets Control

#### Identification of Additional Vessels Pursuant to the Iranian Transactions and Sanctions Regulations and Executive Order 13599

AGENCY: Office of Foreign Assets Control, Treasury.

ACTION: Notice.

**SUMMARY:** The Treasury Department's Office of Foreign Assets Control ("OFAC") is publishing the names of eight vessels identified as property in which the Government of Iran has an interest that are blocked pursuant to the Iranian Transactions and Sanctions Regulations, 31 CFR part 560 ("ITSR") and Executive Order 13599 and is also updating the entries on OFAC's list of Specially Designated Nationals and Blocked Persons to identify the new names and/or other information associated with eight previously-identified vessels.

**DATES:** The identification and updates made by the Director of OFAC of the vessels identified in this notice, pursuant to the ITSR and Executive Order 13599, was effective May 9, 2013.

**FOR FURTHER INFORMATION CONTACT:** Assistant Director, Sanctions Compliance and Evaluation, Office of Foreign Assets Control, Department of the Treasury, Washington, DC 20220, Tel.: 202-622-2490.

#### SUPPLEMENTARY INFORMATION:

##### Electronic and Facsimile Availability

This document and additional information concerning OFAC are available from OFAC's Web site ([www.treas.gov/ofac](http://www.treas.gov/ofac)) or via facsimile through a 24-hour fax-on-demand service, Tel.: 202-622-0077.

### Background

On February 5, 2012, the President issued Executive Order 13599, "Blocking Property of the Government of Iran and Iranian Financial Institutions" (the "Order"). Section 1(a) of the Order blocks, with certain exceptions, all property and interests in property of the Government of Iran, including the Central Bank of Iran, that are in the United States, that hereafter come within the United States, or that are or hereafter come within the possession or control of any United States person, including any foreign branch.

Section 7(d) of the Order defines the term "Government of Iran" to mean the Government of Iran, any political subdivision, agency, or instrumentality thereof, including the Central Bank of Iran, and any person owned or controlled by, or acting for or on behalf of, the Government of Iran.

Section 560.211 of the ITSR implements Section 1(a) of the Order. Section 560.304 of the ITSR defines the term "Government of Iran" to include: "(a) The state and the Government of Iran, as well as any political subdivision, agency, or instrumentality thereof, including the Central Bank of Iran; (b) Any person owned or controlled, directly or indirectly, by the foregoing; and (c) Any person to the extent that such person is, or has been, since the effective date, acting or purporting to act, directly or indirectly, for or on behalf of any of the foregoing; and (d) Any other person determined by the Office of Foreign Assets Control to be included within [(a) through (c)]." Section 560.313 of the ITSR further defines an "entity owned or controlled by the Government of Iran" to include "any corporation, partnership, association, or other entity in which the Government of Iran owns a 50 percent or greater interest or a controlling interest, and any entity which is otherwise controlled by that government."

On July 12, 2012, the Director of OFAC identified fifty-eight vessels as property in which the Government of Iran has an interest that are blocked pursuant to the Order and the ITSR.

On May 9, 2013, the Director of OFAC identified eight vessels as property in which the Government of Iran has an interest that are blocked pursuant to the Order and the ITSR. On the same date, the Director of OFAC also updated the entries on OFAC's list of Specially Designated Nationals and Blocked Persons for eight of the vessels identified on July 12, 2012, as property in which the Government of Iran has an

interest to identify new names or other information given to those vessels.

The listing for the newly-identified vessels is as follows:

1. ATLANTIS (5IM316) Crude Oil Tanker Tanzania flag (NITC); Vessel Registration Identification 9569621 (vessel) [IRAN].
2. BADR (EQJU) Iran flag; Vessel Registration Identification 8407345 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).
3. DEMOS (5IM656) Crude Oil Tanker Tanzania flag (NITC); Vessel Registration Identification 9569683 (vessel) [IRAN].
4. INFINITY (5IM411) Crude Oil Tanker Tanzania flag (NITC); Vessel Registration Identification 9569671 (vessel) [IRAN].
5. JUSTICE Crude Oil Tanker None Identified flag; Vessel Registration Identification 9357729 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).
6. SUNRISE (None identified) LPG Tanker None Identified flag (NITC); Vessel Registration Identification 9615092 (vessel) [IRAN].
7. SKYLINE (5IM632) Crude Oil Tanker Tanzania flag; Vessel Registration Identification 9569669 (vessel) [IRAN].
8. YOUNES (EQYY) Platform Supply Ship Iran flag; Vessel Registration Identification 8212465 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).

The updated entries for the previously-identified vessels are as follows:

1. SHONA (f.k.a. ABADAN; f.k.a. ALPHA) (T2EU4) Crude/Oil Products Tanker Tanzania flag; Former Vessel Flag Malta; alt. Former Vessel Flag Tuvalu; alt. Former Vessel Flag None Identified; Vessel Registration Identification IMO 9187629; MMSI 572469210 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).
2. DAMAVAND (9HEG9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9218478; MMSI 256865000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).
3. DARAB (9HEE9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9218492; MMSI 256862000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).
4. DAYLAM (9HEU9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9218466; MMSI 256872000 (vessel) [IRAN] (Linked To:

NATIONAL IRANIAN TANKER COMPANY).

5. DELVAR (9HEF9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9218454; MMSI 256864000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).

6. DENA (9HED9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9218480; MMSI 256861000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).

7. HUWAYZEH (9HEJ9) Crude Oil Tanker None Identified flag; Former Vessel Flag Malta; Vessel Registration Identification IMO 9212888; MMSI 256869000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).

8. SUNEAST (f.k.a. AZALEA; f.k.a. SINA) (9HNY9) Crude Oil Tanker Seychelles flag; Former Vessel Flag Malta; alt. Former Vessel Flag Tuvalu; alt. Former Vessel Flag None Identified; Vessel Registration Identification IMO 9357365; MMSI 249256000 (vessel) [IRAN] (Linked To: NATIONAL IRANIAN TANKER COMPANY).

Dated: May 10, 2013.

**BILLING CODE 4810-AL-P**

**DEPARTMENT OF THE TREASURY**

**Office of Foreign Assets Control**

**Additional Designations, Foreign Narcotics Kingpin Designation Act**

**AGENCY:** Office of Foreign Assets Control, Treasury.

**ACTION:** Notice.

**SUMMARY:** The U.S. Department of the Treasury's Office of Foreign Assets Control ("OFAC") is publishing the name of one individual whose property and interests in property has been blocked pursuant to the Foreign Narcotics Kingpin Designation Act ("Kingpin Act") (21 U.S.C. 1901-1908, 8 U.S.C. 1182).

**DATES:** The designation by the Director of OFAC of the one individual identified in this notice pursuant to section 805(b) of the Kingpin Act is effective on May 14, 2013.

**FOR FURTHER INFORMATION CONTACT:** Assistant Director, Sanctions Compliance & Evaluation, Office of Foreign Assets Control, U.S. Department of the Treasury, Washington, DC 20220, Tel: (202) 622-2490.

**SUPPLEMENTARY INFORMATION:**

**Electronic and Facsimile Availability**

This document and additional information concerning OFAC are available on OFAC's Web site at <http://www.treasury.gov/ofac> or via facsimile through a 24-hour fax-on-demand service at (202) 622-0077.

**Background**

The Kingpin Act became law on December 3, 1999. The Kingpin Act establishes a program targeting the activities of significant foreign narcotics traffickers and their organizations on a worldwide basis. It provides a statutory framework for the imposition of sanctions against significant foreign narcotics traffickers and their organizations on a worldwide basis, with the objective of denying their businesses and agents access to the U.S. financial system and the benefits of trade and transactions involving U.S. companies and individuals.

The Kingpin Act blocks all property and interests in property, subject to U.S.

jurisdiction, owned or controlled by significant foreign narcotics traffickers as identified by the President. In addition, the Secretary of the Treasury, in consultation with the Attorney General, the Director of the Central Intelligence Agency, the Director of the Federal Bureau of Investigation, the Administrator of the Drug Enforcement Administration, the Secretary of Defense, the Secretary of State, and the Secretary of Homeland Security may designate and block the property and interests in property, subject to U.S. jurisdiction, of persons who are found to be: (1) materially assisting in, or providing financial or technological support for or to, or providing goods or services in support of, the international narcotics trafficking activities of a person designated pursuant to the Kingpin Act; (2) owned, controlled, or directed by, or acting for or on behalf of, a person designated pursuant to the Kingpin Act; or (3) playing a significant role in international narcotics trafficking.

On May 14, 2013, the Director of OFAC designated the following individual whose property and interests in property are blocked pursuant to section 805(b) of the Kingpin Act.

**Individual:**

1. ANDRADE PARRA, Alfredo, Ciudad Acuna, Coahuila, Mexico; DOB 30 Dec 1973; POB Ciudad Acuna, Coahuila, Mexico; alt. POB Coahuila, Mexico; nationality Mexico; citizen Mexico; C.U.R.P. AAPA731230HCLNRL07 (Mexico) (individual) [SDNTK].

Dated: May 14, 2013.

40 CFR Parts 79, 80, 85 et al.

Control of Air Pollution From Motor Vehicles: Tier 3 Motor Vehicle  
Emission and Fuel Standards; Proposed Rule

**ENVIRONMENTAL PROTECTION AGENCY**

**40 CFR Parts 79, 80, 85, 86, 600, 1036, 1037, 1065, and 1066**

[EPA-HQ-OAR-2011-0135; FRL-9785-8]

RIN 2060-AQ86

**Control of Air Pollution From Motor Vehicles: Tier 3 Motor Vehicle Emission and Fuel Standards**

**AGENCY:** Environmental Protection Agency (EPA).

**ACTION:** Proposed Rule.

**SUMMARY:** This action would establish more stringent vehicle emissions standards and reduce the sulfur content of gasoline beginning in 2017, as part of a systems approach to addressing the impacts of motor vehicles and fuels on air quality and public health. The proposed gasoline sulfur standard would make emission control systems more effective for both existing and new vehicles, and would enable more stringent vehicle emissions standards. The proposed vehicle standards would reduce both tailpipe and evaporative emissions from passenger cars, light-duty trucks, medium-duty passenger vehicles, and some heavy-duty vehicles. This would result in significant reductions in pollutants such as ozone, particulate matter, and air toxics across the country and help state and local agencies in their efforts to attain and maintain health-based National Ambient Air Quality Standards. Motor vehicles are an important source of exposure to air pollution both regionally and near roads. These proposed vehicle standards are intended to harmonize with California's Low Emission Vehicle program, thus creating a federal vehicle emissions program that would allow automakers to sell the same vehicles in all 50 states. The proposed vehicle standards would be implemented over the same timeframe as the greenhouse gas/fuel efficiency standards for light-duty vehicles, as part of a comprehensive approach toward regulating emissions from motor vehicles.

**DATES:** *Comments.* Comments must be received on or before June 13, 2013.

*Public Hearing:* The public hearings were held on April 24, 2013 in Philadelphia, PA and April 29, 2013 in Chicago, IL.

**ADDRESSES:** Submit your comments, identified by Docket ID No. EPA-HQ-OAR-2011-0135, by one of the following methods:

- *www.regulations.gov:* Follow the on-line instructions for submitting comments.
- *Email: A-and-R-Docket@epamail.epa.gov.*
- *Mail:* Air and Radiation Docket and Information Center, Environmental Protection Agency, Mailcode: 2822T, 1200 Pennsylvania Ave. NW., Washington, DC 20460. In addition, please mail a copy of your comments on the information collection provisions to the Office of Information and Regulatory Affairs, Office of Management and Budget (OMB), Attn: Desk Officer for EPA, 725 17th St. NW., Washington, DC 20503.
- *Hand Delivery:* EPA Docket Center, EPA West Building, Room 3334, 1301 Constitution Ave. NW., Washington, DC 20460. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

*Instructions:* Direct your comments to Docket ID No. EPA-HQ-OAR-2011-0135. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at *www.regulations.gov*, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through *www.regulations.gov* or email. The *www.regulations.gov* Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through *www.regulations.gov* your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact

you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA's public docket visit the EPA Docket Center homepage at *http://www.epa.gov/epahome/dockets.htm*. For additional instructions on submitting comments, go to Section I.B of the **SUPPLEMENTARY INFORMATION** section of this document.

*Docket:* All documents in the docket are listed in the *www.regulations.gov* index. Although listed in the index, some information is not publicly available, e.g., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, will be publicly available only in hard copy. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy at the Air and Radiation Docket and Information Center, EPA/DC, EPA West, Room 3334, 1301 Constitution Ave. NW., Washington, DC. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the Air Docket is (202) 566-1742.

**FOR FURTHER INFORMATION CONTACT:** JoNell Iffland, Office of Transportation and Air Quality, Assessment and Standards Division (ASD), Environmental Protection Agency, 2000 Traverwood Drive, Ann Arbor, MI 48105; Telephone number: (734) 214-4454; Fax number: (734) 214-4816; Email address: *iffland.jonell@epa.gov*.

**SUPPLEMENTARY INFORMATION:**

**I. General Information**

*A. Does this action apply to me?*

Entities potentially affected by this proposed rule include gasoline refiners and importers, ethanol producers, gasoline additive manufacturers, transmix processors, terminals and fuel distributors, light-duty vehicle manufacturers, independent commercial importers, alternative fuel converters, and manufacturers and converters of vehicles between 8,500 and 14,000 lbs gross vehicle weight rating (GVWR).

Potentially regulated categories include:

Category	NAICS <sup>a</sup> Code	SIC <sup>b</sup> Code	Examples of potentially affected entities
Industry .....	324110	2911	Petroleum refineries (including importers).
Industry .....	325110	2869	Butane manufacturers.

Category	NAICS <sup>a</sup> Code	SIC <sup>b</sup> Code	Examples of potentially affected entities
Industry .....	325193	2869	Ethyl alcohol manufacturing.
Industry .....	211112	1321	Natural gas liquids extraction and fractionation.
Industry .....	325199	2869	Other basic organic chemical manufacturing.
Industry .....	486910	4613	Natural gas liquids pipelines, refined petroleum products pipelines.
Industry .....	424690	5169	Chemical and allied products merchant wholesalers.
Industry .....	325199	2869	Manufacturers of gasoline additives.
Industry .....	424710	5171	Petroleum bulk stations and terminals. E51–83 manufacturers.
Industry .....	493190	4226	Other warehousing and storage-bulk petroleum storage.
Industry .....	336111, 336112	3711	Light-duty vehicle and light-duty truck manufacturers.
Industry .....	811111, 811112, 811198	7538, 7533, 7534	Independent commercial importers.
Industry .....	335312, 336312, 336322, 336399, 811198	3621, 3714, 3519, 3599, 7534	Alternative fuel converters.
Industry .....	333618, 336120, 336211, 336312	3699, 3711, 3713, 3714	On-highway heavy-duty engine & vehicle (>8,500 lbs GVWR) manufacturers.

<sup>a</sup> North American Industry Classification System (NAICS).

<sup>b</sup> Standard Industrial Classification (SIC).

This table is not intended to be exhaustive, but rather provides a guide for readers regarding entities likely to be regulated by this proposed action. This table lists the types of entities that EPA is now aware could potentially be regulated by this proposed action. Other types of entities not listed in the table could also be regulated. To determine whether your activities would be regulated by this proposed action, you should carefully examine the applicability criteria in 40 CFR parts 79, 80, 85, 86, 1065, and 1066 and the referenced regulations. If you have any questions regarding the applicability of this proposed action to a particular entity, consult the person listed in the preceding **FOR FURTHER INFORMATION CONTACT** section.

#### B. What should I consider as I prepare my comments for EPA?

##### 1. Submitting CBI

Do not submit this information to EPA through [www.regulations.gov](http://www.regulations.gov) or email. Clearly mark the part or all of the information that you claim to be CBI. For CBI information in a disk or CD ROM that you mail to EPA, mark the outside of the disk or CD ROM as CBI and then identify electronically within the disk or CD ROM the specific information that is claimed as CBI. In addition to one complete version of the comment that includes information claimed as CBI, a copy of the comment that does not contain the information claimed as CBI must be submitted for inclusion in the public docket. Information so marked will not be

disclosed except in accordance with procedures set forth in 40 CFR part 2.

##### 2. Tips for Preparing Your Comments

When submitting comments, remember to:

- Identify the rulemaking by docket number and other identifying information (subject heading, **Federal Register** date and page number).
- Follow directions—The agency may ask you to respond to specific questions or organize comments by referencing a Code of Federal Regulations (CFR) part or section number.
- Explain why you agree or disagree, suggest alternatives, and substitute language for your requested changes.
- Describe any assumptions and provide any technical information and/or data that you used.
- If you estimate potential costs or burdens, explain how you arrived at your estimate in sufficient detail to allow for it to be reproduced.
- Provide specific examples to illustrate your concerns, and suggest alternatives.
- Explain your views as clearly as possible, avoiding the use of profanity or personal threats.
- Make sure to submit your comments by the comment period deadline identified.

##### C. Did EPA conduct a peer review before issuing this notice?

This regulatory action was supported by influential scientific information. Therefore, EPA conducted peer reviews in accordance with OMB's Final Information Quality Bulletin for Peer

Review. Specifically, EPA conducted six peer reviews in connection with data supporting the proposed Tier 3 program, including new research on the effects of fuel properties changes (including sulfur effects) on exhaust and evaporative emissions of Tier 2 vehicles. The refinery-by-refinery cost model was also peer reviewed. The peer review reports are located in the docket for today's action, as well as the agency's response to the peer review comments.

##### Table of Contents

- I. Executive Summary and Overview of Proposed Program
  - A. Introduction
  - B. What are the basic components of the proposed program?
    1. Proposed Standards for Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle Tailpipe Emissions
    2. Proposed Heavy-Duty Vehicle Tailpipe Emissions Standards
    3. Proposed Evaporative Emission Standards
    4. Onboard Diagnostic Systems (OBD)
    5. Emissions Test Fuel
    6. Fuel Standards
    7. Regulatory Streamlining and Technical Amendments
  - C. What would the impacts of the proposed standards be?
- II. Why is EPA making this proposal?
  - A. Basis for Action Under the Clean Air Act
    1. Clean Air Act Section 202
    2. Clean Air Act Section 211
  - B. Overview of Public Health Impacts of Motor Vehicles and Fuels
    1. Ozone
    2. Particulate Matter
    3. Nitrogen Oxides and Sulfur Oxides
    4. Carbon Monoxide

- 5. Mobile Source Air Toxics
- 6. Near-Roadway Pollution
- 7. Environmental Impacts of Motor Vehicles and Fuels
- III. How would this proposal reduce emissions and air pollution?
  - A. Effects of the Proposed Vehicle and Fuel Changes on Mobile Source Emissions
    - 1. How do vehicles produce the emissions addressed in this proposal?
    - 2. How would the proposed changes to gasoline sulfur content affect vehicle emissions?
  - B. How would emissions be reduced?
    - 1. NO<sub>x</sub>
    - 2. VOC
    - 3. CO
    - 4. Direct PM<sub>2.5</sub>
    - 5. Air Toxics
    - 6. SO<sub>2</sub>
    - 7. Greenhouse Gases
  - C. How would air pollution be reduced?
    - 1. Ozone
    - 2. Particulate Matter
    - 3. Nitrogen Dioxide
    - 4. Air Toxics
    - 5. Visibility
    - 6. Nitrogen and Sulfur Deposition
    - 7. Environmental Justice
- IV. Proposed Vehicle Emissions Program
  - A. Tailpipe Emission Standards for Light-Duty Vehicles, Light-Duty Trucks, and Medium-Duty Passenger Vehicles
    - 1. Overview
    - 2. Summary of Proposed FTP and SFTP Tailpipe Standards

## I. Executive Summary and Overview of Proposed Program

### A. Introduction

In this action, EPA is proposing a major program designed to reduce air pollution from passenger cars and trucks. This program includes new standards for both vehicle emissions and the sulfur content of gasoline, considering the vehicle and its fuel as an integrated system. We refer to this proposed program as the “Tier 3” vehicle and fuel standards.

This proposed rule is part of a comprehensive approach to address the impacts of motor vehicles on air quality and public health. Over 158 million Americans are currently experiencing unhealthy levels of air pollution, which are linked with respiratory and cardiovascular problems and other adverse health impacts that lead to increased medication use, hospital admissions, emergency department visits, and premature mortality.<sup>1</sup> Motor vehicles are a particularly important source of exposure to air pollution, especially in urban areas. By 2014 we project that in many nonattainment areas, cars and light trucks will contribute 30–45 percent of total nitrogen oxides (NO<sub>x</sub>) emissions, 20–25 percent of total volatile organic compound (VOC) emissions, and 5–10 percent of total direct particulate matter (PM<sub>2.5</sub>) emissions.<sup>2</sup> These compounds form ozone, PM, and other air pollutants, whose health and environmental effects are described in more detail in Section II. Cars and light trucks also continue to be a significant contributor to air pollution directly near roads, with gasoline vehicles accounting for more than 50 percent of near-road concentrations of some criteria and

toxic pollutants.<sup>3</sup> More than 50 million people live, work, or go to school in close proximity to high-traffic roadways, and the average American spends more than one hour traveling along roads each day.<sup>4,5</sup> Almost 90 percent of daily trips use personal vehicles.<sup>6</sup>

The standards set forth in this proposed rule would significantly reduce levels of multiple air pollutants (such as ambient levels of ozone, PM, nitrogen dioxide (NO<sub>2</sub>), and mobile source air toxics (MSATs)) across the country, with immediate impacts expected due to the proposed sulfur control standards starting in 2017. These reductions would help state and local agencies in their effort to attain and maintain health-based National Ambient Air Quality Standards (NAAQS). Few other national strategies exist that would deliver the same magnitude of multi-pollutant reductions projected to result from the proposed Tier 3 standards. In the absence of additional controls, many areas will continue to have ambient ozone concentrations exceeding the NAAQS in the future. See Section III.C for more details.

The Clean Air Act authorizes EPA to establish emissions standards for motor vehicles to address air pollution that may reasonably be anticipated to endanger public health or welfare (section 202). EPA also has authority to establish fuel controls to address such air pollution (section 211). These statutory authorities are described in Section II.A.

The vehicle and gasoline sulfur standards we are proposing represent a “systems approach” to reducing vehicle-related exhaust and evaporative emissions by addressing the vehicle and fuel as a system. The systems approach enables emission reductions that are

both technologically feasible and cost-effective beyond what would be possible looking at vehicle and fuel standards in isolation. We first applied such an approach with our Tier 2 vehicle/gasoline sulfur standards (finalized in 2000).<sup>7</sup> We believe that a similar approach for the proposed Tier 3 standards would be a cost-effective way to achieve substantial additional emissions reductions.

The proposed Tier 3 standards include new light- and heavy-duty vehicle emission standards for exhaust emissions of VOC (specifically, non-methane organic gases, or NMOG), NO<sub>x</sub>, and PM, as well as evaporative emissions standards. The proposed standards for light-duty vehicle, light-duty truck, and medium-duty passenger vehicle tailpipe emissions are an 80 percent reduction in fleet average NMOG+NO<sub>x</sub> compared to current standards, and a 70 percent reduction in per-vehicle PM standards. The proposed Tier 3 heavy-duty vehicle tailpipe emissions standards provide reductions in both NMOG+NO<sub>x</sub> and PM that are on the order of 60 percent, compared to current standards. The proposed evaporative emissions standards represent a 50 percent reduction from current standards.

The vehicle emission standards, combined with the proposed reduction of gasoline sulfur content from the current 30 parts per million (ppm) average down to a 10-ppm average, would result in dramatic emissions reductions for NO<sub>x</sub>, VOC, direct PM<sub>2.5</sub>, carbon monoxide (CO) and air toxics. For example, in 2030, when Tier 3 vehicles would make up the majority of the fleet as well as vehicle miles travelled, NO<sub>x</sub> and VOC emissions from on-highway vehicles would be reduced by about one quarter, and CO emissions would be reduced by about 30 percent. Emissions of many air toxics would also be reduced by 10 to nearly 40 percent of national emissions from on-highway vehicles. Reductions would continue beyond 2030 as more of the fleet is composed of Tier 3 vehicles. For example, the Tier 3 program would reduce on-highway emissions of NO<sub>x</sub> and VOC nearly 40 percent by 2050, when Tier 3 vehicles would comprise almost the entire fleet.

Gasoline vehicles depend to a great degree on catalytic converters to reduce levels of pollutants in their exhaust, including NMOG and NO<sub>x</sub>, as well as PM (specifically, the volatile hydrocarbon fraction), CO, and most air toxics. The catalytic converters become significantly less efficient when sulfur

<sup>7</sup> 65 FR 6698 (February 10, 2000).

from the gasoline is deposited (adsorbed) onto the precious metals that catalyze the reactions to reduce the emissions. The Tier 2 rulemaking required refiners to take steps to reduce sulfur levels in gasoline by approximately 90 percent, to an average of 30 ppm. As discussed in Section IV.A.6, subsequent research provides a compelling case that even this level of sulfur not only degrades the emission performance of vehicles on the road today, but also inhibits necessary further reductions in vehicle emissions performance to reach the proposed Tier 3 standards. Thus, the proposed Tier 3 10-ppm average sulfur standard is significant in two ways: it enables vehicles designed to the proposed Tier 3 tailpipe exhaust standards to meet these standards in-use for the duration of their useful life, and it facilitates immediate emission reductions from all the vehicles on the road at the time the sulfur controls are implemented. Lower sulfur gasoline also facilitates the development of lower-cost technologies to improve fuel economy. Sulfur in the fuel quickly causes the fuel economy benefits of lean-burn technologies to disappear due to its effect on NO<sub>x</sub> adsorber operation requiring more fuel to be burned. We are not the first regulatory agency to recognize the need for lower-sulfur gasoline. Agencies in Europe and Japan have already imposed gasoline sulfur caps of 10 ppm, and the State of California is already averaging 10 ppm sulfur with a per gallon cap of 20 ppm. Other states are preempted by the Clean Air Act from adopting new fuel programs to meet air quality objectives. Consequently, they could not receive the air quality benefits of lower sulfur gasoline without federal action.

This proposal is one aspect of a comprehensive national program regulating emissions from motor vehicles. EPA's recent final rule for reducing greenhouse gas (GHG) emissions from light-duty (LD) vehicles starting with model year (MY) 2017 (referred to here as the "2017 LD GHG" standards) is another aspect of this comprehensive program.<sup>8</sup> The Tier 3 proposal addresses interactions with the 2017 LD GHG rule in a manner that aligns implementation of the two actions, to achieve significant criteria pollutant and GHG emissions reductions while providing regulatory certainty and compliance efficiency. As vehicle manufacturers introduce new vehicle platforms for compliance with the GHG standards, they will be able to design them for compliance with the Tier 3 standards at the same time. The

proposed Tier 3 standards are also closely coordinated with California's Low Emission Vehicle (LEV III) program to create a vehicle emissions program that would allow automakers to sell the same vehicles in all 50 states. (In December 2012 EPA approved a waiver of Clean Air Act preemption for the California Air Resources Board's (CARB's) LEV III program with compliance beginning in 2015. Ten states have adopted the LEV III program under Section 177 of the Clean Air Act.<sup>9</sup>) We have worked closely with individual vehicle manufacturers and their trade associations, who have emphasized the importance of a harmonized national program. Together, the Tier 3, 2017 LD GHG, and LEV III standards would maximize reductions in GHGs, criteria pollutants and air toxics from motor vehicles while streamlining programs and enabling manufacturers to design a single vehicle for nationwide sales, thus reducing their costs of compliance. In this way, the Tier 3 proposal responds to the May 21, 2010 Presidential Memorandum that requested that EPA develop a comprehensive approach toward regulating motor vehicles, including consideration of non-GHG emissions standards.<sup>10</sup>

As part of the systems approach to this program, we are considering the future fuels on which vehicles will be operating. In particular, the renewable fuels mandate that was revised by the Energy Independence and Security Act (EISA) and is being implemented through the Renewable Fuel Standards program (RFS2)<sup>11</sup> will result in significant amounts of ethanol-blended gasoline in the implementation timeframe of the proposed Tier 3 program. We are proposing to update the specifications of the certification test fuel with which vehicles demonstrate compliance with emissions standards, in order to better reflect the ethanol content and other properties of gasoline that will be in use.

This section provides an overview of the vehicle- and fuel-related standards we are proposing as well as the impacts of the proposed standards. The public health issues and statutory requirements that have prompted this proposal are described in Section II, and our discussion of how the proposal would

reduce emissions and air pollution is presented in Section III. Details of proposed standards and how they would be implemented can be found in Sections IV through VI. Sections VII through X contain our discussion of the proposed standards' technological feasibility and cost, benefits, alternatives and economic impacts.

#### *B. What are the basic components of the proposed program?*

In the more than 10 years since EPA finalized the Tier 2 Vehicle Program, manufacturers of light-duty vehicles have continued to develop a wide range of improved technologies capable of reducing key exhaust emissions, especially VOC, NO<sub>x</sub>, and PM. The California LEV II program has been instrumental in the continuous technology improvements by requiring year after year reductions in the fleet average hydrocarbon levels, in addition to requiring the introduction of advanced exhaust and evaporative emission controls in partial zero emission vehicles (PZEVs). This progress in vehicle technology has made it possible for manufacturers to achieve emission reductions well beyond the requirements of the Tier 2 program if gasoline sulfur levels are lowered further.

As a result, we are proposing new standards for exhaust emissions of NMOG, NO<sub>x</sub>, and PM, as well as evaporative emissions standards. These standards would phase in beginning with MY 2017. The proposed Tier 3 standards are very similar in structure to those in the existing Tier 2 program. As with the Tier 2 program, the proposed standards would apply to all light-duty vehicles (LDVs, or passenger cars), light-duty trucks (LDT1s, LDT2s, LDT3s, and LDT4s) and Medium-Duty Passenger Vehicles (or MDPVs). We are also proposing separate but closely related standards for heavy-duty vehicles up to 14,000 lbs Gross Vehicle Weight Rating (GVWR). These vehicles were not included in Tier 2 but were made subject to new standards in a final rule that covered the broad heavy-duty sector (66 FR 5002, January 18, 2001). We have concluded that the proposed vehicle emissions standards, in conjunction with the reductions in fuel sulfur also proposed in this action, are feasible across the fleet in the proposed time frame.

In the discussions of the various elements of our proposed program for light- and heavy-duty vehicles throughout this preamble, we describe how the provisions would be consistent with the California Air Resources Board (CARB) LEV III program. Auto

<sup>9</sup> These states include Connecticut, Maryland, Maine, Massachusetts, New Jersey, New York, Pennsylvania, Rhode Island, Washington, and Vermont.

<sup>10</sup> The Presidential Memorandum is found at: <http://www.whitehouse.gov/the-press-office/presidential-memorandum-regarding-fuel-efficiency-standards>.

<sup>11</sup> 75 FR 14670 (March 26, 2010).

<sup>8</sup> 77 FR 62623 (October 15, 2012).

manufacturers have stressed to us the importance of their being able to design and produce a single fleet of vehicles in all 50 states that would comply with requirements under the Tier 3 program and the LEV III program, as well as greenhouse gas/Corporate Average Fuel Economy (CAFE) requirements in the same timeframe. Consistency among the federal and California programs means that special versions of vehicles with different emission control hardware and calibrations would not be necessary for different geographic areas. This would allow manufacturers to avoid the additional costs of parallel design, development, calibration, and manufacturing. Consistency among programs would also eliminate the need to supply aftermarket parts for repair of multiple versions of a vehicle. To that end, we worked closely with CARB and with the vehicle manufacturers, both with individual companies and with their trade associations, to align the two programs in most respects.

We have also designed the proposed Tier 3 program to be implemented in the same timeframe as the federal and California GHG emissions and fuel economy standards for model years 2017–2025. We expect that in response to these programs, manufacturers will be developing entirely new powertrains for most of their vehicles. Because the Tier 3 standards would phase in over the same timeframe, manufacturers would be in a position to simultaneously respond to all of these requirements.

#### 1. Proposed Standards for Light-Duty Vehicle, Light-Duty Truck, and Medium-Duty Passenger Vehicle Tailpipe Emissions

We are proposing a comprehensive program that would include new fleet-average standards for the sum of NMOG and NO<sub>x</sub> tailpipe emissions (presented as NMOG+NO<sub>x</sub>) and for PM.<sup>12</sup> These proposed standards, when applied in conjunction with reduced gasoline sulfur content, would result in very significant improvements in vehicle

emissions from the levels of the Tier 2 program. For these pollutants, we are proposing standards as measured on test procedures that represent a range of vehicle operation, including the Federal Test Procedure (or FTP, simulating typical driving) and the Supplemental Federal Test Procedure (or SFTP, a composite test simulating higher temperatures, higher speeds, and quicker accelerations). In addition to the standards, we are also proposing to extend the regulatory useful life period during which the standards apply and to make test fuel more representative of expected real-world fuel (see Section I.B.5 below).

As discussed in Section IV.A.6., the impact of gasoline sulfur poisoning on exhaust catalyst performance provides a compelling argument, particularly for larger vehicles and trucks, that these vehicle standards would be achievable only with a reduction of gasoline sulfur content from the current 30-ppm average down to a 10-ppm average. Sulfur is a well-known catalyst poison. The nature of sulfur's interactions with active catalytic materials is complex and varies with catalyst composition, exhaust gas composition and exhaust temperature. Thus, even if a manufacturer were able to certify a new vehicle to the proposed new stringent standards, the manufacturer's ability to maintain the emission performance of that vehicle in-use is greatly jeopardized if the vehicle is being operated on gasoline sulfur levels greater than 10 ppm. Vehicle manufacturers, both individually and through their trade associations, have emphasized that reduced gasoline sulfur would be required to meet the proposed standards.<sup>13 14</sup> Due to the variation in actual vehicle operation, any amount of gasoline sulfur will deteriorate catalyst efficiency. However, we believe that a 10-ppm average sulfur level is sufficiently low to enable compliance with these proposed Tier 3 vehicle standards, and as described below and in Section V, reducing sulfur levels

further would cause sulfur control costs to quickly escalate.

The proposed FTP and SFTP NMOG+NO<sub>x</sub> standards would be fleet-average standards, meaning that a manufacturer would calculate the average emissions of the vehicles it sells in each model year and compare that average to the applicable standard for that model year. The manufacturer would certify each of its vehicles to a per-vehicle "bin" standard (see Section IV.A.2) and sales-weight these values to calculate its fleet-average NMOG+NO<sub>x</sub> emissions for each model year. The proposed fleet average standards for NMOG+NO<sub>x</sub> evaluated over the FTP are summarized in Table I–1. The standards for light-duty vehicles would begin in MY 2017 at a level representing a 46 percent reduction from the current Tier 2 requirements. (For vehicles over 6000 lbs GVWR, the standards would apply beginning in MY 2018). As shown, these proposed fleet-average standards would decline during the first several years of the program, becoming increasingly stringent until ultimately reaching an 81 percent reduction when the transition is complete. The proposed FTP NMOG+NO<sub>x</sub> program includes two separate sets of declining fleet-average standards, with LDVs and small light trucks (LDT1s) in one grouping and heavier light trucks (LDT2s, LDT3s, LDT4s) and MDPVs in a second grouping, that would converge at 30 milligram per mile (mg/mi) in MY 2025 and later.<sup>15</sup>

Manufacturers could also earn credits for fleet average NMOG+NO<sub>x</sub> levels below the applicable standard in any model year. Credits that were previously banked or obtained from other manufacturers could be used, or credits could be transferred to other manufacturers (see Section IV.A.7.a). Unused credits would expire after 5 model years. Manufacturers would also be allowed to carry deficits in their credit balance for up to 3 model years.

<sup>12</sup> A discussion of the reasons for combining the two pollutants for this purpose is in Section IV.A.3.a below.

<sup>13</sup> Letter to EPA Administrator Jackson, with white paper, from Alliance of Automobile Manufacturers, October 6, 2011.

<sup>14</sup> Global Automakers letter to EPA Administrator Jackson, October 21, 2011.

<sup>15</sup> Alternatively, a manufacturer could choose to certify its entire fleet of passenger cars and light trucks to the 30 mg/mi level beginning in MY 2017 and continuing for all subsequent model years. A percent phase-in would apply. This would not be a fleet-average standard.

TABLE I-1—PROPOSED LDV, LDT, AND MDPV FLEET AVERAGE NMOG+NO<sub>x</sub> FTP STANDARDS [mg/mi]

	Model year								
	2017 <sup>a</sup>	2018	2019	2020	2021	2022	2023	2024	2025 and later
LDV/LDT1 <sup>b</sup> .....	86	79	72	65	58	51	44	37	30
LDT2,3,4 and MDPV .....	101	92	83	74	65	56	47	38	30

<sup>a</sup> For vehicles above 6000 lbs GVWR, the fleet average standards would apply beginning in MY 2018.

<sup>b</sup> These proposed standards would apply for a 150,000 mile useful life. Manufacturers could choose to certify all of their LDVs and LDT1s to a useful life of 120,000 miles. If any of these families are certified to the shorter useful life, a proportionally lower numerical fleet-average standard would apply, calculated by multiplying the respective 150,000 mile standard by 0.85 and rounding to the nearest mg. See Section IV.A.7.b.

Similarly, the proposed NMOG+NO<sub>x</sub> standards measured over the SFTP would be fleet-average standards, declining from MY 2017 until MY 2025, as shown in Table I-2. In this case, the same standards would apply to both lighter and heavier vehicles. In MY 2025, the SFTP NMOG+NO<sub>x</sub> standard would reach its final fleet average level of 50 mg/mi.

TABLE I-2—PROPOSED LDV, LDT, AND MDPV FLEET AVERAGE NMOG+NO<sub>x</sub> SFTP STANDARDS [mg/mi]

	Model year								
	2017 <sup>a</sup>	2018	2019	2020	2021	2022	2023	2024	2025 and later
NMOG + NO <sub>x</sub> .....	103	97	90	83	77	70	63	57	50

<sup>a</sup> For vehicles above 6000 lbs GVWR, the fleet average standards would apply beginning in MY 2018.

We are also proposing PM standards as part of this Tier 3 program, both on the FTP and US06 cycles (US06 is a component of the SFTP test). Research has demonstrated that the level of PM from gasoline light-duty vehicles is more significant than previously thought.<sup>16</sup> Although many vehicles today are performing at or near the levels of the proposed standards, the data indicate that improvements, especially in high-load fuel control and in the durability of engine components, are possible.

Under typical driving, as simulated by the FTP, the PM emissions of most current-technology gasoline vehicles are fairly low at certification and in use, well below the Tier 2 p.m. standards. At the same time we see considerable variation in PM emissions among

vehicles of various makes, models, and designs. As a result, we are proposing a new FTP PM standard that is set to ensure that all new vehicles perform at the level already being achieved by well-designed Tier 2 emission control technologies. The proposed PM standards would apply to each vehicle separately (i.e., not as a fleet average). Also, in contrast to the declining NMOG+NO<sub>x</sub> standards, the proposed PM standard on the FTP for certification testing is 3 mg/mi for all vehicles and for all model years. As for the NMOG+NO<sub>x</sub> standards, for vehicles over 6000 lbs GVWR, the FTP PM standard would apply beginning in MY 2018. Manufacturers could phase in their vehicle models as a percent of U.S. sales through MY 2022. Most vehicles are already performing at this stringent

PM level, and the primary intent of the proposed standard is to bring all light-duty vehicles to the typical level of PM performance being demonstrated by the current light-duty fleet.

The proposed program also includes a separate in-use FTP PM standard of 6 mg/mi for the testing of in-use vehicles that would apply during the percent phase-in period only. This in-use standard would address the uncertainties that accompany the introduction of new technologies, and then expire. Table I-3 presents the FTP certification and in-use PM standards and the phase-in percentages. The proposed standards represent a significant numerical reduction from the Tier 2 p.m. emission standards of 10 mg/mi for light-duty vehicles.

TABLE I-3—PHASE-IN FOR PROPOSED FTP PM STANDARDS

	2017 <sup>a</sup>	2018	2019	2020	2021	2022 and later
Phase-In (percent of U.S. sales). Certification Standard (mg/mi) .....	20	20	40	70	100	100

TABLE I-3—PHASE-IN FOR PROPOSED FTP PM STANDARDS—Continued

	2017 <sup>a</sup>	2018	2019	2020	2021	2022 and later
In-Use Standard (mg/mi). . . . .	6	6	6	6	6	3

<sup>a</sup> For vehicles above 6000 lbs GVWR, the proposed FTP PM standards would apply beginning in MY 2018.

Finally, the proposed Tier 3 program includes certification PM standards evaluated over the SFTP (specifically the US06 component of the SFTP procedure) at a level of 10 mg/mi for lighter vehicles and 20 mg/mi for heavier vehicles. PM levels over the SFTP are typically higher than the PM emitted over the FTP due to the increased load on the vehicle. Test data show that most current light-duty vehicles are already performing in the range of the proposed standard. As in the case of the FTP PM standards, the intent of the proposed standard is to bring the emission performance of all vehicles to that already being demonstrated by many vehicles in the current light-duty fleet.

As with the FTP PM standard, we propose separate in-use US06 p.m. standards during the percent phase-in only, of 15 and 25 mg/mi for vehicles up to and above 6,000 lbs (lbs) GVWR, respectively. The US06 p.m. standards would also phase in on the same schedule as the FTP PM standards, reaching 100 percent of each company's U.S. sales by MY 2022.

2. Proposed Heavy-Duty Vehicle Tailpipe Emissions Standards

As discussed in detail in Section IV.B, we are proposing Tier 3 exhaust emissions standards for complete heavy-

duty vehicles (HDVs) between 8,501 and 14,000 lb GVWR. Vehicles in this GVWR range are often referred to as Class 2b (8,501–10,000 lb) and Class 3 (10,001–14,000 lb) vehicles, and are typically full-size pickup trucks and work vans. Most are built by companies with even larger light-duty truck markets, and as such they frequently share major design characteristics and potential emissions control technologies with their LDT counterparts. However, in contrast to the largely gasoline-fueled LDT fleet, roughly half of the HD pickup and van fleet in the U.S. is diesel-fueled, which is a consideration in setting emissions standards, as diesel engine emissions and control strategies differ from those of gasoline engines.

The key elements of the proposed Tier 3 program for HDVs would parallel those proposed for passenger cars and LDTs, with adjustments in standards levels, emissions test requirements, and implementation schedules, appropriate to this sector. These key elements include a combined NMOG+NO<sub>x</sub> declining fleet average standard, new stringent PM standards phasing in on a separate schedule, adoption of a 15 percent ethanol by volume (E15) certification test fuel for gasoline-fueled vehicles, extension of the regulatory useful life to 150,000 miles or 15 years

(whichever occurs first), and a new requirement to meet standards over an SFTP that would address real-world driving modes not well-represented by the FTP cycle alone.

We are proposing the separate Class 2b and Class 3 fleet average NMOG+NO<sub>x</sub> standards shown in Table I-4. The proposed standards would become more stringent in successive model years from 2018 to 2022, with voluntary standards made available in 2016 and 2017, all of which would be set at levels that match those of California's LEV III program for these classes of vehicles. Each covered HDV sold by a manufacturer in each model year would contribute to this fleet average based on the mg/mi NMOG+NO<sub>x</sub> level of the emission level ("bin") declared for it by the manufacturer. Manufacturers could also earn credits for fleet average NMOG+NO<sub>x</sub> levels below the standard in any model year. Tier 3 credits that were previously banked, obtained from other manufacturers, or transferred across the Class 2b/Class 3 categories could be used to help demonstrate compliance. Unused credits would expire after 5 model years. Manufacturers would also be allowed to carry deficits in their credit balance for up to 3 model years.

TABLE I-4—PROPOSED HDV FLEET AVERAGE NMOG+NO<sub>x</sub> STANDARDS

[mg/mi]

Model Year .....	Voluntary		Required program.				
	2016	2017	2018	2019	2020	2021	2022 and later.
Class 2b .....	333	310	278	253	228	203	178.
Class 3 .....	548	508	451	400	349	298	247.

We are proposing PM standards of 8 mg/mi and 10 mg/mi for Class 2b and Class 3 HDVs, respectively, phasing in as an increasing percentage of a manufacturer's sales per year. We are proposing the same phase-in schedule as proposed for the light-duty sector during model years 2018–2019–2020–2021: 20–40–70–100 percent, respectively, and a more flexible but equivalent alternative PM phase-in is also being proposed. Tier 3 HDVs would also be subject to more stringent CO and

formaldehyde exhaust emissions standards.

Finally, we are proposing first-ever SFTP standards for HDVs to ensure a robust overall control program that precludes high off-FTP cycle emissions by having vehicle designers consider them in their choice of compliance strategies. As for light-duty vehicles, we are proposing that SFTP compliance be based on a weighted composite of measured emissions from testing over the FTP cycle, the SC03 cycle, and an

aggressive driving cycle, with the latter tailored to various HDV sub-categories: the US06 cycle for most HDVs, the highway portion of the US06 cycle for low power-to-weight Class 2b HDVs, and the LA-92 (or "Unified") cycle for Class 3 HDVs. The proposed SFTP standards are the same as those adopted for California LEV III vehicles, and would apply to NMOG+NO<sub>x</sub>, PM, and CO emissions.

Overall, we expect the Tier 3 program we are proposing for HDVs to result in

substantial reductions in harmful emissions from this large fleet of work trucks and vans. The final Tier 3 standards levels for NMOG+NO<sub>x</sub> and PM are on the order of 60 percent lower than the current stringent standards that took full effect in the 2009 model year.

3. Proposed Evaporative Emission Standards

Gasoline vapor emissions from vehicle fuel systems occur when a vehicle is in operation, when it is parked, and when it is being refueled. These evaporative emissions, which occur on a daily basis from gasoline-powered vehicles, are primarily functions of temperature, fuel vapor pressure, and activity. EPA first instituted evaporative emission standards in the early 1970s to address emissions when vehicles are parked after being driven. These are commonly referred to as hot soak plus diurnal emissions. Over the subsequent years the test procedures have been modified and improved and the standards have become more numerically stringent. We have addressed emissions which arose from new fuel system designs by putting in place new requirements such as running loss emission standards and test procedure provisions to address permeation emissions. Subsequently standards were put in place to control refueling emissions from all classes of gasoline-powered motor vehicles up to 10,000 lbs GVWR. Even though evaporative and refueling emission control systems have been in place for most of these vehicles for many years, they still contribute about 30–40 percent of the summer on-highway mobile source hydrocarbon inventory. These fuel vapor emissions are ozone and PM precursors, and also contain air toxics such as benzene.

To control evaporative emissions, EPA is proposing more stringent standards that would require covered vehicles to have essentially zero fuel vapor emissions in use. These include more stringent evaporative emissions standards, new test procedures, and a new fuel/evaporative system leak emission standard. The program also includes refueling emission standards for a portion of heavy-duty gasoline vehicles (HDGVs) over 10,000 lbs GVWR. EPA is proposing phase-in flexibilities as well as credit and allowance programs. The proposed standards, harmonized with California’s “zero evap” standards, are designed to essentially allow for a use of common technology in vehicle models sold throughout the U.S. The level of the standard remains above zero to account

for nonfuel background emissions from the vehicle hardware itself.

Requirements to meet the Tier 3 evaporative emission regulations would phase-in over a six model year period. We are proposing two options for the 2017 model year, but after that the sales percentage requirements are 60 percent for MYs 2018 and 2019, 80 percent for model years 2020 and 2021, and 100 percent for model years 2022 and later. In Table I–5 we present the proposed evaporative diurnal plus hot soak emission standards by vehicle class. The standards are approximately a 50 percent reduction from the existing standards. To enhance flexibility and reduce costs, EPA is proposing a program that would allow manufacturers to generate allowances through early certifications (basically before the 2017 model year) and to demonstrate compliance using averaging concepts. Manufacturers may comply on average within each of the four vehicle categories, but not across these categories. EPA is not proposing any changes to the existing light-duty running loss or refueling emission standards, with the exception of the certification test fuel requirement discussed in Section I.B.5 below.

TABLE I–5—PROPOSED EVAPORATIVE EMISSION STANDARDS  
[g/test]

Vehicle class	Highest diurnal + hot soak level (over both 2-day and 3-day diurnal tests)
LDV, LDT1 .....	0.300
LDT2 .....	0.400
LDT3, LDT4, MDPV .....	0.500
HDGVs .....	0.600

EPA is proposing a new testing requirement referred to as the bleed emission test procedure to help ensure fuel vapor emissions are eliminated. Under this proposal, manufacturers would be required to measure diurnal emissions over the 2-day diurnal test procedure from just the fuel tank and the evaporative emission canister and comply with a 0.020 gram per test (g/test) standard for all LDVs, LDTs, and MDPVs, without averaging. The corresponding canister bleed test standard for HDGVs would be 0.030 g/test. The proposed Tier 3 evaporative emission standards would be phased in over a period of six model years between MY 2017 and MY 2022, with the leak test phasing in beginning in 2018.

Data from in-use evaporative emissions testing indicates that vapor

leaks from vehicle fuel/evaporative systems are found in the fleet and that even very small leaks have the potential to make relatively significant contributions to the mobile source VOC inventory. To help address this issue, we are also proposing to add a new emission standard and test procedure to control vapor leaks from vehicle fuel and vapor control systems. The standard would prohibit leaks with a cumulative equivalent diameter of 0.02 inches or greater. We are proposing to add this simple and inexpensive test and emission standard to help ensure vehicles maintain zero fuel vapor emissions over their full useful life. New LDV, LDT, MDPV, and HDGV equal to or less than 14,000 lbs GVWR meeting the proposed Tier 3 evaporative emission regulations would also be required to meet the leak emission standard beginning in the 2018 model year. The requirement to meet the leak emission standard would phase-in on the same percentage of sales schedule as the proposed Tier 3 evaporative emission standard. Manufacturers would comply with the leak emission standard during certification and in use. EPA is not proposing that the leak emission standard apply to HDGVs above 14,000 lbs GVWR.

EPA is also proposing new refueling emission control requirements for all HDGVs equal to or less than 14,000 lbs GVWR (i.e., Class 2b/3 HDGVs), starting in the 2018 model year. EPA is proposing to include these vehicles as part of the same basic implementation scheme used for LDVs and LDTs. The current refueling emission control requirements apply to complete Class 2b HDGVs, and EPA is proposing to extend those requirements to Class 3 HDGVs as well, since the fuel and evaporative control systems on these vehicles are very similar to those on their slightly lighter-weight Class 2b counterparts.

4. Onboard Diagnostic Systems (OBD)

EPA and CARB both have OBD regulations applicable to the vehicle classes covered by the proposed Tier 3 emission standards. In the past the requirements have been very similar, so most manufacturers have met CARB OBD requirements and, as permitted in our regulations, EPA has generally accepted compliance with CARB’s OBD requirements as satisfying EPA’s OBD requirements. Over the past several years CARB has upgraded its requirements to help improve the effectiveness of OBD in ensuring good in-use exhaust and evaporative system emissions performance. We have reviewed these provisions and agree with CARB that these revisions will

help to improve in-use emissions performance, while at the same time harmonizing with the CARB program. Toward that end, we are proposing to adopt and incorporate by reference the current CARB OBD regulations effective for the 2017 MY. We are also proposing two specific additions to enhance the implementation of the leak emission standard. EPA would retain the provision that certifying with CARB's program would permit manufacturers to seek a separate EPA certificate on that basis.

#### 5. Emissions Test Fuel

In-use gasoline has changed considerably since EPA's test fuel specifications were first set and last revised. Gasoline sulfur and benzene have been reduced and, perhaps most importantly, gasoline containing 10 percent ethanol by volume (E10) has replaced clear gasoline (E0) across the country. This has had second-order effects on other gasoline properties. In-use fuel is projected to continue to change with the implementation of the RFS2 program (e.g., the potential expansion of the number of retailers that offer gasoline containing 15 percent ethanol by volume (E15)) as well as today's proposed Tier 3 gasoline sulfur program.

As a result, we are proposing to update our federal emissions test fuel to better match today's in-use gasoline and also to be forward-looking with respect to future ethanol and sulfur content. The new test fuel specifications would apply to new vehicle certification, assembly line, and in-use testing. EPA is also proposing changes consistent with CARB's LEV III emissions test fuel specifications. Key changes include:

- Moving away from "Indolene" (E0) to an E15 test fuel;
- Lowering octane to match regular-grade gasoline (except for premium-required vehicles);
- Adjusting distillation temperatures, aromatics, and olefins to better match today's in-use fuel and to be consistent with anticipated E15 composition; and
- Lowering the existing sulfur specification and setting a benzene specification to be consistent with proposed Tier 3 gasoline sulfur requirements and recent MSAT2 gasoline benzene requirements.<sup>17</sup>

The proposed E15 emissions test fuel specifications are detailed in Section IV.D.1 as well as § 1065.710 of the proposed regulations. For more information on how we arrived at the proposed fuel parameters and ASTM test methods, refer to Chapter 3 of the draft Regulatory Impact Analysis (RIA).

In addition to proposing a new E15 emissions test fuel, we are also proposing for the first time detailed specifications for the E85 emissions test fuel used for flexible fuel vehicle (FFV) certification, as discussed in Section IV.D.2.<sup>18</sup> This is intended to avoid uncertainty and confusion in the certification of FFVs designed to operate on ethanol levels up to 83 percent. Furthermore, we are proposing to allow vehicle manufacturers to request approval for an alternative certification fuel such as a high-octane 30 percent ethanol by volume (E30) blend for vehicles they might design or optimize for use on such a fuel. This could help manufacturers that wish to raise compression ratios to improve vehicle efficiency, as a step toward complying with the 2017 and later light-duty greenhouse gas and CAFE standards (2017 LD GHG). This in turn could help provide a market incentive to increase ethanol use beyond E10 by overcoming the disincentive of lower fuel economy associated with increasing ethanol concentrations in fuel, and enhance the environmental performance of ethanol as a transportation fuel by using it to enable more fuel efficient engines.

In addition to seeking comment on all aspects of the proposed new emission test fuel requirements, we also seek comment on whether there are other aspects of today's proposed standards that, if modified, might provide an incentive for, or remove obstacles to, the development of highly efficient vehicles optimized for use on higher level ethanol blends.

#### 6. Fuel Standards

Under the Tier 3 fuel program, we are proposing that gasoline and any ethanol-gasoline blend contain no more than 10 ppm sulfur on an annual average basis by January 1, 2017.

<sup>18</sup> Flexible fuel vehicles are currently required to meet emissions certification requirements using both E0 and E85 test fuels. However, there are currently no detailed regulatory specifications regarding the composition of E85 test fuels.

Similar to the Tier 2 gasoline program, the proposed Tier 3 program would apply to gasoline in the U.S. and the U.S. territories of Puerto Rico and the Virgin Islands, excluding California. The proposed program would result in gasoline that contains, on average, two-thirds less sulfur than it does today. In addition, following discussions with numerous refiners and other segments of the fuel market (e.g., pipelines, terminals, marketers, ethanol industry representatives, transmix processors, additive manufacturers), we are proposing a Tier 3 fuel program that contains considerable flexibility to ease both initial and long-term implementation of the program. We are proposing an averaging, banking, and trading (ABT) program that would allow refiners and importers to spread out their investments through an early credit program and rely on ongoing nationwide averaging to meet the 10-ppm sulfur standard. We are also proposing a three-year delay for small refiners and "small volume refineries" processing less than or equal to 75,000 barrels of crude oil per day. As a result of the early credit program, even considering the proposed ABT program and flexibilities offered to small refiners and small volume refineries, we anticipate considerable reductions in gasoline sulfur levels prior to 2017, with final refinery control to the 10-ppm average occurring by January 1, 2020. For more on the proposed gasoline sulfur program flexibilities, refer to Section V.D.

Under today's Tier 3 gasoline sulfur program, we are proposing to either maintain the current 80-ppm refinery gate and 95-ppm downstream per-gallon caps or lower them to 50 and 65 ppm, respectively. We also evaluated and are seeking comment on the potential of lowering the per-gallon caps to as low as 20 and 25 ppm. There are advantages and disadvantages with each of the various sulfur cap options (explained in more detail in Section V.A.3), but under all scenarios, the stringency of the 10-ppm annual average standard would result in reduced gasoline sulfur levels nationwide. A summary of the proposed Tier 3 sulfur standards is provided in Table I-6.

<sup>17</sup> 72 FR 8434 (February 26, 2007).

TABLE I-6—PROPOSED TIER 3 GASOLINE SULFUR STANDARDS

Proposed Tier 3 gasoline sulfur standards	Cap Option 1		Cap Option 2	
	Limit	Effective	Limit	Effective
Refinery annual average standard .....	10 ppm .....	January 1, 2017 <sup>a</sup> .....	10 ppm .....	January 1, 2017. <sup>a</sup>
Refinery gate per-gallon cap .....	80 ppm .....	Already .....	50 ppm .....	January 1, 2020.
Downstream per-gallon cap .....	95 ppm .....	Already .....	65 ppm .....	March 1, 2020.

<sup>a</sup> Effective January 1, 2020 for eligible small refiners and small volume refineries.

We are proposing that manufacturers of gasoline additives that are used downstream of the refinery at less than 1 volume percent must limit the sulfur contribution to the finished gasoline from the use of their additive to less than 3 ppm when the additive is used at the maximum recommended treatment rate.

The proposed vehicle emissions standards are fuel neutral (i.e. they are applicable regardless of the type of fuel that the vehicle is designed to use). The sulfur content of highway diesel fuel is already required to meet a 15ppm sulfur cap. Thus, no further action is needed to enable diesel fuel vehicles to meet the proposed emissions standards. There currently are no sulfur standards for the fuel used in compressed natural gas (CNG) and liquid propane gas (LPG) vehicles. We request comment on whether it is necessary for EPA to establish sulfur standards for CNG and LPG, and whether a 15 ppm sulfur cap similar to that established for highway diesel fuel would be appropriate. Comment is also requested on whether and how to address the sulfur contribution from odorants and other additives used in CNG and LPG.

As the number of flex-fuel vehicles (FFVs) in the in-use fleet increases, it is now becoming increasingly important that all fuels used in FFVs, not just gasoline, meet fuel quality standards. A lack of clarity regarding the standards that apply to fuels used in FFVs could act to impede the further expansion of ethanol blended fuels with concentrations greater than 15 volume percent, which is important to satisfying the requirements of the RFS2 program. For these reasons, we believe it is important that our gasoline quality standards for not only sulfur, but also benzene, RVP, detergency, and chemical composition (i.e., contains only carbon, hydrogen, oxygen, nitrogen, and sulfur) apply to any fuel used in an FFV. At the same time, it is not necessarily clear how we should implement such standards within the context of our existing regulations as these fuels tend to be produced downstream of the petroleum refinery. For this reason we are seeking comment on both the need

to extend our gasoline standards to all gasoline-ethanol blends, as well as the appropriate regulatory mechanisms for doing so.

7. Regulatory Streamlining and Technical Amendments

We are proposing and requesting comment in this action on a number of items to help streamline the in-use fuels regulations at 40 CFR part 80. The majority of items involve clarifying vague or inconsistent language, removal or updating of outdated provisions, and decrease in frequency and/or volume of reporting burden where data are no longer needed or are redundant with other EPA fuels programs. In general, we believe that these changes would reduce burden on industry and allow us to achieve the standards and resulting environmental benefits as early as possible with no expected loss in environmental control. In some cases, these regulatory streamlining items are non-substantive amendments that correct minor errors or inconsistencies in the regulations.

The regulatory streamlining items that we are proposing for the in-use fuels regulations are changes that we believe are straightforward and should be made quickly. In addition, there are a number of items that we believe need further consideration and discussion on which we are seeking comment.

The proposal also includes a variety of technical amendments to certification-related requirements for engine and vehicle emission standards. We are proposing to revise the fuel economy labeling requirements to correspond to the new Tier 3 standards. We are also proposing to remove obsolete regulatory text and make several minor corrections and clarifications.

Please refer to Section VI for a complete discussion of technical amendments and regulatory streamlining provisions and issues.

C. What would the impacts of the proposed standards be?

The proposed Tier 3 vehicle and fuel standards together would reduce dramatically emissions of NO<sub>x</sub>, VOC,

PM<sub>2.5</sub>, and air toxics. The gasoline sulfur standards, which would take effect in 2017, would provide large immediate reductions in emissions from existing gasoline vehicles and engines. NO<sub>x</sub> emissions would be reduced by about 284,000 tons, or about 8 percent of emissions from on-highway vehicles, in 2017 alone. The emission reductions would increase over time as newer vehicles become a larger percentage of the fleet. In 2030, when 80 percent of the light-duty fleet (and 90 percent of the vehicle miles travelled) consists of Tier 3 vehicles, we expect the NO<sub>x</sub> and VOC emissions to be reduced by about 525,000 tons and 226,000 tons, respectively, or one quarter of emissions from on-highway vehicles compared to their 2030 levels without the Tier 3 program. Emissions of CO would decrease by almost 6 million tons, or 30 percent of emissions from on-highway vehicles. Emissions of many air toxics would also be reduced, including benzene, 1,3-butadiene, acetaldehyde, formaldehyde, acrolein and ethanol, with reductions ranging from 10 to nearly 40 percent of national emissions from on-highway vehicles. We expect these reductions to continue beyond 2030 as more of the fleet continues to turn over to Tier 3 vehicles; for example, by 2050, when nearly all of the fleet would have turned over to Tier 3 standards, we estimate the Tier 3 program would reduce on-highway emissions of NO<sub>x</sub> and VOC nearly 40 percent from the level of emissions projected without Tier 3 controls.<sup>19</sup>

These reductions in emissions of NO<sub>x</sub>, VOC, PM<sub>2.5</sub> and air toxics from the proposed Tier 3 standards are projected to lead to significant decreases in ambient concentrations of ozone, PM<sub>2.5</sub> and air toxics (including notable nationwide reductions in benzene concentrations) by 2030, and would immediately reduce ozone in 2017 when the proposed sulfur controls take effect. Additional information on the emission and air quality impacts of the proposed Tier 3 program is presented in Sections III.B and C.

<sup>19</sup>To estimate the benefits of the proposed Tier 3 rule, we performed air quality modeling for the year 2030.

Exposure to ambient concentrations of ozone, PM<sub>2.5</sub>, and air toxics is linked to adverse human health impacts such as premature deaths as well as other important public health and environmental effects (see Section II.B). The proposed Tier 3 standards would reduce these adverse impacts and yield significant benefits, including those we can monetize and those we are unable to quantify. We estimate that by 2030, the annual emission reductions of the Tier 3 standards would annually prevent between 670 and 1,700 PM-related premature deaths, between 160 and 710 ozone-related premature deaths, 81,000 work days lost, and approximately 1.4 million minor

restricted-activity days. The estimated annual monetized health benefits of the proposed Tier 3 standards in 2030 (2010\$) would be between \$8.0 and \$23 billion, assuming a 3-percent discount rate (or between \$7.4 billion and \$21 billion assuming a 7-percent discount rate).<sup>20</sup> The proposed fuel standards are projected to cost on average less than one cent per gallon of gasoline, and the proposed light-duty vehicle standards would have an average cost that increases in proportion to the increase in stringency from \$50 per vehicle in 2017 to \$134 per vehicle when the standards are fully phased in 2025. The annual cost of the overall program in 2030 would be approximately \$3.4

billion.<sup>21</sup> The 2030 benefits are 2 to 7 times the costs of the program.

The benefits in Table I–7 include all of the human health impacts we are able to quantify and monetize at this time. However, the full complement of human health and welfare effects associated with PM, ozone and air toxics remain unquantified because of current limitations in methods and/or available data. As a result, the health benefits quantified in this section are likely underestimates of the total benefits attributable to the proposed standards. See Sections VII and VIII for detailed descriptions of the costs and benefits of this proposal.

TABLE I–7—SUMMARY OF ANNUAL BENEFITS AND COSTS ASSOCIATED WITH THE PROPOSED TIER 3 PROGRAM  
[Billions, 2010\$]<sup>a</sup>

Description	2030
Vehicle Program Costs .....	\$2.1
Fuels Program Costs .....	1.3
Total Estimated Costs <sup>b</sup> .....	3.4
Total Estimated Health Benefits <sup>c d e f g</sup> .....	
3 percent discount rate .....	\$8.0–\$23
7 percent discount rate .....	7.4–21
Annual Net Benefits (Total Benefits—Total Costs): .....	
3 percent discount rate .....	4.6–20
7 percent discount rate .....	4.0–18

<sup>a</sup> All estimates represent annual benefits and costs anticipated for the year 2030. Totals are rounded to two significant digits and may not sum due to rounding.

<sup>b</sup> The calculation of annual costs does not require amortization of costs over time. Therefore, the estimates of annual cost do not include a discount rate or rate of return assumption (see Section VII of the preamble for more information on vehicle and fuel costs). The program costs include the costs associated with the Tier 3 vehicle and fuel standards in all states except California.

<sup>c</sup> The benefits presented in this table have been adjusted to remove benefits of the Tier 3 program in California.

<sup>d</sup> Total includes ozone and PM<sub>2.5</sub> benefits. Range was developed by adding the estimate from the Bell et al., 2004 ozone premature mortality function to PM<sub>2.5</sub>-related premature mortality derived from the American Cancer Society cohort study (Pope et al., 2002) for the low estimate and ozone premature mortality derived from the Levy et al., 2005 study to PM<sub>2.5</sub>-related premature mortality derived from the Six-Cities (Laden et al., 2006) study for the high estimate.

<sup>e</sup> Annual benefits analysis results reflect the use of a 3 percent and 7 percent discount rate in the valuation of premature mortality and nonfatal myocardial infarctions, consistent with EPA and OMB guidelines for preparing economic analyses.

<sup>f</sup> Valuation of premature mortality based on long-term PM exposure assumes discounting over the SAB recommended 20-year segmented lag structure described in the Regulatory Impact Analysis for the 2006 PM National Ambient Air Quality Standards (September, 2006).

<sup>g</sup> Not all possible benefits are quantified and monetized in this analysis; the total monetized benefits presented here may therefore be underestimated. Potential benefit categories that have not been quantified and monetized, due to current limitations in methods and/or data availability, are listed in Table VIII–2. For example, we have not quantified a number of known or suspected health and welfare effects linked with reductions in ozone and PM (e.g., reductions in heart rate variability, reduced material damage to structures and cultural monuments, and reduced eutrophication in coastal areas). We are also unable to quantify health and welfare benefits associated with reductions in air toxics.

**II. Why is EPA making this proposal?**

The Clean Air Act authorizes EPA to establish emissions standards for motor vehicles to address air pollution that may reasonably be anticipated to endanger public health or welfare. EPA also has authority to establish fuel controls to address such air pollution. These statutory requirements are described in Section II.A.

Emissions from motor vehicles and their fuels contribute to ambient levels of ozone, PM, NO<sub>2</sub>, sulfur dioxide (SO<sub>2</sub>) and CO, which are all pollutants for which EPA has established health-based NAAQS. These pollutants are linked with respiratory and/or cardiovascular problems and other adverse health impacts leading to increased medication use, hospital admissions, emergency department visits, and premature mortality. Over 158 million people

currently live in areas designated nonattainment for one or more of the current NAAQS.<sup>22</sup>

Motor vehicles also emit air toxics, and the majority of Americans continue to be exposed to ambient concentrations of air toxics at levels which have the potential to cause adverse health effects, including cancer, immune system damage, and neurological, reproductive, developmental, respiratory, and other

<sup>20</sup> These benefits estimates have been adjusted to remove benefits of the Tier 3 program in California. The Tier 3 proposal's analysis assumed emissions reductions and resulting benefits would occur nationwide. California was recently granted a Clean Air Act waiver of preemption for the LEV III vehicle program, and some other states have adopted it. The

Tier 3 final rule analysis will account for those emission reductions that will occur even in the absence of Tier 3 vehicle standards, for all states that have adopted LEV III. See Section VIII of the preamble for more information on the benefits associated with the Tier 3 program.

<sup>21</sup> Costs include estimates for the proposed Tier 3 standards in all states except California.

<sup>22</sup> Data come from Summary Nonattainment Area Population Exposure Report, current as of December 14, 2012 at: <http://www.epa.gov/oar/oaqps/greenbk/popexp.html> and contained in Docket EPA–HQ–OAR–2011–0135.

health problems.<sup>23</sup> A more detailed discussion of the health and environmental effects of these pollutants is included in Section II.B.

Cars and light trucks also continue to be a significant contributor to air pollution directly near roads, with gasoline vehicles accounting for more than 50 percent of near-road concentrations of some criteria and toxic pollutants.<sup>24</sup> More than 50 million people live, work, or go to school in close proximity to high-traffic roadways, and the average American spends more than one hour traveling each day, with nearly 90 percent of daily trips occurring by personal vehicle.<sup>25 26 27</sup> Exposure to traffic-related pollutants has been linked with adverse health impacts such as respiratory problems (particularly in asthmatic children) and cardiovascular problems.

In the absence of additional controls such as Tier 3 standards, many areas will continue to have ambient ozone and PM<sub>2.5</sub> concentrations exceeding the NAAQS in the future. States and local areas are required to adopt control measures to attain the NAAQS and, once attained, to demonstrate that control measures are in place sufficient to maintain the NAAQS for ten years (and eight years later, a similar demonstration is required for another ten-year period). The proposed Tier 3 standards would be a critical part of areas' strategies to attain and maintain the standards. Maintaining the standards has been challenging in the past, particularly for areas where high population growth rates lead to significant annual increases in vehicle trips and vehicle miles traveled. Our air quality modeling for this proposal, which is described in more detail in Section III.C, projects that in 2017 a

significant number of counties outside CA will be within 10 percent of the 2008 ozone NAAQS, in the absence of additional controls. These counties in particular would benefit from the proposed Tier 3 standards as they work to ensure long-term maintenance of the NAAQS.

Section III provides more detail on how this proposal would reduce motor vehicle emissions and ambient levels of pollution. The proposed rule would meaningfully reduce ozone concentrations as early as 2017 (the first year of the program), and even more significantly in 2030. The reductions are of significant enough magnitude to bring ozone levels in some counties from above the standard to below the standard, even without any additional controls. We also project that the Tier 3 standards would reduce ambient PM<sub>2.5</sub> concentrations.

Without this proposal to reduce nationwide motor vehicle emissions, areas would have to adopt other measures to reduce emissions from other sources under their state or local authority. Few other measures exist for providing multi-pollutant reductions of the same magnitude and cost-effectiveness as those expected from the proposed Tier 3 standards. Furthermore, states outside California do not have the authority to lower the sulfur in gasoline, which is needed to immediately reduce emissions from the existing fleet and also enable new vehicles to meet the proposed Tier 3 emissions standards throughout their useful life.

The reductions in ambient ozone and PM<sub>2.5</sub> that would result from the proposed Tier 3 standards would provide significant health benefits. By 2030, the standards would annually prevent between 670 and 1,700 PM-related premature deaths, between 160 and 710 ozone-related premature deaths, 81,000 work days lost, and approximately 1.4 million minor restricted-activity days (see Section VIII for more details). This proposal would also reduce air toxics; for example, we project that in 2030, the proposal would decrease ambient benzene concentrations by 10–25 percent in some urban areas. Furthermore, the proposed Tier 3 standards would reduce traffic-associated pollution near major roads. EPA is proposing Tier 3 vehicle and fuel standards as part of a comprehensive nationwide program for regulating all types of air pollution from motor vehicles. EPA recently finalized standards to reduce GHG emissions from light-duty vehicles, starting with model year 2017.<sup>28</sup> The Tier 3 standards

in this proposal, which address non-GHGs, would be implemented on the same timeframe, thus allowing manufacturers to optimize their vehicle redesigns over both sets of standards. Furthermore, the Tier 3 vehicle and fuel standards are also closely aligned with California's LEV III program, in such a way that manufacturers could design a single vehicle for nationwide sales. This reduces the cost of compliance for auto manufacturers.

This Tier 3 proposal responds to the President's request in his May 2010 memorandum for EPA to review the adequacy of its existing non-GHG standards for new motor vehicles and fuels, and to promulgate new standards, if necessary, as part of a comprehensive approach to regulating motor vehicles.<sup>29</sup> Based on our review, we have concluded that improved vehicle technology, combined with lower sulfur gasoline, make it feasible and cost-effective to reduce emissions well below the current Tier 2 levels. These emission reductions are necessary to reduce air pollution that is (and projected to continue to be) at levels that endanger public health and welfare.

#### A. Basis for Action Under the Clean Air Act

##### 1. Clean Air Act Section 202

We are proposing to set motor vehicle emission standards under the authority of section 202 of the Clean Air Act. Section 202(a) provides EPA with general authority to prescribe vehicle standards, subject to any specific limitations elsewhere in the Act. EPA is also setting standards for larger light-duty trucks and MDPVs under the general authority of section 202(a)(1) and under section 202(a)(3), which requires that standards applicable to emissions of hydrocarbons, NO<sub>x</sub>, CO and PM from heavy-duty vehicles<sup>30</sup> reflect the greatest degree of emission reduction available for the model year to which such standards apply, giving appropriate consideration to cost, energy, and safety. In addition, section 202(k) provides EPA with authority to issue and revise regulations applicable to evaporative emissions of hydrocarbons from all gasoline-fueled motor vehicles during: (1) Operation, and (2) over 2 or more days of nonuse;

<sup>29</sup> The Presidential Memorandum is found at: <http://www.whitehouse.gov/the-press-office/presidential-memorandum-regarding-fuel-efficiency-standards>.

<sup>30</sup> LDTs that have gross vehicle weight ratings above 6000 lbs are considered "heavy-duty vehicles" under the CAA. See section 202(b)(3)(C). For regulatory purposes, we refer to those LDTs at or below 8500 lbs GVWR as "heavy light-duty trucks" made up of LDT3s and LDT4s.

<sup>28</sup> 77 FR 62623 (October 15, 2012).

under ozone-prone summertime conditions. Regulations under section 202(k) shall take effect as expeditiously as possible and shall require the greatest degree of emission reduction achievable by means reasonably expected to be available for production during any model year to which the regulations apply, giving appropriate consideration to fuel volatility, and to cost, energy, and safety factors associated with the application of the appropriate technology. Further, section 206 and in particular section 206(d) of the Clean Air Act authorizes EPA to establish methods and procedures for testing whether a motor vehicle or motor vehicle engine conforms with section 202 requirements.

## 2. Clean Air Act Section 211

We are proposing to adopt gasoline sulfur controls pursuant to our authority under section 211(c)(1) of the CAA. This section allows EPA to establish a fuel control if at least one of the following two criteria is met: (1) The emission products of the fuel cause or contribute to air pollution which may reasonably be anticipated to endanger public health or welfare; or (2) the emission products of the fuel will impair to a significant degree the performance of any emissions control device or system which is either in general use or which the Administrator finds has been developed to a point where in a reasonable time it will be in general use were the fuel control to be adopted. We are proposing gasoline sulfur controls based on both of these criteria. Under the first criterion, we believe that gasoline with current levels of sulfur contributes to ambient levels of air pollution that endanger public health and welfare, as described in Section II.B. Under the second criterion, we believe that gasoline sulfur impairs the emissions control systems of vehicles, as discussed in Section III.A.2.

### B. Overview of Public Health Impacts of Motor Vehicles and Fuels

Motor vehicles emit pollutants that contribute to ambient levels of ozone, PM, NO<sub>2</sub>, SO<sub>2</sub>, CO, and air toxics. Motor vehicles are significant contributors to emissions of VOC and NO<sub>x</sub>, which contribute to the formation of both ozone and PM<sub>2.5</sub>. Approximately 159 million people currently live in counties designated nonattainment for one or more of the NAAQS, and this figure does not include the people living in areas with a risk of exceeding the NAAQS in the future.<sup>31</sup> The majority of

Americans continue to be exposed to ambient concentrations of air toxics at levels which have the potential to cause adverse health effects.<sup>32</sup> In addition, populations who live, work, or attend school near major roads experience elevated exposure concentrations to a wide range of air pollutants.<sup>33</sup>

EPA has already adopted many emission control programs that are expected to reduce ambient pollution levels. As a result of these programs, the number of areas that continue to violate the ozone and PM<sub>2.5</sub> NAAQS or have high levels of air toxics is expected to continue to decrease. However, the baseline air quality modeling completed for this proposed rule predicts that without additional controls there will continue to be a need for reductions in ozone, PM<sub>2.5</sub> and air toxics concentrations in the future. Section III.C of this preamble presents the air quality modeling results for this proposed rule.

## 1. Ozone

### a. Background

Ground-level ozone pollution is typically formed through reactions involving VOC and NO<sub>x</sub> in the lower atmosphere in the presence of sunlight. These pollutants, often referred to as ozone precursors, are emitted by many types of pollution sources, such as highway and nonroad motor vehicles and engines, power plants, chemical plants, refineries, makers of consumer and commercial products, industrial facilities, and smaller area sources.

The science of ozone formation, transport, and accumulation is complex. Ground-level ozone is produced and destroyed in a cyclical set of chemical reactions, many of which are sensitive to temperature and sunlight. When ambient temperatures and sunlight levels remain high for several days and the air is relatively stagnant, ozone and its precursors can build up and result in more ozone than typically occurs on a single high-temperature day. Ozone and its precursors can be transported hundreds of miles downwind from precursor emissions, resulting in elevated ozone levels even in areas with low local VOC or NO<sub>x</sub> emissions.

## b. Health Effects of Ozone

The health and welfare effects of ozone are well documented and are assessed in EPA's 2006 Air Quality Criteria Document and 2007 Staff Paper.<sup>34 35</sup> People who are more susceptible to effects associated with exposure to ozone can include children, the elderly, and individuals with respiratory disease such as asthma. Those with greater exposures to ozone, for instance due to time spent outdoors (e.g., children and outdoor workers), are of particular concern. Ozone can irritate the respiratory system, causing coughing, throat irritation, and breathing discomfort. Ozone can reduce lung function and cause pulmonary inflammation in healthy individuals. Ozone can also aggravate asthma, leading to more asthma attacks that require medical attention and/or the use of additional medication. Thus, ambient ozone may cause both healthy and asthmatic individuals to limit their outdoor activities. In addition, there is suggestive evidence of a contribution of ozone to cardiovascular-related morbidity and highly suggestive evidence that short-term ozone exposure directly or indirectly contributes to non-accidental and cardiopulmonary-related mortality, but additional research is needed to clarify the underlying mechanisms causing these effects. In a report on the estimation of ozone-related premature mortality published by the National Research Council (NRC), a panel of experts and reviewers concluded that short-term exposure to ambient ozone is likely to contribute to premature deaths and that ozone-related mortality should be included in estimates of the health benefits of reducing ozone exposure.<sup>36</sup> Animal toxicological evidence indicates that with repeated exposure, ozone can inflame and damage the lining of the lungs, which may lead to permanent changes in lung tissue and irreversible reductions in lung function. The respiratory effects observed in controlled human exposure studies and animal studies are coherent with the evidence from epidemiologic studies supporting a causal relationship between acute ambient ozone exposures

<sup>31</sup> Data come from Summary Nonattainment Area Population Exposure Report, current as of July 20,

and increased respiratory-related emergency room visits and hospitalizations in the warm season. In addition, there is suggestive evidence of a contribution of ozone to cardiovascular-related morbidity and non-accidental and cardiopulmonary mortality.

### c. Current and Projected Ozone Levels

Concentrations that exceed the level of the ozone NAAQS occur in many parts of the country, including many major population centers. In addition, our modeling without the proposed Tier 3 controls projects that in the future we will continue to have many areas that will have ambient ozone concentrations above the level of the NAAQS (see Section III.C.1). States will need to meet the standard in the 2015–2032 timeframe. The emission reductions and significant ambient ozone improvements from this proposed rule, which would take effect starting in 2017, would be helpful to states as they work to attain and maintain the ozone NAAQS.

The primary and secondary NAAQS for ozone are 8-hour standards with a level of 0.075 ppm. The most recent revision to the ozone standards was in 2008; the previous 8-hour ozone standards, set in 1997, had a level of 0.08 ppm. In 2004, the U.S. EPA designated nonattainment areas for the 1997 8-hour ozone NAAQS.<sup>37</sup> <sup>38</sup> As of December 14, 2012, there were 41 ozone nonattainment areas for the 1997 ozone NAAQS composed of 221 full or partial counties with a total population of over 118 million. Nonattainment designations for the 2008 ozone standard were finalized on April 30, 2012 and May 31, 2012.<sup>39</sup> These designations include 46 areas, composed of 227 full or partial counties, with a population of over 123 million. As of December 14, 2012, over 138 million people are living in ozone nonattainment areas.<sup>40</sup>

States with ozone nonattainment areas are required to take action to bring those areas into attainment. The attainment date assigned to an ozone

nonattainment area is based on the area's classification. Most ozone nonattainment areas are required to attain the 1997 8-hour ozone NAAQS in the 2007 to 2013 time frame and then to maintain it thereafter.<sup>41</sup> The attainment dates for areas designated nonattainment for the 2008 8-hour ozone NAAQS are in the 2015 to 2032 timeframe, depending on the severity of the problem in each area. In addition, EPA is working to complete the current review of the ozone NAAQS by mid-2014. If EPA revises the ozone standards in 2014 pursuant to that review, the attainment dates associated with areas designated nonattainment for that NAAQS would likely be in the 2019 to 2036 timeframe, depending on the severity of the problem in each area.

EPA has already adopted many emission control programs that are expected to reduce ambient ozone levels. As a result of these and other federal, state and local programs, 8-hour ozone levels are expected to improve in the future. However, even with the implementation of all current state and federal regulations, there are projected to be counties violating the ozone NAAQS well into the future. Thus additional federal control programs, such as Tier 3, can assist areas with attainment dates in 2017 and beyond in attaining the NAAQS as expeditiously as practicable and may relieve areas with already stringent local regulations from some of the burden associated with adopting additional local controls.

## 2. Particulate Matter

### a. Background

Particulate matter is a highly complex mixture of solid particles and liquid droplets distributed among numerous atmospheric gases which interact with solid and liquid phases. Particles range in size from those smaller than 1 nanometer ( $10^{-9}$  meter) to over 100 micrometer ( $\mu\text{m}$ , or  $10^{-6}$  meter) in diameter (for reference, a typical strand of human hair is 70  $\mu\text{m}$  in diameter and a grain of salt is about 100  $\mu\text{m}$ ). Atmospheric particles can be grouped into several classes according to their aerodynamic and physical sizes, including ultrafine particles ( $<0.1 \mu\text{m}$ ), accumulation mode or 'fine' particles ( $<1$  to  $3 \mu\text{m}$ ), and coarse particles ( $>1$  to  $3 \mu\text{m}$ ). For regulatory purposes, fine particles are measured as  $\text{PM}_{2.5}$  and

inhalable or thoracic coarse particles are measured as  $\text{PM}_{10-2.5}$ , corresponding to their size (diameter) range in micrometers and referring to total particle mass under 2.5 and between 2.5 and 10 micrometers, respectively. The EPA currently has standards that measure  $\text{PM}_{2.5}$  and  $\text{PM}_{10}$ .<sup>42</sup>

Particles span many sizes and shapes and consist of hundreds of different chemicals. Particles are emitted directly from sources and are also formed through atmospheric chemical reactions; the former are often referred to as "primary" particles, and the latter as "secondary" particles. Particle pollution also varies by time of year and location and is affected by several weather-related factors, such as temperature, clouds, humidity, and wind. A further layer of complexity comes from particles' ability to shift between solid/liquid and gaseous phases, which is influenced by concentration and meteorology, especially temperature.

Fine particles are produced primarily by combustion processes and by transformations of gaseous emissions (e.g., sulfur oxides ( $\text{SO}_x$ ), nitrogen oxides ( $\text{NO}_x$ ), and volatile organic compounds (VOC)) in the atmosphere. The chemical and physical properties of  $\text{PM}_{2.5}$  may vary greatly with time, region, meteorology, and source category. Thus,  $\text{PM}_{2.5}$  may include a complex mixture of different components including sulfates, nitrates, organic compounds, elemental carbon and metal compounds. These particles can remain in the atmosphere for days to weeks and travel hundreds to thousands of kilometers.

### b. Health Effects of PM

Scientific studies show ambient PM is associated with a series of adverse health effects. These health effects are discussed in detail in EPA's Integrated Science Assessment (ISA) for Particulate Matter.<sup>43</sup> Further discussion of health effects associated with PM can also be found in the draft RIA. The ISA summarizes health effects evidence associated with both short-term and long-term exposures to  $\text{PM}_{2.5}$ ,  $\text{PM}_{10-2.5}$ , and ultrafine particles.

The ISA concludes that health effects associated with short-term exposures (hours to days) to ambient  $\text{PM}_{2.5}$  include mortality, cardiovascular effects, such as

<sup>37</sup> 69 FR 23858 (April 30, 2004).

<sup>38</sup> A nonattainment area is defined in the Clean Air Act (CAA) as an area that is violating an ambient standard or is contributing to a nearby area that is violating the standard.

<sup>39</sup> 77FR 30088 (May 21, 2012).

<sup>40</sup> The 138 million total is calculated by summing, without double counting, the 1997 and 2008 ozone nonattainment populations contained in the Summary Nonattainment Area Population Exposure report (<http://www.epa.gov/oar/oaqps/greenbk/popexp.html>). If there is a population associated with both the 1997 and 2008 nonattainment areas, and they are not the same, then the larger of the two populations is included in the sum.

<sup>41</sup> The Los Angeles South Coast Air Basin 8-hour ozone nonattainment area and the San Joaquin Valley Air Basin 8-hour ozone nonattainment area are designated as extreme and will have to attain before June 15, 2024. The Sacramento, Coachella Valley, Western Mojave and Houston 8-hour ozone nonattainment areas are designated as severe and will have to attain by June 15, 2019.

<sup>42</sup> Regulatory definitions of PM size fractions, and information on reference and equivalent methods for measuring PM in ambient air, are provided in 40 CFR parts 50, 53, and 58.

<sup>43</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F.

altered vasomotor function and myocardial ischemia, and hospital admissions and emergency department visits for ischemic heart disease and congestive heart failure, and respiratory effects, such as exacerbation of asthma symptoms in children and hospital admissions and emergency department visits for chronic obstructive pulmonary disease and respiratory infections.<sup>44</sup> The ISA notes that long-term exposure (months to years) to PM<sub>2.5</sub> is associated with the development/progression of cardiovascular disease, premature mortality, and respiratory effects, including reduced lung function growth in children, increased respiratory symptoms, and asthma development.<sup>45</sup> The ISA concludes that the currently available scientific evidence from epidemiologic, controlled human exposure, and toxicological studies supports a causal association between short- and long-term exposures to PM<sub>2.5</sub> and cardiovascular effects and premature mortality. Furthermore, the ISA concludes that the collective evidence supports likely causal associations between short- and long-term PM<sub>2.5</sub> exposures and respiratory effects. The ISA also concludes that the scientific evidence is suggestive of a causal association for reproductive and developmental effects including respiratory-related infant mortality, and cancer, mutagenicity, and genotoxicity and long-term exposure to PM<sub>2.5</sub>.<sup>46</sup>

For PM<sub>10-2.5</sub>, the ISA concludes that the current evidence is suggestive of a causal relationship between short-term exposures and premature mortality, cardiovascular effects, and respiratory effects. Data are inadequate to draw conclusions regarding the health effects associated with long-term exposure to PM<sub>10-2.5</sub>.<sup>47</sup>

For ultrafine particles, the ISA concludes that there is suggestive evidence of a causal relationship between short-term exposures and cardiovascular effects, such as changes

in heart rhythm and blood vessel function. It also concludes that there is suggestive evidence of association between short-term exposure to ultrafine particles and respiratory effects. Data are inadequate to draw conclusions regarding the health effects associated with long-term exposure to ultrafine particles.<sup>48</sup>

#### c. Current and Projected PM<sub>2.5</sub> Levels

There are many areas of the country that are currently in nonattainment for the annual and 24-hour PM<sub>2.5</sub> NAAQS. Our modeling without the proposed Tier 3 controls projects that in the future we will continue to have many areas that will have ambient PM<sub>2.5</sub> concentrations above the level of the NAAQS (see Section III.C.2). States will need to meet the 24-hour standard in the 2015–2019 timeframe and the annual standard in the 2021–2025 timeframe. The emission reductions and improvements in ambient PM<sub>2.5</sub> from this proposed rule, which would take effect starting in 2017, would be helpful to states as they work to attain and maintain the PM<sub>2.5</sub> NAAQS.

There are two NAAQS for PM<sub>2.5</sub>: an annual standard (12 micrograms per cubic meter (µg/m<sup>3</sup>)) and a 24-hour standard (35 µg/m<sup>3</sup>). The most recent revisions to these standards were in 1997, 2006 and in December 2012. The December 2012 rule revised the level of the annual PM<sub>2.5</sub> standard from 15 µg/m<sup>3</sup> to 12 µg/m<sup>3</sup>.<sup>49</sup>

In 2005 EPA designated nonattainment areas for the 1997 PM<sub>2.5</sub> NAAQS.<sup>50</sup> As of December 14, 2012, over 91 million people lived in the 35 areas that are designated as nonattainment for the 1997 PM<sub>2.5</sub> NAAQS. These PM<sub>2.5</sub> nonattainment areas are comprised of 191 full or partial counties. On October 8, 2009, the EPA issued final nonattainment area designations for the 2006 24-hour PM<sub>2.5</sub> NAAQS.<sup>51</sup> These designations include 32 areas composed of 121 full or partial counties with a population of over 70 million. In total, there are 50 PM<sub>2.5</sub> nonattainment areas with a population of over 105 million people.<sup>52</sup>

<sup>44</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. Section 2.3.1.1.

<sup>44</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. Section 2.3.1.1.

<sup>45</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. page 2–12, Sections 7.3.1.1 and 7.3.2.1.

<sup>46</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. Section 2.3.2.

<sup>47</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. Section 2.3.4 and Table 2–6.

<sup>48</sup> U.S. EPA. (2009). Integrated Science Assessment for Particulate Matter (Final Report). U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-08/139F. Section 2.3.5 and Table 2–6.

<sup>49</sup> U.S. EPA (2012). National Ambient Air Quality Standards for Particulate Matter. <http://www.epa.gov/PM/2012/finalrule.pdf>.

<sup>50</sup> 70 FR 19844 (April 14, 2005).

<sup>51</sup> 74 FR 58688 (November 13, 2009).

<sup>52</sup> Data come from Summary Nonattainment Area Population Exposure Report, current as of December 14, 2012 at <http://www.epa.gov/oar/oaqps/greenbk/popexp.html> and contained in Docket EPA-HQ-OAR-2011-0135.

States with PM<sub>2.5</sub> nonattainment areas will be required to take action to bring those areas into attainment in the future. Most 1997 PM<sub>2.5</sub> nonattainment areas are required to attain the 1997 PM<sub>2.5</sub> NAAQS in the 2010 to 2015 time frame and then required to maintain the 1997 PM<sub>2.5</sub> NAAQS thereafter.<sup>53</sup> The 2006 24-hour PM<sub>2.5</sub> nonattainment areas will be required to attain the 2006 24-hour PM<sub>2.5</sub> NAAQS in the 2014 to 2019 time frame and then be required to maintain the 2006 24-hour PM<sub>2.5</sub> NAAQS thereafter.<sup>54</sup> The 2012 PM<sub>2.5</sub> nonattainment areas will likely be required to attain the 2012 PM<sub>2.5</sub> NAAQS in the 2020 to 2025 time frame, depending on the severity of an area's fine particle pollution problems and the availability of pollution controls. The standards proposed here begin taking effect in 2017.

EPA has already adopted many mobile source emission control programs that are expected to reduce ambient PM levels. As a result of these and other federal, state and local programs, the number of areas that fail to meet the PM<sub>2.5</sub> NAAQS in the future is expected to decrease. However, even with the implementation of all current state and federal regulations, there are projected to be counties violating the PM<sub>2.5</sub> NAAQS well into the future. Thus additional federal control programs, such as Tier 3, can assist areas with attainment dates in 2017 and beyond in attaining the NAAQS as expeditiously as practicable and may relieve areas with already stringent local regulations from some of the burden associated with adopting additional local controls.

### 3. Nitrogen Oxides and Sulfur Oxides

#### a. Background

Nitrogen dioxide (NO<sub>2</sub>) is a member of the NO<sub>x</sub> family of gases. Most NO<sub>2</sub> is formed in the air through the oxidation of nitric oxide (NO) emitted when fuel is burned at a high temperature. Sulfur dioxide (SO<sub>2</sub>), a member of the sulfur oxide (SO<sub>x</sub>) family of gases, is formed from burning fuels containing sulfur (e.g., coal or oil derived), extracting gasoline from oil, or extracting metals from ore.

SO<sub>2</sub> and NO<sub>2</sub> and their gas phase oxidation products can dissolve in water droplets and further oxidize to form sulfuric and nitric acid which react with ammonia to form sulfates and

<sup>53</sup> U.S. EPA. (2007). PM<sub>2.5</sub> National Ambient Air Quality Standard Implementation Rule (Final). Washington, DC: U.S. EPA. 72 FR 20586, April 25, 2007.

<sup>54</sup> U.S. EPA. (2011). PM Standards Revision—2006: Timeline. Available at <http://www.epa.gov/PM/naaqstrev2006.html#timeline>. Accessed December 31, 2011.

nitrates, both of which are important components of ambient PM. The health effects of ambient PM are discussed in Section II.B.2.b of this preamble. NO<sub>x</sub> and VOC are the two major precursors of ozone. The health effects of ozone are covered in Section II.B.2.1.b.

#### b. Health Effects of NO<sub>2</sub>

Information on the health effects of NO<sub>2</sub> can be found in the EPA Integrated Science Assessment (ISA) for Nitrogen Oxides.<sup>55</sup> The EPA has concluded that the findings of epidemiologic, controlled human exposure, and animal toxicological studies provide evidence that is sufficient to infer a likely causal relationship between respiratory effects and short-term NO<sub>2</sub> exposure. The ISA concludes that the strongest evidence for such a relationship comes from epidemiologic studies of respiratory effects including symptoms, emergency department visits, and hospital admissions. Based on both short- and long-term studies, the ISA concludes that associations of NO<sub>2</sub> with respiratory health effects are stronger among a number of groups; these include individuals with preexisting pulmonary conditions (e.g., asthma or COPD), children and older adults. The ISA also draws two broad conclusions regarding airway responsiveness following NO<sub>2</sub> exposure. First, the ISA concludes that NO<sub>2</sub> exposure may enhance the sensitivity to allergen-induced decrements in lung function and increase the allergen-induced airway inflammatory response following 30-minute exposures of asthmatics to NO<sub>2</sub> concentrations as low as 0.26 ppm. Second, exposure to NO<sub>2</sub> has been found to enhance the inherent responsiveness of the airway to subsequent nonspecific challenges in controlled human exposure studies of asthmatic subjects. Small but significant increases in non-specific airway hyperresponsiveness were reported following 1-hour exposures of asthmatics to 0.1 ppm NO<sub>2</sub>. Enhanced airway responsiveness could have important clinical implications for asthmatics since transient increases in airway responsiveness following NO<sub>2</sub> exposure have the potential to increase symptoms and worsen asthma control. Together, the epidemiologic and experimental data sets form a plausible, consistent, and coherent description of a relationship between NO<sub>2</sub> exposures and an array of adverse health effects

<sup>55</sup> U.S. EPA (2008). *Integrated Science Assessment for Oxides of Nitrogen—Health Criteria (Final Report)*. EPA/600/R-08/071. Washington, DC: U.S. EPA.

that range from the onset of respiratory symptoms to hospital admission.

Although the weight of evidence supporting a causal relationship is somewhat less certain than that associated with respiratory morbidity, NO<sub>2</sub> has also been linked to other health endpoints. These include all-cause (nonaccidental) mortality, hospital admissions or emergency department visits for cardiovascular disease, and decrements in lung function growth associated with chronic exposure.

#### c. Health Effects of SO<sub>2</sub>

Information on the health effects of SO<sub>2</sub> can be found in the EPA Integrated Science Assessment for Sulfur Oxides.<sup>56</sup> SO<sub>2</sub> has long been known to cause adverse respiratory health effects, particularly among individuals with asthma. Other potentially sensitive groups include children and the elderly. During periods of elevated ventilation, asthmatics may experience symptomatic bronchoconstriction within minutes of exposure. Following an extensive evaluation of health evidence from epidemiologic and laboratory studies, the EPA has concluded that there is a causal relationship between respiratory health effects and short-term exposure to SO<sub>2</sub>. Separately, based on an evaluation of the epidemiologic evidence of associations between short-term exposure to SO<sub>2</sub> and mortality, the EPA has concluded that the overall evidence is suggestive of a causal relationship between short-term exposure to SO<sub>2</sub> and mortality.

#### d. Current Levels of NO<sub>2</sub>

Between 2003 and 2005, national mean concentrations of NO<sub>2</sub> were about 15 parts per billion (ppb) for averaging periods ranging from a day to a year.<sup>57</sup> There are two NAAQS for NO<sub>2</sub>: an annual standard (53 ppb) and a 1-hour standard (100 ppb). The primary NAAQS for NO<sub>2</sub> was revised in January 2010. EPA completed area designations in January 2012 and there are currently no nonattainment areas. The designations were based on the existing community-wide monitoring network. Once the expanded network of NO<sub>2</sub> monitors is fully deployed and three years of air quality data have been collected, EPA intends to redesignate areas, as appropriate, based on the air

quality data from the new monitoring network.<sup>58 59</sup>

#### 4. Carbon Monoxide

Carbon monoxide (CO) is a colorless, odorless gas emitted from combustion processes. Nationally and, particularly in urban areas, the majority of CO emissions to ambient air come from mobile sources.

##### a. Health Effects of Carbon Monoxide

Information on the health effects of CO can be found in the EPA Integrated Science Assessment (ISA) for Carbon Monoxide.<sup>60</sup> The ISA concludes that ambient concentrations of CO are associated with a number of adverse health effects.<sup>61</sup> This section provides a summary of the health effects associated with exposure to ambient concentrations of CO.<sup>62</sup>

Human clinical studies of subjects with coronary artery disease show a decrease in the time to onset of exercise-induced angina (chest pain) and electrocardiogram changes following CO exposure. In addition, epidemiologic studies show associations between short-term CO exposure and cardiovascular morbidity, particularly increased emergency room visits and hospital admissions for coronary heart disease (including ischemic heart disease, myocardial infarction, and angina). Some epidemiologic evidence is also available for increased hospital admissions and emergency room visits for congestive heart failure and cardiovascular disease as a whole. The ISA concludes that a causal relationship is likely to exist between short-term exposures to CO and cardiovascular

<sup>59</sup> U.S. Environmental Protection Agency (2013). *Revision to Ambient Nitrogen Dioxide Monitoring Requirements*. March 7, 2013. <http://www.epa.gov/airquality/nitrogenoxides/pdfs/20130307fr.pdf>.

<sup>60</sup> U.S. EPA. (2010). *Integrated Science Assessment for Carbon Monoxide (Final Report)*. U.S. Environmental Protection Agency, Washington, DC, EPA/600/R-09/019F, 2010. Available at <http://cfpub.epa.gov/ncea/cfm/recordisplay.cfm?deid=218686>.

<sup>61</sup> The ISA evaluates the health evidence associated with different health effects, assigning one of five “weight of evidence” determinations: causal relationship, likely to be a causal relationship, suggestive of a causal relationship, inadequate to infer a causal relationship, and not likely to be a causal relationship. For definitions of these levels of evidence, please refer to Section 1.6 of the ISA.

<sup>62</sup> Personal exposure includes contributions from many sources, and in many different environments. Total personal exposure to CO includes both ambient and nonambient components; and both components may contribute to adverse health effects.

morbidity. It also concludes that available data are inadequate to conclude that a causal relationship exists between long-term exposures to CO and cardiovascular morbidity.

Animal studies show various neurological effects with in-utero CO exposure. Controlled human exposure studies report inconsistent neural and behavioral effects following low-level CO exposures. The ISA concludes the evidence is suggestive of a causal relationship with both short- and long-term exposure to CO and central nervous system effects.

A number of epidemiologic and animal toxicological studies cited in the ISA have evaluated associations between CO exposure and birth outcomes such as preterm birth or cardiac birth defects. The epidemiologic studies provide limited evidence of a CO-induced effect on preterm births and birth defects, with weak evidence for a decrease in birth weight. Animal toxicological studies have found associations between perinatal CO exposure and decrements in birth weight, as well as other developmental outcomes. The ISA concludes these studies are suggestive of a causal relationship between long-term exposures to CO and developmental effects and birth outcomes.

Epidemiologic studies provide evidence of effects on respiratory morbidity such as changes in pulmonary function, respiratory symptoms, and hospital admissions associated with ambient CO concentrations. A limited number of epidemiologic studies considered copollutants such as ozone, SO<sub>2</sub>, and PM in two-pollutant models and found that CO risk estimates were generally robust, although this limited evidence makes it difficult to disentangle effects attributed to CO itself from those of the larger complex air pollution mixture. Controlled human exposure studies have not extensively evaluated the effect of CO on respiratory morbidity. Animal studies at levels of 50–100 ppm CO show preliminary evidence of altered pulmonary vascular remodeling and oxidative injury. The ISA concludes that the evidence is suggestive of a causal relationship between short-term CO exposure and respiratory morbidity, and inadequate to conclude that a causal relationship exists between long-term exposure and respiratory morbidity.

Finally, the ISA concludes that the epidemiologic evidence is suggestive of a causal relationship between short-term exposures to CO and mortality. Epidemiologic studies provide evidence of an association between short-term exposure to CO and mortality, but

limited evidence is available to evaluate cause-specific mortality outcomes associated with CO exposure. In addition, the attenuation of CO risk estimates which was often observed in copollutant models contributes to the uncertainty as to whether CO is acting alone or as an indicator for other combustion-related pollutants. The ISA also concludes that there is not likely to be a causal relationship between relevant long-term exposures to CO and mortality.

#### 5. Mobile Source Air Toxics

Light-duty vehicle emissions contribute to ambient levels of air toxics known or suspected as human or animal carcinogens, or that have noncancer health effects. The population experiences an elevated risk of cancer and other noncancer health effects from exposure to the class of pollutants known collectively as “air toxics.”<sup>63</sup> These compounds include, but are not limited to, benzene, 1,3-butadiene, formaldehyde, acetaldehyde, acrolein, polycyclic organic matter, and naphthalene. These compounds were identified as national or regional risk drivers or contributors in the 2005 National-scale Air Toxics Assessment and have significant inventory contributions from mobile sources.<sup>64</sup>

#### a. Health Effects of Air Toxics

##### i. Benzene

The EPA’s IRIS database lists benzene as a known human carcinogen (causing leukemia) by all routes of exposure, and concludes that exposure is associated with additional health effects, including genetic changes in both humans and animals and increased proliferation of bone marrow cells in mice.<sup>65</sup> EPA states in its IRIS database that data indicate a causal relationship between benzene exposure and acute lymphocytic leukemia and suggest a

relationship between benzene exposure and chronic non-lymphocytic leukemia and chronic lymphocytic leukemia. EPA’s IRIS documentation for benzene also lists a range of  $2.2 \times 10^{-6}$  to  $7.8 \times 10^{-6}$  as the unit risk estimate (URE) for benzene.<sup>68</sup> The International Agency for Research on Carcinogens (IARC) has determined that benzene is a human carcinogen and the U.S. Department of Health and Human Services (DHHS) has characterized benzene as a known human carcinogen.<sup>70</sup>

A number of adverse noncancer health effects including blood disorders, such as preleukemia and aplastic anemia, have also been associated with long-term exposure to benzene.<sup>72</sup> The most sensitive noncancer effect observed in humans, based on current data, is the depression of the absolute lymphocyte count in blood.<sup>74</sup> EPA’s inhalation reference concentration (RfC) for benzene is 30 µg/m<sup>3</sup>. The RfC is based on suppressed absolute lymphocyte counts seen in humans under occupational exposure conditions. In addition, recent work, including studies sponsored by the Health Effects Institute (HEI), provides evidence that biochemical responses are occurring at lower levels of benzene exposure than previously known.<sup>76</sup> EPA’s IRIS program has

<sup>68</sup> A unit risk estimate is defined as the increase in the lifetime risk of an individual who is exposed for a lifetime to 1 µg/m<sup>3</sup> benzene in air.

not yet evaluated these new data. EPA does not currently have an acute reference concentration for benzene. The Agency for Toxic Substances and Disease Registry (ATSDR) Minimal Risk Level (MRL) for acute exposure to benzene is 29  $\mu\text{g}/\text{m}^3$  for 1–14 days exposure.<sup>80 81</sup>

## ii. Formaldehyde

In 1991, EPA concluded that formaldehyde is a carcinogen based on nasal tumors in animal bioassays.<sup>82</sup> An Inhalation Unit Risk for cancer and a Reference Dose for oral noncancer effects were developed by the Agency and posted on the Integrated Risk Information System (IRIS) database. Since that time, the National Toxicology Program (NTP) and International Agency for Research on Cancer (IARC) have concluded that formaldehyde is a known human carcinogen.<sup>83 84 85</sup>

The conclusions by IARC and NTP reflect the results of epidemiologic research published since 1991 in combination with previous animal, human and mechanistic evidence. Research conducted by the National Cancer Institute reported an increased risk of nasopharyngeal cancer and specific lymphohematopoietic malignancies among workers exposed to formaldehyde.<sup>86 87 88</sup> A National

Institute of Occupational Safety and Health study of garment workers also reported increased risk of death due to leukemia among workers exposed to formaldehyde.<sup>89</sup> Extended follow-up of a cohort of British chemical workers did not report evidence of an increase in nasopharyngeal or lymphohematopoietic cancers, but a continuing statistically significant excess in lung cancers was reported.<sup>90</sup> Finally, a study of embalmers reported formaldehyde exposures to be associated with an increased risk of myeloid leukemia but not brain cancer.<sup>91</sup>

Health effects of formaldehyde in addition to cancer were reviewed by the Agency for Toxic Substances and Disease Registry in 1999<sup>92</sup> and supplemented in 2010,<sup>93</sup> and by the World Health Organization.<sup>94</sup> These organizations reviewed the literature concerning effects on the eyes and respiratory system, the primary point of contact for inhaled formaldehyde, including sensory irritation of eyes and respiratory tract, pulmonary function, nasal histopathology, and immune system effects. In addition, research on reproductive and developmental effects and neurological effects were discussed.

June 2010.<sup>95</sup> The draft assessment reviewed more recent research from animal and human studies on cancer and other health effects. The NRC released their review report in April 2011.<sup>96</sup> The EPA is currently revising the draft assessment in response to this review.

## iii. Acetaldehyde

Acetaldehyde is classified in EPA's IRIS database as a probable human carcinogen, based on nasal tumors in rats, and is considered toxic by the inhalation, oral, and intravenous routes.<sup>97</sup> The URE in IRIS for acetaldehyde is  $2.2 \times 10^{-6}$  per  $\mu\text{g}/\text{m}^3$ .<sup>98</sup> Acetaldehyde is reasonably anticipated to be a human carcinogen by the U.S. DHHS in the 12th Report on Carcinogens and is classified as possibly carcinogenic to humans (Group 2B) by the IARC.<sup>99 100</sup> EPA is currently conducting a reassessment of cancer risk from inhalation exposure to acetaldehyde.

The primary noncancer effects of exposure to acetaldehyde vapors include irritation of the eyes, skin, and respiratory tract.<sup>101</sup> In short-term (4 week) rat studies, degeneration of olfactory epithelium was observed at various concentration levels of acetaldehyde exposure.<sup>102 103</sup> Data from

these studies were used by EPA to develop an inhalation reference concentration of  $9 \mu\text{g}/\text{m}^3$ . Some asthmatics have been shown to be a sensitive subpopulation to decrements in functional expiratory volume (FEV1 test) and bronchoconstriction upon acetaldehyde inhalation.<sup>104</sup> The agency is currently conducting a reassessment of the health hazards from inhalation exposure to acetaldehyde.

#### iv. Acrolein

EPA most recently evaluated the toxicological and health effects literature related to acrolein in 2003 and concluded that the human carcinogenic potential of acrolein could not be determined because the available data were inadequate. No information was available on the carcinogenic effects of acrolein in humans and the animal data provided inadequate evidence of carcinogenicity.<sup>105</sup> The IARC determined in 1995 that acrolein was not classifiable as to its carcinogenicity in humans.<sup>106</sup>

Lesions to the lungs and upper respiratory tract of rats, rabbits, and hamsters have been observed after subchronic exposure to acrolein.<sup>107</sup> The Agency has developed an RfC for acrolein of  $0.02 \mu\text{g}/\text{m}^3$  and an RfD of  $0.5 \mu\text{g}/\text{kg}\cdot\text{day}$ .<sup>108</sup> EPA is considering updating the acrolein assessment with data that have become available since the 2003 assessment was completed.

Acrolein is extremely acrid and irritating to humans when inhaled, with

acute exposure resulting in upper respiratory tract irritation, mucus hypersecretion and congestion. The intense irritancy of this carbonyl has been demonstrated during controlled tests in human subjects, who suffer intolerable eye and nasal mucosal sensory reactions within minutes of exposure.<sup>109</sup> These data and additional studies regarding acute effects of human exposure to acrolein are summarized in EPA's 2003 IRIS Human Health Assessment for acrolein.<sup>110</sup> Studies in humans indicate that levels as low as  $0.09 \text{ ppm}$  ( $0.21 \text{ mg}/\text{m}^3$ ) for five minutes may elicit subjective complaints of eye irritation with increasing concentrations leading to more extensive eye, nose and respiratory symptoms. Acute exposures in animal studies report bronchial hyper-responsiveness. Based on animal data (more pronounced respiratory irritancy in mice with allergic airway disease in comparison to non-diseased mice<sup>111</sup>) and demonstration of similar effects in humans (e.g., reduction in respiratory rate), individuals with compromised respiratory function (e.g., emphysema, asthma) are expected to be at increased risk of developing adverse responses to strong respiratory irritants such as acrolein. EPA does not currently have an acute reference concentration for acrolein. The available health effect reference values for acrolein have been summarized by EPA and include an ATSDR MRL for acute exposure to acrolein of  $7 \mu\text{g}/\text{m}^3$  for 1–14 days exposure; and Reference Exposure Level (REL) values from the California Office of Environmental Health Hazard Assessment (OEHHA) for one-hour and 8-hour exposures of  $2.5 \mu\text{g}/\text{m}^3$  and  $0.7 \mu\text{g}/\text{m}^3$ , respectively.<sup>112</sup>

#### v. 1,3-Butadiene

EPA has characterized 1,3-butadiene as carcinogenic to humans by inhalation.<sup>113 114</sup> The IARC has determined that 1,3-butadiene is a human carcinogen and the U.S. DHHS has characterized 1,3-butadiene as a known human carcinogen.<sup>115 116 117</sup> There are numerous studies consistently demonstrating that 1,3-butadiene is metabolized into genotoxic metabolites by experimental animals and humans. The specific mechanisms of 1,3-butadiene-induced carcinogenesis are unknown; however, the scientific evidence strongly suggests that the carcinogenic effects are mediated by genotoxic metabolites. Animal data suggest that females may be more sensitive than males for cancer effects associated with 1,3-butadiene exposure; there are insufficient data in humans from which to draw conclusions about sensitive subpopulations. The URE for 1,3-butadiene is  $3 \times 10^{-5}$  per  $\mu\text{g}/\text{m}^3$ .<sup>118</sup> 1,3-butadiene also causes a variety of reproductive and developmental effects in mice; no human data on these effects are available. The most sensitive effect was ovarian atrophy observed in a lifetime bioassay of female mice.<sup>119</sup> Based on this critical effect and the benchmark concentration methodology,

an RFC for chronic health effects was calculated at 0.9 ppb (approximately 2 µg/m<sup>3</sup>).

vi. Ethanol

EPA is planning to develop an assessment of the health effects of exposure to ethanol, a compound which is not currently listed on EPA's IRIS database. Extensive health effects data are available for ingestion of ethanol, while data on inhalation exposure effects are sparse. In developing the assessment, EPA is evaluating pharmacokinetic models as a means of extrapolating across species (animal to human) and across exposure routes (oral to inhalation) to better characterize the health hazards and dose-response relationships for low levels of ethanol exposure in the environment.

vii. Polycyclic Organic Matter

The term polycyclic organic matter (POM) defines a broad class of compounds that includes the polycyclic aromatic hydrocarbon compounds (PAHs). One of these compounds, naphthalene, is discussed separately below. POM compounds are formed primarily from combustion and are present in the atmosphere in gas and particulate form. Cancer is the major concern from exposure to POM. Epidemiologic studies have reported an increase in lung cancer in humans exposed to diesel exhaust, coke oven emissions, roofing tar emissions, and cigarette smoke; all of these mixtures contain POM compounds.<sup>120 121</sup> Animal studies have reported respiratory tract tumors from inhalation exposure to benzo[a]pyrene and alimentary tract and liver tumors from oral exposure to benzo[a]pyrene.<sup>122</sup> In 1997 EPA classified seven PAHs (benzo[a]pyrene, benz[a]anthracene, chrysene, benzo[b]fluoranthene, benzo[k]fluoranthene, dibenz[a,h]anthracene, and indeno[1,2,3-cd]pyrene) as Group B2, probable human carcinogens.<sup>123</sup> Since

that time, studies have found that maternal exposures to PAHs in a population of pregnant women were associated with several adverse birth outcomes, including low birth weight and reduced length at birth, as well as impaired cognitive development in preschool children (3 years of age).<sup>124 125</sup> These and similar studies are being evaluated as a part of the ongoing IRIS assessment of health effects associated with exposure to benzo[a]pyrene.

viii. PAN

PAN (peroxy acetyl nitrate) has not been evaluated by EPA's IRIS program. Information regarding the potential carcinogenicity of PAN is limited. As noted in the EPA air quality criteria document for ozone and related photochemical oxidants, cytogenetic studies indicate that PAN is not a potent mutagen, clastogen (a compound that can cause breaks in chromosomes), or DNA-damaging agent in mammalian cells either in vivo or in vitro. Some studies suggest that PAN may be a weak bacterial mutagen at concentrations much higher than exist in present urban atmospheres.<sup>126</sup>

Effects of ground-level smog causing intense eye irritation have been attributed to photochemical oxidants, including PAN.<sup>127</sup> Animal toxicological information on the inhalation effects of the non-ozone oxidants has been limited to a few studies on PAN. Acute exposure to levels of PAN can cause changes in lung morphology, behavioral modifications, weight loss, and susceptibility to pulmonary infections. Human exposure studies indicate minor pulmonary function effects at high PAN concentrations, but large inter-

individual variability precludes definitive conclusions.<sup>128</sup>

ix. Naphthalene

Naphthalene is found in small quantities in gasoline and diesel fuels. Naphthalene emissions have been measured in larger quantities in both gasoline and diesel exhaust compared with evaporative emissions from mobile sources, indicating it is primarily a product of combustion. Acute (short-term) exposure of humans to naphthalene by inhalation, ingestion, or dermal contact is associated with hemolytic anemia and damage to the liver and the nervous system.<sup>129</sup> Chronic (long term) exposure of workers and rodents to naphthalene has been reported to cause cataracts and retinal damage.<sup>130</sup> EPA released an external review draft of a reassessment of the inhalation carcinogenicity of naphthalene based on a number of recent animal carcinogenicity studies.<sup>131</sup> The draft reassessment completed external peer review.<sup>132</sup> Based on external peer review comments received, a revised draft assessment that considers all routes of exposure, as well as cancer and noncancer effects, is under development. The external review draft does not represent official agency opinion and was released solely for the purposes of external peer review and public comment. The National Toxicology Program listed naphthalene

as “reasonably anticipated to be a human carcinogen” in 2004 on the basis of bioassays reporting clear evidence of carcinogenicity in rats and some evidence of carcinogenicity in mice.<sup>133</sup> California EPA has released a new risk assessment for naphthalene, and the IARC has reevaluated naphthalene and re-classified it as Group 2B: possibly carcinogenic to humans.<sup>134</sup>

Naphthalene also causes a number of chronic non-cancer effects in animals, including abnormal cell changes and growth in respiratory and nasal tissues.<sup>135</sup> The current EPA IRIS assessment includes noncancer data on hyperplasia and metaplasia in nasal tissue that form the basis of the inhalation RfC of 3 µg/m<sup>3</sup>.<sup>136</sup> The ATSDR MRL for acute exposure to naphthalene is 0.6 mg/kg/day.

#### x. Other Air Toxics

In addition to the compounds described above, other compounds in gaseous hydrocarbon and PM emissions from light-duty vehicles would be affected by this proposal. Mobile source air toxic compounds that would potentially be impacted include ethylbenzene, propionaldehyde, toluene, and xylene. Information regarding the health effects of these compounds can be found in EPA’s IRIS database.<sup>137</sup>

#### b. Current Levels of Air Toxics

The majority of Americans continue to be exposed to ambient concentrations of air toxics at levels which have the potential to cause adverse health effects.<sup>138</sup> The levels of air toxics to which people are exposed vary depending on where people live and work and the kinds of activities in which they engage, as discussed in

detail in U.S. EPA’s most recent Mobile Source Air Toxics Rule.<sup>139</sup> According to the National Air Toxics Assessment (NATA) for 2005,<sup>140</sup> mobile sources were responsible for 43 percent of outdoor toxic emissions and over 50 percent of the cancer risk and noncancer hazard associated with primary emissions. Mobile sources are also large contributors to precursor emissions which react to form secondary concentrations of air toxics. Formaldehyde is the largest contributor to cancer risk of all 80 pollutants quantitatively assessed in the 2005 NATA. Mobile sources were responsible for over 40 percent of primary emissions of this pollutant in 2005, and are major contributors to formaldehyde precursor emissions. Benzene is also a large contributor to cancer risk, and mobile sources account for over 70 percent of ambient exposure. Over the years, EPA has implemented a number of mobile source and fuel controls which have resulted in VOC reductions, which also reduced formaldehyde, benzene and other air toxic emissions.

#### 6. Near-Roadway Pollution

Locations in close proximity to major roadways generally have elevated concentrations of many air pollutants emitted from motor vehicles. Hundreds of such studies have been published in peer-reviewed journals, concluding that concentrations of CO, NO, NO<sub>2</sub>, benzene, aldehydes, particulate matter, black carbon, and many other compounds are elevated in ambient air within approximately 300–600 meters (about 1,000–2,000 feet) of major roadways. Highest concentrations of most pollutants emitted directly by motor vehicles are found at locations within 50 meters (about 165 feet) of the edge of a roadway’s traffic lanes.

A recent large-scale review of air quality measurements in vicinity of major roadways between 1978 and 2008 concluded that the pollutants with the steepest concentration gradients in vicinities of roadways were CO, ultrafine particles, metals, elemental carbon (EC), NO, NO<sub>x</sub>, and several VOCs.<sup>141</sup> These pollutants showed a large reduction in concentrations within 100 meters downwind of the roadway. Pollutants that showed more gradual

reductions with distance from roadways included benzene, NO<sub>2</sub>, PM<sub>2.5</sub>, and PM<sub>10</sub>. In the review article, results varied based on the method of statistical analysis used to determine the trend.

For pollutants with relatively high background concentrations relative to near-road concentrations, detecting concentration gradients can be difficult. For example, many aldehydes have high background concentrations as a result of photochemical breakdown of precursors from many different organic compounds. This can make detection of gradients around roadways and other primary emission sources difficult. However, several studies have measured aldehydes in multiple weather conditions, and found higher concentrations of many carbonyls downwind of roadways.<sup>142 143</sup> These findings suggest a substantial roadway source of these carbonyls.

In the past 15 years, many studies have been published with results showing that populations who live, work, or go to school near high-traffic roadways experience higher rates of numerous adverse health effects, compared to populations far away from major roads.<sup>144</sup> In addition, numerous studies have found adverse health effects associated with spending time in traffic, such as commuting or walking along high-traffic roadways. The health outcomes with the strongest evidence linking them with traffic-associated air pollutants are respiratory effects, particularly in asthmatic children, and cardiovascular effects.

Numerous reviews of this body of health literature have been published as well. In 2010, an expert panel of the Health Effects Institute (HEI) published a review of hundreds of exposure, epidemiology, and toxicology studies.<sup>145</sup> The panel rated how the evidence for each type of health outcome supported a conclusion of a causal association with traffic-

<sup>144</sup> In the widely-used PubMed database of health publications, between January 1, 1990 and August 18, 2011, 605 publications contained the keywords “traffic, pollution, epidemiology,” with approximately half the studies published after 2007.

<sup>145</sup> Health Effects Institute Panel on the Health Effects of Traffic-Related Air Pollution. (2010). *Traffic-related air pollution: a critical review of the literature on emissions, exposure, and health effects*. HEI Special Report 17. Available at <http://www.healtheffects.org>.

associated air pollution as either “sufficient,” “suggestive but not sufficient,” or “inadequate and insufficient.” The panel categorized evidence of a causal association for exacerbation of childhood asthma as “sufficient.” The panel categorized evidence of a causal association for new onset asthma as between “sufficient” and as “suggestive but not sufficient.” “Suggestive of a causal association” was how the panel categorized evidence linking traffic-associated air pollutants with exacerbation of adult respiratory symptoms and lung function decrement. It categorized as “inadequate and insufficient” evidence of a causal relationship between traffic-related air pollution and health care utilization for respiratory problems, new onset adult asthma, chronic obstructive pulmonary disease (COPD), nonasthmatic respiratory allergy, and cancer in adults and children. Other literature reviews have been published with conclusions similar to the HEI panel’s.<sup>146 147 148</sup> Health outcomes with few publications suggest the possibility of other effects still lacking sufficient evidence to draw definitive conclusions. Among these outcomes with a small number of positive studies are neurological impacts (e.g., autism and reduced cognitive function) and reproductive outcomes (e.g., preterm birth, low birth weight).<sup>149 150 151 152</sup>

In addition to health outcomes, particularly cardiopulmonary effects, conclusions of numerous studies suggest mechanisms by which traffic-related air pollution affects health. Numerous studies indicate that near-roadway exposures increase systemic inflammation, affecting organ systems,

including blood vessels and lungs.<sup>153 154 155 156</sup> Long-term exposures in near-road environments have been associated with inflammation-associated conditions, such as atherosclerosis and asthma.<sup>157 158 159</sup>

Several studies suggest that some factors may increase susceptibility to the effects of traffic-associated air pollution. Several studies have found stronger respiratory associations in children experiencing chronic social stress, such as in violent neighborhoods or in homes with high family stress.<sup>160 161 162</sup>

The risks associated with residence, workplace, or schools near major roads are of potentially high public health significance due to the large population in such locations. According to the 2009 American Housing Survey, over 22 million homes (17.0 percent of all U.S. housing units) were located within 300 feet of an airport, railroad, or highway with four or more lanes. corresponds to a population of more than 50 million U.S. residents in close proximity to high-traffic roadways or other transportation sources. As discussed in Section III, populations near major roads have higher fractions of minority residents and lower socioeconomic status. Furthermore, on average, Americans spend more than an hour traveling each day, bringing nearly all residents into a high-exposure microenvironment for part of the day.

EPA continues to research near-road air quality, including the types of pollutants found in high concentrations near major roads and health problems associated with the mixture of pollutants near roads.

## 7. Environmental Impacts of Motor Vehicles and Fuels

### a. Plant and Ecosystem Effects of Ozone

Elevated ozone levels contribute to environmental effects, with impacts to plants and ecosystems being of most concern. Ozone can produce both acute and chronic injury in sensitive species depending on the concentration level and the duration of the exposure. Ozone effects also tend to accumulate over the growing season of the plant, so that even low concentrations experienced for a longer duration have the potential to create chronic stress on vegetation. Ozone damage to plants includes visible injury to leaves and impaired photosynthesis, both of which can lead to reduced plant growth and reproduction, resulting in reduced crop yields, forestry production, and use of sensitive ornamentals in landscaping. In addition, the impairment of photosynthesis, the process by which the plant makes carbohydrates (its source of energy and food), can lead to a subsequent reduction in root growth and carbohydrate storage below ground, resulting in other, more subtle plant and ecosystems impacts.

These latter impacts include increased susceptibility of plants to insect attack, disease, harsh weather, interspecies competition and overall decreased plant vigor. The adverse effects of ozone on forest and other natural vegetation can potentially lead to species shifts and loss from the affected ecosystems, resulting in a loss or reduction in associated ecosystem goods and services. Lastly, visible ozone injury to leaves can result in a loss of aesthetic value in areas of special scenic significance like national parks and wilderness areas. The final 2006 Ozone Air Quality Criteria Document presents more detailed information on ozone effects on vegetation and ecosystems.

## b. Visibility

Visibility can be defined as the degree to which the atmosphere is transparent to visible light.<sup>163</sup> Visibility impairment is caused by light scattering and absorption by suspended particles and gases. Visibility is important because it has direct significance to people's enjoyment of daily activities in all parts of the country. Individuals value good visibility for the well-being it provides them directly, where they live and work, and in places where they enjoy recreational opportunities. Visibility is also highly valued in significant natural areas, such as national parks and wilderness areas, and special emphasis is given to protecting visibility in these areas. For more information on visibility see the final 2009 PM ISA.<sup>164</sup>

EPA is pursuing a two-part strategy to address visibility impairment. First, EPA developed the regional haze program which was put in place in July 1999 to protect the visibility in Mandatory Class I Federal areas.<sup>165</sup> There are 156 national parks, forests and wilderness areas categorized as Mandatory Class I Federal areas.<sup>166</sup> These areas are defined in CAA section 162 as those national parks exceeding 6,000 acres, wilderness areas and memorial parks exceeding 5,000 acres, and all international parks which were in existence on August 7, 1977. Second, EPA has concluded that PM<sub>2.5</sub> causes adverse effects on visibility in other areas that are not protected by the Regional Haze Rule, depending on PM<sub>2.5</sub> concentrations and other factors that control their visibility impact effectiveness such as dry chemical composition and relative humidity (i.e., an indicator of the water composition of the particles). EPA revised the PM<sub>2.5</sub> standards in December 2012 and established a target level of protection that is expected to be met through attainment of the existing secondary standards for PM<sub>2.5</sub>.

## i. Current Visibility Levels

As mentioned in Section II.B.2.c, millions of people live in nonattainment areas for the PM<sub>2.5</sub> NAAQS. These populations, as well as large numbers of individuals who travel to these areas,

<sup>166</sup> 62 FR 38680-38681 (July 18, 1997).

are likely to experience visibility impairment. In addition, while visibility trends have improved in mandatory class I federal areas, the most recent data show that these areas continue to suffer from visibility impairment. In summary, visibility impairment is experienced throughout the U.S., in multi-state regions, urban areas, and remote mandatory class I federal areas.

## c. Atmospheric Deposition

Wet and dry deposition of ambient particulate matter delivers a complex mixture of metals (e.g., mercury, zinc, lead, nickel, aluminum, cadmium), organic compounds (e.g., polycyclic organic matter, dioxins, furans) and inorganic compounds (e.g., nitrate, sulfate) to terrestrial and aquatic ecosystems. The chemical form of the compounds deposited depends on a variety of factors including ambient conditions (e.g., temperature, humidity, oxidant levels) and the sources of the material. Chemical and physical transformations of the compounds occur in the atmosphere as well as the media onto which they deposit. These transformations in turn influence the fate, bioavailability and potential toxicity of these compounds. Atmospheric deposition has been identified as a key component of the environmental and human health hazard posed by several pollutants including mercury, dioxin and PCBs.<sup>167</sup>

Adverse impacts on water quality can occur when atmospheric contaminants deposit to the water surface or when material deposited on the land enters a waterbody through runoff. Potential impacts of atmospheric deposition to waterbodies include those related to both nutrient and toxic inputs. Adverse effects to human health and welfare can occur from the addition of excess nitrogen via atmospheric deposition. The nitrogen-nutrient enrichment contributes to toxic algae blooms and zones of depleted oxygen, which can lead to fish kills, frequently in coastal waters. Deposition of heavy metals or other toxics may lead to the human ingestion of contaminated fish, impairment of drinking water, damage to freshwater and marine ecosystem components, and limits to recreational uses. Several studies have been conducted in U.S. coastal waters and in the Great Lakes Region in which the role

<sup>167</sup> U.S. EPA. (2000). Deposition of Air Pollutants to the Great Waters: Third Report to Congress. Office of Air Quality Planning and Standards. EPA-453/R-00-0005.

of ambient PM deposition and runoff is investigated.<sup>168 169 170 171 172</sup>

Atmospheric deposition of nitrogen and sulfur contributes to acidification, altering biogeochemistry and affecting animal and plant life in terrestrial and aquatic ecosystems across the United States. The sensitivity of terrestrial and aquatic ecosystems to acidification from nitrogen and sulfur deposition is predominantly governed by geology. Prolonged exposure to excess nitrogen and sulfur deposition in sensitive areas acidifies lakes, rivers and soils. Increased acidity in surface waters creates inhospitable conditions for biota and affects the abundance and nutritional value of preferred prey species, threatening biodiversity and ecosystem function. Over time, acidifying deposition also removes essential nutrients from forest soils, depleting the capacity of soils to neutralize future acid loadings and negatively affecting forest sustainability. Major effects include a decline in sensitive forest tree species, such as red spruce (*Picea rubens*) and sugar maple (*Acer saccharum*), and a loss of biodiversity of fishes, zooplankton, and macro invertebrates.

In addition to the role nitrogen deposition plays in acidification, nitrogen deposition also leads to nutrient enrichment and altered biogeochemical cycling. In aquatic systems increased nitrogen can alter species assemblages and cause eutrophication. In terrestrial systems nitrogen loading can lead to loss of nitrogen sensitive lichen species, decreased biodiversity of grasslands, meadows and other sensitive habitats, and increased potential for invasive species. For a broader explanation of the topics treated here, refer to the description in Section 6.3.2 of the RIA.

Adverse impacts on soil chemistry and plant life have been observed for areas heavily influenced by atmospheric

deposition of nutrients, metals and acid species, resulting in species shifts, loss of biodiversity, forest decline, damage to forest productivity and reductions in ecosystem services. Potential impacts also include adverse effects to human health through ingestion of contaminated vegetation or livestock (as in the case for dioxin deposition), reduction in crop yield, and limited use of land due to contamination.

Atmospheric deposition of pollutants can reduce the aesthetic appeal of buildings and culturally important articles through soiling, and can contribute directly (or in conjunction with other pollutants) to structural damage by means of corrosion or erosion. Atmospheric deposition may affect materials principally by promoting and accelerating the corrosion of metals, by degrading paints, and by deteriorating building materials such as concrete and limestone. Particles contribute to these effects because of their electrolytic, hygroscopic, and acidic properties, and their ability to adsorb corrosive gases (principally sulfur dioxide).

#### i. Current Nitrogen and Sulfur Deposition

Over the past two decades, the EPA has undertaken numerous efforts to reduce nitrogen and sulfur deposition across the U.S. Analyses of long-term monitoring data for the U.S. show that deposition of both nitrogen and sulfur compounds has decreased over the last 17 years. The data show that reductions were more substantial for sulfur compounds than for nitrogen compounds. In the eastern U.S., where data are most abundant, total sulfur deposition decreased by about 44 percent between 1990 and 2007, while total nitrogen deposition decreased by 25 percent over the same time frame.<sup>173</sup> These numbers are generated by the U.S. national monitoring network and they likely underestimate nitrogen deposition because neither ammonia nor organic nitrogen is measured. Although total nitrogen and sulfur deposition has decreased over time, many areas continue to be negatively impacted by deposition. Deposition of inorganic nitrogen and sulfur species routinely measured in the U.S. between 2005 and 2007 were as high as 9.6 kilograms of nitrogen per hectare (kg N/ha) averaged over three years and 20.8

kilograms of sulfur per hectare (kg S/ha) averaged over three years.<sup>174</sup>

#### d. Environmental Effects of Air Toxics

Emissions from producing, transporting and combusting fuel contribute to ambient levels of pollutants that contribute to adverse effects on vegetation. Volatile organic compounds, some of which are considered air toxics, have long been suspected to play a role in vegetation damage.<sup>175</sup> In laboratory experiments, a wide range of tolerance to VOCs has been observed.<sup>176</sup> Decreases in harvested seed pod weight have been reported for the more sensitive plants, and some studies have reported effects on seed germination, flowering and fruit ripening. Effects of individual VOCs or their role in conjunction with other stressors (e.g., acidification, drought, temperature extremes) have not been well studied. In a recent study of a mixture of VOCs including ethanol and toluene on herbaceous plants, significant effects on seed production, leaf water content and photosynthetic efficiency were reported for some plant species.<sup>177</sup>

Research suggests an adverse impact of vehicle exhaust on plants, which has in some cases been attributed to aromatic compounds and in other cases to nitrogen oxides.<sup>178 179 180</sup>

### III. How would this proposal reduce emissions and air pollution?

#### A. Effects of the Proposed Vehicle and Fuel Changes on Mobile Source Emissions

The vehicle and fuel standards that EPA is proposing would significantly

reduce the tailpipe and evaporative emissions of light- and heavy-duty vehicles in several ways, as described in this section. In addition, the proposed gasoline sulfur standard would reduce emissions of SO<sub>2</sub> from existing gasoline-powered vehicles and equipment. As described in Section II, all of these emission reductions would in turn improve air quality nationwide and reduce the health effects associated with air pollution from mobile sources.

As with the Tier 2 program, EPA is proposing to implement closely-coordinated requirements for both automakers and refiners in the same rulemaking action. The proposed vehicle emission standards and gasoline sulfur standards represent a “systems approach” to reducing vehicle-related exhaust and evaporative emissions. By recognizing the relationships among the various sources of emissions addressed by this proposed rule, we have been able to integrate the provisions into a single, coordinated program.

#### 1. How do vehicles produce the emissions addressed in this proposal?

The degree to which vehicles produce exhaust and evaporative emissions depends on the design and functionality of the engine and the associated exhaust and evaporative emission controls, in concert with the properties of the fuel on which the vehicle is operating. In the following paragraphs, we discuss how light- and heavy-duty vehicles produce each of these types of emissions, both from the tailpipe and from the fuel system.

#### a. Tailpipe (Exhaust) Emissions

Which pollutants are emitted at the vehicle’s tailpipe and their quantities depend on how the fuel is combusted in the engine and how the resulting gases are treated in the exhaust system. Historically, much of tailpipe emission control has focused on hydrocarbon compounds (HC) and NO<sub>x</sub>. The portion of hydrocarbons that is methane is minimally reactive in forming ozone. Thus, for emission control purposes, the focus is generally on non-methane hydrocarbons (NMHC), which are also expressed as non-methane organic gases (NMOG) in order to account for oxygenates (usually ethanol) now usually present in the fuel.

Tailpipe hydrocarbon emissions also include several toxic pollutants, including benzene, acetaldehyde, and formaldehyde. To varying degrees, the mass emissions of these pollutants are reduced along with other hydrocarbons by the catalytic converter and improved engine controls.

Light- and heavy-duty gasoline vehicles also emit PM and CO. PM forms directly as a combustion product (primarily as elemental carbon, usually called soot) and also indirectly as semi-volatile hydrocarbon compounds that form particles in the exhaust system or soon after exiting the tailpipe. CO is a product of incomplete fuel combustion.

When operating properly, modern exhaust emission controls (centering on the catalytic converter) can reduce much of the HC (including toxics), NO<sub>x</sub> and CO exiting the engine. However, tailpipe emissions are increased during periods of vehicle startup, as catalytic converters must warm up to be effective; during subsequent operation due to the interference of sulfur in the gasoline; during high load operating events, as the catalyst is overwhelmed or its operation is modified to protect against permanent damage; and as a vehicle ages, as the catalyst degrades in performance due to the effects of high temperature operation and contaminants in the fuel and lubricating oil.

#### b. Evaporative Emissions

Gasoline vehicles also produce vapors in the fuel tank and fuel system that can be released as evaporative emissions. These vapors are primarily the lighter, more volatile hydrocarbon compounds in the gasoline, which, like exhaust hydrocarbons, contribute to concentrations of VOCs in the atmosphere.

As discussed in Section IV below, vehicle evaporative ("evap") control systems are designed to block or capture vapors as they are generated. Vapors are generated in the vehicle fuel tank and fuel system (and released to the atmosphere if not adequately controlled) as fuel heats up due to ambient temperature increase and/or vehicle operation. Fuel vapors are also released when they permeate through hose material, when they leak at connections or due to damaged components, and during refueling events.

In general, the evap emission controls on current vehicles (and that would be improved under this proposed rule) consist of a canister filled with activated charcoal and connected by hoses to the fuel system. The hoses direct generated vapors to the canister, which collects the vapors on the carbon and stores them until the system experiences a "purge" event. During purge, the engine draws fresh air through the canister, carrying vapors released by the carbon to the engine to be combusted and restoring the capacity of the canister. Evaporative emissions occur when vapors are emitted to the atmosphere

because the evap system is compromised, the carbon canister is overwhelmed, or vapors permeate or leak. As such, evaporative emission controls also involve proper material selection for fuel system components, careful design of these components, and onboard diagnostics to check the system for failure.

#### 2. How would the proposed changes to gasoline sulfur content affect vehicle emissions?

Gasoline vehicles depend to a great degree on catalytic converters to reduce levels of pollutants in their exhaust, including NMOG and NO<sub>x</sub>, as well as PM (specifically, the volatile hydrocarbon fraction), CO, and most air toxics. The presence of sulfur in gasoline has a strong impact on these emissions, particularly NO<sub>x</sub>, due to its impact on proper catalyst operation.

Sulfur naturally occurs in crude oil and thus in gasoline. In vehicle catalytic converters, the precious metals that catalyze the reactions that convert the pollutants become significantly less efficient when sulfur is deposited (adsorbed) onto them. The Tier 2 rulemaking required refiners to take steps to reduce sulfur levels in gasoline by approximately 90 percent, to an average of 30 ppm. At the time there were indications that sulfur reductions below 30 ppm may continue to provide additional emission benefits. However, the data was insufficient to quantify the benefits to the existing fleet, and the Tier 2 vehicle standards could be achieved without lowering sulfur further. As a result, to minimize the cost of the Tier 2 program, the sulfur standard was not further reduced below 30 ppm.

As discussed in Section IV.A.6, subsequent research provides a compelling case that even this level of sulfur degrades the emission performance of vehicles on the road today, and inhibits necessary further reductions in vehicle emissions performance, which depend on optimum catalyst performance to reach emission targets. A study conducted by EPA and the auto industry in support of the Mobile Source Air Toxics (MSAT) rule found significant reductions in NO<sub>x</sub>, CO and total HC when nine Tier 2 vehicles were tested on low sulfur fuel, relative to 32-ppm fuel.<sup>181</sup> In particular, the study found a nearly 50 percent increase in NO<sub>x</sub> when sulfur was increased from 6 ppm to 32 ppm. Another recent study by Umicore

showed reductions of 41 percent for NO<sub>x</sub> and 17 percent for HC on a PZEV operating on fuel with 33-ppm and 3-ppm fuel.<sup>182</sup>

A larger study recently completed by EPA confirmed these results, showing significant reductions in FTP-composite NO<sub>x</sub> (23 percent), CO (12 percent) and total HC (13 percent) on the 5-ppm fuel, relative to 28-ppm fuel. For NO<sub>x</sub>, the majority of overall reductions were driven by large reductions on warmed-up periods of the test cycle (Bag 2), which showed a 59 percent reduction between 28 and 5-ppm fuel, consistent with the role of sulfur in catalyst degradation discussed above. Applying individual bag reductions to in-use activity patterns from EPA emission models suggests an overall NO<sub>x</sub> reduction of nearly 40 percent on the road.

Based on these studies, the benefits of the proposed Tier 3 sulfur standard are significant in two ways: they enable vehicles designed to the proposed Tier 3 tailpipe exhaust standards to meet these standards for the duration of their useful life, and they facilitate immediate emission reductions from all the vehicles on the road at the time the sulfur controls are implemented.

#### B. How would emissions be reduced?

The proposed standards would reduce emissions of VOC, NO<sub>x</sub> (including NO<sub>2</sub>), direct PM<sub>2.5</sub>, CO, SO<sub>2</sub>, and air toxics. The proposed sulfur standards would reduce emissions from the on-road fleet immediately upon implementation, so to reflect these early reductions, we present emission reductions in calendar year 2017. The proposed vehicle standards would begin to reduce emissions as the cleaner cars and trucks begin to enter the fleet in model year 2017. The magnitude of reduction would grow as more Tier 3 vehicles enter the fleet. Therefore, we also present emission reductions in calendar year 2030, when model year 2017 and later cars and trucks contribute nearly 90 percent of fleet-wide vehicle miles travelled. Although 2030 is the farthest year that is feasible for air quality modeling, the full reduction of the vehicle program would be realized after 2030, when the fleet has fully turned over to Tier 3 vehicles. In Chapter 7 of the RIA, we present emission reductions projected in 2050, as well as additional calendar years between 2017 and 2030.

Emission reductions are estimated on an annual basis, for all 50 U.S. states

<sup>181</sup> Regulatory Impact Analysis for the Control of Hazardous Air Pollutants from Mobile Sources Final Rule, EPA 420-R-07-002, Chapter 6.

<sup>182</sup> Ball D., Clark D., Moser D. (2011). *Effects of Fuel Sulfur on FTP NO<sub>x</sub> Emissions from a PZEV 4 Cylinder Application*. SAE 2011 World Congress Paper 2011-01-0300.

plus the District of Columbia, Puerto Rico and the U.S. Virgin Islands. The reductions were estimated using a version of EPA’s MOVES model updated for this analysis, as described in detail in Chapter 7 of the RIA. This version of MOVES includes our most recent data on how vehicle emissions are affected by changes in sulfur, ethanol, and other fuel properties. We estimated emission reductions compared to a reference case that assumed partial RFS2 implementation by 2017, with full implementation in 2022 and beyond. The ethanol scenarios used for the reference and control cases were the “post-EPA/EISA” scenario defined in Chapter 7 of the RIA, reflecting a mix of E10 and E15 in 2017, and E15 only in 2030. The reference case also assumed continuation of the Tier 2 vehicle program indefinitely, and an average sulfur level of 30 ppm (10 ppm in California).

As discussed throughout this preamble, implementation of the proposed Tier 3 standards is aligned with the 2017 LD GHG standards to achieve significant criteria pollutant and GHG emissions reductions while providing regulatory certainty and compliance efficiency to the auto and oil industries. The 2017 LD GHG standards were still in a preliminary state of development (pre-proposal) at the time we finalized our assumptions for the Tier 3 emissions, air quality, and cost analyses, so we were not able to reflect them in these analyses. However, we continue to expect vehicle criteria pollutant performance to be neutral under the GHG program, because exhaust and evaporative emissions are not proportional to the amount of fuel burned; rather, our standards are expressed on a per-mile basis, not on a per-gallon basis. Vehicle criteria emissions are almost exclusively controlled by a vehicle’s emissions

aftertreatment system and not by the efficiency of the engine.

The majority of the NMOG that is emitted from a gasoline engine is generated during cold start, before the catalyst is lit off, and NO<sub>x</sub> is often created during higher load operation. Optimizing catalyst efficiency, minimizing thermal parasitics, minimizing fuel system leaks, and lower gasoline sulfur will be key enablers for all vehicles to meet the Tier 3 standards, regardless of the vehicle’s fuel efficiency. Because we do not expect the increase in fuel efficiency to result in lower criteria pollutant emissions, we did not claim in the 2017 LD GHG rule any reductions attributable to the ability of vehicles to meet lower criteria emission levels (see 77 FR 62899–62901, October 15, 2012). In other words, in the 2017 LD GHG rule, we assumed that, absent the proposed Tier 3 standards, the light-duty fleet would continue to meet the Tier 2 standards. Thus, we believe that the inclusion of the light-duty GHG standards in our cost and benefit analyses for the proposed Tier 3 standards would have had little or no impact on the results or our conclusions, as discussed in Sections 7.1.2 and 7.1.3.2.1 of the draft RIA. Nevertheless, for the final rulemaking we will include the LD GHG requirements in the analysis.

The analysis described here does account for the following national onroad rules:

- Tier 2 Motor Vehicle Emissions Standards and Gasoline Sulfur Control Requirements (65 FR 6698, February 10, 2000)
- Heavy-Duty Engine and Vehicle Standards and Highway Diesel Fuel Sulfur Control Requirements (66 FR 5002, January 18, 2001)
- Mobile Source Air Toxics Rule (72 FR 8428, February 26, 2007)
- Regulation of Fuels and Fuel Additives: Changes to Renewable Fuel

Standard Program (75 FR 14670, March 26, 2010)

- Light-Duty Vehicle Greenhouse Gas Emission Standards and Corporate Average Fuel Economy Standards for 2012–2016 (75 FR 25324, May 7, 2010)

The analysis also accounts for many other national rules and standards. In addition, the modeling accounts for state and local rules including local fuel standards, Inspection/Maintenance programs, Stage II refueling controls, the National Low Emission Vehicle Program (NLEV), and the section 177 states LEV and LEVII programs. See the Tier 3 emissions modeling TSD for more detail.

A summary of emission reductions projected to result from Tier 3, relative to the reference case, is shown in calendar years 2017 and 2030 for NO<sub>x</sub>, VOC, direct PM<sub>2.5</sub>, CO, SO<sub>2</sub>, and total air toxics in Table III–1. For many pollutants, the immediate reductions in 2017 are significant; for example, combined NO<sub>x</sub> and VOC emissions would be reduced by over 300,000 tons. By 2030, combined NO<sub>x</sub> and VOC emissions would be reduced by roughly 750,000 tons, one quarter of the onroad inventory. Many of the modeled air toxics would be significantly reduced as well, including benzene, 1,3-butadiene, acetaldehyde, acrolein and ethanol (ranging from 20 to nearly 40 percent of the national onroad inventory by 2030). The relative reduction in overall emissions would continue to increase beyond 2030 as more of the fleet continues to turn over to Tier 3 vehicles; for example, by 2050, when nearly all of the fleet would have turned over to Tier 3 standards, we estimate the Tier 3 program would reduce onroad emissions of NO<sub>x</sub> and VOC nearly 40 percent from the level of emissions projected without Tier 3 controls.

<sup>a</sup> This analysis assumed emissions reductions from the Tier 3 vehicle standards would occur in all states. For the final rule we will account for LEV III vehicle standards in states that have subsequently adopted it.

Reductions for each pollutant are discussed in the following sections, focusing on the contribution of program elements to the total reductions summarized above.

1. NO<sub>x</sub>

The proposed sulfur standards would significantly reduce NO<sub>x</sub> emissions immediately upon implementation of the program. As discussed above, recent research on the impact of sulfur on Tier 2 technology vehicles shows the potential for significant reductions in NO<sub>x</sub> emissions from the existing fleet of Tier 2 vehicles by lowering sulfur levels

to 10 ppm. Prior research shows that NO<sub>x</sub> emissions would also be expected to decrease from the fleet of older (pre-Tier 2) light-duty vehicles as well as heavy-duty gasoline vehicles,<sup>183</sup> although at a lesser extent than for Tier 2 vehicles.

Table III-2 shows the reduction in NO<sub>x</sub> emissions, in annual short tons, projected in calendar years 2017 and 2030. The reductions are split into those attributable to the introduction of low sulfur fuel in the pre-Tier 3 fleet (defined for this analysis as model years prior to 2017); and reductions

attributable to vehicle standards enabled by low sulfur fuel (model year 2017 and later). As shown, upon implementation of the proposed sulfur standards, total onroad NO<sub>x</sub> emissions are projected to drop 8 percent. This is primarily due to large reductions from Tier 2 gasoline vehicles, which contribute about one-quarter of the NO<sub>x</sub> emissions from the on-road fleet in 2017. The relative reduction grows as cleaner vehicles turn over into the fleet. By 2030, we project that the reduction in overall onroad NO<sub>x</sub> inventory would be close to 30 percent.

TABLE III-2—PROJECTED NO<sub>x</sub> REDUCTIONS FROM TIER 3 PROGRAM  
[Annual U.S. Tons]<sup>a</sup>

	2017	2030

Reduction from Tier 3 fleet due to vehicle and sulfur standards .....	19,728	458,504
Percent reduction in onroad NO <sub>x</sub> emissions .....	8%	28%

<sup>a</sup> This analysis assumed emissions reductions from the Tier 3 vehicle standards would occur in all states. For the final rule we will account for LEV III vehicle standards in states that have subsequently adopted it.

2. VOC

Table III-3 shows the reduction in VOC emissions, in annual short tons, projected in calendar years 2017 and 2030 resulting from the proposed

standards. In 2017, as with NO<sub>x</sub>, we project reductions from the pre-Tier 3 fleet with the proposed fuel standards. By 2030 the reduction in overall onroad VOC emissions would be over 20

percent, the majority of this from the Tier 3 fleet. The proposed evaporative standards are projected to account for roughly one quarter of the overall vehicle program reduction in 2030.

TABLE III-3—PROJECTED VOC REDUCTIONS FROM TIER 3 PROGRAM

Percent reduction in onroad CO emissions .....	4%	30%

<sup>a</sup>This analysis assumed emissions reductions from the Tier 3 vehicle standards would occur in all states. For the final rule we will account for LEV III vehicle standards in states that have subsequently adopted it.

4. Direct PM<sub>2.5</sub> Reducing engine durability through the end of a vehicle's useful life, the relative reduction in onroad emissions is projected to grow to 17 percent with full fleet turnover in 2050. Reductions in NO<sub>x</sub> and VOC emissions would also reduce secondary PM formation, which is quantified as part of the air quality analysis described in Section III.C.

5. Air Toxics Emissions of air toxics also would be reduced by the proposed sulfur, exhaust and evaporative standards. Air toxics are generally a subset of compounds making up VOC, so the reduction trends tend to track the VOC reductions presented above. Table III-5 presents reductions for certain key air toxics, and Table III-6 presents reductions for the sum of 71 different toxic compounds.

<sup>a</sup>This analysis assumed emissions reductions from the Tier 3 vehicle standards would occur in all states. For the final rule we will account for LEV III vehicle standards in states that have subsequently adopted it.

The totals shown in Table III-6 represent the sum of 71 species including the toxics in Table III-5, 15 polycyclic aromatic hydrocarbon (PAH) compounds in gas and particle phase, and additional gaseous compounds such as toluene, xylenes, styrene, hexane, 2,2,4-trimethylpentane, n-hexane, and propionaldehyde (Appendix 7A in the draft RIA). As shown, in 2030 the overall onroad inventory of total toxics would be reduced by over 20 percent, with nearly one third of the vehicle program reductions coming from the proposed evaporative standards.

<sup>a</sup>This analysis assumed emissions reductions from the Tier 3 vehicle standards would occur in all states. For the final rule we will account for LEV III vehicle standards in states that have subsequently adopted it.

6. SO<sub>2</sub>

SO<sub>2</sub> emissions from mobile sources are a direct function of sulfur in the fuel, and reducing sulfur in gasoline

would result in immediate reductions in SO<sub>2</sub> from the on and off-road fleet. The reductions, shown in Table III–7, are a function of the sulfur level and fuel consumption. This is reflected in the

relative contribution of on-road vehicles and off-road equipment, where off-road gasoline consumption accounts for approximately 5 percent of overall gasoline use.<sup>184</sup>

7. Greenhouse Gases

Reductions in nitrous oxide (N<sub>2</sub>O) emissions and methane (CH<sub>4</sub>) emissions, both potent greenhouse gas emissions, are projected for gasoline cars and trucks due to the proposed sulfur and tailpipe standards. A study conducted by the University of California at Riverside found a 29 percent reduction in N<sub>2</sub>O emissions over the FTP when sulfur was reduced from 30 to 5 ppm,<sup>185</sup> while EPA research described in Section IV.A on sulfur effects found a 25 percent reduction in CH<sub>4</sub> emissions when sulfur was reduced from 28 to 5 ppm. Several studies have established correlations between reductions in tailpipe NO<sub>x</sub> emissions and reductions in N<sub>2</sub>O from gasoline cars and trucks,<sup>186 187 188</sup> as well as correlations between reductions in tailpipe HC emissions and reductions in CH<sub>4</sub>.<sup>189 190</sup> One such study (Behrentz et al.) reported an N<sub>2</sub>O: NO<sub>x</sub> ratio of 0.095 ± 0.035, and supported the application of N<sub>2</sub>O: NO<sub>x</sub> ratios to NO<sub>x</sub> emissions as a reasonable method for estimating N<sub>2</sub>O emission inventories. As detailed in RIA Chapter 7.3, a range of N<sub>2</sub>O reductions is bounded by applying this ratio to NO<sub>x</sub> reductions projected for this proposal (from Table III–1), and applying the UC Riverside sulfur results to MOVES N<sub>2</sub>O inventories for pre-Tier 3 vehicles. Using a 100-year global warming potential of 298 for N<sub>2</sub>O according to the 2007 IPCC AR4,<sup>191</sup> the range of reductions calculated for N<sub>2</sub>O is from 2.9 to 7.3 million metric tons of carbon dioxide equivalent (MMTCO<sub>2</sub>e)

in 2017, growing to 12.3 to 13.5 MMTCO<sub>2</sub>e in 2030. MOVES can be used to directly estimate CH<sub>4</sub> reductions from the sulfur and vehicle standards, estimating an additional 0.1 MMTCO<sub>2</sub>e reduction in 2017, growing to 0.5 MMTCO<sub>2</sub>e in 2030. The range of total GHG reductions from the Tier 3 rule is 3.0 to 7.4 MMTCO<sub>2</sub>e in 2017, growing to 12.8 to 14.0 MMTCO<sub>2</sub>e in 2030.

These reductions would be offset to some degree by CO<sub>2</sub> emissions associated with higher energy use required in the process of removing sulfur within the refinery. To assess the potential refinery permitting implications of the Tier 3 proposal, we calculated the CO<sub>2</sub> emission impacts on a refinery-by-refinery basis. We used the projected refinery-specific changes from our refinery-by-refinery modeling (see Chapter 5 of the draft RIA) to estimate changes in process energy and then applied emission factors that correspond to those changes. The results showed an increase of up to 4.6 MMTCO<sub>2</sub>e in 2017 for all U.S. refineries complying with the lower sulfur standards assuming that the proposed sulfur standards are fully phased-in.<sup>192</sup> The actual increase is expected to be considerably lower, since this is a permitting analysis and refineries will not be operating at their permit capacity. The actual increase will also be a function of several factors, including technology options selected by the refineries and the projected use of averaging, banking and trading in

avoiding the need for investments at some refineries. As a result, 4.6 MMTCO<sub>2</sub>e represents an upper-bound estimate of the possible increase in refinery CO<sub>2</sub> emissions due to the need for additional process heat and hydrogen production to enable the additional hydrotreating required.

In 2017, the range of potential decrease in CH<sub>4</sub> and N<sub>2</sub>O emissions overlaps with the range of projected increase in CO<sub>2</sub> from refinery processes, suggesting that a net increase or decrease in GHG emissions cannot be quantified with certainty. However, we estimate the program would result in net GHG reductions as the program continues into the future, as shown by our 2030 estimates.

We do not expect the Tier 3 vehicle standards to result in any discernible changes in vehicle CO<sub>2</sub> emissions or fuel economy. Emissions of the pollutants that we have designed the program to address—NMOG, NO<sub>x</sub>, and PM—are not a function of the amount of fuel consumed, since manufacturers need to design their catalytic emission control systems to reduce these emissions regardless of their engine-out levels. However, there may be some slight reduction of vehicle mass if manufacturers explore lighter exhaust manifold materials in order to reduce thermal mass and promote earlier catalyst light-off. EPA invites comments on any potential impacts of the proposed Tier 3 program on vehicle CO<sub>2</sub> emissions and fuel economy.

*C. How would air pollution be reduced?*

Reductions in emissions of NO<sub>x</sub>, VOC, PM<sub>2.5</sub> and air toxics expected as a result of the proposed Tier 3 standards are projected to lead to significant decreases in ambient concentrations of ozone, PM<sub>2.5</sub>, and air toxics. The results of our air quality modeling of the impacts of the Tier 3 proposal are summarized in the following section. The air quality modeling predicts significant improvements in ozone concentrations due to the proposed Tier 3 standards. Ambient PM<sub>2.5</sub> and NO<sub>2</sub> concentrations are also expected to improve as a result of the proposed Tier 3 program. Decreases in ambient concentrations of air toxics are projected with the proposed standards, including notable nationwide reductions in benzene concentrations. Our air quality modeling also predicts improvements in visibility and sulfur deposition, as well as substantial decreases in nitrogen deposition as a result of the proposed standards.

1. Ozone

The air quality modeling done for this proposal projects that in 2017, with all current controls in effect but excluding the emissions changes expected to occur as a result of this proposed action or any other additional controls, at least 40 counties, with a projected population of almost 50 million people, would have projected design values above the level of the 2008 8-hour ozone standard of 75 ppb. Even in 2030 the modeling projects that in the absence of additional controls there would be 12 counties with a population of almost 32 million people with projected design values above the level of the 2008 8-hour ozone standard of 75 ppb. Since the emission

changes from this proposal go into effect during the period when some areas are still working to attain the ozone NAAQS, the projected emission changes would help state and local agencies in their effort to attain and maintain the ozone standard.

Air quality modeling indicates ozone design value concentrations would decrease dramatically in many areas of the country as a result of this action and in some places those decreases would be enough to change the projected design values from being above the NAAQS to being below the NAAQS. The decreases in ozone design values are likely due to projected tailpipe reductions in NO<sub>x</sub> and VOCs from reductions in fuel sulfur and engine controls.

In 2017, the majority of the design value decreases are between 0.5 and 1.0 ppb. The projected population-weighted average design value concentration without the proposed rule is 71.3 ppb in 2017. The proposed rule would also reduce the projected ozone design values in three counties from above the level of the standard to below. These three counties are Bucks County in Pennsylvania, Arlington County in Virginia and St Louis County in Missouri. The projected population in these three counties in 2017 is almost 2 million people. In 2030, the proposed rule would result in larger decreases in ozone design values, with the majority of counties projecting decreases of between 1.0 and 1.5 ppb, and over 200 more counties with decreases greater than 1.5 ppb. The projected population-weighted average design value concentration without the proposed rule is 66.7 ppb in 2030. There are also two more counties whose projected design

values would be reduced from above the level of the ozone standard to below by the proposed rule in 2030. These counties are Hudson County in New Jersey and Brazoria County in Texas. The projected population in these two counties in 2030 is over 1 million people.

Table III–8 and Table III–9 show the average change in 2017 and 2030 8-hour ozone design values for: (1) All counties with 2005 baseline design values, (2) counties with 2005 baseline design values that exceeded the 2008 ozone standard, (3) counties with 2005 baseline design values that did not exceed the 2008 standard, but were within 10 percent of it, (4) counties with 2017/2030 design values that exceeded the 2008 ozone standard, and (5) counties with 2017/2030 design values that did not exceed the standard, but were within 10 percent of it. Counties within 10 percent of the standard are intended to reflect counties that although not violating the standards, will also be impacted by changes in ozone as they work to ensure long-term maintenance of the ozone NAAQS. All of these metrics show a decrease in 2017 and 2030, indicating in five different ways the overall improvement in air quality.

On a population-weighted basis, the average modeled future-year 8-hour ozone design values are projected to decrease by 0.47 ppb in 2017 and 1.55 ppb in 2030. On a population-weighted basis design values in those counties that are projected to be above the 2008 ozone standard in 2017 and 2030 are projected to decrease by 0.30 and 1.62 ppb respectively due to the proposed standards.

2. Particulate Matter

The air quality modeling conducted for this proposal projects that in 2030, with all current controls in effect but excluding the emissions changes expected to occur as a result of this proposal or any other additional controls, at least 14 counties, with a projected population of over 28 million people, would have projected design values above the level of the annual standard of 12 µg/m<sup>3</sup> and at least 21 counties, with a projected population of over 31 million people, would have projected design values above the level of the 24-hour standard of 35 µg/m<sup>3</sup>.<sup>193</sup> Since the emission changes from this proposed action would go into effect during the period when some areas are still working to attain the PM<sub>2.5</sub> NAAQS, the projected emission changes would be useful to state and local agencies in their effort to attain and maintain the PM<sub>2.5</sub> standard.

The proposed rule would reduce 24-hour and annual PM<sub>2.5</sub> design values in 2030. Annual PM<sub>2.5</sub> design values in the majority of modeled counties would decrease by between 0.01 and 0.05 µg/m<sup>3</sup> and in over 100 additional counties design values are projected to decrease by greater than 0.05 µg/m<sup>3</sup>. The projected population-weighted average

design value concentration without the proposed rule is 9.5 µg/m<sup>3</sup> in 2030. The average modeled future-year annual PM<sub>2.5</sub> design values in 2030 decrease by 0.06 µg/m<sup>3</sup> on a population-weighted basis. Design values in those counties that are projected to be above the annual PM<sub>2.5</sub> standard in 2030 decrease even more, by 0.11 µg/m<sup>3</sup> on a population-weighted basis, due to the proposed standards. In addition, the average modeled future-year 24-hour PM<sub>2.5</sub> design values in 2030 decrease by 0.20 µg/m<sup>3</sup> on a population-weighted basis. The projected population-weighted average design value concentration without the proposed rule is 24.3 µg/m<sup>3</sup> in 2030. The decreases in PM<sub>2.5</sub> design values are likely due to the projected tailpipe reductions in primary PM<sub>2.5</sub>, NO<sub>x</sub> and VOCs. The proposed rule has little impact on PM<sub>2.5</sub> design values for the majority of counties in 2017, although our air quality modeling underestimated the PM decreases that would result from this proposal (see Section 7.4.2.3 of the draft RIA for more detail).

Table III-10 and Table III-11 present the average change in 2030 annual and 24-hour PM<sub>2.5</sub> design values for: (1) All counties with 2005 baseline design values, (2) counties with 2005 baseline

design values that exceeded the PM<sub>2.5</sub> standard, (3) counties with 2005 baseline design values that did not exceed the standard, but were within 10 percent of it, (4) counties with 2030 design values that exceeded the PM<sub>2.5</sub> standard, and (5) counties with 2030 design values that did not exceed the standard, but were within 10 percent of it. Counties within 10 percent of the standard are intended to reflect counties that although not violating the standards, will also be impacted by changes in PM<sub>2.5</sub> as they work to ensure long-term maintenance of the annual and/or 24-hour PM<sub>2.5</sub> NAAQS. All of these metrics show a decrease in 2030. On a population-weighted basis, there is a 0.06 µg/m<sup>3</sup> decrease in the average modeled future-year annual PM<sub>2.5</sub> design values in 2030 and a decrease of 0.11 µg/m<sup>3</sup> in those counties that are projected to be above the annual PM<sub>2.5</sub> standard in 2030. In addition, the average population-weighted modeled future-year 24-hour PM<sub>2.5</sub> design values are projected to decrease by 0.20 µg/m<sup>3</sup> due to the proposed standards and design values in those counties that are projected to be above the 24-hour PM<sub>2.5</sub> standard in 2030 would decrease by 0.32 µg/m<sup>3</sup>.

The analysis for the final rule will account for LEV III vehicle standards.

<sup>d</sup> Eleven of these counties are in California, see Table 7-37 in the DRIA.

3. Nitrogen Dioxide

Although our modeling indicates that by 2030 the majority of the country will experience decreases of less than 0.1 ppb in their annual NO<sub>2</sub> concentrations due to this proposal, annual NO<sub>2</sub> concentrations are projected to decrease by more than 0.3 ppb in most urban areas. These emissions reductions would also likely decrease 1-hour NO<sub>2</sub> concentrations and help any potential nonattainment areas to attain and maintain the standard. Additional information on the emissions reductions that are projected with this proposal is available in Section 7.2.1 of the draft RIA.

4. Air Toxics

Our modeling indicates that the impacts of proposed Tier 3 standards include generally small decreases in ambient concentrations of air toxics, especially in urban areas, with notable nationwide reductions in benzene. Although reductions are greater in 2030 (when Tier 3 cars and trucks would contribute nearly 90 percent of fleet-wide vehicle miles travelled) than in 2017 (the first year of the proposed program), our modeling projects there would be small immediate reductions in ambient concentrations of air toxics due to the proposed sulfur controls in 2017. Furthermore, the full reduction of the vehicle program would be realized after 2030, when the fleet has fully turned over to Tier 3 vehicles. Air toxics

pollutants dominated by primary emissions (or a decay product of a directly emitted pollutant) have the largest impacts, rather than air toxics that primarily result from photochemical transformation. Specifically, in 2030, our modeling projects that the proposal would decrease ambient benzene concentrations across much of the country on the order of 1 to 5 percent, with reductions ranging from 10 to 25 percent in some urban areas. Our modeling also shows reductions of 1,3-butadiene and acrolein concentrations in 2030 ranging between 1 and 25 percent, with 1,3-butadiene decreases of at least 0.005 µg/m<sup>3</sup> in urban areas. These toxics are national risk drivers and the reductions in ambient

concentrations from this proposed rule would result in reductions in risks from cancer and noncancer health effects. In some parts of the country (mainly urban areas), ethanol and formaldehyde concentrations are projected to decrease on the order of 1 to 5 percent in 2030 as a result of the proposal. Decreases in ethanol concentrations are expected due to reductions in VOC as a result of the proposed standards. Changes in ambient acetaldehyde concentrations are generally less than 1 percent across the

U.S., although the proposal may decrease acetaldehyde concentrations in some urban areas by 1 to 2.5 percent in 2030.

Although the reductions in ambient air toxics concentrations expected from the proposed Tier 3 standards are generally small, they are projected to benefit the majority of the U.S. population. As shown in Table III–12, over 80 percent of the total U.S. population is projected to experience a decrease in ambient benzene and

acrolein concentrations of at least 2.5 percent, with more than 90 percent of the populations projected to experience 1,3-butadiene concentrations of similar magnitude. Over 80 percent of the U.S. population is projected to experience at least a 1 percent decrease in ambient ethanol concentrations, and over 60 percent would experience a similar decrease in ambient formaldehyde concentrations with the proposed standards.

TABLE III–12—PERCENT OF TOTAL POPULATION EXPERIENCING CHANGES IN ANNUAL AMBIENT CONCENTRATIONS OF TOXIC POLLUTANTS IN 2030 AS A RESULT OF THE PROPOSED STANDARDS <sup>a</sup>

Percent change	Benzene (percent)	Acrolein (percent)	1,3-Butadiene (percent)	Formaldehyde (percent)	Ethanol (percent)	Acetaldehyde (percent)

<sup>a</sup>This analysis assumed emissions reductions from Tier 3 vehicle standards would occur in all states and did not account for emission reductions associated with LEV III vehicle standards in California and other states that have subsequently adopted it. The analysis for the final rule will account for LEV III vehicle standards.

5. Visibility

Air quality modeling conducted for this proposed action was used to project visibility conditions in 139 mandatory class I federal areas across the U.S. The results show that in 2030 all the modeled areas would continue to have annual average deciview levels above background and the proposed rule would improve visibility in all these areas.<sup>194</sup> The average visibility at all modeled mandatory class I federal areas on the 20 percent worst days is projected to improve by 0.04 deciviews, or 0.28 percent, in 2030. Section 7.2.5.5 of the draft RIA contains more detail on the visibility portion of the air quality modeling.

6. Nitrogen and Sulfur Deposition

Our air quality modeling projects substantial decreases in nitrogen

deposition as a result of the proposed standards. The standards would result in annual percent decreases of greater than 5 percent in most major urban areas and greater than 7 percent in a few areas. In addition, smaller decreases, in the 1 to 1.5 percent range, would occur over most of the rest of the country. The impacts of the proposed standards on sulfur deposition are smaller, ranging from no change to decreases of over 2 percent in some areas. For maps of 2030 deposition impacts and additional information on these impacts see Section 7.2.5.6 of the draft RIA.

7. Environmental Justice

Environmental justice (EJ) is a principle asserting that all people deserve fair treatment and meaningful involvement with respect to environmental laws, regulations, and policies. EPA seeks to provide the same degree of protection from environmental health hazards for all people. As referenced below, numerous studies have found that some environmental hazards are more prevalent in areas with high population fractions of racial/ethnic minorities and people with low socioeconomic status (SES), as would be

expected on the basis of those areas' share of the general population.

As discussed in Section II of this document, concentrations of many air pollutants are elevated near high-traffic roadways. If minority populations and low-income populations disproportionately live near such roads, then an issue of EJ may be present. Such disparities may be due to multiple factors.<sup>195</sup>

People with low SES often live in neighborhoods with multiple stressors and health risk factors, including reduced health insurance coverage rates, higher smoking and drug use rates, limited access to fresh food, visible neighborhood violence, and elevated rates of obesity and some diseases such as asthma, diabetes, and ischemic heart disease. Although questions remain, several studies find stronger associations between air pollution and health in locations with such chronic neighborhood stress, suggesting that populations in these areas may be more susceptible to the effects of air

<sup>194</sup>The level of visibility impairment in an area is based on the light-extinction coefficient and a unitless visibility index, called a "deciview", which is used in the valuation of visibility. The deciview metric provides a scale for perceived visual changes over the entire range of conditions, from clear to hazy. Under many scenic conditions, the average person can generally perceive a change of one deciview. The higher the deciview value, the worse the visibility. Thus, an improvement in visibility is a decrease in deciview value.

<sup>195</sup>Depro, B.; Timmins, C. (2008) Mobility and environmental equity: do housing choices determine exposure to air pollution? North Carolina State University Center for Environmental and Resource Economic Policy.

pollution.<sup>196 197 198 199</sup> Household-level stressors such as parental smoking and relationship stress also may increase susceptibility to the adverse effects of air pollution.<sup>200 201</sup>

To address the existing conditions in areas near major roadways, in comparison with other locations, we reviewed existing scholarly literature examining the topic, and conducted our own evaluation of two national datasets: the U.S. Census Bureau's American Housing Survey for calendar year 2009 and the U.S. Department of Education's database of school locations.

Existing publications that address EJ issues generally report that populations living near major roadways (and other types of transportation infrastructure) tend to be composed of larger fractions of nonwhite residents. People living in neighborhoods near such sources of air pollution also tend to be lower in income than people living elsewhere. Numerous studies evaluating the demographics and socioeconomic status of populations or schools near roadways have found that they include a greater percentage of minority residents, as well as lower SES (indicated by variables such as median household income). Locations in these studies include Los Angeles, CA, Seattle, WA, Wayne

County, MI, Orange County, FL, and the State of California.<sup>202 203 204 205 206 207</sup>

We analyzed two national databases that allowed us to evaluate whether homes and schools were located near a major road. One database, the American Housing Survey (AHS), includes descriptive statistics of over 70,000 housing units across the nation. The study is conducted every two years by the U.S. Census Bureau. We analyzed data from the 2009 AHS. The second database we analyzed was the U.S. Department of Education's Common Core of Data, which includes enrollment and location information for schools across the U.S.

In analyzing the 2009 AHS, we focused on whether or not a housing unit was located within 300 feet of "4-or-more lane highway, railroad, or airport."<sup>208</sup> We analyzed whether there were differences between houses and householders in such locations and those not in them.<sup>209</sup> We found that houses with a nonwhite householder were 22–34 percent more likely to be located within 300 feet of these large transportation facilities, while houses with a Hispanic householder were 17–33 percent more likely. Households near large transportation facilities were, on average, lower in income and educational attainment, more likely to

be a rental property and located in an urban area.

In examining schools near major roadways, we examined the Common Core of Data (CCD) from the U.S. Department of Education, which includes information on all public elementary and secondary schools and school districts nationwide.<sup>210</sup> To determine school proximities to major roadways, we used a geographic information system (GIS) to map each school and roadways based on the U.S. Census's TIGER roadway file.<sup>211</sup> We found that minority students were overrepresented at schools within 200 meters of the largest roadways, and that schools within 200 meters of the largest roadways also had higher than expected numbers of students eligible for free or reduced-price lunches. For example, Black students represent 21.57 percent of students at schools located within 200 meters of a primary road, whereas Black students represent 16.62 percent of students in all U.S. schools. Hispanic students represent 30.13 percent of students at schools located within 200 meters of a primary road, whereas Hispanic students represent 21.93 percent of students in all U.S. schools.

Overall, there is substantial evidence that people who live or attend school near major roadways are more likely to be of a minority race, Hispanic ethnicity, and/or low SES. The reduction of near-roadway concentrations of many pollutants, discussed above, is likely to help in mitigating this disparity in racial, ethnic, and economically-based exposures.

#### IV. Proposed Vehicle Emissions Program

In the more than 10 years since EPA finalized the Tier 2 Vehicle Program, manufacturers of light-duty vehicles have continued to develop a wide range of improved technologies capable of reducing key exhaust emissions, especially hydrocarbons, nitrogen oxides (NO<sub>x</sub>), and particulate matter (PM). The California LEV II program has been instrumental in the continuous technology improvements by requiring year after year reductions in fleet average hydrocarbon levels in addition to requiring the introduction of advanced exhaust and evaporative emission controls in partial zero emission vehicles (PZEVs). This progress in vehicle technology has made it possible for manufacturers to achieve

emission reductions well beyond the requirements of the Tier 2 program if gasoline sulfur levels are lowered further.

Extensive data from existing Tier 2 (and California LEV II) vehicles show the opportunity for further reductions, especially in addressing emissions produced at start-up, emissions under high-speed, high-load conditions, the effects of sulfur in gasoline, the effects of increased oil consumption, and the effects of vehicle and control systems age. For these reasons, we are proposing more stringent standards designed to reduce emissions, primarily non-methane organic gases (NMOG), NO<sub>x</sub>, and PM from new vehicles. As discussed in detail below and in the draft RIA, we have concluded that, in conjunction with the reductions in fuel sulfur proposed in this action, the proposed vehicle emissions standards are feasible and cost-effective across the fleet in the proposed timeframe. We believe that simultaneous reductions in fuel sulfur would be a key factor in enabling the entire fleet of light-duty vehicles to meet the proposed emission standards in-use, throughout the life of the vehicle.

This section describes in detail the proposed program for reducing tailpipe and evaporative emissions from light-duty vehicles (LDVs, or passenger cars), light-duty trucks (LDT1s, 2s, 3s, and 4s), Medium-Duty Passenger Vehicles (MDPVs), and heavy-duty vehicles (HDVs). Sections IV.A and B discuss the proposed tailpipe emission standards and time lines, and other provisions for new light-duty vehicles and MDPVs and for new heavy-duty vehicles up to 14,000 lbs Gross Vehicle Weight Rating (GVWR). Section IV.C presents the proposed evaporative emissions standards and program as well as proposed improvements to the existing Onboard Diagnostics (OBD) provisions. In Section IV.D, we describe our proposal to update our federal certification fuel to better match today's in-use fuel and to be forward-looking with respect to potential future gasoline ethanol and sulfur content. We also discuss in this section proposed compliance flexibilities for small companies and small-volume manufacturers (IV.E) and test procedure and other compliance provisions (IV.F).

#### *A. Tailpipe Emission Standards for Light-Duty Vehicles, Light-Duty Trucks, and Medium-Duty Passenger Vehicles*

##### 1. Overview

The proposed Tier 3 standards are very similar in structure to those in the Tier 2 program. As with the Tier 2

program, the proposed standards would apply to all LDVs and LDTs below 8,500 lbs GVWR, and MDPVs (8,500 to 10,000 lbs GVWR). (We discuss the proposed standards for heavy-duty vehicles up to 14,000 lbs GVWR other than MDPVs, in Section IV.B below.) Also as with Tier 2, manufacturers would select from several "bins" of emission standards such that the average of their vehicles' emissions complies with the proposed fleet-average standards.

In the discussions of the various elements of our proposed program for light- and heavy-duty vehicles throughout this preamble, we describe how the provisions would be consistent with the California Air Resources Board (CARB) LEV III program.<sup>212</sup> Auto manufacturers have stressed to us the importance of their being able to design and produce a single fleet of vehicles in all 50 states that would comply with requirements under the Tier 3 program and the LEV III program, as well as greenhouse gas/CAFE requirements in the same timeframe. Consistency among the federal and California programs means that special versions of vehicles with different emission control hardware and calibrations would not be necessary for different geographic areas. This would allow manufacturers to avoid the additional costs of parallel design, development, calibration, and manufacturing. Consistency among programs would also eliminate the need to supply aftermarket parts for repair of multiple versions of a vehicle. We believe that the most cost-effective national program will result from close coordination of CARB LEV III and federal Tier 3 program elements and their implementation. To that end, we worked closely with CARB and the vehicle manufacturers, both individually and through their trade associations, to align the two programs.

The Tier 3 program we are proposing is identical to LEV III in most major respects for both light-duty and heavy-duty vehicle exhaust and evaporative emissions requirements, as discussed in detail below in this section. The levels and the timing of the light-duty and heavy-duty declining fleet-average NMOG+NO<sub>x</sub> standards that we are proposing would be identical to those in LEV III. Also, the Tier 3 emissions bins to which manufacturers would certify individual vehicle models in order to comply with the average standards, for both light- and heavy-duty vehicles, would also be identical to those in LEV III. Similarly, the proposed Tier 3 per-vehicle PM standards match LEV III

standards through MY 2024. In addition, our proposed primary evaporative emissions standards and onboard diagnostics requirements are also identical to the LEV III requirements.

We note there are a few proposed Tier 3 provisions that CARB and EPA understand would be different, for reasons discussed below. Specifically, these include the LEV III program and our proposed Tier 3 program would have different light-duty PM requirements late in the program (i.e., after MY 2024 (IV.A.3.b.)), would require different test fuels (E10 and E15, respectively (IV.A.3.c)), and only EPA would have an evaporative leak test (IV.C.5.b). EPA and CARB will continue to work toward additional consistency between our programs whenever practicable as both programs are implemented. Beyond these three provisions, the differences between the programs would not be major and would exist only in the early transitional years of the Tier 3 program. These differences would result from the fact that the LEV III requirements begin slightly earlier and that a limited phase-in of some provisions would be necessary for a smooth transition to overall aligned programs. These temporary differences would include the process for how early compliance credits would be generated and used (e.g., Section IV.A.7.a); how quickly manufacturers would need move toward certifying all of their vehicle models to longer useful-life values (e.g., Section IV.A.7.b) and on the new test fuel (e.g., Section IV.A.7.c); and transitional emissions bins to facilitate the transition from Tier 2 to Tier 3 (IV.A.7.m). Similarly, the primary Tier 3 evaporative standards would have a brief phase in period, temporarily resulting in requirements that would be slightly different from those in LEV III.

The proposed Tier 3 program is designed primarily to reduce exhaust and evaporative emissions during summer ambient temperature conditions when NMOG, NO<sub>x</sub> and PM emissions contribute to air quality concerns. We are not proposing new emission requirements for any vehicle or fuel over the cold temperatures test cycles (i.e., the 20 °F cold CO and NMHC tests). However, we seek comment on the need for doing so, including vehicles operating on E85 fuel, and on the appropriate form and level for any such cold-temperature requirements.

<sup>212</sup> LEV III program as approved by the California Air Resources Board, January 2012.

## 2. Summary of Proposed FTP and SFTP Tailpipe Standards

We are proposing a comprehensive program that would address the key pollutants of concern. We are proposing new standards for the sum of NMOG and NO<sub>x</sub> emissions, presented as NMOG+NO<sub>x</sub>, and PM. As discussed in Section III above, these proposed standards would result in very significant improvements in vehicle emissions from the levels of the Tier 2 program. For these pollutants, we are proposing standards as measured on test procedures that represent a range of vehicle operation, including the Federal Test Procedure (FTP) and the Supplemental Federal Test Procedure (SFTP). Unless otherwise specified, the proposed FTP and SFTP standards would apply to vehicles operating on gasoline, diesel, and alternative fuels, including both flexible fuel and dedicated alternative fuel vehicles.

The proposed FTP and SFTP NMOG+NO<sub>x</sub> standards would be fleet-average standards, meaning that the manufacturer would calculate the average emissions of the vehicles it sells in each model year and compare that average to the applicable standard for that model year. The proposed fleet average standards for NMOG+NO<sub>x</sub> evaluated over the FTP are summarized in Table I-1. (For comparison, the average NMOG and NO<sub>x</sub> standard for the Tier 2 program, when added together, equal 160 mg/mi). The standards would begin in MY 2017 at a level representing a 46 percent reduction from the current Tier 2 requirements for lighter vehicles and would become increasingly stringent, culminating in an 81 percent reduction in MY 2025. The proposed FTP NMOG+NO<sub>x</sub> program includes separate fleet average standards for lighter and heavier vehicles that would converge at 30 milligrams per mile (mg/mi) in MY 2025 and later.<sup>213 214</sup>

Manufacturers would determine their fleet average FTP NMOG+NO<sub>x</sub> emission values based on the per-vehicle "bin standards" to which they certified each vehicle model. As with the Tier 2 program, manufacturers would be free to choose to certify vehicles to any of

the bins, so long as the sales-weighted average of the NMOG+NO<sub>x</sub> values from the selected bins met the fleet average standard for that model year. Table IV-1 presents the per-vehicle bin standards. Similarly, the proposed fleet average NMOG+NO<sub>x</sub> standards measured over the SFTP are summarized in Table I-2. The proposed SFTP NMOG+NO<sub>x</sub> fleet average standards decline from MY 2017 until MY 2025. In this case, the same standards would apply to both lighter and heavier vehicles. In MY 2025, the SFTP NMOG+NO<sub>x</sub> standard would reach its fully phased-in fleet average level of 50 mg/mi. We are also proposing PM standards as part of this Tier 3 program. The proposed PM standards would apply to each vehicle separately (i.e., not as a fleet average). Also, in contrast to the declining NMOG+NO<sub>x</sub> standards, the proposed certification PM standard on the FTP is 3 mg/mi for all vehicles and for all model years, but phasing in beginning in MY 2017 for vehicles at or below 6,000 lbs GVWR and in MY 2018 for vehicles above 6,000 lbs GVWR. Based on EPA and CARB test programs, most current light duty vehicles are already performing at or below this level. However, some vehicles are emitting above this level, due to such factors as combustion chamber designs, and fuel and oil consumption controls that are not optimized for low PM emissions. The intent of the proposed 3 mg/mi standard is to bring all light-duty vehicles to the PM level typical of that being demonstrated by most light-duty vehicles today.

To address the uncertainties that will accompany the introduction of new technologies, the proposed program also includes a separate in-use FTP PM standard of 6 mg/mi for the testing of in-use vehicles during the phase-in period, as described in more detail below. As presented in Table I-3, for vehicles at or below 6000 lbs GVWR, these FTP certification and in-use standards would be phased in beginning with a requirement that at least 20 percent of a company's U.S. sales meet the standards in MY 2017 and reaching a 100 percent compliance requirement in MY 2021. The proposed standards represent a significant numerical reduction from the Tier 2 PM emission standards of 10 mg/mi for light-duty vehicles. Finally, the proposed Tier 3 program includes PM standards evaluated over the US06 cycle (a component of the SFTP test, discussed further below) at a level of 10 mg/mi for vehicles at or below 6,000 lbs GVWR and 20 mg/mi for heavier vehicles. We are proposing separate standards for

different sizes of vehicles because PM generation typically increases when vehicles are carrying heavier loads and/or when they are pulling trailers. The US06 PM standards would phase in on the same schedule as the FTP PM standards, reaching 100 percent of each company's U.S. sales by MY 2022. These US06 standards would apply to the same vehicle models that a manufacturer chose to certify to the FTP PM standard during the percent phase-in period. PM levels over the US06 are typically higher than the PM emitted over the FTP due to the increased load on the vehicle. As in the case of the FTP PM standards, the intent of the proposed standard is to bring the emission performance of all vehicles to that already being demonstrated by many vehicles in the current light-duty fleet.

As with the FTP PM standard, we propose a separate in-use US06 PM standard during the percent phase-in period of 15 and 25 mg/mi for vehicles of 6000 lbs GVWR and less, and for vehicles above 6,000 lbs GVWR, respectively.

The next subsections describe in more detail the proposed standards, how they would be implemented over time, and the technological approaches that we believe will be available to manufacturers in order to comply.

## 3. Proposed FTP Standards

As summarized above, we propose new standards for the primary pollutants of concern for this rule (NMOG, NO<sub>x</sub>, and PM) as measured on the FTP. The following paragraphs describe in more detail these FTP standards for NMOG+NO<sub>x</sub> and PM, as well as for carbon monoxide (CO) and formaldehyde (HCHO).

### a. FTP NMOG+NO<sub>x</sub> Standards

We propose that the Tier 3 NMOG and NO<sub>x</sub> standards, both of which are important to reduce ambient ozone concentrations, be expressed in terms of the sum of the two pollutants, or as NMOG+NO<sub>x</sub> in mg/mi.<sup>215</sup> This approach contrasts with the Tier 2 standards, which were expressed as separate NMOG and NO<sub>x</sub> standards. We believe that the combined standard is appropriate for this proposed program for several reasons. At the stringent proposed emission levels, combining NMOG and NO<sub>x</sub> would provide a small amount of compliance flexibility, while at the same time significantly reducing both NMOG and NO<sub>x</sub> emission levels.

<sup>213</sup> The proposed declining NMOG+NO<sub>x</sub> fleet-average standards would consist of one set of declining standards that would apply to light-duty vehicles (LDVs) and small light trucks (LDT1s) and a second set of declining standards that would apply to heavier light trucks (LDT2s, LDT3s, LDT4s), and MDPVs.

<sup>214</sup> This preamble presents the proposed standards in terms of milligrams per mile for convenience. The associated regulatory language will continue to present the standard in terms of grams per mile for consistency with earlier programs.

<sup>215</sup> In the past, EPA has taken a similar combined-standard approach for heavy-duty highway engines and many categories of nonroad engines.

For example, the combined standard would allow a gasoline vehicle manufacturer to have slightly higher NMOG if it were offset by lower NO<sub>x</sub>, or allow a diesel vehicle manufacturer to have slightly higher NO<sub>x</sub> if offset by lower NMOG. This approach still ensures major reductions in both pollutants compared to today's levels. This is because the very stringent level of the fully phased-in proposed combined standard (30 mg/mi NMOG+NO<sub>x</sub>) means that even with a degree of allowed trading off of one pollutant for the other, the maximum emissions of either pollutant would need to be well below current levels. The standards of the California LEV III program would also be expressed as NMOG+NO<sub>x</sub>; aligning Tier 3 with LEV III in this respect would facilitate an important element of a national program.

We believe that a fully phased-in level for the proposed fleet-average standard of 30 mg/mi is the most stringent level that we could reasonably propose in the context of our proposed 10-ppm average standard for gasoline sulfur. As discussed in the feasibility Section IV.A.5 below, when necessary margins

of compliance are considered, this proposed standard is very close to zero. We request comment on this level for the proposed standard, as well as the declining standards during the transition years (see Table IV–3 below). EPA is proposing compliance mechanisms for the new Tier 3 FTP standards that are the same in most respects as those of the Tier 2 program. Using the Tier 2 approaches as much as possible would streamline the implementation of the program by maintaining most of the compliance processes that manufacturers are familiar with today.

A key compliance mechanism adapted from the Tier 2 program is a “bin” structure for the proposed emission standards. For these purposes, a bin is a set of several standards that are intended to be complied with as a group. Thus each Tier 3 bin would have an NMOG+NO<sub>x</sub> standard and a PM standard, as well as CO and HCHO standards. A manufacturer choosing to certify a vehicle to a certain bin would need to meet each of that bin's standards for the full useful life of the vehicle. In this approach, manufacturers could certify vehicles to any of the bins,

but they would have to ensure that average NMOG+NO<sub>x</sub> of the bins to which all of its vehicles were certified met the fleet average standard specific to the vehicle category (i.e., LDV/LDT1 and LDT2/3/4/MDPVs) for that model year. That is, a manufacturer would comply by ensuring that the sales-weighted average of the NMOG+NO<sub>x</sub> values of the bins to which each of its vehicle models was certified was lower than the fleet average standard that applied for that model year.

For each proposed bin, we are including CO and HCHO standards at levels intended to prevent new engine and emission control designs that would result in increases in today's CO and HCHO emissions. The standards are based on the comparable current LEV II and Tier 2 bin standards for these pollutants. The current standards do not appear to be technology-forcing, and we believe that this would continue to be the case as Tier 3 technologies are developed.

The bin structure that we are proposing for light duty vehicles, light-duty trucks, and MDPVs standards is presented in Table IV–1.

TABLE IV–1—PROPOSED FTP STANDARDS FOR LDVs, LDTs AND MDPVs (MG/MI)

Bin	NMOG+NO <sub>x</sub> (mg/mi)	PM <sup>a</sup> (mg/mi)	CO (g/mi)	HCHO (mg/mi)
Bin 160 .....	160	3	4.2	4
Bin 125 .....	125	3	2.1	4
Bin 70 .....	70	3	1.7	4
Bin 50 .....	50	3	1.7	4
Bin 30 .....	30	3	1.0	4
Bin 20 .....	20	3	1.0	4
Bin 0 .....	0	0	0	0

<sup>a</sup> In MYs 2017–20, the PM standard applies only to that segment of a manufacturer's vehicles covered by the percent of sales phase-in for that model year.

Consistent with the Tier 2 principle of vehicle and fuel neutrality, we are proposing that the same standards apply to LDVs, LDTs, or MDPVs, regardless of the fuel they use. That is, vehicles certified to operate on any fuel (e.g., gasoline, diesel fuel, E85, CNG, LNG, hydrogen, and methanol) would all be subject to the same standards.

We propose to maintain the fleet-average approach of the Tier 2 standards. Unlike Tier 2, the proposed Tier 3 fleet-average standards would decline annually to a fully phased-in level of 30 mg/mi NMOG+NO<sub>x</sub>. (The Tier 2 program, after a period of transition, established a single fleet average standard for all model years.) Specifically, we are proposing NMOG+NO<sub>x</sub> standards as measured on the FTP that would reduce the combined fleet-average emissions

gradually from MY 2017 through 2025, as shown in Table IV–2 below.

Beginning in MY 2017, we propose separate fleet average standards for lighter and heavier vehicles that would both decline annually, converging in MY 2025. These proposed declining average standards are identical to CARB's LEV III standards.<sup>216</sup>

The declining fleet-average NMOG+NO<sub>x</sub> standard requirement would begin in 2017 for light-duty vehicles and light-duty trucks with a GVWR up to and including 6,000 lbs

<sup>216</sup> See California Low-Emission Vehicles (LEV) & GHG 2012 regulations adopted by State of California Air Resources Board, March 22, 2012, Resolution 12–21 incorporating by reference Resolution 12–11, which was adopted January 26, 2012. Available at <http://www.arb.ca.gov/regact/2012/leviiighg2012/leviiighg2012.htm> (last accessed November 19, 2012).

and in 2018 for all other light-duty vehicles and light-duty trucks (i.e., those with a GVWR greater than 6,000 lbs). The standards would apply to the heavier vehicles a year later to facilitate the transition to a 50-state program for all manufacturers. During this transition period, there would be two fleet-average NMOG+NO<sub>x</sub> standards for each model year, one for LDVs and LDT1s and a second fleet-average standard for all other LDTs (LDT2s, LDT3s, and LDT4s) and for MDPVs. We are proposing that the fleet-average standards decline in a linear way from MY 2017 through MY 2025, at which point the two fleet-average standards would converge and stabilize for later model years at the same level, 30 mg/mi, as shown in Table IV–2. Note that these fleet average standards are for LDT2 and larger vehicles, and for LDVs and LDT1s that

manufacturers certify to the 150,000 mile useful life value. Section IV.A.7.b discusses how the Clean Air Act defines the useful life values for certification

purposes and how EPA proposes to also provide for certification to slightly lower emissions standards to a useful life value of 120,000 miles, representing

a level of stringency that is equivalent to that of the emission standards corresponding to the 150,000 mile useful life, for LDVs and LDT1s.

TABLE IV–2—PROPOSED LDV, LDT, AND MDPV FLEET AVERAGE FTP NMOG+NO<sub>x</sub> STANDARDS [mg/mi]

	Model Year								
	2017 <sup>a</sup>	2018	2019	2020	2021	2022	2023	2024	2025 and later
LDV/LDT1 <sup>b</sup> .....	86	79	72	65	58	51	44	37	30
LDT2,3,4 and MDPV .....	101	92	83	74	65	56	47	38	30

<sup>a</sup>For vehicles above 6,000 lbs GVWR, the fleet average standards would apply beginning in MY 2018.

<sup>b</sup>These proposed standards apply for a 150,000 mile useful life. Manufacturers could choose to certify all of their LDVs and LDT1s to a useful life of 120,000 miles. If any of these families are certified to the shorter useful life, a proportionally lower numerical fleet average standard would apply, calculated by multiplying the respective 150,000 mile standard by 0.85 and rounding to the nearest mg.

EPA is also proposing an alternative phase-in of the 30 mg/mi FTP NMOG+NO<sub>x</sub> standard that would be available if a manufacturer prefers a stable standard and four full years of lead time, as specified in the Clean Air Act for vehicles above 6,000 lbs GVWR. For MYs 2017 and 2018, a manufacturer would certify vehicles up to 6,000 lbs GVWR to the primary declining FTP fleet average standards, as in the primary program. Then, beginning in MY 2019, a stable fleet average standard of 30 mg/mi would apply to an increasing percentage of a manufacturer’s light-duty vehicles, light-duty trucks, and MDPVs, both up to and above 6,000 lbs GVWR. The percent phase-in would match the proposed PM percent phase-in schedule, as discussed below—specifically 40 percent of sales in MY 2019, 70 percent in MY 2020, and 100 percent in MY 2021 and later model years. A manufacturer choosing to certify any vehicle to this alternative phase-in would need to use this approach for all its models in MYs 2019 and later; certifying part of its fleet to the declining fleet average after MY 2018 would not be permitted, since the structures of the two approaches, including the early credits provisions of the NMOG+NO<sub>x</sub> fleet average program, would not be consistent. A manufacturer certifying to this alternative phase-in would also need to comply with the alternative SFTP NMOG+NO<sub>x</sub> phase-in and the alternative FTP PM and US06 PM phase-ins as described below. Vehicles covered by the alternative phase-in programs would be considered “final Tier 3” vehicles and thus would also comply with the Tier 3 certification fuel and full useful life provisions. EPA requests comment on this alternative phase-in approach as well as on the primary option above.

b. FTP PM Standards

We also propose new FTP standards for PM emissions, as summarized in Table IV–3 below. For many years, EPA’s focus for mobile source PM was on diesel engine emissions. In recent years, the very effective controls on PM exhaust emissions that manufacturers have developed for heavy-duty diesel engines have been successfully applied to light-duty diesel engines as well. At the same time, attention to gasoline engine PM emissions has increased as research has demonstrated that the level of PM from gasoline light duty vehicles is more significant than had been previously thought.<sup>217</sup>

Under typical driving, as simulated by the FTP, the PM emissions of most current-technology gasoline vehicles are fairly low, well below the Tier 2 PM standards. At the same time we see considerable variation in PM emissions among vehicle models not consistently associated with any specific engine or emission control technology (Section 1.5.1 of the draft RIA). As a result, we are proposing a new FTP PM standard that is set to ensure that all new vehicles would perform at a level representing what is already being achieved by well-designed Tier 2 emission control technologies.

PM emissions over the FTP are generally attributed to the cold start, when PM formation from combustion of the fuel is facilitated by the operating conditions, including a cold combustion chamber and fuel enrichment. During cold start, PM control via oxidation of semi-volatile organic compounds from

the lubricating oil by catalytic converters is less effective. We believe that the proposed FTP PM standard can be achieved with improvements to the fuel controls during the cold start without the need for any new technology or hardware. Improvements in cold-start exhaust catalyst performance for NMOG+NO<sub>x</sub> control will also reduce emissions of semi-volatile organic PM. As such, cold start PM levels are relatively independent of vehicle application and therefore we are proposing a single FTP PM standard for all light-duty and MDPV vehicles. The PM standard level we are proposing would ensure that future PM performance is consistent with current well-performing Tier 2 vehicles. Unlike the NMOG+NO<sub>x</sub> FTP standard, the PM standard would not decline over time, since most manufacturers are already producing vehicles that would meet the proposed new standards.

Although we believe it is important that the proposed FTP PM standard apply from the beginning of the Tier 3 program, we are proposing several provisions to provide a degree of flexibility for manufacturers in how many vehicle models would need to meet that standard in the early years of the program. Manufacturers have raised several issues that we believe these provisions would address.

In meetings with EPA, several manufacturers have expressed concerns about how a PM standard in the range of the proposed 3 mg/mi standard would be implemented. One concern related to the initial uncertainties about PM emissions performance that will accompany the development of new engine technologies, including those that may be introduced to address the GHG emissions/fuel economy standards that EPA and NHTSA recently finalized for these vehicles. Also, manufacturers expressed concerns related to the testing

<sup>217</sup> Nam, E.; Fulper, C.; Warila, J.; Somers, J.; Michaels, H.; Bauldauf, R.; Rykowski, R.; and Scarboro, C. Analysis of Particulate Matter Emissions from Light-Duty Gasoline Vehicles in Kansas City, EPA420–R–08–010. Assessment and Standards Division Office of Transportation and Air Quality U.S. Environmental Protection Agency Ann Arbor, MI, April 2008.

of PM on the FTP, particularly about potential updates to the test procedures required to accurately measure PM at very low levels. Finally, related to the concerns about the new test procedures are the current limitations that exist for some manufacturers regarding the capacity of their test facilities to perform a significant volume of gasoline vehicle PM testing.

For these reasons, we are proposing a percent-of-sales phase-in during the first 5 years of the program to address these concerns. Beginning in MY 2017 (and in MY 2018 for vehicles over 6,000 lbs GVWR), manufacturers would comply with the PM standard with a minimum of 20 percent of their U.S. sales. As shown in Table IV-3, the percentage of the manufacturer's sales that would need to comply would increase each year, reaching 100 percent in MY 2021. In addition to this percent phase-in, we are proposing a separate PM standard of 6 mg/mi that would apply only for in-use testing of vehicles certified to the new standards, and only during the percent phase-in period.

Due to the MY 2018 start date for vehicles over 6,000 lbs GVWR, manufacturers that have few or no vehicle models over 6,000 lbs GVWR would be required to certify a larger percentage of their total light-duty sales

in MY 2017 than full line manufacturers. While we believe that most manufacturers would likely choose a single large-volume durability group to meet the 2017 requirements, we seek comment on an option to comply with the MY 2017 PM requirements by allowing manufacturers to certify 10 percent of all their light-duty vehicle sales in MY 2017 to the new PM standards, including light-duty vehicles over 6,000 lbs GVWR and MDPVs. This approach would be consistent with the CARB LEV VIII program, which requires that 10 percent of all light-duty vehicle sales meet the new PM standards in MY 2017.

Because of the expected time and expense of performing emission tests on the improved PM test procedures, we are proposing to limit the number of tests using the new procedures that a manufacturer would need to perform at certification and during in-use testing. Specifically, manufacturers would be required to test vehicles representing a minimum of 25 percent of a model's durability test groups during certification each model year (and a minimum of 2 durability groups).<sup>218</sup> Manufacturers could select which durability groups to test, but would need to rotate the groups tested each year to eventually cover their whole

fleet. Similarly, manufacturers performing in-use testing under the In-Use Verification Program could limit their testing to 50 percent of their low- and high-mileage test vehicles. Again, manufacturers would need to rotate their vehicle models so that each model would be tested every other year. Overall, we believe that the flexibility that these proposed provisions would provide would facilitate the expeditious implementation of the proposed program, with no significant impact on the potential benefits of the program.

The PM standards that we are proposing are the most stringent technically feasible standards within the implementation timeframe of this proposal. Although the CARB LEV III program includes a 1 mg/mi standard which will begin phasing in starting in MY 2025, they acknowledge that there is a need for continuing PM measurement method development prior to implementing this standard.<sup>219</sup> In order for EPA to propose a standard at this level, there must be established methods to reliably and consistently measure PM below that standard, for compliance purposes.

We request comment on all of the proposed FTP standards, their structure, and their implementation schedules.

TABLE IV-3—SUMMARY OF PROPOSED FTP STANDARDS

Program Element		Units	Model Year						Notes
			<sup>a</sup> 2017	2018	2019	2020	2021	2022	
NMOG+NO <sub>x</sub> Standard (fleet average)		mg/mi	Per declining fleet average for cars and trucks (see Table IV-2) <sup>b</sup>						
PM Standards									
<i>Phase-in</i>		% .....	20	20	40	70	100	100	100
FTP .....	Certification .....	mg/mi	3	3	3	3	3	3	Note c
	In-use .....	mg/mi	6	6	6	6	6	3	Note d

<sup>a</sup> For vehicles above 6,000 lbs GVWR, the proposed FTP PM would apply beginning in MY 2018.

<sup>b</sup> The percent phase-in would not apply to the declining fleet average standards.

<sup>c</sup> Manufacturers would be required to test 25 percent of each model year's durability groups, minimum of 2.

<sup>d</sup> Manufacturers would be required to test 50 percent of their low and high mileage in-use vehicles.

As with the proposed FTP NMOG+NO<sub>x</sub> standards, EPA is also proposing an alternative phase-in of the 3 mg/mi FTP PM standard that would be available if a manufacturer prefers 4 full years of lead time for vehicles above 6,000 lbs GVWR. A manufacturer that chooses the alternative phase-in for the FTP NMOG+NO<sub>x</sub> program above could also postpone the beginning of the phase-in for PM compliance for vehicles

above 6,000 lbs GVWR until MY 2019. For MYs 2017 and 2018, a manufacturer would certify vehicles up to 6,000 lbs GVWR to the 3 mg/mi FTP PM standard (and have a 6 mg/mi in-use PM standard) for 20 percent of its sales in each of those years, as with the primary PM percent phase-in schedule. Then, for MYs 2019 and later, it would comply with the 3 mg/mi (and 6 mg/mi in-use) PM standards for their LDVs, LDTs, and

MDPVs, both up to and above 6,000 lbs GVWR. For MYs 2019 and 2020 (i.e., before the phase-in is fully implemented in MY 2021), manufacturers choosing this alternative would be required to meet the PM standard on the same segment of their fleet vehicles being used to meet the NMOG+ NO<sub>x</sub> fleet average standard, and at the applicable phase-in percentage of sales for the given model year. Manufacturers

<sup>218</sup> Durability groups are a subset of engine families. Several engine families may have the same durability group.

<sup>219</sup> California Air Resources Board (CARB) Initial Statement of Reasons, Public Hearing to Consider LEV III, December 7, 2011

certifying to the alternative PM phase-in standard would also need to comply with the alternative US06 PM phase-in as described below, as well as the NMOG+NO<sub>x</sub> FTP and SFTP phase-ins. EPA requests comment on this alternative phase-in approach as well as on the primary PM phase-in option above.

#### 4. Proposed SFTP Standards

In addition to the proposed FTP standards, we are proposing NMOG+NO<sub>x</sub> and PM standards as measured on the SFTP. The SFTP (and specifically the US06 component of the test) is designed to simulate higher speeds and higher acceleration rates (and thus higher loads) when substantially more heat can be generated during the combustion process. It is during these kinds of operation that engines can go into a fuel “enrichment” mode, where the engine’s controls may temporarily create a rich air/fuel mixture to protect exhaust components from thermal damage. Enrichment can increase emissions of NMOG+NO<sub>x</sub> and PM, primarily due to the incomplete combustion that occurs under rich conditions and the diminished effectiveness of the catalyst in these circumstances. However, enrichment can be minimized or eliminated in current and future engines, where components can be thermally protected even under high-load conditions by careful electronic management of the air/fuel mixture and the combustion process. To reduce emissions caused by excessive enrichment, we are proposing new SFTP standards. Further, as described in Section IV.A.4.c below, we are proposing limitations on the magnitude of enrichment that could be commanded by the vehicle operator. We describe the proposed SFTP standards in the following paragraphs.

We are also proposing an SFTP composite CO standard of 4.2 g/mi for all model years 2017 (or 2018) and later. This standard represents no effective change from the current Tier 2 SFTP CO standard, which we believe is already at a level that is sufficiently stringent.

##### a. SFTP NMOG+NO<sub>x</sub> Standards

We have reviewed certification and in-use NMOG and NO<sub>x</sub> data on a wide range of recent vehicles as tested on the US06 cycle. See Chapter 1 of the draft RIA for an analysis of this data. It is clear that most current vehicles are generally avoiding significant enrichment events during high-load operation and thus achieve relatively low NMOG+NO<sub>x</sub> emissions on the US06 test. The data shows that with minor (if any) improvements to engine

calibrations and with no significant loss of performance, manufacturers are able to essentially eliminate enrichment events and their emissions consequences. Thus, as presented in Table IV–5 below, we are proposing new composite SFTP standards for NMOG+NO<sub>x</sub> at levels that would be more stringent than those required by the existing Tier 2 program. We believe that the new standards would require emission performance at levels currently achieved today by most vehicles under high-load operation, and we do not believe that significant additional reductions would result from SFTP standards more stringent than the proposed 50 mg/mi fully phased-in level. The SFTP emissions value for certification of gaseous pollutants would continue to be calculated as a weighted composite value of emissions on three cycles ( $0.35 \times \text{FTP} + 0.28 \times \text{US06} + 0.37 \times \text{SC03}$ ), as is done for the Tier 2 SFTP standards.

We believe that the proposed standards could be more challenging in the early years of the program. Thus, we propose a declining fleet average standard that would become increasingly stringent from MY 2017 to MY 2025. Manufacturers would comply with a declining NMOG+NO<sub>x</sub> fleet-average SFTP standard for each year beginning in MY 2017 (MY 2018 for vehicles over 6000 lbs GVWR) and culminating for MY 2025 and later with a fleet-average standard of 50 mg/mi.

To provide flexibility in meeting the fleet-average standards, manufacturers would determine for themselves what the specific SFTP composite standard would be for an individual vehicle family and report that self-selected standard and the measured emission performance. (These self-selected standards are analogous to “family emission limits,” or “FELs,” used in other programs (e.g., heavy-duty highway engine standards).) For each family, a manufacturer would choose any composite NMOG+NO<sub>x</sub> standard, up to 180 mg/mi, in even 10 mg/mi increments. The manufacturer would then calculate the sales-weighted average of all the selected standards of the families across its fleet and compare that emissions value to the applicable fleet-average standards for that model year. Table IV–4 presents the proposed declining fleet-average SFTP NMOG+NO<sub>x</sub> standards.

As with the proposed FTP NMOG+NO<sub>x</sub> and PM standards, EPA is also proposing an alternative phase-in of the 50 mg/mi SFTP NMOG+NO<sub>x</sub> standard that would be available if a manufacturer prefers a stable standard and four full years of lead time for

vehicles above 6,000 lbs GVWR. For MYs 2017 and 2018, a manufacturer would certify vehicles up to 6,000 lbs GVWR to the primary SFTP declining fleet average standards, as in the primary program. Then, beginning in MY 2019, a stable fleet average standard of 50 mg/mi would apply to an increasing percentage of a manufacturer’s light-duty vehicles, light-duty trucks, and MDPVs, both up to and above 6,000 lbs GVWR. The percent phase-in would match the proposed PM percent phase-in schedule, as discussed below. A manufacturer certifying to this alternative phase-in would also need to comply with the alternative FTP NMOG+NO<sub>x</sub> phase-in and the alternative FTP PM and US06 PM phase-ins, as described elsewhere in this section. EPA requests comment on this alternative phase-in approach as well as on the primary option above.

##### b. US06 PM Standards

Our proposed approach to addressing PM emissions on the US06 test (a component of the composite SFTP standard) is somewhat different from the SFTP standards that we are proposing for NMOG and NO<sub>x</sub> emissions. In the case of PM, US06 data on recent vehicles shows that current gasoline vehicles can have very low PM emissions, but US06 PM emission levels vary depending on many factors. In some cases, manufacturer emission control strategies that are sensitive to variations in operating conditions (e.g., variation due to driver behavior or automatic transmission shift points) appear to result in very low PM levels during some tests and yet higher PM on other tests on the same vehicle when driven slightly differently. We also believe that some of the observed high PM emissions may be partly due to increasing oil consumption in vehicles as they age, especially under higher-load conditions or hard closed-throttle deceleration conditions. Thus, we now believe that more focus on vehicles as they age is important.

We have designed the proposed US06 PM standards in light of all of these factors, which relate to PM emission formation under relatively extreme driving conditions. For these standards, we are proposing to focus on the US06 cycle component of the composite SFTP, since most of our concern about PM formation and sensitivity of engine controls arises from high-speed, high-load driving conditions. Similarly, the quantity of PM emissions from warmed-up engines is closely related to engine load, since the higher rate of fuel consumption results in more

opportunities for PM to form. For this reason, we propose that heavier vehicles, which face high-load conditions more frequently than lighter vehicles, comply with a higher US06 standard and lighter vehicles comply with a lower standard. The proposed US06 PM standard would be 10 mg/mi for vehicles at or below 6,000 lbs GVWR and 20 mg/mi for heavier vehicles.

EPA is seeking comment on the use of vehicle weight to establish separate US06 PM standards for cars and trucks. The data presented in Chapter 1 of the draft RIA demonstrate that today's heavier vehicles are already achieving PM emission levels well below our proposed 20 mg/mi standard and are approximately equivalent to the performance of lighter vehicles. According to our data, manufacturers appear to be controlling PM emissions in heavier vehicles over severe duty cycles. Thus, EPA seeks comment on the proposed US06 PM standards in general, including whether EPA should adopt a common US06 standard of 10 mg/mi for all light-duty vehicles.

As is the case for the proposed FTP PM standards, we are proposing a single per-vehicle maximum standard to apply

in each model year, with an allowable percentage phase-in schedule identical to the FTP PM phase-in.

Finally, as with the FTP PM standard (and for the same reasons), we propose a slightly less stringent in-use US06 PM standard that would apply during the percent phase-in period only. The proposed in-use SFTP PM standards would be 15 mg/mi for vehicles at or below 6,000 lbs GVWR and 25 mg/mi for heavier vehicles.

As with the proposed FTP and SFTP NMOG+NO<sub>x</sub> standards and FTP PM standards, EPA is also proposing an alternative phase-in of the 20 mg/mi PM standard as measured on the US06 cycle, that would be available if a manufacturer prefers 4 full years of lead time for vehicles above 6,000 lbs GVWR. A manufacturer that chooses the alternative phase-in for the FTP NMOG+NO<sub>x</sub> program above could also postpone the beginning of the phase-in for US06 PM compliance for vehicles above 6,000 lbs GVWR until MY 2019. For MYs 2017 and 2018, a manufacturer would certify vehicles up to 6,000 lbs GVWR to the 10 mg/mi FTP PM standard (and have a 15 mg/mi in-use standard) for 20 percent of its sales in

each of those years, as with the primary PM percent phase-in schedule. Then, for MYs 2019 and later, it would comply with the respective standards for vehicles up to and above 6,000 lbs GVWR for their LDVs, LDTs, and MDPVs (i.e., 10 mg/mi and 15 mg/mi (in-use) for vehicles up to 6,000 lbs GVWR, and 20 mg/mi and 25 mg/mi (in-use) for vehicles above 6,000 lbs GVWR.) For MYs 2019 and 2020, manufacturers choosing this alternative would be required to meet both the FTP PM and the US06 PM standards on the same segment of their fleet vehicles being used to meet the 30 mg/mi fleet average NMOG+NO<sub>x</sub> standards, at the applicable percent phase-in requirement for the given model year. Manufacturers certifying to the alternative US06 PM phase-in standard would also need to comply with the alternative FTP PM phase-in as described above, as well as the NMOG+NO<sub>x</sub> FTP and SFTP phase-ins. EPA requests comment on this alternative phase-in approach as well as on the primary US06 phase-in option above.

All of the proposed SFTP/US06 standards are shown in Table IV-4 and Table IV-5.

TABLE IV-4—PROPOSED LD AND MDPV SFTP COMPOSITE FLEET AVERAGE STANDARDS

	Model year								
	2017	2018	2019	2020	2021	2022	2023	2024	2025 and later
NMOG+NO <sub>x</sub> (mg/mi) .....	<sup>a</sup> 103	97	90	83	77	70	63	57	50
CO (g/mi) .....	<sup>a</sup> 4.2								

<sup>a</sup>For vehicles above 6,000 lbs GVWR, the NMOG+NO<sub>x</sub> and CO standards would apply beginning in MY 2018.

TABLE IV-5—SUMMARY OF PROPOSED SFTP STANDARDS

Program element	Units	Model year							Notes
		<sup>a</sup> 2017	2018	2019	2020	2021	2022	2023	
NMOG+NO <sub>x</sub> Standard (fleet average) .....	mg/mi ..	Per declining fleet average for cars and trucks (see Table IV-4) <sup>b</sup>							
PM Standards:									
Phase-in .....	% .....	20	20	40	70	100	100	100	
US06:									
LDV, LDT1&2 Certification .....	mg/mi ..	10	10	10	10	10	10	10	Note c.
LDV, LDT1&2 In-use .....	mg/mi ..	15	15	15	15	15	10	10	Note d.
US06:									
LDT3&4, MDPV Certification .....	mg/mi ..	20	20	20	20	20	20	20	Note c.
LDT3&4, MDPV In-use .....	mg/mi ..	25	25	25	25	25	20	20	Note d.

<sup>a</sup>For vehicles above 6,000 lbs GVWR, the standards would apply beginning in MY 2018.

<sup>b</sup>The percent phase-in would not apply to the declining fleet average standards.

<sup>c</sup>Manufacturers would be required to test 25 percent of each model year's durability groups, minimum of 2.

<sup>d</sup>Manufacturers would be required to test 50 percent of their low and high mileage in-use vehicles.

We request comment on our proposed SFTP NMOG+NO<sub>x</sub> and PM standards, their structure, and their implementation schedules.

c. Enrichment Limitation for Spark-Ignition Engines

To prevent emissions from excessive enrichment during operating conditions

represented by the SFTP cycles, we are proposing limitations on the magnitude of enrichment that could be commanded, including enrichment episodes encountered during in-use

operation. During conditions where enrichment was demonstrated to be present on the SFTP, the nominal air to fuel ratio could not be richer at any time than the leanest air to fuel ratio required to obtain maximum torque (lean best torque or LBT). An air to fuel ratio of LBT plus a tolerance of 4 percent additional enrichment would be allowed in actual vehicle testing to protect for any in-use variance in the air to fuel ratio from the nominal LBT air to fuel determination, for such reasons as air or fuel distribution differences from production variances or aging.

LBT is defined as the leanest air to fuel ratio required at a speed and load point with a fixed spark advance to make peak torque. Specifically, an increase in fuel would not result in an increase in torque while maintaining a fixed spark advance. LBT is determined by setting the spark advance to a setting that is less than or equal to the spark advance required for best torque (MBT) and maintaining that spark advance when sweeping the air to fuel ratio. This fixed spark advance requirement is intended to prevent torque changes related to spark changes masking true LBT. Manufacturers may request approval of an alternative LBT definition for a unique technology or control strategy. The Agency could determine that an enrichment amount was excessive or not necessary and therefore deem that the approach did not meet the air to fuel ratio requirements.

Enrichment required for thermal protection would continue to be allowed upon demonstration of necessity to the Agency, based upon temperature limitations of the engine or exhaust components. Manufacturers would be required to provide descriptions of all components requiring thermal protection, temperature limitations of the components, how the enrichment strategy will detect over-temperature conditions and correct them, and a justification regarding why the enrichment is the minimum necessary to protect the specific components. The Agency may determine that the enrichment is not justified or is not the minimum necessary based on the use of engineering judgment using industry-reported thermal protection requirements.

##### 5. Feasibility of the Proposed NMOG+NO<sub>x</sub> and PM Standards

In this section, with additional support in Chapter 1 of the draft RIA, we describe how we reached our conclusion that the proposed Tier 3 standards would be technologically

feasible in the time frame of the program. For each of the proposed emission standards, the lead time provided by the proposed program is more than sufficient for all manufacturers to comply. First, manufacturers in many cases are already adopting complying technologies for reasons other than this proposed rulemaking. For example, many of the technologies that manufacturers will begin to develop as early as MY 2014 in response to the CARB LEV III FTP and SFTP NMOG+NO<sub>x</sub> standards for the California market will likely represent steps toward compliance with this proposed national program. Similarly, manufacturers are already building some vehicles that comply with our proposed evaporative emissions standards in response to the CARB LEV III evaporative standards. In addition, as described above, our proposed program incorporates a number of phase-in provisions that would ease the transition to compliance, including time some manufacturers would need to install PM testing capability and to ramp up production on a national scale. We invite comment on our conclusions relating to the feasibility of the proposed program for each of the standards, as discussed below, including our overall conclusion that technological lead time is not a driving factor in complying with any of the proposed standards.

This feasibility assessment is based on a variety of complementary technical data, studies, and analyses. As described below, these include our analysis of the stringency of the proposed standards as compared to current Tier 2 emission levels. We also discuss below our observation that manufacturers are currently certifying several vehicle models under the California LEV II program that could likely achieve the proposed Tier 3 NMOG+NO<sub>x</sub> and PM standards or similar levels. EPA has assessed the emissions control challenges manufacturers would generally face (e.g., cold start NMOG reductions and running (warmed-up) NO<sub>x</sub> emissions under typical and more aggressive driving conditions) and the corresponding technologies that we expect to be available to manufacturers to meet these challenges. Our feasibility assessment accounts for the fact that the proposed Tier 3 program would apply to all types of new vehicles, ranging from small cars to large pick-up trucks and MDPVs and representing a wide diversity in applications and in specific engine designs.

It is important to note that our primary assessment of the feasibility of engine and emission control

technologies is based on the assumption that vehicles would be certified on gasoline with a fuel sulfur content of 10 ppm and operated on in-use gasoline with 10 ppm sulfur or less.<sup>220</sup> Therefore, our primary assessment does not incorporate the degradation of emission control system caused by higher levels of sulfur content, as is discussed in Section IV.6 below and in the draft RIA. This assessment reinforces the critical role of gasoline sulfur control, as proposed in Section V below, in making it possible for EPA to propose emission standards at these very stringent levels. See Section IV.6 below for a full discussion of our current knowledge of the effects of gasoline sulfur on current vehicle emissions as well as our projections of how we expect that sulfur would affect compliance with standards in the range of the proposed Tier 3 standards.

Since there are multiple aspects to the Tier 3 program, it is necessary to consider technical feasibility in light of the different program requirements and their interactions with each other. In many cases, manufacturers would be able to address more than one requirement with the same general technological approach (e.g., faster catalyst light-off can improve both FTP NMOG+NO<sub>x</sub> and PM emissions). At the same time, the feasibility assessment must consider that different technologies may be needed on different types of vehicle applications (i.e., cars versus trucks) and must consider the relative effectiveness of these technologies in reducing emissions for the full useful life of the vehicle while operating on expected in-use fuel. For example, certain smaller vehicles with correspondingly small engines may be less challenged to meet FTP standards than larger vehicles with larger engines. Conversely, these smaller vehicles may have more difficulty meeting the more aggressive SFTP requirements than vehicles with larger and more powerful engines. Additionally, the ability to meet the proposed SFTP emission requirements can also be impacted by the path taken to meet the FTP requirements (e.g., larger volume catalysts for US06 emissions control vs. smaller catalysts for improved FTP cold-start emissions control). Throughout the following discussion, we address how these factors, individually and in interaction with each other, affect the feasibility of the proposed program. We

<sup>220</sup> Our technology, feasibility, and cost assessments are also consistent with an assumption that certification fuel would contain 15 percent ethanol and would have other properties as specified in Section IV.D below.

invite comment on our assessments of these or any other such potential interactions. Also, although we are not aware of any technological reasons that vehicle emission controls responding to new Tier 3 requirements should affect vehicle CO<sub>2</sub> emissions or fuel economy in any significant way, it is possible that such interactions could occur. For example, there may be some slight change in vehicle mass if manufacturers explore lighter exhaust manifold materials in order to reduce thermal mass and promote earlier catalyst light-off or add emissions control equipment such as hydrocarbon adsorbers. We invite comment on any such potential effects as well.

#### a. FTP NMOG+NO<sub>x</sub> Standards

The proposed new emission requirements include stringent NMOG+NO<sub>x</sub> standards on the FTP that would require new vehicle hardware in order to achieve the 30 mg/mi fleet average level in 2025. The type of new hardware that would be required would vary depending on the specific application and emission challenges. Smaller vehicles with corresponding smaller engines would generally need less new hardware while larger vehicles may need additional hardware and improvements beyond what would be needed for the smaller vehicles. While some vehicles, especially larger light trucks, may face higher costs in meeting the proposed standards, it is important to remember that not every vehicle needs to meet the standard. The proposed program has been structured to provide higher emission standard “bins” (see Table IV–1 above) to which manufacturers may certify more challenged vehicles, so long as these vehicles are offset with vehicles certified in lower emission bins such that the fleet-wide average meets the standard. We believe that the availability of the proposed less-stringent bins would allow for feasible and cost-effective compliance for all vehicles. In the Tier 2 program, manufacturers took advantage of this flexibility, especially in the early years of the program. Then, as technologies improved and/or became less expensive and the need for averaging diminished, manufacturers began certifying all or most of their fleets to the average bin (Tier 2 Bin 5). We anticipate that manufacturers will follow a similar trend with the proposed Tier 3 standards, relying on fleet averaging more significantly in the transitional years but certifying increasing numbers of their vehicles to the final fleet average standard of 30 mg/mi in the later years of the program.

In order to assess the technical feasibility of a 30 mg/mi NMOG+NO<sub>x</sub> national fleet average FTP standard, EPA conducted two supporting analyses. The initial analyses performed were of the current Tier 2 and LEV II fleets. This provided a baseline for the current federal fleet emissions performance, as well as the emissions performance of the California LEV II fleet. The second consideration was a modal analysis of typical vehicle emissions under certain operating conditions. In this way EPA determined the specific emissions performance challenges that vehicle manufacturers would face in meeting the lower fleet average emission standards. Each of these considerations is described in greater detail below.

The current federal fleet is certified to an average of Tier 2 Bin 5, equivalent to 160 mg/mi NMOG+NO<sub>x</sub>.<sup>221</sup> For MY 2009, 92 percent of LDVs and LDT1s were certified to Tier 2 Bin 5 and 91 percent of LDT2s through LDT4s were certified to Tier 2 Bin 5. This was not an unexpected result as there is currently no motivation for vehicle manufacturers to produce a federal fleet that over-complies with respect to the current Tier 2 standards. By comparison, in the California fleet, where compliance with the “PZEV” program encourages manufacturers to certify vehicles to cleaner levels, only 30 percent of the LDVs and LDT1s are certified to Tier 2 Bin 5 and 60 percent are certified to Tier 2 Bin 3. The situation regarding the truck fleet in California is similarly stratified, with 37 percent of the LDT2s through LDT4s being certified to Tier 2 Bin 5 and 55 percent being certified to Tier 2 Bin 3. In many cases identical vehicles are being certified to a lower standard in California and a higher standard federally. We note that vehicles certified to a lower standard in California are operated on gasoline with an average sulfur content of 10 ppm and thereby are able to maintain their emissions performance in-use. Based on these patterns of federal and California certification, EPA believes that much of the existing Tier 2 fleet could be certified to a lower federal fleet average immediately, with no significant feasibility concerns, if lower sulfur gasoline were made available nationwide.

Regardless of the Tier 2 bin standards at which manufacturers choose to certify their vehicles, actual measured

<sup>221</sup> The current Tier 2 program does not combine NMOG and NO<sub>x</sub> emissions into one fleet-average standard. The fleet-average standard in that program is for NO<sub>x</sub> emissions alone.

emissions performance of these vehicles is typically well below the numerical standards. This difference is referred to as “compliance margin” and is a result of manufacturers’ efforts to address all the sources of variability, including:

- Test-to-test variability (within one test site and lab-to-lab)
- Build variation expectations
- Manufacturing tolerances and stack-up
- Vehicle operation (for example: driving habits, ambient temperature, etc.)
- Fuel composition
- The effects of fuel sulfur on exhaust catalysts and oxygen sensors
- The effects of other fuel components, including ethanol and gasoline additives
- Oil consumption
- The impact of oil additives and oil ash on exhaust catalysts and oxygen sensors

For MY 2009, the compliance margin for a Tier 2 Bin 5 vehicle averaged approximately 60 percent. In other words, actual vehicle emissions performance was on average about 40 percent of a 160 mg/mi NMOG+NO<sub>x</sub> standard, or about 64 mg/mi. By comparison, for California-certified vehicles, the average Super Ultra Low Emission Vehicle (SULEV) compliance margin was somewhat less for the more stringent standards, approximately 50 percent. We believe that the recent California experience is a likely indicator of compliance margins that manufacturers would design for in order to comply with the proposed Tier 3 FTP standards. Thus, a typical Tier 2 Bin 5 vehicle, performing at 40 percent of the current standard (i.e., at about 64 mg/mi) would need improvements sufficient to reach about 15 mg/mi (50 percent of a 30 mg/mi standards).

To understand how the several currently-used technologies described below could be used by manufacturers to reach the stringent proposed Tier 3 NMOG+NO<sub>x</sub> standards, it is helpful to consider emissions formation in common modes of operation for gasoline engines, or modal analysis.<sup>222</sup> The primary challenge faced by manufacturers for producing Tier 3 compliant light-duty gasoline vehicle powertrains would be to reduce the emissions during cold-start operation which, based on modal analysis of a gasoline powered vehicle being operated on the FTP cycle, occurs during about the first 50 seconds after engine start. Thus, effective control of

<sup>222</sup> A modal analysis provides a second-by-second view of the total amount of emissions over the entire cycle being considered.

these cold-start emissions would be the primary technological goal of manufacturers complying with the proposed Tier 3 FTP standards. As discussed below, light-duty manufacturers are already applying several technologies capable of significant reductions in these cold start emissions to vehicles currently on the road.

#### b. SFTP NMOG+NO<sub>x</sub> Standards

The increase in the stringency of the SFTP NMOG+NO<sub>x</sub> standards, specifically across the US06 cycle, would generally only require additional focus on fuel control of the engines and diligent implementation of new technologies that manufacturers are already introducing or are likely to introduce in response to the current and 2017 LD GHG emission standards. These include downsized gasoline direct injection (GDI) and turbocharged engines, which may also include improvements to the engine and emission control hardware to tolerate higher combustion and exhaust temperatures expected in these future GHG-oriented engine designs. The upgraded materials or components would enable manufacturers to rely less on fuel enrichment during high-speed/high-load operation to protect components from overheating. This fuel enrichment is currently the source of elevated VOC, NO<sub>x</sub>, and PM emissions seen in a subset of the current Tier 2 fleet.

With respect to enrichment, changes to the fuel/air mixture by increasing the fuel fraction has historically been the primary method available to manufacturers to protect the catalyst and other exhaust components from over-temperature conditions. Changing the fuel/air mixture is no longer the only tool available to manufacturers for this purpose. With the application of electronic throttle controls, variable valve timing, exhaust gas recirculation and other exhaust temperature influencing technologies on nearly every light-duty vehicle, the manufacturer has the ability to systematically control the operation and combustion processes of the engine to minimize or altogether avoid areas and modes of operation where thermal issues can occur. While some of these solutions could in some cases result in a small and temporary reduction in vehicle performance (absolute power levels), we believe that it could be an effective way to reduce NMOG+NO<sub>x</sub> emissions over the SFTP test.

Additionally, some components, especially catalysts, can experience accelerated thermal deterioration that

occurs when operating at higher temperatures for more time than expected under normal operation (e.g., trailer towing, mountain grades). Some upgrades of existing vehicle emission control technology, like catalyst substrates and washcoats may be required to limit thermal deterioration and ensure vehicle emissions compliance throughout the useful life of the vehicle.

In order to assess the technical feasibility of a 50 mg/mi NMOG+NO<sub>x</sub> national fleet average SFTP standard, EPA conducted an analysis of SFTP levels of Tier 2 and LEV II vehicles. The analysis was performed on the US06 results from current Tier 2 and LEV II vehicles tested in the in-use verification program (IUV) by manufacturers and submitted to EPA. This analysis provided a baseline for the current Tier 2 and LEV II fleet emissions performance, as well as the SFTP emissions performance capability of the cleanest vehicles meeting the proposed Tier 3 FTP standards. The analysis concluded that most vehicles in the IUV testing program are already capable of meeting the composite SFTP standard of 50 mg/mi when the Tier 3 FTP standard levels are factored into the composite calculation. With the technological improvements already underway as discussed above, we believe all 2017 and later vehicles would be able to comply with the proposed SFTP standards, directly, or through the flexibility of the averaging, banking and trading program. For further information on the analysis see Chapter 1 of the draft RIA.

#### c. FTP and SFTP PM Standards

As described above for NMOG+NO<sub>x</sub> over the SFTP, the increase in the stringency of the FTP and SFTP PM standards would generally also only require additional focus on fuel control of the engines and diligent implementation of new technologies like gasoline direct injection (GDI) and turbocharged engines. Some upgrades of existing vehicle emission control technology may be required to ensure vehicle emissions performance is maintained throughout the useful life of the vehicle. These upgrades may include improvements to the engine to control wear that could result in increased PM from oil consumption and selection of GDI systems that would be capable of continuing to perform optimally even as the systems age.

We based our conclusions about the ability of manufacturers to meet the proposed PM standards largely on the PM performance of the existing fleet, both on the FTP and SFTP. In the case

of FTP testing of current vehicles, data on both low and high mileage light-duty vehicles demonstrate that the majority of vehicles are currently achieving levels at or below the proposed Tier 3 FTP standards.

The testing results can be found in Chapter 1 of the draft RIA. A small number of vehicles are at or just over the proposed FTP PM standard at low mileage and could require calibration changes and/or catalyst changes to meet the new standards. It is our expectation that the same calibration and catalyst changes required to address NMOG would also provide the necessary PM control. Vehicles that currently have higher PM emissions over the FTP or SFTP at higher mileages would likely be required to control oil consumption and combustion chamber deposits.

We also analyzed PM test data on US06 emissions for current Tier 2 vehicles. The data show that many vehicles are already at or below the proposed standards on the US06. Vehicles that have high PM emission rates on the US06 would likely need to control enrichment, and oil consumption particularly later in life. As described above for SFTP NMOG+NO<sub>x</sub> control, enrichment can be more accurately managed through available electronic engine controls. The strategies for reducing oil consumption are similar to those described above for controlling oil consumption on the FTP. However, given the higher engine speeds experienced on the US06 and the increase in oil consumption that can accompany this kind of operation, manufacturers would most likely focus on oil sources stemming from the piston to cylinder interface and positive crankcase ventilation (PCV).

Manufacturers have informed us that they have already reduced or are planning to reduce the oil consumption of their engines by improved sealing of the paths of oil into the combustion chamber and improved piston-to-cylinder interfaces. They are already taking or considering these actions to address issues of customer satisfaction and cost of ownership. In addition, many vehicle manufacturers acknowledge the relationship between combustion chamber deposits and PM formation and are actively pursuing design changes to mitigate fuel impingement within the combustion chamber and its commensurate PM effects. Both types of controls are being widely applied by manufacturers today.

#### d. Technologies Manufacturers Are Likely To Apply

Most of the technologies expected to be applied to light-duty vehicles to meet

the stringent proposed standards would address the emissions control system's ability to control emission during cold start. The effectiveness of current vehicle emissions control systems depends in large part on the time it takes for the catalyst to light off, which is typically defined as the catalyst reaching a temperature of 250 °C. In order to improve catalyst light-off, we expect that manufacturers would add technologies that provide heat from combustion more readily to the catalyst or improve the catalyst efficiency at lower temperatures. These technologies include calibration changes, thermal management, close-coupled catalysts, catalyst platinum group metals (PGM) loading and strategy, and secondary air injection, all which generally improve emission performance of all pollutants. In some cases where the catalyst light-off and efficiency are not enough to address the cold start NMOG emissions, hydrocarbon adsorbers may be applied to trap hydrocarbons until such time that the catalyst is lit off. Note that with the exception of hydrocarbon adsorbers each of these technologies addresses NMOG, NO<sub>x</sub>, and PM performance. The technologies are described in greater detail below. Additional information on these technologies can also be found in Chapter 1 of the RIA.

- **Engine Control Calibration Changes**—These include changes to retard spark and/or adjust air/fuel mixtures such that more combustion heat is created during the cold start. Control changes may include injection strategies in GDI applications, unique cold-start variable valve timing and lift, and other available engine parameters.

Engine calibration changes can affect NMOG, NO<sub>x</sub> and PM emissions.

- **Catalyst PGM Loading**—Additional PGM loading, increased loading of other active materials, and improved dispersion of PGM and other active materials in the catalyst provide a greater number of sites available to catalyze emissions and addresses NMOG, NO<sub>x</sub> and PM emissions. Catalyst PGM loading, when implemented in conjunction with low sulfur gasoline, will effectively eliminate NO<sub>x</sub> emissions under warmed-up conditions.

- **Thermal Management**—This category of technologies includes all design attributes meant to conduct the combustion heat into the catalyst with minimal cooling. This includes insulating the exhaust piping between the engine and the catalyst, reducing the wetted area of the exhaust path, reducing the thermal mass of the exhaust system, and/or using close-coupled catalysts (i.e., the catalysts are packaged as close as possible to the engine's cylinder head to mitigate the cooling effects of longer exhaust piping). Thermal management technologies primarily address NMOG emissions, but also affect NO<sub>x</sub> and PM emissions.

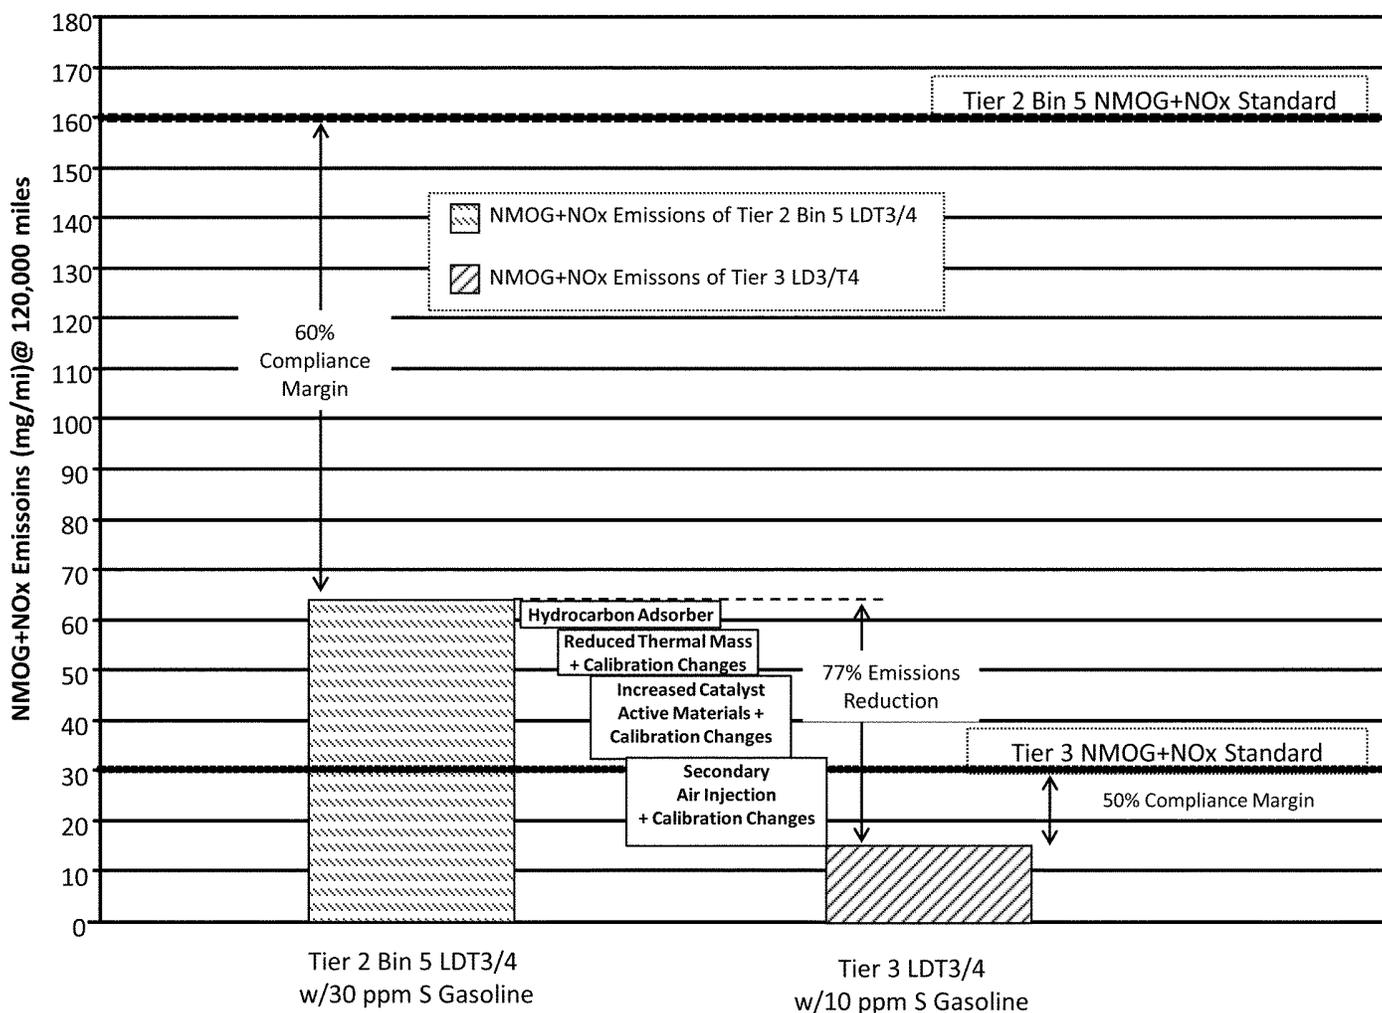

- **Secondary Air Injection**—By injecting air directly into the exhaust stream, close to the exhaust valve, combustion can be maintained within the exhaust, creating additional heat by which to increase the catalyst temperature. The air/fuel mixture must be adjusted to provide a richer exhaust gas for the secondary air to be effective.

- **Hydrocarbon Adsorber**—Traps hydrocarbons during a cold start until

the catalyst lights off, and then releases the hydrocarbons to be converted by the catalyst.

- **Gasoline Sulfur**—The relative effectiveness for NMOG and NO<sub>x</sub> control of the exhaust-catalyst related technologies are constrained by gasoline fuel sulfur levels. Thus, reduced sulfur in gasoline is an enabling technology to achieve the standards and maintain this performance during in-use operation. We discuss the relationship between gasoline sulfur and emissions in greater detail in Section IV.6 below and in the draft RIA.

Discussions between EPA, CARB, vehicle manufacturers, and major component suppliers indicated that large light-duty trucks (e.g., pickups and full-size sport utility vehicles (SUVs) in the LDT3 and LDT4 categories) would be the most challenging light-duty vehicles to bring into compliance with the proposed Tier 3 NMOG+NO<sub>x</sub> standards at the 30 mg/mi corporate average emissions level. A similar challenge was addressed when large light-duty trucks were brought into compliance with the Tier 2 standards over the past decade. Figure IV-1 provides a graphical representation of the effectiveness of Tier 3 technologies for large light-duty truck applications. A compliance margin is shown in both cases. Note that the graphical representation of the effectiveness of catalyst technologies on NO<sub>x</sub> and NMOG when going from Tier 2 to Tier 3 levels also includes a reduction in gasoline sulfur levels from 30 ppm to 10 ppm.

**Figure IV-1: Contribution of Tier 3 Technologies to Large Light-Duty Truck Compliance<sup>223</sup>**

6. Impact of Gasoline Sulfur Control on the Feasibility of the Proposed Vehicle Emission Standards

a. Fuel Sulfur Impacts on Exhaust Catalysts

Modern three-way catalytic exhaust systems utilize platinum group metals (PGM), metal oxides and other active materials to selectively oxidize organic compounds and carbon monoxide in the exhaust gases. These systems simultaneously reduce nitrogen oxides when air-to-fuel ratio control operates in a condition of relatively low amplitude/high frequency oscillation about the stoichiometric point. Sulfur is a well-

known catalyst poison. There is a large body of work demonstrating sulfur inhibition of the emissions control performance of PGM three-way exhaust catalyst systems.<sup>224 225 226 227 228 229 230 231 232 233</sup>

materials and catalyst substrates is complex and varies with catalyst composition and exhaust gas composition and exhaust temperature. The variation of these interactions with exhaust gas composition and temperature means that the operational history of a vehicle is an important factor; continuous light-load operation, throttle tip-in events and enrichment under high-load conditions can all

impact sulfur interactions with the catalyst.

Sulfur from gasoline is oxidized during spark-ignition engine combustion primarily to  $\text{SO}_2$  and, to a much lesser extent,  $\text{SO}_3^{-2}$ . Sulfur oxides selectively chemically bind (chemisorb) with, and in some cases react with, active sites and coating materials within the catalyst, thus inhibiting the intended catalytic reactions. Sulfur oxides inhibit

pollutant catalysis chiefly by selective poisoning of active PGM, ceria sites, and alumina washcoatings (see Figure IV-2).<sup>234</sup> The amount of sulfur retained by the catalyst is primarily a function of its operating temperature, the active materials and coatings used within the catalyst, the concentration of sulfur oxides in the incoming exhaust gases, and air-to-fuel ratio feedback and control by the engine management system.

**Figure IV-2 Functional schematic showing selective poisoning of active catalytic sites by sulfur compounds. Adapted from Heck and Farrauto 2002.<sup>234</sup>**

<sup>234</sup> Heck, R.M., Farrauto, R.J. (2002). Chapter 5: Catalyst Deactivation in *Catalytic Air Pollution Control, 2nd Edition*. John Wiley and Sons, Inc.

Selective sulfur poisoning of platinum (Pt) and rhodium (Rh) is primarily from surface-layer chemisorption. Sulfur poisoning of palladium (Pd) and ceria appears to be via chemisorption combined with formation of more stable metallic sulfur compounds, e.g. PdS and Ce<sub>2</sub>O<sub>2</sub>S, present in both surface and bulk form (i.e., below the surface layer).<sup>235 236 237 238</sup> Ceria, zirconia and other oxygen storage components (OSC) play an important role that is crucial to NO<sub>x</sub> reduction over Rh as the engine air-to-fuel ratio oscillates about the stoichiometric closed-loop control point.<sup>239</sup> Water-gas-shift reactions are important for NO<sub>x</sub> reduction over catalysts combining Pd and ceria. This reaction can be blocked by sulfur poisoning and may be responsible for observations of reduced NO<sub>x</sub> activity over Pd/ceria catalysts even with exposure to fairly low levels of sulfur (equivalent to 15 ppm in gasoline).<sup>240 241</sup> Pd is also of increased importance for meeting Tier 3 standards due to its unique application in the closed-coupled-catalysts location required for vehicles certifying to very stringent emission standards. Pd is required in closed-coupled catalysts due to its resistance to high temperature thermal sintering. Sulfur removal from Pd requires rich operation at higher temperatures than required for sulfur removal from other PGM catalysts.<sup>242</sup>

In addition to its interaction with catalyst materials, sulfur can also react with the washcoating itself to form alumina sulfate, which in turn can block coating pores and reduce gaseous

diffusion to active materials below the coating surface.<sup>243</sup> This may be a significant mechanism for the observed storage of sulfur compounds at light and moderate load operation with subsequent, rapid release as sulfate particulate matter when high-load, high-temperature conditions are encountered.<sup>244</sup>

Operating the catalyst at a sufficiently high temperature under net reducing conditions (e.g., air-to-fuel equivalence that is net fuel-rich of stoichiometry) can effectively release the sulfur oxides from the catalyst components. Thus, regular operation at sufficiently high temperatures at rich air-to-fuel ratios can minimize the effects of fuel sulfur levels on catalyst active materials and catalyst efficiency. However, it cannot completely eliminate the effects of sulfur poisoning. A study of Tier 2 vehicles in the in-use fleet recently completed by EPA shows that emission levels immediately following high speed/load operation is still a function of fuel sulfur level, suggesting that lower fuel sulfur levels will bring emission benefits unachievable by catalyst regeneration procedures alone.<sup>245</sup> Furthermore, regular operation at these temperatures and at rich air-to-fuel ratios is not desirable, for several reasons. The temperatures necessary to release sulfur oxides are high enough to lead to thermal degradation of the catalyst over time via thermal sintering of active materials. Sintering reduces the surface area available to participate in reactions. Additionally, it is not always possible to maintain these catalyst temperatures (because of cold weather, idle conditions, light load operation) and the rich air-to-fuel ratios necessary can result in increased PM, NMOG and CO emissions. Thus, reducing fuel sulfur levels has been the primary regulatory mechanism to minimize sulfur contamination of the catalyst and ensure optimum emissions performance over the useful life of a vehicle. The impact of gasoline sulfur has become even more important as vehicle emission standards have become more stringent. Some studies have suggested an increase in catalyst

sensitivity to sulfur (in terms of percent conversion efficiency) when standards increase in stringency and emissions levels decrease. Emission standards under the programs that preceded the Tier 2 program (Tier 0, Tier 1 and National LEV, or NLEV) were high enough that the impact of sulfur was considered negligible. The Tier 2 program recognized the importance of sulfur and reduced the sulfur levels in the fuel from around 300 ppm to 30 ppm in conjunction with the new emission standards.<sup>246</sup> At that time, very little work had been done to evaluate the effect of further reductions in fuel sulfur, especially on in-use vehicles that may have some degree of catalyst deterioration due to real-world operation.

In 2005, EPA and several automakers jointly conducted a program that examined the effects of sulfur and other gasoline properties, benzene, and volatility on emissions from a fleet of nine Tier 2 compliant vehicles. Section 1.2.3 of the draft RIA provides details of the Mobile Source Air Toxics (MSAT) Study.<sup>247</sup> The study found significant reductions in NO<sub>x</sub>, CO and total hydrocarbons (HC) when the vehicles were tested on low sulfur fuel, relative to 32 ppm fuel.<sup>248</sup> In particular, the study found a nearly 50 percent increase in NO<sub>x</sub> over the FTP when sulfur was increased from 6 ppm to 32 ppm. Given the prep procedures related to catalyst clean-out and loading used by these studies, these results may represent a "best case" scenario relative to what would be expected under more typical driving conditions. Nonetheless, these data suggested the effect of sulfur loading was reversible for Tier 2 vehicles, and that there were likely to be significant emission reductions possible with further reductions in gasoline sulfur level. For more discussion of the impact of gasoline fuel sulfur on the current light-duty vehicle fleet, see Section III.A.

#### b. EPA Gasoline Sulfur Effects Testing

Both the MSAT and Umicore studies showed the emission reduction potential of lower sulfur fuel on Tier 2 and later technology vehicles over the FTP cycle. However, assessing the potential for reduction on the in-use

fleet requires understanding how sulfur exposure over time impacts emissions, and what the state of loading is for the typical vehicle in the field. In response to these data needs, EPA conducted a new study to assess the emission reductions expected from the in-use Tier 2 fleet with a reduction in fuel sulfur level from current levels. It was designed to take into consideration what was known from prior studies on sulfur build-up in catalysts over time and the effect of periodic regeneration events that may result from higher speed and load operation over the course of day-to-day driving.

The study sample described in this analysis consisted of 81 cars and light trucks recruited from owners in

southeast Michigan, covering model years 2007–9 with approximately 20,000–40,000 odometer miles. The makes and models targeted for recruitment were chosen to be representative of high sales vehicles covering a range of types and sizes. Test fuels were two non-ethanol gasolines with properties typical of certification test fuel, one at a sulfur level of 5 ppm and the other at 28 ppm. A nominal concentration of approximately 25 ppm was targeted for the high level to be representative of retail fuel available to the public in the vehicle recruiting area. All emissions data was collected using the FTP cycle at a nominal temperature of 75 °F.

Using the 28 ppm test fuel, emissions data were collected from vehicles in their as-received state as well as following a high-speed/load “clean-out” procedure consisting of two back-to-back US06 cycles intended to reduce sulfur loading in the catalyst. A statistical analysis of this data showed highly significant reductions in several pollutants including NO<sub>x</sub> and hydrocarbons, suggesting that reversible sulfur loading exists in the in-use fleet and has a measurable effect on aftertreatment performance (Table IV–6). For example, Bag 2 NO<sub>x</sub> emissions dropped 32 percent between the pre- and post-cleanout tests on 28 ppm fuel.

TABLE IV–6—AVERAGE CLEAN-OUT EFFECT ON IN-USE EMISSIONS USING 28 PPM TEST FUEL<sup>a</sup>

	NO <sub>x</sub> (p-value)	THC (p-value)	CO (p-value)	NMHC (p-value)	CH <sub>4</sub> (p-value)	PM (p-value)
Bag 1 .....	.....	.....	4.7% (0.0737)	.....	.....	15.4% (<0.0001)
Bag 2 .....	31.9% (0.0009)	16.5% (0.0024)	.....	17.8% (0.0181)	15.3% (0.0015)	.....
Bag 3 .....	38.3% (<0.0001)	21.4% (<0.0001)	19.5% (0.0011)	27.8% (<0.0001)	12.0% (<0.0001)	24.5% (<0.0001)
FTP Composite .....	11.4% (<0.0001)	4.1% (0.0187)	7.6% (0.0008)	3.0% (0.0751)	6.9% (0.0003)	13.7% (<0.0001)

<sup>a</sup> The clean-out effect is not significant at  $\alpha = 0.10$  when no reduction estimate is provided.

To assess the impact of lower sulfur fuel on in-use emissions, further testing was conducted on a representative subset of vehicles on 28 ppm and 5 ppm fuel with accumulated mileage. A first step in this portion of the study was to assess differences in the effectiveness of the clean-out procedure when done

using different fuel sulfur levels. Table IV–7 presents a comparison of emissions immediately following (<50 miles) the clean-out procedures at the low vs. high sulfur level. These results show significant emission reductions for the 5 ppm fuel relative to the 28 ppm fuel immediately after this clean-out; for

example, Bag 2 NO<sub>x</sub> emissions were 47 percent lower on the 5 ppm fuel vs. the 28 ppm fuel. This indicates that the catalyst is not fully desulfurized, even after a clean out procedure, as long as there is sulfur in the fuel.

TABLE IV–7—PERCENT REDUCTION IN EXHAUST EMISSIONS WHEN GOING FROM 28 PPM TO 5 PPM SULFUR GASOLINE FOR THE FIRST THREE REPEAT FTP TESTS IMMEDIATELY FOLLOWING CLEAN-OUT

	NO <sub>x</sub> (p-value)	THC (p-value)	CO (p-value)	NMHC (p-value)	CH <sub>4</sub> (p-value)	PM <sup>a</sup>
Bag 1 .....	5.9% (0.0896)	5.4% (0.0118)	7.3% (0.0023)	4.6% (0.0465)	11.1% (<0.0001)	.....
Bag 2 .....	47.3% (0.0010)	40.2% (<0.0001)	— <sup>a</sup>	34.4% (0.0041)	53.6% (<0.0001)	.....

<sup>a</sup> Sulfur level not significant at  $\alpha = 0.10$ .

To assess the overall in-use reduction between high and low sulfur fuel, a mixed model analysis of all data as a function of fuel sulfur level and miles driven after cleanout was performed.

This analysis found highly significant reductions for several pollutants, as shown in Table IV–8. Reductions for Bag 2 NO<sub>x</sub> were particularly high, estimated at 59 percent between 28 ppm

and 5 ppm overall. For some pollutants, such as Bag 2 NO<sub>x</sub>, the model fitting did not find a significant miles-by-sulfur interaction, suggesting the relative differences were not dependent on

miles driven after clean-out. Other results, such as Bag 1 hydrocarbons, did show a significant miles-by-sulfur interaction. In this case, determination

of a sulfur level effect for the in-use fleet required estimation of a miles-equivalent level of sulfur loading, which was determined by the cleanout results

obtained from the baseline testing on the vehicles as-received.

TABLE IV-8—SUMMARY OF MIXED MODEL RESULTS FOR EMISSION REDUCTIONS WHEN GOING FROM 28 PPM TO 5 PPM SULFUR GASOLINE, ADJUSTED FOR IN-USE SULFUR LOADING (MILEAGE ACCUMULATION) WHERE APPROPRIATE

	NO <sub>x</sub> (p-value)	THC (p-value)	CO (p-value)	NMHC (p-value)	CH <sub>4</sub> (p-value)	NO <sub>x</sub> +NMOG (p-value)	PM <sup>a</sup>

Bag 1–Bag 3 .....	— <sup>a</sup>	5.2% (0.0063)	4.3% (0.0689)	5.1% (0.0107)	4.6% (0.0514)	N/A	

<sup>a</sup> Sulfur level not significant at  $\alpha = 0.10$ . For THC Bag 1 and CH<sub>4</sub> Bag 1, because the effect of clean-out was not statistically significant, the reduction estimates are based on the estimates of least squares means.

<sup>b</sup> Model with significant sulfur and mileage interaction term.

Major findings from this study include:

- Reversible sulfur loading is occurring in the in-use fleet of Tier 2 vehicles and has a measureable effect on emissions of NO<sub>x</sub>, hydrocarbons, and other pollutants of interest.

- The effectiveness of high speed/load procedures in restoring catalyst efficiency is limited when operating on higher sulfur fuel.

- Reducing fuel sulfur levels from current levels to levels in the range of the proposed gasoline sulfur standards would be expected to achieve significant reductions in emissions of NO<sub>x</sub>, hydrocarbons, and other pollutants of interest in the in-use fleet.

The overall reductions found in this study are in agreement with other low sulfur studies conducted on Tier 2 vehicles. The magnitude of NO<sub>x</sub> and HC reductions found in this study when switching from 28 ppm to 5 ppm fuel are consistent with those found in MSAT and Umicore studies mentioned above. For further details regarding the Tier 2 In-Use Gasoline Sulfur Effects Study, see the draft report on this work.<sup>249</sup>

c. Fuel Sulfur Impacts on Vehicles at the Proposed Tier 3 Levels

As discussed in previous sections, the Tier 3 Program would reduce fleet average NMOG+NO<sub>x</sub> emissions by over 80 percent. The feasibility of the proposed 30 mg/mi NMOG+NO<sub>x</sub> fleet average standard depends on a degree of emissions control from exhaust catalyst

systems that will require gasoline at 10 ppm sulfur or lower. The most likely control strategies would involve using exhaust catalyst technologies and powertrain calibration primarily focused on reducing cold-start emissions of NMOG and on both cold-start and warmed-up (running) emissions of NO<sub>x</sub>. An important part of this strategy, particularly for larger vehicles having greater difficulty achieving cold-start NMOG emissions control, would be to reduce NO<sub>x</sub> emissions to near-zero levels. This would allow sufficient NMOG compliance margin to allow vehicles to meet the combined NMOG+NO<sub>x</sub> emissions standards for their full useful life.

Achieving the proposed Tier 3 emission standards would require very careful control of the exhaust chemistry and exhaust temperatures to ensure high catalyst efficiency. The impact of sulfur on OSC components in the catalyst makes this a challenge even at relatively low (10 ppm) gasoline sulfur levels. NO<sub>x</sub> conversion by exhaust catalysts is strongly influenced by the OSC components like ceria. Ceria sulfation may play an important role in the degradation of NO<sub>x</sub> emission control with increased fuel sulfur levels observed in the MSAT, Umicore and EPA Tier 2 In-Use Gasoline Sulfur Effects studies.<sup>250</sup>

Light-duty vehicles certified to CARB SULEV and federal Tier 2 Bin 2 exhaust emission standards accounted for approximately 3.1 percent and 0.4 percent, respectively of vehicle sales for

MY2009. Light-duty vehicles certified to SULEV under LEV II are more typically certified federally to Tier 2 Bin 3, Bin 4 or Bin 5, and vehicles certified to SULEV and Tier 2 Bins 3–5 comprised approximately 2.5 percent of sales for MY2009. In particular, nonhybrid vehicles certified in California as SULEV are not certified to federal Tier 2 Bin 2 emissions standards even though the numeric limits for NO<sub>x</sub> and NMOG are shared between the California LEV II and federal Tier 2 programs for SULEV and Bin 2. Confidential business information shared by the auto companies indicate that the primary reason is an inability to demonstrate compliance with SULEV/ Bin 2 emission standards after vehicles have operated in-use on gasoline with greater than 10 ppm sulfur and with exposure to gasoline up to the Tier 2 80 ppm gasoline sulfur cap. While vehicles certified to the SULEV and Tier 2 Bin 2 standards both demonstrate compliance using certification gasoline with 15–40 ppm sulfur content, in-use compliance of SULEV vehicles in California occurs after operation on gasoline with an average of 10 ppm sulfur and a maximum cap of 30 ppm sulfur while federally certified vehicles operate on gasoline with an average of 30 ppm sulfur and a maximum cap of 80 ppm sulfur. Although the SULEV and Tier 2 Bin 2 standards are numerically equivalent, the increased sulfur exposure of in-use vehicles certified under the federal Tier 2 program results in a need for a higher emissions compliance margin to take into account the impact of in-use gasoline sulfur on full useful life vehicle emissions. As a result, vehicles certified

<sup>249</sup> U.S. EPA. 2013. “The Effects of Fuel Sulfur Level on Emissions from Tier 2 Vehicles In-Use.” EPA-420-D-13-003. Available in the docket for this rule.

<sup>250</sup> Heck, R.M., Farrauto, R.J. (2002). Chapter 6: Automotive Catalyst in *Catalytic Air Pollution Control, 2nd Edition*. John Wiley and Sons, Inc.

to California SULEV typically certify to emissions standards under the federal Tier 2 program that are 1–2 certification bins higher (e.g., SULEV certified federally as Tier 2 Bin 3 or Bin 4) in order to ensure in-use compliance with emissions standards out to the full useful life of the vehicle when operating on higher-sulfur gasoline.

Emissions of vehicles certified to the SULEV standard of the California LEV II program, or the equivalent Tier 2 Bin 2 standards, can provide some insight into the impact of fuel sulfur on vehicles at the very low proposed Tier 3 emissions levels. Vehicle testing by Toyota of LEV I, LEV II ULEV and prototype SULEV vehicles showed larger percentage increases in NO<sub>x</sub> and HC emissions for SULEV vehicles as gasoline sulfur increased from 8 ppm to 30 ppm, as compared to other LEV vehicles they tested. Testing of a SULEV-certified PZEV vehicle by Umicore showed a pronounced, progressive trend of increasing NO<sub>x</sub> emissions (referred to as “NO<sub>x</sub> creep”) when switching from a 3 ppm sulfur gasoline to repeated, back-to-back FTP tests using 33 ppm sulfur gasoline.<sup>251</sup> The PZEV Chevrolet Malibu, after being aged to an equivalent of 150,000 miles, demonstrated emissions at a level equivalent to the compliance margin for the Tier 3 Bin 30 NMOG+NO<sub>x</sub> standard when operated on 3 ppm sulfur fuel and for at least one FTP test after switching to 33 ppm certification fuel. Following operation over 2 FTP cycles on 33 ppm sulfur fuel, NO<sub>x</sub> emissions alone were more than double the proposed Tier 3 30 mg/mi NMOG+NO<sub>x</sub> standard.<sup>252</sup> This represents a NO<sub>x</sub> percentage increase that is approximately 2–3 times of what has been reported for similar changes in fuel sulfur level for Tier 2 and older vehicles over a similar difference in fuel sulfur.<sup>253 254</sup> There are no LDTs larger than LDT2 and no larger non-hybrid LDVs. We expect that additional catalyst technologies, for example increasing catalyst surface area (volume or substrate cell density) and/or increased PGM loading, would need to be applied to larger vehicles in order to achieve the catalyst efficiencies

necessary to comply with the proposed Tier 3 standards. Any sulfur impact on catalyst efficiency would have a larger impact on vehicles and trucks that rely more on very high catalyst efficiencies in order to achieve very low emissions.

The negative impact of gasoline sulfur on catalytic activity and the resultant loss of exhaust catalyst effectiveness to chemically reduce NO<sub>x</sub> and oxidize NMOG and air toxic emissions occurs across all vehicle categories. However, the impact of gasoline sulfur on NO<sub>x</sub> emissions control of catalysts in the fully-warmed-up condition is particularly of concern for larger vehicles (the largest LDVs and LDT3s, LDT4s, and MDPVs). Manufacturers face the most significant challenges in reducing cold-start NMOG emissions for these vehicles. Because of the need to reach near-zero NO<sub>x</sub> levels, any significant degradation in NO<sub>x</sub> emissions control over the useful life of the vehicle would likely prevent some if not most larger vehicles from reaching a combined NMOG+NO<sub>x</sub> low enough to comply with the 30 mg/mi fleet-average standard. These vehicles represent a sufficiently large segment of light-duty vehicle sales now and in the foreseeable future that their emissions could not be offset (and thus the fleet-average standard achieved) by certifying vehicles to bins below the fleet average. Any degradation in catalyst performance due to gasoline sulfur would reduce or eliminate the margin necessary to ensure in-use compliance with the proposed Tier 3 emissions standards. Certifying to a useful life of 150,000 miles versus the current 120,000 miles would further add to manufacturers’ compliance challenge for Tier 3 large light trucks (See Section IV.7.b below for more on the useful life requirements.)

#### d. Gasoline Sulfur Control Required To Meet Tier 3 Emissions Standards

The impact of gasoline sulfur poisoning on exhaust catalyst performance and the relative stringency of the Tier 3 standards, particularly for larger vehicles and trucks, when considered together make a compelling argument for the virtual elimination of sulfur from gasoline. As discussed in Section V.A.2, the proposed 10-ppm standard for sulfur in gasoline represents the lowest practical limit from a standpoint of fuel production, handling and transport. While lowering gasoline sulfur to levels below 10 ppm would further help ensure in-use vehicle compliance with the Tier 3 standards, the Agency believes that a gasoline sulfur standard of 10 ppm would allow compliance by gasoline-

fueled engines with a national fleet average of 30 mg/mi NMOG+NO<sub>x</sub>. The level of the proposed Tier 3 standards was considered in light of a 10-ppm average sulfur level for gasoline. Not only should a 10-ppm sulfur standard enable vehicle manufacturers to certify their entire product line of vehicles to the Tier 3 fleet average standards, but based on the results of testing both Tier 2 vehicles and SULEV vehicles as discussed above, reducing gasoline sulfur to 10 ppm should enable these vehicles to maintain their emission performance in-use over their full useful life. It is important to note that while the preceding discussion focused on gasoline sulfur control, spark ignition engines operating on other fuels (i.e., CNG, LPG, E85) and utilizing a three way catalyst systems for control of emission are similarly affected by the sulfur levels in the fuel. We invite comment on all aspects of our analysis of gasoline sulfur effects and our conclusions, especially comments that include any additional relevant testing data.

## 7. Other Provisions

### a. Early Credits

The California LEV III program is scheduled to begin at least two model years earlier than the proposed federal Tier 3 program.<sup>255</sup> As stated earlier, EPA proposes to implement the Tier 3 standards in MY 2017, for vehicles 6,000 lbs GVWR and less, and in MY 2018 for vehicles over 6,000 lbs GVWR. As a result, LEV III vehicles sold in California beginning in MY 2015 will be required to meet a lower fleet average NMOG+NO<sub>x</sub> level than the federal fleet is meeting at that time. In addition, the California NMOG+NO<sub>x</sub> standards will continue to decline resulting in the gap growing between the current federal program and LEV III. The early credit program we are proposing is designed to accomplish three goals: (1) Encourage manufacturers to produce a cleaner federal fleet earlier than otherwise required; (2) provide needed flexibility to the manufacturers to facilitate the “step down” from the current Tier 2 Bin 5 fleet average required in MY 2016 to the LEV III-based declining fleet average in MY 2017; and (3) create a Tier 3 program that is equivalent in stringency to the LEV III program such that manufacturers will be able to produce a 50-state fleet at the earliest opportunity.

The first provision that we are proposing to address these goals is to allow manufacturers to generate early federal credits against the current Tier 2

<sup>251</sup> Heck, R.M., Farauto, R.J. (2002). Chapter 6: Automotive Catalyst in *Catalytic Air Pollution Control, 2nd Edition*. John Wiley and Sons, Inc.

<sup>254</sup> Shapiro, E. (2009). National Clean Gasoline—An Investigation of Costs and Benefits. Published by the Alliance of Automobile Manufacturers.

<sup>255</sup> The LEV III program as approved by the California Air Resources Board, January 2012.

Bin 5 requirement<sup>256</sup> in MYs 2015 and 2016 for vehicles under 6,000 lbs GVWR and MYs 2016 and 2017 for vehicles greater than 6,000 lbs GVWR. (Early credits would only be available for manufacturers complying under the primary program (declining fleet average), not the alternative phase-in approach (Section IV.A.3.a above). In order to generate these credits, manufacturers would sum the NMOG and NO<sub>x</sub> certification standards for each federally certified Tier 2 vehicle and calculate an NMOG+NO<sub>x</sub> fleet average. Credits would be based on the difference between the new, cleaner, fleet average and the Tier 2 Bin 5 requirement (160 mg/mi total of NMOG and NO<sub>x</sub>). We expect that manufacturers could accomplish this by certifying existing Tier 2 vehicles to a lower fleet average, mainly for the higher bins as the current sulfur content in gasoline would preclude them from certifying the cleanest bins federally (Our analysis, presented in Section IV.A.5 above and Chapter 1 of the draft RIA, shows that many vehicles currently certified to Tier 2 Bin 5 could likely be certified to a lower bin with some reduction in compliance margin; e.g., from Bin 5 to Bin 4 or Bin 3.) We expect to realize early environmental benefits, as the result of a cleaner federal fleet, that justify the credits generated.

We believe that this provision would help us realize both our first and our second goals. For example, a manufacturer certifying their federal fleet to Tier 2 Bin 4 would earn 50 mg/mi of NMOG+NO<sub>x</sub> credits per vehicle (i.e., 160 mg/mi minus 110 mg/mi) which should encourage manufacturers to certify a cleaner federal fleet and provide ample opportunity for credit generation to facilitate the “step down” in stringency. However, if we allowed excessive early credits to be generated it could allow manufacturers to delay their federal compliance with the same fleet average as California for several years. This would be in direct conflict with our third goal of creating a program of equal stringency to the California program as early as possible. In order to address this concern we are proposing that the application of the early federal credits be constrained under the following conditions:

- Early federal credits generated under the provision described above could be used without limitation in MY 2017.

<sup>256</sup> Tier 2 standards are not set in the form of NMOG+NO<sub>x</sub>. The equivalent Tier 2 Bin 5 fleet average in NMOG+NO<sub>x</sub> terms would be equal to 160 mg/mi (90 mg/mi NMOG + 70 mg/mi NO<sub>x</sub>).

- Credits used for compliance in MY 2018 and beyond would be capped at an amount equal to the lesser of the manufacturer's federal credits as calculated above or the manufacturer's LEV III credits multiplied by the ratio of 50-state sales to California only sales. Calculation of these credits would account for the fact that some LEV III credits may have begun to expire and would no longer be eligible as a basis for Tier 3 early credits.

By capping the available federal credits we believe that the two programs, LEV III and Tier 3 would be at parity starting in 2018 MY. In addition, because the number of federal early credits that could be used would be based on the number of LEV III credits that the manufacturer had generated, there may be additional motivation for manufacturers to over-perform in California during the initial model years.

We are proposing that early credit life be limited to 5 years with no discounting, consistent with the California LEV II and LEV III programs and similar to the basic credit carry-forward provisions of the recent light-duty and heavy-duty greenhouse gas rules. We are not proposing any carry-over of Tier 2 credits for use in the Tier 3 program. We seek comment on the 5-year credit life in the context of the programs goals of harmonization with California LEV III and whether the added flexibility would be advantageous relative to any added burden associated with corresponding record retention requirements.

#### b. Useful Life

The “useful life” of a vehicle is the period of time, in terms of years and miles, during which a manufacturer is responsible for the vehicle's emissions performance.<sup>257</sup> For LDVs and LDTs (including MDPVs) under the Tier 2 program, there have historically been both “full useful life” values, approximating the average life of the vehicle on the road, and “intermediate useful life” values, representing about half of the vehicle's life. For the Tier 3 program, we are proposing several changes to the current useful life provisions that are appropriate to the proposed standards described above.

Every vehicle manufacturer with which the EPA has met has expressed

<sup>257</sup> The useful life of the vehicle should not be confused with the vehicle's emissions warranty. The useful life value is relevant for certification and in-use compliance purposes; the emissions warranty relates to the period during which the manufacturer is obligated to repair or replace failing emission control equipment on a properly maintained vehicle.

the desire for a single national vehicle fleet and has indicated an ability and willingness to certify their vehicles to a 150,000 mile, 15 year full useful life in support of that goal, since the LEV III program would apply a single 150,000 mile, 15 year useful life value for all of the new standards. However, the CAA, written at a time when vehicles did not last as long as today, precludes EPA from requiring a useful life value longer than the 120,000 mile (and 10 or 11 year, as applicable) value set in Tier 2, for all LDVs and for LDTs up to 3,750 lbs LVW and up to 6,000 lbs GVWR (LDT1s). For vehicles heavier than these limits (i.e., LDT2s, 3s, 4s, as well as MDPVs, representing a large fraction of the light-duty fleet) we are proposing a 150,000 mile, 15 year useful life value. For the lighter vehicles, we are proposing to continue to apply the 120,000 mile (and 10 or 11 year, as applicable) full useful life requirement from the Tier 2 program. Numerically, we are proposing 120,000 mile useful life NMOG+NO<sub>x</sub> standards that are 85 percent of the respective NMOG+ NO<sub>x</sub> 150,000 mile standards. (See Chapter 1 of the draft RIA for a description of our analysis of this relationship.) For the lighter vehicles, we propose that manufacturers be allowed to choose to certify to either useful life value in complying with the proposed fleet average and per-vehicle standards.<sup>258</sup> A manufacturer choosing to comply with the 120,000 mile useful life standards for any of their lighter vehicles would demonstrate compliance with the numerically lower fleet-average NMOG+NO<sub>x</sub> standards for all LDV and LDT1 families. Standards for all other pollutants<sup>259</sup> would remain the same regardless of whether compliance was at the 120,000 mile or the 150,000 mile useful life periods. If a vehicle manufacturer chose to comply with the 120,000 mile useful life standards for their lighter vehicles, it would be required to separately demonstrate that its larger vehicles complied with the 150,000 mile fleet average standards.

Except for vehicles not required to meet a 150,000 miles useful life and for which a manufacturer chose to apply the 120,000 mile useful life value, we propose that manufacturers be required to certify vehicles to the 150,000 mile useful life beginning with the first model year that a vehicle model is certified to the FTP NMOG+NO<sub>x</sub> Bin 70 or lower. This useful-life requirement

<sup>258</sup> CARB has stated that they do not expect to accept vehicles certified under the federal Tier 3 program to a 120,000 mile useful life value for California certification, and thus for meeting California's fleet average NMOG+NO<sub>x</sub> standards.

<sup>259</sup> PM, CO, and HCHO

would apply beginning in MY 2017. Beginning in MY 2020, all vehicles would need to certify to the 150,000 mile useful life, regardless of NMOG+NO<sub>x</sub> certification bin, unless they are allowed and the manufacturer has chosen to remain at 120,000 mile useful life. (Note that the timing of the requirement to certify on the new test fuel would follow the same approach as for the useful life requirement (i.e., based on the first year a model is certified to Bin 70 or below) as described in Section IV.A.7.c below.)

We request comment on the proposed useful life provisions, including the 85 percent factor we propose to use to establish the standards for the 120,000 mile useful life.

#### c. Test Fuels

We recognize that test fuels are an important element of a national program. Vehicle manufacturers have emphasized the desire to reduce test burden by producing one vehicle that is tested to a single test procedure and a single fuel and meets both California and federal requirements. Although we have been able to reasonably align the proposed Tier 3 program with the LEV III program in most key respects, we recognize that there would still exist some differences in emissions performance between vehicles operated on the LEV III and Tier 3 certification fuels. The largest differences between the two fuels are the amount of ethanol they contain and the Reid Vapor Pressure (RVP). The proposed Tier 3 NMOG+NO<sub>x</sub> standards assume operation on federal certification fuel.

We propose that manufacturers begin to certify vehicles on the new Tier 3 fuels<sup>260</sup> beginning with the first model year that a vehicle model is certified to the FTP NMOG+NO<sub>x</sub> Bin 70 or lower, independent of its useful life. The new-fuel requirement would apply beginning in MY 2017. Beginning in MY 2020, all gasoline-fueled models would need to certify on the new fuel, regardless of their certification bin.<sup>261</sup> As discussed in Section IV.A.7.b above, manufacturers would also need to apply the 150,000 mile useful life value to these same vehicles as they begin to be certified to Bin 70 and lower.

During the transition period from Tier 2 fuel to the new Tier 3 and LEV III fuels, manufacturers have indicated a substantial workload challenge of developing and certifying a vehicle to

<sup>260</sup> This includes fuels used for low temperature and high altitude testing and durability requirements. See Section IV.D below.

<sup>261</sup> Diesel fueled and alternative fueled vehicles would continue to test on the fuels used under the Tier 2 program.

the two new fuels simultaneously. To address this potential workload and certification challenge, we propose that vehicles certified in MY 2015 through 2019 to California LEV III standards using California LEV III certification fuels and test procedures could be used for certifying to EPA standards. (For example, for MY 2015 and 2016, EPA would consider such vehicles to be Tier 2 vehicles, although they could be tested on California LEV III fuel.<sup>262</sup> Similarly, for MY 2017 through 2019, EPA would consider such vehicles to be Interim Tier 3 vehicles, although they could be tested on California LEV III fuel.) For these vehicles only, we would not perform or require in-use exhaust testing on Tier 3 fuel.

California does not have fuel specifications for high altitude testing or cold CO and hydrocarbon testing. For this reason, we are proposing that for vehicles that manufacturers choose to certify using LEV III fuel and test procedures, they can use test fuels meeting either Tier 2 or Tier 3 fuel specifications to comply with these federal-only requirements. We would perform in-use testing for these vehicles on the same fuel as selected by the manufacturer at certification.

Certifications after MY 2019, however, would be required to use the Tier 3 fuel and carry-over certifications using LEV II, LEV III or Tier 2 certification fuels would not be allowed after MY 2019. CARB has indicated that they would accept Tier 3 test data (on federal certification fuel) to obtain a California certificate as early as MY 2015. In this manner manufacturers should be able to avoid compliance testing on more than one fuel as vehicles certified to LEV III using federal certification fuel could obtain Final Tier 3 status.<sup>263</sup>

#### d. High Altitude Requirements

FTP emission standards are historically designed to be applicable at all altitudes. Under Tier 2, the same FTP emission bin standards applied to vehicles tested at both low and high-altitude. However, fundamental physical challenges exist at high altitude resulting in typically higher

<sup>262</sup> Because the Tier 2 program has NO<sub>x</sub> fleet average standards (instead of the NMOG+NO<sub>x</sub> fleet average standard of LEV III and Tier 3), manufacturers certifying to LEV III standards in MY 2015 and 2016 would not include such vehicles in their Tier 2 NO<sub>x</sub> fleet average calculation. Tier 2 provisions that are not a part of the California program would still apply. For example, high altitude testing, which is only required in the federal program, would still need to be performed on federal Tier 2 fuel.

<sup>263</sup> That is, a manufacturer that certifies a vehicle to LEV III in MY 2015 and MY 2016.

emissions during cold starts compared with starts at lower altitudes (i.e., sea level). This expected increase in emissions is primarily due to the lower air density at higher altitudes. Due to the lower air density, the needed volume of the hot combustion exhaust required to quickly heat the catalyst in the first minute after a cold start is reduced. As a result, catalyst light-off is delayed and cold start emissions increase. Vehicles under the Tier 2 program typically had sufficient compliance margins to absorb this increase in emissions during testing under high-altitude conditions. However, given the near-zero standards we are proposing in Tier 3, vehicles will have less compliance margin with which to address the issue.

Under the Tier 3 program, we expect that the emission control technologies selected for low altitude performance would also provide very significant emission control at high altitude.<sup>264</sup> However, as explained above, unique emission challenges exist with operation at higher altitude. The stringency of the Tier 2 standards is such that manufacturers comply with the same standards at all altitudes without the need to design their emission control strategies specifically for the more challenging high altitude operation. The Tier 3 stringency may not allow manufacturers emission control strategies at lower altitude to maintain sufficient compliance margin when tested at higher altitude, therefore requiring manufacturers to design their emission controls specifically for higher altitude.

To avoid requiring special high-altitude emission control technologies, we propose to allow manufacturers the limited relief of complying with the next less-stringent bin for testing at high altitude for vehicles certified at sea level to Bin 20, 30, and 50 (e.g., certifying to Bin 50 for testing at high altitude versus Bin 30 at sea level). For vehicles certified at sea level to Bins 70 and 125, 35 mg/mi of relief will be provided. No relief is proposed for Bin 160.

We do not believe that the impact of the fairly small fraction of overall U.S. driving that occurs in high altitude locations warrants a requirement for additional technologies to be applied specifically for high-altitude conditions. In addition, this provision is intended to be applicable to all Final Tier 3 vehicles for the duration of the Tier 3 program.

<sup>264</sup> *High-altitude conditions* means a test altitude of 1,620 meters (5,315 feet). *Low altitude conditions* means a test altitude less than 549 meters (1,800 feet).

While vehicles would need to meet the Tier 3 standards at all intermediate altitudes, the question remains as to what the value of the standard should be at a given intermediate altitude. We request comment on both the level of the proposed high altitude standards and the appropriate level of the standard at intermediate altitudes. In particular, we seek comment on whether this could be addressed by requiring that all emission control strategies remain in effect at altitudes that are in between the specific altitudes used for high and low altitude testing and that any altitude-related auxiliary emission control device (AECD) must be identified by the manufacturer and justified as not being defeat devices.

TABLE IV-9—PROPOSED HIGH ALTITUDE STANDARDS

Bin	Sea level FTP standard (mg/mi NMOG+NO <sub>x</sub> )	Altitude FTP standard (mg/mi NMOG+NO <sub>x</sub> )
Bin 160 .....	160	160
Bin 125 .....	125	160
Bin 70 .....	70	105
Bin 50 .....	50	70
Bin 30 .....	30	50
Bin 20 .....	20	30

e. Highway Test Standards

Sustained high-speed operation can result in NO<sub>x</sub> emissions that may not be represented on either the FTP or SFTP cycles. Although we are not aware of any serious issues with this mode of operation with current Tier 2 vehicles, we are interested in preventing increases in these NO<sub>x</sub> emissions as manufacturers develop new or improved engine and emission control technologies.

For this reason, we are proposing that the same FTP NMOG+NO<sub>x</sub> standards proposed above also apply on the Highway Fuel Economy Test (HFET), which is performed as a part of GHG and Fuel Economy compliance testing. Thus, the FTP NMOG+NO<sub>x</sub> standard for the bin at which a manufacturer has chosen to certify a vehicle would also apply on the HFET test. For example, if a manufacturer certifies a vehicle to Bin 70, the vehicle's NMOG+NO<sub>x</sub> performance over the HFET could not exceed 70 mg/mi. Manufacturers would simply need to ensure that the same emission control strategies implemented for the FTP and SFTP cycles were also effectively utilized during the highway test cycle. We believe that this proposed requirement would not require manufacturers to take any unique technological action, would not add technology costs, and would not add

significantly to the certification burden. We request comment on this proposed provision.

f. Interim 4,000 mile SFTP Standards

During the period of the declining NMOG+NO<sub>x</sub> standards, we are proposing that interim Tier 3 vehicles meet 4,000 mile SFTP standards, consistent with the existing Tier 2 and LEV II program requirements. The 4,000 mile standards are designed to prevent excessive emission levels from a single vehicle or a single SFTP cycle, which can occur if only a composite approach is taken. Under the Tier 3 program, the proposed composite standards would be fleet average standards that would decline from 2017 until 2025, as described in Section IV.A.4. While this approach is expected to result in fleet-wide reductions in SFTP emissions during all years of the declining standard, the level of the fleet average requirement during the initial years provides an opportunity for backsliding of SFTP emissions on individual vehicles or on individual SFTP cycles. We believe it is appropriate to require any individual Interim Tier 3 vehicle to at a minimum meet the same requirements under the Tier 2 and LEV II programs. Table IV-10 below presents the proposed 4,000 mile SFTP standards for interim Tier 3 vehicles.

TABLE IV-10—PROPOSED 4,000 MILE SFTP EXHAUST STANDARDS FOR INTERIM TIER 3 VEHICLES (GRAMS/MILE)

Vehicle category	US06 NMOG+NO <sub>x</sub>	US06 CO	SC03 NMOG+NO <sub>x</sub>	SC03 CO
LDV/LDT1 .....	0.14	8.0	0.20	2.7
LDT2 .....	0.25	10.5	0.27	3.5
LDT3 .....	0.4	10.5	0.31	3.5
LDT4 .....	0.6	11.8	0.44	4.0

We believe that vehicles considered to be Final Tier 3 (i.e., they meet the Tier 3 PM requirements, specifically the stringent SFTP PM standards) will have sufficiently robust designs that the 4,000 mile SFTP standards will no longer be necessary. Additionally, once the program reaches the fully phased-in fleet average composite standard of 50 mg/mi in 2025, high SFTP emissions even on a limited portion of a manufacturer's fleet should be effectively mitigated. We seek comment on this proposed 4,000 mile SFTP provision.

g. Phase-In Schedule

As described in Section IV.A.3, under the proposed Tier 3 program, manufacturers would be required to certify each vehicle model to an FTP bin, which would then be used to

calculate the NMOG+NO<sub>x</sub> fleet average of all of its vehicles. Manufacturers would also need to determine the SFTP levels of each model and calculate the NMOG+NO<sub>x</sub> fleet average for the SFTP requirements as described in Section IV.A.4. These separate FTP and SFTP fleet average calculations would satisfy one aspect of certification under the Tier 3 program, specifically the standards associated with each model year.

As described in Sections IV.A.7.b and IV.A.7.c above, the longer (150,000 mile) useful life value, as applicable, and the new Tier 3 certification fuel for exhaust testing would be implemented as manufacturers certified vehicles to more stringent NMOG+NO<sub>x</sub> standards, with the threshold to implement both of these provisions being Bin 70. Beginning in MY 2017, any vehicle

certified to Bin 70 or lower would be required to be certified on Tier 3 test fuel. In addition, any vehicle certified to Bin 70 or lower that would be required to meet the longer 150,000 mile useful life would be required to do so. Beginning in MY 2020 all vehicles would be required to be certified to on the Tier 3 test fuel, regardless of the bin they are certified to or the useful life they are required to meet.

Manufacturers would also be required to comply with more stringent PM standards on a percent phase-in schedule. Compliance with the PM standards, which is consistent with the CARB LEV III program, would be independent of the fleet average requirements described above. The PM emission standards for FTP and SFTP described in Section IV.A.3 and 4 respectively would be implemented as a

percent phase-in requirement as described below under a basic phase-in schedule or under an optional phase-in schedule.

Vehicles certified to a Tier 3 bin, meeting the requirements of the PM phase-in schedule, and complying with the other Tier 3 requirements (i.e., 150,000 mile useful life (as applicable) and Tier 3 certification fuel, as applicable) would be considered “Final Tier 3” compliant vehicles. All other vehicles certified to Tier 3 bins but not yet meeting the PM and other Tier 3 requirements would be considered “Interim Tier 3” compliant vehicles. At the completion of the percent phase-in period for PM (2021 for the basic PM phase-in schedule and 2022 for the alternative PM phase-in schedule, as described below), 100 percent of vehicles would need to meet the all Tier 3 requirements and would be considered “Final Tier 3” vehicles.

For the PM requirements, each year manufacturers would be required to

meet either the basic PM percent phase-in or alternative PM phase-in as described in the following subsections. The basic percent PM phase-in schedule is composed of fixed yearly minimum phase-in percentages that we expect that most manufacturers would meet to comply with the Tier 3 requirements. The alternative PM phase-in schedule provides additional flexibility for manufacturers with product offerings that may not provide sufficient vehicle model granularity to allow for a gradual transition into the Final Tier 3 requirements as described below. In either case, Interim Tier 3 vehicles not yet meeting the Tier 3 PM standards must at a minimum meet the Tier 2 PM full useful life FTP standard of 10 mg/mi and the SFTP weighted composite standard of 70 mg/mi.

i. Basic PM Percent Phase-In Schedule

It is important to note that the percent phase-in of the new Tier 3 standards that we are proposing and the declining

fleet average standards to which a manufacturer’s fleet is held are separate and independent elements of the Tier 3 program. “Phase-in” in this context means the fraction of a manufacturer’s fleet that would be required to meet the new Tier 3 PM standards in a given model year. We expect manufacturer fleets to consist of a mix of vehicles certified to Tier 2, LEV II, LEV III and Tier 3 standards throughout the percent phase-in period.

As discussed above, vehicles originally certified to Tier 2, LEV II, and LEV III would be carried over into the Tier 3 program as Interim Tier 3 vehicles. A vehicle would be considered a “Final Tier 3 vehicle” when it is certified to one of the Tier 3 bins; meets the Tier 3 PM standards; certifies to the 150,000 useful life value (for LDT2s, LDT3s, LDT4s, and MDPVs); and certifies on the new certification test fuel. Table IV–11 below presents the proposed PM phase-in schedule for Final Tier 3 vehicles.

TABLE IV–11—PM PHASE-IN SCHEDULE FOR FINAL TIER 3 VEHICLES

Model year	2017	2018	2019	2020	2021	2022 and later
Manufacturer’s Fleet (%) .....	20 <sup>a</sup> .....	20	40	70	100	100
Vehicle Types .....	≤ 6,000 lbs GVWR ....	All vehicles ≤ 8,500 lbs GVWR and MDPVs				

<sup>a</sup>In 2017 model year, a manufacturer may optionally include vehicles up to 8,500 lbs GVWR and/or MDPVs in its phase-in calculation.

ii. Optional PM Phase-In

The proposed PM percent-of-sales phase-in schedule described above would allow manufacturers with multiple vehicle models to plan the phase-in of those models based on anticipated volumes of each vehicle model. However, manufacturers certifying only a few vehicle models might not benefit from this schedule. This is because, in order to satisfy the phase-in schedule percentages, they might have to over-comply with the required percentages earlier than would a manufacturer with many vehicle models available for the phase-in.

For instance, a manufacturer with only two models that each equally accounted for 50 percent of their sales would be required to introduce (at least) one of the models in MY 2017 meet the PM phase-in requirement of 20 percent in the first year. Because it represented 50 percent of the manufacturer’s sales, this model would then also meet the requirements for MY 2018 (20 percent) and MY 2019 (40 percent). To meet the MY 2020 requirement of 70 percent of sales, however, the manufacturer would need to introduce the second Tier 3 vehicle that year. Thus the manufacturer

would have introduced 100 percent of its Tier 3 models one year earlier than would have been required of a manufacturer that was able to delay the final 30 percent of its fleet until MY 2021 (by distributing its their models over the entire phase-in period).

To provide for more equal application of this benefit among all manufacturers in the early years of the program, we are proposing an optional “indexed” PM phase-in schedule that could be used by a manufacturer to meet its PM percent phase-in requirements. A manufacturer that exceeded the phase-in requirements in any given year would be allowed to, in effect, offset some of the phase-in requirements in a later model year. The optional phase-in schedule would be acceptable if it passes a mathematical test. The mathematical test is designed to provide manufacturers a benefit from certifying to the standards at higher volumes than obligated to under the normal phase-in schedule, while ensuring that significant numbers of vehicles are meeting the new Tier 3 requirements during each year of the optional phase-in schedule. In this approach, manufacturers would weight the earlier years by multiplying their percent phase-in by the number of years

prior to MY 2022 (i.e., the second year of the 100 percent phase-in requirement).

The proposed mathematical equation for applying the optional PM phase-in is as follows:

$$(5 \times APP_{2017}) + (4 \times APP_{2018}) + (3 \times APP_{2019}) + (2 \times APP_{2020}) + (1 \times APP_{2021}) \geq 540,$$

where APP is the anticipated phase-in percentage for the referenced model year.

The sum of the calculation would need to be greater than or equal to 540, which is the result when the optional phase-in equation is applied to the primary percent phase-in schedule (i.e.,  $5 \times 20\% + 4 \times 20\% + 3 \times 40\% + 2 \times 70\% + 1 \times 100\% = 540$ ).

Applying the proposed optional PM phase-in equation to the hypothetical manufacturer in the example above, the manufacturer could postpone its model introductions by one year each, to MY 2018 and MY 2021. Its calculation would be  $(5 \times 0\% + 4 \times 50\% + 3 \times 50\% + 2 \times 50\% + 1 \times 100\% = 550$ , and thus the phase-in would be acceptable.

EPA requests comment on the proposed PM phase-in schedules.

h. In-Use Standards

i. NMOG+NO<sub>x</sub>

The proposed Tier 3 emission standards would require a substantial migration of emission control technology historically used only on a small percent of the fleet and typically limited to smaller vehicles and engines. While we believe that these technologies can generally be used on any vehicle and are applicable to the entire fleet, manufacturers have less experience with the in-use performance of these technologies across the fleet. For example, technologies that accelerate catalyst warm-up such as catalyst location close to the engine exhaust ports and other advanced thermal management approaches would be new to certain vehicle types, particularly larger vehicles (i.e., LDT3/4s), which have historically not relied on these technologies to meet emission standards.

To help manufacturers address the lack of in-use experience and associated challenges with the expanded introduction of these technologies particularly in the larger vehicles, we are proposing temporarily-relaxed in-use NMOG+NO<sub>x</sub> standards that would apply to all vehicles certified to Bins 70 and cleaner as Interim or Final Tier 3 vehicles. The in-use standards would apply during the entire percent phase-in period (i.e., through MY 2021). The proposed in-use standards would be 40 percent less stringent than the certification standards, providing a significant but reasonable temporary cushion for the uncertainties associated with new technologies (or new applications of existing technologies) over the life of the vehicle.

The proposed in-use NMOG+NO<sub>x</sub> standards are shown in Table IV–12.

TABLE IV–12—PROPOSED FTP IN-USE STANDARDS FOR LIGHT DUTY VEHICLES AND MDPVs

Bin	NMOG+NO <sub>x</sub> (mg/mi)
Bin 160 .....	160
Bin 125 .....	125
Bin 70 .....	98
Bin 50 .....	70
Bin 30 .....	42
Bin 20 .....	28

ii. PM

As with the proposed NMOG+NO<sub>x</sub> standards, the introduction of new emission control technologies or new applications of existing technologies (e.g., GDI, turbocharging, downsized

engines) would create significant uncertainties for manufacturers about in-use performance over the vehicle's useful life. We are proposing a temporary in-use FTP standard for PM of 6 mg/mi for all light duty vehicles and MDPVs certified to the Tier 3 full useful life 3 mg/mi standard. Since the Tier 3 PM standard has a percent phase-in schedule spread over several years, starting in 2017 with full phase-in completed in 2022, we are proposing that the in-use standard apply to all vehicles certified to the new PM standards during the entire percent phase-in period (i.e., through MY 2021).

We are also proposing temporarily-relaxed in-use US06 PM standards. We propose in-use standards 5 mg/mi less stringent than the certification standards, or 15 mg/mi for all light duty vehicles up to and including 6,000 lbs GVWR and 25 mg/mi for all light duty vehicles and light-duty trucks over 6,000 lbs GVWR and MDPVs. Consistent with the FTP in-use standards, these in-use standards would apply to all vehicles certified to the new PM standards during the entire percent phase-in period (i.e., through MY 2021).

EPA requests comment on the proposed in-use standards.

i. FFVs

Because of the physical and chemical differences in how emissions are generated and controlled between vehicles operating on gasoline and ethanol, manufacturers of vehicles designed for high-percentage blends of ethanol (usually called Flexible Fuel Vehicles, or FFVs) may face unique compliance challenges under the proposed Tier 3 program. Historically, under the Tier 2 program, FFVs have only been required to meet all Tier 2 emission standards while operating on gasoline; when operating on the alternative fuel (generally this means a blend that is nominally 85 percent ethanol, or E85), they have only been required to meet the FTP emission standards.

However, E85 use may rise considerably in the future as ethanol use increases in response to the Renewable Fuels Standards (RFS). Thus, it is increasingly important that FFVs maintain their emission performance when operating on E85 across different operating conditions.

We believe that at standard test conditions, requiring manufacturers to meet the Tier 3 standards on any blend of gasoline and ethanol would not add technological feasibility concerns beyond compliance on gasoline alone (or low-level blends like E10 or E15). We are thus proposing that in addition

to complying with the Tier 3 requirements when operating on gasoline, FFVs also comply with both the FTP and the SFTP emission standards when operating on E85. This would include the requirement to meet emission standards for both gasoline and E85 for the FTP, highway test, and SFTP emission standards at standard test temperatures (i.e., 68 °F to 86 °F). Since FFVs can operate on any blend of gasoline and ethanol (up to a nominal 85 percent ethanol), the emission requirements apply to operation at all levels of the alternative fuel that can be achieved with commercially available fuels. However, for emission compliance demonstration purposes, we will continue to test on gasoline and the highest available level ethanol.

EPA welcomes comment on this proposed approach to FFV compliance.

j. Credit for Direct Ozone Reduction (DOR) Technology

Since the late 1990s, technologies have been commercialized with which vehicles can remove ozone from the air that flows over the vehicle's coolant radiator. In such direct ozone reduction (DOR) technology, a catalytic coating on the radiator is designed to convert ambient ozone into gaseous oxygen, addressing the air quality concerns about ozone. Detailed technical analyses for the California LEV II and the federal Tier 2 programs showed that when properly designed these systems can remove sufficient ozone from the air to be equivalent to a quantifiable reduction in tailpipe NMOG emissions. In the earlier programs, both California and EPA provided methodologies through which a manufacturer could demonstrate the capability and effectiveness of the ozone-reducing technology and be granted an NMOG credit. A small number of vehicle models with DOR applications received credit under the LEV II program; no manufacturer formally applied for credits under the federal Tier 2 program.

Some manufacturers have expressed an interest in the continued availability of a DOR credit as a part of their potential LEV III and Tier 3 compliance strategies. EPA believes that when a DOR system is shown to be effective in reducing ozone, a credit toward Tier 3 compliance is warranted. We propose that manufacturers following the California methodology for demonstrating effectiveness and calculating a appropriate credit for a DOR system be granted a specific credit toward the NMOG portion of the

NMOG+NO<sub>x</sub> standard.<sup>265</sup> As with the California program, such a credit could not exceed 5 mg/mi NMOG. We invite comment on the appropriateness of this proposed DOR credit approach, including the application of the California methodology to the federal Tier 3 program.

#### k. Credit for Adopting a 150,000-Mile Emissions Warranty

Under the Tier 3 standards proposed above manufacturers would be expected to design their emission control systems to continue to operate effectively for a useful life of 150,000 miles (120,000 miles for some smaller vehicles). However, as with the current Tier 2 program, manufacturers are only required to replace failed emission control components or systems on customers' vehicles for a limited time period, specified in the Clean Air Act (80,000 miles/8 years for key emission control components). EPA believes that voluntary extension of this warranty obligation by manufacturers would provide additional emission reductions by helping ensure that controls continue to operate effectively in actual operation through the full life of the vehicle.

We propose that a manufacturer providing its customers with a robust emission control system warranty of 15 years or 150,000 miles be eligible for a modest credit of 5 mg/mi NMOG+NO<sub>x</sub>.<sup>266</sup> Because of the significant liability that manufacturers would be accepting, we do not expect that the use of this credit opportunity would be widespread. However, based on our modeling of the expected deterioration of the emissions of future Tier 3 vehicles absent repair/replacement of failed emission controls, we anticipate that the value to the environment of long emissions warranties in terms of reduced real-world emissions would significantly exceed the 5 mg/mi NMOG+NO<sub>x</sub> credit.<sup>267</sup>

We propose to use the same criteria for approving such a credit as does the parallel California program.<sup>268</sup> Thus, in addition to committing to customers that failing emission controls would be repaired or replaced for 15 years/150,000 miles, manufacturers would also need to accept the liability that in

the event that a specific emissions control device failed on greater than 4 percent of a vehicle model's production, they would recall the entire production of that model for repair. EPA requests comment on this optional credit opportunity.

#### l. Averaging, Banking, and Trading of Credits

An averaging, banking, and trading (ABT) program was established in the Tier 2 program to provide for credits to be generated by certifying vehicles that perform better than the standards, for those credits to be used to offset vehicles that perform worse than the standards, and for credits to be banked for later use or traded to other manufacturers. The ABT program is largely unchanged by this Tier 3 proposal. In some cases, especially during the transitional years, there would be specific restrictions on the generation of credits, as described above. Also, we are proposing that Tier 3 credits expire after 5 years, consistent with the LEV II and LEV III programs and similar to the basic credit carry-forward provisions in the recent light-duty and heavy-duty greenhouse gas rules. We invite comment on the ABT program in general, and specific comment on a longer Tier 3 credit life, including any flexibilities that this may provide and any implications for record retention requirements by manufacturers.

#### m. Tier 3 Transitional Emissions Bins

In discussions with manufacturers, EPA has become aware that some vehicles may continue to be produced as late as MY 2019 that could be certified to Tier 2 Bin 3 or Bin 4 standards. In order to provide manufacturers flexibility in meeting the fleet average standards and thus to further facilitate the transition from Tier 2 to Tier 3, we will allow manufacturers to certify to the combined NMOG+NO<sub>x</sub> levels of these bins through MY 2019. Two proposed transitional Tier 3 bins, Bin 110 and Bin 85, would have NMOG+NO<sub>x</sub> standards on the FTP of 110 mg/mi and 85 mg/mi, respectively (i.e., the sum of the NMOG and NO<sub>x</sub> values from the Tier 2 bins); the associated FTP standards for CO, PM, and HCHO corresponding to these bins would be identical to those for vehicles certified to the proposed Tier 3 Bin 125. Tier 3 SFTP standards would apply to these vehicles, and these vehicles would be included in the Tier 3 p.m. percent phase-in calculations.

#### n. Compliance Demonstration

In general, we are proposing that manufacturers demonstrate compliance with the proposed Tier 3 light-duty vehicle emission standards in a very similar manner to current Tier 2 vehicle compliance (see § 86.1860 of the proposed regulatory language). However, we propose for Tier 3 that manufacturers calculate their compliance with the fleet average standards and percent phase-in standards based on annual nationwide sales, including sales in California and Clean Air Act Section 177 states. We believe that this approach represents another step toward achieving the goal of an effectively nationwide program as early as possible, which has been a basic principle in EPA's development of this proposed program and broadly supported by vehicle manufacturers. We also believe that basing compliance on nationwide sales may reduce the need for manufacturers to project future sales and track past years' sales in a disaggregated way. Because the proposed Tier 3 provisions will become increasingly consistent with LEV III provisions as the Tier 3 program phases in, we believe that any disproportionate impacts of different mixes of vehicles in different states are unlikely to occur. We seek comment on this approach to compliance demonstration.

This proposed nationwide compliance calculation approach would apply to vehicles as they become subject to the Tier 3 provisions, either the declining fleet-average NMOG+NO<sub>x</sub> curves or the percent phase-in PM standards. Were any manufacturer to choose to use the alternative FTP and SFTP phase-ins, which are not a part of the LEV III program, the manufacturer would not include sales in California or in the Section 177 states in its compliance calculations.<sup>269</sup>

### B. Tailpipe Emissions Standards for Heavy-Duty Vehicles

#### 1. Overview

We are proposing Tier 3 exhaust emissions standards for heavy-duty vehicles (HDVs) between 8,501 and 14,000 lbs GVWR that are certified to gram per mile standards on a chassis dynamometer. Vehicles in this GVWR range are often referred to as Class 2b (8,501–10,000 lbs) and Class 3 (10,001–14,000 lbs) vehicles, and are typically

<sup>269</sup> If EPA ultimately decided to continue the disaggregated approach to fleet compliance calculations, we could potentially base compliance with the proposed Tier 3 emission requirements on U.S. sales (i.e., sales in non-California and non-Section 177 states).

<sup>265</sup> EPA is incorporating the CARB DOR methodology by reference.

<sup>266</sup> Manufacturers choosing to comply with the standards for a 120,000 mile useful life for their LDVs and LDT1s would not be eligible for this extended warranty credit for those vehicles.

<sup>267</sup> Beardsley, M, et al. (2013, February). Updates to MOVES for the Tier 3 NPRM. Memorandum to the docket.

<sup>268</sup> EPA is incorporating the CARB extended emission warranty provisions by reference.

full-size pickup trucks and work vans certified as complete vehicles.<sup>270</sup> Most are built by companies with even larger light-duty truck markets, and as such they frequently share major design characteristics and potential emissions control technologies with their LDT counterparts. However, in contrast to the largely gasoline-fueled LDT fleet, roughly half of the HD pickup and van fleet in the U.S. is diesel-fueled, which is a consideration in setting emissions standards, as diesel engine emissions and control strategies differ from those of gasoline engines.

Manufacturers of diesel-fueled complete HDVs have the option under existing EPA regulations to satisfy EPA criteria emissions requirements for these vehicles by using engines certified through engine dynamometer testing, but for the most part have chosen to certify whole vehicles on the chassis test. We are proposing to codify this common practice and require that diesel-fueled Class 2b and 3 complete Tier 3 vehicles, like their gasoline-fueled counterparts, be certified to the Tier 3 standards on the chassis test. The current prohibition in 40 CFR 86.1863–07(d) on averaging, banking, and trading (ABT) credit generation and use by chassis-certified diesel HDVs would be replaced by the proposed fleetwide averaging program. We are not proposing changes to the heavy-duty engine certification requirements at this time.

Manufacturers of incomplete HDVs that are sold to secondary manufacturers for subsequent completion (less than 10 percent of the Class 2b and 3 U.S. market) are also allowed under existing EPA regulations to certify via either the chassis or engine test, and those who choose to chassis-certify in the future would be subject to Tier 3 requirements. We are not proposing to mandate chassis certification of incomplete Class 2b and 3 vehicles, but we note that California's LEV III program does include such a requirement for Class 2b and we request comment on doing the same in the federal program. We further note that MDPVs are classified as HDVs under the Clean Air Act but, as in our current Tier 2 program, would be covered as part of our Tier 3 light-duty program discussed in Section IV.A, and not in the proposed program described here.

The key elements of the proposed Tier 3 program for HDVs parallel those proposed for passenger cars and LDTs, with adjustments in standards levels,
