

along the I-84 Corridor in Fairfield County and New Haven County, CT, for a distance of approximately 32 miles. The purposes of the proposed improvements were to improve safety and provide increased capacity to meet future traffic demands. Due to the re-prioritization of major transportation projects in Connecticut and funding constraints, the CTDOT is no longer pursuing this project. Therefore, the NOI for this project is rescinded. Studies are being done to determine specific safety and capacity improvements along the I-84 corridor, and any future transportation improvements will progress under a separate environmental review process, in accordance with all applicable laws and regulations.

OMB Number: 1535-0143.

Type of Review: Extension without change of a currently approved collection.

Title: Generic Clearance for the Collection of Qualitative Feedback on Agency Service Delivery.

Abstract: The information collection activity will garner qualitative customer and stakeholder feedback in an efficient, timely manner, in accordance with the Administration's commitment to improving service delivery. By qualitative feedback, we mean information that provides useful insights on perceptions and opinions, but are not statistical surveys that yield quantitative results that can be generalized to the population of study. This feedback will provide insights into customer or stakeholder perceptions, experiences and expectations, provide an early warning of issues with service, or focus attention on areas where communication, training or changes in operations might improve delivery of products or services. These collections will allow for ongoing, collaborative and actionable communications between the Agency and its customers and stakeholders. It will also allow feedback to contribute directly to the improvement of program management.

Feedback collected under this generic clearance will provide useful information, but it will not yield data that can be generalized to the overall population. This type of generic clearance for qualitative information will not be used for quantitative information collections that are designed to yield reliably actionable results, such as monitoring trends over time or documenting program performance. Such data uses require more rigorous designs that address: the target population to which generalizations will be made, the sampling frame, the sample design (including stratification and clustering), the precision requirements or power calculations that justify the proposed

sample size, the expected response rate, methods for assessing potential non-response bias, the protocols for data collection, and any testing procedures that were or will be undertaken prior fielding the study. Depending on the degree of influence the results are likely to have, such collections may still be eligible for submission for other generic mechanisms that are designed to yield quantitative results.

Average Expected Annual Number of Activities: 10.

Number of Respondents: 10,000.

Frequency of Response: Once per request.

Average Minutes Per Response: 60.

Estimated Annual Burden Hours: 10,000.

Brenda Simms,

Treasury PRA Clearance Officer.
