SUPPLEMENTARY INFORMATION:

I. Abstract

This request is for a new collection. The NOAA Sentinel Site Program (SSP) brings to life NOAA's science, service, and stewardship continuum by leveraging existing resources and integrating multiple parallel efforts to promote resilient coastal communities and ecosystems in the face of change. A primary purpose of the NOAA Sentinel Site Program is to directly engage local, state, and federal managers as part of a Sentinel Site Cooperative (SSC) team. By doing so, managers can help ensure the types of science conducted, information gathered, and products developed are immediately used for better management. With this point in mind, who is actually using the products and services developed by these Cooperatives, and to what degree

is capacity being built among and between coastal professionals and organizations through communications generated through the SSCs.

The purpose of this survey is to better understand the frequency and patterns of communication as a result of the efforts of the SSP. To help gather this information, NOAA will survey individuals known to have experience and insight with the SSP and inquire on the communications and collaborations that have resulted. This is intended to serve as a means of formative evaluation for this effort. A formative evaluation is used to assess programs or projects early in their development or implementation to provide information about how best to revise and modify for improvement. This type of evaluation often is helpful for new programs, such as the SSC, but can also be used to monitor the progress of ongoing programs.

II. Method of Collection

The survey will be provided to respondents in electronic format provided via email. Methods of submittal will also be via email of electronic forms.
