Abstract: This ICR renewal is being submitted for the Air Emission Standards for Tanks, Surface Impoundments and Containers (40 CFR Part 264, Subpart CC and 40 CFR Part 265, Subpart CC), which were promulgated on December 6, 1994. The requirements of this subpart apply to owners and operators of all facilities that treat, store, or dispose of hazardous wastes in tanks, surface impoundments and containers that are subject to subparts I, J or K of these parts, except for Sections 264.1 and 265.1 and those management units identified at Sections 264.1080(b) and 265.1080(b). Also, the requirements of this subpart apply to large quantity generators that manage hazardous wastes in either tanks, or containers (262.34(a)(1)(i and ii)). The affected entities are subject to the General Provisions of the NSPS at 40 CFR part 60, subpart A and any changes or additions to the Provisions specified at 40 CFR part 264, subpart CC and 40 CFR part 265, subpart CC.

Form Numbers: None.

Respondents/affected entities:

Facilities that treat, store, or dispose of RCRA Subtitle C hazardous waste.

Respondent's obligation to respond:

Mandatory (40 CFR part 264, subpart CC and 40 CFR part 265, subpart CC)

Estimated number of respondents:

6,209 (total).

Frequency of response: Occasionally, annually, and semiannually.

Total estimated burden: 712,293 hours (per year). Burden is defined at 5 CFR 1320.3(b).

Total estimated cost: \$82,092,685 (per year), includes \$12,418,000 for operation & maintenance costs annualized capital and no annualized capital/start-up costs.

Changes in the Estimates: There is an adjustment increase in the respondent burden hours and costs from the most recently approved ICR. The previous ICR used rounded numbers, while this ICR uses exact values in calculating burden hours. In addition, this ICR uses updated labor rates from the Bureau of Labor Statistics to calculate burden costs.

There is also an increase of one response in this ICR due to a correction. The previous ICR did not account for the annual project report for the Sistersville Plant when calculating the total number of responses.

Director, Collection Strategies Division.

ICR Information: EPA ICR Number 2375.02; OMB Control Number 2060-0648.

Abstract: This ICR includes ambient air monitoring data reporting and recordkeeping activities associated with the 40 CFR part 58, appendix A, Ambient Air Quality Surveillance Quality Assurance Regulations. These data and information are collected by state, local, and tribal air quality management agencies and reported to the EPA.

The EPA Ambient Air Quality Monitoring Program's quality assurance requirements in 40 CFR part 58, appendix A, require: "2.6 Gaseous and

Flow Rate Audit Standards. Gaseous pollutant concentration standards (permeation devices or cylinders of compressed gas) used to obtain test concentrations for CO, SO₂, NO, and NO₂ must be traceable to either a National Institute of Standards and Technology (NIST) Traceable Reference Material (NTRM), NIST Standard Reference Materials (SRM), and Netherlands Measurement Institute (NMI) Primary Reference Materials (valid as covered by Joint Declaration of Equivalence) or a NIST-certified Gas Manufacturer's Internal Standard (GMIS), certified in accordance with one of the procedures given in reference 4 of this appendix. Vendors advertising certification with the procedures provided in reference 4 of this appendix and distributing gases as "EPA Protocol Gas" must participate in the EPA Protocol Gas Verification Program or not use "EPA" in any form of advertising."

These requirements give assurance to end users that all specialty gas producers selling EPA Protocol Gases are participants in a program that provides an independent assessment of the accuracy of their gases' certified concentrations. In 2010, EPA developed an Ambient Air Protocol Gas Verification Program that provides end users with information about participating producers and verification results. Each year, EPA will attempt to compare gas cylinders from every specialty gas producer being used by ambient air monitoring organizations. Cylinders will be verified at a pre-determined time each quarter. In order to make the appropriate selection, EPA needs to know what specialty gas producers are being used by the monitoring organizations. Therefore, EPA needs information from each primary quality assurance organization every year on specialty gas producers being used and whether the monitoring organization would like to participate in the verification for the upcoming calendar year.
