Marine Mammals; Notice of Availability of a Draft Environmental Impact Statement To Amend the Atlantic Large Whale Take Reduction Plan

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Notice of Availability of a Draft Environmental Impact Statement; notice of public hearing meetings; request for comments.

SUMMARY: NMFS proposes to amend the regulations implementing the Atlantic Large Whale Take Reduction Plan (Plan). The proposed rule revises the management measures for reducing the incidental mortality and serious injury to the North Atlantic right whale (*Eubalaena glacialis*), humpback whale (*Megaptera novaeangliae*), and fin whale (*Balaenoptera physalus*) in commercial trap/pot and gillnet fisheries to meet the goals of the Marine Mammal Protection Act (MMPA) and the Endangered Species Act (ESA). A Draft Environmental Impact Statement (DEIS) was prepared in accordance with the National Environmental Policy Act (NEPA), to analyze impacts to the environment of the management alternatives under consideration. NMFS will hold 16 public hearings along the East coast in August and September for the purpose of answering questions and receiving public testimony on the DEIS.

DATES: The public hearings will be held in August and September. For specific dates, times, and locations see

SUPPLEMENTARY INFORMATION section. The public comment period is from July 12, 2013, to September 13, 2013.

ADDRESSES: You may submit comments on this document, identified by 130201095-3095-01, by any of the following methods:

SUPPLEMENTARY INFORMATION:

Background

Large whale entanglements resulting in serious injuries and mortalities are still occurring; therefore, NMFS believes modifications to the Plan are needed to meet the goals of the Marine Mammal Protection Act (MMPA). Under the MMPA, NMFS is required to reduce the incidental mortality and serious injury to three strategic large whale stocks—the Western Stock of the North Atlantic right whales (*Eubalaena glacialis*), the Gulf of Maine stock of humpback whales (*Megaptera novaeangliae*), and the Western North Atlantic stock of fin whales (*Balaenoptera physalus*)—incidentally taken in commercial fisheries to below the Potential Biological Removal (PBR) level for each stock.

Atlantic Large Whale Take Reduction Team (Team)

At its 2009 meeting, the Team agreed on a schedule to develop a management approach to reduce the risk of serious injury and mortality due to vertical line. As a result of this schedule NMFS committed to publishing a final rule to address vertical line entanglement by 2014. The approach for the vertical line rule will focus on reducing the risk of vertical line entanglements in high impact areas versus a wide-broad scale management scheme. Using fishing gear survey data and whale sightings per unit effort (SPUE), a model was developed to

determine the co-occurrence of fishing gear density and whale density.

The Team's Northeast Subgroup met in November 2010 and the Mid-Atlantic/Southeast Subgroup met in April 2011 to review the model and consider its implications for an overall management strategy to address vertical line entanglements.

The Team agreed NMFS should use the model to consider and develop possible options to address fishery interactions with large whales by reducing the potential for entanglements, minimize adverse effects if entanglements occur, and mitigate the effects of any unavoidable entanglements.

To solicit additional stakeholder involvement, on June 14, 2011, NMFS published a Notice of Intent in the **Federal Register** (76 FR 34654) to announce the agency's intent to prepare an Environmental Impact Statement that would analyze the impacts of alternatives for amending the Plan. In July and August 2011, NMFS held 15 scoping meetings to solicit feedback on the vertical line risk reduction strategy. The information provided at the scoping meetings was also reviewed at a full Team meeting in January 2012. Team members further refined their vertical line risk reduction proposals and the team met via teleconference in February 2012 to review the final proposals submitted. The Team reviewed five proposals: three from state agencies, one from the scientist/academic community, and one from the conservation community. Results of the proposals were presented via teleconference in April 2012. Each vertical line risk reduction proposal was analyzed to assess its impact on both the number of vertical lines and co-occurrence scores relative to the baseline in the Northeast and coastwide.

NMFS designed the proposed alternatives in the DEIS based on comments received during public scoping and using many of the measures submitted by the team in their stakeholder proposals. The alternatives include measures requiring increased traps per trawl, the use of weaker weak links and/or vertical lines of lower breaking strength, and potential time-area closures.

Several of the background documents for the Plan and the take reduction planning process can be downloaded from the Plan Web site at <http://www.nero.noaa.gov/whaletrp/>. Copies of the DEIS/Regulatory Impact Review for this action can also be obtained online. NMFS has scheduled public hearings on the DEIS. The purpose of the hearings is to provide the public the

opportunity to ask questions and provide comments on the upcoming action.
