

The historical mission of CRIS, broadly stated, is to document the research activities of USDA and the State agricultural research system partners, to satisfy a variety of reporting requirements, and to provide access to research information. This mission supports one of NIFA's primary functions, as stated in the agency strategic plan, of providing program leadership to identify, develop, and manage programs to support university-based and other institutional research. The boundaries and scope of the CRIS mission have been expanded to a more comprehensive purpose of documenting all of the research, education, extension, and integrated activities funded or managed by NIFA. As such, the information collected for CRIS can be utilized in an essentially unlimited number of ways for a wide array of purposes. Generally, CRIS provides ready access to information through public web accessible data, as well as custom reports and services for agency officials, program leaders, administrators, and managers. The information provided helps users keep abreast of the latest developments in agriculture, food science, human nutrition, and forestry research and education; track resource utilization in specific target areas of work; plan for future activities; plan for resource allocation for research, education, and extension programs; avoid costly duplication of effort; aid in coordination of efforts addressing similar problems in different locations; and aid research, education, and extension workers in establishing valuable contacts within the agricultural community.

Descriptive information pertaining to documented projects is available to the general public as well as the research, education, and extension community who contribute to CRIS. Limited financial information is available on individual grants and cooperative agreements as well as summary financial information. A cooperating institution, including a state agricultural experiment station, state forestry school, or land grant institution, has access to all of the data pertaining to that institution. Many institutions take advantage of this access utilizing CRIS system facilities to manage the research programs at their institution. In addition, NIFA staff members can request specialized reports directly from the CRIS staff. These requests can include financial data pertaining to a particular subject area or targeted program. The nature of this type of request characterizes one of the strengths of the CRIS information

collection. The system collects obligations and expenditures on individual projects; however, information can be retrieved and aggregated based on subject areas or targeted programs, and corresponding financial information can be tabulated accordingly. The inclusion of subject-based classifications and subject specific descriptive fields supports a unique retrieval capability in this system. The information can be utilized nationally, regionally, or at more detailed levels by program leaders, budget officials, and administrators to identify resource utilization, monitor research, education, and extension activity in specific target areas and support decision making and resource allocation, not just on individual projects but also for specific program areas. This combination of system capabilities facilitates program evaluation, accountability, and decision making processes.

Out of an initiative of the Research Business Models (RBM) Subcommittee of the Committee on Science (CoS), a committee of the National Science and Technology Council (NSTC), came the Research Performance Progress Report (RPPR). The RPPR is a uniform format for reporting performance progress on Federally-funded research projects. Upon implementation, the RPPR will be used by agencies that support research and research-related activities to receive interim progress reports. It is intended to replace other interim performance reporting formats currently in use by agencies. In anticipation of the RPPR's implementation, NIFA is working to align activities with that effort. Currently, NIFA is transitioning from calling this collection of grant data CRIS to calling it REEport, a new reporting system with a RPPR based format as part of this transition; the AD-419 will be called the Financial Report. However, the AD-419 still needs to be renewed in its current form to collect the financial data on grant projects.

Estimate of Burden: There will be a reduction made to the burden per response from the previous approval. NIFA estimates that the number of respondents for the AD-419 Financial Report will be 15,199 with an estimated response time of 1.4 hours, representing a total annual burden of 21,279 hours.

Comments: Comments are invited on: (a) Whether the proposed collection of information is necessary for the proper performance of the functions of the Agency, including whether the information will have practical utility; (b) the accuracy of the Agency's estimate of the burden of the proposed collection of information; (c) ways to

enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology.
