PART 25—SATELLITE COMMUNICATIONS

3. The authority citation for part 25 continues to read as follows:

Authority: Interprets or applies sections 4, 301, 302, 303, 307, 309, 319, 332, 705 and 721 of the Communications Act as amended, 47 U.S.C. 154, 301, 302, 303, 307, 309, 319, 332, 605 and 721, unless otherwise noted.

4. Amend §25.103 by revising the definition of “Earth Stations Aboard Aircraft (ESAA)” to read as follows:

§ 25.103 Definitions.

Earth Stations Aboard Aircraft (ESAA). Earth stations operating aboard aircraft that receive from and transmit to geostationary-orbit Fixed-Satellite Service space stations pursuant to the requirements in §25.227.

5. Amend §25.227 by revising paragraphs (a)(14), (b)(1)(iii)(A), (b)(2)(i), and the second to last sentence of paragraph (b)(3)(ii) to read as follows:

§ 25.227 Blanket Licensing provisions for Earth Stations Aboard Aircraft (ESAA) receiving in the 10.95–11.2 GHz (space-to-Earth), 11.45–11.7 GHz (space-to-Earth), and 11.7–12.2 GHz (space-to-Earth) frequency bands and transmitting in the 14.0–14.5 GHz (Earth-to-space) frequency band, operating with Geostationary Satellites in the Fixed-Satellite Service.

(a) * * * * (14) All ESAA terminals operated in U.S. airspace, whether on U.S.- registered civil aircraft or non-U.S.- registered civil aircraft, must be licensed by the Commission. All ESAA terminals on U.S.-registered civil aircraft operating outside of U.S. airspace must be licensed by the Commission, except as provided by section 303(t) of the Communications Act.

(b) * * * * (1) * * * *

(iii) * * * *(A) Demonstrate that the total tracking error budget of their antenna is within 0.2° or less between the orbital location of the target satellite and the axis of the main lobe of the ESAA antenna. As part of the engineering analysis, the ESAA applicant must show that the antenna pointing error is within three sigma (σ) from the mean value, i.e., that there is a 0.997 probability the antenna maintains a pointing error within 0.2°; and

(ii) A statement from the target satellite operator certifying that the proposed operation of the ESAA has the potential to create harmful interference to satellite networks adjacent to the target satellite(s) that may be unacceptable.

(3) * * * * *

(i) * * * * The ESAA applicant also shall provide a detailed showing that one or more transmitters are capable of automatically ceasing or reducing emissions within 100 milliseconds of receiving a command from the system’s network control and monitoring center that the aggregate off-axis EIRP spectral-densities of the transmitter or transmitters exceed the off-axis EIRP-density limits specified in paragraph (a)(3)(i) of this section. * * * *

SUMMARY: FMCSA issues regulatory guidance on two issues involving roadside inspection of commercial motor vehicles (CMVs) equipped with automatic on-board recording devices (AOBRDs) to assist drivers with hours-of-service (HOS) recordkeeping and compliance. All prior Agency interpretations and regulatory guidance, including memoranda and letters, may no longer be relied upon to the extent they are inconsistent with this guidance.

DATES: This regulatory guidance is effective May 12, 2014.
uncommon and costly, and the amount and type of information they could display were limited. The earliest displays could show only text, not graphics—hence the requirement for the “time and sequence of duty status” rather than the § 395.8 graph grid. The additional information that is recorded but not displayed is intended for use during an audit of the carrier’s HOS records.

**Regulatory Guidance**

FMCSA amends the April 4, 1997, publication to add questions 5 and 6 to the § 395.8 production of records during a roadside inspection.

**PART 395—HOURS OF SERVICE OF DRIVERS**

Add § 395.15 Questions 5 and 6, to read as follows:

**Question 5:** What information is required to be displayed on the AOBRD?

**Guidance:**

(1) Section 395.15(i)(5) requires that AOBRDs with electronic displays must be capable of displaying the following:

- (i) Driver’s total hours of driving today;
- (ii) The total hours on duty today; (iii) Total miles driving today; (iv) Total hours on duty for the 7 consecutive day period, including today; (v) Total hours on duty for the prior 8 consecutive day period, including the present day; and (vi) The sequential changes in duty status and the times the changes occurred for each driver using the device.”

(2) While § 395.15(c) requires additional information be recorded by the AOBRD, only the specific information listed in § 395.15(i)(5) must be displayed.

(3) The two provisions differ because of the data display limitations of a minimally compliant AOBRD.

**Question 6:** Must an AOBRD be capable of providing a hardcopy printout?

**Guidance:** No, the FMCSRs do not require AOBRDs to provide a hardcopy printout for an enforcement official. As long as the information made available for display on the AOBRD meets the requirements of § 395.15(i)(5), the driver and motor carrier are not required to provide additional RODS documentation to an enforcement official at the roadside. However, an enforcement official may request that additional information be provided by email, fax, or similar means within 48 hours for follow-up after the conclusion of the roadside inspection.

Issued on: April 28, 2014.

Anne S. Ferro,
Administrator.
