AGENCY: Nuclear Regulatory Commission.

ACTION: Draft regulatory issue summary; request for comment.

SUMMARY: The U.S. Nuclear Regulatory Commission (NRC) is seeking public comment on the draft regulatory issue summary (RIS), which addresses the reporting of H-3, C-14, Tc-99, and I-129 on the uniform waste manifest. The purpose of this draft RIS is to identify instances where licensees may use indirect methods to determine the activity of these radionuclides reported on the uniform manifest when the radionuclide is present at a concentration less than the lower limit of detection (LLD).

DATES: Submit comments by July 2, 2014. Comments received after this date will be considered if it is practical to do so, but the NRC is able to ensure consideration only for comments received before this date.

ADDRESSES: You may submit comments by any of the following methods (unless this document describes a different

method for submitting comments on a specific subject):

- Federal Rulemaking Web site: Go to <http://www.regulations.gov> and search for Docket ID NRC-2014-0116. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

II. Discussion

The NRC issues RISs to communicate with stakeholders on a broad range of matters. This may include communicating staff technical positions on matters that have not been communicated to, or are not broadly understood by, the nuclear industry. The NRC is issuing this draft RIS to inform addressees of the option to use indirect methods to determine the activity of H-3, C-14, Tc-99, and I-129 reported on the uniform waste manifest when the radionuclide is present at a concentration less than the lower limit of detection (LLD). Research indicates that the use of the LLD values as the standard concentration reported on the uniform waste manifest may be resulting in a significant over-estimation of the inventory of these four radionuclides in disposal facilities. Over-estimation of inventory could lead to premature loss of disposal system capacity (e.g., closure of disposal sites), whereas underestimation of inventory could lead to health and safety concerns.
