Abstract: Under Section 206(a) of the Clean Air Act (42 U.S.C. 7521), on-highway engine and vehicle manufacturers may not legally introduce their products into U.S. commerce unless EPA has certified that their production complies with applicable emission standards. Per section 207(a), original vehicle manufacturers must warrant that vehicles are free from defects in materials and workmanship that would cause the vehicle not to comply with emission regulations during its useful life. Section 207(a) directs EPA to provide certification to those manufacturers or builders of automotive aftermarket parts that demonstrate that the installation and use of their products will not cause failure of the engine or vehicle to comply with emission standards. An aftermarket part is any part offered for sale for installation in or on a motor vehicle after such vehicle has left the vehicle manufacturer's production line (40 CFR 85.2113(b)). Participation in the aftermarket certification program is voluntary. Aftermarket part manufacturers or builders (manufacturers) electing to participate conduct emission and durability testing as described in 40 CFR part 85, subpart V, and submit data about their products and testing procedures. Any information submitted to the Agency for which a claim of confidentiality is made is safeguarded according to policies set forth in CFR title 40, chapter 1, part 2, subpart B—Confidentiality of Business Information (see 40 CFR part 2).

Form Numbers: None.

Respondents/affected entities: manufacturers or builders of automotive aftermarket parts.

Respondent's obligation to respond: voluntary.

Estimated number of respondents: 1 (total).

Frequency of response: On occasion.

Total estimated burden: 547 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$19,063 (per year), which includes \$1,955 annualized capital or operation & maintenance costs.

Changes in Estimates: There is no change in the total estimated respondent

burden compared with the ICR currently approved by OMB.

Dated: June 5, 2013.

Title: NESHAP for Phosphoric Acid Manufacturing and Phosphate Fertilizers Production (Renewal)

ICR Numbers: EPA ICR Number 1790.06, OMB Control Number 2060-0361

ICR Status: This ICR is scheduled to expire on June 30, 2013. Under OMB regulations, the Agency may continue to either conduct or sponsor the collection of information while this submission is pending at OMB.

Abstract: The affected entities are subject to the General Provisions of the NESHAP at 40 CFR part 63, subpart A, and any changes, or additions to the Provisions specified at 40 CFR part 63, subparts AA and BB. Owners or operators of the affected facilities must submit initial notification, performance tests, and periodic reports and results. Owners or operators are also required to

maintain records of the occurrence and duration of any startup, shutdown, or malfunction in the operation of an affected facility, or any period during which the monitoring system is inoperative. Reports are required semiannually at a minimum.

Respondents/Affected Entities: Phosphoric acid manufacturing and phosphate fertilizers production facilities

Estimated Number of Respondents: 12
Frequency of Response: Initially, occasionally, semiannually and annually

Estimated Total Annual Hour Burden: 1,765

Estimated Total Annual Cost: \$181,581, which includes \$170,949 in labor costs, no capital/startup costs, and \$10,632 in operation and maintenance (O&M) costs.

Changes in the Estimates: There is an increase in burden for both the respondents and the Agency due to an adjustment. The previous ICR assumed the per-respondent burden hour for each activity is inclusive of all technical, managerial, and clerical hours. This ICR assumes the per-respondent burden hour includes technical hours only, and that managerial and clerical hours are additional 5 and 10 percent of technical hours, respectively. In addition, this ICR uses updated labor rates available from the Bureau of Labor Statistics to calculate burden costs, which results in an adjustment increase in both labor hours and costs.

Additionally, there is a decrease in the estimated number of responses due to a correction. The previous ICR assumed that each respondent would have to submit annual, semiannual, and quarterly reports, or a total of seven reports per year, which is inconsistent with the assumptions used to calculate respondent reporting burden. This ICR corrects the number of responses and clarifies that quarterly reports are only required if there are excess emissions.
