

2. Impact of Guidance Groups

In its role in administering and supporting the Guidance Groups, NIST's aim is to improve discipline practices by advancing forensic science standards and techniques through a collaborative consensus building process with Federal, state and local community partners. NIST thus seeks comments about the ways in which the structure, function and operation would best support the Guidance Groups by being a catalyst for such improvements.

- Given that the Guidance Groups cannot mandate the adoption of standards, what can they do to best leverage their position and encourage adoption? To what extent does membership and transparency impact possible adoption of guidance at the state and local level?
- Are there best practices or models to consider with regard to a structure that would encourage effective communication with the scientific community to explore research gaps and aid in recognizing research priorities?

- How should NIST researchers engage with the Guidance Groups in support of the goal to strengthen the nation's use of forensic science by supporting the development and propagation of forensic science consensus documentary standards, identifying needs of forensic science research and measurement standards, and verifying the scientific basis exists for each discipline?

3. Representation in the Guidance Groups

Given the diverse, multi-sector set of stakeholders in forensic science, representation in Guidance Groups must be carefully balanced and inclusive.

- Who are the stakeholders who should be represented on the Guidance Groups? What steps can NIST take to ensure appropriately broad representation within the Guidance Groups? What does balanced representation mean and how can it be achieved?
- What is the best way to engage organizations playing a role in forensic science, standards development and practice?
- How should interested parties who may not be direct participants in Guidance Groups, engage in a meaningful way to have an impact on issues in front of the Guidance Groups?
- To what extent and in what ways must the Federal government, as well as state, local, tribal and territorial governments be involved at the outset?

4. Scope of the Guidance Groups

- Should all of the current forensic Scientific Working Groups (SWGs) transition to Guidance Groups?
- Are there broader groupings of forensic science disciplines that could form the basis of Guidance Groups than the current group of twenty-one SWGs? If so, what are those groupings?
- Is there a need for a cross-disciplinary functional approach (i.e. statistical analysis) and how could the Guidance Groups be structured to best address that need?
- To what extent do Guidance Groups need to support different forensic science disciplines differently from one another?

Associate Director for Laboratory Programs.
