information is less than 10 years old, NARA will follow these procedures:

(a) If, after reviewing the records in response to a FOIA request, NARA believes that the records should properly be released under FOIA, it will make reasonable efforts to inform the submitter. The notice to the submitter will describe the business information requested or include copies of the requested records.

(b) When the request is for information from a single or small number of submitters, NARA will send a notice via registered mail to the submitter’s last known address. NARA’s notice to the submitter will include a copy of the FOIA request and will tell the submitter the time limits and procedures for objecting to the release of the requested material.

(c) When the request is for information from a voluminous number of submitters, notification may be made by posting or publishing the notice in a place reasonably likely to inform the submitters of the proposed disclosure.

(d) The submitter will have 10 working days from the receipt of our notice to object to the release and to explain the basis for the objection. The NARA FOIA Officer may extend this period as appropriate.

(e) NARA will review and consider all objections to release that are received within the time limit. If NARA decides to release the records, it will inform the submitter in writing. This notice will include copies of the records as NARA intends to release them and its reasons for deciding to release. NARA will also inform the submitter that it intends to release the records 10 working days after the date of the notice unless a U.S. District Court forbids disclosure.

(f) If the requester files a lawsuit under the FOIA for access to any withheld records, NARA will inform the submitter.

(g) NARA will notify the requester whenever it notifies the submitter of the opportunity to object or to extend the time for objecting.

Dated: July 29, 2013.

Approval and Promulgation of Air Quality Implementation Plans; Maine; Oxides of Nitrogen Exemption and Ozone Transport Region Restructuring

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: EPA is proposing to approve Maine’s request dated June 10, 2013, for an exemption from the nitrogen oxides (NOx) emissions control requirements of the Clean Air Act (CAA or Act) in relation to the 2008 8-hour ozone national ambient air quality standards (standards or NAAQS). EPA’s proposed approval of Maine’s request is based on a technical demonstration submitted to EPA by Maine’s Department of Environmental Protection (ME DEP) showing that NOx emissions in Maine are not having a significant adverse impact on the ability of any nonattainment area located in the Ozone Transport Region (OTR) to attain the ozone standards during times when elevated ozone levels are monitored in those areas.

Additionally, EPA is also proposing to approve the Clean Air Act’s 11, 2013 request that EPA approve "limited opt-out" or "restructuring" of the Act’s OTR requirements pertaining to nonattainment New Source Review (NSR) permitting requirements applicable to major new and modified stationary sources of volatile organic compounds (VOC). EPA is proposing to approve Maine’s request because a technical demonstration submitted by ME DEP shows convincingly that the control of VOC emissions throughout the entire State of Maine through implementation of the VOC nonattainment NSR permitting requirements will not significantly contribute to the attainment of the 2008 8-hour ozone standards in any area of the OTR.

DATES: Written comments must be received on or before September 4, 2013.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–RA01–OAR–2012–0895 by one of the following methods:

1. www.regulations.gov: Follow the on-line instructions for submitting comments.
2. Email: arnold.anne@epa.gov.
3. Fax: (617) 918–0047.

Hand Delivery or Courier. Deliver your comments to: Anne Arnold, Manager, Air Quality Planning Unit, Office of Ecosystem Protection, U.S. Environmental Protection Agency, EPA New England Regional Office, 5 Post Office Square, Suite 100, Boston, MA 02109–3912. Such deliveries are only accepted during the Regional Office’s normal hours of operation. The Regional Office’s official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding legal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R01–OAR–2012–0895. EPA’s policy is that all comments received will be included in the public docket without change and may be made available online at www.regulations.gov, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through www.regulations.gov or email, information that you consider to be CBI or otherwise protected. The www.regulations.gov Web site is an “anonymous access” system which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through www.regulations.gov, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD–ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment.

Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA’s public docket visit the EPA Docket Center homepage at http://www.epa.gov/epahome/dockets.htm. Docket: All documents in the electronic docket are listed in the www.regulations.gov index. Although listed in the index, some information is not publicly available, i.e., CBI or other
I. What is EPA proposing?

EPA is proposing to approve two separate requests submitted by the State of Maine. The first request was submitted to EPA on October 13, 2012, seeking an exemption from the NOx emissions control requirements contained in section 182(f) of the Act in relation to the 2008 8-hour ozone national ambient air quality standards. More specifically, the emissions control requirements in question are: (1) Any additional NOx RACT requirements that might be required pursuant to the 2008 8-hour ozone standards; and (2) NOx nonattainment NSR permitting requirements applicable to new and modified major stationary sources. Maine’s SIP already contains language that renders the SIP’s NOx nonattainment NSR permitting requirements inapplicable in any area for which EPA has approved a section 182(f) NOx exemption, so no SIP revision would be required to implement the exemption from NOx nonattainment NSR permitting requirements if EPA grants this proposed NOx waiver. EPA’s proposed approval of Maine’s request is based on a technical demonstration submitted by Maine’s Department of Environmental Protection showing that NOx emissions in Maine are not having a significant adverse impact on the ability of any nonattainment area located in the OTR to attain the ozone standards during times when elevated ozone levels are monitored in those areas. Consequently, any additional reductions in NOx emissions in the State of Maine that would be required under the 2008 8-hour ozone standards, and which would be beyond what Maine’s State Implementation Plan (SIP) regulations already provide for, are not necessary for attainment or maintenance of the ozone standards in any areas within the OTR. Thus, because any such NOx reductions in Maine would be in excess of the emissions necessary for attainment and maintenance of the ozone standards, EPA has determined that those emissions reductions may be exempted under section 182(f) of the Act. The State’s second request, submitted to EPA on February 11, 2013, seeks EPA approval, pursuant to section 176A(a)(2) of the Act, of a “limited opt-out” or “restructuring” of the OTR requirements set forth in section 182(f) of the Act pertaining to VOC nonattainment NSR permitting requirements. In connection with this latter request, EPA expects to take final action on a request for a SIP revision that the State of Maine has committed to re-submit to EPA after the close of the State’s public notice and hearing process on the proposed revision. The SIP revision would conform Maine’s SIP to the section 176A(a)(2) restructuring of the VOC nonattainment NSR permitting requirements. The substance of both the OTR restructuring request and the State’s proposed SIP revision are available now for review in the docket for this action, so EPA is proposing to approve them both, subject to the State completing its notice and hearing process on the SIP revision. NOx RACT and NOx nonattainment NSR exemption:

The State of Maine is part of the OTR pursuant to section 184(a) of the Act. The entire State of Maine is designated unclassifiable/attainment for the 2008 8-hour ozone standards. (See 40 CFR 81.320.) Sections 182(f) and 184 of the Act, in combination, require states in the OTR, such as Maine, to adopt reasonably available control technology (RACT) regulations for major stationary sources of NOx and to provide for nonattainment NSR for major new and modified stationary sources of NOx. EPA’s proposed approval of Maine’s request is based on the State’s technical demonstration showing that NOx emissions in Maine are not having a significant adverse impact on the ability of nonattainment areas located in the OTR to attain and maintain the ozone standards during times when elevated ozone levels are monitored in those areas. Thus, because any such NOx reductions in Maine would be in excess of the emissions necessary for attainment and maintenance of the ozone standards, EPA has determined that those emissions reductions may be exempted under Section 182(f) of the Act.

VOC nonattainment NSR restructuring:

Pursuant to section 176A(a)(2) of the Act, EPA is also proposing to approve the State’s February 11, 2013 request to restructure or remove the VOC nonattainment NSR permitting requirements that currently apply in ozone attainment areas solely by virtue of Maine’s location in the OTR (all of Maine is designated unclassifiable/attainment with the 2008 8-hour ozone standards). Maine’s February 11, 2013 request is based on a significant adverse impact on the ability of nonattainment areas located in the OTR to attain and maintain the ozone standards during times when elevated ozone levels are monitored in those areas. Consequently, any additional reductions in VOC emissions in the State of Maine that would be required under the 2008 8-hour ozone standards, and which would be beyond what Maine’s State Implementation Plan (SIP) regulations already provide for, are not necessary for attainment or maintenance of the ozone standards in any areas within the OTR. Thus, because any such VOC reductions in Maine would be in excess of the emissions necessary for attainment and maintenance of the ozone standards, EPA has determined that those emissions reductions may be exempted under section 182(f) of the Act.

II. What are the Clean Air Act requirements that form the legal basis for EPA’s actions?

A. NOx Exemption Under Section 182(f) of the Act

B. OTR Restructuring Request of the VOC Nonattainment NSR Permitting Requirements

III. What is the scope of the NOx exemption under section 182(f) of the Act?

IV. What is the scope of the proposed VOC nonattainment NSR restructuring under section 176A(a)(2) of the Act?

V. What are the technical criteria EPA used to evaluate Maine’s requests?

VI. What was included in the State of Maine’s requests?

VII. What is EPA’s evaluation of Maine’s requests?

VIII. Which provisions did Maine request be removed by EPA from the SIP?
of the Act. The State’s request is justified by a technical demonstration that clearly supports ME DEP’s conclusion that the VOC emissions controlled by the State’s nonattainment NSR permitting requirements will not significantly contribute to the attainment of the ozone standards in Maine or in any other area within the OTR.

In connection with this request, EPA expects to take final action on a request for a SIP revision that the State of Maine has committed to re-submit to EPA after the close of the State’s public notice and hearing process on the proposed revision. The SIP revision would conform the language of Maine’s SIP to the section 176A(a)(2) restructuring of the VOC nonattainment NSR requirements, i.e., render those requirements inapplicable solely by virtue of Maine’s location in the OTR. Because all of Maine is designated unclassifiable/attainment for the 2008 8-hour ozone standards, the VOC nonattainment NSR permitting requirements in Maine’s SIP would not currently apply anywhere in Maine. EPA will not take final action on Maine’s section 176A(a)(2) restructuring request until Maine re-submits the request for a SIP revision described above to EPA. EPA would take final action on the restructuring request and the request for a SIP revision at the same time.

If EPA takes final action approving both of Maine’s requests, and in addition approves the request for a SIP revision that the State of Maine has committed to re-submit to EPA, the following consequences would result. First, any NOx RACT requirements that would otherwise have been necessary in Maine in relation to the 2008 8-hour ozone standard would now not be required to be included in Maine’s SIP through a SIP revision. However, NOx RACT requirements already contained in Maine’s SIP for purposes of implementing earlier ozone standards promulgated prior to the 2008 8-hour ozone standard would remain in Maine’s SIP. Second, NOx nonattainment NSR permitting requirements would no longer apply anywhere in the State upon EPA’s approval of the NOx waiver because Maine’s currently approved NSR SIP already eliminates NSR for NOx in areas where EPA has approved a NOx waiver. Third, the VOC nonattainment NSR permitting requirements, which apply throughout the entire State of Maine, would no longer apply in any area in Maine at this time and would never apply solely by virtue of Maine’s location in the OTR. Fourth, for major new and modified stationary sources of VOC and NOx throughout the entire State of Maine, Maine’s PSD permitting requirements would apply in lieu of the nonattainment NSR permitting requirements. The primary differences between the nonattainment NSR and PSD permitting programs are that (1) the emissions threshold at which the permitting requirement is triggered can be higher in the PSD program, (2) the required level of control is more stringent under nonattainment NSR (lowest achievable emission rate (LAER) as compared to best achievable control technology (BACT) under PSD), and (3) emissions offsets must be obtained under nonattainment NSR to account for the new growth, but such emissions offsets are not required under PSD and, instead, sources must demonstrate that their new emissions will not exceed the emissions growth increment available in the area.

II. What are the Clean Air Act requirements that form the legal basis for EPA’s actions?

A. NOx Exemption Under Section 182(f) of the Act

The air quality planning requirements for the reduction of NOx emissions are set out in section 182(f) of the Act. Section 182(f) requires states with areas designated and classified as moderate nonattainment and above for ozone, or located in ozone transport regions, to impose the same control requirements for major stationary sources of NOx as apply under the Act to major stationary sources of VOC. These requirements include the adoption of RACT regulations for major stationary sources and the adoption of regulations for nonattainment NSR permitting applicable to major new and modified stationary sources of NOx. Section 182(f)(1) of the Act, however, provides that these requirements do not apply if EPA determines that any of the tests set forth in section 182(f) of the Act are met, i.e., tests based on the relationship of the NOx emission reductions in question to: (1) Net air quality benefit; (2) contribution to attainment; or (3) net ozone air quality benefits. Further, section 182(f) of the Act provides that EPA may limit the application of the NOx emissions controls in question if EPA determines that such emissions reductions constitute excess reductions in emissions. If the EPA Administrator determines, under Section 182(f) of the Act, that additional reductions of NOx are excess for an entire area, the area issue shall automatically (i.e., a State would not need to submit an exemption request for each requirement) be exempt from the applicable requirements.

On December 26, 1995 (60 FR 66748), EPA approved the State of Maine’s section 182(f) NOx exemption request for counties in northern Maine (specifically, Aroostook, Franklin, Oxford, Penobscot, Piscataquis, Somerset, Washington, Hancock and Waldo Counties) in relation to the 1-hour ozone standard. At this time, the NOx exemption relating to the 1-hour ozone standard remains in effect as approved by EPA in 1995. In addition, on February 3, 2006 (71 FR 5791), EPA approved a section 182(f) NOx exemption request for a similar area in Maine (specifically, Aroostook, Franklin, Oxford, Penobscot, Piscataquis, Somerset, Washington, and portions of Hancock and Waldo Counties) in relation to the 1997 8-hour ozone standard. At this time, the NOx exemption relating to the 1997 8-hour ozone standard remains in effect as approved by EPA in 2006.

EPA’s implementation rule for the 1997 8-hour ozone standard (69 FR 23951) requires areas to request a separate section 182(f) NOx exemption request under the 1997 8-hour ozone standard, even if those areas previously received an exemption under the 1-hour ozone standard. Because EPA has not yet issued a final implementation rule for the 2008 8-hour ozone standard, 3 EPA has decided to follow the same approach as was taken in transitioning from the 1-hour ozone standards to the 1997 8-hour ozone standards, i.e., a state must request a separate NOx exemption for the new 2008 8-hour ozone standards, even if that state had already been granted a NOx exemption under section 182(f) under the 1997 8-hour ozone standard.

B. OTR Restructuring Request of the VOC Nonattainment NSR Permitting Requirements

Sections 172(c)(5) and 173 of the Act together contain the SIP permitting requirements applicable to new or modified major stationary sources in nonattainment areas. Section 184(b)(2) of the Act, relating to emissions control requirements applicable to stationary sources that emit or have the potential to emit at least 50 tons per year of VOC are subject to the requirements which would apply to major stationary sources under the Act if the area were classified as a moderate nonattainment area. These provisions of

---

3EPA published in the Federal Register on June 6, 2013 (78 FR 34178) a proposed implementation rule that would follow the same approach.
the Act, in combination, resulted in the promulgation of the State of Maine’s VOC nonattainment NSR SIP permitting requirements relevant to EPA’s proposed action here. EPA’s proposed approval of the State of Maine’s OTR restructuring request, if finalized in a subsequent rulemaking in combination with action on a SIP revision, would mean that the VOC nonattainment NSR permitting requirements would no longer apply in the State of Maine on the sole basis that Maine is located in the OTR. The SIP’s nonattainment NSR permitting requirements applicable to VOC sources will remain in the SIP but would only apply in ozone nonattainment areas, if EPA finalizes its approval of the section 176A(a)(2) restructuring request and approves the corresponding SIP revision. As a practical matter, however, because all areas in Maine are designated unclassifiable/attainment for the 2008 8-hour ozone standards, the VOC nonattainment NSR permitting requirements in the SIP would only apply if an area in Maine is designated nonattainment.

Section 176A of the Clean Air Act is entitled “Interstate Transport Commissions,” and contains the criteria upon which areas that are part of interstate transport regions may be added or removed from such transport regions. Section 176A(a)(2) provides that the EPA Administrator may remove any State or portion of a State from an interstate transport region, in this case the OTR, whenever the Administrator has reason to believe that control of emissions in that State or portion of the State pursuant to the Act’s requirements for that interstate transport region will not significantly contribute to attainment of a NAAQS in that interstate transport region. Implicit in EPA’s authority to remove a State or a portion of a State from the OTR in its entirety, is the authority to eliminate or “restructure” specific emissions control requirements for a State that remains in the OTR, provided that such State demonstrates that the control of emissions from such requirements will not significantly contribute to attainment of the ozone standards anywhere in the OTR. EPA’s proposed action under section 176A(a)(2) of the Act meets this requirement because the State of Maine has demonstrated that the control of VOC emissions through implementation of the nonattainment NSR permitting requirements will not significantly contribute to attainment of the ozone standards in the OTR. EPA previously has used this statutory authority to approve requests by the States of Maine and New Hampshire to restructure those states’ motor vehicle inspection and maintenance (I/M) requirements, on January 10, 2001. See 66 FR 1868 and 66 FR 1871, respectively.

III. What is the scope of the NOx exemption under section 182(f) of the Act?

Section 182(f) provides that if the EPA Administrator determines that additional reductions of NOx are excess, the area in question shall be exempt from the following requirements (as applicable): motor vehicle inspection and maintenance (I/M) program NOx requirements; the NOx-related general conformity provisions; the NOx-related transportation conformity provisions in 4 CFR part 93; NOx RACT; and nonattainment area NSR for major new sources and modifications of NOx. (See Section 182(f) of the Act, 40 CFR 51.351(d) for I/M, 40 CFR 93.119(f)(2) for transportation conformity and 40 CFR 93.199(f)(2) for general conformity.) If the EPA Administrator determines, under Section 182(f) of the Act, that additional reductions of NOx are excess for an entire area, the area at issue shall automatically (i.e., a State would not need to submit an exemption request for each requirement) be exempt from the applicable requirements.

Consequently, if EPA finalizes its approval of Maine’s request for a section 182(f) NOx exemption, Maine need not modify its NOx control SIP provisions to address any new emissions controls required in relation to the 2008 8-hour ozone standard, including I/M. Also, because the entire State of Maine is now designated unclassifiable/attainment for the 2008 8-hour ozone standard, transportation conformity for the 2008 8-hour ozone standard (See 40 CFR 93.102(b)) and general conformity in relation to the 2008 8-hour ozone standard (See 40 CFR 93.153) do not apply. EPA’s proposed action on Maine’s October 13, 2012 section 182(f) request for a NOx exemption, if finalized, would have no impact on I/M or conformity requirements in Maine. Furthermore, if EPA’s proposed approval of Maine’s section 182(f) NOx exemption request is finalized, any NOx RACT requirements that would otherwise have been necessary in Maine in relation to the 2008 8-hour ozone standard would not be required (although NOx RACT requirements already contained in Maine’s existing SIP for purposes of implementing prior ozone standards will remain in Maine’s SIP). Finally, NOx nonattainment NSR permitting requirements would no longer apply anywhere in the State. If EPA’s action on Maine’s request is finalized, major new and modified stationary sources of NOx would be subject to the Maine SIP’s PSD permitting requirements in lieu of the NOx nonattainment NSR permitting requirements. The primary differences between those two permitting requirements are described earlier in this notice of proposed rulemaking.

IV. What is the scope of the proposed VOC nonattainment NSR restructuring under section 176A(a)(2) of the Act?

All areas in the State of Maine are designated unclassifiable/attainment for the 2008 8-hour ozone standard. Consequently, the effect of the proposed VOC nonattainment NSR restructuring in combination with the planned SIP revision, will be that the Maine SIP’s PSD regulations, applicable to permitting major new or modified stationary sources of regulated NSR pollutants including VOC, would apply in lieu of the State’s nonattainment NSR permitting requirements in every area within the State. The VOC nonattainment NSR permitting requirements currently part of Maine’s SIP would no longer be applicable anywhere in the State solely by virtue of Maine’s location in the OTR. The primary differences between those two permitting requirements are described earlier in this notice of proposed rulemaking.

V. What are the technical criteria EPA used to evaluate Maine’s requests?

EPA’s criteria for the evaluation of a request for a section 182(f) NOx exemption are set forth in a memorandum from Stephen D. Page, Director, OAQPS, dated January 14, 2005, entitled “Guidance on Limiting Nitrogen Oxides Requirements Related to 8-Hour Ozone Implementation.” As explained earlier in this notice of proposed rulemaking, EPA evaluated Maine’s technical demonstration and has concluded that the demonstration shows that NOx emissions in Maine are not having a significant adverse impact on the ability of any nonattainment area located in the OTR to attain or maintain the ozone standards during times when elevated ozone levels are monitored in those areas. EPA is therefore proposing to approve Maine’s request for a section 182(f) NOx exemption.

EPA’s criteria for restructuring out of the OTR are set forth in a memorandum from John S. Seitz, Director, OAQPS,
dated May 25, 1995, and entitled “Technical Guidance for Removing Areas From the Northeast Ozone Transport Region (OTR).” As noted earlier in this notice of proposed rulemaking, EPA evaluated Maine’s technical demonstration and determined that Maine’s demonstration shows that the control of VOC emissions through implementation of the nonattainment NSR permitting requirements in Maine will not significantly contribute to attainment of the ozone standard anywhere in the OTR. EPA is therefore proposing to approve Maine’s request for a section 176A(a)(2) restructuring of the VOC nonattainment NSR permitting requirements.

VI. What was included in the State of Maine’s requests?

As noted earlier, Maine submitted a technical demonstration with its request for a section 182(f) NOX exemption showing that NOX emissions in Maine are not having a significant adverse impact on the ability of any nonattainment area located in the OTR to attain or maintain the ozone standards during times when elevated ozone levels are monitored in those areas.

For the State’s section 176A(a)(2) VOC nonattainment NSR restructuring request, Maine’s technical demonstration showed that the control of emissions from those permitting requirements will not significantly contribute to the attainment of the 2008 8-hour ozone standard in any area in the OTR.

The State’s submittals include detailed technical analyses for VOC and NOX emissions in the State, including an analysis of whether emissions from Maine impact areas in the OTR. The State’s technical analyses rely on several different techniques used to analyze those emissions and their impacts, the primary technique being back trajectories using the HYPLIT trajectory model.

For the section 182(f) NOX exemption and the VOC nonattainment NSR restructuring requests, ME DEP air quality meteorologists conducted air trajectory analyses of days during the 2009 through 2011 ozone seasons at times when elevated ozone levels were monitored. The analyses were conducted for monitoring sites in the ozone nonattainment areas closest to Maine, in the State of Connecticut and on Martha’s Vineyard, Massachusetts. The air trajectories used by ME DEP are four-dimensional representations of the path an air parcel follows, in time, based on archived surface and upper-level meteorological data. A back trajectory, as used by ME DEP in this case, is the path the parcel takes to reach a specific point in time and space. ME DEP created a back trajectory for each hour that ozone levels were equal to or greater than 75 parts per billion (ppb) for every day that the 2008 ozone standard was exceeded (i.e., ozone levels exceeded 0.075 parts per million (or 75 ppb) on an 8-hour average basis) and recorded in the State of Connecticut and Martha’s Vineyard, Massachusetts. For each such instance, 24-hour back trajectories from 10, 150 and 250 meters above ground level were created.

ME DEP used the National Oceanic and Atmospheric Administration’s HYPLIT model to create and map the trajectories. The HYPLIT model uses gridded meteorological data, which is selected within the on-line model’s graphical user interface. For more information about HYPLIT, please refer to the following document by Roland R. Draxler and G.D. Hess: Description of the HYPLIT 4 Modeling System. (See http://www.arl.noaa.gov/documents/reports/arl-224.pdf.) ME DEP staff meteorologists used the on-line version of the HYPLIT model to create the trajectories used in the DEP’s analyses. Archived ETA Data Assimilation System (EDAS) meteorological data at 40 kilometers (km) was used because that data set had the best resolution and had an excellent data recovery rate.

ME DEP provided to EPA a map of HYPLIT back trajectory calculations for all hours when ozone monitoring sites in the State of Connecticut and in Martha’s Vineyard, Massachusetts exceeded the 2008 ozone standards. That map clearly shows that emissions from Maine do not have a significant adverse impact on the ability of any nonattainment area located in the OTR to attain and maintain the 2008 8-hour ozone standards, because none of the dozens of plotted back trajectories originate in Maine or even traverse any portion of Maine. Therefore, the analysis demonstrates convincingly that NOX and VOC emissions in Maine will not significantly contribute to attainment of the ozone standards anywhere in the OTR.

In addition to the trajectories discussed above, Maine also provided in its request for VOC nonattainment NSR restructuring information from several photochemical modeling analyses conducted by EPA for the eastern United States. Maine’s submission referenced EPA photochemical modeling for: (1) The NOX SIP call (63 FR 57356: October 27, 1998); (2) the Clean Air Interstate Rule (CAIR) (70 FR 25162; May 12, 2005); and (3) the Cross State Air Pollution Rule (CSAPR) (76 FR 48208; August 8, 2011). Table 1 below contains a summary of those EPA modeling results for the State of Maine. With regard to NOX emissions in Maine, the detailed photochemical ozone modeling for these three programs shows that emissions of NOX in the State of Maine do not have a significant adverse impact on the ability of any ozone nonattainment areas in the OTR to attain or maintain the 2008 8-hour ozone standards. With regard to VOC emissions in Maine, the detailed photochemical ozone modeling shows that control of emissions of VOC in Maine do not significantly contribute to the attainment of the 2008 8-hour ozone standard in any area of the OTR.

# Note that Dukes County, Massachusetts was not modeled for these two programs so the impact to Rhode Island was used because it is representative of the Massachusetts Dukes County nonattainment area. Dukes County, Massachusetts consists of several islands in Nantucket Sound, the largest of which is Martha’s Vineyard.

3 Although the CSAPR rule was vacated (See EME Homer City Generation, L.P. v. EPA, No. 11–1302 (D.C. Cir. August 21, 2012), nothing in the opinion disturbs or calls into question that conclusion or the validity of the air quality modeling on which the conclusion is based.
VII. What is EPA’s evaluation of Maine's requests?

Based on the ME DEP’s technical analyses discussed above, EPA believes that the State has demonstrated convincingly that control of emissions of VOC in Maine do not significantly contribute to the attainment of the 2008 8-hour ozone standard in any area in the OTR. Such demonstration is sufficient to support Maine’s section 176A(a)(2) VOC nonattainment NSR restructuring request. Based on those same technical analyses, EPA has determined that the State has demonstrated convincingly that emissions of NO\textsubscript{X} in Maine are not having a significant adverse impact on the ability of any ozone nonattainment areas in the OTR to attain or maintain the ozone standards during times when elevated ozone levels are monitored in those areas. Such demonstration is also sufficient to support Maine’s request for a NO\textsubscript{X} exemption under section 182(f).

Consequently, EPA is proposing to approve both the State’s request for an exemption from the section 182(f) NO\textsubscript{X} requirements and the State’s request to restructure or obtain a “limited opt-out” of the Act’s VOC nonattainment NSR requirements relating to the OTR.

VIII. Which provisions did Maine request be removed by EPA from the SIP?

In its February 11, 2013 request to EPA, Maine requested that EPA remove specific language from certain parts of its SIP consistent with the State’s request under section 176A(a)(2) for VOC nonattainment NSR restructuring. By letter dated July 5, 2013, Maine committed to provide notice and an opportunity for a hearing on the proposed SIP revisions and to resubmit its request to EPA for a SIP revision after the public participation process concludes. Because all areas in Maine are designated attainment for the 2008 ozone standards, the Maine SIP’s VOC nonattainment NSR restructuring requirements only now apply in Maine because Maine is part of the OTR. Thus, the language that would be removed from Maine’s SIP imposes requirements that now apply only by virtue of a source’s location within the OTR. As noted earlier in this notice of proposed rulemaking, EPA will not take final action on the State’s request for a SIP revision until: (1) The State’s public participation process on the revisions has concluded and the State has resubmitted its request for a proposed SIP revision to EPA; and (2) until such time as EPA takes final action on the State’s request for the section 176A(a)(2) VOC nonattainment NSR restructuring. The SIP revision would affect specific parts of two chapters of Maine’s nonattainment NSR permitting regulations previously approved by EPA into the SIP. The first is Chapter 113 entitled “Growth Offset Regulations”, which contains emissions offsets requirements for sources subject to nonattainment NSR. The second is Chapter 115 entitled “Emission License Regulation” which includes generally applicable requirements for sources that must obtain an emissions license in Maine. EPA last approved amendments to Chapters 113 and 115 on February 14, 1996 (61 FR 5690). If EPA takes final action approving the State’s requests for a section 182(f) NO\textsubscript{X} exemption and a section 176A(a)(2) restructuring and the associated SIP revisions described above, the Maine SIP’s PSD permitting requirements would apply in lieu of the SIP’s nonattainment NSR permitting requirements for any major new or modified stationary source of VOC and/or NO\textsubscript{X} located anywhere in the State of Maine.

EPA is soliciting public comments on the issues discussed in this notice or on other relevant matters. These comments will be considered before taking final action. Interested parties may participate in the Federal rulemaking procedure by submitting written comments to the EPA New England Regional Office listed in the ADDRESSES section of this notice.

IX. Proposed Actions

EPA is proposing to approve Maine’s October 13, 2012 request for an exemption from the requirements for the control of NO\textsubscript{X} emissions contained in...
section 182(f) of the Act in relation to the 2008 8-hour ozone standards. The exemption would apply throughout the entire State of Maine. EPA is also proposing to approve Maine’s February 11, 2013 request for a limited “opt-out” or “restructuring” of the section 182(f) OTR requirements pertaining to VOC nonattainment NSR permitting, currently applicable in Maine only by virtue of Maine’s location in the OTR, not by virtue of Maine having any areas designated nonattainment for the 2008 8-hour ozone standards. In addition, EPA is proposing to approve Maine’s request for the SIP revisions described earlier in this notice.

If EPA takes final action to approve Maine’s requests, including the SIP revisions described above, the following consequences would result. First, any NOX RACT requirements that would otherwise have been necessary in Maine in relation to the 2008 8-hour ozone standard would now not be required. However, any NOX and/or VOC requirements earlier approved into Maine’s SIP to implement regional haze requirements or requirements relating to prior, pre-2008, ozone standards, will remain in Maine’s SIP. Second, nonattainment NSR permitting requirements for major new or modified stationary sources of NOX in Maine would no longer apply anywhere in the State. Third, the nonattainment NSR permitting requirements applicable to major new and modified stationary sources of VOC, which now apply throughout the entire State of Maine, would no longer apply in any area in Maine. Fourth, for major new and modified stationary sources of VOC and NOX throughout the entire State of Maine, the Maine SIP’s PSD permitting requirements would apply in lieu of the nonattainment NSR permitting requirements. Finally, the requirements applicable to sources holding existing nonattainment NSR permits will remain in effect.

As part of this action, EPA is proposing to revise certain provisions in Maine’s SIP. The SIP revisions would affect specific parts of two chapters of Maine’s nonattainment NSR permitting regulations previously approved by EPA into the SIP. The first is Chapter 113 entitled “Growth Offset Regulations” which contains emissions offsets requirements for sources subject to nonattainment NSR. The second is Chapter 115 entitled “Emission License Regulation” which includes generally applicable requirements for sources that must obtain an emissions license in Maine.

Specifically, EPA is proposing to remove from Chapter 113 all references to the OTR as a basis for the applicability of VOC nonattainment NSR permitting requirements. Those references appear in section 1 (Applicability), section 2.C.1 (Ozone Nonattainment Areas), section 2.C.2 (Ozone Nonattainment Areas, Location of offsets), and section 3 (Exemptions). EPA also is proposing to remove references in Chapter 113 to the permissible location of emissions offsets for attainment areas (these provisions for attainment areas are only relevant if location in the OTR is a basis for nonattainment NSR applicability). These references appear in sections 2.C.3 (Ozone Nonattainment Areas) and 2.C.3.b. (Ozone Nonattainment Areas) of Chapter 113, and will not be relevant if the section 176A(al)(2) restructuring is approved, because new or modified major stationary sources of VOC located in areas attaining the ozone standard will no longer be required to obtain offsets. In Chapter 115, EPA proposes to remove the reference to the OTR in Sections V.B.2 (Criteria for Granting a License) and VI.B.2 (New sources and modifications, Nonattainment areas).

X. Statutory and Executive Order Reviews

Under the Clean Air Act, the Administrator is required to approve a state’s submission that complies with the provisions of the Act and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing state submissions, EPA’s role is to approve state choices, provided that they meet the criteria of the Clean Air Act. Accordingly, these actions, merely propose to approve Maine’s requests meeting Federal requirements and do not impose additional requirements beyond those imposed by state law. For that reason, these proposed actions:

• Are not “significant regulatory actions” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
• Do not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 et seq.);
• Are certified as not having significant economic impacts on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 et seq.);
• Do not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
• Do not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
• Are not economically significant regulatory actions based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);
• Are not significant regulatory actions subject to Executive Order 13211 (66 FR 28355, May 22, 2001);
• Are not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the Clean Air Act; and
• Do not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this rule does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the Maine SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

Authority: 42 U.S.C. 7401 et seq.
