New Tolerance Exemption

1. *PP 3F8176*. (EPA-HQ-OPP-2013-0717). Anatis Bioprotection, Inc., 278, rang Saint-André, St-Jacques-le-Mineur, Quebec JOJ 1Z0, Canada (represented by Technology Sciences Group, Inc., 712 Fifth St., Suite A, Davis CA 95616), requests to establish an exemption from the requirement of a tolerance for residues of the microbial insecticide, *Beauveria bassiana* strain ANT-03, in or on all food commodities. The petitioner believes no analytical method is needed because their expectation is that, when used as proposed, *Beauveria bassiana* strain ANT-03 would not result in residues that are of toxicological concern. (BPPD)

2. *PP IN-10604*. (EPA-HQ-OPP-2013-0700). Gowan Company, LLC, P.O. Box 5569, Yuma, AZ 85366 requests to establish an exemption from the requirement of a tolerance for residues of ammonium acetate (CAS Registry No. 631-61-8), under 40 CFR 180.920, when used at not more than 15% of a pesticide formulation, as a preharvest inert ingredient in or on raw agricultural commodities. The petitioner believes no analytical method is needed because it is not required for the establishment of a tolerance exemption for inert ingredients. Based on the physical chemical characteristics of ammonium acetate, there is little likelihood of foliar residues remaining on treated crops. Ammonium acetate is highly soluble in water and undergoes rapid environmental degradation in soil and water, breaking down into acetate and ammonium. Acetate/acetic acid as such would not be expected to remain on foliage and or bioaccumulate or persist in humans. Therefore, analytical methods to assess residues of ammonium acetate are not required. (RD)
