Agency Information Collection Activities: Proposed Collection; Comment Request

This research has the following goals:

(1) Develop, cognitively test and modify as necessary the Ambulatory Surgery/Procedure Survey on Patient Safety Culture Questionnaire (Ambulatory Surgery SOPS)

SUPPLEMENTARY INFORMATION:

Proposed Project
Pretest of the Ambulatory Surgery/Procedure Survey on Patient Safety Culture Questionnaire (Ambulatory Surgery SOPS)

One setting which has demonstrated tremendous growth both in the volume and complexity of procedures being performed is ambulatory surgical and procedure centers (ASCs). ASCs are defined by the Centers for Medicare & Medicaid Services (CMS) as distinct entities that operate exclusively to provide surgical services to patients who do not require hospitalization and are not expected to need to stay in a surgical facility longer than 24 hours (42 CFR 416.2). Many of the services performed in these facilities extend beyond procedures traditionally thought of as surgery, including endoscopy, and injections to treat chronic pain. Currently, there are over 5,300 Medicare-certified ASCs in the U.S., which represents a greater than 54 percent increase since 2001. In 2007, Medicare paid for more than 6 million surgeries performed in these facilities at a cost of nearly $3 billion. Recent CMS audits suggest infection control deficiencies in these facilities are widespread. For example, preliminary data from 2011 found that 51 percent of ASCs surveyed had an infection control deficiency; 11 percent were considered very serious deficiencies. These findings are only slightly lower than 2010 audits and a 2008 sample of ASCs in three states.

Given the widespread impact of ASCs on patient safety, the new Ambulatory Surgery/Procedure Survey on Patient Safety Culture (Ambulatory Surgery SOPS) will measure ASC staff perceptions about what is important in their organization and what attitudes and behaviors related to patient safety culture are supported, rewarded, and expected. The survey will help ASCs to identify and discuss strengths and weaknesses of patient safety culture within their individual facilities. They can then use that knowledge to develop appropriate action plans to improve their practices and their culture of patient safety. This survey is designed for use in ASCs that practice all types of surgical procedures including those that require incisions and less invasive or non-surgical procedures such as gastrointestinal procedures or pain management injections.

This research has the following goals:

(1) Develop, cognitively test and modify as necessary the Ambulatory Surgery/Procedure Survey on Patient Safety Culture Questionnaire (Ambulatory Surgery SOPS).
