Information collected will be used to investigate the long-term effects of injury, TBI, and PTSD on the overall physical and psychological health of military personnel injured in overseas contingency operations. Participants will respond to a health-related questionnaire bi-annually for three to six years. Respondents to this study will include both active-duty and separated members of all branches of the U.S. Armed Forces that have been injured and that have indicated a desire to participate through an Institutional Review Board (IRB)-approved informed consent process.

NHRC has been tasked by the office of Congressionally Directed Medical Research Programs (CDMRP) to conduct this longitudinal epidemiological study. The NHRC team will collect information about physical and psychological health from members of the U.S. Armed Forces that have been injured in overseas contingency operations by administering a voluntary web, phone, or mail survey bi-annually for a period of three (3) to six (6) years. In all cases, informed consent will be obtained prior to survey administration. The information collected will be used to ascertain the long-term effects of traumatic brain injury (TBI), Posttraumatic Stress Disorder (PTSD), and other injuries on quality of life outcomes. Pinpointing the effects of these injuries will allow for the development of more effective treatments and early interventions in the management of TBI, PTSD, and other injuries sustained by U.S. military personnel in overseas contingency operations.
