SUPPLEMENTARY INFORMATION: 1. *Background:* USACE conducted GLMRIS in consultation with other federal agencies, Native American tribes, state agencies, local governments and non-governmental organizations. The GLMRIS authority directed USACE to identify the range of options and technologies available to prevent the spread of ANS between the Great Lakes and Mississippi River basins through the Chicago Sanitary and Ship Canal and other aquatic pathways. In GLMRIS, USACE has identified thirteen ANS of Concern established in one basin with the risk for transfer to the other, analyzed and evaluated available ANS

controls, and formulated alternatives specifically for the Chicago Area Waterway System (CAWS) with the goal of preventing ANS transfer between the two basins.

2. *The GLMRIS Report:* The GLMRIS Report identifies eight potential alternatives—from continuing current efforts to complete separation of the watersheds, and evaluates the potential of these alternatives to control the inter-basin spread of thirteen ANS, which include fish (such as Asian carp), algae, crustaceans, plants and viruses. The report also identifies potential significant adverse impacts that alternatives may have on existing uses and users of the waterways, such as flood risk management, navigation, and water quality, and identifies mitigation measures that could be implemented to minimize these impacts.

Authority: This action is being undertaken pursuant to the Water Resources and Development Act of 2007, Section 3061, Pub. L. 110–114, and Section 1538 of Public Law 112–141 of the Moving Ahead for Progress in the 21st Century Act.
