SUPPLEMENTARY INFORMATION: The subject permit is requested under the authority of the Marine Mammal Protection Act of 1972, as amended (MMPA; 16 U.S.C. 1361 *et seq.*), and the regulations governing the taking and

importing of marine mammals (50 CFR part 216).

The applicant requests a 5-year permit to study sub-ice navigation and orientation of Weddell seals in the area around Ross Island, McMurdo Sound, Antarctica. The purpose of the study is to understand key sensory modalities used for locating breathing holes in the sea ice and to address the overarching questions: Do Weddell seals possess a magnetic sense, and do they use it to sense Earth's geomagnetic field for navigating under sea ice over small spatial scales? In each of three annual field seasons (3 months during July–December across a 5-year project), up to 12 seals will be captured, sedated, weighed, measured, and have ultrasound and metabolic measurements taken. Eight of those 12 animals will also be instrumented and translocated within their home range. Up to 20 Weddell seals may be incidentally disturbed and up to two Weddell seals may die during research activities during each of the three annual field seasons. Samples may be imported to the U.S. from Antarctica.

In compliance with the National Environmental Policy Act of 1969 (42 U.S.C. 4321 *et seq.*), an initial determination has been made that the activity proposed is categorically excluded from the requirement to prepare an environmental assessment or environmental impact statement.

Concurrent with the publication of this notice in the **Federal Register**, NMFS is forwarding copies of the application to the Marine Mammal Commission and its Committee of Scientific Advisors.

Dated: April 14, 2014.
