

its test procedures to address granted waivers going forward. Second, to prevent the administrative waiver process from delaying or deterring the introduction of novel, innovative products into the marketplace, the Department, as a matter of enforcement policy, will refrain from enforcement actions related to pending waiver requests”.

FSI appreciates DOE’s recognition of the need to act promptly on these waiver requests and hopes DOE will take such an approach in responding to this petition in a manner that does not impose additional economic burdens on FSI. The objective is to assure that all test procedures result in representative indication of a product’s true energy consumption, without imposing unnecessary costs on small business appliance manufacturers such as FSI.

Conclusions

The waiver process clearly is intended for situations where test procedures do not provide an accurate representation of actual energy consumption. FSI has demonstrated that the test procedures specified by DOE do not provide representative measure of the basic models in this waiver application, whose doors are opened and closed significantly less than typical household use.

FSI has demonstrated that:

- The use of 90°F is designed to simulate an average of 40 to 50 door openings per day and, even at that level, may overstate energy usage;
- The models listed in this waiver application have their doors opened and closed infrequently, and certainly significantly less than the simulation average;
- An alternate test procedure is readily available consisting of testing the products at 70°F or 72°F, over a 24 hour period, and holding all other test procedures in accordance with AHAM Procedures and 10 CFR § 430, Subpart B, Appendix A;
- Failure to grant this waiver will cause severe economic hardship to FSI, and in some cases, will cause energy consumption to be higher than if the waiver were granted.

FSI respectfully requests DOE waive the test procedures for the products listed in the petition as these “test procedures may evaluate [these product] . . . in a manner so unrepresentative of [their] true energy consumption characteristics . . . as to provide materially inaccurate comparative data.” 10 C.F.R. § 430.27. All of these basic units have materially different uses than the average products subject to the test procedures. The proposed alternative procedures will provide an accurate representation of actual energy use. For these reasons, FSI

respectfully requests that DOE substitute our proposed test procedures and waive the test procedures at 10 CFR § 430, Subpart B, Appendix A for FSI’s beer coolers, assisted living refrigerator-freezers and hotel refrigerators.
