SUPPLEMENTARY INFORMATION:

I. Information About the Project/ Document

The Next Generation (NexGen) Risk Assessment project was initiated in 2010 as a multi-year, multi-organization effort to consider new molecular, computational, and systems biology approaches for use in risk assessments. The specific aims of the NexGen effort, described in this draft report, are to: (1) Demonstrate proof of concept that the data and methods from recent advances in biology can inform risk assessment; (2) identify which of the information resources and practices are most useful for particular purposes (value of information); (3) develop decision considerations for use of different types of NexGen data and methods to inform different types of assessments; and (4) identify priority research needs.

The "Next Generation Risk Assessment: Incorporation of Recent Advances in Molecular, Computational, and Systems Biology [External Review Draft]" presents the results and lessons learned from the prototypes/case studies for use of molecular, computational, and systems biology data in risk assessment. The prototype results demonstrated proof of concept for an integrated approach to incorporating molecular, computational, and systems biology data in risk assessment and considered various data types for specific assessment purposes. The lessons learned from this project suggested research needs and near- and longer-term implications of incorporating molecular, computational, and systems biology data in risk assessment.
