If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. II. Discussion

The NRC issues RISs to communicate with stakeholders on a broad range of matters. This may include communicating staff technical positions on matters that have not been communicated to, or are not broadly understood by, the nuclear industry. The NRC is issuing this draft RIS to inform addressees of the option to use indirect methods to determine the activity of H-3, C-14, Tc-99, and I-129 reported on the uniform waste manifest when the radionuclide is present at a concentration less than the lower limit of detection (LLD). Research indicates that the use of the LLD values as the standard concentration reported on the uniform waste manifest may be resulting in a significant over-estimation of the inventory of these four radionuclides in disposal facilities. Over-estimation of inventory could lead to premature loss of disposal system capacity (e.g., closure of disposal sites), whereas underestimation of inventory could lead to health and safety concerns.
