

This rule continues in effect the action that decreased the assessment rate established for the Committee and collected from handlers for the 2014–2015 and subsequent marketing years from \$0.10 to \$0.09 per pound of spearmint oil handled. The Committee unanimously recommended 2014–2015 expenditures of \$266,400 and an assessment rate of \$0.09. The assessment rate of \$0.09 is \$0.01 lower than the rate previously in effect. The quantity of assessable spearmint oil for the 2014–15 marketing year is estimated at 2,500,000 pounds. Thus, the \$0.09 rate should provide \$225,000 in assessment income. Income derived from handler assessments, along with interest income and funds from the Committee's monetary reserve will be adequate to cover the budgeted expenses. This action will allow the Committee to reduce its financial reserve while still providing adequate funding to meet program expenses.

This rule continues in effect the action that decreased the assessment obligation imposed on handlers. Assessments are applied uniformly on all handlers, and some of the costs may be passed on to producers. However, decreasing the assessment rate reduces the burden on handlers, and may reduce the burden on producers.

Additionally, the Committee's meeting was widely publicized throughout the Far West spearmint oil industry and all interested persons were invited to attend the meeting and participate in Committee deliberations on all issues. Like all Committee meetings, the February 19, 2014, meeting was a public meeting and all entities, both large and small, were able to express views on this issue.

In accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35), the order's information collection requirements have been previously approved by the Office of Management and Budget (OMB) and assigned OMB No. 0581–0178, Vegetable and Specialty Crops. No changes in those requirements as a result of this action are anticipated. Should any changes become necessary, they would be submitted to OMB for approval.

This action imposes no additional reporting or recordkeeping requirements on either small or large Far West spearmint oil handlers. As with all Federal marketing order programs, reports and forms are periodically reviewed to reduce information requirements and duplication by industry and public sector agencies.

USDA has not identified any relevant Federal rules that duplicate, overlap, or conflict with this rule.

Comments on the interim rule were required to be received on or before June 23, 2014. No comments were received. Therefore, for the reasons given in the interim rule, we are adopting the interim rule as a final rule, without change.

To view the interim rule, go to: <http://www.regulations.gov/#!documentDetail;D=AMS-FV-14-0027-0001>.

This action also affirms information contained in the interim rule concerning Executive Orders 12866, 13563, 12988, and 13175; the Paperwork Reduction Act (44 U.S.C. Chapter 35); and the E-Gov Act (44 U.S.C. 101).

After consideration of all relevant material presented, including the information and recommendation submitted by the Committee and other available information, it is found that finalizing the interim rule, without change, as published in the **Federal Register** (79 FR 22359, April 22, 2014) will tend to effectuate the declared policy of the Act.

[Docket No. FAA–2014–0067; Special Conditions No. 25–556–SC]

##### Special Conditions: Learjet Inc., Model LJ–200–1A10 Airplane; Composite Fuselage In-Flight Fire/Flammability Resistance

**AGENCY:** Federal Aviation Administration (FAA), DOT.

**ACTION:** Final special conditions.

**SUMMARY:** These special conditions are issued for the Learjet Inc. Model LJ–200–1A10 airplane. This airplane will have a novel or unusual design feature when compared to the state of technology envisioned in the airworthiness standards for transport category airplanes. The fuselage of the Model LJ–200–1A10 will be made of composite materials rather than conventional aluminum, which may affect fire propagation during an in-flight fire. The applicable airworthiness regulations do not contain adequate or appropriate safety standards for this design feature. These special conditions contain the additional safety standards that the Administrator considers necessary to establish a level of safety equivalent to that established by the existing airworthiness standards.

**DATES:** *Effective Date:* August 25, 2014.

**FOR FURTHER INFORMATION CONTACT:** Alan Sinclair, FAA, Airframe and Cabin Safety Branch, ANM–115, Transport Airplane Directorate, Aircraft Certification Service, 1601 Lind Avenue SW., Renton, Washington, 98057–3356; telephone 425–227–2195; facsimile 425–227–1232.

##### SUPPLEMENTARY INFORMATION:

##### Background

On February 9, 2009, Learjet Inc. applied for a type certificate for their new Model LJ–200–1A10 airplane (hereafter referred to as the “Model LJ–200”). The Model LJ–200 is a business class airplane powered by two high-bypass turbine engines with an estimated maximum takeoff weight of 35,550 pounds and an interior configuration for up to 10 passengers.

The Model LJ–200 is the first composite fuselage airplane design manufactured by Learjet Inc. A fuselage manufactured from composite material is considered a novel or unusual design with respect to existing regulations for this type of aircraft. The performance of aircraft consisting of a conventional
