

FEDERAL REGISTER

Vol. 79

Friday,

No. 163

August 22, 2014

Book 1 of 2 Books

Pages 49659–49852

OFFICE OF THE FEDERAL REGISTER

The **FEDERAL REGISTER** (ISSN 0097-6326) is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, Washington, DC 20408, under the Federal Register Act (44 U.S.C. Ch. 15) and the regulations of the Administrative Committee of the Federal Register (1 CFR Ch. I). The Superintendent of Documents, U.S. Government Printing Office, Washington, DC 20402 is the exclusive distributor of the official edition. Periodicals postage is paid at Washington, DC.

The **FEDERAL REGISTER** provides a uniform system for making available to the public regulations and legal notices issued by Federal agencies. These include Presidential proclamations and Executive Orders, Federal agency documents having general applicability and legal effect, documents required to be published by act of Congress, and other Federal agency documents of public interest.

Documents are on file for public inspection in the Office of the Federal Register the day before they are published, unless the issuing agency requests earlier filing. For a list of documents currently on file for public inspection, see www.ofr.gov.

The seal of the National Archives and Records Administration authenticates the **Federal Register** as the official serial publication established under the Federal Register Act. Under 44 U.S.C. 1507, the contents of the **Federal Register** shall be judicially noticed.

The **Federal Register** is published in paper and on 24x microfiche. It is also available online at no charge at www.fdsys.gov, a service of the U.S. Government Printing Office.

The online edition of the **Federal Register** is issued under the authority of the Administrative Committee of the Federal Register as the official legal equivalent of the paper and microfiche editions (44 U.S.C. 4101 and 1 CFR 5.10). It is updated by 6:00 a.m. each day the **Federal Register** is published and includes both text and graphics from Volume 59, 1 (January 2, 1994) forward. For more information, contact the GPO Customer Contact Center, U.S. Government Printing Office. Phone 202-512-1800 or 866-512-1800 (toll free). E-mail, gpocusthelp.com.

The annual subscription price for the **Federal Register** paper edition is \$749 plus postage, or \$808, plus postage, for a combined **Federal Register**, **Federal Register** Index and List of CFR Sections Affected (LSA) subscription; the microfiche edition of the **Federal Register** including the **Federal Register** Index and LSA is \$165, plus postage. Six month subscriptions are available for one-half the annual rate. The prevailing postal rates will be applied to orders according to the delivery method requested. The price of a single copy of the daily **Federal Register**, including postage, is based on the number of pages: \$11 for an issue containing less than 200 pages; \$22 for an issue containing 200 to 400 pages; and \$33 for an issue containing more than 400 pages. Single issues of the microfiche edition may be purchased for \$3 per copy, including postage. Remit check or money order, made payable to the Superintendent of Documents, or charge to your GPO Deposit Account, VISA, MasterCard, American Express, or Discover. Mail to: U.S. Government Printing Office—New Orders, P.O. Box 979050, St. Louis, MO 63197-9000; or call toll free 1-866-512-1800, DC area 202-512-1800; or go to the U.S. Government Online Bookstore site, see bookstore.gpo.gov.

There are no restrictions on the republication of material appearing in the **Federal Register**.

How To Cite This Publication: Use the volume number and the page number. Example: 77 FR 12345.

Postmaster: Send address changes to the Superintendent of Documents, Federal Register, U.S. Government Printing Office, Washington, DC 20402, along with the entire mailing label from the last issue received.

Single Family Housing Guaranteed Loan Program

AGENCIES: Rural Housing Service, Rural Business-Cooperative Service, Rural Utilities Service, and Farm Service Agency, USDA.

ACTION: Interim final rule; delay of effective date.

SUMMARY: On December 9, 2013, the Rural Housing Service (RHS) published an interim final rule concerning the streamlining and reengineering its Single Family Housing Guaranteed Loan Program. The effective date was listed as September 1, 2014 and is being deferred to December 1, 2014.

DATES: Effective on August 22, 2014, the effective date of the interim final rule published December 9, 2013 (78 FR 73928) is delayed from September 1, 2014 to December 1, 2014.

FOR FURTHER INFORMATION CONTACT: Joaquín Tremols, Director, Single Family Housing Guaranteed Loan Division, USDA, Rural Development, 1400 Independence Avenue SW., Room 2250, Stop 0784, Washington, DC 20250, telephone (202) 720-1465, Email: joaquin.tremols@wdc.usda.gov.

SUPPLEMENTARY INFORMATION: On December 9, 2013, the Rural Housing

Service (RHS) published an interim final rule concerning the streamlining and reengineering its Single Family Housing Guaranteed Loan Program. The effective date of September 1, 2014 is being deferred to December 1, 2014 to allow for adequate implementation of affected automated processes.

Dated: August 19, 2014.

Tony Hernandez,

Acting Under Secretary, Rural Development.

Dated: August 18, 2014.

Michael T. Scuse,

Under Secretary, Farm and Foreign Agricultural Services.

[Docket Number: 140626542-4542-01]

RIN 0607-AA52

Foreign Trade Regulations (FTR): Clarification on Uses of Electronic Export Information

AGENCY: Bureau of the Census, Commerce Department.

ACTION: Interim final rule.

SUMMARY: The U.S. Census Bureau issues this interim final rule to amend its regulations to reflect changes related to the implementation of the International Trade Data System (ITDS) and subsequent changes to the access to the electronic export information (EEI). The ITDS was established to eliminate redundant information requirements, efficiently regulate the flow of commerce and to effectively enforce laws and regulations relating to international trade by establishing a single portal system for the collection and distribution of standard electronic import and export data required by all participating federal agencies. Therefore, the Automated Export System (AES) will include export information collected under other federal agencies' authority, which is subject to those agencies' disclosure mandates. This rule clarifies the confidentiality provisions of the EEI and facilitates the legitimate sharing of

export data consistent with the goals for the ITDS.

DATES: *Effective Date:* This rule is effective August 22, 2014.

Comment Due Date: Comments on the interim rule should be submitted in writing to the addresses shown below on or before October 21, 2014 to be considered in the formation of the final rule.

ADDRESSES: Please direct all written comments on this interim final rule to the Chief, Foreign Trade Division, U.S. Census Bureau, Room 6K032, Washington, DC 20233-6010. You may also submit comments, identified by RIN number 0607-AA52 or by the eRulemaking docket number USBC-2014-0002, to the Federal e-Rulemaking Portal: <http://www.regulations.gov>. All comments received are part of the public record. No comments will be posted to <http://www.regulations.gov> for public viewing until after the comment period has closed. Comments will generally be posted without change. All Personal Identifying Information (for example, name and address) voluntarily submitted by the commenter may be publicly accessible. Do not submit Confidential Business Information or otherwise sensitive or protected information. The Census Bureau will accept anonymous comments (enter N/A in the required fields, if you wish to remain anonymous). You may submit attachments to electronic comments in Microsoft Word, Excel, WordPerfect, or Adobe PDF file formats only.

FOR FURTHER INFORMATION CONTACT: Dale C. Kelly, Chief, Foreign Trade Division, U.S. Census Bureau, Room 6K032, Washington, DC 20233-6010, by phone (301) 763-6937, by fax (301) 763-8835, or by email dale.c.kelly@census.gov.

SUPPLEMENTARY INFORMATION:

Background

The Census Bureau is responsible for collecting, compiling, and publishing export trade statistics for the United States under the provisions of Title 13, United States Code (U.S.C.), Chapter 9, Section 301. The Automated Export System (AES) is the primary instrument used for collecting export trade data, which are used by the Census Bureau for statistical purposes. Through the AES, the Census Bureau collects the Electronic Export Information (EEI), the electronic equivalent of the export data formerly collected on the Shipper's

Export Declaration, reported pursuant to Title 15, Code of Federal Regulations (CFR), Part 30. The EEI consists of data elements set forth in 15 CFR 30.6 for an export shipment, and includes information such as the exporter's name, address and identification number, and detailed information concerning the exported product. Traditionally, other federal agencies have used the EEI for export control purposes to detect and prevent the export of certain items by unauthorized parties or to unauthorized destinations or end users. The EEI is exempt from public disclosure unless the Secretary of Commerce determines under the provisions of Title 13, U.S.C., Chapter 9, Section 301(g) that such exemption would be contrary to the national interest.

The Security and Accountability For Every Port Act of 2006 (SAFE Port Act, Pub. L. 109-347) established the International Trade Data System (ITDS). Pursuant to the Section 405(d) of that Act, the purpose of the ITDS is to eliminate redundant information requirements, efficiently regulate the flow of commerce and to effectively enforce laws and regulations relating to international trade by establishing a single portal system for the collection and distribution of standard electronic import and export data required by all participating federal agencies. Therefore, the AES will include export information collected under other federal agencies' authority, which is subject to those agencies' disclosure mandates. Access and use of EEI by other federal agencies will also increase under the ITDS.

This rule clarifies the confidentiality provisions of the EEI by amending section 30.60 of the Foreign Trade Regulations. This revision will allow federal agencies with appropriate authority to access export data in the AES, and ensure consistency with the Executive Order of February 19, 2014, titled Streamlining the Export/Import Process for America's Businesses. The ultimate goal of this rule is to facilitate the legitimate sharing of export data consistent with the goals for the International Trade Data System (ITDS).

Program Requirements

The Census Bureau is amending the following section of the FTR:

- Revise § 30.60 to reflect changes related to the implementation of the International Trade Data System (ITDS) and subsequent changes to the access to Electronic Export Information (EEI).

Rulemaking Requirements

Administrative Procedure Act

The Census Bureau finds good cause pursuant to Title 5, United States Code (U.S.C.), 553(b)(3)(B) to waive prior notice and opportunity for public comment, as contrary to the public interest. With the implementation of the International Trade Data System (ITDS), the Automated Export System (AES) will capture export information collected and used by other federal agencies under their authorities. The Census Bureau is undertaking this amendment in order to accurately reflect the authorized uses of electronic export information (EEI) by other federal agencies resulting from the ITDS. In particular, this rule amends section 30.60 of the Foreign Trade Regulations to help ensure that federal agencies with appropriate authority can access export data in the AES, which access will help ensure the efficient and timely flow of exports as well as protect U.S. interests in export controls and enforcement. Additionally, the rule complies with the directives and timelines established by Executive Order of February 19, 2014, titled Streamlining the Export/Import Process for America's Businesses. Allowing for a period of notice and comment may delay exports and make export control more difficult, both of which are contrary to the public interest.

Additionally, and for similar reasons, the Census Bureau finds good cause pursuant to 5 U.S.C. 553(d) to waive the 30-day delay in effectiveness for this rule. This rule imposes no additional requirements or obligations on any member of the public, and so delaying its effectiveness is unnecessary. Moreover, if this rule were delayed, federal agencies would not have direct access to export data in a timely manner, which could delay or impede the flow of exports, as well as hamper critical export control and enforcement activities. Therefore, the Census Bureau has determined that it will make this rule effective on August 22, 2014.

Regulatory Flexibility Act

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration (SBA) that this rule will not have a significant impact on a substantial number of small entities.

The purpose and goal of this rule are explained in the preamble, and are not repeated here. This rule does not mandate any new filing requirements and does not directly impact any small or large entities. Rather, this rule's

impact is largely on federal entities. Indeed, to the extent they will be indirectly impacted by this rule, small entities will see reduced burdens for exports because this rule creates a "single window" through which exporters can comply with export laws and regulations. Therefore, no Regulatory Flexibility analysis is required and none has been prepared.

Executive Orders

This rule has been determined to be not significant for purposes of Executive Order 12866. It has been determined that this rule does not contain policies with federalism implications as that term is defined under Executive Order 13132.

Paperwork Reduction Act

Notwithstanding any other provision of law, no person is required to respond to, nor shall a person be subject to a penalty for failure to comply with, a collection of information subject to the requirements of the Paperwork Reduction Act (PRA), unless that collection of information displays a current, valid Office of Management and Budget (OMB) control number. This rule, however, does not contain any information collection subject to the PRA.

List of Subjects in 15 CFR Part 30

Economic statistics, Exports, Foreign trade, Reporting and recordkeeping requirements.

For the reasons set out in the preamble, 15 CFR part 30 is amended as follows:

PART 30—FOREIGN TRADE REGULATIONS

- 1. The authority citation for Part 30 continues to read as follows:

Authority: 5 U.S.C. 301; 13 U.S.C. 301-307; Reorganization Plan 5 of 1990 (3 CFR 1949-1953 Comp., p. 1004); Department of Commerce Organization Order No. 35-2A, July 22, 1987, as amended, and No. 35-2B, December 20, 1996, as amended; and Pub. L. 107-228, 116 Stat. 1350.

- 2. Revise § 30.60 to read as follows:

§ 30.60 Confidentiality of Electronic Export Information.

(a) The Electronic Export Information (EEI) collected and accessed by the Census Bureau under 15 CFR Part 30 is confidential, to be used solely for official purposes as authorized by the Secretary of Commerce. The collection of EEI by the Department of Commerce has been approved by the Office of Management and Budget (OMB). The information collected is used by the

Census Bureau for statistical purposes. In addition, EEI is used by federal government agencies, such as the Department of State, Immigration and Customs Enforcement, and Customs and Border Protection (CBP) for export control; by other federal government agencies such as the Bureau of Economic Analysis, Bureau of Labor Statistics, and Bureau of Transportation Statistics for statistical purposes; and by other federal agencies as authorized by the Secretary of Commerce or the Census Bureau Director consistent with the agencies' statutory or legal authorities as provided for in paragraph (e) of this section. Absent such authorization, information collected pursuant to this Part shall not be disclosed to anyone by any officer, employee, contractor, agent of the federal government or other parties with access to the EEI other than to the USPPPI or the authorized agent of the USPPPI. Such disclosure shall be limited to that information provided by each party pursuant to this Part.

(b) *Viewing and using EEI for official purposes.* (1) The EEI may be viewed and used by federal agencies authorized to use export data for official purposes as defined to include, but not limited to:

(i) Improving compliance with U.S. export laws and regulations;

(ii) Detecting and preventing violations of export, census, customs, homeland security, national resource and other laws, regulations and treaties;

(iii) Analysis to assess threats to U.S. and international security such as money laundering, and other potential violations of U.S. and foreign criminal laws;

(iv) Enforcement of U.S. export-related laws and regulations;

(v) Investigation and prosecution of possible violations of U.S. export-related laws and regulations;

(vi) Proof of export for enforcement of laws relating to exemption from or refund, drawback or other return of taxes, duties, fees or other charges;

(vii) Analyzing the impact of proposed and implemented trade agreements and fulfilling U.S. obligations under such agreements; and

(viii) Preparation of statistics.

(2) The Census Bureau may provide the EEI to the USPPPI or authorized agent, for compliance and audit purposes. Such disclosure shall be limited to that information provided to the AES by the USPPPI or the authorized agent.

(c) *Supplying EEI for nonofficial purposes.* The official report of the EEI submitted to the U.S. government shall not be disclosed by the USPPPI, the authorized agent, or representative of

the USPPPI for "nonofficial purposes," either in whole or in part, or in any form including but not limited to electronic transmission, paper printout, or certified reproduction. "Nonofficial purposes" are defined to include but not limited to providing the official EEI:

(1) In support of claims for exemption from Federal or state taxation, except as related to paragraph (b)(1)(vi) of this section;

(2) To the U.S. Internal Revenue Service for purposes not related to export control or compliance;

(3) To state and local government agencies, and nongovernmental entities or individuals for any purpose; and

(4) To foreign entities or foreign governments for any purpose.

(d) Ocean manifest data can be made public under provision of CBP regulations. For information appearing on the outward manifest, 19 CFR 103.31 allows a shipper (or their authorized employee or official) to submit a certification for confidential treatment of the shipper's name and address.

(e) *Determination by the Secretary of Commerce.* Under 13 U.S.C. 301(g), the EEI collected and accessed by the Census Bureau is exempt from public disclosure unless the Secretary or delegate determines that such exemption would be contrary to the national interest. The Secretary or delegate may make such information available, if he or she determines it is in the national interest, taking such safeguards and precautions to limit dissemination as deemed appropriate under the circumstances. In determining whether it is contrary to the national interest to apply the exemption, the maintenance of confidentiality and national security shall be considered as important elements of national interest. The unauthorized disclosure of confidential EEI granted under a National Interest Determination renders such persons subject to the civil penalties provided for in Subpart H of this part.

(f) *Penalties.* Disclosure of confidential EEI by any officer, employee, contractor, or agent of the federal government, except as provided for in paragraphs (b) and (e) of this section renders such persons subject to the civil penalties.

Dated: August 15, 2014.

John H. Thompson,

Director, Bureau of the Census.

BILLING CODE 3510-07-P

DEPARTMENT OF JUSTICE

Drug Enforcement Administration

21 CFR Part 1308

[Docket No. DEA-389]

Schedules of Controlled Substances: Rescheduling of Hydrocodone Combination Products From Schedule III to Schedule II

AGENCY: Drug Enforcement Administration, Department of Justice.

ACTION: Final rule.

SUMMARY: With the issuance of this final rule, the Administrator of the Drug Enforcement Administration reschedules hydrocodone combination products from schedule III to schedule II of the Controlled Substances Act. This scheduling action is pursuant to the Controlled Substances Act which requires that such actions be made on the record after opportunity for a hearing through formal rulemaking. This action imposes the regulatory controls and administrative, civil, and criminal sanctions applicable to schedule II controlled substances on persons who handle (manufacture, distribute, dispense, import, export, engage in research, conduct instructional activities with, conduct chemical analysis with, or possess) or propose to handle hydrocodone combination products.

DATES: This rule is effective October 6, 2014.

FOR FURTHER INFORMATION CONTACT: Imelda L. Paredes, Office of Diversion Control, Drug Enforcement Administration; Mailing Address: 8701 Morrisette Drive, Springfield, Virginia 22152, Telephone: (202) 598-6812.

SUPPLEMENTARY INFORMATION:

- V. Scheduling Conclusion
- VI. Determination of Appropriate Schedule
- VII. Requirements for Handling HCPs
- VIII. Regulatory Analyses

I. Legal Authority

The DEA implements and enforces titles II and III of the Comprehensive Drug Abuse Prevention and Control Act of 1970, as amended. Titles II and III are referred to as the “Controlled Substances Act” and the “Controlled Substances Import and Export Act,” respectively, and are collectively referred to as the “Controlled Substances Act” or the “CSA” for the purpose of this action. 21 U.S.C. 801–971. The DEA publishes the implementing regulations for these statutes in title 21 of the Code of Federal Regulations (CFR), parts 1300 to 1321. The CSA and its implementing regulations are designed to prevent, detect, and eliminate the diversion of controlled substances and listed chemicals into the illicit market while providing for the legitimate medical, scientific, research, and industrial needs of the United States. Controlled substances have the potential for abuse and dependence and are controlled to protect the public health and safety.

Under the CSA, every controlled substance is classified into one of five schedules based upon its potential for abuse, currently accepted medical use in treatment in the United States, and the degree of dependence the drug or other substance may cause. 21 U.S.C. 812. The initial schedules of controlled substances established by Congress are found at 21 U.S.C. 812(c), and the current list of all scheduled substances is published at 21 CFR part 1308. 21 U.S.C. 812(a).

Pursuant to 21 U.S.C. 811(a)(1), the Attorney General may, by rule, “add to such a schedule or transfer between such schedules any drug or other substance if he (A) finds that such drug or other substance has a potential for abuse, and (B) makes with respect to such drug or other substance the findings prescribed by [21 U.S.C. 812(b)] for the schedule in which such drug is to be placed * * *.” The Attorney General has delegated this scheduling authority to the Administrator of the DEA. 28 CFR 0.100(b).

The Administrator may initiate the scheduling of any drug or other substance (1) on her own motion; (2) at the request of the Secretary of the Department of Health and Human Services (HHS); or (3) on the petition of

any interested party. 21 U.S.C. 811(a). This action was initiated by a petition to reschedule hydrocodone combination products (HCPs)¹ from schedule III to schedule II of the CSA, and is supported by, *inter alia*, a recommendation from the Assistant Secretary for Health of the HHS² and an evaluation of all relevant data by the DEA. This final action imposes the regulatory controls and administrative, civil, and criminal sanctions of schedule II controlled substances on any person who handles, or proposes to handle, HCPs.

II. Background

Hydrocodone was listed in schedule II of the CSA upon the enactment of the CSA in 1971. Public Law 91–513, 84 Stat. 1236, sec. 202(c), schedule II, paragraph (a), clause (1) (codified at 21 U.S.C. 812(c)); initially codified in DEA regulations at 21 CFR 308.12(b)(1)(x) (36 FR 7776, April 24, 1971) (currently codified at 21 CFR 1308.12(b)(1)(vi)). At that time, hydrocodone was listed in schedule III of the CSA when formulated with specified amounts of an isoquinoline alkaloid of opium or one or more therapeutically active nonnarcotic ingredients. Pub. L. 91–513, 84 Stat. 1236, sec. 202(c), schedule III, paragraph (d), clauses (3) and (4) (codified at 21 U.S.C. 812(c)); initially codified at 21 CFR 308.13(e) (3) and (4) (36 FR 7776, April 24, 1971) (currently codified at 21 CFR 1308.13(e)(1) (iii) and (iv)).³ Any other hydrocodone single-entity products or combinations of hydrocodone with other substances outside the range of specified doses are listed in schedule II of the CSA.⁴

¹ Hydrocodone combination products (HCPs) are pharmaceuticals containing specified doses of hydrocodone in combination with other drugs in specified amounts. These products are approved for marketing for the treatment of pain and for cough suppression.

² As discussed in a memorandum of understanding entered into by the Food and Drug Administration (FDA), and the National Institute on Drug Abuse (NIDA), the FDA acts as the lead agency within the HHS in carrying out the Secretary’s scheduling responsibilities under the CSA, with the concurrence of NIDA. 50 FR 9518, Mar. 8, 1985. The Secretary of the HHS has delegated to the Assistant Secretary for Health of the HHS the authority to make domestic drug scheduling recommendations. 58 FR 35460, July 1, 1993.

³ Specifically: (iii) “Not more than 300 milligrams of dihydrocodeinone (hydrocodone) per 100 milliliters or not more than 15 milligrams per dosage unit, with a fourfold or greater quantity of an isoquinoline alkaloid of opium;” (iv) “Not more than 300 milligrams of dihydrocodeinone (hydrocodone) per 100 milliliters or not more than 15 milligrams per dosage unit, with one or more active nonnarcotic ingredients in recognized therapeutic amounts”

⁴ In the United States there are currently no approved, marketed, products containing hydrocodone in combination with other active ingredients that fall outside schedule III of the CSA. Further, until recently, there were no approved

III. Determination To Transfer Hydrocodone Combination Products (HCPs) to Schedule II

Pursuant to 21 U.S.C. 811(a), proceedings to add a drug or substance to those controlled under the CSA, or to transfer a drug between schedules, may be initiated on the petition of any interested party. The DEA received a petition requesting that HCPs be controlled in schedule II of the CSA. In response, in 2004, the DEA submitted a request to the HHS to provide the DEA with a scientific and medical evaluation of available information and a scheduling recommendation for HCPs, pursuant to 21 U.S.C. 811 (b) and (c). In 2008, the HHS provided to the DEA its recommendation that HCPs remain controlled in schedule III of the CSA. In response, in 2009, the DEA requested that the HHS re-evaluate their data and provide another scientific and medical evaluation and scheduling recommendation based on additional data and analysis.

On July 9, 2012, President Obama signed the Food and Drug Administration Safety and Innovation Act (Pub. L. 112–144, 126 Stat. 993) (FDASIA). Section 1139 of the FDASIA directed the Food and Drug Administration (FDA) to hold a public meeting to “solicit advice and recommendations” pertaining to the scientific and medical evaluation in connection with its scheduling recommendation to the DEA regarding drug products containing hydrocodone, combined with other analgesics or as an antitussive. Additionally, the Secretary was required to solicit stakeholder input “regarding the health benefits and risks, including the potential for abuse” of HCPs “and the impact of up-scheduling these products.” Accordingly, on January 24 and 25, 2013, the FDA held a public Drug Safety and Risk Management Advisory Committee (DSaRM) meeting, at which the DEA made a presentation.⁵ The DSaRM Committee included members with scientific and medical expertise in the subject of opioid abuse, and a patient representative. Members included

hydrocodone single-entity schedule II products. In October 2013 the FDA approved Zohydro™ ER, a single-entity, extended release schedule II product. Zohydro™ ER was launched on March 3, 2014. Accordingly, all of the historical data regarding hydrocodone from different national and regional databases that support this rule should refer to HCPs only, regardless of whether the database utilizes the term “hydrocodone” or “hydrocodone combination products.”

⁵ The DEA presentation is available at <http://www.fda.gov/downloads/advisorycommittees/committeesmeetingmaterials/drugs/drugsafetyandriskmanagementadvisorycommittee/ucm346941.pdf>.

representatives from the National Institute on Drug Abuse (NIDA) and the Centers for Disease Control (CDC). There was also an opportunity for the public to provide comment. The DSaRM voted 19 to 10 in favor of recommending that HCPs be placed into schedule II. According to the FDA, 768 comments were submitted to the FDA by patients, patient groups, advocacy groups, and professional societies.

Upon evaluating the scientific and medical evidence, along with the above considerations mandated by the FDASIA, the HHS on December 16, 2013, submitted to the Administrator of the DEA its scientific and medical evaluation entitled, "Basis for the Recommendation to Place Hydrocodone Combination Products in Schedule II of the Controlled Substances Act." Pursuant to 21 U.S.C. 811(b), this document contained an eight-factor analysis of the abuse potential of HCPs, along with the HHS's recommendation to control HCPs in schedule II of the CSA.

The HHS stated that the comments received during the open public hearing and submitted to the docket, and the discussion of the DSaRM members of the FDA DSaRM meeting provided support for its conclusion that: (1) Individuals are taking HCPs in amounts sufficient to create a hazard to their health or to the safety of other individuals or to the community; (2) there is significant diversion of HCPs; and (3) individuals are taking HCPs on their own initiative rather than on the basis of medical advice from a practitioner licensed by law to administer such drugs. The HHS stated that it gave careful consideration to the fact that the members of the DSaRM voted 19 to 10 in favor of rescheduling HCPs from schedule III to schedule II under the CSA. The HHS considered the increasing trends, the public comments, the recommendation of the DSaRM, the health benefits and risks, and the information available about the impact of rescheduling, and concluded that HCPs have high potential for abuse.

After a review of the available data, including the scientific and medical evaluation and the scheduling recommendation from the HHS, the Administrator of the DEA published in the **Federal Register** a notice of proposed rulemaking (NPRM) entitled "Schedules of Controlled Substances: Rescheduling of Hydrocodone Combination Products from Schedule III to Schedule II" which proposed to reschedule HCPs from schedule III to schedule II of the CSA. 79 FR 11037, Feb. 27, 2014. Both the DEA and HHS eight-factor analyses, as well as the

DEA's Economic Impact Analysis (EIA), were made available in their entirety in the public docket for this rule (Docket No. DEA-389) and are available at <http://www.regulations.gov/#!docketDetail;D=DEA-2014-0005> under "Supporting and Related Material." The proposed rule provided an opportunity for interested persons to file a request for hearing in accordance with DEA regulations by March 31, 2014. No requests for such a hearing were received by the DEA. The NPRM also provided an opportunity for interested persons to submit written comments on the proposal on or before April 28, 2014. The DEA specifically solicited comments on the economic impacts of rescheduling with a request that commenters describe the specific nature of any impact on small entities and provide empirical data to illustrate the extent of such impact.

IV. Comments Received

The DEA received 573 comments on the proposed rule to reschedule HCPs. Fifty-two percent (52%) (298 comments) supported, or supported with qualification, controlling HCPs in schedule II of the CSA. Forty-one percent (41%) (235 comments) opposed rescheduling HCPs into schedule II. Seven percent (7%) (40 comments) did not take a definitive position regarding rescheduling of HCPs.

Comments were submitted by a variety of individuals, including among others: Federal and State Government officials, manufacturers, distributors, pharmacies, surgeons, emergency physicians, dentists, physician assistants, nurse practitioners, pharmacists and pharmacy students, ultimate users of HCPs, and members of the general public.⁶⁷ The DEA also received comments from a number of national and regional trade associations with memberships comprised of manufacturers and distributors, pharmacists, pharmacies, physicians, pain specialists, doctors of optometry, physician assistants, nurse practitioners, and long term care facilities (LTCFs). In addition, the DEA received comments from patient advocacy groups. The 5 commenter categories with the most submissions were physicians (13%; 73

comments); mid-level practitioners⁸ (5%; 31 comments); pharmacists and pharmacy students (21%; 122 comments); the general public (44%; 250 comments); and ultimate users (6%; 35 comments).

As discussed above, 52% of all commenters (298 of 573 comments) supported, or supported with qualification, controlling HCPs in schedule II of the CSA. The majority of those supporting the rule were members of the general public and physicians. Comments submitted by the general public comprised 62% of the total 298 comments that supported, or supported with qualification, the rescheduling. Seventy-four percent (74%) (184 of 250 comments) of all comments submitted by the general public were in support, or supported with qualification, the rescheduling. Comments by physicians comprised 14% of the total 298 comments that supported or supported with qualification rescheduling. Fifty-six percent (56%) (41 of 73 comments) of all comments submitted by physicians were in support, or supported with qualification, rescheduling.

Forty-one percent (41%) of commenters (235 of 573 comments) opposed the proposal to reschedule HCPs from schedule III to schedule II of the CSA. The majority of those opposed to rescheduling HCPs were pharmacists, pharmacy students, and ultimate users. Pharmacists and pharmacy students comprised 31% of the total 235 comments submitted in opposition to the rule. Sixty percent (60%) (122 comments) of all comments submitted by pharmacists and pharmacy students were in opposition to the rule. Comments from ultimate users comprised 14% of the total 235 comments in opposition to the rule. Ninety-one percent (91%) (32 of 35 comments) of all comments submitted by ultimate users were in opposition to rescheduling.

Further discussions of these comments are included below.

A. Support of the Proposed Rule

Two hundred ninety-eight commenters (52%) supported, or supported with qualification, controlling HCPs in schedule II of the CSA. Forty-one percent (41%) of commenters opposed controlling HCPs in schedule II, and 7% of commenters

⁶The term "ultimate user" means a person who has lawfully obtained, and who possesses, a controlled substance for his own use or for the use of a member of his household or for an animal owned by him or by a member of his household. 21 U.S.C. 802(27).

⁷Comments from the "general public" are distinguished from those submitted by "ultimate users" when the commenter did not specifically indicate in their comment that they personally use HCPs.

⁸The term "mid-level practitioner" means an individual practitioner, other than a physician, dentist, veterinarian, or podiatrist, who is licensed, registered, or otherwise permitted by the United States or the jurisdiction in which he/she practices, to dispense a controlled substance in the course of professional practice. 21 CFR 1300.01(b).

did not have a clearly defined position either in support or in opposition to the rescheduling. The majority of those supporting the rule were members of the general public (62%) and physicians (14%), with 74% of comments from the general public supporting, or supporting with qualification, and 56% of comments from physicians supporting, or supporting with qualification, making HCPs schedule II controlled substances. Manufacturers, pharmacists, mid-level practitioners, pharmacy students, and trade associations also expressed support for the rule. Of all comments submitted, in support and opposition, 40% of pharmacists, 9% of ultimate users, and 78% of the general public were in support.

The State Attorney General and a U.S. Senator from the State with last year's highest per capita rate of prescription drug overdose in the nation wrote in strong support of rescheduling HCPs. The State Attorney General wrote that, "This reclassification is not only justified given the high abuse and addiction potential of hydrocodone prescription painkillers * * *, it is necessary to combat the drug abuse epidemic that is destroying so many [] communities. I urge you to proceed with your rulemaking without delay. The abuse of hydrocodone is an urgent problem that necessitates urgent action." The U.S. Senator wrote that, "rescheduling hydrocodone combination drugs would be a tremendous step forward in the fight to curb the prescription drug abuse epidemic that has ravaged * * * our country. It will help prevent these highly addictive drugs from getting into the wrong hands and devastating families and communities * * *. I urge the DEA to move quickly in finalizing its regulations so that we are able to save hundreds of thousands of lives."

Two U.S. Senators from two other States, wrote a joint comment in support of rescheduling, stating that: "As members of the Judiciary Committee and senators from states hit particularly hard by the opioid epidemic, we are well aware of the alarming rates of diversion and prescription drug abuse," and "we fully support DEA's efforts to combat this nationwide public health crisis." All three Senators expressed their desire that patients maintain access to legitimate care.

A major component of the rescheduling of HCPs was to evaluate their abuse potential as required under 21 U.S.C. 812(b)(2). Many commenters indicated support for controlling HCPs in schedule II based on the scientific evidence demonstrating the high abuse potential of HCPs, evidence that HCPs

may lead to severe psychological or physical dependence, history and current pattern of abuse, significance of abuse, and risk to the public health and safety. Of the total 47 commenters who referenced the scientific, medical, and epidemiological data that was used to support the statutory requirement under 21 U.S.C. 812(b)(2) for control of HCPs in schedule II of the CSA, 29 agreed with the data used to support control of HCPs in schedule II. Nineteen commenters specifically discussed the eight-factor analysis that was conducted in support of rescheduling HCPs into schedule II. Ten of those 19 commenters were in agreement with the DEA's analysis. Nine of the commenters who cited the DEA's eight-factor analysis indicated that the presented evidence was congruent with the requirements for placing a drug or other substance into schedule II of the CSA. (One commenter, while in agreement with the conclusion of the eight-factor analysis, did not favor rescheduling HCPs.)

Commenters generally agreed that there is psychological and physical dependence associated with HCPs that support placement into schedule II. For example, one commenter stated that rescheduling HCPs from schedule III to schedule II "would be in the best interest of the general public" because he has personally witnessed the increase in abuse of prescription pain medication over the course of his 45-year career as a pharmacist. Additional supportive comments included that the mechanism of action of hydrocodone is identical to oxycodone and morphine, both in schedule II as combination and single-entity products. Some commenters indicated that lower doses of hydrocodone in HCPs do not lower abuse and therefore agreed with the transfer to schedule II. Other commenters mentioned that HCPs are metabolized to hydromorphone, a schedule II opioid, and also have similar mechanisms of action to other schedule II opioids including oxycodone, morphine, and fentanyl, suggesting that abuse potential would be comparable. Some of the commenters indicated that HCPs are more likely to be abused due to their greater availability.

Many of the commenters cited one of their primary reasons for supporting the rule was that it would lead to tighter regulation of HCP prescriptions. For example, one commenter stated: "Hydrocodone combination products should not be available with multiple refills on a single prescription and need to be prescribed more cautiously." Similarly, another commenter stated: "Rescheduling HCPs [*sic*] would directly address the problem of 'leftover'

pills in parents [*sic*] medicine cabinets, and would keep kids safe. Furthermore, lowering the quantity a doctor can prescribe will decrease the number of drugs that are sold on the street, which will in turn decrease crime and decrease HCP abuse overtime [*sic*]."

Many of the commenters wrote of their personal experiences with loved ones who suffer or had suffered with abuse and addiction, including many youths and young adults who have tragically died as a result of HCPs or other prescription opioids. The commenters wrote that the path to abuse and addiction was varied—sometimes beginning with a practitioner prescribing HCPs, and other times by recreational use of pills that were available for them to access as a result of practitioner overprescribing. Many of these commenters believe that controlling HCPs as a schedule II controlled substance will impose controls necessary to prevent the abuse and diversion of HCPs.

DEA Response: The DEA appreciates the comments in support of this rulemaking.

B. Request for Extended Comment Period

The DEA received two comments requesting that the DEA reopen the period for public comment. One of the commenters specifically requested that the comment period be reopened for a minimum of 180 days. The stated justification of one of the commenters was that "[t]he current period is utterly inadequate to large segments of the population who have had no meaningful notice, have extremely limited internet access in small time periods through use of computers at public libraries and are particularly at risk from harm if this rule is adopted." Both requests for extended comment periods were accompanied by meaningful comment along with the request for extension.

DEA response: The Administrative Procedure Act does not set a minimum length of time for public comment. 21 U.S.C. 553; *Phillips Petroleum Co. v. U.S. E.P.A.*, 803 F.2d 545, 558–59 (10th Cir. 1986) (upholding the EPA's refusal to extend the 45-day comment period on an NPRM, noting that courts have uniformly upheld comment periods of 45 days or less) (internal citations omitted). However, both Executive Orders 12866 and 13563 provide that agencies should afford the public a comment period of at least 60 days. The DEA published in the **Federal Register** the NPRM proposing to reschedule HCPs into schedule II of the CSA on February 27, 2014. 79 FR 11037. The

DEA provided 60 days for interested persons to submit written comments (either online or through the mail) on the proposal. The comment period closed April 28, 2014. Seven hundred twenty-four submissions on the associated docket at <http://www.regulations.gov> were submitted by the close of the comment period. Several paper submissions duplicating electronic submissions were received via the mail as well. (The 724 number differs from the finalized number of 573 comments received because, as alluded to above, many commenters submitted multiple, duplicate submissions. Multiple submissions of exactly identical comments submitted by the same person or entity are considered by the DEA as only a single, submitted comment.) Based on the following considerations, the DEA declines to reopen the period for additional public comment.

The **Federal Register** is published daily, Monday through Friday, except official holidays, by the Office of the Federal Register, National Archives and Records Administration, under the **Federal Register Act** (44 U.S.C. chapter 15). Section 7 of the **Federal Register Act** (44 U.S.C. 307) provides that publication in the **Federal Register** constitutes constructive notice to persons subject thereto or affected thereby. The **Federal Register** is published in paper and on microfiche. It is also available online at no charge at <http://www.gpo.gov/fdsys/>.

The NPRM was also available on <http://www.regulations.gov> to enable the public to conveniently access the proposal and the supporting materials. Of additional consideration, on the same day as publication in the **Federal Register**, the DEA issued a press release stating that the Administration had published in the **Federal Register** an NPRM to move HCPs from schedule III to schedule II (available at <http://www.justice.gov/dea/divisions/hq/2014/hq022714.shtml>). The press release advised individuals where a complete copy of the NPRM could be obtained as well as how they could submit comments in response to the proposal. The DEA accepted written comments submitted either through Regulations.gov or through the mail.

In accordance with the Administrative Procedure Act, the DEA's published NPRM included "the terms or substance of the proposed rule" and "a description of the subject and issues involved." 5 U.S.C. 553(b)(3). The quality and quantity of the responses received in response to the published NPRM, as well as the variety of respondents, including those advocating

on behalf of persons residing in LTCFs and other populations that may potentially feel distributional regulatory impacts, demonstrate to the DEA that there has been an adequate opportunity for meaningful public participation by interested persons in accordance with the Administrative Procedure Act. 5 U.S.C. 553(c); *Idaho Farm Bureau Fed'n v. Babbitt*, 58 F.3d 1392, 1404 (9th Cir. 1995) (holding that comments discussing the proposed action and supporting data were evidence that the public had obtained and reviewed the information and thus adequate opportunity for public comment had been given).

The DEA notes that the submission by a nurse located in Australia shows that the published NPRM was widely read and reviewed. In addition, those commenters requesting additional time for comment accompanied their request for an extension with substantial comment on the rule. This demonstrates to the DEA that adequate notice and opportunity for meaningful comment was provided by the DEA on this rulemaking.

C. Clarification of Affected Drugs and Substances

The DEA received some comments, though limited in number, indicating it would be helpful to provide detailed discussion of what products are affected by this rule. One commenter specifically requested clarification as to whether the action would apply to cough syrups that contain hydrocodone. The second commenter requested the DEA not change the schedule of Zohydro™ ER. The third commenter requested that Zogenix, the manufacturer of Zohydro™ ER, be "allow[ed] to bring their new drug to market."

DEA response: This rulemaking action affects hydrocodone combination products, which are those substances described in 21 CFR 1308.13(e)(1) (iii) and (iv). All other products containing hydrocodone are already controlled in schedule II of the CSA and are not impacted by this action. Zohydro™ ER does not meet the definition of either 21 CFR 1308.13(e)(1) (iii) or (iv); it is currently a schedule II controlled substance under 21 CFR 1308.12(b)(1)(vi) and is not affected by this action.

Other than Zohydro™ ER, all pharmaceuticals containing hydrocodone currently on the market in the United States are HCPs and are subject to this rulemaking. Hydrocodone is the most frequently prescribed opioid in the United States with nearly 137 million prescriptions for HCPs dispensed in 2013. IMS Health, National

Sales Perspective™ (NSP). There are several hundred brand name and generic hydrocodone products marketed with the most frequently prescribed combination being hydrocodone and acetaminophen (e.g., Vicodin®, Lortab®). Currently marketed HCPs approved as cough suppressants include Hycodan®, Mycodone®, Tussionex®, Pennkinetic®, Tussiong®, and several generics.

D. Opposition to the Proposed Rule

Two hundred thirty-five commenters (41% of all commenters) opposed the proposal to reschedule HCPs from schedule III to schedule II of the CSA. Many comments submitted in opposition came from pharmacists, including pharmacy school students/interns (31%); the general public (23%); and ultimate users (14%). Of all comments submitted, in support and in opposition, 60% of pharmacists were opposed; 22% of the general public were opposed; and 91% of ultimate users were opposed. These commenters opposed the rescheduling HCPs for a variety of reasons. The comments in opposition can be grouped in the following general categories: (1) Concerns over the DEA's authority to reschedule HCPs; (2) concerns over prescribing practices; (3) concerns regarding patient access to medicine; (4) concerns regarding impacts at LTCFs; (5) concerns that rescheduling HCPs will not prevent abuse or diversion; (6) concerns that rescheduling HCPs will increase provider and pharmacist workload; (7) concerns regarding economic impacts to manufacturers, distributors, pharmacies, physicians, and ultimate users; (8) concerns that alternatives to rescheduling had not been explored and/or implemented first; and (9) concerns about the amount of time to comply with the rule. Each of these general categories is addressed below.

1. Authority To Control Drugs or Substances

a. DEA's Authority To Schedule Substances

One commenter questioned the DEA's general authority to schedule drugs.

DEA response: Recognizing the need for a high level of scrutiny over controlled substances due to their potential for abuse and danger to the public health and safety, Congress established a closed system of distribution for all controlled substances with the passage of the Comprehensive Drug Abuse Prevention and Control Act of 1970. See H.R. Rep. No. 91-1444, 1970 U.S.C.C.A.N. at 4566. The DEA

implements and enforces titles II and III of the Comprehensive Drug Abuse Prevention and Control Act of 1970, as amended. 28 CFR 0.100. Pursuant to 21 U.S.C. 811(a)(1), the Attorney General may, by rule, “add to such a schedule or transfer between such schedules any drug or other substance if he (A) finds that such drug or other substance has a potential for abuse, and (B) makes with respect to such drug or other substance the findings prescribed by [21 U.S.C. 812(b)] for the schedule in which such drug is to be placed * * *.” Pursuant to 28 CFR 0.100(b), the Attorney General has delegated this scheduling authority to the Administrator of the DEA. The DEA’s authority to implement and enforce the CSA, including adding to the schedules, has been repeatedly recognized and upheld in the Courts. *E.g., U.S. v. Alexander*, C.A.9 (Cal.) 1982, 673 F.2d 287 (1982), *cert. denied*, 459 U.S. 876 (Congress’ delegation to Attorney General of authority to reclassify controlled substances is constitutional); *U.S. v. Roy*, C.A.7 (Ill.) 1978, 574 F.2d 386, *cert. denied*, 439 U.S. 857 (finding no merit to the claim that the addition and reclassification of amobarbital and phenmetrazine as schedule II controlled substances by the Attorney General was an unconstitutional delegation of authority under separation of powers doctrine); *U.S. v. Kinder*, C.A.5 (Tex.) 1991, 946 F.2d 362, *cert. denied*, 503 U.S. 987, *cert. denied*, 504 U.S. 946, *rehearing denied*, 505 U.S. 1238 (Attorney General followed proper procedures in reclassifying methamphetamine as schedule II controlled substance, pursuant to the CSA; Attorney General properly delegated his authority to the Director of the Bureau of Narcotics and Dangerous Drugs (BNDD) who then reclassified methamphetamine).

b. Conflict With Other Federal Law

One commenter questioned whether the rescheduling action would have illegal discriminatory effects, and “violate laws against disability and age discrimination.” This same commenter also asserted without premise that the rescheduling action could potentially conflict with parts of the Affordable Care Act and “deprivation of rights under color of authority.”

DEA response: Executive Order 12866 of September 30, 1993, “Regulatory Planning and Review,” and Executive Order 13563 of January 18, 2011, “Improving Regulation and Regulatory Review,” direct Federal agencies to assess costs and benefits of available regulatory alternatives and, if the regulation is necessary, to select regulatory approaches that maximize

net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Paragraph (b)(1) of section 1 of Executive Order 12866 specifically directs Federal agencies to “avoid regulations that are inconsistent, incompatible, or duplicative with its other regulations or those of other Federal agencies.” The DEA has reviewed the impacts of this scheduling action against the principles edified by Executive Orders 12866 and 13563 and finds no basis that it would have illegal discriminatory effects, or “violate laws against disability and age discrimination.”

c. Factors Determinative of Control

Twenty-six commenters opposed rescheduling HCPs as schedule II controlled substances based on concerns regarding the eight-factor analyses. Twenty-four commenters believed that the eight-factor analyses did not support rescheduling into schedule II and that HCPs should remain in schedule III. Two commenters believed that HCPs should be rescheduled into a lower schedule than schedule III. (One commenter stated that HCPs should be down-scheduled into schedule V and made over-the-counter for those 21 years and older.)

i. Evaluation of Abuse Potential of HCPs and Data Used To Support Placement of HCPs into Schedule II of the CSA

Eighteen commenters expressed disagreement about the data that was used to support the statutory requirement under 21 U.S.C. 811(c) and 812(b)(2) for placement into schedule II of the CSA. Some of these commenters stated that the available data are limited and do not support rescheduling HCPs into schedule II. Some commenters indicated that there was no scientific consensus in support of moving HCPs from schedule III to schedule II.

Many of the comments in opposition to the proposed scheduling action were statements by ultimate users of HCPs that HCPs are not abused by patients with legitimate prescriptions. Some of the commenters stated that the small amounts of hydrocodone in HCPs have never contributed to addiction and acetaminophen in HCPs would actually decrease abuse rates. Commenters suggested that abuse potential of HCPs is lowered or negated by the fact that it is often used with other substances such as alcohol. Some commenters supported their assertions with statements that deaths are extremely rare with HCPs.

DEA response: The DEA conducted a comprehensive evaluation of epidemiological, diversion,

pharmacological, and pharmacokinetic data to conclude that HCPs have a high abuse potential. All of the data was reviewed collectively, and the data supports the finding that HCPs have a high abuse potential similar to other schedule II controlled substances, such as oxycodone products. The DEA’s decision to reschedule HCPs from schedule III to schedule II is also supported by the HHS review and the FDA’s DSaRM recommendation.

The DEA disagrees that there is a lack of scientific consensus among scientific experts. Some commenters, in support of their dissenting opinions, cited some selective information presented in the briefing document for the FDA’s DSaRM meeting in January 2013. It should be noted that the DSaRM members received the selected information cited by the commenters, and, upon deliberating extensively on all the available data voted 19 to 10 in favor of rescheduling HCPs from schedule III to schedule II. The DEA’s determination of the appropriate schedule under the CSA in which to place HCPs is based on a comprehensive review of all available data, rather than selected portions of available data, and the DEA did in fact review and consider the selected information presented by the commenters. The DEA also considered the HHS scientific and medical evaluation and scheduling recommendations.

The DEA finds that the scientific, medical, and epidemiological data are robust and support rescheduling HCPs into schedule II of the CSA. Various drug abuse indicators for HCPs indicate that HCPs are widely diverted and abused at rates largely similar to that of oxycodone products (schedule II). The data indicate that HCPs have an abuse potential similar to schedule II opioid analgesics such as oxycodone and their abuse is associated with severe psychological or physical dependence. Abuse of HCPs is also associated with large numbers of individuals being admitted to addiction treatment centers. Individuals are taking these drugs in sufficient quantities to create a hazard to their health, and abuse of HCPs is associated with large numbers of deaths. Further, data from several different drug abuse monitoring databases support the conclusion that HCPs have a high potential for abuse similar to other schedule II opioid analgesics.

Contrary to the views expressed by some commenters, the review by the DEA and HHS of all the relevant data found that HCPs are abused at high rates and have high dependence potential as indicated by the data reported by the National Survey on Drug Use and

Health (NSDUH), Monitoring the Future (MTF), National Poison Data System (NPDS), Drug Abuse Warning Network (DAWN), and Treatment Episode Data Set (TEDS). There have been large numbers of deaths and emergency department visits associated with abuse of HCPs. In addition, the data indicate that HCPs and oxycodone products have similar abuse potential. Based on these considerations, the DEA believes that the high abuse and dependence potential and harm associated with HCPs support rescheduling into schedule II of the CSA.

Contrary to statements made by some ultimate users, even low doses of HCPs have the potential for adverse impacts on the public health and safety. According to the CDC, while an estimated 80% of patients who are prescribed opioids are prescribed low doses (<100 mg morphine equivalent dose per day) by a single practitioner, these patients account for an estimated 20% of all prescription drug overdoses.⁹ (An estimated 10% of patients who are prescribed opioids are prescribed high doses (≥100 mg morphine equivalent dose per day) by single prescribers. These patients account for an estimated 40% of all prescription opioid overdoses. An estimated 10% of patients are patients who seek care from multiple doctors and are prescribed high daily doses of opioids. They account for another 40% of all opioid overdoses.) *Id.*

After careful consideration of relevant data, the DEA finds that HCPs have abuse potential supporting placement into schedule II.

ii. Criteria for Abuse

One commenter wanted the DEA to draw distinctions among abuse, addiction, and dependence. A second commenter objected to the DEA's consideration of "individuals taking the drug or other substance on their own initiative rather than on the basis of medical advice from a practitioner licensed by law to administer such drugs" as a criterion of abuse.

DEA response: As noted by researchers, "[t]here is no agreement between researchers for terms such as drug abuse, psychological dependence, drug dependence and drug addiction," and that, "[o]ften these terms are used interchangeably."¹⁰ The DEA is aware

that the most recent version of the Diagnostic and Statistical Manual, the DSM-V, released in 2013, removed the distinction between abuse and dependence for diagnostic purposes, and replaced them with a combined single disorder called "substance use disorder." However, the DEA derives authority from the CSA, and when acting under its authority must speak under the terms and conditions imposed by it. The CSA does not define "abuse" in terms of the DSM; in fact it does not define the term at all. The CSA uses terms such as "potential for abuse," "pattern of abuse," and "significance of abuse." *E.g.*, 21 U.S.C. 811 and 812.

One looks first to the face of a law to understand its meaning, and "[i]f the statute's meaning is plain and unambiguous, there is no need for further inquiry." *United States v. Fisher*, 289 F.3d 1329, 1337–38 (11th Cir.2002) (internal quotation marks and citation omitted). However, if the language is ambiguous, the relevant legislative history may be used to aid in understanding meaning. *United States v. Dodge*, 597 F.3d 1347, 1352 (11th Cir. 2010). The legislative history of the CSA suggests four factors that may be considered in determining whether a particular drug or substance has a "potential for abuse," including whether individuals are taking the drug or drugs containing such a substance on their own initiative rather than on the basis of medical advice from a practitioner licensed by law to administer such drugs in the course of his professional practice.¹¹ Accordingly,

(NASPER): *Balancing Substance Abuse and Medical Necessity*, 5 Pain Physician 294, 299, n.3 (2002).

¹¹ As provided in the CSA's legislative history:
* * * [A] substance has a potential for abuse because of its depressant or stimulant effect on the central nervous system or its hallucinogenic effect if: (1) There is evidence that individuals are taking the drug or drugs containing such a substance in amounts sufficient to create a hazard to their health or to the safety of other individuals or of the community; or (2) There is a significant diversion of the drug or drugs containing such a substance from legitimate drug channels; or (3) Individuals are taking the drug or drugs containing such a substance on their own initiative rather than on the basis of medical advice from a practitioner licensed by law to administer such drugs in the course of his professional practice; or (4) The drug or drugs containing such a substance are new drugs so related in their action to a drug or drugs already listed as having a potential for abuse to make it likely that the drug will have the same potentiality for abuse as such drugs, thus making it reasonable to assume that there may be significant diversions from legitimate channels, significant use contrary to or without medical advice, or that it has a substantial capability of creating hazards to the health of the user or to the safety of the community.

Comprehensive Drug Abuse Prevention and Control Act of 1970, H.R. Rep. No 91–1444, 91st Cong., Sess.1 (1970) reprinted in U.S.C.A.N. 4566, 4603.

the DEA uses this as one factor in determining a substance's potential for abuse.

"Addict" is defined by the CSA as a person who "habitually uses any narcotic so as to endanger the public morals, health, safety, or welfare, or who is so far addicted to the use of narcotic drugs as to have lost the power of self-control with reference to his addiction." 21 U.S.C. 802(1). The DEA uses this definition for the terms "addict" and "addiction."

iii. Appropriate Drug Comparator

One commenter asserted that HCPs were not compared to appropriate reference drugs and have lower abuse ratios and abuse potential than schedule II oxycodone combination products. Another commenter expressed the opinion that HCPs are substantially cheaper than oxycodone products which would affect drug selection as opposed to the notion that HCPs have more addiction potential. The commenters did not provide any appropriate alternative comparison drug for HCPs.

DEA response: HCPs were compared to oxycodone products, currently schedule II controlled substances, to evaluate abuse potential. The DEA, in agreement with the HHS review, considers the comparison of HCPs to oxycodone products appropriate due to similarities between their pharmacological properties, therapeutic uses and patterns, as well as market history. In their eight-factor analysis, the FDA noted that it is not always possible to identify an "appropriate opioid comparator in Schedule III." The FDA went on to state that: "While FDA considered codeine as a potential comparator, it was deemed inappropriate for several reasons * * *. Given the absence of an appropriate Schedule III comparator, FDA focused its analyses on comparing the abuse liability of hydrocodone combination products (Schedule III) with oxycodone products (Schedule II)."

With regard to the comment about the lower costs of HCPs contributing to its high abuse potential, it is important to note that abuse potential of a given drug is also influenced by various other factors (e.g., pharmacological properties, ease of availability, etc.). Additionally, actual abuse data comparing HCPs and oxycodone combination drugs indicate that the abuse potential between the two drugs is similar. Contrary to the views expressed by some commenters, the review by the DEA of all the relevant data found that HCPs are abused at high rates and have high dependence potential as indicated by the data

⁹ Centers for Disease Control, *CDC Grand Rounds: Prescription Drug Overdoses—a U.S. Epidemic*, 61(01) Morbidity and Mortality Weekly Report (MMWR) 10 (2012) (internal citations omitted) available at <http://www.cdc.gov/mmwr/preview/mmwrhtml/mm6101a3.htm>.

¹⁰ Laxmaiah Manchikanti, MD et al., *National All Schedules Prescription Electronic Reporting Act*

reported by the NSDUH, MTF, NPDS, DAWN, and TEDS. There have been large numbers of deaths and emergency department visits associated with abuse of HCPs. Based on these considerations, the DEA believes that the high abuse and dependence potential and harm associated with HCPs support rescheduling into schedule II of the CSA.

iv. Balanced Presentation of the Eight-Factor Analysis

Nine commenters disagreed with the conclusions in the DEA's eight-factor analysis. These commenters asserted that the DEA's eight-factor analysis was not a balanced presentation and did not include the therapeutic benefits or the negative impact on patients with a legitimate medical use for HCPs. In addition, some of the commenters stated that the DEA's eight-factor analysis used flawed analytical methods and failed to show that HCPs were more dangerous or more abused than oxycodone. Several of these commenters requested that DEA include both sides of the clinical argument and peer-reviewed clinical research.

DEA response: The DEA reviewed the required eight factors in accordance with the provisions stated in 21 U.S.C. 811(c), specifically exploring the abuse potential and potential harms of HCPs. The DEA's analysis also acknowledges that there is a currently accepted medical use, and accordingly therapeutic benefit, of HCPs. Consistent with the CSA, an evaluation of abuse and dependence potential, risk to the public health and safety, and other factors are included in the analysis. 21 U.S.C. 811(c). The CSA does not require that HCPs be *more* dangerous or abused than oxycodone in order to be placed in schedule II. Rather, relative abuse potential must be established. The DEA's analysis shows that HCPs have a high potential for abuse, and the abuse potential of HCPs is *comparable* to the schedule II controlled substance oxycodone. Thus, HCPs are appropriately placed in schedule II, along with oxycodone. Further, the analytical methods that were presented in the DEA's eight-factor analysis were consistent with the HHS's eight-factor analysis that was finalized in December 2013. The DEA used the best available methods based on current science to complete the eight-factor analysis.

2. Requirements Applicable to Prescriptions

a. Authority To Prescribe HCPs as Schedule II Controlled Substances

Nineteen commenters opposed rescheduling HCPs as schedule II controlled substances based on concerns related to the restricted authority of mid-level practitioners to prescribe medications that are schedule II controlled substances.

DEA response: The DEA recognizes that some States do not allow all providers to prescribe schedule II controlled substances. However, it is outside of the DEA's scope of authority under the CSA to determine what categories of practitioners may prescribe controlled substances. Under the CSA, it is up to each State to decide who has the authority to prescribe controlled substances within that State. This is reflected in 21 U.S.C. 823(f), which requires DEA to register a practitioner who is authorized under the laws of the State in which he practices unless the practitioner's registration would be inconsistent with the public interest. 21 U.S.C. 823, 824. This is also echoed in 21 CFR 1306.03, which states that a practitioner can issue a prescription for controlled substances so long as the practitioner is authorized to prescribe controlled substances by the jurisdiction where he is licensed to practice his profession and is registered or exempted from registration pursuant to 21 CFR 1301.22(c) and 21 CFR 1301.23. Each State has this authority, so long as it does not conflict with federal law.

b. Transmittal Method of HCPs as Schedule II Controlled Substances

i. Oral and Facsimile Prescriptions

Multiple commenters opposed rescheduling HCPs as schedule II controlled substances based on concerns related to the transmittal methods available for schedule II as compared to schedule III controlled substances, specifically the circumstances required in order to provide oral prescriptions and to transmit prescriptions via facsimile. Both ultimate users and providers expressed concern that HCPs as schedule II controlled substances will not be available on nights and weekends. They were especially concerned about dental emergencies that might occur over the weekend. Four commenters stated that patients needing night or weekend prescriptions for HCPs will overburden Emergency Departments (EDs).

DEA response: The requirements for issuing an emergency oral prescription for a schedule II controlled substance do not hinder legitimate access to HCPs.

The procedural requirements relating to transmission of a legitimate prescription do not hinder legitimate access either.

Contrary to concerns of commenters, practitioners will still be allowed to call-in prescriptions for HCPs in the event of an emergency. In the event of an emergency, as defined by 21 CFR 290.10, a pharmacist may dispense a schedule II controlled substance upon receiving oral authorization of a prescribing individual practitioner in accordance with 21 CFR 1306.11(d).

ii. Triplicate Prescriptions

Five commenters opposed rescheduling HCPs as schedule II controlled substances based on concerns regarding "triplicate prescriptions." One commenter stated that emergency physicians do not have triplicate prescription forms, and as a result, they will be required to prescribe drugs that are less effective for pain management. Two commenters stated that emergency physicians do not want to carry a triplicate prescription pad.

DEA response: Neither the CSA nor DEA regulations require prescriptions to be prepared in triplicate. The DEA recognizes that some States, such as Texas and California, require the use of triplicate prescription forms for some or all controlled substances. As stated in the November 19, 2007, final rule, "Issuance of Multiple Prescriptions for Schedule II Controlled Substances," the "DEA supports the efforts of States to take the specific action they deem necessary to prevent the diversion of controlled substances within their jurisdictions." 72 FR 64921, 64923.

Under the CSA, Congress envisioned that the Federal and State Governments would work in tandem to regulate activities relating to controlled substances. This is reflected in 21 U.S.C. 903, which indicates that Congress did not intend to preempt state controlled substance laws, so long as such state laws do not conflict with federal law. Thus, each state may enact controlled substance laws that go beyond the requirements of the CSA, provided such laws do not conflict with the CSA. Given this aspect of the CSA, it would not be appropriate for DEA to seek to preempt or supersede state laws relating to the prescribing of controlled substances, provided such laws do not conflict with the CSA or DEA regulations.

Id. at 64927.

c. Quantity and Frequency of Fills and Refills for HCPs as Schedule II Controlled Substances

Pharmacists, prescribers, and ultimate users expressed concern about the quantity and frequency of fills and refills for HCPs as schedule II controlled substances that would be allowed if HCPs were placed into schedule II.

Several commenters, mostly ultimate users, asserted that up-scheduling would result in patients being limited to a 30-day supply of medication and would correspondingly need to begin seeing their doctors monthly. Other commenters, primarily pharmacists and physicians, expressed their belief that rescheduling HCPs will result in larger quantities of pills being authorized on each prescription to prevent patients from running out of medication and being in pain. Most of these commenters had corresponding concerns that these larger prescriptions would lead to more unused medication in the home that would be available for diversion. Examples include the following: One commenter mentioned his concern that since larger prescriptions would be authorized, he would be unable to monitor whether the patient is taking the medication or taking too much of it. An emergency physician opined that removing the ability to get refills on HCPs may result in prescriptions for more potent medications being issued. One ultimate user was concerned that the elimination of refills on HCPs would result in patients getting insufficient quantities to treat the acute illness for which it was prescribed.

DEA response: While courts have recognized that prescribing an “inordinately large quantity of controlled substances” can be evidence of a violation of the CSA,¹² generally neither the CSA nor DEA regulations impose a specific quantitative minimum or maximum limit on the amount of medication that may be prescribed on a single prescription, or the duration of treatment intended with the prescribed controlled substance. The quantity prescribed and dispensed is limited in an emergency situation as defined by 21 CFR 290.10 when dispensing a schedule II controlled substance upon oral authorization in accordance with 21 CFR 1306.11(d). The CSA and implementing regulations require all controlled substance prescriptions to be “valid.” A prescription is not “valid” unless it is issued for a legitimate medical purpose and within the usual course of professional practice. 21 CFR 1306.04(a). A pharmacist who fills a prescription has a corresponding responsibility, and the person who fills an illegitimate prescription is subject to penalty. *Id.*

While the CSA and DEA regulations generally contain no specific limit on the quantity that may be prescribed on a single prescription, or the duration of treatment intended for a single

prescription, some States do impose specific limits on prescribing schedule II controlled substances. Likewise, some limitations on the quantity or frequency of schedule II controlled substances may be limited by individual prescription benefit providers. Any limitations imposed by State law apply, in addition to the corresponding requirements under Federal law, so long as the State requirements do not conflict with or contravene the Federal requirements. 21 U.S.C. 903; 21 CFR 1306.12(b)(1)(v); “Clarification of Existing Requirements Under the Controlled Substances Act for Prescribing Schedule II Controlled Substances,” 70 FR 50408, Aug. 26, 2005.

Although the CSA prohibits refills of prescriptions for schedule II controlled substances, a practitioner may issue multiple schedule II prescriptions in order to provide up to a 90-day supply of medication in accordance with 21 CFR 1306.12. Furthermore, DEA regulations do not require patients to be seen monthly by their provider. Rather, practitioners must determine on their own, based on sound medical judgment, and in accordance with established medical standards how often to see their patients when prescribing controlled substances.

Note, however, that DEA regulations should not be “construed as mandating or encouraging individual practitioners to issue multiple prescriptions or to see their patients only once every 90 days when prescribing Schedule II controlled substances. Rather, individual practitioners must determine on their own, based on sound medical judgment, and in accordance with established medical standards, whether it is appropriate to issue multiple prescriptions and how often to see their patients when doing so.” 21 CFR 1306.12(b)(2). The DEA does not regulate the general practice of medicine and the agency lacks the authority to issue guidelines (or make policy statements) that constitute advice on the general practice of medicine.

3. Patient Access to Medicine

The DEA received numerous comments, predominantly from ultimate users, who voiced concerns about the possible effects rescheduling would have on patients’ access to appropriate treatment for pain. Commenters were concerned about the possible need for increased provider visits, and associated increased time and cost to receive medical care. Commenters were concerned about access to health care providers, such as possibly needing to change health care providers and in some cases having to drive longer

distances to get to practitioners’ offices because of limitations on types of practitioners who can prescribe schedule II controlled substances. Commenters were also concerned that rescheduling could result in doctors changing prescriptions to alternative medications which might be less effective for treating some kinds of pain and/or cause adverse health effects.

a. Impact on Prescribing Practices

Several commenters were concerned that because of the rescheduling, practitioners will be less likely to prescribe HCPs. One commenter suggested that since a practitioner can no longer call in or fax a prescription to the pharmacy, the practitioner will be reluctant to prescribe HCPs. Other commenters stated the scheduling action will impose additional burdens on practitioners and therefore they will stop prescribing for HCPs and prescribe less effective drugs. One commenter stated that many EDs do not typically prescribe schedule II narcotics. Likewise, two commenters suggested that cumbersome and slow ordering processes for schedule II substances will cause local shortages of HCPs, and thus practitioners will turn to prescribing other drugs.

DEA Response: The processes and procedures associated with dispensing a controlled substance are not relevant factors to the determination of whether a substance should be controlled or under what schedule a substance should be placed if it is controlled. See 21 U.S.C. 811 and 812. Nonetheless, controlling HCPs as a schedule II controlled substance should not hinder legitimate access to the medicine. As recognized and noted by commenters, scheduling a medication does not make it impossible to prescribe, dispense, or administer the medication. However, it does alert prescribing-practitioners, pharmacists medical support professionals and perhaps even some patients and non-professional caregivers that the medication has potential dangers for addiction and misuse, and careful monitoring and evaluation of use of such drugs is necessary for appropriate patient care. “The placing of a drug into [a particular schedule of the CSA] will alert a physician that the drug does cause physical and psychological dependence. This is valuable information for a physician to possess before prescribing any drug.” 50 FR 8104, 8107, Feb. 28, 1985 (“Schedules of Controlled Substances; Rescheduling of Buprenorphine From Schedule II to Schedule V of the Controlled Substances Act”).

¹² *United States v. Rosen*, 582 F.2d 1032, 1036 (5th Cir. 1978).

The DEA does not intend for legitimate patients to go without adequate care. A prescription for a controlled substance to be effective must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice. 21 CFR 1306.04(a). When a practitioner prescribes a medication that is a controlled substance for a patient, it must be because he/she has made a professional medical determination that it would be medically appropriate for the patient's medical condition to treat with that specific controlled substance.

The DEA recognizes that rescheduling a legitimately marketed pharmaceutical controlled substance may have some effect on the decision of a practitioner to prescribe that particular controlled substance. There may be some practitioners who are reluctant to prescribe a schedule II controlled substance although authorized by State law to do so. However, the DEA notes that other schedule II controlled substances are widely prescribed. Given that classification has not deterred practitioners from prescribing those drugs, the DEA believes that when a practitioner makes a medical determination that a particular controlled substance is appropriate to treat a patient's medical condition, the practitioner will prescribe the appropriate controlled substance, regardless of the substance's schedule. The DEA notes that a doctor from New York, one of the States that has already scheduled HCPs as schedule II controlled substances under State law, asserted in his comment that up-scheduling "has reduced unconscious (or conscience-less) prescribing without impacting patients' access to medications."

b. Impact of Criminal Action

Some commenters expressed concern that transferring HCPs to schedule II would deter prescribers from properly treating pain for fear of facing criminal action. According to one commenter, many providers limit the number of pills for schedule II medications "because they feel they are being watched by monitoring programs and are afraid the DEA 'will investigate' them for too many CII scripts."

DEA response: One of the most important principles underlying the CSA is that every prescription for a controlled substance must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice. 21 CFR 1306.04(a); *U.S. v. Moore*, 423 U.S. 122 (1975) (holding

registered physicians may be prosecuted for violation of the CSA when their activities fall outside the usual course of professional practice). The DEA policy statement entitled "Dispensing Controlled Substances for the Treatment of Pain," 71 FR 52715, Sept. 6, 2006, makes clear that this longstanding requirement should in no way interfere with the legitimate practice of medicine or cause any practitioner to be reluctant to provide legitimate pain treatment. Practitioners (as well as ultimate users) become subject to administrative, civil, and/or criminal action when their activity involving controlled substances is not authorized by, or is in violation of, the CSA, regardless of whether the activity involves a schedule II controlled substance or a schedule III controlled substance.

c. Impact on Drug Availability

Two commenters suggested this rule will result in limited drug availability because wholesalers are limiting distributions to community pharmacies. These commenters assert that if a pharmacy goes over a pre-determined amount, they cannot obtain the needed pharmaceuticals until the following month. The commenter asserted that this practice may have particularly adverse impacts in rural areas where a pharmacy may only be serviced by one distributor. Another commenter suggested there will be local shortages of HCPs because of the cumbersome and slow schedule II ordering process. Two commenters were concerned that limited availability may result from delays associated with manufacturer production due to annual production requirements for schedule II controlled substances.

DEA response: DEA registered distributors are required to provide effective controls against diversion of controlled substances. However, the DEA does not limit the quantity of controlled substances that may be legitimately distributed to pharmacies. Any arbitrary limits placed on community pharmacies by distributors are the result of a business decision of that distributor.

The DEA does impose requirements for distributors to operate a system to disclose suspicious orders of controlled substances. 21 CFR 1301.74(b). Suspicious orders include orders of unusual size, orders deviating substantially from a normal pattern, and orders of unusual frequency. *Id.* Part of the due diligence associated with that requirement, as well as the general requirement under 21 CFR 1301.71(a) for registrants to "provide effective controls and procedures to guard against

theft and diversion of controlled substances," is to "know your customer." While order volume may be one indicator of a suspicious order, the totality of circumstances must be used in making a determination. Generally, no single indicator is independently a suggestion that a given order is suspicious. Order volume should be examined not only on an industry-wide comparison level, but also on a local level. For example, a pharmacy located near an oncology clinic may be more likely to regularly order higher volumes of certain controlled pharmaceuticals than one that is not.

The DEA does not find evidence to support the claim that the ordering process for schedule II controlled substances will result in limited availability of HCPs. A DEA Form 222, or its electronic equivalent—the Controlled Substance Ordering System (CSOS), is required for all distributions of schedule I or II controlled substances, with specific exceptions, 21 U.S.C. 828(a); 21 CFR 1305.03, which enables the DEA to monitor the flow of these controlled substances from their point of manufacture through commercial distribution. It takes approximately an hour to complete each order using the paper DEA Form 222. It takes approximately three minutes to complete an order using CSOS. (The DEA Form 222 permits ten line items per form; electronic orders are not subject to the same requirement and may contain an unlimited number of transactions (line items)). While CSOS transactions are faster, the paper DEA Form 222 orders are also able to be processed quickly through the system. In 2013, 109,632 registrants ordered schedule I or II controlled substances. About 4.8 million orders were processed on Form 222s and 924,257 were processed electronically via CSOS (approximately 16% of all orders). The paper orders represented roughly 27.7 million transactions (or about 6 per order); the electronic orders represented roughly 21.2 million transactions or slightly more than 23 per order.

There should be no impact on availability due to schedule II annual production requirements (i.e., manufacturing quota). Registrants that manufacture hydrocodone are already required to obtain an annual quota in order to manufacture hydrocodone because it is a schedule II controlled substance unless and until it is formulated into dosage form HCPs.

Manufacturing quotas are issued to bulk manufacturers who manufacture either from synthetic routes (e.g., hydrocodone from codeine), or extraction from narcotic raw material.

Bulk manufacturing quota will not be impacted by the movement of HCPs from schedule III into schedule II.

Procurement quotas are typically issued to dosage form manufacturers and repackagers or relablers for manufacturing activities. As related to HCPs, a procurement quota is required to: (1) Receive bulk Active Pharmaceutical Ingredients to be manufactured into dosage units; and (2) for a company to receive bulk finished dosage units for relabeling or repackaging.

d. Providers Authorized To Prescribe Schedule II Controlled Substances

Nine commenters expressed concern about the ability to access health care providers who can prescribe schedule II controlled substances. Specifically, commenters stated that mid-level health care providers such as physician assistants and nurse practitioners, who provide primary health care, cannot prescribe schedule II controlled substances in many States. As a result, these patients will not have access to the medicine they need to treat their pain. In addition, one commenter stated this will have a negative impact on patients who visit rural practices where mid-level practitioners often prescribe pain medication. Moreover, one commenter stated the scheduling action would make it mandatory for a patient to see a physician for pain. Another commenter stated that because of this scheduling they would now have to find new doctors, which would increase travel time and the amount of money spent on gas.

DEA response: State authorization to handle controlled substances is both a necessary precondition for Federal authorization to handle controlled substances and a qualifying determinate as to the extent of the practitioner's scope of authority in regard to such substances. *U.S. v. Moore*, 423 U.S. 122, 141 (1975) ("The federal registration, which follows automatically, extends no further [than the scope of authority granted by the State to practice medicine and to dispense drugs in connection with their professional practice]."). A DEA registered practitioner may only engage in those activities involving controlled substances that are authorized by the laws of the State on which the practitioner's Federal registration is based. If an individual practitioner, or a class of practitioners, has not been granted authorization to prescribe certain controlled substances that is the rightful determination of the State under its authority to regulate the practice of medicine.

e. Treatment for Pain

Concerns were raised that changes in the scheduling for HCPs could drive the use of alternative treatments. One class of commenters who were particularly concerned about this was emergency physicians who work in States that require triplicate prescriptions and/or facilities whose policy is not to handle schedule II controlled substances in their emergency departments. Some emergency providers in triplicate-prescription States said that they did not carry triplicate prescriptions due to concerns about them being stolen. Some emergency physicians who work in States that require triplicate prescription forms (but who are able to write schedule II controlled substance prescriptions while working in their emergency departments) stated that if "forced to get a triplicate," then he will start writing for more schedule II controlled substances, such as Percocet, because it is a "better pain med[icine] than HCPs." Other commenters were concerned that some prescribers might switch to prescribing "stronger drugs with significant abuse potential," or alternatively switch to medications such as non-steroidal anti-inflammatory drugs (NSAIDs) which are less effective for treating some kinds of pain and may cause other adverse effects, leaving people in untreated pain. One commenter was concerned that tramadol would be prescribed in place of HCPs, which worried them because of issues with tramadol specific to renal patients.

DEA response: The DEA does not regulate the general practice of medicine and the agency lacks authority to issue guidelines (or make policy statements) that constitute advice on the general practice of medicine. A prescription for a controlled substance must be issued for a legitimate medical purpose by an individual practitioner acting in the usual course of his professional practice. 21 CFR 1306.04(a); *U.S. v. Moore*, 423 U.S. 122 (1975). A practitioner must use sound medical judgment to determine which controlled substance they will prescribe to appropriately treat his or her patient's medical condition, rather than make a determination based upon whether a triplicate prescription form is required by the State or by their employer's policy to not prescribe schedule II controlled substances.

f. Shift to the Black Market

Several commenters stated that making HCPs schedule II controlled substances would limit access to HCPs,

causing people to buy drugs on the street, including HCPs and heroin.

DEA response: As discussed above, schedule II controlled substances are readily available for legitimate medical use.

g. Monitoring Access

A national advocacy group for cancer patients requested that the DEA "require monitoring plans and an annual report to Congress, in the event that HCPs are upscheduled, that assess the impact on access by patients with legitimate needs, as emphasized and urged by HHS" and to "adjust policy accordingly if it finds that access is impeded for patients who legitimately need HCPs for pain management."

DEA response: Once upscheduled the DEA will continue to monitor the diversion of HCPs. However, it is outside the scope of the DEA's authority under the CSA to require monitoring plans or reports not authorized under the Act.

4. Impacts on Unique Populations

The DEA received several comments regarding the impact on patients who suffer from chronic pain, cancer, rare diseases, chronic and end-stage renal disease, as well as dental and surgical post-op patients, and rural residents. Many commenters also voiced concerns about possible effects of rescheduling on the elderly and disabled. Several commenters who are affected by chronic pain voiced a concern that the scheduling action will be a burden and make it harder for them to obtain their medicine. As a result, these commenters stated they will suffer solely because of the people that abuse HCPs. Another commenter stated that because of this burden, patients might start self-medicating. One commenter said that practitioners will start prescribing drugs that are not as effective as HCPs, which could have a negative impact on patients mentally. One commenter stated that many cancer patients are in chronic pain, and because of this action, these patients will suffer as they cannot get their required medication. Others suggested post-op patients will have to suffer in pain after their surgeries because they will not be able to get the required medications from doctors on weekends. Several commenters stated that patients in rural areas who are currently seen by mid-level practitioners will need to drive an hour or more to be treated by a physician because their mid-level provider is not authorized to issue prescriptions for schedule II controlled substances. In addition, another commenter stated that many rural physicians are already

overbooked, which will cause rural patients to suffer in pain until they can get an appointment. Another commenter stated that rural patients have a tough time physically picking up handwritten prescriptions. Several commenters noted that the nearest doctor is more than an hour away and that having to drive that distance once a month to obtain HCPs is inconvenient.

DEA response: Scheduling determinations are based on scientific determinations regarding the substance's potential for abuse, its potential for psychological and physical dependence, and whether the substance has a currently accepted medical use in treatment in the United States. 21 U.S.C. 812(b). The DEA may not reschedule, or refuse to reschedule, a drug or other substance based merely on the population it is intended or approved to treat.

5. Impact on Long-Term Care Facilities (LTCFs)

a. Treatment for Pain

Many commenters, including two U.S. Senators, requested that the DEA closely examine possible impacts of rescheduling HCPs in the long-term care facility (LTCF) setting. Many commenters had concerns that placing HCPs into schedule II will impact a substantial number of LTCF residents and may result in untreated pain due to the lack of ready-access to other appropriate medications. For example, according to one commenter, "HCPs are the current, albeit less preferred alternative because of its combination with acetaminophen, which has to be restricted in older adults due to toxicity risk. However, long-term care providers have been forced to use HCPs as a substitute for Schedule II drugs" because they are more readily available for administration due to less restrictive handling requirements for controlled substances in lower schedules than schedule II. According to this same commenter, "the remaining pain care options still in schedule II are not as clinically effective in treating pain for the elderly as HCPs."

Two commenters stated that LTCF residents, especially post-surgical patients, need medications immediately and that obtaining prescriptions is not quick because most LTCFs do not operate with in-house doctors on site.

DEA response: As previously discussed, scheduling determinations are based on scientific determinations regarding the substance's potential for abuse, its potential for psychological and physical dependence, and whether the substance has a currently accepted

medical use in treatment in the United States. 21 U.S.C. 812(b). Nonetheless, the DEA has promulgated many regulations to accommodate the unique circumstances of LTCF residents. For example, in accordance with 21 CFR 1306.11(f), a prescription for a schedule II controlled substance for a resident of an LTCF may be transmitted by the practitioner or practitioner's agent to the dispensing pharmacy by facsimile. In accordance with 21 CFR 1306.13(b), a prescription for a schedule II controlled substance written for a patient in an LTCF may be filled by the pharmacy in partial quantities to include individual dosage units.

b. Request for Exemption for LTCFs

Several commenters requested that the DEA waive/exempt LTCFs from the more restrictive schedule II handling requirements with respect to HCPs. Some commenters asserted that such a waiver/exemption would be justified based on their assertion that there is a lower risk of misuse, abuse, and diversion of HCPs in an LTCF setting as compared to other settings. One nationwide professional association stated that:

[T]he long-term care setting has special and unique protections against diversion that are required by federal regulations and makes abuse and diversion very difficult and therefore, less likely to occur. * * * The regulatory standards and mandatory procedural checks in most cases make it difficult or impossible for any suspected abuse or diversion to occur over a sustained period of time. This makes diversion by staff difficult * * *. Other than anecdotal case here and there, there is no evidence that diversion is a systemic or frequent problem in SNF [skilled nursing facility] setting nor that the current proposed rule will correct [it].

This same commenter asserted that the "nursing home population is unlikely to be drug abusers" because "[t]heir health conditions often make them bed-bound or otherwise dependent on nurses for the administration of their medications."

DEA response. Nursing home residents take, on average, eight to ten medications per day.¹³ At least 17% of those medications are unused.¹⁴ Controlled substance medications are often stored and administered in LTCF

settings as monthly punch cards (a.k.a. "bingo cards"), and liquid controlled substances are often dispensed in large-volume packaging.^{15 16} In addition, a 2011 report by the HHS Office of Inspector General found that almost all sampled nursing facilities employed one or more individuals with at least one criminal conviction, and nearly half of sampled nursing facilities employed five or more individuals with at least one conviction. Further, 44% of employees with convictions were convicted of crimes against property (e.g., burglary, shoplifting, writing bad checks).¹⁷ LTCFs are unique potential sources of diversion because the care provided to residents results in the accumulation of large amounts of controlled substances in a single, unregistered, relatively unsecure environment, where the disabled and elderly cannot defend themselves or adequately report what has happened.

While focusing on the limited mobility of many residents in LTCFs as justification for why LTCFs should be able to adhere to less restrictive handling requirements for HCPs, commenters gave little consideration to potential diversion by employees, contractors, outside professionals, or visitors who may have access to their facilities. Direct access to controlled substances around a vulnerable population provides many opportunities for diversion of controlled substances, to the detriment of the LTCF residents as well as the general public. For example, the Oregon Aging and People with Disabilities Division, alone, investigated 29 instances of drug theft at 17 different LTCFs in three counties, between 2009 and 2013.¹⁸ The average was 15.8 cases of medication theft per 1,000 beds/units, with the most often stolen products being narcotic

painkillers—such as HCPs.¹⁹ These medication thefts occurred in both large nursing homes and small adult foster homes.²⁰

Although not addressing LTCFs directly, the Mayo Clinic has reported on the diversion of drugs from within health care facilities and the threat to public health and safety such actions cause.²¹ Those risks included risk to patients receiving adulterated or contaminated drugs in place of the diverted drug as well as the risk of receiving substandard care from addicted employees.²² The Oregon investigations also included reports of having a patient's medication replaced with blood pressure medication—thus causing the combined risk of not receiving proper medication with the risk of overdose of another medication.

The most cursory of searches readily reveals multiple allegations reported in the news of thefts of controlled substances in nursing homes. For example, in 2012 six nursing home employees in Oklahoma were charged with operating a drug ring out of the facility for whom they were employed.

Charges Filed in Nursing Home Drug Theft, KWGS News, July 5, 2012, available at <http://publicradiotulsa.org/post/charges-filed-nursing-home-drug-theft>. The Oklahoma Bureau of Narcotics (OBN) reported that 9,000 dosage units of controlled substances had been diverted from the facility by the nursing home employees, 8,400 of which involved hydrocodone. Press Release, Oklahoma Bureau of Narcotics and Dangerous Drugs Control (July 5, 2012) (on file with the Oklahoma Bureau of Narcotics); *Oklahoma Nursing Home Employees Accused of Running Drug Ring: State v. Alexander*, 15 No. 1 Westlaw Journal Nursing Home 4 (2012). The spokesman for OBN stated that employees would call in fraudulent prescriptions of hydrocodone for residents: "These residents had not been prescribed the Hydrocodone by doctors. There is no evidence that any resident was deprived of their legitimate medications. Evidence suggests some of the employees would personally use small amount of the diverted medication, but the majority of the fraudulent drugs were sold on the streets * * *." *Id.*

Criminal acts at LTCFs "often go undocumented, are seldom reported to

law enforcement, and are rarely prosecuted."²³ Even so, theft and diversion at LTCFs likely occurs on a local level, and when reported, are investigated and prosecuted at the local level. The diversion of controlled substances at LTCFs, whether widespread or discrete events, are a threat to the public health and safety, especially considering that such activity poses a real and direct threat to a vulnerable population. Public health and safety threats to disadvantaged, underrepresented, and historically vulnerable populations, including the elderly and mentally, physically, and emotionally/behaviorally disabled, disordered, or challenged, must be taken that much more seriously by those public bodies charged with protecting the public health and welfare. The DEA further notes that the misuse, abuse, and diversion of controlled substances, including pharmaceutical controlled substances, are not limited to any particular age group or functional level.

c. Transmission Method for Prescriptions

One commenter requested two changes to the transmittal methods for prescriptions: (1) Allow a prescribing practitioner to call in to the pharmacy an order for a limited supply, up to a 72 hour quantity, of a schedule II medication for an LTCF patient in an emergency situation, under existing regulations for schedule III–V controlled substances; and (2) Allow a practitioner's agent, acting on behalf of a prescribing practitioner, to call in the prescribing practitioner's verbal order for a small (72 hour) supply of a schedule II medication for an LTCF patient in an emergency situation, under existing regulations for schedule III–V controlled substances.

DEA response: The CSA requires that prescriptions for schedule II controlled substances be written, except in emergency situations as defined by the HHS. 21 U.S.C. 829(a). Pursuant to 21 CFR 1306.11(d), in the case of an emergency situation, a pharmacist may dispense a schedule II controlled substance upon receiving oral authorization from a prescribing individual practitioner provided that the quantity prescribed and dispensed is limited to the amount adequate to treat the patient during the emergency period (dispensing beyond the emergency period must be pursuant to a written prescription signed by the prescribing individual practitioner).

²³ Wes Bledsoe, *Criminal Offenders Residing in Long-Term Care Facilities*, 2(3) J Forensic Nurs. 142 (2006).

The DEA recognizes the unique challenges and issues pertaining to handling and using controlled substances at LTCFs and has previously addressed these issues within the limits of the CSA.²⁴ For example, a prescription for a schedule II controlled substance for an LTCF resident may be transmitted by the practitioner or the practitioner's agent to the dispensing pharmacy by facsimile. 21 CFR 1306.11(f). In addition, a prescription for a schedule II controlled substance for an LTCF resident may be filled in partial quantities to include individual dosage units. 21 CFR 1306.13(b).

It is emphasized that a DEA registered practitioner may not delegate to a nurse, a pharmacist, or anyone else, his or her authority to make a medical determination whether to prescribe a particular controlled substance. Note that the practitioner remains responsible for ensuring that the prescription conforms in all essential respects to the law and regulations, 21 CFR 1306.05(f), 75 FR 61613, 61614, Oct. 6, 2010. This requires the practitioner alone to determine on a prescription by prescription basis whether the prescription is supported by a legitimate medical purpose and that all the essential elements of the prescriptions are met.

d. E-Prescribing

One commenter requested that the DEA "promote the adoption of e-prescribing by requiring facilities and their respective pharmacy suppliers to allow physicians to electronically prescribe controlled substances consistent with the law and appropriate safeguards."

DEA response: This request is outside the scope of this rulemaking.

e. Emergency Kits

One commenter requested that the DEA "promote adoption of consistent and effective laws and policies across all states for the content and use of emergency kits (E-Kits) in the PA/LTC setting."

DEA response: This request is outside the scope of this rulemaking.

6. Abuse Prevention

Commenters raised concerns that, despite the scheduling of drugs, individuals will always find substances to abuse. These commenters argued that the proposed schedule II controls for

²⁴ E.g., "Preventing the Accumulation of Surplus Controlled Substances at Long Term Care Facilities," 66 FR 20833, Apr. 25, 2001; "Role of Authorized Agents in Communicating Controlled Substance Prescriptions to Pharmacies," 75 FR 61613, Oct. 6, 2010.

²¹ Keith H. Berge, et. al., *Diversion of Drugs Within Health Care Facilities, a Multiple-Victim Crime: Patterns of Diversion, Scope, Consequences, Detection, and Prevention*, 87(7) Mayo Clin. Proc. 674 (2012).

²² *Id.*

HCPs will not address or stop the abuse of HCPs because other schedule II controlled substances such as oxycodone products are highly abused and diverted.

DEA response: The cycle of abuse between licit and illicit opioids, abuse of licit and illicit non-narcotic prescription drugs, and continued abuse of schedule I controlled substances such as LSD demonstrates that what individuals and communities are facing is not a problem specific to HCPs. Rather, it is an addiction problem. Heroin use and prescription drug abuse are both addictions that begin with use and are sustained and promoted through increased trafficking. This serious public health problem can be addressed by education, appropriate screening and treatment, recovery, support, and enforcement. These initiatives can be effective regardless of whether the problem is fed by heroin or prescription drugs, including HCPs, and the DEA supports all of these initiatives to address both prescription drug misuse and abuse and heroin use.

The problem of prescription drug abuse is fueled due to a combination of excessive prescribing, drug availability through friends and family, rogue pain clinics, practitioners who prescribe pharmaceutical controlled substances without legitimate medical purpose or outside the usual course of professional practice, pharmacies that dispense illegitimate prescriptions, and supply chain wholesalers and manufacturers that fail to provide effective controls and procedures to guard against diversion—all of which fuel illicit access at the expense of the public health and safety.

A balanced drug control strategy, one that includes strong enforcement, education, prevention, and treatment components, can make significant progress in protecting our nation from the dangers of drug abuse.

The DEA's enforcement responsibility as it pertains to drugs and other substances is clearly delineated in Federal law. Pursuant to 21 U.S.C. 811(a), the CSA authorizes the DEA, under authority delegated by the Attorney General, to add to a schedule any drug or other substance if it is found that the drug or other substance has a potential for abuse, and makes with respect to such drug or other substance the findings prescribed by 21 U.S.C. 812(b). As such, the legal system established by Congress specifically accounts for new substances to be added to the list of controlled substances without regard to the number of substances already controlled. *See also* 21 U.S.C. 812(a) ("Such schedules shall

initially consist of * * *") (*emphasis added*)).

The dynamic structure constructed in the establishment of the schedules of controlled substances takes into consideration that the conclusions reached under each of the eight-factors specified under 21 U.S.C. 811(c) may change over time. Scientific knowledge about a drug or substance grows, pharmacological knowledge increases, history and current patterns of abuse change, etc. The CSA scheduling protocols also take into account that new drug applications for drugs with abuse potential are submitted to and approved by the FDA as well as that clandestine chemists attempt to manipulate the molecular structures of controlled substances to create synthetic drugs that would have the same pharmacologic properties of a controlled drug, but not expose the chemist or distributor to criminal violations. The CSA, however does not only account for one-time scheduling determinations regarding the control of drugs and other substances. In addition to the initial control of drugs and other substances to schedules, the CSA likewise takes into account and provides for the transfer of a drug or other substance between schedules, or for a drug or other substance to be removed entirely from the schedules. 21 U.S.C. 811(a) and (b).

Nevertheless, the DEA disagrees that control of HCPs in schedule II will not decrease abuse of HCPs. Control of HCPs in schedule II will result in increased monitoring of these drugs as well as increased safeguards for legitimate prescriptions.

7. Diversion Prevention

Commenters also questioned whether moving HCPs to schedule II would reduce diversion of HCPs. These commenters argued that the proposed schedule II controls for HCPs will not address or stop the diversion of HCPs because other schedule II controlled substances such as oxycodone products are still diverted despite their schedule II status.

DEA response: The DEA disagrees that control of HCPs as schedule II controlled substances will not decrease their diversion. Control of HCPs into schedule II will result in increased monitoring of these drugs as well as increased safeguards for legitimate prescriptions.

8. Responsibilities of Pharmacists

The DEA received many comments, from pharmacists, physicians, ultimate users, and the general public, who were concerned that the increased administrative burden on pharmacists

that might occur as a result of moving HCPs into schedule II would cause pharmacists to devote time to the administrative burdens rather than on patient counseling and safety. Commenters stated that the administrative burden would be greatly increased in the pharmacy setting because: separate prescriptions would have to be entered for every HCP; pharmacists would have to count the prescriptions, as technicians are not legally allowed to do so in some States; inventories would be required of all HCPs; and increased workload associated with recordkeeping requirements (i.e., DEA Form 222).

DEA response: The processes and procedures associated with dispensing a controlled substance are not relevant factors to the determination of whether a substance should be controlled or under what schedule a substance should be placed if it is controlled. *See* 21 U.S.C. 811 and 812.

9. Requirements Applicable to Manufacturers and Distributors

a. Effective Date

Several of the comments submitted by members of industry (manufacturers, wholesale distributors, veterinary distributors, retail pharmacies), and/or trade associations representing them, focused on the timeframe for implementation of various handling requirements. A national trade association comprised of manufacturers and distributors of generic pharmaceutical products requested that the DEA "allow sufficient time for all parts of the supply chain to integrate the new requirements into their business operations." Similar requests were also posed by an individual manufacturer of HCPs, a wholesale distributor, and a retail pharmacy/mail pharmacy service provider, each who proposed a blanket six month delay before a final rule would go into effect. A national trade association comprised of distributors requested that the DEA allow at least 12 to 24 months, with opportunity for additional extension for individual registrants on an as needed basis, from the effective date of the final rule to allow for changes to facilities, policies and procedures. The national trade association requested that during the interim period registrants be allowed to continue to hold HCPs in cages rather than to be immediately required to place these items in vaults. Specifically, the association proposed that the DEA "[r]ecognize a registrant's compliance with the physical security requirements if the registrant has, by the implementation date of the storage

requirements resulting from a rescheduling decision, submitted to the agency plans, blueprints, sketches, or other materials, including but not limited to signed contracts with contractors to implement any proposed physical security changes to the registrant's premises, and has otherwise been and continues to be in compliance with physical security requirements pursuant to [21 CFR 1301.72] for HCPs subject to this rescheduling decision as of the date prior to the effective date of a rescheduling decision." The national trade association additionally requested that the DEA provide specifics regarding the "process for submission of the materials demonstrating the vault construction plans" and how they might be able to "demonstrate compliance in lieu of vault construction completion."

DEA Response: In accordance with the Administrative Procedure Act, generally, DEA scheduling actions are effective 30 days from the date of publication of the final rule in the **Federal Register**. 5 U.S.C. 553(d). In order to ensure the continued availability of HCPs for legitimate medical use, while also ensuring they are not subject to misuse, abuse, and diversion, the DEA is establishing an effective date 45 days from the date of publication of this final rule. This 45-day period is a reasonable amount of time for registrants to comply with the handling requirements for a schedule II controlled substance and was established upon a full consideration of the totality of circumstances specific to HCPs.

The DEA understands that 45 days to implement all schedule II handling requirements may be perceived as short by some distributors. While the DEA acknowledges that the supply chain will need to plan and coordinate efforts, and may even need to temporarily modify existing ordering and inventory management practices, the DEA is required to consider the risk of diversion and risk to public health and safety of U.S. residents.

As summarized in the NPRM and the DEA presentation at the January 24, 2013, public DSaRM meeting, available at <http://www.fda.gov/downloads/advisorycommittees/committeesmeetingmaterials/drugs/drugsafetyandriskmanagementadvisorycommittee/ucm346941.pdf>, and discussed in detail in the supporting eight-factor analyses, HCPs are being abused with adverse effects both individually and to the public health and safety, accordingly, it should be placed into schedule II as soon as practicable. Prescription drug abuse refers to the intentional misuse of a medication by using more than

medically indicated in order to feel the drug's psychoactive effects and/or using the drug in a manner that is not medically indicated. Prescription drug abuse has increased exponentially in the last 15 years and is the Nation's fastest growing drug problem. Factors including excessive prescriptions, drug availability through friends and family, Internet trafficking, rogue pain clinics, pharmacies that dispense illegitimate prescriptions, and failed safeguards by wholesalers and manufacturers to guard against diversion have all contributed to the prescription drug abuse problem.

The increase in prescription drug abuse has also been attributed to ease of obtaining the drug and the misconception that abusing prescription drugs is much safer than using and abusing street drugs. According to the 2012 Partnership Attitude Tracking Study (PATS), 43% of teenagers believe that prescription medications are "easier to obtain" than illegal drugs. In addition, the 2012 PATS also reported that 27% of teens believe that misusing or abusing prescription drugs is "safer" than using street drugs. Some of the increased demand for prescription opioid painkillers is from people who use them non-medically (using drugs without a prescription or just for the high they cause), sell them, or get them from multiple prescribers at the same time (CDC Vital Signs, July 2014, Opioid Painkiller Prescribing, Where You Live Makes a Difference).

According to the 2012 National Survey on Drug Use and Health (NSDUH), approximately 2.6% or 6.8 million people ages 12 and older are nonmedical users of prescription drugs. Abuse of opioid drugs, including HCPs, can lead to addiction, respiratory depression, and death. There were more than 16,000 deaths due to abuse of opioid drugs including HCPs in 2010. That is more than 1,333 people dying each month. According to the CDC, 38,329 people died from a drug overdose in the United States in 2010. Of these deaths, 22,134 people or 60% involved prescription drugs. Seventy-five percent of the prescription drug overdose deaths (16,651 people) were due to opioid drugs primarily containing oxycodone, hydrocodone, or methadone.

Abuse of prescription drugs is particularly alarming since data are strongly indicating that prescription opioid drug abuse can lead to heroin abuse.²⁵ Specifically, the data show that

²⁵ SAMHSA, Center for Behavioral Health Statistics and Quality, Data Review, Associations of Nonmedical Pain Reliever Use and Initiation of Heroin Use in the United States. August 2013

the population with the highest rate of heroin initiation was that population with prior nonmedical pain reliever use. The rate of heroin initiation among prior nonmedical pain reliever users was approximately 19 times greater than those who did not have such prior use. The rate of heroin initiation increased with increases in the frequency of past year nonmedical pain reliever use. *Id.*

The DEA has long held that increased heroin use is driven primarily by an increase in the misuse and abuse of prescription opioid drugs, particularly HCPs. The DEA's investigations indicate that the cost of prescription opioid drugs on the street may be as high as \$80.00 per tablet and makes it difficult for teens and young adults to purchase drugs in support of their addiction. Therefore, abusers of prescription opioid drugs may resort to using heroin, a much cheaper alternative that produces similar euphoric effects, to keep the drug seeker/abuser from experiencing painful withdrawal symptoms. According to the most recent NSDUH, there were 335,000 heroin users in 2012, which is more than double the number in 2007 (161,000). In the decade from 2002 to 2011, the annual number of drug poisoning deaths involving heroin doubled, from 2,089 deaths in 2002 to 4,397 deaths in 2011.²⁶

HCPs are the most prescribed drug in the United States. Production of HCPs has increased from 15,359 kilograms in 1998 to 63,338 kilograms in 2012 (IMS, 2014). Increased production of HCPs is directly due to the increased prescription of these drugs to treat and alleviate pain. Even though there is legitimate use of HCPs, data indicate that a considerable population misuse HCPs. The National Poison Data System (NPDS) reported during the period of 2006–2012, that 45.4% of the total exposures to HCPs were considered intentional exposures, a surrogate to usage for abuse or misuse. The high percentage of HCPs for misuse supports that HCPs are contributing to prescription opioid drug abuse and may consequently lead to heroin abuse and death.

In order to prevent continued misuse, abuse and diversion, it is necessary to set an effective date for this scheduling action, including security and labeling requirements, with all reasonable haste.

available at <http://www.samhsa.gov/data/2k13/DataReview/DR006/nonmedical-pain-reliever-use-2013.htm>.

²⁶ Hedegaard H, Chen L-H, and Warner M. Quick Stats: Rates of Drug Poisoning Deaths Involving Heroin, * by Selected Age and Racial/Ethnic Groups—United States, 2002 and 2011, MMWR 2014; 63:595.

After careful consideration of the risk to the U.S. public health and safety related to the diversion and abuse of HCPs, the DEA believes the 45-day effective date is reasonable.

From the 2007 Economic Census, the DEA estimates that the inventory turnover ratio for the industry²⁷ is approximately 11.3.²⁸ The inventory turnover ratio represents the number of times the inventory sells (turns) in a year. The 11.3 inventory turnover ratio equates to an average of 32 days to sell inventory. The 11.3 turnover ratio is consistent with that of large distributors where financial information was publicly available and reviewed. The inventory turnover ratio is a reasonable estimate for the entire industry and all products under the circumstances. Publicly reviewed data show that about 85% of all revenues (an indirect indicator of dosage units moved) from drug distribution in the United States come from three public wholesalers, each with annual revenue in the billions. The DEA additionally notes that many regional and specialist pharmaceutical wholesalers have been acquired by the largest three distribution companies. Because the 32 days to sell inventory is an average based on industry-wide Census data, it is possible for an individual company and/or product line to experience a shorter or longer time to sell.

Since HCPs are the most prescribed opioid drugs in the United States, with over 137 million prescriptions dispensed in 2013,²⁹ the DEA expects distributors to continue to receive and distribute HCPs at high volume and with regularity; thus, anticipating shorter than average days to sell HCPs than the overall industry average ratio. In other words, the very high volume of sales indicates that HCPs are moving very quickly through the supply chain to meet demand, indicating high turnover and low inventory. However, to accommodate those manufacturers and distributors that have lower than average industry turnover ratio, the DEA is establishing an effective date of this final rule, including labeling and packaging requirements, 45 days from the date of publication. Based on the available information, and the lack of specific information regarding

manufacturer and distributor inventory practices with respect to HCPs, the DEA believes this will provide a reasonable time for distributors to sell existing stock with pre-control labeling and packaging (C-III) and to stock inventory with post-control labeling and packaging (C-II).

The DEA anticipates manufacturers to begin developing inventory of HCPs with schedule II labels prior to the effective date of the rule to have stock ready to be distributed upon effect of this rule. The DEA estimates that 45 days is a reasonable amount of time for manufacturers and distributors to deplete existing inventory of HCPs. The packaging and labeling requirements for manufacturers and distributors do not apply to dispensers. Dispensers with HCPs in commercial containers labeled as schedule III may continue to dispense these HCPs after the implementation of this rule.

The DEA believes that HCPs labeled as C-III can be exchanged with HCPs containing new labels at nominal cost. The rule allows this exchange in a similar manner to the return of expired controlled substances authorized under existing regulations. Since manufacturers are expected to have ready-inventory of HCPs with new labels, exchanges are expected to occur without delay. In this rule, the DEA is allowing transfers of HCPs labeled as schedule III to be returned in exchange for HCPs labeled as schedule II without the requirement for procurement quota. Therefore, the DEA believes HCP manufacturers and distributors can reasonably make the necessary labeling changes and have inventory to meet the demands of customers.

The DEA acknowledges distributors may need to make some modifications to their inventory management system and operating procedures. However, these changes are expected to be procedural changes with only nominal impact on the burden created by the activities. For example, a distributor will need to receive, unpack, record the product in inventory, store, accept orders, and ship out to customers. These are all activities that occur regardless of the control status of HCPs. The anticipated changes may be a modification to the inventory management system and possible expansion of storage space (vaults).

The DEA has carefully considered the security requirements for compliance with this rule. As confirmed by the national trade association comprised of distributors, current distributors of HCPs are DEA registrants with existing controlled substance storage facilities that comply with DEA regulations. The

DEA believes the DEA regulations provide flexibility that enables the supply chain to quickly implement the new rule without delay or significant cost.

Modifications necessary for physical security compliance will be a one-time modification primarily to provide for appropriate storage. The DEA understands that handlers of HCPs may also need to make modifications to their current security procedures for compliance. To a lesser extent, there may be necessary modifications to operating procedures, staff training, and amendments to suspicious order monitoring systems. However, due to the high diversion and abuse profile of HCPs, it is reasonably likely that most, if not all, manufacturers and distributors already provide controls and procedures to guard against theft and diversion of HCPs. That is, due to the high diversion potential of HCPs, most, if not all, manufacturers and distributors likely already have operating procedures (e.g., suspicious order monitoring systems, staff training) to guard against theft and diversion of HCPs, thereby necessitating minimal (if any) changes to these non-physical security controls. The DEA believes that a 45-day period will provide handlers of HCPs a reasonable amount of time to implement any one-time modifications to comply with the DEA regulations. Registrants are familiar with the applicable security regulations, and already have systems in place with respect to other schedule II controlled substances. Accordingly, it is reasonable to revise operating procedures, amend monitoring systems, and train staff with respect to HCPs as schedule II controlled substances within the 45-day compliance timeframe.

The DEA has specifically chosen not to stagger implementation dates of handling requirements for the reasons stated herein. Also, different implementation dates leads to confusion and inconsistent application of the law, particularly with respect to rescheduling a drug from schedule III to schedule II. Schedule II and III substances are subject to different recordkeeping and reporting requirements, for example, and registrants would have difficulty keeping and maintaining records and inventories. Also, if one registrant category were to handle HCPs as schedule III controlled substances while another registrant category were to handle HCPs as schedule II controlled substances, it would be confusing (for the registrants and for enforcement authorities), particularly with respect to the relevant transaction records.

²⁷ NAICS 424210—Drugs and druggists' sundries merchant wholesalers; Merchant wholesalers, except manufacturers' sales branches and offices.

²⁸ The inventory turnover ratio of 11.3 was calculated by dividing the 2007 "cost of goods sold" for the industry of \$280,481,051,000 by the average end-of-year 2006 and 2007 total inventories of \$24,782,835,000.

²⁹ IMS Health, National Sales Perspective™ (NSP).

The DEA strongly advises registrants to work closely with their local DEA office regarding submission of materials, storage containers, all applicable security requirements, and any necessary modifications due to compliance with this rule. 21 CFR 1301.71(d); *see also* 21 CFR 1307.03. After 45 days from the date of publication, HCPs will be subject to schedule II security requirements and must be handled and stored pursuant to 21 U.S.C. 821 and 823 and in accordance with 21 CFR 1301.71–1301.93.

b. Distribution of C–III Labeled HCPs Post Implementation

The comments of a manufacturer, wholesale distributor, and national trade association comprised of distributors, each discussed their concerns about how commercial containers of HCPs labeled as “C–III” would be handled. The manufacturer requested that the DEA allow at least nine months from the date of issuance of the final rule for distribution of commercial products labeled as “C–III” in order to allow time for the supply chain to be restocked. This same company also requested that the DEA clarify the ability of reverse distributors and other registrants to continue to handle HCPs labeled as “C–III” for at least three months after the expiration date of the substance, in order to account for handling HCPs for purposes of destruction. The wholesale distributor wrote in favor of immediate implementation of the use of DEA Form 222, while allowing HCPs already labeled as C–III to be continuously distributed until depleted.

DEA response: For the reasons discussed in response to the previous comments, as of the effective date of the final rule, pursuant to 21 U.S.C. 821, 825, and 958(e) and in accordance with 21 CFR 1302.03, manufacturers are required to print upon the labeling of each commercial container of HCPs they distribute the designation of HCPs as “C–II.” It shall be unlawful for commercial containers of HCPs to be distributed downstream without bearing the label properly identifying them as schedule II controlled substances in accordance with 21 CFR part 1302. As clearly stated in 21 CFR 1302.05, “[a]ll labels on commercial containers of, and all labeling of, a controlled substance which either is transferred to another schedule or is added to any schedule shall comply with the requirements of § 1302.03, on or before the effective date established in the final order for the transfer or addition.” Accordingly, the DEA is requiring that commercial

containers of HCPs distributed on or after 45 days from the date of publication of the final rule be labeled as “C–II” and be packaged in accordance with 21 CFR part 1302.

A distribution of HCPs on or after the effective date of this final rule, is a distribution of a schedule II controlled substance, and a DEA Form 222 is required to be used to conduct the transfer in accordance with 21 CFR 1305.03. A registrant may transfer commercial containers of HCPs labeled as “C–III” upstream on or after the effective date of the final rule, with utilization of a DEA Form 222 as required in accordance with 21 CFR 1305.03. Utilization of the DEA Form 222 ensures that schedule I and II controlled substances are accounted for, and allows for the detection and prevention of diversion.

Additionally, as discussed previously in more detail in the Economic Impact Analysis, the DEA believes that any manufacturer or distributor that requires more than 45 days to sell HCP inventory under normal circumstances can make minor modifications to ordering and stocking procedure for a transitional period to meet the established effective date. Distributors also have the option of returning excess stock of HCPs labeled as “C–III” to the manufacturer, or the manufacturer’s authorized agent, as authorized by this final rule, or in accordance with 21 CFR 1307.12.

The DEA takes this opportunity to clarify that the regulation pertaining to labeling of commercial containers applies to distributions by manufacturers and distributors. The DEA does not regulate the labeling and packing of commercial containers of controlled substance downstream of distributors.

c. Exemption of Distributors and Manufacturers

A national trade association comprised of distributors and an individual manufacturer of HCPs requested that the DEA provide an exemption from the schedule II controlled substance security requirements for manufacturers and distributors of HCPs. Both commenters based this request on the assertion that manufacturers and distributors are not a documented significant source of diversion.

DEA response: Scheduling determinations are based on scientific determinations regarding the drug or other substance’s potential for abuse, its potential for psychological and physical dependence, and whether the drug or other substance has a currently accepted medical use in treatment in the United

States. 21 U.S.C. 812(b). The DEA may not reschedule, or refuse to reschedule, a drug or other substance based on purported sources of diversion. One of the primary functions of the DEA Diversion Control Program is to ensure that registrants are in compliance with the safeguards inherent in the CSA. This proactive approach is designed to identify and prevent the large scale diversion of controlled substances and listed chemicals into the illicit market. Manufacturers and distributors pose the greatest potential for large-scale diversion. As discussed in the final rule, “Controlled Substances and List I Chemical Registration and Reregistration Fees,” there is great risk and grave consequences associated with the quantity and purity of controlled substances and/or chemicals with each manufacturer at this point in the closed system. 77 FR 15234, 15241, March 15, 2012. Accordingly, non-practitioners such as manufacturers and distributors must adhere to very stringent physical security requirements. The DEA has determined that there is a high potential for abuse of HCPs, and this, *inter alia*, requires that HCPs be controlled in schedule II. The physical security requirements applicable to schedule II controlled substances will provide secure controls to detect and prevent diversion of HCPs. Accordingly, the DEA declines to exempt manufacturers or distributors from the physical security requirements applicable to HCPs upon control in schedule II. However, the DEA encourages manufacturers and distributors to work closely with their local DEA office regarding submission of materials, storage containers, all applicable security requirements, and any necessary modifications due to compliance with this rule. 21 CFR 1301.71(d); *see also* 21 CFR 1307.03.

10. Economic Impact

a. Cost to Ultimate Users

Several commenters stated that the DEA had failed to fully take into account costs and impacts to ultimate users in its economic impact analysis.

DEA response: Scheduling decisions are based on scientific determinations regarding the drug or other substance’s potential for abuse, its potential for psychological and physical dependence, and whether the drug or other substance has a currently accepted medical use in treatment in the United States. 21 U.S.C. 812(b). The DEA may not reschedule, or refuse to reschedule, a drug or other substance based on the population it is intended or approved to treat, or potential impacts thereon. However, as

discussed above, scheduling or rescheduling a drug does not hinder legitimate access to needed medication. For the reasons discussed earlier in this document, the DEA does not believe that there will be significant impacts, if any, on ultimate users associated with this rulemaking.

b. Cost of Physical Security

Several commenters suggested that it would cost millions of dollars for distributors and retail pharmacies to obtain new vaults or increase the size of their vaults to accommodate for the influx of HCPs. Another commenter suggested that only a limited number of firms can build vaults that meet the requirements of the DEA and because of this, constructing a vault would be time consuming and costly.

DEA response: Scheduling determinations are based on scientific determinations regarding the drug or other substance's potential for abuse, its potential for psychological and physical dependence, and whether the drug or other substance has a currently accepted medical use in treatment in the United States. 21 U.S.C. 812(b). The DEA may not reschedule, or refuse to reschedule, a drug or other substance based on economic impacts.

Retail pharmacies are not required by the CSA or DEA regulations to place schedule II controlled substances in a vault or safe. In accordance with 21 CFR 1301.75(b), pharmacies may disperse schedule II controlled substances throughout their stock of noncontrolled substances in such a manner as to obstruct the theft or diversion of the controlled substances.

11. Proposed Alternatives

a. Establishment of a National Prescription Drug Monitoring Program (PDMP)

Several commenters requested the implementation of a national prescription drug monitoring program (PDMP) either as an alternative to rescheduling HCPs, or possibly in addition thereto, as a means of curtailing doctor shopping and preventing abuse. For example, one commenter noted that "Despite broad consensus that prescribers and public health officials need these essential tools modernized to support clinical decision-making and identify state and regional patterns of abuse and diversion, state-based PDMPs continue to have limited financial resources and interoperability * * *." Another commenter stated that PDMPs "can be improved by creating incentives for inter-state connectivity, making data

available in a more timely fashion and unifying standard submissions."

DEA response: One of the best ways to combat the rising tide of prescription drug abuse is the implementation and use of PDMPs. PDMPs help prevent and detect the diversion and abuse of pharmaceutical controlled substances, particularly at the retail level where no other automated information collection system exists. PDMPs are valuable tools for prescribers, pharmacists, and law enforcement agencies to identify, detect, and prevent prescription drug abuse and diversion.

The DEA supports and encourages the development and maintenance of PDMPs at the State level. Currently, 48 States have an operational PDMP (meaning collecting data from dispensers and reporting information from the database to authorized users). One State has enacted legislation enabling the program to come online; Missouri has no state PDMP. As of February, 2014, only 16 States mandate usage of PDMP. Of those 16 States, 6 States mandate its usage in designated circumstances and 10 mandate its use in broader circumstances. Currently, 26 States have adopted the Interconnect platform for data sharing.

The DEA agrees with these commenters that the use of PDMPs is challenging across State lines because interconnectivity is limited. Interconnectivity or a nationwide system would help deter and detect drug traffickers and drug seekers, many of whom willingly travel hundreds of miles to gain easy access to unscrupulous pain clinics and physicians.

The Department has supported the development of PDMPs through the Harold Rogers Prescription Drug Monitoring grant program, distributing a total of over \$87 million from FY 2002 to FY 2014, including \$7 million in FY 2014. The purpose of this program is to enhance the capacity of regulatory and law enforcement agencies to collect and analyze controlled substance prescription data. It focuses on providing help for States that want to establish a PDMP or expand an existing PDMP. In 2012, the Department provided further policy guidance on data sharing efforts among State PDMPs, a critical aspect of the program.

b. Better Utilization of Currently Established State PDMPs Already in Existence

One commenter suggested that State monitoring systems should be used in a way to specifically identify usage of HCPs in the respective State. The commenter stated that this would allow

each State to develop its own methods for handling the abuse of HCPs problem rather than making a nationwide rule rescheduling HCPs to schedule II. Another commenter suggested that practitioners should use State prescription monitoring programs more to prevent unnecessary refills and prescriptions, thereby preventing abuse. Another commenter suggested that States should be mandated to implement a PDMP if they don't already have one in existence.

DEA response: As mentioned above, States are free to implement their own PDMP. Moreover, States may customize their PDMP in a way that is most beneficial to that State. The States can do this so long as the laws governing the program do not conflict with the CSA, DEA regulations, or other federal law.

However, the DEA, as required by the CSA, has an obligation to control drugs or other substances that have a potential for abuse. Once the DEA controls a drug or substance, it must apply the provisions of the CSA to that newly controlled drug or substance. As stated, scheduling determinations are based on scientific determinations regarding the drug or other substance's potential for abuse, its potential for psychological and physical dependence, and whether the drug or other substance has a currently accepted medical use in treatment in the United States. 21 U.S.C. 812(b).

c. Establishment of a List of "Vetted Patients"

One commenter suggested "that people who genuinely need the medication * * * be listed in the state monitoring system as patients who have been vetted and should be prescribed the medication without [schedule II] requirements." The commenter proposed that such vetting could be done on a six month renewal basis.

DEA response: The CSA does not prevent the States from enacting laws related to controlled substances or prevent States from creating stricter laws. See 21 U.S.C. 903. However, States cannot create rules that are more relaxed than the CSA, and its implementing regulations, as this would be a conflict. See *Id.* Creating a list of vetted patients who do not have to comply with schedule II requirements would be in direct conflict with the CSA and schedule II prescription requirements. An individual practitioner must determine if an individual has a legitimate medical purpose to be issued a prescription for a controlled substance each time a prescription is issued. There is no

mechanism to “vet” a patient in the CSA.

d. Monitoring and/or Enforcement

One commenter stated that “I believe more effort should go into the monitoring the narcotics registry and targeting [of] patients or doctors that are suspicious for abuse rather than trying to restrict the narcotics given.” Another suggested to “vet the patients by 2 different doctor evaluations, vetting to extend for 6 months. Register the vetted patients in the state drug monitoring programs as ‘OK’ to obtain 90-day supplies. Patients not vetted get a very limited supply.”

DEA response: The DEA actively pursues administrative action and civil and criminal prosecution of DEA registrants and individuals who divert controlled substances. One of the primary functions of the DEA Diversion Control Program is to ensure that all DEA registrants are in compliance with the safeguards inherent in the CSA. This proactive approach is designed to identify and prevent diversion of controlled substances and listed chemicals into the illicit market. Insofar as the issuance of and the filling of controlled substance prescriptions is concerned, prescribers and pharmacies, have an obligation to ensure that they do not prescribe or dispense controlled substances to individuals with no legitimate medical purpose for the controlled substance.

e. Change of Prescription Requirements While Retaining Schedule III Status

Several commenters suggested that the DEA change prescription requirements for HCPs while keeping them as schedule III controlled substances instead of transferring them to schedule II of the CSA. For example, some commenters suggested that subcategories be created for specific categories of practitioners, such as oncologists or emergency practitioners. Other commenters suggested that the DEA should limit the quantity of HCPs prescribed or number of refills authorized instead of rescheduling HCPs. As an example, one commenter suggested that any HCP prescriptions of 30 tablets and under should remain as a schedule III controlled substance and prescriptions for over 30 tablets of HCPs should be a schedule II controlled substance.

DEA response: The DEA cannot retain schedule III status for HCPs, as the DEA has determined that HCPs satisfy the criteria for control in schedule II of the CSA. 21 U.S.C. 812(b).

The Assistant Secretary of the HHS provided a scientific and medical

evaluation and a scheduling recommendation to control HCPs as a schedule II controlled substance. In accordance with 21 U.S.C. 811(c), the DEA conducted its own analysis of the eight factors determinative of control. Besides published literature, various other data as detailed in the supporting documents were considered in making the scheduling determination for HCPs. Thus, the scheduling determination is based on a comprehensive evaluation of all available data as related to the required eight factors. The summary of each factor as analyzed by the HHS and the DEA, and as considered by the DEA in this scheduling action, was provided in the proposed rule. Both the DEA and the HHS analyses have been made available in their entirety under “Supporting and Related Material” of the public docket for this rule at <http://www.regulations.gov> under Docket No. DEA-389. Based on the review of the HHS evaluation and scheduling recommendation and all other relevant data, the DEA found that HCPs have an abuse potential and meets the requirements for schedule II controls under the CSA.

f. Education of Prescribing Practitioners

Several commenters suggested that prescribing practitioners should receive education about the problems of HCP abuse, addiction, and prevention of diversion rather than rescheduling HCPs.

DEA response: The DEA fully supports efforts by medical professionals, acting alone and as part of professional organizations, and as well as industry associations, to educate members of their profession/industry on the risks associated with prescription opioid use and on ways to prevent misuse, abuse, and diversion of prescription opioid products. These efforts are an important and integral part of tackling the problem of prescription opioid abuse.

However, as recognized by the CDC, the United States is in the midst of a public health crisis regarding prescription painkiller overdose. Individuals, families, and society are suffering the effects of abuse and addiction. People are dying. In their 2011 report, the CDC estimated that 75 opioid-related deaths occur each day. That equates to over 27,000 people each year. As a society, America simply cannot afford to wait for self-initiated educational programs and measures by medical professionals and industry to solve the problem on their own. As acknowledged by commenters advocating solely for an educational approach, opioid consumption in the

United States continues to increase despite self-initiated professional educational endeavors such as symposia and scientific articles.

One physician who wrote in support of rescheduling asserted that only a limited number of practitioners have paid attention to the warnings issued regarding the risk of addiction, overdose, and death associated with use of HCPs. It was this physician’s belief that: “The opioid epidemic has mainly resulted from a large volume of misinformed doctors failing to understand the risks and limited benefits of these drugs, especially for chronic noncancer pain, one of the most common reasons why patients seek medical care.” This concern has been echoed by the HHS. The HHS has noted “Multiple studies have shown that a small percentage of prescribers are responsible for prescribing the majority of opioids.” Behavioral Health Coordinating Committee, Prescription Drug Abuse Subcommittee, HHS. *Addressing Prescription Drug Abuse in the United States: Current Activities and Future Opportunities*. 2013. (internal citations omitted). The HHS points out, however, that “Providers who are not high-volume prescribers may also contribute to opioid abuse and overdose because of a lack of education and awareness about appropriate opioid prescribing * * *.” The HHS additionally stated, “Even when sufficient information exists, studies show that some providers do not follow risk mitigation strategies even for patients known to be at high risk for abuse.” *Id.* The physician-commenter asserted that “Upscheduling hydrocodone combination products will, at the very least, send a clear message to these providers that hydrocodone is a narcotic in the same class as oxycodone, morphine and heroin, which should be prescribed and refilled with the utmost of selectivity, caution and close patient follow-up.”

The problem must be addressed both nationally and locally by using all available legal and social measures at hand. At the Federal level, this includes following the legal path directed by Congress to address issues of substance abuse and trafficking. As part of a comprehensive approach involving multiple Federal and State actors to address these concerns, Congress has charged the DEA with the responsibility to implement and enforce, to the fullest extent of the law, the requirements of the CSA. This includes ensuring that drugs and other substances are appropriately scheduled concordant with the factors for each schedule under 21 U.S.C. 812(b).

g. Education and Rehabilitation of Ultimate Users

Several commenters suggested that patient education and/or rehabilitation was the proper route to address abuse of HCPs rather than rescheduling.

DEA response: A multi-pronged approach, one that includes education, treatment, monitoring, and law enforcement is needed to combat this epidemic. The DEA supports all efforts to educate patients about the risks associated with use of substances with abuse potential. As discussed above, an analysis of the eight factors determinative of control demonstrates that HCPs warrant control II of the CSA. 21 U.S.C. 812(b).

h. Strict Enforcement/Sanctions

Several commenters voiced an opinion that there should be strict enforcement against those that have diverted and illegally sold prescription HCPs. These commenters stated it would be a good idea to ban these offenders from receiving HCPs or reduce limits on how much HCPs an offender can receive. In addition, several commenters suggested tougher sanctions and enforcement should be applied to providers who are not lawfully practicing their trade rather than punishing those who are obeying the laws.

DEA response: The DEA mission is to implement and enforce the CSA and corresponding regulations to the fullest extent of the law. The DEA actively pursues administrative action and civil and criminal prosecution of DEA registrants and other individuals who divert controlled substances. One of the primary functions of the DEA Diversion Control Program is to ensure that registrants are in compliance with the safeguards inherent in the CSA. The DEA supports State and local law enforcement, and State professional and regulatory boards in their efforts to prevent diversion and enforce the controlled substances laws.

V. Scheduling Conclusion

Based on consideration of all comments, the scientific and medical evaluation and accompanying recommendation of the HHS, and based on the DEA's consideration of its own eight-factor analysis, the DEA finds that these facts and all other relevant data constitute substantial evidence of potential for abuse of HCPs. As such, the DEA is rescheduling HCPs as a schedule II controlled substance under the CSA.

VI. Determination of Appropriate Schedule

The CSA outlines the findings required to transfer a drug or other substance between schedules (I, II, III, IV, or V) of the CSA. 21 U.S.C. 811(a); 21 U.S.C. 812(b). After consideration of the analysis and rescheduling recommendation of the Assistant Secretary for Health of the HHS and review of available data, the Administrator of the DEA, pursuant to 21 U.S.C. 811(a) and 21 U.S.C. 812(b)(2), finds that:

1. HCPs have a high potential for abuse. The abuse potential of HCPs is comparable to the schedule II controlled substance oxycodone;
2. HCPs have a currently accepted medical use in treatment in the United States. Several pharmaceutical products containing hydrocodone in combination with acetaminophen, aspirin, other NSAIDs, and homatropine are approved by the FDA for use as analgesics for pain relief and for the symptomatic relief of cough and upper respiratory symptoms associated with allergies and colds; and
3. Abuse of HCPs may lead to severe psychological or physical dependence.

Based on these findings, the Administrator of the DEA concludes that HCPs warrant control in schedule II of the CSA. 21 U.S.C. 812(b)(2).

VII. Requirements for Handling HCPs

Upon the effective date of this final rule, any person who handles HCPs will be subject to the CSA's schedule II regulatory controls and administrative, civil, and criminal sanctions applicable to the manufacture, distribution, dispensing, importing, exporting, engaging in research, conducting instructional activities, and conducting chemical analysis, of schedule II controlled substances, including the following:

Registration. Any person who handles (manufactures, distributes, dispenses, imports, exports, engages in research, conducts instructional activities with, or conducts chemical analysis with) HCPs, or who desires to handle HCPs, must be registered with the DEA to conduct such activities pursuant to 21 U.S.C. 822, 823, 957, and 958, and in accordance with 21 CFR parts 1301 and 1312 as of October 6, 2014.

Security. HCPs are subject to schedule II security requirements and must be handled and stored pursuant to 21 U.S.C. 821 and 823, and in accordance with 21 CFR 1301.71–1301.93 as of October 6, 2014.

Labeling and Packaging. All labels, labeling, and packaging for commercial containers of HCPs must comply with

21 U.S.C. 825 and 958(e), and be in accordance with 21 CFR part 1302 as of October 6, 2014, except with respect to exchanges for purposes of relabeling/repackaging as provided below under "Quotas."

Quotas. A quota assigned pursuant to 21 U.S.C. 826 and in accordance with 21 CFR part 1303 is required in order to manufacture HCPs as of October 6, 2014. Registrants required to obtain an individual manufacturing quota shall not manufacture HCPs on or after October 6, 2014, unless an individual manufacturing quota is granted for such quantities of HCP to be manufactured. Registrants required to obtain a procurement quota shall not procure HCPs on or after October 6, 2014, unless a procurement quota is granted for such quantities of HCP to be procured.

Except, registrants authorized to manufacture schedule II and III controlled substances may relabel/repackage HCPs labeled as "CIII" or "C-III" without obtaining procurement quota for such activity, under the following conditions:

- (1) The manufacturing activity occurs before December 8, 2014;
- (2) if the manufacturer is relabeling/repackaging HCPs that were returned to the manufacturer, the manufacturer returns the same quantity and strength of HCPs labeled as "CII" or "C-II" back to the registrant that returned HCPs labeled as "CIII" or "C-III" to the manufacturer; and
- (3) an invoice or the DEA Form 222 (whichever is applicable) records the transfer and reflects that the transfer occurred pursuant to the authority contained in this final rule.

For example, if before October 6, 2014, distributor A transfers 5 packages of 100-bottle 5/325 HCPs labeled as CIII/C-III to manufacturer B, solely for the purpose of relabeling, the invoice would reflect that the transfer occurred pursuant to the authority in this final rule. If the return occurs after October 6, 2014, the DEA Form 222 would reflect that the transfer occurred pursuant to the authority contained in this final rule. When the manufacturer distributes HCPs labeled as "CII" or "C-II" back to the registrant that returned the HCPs labeled as "CIII" or "C-III," the manufacturer must return the same quantity and strength that was originally received for relabeling/repackaging. The DEA Form 222 will, again, reflect that the transfer occurred pursuant to the authority contained in this final rule.

In the above example, the manufacturer would not be required to obtain a procurement quota in order to relabel/repackage 5 packages of 100-bottle 5/325 HCPs, so long as

manufacturer B subsequently transfers to distributor A 5 packages of 100-bottle 5/325 HCPs labeled as CII/C–II, unless the re-label/repackage activity occurs after December 8, 2014.

Registrants may continue to return HCPs pursuant to 21 CFR 1307.12.

Inventory. Any person who becomes registered with the DEA on or after the effective date of the final rule must take an initial inventory of all stocks of controlled substances (including HCPs) on hand on the date the registrant first engages in the handling of controlled substances pursuant to 21 U.S.C. 827 and 958, and in accordance with 21 CFR 1304.03, 1304.04, and 1304.11(a) and (b) as of October 6, 2014.

After the initial inventory, every DEA registrant must take a new inventory of all stocks of controlled substances (including HCPs) on hand every two years pursuant to 21 U.S.C. 827 and 958, and in accordance with 21 CFR 1304.03, 1304.04, and 1304.11.

Records and Reports. Every DEA registrant must maintain records and submit reports with respect to HCPs pursuant to 21 U.S.C. 827 and 958, and in accordance with 21 CFR parts 1304 and 1312 as of October 6, 2014. Each pharmacy with a modified registration under 21 U.S.C. 823(f) that authorizes the dispensing of controlled substances by means of the Internet must submit reports to the DEA regarding HCPs pursuant to 21 U.S.C. 827 and in accordance with 21 CFR 1304.55 as of October 6, 2014.

Orders for HCPs. Every DEA registrant who distributes HCPs must comply with order form requirements, pursuant to 21 U.S.C. 821, 828, 871 and in accordance with 21 CFR parts 1305 and 1307 as of October 6, 2014.

Prescriptions. All prescriptions for HCPs must comply with 21 U.S.C. 829(a) and must be issued in accordance with 21 CFR part 1306 and subpart C of 21 CFR part 1311 as of October 6, 2014. No prescription for HCPs issued on or after October 6, 2014 shall authorize any refills. Any prescriptions for HCPs that are issued before October 6, 2014, and authorized for refilling, may be dispensed in accordance with 21 CFR 1306.22–1306.23, 1306.25, and 1306.27, if such dispensing occurs before April 8, 2015.

Importation and Exportation. All importation and exportation of HCPs must be in compliance with 21 U.S.C. 952, 953, 957, and 958, and in accordance with 21 CFR part 1312 as of October 6, 2014.

Liability. Any activity involving HCPs not authorized by, or in violation of, the CSA or its implementing regulations, occurring as of October 6, 2014, is

unlawful, and may subject the person to administrative, civil, and/or criminal action.

VIII. Regulatory Analyses

Executive Orders 12866 and 13563

In accordance with 21 U.S.C. 811(a), this scheduling action is subject to formal rulemaking procedures performed “on the record after opportunity for a hearing,” which are conducted pursuant to the provisions of 5 U.S.C. 556 and 557. The CSA sets forth the procedures and criteria for scheduling a drug or other substance. Such actions are exempt from review by the Office of Management and Budget (OMB) pursuant to section 3(d)(1) of Executive Order 12866 and the principles reaffirmed in Executive Order 13563.

Executive Order 12988

This regulation meets the applicable standards set forth in sections 3(a) and 3(b)(2) of Executive Order 12988 Civil Justice Reform to eliminate drafting errors and ambiguity, minimize litigation, provide a clear legal standard for affected conduct, and promote simplification and burden reduction.

Executive Order 13132

This rulemaking does not have federalism implications warranting the application of Executive Order 13132. The rule does not have substantial direct effects on the States, on the relationship between the national government and the States, or the distribution of power and responsibilities among the various levels of government.

Executive Order 13175

This rule does not have tribal implications warranting the application of Executive Order 13175. It does not have substantial direct effects on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

Regulatory Flexibility Act

The Administrator, in accordance with the Regulatory Flexibility Act (5 U.S.C. 601–612) (RFA), has reviewed this rule, and by approving it, certifies that it will not have a significant economic impact on a substantial number of small entities. The purpose of this rule is to place HCPs into schedule II of the CSA. No less restrictive measures (i.e., non-control or control in a lower schedule) would enable the DEA to meet its statutory obligation under the CSA.

HCPs are widely prescribed drugs for the treatment of pain and cough suppression. Handlers of HCPs primarily include manufacturers, distributors, exporters, pharmacies, practitioners, mid-level practitioners, and hospitals/clinics.³⁰ It is possible that other registrants, such as importers, researchers, analytical labs, teaching institutions, etc., also handle HCPs. However, based on its understanding of its registrant population, the DEA assumes for purposes of this analysis that for all business activities other than manufacturers, distributors, exporters, pharmacies, practitioners, mid-level practitioners, and hospitals/clinics, that the volume of HCPs handled is nominal, and therefore *de minimis* to the economic impact determination of this rescheduling action.

Because HCPs are so widely prescribed, for the purposes of this analysis, the DEA conservatively assumes all distributors, exporters, pharmacies, practitioners, mid-level practitioners, and hospitals/clinics currently registered with the DEA to handle schedule III controlled substances are also handlers of HCPs. The DEA estimated the number of manufacturers and exporters handling HCPs directly from DEA records. In total, the DEA estimates that nearly 1.5 million controlled substance registrations, representing approximately 376,189 entities, would be affected by this rule.

The DEA does not collect data on company size of its registrants. The DEA used DEA records and multiple subscription-based and public data sources to relate the number of registrations to the number of entities and the number of entities that are small entities. The DEA estimates that of the 376,189 entities that would be affected by this rule, 366,351³¹ are “small entities” in accordance with the RFA and Small Business Administration size

³⁰For purposes of performing regulatory analysis, the DEA uses the definition of a “practitioner” as a physician, veterinarian, or other individual licensed, registered, or otherwise permitted, by the United States or the jurisdiction in which he/she practices, to dispense a controlled substance in the course of professional practice, but does not include a pharmacist, pharmacy, or hospital (or other person other than an individual). For the purposes of performing regulatory analysis, “mid-level practitioner” means an individual registered with the DEA as a “mid-level practitioner” but does not include practitioners as defined above. Examples of mid-level practitioners include, but are not limited to, health care providers such as nurse practitioners, nurse midwives, nurse anesthetists, clinical nurse specialists and physician assistants.

³¹The estimated break-down is as follows: 50 manufacturers; 4 exporters; 683 distributors; 50,774 pharmacies; and 314,840 persons registered as or employing practitioners/mid-level practitioners/hospitals/clinics.

standards. 5 U.S.C. 601(6); 15 U.S.C. 632.

The DEA examined the registration, security (including storage), labeling and packaging, quota, inventory, recordkeeping and reporting, ordering, prescribing, importing, exporting, and disposal requirements for the 366,351 small entities estimated to be affected by the rule. The DEA estimates that only the physical security requirements will have material economic impact and such impacts will be limited to manufacturers, exporters, and distributors. Many manufacturers and exporters are likely to have sufficient space in their existing vaults to accommodate HCPs. However, the DEA understands that some manufacturers, exporters, and distributors will need to build new vaults or expand existing vaults to store HCPs in compliance with schedule II controlled substance physical security requirements. Due to the uniqueness of each business, the DEA made assumptions based on research and institutional knowledge of its registrant community to quantify the costs associated with physical security requirements for manufacturers, exporters and distributors.

The DEA estimates there will be significant economic impact on 1 (2.0%) of the affected 50 small business manufacturers, and 54 (7.9%) of the affected 683 small business distributors. The DEA estimates no significant impact on the remaining affected 4 small business exporters, 50,774 small business pharmacies, or 314,840 small business practitioners/mid-level practitioners/hospitals/clinics.

In summary, 55 of the 366,351 (0.015%) affected small entities are estimated to experience significant impact, (i.e., incur costs greater than 1% of annual revenue) as a result of this rule being finalized. The percentage of small entities with significant economic impact is below the 30% threshold for all registrant business activities. The DEA's assessment of economic impact by size category indicates that the rule to reschedule HCPs as schedule II controlled substances will not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act of 1995

On the basis of information contained in the "Regulatory Flexibility Act" section above, the DEA has determined and certifies pursuant to the Unfunded Mandates Reform Act (UMRA) of 1995 (2 U.S.C. 1501 *et seq.*), that this action would not result in any Federal mandate that may result "in the expenditure by State, local, and tribal governments, in the aggregate, or by the

private sector, of \$100,000,000 or more (adjusted for inflation) in any one year * * *." Therefore, neither a Small Government agency Plan nor any other action is required under provisions of the UMRA of 1995.

Paperwork Reduction Act of 1995

This action does not impose a new collection of information requirement under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3521). This action would not impose recordkeeping or reporting requirements on State or local governments, individuals, businesses, or organizations. An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless it displays a currently valid OMB control number.

Congressional Review Act

This rule is not a major rule as defined by section 804 of the Small Business Regulatory Enforcement Fairness Act of 1996 (Congressional Review Act (CRA)). This rule will not result in: an annual effect on the economy of \$100,000,000 or more; a major increase in costs or prices for consumers, individual industries, Federal, State, or local government agencies, or geographic regions; or significant adverse effects on competition, employment, investment, productivity, innovation, or on the ability of United States-based companies to compete with foreign based companies in domestic and export markets. However, pursuant to the CRA, the DEA has submitted a copy of this final rule to both Houses of Congress and to the Comptroller General.

List of Subjects in 21 CFR Part 1308

Administrative practice and procedure, Drug traffic control, Reporting and recordkeeping requirements.

For the reasons set out above, 21 CFR part 1308 is amended as follows:

PART 1308—SCHEDULES CONTROLLED SUBSTANCES

■ 1. The authority citation for 21 CFR part 1308 continues to read as follows:

Authority: 21 U.S.C. 811, 812, 871(b) unless otherwise noted.

§ 1308.13 [Amended]

■ 2. Amend § 1308.13 by removing paragraphs (e)(1)(iii) and (iv) and redesignating paragraphs (e)(1)(v) through (viii) as (e)(1)(iii) through (vi), respectively.

Dated: August 15, 2014.

Michele M. Leonhart,
Administrator.

BILLING CODE 4410–09–P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

26 CFR Part 1

[TD 9676]

RIN 1545–BJ59

Allocation and Apportionment of Interest Expense; Correction

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Correcting amendment.

SUMMARY: This document contains corrections to final regulations (TD 9676) that were published in the **Federal Register** on Wednesday, July 16, 2014 (79 FR 41424) providing guidance concerning the allocation and apportionment of interest expense by corporations owning a 10 percent or greater interest in a partnership, as well as the allocation and apportionment of interest expense using the fair market value method. These regulations also update the interest allocation regulations to conform to the statutory changes made by section 216 of the legislation commonly referred to as the Education Jobs and Medicaid Assistance Act (EJMAA), enacted on August 10, 2010, affecting the affiliation of certain foreign corporations for purposes of section 864(e). These regulations affect taxpayers that allocate and apportion interest expense.

DATES: This correction is effective on August 22, 2014, and is applicable July 16, 2014.

FOR FURTHER INFORMATION CONTACT: Jeffrey L. Parry at (202) 317–6936 (not a toll-free number).

SUPPLEMENTARY INFORMATION:

Background and Explanation of Provisions

The final regulations that are the subject of this document are under section 864(e) of the Internal Revenue Code.

Need for Correction

As published, final regulations (TD 9676) contain errors that may prove to be misleading and are in need of clarification.

List of Subjects in 26 CFR Part 1

Income taxes, Reporting and recordkeeping requirements.

Correction of Publication

Accordingly, 26 CFR part 1 is corrected by making the following correcting amendments:

PART 1—INCOME TAXES

■ **Paragraph 1.** The authority citation for part 1 continues to read in part as follows:

Authority: 26 U.S.C. 7805 * * *

■ **Par. 2.** Section 1.861–9 is amended by revising the third to the last sentence of paragraph (h)(4)(iii)(A) to read as follows:

§ 1.861–9 Allocation and apportionment of interest expense.

(h) * * *

(4) * * *

(iii) * * *

(A) * * * The value of these assets has been determined using generally accepted valuation techniques, as required by § 1.861–9T(h)(1)(ii). * * *

Martin V. Franks,

Chief, Publications and Regulations Branch, Legal Processing Division, Associate Chief Counsel (Procedure and Administration).

BILLING CODE 4830–01–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 100**

[Docket No. USCG–2014–0580]

RIN 1625–AA08

Eighth Coast Guard District Annual Marine Events; Wheeling Vintage Raceboat Regatta; Ohio River Mile 90.2 to 90.8; Wheeling, WV

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a special local regulation for the Wheeling Vintage Raceboat Regatta on the Ohio River, from mile 90.2 to 90.8, extending the entire width of the river. This zone will be in effect on August 30–31, 2014 from 9:00 a.m. until 6:00 p.m. This regulated area is necessary to protect vessels participating in the event and event spectators from the hazards associated with a boat race on the

waterway. During the enforcement period, entry into, transiting, or anchoring in the safety zone is prohibited to all vessels not registered with the sponsor as participants or official patrol vessels, unless specifically authorized by the Captain of the Port (COTP) Pittsburgh or a designated representative.

DATES: The regulations in 33 CFR 100.801 will be enforced with actual notice on August 30–31, 2014 from 9:00 a.m. until 6:00 p.m.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice of enforcement, call or email Ariana Mohnke, Marine Safety Unit Pittsburgh, U.S. Coast Guard, at telephone (412) 644–5808, email *Ariana.L.Mohnke@uscg.mil*.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the special local regulation for the annual Wheeling Vintage Raceboat Regatta listed in 33 CFR 100.801 Table 1, Entry No. 25; Sector Ohio Valley on August 30–31, 2014 from 9:00 a.m. until 6:00 p.m.

Under the provisions of 33 CFR 100.801, entry into the safety zone listed in Table 1, Entry No. 25; Sector Ohio Valley, is prohibited unless authorized by the COTP or a designated representative. Persons or vessels desiring to enter into or passage through the safety zone must request permission from the COTP or a designated representative. If permission is granted, all persons and vessels shall comply with the instructions of the COTP Pittsburgh or designated representative.

This notice is issued under authority of 5 U.S.C. 552(a) and 33 U.S.C. 1233. The Coast Guard will provide the maritime community with advance notification of this enforcement period via Local Notice to Mariners and updates via Marine Information Broadcasts.

If the COTP or designated representative determines that the special local regulation need not be enforced for the full duration stated in this notice of enforcement, he or she may use a Broadcast Notice to Mariners to remove this restriction or to grant general permission to enter the regulated area.

Dated: August 1, 2014.

L. N. Weaver,

Commander, U. S. Coast Guard, Captain of the Port, Pittsburgh.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY**Coast Guard****33 CFR Part 117**

[Docket No. USCG–2014–0736]

Drawbridge Operation Regulation; Bishop Cut, Between King Island and Bishop Tract, CA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the San Joaquin County highway bridge across Bishop Cut, mile 1.0 between King Island and Bishop Tract, CA. The deviation is necessary to allow the bridge owner to make necessary bridge repairs. This deviation allows the bridge to remain in the closed-to-navigation position during the deviation period.

DATES: This deviation is effective without actual notice from August 22, 2014 through 5 p.m. on October 23, 2014. For the purposes of enforcement, actual notice will be used from 7 a.m. on August 18, 2014, until August 22, 2014.

ADDRESSES: The docket for this deviation, [USCG–2014–0736], is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this deviation. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email David H. Sulouff, Chief, Bridge Section, Eleventh Coast Guard District; telephone 510–437–3516, email *David.H.Sulouff@uscg.mil*. If you have questions on viewing the docket, call Cheryl Collins, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION: The County of San Joaquin has requested a temporary change to the operation of the San Joaquin County highway bridge, mile 1.0, over Bishop Cut, between King Island and Bishop Tract, CA. The drawbridge navigation span provides approximately 6 feet vertical clearance above Mean High Water in the closed-

to-navigation position. In accordance with 33 CFR 117.143, the draw opens on signal if at least 12 hours notice is given to the San Joaquin County Department of Public Works at Stockton. Navigation on the waterway is commercial and recreational.

The drawspan will be secured in the closed-to-navigation position from 7 a.m. on August 18, 2014 to 5 p.m. on October 23, 2014 to allow the bridge owner to make necessary structural maintenance repairs and to replace approach deck slabs. This temporary deviation has been coordinated with the waterway users. No objections to the proposed temporary deviation were raised.

Vessels able to pass through the bridge in the closed position may do so at any time. The bridge will not be able to open for emergencies, and Disappointment Slough can be used as an alternate route for vessels unable to pass through the bridge in closed position. The Coast Guard will inform waterway users of this temporary deviation via our Local and Broadcast Notices to Mariners, to minimize resulting navigational impacts.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the effective period of this temporary deviation. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 6, 2014.

D.H. Sulouff,

District Bridge Chief, Eleventh Coast Guard District.

BILLING CODE 9110-04-P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 117

[Docket No. USCG-2014-0670]

Drawbridge Operation Regulation; Lake Washington Ship Canal, Seattle, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Montlake Bridge across the Lake Washington Ship Canal, mile 5.2, at Seattle, WA. The deviation continues to allow the Washington State Department of Transportation to accommodate

vehicular traffic attending football games, and maintain the bridge in the closed to navigation position. This deviation modifies the previously approved deviation under the same docket number.

DATES: This deviation is effective from September 6, 2014 through November 22, 2014.

ADDRESSES: The docket for this deviation, [USCG-2014-0670] is available at <http://www.regulations.gov>. Type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this deviation. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Steven M. Fischer, Bridge Administrator, Thirteenth District, Coast Guard; telephone 206-220-7282, email Steven.M.Fischer3@uscg.mil. If you have questions on viewing the docket, call Cheryl Collins, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION: This temporary deviation supersedes the previous deviation of the same docket number published on August 5, 2014 (79 FR 45344) with respect to the closer times from September 6, 2014 to November 22, 2014. The Washington State Department of Transportation, on behalf of the University of Washington Police Department, has requested that 30 additional minutes be added to the requested time periods published on August 5, 2014 to facilitate timely movement of pre-game and post-game football traffic. The Montlake Bridge bascule span will remain closed and need not open to vessel traffic from 9:30 a.m. to 12:30 p.m., and from 2:30 p.m. to 5:30 p.m. on September 6, 2014; from 10:30 a.m. to 1:30 p.m. and from 3:30 p.m. to 6:30 p.m. on September 13, 2014. The times for the closures on September 20, 2014, September 27, 2014, October 25, 2014, November 8, 2014, and November 22, 2014 will be determined and announced in the Coast Guard's Local Notice to Mariners and Broadcast Notice to Mariners as they become available. Due to NCAA television scheduling, the times for the games are not currently available. The bridge shall operate in accordance to 33 CFR 117.1051(e) at all other times.

The Montlake Bridge crosses the Lake Washington Ship Canal at mile 5.2, and while in the closed position provides 30 feet of vertical clearance throughout the navigation channel and 46 feet of vertical clearance throughout the center 60-feet of the bridge. These vertical clearance measurements are made in reference to the Mean Water Level of Lake Washington. The normal operating schedule for the Montlake Bridge states that the bridge opens on signal, subject to the list of exceptions provided in 33 CFR 117.1051(e).

Waterway usage on the Lake Washington Ship Canal ranges from commercial tug and barge to small pleasure craft. Vessels able to pass through the bridge in the closed positions may do so at any time. The bridge will be able to open for emergencies and there is no immediate alternate route for vessels to pass. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridges must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 11, 2014.

Steven M. Fischer,

Bridge Administrator, Thirteenth Coast Guard District.

Drawbridge Operation Regulation; Lake Washington Ship Canal, Seattle, WA

AGENCY: Coast Guard, DHS.

ACTION: Notice of deviation from drawbridge regulation.

SUMMARY: The Coast Guard has issued a temporary deviation from the operating schedule that governs the Seattle Department of Transportation (SDOT) Fremont Bridge, across the Lake Washington Ship Canal, mile 2.6, at Seattle, WA. This deviation is necessary to allow the bridge to operate in single

leaf mode while work crews are onsite, and to only provide a double leaf opening with a five hour advance notice. This deviation allows one half of the bridge to remain in the closed position while reducing the vertical clearance of the non-operating span by four feet to account for the installation of a moveable platform underneath the bridge.

DATES: This deviation is effective without actual notice from August 22, 2014 through 6 p.m. on January 21, 2015. For the purposes of enforcement, actual notice will be used from 7 a.m. on August 6, 2014, until August 22, 2014.

ADDRESSES: The docket for this deviation, [USCG–2014–0735] is available at <http://www.regulations.gov>. Type the docket number in the “SEARCH” box and click “SEARCH.” Click on Open Docket Folder on the line associated with this deviation. You may also visit the Docket Management Facility in Room W12–140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary deviation, call or email Mr. Steven Fischer, Bridge Administrator, Thirteenth Coast Guard District; telephone 206–220–7282, email Steven.M.Fischer3@uscg.mil. If you have questions on viewing the docket, call Cheryl Collins, Program Manager, Docket Operations, telephone 202–366–9826.

SUPPLEMENTARY INFORMATION: The Seattle Department of Transportation (SDOT) has requested a temporary deviation from the operating schedule for the Fremont Bridge, mile 2.6, crossing the Lake Washington Ship Canal at Seattle, WA. The deviation is necessary to accommodate SDOT workers for a bridge painting project. To facilitate this event, the full draw of the bridge need not open for vessel traffic

unless a five hour advance notice is provided to the bridge operator. Additionally, one half of the draw of the bridge will be maintained in the closed-to-navigation position, and the clearance reduced up to four feet. This deviation will begin at 7 a.m. on August 6, 2014 and continue until 6 p.m. on January 21, 2015.

The Fremont Bridge, mile 2.6, is a double leaf bascule bridge which provides a vertical clearance of 14 feet (31 feet of vertical clearance for the center 36 horizontal feet) in the closed position. The clearance is referenced to the mean water elevation of Lake Washington. The normal operating schedule for the Fremont Bridge is set out in 33 CFR 117.1051 and states that the bridge need not open from 7 a.m. to 9 a.m. and from 4 p.m. to 6 p.m. Monday through Friday for vessels less than 1000 tons. The normal operating schedule for this bridge also requires one hour advance notification for bridge openings between 11 p.m. and 7 a.m. daily. Waterway usage on the Lake Washington Ship Canal ranges from commercial tug and barge to small pleasure craft.

Vessels able to pass through the bridge in the closed positions may do so at any time. The bridge will be able to open one leaf, half of the draw span, for emergencies and there is no immediate alternate route for vessels to pass. The Coast Guard will also inform the users of the waterways through our Local and Broadcast Notices to Mariners of the change in operating schedule for the bridge so that vessels can arrange their transits to minimize any impact caused by the temporary deviation.

In accordance with 33 CFR 117.35(e), the drawbridge must return to its regular operating schedule immediately at the end of the designated time period. This deviation from the operating regulations is authorized under 33 CFR 117.35.

Dated: August 6, 2014.

Steven M. Fischer,
Bridge Administrator, Thirteenth Coast Guard District.

BILLING CODE 9110–04–P

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[Docket No. USCG–2012–1036]

Safety Zones; Recurring Marine Events in Captain of the Port Long Island Sound Zone

AGENCY: Coast Guard, DHS.

ACTION: Notice of enforcement of regulation.

SUMMARY: The Coast Guard will enforce a safety zone for a fireworks display in the Sector Long Island Sound area of responsibility on August 30–31, 2014. This action is necessary to provide for the safety of life on navigable waterways during the event. During the enforcement period, no person or vessel may enter the safety zone without permission of the Captain of the Port (COTP) Sector Long Island Sound or designated representative.

DATES: The regulations for the marine event listed in Table 1 to 33 CFR 165.151(9.3) will be enforced on August 30, 2014 and August 31, 2014 from 8:30 p.m. to 9:40 p.m.

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call or email Petty Officer Ian Fallon, Waterways Management Division, U.S. Coast Guard Sector Long Island Sound; telephone 203–468–4565, email Ian.M.Fallon@uscg.mil.

SUPPLEMENTARY INFORMATION: The Coast Guard will enforce the safety zone listed in Table 1 to 33 CFR 165.151(9.3) on the specified dates and times as indicated below. The final rule establishing this safety zone was published in the **Federal Register** on May 24, 2013 (78 FR 31402).

TABLE 1 TO §165.151

9.3 Village of Island Park Labor Day Celebration Fireworks	<ul style="list-style-type: none"> • Date: August 30, 2014. • Rain Date: August 31, 2014. • Time: 8:30 p.m. to 9:40 p.m. • Location: Waters off Village of Island Park Fishing Pier, Village Beach, NY in approximate position 40°36'30.95" N., 073°39'22.23" W. (NAD 83).
--	--

Under the provisions of 33 CFR 165.151, the fireworks display listed

above is established as a safety zone. During the enforcement period, persons

and vessels are prohibited from entering into, transiting through, mooring, or

anchoring within the safety zone unless they receive permission from the COTP or designated representative. This notice is issued under authority of 33 CFR 165 and 5 U.S.C. 552(a). In addition to this notice in the **Federal Register**, the Coast Guard will provide the maritime community with advance notification of this enforcement period via the Local Notice to Mariners or marine information broadcasts. If the COTP determines that the safety zone need not be enforced for the full duration stated in this notice, a Broadcast Notice to Mariners may be used to grant general permission to enter the safety zone.

Dated: August 8, 2014.

E. J. Cubanski III,

Captain, U.S. Coast Guard, Captain of the Port Sector Long Island Sound.

DEPARTMENT OF HOMELAND SECURITY

Coast Guard

33 CFR Part 165

[USCG-2014-0708]

RIN 1625-AA87

Security Zone: Martha's Vineyard, Massachusetts

AGENCY: Coast Guard, DHS.

ACTION: Temporary final rule.

SUMMARY: The Coast Guard is establishing two 1000-yard temporary security zones around the President of the United States (POTUS) and/or the first family in conjunction with their visit to Martha's Vineyard, Massachusetts. Vessels and people will be prohibited from entering these security zones during the effective period.

These security zones will be effective from 30 minutes prior to the arrival of the POTUS and/or the first family within 1000 yards of navigable waters of the U.S. in the the coastal areas of Chilmark and Edgartown Great Pond, Martha's Vineyard, Massachusetts, until departure of the POTUS and/or the first family from the area. These security zones are needed to safeguard the POTUS and the first family from potential threats or harm. Entry into these zones by any vessel or person is prohibited unless specifically authorized by the Captain of the Port (COTP) or the COTP's designated on-scene representative.

DATES: This rule is effective without actual notice from August 22, 2014 until

August 24, 2014 at 5:00 p.m. For the purposes of enforcement, actual notice will be used from the date the rule was signed, August 7, 2014, until August 22, 2014.

ADDRESSES: Documents indicated in this preamble as being available in the docket are part of docket USCG-2014-0708 and are available online by going to <http://www.regulations.gov>, inserting USCG-2014-0708 in the "Keyword" box, and then clicking "Search". They are also available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this temporary rule, call or email Mr. Edward G. LeBlanc at Sector Southeastern New England; telephone (401) 435-2351, email Edward.G.LeBlanc@uscg.mil. If you have questions on viewing the docket, call Cheryl Collins, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

APA	Administrative Procedure Act
CFR	Code of Federal Register
DHS	Department of Homeland Security
FR	Federal Register
NPRM	Notice of Proposed Rulemaking
POTUS	President of the United States
USC	United States Code
USCG	United States Coast Guard

A. Regulatory Information

The Coast Guard is issuing this temporary final rule without prior notice and opportunity to comment pursuant to authority under section 4(a) of the Administrative Procedure Act (APA) (5 U.S.C. 553(b)). This provision authorizes an agency to issue a rule without prior notice and opportunity to comment when the agency for good cause finds that those procedures are "impracticable, unnecessary, or contrary to the public interest." Under 5 U.S.C. 553(b)(B), the Coast Guard finds that good cause exists for not publishing a notice of proposed rulemaking (NPRM) with respect to this rule because of the sensitive security issues related to the POTUS and first family. Providing a public notice and comment period is contrary to national security concerns and the public interest.

Under 5 U.S.C. 553(d)(3), the Coast Guard finds that good cause exists for making this rule effective less than 30 days after publication in the **Federal Register**. Any delay encountered in this

temporary rule's effective date would be contrary to the public interest given the immediate need to ensure the safety and security of the POTUS and first family during their visit to Martha's Vineyard, Massachusetts, from August 08, 2014 through August 24, 2014.

B. Basis and Purpose

The legal basis for this rule is 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, and 160.5; Public Law 107-295, 116 Stat. 2064; and Department of Homeland Security Delegation No. 0170.1.

The POTUS and first family will visit Martha's Vineyard, Massachusetts, from August 08, 2014 through August 24, 2014. It is expected they will reside and/or participate in activities on property that borders navigable waters within the Captain of the Port, Southeastern New England zone. The U.S. Secret Service has requested that the Coast Guard provide 1000-yard waterside security zones around the POTUS and the first family. These security zones are intended to provide security for the POTUS and first family by preventing vessels and persons from approaching the location of the POTUS and first family without prior authorization from the U.S. Secret Service.

C. Discussion of Rule

This temporary rule establishes 1000-yard security zones in the navigable waters in the vicinity of the POTUS and first family during their visit to Martha's Vineyard, Massachusetts, from August 08-24, 2014. Vessels and persons will be prohibited from entering these security zones whenever they are enforced due to the presence of the POTUS and/or first family.

This rule is effective from 8:00 a.m. on Friday, August 08, 2014 through 5:00 p.m. on Sunday, August 24, 2014.

This action is intended to temporarily prohibit vessels or people from approaching within 1000 yards of the POTUS and/or first family while they are in or near the navigable waters of the U.S. during their visit to Martha's Vineyard, Massachusetts.

The Captain of the Port, Southeastern New England, anticipates negligible negative impact on vessel traffic from these temporary security zones, as they will be in effect for only sixteen days, and will only be enforced while the POTUS and/or first family are in the vicinity of the navigable waters of the U.S. at Martha's Vineyard, Massachusetts. It has been determined that the necessary security enhancements provided by this rule

greatly outweigh any potential negative impacts.

D. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders relating to rulemaking. Below we summarize our analyses based on these statutes or executive orders.

1. Regulatory Planning and Review

This rule is not a “significant regulatory action” under section 3(f) of Executive Order 12866, Regulatory Planning and Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of that Order. The Office of Management and Budget has not reviewed it under that Order.

The Coast Guard expects the economic impact of this rule to be so minimal that a full regulatory evaluation under the regulatory policies and procedures of DHS is unnecessary. The effect of this rule will not be significant as the duration of the security zones is for only sixteen days, and will only be in effect while the POTUS and/or first family are in the vicinity of the navigable waters of the U.S. at Martha’s Vineyard, Massachusetts.

2. Impact on Small Entities

Under the Regulatory Flexibility Act (5 U.S.C. 601–612), we have considered whether this rule would have a significant economic impact on a substantial number of small entities. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000.

The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule may affect the following entities, some of which may be small entities: the owners and operators of vessels intending to transit in the vicinity of Martha’s Vineyard, Massachusetts from 8:00 a.m. on Friday, August 8, 2014 through 5:00 p.m. on Sunday, August 24, 2014. The security zones will not have a significant impact on a substantial number of small entities for the following reasons: The security zones are temporary and effective only while the POTUS and/or first family are in the vicinity of the navigable waters of the U.S. at Martha’s Vineyard, Massachusetts. Thus, the temporary nature and limited effective period of the zones, coupled with the ability of

the maritime public to maneuver around the zones, will allow small entities to plan and conduct their business accordingly.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104–121), we offer to assist small entities in understanding the rule so that they could better evaluate its effects on them and participate in the rulemaking process. If you think your small business or organization would be affected by this rule and you have any questions concerning its provisions or options for compliance, please call Mr. Edward G. Leblanc at (401) 435–2351.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1–888–REG–FAIR (1–888–734–3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule calls for no new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on State or local governments and would either preempt State law or impose a substantial direct cost of compliance on them. We have analyzed this rule under that Order and have determined that it does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places, or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531–1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (*adjusted for inflation*) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination with Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

We have analyzed this rule under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. We have determined that it is not a “significant energy action” under that order because it is not a “significant regulatory action” under Executive Order 12866 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. The Administrator of the Office of Information and Regulatory Affairs has not designated it as a significant energy action. Therefore, it does not

require a Statement of Energy Effects under Executive Order 13211.

13. Technical Standards

The National Technology Transfer and Advancement Act (NTTAA) (15 U.S.C. 272 note) directs agencies to use voluntary consensus standards in their regulatory activities unless the agency provides Congress, through the Office of Management and Budget, with an explanation of why using these standards would be inconsistent with applicable law or otherwise impractical. Voluntary consensus standards are technical standards (e.g., specifications of materials, performance, design, or operation; test methods; sampling procedures; and related management systems practices) that are developed or adopted by voluntary consensus standards bodies.

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA)(42 U.S.C. 4321-4370f), and have concluded this action is one of a category of actions which do not individually or cumulatively have a significant effect on the human environment. This rule is categorically excluded, under figure 2-1, paragraph (34)(g) of the Instruction. This rule fits the category selected from paragraph (34)(g), as it establishes temporary security zones for a limited period of time. An environmental analysis checklist and a categorical exclusion determination will be available in the docket where indicated under

ADDRESSES. We seek any comments or information that may lead to the discovery of a significant environmental impact from this rule.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reports and recordkeeping requirements, Security measures, and Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1226, 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, and 160.5; Pub. L. 107-295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Add § 165.T01-0708 to read as follows:

§ 165.T01-0708 Security Zone: Martha's Vineyard, Massachusetts.

(a) *Location.* The following areas are security zones: All navigable waters, from surface to bottom, within 1000 yards of the POTUS and/or first family while underway in, or on shore but within 1000 yards of, the navigable waters of the U.S. in the coastal areas of Chilmark and Edgartown Great Pond, Martha's Vineyard, Massachusetts.

(b) *Notification.* Coast Guard Sector Southeastern New England will give actual notice to mariners for the purpose of enforcement of these temporary security zones.

(c) *Effective and Enforcement Period.* This rule is effective for purposes of enforcement from 8:00 a.m. on Friday, August 8, 2014 through 5:00 p.m. on Sunday, August 24, 2014. This rule will be enforced with actual notice during the effective period.

(d) *Regulations.* (1) The general regulations contained in 33 CFR 165.33 apply.

(2) In accordance with the general regulations in § 165.33 of this part, entry into or movement within these zones is prohibited unless authorized by the Captain of the Port or his designated representatives.

(3) The "designated representative" is any Coast Guard commissioned, warrant, or petty officer who has been designated by the Captain of the Port to act on his behalf. The on-scene representative may be on a Coast Guard vessel, or onboard a federal, state, or local agency vessel that is authorized to act in support of the Coast Guard.

(4) Upon being hailed by a U.S. Coast Guard vessel or his designated representative, by siren, radio, flashing light or other means, the operator of the vessel shall proceed as directed.

(5) Vessel operators desiring to enter or operate within these security zones shall contact the Captain of the Port or his designated representative via VHF channel 16 to obtain permission to do so.

Dated: August 7, 2014.

J. T. Kondratowicz,

Captain, U.S. Coast Guard, Captain of the Port, Southeastern New England.

33 CFR Part 165

[Docket Number USCG-2014-0296]

RIN 1625-AA00

Security Zone, Change of Enforcement Period, Chesapeake Bay; Between Sandy Point and Kent Island, MD

AGENCY: Coast Guard, DHS.

ACTION: Final rule.

SUMMARY: The Coast Guard is changing the enforcement period of a security zone regulation within the Baltimore COTP Zone. This regulation applies to a recurring event that takes place on the William P. Lane Jr. Memorial Bridges, across the Chesapeake Bay, between Sandy Point and Kent Island, MD. This action is necessary to protect persons and property, and prevent terrorist acts or incidents on navigable waters during the event. This rule prohibits vessels and people from entering the security zone and requires vessels and persons in the security zone to depart the security zone, unless specifically exempt under the provisions in this rule or granted specific permission from the Coast Guard Captain of the Port Baltimore.

DATES: This rule is effective September 22, 2014 and will be enforced annually on the second Sunday in November from 7 a.m. to 11 a.m., and if necessary due to inclement weather, on the third Sunday in November from 7 a.m. to 11 a.m.

ADDRESSES: Documents mentioned in this preamble are part of docket [USCG-2014-0296]. To view documents mentioned in this preamble as being available in the docket, go to <http://www.regulations.gov>, type the docket number in the "SEARCH" box and click "SEARCH." Click on Open Docket Folder on the line associated with this rulemaking. You may also visit the Docket Management Facility in Room W12-140 on the ground floor of the Department of Transportation West Building, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

FOR FURTHER INFORMATION CONTACT: If you have questions on this rule, call or email Mr. Ronald Houck, U.S. Coast Guard Sector Baltimore, MD; telephone 410-576-2674, email Ronald.L.Houck@uscg.mil. If you have questions on viewing or submitting material to the

docket, call Cheryl Collins, Program Manager, Docket Operations, telephone (202) 366-9826.

SUPPLEMENTARY INFORMATION:

Table of Acronyms

DHS Department of Homeland Security
FR Federal Register
NPRM Notice of Proposed Rulemaking

A. Regulatory History and Information

On May 16, 2014, we published a notice of proposed rulemaking (NPRM) entitled “Security Zone, Change of Enforcement Period, Chesapeake Bay; Between Sandy Point and Kent Island, MD” in the **Federal Register** (79 FR 28468). We received no comments on the proposed rule. No public meeting was requested, and none was held.

B. Basis and Purpose

The legal bases and authorities for this rule are found in 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, and 160.5; Public Law 107-295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1, which collectively authorize the Coast Guard to propose, establish, and define regulatory security zones. The purpose of this security zone is to protect persons and property, mitigate potential terrorist acts or incidents, and enhance public and maritime safety and security in order to safeguard life, property, and the environment on or near the navigable waters.

C. Discussion of Comments, Changes and the Final Rule

The Coast Guard received no comments in response to the NPRM. No public meeting was requested and none was held.

D. Regulatory Analyses

We developed this rule after considering numerous statutes and executive orders related to rulemaking. Below we summarize our analyses based on these statutes and executive orders.

1. Regulatory Planning and Review

This rule is not a significant regulatory action under section 3(f) of Executive Order 12866, Regulatory Planning and Review, as supplemented by Executive Order 13563, Improving Regulation and Regulatory Review, and does not require an assessment of potential costs and benefits under section 6(a)(3) of Executive Order 12866 or under section 1 of Executive Order 13563. The Office of Management and Budget has not reviewed it under those Orders.

Although this regulation would restrict access to this area, the effect of this rule will not be significant because: (i) The security zone will only be in effect annually on the second Sunday in November from 7 a.m. through 11 a.m., and if necessary due to inclement weather, on the third Sunday in November from 7 a.m. through 11 a.m., and (ii) the Coast Guard will give advance notification via maritime advisories so mariners can adjust their plans accordingly, and will continue such advisories on the status of the security zone until the completion of the event.

2. Impact on Small Entities

The Regulatory Flexibility Act of 1980 (RFA), 5 U.S.C. 601-612, as amended, requires federal agencies to consider the potential impact of regulations on small entities during rulemaking. The term “small entities” comprises small businesses, not-for-profit organizations that are independently owned and operated and are not dominant in their fields, and governmental jurisdictions with populations of less than 50,000. The Coast Guard received no comments from the Small Business Administration on this rule. The Coast Guard certifies under 5 U.S.C. 605(b) that this rule will not have a significant economic impact on a substantial number of small entities.

This rule may affect the following entities, some of which may be small entities: the owners or operators of vessels intending to operate or transit through or within, or anchor in, the security zone during the enforcement period. This security zone will not have a significant economic impact on a substantial number of small entities for the reasons provided under Regulatory Planning and Review.

3. Assistance for Small Entities

Under section 213(a) of the Small Business Regulatory Enforcement Fairness Act of 1996 (Pub. L. 104-121), we want to assist small entities in understanding this rule. If the rule affects your small business, organization, or governmental jurisdiction and you have questions concerning its provisions or options for compliance, please contact the person listed in the **FOR FURTHER INFORMATION CONTACT**, above.

Small businesses may send comments on the actions of Federal employees who enforce, or otherwise determine compliance with, Federal regulations to the Small Business and Agriculture Regulatory Enforcement Ombudsman and the Regional Small Business Regulatory Fairness Boards. The

Ombudsman evaluates these actions annually and rates each agency’s responsiveness to small business. If you wish to comment on actions by employees of the Coast Guard, call 1-888-REG-FAIR (1-888-734-3247). The Coast Guard will not retaliate against small entities that question or complain about this rule or any policy or action of the Coast Guard.

4. Collection of Information

This rule will not call for a new collection of information under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501-3520).

5. Federalism

A rule has implications for federalism under Executive Order 13132, Federalism, if it has a substantial direct effect on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government. We have analyzed this rule under that Order and determined that this rule does not have implications for federalism.

6. Protest Activities

The Coast Guard respects the First Amendment rights of protesters. Protesters are asked to contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to coordinate protest activities so that your message can be received without jeopardizing the safety or security of people, places or vessels.

7. Unfunded Mandates Reform Act

The Unfunded Mandates Reform Act of 1995 (2 U.S.C. 1531-1538) requires Federal agencies to assess the effects of their discretionary regulatory actions. In particular, the Act addresses actions that may result in the expenditure by a State, local, or tribal government, in the aggregate, or by the private sector of \$100,000,000 (adjusted for inflation) or more in any one year. Though this rule will not result in such an expenditure, we do discuss the effects of this rule elsewhere in this preamble.

8. Taking of Private Property

This rule will not cause a taking of private property or otherwise have taking implications under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights.

9. Civil Justice Reform

This rule meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to

minimize litigation, eliminate ambiguity, and reduce burden.

10. Protection of Children

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. This rule is not an economically significant rule and does not create an environmental risk to health or risk to safety that may disproportionately affect children.

11. Indian Tribal Governments

This rule does not have tribal implications under Executive Order 13175, Consultation and Coordination With Indian Tribal Governments, because it does not have a substantial direct effect on one or more Indian tribes, on the relationship between the Federal Government and Indian tribes, or on the distribution of power and responsibilities between the Federal Government and Indian tribes.

12. Energy Effects

This action is not a “significant energy action” under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use.

13. Technical Standards

This rule does not use technical standards. Therefore, we did not consider the use of voluntary consensus standards.

14. Environment

We have analyzed this rule under Department of Homeland Security Management Directive 023-01 and Commandant Instruction M16475.ID, which guide the Coast Guard in complying with the National Environmental Policy Act of 1969 (NEPA) (42 U.S.C. 4321-4370f), and have determined that this action is one of a category of actions that do not individually or cumulatively have a significant effect on the human environment. This rule involves establishing a security zone. This rule is categorically excluded from further review under paragraph 34(g) of Figure 2-1 of the Commandant Instruction. An environmental analysis checklist supporting this determination and a Categorical Exclusion Determination are available in the docket where indicated under **ADDRESSES**.

List of Subjects in 33 CFR Part 165

Harbors, Marine safety, Navigation (water), Reporting and recordkeeping requirements, Security measures, Waterways.

For the reasons discussed in the preamble, the Coast Guard amends 33 CFR part 165 as follows:

PART 165—REGULATED NAVIGATION AREAS AND LIMITED ACCESS AREAS

■ 1. The authority citation for part 165 continues to read as follows:

Authority: 33 U.S.C. 1231; 46 U.S.C. Chapter 701, 3306, 3703; 50 U.S.C. 191, 195; 33 CFR 1.05-1, 6.04-1, 6.04-6, and 160.5; Pub. L. 107-295, 116 Stat. 2064; Department of Homeland Security Delegation No. 0170.1.

■ 2. Revise § 165.507 to read as follows:

§ 165.507 Security Zone; Chesapeake Bay, between Sandy Point and Kent Island, MD.

(a) *Definitions.* The “Captain of the Port, Baltimore, Maryland” means the Commander, Coast Guard Sector Baltimore, Maryland or any Coast Guard commissioned, warrant, or petty officer who has been authorized by the Captain of the Port, Baltimore, Maryland to act on his or her behalf.

(b) *Location.* The following area is a security zone: All waters of the Chesapeake Bay, from the surface to the bottom, within 250 yards north of the north (westbound) span of the William P. Lane Jr. Memorial Bridge, and 250 yards south of the south (eastbound) span of the William P. Lane Jr. Memorial Bridge, from the western shore at Sandy Point to the eastern shore at Kent Island, Maryland.

(c) *Regulations.* (1) All persons are required to comply with the general regulations governing security zones found in § 165.33 of this part.

(2) Entry into or remaining in this zone is prohibited unless authorized by the Coast Guard Captain of the Port, Baltimore, Maryland.

(3) Persons or vessels requiring entry into or passage through the security zone must first request authorization from the Captain of the Port, Baltimore. The Captain of the Port, Baltimore, Maryland can be contacted at telephone number (410) 576-2693. The Coast Guard vessels enforcing this section can be contacted on VHF Marine Band Radio, VHF channel 16 (156.8 MHz). Upon being hailed by a U.S. Coast Guard vessel by siren, radio, flashing light, or other means, the operator of a vessel shall proceed as directed. If permission is granted, all persons and vessels must comply with the instructions of the Captain of the Port, Baltimore, Maryland and proceed at the minimum speed necessary to maintain a safe course while within the zone.

(d) *Enforcement.* The U.S. Coast Guard may be assisted in the patrol and

enforcement of the zone by Federal, State, and local agencies.

(e) *Enforcement period.* This section will be enforced annually on the second Sunday in November from 7 a.m. to 11 a.m., and if necessary due to inclement weather, on the third Sunday in November from 7 a.m. to 11 a.m.

Dated: August 7, 2014.

K. C. Kiefer,

Captain, U.S. Coast Guard, Captain of the Port Baltimore.

BILLING CODE 9110-04-P

GULF COAST ECOSYSTEM RESTORATION COUNCIL

40 CFR Part 1800

[Docket Number: 140819111-4111-01]

RESTORE Act Spill Impact Component Planning Allocation

AGENCY: Gulf Coast Ecosystem Restoration Council.

ACTION: Interim final rule.

SUMMARY: The Gulf Coast Ecosystem Restoration Council (Council) is issuing a final regulation authorizing the Gulf Coast State members of the Council, or their administrative agents, and the Gulf Consortium of Florida counties to apply for grants to fund planning activities to develop individual State Expenditure Plans (SEP) using funds up to the statutory minimum that each Gulf Coast State must receive under the Spill Impact Component of the Resources and Ecosystem Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States Act of 2012 (RESTORE Act).

DATES: This Interim Final Rule becomes effective on August 22, 2014. Comments on the Interim Final Rule are due September 22, 2014.

ADDRESSES: The Council invites comments on the planning allocation contained in this Interim Final Rule. Comments may be submitted through one of these methods:

Electronic Submission of Comments: Interested persons may submit comments electronically through the Federal eRulemaking Portal at <http://www.regulations.gov>. Electronic submission of comments allows the commenter maximum time to prepare and submit a comment, ensures timely receipt, and enables the Council to make them available to the public. Comments submitted electronically through the <http://www.regulations.gov> Web site can be viewed by other commenters and interested members of the public.

Mail: Send to Gulf Coast Ecosystem Restoration Council, c/o US Custom House, Suite 419, 423 Canal Street, Suite 419, New Orleans, LA 70130.

Email: Send to RestoreCouncil@RestoreTheGulf.gov.

In general, the Council will post all comments to www.regulations.gov without change, including any business or personal information provided, such as names, addresses, email addresses, or telephone numbers. Comments may also be submitted anonymously. The Council will also make such comments available for public inspection and copying on its Web site,

<http://www.restorethegulf.gov/>. All comments received, including attachments and other supporting materials, will be part of the public record and subject to public disclosure. You should only submit information that you wish to make publicly available.

FOR FURTHER INFORMATION CONTACT: Jeffrey Roberson at 202-482-1315.

SUPPLEMENTARY INFORMATION:

I. Background

The RESTORE Act, Public Law 112-141 (July 6, 2012), codified at 33 U.S.C. 1321(t) and note, makes funds available for the restoration and protection of the Gulf Coast Region through a new trust fund in the Treasury of the United States, known as the Gulf Coast Restoration Trust Fund (Trust Fund). The Trust Fund will contain 80 percent of the administrative and civil penalties paid by the responsible parties after July 6, 2012, under the Federal Water Pollution Control Act in connection with the *Deepwater Horizon* oil spill. These funds will be invested and made available through five components of the RESTORE Act. On August 15, 2014, the Department of Treasury (Treasury) issued regulations (79 FR 48039) applicable to all five components, and which generally describe the responsibilities of the Federal and State entities that administer RESTORE Act programs and carry out restoration activities in the Gulf Coast Region.

Two of the five components, the Comprehensive Plan and Spill Impact Components, are administered by the Council, an independent federal entity created by the RESTORE Act. Under the Spill Impact Component (33 U.S.C. 1321(t)(3)), the subject of this regulation, 30 percent of funds in the Trust Fund will be disbursed to the five Gulf Coast States (Alabama, Florida, Louisiana, Mississippi, and Texas) or their administrative agents based on an allocation formula established by the Council by regulation based on criteria

in the RESTORE Act. The RESTORE Act establishes a statutory minimum under which each of the five Gulf Coast States is guaranteed five percent of the funds made available in a fiscal year under this component. In order for funds to be disbursed to a Gulf Coast State, the RESTORE Act requires each Gulf Coast State to develop a SEP and submit it to the Council for approval. The RESTORE Act specifies the particular entity within each Gulf Coast State that will prepare the individual SEPs: in Alabama, the Alabama Gulf Coast Recovery Council; in Florida, a consortium of local political subdivisions that includes a minimum of one representative of each affected county (officially named the "Gulf Consortium" as organized under Florida law); in Louisiana, the Coastal Protection and Restoration Authority of Louisiana; in Mississippi, the Office of the Governor or an appointee of the Office of the Governor; and in Texas, the Office of the Governor or an appointee of the Office of the Governor. 33 U.S.C. 1321(t)(3)(B)(iii).

SEPs must meet the statutory requirements of the RESTORE Act, including: (1) All projects, programs and activities included in the SEP are eligible activities as defined by the RESTORE Act; (2) all projects, programs and activities included in the SEP contribute to the overall economic and ecological recovery of the Gulf Coast; (3) the SEP takes the Council's Comprehensive Plan into consideration and is consistent with the goals and objectives of the Comprehensive Plan; and (4) no more than 25 percent of the allotted funds are used for infrastructure projects unless the SEP contains certain certifications from the Gulf Coast State submitting the SEP. The funds the Council disburses to the Gulf Coast States upon approval of a SEP will be in the form of grants. As required by federal law, the Council will award a grant or grants to each of the Gulf Coast States and incorporate into the grant award(s) standard administrative terms on such topics as recordkeeping, reporting, and auditing. The Council is currently developing another set of regulations to more fully implement the Spill Impact Component of the RESTORE Act. These regulations will be published in the **Federal Register** at a later date and will establish how funds made available from the Trust Fund will be allocated based on the formula between the five Gulf Coast States. It will also generally describe the responsibilities of the Gulf Coast States in applying for and administering the financial assistance awards made under the Spill Impact Component.

II. This Interim Final Rule

Each of the five Gulf Coast States, Alabama, Florida, Louisiana, Mississippi, and Texas, are statutorily guaranteed a minimum of five percent of amounts made available from the Trust Fund under the Spill Impact Component each fiscal year. 33 U.S.C. 1321(t)(3)(A)(iii). A Gulf Coast State may receive more than the statutory minimum depending on the calculation of each Gulf Coast State's share using an allocation formula established by the Council by regulation based on criteria specified in the Act. 33 U.S.C. 1321(t)(3)(A)(ii). The Council is developing a regulation to be published in the **Federal Register** at a later date establishing this allocation formula.

The Council is issuing this regulation as an Interim Final Rule in order to facilitate expeditious development of SEPs by the Gulf Coast States and thus make funds available sooner for the restoration and protection of the Gulf Coast Region. The Council is not providing a waiting period for implementation of this Interim Final Rule because the five affected parties (four of the Gulf Coast States and the Gulf Consortium of Florida counties) are already on notice of the contents of the Interim Final Rule and it does not change any existing requirement that would necessitate any sort of transition period.

Under this regulation an amount of funds less than or equal to the statutory minimum allocation (five percent of funds available under the Spill Impact Component) would be available to a Gulf Coast State, or eligible entity for a SEP that funds planning activities only, an eligible activity under the Spill Impact Component. 33 U.S.C. 1321(t)(1)(B)(i)(VIII); 33 U.S.C. 1321(t)(3)(B)(i)(I). Eligible entities include the States of Louisiana, Mississippi, and Texas, the Alabama Gulf Coast Recovery Council, and the Gulf Consortium of Florida counties. All planning activities authorized under the Interim Final Rule would relate solely to the development of a comprehensive SEP, including conceptual design and feasibility studies related to specific projects. It does not include engineering and environmental studies related to specific projects. It also does not include any pre-award costs incurred prior to the date of publication of this Interim Final Rule; any pre-award costs incurred after the date of publication will be evaluated pursuant to 2 CFR Part 200. In order to receive a grant for planning activities under this Interim Final Rule, the Gulf Coast State or eligible entity must submit an

application for grant funding to the Council for approval.

The Council will accept comments on the Interim Final Rule for 30 days after publication, and publish a Final Rule after considering any comments.

III. Procedural Requirements

A. Regulatory Flexibility Act

The Regulatory Flexibility Act (5 U.S.C. 601 et seq.) generally requires agencies to prepare a regulatory flexibility analysis of any rule subject to notice and comment rulemaking requirements under the Administrative Procedure Act or any other statute, unless the agency certifies that this Interim Final Rule will not have a significant economic impact on a substantial number of small entities. The Council hereby certifies that this rule will not have a significant economic impact on a substantial number of small entities, for the following reasons.

This rule, if implemented, would only affect the those Gulf Coast States that are eligible recipients of these funds, and States are not considered “small entities” under the Regulatory Flexibility Act. For two Gulf Coast States, Alabama and Florida, the Act mandates that entities not officially part of the Executive Office of the State’s government develop the SEPs. The Alabama Gulf Coast Recovery Council, in the context of the Act, serves as an administrative agent of the State of Alabama so the effects of this rule are still directed solely at the State. For the State of Florida, while the Gulf Consortium of counties is tasked with developing the SEP, it is a consortium of 23 counties with a population of greater than 50,000. As such neither entity is considered “small entities” under the Regulatory Flexibility Act.

Additionally, while this rule describes procedures concerning the allocation and expenditure of amounts from the Trust Fund under the Spill Impact Component, most of these requirements come from the RESTORE Act itself or other Federal law. The RESTORE Act determines the statutory minimum percentage of funds available to the Gulf Coast States under the Spill Impact Component.

Because no small entities will be impacted by this rule no initial regulatory flexibility analysis is required, and none has been prepared. Notwithstanding this certification, the Council invites comments on this rule’s impact on small entities.

B. Paperwork Reduction Act

The collections of information contained in this Interim Final Rule

would at most require submissions of grant paperwork from five entities (four of the Gulf Coast States, or their administrative agents, and the Gulf Consortium) below the threshold requirement for application of the Paperwork Reduction Act of 1995 (44 U.S.C. 3507(d)). As such, any request for information under this Interim Final Rule is not considered a “collection of information” subject to the Paperwork Reduction Act of 1995. Notwithstanding this determination, the Council invites comments on the application of the Paperwork Reduction Act to this Interim Final Rule.

C. Regulatory Planning and Review (Executive Orders 12866 and 13563)

As an independent federal entity that is composed of, in part, six federal agencies, including the Departments of Agriculture, the Army, Commerce, and the Interior, the Department in which the Coast Guard is operating, and the Environmental Protection Agency, the requirements of Executive Orders 12866 and 13563 are inapplicable to this rule.

List of Subjects in 40 CFR Part 1800

Coastal zone, Fisheries, Grant programs, Grants administration, Gulf Coast Restoration Trust Fund, Gulf RESTORE Program, Intergovernmental relations, Marine resources, Natural resources, Oil pollution, Research, Science and technology, Trusts, Wildlife.

Dated: August 19, 2014.

Justin R. Ehrenwerth,

Executive Director, Gulf Coast Ecosystem Restoration Council.

For the reasons set forth in the preamble, the Gulf Coast Ecosystem Restoration Council amends 40 CFR to establish a new chapter VIII, consisting of part 1800, to read as follows:

Title 40—Protection of Environment

Chapter VIII—Gulf Coast Ecosystem Restoration Council

PART 1800—SPILL IMPACT COMPONENT

Sec.

Subpart A—Definitions

1800.1 Definitions.

Subpart B—Minimum Allocation Available for Planning Purposes

1800.10 Purpose.

1800.20 Minimum allocation available for planning purposes.

Authority: 33 U.S.C. 1321(t).

Subpart A—Definitions

§ 1800.1 Definitions.

As used in this part:

Gulf Coast State means any of the States of Alabama, Florida, Louisiana, Mississippi, and Texas.

Gulf Consortium means the consortium of Florida counties formed to develop the Florida State Expenditure Plan pursuant to 33 U.S.C. 1321(t)(3)(B)(iii)(II).

Minimum allocation means the amount made available to each Gulf Coast State which totals at least five percent of the total allocation made under the Spill Impact Component available in the fiscal year.

RESTORE Act means the Resources and Ecosystems Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States Act of 2012.

Spill Impact Component means the component of the Gulf RESTORE program authorized by section 311(t)(3) of the Federal Water Pollution Control Act (33 U.S.C. 1321(t)(3)), as added by section 1603 of the Act, in which Gulf Coast States are provided funds by the Council according to a formula that the Council establishes by regulation, using criteria listed in the Act.

State Expenditure Plan means the plan for expenditure of amounts disbursed under the Spill Impact Component that each Gulf Coast State must submit to the Council for approval.

Subpart B—Minimum Allocation Available for Planning Purposes

§ 1800.10 Purpose.

This subpart establishes that up to the statutory minimum allocation (five percent) is available under the Spill Impact Component of the Resources and Ecosystems Sustainability, Tourist Opportunities, and Revived Economies of the Gulf Coast States Act of 2012 (RESTORE Act) (Pub. L. 112–141, 126 Stat. 405, 588–607) for planning purposes associated with development of a State Expenditure Plan.

§ 1800.20 Minimum allocation available for planning purposes.

A Gulf Coast State or its administrative agent, or the Gulf Consortium, may apply to the Council for a grant to use the minimum allocation available in a fiscal year under the Spill Impact Component of the RESTORE Act for planning purposes. These planning purposes are limited to development of a State Expenditure Plan, and includes conceptual design and feasibility studies related to specific projects. It does not include engineering and

environmental studies related to specific projects. It also does not include any pre-award costs incurred prior to August 22, 2014.

[Docket No. FRA-2011-0061, Notice No. 3]

RIN 2130-AC32

Positive Train Control Systems (RRR)

AGENCY: Federal Railroad Administration (FRA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: FRA's final rule primarily amends the regulations implementing a requirement of the Rail Safety Improvement Act of 2008 that certain passenger and freight railroads install positive train control (PTC) systems governing operations on certain main line tracks. This final rule revises an existing regulatory exception to the requirement to install a PTC system for track segments carrying freight only that present a *de minimis* safety risk. The final rule also adds a new exception for PTC-unequipped freight trains associated with certain freight yard operations to operate within PTC systems. The final rule also revises the existing regulations related to en route failures of a PTC system, adds new

provisions related to other failures of a PTC system, and amends the regulations on applications for approval of certain modifications of signal and train control systems.

Finally, this final rule makes technical amendments to FRA's other signal and train control regulations and FRA's regulations governing highway-rail grade crossing warning systems.

DATES: This final rule is effective October 21, 2014.

FOR FURTHER INFORMATION CONTACT:

George Hartman, Office of Safety Assurance and Compliance, Staff Director, Signal & Train Control Division, Federal Railroad Administration, Mail Stop 25, West Building 3rd Floor West, Room W35-333, 1200 New Jersey Avenue SE., Washington, DC 20590 (telephone: 202-493-6225) or Emily Prince, Trial Attorney, Office of Chief Counsel, RCC-10, Mail Stop 10, West Building 7th Floor, Room W75-208, 1200 New Jersey Avenue SE., Washington, DC 20590 (telephone: 202-493-6146).

Terms Frequently Used

Categorical de minimis exception means the exception to the requirement to implement a PTC system on a given track segment provided by 49 CFR 236.1005(b)(4)(iii)(A) and (B) before this final rule is effective and by 49 CFR 236.1005(b)(4)(iii)(A) and (B) after this final rule is effective.

General de minimis exception means the exception to the requirement to

implement a PTC system on a given track segment provided by 49 CFR 236.1005(b)(4)(iii)(C) that existed prior to this final rule and by 49 CFR 236.1005(b)(4)(iii)(A) and (C) after this final rule is effective.

Old section or old provision refers to the section or provision as it existed on the day before the section or provision of this final rule is effective. *PTC-preventable accident* means an accident or incident that could be prevented by the functions of a positive train control system required by 49 U.S.C. 20157.

I. Executive Summary

Section 104 of the Rail Safety Improvement Act of 2008, Public Law 110-432, 122 Stat. 4854, (Oct. 16, 2008) (codified at 49 U.S.C. 20157) (hereinafter “RSIA”) requires the installation of PTC systems governing all train operations on certain track. RSIA defines “PTC system” as “a system designed to prevent train-to-train collisions, over-speed derailments, incursions into established work zone limits, and the movement of a train through a switch left in the wrong position.” 49 U.S.C. 20157(i)(3). While there are different PTC system configurations, and there is no specific technological model that defines a PTC system, all PTC systems generally have the same four parts: (1) An onboard apparatus for the locomotive controlling each applicable train; (2) wayside devices such as wayside interface units;

(3) a centralized dispatch system; and (4) a communications system linking these components.

On December 11, 2012, FRA published a notice of proposed rulemaking (NPRM) primarily to amend its existing PTC regulations to provide covered railroads with additional regulatory guidance and flexibility for their implementation of this statutory mandate. 77 FR 73589. Having considered public comments in response to the NPRM and FRA's subsequent notice of clarification issued on January 28, 2013 (78 FR 5767), and having later met with the PTC Working Group (PTC WG) of the Railroad Safety Advisory Committee (RSAC), FRA now responds to the comments on the proposed regulatory changes and issues this final rule, which will become effective on October 21, 2014.

For years, FRA has supported the nationwide proliferation and implementation of PTC systems, forecasting substantial benefits of advanced train control technology in supporting a variety of business and safety purposes. In 2005, for example, FRA promulgated regulations providing for the voluntary implementation of processor-based train control systems. See 70 FR 11,052 (Mar. 7, 2005) (codified at 49 CFR part 236, subpart H). However, implementation was not mandated by FRA because the costs for the systems far outweighed the possible safety benefits at that time.

Partially as a consequence of certain very severe railroad accidents, coupled with a series of other less serious accidents, Congress passed RSIA, which mandates the implementation of PTC systems by December 31, 2015, on lines meeting certain thresholds. RSIA requires PTC system implementation on all Class I railroad main lines that carry poison- or toxic-by-inhalation hazardous (PIH or TIH) materials and 5 million gross tons (MGT) or more of annual traffic, and on any railroad's main line tracks over which intercity or commuter rail passenger train service is regularly provided. In addition, RSIA provides the Secretary of Transportation (Secretary) with the authority to require PTC system implementation on any other line. The Secretary has delegated this authority to the Administrator of FRA. 49 CFR 1.89 (formerly codified at 1.49).

FRA's existing PTC regulations (codified primarily in 49 CFR part 236 subpart I) include various exceptions from mandatory PTC system implementation. For instance, the *de minimis* exception was developed to

provide railroads an opportunity to avoid PTC system implementation on certain freight-only track segments where the burdens of the regulation would yield a gain of trivial or no value. See 49 CFR 236.1005(b)(4)(iii). In accordance with FRA's statutory authority, FRA's existing regulations also include a limited operations exception, which is for passenger operations or segments over which limited or no freight railroad operations occur. 49 CFR 236.1019(c).

In a petition for rulemaking dated April 22, 2011 ("Petition"), the Association of American Railroads (AAR) requested that FRA initiate a rulemaking to expand the *de minimis* exception and otherwise amend the rules concerning the limited operations exception, en route failures of trains operating within PTC systems, and the discontinuance of signal systems once PTC systems are installed. AAR also requested that FRA develop a new exception that would allow unequipped trains associated with certain yard operations to operate within PTC systems. In response to the Petition, FRA issued an NPRM on December 11, 2012, proposing several changes to part 236, subpart I, and expressing concerns over several other suggestions made in the Petition. The scope of the rulemaking was later clarified in a notice of clarification published January 28, 2013, in order to ensure that all commenters were aware that all of the Petition's proposals remained open for consideration.

Having considered the public comments on the NPRM and notice of clarification and discussions with the RSAC PTC Working Group, FRA is promulgating this final rule. The rule makes substantial revisions to the *de minimis* exception for freight-only track segments under 49 CFR 236.1005(b)(4)(iii). In particular, this final rule revises the annual car limitation to remove cars containing only a residue¹ of PIH materials; replaces the criterion "ruling grade of less than one percent" with the term "heavy grade" as defined in FRA's end-of-train device rule; limits to two per day the number of trains carrying any quantity of PIH materials; and replaces the temporal separation requirement with a requirement that a train carrying any quantity of PIH materials be operated with a vacant block ahead of and behind the train. A new exception for PTC-unequipped locomotives used in freight operations and PTC-unequipped freight trains has been added, which allows yard movements

by these locomotives and trains to operate on PTC-equipped main track with speed restrictions and with operating rules in place to protect against conflicting movements. Further, the en route failure provision at 49 CFR 236.1029 has also been revised to remove the requirement that an absolute block be placed in advance of train movements where the onboard PTC apparatus fails en route, as well as to add several temporary exceptions that last from the effective date of the final rule through the two years after the statutory deadline for PTC system implementation. In addition to these changes, the final rule provides in 49 CFR part 235 an alternative method for reviewing some applications for signal system modifications related to PTC system implementation and makes a number of technical corrections to 49 CFR parts 234 and 236.

For the first 20-years of the final rule, the estimated quantified benefits to society, due to the regulatory changes, total approximately \$700 million discounted at 7 percent and \$922 million discounted at 3 percent. The largest components of the benefits come from reduced costs of PTC system wayside components because of extensions of the *de minimis* risk exception under 49 CFR 236.1005(b)(4)(iii) and reduced costs of onboard PTC systems on locomotives used in freight operations in yard areas. A smaller benefit, independent of the other benefits, comes from changes to the application process for a discontinuation or material modification of a signal system under 49 CFR part 235 where the application would have been filed as part of a PTC system installation.

FRA analyzed the final rule under three cases. The "base case" is FRA's best estimate of the likely impact of the final rule. To address uncertainty related to assumptions and inputs, FRA also analyzed a "high case," where the impacts are greater than FRA's best estimate, and a "low case," where the impacts are less than FRA's best estimate. The cases used for the sensitivity analysis are discussed in more detail below, in the discussion of regulatory impact. All values in the analysis are measured in 2009 dollars. FRA is using 2009 dollars throughout this analysis, to aid in comparison to the analysis of the original 2010 PTC rule. The following table presents the quantified benefits discounted over 20 years:

¹ As defined in 49 CFR 171.8.

	Discount factor	
	7 percent	3 percent
Base case:		
Applications Avoided Benefit	\$397,319	\$446,926
Wayside Installation Benefit	446,266,012	587,977,605
Onboard Installation Benefit	252,858,508	333,153,625
Total Benefit	699,521,839	921,578,156
High case:		
Applications Avoided Benefit	397,319	446,926
Wayside Installation Benefit	892,532,024	1,175,955,209
Onboard Installation Benefit	316,073,135	416,442,032
Total Benefit	1,209,002,478	1,592,844,167
Low case:		
Applications Avoided Benefit	397,319	446,926
Wayside Installation Benefit	328,700,721	433,079,503
Onboard Installation Benefit	180,785,397	238,193,726
Total Benefit	509,883,437	671,720,155

Totals in each respective category may not add due to rounding.

For the same 20-year period, the estimated quantified cost totals \$6.61 million discounted at 7 percent and \$9.75 million discounted at 3 percent. The costs associated with the regulatory relief result from a slight increase in accident avoidance risk. FRA was able to estimate the monetized costs affected by changes in the *de minimis* provisions, but was not able to estimate the costs of changes to the provision affecting locomotives in yard areas. The following table presents the total quantified costs of the final rule:

	Discount factor	
	7 percent	3 percent
Base Case	\$6,609,680	\$9,752,784
High Case	6,609,680	9,752,784
Low Case	4,937,849	7,285,947

The net benefit amounts for each case, subtracting the costs from the benefits, provide the following results:

	Discount factor	
	7 percent	3 percent
Base Case ..	\$692,912,160	\$911,825,373
High Case ..	1,202,392,799	1,583,091,384
Low Case ..	504,945,587	664,434,208

The analysis indicates that the savings of the final rule far outweigh the cost.

II. Statutory and Regulatory Background and Proceedings to Date

The President signed RSIA into law on October 16, 2008, mandating PTC system implementation by December 31, 2015. To effectuate this goal, RSIA required the covered railroads to submit

for FRA approval a PTC implementation plan (PTCIP) within 18 months (*i.e.*, by April 16, 2010).

On July 27, 2009, FRA published an NPRM regarding the mandatory implementation and operation of PTC systems in accordance with RSIA. During the comment period for that proceeding, CSX Transportation, Inc. (CSX) suggested that FRA create a *de minimis* exception to the requirement that lines carrying PIH materials traffic (but not applicable passenger traffic) be equipped with PTC systems.

The final rule, published on January 15, 2010, included a *de minimis* exception, since FRA believed that it contained significant merit and that it fell within the scope of the issues set forth in the proposed rule. However, since none of the parties had an opportunity to comment on this specific exception as provided in the final rule, FRA sought further comments on the extent of the *de minimis* exception. The further comments responsive to this issue were largely favorable, although AAR sought some further modification and clarification. In publishing its second PTC system final rule on September 27, 2010, FRA decided not to amend the *de minimis* exception any further based on the comments submitted.

AAR, in its Petition dated April 22, 2011, requested that FRA initiate a rulemaking to expand the *de minimis* exception and otherwise amend the rules concerning the limited operations exception, en route failures of trains operating with PTC systems, and the discontinuance of signal systems once PTC systems were installed. AAR also requested that FRA develop a new exception to allow unequipped trains to operate on PTC lines during certain yard

operations. On October 21, 2011, FRA held a meeting in Washington, DC with the PTC WG to the RSAC to seek input and guidance concerning the issues raised in AAR's Petition and other technical amendments. FRA facilitated a valuable group discussion relating to each of the proposed amendments.

Taking into account this input, FRA published an NPRM on December 11, 2012. With respect to the categorical *de minimis* exception at 49 CFR 236.1005(b)(4)(iii), FRA proposed to modify the categorical *de minimis* exception to raise the maximum number of freight cars containing PIH materials from fewer than 100 cars to fewer than 200 cars and revise the grade limitation to be more consistent with the definition of "heavy grade" present in 49 CFR part 232. FRA also proposed to remove the traffic limitation of 15 MGT from the general *de minimis* exception in paragraph (b)(4)(iii)(C), but not the categorical exception in paragraph (b)(4)(iii)(B). In response to AAR's suggestions for a yard move exception, FRA proposed to add a freight yard movement exception, which would authorize movements by unequipped locomotives over PTC-equipped main line track segments for the purpose of switching service or transfer train movements related to freight operations. FRA did not propose to create an additional limited operations exemption, remove oversight from signal system discontinuances, or modify the default rules for resolving en route failures of a PTC system, though FRA requested comments on these elements of AAR's Petition. FRA also proposed a number of technical amendments to the signal and grade crossing regulations of 49 CFR parts

234, 235, and 236. After learning that some viewed the scope of the NPRM as ambiguous, FRA published a notice of clarification on January 28, 2013, to ensure that commenters would have an adequate opportunity to address each element of AAR's Petition. After the close of the comment period, FRA held a meeting of the RSAC PTC WG on May 24, 2013, in order to gather more information relating to the comments and an additional meeting on July 9, 2013, to discuss draft rule text.

III. Public Participation

A. RSAC Process and the PTC Working Group

In March 1996, FRA established RSAC, which provides a forum for developing consensus recommendations to the Administrator of FRA on rulemakings and other safety program issues. 61 FR 9740 (Mar. 11, 1996). RSAC's charter under the Federal Advisory Committee Act (Pub. L. 92-463) was most recently renewed in 2014. 79 FR 28591 (May 16, 2014).

RSAC includes representation from all of FRA's major stakeholders, including railroads, labor organizations, suppliers and manufacturers, and other interested parties. An alphabetical list of RSAC members includes the following:

AAR;
 American Association of Private Railroad Car Owners;
 American Association of State Highway and Transportation Officials (AASHTO);
 American Chemistry Council (ACC);
 American Petroleum Institute;
 American Public Transportation Association (APTA);
 American Short Line and Regional Railroad Association (ASLRRA);
 American Train Dispatchers Association;
 Association of Railway Museums;
 Association of State Rail Safety Managers (ASRSM);
 Brotherhood of Locomotive Engineers and Trainmen (BLET);
 Brotherhood of Maintenance of Way Employees Division (BMWED);
 Brotherhood of Railroad Signalmen (BRS);
 The Chlorine Institute, Inc.;
 Federal Transit Administration (FTA);*
 The Fertilizer Institute;
 High Speed Ground Transportation Association;
 Institute of Makers of Explosives;
 International Association of Machinists and Aerospace Workers;
 International Brotherhood of Electrical Workers (IBEW);
 Labor Council for Latin American Advancement;*
 League of Railway Industry Women;*
 National Association of Railroad Passengers;
 National Association of Railway Business Women;*
 National Conference of Firemen & Oilers;
 National Railroad Passenger Corporation (Amtrak);

National Railroad Construction and Maintenance Association (NRCMA);
 National Transportation Safety Board (NTSB);*
 Railway Passenger Car Alliance;
 Railway Supply Institute;
 Safe Travel America;
 Secretaria de Comunicaciones y Transporte;*
 Sheet Metal Workers International Association;
 Tourist Railway Association Inc.;
 Transport Canada;*
 Transport Workers Union of America;
 Transportation Communications International Union/BRC;
 Transportation Security Administration; and
 United Transportation Union (UTU).

* Indicates associate, non-voting membership.

When appropriate, FRA assigns a task to RSAC, and after consideration and debate, RSAC may accept or reject the task. If the task is accepted, RSAC establishes a working group that possesses the appropriate expertise and representation of interests to develop recommendations to FRA for action on the task. These recommendations are developed by consensus. A working group may establish one or more task forces to develop facts and options on a particular aspect of a given task. The task force then provides that information to the working group for consideration.

If a working group comes to a unanimous consensus on recommendations for action, the proposal is presented to the full RSAC for a vote. If the proposal is accepted by a simple majority of RSAC, the proposal is formally recommended to FRA. FRA then determines what action to take on the recommendation. Because FRA staff members play an active role at the working group level in discussing the issues and options and in drafting the language of the consensus proposal, FRA is often favorably inclined toward the RSAC recommendation.

However, FRA is in no way bound to follow the RSAC recommendation, and the agency exercises its independent judgment on whether the recommended rule achieves the agency's regulatory goal, is soundly supported, and is in accordance with policy and legal requirements. Often, FRA varies in some respects from the RSAC recommendation in developing the actual regulatory proposal or final rule. Any such variations would be noted and explained in the rulemaking document issued by FRA. If the working group or RSAC is unable to reach consensus on recommendations for action, FRA will proceed to resolve the issue through traditional rulemaking proceedings.

In 2009, FRA re-convened the PTC Working Group that had produced the

rule recommendation resulting in 49 CFR part 236, subpart H, the set of regulations governing the voluntary implementation of processor-based signal and train control systems. The following organizations contributed members: AASHTO; ACC; Amtrak, APTA; ASLRRA; AAR; ASRSM; BMWED; BLET; BRS; FTA,* IBEW; NRCMA; NTSB; RSI; Transport Canada; * Tourist Railway Association, Inc.; and UTU. (The asterisk indicates associate, non-voting membership.)

While the rule was not put before the PTC Working Group or the RSAC to develop a consensus on recommendations for action, FRA consulted with the PTC Working Group several times in the development of both the NPRM and this final rule.

B. Comments Received

1. In General

FRA received nine comments in response to the NPRM. Two of these comments were from individuals. The remaining seven were from GE Transportation; the Western Interstate Energy Board High Level Radioactive Waste Committee (WIEB); Amtrak; AAR; ACC; a joint comment from the Brotherhood of Railroad Signalmen, Sheet Metal, Air, Rail and Transportation Workers, and the American Train Dispatchers Association; and the Transportation Trades Department, AFL-CIO. The majority of the content of these comments is discussed in the appropriate portions of the Section-by-Section Analysis. However, some portions of the Petition and comments received do not pertain to sections modified by this final rule. Unless otherwise noted, all references below to a "section" or to "\$" refer to a section in title 49 of the Code of Federal Regulations (CFR).

2. Comments on § 236.1021, Discontinuances, Material Modifications, and Amendments, Which Is Unchanged

AAR, in its Petition, recommends that FRA allow automatic approval for the removal of cab signal systems from PTC-equipped lines or the removal of any signal system where stand-alone PTC systems are used, avoiding the need for an application pursuant to 49 CFR part 235 or the parallel process established by § 236.1021. However, the Petition did not provide adequate justification to support the categorical approval of such changes without any FRA oversight. AAR's petition even conceded that new PTC systems are likely to suffer en route failures, as discussed in more detail

below. Such failures would be mitigated by the presence of an underlying signal system. FRA noted these difficulties in the NPRM, and the comments received did not provide a basis to conclude otherwise; the only comment received on the matter was a comment against the proposal. Additionally, Amtrak's comment on § 235.7, discussed below, reflects a similar concern with the proposal for this section. The final rule does not amend § 236.1021.

3. Comments on Paragraph (c), Limited Operations Exception, of § 236.1019, Main Line Track Exceptions, Which Is Unchanged

AAR also suggested in its Petition that FRA should exempt certain limited freight operations in a similar manner as provided for limited passenger operations under § 236.1019(c). AAR suggested exempting track segments over which not more than two trains containing PIH materials carloads are transported daily, where the annual freight traffic over the line is less than 15 MGT. RSIA provided FRA with the authority to redefine "main line" for intercity or commuter rail passenger transportation routes or segments where there are limited or no freight operations. See 49 U.S.C. 20157(i)(2)(B). Under this authority, FRA, in § 236.1019(c), provides an exception from PTC system implementation on line segments where there are limited or no freight operations and where either all trains are limited to restricted speed, temporal separation is provided between passenger trains and other trains, or passenger service is operated under a risk mitigation plan. The purpose of § 236.1019(c) is to eliminate the requirement for PTC system installation in the case of low-risk passenger operations.

Because the express language of 49 U.S.C. 20157(i)(2)(B) only applies to "intercity rail passenger transportation or commuter rail passenger transportation routes or segments," FRA does not believe it is within its authority to use this statutory framework in order to exclude track segments carrying PIH materials from the PTC implementation mandate. Nevertheless, FRA recognizes that the exception sought by AAR already exists, albeit in a different and limited form. The exception of § 236.1005(b)(4)(iii)(C) allows railroads to apply for an exception from the requirement to implement PTC systems on track segments where the railroad can demonstrate that the track segment poses an equivalent or lesser degree of risk as the track segments covered by the categorical *de minimis* exception. AAR, in its comment, recommended a

new *de minimis* exception for track segments with only two trains carrying PIH materials per day and fewer than 300 loaded PIH cars annually, or 150 loaded PIH cars in dark territory. Given that the daily limit on trains carrying PIH materials has been added to the existing categorical *de minimis* exception as discussed above, this provision would effectively replace the categorical *de minimis* exception of § 236.1005(b)(4)(iii). While there may be some limited circumstances under which FRA could view a track segment with as many as 300 loaded PIH cars as posing an equivalent or lesser degree of risk, FRA does not have an adequate basis for concluding that would be the case for all circumstances. Accordingly, the final rule does not adopt AAR's suggestion to amend § 236.1019.

4. Comments on Cost of Transportation of Certain Radioactive Lading

The WIEB comment expresses concerns over costs of transportation of spent nuclear fuel and high-level radioactive waste as they may relate to PTC system implementation. However, these concerns are outside the scope of the present rulemaking.

IV. Section-by-Section Analysis

Amendments to 49 CFR Part 234, Grade Crossing Safety, Including Signal Systems, State Action Plans, and Emergency Notification Systems

Section 234.207 Adjustment, Repair, or Replacement of Component

Until amended by this final rule, paragraph (b) of § 234.207 read as follows: "Until repair of an essential component is completed, a railroad shall take appropriate action under § 234.105, Activation failure, § 234.106, Partial activation, or § 234.107, False activation, of this part." During training and enforcement actions, FRA has found the regulated entities to have misconceptions and misunderstandings regarding the response required under § 234.207. FRA believes that various regulated entities have misread paragraph (b) to indicate that the necessary response to any essential component of a highway-rail grade crossing warning system failing to perform its intended function under paragraph (a) is only applicable where the result of such failure is one of the three types of warning system malfunctions listed in paragraph (b). In the NPRM, FRA proposed to modify the language of paragraph (b) to make clear that if an essential component fails, it must be repaired without undue delay and regardless of whether the component failure results in an

activation failure, partial activation, or false activation.

In response to this proposal, one individual commenter asked under what circumstances an essential component could fail without constituting one of these three error states. FRA believes that such a circumstance could arise specifically in the context of a partial activation, which is defined to be an "activation of a highway-rail grade crossing warning system indicating the approach of a train, however, the full intended warning is not provided due to one of the following conditions: (1) At non-gated crossings equipped with one pair of lights designed to flash alternately, one of the two lights does not operate properly (and approaching motorists cannot clearly see flashing back lights from the warning lights on the other side of the crossing); (2) at gated crossings, the gate arm is not in a horizontal position; or (3) at gated crossings, any portion of a gate arm is missing if that portion normally had a gate arm flashing light attached." This exclusive list of grade crossing partial activation failures requires remedial action under § 234.106, but does not include all potential failures of essential components. For instance, at a gated crossing equipped with two pairs of lights designed to flash alternately, if one pair of lights is not operating as intended, that failure does not constitute a partial activation or activation failure, but is nonetheless a failure of an essential component of the grade crossing warning system that should be repaired without undue delay.

The commenter also requested that FRA enumerate what constitutes an "essential component." FRA declines to do so, as the language is consistent with FRA's longstanding signal and train control rules.² Given the variety of grade crossing warning systems currently in use, an exclusive list of components deemed essential would bloat the rule and would likely serve only to create more confusion.

To resolve the ambiguity of § 234.207, paragraph (a) is amended to make clear that all failures of essential components,

² See 49 CFR 236.11 ("When any component of a signal system, the proper functioning of which is essential to the safety of train operation . . ."), 49 CFR 236.915 ("Until repair of such essential components [is] completed, a railroad shall take appropriate action as specified in the PSP."), and 49 CFR 236.1029 ("Until repair of such essential components [is] completed, a railroad shall take appropriate action as specified in its PTCSPP."). See also 59 FR 3051, 3056 (Jan. 20, 1994), proposing the "essential component" and the language is similar to the requirement in the present FRA signal rules at 49 CFR part 236.

including but not limited to failures resulting in an activation failure, partial activation, or false activation, must be investigated to determine the cause of the failure to perform their intended function and the failed components must be adjusted, repaired, or replaced without undue delay. Paragraph (b) is amended to make clear that, for those failures of essential components that constitute false activations, partial activations, and activation failures, railroads must also comply with §§ 234.105, 234.106, or 234.107, as appropriate, until such adjustments, repairs, or replacements are made.

Section 234.213 Grounds

Until amended by this final rule, § 234.213 indicated that each circuit that affects the proper functioning of a highway-rail grade crossing warning system shall be kept free of any ground or combination of grounds that will permit a current flow of 75 percent or more of the release value of any relay or electromagnetic device in the circuit. With the migration of many warning systems, subsystems, and components from relay-based to microprocessor-based technologies, FRA believes that a more comprehensive indicator of prohibited current flow grounds is required. In the NPRM, FRA proposed to amend this language to prohibit any ground that could “adversely affect the proper safety-critical functioning of the warning system.”

Several commenters noted the ambiguity of this language, and suggested revisions to both define the quantity at issue and the meaning of “adversely affect.” FRA agrees that the proposed language was unnecessarily ambiguous, and therefore is amending the proposed rule text to be consistent with its prior prohibition while addressing processor-based systems. The final rule prohibits any ground or combination of grounds that will permit a current flow of 75 percent or more of the value necessary to retain a permissive state of a safety appliance such as a highway-rail grade crossing warning system. Because it is neither feasible nor necessary to test the internal microprocessor or microprocessor memory circuitry for ground leakage current, the final rule also explicitly excludes such circuitry from the grounds prohibition. To improve the readability of the rule, the text has been separated into two paragraphs: Paragraph (a) providing the limitation on grounds, and paragraph (b) listing the exceptions.

Amendments to 49 CFR Part 235, Instructions Governing Applications for Approval of a Discontinuance or Material Modification of a Signal System or Relief From the Requirements of Part 236

Section 235.6 Expedited Application for Approval of Certain Changes

This final rule adds new § 235.6, which allows specified changes within existing signal or train control systems to be made without the necessity of filing an application for approval with FRA’s Associate Administrator for Railroad Safety/Chief Safety Officer (Associate Administrator). The amendment provides each railroad a simplified process to obtain approval to modify existing signal systems directly associated with PTC system implementation.

Under a different provision, § 235.7, Changes not requiring filing of application, a railroad may avoid filing an application for a broad variety of modifications to a signal system, so long as the resultant arrangement is in compliance with part 236. FRA recognizes that, during the process of installing the wayside PTC equipment, the railroads may have the resources and time available to implement needed or desired wayside signal system upgrades. Such modifications generally require FRA approval in accordance with § 235.5, Changes requiring filing of application. Given that the outcome of such modifications must be in compliance with part 236, FRA now creates an expedited approval process for modifications of the signal system by the installation, relocation, or removal of signals, interlocked switches, derails, movable-point frogs, or electronic locks in an existing system where the modification is directly associated with the implementation of PTC systems. Instead of filing an application for approval to the Associate Administrator, a railroad is permitted to instead submit its request to the FRA regional office that has jurisdiction over the affected territory, with a copy provided to representatives of signal employees, similar to the information provided under the provisions for pole line circuit elimination, § 235.7(c)(24)(vi). If the Regional Administrator for the appropriate regional office denies approval of the requested modification, the request would then be forwarded to the FRA Railroad Safety Board as an application for signal system modification. However, express approval from the Regional Administrator is necessary before the modifications may begin. In the NPRM, this provision was located in a new

paragraph of § 235.7, but has been moved to a new section to reflect that it does not fall cleanly into either § 235.5 or § 235.7.

Amtrak, in its comment, sought clarification that FRA does not intend to allow the removal of signal systems without approval under part 235. This reading is correct; the amendments to § 235.7 do not allow the discontinuance of a signal system nor a decrease of its limits. FRA rejected such a proposal, as discussed in more detail below in the analysis of § 236.1021. Section 235.5 defines three types of changes: discontinuance; decrease of limits; and modification. The language of § 235.6 authorizes this expedited procedure only for modifications, and not for discontinuances or decreases of limits. Accordingly, a railroad may not use the process defined in § 235.7(d) for the removal of an entire signal system. Amtrak continues to have the authority to comment on any such proposed removal through a part 235 discontinuance proceeding or review of a railroad’s Request for Amendment (of a plan or system made by a PTC railroad in accordance with § 236.1021) (RFA) requesting discontinuance in accordance with § 236.1021(c).

AAR asked that FRA revise this section to be consistent with § 235.7(c)(24)(vi), governing modifications of signal systems as part of a conversion from pole line circuits to electronic (coded) track circuits. Paragraph (c)(24)(vi) provides that a signal system modification will be deemed acceptable unless the Regional Administrator stays action within 60 days of receiving notice from the railroad of the proposed modifications, whereas paragraph (d) requires an affirmative response from the Regional Administrator. Because FRA anticipates signal system modifications related to PTC system implementation to be of a broader nature than the modifications associated with pole line conversion, the 60-day deadline of the pole line conversion provision would not provide adequate time for review in all cases. However, FRA will work expeditiously to respond to all railroad requests for modifications under new § 235.6.

Amendments to 49 CFR Part 236, Rules, Standards, and Instructions Governing the Installation, Inspection, Maintenance, and Repair of Signal and Train Control Systems, Devices, and Appliances

Section 236.0 Applicability, Minimum Requirements, and Penalties

The final rule removes paragraph (i), Preemptive effect. FRA believes that this

provision is unnecessary because 49 U.S.C. 20106 sufficiently addresses the preemptive effect of FRA's regulations. Providing a separate Federal regulatory provision concerning the preemptive effect of 49 CFR part 236 is duplicative and unnecessary. FRA received no comments on the proposal to remove the provision on preemptive effect.

Section 236.2 Grounds

Mirroring old § 234.213, old § 236.2 provided that each circuit that affects the safety of train operations shall be kept free of any ground, or combination of grounds, that permits a current flow of 75 percent or more of the release value of any relay or electromagnetic device in the circuit. For the same reasons cited in the discussion of old and revised § 234.213 above, the final rule amends old § 236.2 to prohibit any ground or combination of grounds that permits a current flow of 75 percent or more of the value necessary to retain a permissive state of a safety appliance, such as a signal lamp or locking circuit. As with § 234.213, the text has been separated into two paragraphs: paragraph (a) providing the limitation on grounds, and paragraph (b) listing the exceptions.

Section 236.15 Timetable Instructions

In the interest of providing clarity, FRA amends old § 236.15 to require explicitly the designation of PTC system territory, equal to the other types of signal and train control systems that are already required to be designated in a railroad's timetable instructions (i.e., "[a]utomatic block, traffic control, train stop, train control, and cab signal . . ."). During the July 9, 2013, PTC WG meeting, FRA discussed broadening the old provision to require that "all signal and train control systems" be designated in timetable instructions, in order to account for future advances in signal and train control systems. However, the discussion indicated that this change would cause more confusion, and accordingly the final rule simply adds PTC to the list of systems governing operations in a territory that must be designated in timetable instructions. Beyond that issue, FRA received no comments on this provision as proposed.

Section 236.567 Restrictions Imposed When Device Fails and/or Is Cut Out en Route

Old § 236.567, which applied to territories where "an automatic train stop, train control, or cab signal device fails and/or is cut out en route," required trains with en route failures to proceed in a specified restrictive

manner until reaching the next available point of communication, where a report had to be made to a designated officer and an absolute block had to be established in advance of the train on which the device was inoperative. Once the railroad established the absolute block (under the manual block system), the train was permitted to proceed at a speed not exceeding 79 miles per hour (mph), premised upon the same requirement in old § 236.0 as applicable to a train operating in a manual block system with an absolute block in advance of the train. However, effective on or after January 17, 2012, manual block systems are no longer approved as a method of operation for freight trains operating at greater than 49 mph or passenger trains operating at greater than 59 mph under § 236.0(c)(2). See 75 FR 2598 at 2607 (Jan. 15, 2010). This change to § 236.0 resulted in an inconsistency between § 236.0 and old § 236.567, which was not contemporaneously revised.

To rectify this inconsistency, FRA's present final rule amends old § 236.567 to reflect the amendment previously made to § 236.0. Accordingly, for trains operating in territory without a block signal system installed and operated in compliance with part 236, this amendment to old § 236.567 reduces the maximum allowable speed from 79 mph to 59 mph for passenger trains and to 49 mph for freight trains. Where a block signal system is operational, the maximum allowable speed remains at 79 mph. FRA received no comments on this provision as proposed.

Because the harmonizing changes made the old paragraph structure too complicated, FRA has reorganized the section with discrete paragraphs for each of the three operating phases: (1) Prior to the report to a designated officer; (2) after the report but prior to the establishment of an absolute block in advance of the train; and (3) after the establishment of the absolute block. This reorganization does not change the meaning of § 236.567, except as discussed above. For trains operating without a block signal system installed and operated in compliance with part 236, this amendment to § 236.567 reduces the maximum allowable speed from 79 mph to 59 mph for passenger trains and to 49 mph for freight trains. Where a block signal system is operational, the maximum allowable speed remains at 79 mph. The language has also been revised to replace the phrase "medium speed" with an explicit speed, 40 mph, to reduce confusion.

Section 236.1003 Definitions

The final rule replaces "PIH Materials" with "PIH materials" to correct an error in capitalization and to change the definition to make clear that even though the term is in the plural, the term includes the singular (i.e., only one PIH material).

Section 236.1005 Requirements for Positive Train Control Systems

Paragraph (a) specifies PTC system functionality and implementation requirements. A typographical error is corrected in the table header in paragraph (a); an asterisk is present with no accompanying text.

Paragraph (b) provides for certain exclusions and the temporary rerouting of unequipped locomotives, locomotive consists, and trains (i.e., locomotives, locomotive consists, and trains not equipped with PTC) on PTC-system-equipped track. Until amended by this final rule, the allowable exclusions of § 236.1005(b)(4)(iii) addressed track segments with *de minimis* risk based upon specified criteria that can be expected to result in a risk a PTC-preventable accident being negligible on the subject track segment. The categorical criteria under old paragraph (b)(4)(iii)(A) and (B) were as follows:

- A minimal amount of PIH materials cars transported (fewer than 100 cars per year, either loads or residue);
- A train speed limitation of either Class 1 or 2 track as described in 49 CFR part 213;
- Less than 15 MGT of traffic annually;
- A ruling grade of less than 1 percent; and
- A train-spacing requirement where any train transporting a car containing PIH materials (including a residue car) shall be operated under conditions of temporal separation from other trains.

A general *de minimis* exception under paragraph (b)(4)(iii)(C) was also available for additional line segments carrying fewer than 100 PIH cars annually and less than 15 MGT annually and where it was established to the satisfaction of the Associate Administrator that risk mitigations will be applied that will ensure that risk of a release of PIH materials is negligible.

In its Petition, AAR made certain proposals to modify these criteria, which are further discussed below. In the NPRM, FRA adopted some of these proposals, modified others, and rejected some elements. In this final rule, FRA is adopting additional elements of the Petition and adjusting the general *de minimis* exception for clarity.

In considering the suggestions contained in the Petition, FRA

recognizes that any *de minimis* exception (in the generic sense of the term, as developed in case law) must apply in a way that fulfills Congress' intent. In other words, such exceptions must only cover situations where "the burdens of regulation yield a gain of trivial or no value" and should apply not "to depart from the statute, but rather [as] a tool to be used in implementing the legislative design." *Environmental Defense Fund, Inc. v. EPA*, 82 F.3d 451, 466 (D.C. Cir. 1996) (inner quotations omitted); *Alabama Power Co. v. Costle*, 636 F.2d 323, 360–61 (D.C. Cir. 1979).

FRA continues to believe that *de minimis* exceptions are warranted for low-density main lines with minimal safety hazards that carry a truly minimal quantity of PIH materials. The preamble discussion to the final rule published January 15, 2010, focused primarily on the risks associated with PIH materials exposure. However, any *de minimis* exception must also consider the risks associated with the events that Congress intended PTC systems must be designed to prevent. In other words, when a *de minimis* exception applies, there must be *de minimis* risk that a train-to-train collision, overspeed derailment, incursion into a roadway worker zone, or movement over a switch in the wrong position may occur. See 49 U.S.C. 20157(i)(3).

After reviewing the Petition and the comments received in response to the NPRM, FRA is amending the old categorical *de minimis* exception at § 236.1005(b)(4)(iii)(A) and (B) to reflect with the restrictions discussed below.

1. Annual Limit on Number of PIH Cars Carried on the Track Segment

The final rule moves the annual limitation on cars carrying PIH materials from paragraph (b)(4)(iii)(A) into paragraph (b)(4)(iii)(B) and restricts its scope to no longer include cars containing only a residue of PIH material. As background, first, AAR proposed that the limit of fewer than 100 cars apply to loaded PIH cars only, not residue cars. FRA responded in the NPRM by proposing in § 236.1005(b)(4)(iii)(A) to increase the total car limit to fewer than 200 cars containing PIH materials, including both loaded cars and residue cars, expressing concern that completely excluding residue cars from consideration could increase the risk of a PIH materials release beyond a negligible level. As was noted in the NPRM, most residue tank cars are routed back to the original shipper along the identical route that brought them to the location where they were offloaded.

While this fact supported FRA's proposal, it also indicated that the impact of excluding residue cars from consideration would not dramatically increase the set of track segments eligible for the *de minimis* exception, as most track segments that would qualify under the limit of fewer than 100 loaded cars would also qualify under the limit of fewer than 200 loaded and residue cars. The PTC WG identified two situations where residue cars are not travelling back along an identical route to their original shipment route. First, AAR identified situations where multiple track segments deliver loaded tank cars, with residue car traffic being consolidated for a return trip. Second, several members of the PTC WG raised the issue of tank car repair facilities. Because a tank car is considered to be a residue car unless it is refilled or cleaned and purged, the locations where the cleaning and purging take place will necessarily have a disproportionately high volume of residue tank cars that does not necessarily entail a disproportionately high level of risk from the residue of PIH materials. As the hazards related to the movement of residue PIH cars are diminished somewhat compared to the hazards of loaded PIH cars, and considering the public interest in purging, cleaning, and repairing cars handling PIH materials in a timely manner, FRA finds it unnecessary to address those limited number of line segments that may haul significantly more residue cars than loaded cars. Moreover, the new limitations that must be met to qualify under the *de minimis* exception further reduce the risk from these residue cars. For these reasons, FRA concludes that removing residue cars from the annual limit of fewer than 100 cars is appropriate.

This conclusion does not change DOT's underlying position on the risk posed by tank cars containing a residue of hazardous materials. Rather, FRA recognizes the contextual difference between regulating the treatment of individual tank cars containing a residue of hazardous materials and assessing the risk to a track segment as a whole based on the total number of tank cars containing a residue of hazardous materials operating over the track segment on an annual basis. It remains imperative for each car containing a residue of hazardous materials to be properly marked, labeled, placarded, and inspected prior to being offered for transportation, and to conform with all other regulations applicable to the transportation of hazardous materials. However, when

viewed in conjunction with the other limitations of the *de minimis* exception, the movement of residue cars is not a determining factor in increasing the level of risk on a given track segment as a whole above a negligible level, and the final rule therefore removes cars containing only a residue of PIH materials from consideration in the annual car limit.

2. New Limit on the Number of Trains per Day Carrying Any Quantity of PIH Materials on the Track Segment

The old rule text did not provide a daily train limitation. However, with the potential increase in PIH materials traffic moving over a track segment under this final rule, FRA views it to be necessary to look not only to the risk profile of a track segment on an annual basis, but also on a day-by-day basis. In the NPRM, FRA proposed to add the limitation on trains per day carrying PIH materials to ensure that the risk of PIH materials release remained negligible in light of the other changes made to the *de minimis* exception. Under ordinary circumstances, one might reasonably expect the overall number of cars containing PIH materials to be distributed throughout the year, such that the train-per-day limit would not be necessary. AAR noted this in its comment, opposing the imposition of the limit but stating, "[f]rom an operational perspective, this limit is not a significant issue because the annual limit on the number of PIH cars makes a 2-train per day limit insignificant." This perspective assumes some degree of uniform distribution of cars carrying PIH materials, but that assumption may not be met in all circumstances. Absent a daily limitation on the number of trains carrying PIH materials, a railroad would be permitted to operate a large number of trains carrying PIH materials in a single day on a track segment subject to the *de minimis* exception, while nonetheless increasing the exposure to the risk of PIH-materials release on that day well above what would be the case in the ordinary situation of transporting cars containing PIH materials regularly throughout the year, due to the increased PIH materials traffic on that particular day. The qualitative judgment of FRA is that such a potential outcome would likely exceed negligible risk and therefore the final rule adds an additional limit of two trains carrying any quantity of PIH materials per day to the *de minimis* exception. Because this restriction is not a calculation of the level of risk posed by aggregate movements over the track segment, but rather governs the day-to-day operations on the track segment,

this limitation includes cars containing only a residue of PIH materials. The trains-per-day limitation removes such unusual operations from the scope of the general *de minimis* exception. It bears emphasis that AAR indicated in its comment that it viewed the limitation as “insignificant,” reflecting a degree of industry agreement with FRA’s underlying premise that the limitation will not reach the ordinary circumstances that it is not intended to address. Rather, the limitation precludes only the unusual outlier situations which are best handled under paragraph (b)(4)(iii)(C). A railroad anticipating one or more days upon which it expects to move many trains carrying PIH materials may request that the track segment at issue be excluded despite the high number of trains carrying PIH materials on particular days by showing what steps will be taken to render the exposure to risk of PIH-materials release on those days to a level equivalent or lesser than the risk of operations where the transportation of cars containing PIH materials is divided throughout the year.

3. Limit to Class 1 or 2 Track Segments or Limit the Speed of the PIH Trains Over the Track Segment

Until amended by this final rule, the categorical *de minimis* exception, under § 236.1005(b)(4)(iii)(B)(1), limited maximum authorized train speed on the subject track segment to that afforded for Class 1 (10 mph) or Class 2 (25 mph) tracks in order to reduce the kinetic energy available in any accident and to ensure that involved tank cars carrying PIH materials are capable of surviving the forces generated. AAR’s Petition proposed that the regulation provide a speed limitation only for those trains transporting PIH materials. Specifically, AAR proposed a speed restriction of 40 mph (*i.e.*, the same maximum authorized speed provided for certain rail-to-rail at-grade crossings under § 236.1005(a)(1)(i)), to be enforced by operating rules and only for trains carrying PIH materials. In the NPRM, FRA expressed concern that increasing the speed limit on the track segment from 25 mph to 40 mph would substantially increase the risk of PIH materials release due to the increase in kinetic energy in the event of a collision. However, comments received in response to the NPRM and discussions with the PTC WG indicate that the current track class limitation serves as a disincentive to maintain the track segment to a higher standard. By moving from a limitation based on track class (restricting the speed of all movement over the track segment) to a

speed restriction for only those trains carrying PIH materials, the revised rule will encourage routing the PIH materials traffic over track segments maintained to a higher quality, which should decrease the risk of track-caused incidents.³ Track-caused accidents and incidents are generally not PTC-preventable, but represent a larger percentage of accidents and incidents than PTC-preventable accidents and are appropriately considered when considering the overall level of risk posed by operations over a track segment.

In addition to the comments received and discussions during PTC WG meetings, FRA has also considered other limitations imposed on PIH materials traffic. When considering then-current tank car strength, the Pipeline and Hazardous Materials Safety Administration set a speed limitation of 50 mph for tank cars containing PIH materials. 49 CFR 174.86. Since that rulemaking, newer tank car designs have further reduced the probability of rupture in the event of collision or derailment due to improvements in structural design. When combined with the other limitations of the *de minimis* exception, the 40-mph limit is an appropriate replacement for the track class restriction that existed in old § 236.1005(b)(4)(iii)(B)(1).

In the NPRM, FRA also expressed concern regarding the enforcement of a speed restriction for trains carrying PIH materials. AAR responded in its comment by noting that any speed restriction would be subject to errors by the locomotive engineer, whether that speed restriction was imposed for all trains operating over a given track segment or only for those trains carrying PIH materials. This argument has merit; without a PTC system or automatic train control system, a train’s speed is limited only by rule and is subject to human failure by the train crew. It is also not unusual for FRA regulations or railroad operating rules to require temporary speed restrictions for certain trains or certain track segments, such as where a significant track defect exists.

4. Limitation on the Grade of the Track Segment; Definition of “Heavy Grade”

In its Petition, AAR proposed that lines eligible for the categorical *de minimis* exception be restricted to grades that are not “heavy grades” as

defined by FRA in part 232. “Heavy grade” is defined in § 232.407(a)(1).

The steeper the grade, the more susceptible a train operation becomes to concerns relating to train handling, overspeed, and other factors that may contribute to a PTC-preventable accident. FRA continues to believe that placing a limit on ruling grade helps to avoid situations in which an engineer may lose control of a train as a result of a failure to make a timely and sufficiently strong brake application. In the NPRM, FRA expressed concern with the train-specific nature of the proposed definition, as the requirement to implement PTC systems applies to track segments in addition to locomotives. The PTC WG discussed the issue and supported referencing the definition, with the possibility of civil penalties in instances where the trailing tonnage of a train causes the track segment to be classified as heavy grade. The NPRM proposed that track segments with average grades equal to or greater than one percent over three continuous miles and less than two percent over two continuous miles could qualify for the general *de minimis* exception despite being ineligible for the categorical *de minimis* exception. However, the train-specific criterion is specific enough that it is feasible to include in the categorical *de minimis* exception.

The final rule references § 232.407, such that a track segment will not qualify for the categorical *de minimis* exception if it has a “heavy grade” as that term is defined under that section for a train operating over the track segment. Any operation of a train with more than 4,000 trailing tons over a segment that has an average grade exceeding one percent over three continuous miles, and that has been excluded under the categorical *de minimis* exception, will constitute a violation of this § 236.1005.

5. Additional Operating Rule Risk Mitigations

As an additional risk mitigation, AAR’s Petition recommended strengthening operating practices protecting against unauthorized incursions into roadway work zones on track segments that have received approval to avoid PTC system implementation under the *de minimis* risk provision. AAR proposed that—in the case of a train approaching working limits on a line subject to the *de minimis* exception—the train crew be required to call the roadway worker in charge at a minimum distance of two miles in advance of the working limits to advise of the train’s approach. If the train crew does not have knowledge of

³ See, e.g., Athaphon Kawprasert and Christopher P. L. Barkan, *Effect of Train Speed on Risk Analysis of Transporting Hazardous Materials by Rail*, 2159 Transportation Research Record 59 (Dec. 2010), available at <http://trb.metapress.com/content/7682666175324228>.

the working limits prior to approaching within two miles of the working limits or if it is impracticable to provide notification two miles in advance, such as if the working limits are less than two miles from the initial terminal, AAR proposed that the train crew would be required to call the roadway worker in charge as soon as practicable. In the NPRM, FRA indicated that it viewed the criterion as covering the same requirements as existing operating rules. However, as preventing incursions into roadway work zones is a core function of PTC, it is appropriate for the categorical *de minimis* exception to include mitigations to reduce the risk of this form of PTC-preventable accident, and commenters expressed concern over protection for roadway workers. Accordingly, the final rule adopts the proposal of AAR's Petition and includes the requirement that a railroad adopt and comply with an operating rule requiring train crews approaching working limits to notify the roadway worker in charge at least two miles in advance of the working limits, or as soon as practical if the train crew does not have advance knowledge of the working limits.

6. Required Separation of PIH Materials Traffic From Other Trains on the Track Segment

Until amended by this final rule, a requirement of the categorical *de minimis* exception was that trains carrying PIH materials be temporally separated⁴ from other trains. Temporal separation reduces the risk of train-to-train collisions, a core PTC function, by prohibiting other trains from operating on the track segment at the same time as any train carrying PIH material. In its Petition, AAR requested that FRA revise the requirement so that a vacant block ahead of and behind the train would constitute temporal separation. The NPRM explained that such a requirement would not be temporal separation, but requested comment on the concept as an alternative to temporal separation. AAR, in its comment, reiterated its argument from the Petition that this form of protection would suffice.

FRA previously expressed openness to the concept, and suggested that interested railroads use the general *de minimis* exception at § 236.1005(b)(4)(iii)(C) as the basis for excluding track segments using a vacant block ahead of and behind a train as an alternative means of protecting against

train-to-train collisions. AAR's comment argued that the desire to substitute its alternative for the prior temporal separation requirement is industry-wide, suggesting that an industry-wide resolution of the proposal is appropriate. In light of the other elements of the categorical *de minimis* exception, FRA is revising the separation requirement to no longer require temporal separation, and instead allow track segments to qualify where any train carrying PIH materials is operated with a vacant block ahead of and behind the train.

7. Annual Traffic Density on the Track Segment for Categorical De Minimis Exception

AAR recommended that if the other criteria for *de minimis* exceptions are met, the amount of annual traffic on the track segment should not disqualify it from eligibility for the exemption. With respect to paragraph (b)(4)(iii)(B), FRA has endeavored to address AAR's concerns with a provision that is broad enough to permit considerations of actual circumstances, limit this exception to track segments that would not otherwise need to have a PTC system implemented, and make explicit reference to the requirement for potential safety mitigations. FRA has chosen below 15 MGT as the area where mitigations are in place, or could be put in place, to establish a high sense of confidence that operations will continue to be conducted safely. FRA has concern that eliminating the traffic density criterion would result in an exception being outside the scope of the *de minimis* risk, and specifically that increasing the traffic density criterion would put the exception outside of FRA's statutory authority to grant a *de minimis* exception. As explained above, any *de minimis* exception must only cover situations where "the burdens of regulation yield a gain of trivial or no value." *Environmental Defense Fund, Inc. v. EPA*, 82 F.3d 451, 466 (D.C. Cir. 1996). A *de minimis* exception explicitly may not be granted where "the regulatory function does provide benefits, in the sense of furthering the regulatory objectives, but the agency concludes that the acknowledged benefits are exceeded by the costs." *Alabama Power Co. v. Costle*, 636 F.2d 323, 361 (D.C. Cir. 1979). The derailment data cited by AAR is only a portion of the data that needs to be considered, as it concerns only one of the four varieties of PTC-preventable accidents. When analyzing AAR's proposal, FRA found that the track segments AAR sought to exclude received disproportionately higher

benefits from the implementation of PTC systems. It is therefore impossible for FRA to conclude that PTC implementation on those segments yields "a gain of trivial or no value": The gain is greater than the average track segment required to implement PTC systems. As such, granting AAR's request is well outside of FRA's inherent authority to grant a limited *de minimis* exception based on the lack of benefits. Even if FRA did possess such authority, the fact that the track segments at issue receive greater-than-average benefits from PTC system implementation means that granting AAR's request to remove the 15 MGT limitation would be ill-advised. Throughout the PTC regulatory process, FRA has sought to use what little authority it has to focus PTC system implementation on those track segments that will receive the most benefit from the systems, and removing the track segments at issue would be antithetical to that aim.

FRA does recognize the potential for a higher density line not being eligible for this exemption even though it may have fewer than 100 PIH materials cars on the line in a year and even though that particular track segment may have less comparable risk than a track segment covered by the categorical *de minimis* exception. Consequently, while the final rule does not amend this limitation, FRA remains open to the possibility of considering some risk evaluation factors in lieu of a prescriptive train-density limitation. During PTC WG meetings, AAR suggested the number of trains traversing a track segment annually as an example of an alternative metric of train density. The flexibility available under paragraph (b)(4)(iii)(C) allows for such alternatives if the track segment is similar to those covered by the categorical *de minimis* exception.

8. General De Minimis Exception at § 236.1005(b)(4)(iii)(A) and (C)

AAR's Petition also requested several changes to § 236.1005(b)(4)(iii)(C), which provides that FRA will "consider" relief from the obligation to install PTC systems on track segments with annual traffic levels under 15 MGT where the risk of a release of PIH materials is "negligible." In addition to requesting the elimination of the 15-MGT limit within the categorical *de minimis* exception, AAR suggested eliminating the limit contained in general *de minimis* exception as well. Moreover, AAR contended that it is unclear what constitutes a "negligible" risk and what discretion FRA would exercise should there be a showing of

⁴ For a discussion of the meaning of "temporal separation," see § 236.1019(e) and 49 CFR part 211, appendix A.

negligible risk. AAR further requested that FRA set a quantitative threshold for negligible risk, and suggests “one-in-a-million” as the criterion. AAR references a U.S. Department of Defense standard regarding standard practice for system safety, MIL–STD–882C,⁵ as the basis for such criterion, which provides a method for categorizing and assessing risk, but does not specifically explain how this standard would apply.

In response to the arguments made by AAR that the exception was vague and unworkable without quantification, the final rule replaces the general *de minimis* exception with a provision more consistent with FRA’s intent for the exception. The provision of paragraph (b)(4)(iii)(A) limiting the application of the *de minimis* exception to only those track segments carrying less than 15 MGT annually has been moved to paragraph (b)(4)(iii)(B), applying solely to the categorical *de minimis* exception. Paragraph (b)(4)(iii)(C) now allows for a *de minimis* exception for FRA approval of track segments similar but not identical to those covered by paragraph (b)(4)(iii)(B), the categorical *de minimis* exception. Instead of being measured against the “negligible risk” standard, a railroad requesting the exception must demonstrate to FRA that the track segment at issue poses an equivalent or lesser risk of a PTC-preventable accident than the risk posed by track segments qualifying for the categorical *de minimis* exception by comparing the discrepancies between the categorical standard and the proposed alternative.

In the NPRM, FRA proposed to preserve the general *de minimis* exception largely, only changing the exception to eliminate the 15–MGT traffic density limitation. The NPRM responded to AAR’s request to quantify “negligible risk” by explaining that such quantification would not be a valuable decisional criterion, would require additional determinations on appropriate factors to quantify, and may not be possible given FRA’s experience attempting to develop the residual risk test. *See generally* 77 FR 28285. FRA has come to view the general *de minimis* exception as providing flexibility for circumstances similar to but nonetheless distinct from the criteria of the categorical *de minimis* exception. FRA has determined that the track segments qualifying for the categorical *de minimis* exception pose a negligible risk, and therefore any similar track segment that can be shown to have

an equivalent or lesser level of risk would necessarily also pose only a negligible risk. However, this interpretation was not readily apparent from the text of the NPRM. To address AAR’s concerns of ambiguity, the general *de minimis* exception has been replaced with a provision providing an exception for track segments similar to those covered by the categorical *de minimis* exception where the track segments are shown to pose an equivalent or lesser level of risk of a PTC-preventable accident. For instance, a track segment with a higher annual MGT traffic density could qualify for the exception based on fewer PIH cars carried annually or additional operating rules providing additional protection beyond that present in the categorical *de minimis* exception.⁶ This comparison will necessarily be qualitative; rather than calculate the absolute risk levels involved, FRA review of such requests will entail an evaluation of the deviances from the categorical *de minimis* exception to ensure that the proposal maintains an equivalent level of safety. Where available, quantitative data on the proposals compared to the requirements of paragraph (b)(4)(iii)(B) will be a valuable component of that review, but not a necessary component.

It bears emphasizing that the risk considered under the general *de minimis* exception is the risk of all PTC-preventable accidents rather than being limited solely to PTC-preventable accidents resulting in the release of PIH materials. In the January 15, 2010 PTC final rule, while FRA indicated that any *de minimis* exception would have to consider the four statutory PTC-preventable accident types and the level of PIH materials release, FRA also focused primarily on *de minimis* PIH materials risk, titling the paragraph “Lines with *de minimis* PIH risk.” This may have been confusing, and FRA would like to take this opportunity to provide further clarification. FRA originally used this term since the exception would only apply to freight traffic on lines where PIH materials are transported. To be clear, FRA did not intend to exclude the four statutory PTC-preventable accidents as risk elements requiring consideration in order to qualify for the exception. Accordingly, the final rule changes the regulatory language to comport with this perspective by modifying the heading of paragraph (b)(4)(iii) to eliminate the

potential for confusion; the heading now reads, “Freight lines with *de minimis* risk not used for regularly provided intercity or commuter passenger service.”

Section 236.1006 Equipping Locomotives Operating in PTC System Territory

AAR, in its Petition, requested that FRA permit locomotives without operational onboard PTC apparatuses to operate over PTC-equipped track segments when the movement is for freight switching operations or freight transfer train movements. AAR suggested that dispatchers hold the area of such movement clear of PTC-equipped trains through what AAR dubbed “absolute protection,” with trains lacking operational onboard PTC apparatuses limited to speeds below 30 mph and multiple concurrent train movements limited to restricted speed. The final rule largely adopts this suggestion.

In this section, FRA uses the term “freight switching service” to refer to switching service as defined by § 232.5. In turn, § 232.5 defines “train” as “one or more locomotives coupled with one or more freight cars, except during switching service.” This distinction between switching service and train movements is drawn from longstanding judicial interpretations of what constitutes a “train movement.” *See, e.g., United States v. Seaboard Air Line R. R. Co.*, 361 U.S. 78 (1959); *Louisville & Jeffersonville Bridge Co. v. United States*, 249 U.S. 534 (1919); *see also* 66 FR 4104, 4148 (Jan 17, 2001) (defining “switching service”). FRA has previously recognized that the nature of switching service precludes the application of some safety technologies or operational practices that are applicable to train movements. *See, e.g.*, 49 CFR part 232, subpart C (not requiring air brake tests as part of switching service, but requiring such tests for train movements of short distances). FRA has also previously recognized that Congress did not intend to sweep in yard tracks in the mandate for PTC system implementation. In the first PTC system rulemaking, FRA defined “main line” to exclude “where all trains are limited to restricted speed within a yard or terminal area or an auxiliary or industry tracks.” § 236.1003. In the final rule prescribed in that proceeding, FRA stated that “any track within a yard used exclusively by freight operations moving at restricted speed is excepted from the definition of main line.” 75 FR 2598, 2657 (Jan. 15, 2010); *see also* § 236.1003. Such tracks are generally considered to be other-

⁵ MIL–STD–882C has been superseded by MIL–STD–882E, available at <https://acc.dau.mil/CommunityBrowser.aspx?id=514013>.

⁶ Note that, because the general *de minimis* exception considers the totality of the circumstances of a track segment, there may exist other characteristics on a track segment otherwise as described above that elevate the risk on that track segment above a negligible level.

than-main line track, and Congress's limitation of the PTC system mandate to "main line" suggests that these tracks were not intended to be included. *See also* S. Rep. 110–270 (taking notice of the limited value that PTC systems offer in preventing accidents in yards or terminals). FRA also exercised its authority to define "main line" with respect to passenger trains to exclude trackage "used exclusively as yard or terminal tracks by or in support of regularly scheduled intercity or commuter passenger service." 49 CFR 236.1019(b); *see also* 49 U.S.C. 20157(i)(2)(b). The result of excluding freight yard track from the PTC system implementation mandate is that many freight switching operations are excluded from the scope of the PTC system mandate, where these operations do not extend onto the main line track that connects to the yard.

However, as AAR explains in its Petition, freight switching operations frequently require some movement along main track adjacent to or within a yard, for purposes of reaching other yard tracks or obtaining necessary distance, or "headroom," from yard tracks to make switching movements. Despite the exclusion of these other-than-main line tracks, switching service could therefore require PTC-equipped locomotives in order to make these movements on main line track. Given the statutory language suggesting that switching service is not subject to the PTC system mandate and the potential to apply operation restrictions to reduce risk to an acceptable level, FRA agrees that it would be appropriate to provide an additional exception for freight locomotives performing switching service from the requirements to be equipped with a PTC system if appropriate safeguards are implemented.

In response to the Petition, the NPRM proposed to create a new *de minimis* exception for yard movements. The proposed exception was limited to 10-mile movements with a maximum authorized speed of 25 mph, in order to maintain consistency with the *de minimis* exception of § 236.1005(b)(4) and the overall 20-mile zone of unequipped movements allowed by § 236.1006(b)(4). This exception would add to the existing definitional exclusion of operations at restricted speed within a yard, terminal, auxiliary tracks, and industry tracks from the meaning of "main line."

AAR, in its comment, argues that because "yard movements" were not intended to be included within the scope of PTC system implementation, movements onto PTC-equipped main

track made pursuant to yard, local, industrial, or hostling service should all be excluded from the requirement to have an operational onboard PTC apparatus. In support of this position, AAR cites discussion in FRA's first final rule implementing the PTC system mandate where FRA acknowledges that yard tracks and yard movements were not intended to be covered by the PTC system mandate. However, that discussion references the existing exclusion of yard, industry, and auxiliary track from the scope of the PTC mandate, not an exception for movements made on PTC-equipped track by locomotives without operational onboard PTC apparatuses. Mindful of this distinction, FRA nonetheless recognizes the impracticability of initializing PTC systems for switching operations and transfer train movements. Similarly, AAR makes a reasonable argument that it may not be feasible for PTC systems to provide appropriate communications to each locomotive operating in a yard environment.

In the NPRM, FRA proposed a performance-based exception for yard movements, allowing the exception to apply whenever sufficient risk mitigations were applied to reduce the risk of a PTC-preventable accident to negligible levels. AAR, in its comment, expressed concern over this formulation, arguing that the negligible-risk standard is too vague if left unquantified. While FRA refrains from developing a definite method to quantify risk, to address AAR's concern the final rule provides a prescriptive set of requirements for the freight yard movement exception, with an option for performance-based alternatives if justified in a railroad's PTC Safety Plan (PTCSP).

In the NPRM, FRA proposed a speed restriction of 25 mph, consistent with the speed restriction applied to movements under the categorical *de minimis* exception of § 236.1005(b)(4)(iii). AAR, in its comment, argues that 30 mph is a more appropriate speed, referencing the previous en route failure language of § 236.1029. This suggestion has merit. The categorical *de minimis* exception applies to operations over an unequipped track segment, whereas both the freight yard movement exception and the en route failure provision address movement without operational onboard PTC apparatuses within PTC-equipped territory. FRA agrees that the en route failure procedures are the more apt analogy. Accordingly, the speed restriction in the final rule has been increased to 30 mph.

AAR also suggested that the PTC system enforce positive stops to ensure that no trains with operative onboard PTC apparatuses are permitted to enter a zone where unequipped movements are taking place and that, when multiple PTC-inoperative movements occur in the same zone concurrently, the maximum speed be reduced to restricted speed.

While the PTC system will prevent PTC-equipped trains from entering an area where unequipped movements occur, it is unable to protect equipped trains from a PTC-unequipped yard movement that has exceeded its authority on PTC-equipped main track. In the July 9, 2013, PTC WG meeting, FRA raised the idea of taking this procedure and adding a requirement that a vacant absolute block be placed between unequipped movements and PTC-equipped trains, in order to address this concern. The railroads presented substantial arguments during the meeting that such a requirement would hamstring yard operations, given the number of PTC-equipped main tracks over which a yard movement might operate, even if the route were locked in such a way as to preclude a PTC-unequipped locomotive or train from exceeding its authority into an area where PTC-equipped trains could operate. The PTC WG discussion led to the idea of a more narrowly-tailored restriction, applying only where the risk of such an incursion exists: situations where the unequipped movement is to end on PTC-equipped main track. In such situations, if the unequipped movement exceeds its authority, it would pose a risk to PTC-equipped trains that the PTC system would be unable to protect against. The final rule mitigates this risk by requiring that, if a movement terminates on PTC-equipped main track, the movement must operate on that final main track segment at restricted speed. While restricted speed is not a panacea against train-to-train collisions, it does reduce the risk of such collisions to an acceptable level when combined with the other operational restrictions in place in the yard movements exception.

AAR also suggested the use of what it terms "absolute protection" to mitigate the risk of train-to-train collisions. From AAR's presentation at the July 9, 2013, PTC WG meeting, FRA understands "absolute protection" to refer to an operating practice adopted by some railroads wherein a route is lined for a movement by a dispatcher and "locked" to require explicit acknowledgement and action before any switch in the route is permitted to be lined for a conflicting movement. The final rule

adopts this suggestion, requiring that the route of the unequipped movement be protected from conflicting movements by the PTC system and sufficient operating rules. The type of protection described by AAR is sufficient; however, because the discussion in the PTC WG meeting indicated that there is some degree of diversity in the implementation of the concept, the final rule is phrased generally for greater flexibility.

AAR did not discuss how to handle roadway workers or roadway working limits in the Petition or in its comments to the NPRM. Several labor organizations commented to express concern for roadway worker protection during periods where PTC-inoperative movements are occurring. To mitigate this hazard, the final rule also requires movements at restricted speed when the zone of PTC-inoperative movements includes working limits established under 49 CFR part 214. This requirement is intended to reduce the risk of an incursion into established work zone limits, one of the four statutory PTC system functions.

The NPRM also considered the exception for movements by Class II and Class III railroads under § 236.1006(b)(4) in determining an appropriate distance limitation for yard movements. While the maximum allowable distance for Class II and Class III railroads with unequipped locomotives is 20 miles, the NPRM limited the maximum distance of yard movements under the exception to 10 miles in either direction from a point of entry on to PTC-equipped main track to limit the total area of unequipped movements to 20 miles. Such a limitation would cover a 20-mile transfer train movement that originated and ended at the same location, but would not include pairs of transfer train movements of 20 miles each between two points. Allowing 20-mile movements in either direction from a point of entry on to PTC-equipped main tracks creates a 40-mile zone where potential movements without operative onboard PTC apparatuses; however, this potential also exists for Class II and Class III movements. With the operating restrictions in place, as discussed above, and considering the limitations of PTC systems for yard movements and transfer trains, FRA has concluded that allowing movements of up to 20 miles does not increase the risk of a PTC-preventable accident beyond a negligible level.

To provide some flexibility, the yard movements exception also allows railroads to propose alternatives. Because the “negligible risk” standard for evaluating these alternatives has

caused great concern, the final rule provides an alternative structure. AAR proposes a quantified level of risk. However, as noted in the NPRM and discussed in more detail above, FRA has previously attempted, but was unable, to develop appropriate risk-quantification methodology with the necessary level of precision to be used for such a task. See 77 FR 28285 (May 14, 2012). Instead, the final rule uses the parameters of the freight yard movement exception discussed above as an explicit baseline; alternatives will be accepted if, in FRA’s discretion, they are determined to be as safe as or safer than the prescriptive requirements. This method of analysis is consistent with the final rule’s restatement of the general *de minimis* exception.

The final rule adds a new paragraph (b)(5) to exclude certain freight yard movements from the requirement to be controlled by a locomotive with an operational onboard PTC apparatus. Paragraphs (b)(5)(i) through (vi) provide the general parameters for approval of the exception. Paragraph (b)(5)(vii) provides the opportunity for railroads to propose alternatives, with the consideration of those alternatives committed to FRA’s discretion. Subparagraph (viii) makes clear that this provision does not prohibit locomotives with operative onboard PTC apparatuses from making certain types of movements to assist other locomotives, such as rescuing locomotives or cars.

In addition to the new freight yard movement exception, several other changes have been made to § 236.1006. Paragraph (a) has been revised to clarify that it encompasses all operations, not just PIH operations specifically. Paragraph (b)(2) has been reserved, as discussed in the analysis of § 236.1009, below. A new paragraph (d) has been added to address the onboard PTC apparatus. The text of new paragraph (d)(1), regarding the visibility of the onboard PTC apparatus, has been moved from § 236.1029(f) to § 236.1006. Sec. 236.1006(d)(1) is a more intuitive location for the requirement. Aside from changing the phrase “PTC system’s onboard apparatus” to the commonly-used phrase “onboard PTC apparatus,” the content has not changed; no change in meaning exists or is intended. New paragraph (d)(2) incorporates the concept that the NPRM addressed in proposed § 236.1029(g), and responds to GE Transportation’s comment. FRA views distributed onboard PTC apparatuses to be acceptable if contemplated within a railroad’s PTCSP, and now provides regulatory text making that view explicit.

Section 236.1009 Procedural Requirements

The final rule moves the PTCIP reporting requirement from old paragraph (b)(2) of § 236.1006 to a new paragraph (a)(5) of § 236.1009. The purpose of this change is not merely for organizational purposes; the annual report no longer pertains solely to locomotives. The revised text requires the submission of additional information so that FRA may better fulfill its Congressional reporting obligations and otherwise fully and accurately monitor the progress of PTC system implementation. The previous language of § 236.1006(b)(2) required each railroad to report the status of achieving its goals with respect to equipping locomotives with fully-operative onboard PTC apparatuses for use on PTC-equipped track segments. However, for FRA to fulfill its statutory obligations and regulatory objectives, it requires additional implementation information concerning all components of PTC system implementation. Accordingly, in the final rule, FRA requires submission of implementation data relating to wayside interface units, communication technologies, back-end computer systems, transponders, and any other PTC system components. FRA did not receive comments on this amendment as proposed.

Section 236.1015 PTC Safety Plan Content Requirements and PTC System Certification

In response to AAR’s proposals for modifications to § 236.1029, FRA expressed concern that the less restrictive proposals may result in locomotives with faulty onboard PTC apparatuses being used for significant distances before being repaired or being exchanged with other locomotives equipped with fully-operative PTC apparatuses. During PTC WG meetings, AAR suggested that FRA alleviate this concern by requiring that railroads submit, as part of their PTCSP, the locations where locomotives will regularly be exchanged or repaired, as well as listing potential movements of locomotives with failed onboard PTC apparatuses that exceed 500 miles. The final rule adopts this suggestion, and a new paragraph (d)(21) has been added to this § 236.1015 to require that this information be submitted as part of each railroad’s PTCSP.

Section 236.1029 PTC System Use and Failures

The final rule revises old paragraph (a) of § 236.1029 by adding a heading (“In general.”) and correcting a

grammatical error (disagreement between subject and verb) in the last sentence of the paragraph. No change in meaning is intended.

As amended by this final rule, paragraph (b) of § 236.1029 provides a means of safely reacting to the en route failure of a PTC system. When a component of a PTC system fails en route resulting in loss of PTC functionality aboard the locomotive, the old text of § 236.1029(b) required that the train proceed at restricted speed—or at medium speed where a block signal system is in operation according to signal indication—until an absolute block is established ahead of the train; after the absolute block is established, the train may proceed at speeds between 30 mph and 79 mph, depending on the nature of the signal system in place, if any, and the nature of the train. AAR, in its Petition, assented to this procedure for each location where a PTC system is the exclusive means of delivering mandatory directives, but suggested substantial revisions to this procedure where a PTC system is not the exclusive means of delivering mandatory directives (*e.g.*, where mandatory directives are also delivered by radio). The AAR proposal would allow trains to continue to a designated repair or exchange location identified in a railroad's PTCSP. While travelling to one of these locations, freight trains would be allowed under the proposal to continue at track speed in signaled territory, up to 40 mph for freight trains in non-signaled territory, and up to 30 mph for trains carrying cars loaded with PIH materials. The proposal also recommended a 30 mph limitation for passenger trains; Amtrak suggested that the appropriate limitation for passenger trains is 40 mph, which AAR later endorsed. The AAR proposal broke from how the en route failure of train control systems has been handled in the past by not requiring an absolute block in advance of the train that experienced failure; as discussed above, § 236.567 requires an absolute block be established in advance of the movement. However, AAR and other participants in the PTC WG meetings made the valid point that the comparison between PTC systems and systems covered by § 236.567 is not completely apt, as PTC systems are not the method of operation in the overwhelming majority of situations, unlike cab signal systems. FRA agrees that this is a relevant difference that supports changes to the procedures for handling en route failures.

FRA is also sensitive to the concerns expressed regarding PTC system reliability and the railroads' desire to

ensure that PTC system implementation does not result in dramatically reduced railroad capacity. AAR, in its comment to the NPRM, provided data suggesting that there could be substantial disruptions in service due to frequent failures of PTC systems. This data is necessarily somewhat speculative, since PTC systems remain in development. FRA expects that system reliability will improve as railroads acquire more experience with PTC systems. Reflecting the current status of PTC system development and the economic risks of substantially reduced rail capacity, the final rule provides additional flexibility for railroads. This relief is provided in several forms. First, while the final rule maintains the speed limitations present in the old rule, the final rule removes the requirement that an absolute block be established in advance of the train. Given the potential scope of PTC system failures, FRA is concerned that requiring an absolute block in advance of each train experiencing PTC system failure may exacerbate system disruptions as train dispatchers manage each of the blocks.

Old paragraph (f) of § 236.1029 has been moved to new § 236.1006(d)(1), as that section is a more intuitive location for that requirement. No change in meaning exists or is intended as part of this rearrangement. See discussion under new § 236.1006(d)(1), above.

New paragraph (g) of § 236.1029 provides three forms of temporary relief, which will be in effect from October 21, 2014 through the first two years following the statutory deadline for full implementation of PTC systems. First, under paragraph (g)(1), a railroad may choose in its PTCSP to operate under the requirements of new § 236.567 (the provision that applies to automatic train stop, automatic train control, and cab signal systems) in lieu of new § 236.1029. The provisions of new § 236.567 are structured similarly to those of new § 236.1029, but authorize higher maximum speeds of up to 79 mph where a functional signal system remains in place, though they require an absolute block in advance of the movement.

Second, under paragraph (g)(2) of § 236.1029, a train may proceed under either new § 236.1029 or new § 236.567 where the PTC system fails to initialize prior to the train's departure from its initial terminal. This relief will permit rail traffic to continue to flow when PTC system initialization problems occur while exchange or repair is arranged at one of the locations designated in the railroad's PTCSP.

Finally, under paragraph (g)(3) of § 236.1029, where a PTC system

requires repair or maintenance that necessitates removing the system from service, a railroad may do so with notice to the appropriate FRA regional office either a week in advance for planned work or contemporaneously in the event of unplanned work. When a railroad exercises this option, the rule requires that it make reasonable efforts to schedule the removal from service for those times posing the least risk to railroad safety, generally but not necessarily when few or no trains are expected to operate over the track segment. The railroad is also required to place the system back into service without undue delay, the same requirement that is in place for all signal and train control system failures. This provision is intended to give railroads the flexibility necessary to address system software and hardware issues quickly without unduly restricting rail capacity or creating excessive safety risks. In summary, the final rule appends new paragraph (g), which provides these temporary authorities.

In authorizing these more lenient provisions until the end of the first two years following the statutory mandate for full PTC system implementation, FRA recognizes that there may be issues that could be identified and resolved in the early days following PTC system implementation and revenue service operation. AAR argues that the complex nature of PTC systems will inevitably create frequent and unavoidable en route failures, and that these problems will not be solved in time. Based on the evidence available at this time, FRA disagrees. However, under this final rule, it will be several years before the default en route failure provisions are due to come fully into effect. Experience over these intervening years will provide more empirical data on PTC system reliability, and may be a basis for FRA to revisit this issue at a later date should circumstances warrant. To facilitate the gathering of this data, the final rule includes a new reporting requirement in new paragraph (h) relating to en route failures. Each calendar year, the rule requires railroads that have implemented PTC systems to report the number of PTC system failures, categorized by type. This report will allow FRA to be aware of reliability issues as PTC systems are implemented and put into use, and will provide useful information for potential improvements in the rule once FRA and the rail industry have more experience with this new technology. This requirement was discussed in the July 9, 2013, PTC WG meeting, and members did not express any objections.

Additionally, as noted in the NPRM, old § 236.1029 had avenues for flexibility with respect to en route failures. Old paragraph (c) allowed for deviations from the requirements of old paragraph (b) if justified in a railroad's PTCDP, PTCSP, or Order of Particular Applicability.⁷ However, this language was unnecessarily vague, and the final rule clarifies the intent of the provision. A railroad may, based on the circumstances of its operations, propose alternative en route failure procedures similar to those of paragraph (b) for approval as part of its PTCSP, RFA, or Order of Particular Applicability. The final rule revises the language of old paragraph (c) to make it consistent with similar provisions discussed earlier with respect to the *de minimis* exception and the yard movements exception.

AAR, in its Petition, also requested clarification concerning the failure of an onboard PTC apparatus of the train's controlling locomotive, where a second PTC-equipped locomotive exists capable of providing PTC system functionality. In the NPRM, FRA proposed to amend old § 236.1029 to indicate specifically that, when a trailing locomotive is used to maintain full PTC system functionality, the system is considered operable and therefore is not considered to have failed en route. However, as discussed above, this proposal has been adopted in new § 236.1006(d)(2) and revised to apply to PTC systems generally, rather than being limited to only instances where there is a PTC system failure.

V. Regulatory Impact and Notices

A. Executive Orders 12866 and 13563 and DOT Regulatory Policies and Procedures

This final rule has been evaluated in accordance with existing policies and procedures, and determined to be significant under Executive Order 12866, Executive Order 13563, and DOT policies and procedures. 44 FR 11034 (Feb. 26, 1979). FRA prepared and placed in the docket a regulatory impact analysis (RIA) addressing the economic impact of this final rule.

In this final rule, FRA mainly amends the regulations implementing the 2008 statutory mandate that certain passenger and freight railroads install PTC systems governing operations on certain main line tracks. In particular, the final rule amends 49 CFR part 236 by revising an existing regulatory exception to the requirement to install a PTC system for track segments carrying freight only that present a *de minimis* safety risk; adding a new exception for unequipped freight trains associated with certain yard operations to operate within PTC systems; revising the provision related to en route failures of a PTC system; and adding new temporary provisions related to various failures of a PTC system. The final rule also streamlines and simplifies the application process for FRA approval of a material modification of a signal system under 49 CFR part 235 where the application would have been filed as part of a PTC system installation. In addition to making these changes related to the PTC requirements, the final rule makes technical amendments to FRA's other signal and train control regulations at 49 CFR part 236 and FRA's regulations governing highway-rail grade crossing warning systems at 49 CFR part 234.

FRA analyzed the final rule under three cases. The "base case" is FRA's best estimate of the likely impact of the final rule. To address uncertainty related to assumptions and inputs, FRA also analyzed a "high case," where the impacts are estimated as greater than FRA's best estimate, and a "low case," where the impacts are estimated as less than FRA's best estimate.

FRA's base case analyzed the impact of extending the *de minimis* exception to cover an additional 4,073 miles of wayside (based on comments from the Association of American Railroads (AAR)) at an estimated savings of \$50,000 per mile, as well as two sensitivity cases—one where the estimated savings per mile was higher (\$100,000), the high case, and one where the mileage affected was lower (3,000 miles), the low case.

FRA also analyzed the benefits of adding a regulatory exception at 49 CFR 236.1006(b)(5) for locomotives not equipped with onboard PTC apparatuses that are involved in yard operations with equipped locomotives. Again, FRA faced uncertainty in

estimating the number of locomotives that will be affected. For the base case, FRA estimated that 2,098 locomotives will be affected at a unit savings of \$55,000 per locomotive. FRA also analyzed two cases for sensitivity—a high case where the unit savings would be \$68,750 and a low case where 1,500 locomotives will be affected.

FRA used values from AAR comments to determine how many units of installations could be avoided by the final rule, and used unit costs from the first PTC final rule. The number of units from the AAR comments are much higher than FRA's assumptions used to analyze the NPRM, and may be high. FRA's assumptions of unit costs from that analysis of the first PTC final rule appear to be low, based on anecdotal evidence, especially reports from commuter railroads. Class I railroads may be able to avoid some of the factors that have led to higher unit costs on commuter railroads, but the unit costs used in the base case analysis of the first PTC final rule are now appearing to be low case estimates. FRA continues to use those unit cost estimates in order to allow more comprehensible comparisons between the estimated net costs of the first PTC final rule and this final rule. Were FRA to adjust the unit cost estimates for this rule, small reductions in the scope of the total PTC system implementation could render total net costs, reflecting each of the four PTC final rules issued to date, dramatically lower.

All values in the analysis are measured in 2009 dollars. FRA used values in 2009 dollars in order to continue using the same values used in analyzing the 2010 final rule amended here, so that readers may readily evaluate the cumulative effect of the initial final rule and amendments to that rule.

For both wayside and onboard portions of the benefit, FRA included the maintenance costs saved by avoiding installation. FRA estimated the annual maintenance costs as 15 percent of the value of the installed base. The reader should note that this regulation reduces regulatory burden, so the benefits of the final rule are reduced regulatory costs, and the costs of the final rule are foregone safety benefits, a mirror image of the typical elements of a benefit cost analysis.

⁷ Orders of Particular Applicability are one of the mechanisms by which a previously approved PTC system may receive expedited certification pursuant to § 236.1031.

TABLE 1—TOTAL 20-YEAR DISCOUNTED BENEFITS

	Discount factor	
	7 Percent	3 Percent
Base case:		
Applications Avoided Benefit	\$397,319	\$446,926
Wayside Installation Benefit	446,266,012	587,977,605
Onboard Installation Benefit	252,858,508	333,153,625
Total Benefit	699,521,839	921,578,156
High case:		
Applications Avoided Benefit	397,319	446,926
Wayside Installation Benefit	892,532,024	1,175,955,209
Onboard Installation Benefit	316,073,135	416,442,032
Total Benefit	1,209,002,478	1,592,844,167
Low case:		
Applications Avoided Benefit	397,319	446,926
Wayside Installation Benefit	328,700,721	433,079,503
Onboard Installation Benefit	180,785,397	238,193,726
Total Benefit	509,883,437	671,720,155

Totals in each respective category may not add due to rounding.

FRA also estimated the annualized benefits of the accompanying final rule.

TABLE 2—TOTAL ANNUALIZED BENEFITS

	Discount factor	
	7 percent	3 percent
Base case:		
Applications Avoided Benefit	\$37,504	\$30,040
Wayside Installation Benefit	42,124,355	39,521,331
Onboard Installation Benefit	23,868,054	22,393,157
Total Benefit	66,029,913	61,944,528
High case:		
Applications Avoided Benefit	37,504	30,040
Wayside Installation Benefit	84,248,709	79,042,661
Onboard Installation Benefit	29,835,068	27,991,446
Total Benefit	114,121,281	107,064,148
Low case:		
Applications Avoided Benefit	37,504	30,040
Wayside Installation Benefit	31,027,023	29,109,745
Onboard Installation Benefit	17,064,863	16,010,360
Total Benefit	48,129,389	45,150,146

Totals in each respective category may not add due to rounding.

In general, the costs of allowing railroads the ability to avoid PTC implementation costs will be foregone safety benefits coupled with some reporting costs. The provisions to extend the *de minimis* risk exception affect track segments that are likely to have a risk of PTC-preventable accidents that is only slightly greater than similar segments equipped with PTC wayside units. FRA analyzed those incremental costs, the only costs analyzed.

TABLE 3—DISCOUNTED 20-YEAR TOTAL COSTS

	Discount factor

High Case	623,907	655,540
Low Case	466,098	489,730

A second *de minimis* exception,⁸ codified under § 236.1006(b)(5), affects

⁸ Here, the term “*de minimis* exception” is used in the generic sense of a *de minimis* exception developed under case law, as described earlier in

whether locomotives used in freight switching operations need to be equipped with onboard PTC apparatuses in order to cross or travel along main track in yards. This newly created provision requires the railroads to maintain a negligible risk of PTC-preventable accidents. FRA believes that negligible risk is near zero, and that the marginal costs of that risk compared to PTC are practically zero.

The costs of the changes to reporting requirements (§ 236.1029(h)) are very low, and only consist of forwarding to FRA data likely already compiled for railroad management purposes.

FRA calculated the net societal benefits, both 20-year discounted totals and 20-year annualized values.

TABLE 5—DISCOUNTED 20-YEAR
TOTAL NET BENEFITS
[Benefits Less Costs]

	Discount factor	
	7 percent	3 percent

Low Case ..	47,663,291	44,660,415

FRA analyzed alternatives to the final rule. One alternative would be to leave the rule unchanged, the “status quo” alternative. By definition, the “status quo” alternative is treated as having no benefits or costs; however, it is the benchmark from which all other cases are analyzed.

FRA also analyzed an alternative where the *de minimis* exception (at § 236.1005(b)(4)(iii)) would apply without regard to line tonnage. This alternative would create greater net societal benefits, since nearly 7,000 miles could be excluded; however,

the preamble to this final rule. See *Environmental Defense Fund, Inc. v. EPA*, 82 F.3d 451, 466 (D.C. Cir. 1996) (inner quotations omitted); *Alabama Power Co. v. Costle*, 636 F.2d 323, 360–61 (D.C. Cir. 1979).

because of concerns about additional risks which are not negligible, FRA does not believe that it has the authority to adopt this alternative. FRA believes that if it had the authority to adopt this alternative and if FRA adopted it, the net societal benefits would be \$1,062,422,244 over 20 years, discounted at 7 percent, or \$1,393,851,865 over 20 years, discounted at 3 percent.

In short, the final rule will create net benefits in all scenarios, with the only uncertainty being the magnitude of those benefits. At the NPRM stage, FRA requested comments on all aspects of the RIA. Such comments and related discussion are discussed in the RIA submitted to the docket.

B. Regulatory Flexibility Act and Executive Order 13272

To ensure that the impact of this rulemaking on small entities is properly considered, FRA developed this final rule in accordance with Executive Order 13272 (“Proper Consideration of Small Entities in Agency Rulemaking”) and DOT’s policies and procedures to promote compliance with the Regulatory Flexibility Act (5 U.S.C. 601 et seq.). The Regulatory Flexibility Act requires an agency to review regulations to assess their impact on small entities. The meaning of “small entity” for purposes of the Regulatory Flexibility Act is discussed below. An agency must conduct a regulatory flexibility analysis unless it determines and certifies that a rule is not expected to have a significant economic impact on a substantial number of small entities.

This final rule is summarized under the immediately previous section of the preamble as well as earlier in the preamble. FRA is certifying that this final rule will result in “no significant economic impact on a substantial number of small entities.” The following section explains the reasons for this certification.

1. Description of the Small Entities Subject to This Final Rule and Impacts of the Final Rule on Those Entities

The “universe” of the entities under consideration here includes only those small entities that can reasonably be expected to be directly affected by the provisions of this final rule. In this case, FRA concludes that the “universe” will be five Class III freight railroads that operate on rail lines that are currently required to have PTC systems installed. Such lines are owned by railroads not considered to be small. No small passenger railroads will be affected by the final rule.

The U.S. Small Business Administration (SBA) stipulates in its “Size Standards” that the largest that a for-profit railroad business firm may be, and still be classified as a “small entity,” is 1,500 employees for “Line Haul Operating Railroads” and 500 employees for “Switching and Terminal Establishments.” “Small entity” is defined in the Regulatory Flexibility Act as a small business that is independently owned and operated, and is not dominant in its field of operation. Additionally, 5 U.S.C. 601(5) defines “small entity” as including governments of cities, counties, towns, townships, villages, school districts, or special districts with populations less than 50,000.

Federal agencies may adopt their own size standards for small entities in consultation with SBA and in conjunction with public comment. Pursuant to that authority, FRA has published a final policy that formally establishes “small entities” for purposes of the Regulatory Flexibility Act as including freight railroads that meet the line haulage revenue requirements of a Class III railroad and passenger railroads that serve populations less than 50,000.⁹ The revenue requirements are currently \$20 million or less in annual operating revenue. The \$20 million limit (which is adjusted by applying the railroad revenue deflator adjustment)¹⁰ is based on the Surface Transportation Board’s (STB) threshold for a Class III railroad carrier. FRA is using the STB’s threshold in its definition of “small entities” that are freight railroads for this rule.

This final rule adds new § 235.6, which allows specified changes within existing signal or train control systems to be made without the necessity of filing an application for approval with FRA’s Associate Administrator. The amendment provides each railroad a simplified process to obtain approval to modify existing signal systems directly associated with PTC system implementation. In the absence of this change in the accompanying rule, a railroad would have to submit the detailed application required for approval under § 235.10, along with the additional information required by § 235.12, every time it modified any of the underlying signal systems as described in § 235.5, even if those changes were part of the PTCIP. The entire application would then be subject

⁹ See 68 FR 24891 (May 9, 2003); 49 CFR part 209, app. C.

¹⁰ For further information on the calculation of the specific dollar limit, please see 49 CFR 1201.1–1.

to the filing procedure described in § 235.13, and FRA would publish under the requirements of § 235.14 and resolve protests under the provisions of § 235.20. The process is burdensome for both the railroad and FRA, where FRA has already reviewed significant elements of what would be the application, as part of the PTCIP. FRA believes this could create a benefit for any of the five small railroads affected by the final rule, but that the likelihood of such filings is very low for the small railroads affected. If the small railroads do file, the filing is likely to be for a very small portion of the railroad affected, and the benefits would be very small.

FRA believes that portions of the rule revising the requirements at 49 CFR 236.567 regarding en route failures are technical in nature, and do not create any economic impacts on any regulated entities, large or small.

The changes to the *de minimis* provisions in the final rule (i.e., § 236.1005(b)(4)(iii)) will impact Class III freight railroads that operate on lines of other railroads currently required to have PTC systems installed. To the extent that such host railroads receive relief from such a requirement along certain lines, Class III freight railroads that operate over those lines will not have to equip their locomotives with PTC system components. FRA believes that small railroads operating over the affected lines are already allowed to avoid equipping locomotives under existing § 236.1006(b)(4), or are otherwise equipping their locomotives to operate over other track segments equipped with PTC systems. Further, some Class III freight railroads host passenger operations, but FRA does not believe any of those Class III freight railroads have any switching operations that would be affected by the final rule (i.e., the freight yard movements exception at § 236.1006(b)(5)). To the extent that any Class III freight railroads are affected in circumstances of which FRA is unaware, the effect would be a benefit, in that the Class III freight railroads would be able to avoid

installing PTC systems on some locomotives. FRA requested comment on whether any other small entities would be affected, and if such small entities would be affected what the impacts on them would be, whether those impacts would be significant and whether the number of small railroads affected is substantial, but received no comments on the topic. FRA believes that no small entities will be affected by changes to the *de minimis* provisions and the freight locomotive yard movements exception, and that therefore the number of small entities affected is not substantial, and that the impact on them is not significant.

These five small freight railroads are required to file a PTCIP by the existing PTC regulations and will be affected by the final rule's changes in the reporting requirements in § 236.1009. The reporting requirements will require the railroad to report its progress in installing PTC, in April 2013, 2014, and 2015, in order to comply with the statutory deadlines. FRA believes that all railroads implementing PTC will track this information and compile the information as part of internal management activities at least as frequently for what is likely to be a relatively large capital project on every affected railroad. FRA believes the incremental reporting regulatory burden is negligible, on the order of forwarding to FRA an email already generated within a railroad. FRA believes this is not a significant burden upon the railroads affected.

Certain other provisions (e.g., § 236.15 (regarding timetable instructions) and § 236.1015(d)(21) (lists related to locomotives with failed onboard PTC apparatus, etc.) are minor and should not create any economic impacts on any regulated entities, large or small other than paperwork, which is accounted for under V.C. of the preamble, below; FRA believes these are not a significant burden on these five small railroads.

FRA believes that the portions of the rule revising the requirements at § 234.207 (regarding adjustment, etc. of

essential components), § 234.213 (regarding grounds), § 236.2 (regarding grounds), and § 236.567 (regarding en route failures) are technical in nature, and do not create any economic impacts on any regulated entities, large or small. Likewise, the revised and new relief provisions at § 236.1029(b), (c), and (g) (which are considered as clarifying the intent of the original PTC final rule) are not expected to create economic impacts on any regulated entities, large or small.

For the reasons summarized above, FRA believes the reporting requirements will not have a significant impact on a substantial number of small entities.

2. Certification

Pursuant to the Regulatory Flexibility Act, 5 U.S.C. 605(b), the FRA Administrator certifies that this rule will not have a significant economic impact on a substantial number of small entities.

C. Executive Order 13175

FRA analyzed this rule in accordance with the principles and criteria contained in Executive Order 13175 (“Consultation and Coordination with Indian Tribal Governments”).

Because this rule does not significantly or uniquely affect tribes and does not impose substantial and direct compliance costs on Indian tribal governments, the funding and consultation requirements of Executive Order 13175 do not apply, and a tribal summary impact statement is not required.

D. Paperwork Reduction Act

The information collection requirements in this final rule are being submitted for approval to the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995, 44 U.S.C. 3501 *et seq.* The sections that contain the both the new and current information collection requirements and the estimated time to fulfill each requirement are as follows:

CFR section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours
234.275—Processor-Based Systems—Deviations from Product Safety Plan (PSP)—Letters.	20 Railroads	25 letters	4 hours	100 hours.
235.6—Requests to FRA Regional Administrators for Modification of a Signal System Related to PTC Implementation—Expedited Application (New Requirement).	38 Railroads	500 application requests.	5 hours	2,500 hours.
—PTC Related Modification Request—Expedited Application—Copies to Railroad Union(s) (New Requirement).	38 Railroads	500 application request copies.	30 minutes	250 hours.
—Railroad Rescindment of Expedited Application—Letters (New Requirement).	38 Railroads	25 letters	6 hours	150 hours.

CFR section	Respondent universe	Total annual responses	Average time per response	Total annual burden hours
—RR Submission of (Revised) Application completed under Sections 235.5 and 235.9–235.20 (New Reqmnt).	38 Railroads	13 submission/applications.	5 hours	65 hours.
—Revised Application Copies to Railroad Union(s) (New Requirement).	38 Railroads	13 copies	30 minutes	7 hours.
236.15—Timetable Instructions—Designation of Positive Train Control (PTC) Territory in Instructions (Revised Requirement).	38 Railroads	13 timetable Instructions.	1 hour	13 hours.
236.18—Software Mgmt Control Plan—	184 Railroads	184 plans	2,150 hours	395,600 hours.
—Updates to Software Mgmt. Control Plan	90 Railroads	20 updates	1.50 hours	30 hours.
236.905—Updates to RSPP	78 Railroads	6 plans	135 hours	810 hours.
—Response to Request For Additional Info	78 Railroads	1 updated doc	400 hours	400 hours.
—Request for FRA Approval of RSPP Modification.	78 Railroads	1 request/modified RSPP.	400 hours	400 hours.
236.907—Product Safety Plan (PSP)—Dev	5 Railroads	5 plans	6,400 hours	32,000 hours.

All estimates include the time for reviewing instructions; searching existing data sources; gathering or maintaining the needed data; and reviewing the information. Pursuant to 44 U.S.C. 3506(c)(2)(B), FRA solicits comments concerning: Whether these information collection requirements are necessary for the proper performance of the functions of FRA, including whether the information has practical utility; the accuracy of FRA’s estimates of the burden of the information collection requirements; the quality, utility, and clarity of the information to be collected; and whether the burden of collection of information on those who are to respond, including through the use of automated collection techniques or other forms of information

technology, may be minimized. For information or a copy of the paperwork package submitted to OMB, contact Mr. Robert Brogan, Information Clearance Officer, Office of Safety, at 202–493–6292, or Ms. Kimberly Toone, Office of Information Technology, at 202–493–6132, or via email at the following addresses: *Robert.Brogan@dot.gov*; *Kimberly.Toone@dot.gov*. Organizations and individuals desiring to submit comments on the collection of information requirements should direct them to the Office of Management and Budget, Office of Information and Regulatory Affairs, Washington, DC 20503, Attention: FRA Desk Officer. Comments may also be sent via email to the Office of Management and Budget at the

following address: *oira_submissions@omb.eop.gov*. OMB is required to make a decision concerning the collection of information requirements contained in this final rule responding to petitions for reconsideration between 30 and 60 days after publication of this document in the **Federal Register**. Therefore, a comment to OMB is best assured of having its full effect if OMB receives it within 30 days of publication. FRA cannot impose a penalty on persons for violating information collection requirements which do not display a current OMB control number, if required. FRA intends to obtain current OMB control numbers for any new information collection requirements resulting from this

rulemaking action prior to the effective date of this final rule. The OMB control number, when assigned, will be announced by separate notice in the **Federal Register**.

E. Federalism Implications

Executive Order 13132, "Federalism" (64 FR 43255, Aug. 10, 1999), requires FRA to develop an accountable process to ensure "meaningful and timely input by State and local officials in the development of regulatory policies that have federalism implications." "Policies that have federalism implications" are defined in the Executive Order to include regulations that have "substantial direct effects on the States, on the relationship between the national government and the States, or on the distribution of power and responsibilities among the various levels of government." Under Executive Order 13132, the agency may not issue a regulation with federalism implications that imposes substantial direct compliance costs and that is not required by statute, unless the Federal government provides the funds necessary to pay the direct compliance costs incurred by State and local governments or the agency consults with State and local government officials early in the process of developing the regulation. Where a regulation has federalism implications and preempts State law, the agency seeks to consult with State and local officials in the process of developing the regulation.

FRA has analyzed this rule in accordance with the principles and criteria contained in Executive Order 13132. If adopted, this rule would not have a substantial direct effect on the States, on the relationship between the Federal government and the States, or on the distribution of power and responsibilities among the various levels of government. FRA has also determined that this rule would not impose substantial direct compliance costs on State and local governments. Therefore, the consultation and funding requirements of Executive Order 13132 do not apply.

However, this rule could have preemptive effect by operation of law under 49 U.S.C. 20106 (Section 20106). Section 20106 provides that States may not adopt or continue in effect any law, regulation, or order related to railroad safety or security that covers the subject matter of a regulation prescribed or order issued by the Secretary of Transportation (with respect to railroad safety matters) or the Secretary of Homeland Security (with respect to railroad security matters), except when

the State law, regulation, or order qualifies under the "local safety or security hazard" exception to Section 20106.

In sum, FRA has analyzed this rule in accordance with the principles and criteria contained in Executive Order 13132. As explained above, FRA has determined that this rule has no federalism implications, other than the possible preemption of State laws under Section 20106. Accordingly, FRA has determined that preparation of a federalism summary impact statement for this rule is not required.

F. Environmental Impact

FRA has evaluated this rule in accordance with its "Procedures for Considering Environmental Impacts" (FRA's Procedures) (64 FR 28545, May 26, 1999) as required by the National Environmental Policy Act (42 U.S.C. 4321 *et seq.*), other environmental statutes, Executive Orders, and related regulatory requirements. FRA has determined that this action is not a major FRA action (requiring the preparation of an environmental impact statement or environmental assessment) because it is categorically excluded from detailed environmental review pursuant to section 4(c)(20) of FRA's Procedures. 64 FR 28547, May 26, 1999. In accordance with section 4(c) and (e) of FRA's Procedures, the agency has further concluded that no extraordinary circumstances exist with respect to this final rule that might trigger the need for a more detailed environmental review. As a result, FRA finds that this rule is not a major Federal action significantly affecting the quality of the human environment.

G. Unfunded Mandates Reform Act of 1995

Pursuant to Section 201 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104-4, 2 U.S.C. 1531), each Federal agency "shall, unless otherwise prohibited by law, assess the effects of Federal regulatory actions on State, local, and tribal governments, and the private sector (other than to the extent that such regulations incorporate requirements specifically set forth in law)." Section 202 of the Act (2 U.S.C. 1532) further requires that "before promulgating any general notice of proposed rulemaking that is likely to result in the promulgation of any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) [currently \$140,800,000] in any 1 year, and before

promulgating any final rule for which a general notice of proposed rulemaking was published, the agency shall prepare a written statement" detailing the effect on State, local, and tribal governments and the private sector. FRA is publishing this final rule to provide additional flexibility in standards for the development, testing, implementation, and use of PTC systems for railroads mandated by RSIA to implement PTC systems. The RIA provides a detailed analysis of the costs and benefits of the final rule. This analysis is the basis for determining that this rule will not result in total expenditures by State, local, or tribal governments, in the aggregate, or by the private sector of \$140,800,000 or more in any one year. The costs associated with this final rule are reduced accident reduction from an existing rule.

H. Energy Impact

Executive Order 13211 requires Federal agencies to prepare a Statement of Energy Effects for any "significant energy action." See 66 FR 28355 (May 22, 2001). Under the Executive Order a "significant energy action" is defined as any action by an agency that promulgates or is expected to lead to the promulgation of a final rule or regulation, including notices of inquiry, advance notices of proposed rulemaking, and notices of proposed rulemaking: (1)(i) that is a significant regulatory action under Executive Order 12866 or any successor order, and (ii) is likely to have a significant adverse effect on the supply, distribution, or use of energy; or (2) that is designated by the Administrator of the Office of Information and Regulatory Affairs as a significant energy action. FRA has evaluated this rule in accordance with Executive Order 13211. FRA has determined that this rule is not likely to have a significant adverse effect on the supply, distribution, or use of energy. Consequently, FRA has determined that this final rule is not a "significant energy action" within the meaning of the Executive Order.

I. Privacy Act

FRA wishes to inform all interested parties that anyone is able to search the electronic form of any written communications and comments received into any agency docket by the name of the individual submitting the document (or signing the document, if submitted on behalf of an association, business, labor union, etc.). Interested parties may also review DOT's complete Privacy Act Statement in the **Federal Register** published on April 11, 2000

(65 FR 19477) or visit <http://www.regulations.gov/#!privacyNotice>.

List of Subjects

49 CFR Part 234

Highway safety, Highway-rail grade crossings, Penalties, Railroad safety, Reporting and recordkeeping requirements.

49 CFR Part 235

Administrative practice and procedure, Penalties, Railroad safety, Reporting and recordkeeping requirements.

49 CFR Part 236

Penalties, Positive Train Control, Railroad safety, Reporting and recordkeeping requirements.

The Rule

In consideration of the foregoing, FRA amends chapter II, subtitle B of title 49, Code of Federal Regulations as follows:

PART 234—[AMENDED]

- 1. The authority citation for part 234 continues to read as follows:

Authority: 49 U.S.C. 20103, 20107, 20152, 21301, 21304, 21311, 22501 note; Pub. L. 110–432, Div. A, Secs. 202, 205; 28 U.S.C. 2461, note; and 49 CFR 1.89.

- 2. Revise § 234.207 to read as follows:

§ 234.207 Adjustment, repair, or replacement of component.

(a) When any essential component of a highway-rail grade crossing warning system fails to perform its intended function, including but not limited to failures resulting in an activation failure, partial activation, or false activation, the cause shall be determined and the faulty component adjusted, repaired, or replaced without undue delay.

(b) If the failure of an essential component results in an activation failure, partial activation, or false activation, as defined in § 234.5, a railroad shall take appropriate action under § 234.105, Activation failure, § 234.106, Partial activation, or § 234.107, False activation, until adjustment, repair, or replacement of the essential component is completed.

- 3. Revise § 234.213 to read as follows:

§ 234.213 Grounds.

(a) *General.* Except as provided in paragraph (b) of this section, each circuit that affects the proper functioning of a highway-rail grade crossing warning system shall be kept free of any ground or combination of grounds that will permit a current flow of 75 percent or more of the value

necessary to retain a permissive state of a safety appliance.

(b) *Exception.* Paragraph (a) of this section does not apply to the following:

- (1) Circuits that include track rail;
- (2) Alternating current power distribution circuits that are grounded in the interest of safety;
- (3) Circuitry internal to microprocessor-based appliances;
- (4) Circuitry internal to semiconductor-based memory; and
- (5) Common return wires of grounded common return single break circuits.

PART 235—[AMENDED]

- 4. The authority citation for part 235 is revised to read as follows:

Authority: 49 U.S.C. 20103, 20107; 28 U.S.C. 2461, note; and 49 CFR 1.89.

- 5. Add § 235.6 to read as follows:

§ 235.6 Expedited application for approval of certain changes.

(a) *Qualifying changes.* A railroad may seek approval under this section, instead of under §§ 235.5 and 235.9–235.20 of this chapter for the following changes:

(1) Modification of a signal system consisting of the installation, relocation, or removal of one or more signals, interlocked switches, derails, movable-point frogs, or electric locks in an existing system directly associated with the implementation of positive train control pursuant to subpart I of part 236 of this chapter, if the modification does not include the discontinuance or decrease of limits of a signal or train control system.

(2) [Reserved]

(b) *Procedure of expedited application.* (1) To seek approval under this section, a railroad shall provide a notice and profile plan for the proposed modification to the FRA Regional Administrator having jurisdiction over the affected territory.

(2) Simultaneously with its filing with the FRA Regional Administrator, the railroad shall serve, either by hard copy or electronically, a copy of the notice and profile plan to representatives of employees responsible for maintenance, inspection, and testing of the affected signal system under part 236 of this chapter, as well as representatives of employees responsible for operating trains or locomotives in the affected territory.

(3) The railroad shall include in its submission to the FRA Regional Administrator a statement affirming that the railroad has complied with the requirements of paragraph (b)(2) of this section, together with a list of the names and addresses of the persons served.

(4) In response to receipt of a notice and profile plan under paragraph (b)(1) of this section, the Regional Administrator shall in writing deny or approve, in full or in part, and with or without conditions, the request for signal system modification. For any portion of the request that is denied, the Regional Administrator shall refer the issue to the Railroad Safety Board as an application to modify the signal system.

(5) A railroad may rescind its application to the Regional Administrator and submit an application under §§ 235.5 and 235.9–235.20 of this chapter at any time prior to the decision of the Regional Administrator.

(c) The resultant arrangement of any change under this section shall comply with part 236 of this chapter.

PART 236—[AMENDED]

- 6. The authority citation for part 236 is revised to read as follows:

Authority: 49 U.S.C. 20102–20103, 20107, 20133, 20141, 20157, 20301–20303, 20306, 20701–20703, 21301–21302, 21304; 28 U.S.C. 2461, note; and 49 CFR 1.89.

§ 236.0 [Amended]

- 7. In § 236.0, remove paragraph (i).

- 8. Revise § 236.2 to read as follows:

§ 236.2 Grounds.

(a) *General.* Except as provided in paragraph (b) of this section, each circuit, the functioning of which affects the safety of train operations, shall be kept free of any ground or combination of grounds having a current flow of 75 percent or more of the value necessary to retain a permissive state of a safety appliance.

(b) *Exception.* Paragraph (a) of this section does not apply to the following:

- (1) Circuits that include any track rail;
- (2) The common return wires of single-wire, single-break, and signal control circuits using a grounded common;
- (3) Circuitry internal to microprocessor-based appliances;
- (4) Circuitry internal to semiconductor-based memory; or
- (5) Alternating current power distribution circuits that are grounded in the interest of safety.

- 9. Revise § 236.15 to read as follows:

§ 236.15 Timetable instructions.

Automatic block, traffic control, train stop, train control, cab signal, and positive train control territory shall be designated in timetable instructions.

- 10. Revise § 236.567 to read as follows:

§ 236.567 Restrictions imposed when device fails and/or is cut out en route.

(a) Except as provided in subparts H or I of this part, where an automatic train stop, train control, or cab signal device fails and/or is cut out en route, the train on which the device is inoperative may proceed to the next available point of communication where report must be made to a designated officer, at speeds not to exceed the following:

- (1) If no block signal system is in operation, restricted speed; or
- (2) If a block signal system is in operation, according to signal indication but not to exceed 40 miles per hour.

(b) Upon completion and communication of the report required by paragraph (a) of this section, a train may continue to a point where an absolute block can be established in advance of the train at speeds not to exceed the following:

- (1) If no block signal system is in operation, restricted speed; or
- (2) If a block signal system is in operation, according to signal indication but not to exceed 40 miles per hour.

(c) Upon reaching the location where an absolute block has been established in advance of the train, as referenced in paragraph (b) of this section, the train may proceed at speeds not to exceed the following:

- (1) If no block signal system is in operation and the train is a passenger train, 59 miles per hour;
- (2) If no block signal system is in operation and the train is a freight train, 49 miles per hour; and
- (3) If a block signal system is in operation, 79 miles per hour.

§ 236.1003 [Amended]

■ 11. In § 236.1003, remove the words “PIH Materials” and add, in their place, “PIH materials”.

■ 12. In § 236.1005, revise the header row in the table in paragraph (a)(1)(i), revise the heading of paragraph (b)(4)(iii), and revise paragraphs (b)(4)(iii)(A), (b)(4)(iii)(B), and (b)(4)(iii)(C) to read as follows:

§ 236.1005 Requirements for Positive Train Control systems.

- (a) * * *
- (1) * * *
- (i) * * *

Crossing type	Max. speed	Protection required
* * *	* * *	* * *

- (b) * * *
- (4) * * *

(iii) *Freight lines with de minimis risk not used for regularly provided intercity or commuter rail passenger service.* (A) In a PTCIP or an RFA, a railroad may request review of the requirement to install a PTC system on a track segment where a PTC system is otherwise required by this section, but has not yet been installed, based upon the presence of a minimal quantity of PIH materials traffic. Any such request shall be accompanied by estimated traffic projections for the next 5 years (e.g., as a result of planned rerouting, coordination, or location of new business on the line). Where the request involves prior or planned rerouting of PIH materials traffic, the railroad must provide the information and analysis identified in paragraph (b)(4)(i) of this section. The submission shall also include a full description of potential safety hazards on the segment of track and fully describe train operations over the line. This paragraph does not apply to line segments used for commuter rail or intercity rail passenger service.

(B) Absent special circumstances related to specific hazards presented by operations on the line segment, FRA will approve a request for relief under this paragraph for a rail line segment that meets all of the following criteria:

- (1) That carries less than 15 million gross tons annually;
- (2) That does not have a heavy grade as “heavy grade” is defined in § 232.407 of this chapter for any train operating over the track segment;
- (3) Where the railroad adopts and complies with an operating rule requiring the crew of any train approaching working limits established under part 214 of this chapter to notify the roadway worker in charge of the train’s approach at least 2 miles in advance of the working limits or, if the train crew does not have advance knowledge of the working limits, as soon as practical;
- (4) That carries fewer than 100 cars containing PIH materials per year, excluding those cars containing only a residue, as defined in § 171.8 of this title, of PIH materials;
- (5) That carries 2 or fewer trains per day carrying any quantity of PIH materials;
- (6) Where trains carrying any quantity of PIH materials operate at speeds not to exceed 40 miles per hour; and
- (7) Where any train transporting a car containing any quantity of PIH materials is operated with a vacant block ahead of and behind the train.

(C) FRA may, in its discretion, approve other track segments not used for regularly provided intercity or commuter passenger service that have

posed an equivalent or lesser level of risk of a PTC-preventable accident or PIH materials release as those track segments covered by paragraph (b)(4)(iii)(B) of this section, where such other track segments are similar to those covered by paragraph (b)(4)(iii)(B) of this section.

* * * * *

■ 13. In § 236.1006, revise paragraph (a), remove and reserve paragraph (b)(2), and add paragraphs (b)(5) and (d) to read as follows:

§ 236.1006 Equipping locomotives operating in PTC territory.

(a) *General.* Except as provided in paragraph (b) of this section, each locomotive, locomotive consist, or train on any track segment equipped with a PTC system shall be controlled by a locomotive equipped with an onboard PTC apparatus that is fully operative and functioning in accordance with the applicable PTCS approved under this subpart.

(b) * * *

(2) [Reserved]

* * * * *

(5) *Freight yard movements.* For the purpose of freight switching service or freight transfer train service, a locomotive, locomotive consist, or train may operate without onboard PTC apparatus installed or operational where an onboard PTC apparatus is otherwise required by this part only if all of the following six requirements and conditions are met:

(i) The locomotive, locomotive consist, or train must be engaged in freight switching service or freight transfer train service, including yard, local, industrial, and hostling service, movements in connection with the assembling or disassembling of trains, and work trains;

(ii) The movement must originate either:

- (A) In a yard; or
- (B) Within 20 miles of a yard with the yard as the final destination point;

(iii) The locomotive, locomotive consist, or train shall not travel to a point in excess of 20 miles from its point of entry onto the PTC-equipped main line track;

(iv) The speed of the locomotive, locomotive consist, or train shall not exceed restricted speed, except if:

- (A) No other locomotive, locomotive consist, or train is operating on any part of the route without an operational onboard PTC apparatus;
- (B) No working limits are established under part 214 of this chapter on any part of the route; and

(C) Either an air brake test under part 232 of this chapter is performed, in

which case the locomotive, locomotive consist, or train may proceed at a speed not to exceed 30 miles per hour; or an air brake test under part 232 of this chapter is not performed, in which case the locomotive, locomotive consist, or train may proceed at a speed not to exceed 20 miles per hour;

(v) The speed of the locomotive, locomotive consist, or train shall not exceed restricted speed on PTC-equipped track where the route terminates; and

(vi) The route of the locomotive or train is protected against conflicting operations by the PTC system and sufficient operating rules to protect against train-to-train collisions, as specified in the PTCSP.

(vii) FRA may, in its discretion, approve yard movement procedures other than the yard movement procedures in paragraphs (b)(5)(i) through (b)(5)(vi) of this section in a PTCSP or an RFA that provide an equivalent or greater level of safety as the requirements of paragraphs (b)(5)(i) through (b)(5)(vi) of this section, where such procedures are similar to those of paragraphs (b)(5)(i) through (b)(5)(vi) of this section.

(viii) A locomotive, locomotive consist, or train with an operative onboard PTC apparatus may assist a locomotive, locomotive consist, or train operating without an operative onboard PTC apparatus for purposes such as locomotive malfunction, rescue of locomotive or cars, or to add or remove power, provided that such a movement is made at restricted speed.

(d) *Onboard PTC apparatus.* (1) The onboard PTC apparatus shall be so arranged that each member of the crew assigned to perform duties in the locomotive can receive the same PTC information displayed in the same manner and execute any functions necessary to that crew member's duties. The locomotive engineer shall not be required to perform functions related to the PTC system while the train is moving that have the potential to distract the locomotive engineer from performance of other safety-critical duties.

(2) The onboard PTC apparatus may be distributed among multiple locomotives if such functionality is included with the applicable PTCSP approved under this subpart. The controlling locomotive shall be equipped with a fully operative interface that complies with paragraph (d)(1) of this section and is consistent with appendix E of this part.

■ 14. Add § 236.1009(a)(5) to read as follows:

§ 236.1009 Procedural requirements.

(a) * * *

(5) Each railroad filing a PTCIP shall report annually, on the anniversary of its original PTCIP submission, and until its PTC system implementation is complete, its progress towards fulfilling the goals outlined in its PTCIP under this part, including progress towards PTC system installation pursuant to § 236.1005 and onboard PTC apparatus installation and use in PTC-equipped track segments pursuant to § 236.1006, as well as impediments to completion if each of the goals.

* * * * *

■ 15. Add § 236.1015(d)(21) to read as follows:

§ 236.1015 PTC Safety Plan content requirements and PTC System Certification.

* * * * *

(d) * * *

(21) A list of each location where a locomotive with a failed onboard PTC apparatus will be regularly be exchanged or repaired pursuant to § 236.1029(b)(6) and a list of each movement that could take place pursuant to § 236.1029(b)(6) if the movement potentially could exceed 500 miles.

* * * * *

■ 16. Section 236.1029 is amended by—

- a. Revising the section heading,
- b. Revising the last sentence in paragraph (a),
- c. Revising paragraphs (b) and (c),
- d. Removing and reserving paragraph (f), and
- e. Adding paragraphs (g) and (h).

The revisions and additions read as follows:

§ 236.1029 PTC system use and failures.

(a) *In general.* * * * Until repair of such essential components is completed, a railroad shall take appropriate action as specified in its PTCSP.

(b) *En route failures.* Except as provided in paragraphs (c) and (g) of this section, where a controlling locomotive that is operating in, or is to be operated within, a PTC-equipped track segment experiences PTC system failure or the PTC system is otherwise cut out while en route (i.e., after the train has departed its initial terminal), the train may only continue in accordance with all of the following:

(1) Except as provided in paragraph (b)(5) of this section, where no block signal system is in use, the train may proceed at a speed not to exceed 40 miles per hour; however, if the involved

train is transporting one or more cars containing PIH materials, excluding those cars containing only a residue of PIH materials, the train may only proceed at a speed not to exceed 30 miles per hour.

(2) Where a block signal system is in place:

(i) A passenger train may proceed at a speed not to exceed 59 miles per hour;

(ii) A freight train transporting one or more cars containing PIH materials, excluding those cars containing only a residue of PIH materials, may proceed at a speed not to exceed 40 miles per hour; and

(iii) Any other freight train may proceed at a speed not to exceed 49 miles per hour.

(3) Where a cab signal system with an automatic train control system is in use, the train may proceed at a speed not to exceed 79 miles per hour.

(4) A report of the failure or cut-out must be made to a designated railroad officer of the host railroad as soon as safe and practicable.

(5) Where the PTC system is the exclusive method of delivering mandatory directives, an absolute block must be established in advance of the train as soon as safe and practicable, and the train shall not exceed restricted speed until the absolute block in advance of the train is established.

(6) Where the failure or cut-out is a result of a defective onboard PTC apparatus, the train may continue no farther than the next forward designated location for the repair or exchange of onboard PTC apparatuses.

(c) *Exception for alternative system failure procedure.* A railroad may submit for approval a PTCSP, an RFA, or an Order of Particular Applicability with an alternative system failure procedure other than that required by paragraph (b) of this section. FRA may, in its discretion, approve such an alternative system failure procedure if it provides similar requirements of, and an equivalent or greater level of safety as, the requirements of paragraph (b) of this section.

* * * * *

(f) [Reserved]

(g) *Temporary exceptions.* From October 21, 2014 through the 24 months following the date of required PTC system implementation established by section 20157 of title 49 of the United States Code—

(1) A railroad's PTCSP or Order of Particular Applicability may provide for compliance with the en route failure requirements of § 236.567 instead of paragraph (b) of this section where a controlling locomotive that is operating

in, or is to be operated within, a PTC-equipped track segment experiences PTC system failure or the PTC system is otherwise cut out while en route;

(2) A train may proceed as prescribed under either paragraph (b) of this section or § 236.567 where the PTC system fails to initialize for any reason prior to the train's departure from its initial terminal; and

(3) A railroad's PTCSP may provide for the temporary disabling of PTC system service where necessary to perform PTC system repair or maintenance. In this paragraph (g)(3), "PTC system service" does not refer to the failure of the onboard PTC apparatus for a single locomotive, locomotive consist, or train.

(i) The PTCSP shall specify appropriate operating rules to apply when the PTC system is temporarily disabled in accordance with this paragraph (g)(3).

(ii) The railroad shall make reasonable efforts to schedule the temporary disabling of PTC system service for times posing the least risk to railroad safety.

(iii) The railroad shall provide notice to the FRA regional office having jurisdiction over that territory at least 7 days in advance of planned temporary disabling of PTC system service and contemporaneous notice for unplanned temporary disabling of PTC system service.

(iv) The PTC system that is temporarily disabled in accordance with this paragraph (g)(3) shall be placed back into service without undue delay.

(h) Annual report of system failures. Annually, by April 16 of each year following the date of required PTC system implementation established by section 20157 of title 49 of the United States Code, each railroad shall provide FRA with a report of the number of PTC failures that occurred during the previous calendar year. The report shall identify failures by category, including but not limited to locomotive, wayside, communications, and back office system failures.

Issued in Washington, DC, on August 8, 2014.

Joseph C. Szabo, Administrator.

BILLING CODE 4910-06-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 229

RIN 0648-BC90

Taking of Marine Mammals Incidental to Commercial Fishing Operations; Atlantic Large Whale Take Reduction Plan Regulations

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule; correction.

SUMMARY: This document contains corrections to the final rule to amend regulations implementing the Atlantic Large Whale Take Reduction Plan, which published June 27, 2014, with an effective date of August 26, 2014.

DATES: Effective August 26, 2014.

FOR FURTHER INFORMATION CONTACT: Kate Swails, NMFS, Greater Atlantic Region, 978-282-8481, Kate.Swails@noaa.gov; or Kristy Long, NMFS Office of Protected Resources, 301-427-8440, Kristy.Long@noaa.gov.

SUPPLEMENTARY INFORMATION: The final rule contains errors concerning the delineation of the boundary of the Cape Cod Bay Restricted Management Area. In addition, the final rule incorrectly omitted New Hampshire state waters from the definition of the Northern Inshore State Waters Management Area. This correction notice provides clarification regarding the correct boundaries of these management areas.

This final rule has been determined to be not significant for the purposes of Executive Order 12866. The Assistant Administrator for Fisheries, NOAA, finds good cause under the Administrative Procedures Act to waive notice and opportunity for public comments as it is unnecessary for a non-substantive correcting amendment.

Corrections

Accordingly, the final rule, in FR Doc. 2014-14936, published on June 27, 2014, in 79 FR 36586, is corrected as follows:

■ 1. On page 36614, in column 3, § 229.32(c)(7)(i) is revised to read as follows:

§ 229.32 Atlantic large whale take reduction plan regulations.

* * * * *

(7) Northern Inshore State Trap/Pot Waters Area—(i) Area. The Northern

Inshore State Trap/Pot Waters Area includes the state waters of Rhode Island, Massachusetts, New Hampshire, and Maine, with the exception of Massachusetts Restricted Area and those waters exempted under paragraph (a)(3) of this section. Federal waters west of 70°00' N. lat. in Nantucket Sound are also included in the Northern Inshore State Trap/Pot Waters Area.

* * * * *

■ 2. On page 36616, in column 3, § 229.32(d)(3)(i) is revised to read as follows:

§ 229.32 Atlantic large whale take reduction plan regulations.

* * * * *

(d) * * *

(3) Cape Cod Bay Restricted Area—(i) Area. The Cape Cod Bay restricted area is bounded by the following points and on the south and east by the interior shoreline of Cape Cod, Massachusetts.

Table with 3 columns: Point, N. lat., W. long. Rows: CCB1 .. 41°46.8' 70°30', CCB2 .. 42°12' 70°30', CCB3 .. 42°12' 70°15', CCB4 .. 42°04.8' 70°10'

* * * * *

■ 3. On page 36618, in column 2, § 229.32(e)(1)(i) is revised to read as follows:

§ 229.32 Atlantic large whale take reduction plan regulations.

* * * * *

(e) Restrictions applicable to drift gillnet gear—(1) Cape Cod Bay Restricted Area—(i) Area. The Cape Cod Bay Restricted Area is bounded by the following points and on the south and east by the interior shoreline of Cape Cod, Massachusetts.

Table with 3 columns: Point, N. lat., W. long. Rows: CCB1 .. 41°46.8' 70°30', CCB2 .. 42°12' 70°30', CCB3 .. 42°12' 70°15', CCB4 .. 42°04.8' 70°10'

[Docket No. 140207123-4657-02]

RIN 0648-BD96

Atlantic Highly Migratory Species; North and South Atlantic 2014 Commercial Swordfish Quotas

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Final rule.

SUMMARY: This final rule adjusts the 2014 fishing season quotas for North and South Atlantic swordfish based upon 2013 commercial quota underharvests and international quota transfers consistent with the International Commission for the Conservation of Atlantic Tunas (ICCAT) Recommendations 13-02 and 13-03. Additionally, this final rule modifies the regulations to comply with upcoming changes to the North Atlantic swordfish underharvest carryover limits, which become effective in 2015. This final rule affects commercial and recreational fishing for swordfish in the Atlantic Ocean, including the Caribbean Sea and Gulf of Mexico. This action implements ICCAT recommendations, consistent with the Atlantic Tunas Convention Act (ATCA), and furthers domestic management objectives under the Magnuson-Stevens Fishery Conservation and Management Act (Magnuson-Stevens Act).

DATES: Effective on September 21, 2014.

ADDRESSES: Copies of the supporting documents—including the 2012 Environmental Assessment (EA), Regulatory Impact Review (RIR), and Final Regulatory Flexibility Analysis (FRFA) for North Atlantic swordfish; the 2007 EA, RIR, and FRFA for South Atlantic swordfish; and the 2006 Consolidated Highly Migratory Species (HMS) Fishery Management Plan (FMP)—are available from the HMS Management Division Web site at <http://www.nmfs.noaa.gov/sfa/hms/> or by contacting Alexis Jackson by phone at 301-427-8503 or Steve Durkee by phone at 202-670-6637.

FOR FURTHER INFORMATION CONTACT: Alexis Jackson by phone at 301-427-8503, Steve Durkee by phone at 202-670-6637, or by fax: 301-713-1917.

SUPPLEMENTARY INFORMATION:

Background

The U.S. North and South Atlantic swordfish fisheries are managed under the 2006 Consolidated HMS FMP. Implementing regulations at 50 CFR part 635 are issued under the authority of the Magnuson-Stevens Act, 16 U.S.C. 1801 *et seq.*, and ATCA, 16 U.S.C. 971 *et seq.* ATCA authorizes the Secretary of Commerce (Secretary) to promulgate regulations as may be necessary and appropriate to implement ICCAT recommendations.

For North Atlantic swordfish, this final action maintains the U.S. baseline quota of 2,937.6 metric tons (mt) dressed weight (dw), implements an ICCAT-recommended quota transfer of 18.8 mt dw from the United States to Mauritania, and discontinues the 112.8 mt dw quota transfer to Morocco, consistent with removal of the measure in the ICCAT recommendation. Additionally, this final rule modifies the regulations to comply with the ICCAT-recommended reduced underharvest carryover limit, which becomes effective in 2015 and thus will apply to any underharvest accrued in 2014 and beyond, pursuant to ICCAT Recommendation 13-02. For South Atlantic swordfish, this action maintains the U.S. South Atlantic swordfish quota at 75.2 mt dw (100 mt whole weight (ww)), carries over 75.1 mt dw of 2013 underharvest, and authorizes the transfer of 50 mt ww (37.6 mt dw) to Namibia, 25 mt ww (18.8 mt dw) to Côte d'Ivoire, and 25 mt ww (18.8 mt dw) to Belize, consistent with ICCAT Recommendation 13-03. Information regarding the quota calculations can be found below. Additional details regarding the quotas and other actions in this rule and their impacts can be found in the proposed rule (79 FR 27553, May 14, 2014).

North Atlantic Swordfish Quota

Based on the 2013 ICCAT Standing Committee on Research and Statistics (SCRS) stock assessment, North Atlantic swordfish are fully rebuilt and not experiencing overfishing. At the 2013 ICCAT annual meeting, Recommendation 13-02 was adopted, maintaining the overall North Atlantic swordfish total allowable catch (TAC) of 10,301 metric tons (mt) dressed weight (dw) (13,700 mt whole weight (ww)) through 2016. Of this TAC, the United States' baseline quota is 2,937.6 mt dw (3,907 mt ww) per year. ICCAT Recommendation 13-02 also includes an 18.8 mt dw (25 mt ww) annual quota transfer from the United States to Mauritania, discontinues the 112.8 mt dw quota transfer to Morocco,

consistent with removal of the measure in the ICCAT recommendation, and limits allowable 2013 underharvest carryover to 25 percent of a contracting party's baseline quota. Underharvest accrued in 2014 and beyond is limited to 15 percent of a contracting party's baseline quota. Therefore, the United States may carry over a maximum of 734.4 mt dw (976.8 mt ww) of underharvest from 2013 and add it to the 2014 baseline quota. This final rule adjusts the U.S. baseline quota for the 2014 fishing year to account for the annual quota transfer to Mauritania and the 2013 underharvest. Additionally, this final rule modifies the regulations to comply with the reduced underharvest carryover limit, which becomes effective in 2015 and thus will apply to underharvest accrued in 2014 and beyond.

The 2014 North Atlantic swordfish baseline quota is 2,937.6 mt dw (3,907 mt ww). The North Atlantic swordfish underharvest for 2013 was 1,391.8 mt dw (1,851.1 mt ww) which exceeds the maximum carryover cap of 734.4 mt dw (976.8 mt ww). This updated estimate, while lower than that estimated in the proposed rule, is still lower than the maximum allowable underharvest carryover. Thus, as proposed, NMFS is carrying forward the same maximum amount allowed per ICCAT Recommendation 13-02. The baseline quota would be reduced by the 18.8 mt dw (25 mt ww) annual quota transfer to Mauritania and increased by the underharvest carryover maximum of 734.4 mt dw (976.8 mt ww), resulting in an adjusted quota of 3,653.2 mt dw (4,857.8 mt ww) for the 2014 fishing year. From that final adjusted quota, per § 635.27(c)(1)(i), the directed category quota of 3,303.2 mt dw (4,393.3 mt ww) is split equally into two seasons (January through June, and July through December), the reserve category quota is 50 mt dw (66.5 mt ww), and the incidental category quota, which includes recreational landings and catch by incidental swordfish permit holders, is 300 mt dw (399 mt ww) (Table 1).

South Atlantic Swordfish Quota

In 2013, ICCAT Recommendation 13-03 established the South Atlantic swordfish TAC at 11,278.2 mt dw (15,000 mt ww) for 2014, 2015, and 2016. Of this, the United States' baseline quota is 75.2 mt dw (100 mt ww). ICCAT Recommendation 13-03 limits the amount of South Atlantic swordfish underharvest that can be carried forward. For South Atlantic swordfish, the United States may carry forward underharvest up to 100 percent of its baseline quota (75.2 mt dw).

Recommendation 13–03 also included a total of 75.2 mt dw (100 mt ww) of quota transfers from the United States to other countries. These transfers were 37.6 mt dw (50 mt ww) to Namibia, 18.8 mt dw (25 mt ww) to Côte d’Ivoire, and 18.8 mt dw (25 mt ww) to Belize.

In 2013, U.S. fishermen landed 0.1 mt dw of South Atlantic swordfish and there were no dead discards. Therefore, 75.1 mt dw of underharvest is available to be carried over to 2014 and added to the baseline quota. That combined quota will then be reduced by the 75.2 mt dw

of annual international quota transfers outlined above, resulting in an adjusted quota of 75.1 mt dw (100 mt ww) for South Atlantic swordfish (see Table 1) for 2014.

TABLE 1—2014 NORTH AND SOUTH ATLANTIC SWORDFISH QUOTAS

North Atlantic Swordfish Quota (mt dw)		2013	2014
Baseline Quota		2,937.6	2,937.6
International Quota Transfer		¹ (–)112.8	² (–)18.8
Total Underharvest from Previous Year+		814.1	1,391.8
Underharvest Carryover from Previous Year+		(+)734.4	(+)734.4
Adjusted Quota		3,559.2	3,653.2
Quota Allocation	Directed Category	3,209.2	3,303.2
	Incidental Category	300	300
	Reserve Category	50	50
South Atlantic Swordfish Quota (mt dw)		2013	2014
Baseline Quota		75.2	75.2
International Quota Transfers*		(–)75.2	(–)75.2
Total Underharvest from Previous Year+		75.2	75.1
Underharvest Carryover from Previous Year+		75.2	75.1
Adjusted Quota		75.2	75.1

+ 2013 underharvest carryover is capped at 25 percent of the baseline quota allocation for the North Atlantic and 75.2 dw (100 mt ww) for the South Atlantic. Starting in 2015, for the North Atlantic only, underharvest carryover will be capped at 15 percent of the baseline quota allocation.

* Under Recommendation 13–03, 100 mt ww of the U.S. underharvest and baseline quota was transferred to Namibia (37.6 mt dw, 50 mt ww), Côte d’Ivoire (18.8 mt dw, 25 mt ww), and Belize (18.8 mt dw, 25 mt ww).

¹ To Morocco.
² To Mauritania.

Response to Comments

During the proposed rule comment period, NMFS received two written comments, one of which was directly related to the proposed rule. A summary of the relative comment on the proposed rule is shown below with NMFS’ response. The second comment suggested banning harvest of all swordfish, which was outside the scope of the current rulemaking. All written comments submitted during the comment period can be found at <http://www.regulations.gov/> by searching for NOAA–NMFS–2014–0054.

Comment: NMFS should apportion some of commercial underharvest to allow for recreational harvest and sale of swordfish caught in the Florida Swordfish Management Area, considering landings of Atlantic swordfish are below the established quotas.

Response: Currently, in the Atlantic, Gulf of Mexico, and Caribbean, recreationally caught swordfish (*i.e.*, those caught on U.S. vessels possessing the HMS Angling permit or the HMS Charter-Headboat permit when on a for-hire trip) may not be sold. Only permit holders that hold commercial permits may sell swordfish. Those commercial permit holders are required to sell to permitted dealers; except that

individuals issued a valid HMS Commercial Caribbean Small Boat permit and operating in the U.S. Caribbean may sell swordfish to non-dealers (see 50 CFR 635.31(d)).

Given the rebuilt status of the North Atlantic swordfish stock and their resulting increased availability, NMFS has made efforts to provide additional harvest opportunities that will allow both recreational and commercial fishermen to more fully utilize the U.S. swordfish quota allocation. Management measures have included increasing retention limits, reducing the minimum cleithrum to caudal keel (CK) length, raising vessel upgrade limits on limited access commercial permits, creating two new commercial permits (the HMS Commercial Caribbean Small Boat permit, which is specific to the U.S. Caribbean, and the Swordfish General Commercial permit), and modifying the HMS Charter-Headboat permit to allow for commercial retention of swordfish when on a non-for hire trip.

The Swordfish General Commercial permit and modified HMS Charter-Headboat permit were first implemented in 2014 after finalization of Amendment 8 to the 2006 Consolidated HMS FMP (Amendment 8). Both of these permits allow for commercial retention of swordfish using rod and reel, handline,

bandit gear, harpoon, and green-stick gear (the same gears authorized for the Atlantic Tunas General category permit). Amendment 8 also established swordfish management regions (including the Florida Swordfish Management Area), established default regional retention limits, and allowed for the adjustment of the regional retention limits during a fishing season from zero to six swordfish based on certain criteria (*e.g.*, dealer reports, landing trends, available quota, etc). The default regional swordfish retention limit varies depending on the specific region; for the Florida Swordfish Management Area, the default regional swordfish retention limit is zero. Please refer to the final rule for Amendment 8 for additional details (78 FR 52012, August 21, 2013).

The swordfish retention limit in the Florida Swordfish Management Area is currently set to zero fish for vessels with a Swordfish General Commercial Permit or an HMS Charter-Headboat permit when on a non-for hire trip, as NMFS is taking a cautious approach at this time while issuing the new open-access commercial swordfish permit for the first time. This cautious approach is particularly important off the southeast coast of Florida, where the Florida Swordfish Management Area was

implemented to conserve juvenile swordfish habitat in a region where fishing grounds are easily accessible to a large number of fishermen. The initial retention limit of zero swordfish was implemented in part upon consideration of public comments on Amendment 8, including a comment from the Florida Fish and Wildlife Conservation Commission indicating a high potential for the rapid growth of a commercial fishery in the Florida Swordfish Management Area.

Currently, NMFS is observing the patterns of harvest, including how fishing for swordfish changes throughout the fishing year in different regions, and seeing how changes in patterns of harvest relate to other portions of the U.S. fishery in overall landings. NMFS does not feel that the low harvest levels to date indicate a need to adjust the regional retention limits at this time. NMFS will continue to monitor the fishery and, based upon the inseason adjustment criteria specified at 50 CFR 635.24 (b)(4)(iv), will consider whether to adjust regional retention limits in the future.

Changes From the Proposed Rule

The final rule contains no changes from the proposed rule, except for minor landings updates based on more recent 2013 landings reports and dead discard estimates.

Classification

Pursuant to the Magnuson-Stevens Act, the NMFS Assistant Administrator has determined that the final rule is consistent with the 2006 Consolidated HMS FMP and its amendments, other provisions of the Magnuson-Stevens Act, and other applicable law.

This final rule has been determined to be not significant for purposes of Executive Order 12866.

The Chief Counsel for Regulation of the Department of Commerce certified to the Chief Counsel for Advocacy of the Small Business Administration during the proposed rule stage that this action would not have a significant economic impact on a substantial number of small entities. The factual basis for the certification was published in the proposed rule and is not repeated here. No comments were received regarding this certification. As a result, a regulatory flexibility analysis was not required and none was prepared.

List of Subjects in 50 CFR Part 635

Fisheries, Fishing, Fishing vessels, Foreign relations, Imports, Penalties, Reporting and recordkeeping requirements, Treaties.

Authority: 16 U.S.C. 971 *et seq.*; 16 U.S.C. 1801 *et seq.*

Dated: August 18, 2014.

Samuel D. Rauch III,

Deputy Assistant Administrator for Regulatory Programs, National Marine Fisheries Service.

For reasons set out in the preamble, 50 CFR part 635 is amended as follows:

PART 635—ATLANTIC HIGHLY MIGRATORY SPECIES

■ 1. The authority citation for part 635 continues to read as follows:

Authority: 16 U.S.C. 971 *et seq.*; 16 U.S.C. 1801 *et seq.*

■ 2. In § 635.27, paragraph (c)(3)(ii) is revised to read as follows:

§ 635.27 Quotas.

* * * * *

(c) * * *

(3) * * *

(ii) If consistent with applicable ICCAT recommendations, total landings above or below the specific North Atlantic or South Atlantic swordfish annual quota will be subtracted from, or added to, the following year's quota for that area. As necessary to meet management objectives, such adjustments may be apportioned to fishing categories and/or to the reserve. Carryover adjustments for the North Atlantic shall be limited to 25 percent of the baseline quota allocation through 2014. Starting in the 2015 fishing year, carryover adjustments shall be limited to 15 percent of the annual baseline quota allocation. Carryover adjustments for the South Atlantic shall be limited to 100 mt ww (75.2 mt dw). Any adjustments to the 12-month directed fishery quota will be apportioned equally between the two semiannual fishing seasons. NMFS will file with the Office of the Federal Register for publication any adjustment or apportionment made under this paragraph.

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 130925836-4174-02]

RIN 0648-XD451

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Cod by Catcher/Processors Using Trawl Gear in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of Pacific cod by catcher/processors using trawl gear in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2014 total allowable catch of Pacific cod apportioned to trawl catcher/processors in the Central Regulatory Area of the GOA has been reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), August 19, 2014, through 2400 hours, A.l.t., December 31, 2014.

FOR FURTHER INFORMATION CONTACT: Josh Keaton, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679. Regulations governing sideboard protections for GOA groundfish fisheries appear at subpart B of 50 CFR part 680.

The 2014 Pacific cod TAC apportioned to catcher/processors using trawl gear in the Central Regulatory Area of the GOA is 1,638 metric tons (mt), as established by the final 2014 and 2015 harvest specifications for groundfish of the GOA (79 FR 12890, March 6, 2014).

In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS (Regional Administrator) has determined that the 2014 Pacific cod TAC apportioned to catcher/processors using trawl gear in the Central

Regulatory Area of the GOA has been reached. Therefore, NMFS is requiring that of Pacific cod caught by catcher/processors using trawl gear in the Central Regulatory Area of the GOA be treated as prohibited species in accordance with § 679.21(b).

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the prohibition of retention of Pacific cod by catcher/processors using trawl gear in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2014.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2014.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[Docket No. 130925836-4174-02]

RIN 0648-XD449

Fisheries of the Exclusive Economic Zone Off Alaska; Pacific Ocean Perch in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and

Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting retention of the incidental catch allowance for Pacific ocean perch in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2014 total allowable catch of Pacific ocean perch apportioned to the incidental catch allowance in the Central Regulatory Area of the GOA has been reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), August 19, 2014, through 2400 hours, A.l.t., December 31, 2014.

FOR FURTHER INFORMATION CONTACT:

Mary Furuness, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679. Regulations governing sideboard protections for GOA groundfish fisheries appear at subpart B of 50 CFR part 680.

The 2014 Pacific ocean perch TAC apportioned to the incidental catch allowance for Pacific ocean perch in the Central Regulatory Area of the GOA is 1,200 metric tons (mt), as established by the final 2014 and 2015 harvest specifications for groundfish of the GOA (79 FR 12890, March 6, 2014).

In accordance with § 679.20(d)(2), the Administrator, Alaska Region, NMFS (Regional Administrator) has determined that the 2014 Pacific ocean perch TAC apportioned to the incidental catch allowance in the Central Regulatory Area of the GOA has been reached. Therefore, NMFS is requiring that catches of the incidental catch allowance for Pacific ocean perch in the Central Regulatory Area of the GOA be treated as prohibited species in accordance with § 679.21(b).

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5

U.S.C. 553(b)(B) as such requirement is impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the prohibition of retention of catches of the incidental catch allowance for Pacific ocean perch in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2014.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2014.

Alan D. Risenhoover,

Director, Office of Sustainable Fisheries, National Marine Fisheries Service.

[FR Doc. 2014-19943 Filed 8-19-14; 4:15 pm]

BILLING CODE 3510-22-P

DEPARTMENT OF COMMERCE

National Oceanic and Atmospheric Administration

50 CFR Part 679

[Docket No. 130925836-4174-02]

RIN 0648-XD450

Fisheries of the Exclusive Economic Zone Off Alaska; Rex Sole in the Central Regulatory Area of the Gulf of Alaska

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Temporary rule; closure.

SUMMARY: NMFS is prohibiting directed fishing for the rex sole sideboard limit by non-exempt American Fisheries Act (AFA) catcher vessels in the Central Regulatory Area of the Gulf of Alaska (GOA). This action is necessary because the 2014 rex sole sideboard limit for non-exempt AFA catcher vessels in the Central Regulatory Area of the GOA has been reached.

DATES: Effective 1200 hours, Alaska local time (A.l.t.), August 19, 2014,

through 2400 hours, A.l.t., December 31, 2014.

FOR FURTHER INFORMATION CONTACT:
Mary Furuness, 907-586-7228.

SUPPLEMENTARY INFORMATION: NMFS manages the groundfish fishery in the GOA exclusive economic zone according to the Fishery Management Plan for Groundfish of the Gulf of Alaska (FMP) prepared by the North Pacific Fishery Management Council under authority of the Magnuson-Stevens Fishery Conservation and Management Act. Regulations governing fishing by U.S. vessels in accordance with the FMP appear at subpart H of 50 CFR part 600 and 50 CFR part 679. Regulations governing sideboard protections for GOA groundfish fisheries appear at subpart B of 50 CFR part 680.

The 2014 rex sole sideboard limit for non-exempt AFA catcher vessels in the Central Regulatory Area of the GOA is 239 metric tons (mt), as established by the final 2014 and 2015 harvest specifications for groundfish of the GOA (79 FR 12890, March 6, 2014).

In accordance with § 679.20(d)(1)(iv), the Administrator, Alaska Region, NMFS (Regional Administrator) has determined that the 2014 rex sole

sideboard limit for non-exempt AFA catcher vessels in the Central Regulatory Area of the GOA has been reached. Therefore, the Regional Administrator is establishing a directed fishing allowance of 300 mt and is setting aside the remaining 29 mt as bycatch to support other anticipated groundfish fisheries. In accordance with § 679.20(d)(1)(iii), the Regional Administrator finds that this directed fishing allowance has been reached. Consequently, NMFS is prohibiting directed fishing for the 2014 rex sole sideboard limit for non-exempt AFA catcher vessels in the Central Regulatory Area of the GOA.

After the effective date of this closure the maximum retainable amounts at § 679.20(e) and (f) apply at any time during a trip.

Classification

This action responds to the best available information recently obtained from the fishery. The Assistant Administrator for Fisheries, NOAA (AA), finds good cause to waive the requirement to provide prior notice and opportunity for public comment pursuant to the authority set forth at 5 U.S.C. 553(b)(B) as such requirement is

impracticable and contrary to the public interest. This requirement is impracticable and contrary to the public interest as it would prevent NMFS from responding to the most recent fisheries data in a timely fashion and would delay the directed fishing closure of the rex sole sideboard limit by non-exempt AFA catcher vessels in the Central Regulatory Area of the GOA. NMFS was unable to publish a notice providing time for public comment because the most recent, relevant data only became available as of August 18, 2014.

The AA also finds good cause to waive the 30-day delay in the effective date of this action under 5 U.S.C. 553(d)(3). This finding is based upon the reasons provided above for waiver of prior notice and opportunity for public comment.

This action is required by § 679.20 and is exempt from review under Executive Order 12866.

Authority: 16 U.S.C. 1801 *et seq.*

Dated: August 19, 2014.

Proposed Rules

Federal Register

Vol. 79, No. 163

Friday, August 22, 2014

This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF TRANSPORTATION

Federal Aviation Administration

14 CFR Part 39

[Docket No. FAA-2014-0574; Directorate Identifier 2013-NM-258-AD]

RIN 2120-AA64

Airworthiness Directives; Airbus Airplanes

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of proposed rulemaking (NPRM).

SUMMARY: We propose to adopt a new airworthiness directive (AD) for all Airbus Model A318 series airplanes, Model A319 series airplanes, Model A320-211, -212, -214, -231, -232, and -233 airplanes, and Model A321 series airplanes. This proposed AD was prompted by a report of skin disbonding on a composite side shell panel of a rudder. This proposed AD would require an inspection to determine if any rudder composite side shell panel has been repaired, a thermography inspection of each rudder that has received this repair, and related investigative and corrective actions if necessary. We are proposing this AD to detect and correct skin disbonding on the rudder, which could affect the structural integrity of the rudder, possibly resulting in reduced control of the airplane.

DATES: We must receive comments on this proposed AD by October 6, 2014.

ADDRESSES: You may send comments by any of the following methods:

- *Federal eRulemaking Portal:* Go to <http://www.regulations.gov>. Follow the instructions for submitting comments.
- *Fax:* (202) 493-2251.
- *Mail:* U.S. Department of Transportation, Docket Operations, M-30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590.
- *Hand Delivery:* U.S. Department of Transportation, Docket Operations, M-

30, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays.

For service information identified in this proposed AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email account.airworth-eas@airbus.com; Internet <http://www.airbus.com>. You may view this referenced service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425-227-1221.

Examining the AD Docket

You may examine the AD docket on the Internet at <http://www.regulations.gov> by searching for and locating Docket No. FAA-2014-0574; or in person at the Docket Management Facility between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. The AD docket contains this proposed AD, the regulatory evaluation, any comments received, and other information. The street address for the Docket Operations office (telephone (800) 647-5527) is in the **ADDRESSES** section. Comments will be available in the AD docket shortly after receipt.

FOR FURTHER INFORMATION CONTACT:

Sanjay Ralhan, Aerospace Engineer, International Branch, ANM-116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057-3356; telephone 425-227-1405; fax 425-227-1149.

SUPPLEMENTARY INFORMATION:

Comments Invited

We invite you to send any written relevant data, views, or arguments about this proposed AD. Send your comments to an address listed under the **ADDRESSES** section. Include "Docket No. FAA-2014-0574; Directorate Identifier 2013-NM-258-AD" at the beginning of your comments. We specifically invite comments on the overall regulatory, economic, environmental, and energy aspects of this proposed AD. We will consider all comments received by the closing date and may amend this proposed AD based on those comments.

We will post all comments we receive, without change, to <http://www.regulations.gov>, including any personal information you provide. We will also post a report summarizing each substantive verbal contact we receive about this proposed AD.

Discussion

The European Aviation Safety Agency (EASA), which is the Technical Agent for the Member States of the European Community, has issued EASA Airworthiness Directive 2013-0302, dated December 19, 2013 (referred to after this as the Mandatory Continuing Airworthiness Information, or "the MCAI"), to correct an unsafe condition for the specified products. The MCAI states:

A case of skin disbonding was reported on a composite side shell panel of a rudder installed on an A310 aeroplane. Investigation results revealed that this disbonding had started from a skin panel area, previously repaired in-service, in accordance with Structural Repair Manual (SRM) instructions. The initial damage was identified as a disbonding between the core and the skin of the repaired area. This damage was not visually detectable and likely propagated during normal operation due to the variation of pressure during ground-air-ground cycles.

Composite rudder side shell panels are also installed on A320 family aeroplanes, which may have been repaired in-service using a similar method.

This condition, if not detected and corrected, could affect the structural integrity of the rudder, possibly resulting in reduced control of the aeroplane.

To address this potential unsafe condition, Airbus issued Service Bulletin (SB) A320-55-1041 to provide instructions to inspect and correct any affected composite rudder side shell panels.

For the reasons described above, this [EASA] AD requires [an inspection to determine if any rudder composite side shell panel has been repaired], a one-time [pulse] thermography inspection of each rudder that have received a composite rudder side shell panel repair, and, depending on the findings, accomplishment of applicable corrective and follow-up actions [related investigative actions and repetitive inspections].

The related investigative actions include elasticity laminate checker (ELCH) inspections, ultrasonic testing (UT) inspections, pulse thermography inspections, and tap test or woodpecker inspections. The repetitive inspections include ELCH inspections, UT inspections, pulse thermography inspections, and detailed inspections

(certain repetitive inspections are required if hole restoration is done; certain other repetitive inspections are options for certain corrective actions). The corrective actions include core venting through the inner skin, replacements, restorations, and repairs.

Depending on the applicable conditions identified in paragraph 1.E., “Compliance,” of Airbus Service Bulletin A320–55–1041, dated November 26, 2012, the compliance times for the related investigative actions range from within 24 months to before further flight after accomplishing certain inspections.

The intervals for the repetitive inspections range from 750 flight cycles to 1,000 flight cycles, depending on the applicable conditions identified in paragraph 1.E., “Compliance,” of Airbus Service Bulletin A320–55–1041, dated November 26, 2012.

Depending on the applicable conditions identified in paragraph 1.E., “Compliance,” of Airbus Service Bulletin A320–55–1041, dated November 26, 2012, the compliance times for the corrective actions range from before further flight to 4,500 flight cycles but not to exceed 24 months after accomplishing the applicable inspection.

The term “findings,” as used in this proposed AD, includes (but is not limited to) fluid ingress, damage, loose or lost tape, and repairs.

You may examine the MCAI in the AD docket on the Internet at <http://www.regulations.gov> by searching for and locating it in Docket No. FAA–2014–0574.

Relevant Service Information

Airbus has issued Service Bulletin A320–55–1041, dated November 26, 2012. The actions described in this service information are intended to correct the unsafe condition identified in the MCAI.

FAA’s Determination and Requirements of This Proposed AD

This product has been approved by the aviation authority of another country, and is approved for operation in the United States. Pursuant to our bilateral agreement with the State of Design Authority, we have been notified of the unsafe condition described in the MCAI and service information referenced above. We are proposing this AD because we evaluated all pertinent information and determined an unsafe condition exists and is likely to exist or develop on other products of these same type designs.

“Contacting the Manufacturer” Paragraph in This Proposed AD

Since late 2006, we have included a standard paragraph titled “Airworthy Product” in all MCAI ADs in which the FAA develops an AD based on a foreign authority’s AD.

The MCAI or referenced service information in an FAA AD often directs the owner/operator to contact the manufacturer for corrective actions, such as a repair. Briefly, the Airworthy Product paragraph allowed owners/operators to use corrective actions provided by the manufacturer if those actions were FAA-approved. In addition, the paragraph stated that any actions approved by the State of Design Authority (or its delegated agent) are considered to be FAA-approved.

In an NPRM having Directorate Identifier 2012–NM–101–AD (78 FR 78285, December 26, 2013), we proposed to prevent the use of repairs that were not specifically developed to correct the unsafe condition, by requiring that the repair approval provided by the State of Design Authority or its delegated agent specifically refer to the FAA AD. This change was intended to clarify the method of compliance and to provide operators with better visibility of repairs that are specifically developed and approved to correct the unsafe condition. In addition, we proposed to change the phrase “its delegated agent” to include a design approval holder (DAH) with State of Design Authority design organization approval (DOA), as applicable, to refer to a DAH authorized to approve required repairs for the proposed AD.

One commenter to the NPRM having Directorate Identifier 2012–NM–101–AD (78 FR 78285, December 26, 2013) stated the following: “The proposed wording, being specific to repairs, eliminates the interpretation that Airbus messages are acceptable for approving minor deviations (corrective actions) needed during accomplishment of an AD mandated Airbus service bulletin.”

This comment has made the FAA aware that some operators have misunderstood or misinterpreted the Airworthy Product paragraph to allow the owner/operator to use messages provided by the manufacturer as approval of deviations during the accomplishment of an AD-mandated action. The Airworthy Product paragraph does not approve messages or other information provided by the manufacturer for deviations to the requirements of the AD-mandated actions. The Airworthy Product paragraph only addresses the

requirement to contact the manufacturer for corrective actions for the identified unsafe condition and does not cover deviations from other AD requirements. However, deviations to AD-required actions are addressed in 14 CFR 39.17, and anyone may request the approval for an alternative method of compliance to the AD-required actions using the procedures found in 14 CFR 39.19.

To address this misunderstanding and misinterpretation of the Airworthy Product paragraph, we have changed the paragraph and retitled it “Contacting the Manufacturer.” This paragraph now clarifies that for any requirement in this proposed AD to obtain corrective actions from a manufacturer, the actions must be accomplished using a method approved by the FAA, the European Aviation Safety Agency (EASA), or Airbus’s EASA DOA.

The Contacting the Manufacturer paragraph also clarifies that, if approved by the DOA, the approval must include the DOA-authorized signature. The DOA signature indicates that the data and information contained in the document are EASA-approved, which is also FAA-approved. Messages and other information provided by the manufacturer that do not contain the DOA-authorized signature approval are not EASA-approved, unless EASA directly approves the manufacturer’s message or other information.

This clarification does not remove flexibility previously afforded by the Airworthy Product paragraph. Consistent with long-standing FAA policy, such flexibility was never intended for required actions. This is also consistent with the recommendation of the Airworthiness Directive Implementation Aviation Rulemaking Committee to increase flexibility in complying with ADs by identifying those actions in manufacturers’ service instructions that are “Required for Compliance” with ADs. We continue to work with manufacturers to implement this recommendation. But once we determine that an action is required, any deviation from the requirement must be approved as an alternative method of compliance.

We also have decided not to include a generic reference to either the “delegated agent” or “design approval holder (DAH) with State of Design Authority design organization approval,” but instead we have provided the specific delegation approval granted by the State of Design Authority for the DAH throughout this proposed AD.

Costs of Compliance

We estimate that this proposed AD affects 851 airplanes of U.S. registry.

We also estimate that it would take about 42 work-hours per product to comply with the basic requirements of this proposed AD. The average labor rate is \$85 per work-hour. Based on these figures, we estimate the cost of this proposed AD on U.S. operators to be \$3,038,070, or \$3,570 per product.

We have received no definitive data that would enable us to provide cost estimates for the on-condition actions specified in this proposed AD.

Paperwork Reduction Act

A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB control number. The control number for the collection of information required by this proposed AD is 2120-0056. The paperwork cost associated with this proposed AD has been detailed in the Costs of Compliance section of this document and includes time for reviewing instructions, as well as completing and reviewing the collection of information. Therefore, all reporting associated with this proposed AD is mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at 800 Independence Ave., SW., Washington, DC 20591, ATTN: Information Collection Clearance Officer, AES-200.

Authority for This Rulemaking

Title 49 of the United States Code specifies the FAA's authority to issue rules on aviation safety. Subtitle I, section 106, describes the authority of the FAA Administrator. "Subtitle VII: Aviation Programs," describes in more detail the scope of the Agency's authority.

We are issuing this rulemaking under the authority described in "Subtitle VII, Part A, Subpart III, Section 44701: General requirements." Under that section, Congress charges the FAA with promoting safe flight of civil aircraft in air commerce by prescribing regulations for practices, methods, and procedures the Administrator finds necessary for safety in air commerce. This proposed regulation is within the scope of that authority because it addresses an unsafe condition that is likely to exist or develop on products identified in this rulemaking action.

Regulatory Findings

We determined that this proposed AD would not have federalism implications under Executive Order 13132. This proposed AD would not have a substantial direct effect on the States, on the relationship between the national Government and the States, or on the distribution of power and responsibilities among the various levels of government.

For the reasons discussed above, I certify this proposed regulation:

1. Is not a "significant regulatory action" under Executive Order 12866;
2. Is not a "significant rule" under the DOT Regulatory Policies and Procedures (44 FR 11034, February 26, 1979);
3. Will not affect intrastate aviation in Alaska; and
4. Will not have a significant economic impact, positive or negative, on a substantial number of small entities under the criteria of the Regulatory Flexibility Act.

List of Subjects in 14 CFR Part 39

Air transportation, Aircraft, Aviation safety, Incorporation by reference, Safety.

The Proposed Amendment

Accordingly, under the authority delegated to me by the Administrator, the FAA proposes to amend 14 CFR part 39 as follows:

PART 39—AIRWORTHINESS DIRECTIVES

- 1. The authority citation for part 39 continues to read as follows:
Authority: 49 U.S.C. 106(g), 40113, 44701.

§ 39.13 [Amended]

- 2. The FAA amends § 39.13 by adding the following new airworthiness directive (AD):

Airbus: Docket No. FAA-2014-0574; Directorate Identifier 2013-NM-258-AD.

(a) Comments Due Date

We must receive comments by October 6, 2014.

(b) Affected ADs

None.

(c) Applicability

This AD applies to the Airbus airplanes specified in paragraphs (c)(1) through (c)(4) of this AD, certificated in any category, all manufacturer serial numbers.

- (1) Airbus Model A318-111, -112, -121, and -122 airplanes.
- (2) Airbus Model A319-111, -112, -113, -114, -115, -131, -132, and -133 airplanes.
- (3) Airbus Model A320-211, -212, -214, -231, -232, and -233 airplanes.
- (4) Airbus Model A321-111, -112, -131, -211, -212, -213, -231, and -232 airplanes.

(d) Subject

Air Transport Association (ATA) of America Code 55, Stabilizers.

(e) Reason

This AD was prompted by a report of skin disbonding on a composite side shell panel of a rudder. We are issuing this AD to detect and correct skin disbonding on the rudder, which could affect the structural integrity of the rudder, possibly resulting in reduced control of the airplane.

(f) Compliance

Comply with this AD within the compliance times specified, unless already done.

(g) Inspection To Determine Repair Status

Within 24 months after the effective date of this AD: Inspect the airplane maintenance records to determine if the rudder composite side shell panel has been repaired since first installation of the rudder on an airplane.

(h) Inspection of Certain Repaired Rudders

If the finding of the inspection required by paragraph (g) of this AD reveals that a rudder repair has been done as described in Figure A-GBBAA (Sheet 01 and 02) or Figure A-GBCAA (Sheet 02) of Airbus Service Bulletin A320-55-1041, dated November 26, 2012: Within 24 months after the effective date of this AD, do a pulse thermography inspection on the rudder, limited to the repaired area(s), to determine type, location, and size of the repair, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320-55-1041, dated November 26, 2012.

(i) Inspection of Rudders With No Records or Incomplete Records

For each rudder for which maintenance records are not available or are incomplete: Do the actions required by paragraphs (i)(1) and (i)(2) of this AD.

(1) Not later than 3 months before accomplishment of the pulse thermography inspection required by paragraph (i)(2) of this AD, send the records of each rudder by serial number to Airbus.

(2) Within 24 months after the effective date of this AD, do a pulse thermography inspection on complete rudder side shells to identify and mark the repair location, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320-55-1041, dated November 26, 2012.

(j) Related Investigative Actions, Repetitive Inspections, and Corrective Actions

After accomplishing the inspections required by paragraphs (h) and (i) of this AD, as applicable: Depending on findings, do the applicable actions specified in paragraphs (j)(1) and (j)(2) of this AD, in accordance with the Accomplishment Instructions of Airbus Service Bulletin A320-55-1041, dated November 26, 2012, except as required by paragraph (l)(2) of this AD. Findings are specified in Airbus Service Bulletin A320-55-1041, dated November 26, 2012.

(1) Do all applicable related investigative actions and corrective actions at the applicable times specified in Tables 3, 4A, 4B, 4C, 4D, and 5 in paragraph 1.E.(2),

“Accomplishment Timescale,” of Airbus Service Bulletin A320–55–1041, dated November 26, 2012, except as required by paragraph (l)(1) of this AD.

(2) Do all applicable repetitive inspections of the restored and repaired areas at the applicable intervals specified in Tables 3, 4A, 4B, 4C, 4D, and 5 in paragraph 1.E.(2), “Accomplishment Timescale,” of Airbus Service Bulletin A320–55–1041, dated November 26, 2012.

(k) Airplanes Excluded From Certain Requirements

Airplanes fitted with a rudder having a serial number which is not in the range TS–1001 to TS–1639 inclusive, or TS–2001 to TS–5890 inclusive; or is not TS–5927; are not affected by the requirements of paragraphs (h), (i), and (j) of this AD, provided it is determined that no repairs have been done as described in the structural repair manual (SRM) procedures identified in Figure A–GBBAA (Sheet 01 and 02) or Figure A–GBCAA (Sheet 02) of Airbus Service Bulletin A320–55–1041, dated November 26, 2012, on the composite side shell panel of that rudder since first installation on an airplane.

(l) Exception to Service Information

(1) Where the service bulletin specifies a compliance time “after the original Service Bulletin issue date,” this AD requires compliance within the specified compliance time after the effective date of this AD.

(2) If any damage or fluid ingress is found during any inspection required by this AD and Airbus Service Bulletin A320–55–1041, dated November 26, 2012, specifies to contact Airbus: Before further flight, repair using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(m) Parts Installation Limitation

As of the effective date of this AD, in case of rudder replacement, it is allowed to install a rudder on an airplane, provided that prior to installation the rudder is determined to be compliant with the requirements of paragraphs (h), (i), (j), and (k) of this AD.

(n) Repair Prohibition

As of the effective date of this AD, do not accomplish a composite side shell panel repair on any rudder using an SRM procedure identified in Figure A–GBBAA (Sheet 01 and 02) or Figure A–GBCAA (Sheet 02) of Airbus Service Bulletin A320–55–1041, dated November 26, 2012.

(o) Other FAA AD Provisions

The following provisions also apply to this AD:

(1) *Alternative Methods of Compliance (AMOCs)*: The Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA, has the authority to approve AMOCs for this AD, if requested using the procedures found in 14 CFR 39.19. In accordance with 14 CFR 39.19, send your request to your principal inspector or local Flight Standards District Office, as

appropriate. If sending information directly to the International Branch, send it to ATTN: Sanjay Ralhan, Aerospace Engineer, International Branch, ANM–116, Transport Airplane Directorate, FAA, 1601 Lind Avenue SW., Renton, WA 98057–3356; telephone 425–227–1405; fax 425–227–1149. Information may be emailed to: 9–ANM–116–AMOC-REQUESTS@faa.gov. Before using any approved AMOC, notify your appropriate principal inspector, or lacking a principal inspector, the manager of the local flight standards district office/certificate holding district office. The AMOC approval letter must specifically reference this AD.

(2) *Contacting the Manufacturer*: For any requirement in this AD to obtain corrective actions from a manufacturer, the action must be accomplished using a method approved by the Manager, International Branch, ANM–116, Transport Airplane Directorate, FAA; or the European Aviation Safety Agency (EASA); or Airbus’s EASA Design Organization Approval (DOA). If approved by the DOA, the approval must include the DOA-authorized signature.

(3) *Reporting Requirements*: A federal agency may not conduct or sponsor, and a person is not required to respond to, nor shall a person be subject to a penalty for failure to comply with a collection of information subject to the requirements of the Paperwork Reduction Act unless that collection of information displays a current valid OMB Control Number. The OMB Control Number for this information collection is 2120–0056. Public reporting for this collection of information is estimated to be approximately 5 minutes per response, including the time for reviewing instructions, completing and reviewing the collection of information. All responses to this collection of information are mandatory. Comments concerning the accuracy of this burden and suggestions for reducing the burden should be directed to the FAA at: 800 Independence Ave. SW., Washington, DC 20591, Attn: Information Collection Clearance Officer, AES–200.

(p) Related Information

(1) Refer to Mandatory Continuing Airworthiness Information (MCAI) European Aviation Safety Agency Airworthiness Directive 2013–0302, dated December 19, 2013, for related information. This MCAI may be found in the AD docket on the Internet at <http://www.regulations.gov> by searching for and locating it in Docket No. FAA–2014–0574.

(2) For service information identified in this AD, contact Airbus, Airworthiness Office—EIAS, 1 Rond Point Maurice Bellonte, 31707 Blagnac Cedex, France; telephone +33 5 61 93 36 96; fax +33 5 61 93 44 51; email account.airworth-eas@airbus.com; Internet <http://www.airbus.com>. You may view this service information at the FAA, Transport Airplane Directorate, 1601 Lind Avenue SW., Renton, WA. For information on the availability of this material at the FAA, call 425–227–1221.

Issued in Renton, Washington, on August 15, 2014.

Jeffrey E. Duven,

Manager, Transport Airplane Directorate, Aircraft Certification Service.

BILLING CODE 4910–13–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

21 CFR Parts 610 and 680

[Docket No. FDA–2014–N–1110]

Revocation of General Safety Test Regulations That Are Duplicative of Requirements in Biological License Applications

AGENCY: Food and Drug Administration, HHS.

ACTION: Proposed rule.

SUMMARY: The Food and Drug Administration (FDA) is proposing to amend the biologics regulations by removing the general safety test (GST) requirements for biological products. FDA is proposing this action because the existing codified GST regulations are duplicative of requirements that are also specified in biologics licenses, or are no longer necessary or appropriate to help ensure the safety, purity, and potency of licensed biological products. FDA is taking this action as part of its retrospective review of its regulations to promote improvement and innovation, in response to an Executive order.

DATES: Submit either electronic or written comments on this proposed rule by November 20, 2014. See section V of this document for the proposed effective date of any final rule that may publish based on this proposal.

ADDRESSES: You may submit comments by any of the following methods:

Electronic Submissions

Submit electronic comments in the following way:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

Written Submissions

Submit written submissions in the following ways:

- *Mail/Hand Delivery/Courier (for paper submissions):* Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

Instructions: All submissions received must include Docket No. FDA–2014–N–

1110 for this rulemaking. All comments received may be posted without change to <http://www.regulations.gov>, including any personal information provided. For additional information on submitting comments, see the "Request for Comments" heading in section X of the **SUPPLEMENTARY INFORMATION** section of this document.

Docket: For access to the docket to read background documents or comments received, go to <http://www.regulations.gov> and insert the docket number, found in brackets in the heading of this document, into the "Search" box and follow the prompts and/or go to the Division of Dockets Management, 5630 Fishers Lane, Rm. 1061, Rockville, MD 20852.

FOR FURTHER INFORMATION CONTACT: Lori J. Churchyard, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, Rm. 7301, Silver Spring, MD 20993-0002, 240-402-7911.

SUPPLEMENTARY INFORMATION:

Executive Summary

Purpose and Coverage of the Proposed Rule

The proposed rule would eliminate the codified GST¹ regulations for biological products. FDA is proposing this action because the existing codified GST regulations are duplicative of requirements that are also specified in biologics license applications (BLAs) or are no longer necessary or appropriate to help ensure the safety, purity, and potency of licensed biological products. FDA is taking this action as part of its retrospective review of its regulations to promote improvement and innovation, in response to Executive Order (E.O.) 13563 of January 18, 2011.

Summary of the Major Provisions of the Proposed Rule

The proposed rule would remove the requirements contained in 21 CFR 610.11, 610.11a, and 680.3(b) from the regulations. Section 610.11 concerns a GST for the detection of extraneous toxic contaminants in biological products intended for administration to humans. Section 610.11a concerns the GST regulations for inactivated influenza vaccine. Section 680.3(b) concerns GST regulations for allergenic products. Removal of these regulations

would not remove GST requirements specified in individual BLAs, however. A biological product manufacturer would continue to be required to follow the GST requirements specified in its BLA unless the BLA were revised to eliminate or modify the test through a supplement in accordance with 21 CFR 601.12(c). FDA would review proposed changes to a manufacturer's approved biologics license on a case-by-case basis so that we could ensure that any such action is appropriate.

Costs and Benefits

FDA is proposing this action because the existing codified GST regulations are duplicative of requirements that are also specified in BLAs, or are no longer necessary or appropriate to help ensure the safety, purity, and potency of licensed biological products. Because this proposed rule would impose no additional regulatory burdens, this regulation is not anticipated to result in any compliance costs and the economic impact is expected to be minimal.

I. Background

On January 18, 2011, President Barack Obama issued E.O. 13563, "Improving Regulation and Regulatory Review" (76 FR 3821, January 21, 2011). One of the provisions in the E.O. is the affirmation of retrospective reviews of existing significant regulations. As one step in implementing the new E.O., FDA published a notice in the **Federal Register** on April 27, 2011 (76 FR 23520), entitled "Periodic Review of Existing Regulations; Retrospective Review Under E.O. 13563." In that notice, FDA announced that it was conducting a review of existing regulations to determine, in part, whether they can be made more effective in light of current public health needs and to take advantage of, and support, advances in innovation that have occurred since those regulations took effect. As part of this initiative, FDA is proposing to eliminate the codified GST regulations as specified in this rule. We believe this action is appropriate because in many instances, the GST regulations duplicate requirements that are also specified in the BLA required for biological products intended for human use under section 351 of the Public Health Service Act (PHS Act) (42 U.S.C. 262), or they are outmoded or otherwise unnecessary to help ensure the continued safety, purity, and potency of biological products. For a number of years, FDA has not codified specific requirements for licensed biological products, in part because codifying specific requirements for biological products can diminish the

ability of the Agency and industry to respond to technological developments. Instead the Agency has described the required tests for particular products in manufacturers' BLAs.

The GST is one of several tests listed in part 610, General Biological Product Standards, that is intended to help ensure the safety, purity, and potency of biological products administered to humans. Manufacturers of biological products are currently required to perform this test for general safety on biological products intended for administration to humans under § 610.11, on inactivated influenza vaccines under § 610.11a, and on allergenic products under § 680.3(b), unless exempted by regulation or an exemption is granted under § 610.11(g)(2).

The GST was intended to be a final check designed to detect any toxic contaminants present in the final product. The test was cited as early as 1909 (Ref. 1), and appeared in the first Code of Federal Regulations in 1938, before the establishment of Current Good Manufacturing Practices (cGMPs) for drug manufacture in the CFR, which occurred in 1963. The GST was subsequently revised to, among other things, "reflect the best current testing procedures established by the scientific community as well as to promote uniformity and specificity in the safety testing of licensed biological products" (March 15, 1976, 41 FR 10888).

A product that meets the requirements for general safety will comply with the criteria found in § 610.11(d) of the GST regulation, i.e., injected animals survive the test period; they do not exhibit any response that is not specific for or expected from the product and which may indicate a difference in quality of the product; and they weigh no less at the end of the test period than they did at the time of injection.

While originally a useful approach, as time has passed, the Agency has periodically explored the utility and efficiency of this approach. In the **Federal Register** of May 14, 1996 (61 FR 24227), FDA published a final rule exempting certain biotechnology-derived and synthetic biological products from a number of regulations applicable to biological products, including the GST (see § 601.2(c)). This action was in response to technical advances that greatly increased the ability of manufacturers to control the manufacture of, and to more fully analyze the physical and biological characteristics of, many biotechnology-derived biological products.

¹ For purposes of this proposed rulemaking, the terms "general safety test" or "GST" refer to the requirements found under Title 21 of the Code of Federal Regulations (CFR), subchapter F, parts 600 through 680 (21 CFR parts 600 through 680), specifically 21 CFR 610.11, 21 CFR 610.11a and 21 CFR 680.3(b).

Approximately 2 years later, in the **Federal Register** of April 20, 1998, FDA issued a direct final rule (DFR) and a companion proposed rule (63 FR 19399 and 19431, respectively) to expand the exceptions in § 610.11(g) to include “cellular therapy products” because, among other reasons, the Agency believed that the procedures and materials used to manufacture these products are stringently controlled and monitored. In addition, FDA provided for in the DFR and the companion proposed rule an administrative procedure for manufacturers of other biological products to request and obtain exemptions from conducting the GST. FDA took this action “. . . because the GST may not be relevant or necessary for biological products . . . currently in various stages of development” and as part of FDA’s continuing efforts at that time “to reduce the burden of unnecessary regulations on biological products without diminishing the protection of the public health” (63 FR 19399 at 19400) (FDA refers readers to the preamble of the April 20, 1998, proposed rule should they wish to obtain additional details on the history of this rulemaking).

In the **Federal Register** of August 5, 1998 (63 FR 41718) (August 1998 Notice), FDA published a DFR confirming in part, and withdrawing in part, the provisions in the DFR that published April 20, 1998. Specifically, FDA confirmed a revision to § 610.11(g)(1) to add “cellular therapy products” to the list of products exempted from the GST. However, because the Agency received significant adverse comments concerning § 610.11(g)(2), the provision of the rule that required administrative procedures for requesting an exemption from the GST regulations, § 610.11(g)(2) was withdrawn. As discussed in the August 1998 Notice, the comments were applied to the corresponding portion of the companion proposed rule and considered in developing the final rule.

After considering the comments to the DFR and companion proposed rule, in the **Federal Register** of March 4, 2003 (68 FR 10157 at 10158) (March 2003 Final Rule), FDA again provided for an administrative procedure under which manufacturers of biological products may request and obtain exemptions from conducting the GST (§ 610.11(g)(2)). In the preamble to the March 2003 Final Rule, FDA again noted that the GST may not be relevant or necessary for certain biological products (68 FR 10157).

Accordingly, § 610.11 currently includes a provision allowing

manufacturers to request an exemption from the GST. Note that this exemption provision requires manufacturers to provide supporting documentation when making their request (see 68 FR 10157 through 10159). Specifically, when requesting such an exemption, manufacturers must submit information as part of a BLA or supplement to an approved BLA establishing that because of the mode of administration, the method of preparation, or the special nature of the product, a test for general safety is unnecessary to assure the safety, purity, and potency of the product, or cannot be performed (§ 610.11(g)(2)).

Since FDA issued the March 2003 Final Rule, it has become increasingly clear that the codified GST regulations are too restrictive for certain additional biological products because they specify particular methodologies or requirements when alternatives may be available that provide the same or greater level of assurance of safety. Thus, the Agency believes that the regulations may no longer reflect the best current testing procedures established by the scientific community as a general matter (although the testing procedures may still be appropriate in certain circumstances) and that the more efficient way of prescribing testing requirements for particular products would be to allow such requirements to be specified in the BLA to enhance flexibility to make appropriate changes to testing methods.

II. Appropriate Controls Would Remain in Place

FDA believes that if this rulemaking becomes finalized as proposed, we would be able to continue to ensure that appropriate controls remain in place. For example, manufacturers of all products derived from inherently toxic substances would be required to continue to use the safety tests that are prescribed in their BLAs to control and monitor toxicity. These product-specific tests (performed in animals, cell cultures, or other systems) in conjunction with physical, chemical, and biological characterization tests define and monitor the production process and alert manufacturers to potential problems. Because these tests are tailored to the proprietary manufacturing process and are appropriate for the detection of intrinsic or extraneous toxic contaminants for a particular product or product class, they are more appropriately specified in the manufacturer’s BLA or BLA supplement than codified as regulations.

Furthermore, we anticipate that the proposal to eliminate the codified GST

regulations would encourage the implementation of the principles of the “3Rs,” to reduce, refine, and replace animal use in testing, thus addressing the need to minimize the use of animals in such testing and promoting more humane, appropriate, and specific test methods for assuring the safety of biological products.²

If the proposed rule is finalized and the GST regulations are eliminated, manufacturers would continue to be required to perform a particular safety test for certain products that present specific safety concerns, for example, testing for a specific toxicity, as set forth in an approved BLA or BLA supplement. As discussed previously, although this rulemaking proposes to eliminate the codified GST from the biologics regulations, FDA recognizes that all manufacturers that currently conduct a GST have this test described in their BLAs for their licensed products. As a result, if this proposed rule is finalized, these manufacturers would continue to be required to perform the GST unless the manufacturer’s BLA were revised through a supplement to eliminate or modify the test. FDA would review these proposed changes to a manufacturer’s approved BLA on a case-by-case basis so that we could ensure that any such action is appropriate. Thus, the removal of these biologics regulations, should this proposed rule be finalized, would not automatically revise a manufacturer’s BLA or BLA supplement.

The requirements for a licensed biological product manufacturer to report changes in its product, product labeling, production process, quality controls, equipment, facilities, or responsible personnel, as established in its approved BLA, are detailed in § 601.12. Under this regulation, manufacturers must report each change to the Agency in one of several different types of submissions. The applicable submission category depends on the potential for the change(s) at issue to have an adverse effect on the identity, strength, quality, purity, or potency of the particular biological product as it may relate to the safety or effectiveness of the product. A BLA supplement for a change that has a moderate potential to have an adverse effect on the identity, strength, quality, purity, or potency of the product as it may relate to the safety

² Interagency Coordinating Committee on the Validation of Alternative Methods (ICCVAM) Authorization Act of 2000 (42 U.S.C. 2851-3). Additional information on the Federal Government’s implementation of the principles of the 3Rs may be found at the ICCVAM Web site at <http://ntp.niehs.nih.gov/go/iccvam>.

or effectiveness of the product must be submitted under § 601.12(c) (*Changes requiring supplement submission at least 30 days prior to distribution of the product made using the change*).

As a general matter, should a manufacturer wish to no longer perform the GST described in its BLA, the Agency would consider the discontinuation of the GST to have a moderate potential to have an adverse effect on the identity, strength, quality, purity, or potency of the product as it may relate to the safety or effectiveness of the product. Accordingly, a manufacturer who desires to discontinue the GST in the approved BLA or utilize an alternative method other than the GST approved in its BLA must submit a BLA supplement reporting the change in accordance with § 601.12(c). Within 30 days of the date FDA receives the submission, FDA will determine if the change has been reported in the proper category and will notify the manufacturer if it has not. If FDA has not notified the manufacturer otherwise within 30 days after FDA receives the supplement, the manufacturer may distribute its product using the change described in the supplement. If, however, FDA determines that the information submitted in the supplement fails to demonstrate the continued safety or effectiveness of the product made using the change, FDA will try to resolve the problems with the manufacturer. For example, in the event that the Agency determines that for a particular manufacturer's unique product a GST is still necessary to assure the continued safety or effectiveness of the product (e.g., for products with concerns related to residual toxin activity/reversion to toxicity, or if the alternative method proposed is unacceptable), the Agency would notify the manufacturer of its decision within 30 days following receipt of the supplement and would work with the manufacturer to resolve the issue.

III. Highlights of the Proposed Rule

The proposed rule would remove §§ 610.11, 610.11a, and 680.3(b), the regulations that require that manufacturers of biological products perform a specified test for general safety of biological products. FDA is taking this action because the existing codified GST regulations are duplicative, outmoded, or are otherwise unnecessary to help ensure the continued safety, purity, and potency of licensed biological products.

IV. Legal Authority

FDA is issuing this regulation under the biological products provisions of the PHS Act (42 U.S.C. 262 and 264), and the drugs and general administrative provisions of the Federal Food, Drug, and Cosmetic Act (FD&C Act) (21 U.S.C. 321 *et seq.*). Under these provisions of the PHS Act and the FD&C Act, we have the authority to issue and enforce regulations designed to ensure that biological products are safe, effective, pure, and potent, and to prevent the introduction, transmission, and spread of communicable disease.

V. Proposed Effective Date

FDA is proposing that any final rule that may issue based on this proposal be effective 90 days after the date of its publication in the **Federal Register**.

VI. Analysis of Impacts

FDA has examined the impacts of the proposed rule under E.O. 12866, E.O. 13563, the Regulatory Flexibility Act (5 U.S.C. 601–612), and the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4). Executive Orders 12866 and 13563 direct Agencies to assess all costs and benefits of available regulatory alternatives and, when regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety, and other advantages; distributive impacts; and equity). The Agency believes that this proposed rule is not a significant regulatory action as defined by E.O. 12866.

The Regulatory Flexibility Act requires Agencies to analyze regulatory options that would minimize any significant impact of a rule on small entities. Because this proposed rule generally increases flexibility for safety testing and would result in the reduction of certain regulatory burdens and does not add any new regulatory responsibilities, the Agency proposes to certify that the final rule will not have a significant economic impact on a substantial number of small entities.

Section 202(a) of the Unfunded Mandates Reform Act of 1995 requires that Agencies prepare a written statement, which includes an assessment of anticipated costs and benefits, before proposing “any rule that includes any Federal mandate that may result in the expenditure by State, local, and tribal governments, in the aggregate, or by the private sector, of \$100,000,000 or more (adjusted annually for inflation) in any one year.” The current threshold after adjustment for inflation is \$141 million, using the most current (2013)

Implicit Price Deflator for the Gross Domestic Product. FDA does not expect this proposed rule to result in any 1-year expenditure that would meet or exceed this amount.

This rule proposes to amend the biologics regulations by removing GST regulations for biological products found in §§ 610.11, 610.11a and 680.3(b). FDA is proposing this action because the current codified GST regulations are duplicative of requirements that are also specified in biologics licenses, or are no longer necessary or appropriate to help ensure the safety, purity, and potency of licensed biological products. The removal of the GST regulations for biological products would not remove GST requirements specified in individual biologics license applications, however. All manufacturers that currently conduct a GST are already required, as part of the requirements specified in their biologics license applications, to perform the GST and would thus continue to be required perform the GST unless the BLA were revised to eliminate or modify the test through a supplement in accordance with § 601.12(c). Because this proposed rule would impose no additional regulatory burdens, this regulation is not anticipated to result in any compliance costs and the economic impact is expected to be minimal.

VII. The Paperwork Reduction Act of 1995

This proposed rule refers to previously approved collections of information that are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501–3520). The collections of information in § 601.12 have been approved under OMB control number 0910–0338. Therefore, FDA tentatively concludes that the proposed requirements in this document are not subject to review by OMB because they do not constitute a “new collection of information” under the PRA.

VIII. Environmental Impact

The Agency has determined under 21 CFR 25.30(h) that this action is of a type that does not individually or cumulatively have a significant effect on the human environment. Therefore, neither an environmental assessment nor an environmental impact statement is required.

IX. Federalism

FDA has analyzed this proposed rule in accordance with the principles set forth in E.O. 13132. FDA has

determined that the proposed rule, if finalized, would not contain policies that would have substantial direct effects on the States, on the relationship between the National Government and the States, or on the distribution of power and responsibilities among the various levels of government. Accordingly, the Agency tentatively concludes that the proposed rule does not contain policies that have federalism implications as defined in the E.O. and, consequently, a federalism summary impact statement is not required.

X. Request for Comments

Interested persons may submit either electronic comments regarding this document to <http://www.regulations.gov> or written comments to the Division of Dockets Management (see **ADDRESSES**). It is only necessary to send one set of comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at <http://www.regulations.gov>.

XI. Reference

FDA has placed the following reference on display in the Division of Dockets Management (see **ADDRESSES**) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday and are available electronically at <http://www.regulations.gov>.

List of Subjects

21 CFR Part 610

Biologics, Labeling, Reporting and recordkeeping requirements.

21 CFR Part 680

Biologics, Blood, Reporting and recordkeeping requirements.

Therefore under the Federal Food, Drug, and Cosmetic Act, the Public Health Service Act, and under authority delegated to the Commissioner of Food and Drugs, it is proposed that 21 CFR parts 610 and 680 be amended as follows:

PART 610—GENERAL BIOLOGICAL PRODUCTS STANDARDS

- 1. The authority citation for 21 CFR part 610 continues to read as follows:

Authority: 21 U.S.C. 321, 331, 351, 352, 353, 355, 360, 360c, 360d, 360h, 360i, 371, 372, 374, 381; 42 U.S.C. 216, 262, 263, 263a, 264.

§ 610.11 [Removed and Reserved]

- 2. Remove and reserve § 610.11.

§ 610.11a [Removed and Reserved]

- 3. Remove and reserve § 610.11a.

PART 680—ADDITIONAL STANDARDS FOR MISCELLANEOUS PRODUCTS

- 4. The authority citation for 21 CFR part 680 continues to read as follows:

Authority: 21 U.S.C. 321, 351, 352, 353, 355, 360, 371; 42 U.S.C. 216, 262, 263, 263a, 264.

§ 680.3 [Amended]

- 5. Remove and reserve paragraph (b).

Dated: August 18, 2014.

Peter Lurie,

Associate Commissioner for Policy and Planning.

ENVIRONMENTAL PROTECTION AGENCY

40 CFR Part 52

[EPA–R03–OAR–2014–0522; FRL–9915–48–Region 3]

Approval and Promulgation of Air Quality Implementation Plans; Virginia; Infrastructure Requirements for the 2010 Sulfur Dioxide National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency (EPA).

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve a State Implementation Plan (SIP) revision submitted by the Commonwealth of Virginia pursuant to the Clean Air Act (CAA). Whenever new or revised National Ambient Air Quality Standards (NAAQS) are promulgated, the CAA requires states to submit a plan for the implementation, maintenance, and enforcement of such NAAQS. The plan is required to address basic program elements including, but not limited to, regulatory structure, monitoring, modeling, legal authority, and adequate resources necessary to assure attainment and maintenance of the standards. These elements are referred to as infrastructure requirements. The Commonwealth of Virginia has made a submittal addressing the infrastructure

requirements for the 2010 sulfur dioxide (SO₂) NAAQS.

DATES: Written comments must be received on or before September 22, 2014.

ADDRESSES: Submit your comments, identified by Docket ID Number EPA–R03–OAR–2014–0522 by one of the following methods:

A. *www.regulations.gov*. Follow the on-line instructions for submitting comments.

B. *Email:* fernandez.cristina@epa.gov.

C. *Mail:* EPA–R03–OAR–2014–0522, Cristina Fernandez, Associate Director, Office of Air Program Planning, Air Protection Division, Mailcode 3AP30, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103.

D. *Hand Delivery:* At the previously-listed EPA Region III address. Such deliveries are only accepted during the Docket's normal hours of operation, and special arrangements should be made for deliveries of boxed information.

Instructions: Direct your comments to Docket ID No. EPA–R03–OAR–2014–0522. EPA's policy is that all comments received will be included in the public docket without change, and may be made available online at www.regulations.gov, including any personal information provided, unless the comment includes information claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit information that you consider to be CBI or otherwise protected through www.regulations.gov or email. The www.regulations.gov Web site is an "anonymous access" system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through www.regulations.gov, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses.

Docket: All documents in the electronic docket are listed in the

www.regulations.gov index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in *www.regulations.gov* or in hard copy during normal business hours at the Air Protection Division, U.S. Environmental Protection Agency, Region III, 1650 Arch Street, Philadelphia, Pennsylvania 19103. Copies of the State submittal are available at the Virginia Department of Environmental Quality, 629 East Main Street, Richmond, Virginia 23219.

FOR FURTHER INFORMATION CONTACT: Ellen Schmitt, (215) 814-5787, or by email at *schmitt.ellen@epa.gov*.

SUPPLEMENTARY INFORMATION: On June 23, 2014, the Commonwealth of Virginia through the Virginia Department of Environmental Quality (VADEQ) submitted a revision to the Commonwealth's SIP to satisfy the requirements of Section 110(a)(2) of the CAA for the 2010 SO₂ NAAQS.

I. Background

On June 22, 2010, (75 FR 35520), EPA promulgated a revised NAAQS for the 1-hour primary SO₂ at a level of 75 parts per billion (ppb), based on a 3-year average of the annual 99th percentile of 1-hour daily maximum concentrations. Section 110(a) of the CAA requires states to submit SIPs to provide for the implementation, maintenance, and enforcement of a new or revised NAAQS. Specifically, Section 110(a)(1) requires states to submit SIPs meeting the applicable requirements of Section 110(a)(2) within three years following the promulgation of such NAAQS, or within such shorter period as EPA may prescribe, and Section 110(a)(2) requires states to address specific elements for monitoring, basic program requirements and legal authority that are designed to assure attainment and maintenance of the newly established or revised NAAQS. The contents of a submission may vary depending upon the facts and circumstances. In particular, the data and analytical tools available at the time the state develops and submits the SIP for a new or revised NAAQS affects the content of the submission. The contents of such SIP submissions may also vary depending upon what provisions the state's existing SIP already contains.

II. Summary of SIP Revision

On June 23, 2014, VADEQ provided a SIP revision to satisfy certain Section 110(a)(2) requirements of the CAA for the 2010 SO₂ NAAQS. This revision addressed the following infrastructure elements which EPA is proposing to approve: Section 110(a)(2)(A), (B), (C), (D)(i)(II) (prevention of significant deterioration), (D)(ii), (E)(i), (E)(iii), (F), (G), (H), (J) (consultation, public notification, and prevention of significant deterioration), (K), (L), and (M). A detailed summary of EPA's review and rationale for approving Virginia's submittal may be found in the Technical Support Document (TSD) for this rulemaking action which is available on line at *www.regulations.gov*, Docket ID Number EPA-R03-OAR-2014-0522.

This rulemaking action does not include any proposed action on Section 110(a)(2)(I) of the CAA which pertains to the nonattainment requirements of part D, Title I of the CAA, because this element is not required to be submitted by the 3-year submission deadline of CAA Section 110(a)(1), and will be addressed in a separate process. This rulemaking action also does not include proposed action on Section 110(a)(2)(D)(i)(I) of the CAA because Virginia's submittal did not include a submittal for this element; therefore, EPA will take later, separate action on Section 110(a)(2)(D)(i)(I) for the 2010 SO₂ NAAQS for Virginia. At this time, EPA is not proposing action on Section 110(a)(2)(D)(i)(II) or (J) for visibility protection for the 2010 SO₂ NAAQS. Although Virginia's infrastructure SIP submittal for the 2010 SO₂ NAAQS referred to Virginia's regional haze SIP for addressing requirements in Section 110(a)(2)(D)(i)(II) and (J) for visibility protection, EPA intends to take separate action on Virginia's submittal for these elements at a later date as explained in the TSD. Finally, EPA will take later, separate action with respect to Section 110(a)(2)(E)(ii) regarding CAA Section 128 requirements for State Boards for the 2010 SO₂ NAAQS. EPA is soliciting public comments on the issues discussed in this document. These comments will be considered before taking final action.

III. EPA's Approach To Review Infrastructure SIPs

EPA is acting upon the SIP submission from Virginia that addresses the infrastructure requirements of Section 110(a)(1) and (2) of the CAA for the 2010 SO₂ NAAQS. The requirement for states to make a SIP submission of this type arises out of Section 110(a)(1).

Pursuant to Section 110(a)(1), states must make SIP submissions "within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof)," and these SIP submissions are to provide for the "implementation, maintenance, and enforcement" of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon EPA's taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that "[e]ach such plan" submission must address.

EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of Section 110(a)(1) and (2) as "infrastructure SIP" submissions. Although the term "infrastructure SIP" does not appear in the CAA, EPA uses the term to distinguish this particular type of SIP submission from submissions that are intended to satisfy other SIP requirements under the CAA, such as "nonattainment SIP" or "attainment plan SIP" submissions to address the nonattainment planning requirements of part D of title I of the CAA, "regional haze SIP" submissions required by EPA rule to address the visibility protection requirements of CAA Section 169A, and nonattainment new source review permit program submissions to address the permit requirements of CAA, title I, part D.

Section 110(a)(1) addresses the timing and general requirements for infrastructure SIP submissions and Section 110(a)(2) provides more details concerning the required contents of these submissions. The list of required elements provided in Section 110(a)(2) contains a wide variety of disparate provisions, some of which pertain to required legal authority, some of which pertain to required substantive program provisions, and some of which pertain to requirements for both authority and substantive program provisions.¹ EPA therefore believes that while the timing requirement in Section 110(a)(1) is unambiguous, some of the other statutory provisions are ambiguous. In particular, EPA believes that the list of

¹ For example: Section 110(a)(2)(E)(i) provides that states must provide assurances that they have adequate legal authority under state and local law to carry out the SIP; Section 110(a)(2)(C) provides that states must have a SIP-approved program to address certain sources as required by part C of title I of the CAA; and Section 110(a)(2)(G) provides that states must have legal authority to address emergencies as well as contingency plans that are triggered in the event of such emergencies.

required elements for infrastructure SIP submissions provided in Section 110(a)(2) contains ambiguities concerning what is required for inclusion in an infrastructure SIP submission.

The following examples of ambiguities illustrate the need for EPA to interpret some Section 110(a)(1) and Section 110(a)(2) requirements with respect to infrastructure SIP submissions for a given new or revised NAAQS. One example of ambiguity is that Section 110(a)(2) requires that “each” SIP submission must meet the list of requirements therein, while EPA has long noted that this literal reading of the statute is internally inconsistent and would create a conflict with the nonattainment provisions in part D of title I of the CAA, which specifically address nonattainment SIP requirements.² Section 110(a)(2)(I) pertains to nonattainment SIP requirements and part D addresses when attainment plan SIP submissions to address nonattainment area requirements are due. For example, Section 172(b) requires EPA to establish a schedule for submission of such plans for certain pollutants when the Administrator promulgates the designation of an area as nonattainment, and Section 107(d)(1)(B) allows up to two years or in some cases three years, for such designations to be promulgated.³ This ambiguity illustrates that rather than apply all the stated requirements of Section 110(a)(2) in a strict literal sense, EPA must determine which provisions of Section 110(a)(2) are applicable for a particular infrastructure SIP submission.

Another example of ambiguity within Section 110(a)(1) and (2) with respect to infrastructure SIPs pertains to whether states must meet all of the infrastructure SIP requirements in a single SIP submission, and whether EPA must act upon such SIP submission in a single action. Although Section 110(a)(1) directs states to submit “a plan” to meet these requirements, EPA interprets the CAA to allow states to make multiple

SIP submissions separately addressing infrastructure SIP elements for the same NAAQS. If states elect to make such multiple SIP submissions to meet the infrastructure SIP requirements, EPA can elect to act on such submissions either individually or in a larger combined action.⁴ Similarly, EPA interprets the CAA to allow it to take action on the individual parts of one larger, comprehensive infrastructure SIP submission for a given NAAQS without concurrent action on the entire submission. For example, EPA has sometimes elected to act at different times on various elements and sub-elements of the same infrastructure SIP submission.⁵

Ambiguities within Section 110(a)(1) and (2) may also arise with respect to infrastructure SIP submission requirements for different NAAQS. Thus, EPA notes that not every element of Section 110(a)(2) would be relevant, or as relevant, or relevant in the same way, for each new or revised NAAQS. The states’ attendant infrastructure SIP submissions for each NAAQS therefore could be different. For example, the monitoring requirements that a state might need to meet in its infrastructure SIP submission for purposes of Section 110(a)(2)(B) could be very different for different pollutants, for example because the content and scope of a state’s infrastructure SIP submission to meet this element might be very different for an entirely new NAAQS than for a minor revision to an existing NAAQS.⁶

⁴ See, e.g., “Approval and Promulgation of Implementation Plans; New Mexico; Revisions to the New Source Review (NSR) State Implementation Plan (SIP); Prevention of Significant Deterioration (PSD) and Nonattainment New Source Review (NNSR) Permitting,” 78 FR 4339 (January 22, 2013) (EPA’s final action approving the structural PSD elements of the New Mexico SIP submitted by the State separately to meet the requirements of EPA’s 2008 PM_{2.5} NSR rule), and “Approval and Promulgation of Air Quality Implementation Plans; New Mexico; Infrastructure and Interstate Transport Requirements for the 2006 PM_{2.5} NAAQS,” 78 FR 4337 (January 22, 2013) (EPA’s final action on the infrastructure SIP for the 2006 PM_{2.5} NAAQS).

⁵ On December 14, 2007, the State of Tennessee, through the Tennessee Department of Environment and Conservation, made a SIP revision to EPA demonstrating that the State meets the requirements of Sections 110(a)(1) and (2). EPA proposed action for infrastructure SIP elements (C) and (J) on January 23, 2012 (77 FR 3213) and took final action on March 14, 2012 (77 FR 14976). On April 16, 2012 (77 FR 22533) and July 23, 2012 (77 FR 42997), EPA took separate proposed and final actions on all other Section 110(a)(2) infrastructure SIP elements of Tennessee’s December 14, 2007 submittal.

⁶ For example, implementation of the 1997 PM_{2.5} NAAQS required the deployment of a system of new monitors to measure ambient levels of that new indicator species for the new NAAQS.

EPA notes that interpretation of Section 110(a)(2) is also necessary when EPA reviews other types of SIP submissions required under the CAA. Therefore, as with infrastructure SIP submissions, EPA also has to identify and interpret the relevant elements of Section 110(a)(2) that logically apply to these other types of SIP submissions. For example, Section 172(c)(7) requires that attainment plan SIP submissions required by part D have to meet the “applicable requirements” of Section 110(a)(2). Thus, for example, attainment plan SIP submissions must meet the requirements of Section 110(a)(2)(A) regarding enforceable emission limits and control measures and Section 110(a)(2)(E)(i) regarding air agency resources and authority. By contrast, it is clear that attainment plan SIP submissions required by part D would not need to meet the portion of Section 110(a)(2)(C) that pertains to the prevention of significant deterioration (PSD) program required in part C of title I of the CAA, because PSD does not apply to a pollutant for which an area is designated nonattainment and thus subject to part D planning requirements. As this example illustrates, each type of SIP submission may implicate some elements of Section 110(a)(2) but not others.

Given the potential for ambiguity in some of the statutory language of Section 110(a)(1) and Section 110(a)(2), EPA believes that it is appropriate to interpret the ambiguous portions of Section 110(a)(1) and Section 110(a)(2) in the context of acting on a particular SIP submission. In other words, EPA assumes that Congress could not have intended that each and every SIP submission, regardless of the NAAQS in question or the history of SIP development for the relevant pollutant, would meet each of the requirements, or meet each of them in the same way. Therefore, EPA has adopted an approach under which it reviews infrastructure SIP submissions against the list of elements in Section 110(a)(2), but only to the extent each element applies for that particular NAAQS.

Historically, EPA has elected to use guidance documents to make recommendations to states for infrastructure SIPs, in some cases conveying needed interpretations on newly arising issues and in some cases conveying interpretations that have already been developed and applied to individual SIP submissions for particular elements.⁷ EPA most recently

⁷ EPA notes, however, that nothing in the CAA requires EPA to provide guidance or to promulgate

² See, e.g., “Rule To Reduce Interstate Transport of Fine Particulate Matter and Ozone (Clean Air Interstate Rule); Revisions to Acid Rain Program; Revisions to the NO_x SIP Call; Final Rule,” 70 FR 25162, at 25163–65 (May 12, 2005) (explaining relationship between timing requirement of Section 110(a)(2)(D) versus Section 110(a)(2)(I)).

³ EPA notes that this ambiguity within Section 110(a)(2) is heightened by the fact that various subparts of part D set specific dates for submission of certain types of SIP submissions in designated nonattainment areas for various pollutants. Note, e.g., that Section 182(a)(1) provides specific dates for submission of emissions inventories for the ozone NAAQS. Some of these specific dates are necessarily later than three years after promulgation of the new or revised NAAQS.

issued guidance for infrastructure SIPs on September 13, 2013 (2013 Guidance).⁸ EPA developed this document to provide states with up-to-date guidance for infrastructure SIPs for any new or revised NAAQS. Within this guidance, EPA describes the duty of states to make infrastructure SIP submissions to meet basic structural SIP requirements within three years of promulgation of a new or revised NAAQS. EPA also made recommendations about many specific subsections of Section 110(a)(2) that are relevant in the context of infrastructure SIP submissions.⁹ The guidance also discusses the substantively important issues that are germane to certain subsections of Section 110(a)(2). Significantly, EPA interprets Section 110(a)(1) and (2) such that infrastructure SIP submissions need to address certain issues and need not address others. Accordingly, EPA reviews each infrastructure SIP submission for compliance with the applicable statutory provisions of Section 110(a)(2), as appropriate.

As an example, Section 110(a)(2)(E)(ii) is a required element of Section 110(a)(2) for infrastructure SIP submissions. Under this element, a state must meet the substantive requirements of Section 128, which pertain to state boards that approve permits or enforcement orders and heads of executive agencies with similar powers. Thus, EPA reviews infrastructure SIP submissions to ensure that the state's SIP appropriately addresses the requirements of Section 110(a)(2)(E)(ii) and Section 128. The 2013 Guidance explains EPA's interpretation that there may be a variety of ways by which states can appropriately address these substantive statutory requirements,

regulations for infrastructure SIP submissions. The CAA directly applies to states and requires the submission of infrastructure SIP submissions, regardless of whether or not EPA provides guidance or regulations pertaining to such submissions. EPA elects to issue such guidance in order to assist states, as appropriate.

⁸ "Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2)," Memorandum from Stephen D. Page, September 13, 2013.

⁹ EPA's September 13, 2013, guidance did not make recommendations with respect to infrastructure SIP submissions to address Section 110(a)(2)(D)(i)(I). EPA issued the guidance shortly after the U.S. Supreme Court agreed to review the DC Circuit decision in *EME Homer City*, 696 F.3d 7 (D.C. Cir. 2012) which had interpreted the requirements of Section 110(a)(2)(D)(i)(I). In light of the uncertainty created by ongoing litigation, EPA elected not to provide additional guidance on the requirements of Section 110(a)(2)(D)(i)(I) at that time. As the guidance is neither binding nor required by statute, whether EPA elects to provide guidance on a particular section has no impact on a state's CAA obligations.

depending on the structure of an individual state's permitting or enforcement program (e.g., whether permits and enforcement orders are approved by a multi-member board or by a head of an executive agency). However they are addressed by the state, the substantive requirements of Section 128 are necessarily included in EPA's evaluation of infrastructure SIP submissions because Section 110(a)(2)(E)(ii) explicitly requires that the state satisfy the provisions of Section 128.

As another example, EPA's review of infrastructure SIP submissions with respect to the PSD program requirements in Section 110(a)(2)(C), (D)(i)(II), and (J) focuses upon the structural PSD program requirements contained in part C and EPA's PSD regulations. Structural PSD program requirements include provisions necessary for the PSD program to address all regulated sources and NSR pollutants, including Green House Gases (GHGs). By contrast, structural PSD program requirements do not include provisions that are not required under EPA's regulations at 40 CFR 51.166 but are merely available as an option for the state, such as the option to provide grandfathering of complete permit applications with respect to the 2013 PM_{2.5} NAAQS. Accordingly, the latter optional provisions are types of provisions EPA considers irrelevant in the context of an infrastructure SIP action.

For other Section 110(a)(2) elements, however, EPA's review of a state's infrastructure SIP submission focuses on assuring that the state's SIP meets basic structural requirements. For example, Section 110(a)(2)(C) includes, *inter alia*, the requirement that states have a program to regulate minor new sources. Thus, EPA evaluates whether the state has an EPA-approved minor new source review program and whether the program addresses the pollutants relevant to that NAAQS. In the context of acting on an infrastructure SIP submission, however, EPA does not think it is necessary to conduct a review of each and every provision of a state's existing minor source program (*i.e.*, already in the existing SIP) for compliance with the requirements of the CAA and EPA's regulations that pertain to such programs.

With respect to certain other issues, EPA does not believe that an action on a state's infrastructure SIP submission is necessarily the appropriate type of action in which to address possible deficiencies in a state's existing SIP. These issues include: (i) Existing

provisions related to excess emissions from sources during periods of startup, shutdown, or malfunction that may be contrary to the CAA and EPA's policies addressing such excess emissions (SSM); (ii) existing provisions related to "director's variance" or "director's discretion" that may be contrary to the CAA because they purport to allow revisions to SIP-approved emissions limits while limiting public process or not requiring further approval by EPA; and (iii) existing provisions for PSD programs that may be inconsistent with current requirements of EPA's "Final NSR Improvement Rule," 67 FR 80186 (December 31, 2002), as amended by 72 FR 32526 (June 13, 2007) (NSR Reform). Thus, EPA believes it may approve an infrastructure SIP submission without scrutinizing the totality of the existing SIP for such potentially deficient provisions and may approve the submission even if it is aware of such existing provisions.¹⁰ It is important to note that EPA's approval of a state's infrastructure SIP submission should not be construed as explicit or implicit re-approval of any existing potentially deficient provisions that relate to the three specific issues just described.

EPA's approach to review of infrastructure SIP submissions is to identify the CAA requirements that are logically applicable to that submission. EPA believes that this approach to the review of a particular infrastructure SIP submission is appropriate, because it would not be reasonable to read the general requirements of Section 110(a)(1) and the list of elements in Section 110(a)(2) as requiring review of each and every provision of a state's existing SIP against all requirements in the CAA and EPA regulations merely for purposes of assuring that the state in question has the basic structural elements for a functioning SIP for a new or revised NAAQS. Because SIPs have grown by accretion over the decades as statutory and regulatory requirements under the CAA have evolved, they may include some outmoded provisions and historical artifacts. These provisions, while not fully up to date, nevertheless may not pose a significant problem for the purposes of "implementation, maintenance, and enforcement" of a new or revised NAAQS when EPA evaluates adequacy of the infrastructure SIP submission. EPA believes that a

¹⁰ By contrast, EPA notes that if a state were to include a new provision in an infrastructure SIP submission that contained a legal deficiency, such as a new exemption for excess emissions during SSM events, then EPA would need to evaluate that provision for compliance against the rubric of applicable CAA requirements in the context of the action on the infrastructure SIP.

better approach is for states and EPA to focus attention on those elements of Section 110(a)(2) of the CAA most likely to warrant a specific SIP revision due to the promulgation of a new or revised NAAQS or other factors.

For example, EPA's 2013 Guidance gives simpler recommendations with respect to carbon monoxide than other NAAQS pollutants to meet the visibility requirements of Section 110(a)(2)(D)(i)(II), because carbon monoxide does not affect visibility. As a result, an infrastructure SIP submission for any future new or revised NAAQS for carbon monoxide need only state this fact in order to address the visibility prong of Section 110(a)(2)(D)(i)(II).

Finally, EPA believes that its approach with respect to infrastructure SIP requirements is based on a reasonable reading of Section 110(a)(1) and (2) because the CAA provides other avenues and mechanisms to address specific substantive deficiencies in existing SIPs. These other statutory tools allow EPA to take appropriately tailored action, depending upon the nature and severity of the alleged SIP deficiency. Section 110(k)(5) authorizes EPA to issue a "SIP call" whenever the Agency determines that a state's SIP is substantially inadequate to attain or maintain the NAAQS, to mitigate interstate transport, or to otherwise comply with the CAA.¹¹ Section 110(k)(6) authorizes EPA to correct errors in past actions, such as past approvals of SIP submissions.¹² Significantly, EPA's determination that an action on a state's infrastructure SIP submission is not the appropriate time and place to address all potential existing SIP deficiencies does not preclude EPA's subsequent reliance on provisions in Section 110(a)(2) as part of the basis for action to correct those deficiencies at a later time. For example,

¹¹ For example, EPA issued a SIP call to Utah to address specific existing SIP deficiencies related to the treatment of excess emissions during SSM events. See "Finding of Substantial Inadequacy of Implementation Plan; Call for Utah State Implementation Plan Revisions," 74 FR 21639 (April 18, 2011).

¹² EPA has used this authority to correct errors in past actions on SIP submissions related to PSD programs. See "Limitation of Approval of Prevention of Significant Deterioration Provisions Concerning Greenhouse Gas Emitting-Sources in State Implementation Plans; Final Rule," 75 FR 82536 (December 30, 2010). EPA has previously used its authority under CAA Section 110(k)(6) to remove numerous other SIP provisions that the Agency determined it had approved in error. See, e.g., 61 FR 38664 (July 25, 1996) and 62 FR 34641 (June 27, 1997) (corrections to American Samoa, Arizona, California, Hawaii, and Nevada SIPs); 69 FR 67062, November 16, 2004 (corrections to California SIP); and 74 FR 57051 (November 3, 2009) (corrections to Arizona and Nevada SIPs).

although it may not be appropriate to require a state to eliminate all existing inappropriate director's discretion provisions in the course of acting on an infrastructure SIP submission, EPA believes that Section 110(a)(2)(A) may be among the statutory bases that EPA relies upon in the course of addressing such deficiency in a subsequent action.¹³

IV. Proposed Action

EPA is proposing to approve the following elements of Virginia's June 23, 2014 SIP revision for the 2010 SO₂ NAAQS: Section 110(a)(2)(A), (B), (C), (D)(i)(II) (prevention of significant deterioration), (D)(ii), (E)(i), (E)(iii), (F), (G), (H), (J) (consultation, public notification, and prevention of significant deterioration), (K), (L), and (M). Virginia's SIP revision provides the basic program elements specified in Section 110(a)(2) necessary to implement, maintain, and enforce the 2010 SO₂ NAAQS. This proposed rulemaking action does not include action on Section 110(a)(2)(I) which pertains to the nonattainment planning requirements of part D, Title I of the CAA, because this element is not required to be submitted by the 3-year submission deadline of Section 110(a)(1) of the CAA, and will be addressed in a separate process. Additionally, EPA will take later, separate action on Section 110(a)(2)(D)(i)(I) (interstate transport of emissions), (D)(i)(II) (visibility protection), (J) (visibility protection) and (E)(ii) (Section 128, "State Boards") for the 2010 SO₂ NAAQS as discussed above and in the TSD. EPA is soliciting public comments on the issues discussed in this document. These comments will be considered before taking final action.

V. General Information Pertaining to SIP Submittals From the Commonwealth of Virginia

In 1995, Virginia adopted legislation that provides, subject to certain conditions, for an environmental assessment (audit) "privilege" for voluntary compliance evaluations performed by a regulated entity. The legislation further addresses the relative burden of proof for parties either asserting the privilege or seeking disclosure of documents for which the

privilege is claimed. Virginia's legislation also provides, subject to certain conditions, for a penalty waiver for violations of environmental laws when a regulated entity discovers such violations pursuant to a voluntary compliance evaluation and voluntarily discloses such violations to the Commonwealth and takes prompt and appropriate measures to remedy the violations. Virginia's Voluntary Environmental Assessment Privilege Law, Va. Code Sec. 10.1-1198, provides a privilege that protects from disclosure documents and information about the content of those documents that are the product of a voluntary environmental assessment. The Privilege Law does not extend to documents or information that: (1) Are generated or developed before the commencement of a voluntary environmental assessment; (2) are prepared independently of the assessment process; (3) demonstrate a clear, imminent and substantial danger to the public health or environment; or (4) are required by law.

On January 12, 1998, the Commonwealth of Virginia Office of the Attorney General provided a legal opinion that states that the Privilege Law, Va. Code Sec. 10.1-1198, precludes granting a privilege to documents and information "required by law," including documents and information "required by Federal law to maintain program delegation, authorization or approval," since Virginia must "enforce Federally authorized environmental programs in a manner that is no less stringent than their Federal counterparts. . . ." The opinion concludes that "[r]egarding § 10.1-1198, therefore, documents or other information needed for civil or criminal enforcement under one of these programs could not be privileged because such documents and information are essential to pursuing enforcement in a manner required by Federal law to maintain program delegation, authorization or approval."

Virginia's Immunity law, Va. Code Sec. 10.1-1199, provides that "[t]o the extent consistent with requirements imposed by Federal law," any person making a voluntary disclosure of information to a state agency regarding a violation of an environmental statute, regulation, permit, or administrative order is granted immunity from administrative or civil penalty. The Attorney General's January 12, 1998 opinion states that the quoted language renders this statute inapplicable to enforcement of any Federally authorized programs, since "no immunity could be afforded from administrative, civil, or criminal penalties because granting

¹³ See, e.g., EPA's disapproval of a SIP submission from Colorado on the grounds that it would have included a director's discretion provision inconsistent with CAA requirements, including Section 110(a)(2)(A). See, e.g., 75 FR 42342 at 42344 (July 21, 2010) (proposed disapproval of director's discretion provisions); 76 FR 4540 (January 26, 2011) (final disapproval of such provisions).

such immunity would not be consistent with Federal law, which is one of the criteria for immunity.”

Therefore, EPA has determined that Virginia's Privilege and Immunity statutes will not preclude the Commonwealth from enforcing its program consistent with the Federal requirements. In any event, because EPA has also determined that a state audit privilege and immunity law can affect only state enforcement and cannot have any impact on Federal enforcement authorities, EPA may at any time invoke its authority under the CAA, including, for example, Sections 113, 167, 205, 211 or 213, to enforce the requirements or prohibitions of the state plan, independently of any state enforcement effort. In addition, citizen enforcement under Section 304 of the CAA is likewise unaffected by this, or any, state audit privilege or immunity law.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the CAA and applicable Federal regulations. 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this action merely approves state law as meeting Federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

- is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed rule, which satisfies certain infrastructure requirements of Section 110(a)(2) of the CAA for the 2010 SO₂ NAAQS for the Commonwealth of Virginia, does not have tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000), because the SIP is not approved to apply in Indian country located in the state, and EPA notes that it will not impose substantial direct costs on tribal governments or preempt tribal law.

[EPA–R04–OAR–2012–0694; FRL–9915–64–Region 4]

Approval and Promulgation of Implementation Plans; South Carolina; Infrastructure Requirements for the 2008 8-Hour Ozone National Ambient Air Quality Standards

AGENCY: Environmental Protection Agency.

ACTION: Proposed rule.

SUMMARY: The Environmental Protection Agency (EPA) is proposing to approve the July 17, 2012, State Implementation Plan (SIP) submission, provided by the South Carolina Department of Health and Environmental Control (SC DHEC) for inclusion into the South Carolina SIP. This proposal pertains to the Clean

Air Act (CAA or the Act) infrastructure requirements for the 2008 8-hour ozone national ambient air quality standards (NAAQS). The CAA requires that each state adopt and submit a SIP for the implementation, maintenance, and enforcement of each NAAQS promulgated by EPA, which is commonly referred to as an “infrastructure” SIP. SC DHEC certified that the South Carolina SIP contains provisions that ensure the 2008 8-hour ozone NAAQS is implemented, enforced, and maintained in South Carolina (hereafter referred to as an “infrastructure SIP submission”). With the exception of provisions pertaining to prevention of significant deterioration (PSD) permitting, interstate transport, and visibility protection requirements, EPA is proposing to determine that South Carolina's infrastructure SIP submission, provided to EPA on July 17, 2012, addresses the required infrastructure elements for the 2008 8-hour ozone NAAQS.

DATES: Written comments must be received on or before September 22, 2014.

ADDRESSES: Submit your comments, identified by Docket ID No. EPA–R04–OAR–2012–0694, by one of the following methods:

1. <http://www.regulations.gov>: Follow the on-line instructions for submitting comments.

2. *Email:* R4-RDS@epa.gov.

3. *Fax:* (404) 562–9019.

4. *Mail:* “EPA–R04–OAR–2012–0694,” Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960.

5. *Hand Delivery or Courier:* Lynorae Benjamin, Chief, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. Such deliveries are only accepted during the Regional Office's normal hours of operation. The Regional Office's official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m. excluding Federal holidays.

Instructions: Direct your comments to Docket ID No. EPA–R04–OAR–2012–0694. EPA's policy is that all comments received will be included in the public docket without change and may be made available online at <http://www.regulations.gov>, including any personal information provided, unless the comment includes information

claimed to be Confidential Business Information (CBI) or other information whose disclosure is restricted by statute. Do not submit through <http://www.regulations.gov> or email, information that you consider to be CBI or otherwise protected. The <http://www.regulations.gov> Web site is an “anonymous access” system, which means EPA will not know your identity or contact information unless you provide it in the body of your comment. If you send an email comment directly to EPA without going through <http://www.regulations.gov>, your email address will be automatically captured and included as part of the comment that is placed in the public docket and made available on the Internet. If you submit an electronic comment, EPA recommends that you include your name and other contact information in the body of your comment and with any disk or CD-ROM you submit. If EPA cannot read your comment due to technical difficulties and cannot contact you for clarification, EPA may not be able to consider your comment. Electronic files should avoid the use of special characters, any form of encryption, and be free of any defects or viruses. For additional information about EPA’s public docket visit the EPA Docket Center homepage at <http://www.epa.gov/epahome/dockets.htm>.

Docket: All documents in the electronic docket are listed in the <http://www.regulations.gov> index. Although listed in the index, some information is not publicly available, i.e., CBI or other information whose disclosure is restricted by statute. Certain other material, such as copyrighted material, is not placed on the Internet and will be publicly available only in hard copy form. Publicly available docket materials are available either electronically in <http://www.regulations.gov> or in hard copy at the Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency, Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. EPA requests that if at all possible, you contact the person listed in the **FOR FURTHER INFORMATION CONTACT** section to schedule your inspection. The Regional Office’s official hours of business are Monday through Friday, 8:30 a.m. to 4:30 p.m., excluding Federal holidays.

FOR FURTHER INFORMATION CONTACT: Nacosta C. Ward, Regulatory Development Section, Air Planning Branch, Air, Pesticides and Toxics Management Division, U.S. Environmental Protection Agency,

Region 4, 61 Forsyth Street SW., Atlanta, Georgia 30303–8960. The telephone number is (404) 562–9140. Ms. Ward can be reached via electronic mail at ward.nacosta@epa.gov.

- IV. What is EPA’s analysis of how South Carolina addressed the elements of sections 110(a)(1) and (2) “infrastructure” provisions?
- V. Proposed Action
- VI. Statutory and Executive Order Reviews

I. Background and Overview

On March 27, 2008, EPA promulgated a revised NAAQS for ozone based on 8-hour average concentrations. EPA revised the level of the 8-hour ozone NAAQS to 0.075 parts per million. See 77 FR 16436. Pursuant to section 110(a)(1) of the CAA, states are required to submit SIPs meeting the applicable requirements of section 110(a)(2) within three years after promulgation of a new or revised NAAQS or within such shorter period as EPA may prescribe. Section 110(a)(2) requires states to address basic SIP elements such as requirements for monitoring, basic program requirements and legal authority that are designed to assure attainment and maintenance of the NAAQS. States were required to submit such SIPs for the 2008 8-hour ozone NAAQS to EPA no later than March 2011.¹

Today’s action is proposing to approve South Carolina’s infrastructure SIP submission for the applicable requirements of the 2008 8-hour ozone NAAQS, with the exception of the PSD permitting requirements for major sources of section 110(a)(2)(C) and (J), the interstate transport requirements of section 110(a)(2)(D)(i)(I) and (II) (prongs 1 through 4), and the visibility requirements of 110(a)(2)(J). With respect to South Carolina’s infrastructure SIP submission related to the provisions pertaining to the PSD

¹ In these infrastructure SIP submissions States generally certify evidence of compliance with sections 110(a)(1) and (2) of the CAA through a combination of state regulations and statutes, some of which have been incorporated into the federally-approved SIP. In addition, certain federally-approved, non-SIP regulations may also be appropriate for demonstrating compliance with sections 110(a)(1) and (2). Throughout this rulemaking, unless otherwise indicated, the term “Regulation” indicates that the cited regulation has been approved into South Carolina’s federally-approved SIP. The term “S.C. Code Ann.” indicates cited South Carolina state statutes, which are not a part of the SIP unless otherwise indicated.

permitting requirements for major sources of section 110(a)(2)(C) and (J), the interstate transport requirements of section 110(a)(2)(D)(i)(I) and (II), and the visibility requirements of 110(a)(2)(J), EPA is not proposing any action today regarding these requirements. EPA will act on these portions of the submission in a separate action. Further, this action is not approving any specific rule, but rather proposing that South Carolina’s already approved SIP meets certain CAA requirements.

II. What elements are required under sections 110(a)(1) and (2)?

Section 110(a) of the CAA requires states to submit SIPs to provide for the implementation, maintenance, and enforcement of a new or revised NAAQS within three years following the promulgation of such NAAQS, or within such shorter period as EPA may prescribe. Section 110(a) imposes the obligation upon states to make a SIP submission to EPA for a new or revised NAAQS, but the contents of that submission may vary depending upon the facts and circumstances. In particular, the data and analytical tools available at the time the state develops and submits the SIP for a new or revised NAAQS affects the content of the submission. The contents of such SIP submissions may also vary depending upon what provisions the state’s existing SIP already contains. In the case of the 2008 8-hour ozone NAAQS, states typically have met the basic program elements required in section 110(a)(2) through earlier SIP submissions in connection with the 1997 8-hour ozone NAAQS.

More specifically, section 110(a)(1) provides the procedural and timing requirements for SIPs. Section 110(a)(2) lists specific elements that states must meet for the “infrastructure” SIP requirements related to a newly established or revised NAAQS. As mentioned above, these requirements include basic SIP elements such as requirements for monitoring, basic program requirements and legal authority that are designed to assure attainment and maintenance of the NAAQS. The requirements that are the subject of this proposed rulemaking are summarized below and in EPA’s September 13, 2013, memorandum entitled “Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean Air Act Sections 110(a)(1) and 110(a)(2).”²

² Two elements identified in section 110(a)(2) are not governed by the three year submission deadline of section 110(a)(1) because SIPs incorporating

- 110(a)(2)(A): Emission Limits and Other Control Measures
- 110(a)(2)(B): Ambient Air Quality Monitoring/Data System
- 110(a)(2)(C): Programs for Enforcement of Control Measures and for Construction or Modification of Stationary Sources³
- 110(a)(2)(D)(i)(I) and (II): Interstate Pollution Transport
- 110(a)(2)(D)(ii): Interstate Pollution Abatement and International Air Pollution
- 110(a)(2)(E): Adequate Resources and Authority, Conflict of Interest, and Oversight of Local Governments and Regional Agencies
- 110(a)(2)(F): Stationary Source Monitoring and Reporting
- 110(a)(2)(G): Emergency Powers
- 110(a)(2)(H): SIP revisions
- 110(a)(2)(I): Plan Revisions for Nonattainment Areas⁴
- 110(a)(2)(J): Consultation with Government Officials, Public Notification, and Prevention of Significant Deterioration (PSD) and Visibility Protection
- 110(a)(2)(K): Air Quality Modeling and Submission of Modeling Data
- 110(a)(2)(L): Permitting fees
- 110(a)(2)(M): Consultation and Participation by Affected Local Entities

III. What is EPA's approach to the review of infrastructure SIP submissions?

EPA is acting upon the SIP submission from South Carolina that addresses the infrastructure requirements of CAA sections 110(a)(1) and 110(a)(2) for the 2008 8-hour ozone NAAQS. The requirement for states to make a SIP submission of this type arises out of CAA section 110(a)(1). Pursuant to section 110(a)(1), states must make SIP submissions “within 3 years (or such shorter period as the Administrator may prescribe) after the promulgation of a national primary ambient air quality standard (or any revision thereof),” and these SIP

necessary local nonattainment area controls are not due within three years after promulgation of a new or revised NAAQS, but rather due at the time the nonattainment area plan requirements are due pursuant to section 172. These requirements are: (1) submissions required by section 110(a)(2)(C) to the extent that subsection refers to a permit program as required in part D Title I of the CAA; and (2) submissions required by section 110(a)(2)(I) which pertain to the nonattainment planning requirements of part D, Title I of the CAA. Today's proposed rulemaking does not address infrastructure elements related to section 110(a)(2)(I) or the nonattainment planning requirements of 110(a)(2)(C).

³ This rulemaking only addresses requirements for this element as they relate to attainment areas.

⁴ As mentioned above, this element is not relevant to today's proposed rulemaking.

submissions are to provide for the “implementation, maintenance, and enforcement” of such NAAQS. The statute directly imposes on states the duty to make these SIP submissions, and the requirement to make the submissions is not conditioned upon EPA's taking any action other than promulgating a new or revised NAAQS. Section 110(a)(2) includes a list of specific elements that “[e]ach such plan” submission must address.

EPA has historically referred to these SIP submissions made for the purpose of satisfying the requirements of CAA sections 110(a)(1) and 110(a)(2) as “infrastructure SIP” submissions. Although the term “infrastructure SIP” does not appear in the CAA, EPA uses the term to distinguish this particular type of SIP submission from submissions that are intended to satisfy other SIP requirements under the CAA, such as “nonattainment SIP” or “attainment plan SIP” submissions to address the nonattainment planning requirements of part D of title I of the CAA, “regional haze SIP” submissions required by EPA rule to address the visibility protection requirements of CAA section 169A, and nonattainment new source review permit program submissions to address the permit requirements of CAA, title I, part D.

Section 110(a)(1) addresses the timing and general requirements for infrastructure SIP submissions, and section 110(a)(2) provides more details concerning the required contents of these submissions. The list of required elements provided in section 110(a)(2) contains a wide variety of disparate provisions, some of which pertain to required legal authority, some of which pertain to required substantive program provisions, and some of which pertain to requirements for both authority and substantive program provisions.⁵ EPA therefore believes that while the timing requirement in section 110(a)(1) is unambiguous, some of the other statutory provisions are ambiguous. In particular, EPA believes that the list of required elements for infrastructure SIP submissions provided in section 110(a)(2) contains ambiguities concerning what is required for inclusion in an infrastructure SIP submission.

⁵ For example: Section 110(a)(2)(E)(i) provides that states must provide assurances that they have adequate legal authority under state and local law to carry out the SIP; section 110(a)(2)(C) provides that states must have a SIP-approved program to address certain sources as required by part C of title I of the CAA; and section 110(a)(2)(G) provides that states must have legal authority to address emergencies as well as contingency plans that are triggered in the event of such emergencies.

The following examples of ambiguities illustrate the need for EPA to interpret some section 110(a)(1) and section 110(a)(2) requirements with respect to infrastructure SIP submissions for a given new or revised NAAQS. One example of ambiguity is that section 110(a)(2) requires that “each” SIP submission must meet the list of requirements therein, while EPA has long noted that this literal reading of the statute is internally inconsistent and would create a conflict with the nonattainment provisions in part D of title I of the Act, which specifically address nonattainment SIP requirements.⁶ Section 110(a)(2)(I) pertains to nonattainment SIP requirements and part D addresses when attainment plan SIP submissions to address nonattainment area requirements are due. For example, section 172(b) requires EPA to establish a schedule for submission of such plans for certain pollutants when the Administrator promulgates the designation of an area as nonattainment, and section 107(d)(1)(B) allows up to two years, or in some cases three years, for such designations to be promulgated.⁷ This ambiguity illustrates that rather than apply all the stated requirements of section 110(a)(2) in a strict literal sense, EPA must determine which provisions of section 110(a)(2) are applicable for a particular infrastructure SIP submission.

Another example of ambiguity within sections 110(a)(1) and 110(a)(2) with respect to infrastructure SIPs pertains to whether states must meet all of the infrastructure SIP requirements in a single SIP submission, and whether EPA must act upon such SIP submission in a single action. Although section 110(a)(1) directs states to submit “a plan” to meet these requirements, EPA interprets the CAA to allow states to make multiple SIP submissions separately addressing infrastructure SIP elements for the same NAAQS. If states elect to make such multiple SIP submissions to meet the infrastructure SIP requirements, EPA can elect to act

⁶ See, e.g., “Rule To Reduce Interstate Transport of Fine Particulate Matter and Ozone (Clean Air Interstate Rule); Revisions to Acid Rain Program; Revisions to the NOx SIP Call; Final Rule,” 70 FR 25162, at 25163–65 (May 12, 2005) (explaining relationship between timing requirement of section 110(a)(2)(D) versus section 110(a)(2)(I)).

⁷ EPA notes that this ambiguity within section 110(a)(2) is heightened by the fact that various subparts of part D set specific dates for submission of certain types of SIP submissions in designated nonattainment areas for various pollutants. Note, e.g., that section 182(a)(1) provides specific dates for submission of emissions inventories for the ozone NAAQS. Some of these specific dates are necessarily later than three years after promulgation of the new or revised NAAQS.

on such submissions either individually or in a larger combined action.⁸ Similarly, EPA interprets the CAA to allow it to take action on the individual parts of one larger, comprehensive infrastructure SIP submission for a given NAAQS without concurrent action on the entire submission. For example, EPA has sometimes elected to act at different times on various elements and sub-elements of the same infrastructure SIP submission.⁹

Ambiguities within sections 110(a)(1) and 110(a)(2) may also arise with respect to infrastructure SIP submission requirements for different NAAQS. Thus, EPA notes that not every element of section 110(a)(2) would be relevant, or as relevant, or relevant in the same way, for each new or revised NAAQS. The states' attendant infrastructure SIP submissions for each NAAQS therefore could be different. For example, the monitoring requirements that a state might need to meet in its infrastructure SIP submission for purposes of section 110(a)(2)(B) could be very different for different pollutants because the content and scope of a state's infrastructure SIP submission to meet this element might be very different for an entirely new NAAQS than for a minor revision to an existing NAAQS.¹⁰

EPA notes that interpretation of section 110(a)(2) is also necessary when EPA reviews other types of SIP submissions required under the CAA. Therefore, as with infrastructure SIP submissions, EPA also has to identify and interpret the relevant elements of section 110(a)(2) that logically apply to

these other types of SIP submissions. For example, section 172(c)(7) requires that attainment plan SIP submissions required by part D have to meet the "applicable requirements" of section 110(a)(2). Thus, for example, attainment plan SIP submissions must meet the requirements of section 110(a)(2)(A) regarding enforceable emission limits and control measures and section 110(a)(2)(E)(i) regarding air agency resources and authority. By contrast, it is clear that attainment plan SIP submissions required by part D would not need to meet the portion of section 110(a)(2)(C) that pertains to the PSD program required in part C of title I of the CAA, because PSD does not apply to a pollutant for which an area is designated nonattainment and thus subject to part D planning requirements. As this example illustrates, each type of SIP submission may implicate some elements of section 110(a)(2) but not others.

Given the potential for ambiguity in some of the statutory language of section 110(a)(1) and section 110(a)(2), EPA believes that it is appropriate to interpret the ambiguous portions of section 110(a)(1) and section 110(a)(2) in the context of acting on a particular SIP submission. In other words, EPA assumes that Congress could not have intended that each and every SIP submission, regardless of the NAAQS in question or the history of SIP development for the relevant pollutant, would meet each of the requirements, or meet each of them in the same way. Therefore, EPA has adopted an approach under which it reviews infrastructure SIP submissions against the list of elements in section 110(a)(2), but only to the extent each element applies for that particular NAAQS.

Historically, EPA has elected to use guidance documents to make recommendations to states for infrastructure SIPs, in some cases conveying needed interpretations on newly arising issues and in some cases conveying interpretations that have already been developed and applied to individual SIP submissions for particular elements.¹¹ EPA most recently issued guidance for infrastructure SIPs on September 13, 2013 (2013 Guidance).¹² EPA developed

this document to provide states with up-to-date guidance for infrastructure SIPs for any new or revised NAAQS. Within this guidance, EPA describes the duty of states to make infrastructure SIP submissions to meet basic structural SIP requirements within three years of promulgation of a new or revised NAAQS. EPA also made recommendations about many specific subsections of section 110(a)(2) that are relevant in the context of infrastructure SIP submissions.¹³ The guidance also discusses the substantively important issues that are germane to certain subsections of section 110(a)(2). Significantly, EPA interprets sections 110(a)(1) and 110(a)(2) such that infrastructure SIP submissions need to address certain issues and need not address others. Accordingly, EPA reviews each infrastructure SIP submission for compliance with the applicable statutory provisions of section 110(a)(2), as appropriate.

As an example, section 110(a)(2)(E)(ii) is a required element of section 110(a)(2) for infrastructure SIP submissions. Under this element, a state must meet the substantive requirements of section 128, which pertain to state boards that approve permits or enforcement orders and heads of executive agencies with similar powers. Thus, EPA reviews infrastructure SIP submissions to ensure that the state's implementation plan appropriately addresses the requirements of section 110(a)(2)(E)(ii) and section 128. The 2013 Guidance explains EPA's interpretation that there may be a variety of ways by which states can appropriately address these substantive statutory requirements, depending on the structure of an individual state's permitting or enforcement program (e.g., whether permits and enforcement orders are approved by a multi-member board or by a head of an executive agency). However they are addressed by the state, the substantive requirements of section 128 are necessarily included in EPA's evaluation of infrastructure SIP

Air Act Sections 110(a)(1) and 110(a)(2)," Memorandum from Stephen D. Page, September 13, 2013.

¹³ EPA's September 13, 2013, guidance did not make recommendations with respect to infrastructure SIP submissions to address section 110(a)(2)(D)(i)(I). EPA issued the guidance shortly after the U.S. Supreme Court agreed to review the DC Circuit decision in *EME Homer City*, 696 F.3d7 (D.C. Cir. 2012) which had interpreted the requirements of section 110(a)(2)(D)(i)(I). In light of the uncertainty created by ongoing litigation, EPA elected not to provide additional guidance on the requirements of section 110(a)(2)(D)(i)(I) at that time. As the guidance is neither binding nor required by statute, whether EPA elects to provide guidance on a particular section has no impact on a state's CAA obligations.

⁸ See, e.g., "Approval and Promulgation of Implementation Plans; New Mexico; Revisions to the New Source Review (NSR) State Implementation Plan (SIP); Prevention of Significant Deterioration (PSD) and Nonattainment New Source Review (NNSR) Permitting," 78 FR 4339 (January 22, 2013) (EPA's final action approving the structural PSD elements of the New Mexico SIP submitted by the State separately to meet the requirements of EPA's 2008 PM_{2.5} NSR rule), and "Approval and Promulgation of Air Quality Implementation Plans; New Mexico; Infrastructure and Interstate Transport Requirements for the 2006 PM_{2.5} NAAQS," (78 FR 4337) (January 22, 2013) (EPA's final action on the infrastructure SIP for the 2006 PM_{2.5} NAAQS).

⁹ On December 14, 2007, the State of Tennessee, through the Tennessee Department of Environment and Conservation, made a SIP revision to EPA demonstrating that the State meets the requirements of sections 110(a)(1) and (2). EPA proposed action for infrastructure SIP elements (C) and (J) on January 23, 2012 (77 FR 3213) and took final action on March 14, 2012 (77 FR 14976). On April 16, 2012 (77 FR 22533) and July 23, 2012 (77 FR 42997), EPA took separate proposed and final actions on all other section 110(a)(2) infrastructure SIP elements of Tennessee's December 14, 2007 submittal.

¹⁰ For example, implementation of the 1997 PM_{2.5} NAAQS required the deployment of a system of new monitors to measure ambient levels of that new indicator species for the new NAAQS.

¹¹ EPA notes, however, that nothing in the CAA requires EPA to provide guidance or to promulgate regulations for infrastructure SIP submissions. The CAA directly applies to states and requires the submission of infrastructure SIP submissions, regardless of whether or not EPA provides guidance or regulations pertaining to such submissions. EPA elects to issue such guidance in order to assist states, as appropriate.

¹² "Guidance on Infrastructure State Implementation Plan (SIP) Elements under Clean

submissions because section 110(a)(2)(E)(ii) explicitly requires that the state satisfy the provisions of section 128.

As another example, EPA's review of infrastructure SIP submissions with respect to the PSD program requirements in sections 110(a)(2)(C), (D)(i)(II), and (J) focuses upon the structural PSD program requirements contained in part C and EPA's PSD regulations. Structural PSD program requirements include provisions necessary for the PSD program to address all regulated sources and new source review (NSR) pollutants, including greenhouse gas (GHGs). By contrast, structural PSD program requirements do not include provisions that are not required under EPA's regulations at 40 CFR 51.166 but are merely available as an option for the state, such as the option to provide grandfathering of complete permit applications with respect to the 2012 PM_{2.5} NAAQS. Accordingly, the latter optional provisions are types of provisions EPA considers irrelevant in the context of an infrastructure SIP action.

For other section 110(a)(2) elements, however, EPA's review of a state's infrastructure SIP submission focuses on assuring that the state's SIP meets basic structural requirements. For example, section 110(a)(2)(C) includes, among other things, the requirement that states have a program to regulate minor new sources. Thus, EPA evaluates whether the state has an EPA-approved minor new source review program and whether the program addresses the pollutants relevant to that NAAQS. In the context of acting on an infrastructure SIP submission, however, EPA does not think it is necessary to conduct a review of each and every provision of a state's existing minor source program (*i.e.*, already in the existing SIP) for compliance with the requirements of the CAA and EPA's regulations that pertain to such programs.

With respect to certain other issues, EPA does not believe that an action on a state's infrastructure SIP submission is necessarily the appropriate type of action in which to address possible deficiencies in a state's existing SIP. These issues include: (i) existing provisions related to excess emissions from sources during periods of startup, shutdown, or malfunction that may be contrary to the CAA and EPA's policies addressing such excess emissions ("SSM"); (ii) existing provisions related to "director's variance" or "director's discretion" that may be contrary to the CAA because they purport to allow

revisions to SIP-approved emissions limits while limiting public process or not requiring further approval by EPA; and (iii) existing provisions for PSD programs that may be inconsistent with current requirements of EPA's "Final NSR Improvement Rule," 67 FR 80186 (December 31, 2002), as amended by 72 FR 32526 (June 13, 2007) ("NSR Reform"). Thus, EPA believes it may approve an infrastructure SIP submission without scrutinizing the totality of the existing SIP for such potentially deficient provisions and may approve the submission even if it is aware of such existing provisions.¹⁴ It is important to note that EPA's approval of a state's infrastructure SIP submission should not be construed as explicit or implicit re-approval of any existing potentially deficient provisions that relate to the three specific issues just described.

EPA's approach to review of infrastructure SIP submissions is to identify the CAA requirements that are logically applicable to that submission. EPA believes that this approach to the review of a particular infrastructure SIP submission is appropriate, because it would not be reasonable to read the general requirements of section 110(a)(1) and the list of elements in 110(a)(2) as requiring review of each and every provision of a state's existing SIP against all requirements in the CAA and EPA regulations merely for purposes of assuring that the state in question has the basic structural elements for a functioning SIP for a new or revised NAAQS. Because SIPs have grown by accretion over the decades as statutory and regulatory requirements under the CAA have evolved, they may include some outmoded provisions and historical artifacts. These provisions, while not fully up to date, nevertheless may not pose a significant problem for the purposes of "implementation, maintenance, and enforcement" of a new or revised NAAQS when EPA evaluates adequacy of the infrastructure SIP submission. EPA believes that a better approach is for states and EPA to focus attention on those elements of section 110(a)(2) of the CAA most likely to warrant a specific SIP revision due to the promulgation of a new or revised NAAQS or other factors.

For example, EPA's 2013 Guidance gives simpler recommendations with

¹⁴ By contrast, EPA notes that if a state were to include a new provision in an infrastructure SIP submission that contained a legal deficiency, such as a new exemption for excess emissions during SSM events, then EPA would need to evaluate that provision for compliance against the rubric of applicable CAA requirements in the context of the action on the infrastructure SIP.

respect to carbon monoxide than other NAAQS pollutants to meet the visibility requirements of section 110(a)(2)(D)(i)(II), because carbon monoxide does not affect visibility. As a result, an infrastructure SIP submission for any future new or revised NAAQS for carbon monoxide need only state this fact in order to address the visibility prong of section 110(a)(2)(D)(i)(II).

Finally, EPA believes that its approach with respect to infrastructure SIP requirements is based on a reasonable reading of sections 110(a)(1) and 110(a)(2) because the CAA provides other avenues and mechanisms to address specific substantive deficiencies in existing SIPs. These other statutory tools allow EPA to take appropriately tailored action, depending upon the nature and severity of the alleged SIP deficiency. Section 110(k)(5) authorizes EPA to issue a "SIP call" whenever the Agency determines that a state's implementation plan is substantially inadequate to attain or maintain the NAAQS, to mitigate interstate transport, or to otherwise comply with the CAA.¹⁵ Section 110(k)(6) authorizes EPA to correct errors in past actions, such as past approvals of SIP submissions.¹⁶ Significantly, EPA's determination that an action on a state's infrastructure SIP submission is not the appropriate time and place to address all potential existing SIP deficiencies does not preclude EPA's subsequent reliance on provisions in section 110(a)(2) as part of the basis for action to correct those deficiencies at a later time. For example, although it may not be appropriate to require a state to eliminate all existing inappropriate director's discretion provisions in the course of acting on an infrastructure SIP submission, EPA believes that section 110(a)(2)(A) may be among the statutory bases that EPA relies upon in the course of addressing

¹⁵ For example, EPA issued a SIP call to Utah to address specific existing SIP deficiencies related to the treatment of excess emissions during SSM events. See "Finding of Substantial Inadequacy of Implementation Plan; Call for Utah State Implementation Plan Revisions," 74 FR 21639 (April 18, 2011).

¹⁶ EPA has used this authority to correct errors in past actions on SIP submissions related to PSD programs. See "Limitation of Approval of Prevention of Significant Deterioration Provisions Concerning Greenhouse Gas Emitting-Sources in State Implementation Plans; Final Rule," 75 FR 82536 (December 30, 2010). EPA has previously used its authority under CAA section 110(k)(6) to remove numerous other SIP provisions that the Agency determined it had approved in error. See, e.g., 61 FR 38664 (July 25, 1996) and 62 FR 34641 (June 27, 1997) (corrections to American Samoa, Arizona, California, Hawaii, and Nevada SIPs); 69 FR 67062 (November 16, 2004) (corrections to California SIP); and 74 FR 57051 (November 3, 2009) (corrections to Arizona and Nevada SIPs).

such deficiency in a subsequent action.¹⁷

IV. What is EPA's analysis of how South Carolina addressed the elements of sections 110(a)(1) and (2) "Infrastructure" provisions?

The South Carolina infrastructure SIP submission addresses the provisions of sections 110(a)(1) and (2) as described below.

1. 110(a)(2)(A): *Emission limits and other control measures*: Several regulations within South Carolina's SIP are relevant to air quality control regulations. The regulations described below have been federally approved in the South Carolina SIP and include enforceable emission limitations and other control measures. Regulation 61–62.5, Standard No. 2, *Ambient Air Quality Standards* and Regulation 61–62.1, *Definitions and General Requirements*, provide enforceable emission limits and other control measures, means, and techniques. Section 48–1–50(23) of the 1976 South Carolina Code of Laws, as amended, ("S.C. Code Ann.") provides the SC DHEC with the authority to "[a]dopt emission and effluent control regulations standards and limitations that are applicable to the entire State, that are applicable only within specified areas or zones of the State, or that are applicable only when a specified class of pollutant is present." EPA has made the preliminary determination that the provisions contained in these regulations and South Carolina's practices are adequate to protect the 2008 8-hour ozone NAAQS in the State.

In this action, EPA is not proposing to approve or disapprove any existing State provisions with regard to excess emissions during SSM of operations at a facility. EPA believes that a number of states have SSM provisions which are contrary to the CAA and existing EPA guidance, "State Implementation Plans: Policy Regarding Excess Emissions During Malfunctions, Startup, and Shutdown" (September 20, 1999), and the Agency plans to address such state regulations in a separate action.¹⁸ In the

meantime, EPA encourages any state having a deficient SSM provision to take steps to correct it as soon as possible.

Additionally, in this action, EPA is not proposing to approve or disapprove any existing State rules with regard to director's discretion or variance provisions. EPA believes that a number of states have such provisions which are contrary to the CAA and existing EPA guidance (52 FR 45109 (November 24, 1987)), and the Agency plans to take action in the future to address such state regulations. In the meantime, EPA encourages any state having a director's discretion or variance provision which is contrary to the CAA and EPA guidance to take steps to correct the deficiency as soon as possible.

2. 110(a)(2)(B) *Ambient air quality monitoring/data system*: South Carolina's Air Pollution Control Regulations, Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration*, along with the *South Carolina Network Description and Ambient Air Network Monitoring Plan*, provide for an ambient air quality monitoring system in the State. S.C. Code Ann. § 48–1–50(14) provides the Department with the necessary authority to "[c]ollect and disseminate information on air and water control." Annually, States develop and submit to EPA for approval statewide ambient monitoring network plans consistent with the requirements of 40 CFR Parts 50, 53, and 58. The annual network plan involves an evaluation of any proposed changes to the monitoring network, includes the annual ambient monitoring network design plan and a certified evaluation of the agency's ambient monitors and auxiliary support equipment.¹⁹ On July 3, 2013, South Carolina submitted its plan to EPA. On November 6, 2013, EPA approved South Carolina's monitoring network plan. South Carolina's approved monitoring network plan can be accessed at www.regulations.gov using Docket ID No. EPA–R04–OAR–2012–0694. EPA has made the preliminary determination that South Carolina's SIP and practices are adequate for the ambient air quality monitoring and data system related to the 2008 8-hour ozone NAAQS.

3. 110(a)(2)(C) *Programs for enforcement of control measures and for construction or modification of stationary sources*: In this action, EPA is proposing to approve South Carolina's infrastructure SIP for the 2008 8-hour ozone NAAQS with respect to the

general requirement in section 110(a)(2)(C) to include a program in the SIP that regulates new and modified sources of emissions that contribute to ozone concentrations and the enforcement of nitrogen oxide (NO_x) and volatile organic compounds (VOCs) emission limits to assist in the protection of air quality in nonattainment, attainment or unclassifiable areas. Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration*, and Regulation 61–62.5, Standard No. 7.1, *Nonattainment New Source Review*, of South Carolina's SIP pertains to the construction of any new major stationary source or any modification at an existing major stationary source in an area designated as nonattainment, attainment or unclassifiable.

Enforcement: SC DHEC's above-described, SIP-approved regulations provide for enforcement of VOC and NO_x emission limits and control measures and construction permitting for new or modified stationary sources.

Preconstruction PSD permitting for major sources: With respect to South Carolina's infrastructure SIP submission related to the preconstruction PSD permitting requirements for major sources of section 110(a)(2)(C), EPA is not proposing any action today regarding these requirements and instead will act on this portion of the submission in a separate action.

Regulation of minor sources and modifications: Section 110(a)(2)(C) also requires the SIP to include provisions that govern the minor source preconstruction program that regulates emissions of the 2008 8-hour ozone NAAQS. Regulation 61–62.1, Section II, *Permit Requirements* governs the preconstruction permitting of modifications and construction of minor stationary sources.

EPA has made the preliminary determination that South Carolina's SIP and practices are adequate for program enforcement of control measures and regulation of minor sources and modifications related to the 2008 8-hour ozone NAAQS.

4. 110(a)(2)(D)(i)(I) and (II) *Interstate pollution transport*: Section 110(a)(2)(D)(i) has two components; 110(a)(2)(D)(i)(I) and 110(a)(2)(D)(i)(II). Each of these components have two subparts resulting in four distinct components, commonly referred to as "prongs," that must be addressed in infrastructure SIP submissions. The first two prongs, which are codified in section 110(a)(2)(D)(i)(I), are provisions that prohibit any source or other type of emissions activity in one state from contributing significantly to

¹⁷ See, e.g., EPA's disapproval of a SIP submission from Colorado on the grounds that it would have included a director's discretion provision inconsistent with CAA requirements, including section 110(a)(2)(A). See, e.g., 75 FR 42342 at 42344 (July 21, 2010) (proposed disapproval of director's discretion provisions); 76 FR 4540 (Jan. 26, 2011) (final disapproval of such provisions).

¹⁸ On February 22, 2013, EPA published a proposed action in the *Federal Register* entitled, "State Implementation Plans: Response to Petition for Rulemaking; Findings of Substantial Inadequacy; and SIP Calls to Amend Provisions Applying to Excess Emissions During Periods of Startup, Shutdown, and Malfunction; Proposed Rule."

¹⁹ On occasion, proposed changes to the monitoring network are evaluated outside of the network plan approval process in accordance with 40 CFR Part 58.

nonattainment of the NAAQS in another state (“prong 1”), and interfering with maintenance of the NAAQS in another state (“prong 2”). The third and fourth prongs, which are codified in section 110(a)(2)(D)(i)(II), are provisions that prohibit emissions activity in one state interfering with measures required to prevent significant deterioration of air quality in another state (“prong 3”), or to protect visibility in another state (“prong 4”). With respect to South Carolina’s infrastructure SIP submission related to the interstate transport requirements of section 110(a)(2)(D)(i)(I) and 110(a)(2)(D)(i)(II) (prongs 1 through 4), EPA is not proposing any action today regarding these requirements and instead will act on these portions of the submission in a separate action.

5. 110(a)(2)(D)(ii) *Interstate pollution abatement and international air pollution*: Section 110(a)(2)(D)(ii) requires SIPs to include provisions insuring compliance with sections 115 and 126 of the Act, relating to interstate and international pollution abatement. With regard to the requirements of section 110(a)(2)(D)(ii), South Carolina does not have any pending obligation under sections 115 and 126 of the CAA. Additionally, Regulation 61–62.5, Standards 7 and 7.1 (q)(2)(iv), *Public Participation*, requires SC DHEC to notify air agencies “whose lands may be affected by emissions” from each new or modified major source if such emissions may significantly contribute to levels of pollution in excess of a NAAQS in any air quality control region outside of the South Carolina. EPA has made the preliminary determination that South Carolina’s SIP and practices are adequate for insuring compliance with the applicable requirements relating to interstate and international pollution abatement for the 2008 8-hour ozone NAAQS.

6. 110(a)(2)(E) *Adequate personnel, funding, and authority*: Section 110(a)(2)(E) requires that each implementation plan provide (i) necessary assurances that the State will have adequate personnel, funding, and authority under state law to carry out its implementation plan, (ii) that the State comply with the requirements respecting State Boards pursuant to section 128 of the Act, and (iii) necessary assurances that, where the State has relied on a local or regional government, agency, or instrumentality for the implementation of any plan provision, the State has responsibility for ensuring adequate implementation of such plan provisions. EPA is proposing to approve South Carolina’s SIP as meeting the requirements of section 110(a)(2)(E). EPA’s rationale for

today’s proposal respecting each requirement of section 110(a)(2)(E) is described in turn below.

With respect to section 110(a)(2)(E)(i) and (iii), SC DHEC develops, implements and enforces EPA-approved SIP provisions in the State. S.C. Code Ann. Section 48, Title 1, as referenced in SC DHEC’s infrastructure SIP submission, provides the Department’s general legal authority to establish a SIP and implement related plans. Specifically, S.C. Code Ann. § 48–1–50(12) grants SC DHEC the statutory authority to “[a]ccept, receive and administer grants or other funds or gifts for the purpose of carrying out any of the purposes of this chapter; [and to] accept, receive and receipt for Federal money given by the Federal government under any Federal law to the State of South Carolina for air or water control activities, surveys or programs.” S.C. Code Ann. Section 48, Title 2 grants SC DHEC statutory authority to establish environmental protection funds, which provide resources for SC DHEC to carry out its obligations under the CAA. Additionally, Regulation 61–30, *Environmental Protection Fees*, provides SC DHEC with the ability to access fees for environmental permitting programs. SC DHEC implements the SIP in accordance with the provisions of S.C. Code Ann § 1–23–40 (the Administrative Procedures Act) and S.C. Code Ann. Section 48, Title 1.

The requirements of 110(a)(2)(E)(i) and (iii) are further confirmed when EPA performs a completeness determination for each SIP submittal. This provides additional assurances that each submittal provides evidence that adequate personnel, funding, and legal authority under State Law has been used to carry out the State’s implementation plan and related issues. This information is included in all prehearings and final SIP submittal packages for approval by EPA.

EPA also notes that annually, states update grant commitments based on current SIP requirements, air quality planning, and applicable requirements related to the NAAQS, including the ozone NAAQS. On March 11, 2014, EPA submitted a letter to South Carolina outlining 105 grant commitments and current status of these commitments for fiscal year 2013. The letter EPA submitted to South Carolina can be accessed at www.regulations.gov using Docket ID No. EPA–R04–OAR–2012–0694. There were no outstanding issues, therefore South Carolina’s grants were finalized and closed out.

With respect to 110(a)(2)(E)(ii), South Carolina satisfies the requirements of CAA section 128(a)(1) for the SC Board

of Health and Environmental Control, which is the “board or body which approves permits and enforcement orders” under the CAA in South Carolina, through S.C. Code Ann. Section 8–13–730. S.C. Code Ann. Section 8–13–730 provides that “[u]nless otherwise provided by law, no person may serve as a member of a governmental regulatory agency that regulates business with which that person is associated,” and S.C. Code Ann. Section 8–13–700(A) which provides in part that “[n]o public official, public member, or public employee may knowingly use his official office, membership, or employment to obtain an economic interest for himself, a member of his immediate family, an individual with whom he is associated, or a business with which he is associated.” S.C. Code Ann. Section 8–13–700(B)(1)–(5) provides for disclosure of any conflicts of interest by public official, public member or public employee, which meets the requirement of CAA Section 128(a)(2) that “any potential conflicts of interest . . . be adequately disclosed.” These state statutes—S.C. Code Ann. Sections 8–13–730, 8–13–700(A), and 8–13–700(B)(1)–(5)—have been approved into the South Carolina SIP as required by CAA section 128. EPA has made the preliminary determination that South Carolina has adequate resources for implementation of the 2008 8-hour ozone NAAQS.

7. 110(a)(2)(F) *Stationary source monitoring system*: SC DHEC’s infrastructure SIP submission describes the establishment of requirements for compliance testing by emissions sampling and analysis, and for emissions and operation monitoring to ensure the quality of data in the State. SC DHEC uses these data to track progress towards maintaining the NAAQS, develop control and maintenance strategies, identify sources and general emission levels, and determine compliance with emission regulations and additional EPA requirements. These SIP requirements are codified at Regulation 61–62.1, Definitions and General Requirements, which provides for an emission inventory plan that establishes reporting requirements of the South Carolina SIP. SC DHEC’s SIP requires owners or operators of stationary sources to monitor emissions, submit periodic reports of such emissions and maintain records as specified by various regulations and permits, and to evaluate reports and records for consistency with the applicable emission limitation or standard on a continuing basis over

time. The monitoring data collected and records of operations serve as the basis for a source to certify compliance, and can be used by SC DHEC as direct evidence of an enforceable violation of the underlying emission limitation or standard. Accordingly, EPA is unaware of any provision preventing the use of credible evidence in the South Carolina SIP.

Additionally, South Carolina is required to submit emissions data to EPA for purposes of the National Emissions Inventory (NEI). The NEI is EPA's central repository for air emissions data. EPA published the Air Emissions Reporting Rule (AERR) on December 5, 2008, which modified the requirements for collecting and reporting air emissions data (73 FR 76539). The AERR shortened the time states had to report emissions data from 17 to 12 months, giving states one calendar year to submit emissions data. All states are required to submit a comprehensive emissions inventory every three years and report emissions for certain larger sources annually through EPA's online Emissions Inventory System. States report emissions data for the six criteria pollutants and their associated precursors—NO_x, sulfur dioxide, ammonia, lead, carbon monoxide, particulate matter, and VOC. Many states also voluntarily report emissions of hazardous air pollutants. South Carolina made its latest update to the 2011 NEI on April 8, 2014. EPA compiles the emissions data, supplementing it where necessary, and releases it to the general public through the Web site <http://www.epa.gov/ttn/chief/einformation.html>. EPA has made the preliminary determination that South Carolina's SIP and practices are adequate for the stationary source monitoring systems related to the 2008 8-hour ozone NAAQS. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(F).

8. 110(a)(2)(G) *Emergency powers:* This section requires that states demonstrate authority comparable with section 303 of the CAA and adequate contingency plans to implement such authority. Regulation 61–62.3, Air Pollution Episodes, provides for contingency measures when an air pollution episode or exceedance may lead to a substantial threat to the health or persons in the state or region. S.C. Code Ann. Section 48–1–290 provides SC DHEC, with concurrent notice to the Governor, the authority to issue an order recognizing the existence of an emergency requiring immediate action as deemed necessary by SC DHEC to

protect the public health or property. Any person subject to this order is required to comply immediately. Additionally, S.C. Code Ann. Section 1–23–130 provides the Department with the authority to establish emergency regulations. EPA has made the preliminary determination that South Carolina's SIP, state laws and practices are adequate for emergency powers related to the 2008 8-hour ozone NAAQS. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(G).

9. 110(a)(2)(H) *Future SIP revisions:* As previously discussed, SC DHEC is responsible for adopting air quality rules and revising SIPs as needed to attain or maintain the NAAQS. South Carolina has the ability and authority to respond to calls for SIP revisions, and has provided a number of SIP revisions over the years for implementation of the NAAQS. Additionally, S.C. Code Ann. Section 48, Title 1, provides SC DHEC with the necessary authority to revise the SIP to accommodate changes in the NAAQS and thus revise the SIP as appropriate. EPA has made the preliminary determination that South Carolina adequately demonstrates a commitment to provide future SIP revisions related to the 2008 8-hour ozone NAAQS when necessary. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(H).

10. 110(a)(2)(J) *Consultation with government officials, public notification, and PSD and visibility protection:* EPA is proposing to approve South Carolina's infrastructure SIP submission for the 2008 8-hour ozone NAAQS with respect to the general requirement in section 110(a)(2)(J) to include a program in the SIP that provides for meeting the applicable consultation requirements of section 121, the public notification requirements of section 127. With respect to South Carolina's infrastructure SIP submission related to the preconstruction PSD permitting and visibility protection requirements, EPA is not proposing any action today regarding these requirements and instead will act on these portions of the submission in a separate action. EPA's rationale for applicable consultation requirements of section 121 and the public notification requirements of section 127 is described below.

110(a)(2)(J) (121 consultation) *Consultation with government officials:* Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration*, as well as the State's Regional Haze

Implementation Plan (which allows for consultation between appropriate state, local, and tribal air pollution control agencies as well as the corresponding Federal Land Managers), provide for consultation with government officials whose jurisdictions might be affected by SIP development activities. South Carolina adopted state-wide consultation procedures for the implementation of transportation conformity. These consultation procedures were developed in coordination with the transportation partners in the State and are consistent with the approaches used for development of mobile inventories for SIPs. Implementation of transportation conformity as outlined in the consultation procedures requires SC DHEC to consult with federal, state and local transportation and air quality agency officials on the development of motor vehicle emissions budgets. EPA has made the preliminary determination that South Carolina's SIP and practices adequately demonstrate consultation with government officials related to the 2008 8-hour ozone NAAQS when necessary. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(J) consultation with government officials.

110(a)(2)(J) (127 public notification) *Public notification:* 61–62.3, *Air Pollution Episodes*, requires that SC DHEC notify the public of any air pollution episode or NAAQS violation. Regulation 61–62.5, Standard 7.1 (q), *Public Participation*, notifies the public by advertisement in a newspaper of general circulation in each region in which a proposed plant or modifications will be constructed of the degree of increment consumption that is expected from the plant or modification, and the opportunity for comment at a public hearing as well as written public comment. An opportunity for a public hearing for interested persons to appear and submit written or oral comments on the air quality impact of the plant or modification, alternatives to the plant or modification, the control technology required, and other appropriate considerations is also offered.

EPA also notes that SC DHEC maintains a Web site that provides the public with notice of the health hazards associated with ozone NAAQS exceedances, measures the public can take to help prevent such exceedances, and the ways in which the public can participate in the regulatory process. See <http://www.scdhec.gov/HomeAndEnvironment/Air/MostCommonPollutants/Ozone/>. EPA has made the preliminary determination

that South Carolina's SIP and practices adequately demonstrate the State's ability to provide public notification related to the 2008 8-hour ozone NAAQS when necessary. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(J) public notification.

11. 110(a)(2)(K) *Air quality and modeling/data*: Regulations 61–62.5, Standards No. 2, *Ambient Air Quality Standards*, and Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration*, of the South Carolina SIP specify that required air modeling be conducted in accordance with 40 CFR Part 51, Appendix W “Guideline on Air Quality Models,” as incorporated into the South Carolina SIP. These standards demonstrate that South Carolina has the authority to provide relevant data for the purpose of predicting the effect on ambient air quality of the 2008 8-hour ozone NAAQS. Additionally, South Carolina supports a regional effort to coordinate the development of emissions inventories and conduct regional modeling for several NAAQS, including the 2008 8-hour ozone NAAQS, for the southeastern states. Taken as a whole, South Carolina's air quality regulations and practices demonstrate that SC DHEC has the authority to provide relevant data for the purpose of predicting the effect on ambient air quality of any emissions of any pollutant for which a NAAQS had been promulgated, and to provide such information to the EPA Administrator upon request. EPA has made the preliminary determination that South Carolina's SIP and practices adequately demonstrate the State's ability to provide for air quality and modeling, along with analysis of the associated data, related to the 2008 8-hour ozone NAAQS. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(K).

12. 110(a)(2)(L) *Permitting fees*: This section requires the SIP to direct the owner or operator of each major stationary source to pay to the permitting authority, as a condition of any permit required under the CAA, a fee sufficient to cover (i) the reasonable costs of reviewing and acting upon any application for such a permit, and (ii) if the owner or operator receives a permit for such source, the reasonable costs of implementing and enforcing the terms and conditions of any such permit (not including any court costs or other costs associated with any enforcement action), until such fee requirement is superseded with respect to such sources

by the Administrator's approval of a fee program under title V.

Section 48–2–50 of the South Carolina Code prescribes that SC DHEC charge fees for environmental programs it administers pursuant to federal and state law and regulations including those that govern the costs to review, implement and enforce PSD and NNSR permits. Regulation 61–30, *Environmental Protection Fees*²⁰ prescribes fees applicable to applicants and holders of permits, licenses, certificates, certifications, and registrations, establishes procedures for the payment of fees, provides for the assessment of penalties for nonpayment, and establishes an appeals process for refunding fees. This regulation may be amended as needed to meet the funding requirements of the state's permitting program. Additionally, South Carolina has a federally-approved title V program, Regulation 61–62.70, *Title V Operating Permit Program*²¹, which implements and enforces the requirements of PSD and nonattainment NSR for facilities once they begin operating. EPA has made the preliminary determination that South Carolina's SIP and practices adequately provide for permitting fees related to the 2008 8-hour NAAQS when necessary. Accordingly, EPA is proposing to approve South Carolina's infrastructure SIP submission with respect to section 110(a)(2)(L).

13. 110(a)(2)(M) *Consultation/participation by affected local entities*: Regulation 61–62.5, Standard No. 7, *Prevention of Significant Deterioration*, of the South Carolina SIP requires that SC DHEC notify the public of an application, preliminary determination, the activity or activities involved in the permit action, any emissions change associated with any permit modification, and the opportunity for comment prior to making a final permitting decision. By way of example, SC DHEC has recently worked closely with local political subdivisions during the development of its Transportation Conformity SIP, Regional Haze Implementation Plan, and Early Action Compacts. EPA has made the preliminary determination that South Carolina's SIP and practices adequately demonstrate consultation with affected local entities related to the 2008 8-hour ozone NAAQS. Accordingly, EPA is proposing to approve South Carolina's

infrastructure SIP submission with respect to section 110(a)(2)(M).

V. Proposed Action

As described above, with the exception of the PSD permitting requirements for major sources of section 110(a)(2)(C) and (J), the interstate transport requirements of section 110(a)(2)(D)(i)(I) and (II) (prongs 1 through 4), and the visibility requirements of 110(a)(2)(J), EPA is proposing to approve South Carolina's July 12, 2012, SIP submission to incorporate provisions into the South Carolina SIP to address infrastructure requirements for the 2008 8-hour ozone NAAQS. EPA is proposing to approve these portions of South Carolina's infrastructure submission for the 2008 8-hour ozone NAAQS because this submission is consistent with section 110 of the CAA.

VI. Statutory and Executive Order Reviews

Under the CAA, the Administrator is required to approve a SIP submission that complies with the provisions of the Act and applicable federal regulations. See 42 U.S.C. 7410(k); 40 CFR 52.02(a). Thus, in reviewing SIP submissions, EPA's role is to approve state choices, provided that they meet the criteria of the CAA. Accordingly, this proposed action merely approves state law as meeting federal requirements and does not impose additional requirements beyond those imposed by state law. For that reason, this proposed action:

- Is not a “significant regulatory action” subject to review by the Office of Management and Budget under Executive Order 12866 (58 FR 51735, October 4, 1993);
- Does not impose an information collection burden under the provisions of the Paperwork Reduction Act (44 U.S.C. 3501 *et seq.*);
- Is certified as not having a significant economic impact on a substantial number of small entities under the Regulatory Flexibility Act (5 U.S.C. 601 *et seq.*);
- Does not contain any unfunded mandate or significantly or uniquely affect small governments, as described in the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4);
- Does not have Federalism implications as specified in Executive Order 13132 (64 FR 43255, August 10, 1999);
- Is not an economically significant regulatory action based on health or safety risks subject to Executive Order 13045 (62 FR 19885, April 23, 1997);

²⁰ This regulation has not been incorporated into the federally-approved SIP.

²¹ Title V program regulations are federally-approved but not incorporated into the federally-approved SIP.

- Is not a significant regulatory action subject to Executive Order 13211 (66 FR 28355, May 22, 2001);

- Is not subject to requirements of Section 12(d) of the National Technology Transfer and Advancement Act of 1995 (15 U.S.C. 272 note) because application of those requirements would be inconsistent with the CAA; and

- Does not provide EPA with the discretionary authority to address, as appropriate, disproportionate human health or environmental effects, using practicable and legally permissible methods, under Executive Order 12898 (59 FR 7629, February 16, 1994).

In addition, this proposed action for the state of South Carolina does not have Tribal implications as specified by Executive Order 13175 (65 FR 67249, November 9, 2000). The Catawba Indian Nation Reservation is located within the State of South Carolina. Pursuant to the Catawba Indian Claims Settlement Act, S.C. Code Ann. 27–16–120, “all state and local environmental laws and regulations apply to the [Catawba Indian Nation] and Reservation and are fully enforceable by all relevant state and local agencies and authorities.” However, EPA has determined that because this proposed rule does not have substantial direct effects on an Indian Tribe because, as noted above, this action is not approving any specific rule, but rather proposing that South Carolina’s already approved SIP meets certain CAA requirements. EPA notes today’s action will not impose substantial direct costs on Tribal governments or preempt Tribal law.

50 CFR Part 300

[Docket No. 130703588–4658–01]

RIN 0648–BD44

International Fisheries; Western and Central Pacific Fisheries for Highly Migratory Species; Fishing Restrictions regarding the Oceanic Whitetip Shark, the Whale Shark, and the Silky Shark

AGENCY: National Marine Fisheries Service (NMFS), National Oceanic and Atmospheric Administration (NOAA), Commerce.

ACTION: Proposed rule; request for comments.

SUMMARY: NMFS proposes regulations under authority of the Western and Central Pacific Fisheries Convention Implementation Act (WCPFC Implementation Act) to implement decisions of the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (Commission or WCPFC) on fishing restrictions related to the oceanic whitetip shark (*Carcharhinus longimanus*), the whale shark (*Rhincodon typus*), and the silky shark (*Carcharhinus falciformis*). The regulations would apply to owners and operators of U.S. fishing vessels used for commercial fishing for highly migratory species (HMS) in the area of application of the Convention on the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (Convention). The regulations for oceanic whitetip sharks and silky sharks would prohibit the retention, transshipment, storage, or landing of oceanic whitetip sharks or silky sharks and would require the release of any oceanic whitetip shark or silky shark as soon as possible after it is caught, with as little harm to the shark as possible. The regulations for whale sharks would prohibit setting a purse seine on a whale shark and would specify certain measures to be taken and reporting requirements in the event a whale shark is encircled in a purse seine net. This action is necessary for the United States to satisfy its obligations under the Convention, to which it is a Contracting Party.

DATES: Comments must be submitted in writing by October 6, 2014.

ADDRESSES: You may submit comments on this proposed rule, identified by

NOAA–NMFS–2014–0086, and the regulatory impact review (RIR) prepared for this proposed rule, by either of the following methods:

- **Electronic Submission:** Submit all electronic public comments via the Federal e-Rulemaking Portal. Go to www.regulations.gov/#!docketDetail;D=NOAA-NMFS-2014-0086, click the “Comment Now!” icon, complete the required fields, and enter or attach your comments.

- **Mail:** Submit written comments to Michael D. Tosatto, Regional Administrator, Pacific Islands Regional Office, NOAA Inouye Regional Center, 1845 Wasp Blvd., Building 176, Honolulu, HI 96818.

Instructions: Comments sent by any other method, to any other address or individual, or received after the end of the comment period, might not be considered by NMFS. All comments received are a part of the public record and will generally be posted for public viewing on www.regulations.gov without change. All personal identifying information (e.g., name and address), confidential business information, or otherwise sensitive information submitted voluntarily by the sender will be publicly accessible. NMFS will accept anonymous comments (enter “N/A” in the required fields if you wish to remain anonymous). Attachments to electronic comments will be accepted in Microsoft Word, Excel, or Adobe PDF file formats only.

An initial regulatory flexibility analysis (IRFA) prepared under authority of the Regulatory Flexibility Act is included in the Classification section of the **SUPPLEMENTARY INFORMATION** section of this proposed rule.

Copies of the RIR and the Environmental Assessment (EA) are available at www.regulations.gov or may be obtained from Michael D. Tosatto, NMFS PIRO (see address above).

Written comments regarding the burden-hour estimates or other aspects of the collection-of-information requirements contained in this proposed rule may be submitted to Michael D. Tosatto, Regional Administrator, NMFS PIRO (see address above) and by email to OIRA_Submission@omb.eop.gov or fax to 202–395–7285.

FOR FURTHER INFORMATION CONTACT: Rini Ghosh, NMFS PIRO, 808–725–5033.

SUPPLEMENTARY INFORMATION:

Background on the Convention

A map showing the boundaries of the area of application of the Convention (Convention Area), which comprises the majority of the western and central

Pacific Ocean (WCPO), can be found on the WCPFC Web site at: www.wcpfc.int/doc/convention-area-map. The Convention focuses on the conservation and management of highly migratory species (HMS) and the management of fisheries for HMS. The objective of the Convention is to ensure, through effective management, the long-term conservation and sustainable use of HMS in the WCPO. To accomplish this objective, the Convention establishes the Commission for the Conservation and Management of Highly Migratory Fish Stocks in the Western and Central Pacific Ocean (WCPFC). The WCPFC includes Members, Cooperating Non-members, and Participating Territories (collectively, CCMs). The United States is a Member. American Samoa, Guam, and the Commonwealth of the Northern Mariana Islands (CNMI) are Participating Territories.

As a Contracting Party to the Convention and a Member of the WCPFC, the United States is obligated to implement the decisions of the WCPFC. The WCPFC Implementation Act (16 U.S.C. 6901 *et seq.*), authorizes the Secretary of Commerce, in consultation with the Secretary of State and the Secretary of the Department in which the United States Coast Guard is operating (currently the Department of Homeland Security), to promulgate such regulations as may be necessary to carry out the obligations of the United States under the Convention, including the decisions of the WCPFC. The WCPFC Implementation Act further provides that the Secretary of Commerce shall ensure consistency, to the extent practicable, of fishery management programs administered under the WCPFC Implementation Act and the Magnuson-Stevens Fishery Conservation and Management Act (MSA; 16 U.S.C. 1801 *et seq.*), as well as other specific laws (see 16 U.S.C. 6905(b)). The Secretary of Commerce has delegated the authority to promulgate regulations under the WCPFC Implementation Act to NMFS.

WCPFC Decision on the Oceanic Whitetip Shark

The WCPFC adopted “Conservation and Management Measure for Oceanic Whitetip Shark” (CMM 2011–04) to address recent declines in catch rates and size of oceanic whitetip sharks in the longline and purse seine fisheries. CMM 2011–04 includes two provisions for CCMs to apply to their vessels. The first provision requires CCMs to prohibit their vessels from retaining on board, transshipping, storing on board, or landing any oceanic whitetip shark, in whole or in part, in the fisheries covered

by the Convention. The second provision requires CCMs to require their vessels to release any oceanic whitetip shark that is caught as soon as possible after the shark is brought alongside the vessel, and to do so in a manner that results in as little harm to the shark as possible. CMM 2011–04 also includes a provision that acts as a limited exemption from the other provisions by allowing observers to collect samples from oceanic whitetip sharks that are dead on haulback, provided that the collection is part of a research project approved by the WCPFC Scientific Committee. The proposed rule would implement all of these provisions for U.S. fishing vessels, as detailed in the section below titled “Proposed Action.”

WCPFC Decision on the Whale Shark

The WCPFC adopted “Conservation and Management Measure for Protection of Whale Sharks from Purse Seine Fishing Operations” (CMM 2012–04) in response to concerns about the potential impacts of purse seine fishing operations on the sustainability of the whale shark. Paragraph 1 of CMM 2012–04 specifies that the measure applies only to the high seas and exclusive economic zones (EEZs) in the area of application of the Convention (Convention Area) (i.e., not to territorial seas or archipelagic waters). CMM 2012–04 includes four specific provisions for CCMs to implement for their vessels. The first provision requires CCMs to prohibit their flagged vessels from setting a purse seine on a school of tuna associated with a whale shark if the animal is sighted prior to the commencement of the set. The measure specifies that in the EEZs of Parties to the Nauru Agreement (PNA), the prohibition shall be implemented in accordance with the “Third Arrangement Implementing the Nauru Agreement Setting Forth Additional Terms and Conditions of Access to the Fisheries Zones of the Parties,” as amended on September 11, 2010 (Third Arrangement). The Third Arrangement states that no purse seine vessel shall engage in fishing or related activity in order to catch tuna associated with whale sharks and that the provisions of the Third Arrangement shall be implemented in accordance with a program adopted by the Parties. The United States is not a party to the Nauru Agreement and has no role in implementing it or the Third Arrangement. It is expected that the PNA will implement this provision of the CMM in their EEZs in accordance with the Third Arrangement. Accordingly, this proposed rule would not implement the prohibition in the

EEZs of the PNA, but would implement the prohibition in all other EEZs and on the high seas in the Convention Area, as detailed in the section below titled “Proposed Action.”

The second and third provisions of CMM 2012–04 require CCMs to require that operators of their vessels take certain measures in the event that a whale shark is encircled in a purse seine net: the operator shall ensure that reasonable steps are taken to ensure the safe release of the shark; and report the incident to the relevant authority of the flag State, including the number of individuals, details of how and why the encirclement happened, where it occurred, steps taken to ensure safe release, and an assessment of the life status of the whale shark on release (including whether the animal was released alive, but subsequently died). These two provisions are applicable to the high seas and all EEZs in the Convention Area, including the EEZs of the PNA. The proposed rule incorporates these two provisions, as detailed in the section below titled “Proposed Action.”

The final provision of CMM 2012–04 for CCMs to apply to their vessels is for CCMs to require their vessels to follow any guidelines adopted by the WCPFC for the safe release of whale sharks. The proposed rule would not implement this provision because the WCPFC has not yet adopted guidelines for the safe release of whale sharks.

CMM 2012–04 also specifies the importance of maintaining the safety of the crew during the implementation of the provisions in the CMM, and this concept has been included in the proposed rule.

WCPFC Decision on the Silky Shark

The WCPFC adopted “Conservation and Management Measure for Silky Sharks” (CMM 2013–08) in response to the results of the recent WCPFC stock assessment, showing that the species is overfished and that overfishing is occurring. The provisions of CMM 2013–08 are similar to the provisions of CMM 2011–04. One provision requires CCMs to prohibit their vessels from retaining on board, transshipping, storing on board, or landing any silky shark, in whole or in part, in the fisheries covered by the Convention. Another provision requires CCMs to require their vessels to release any silky shark that is caught as soon as possible after the shark is brought alongside the vessel, and to do so in a manner that results in as little harm to the shark as possible. CMM 2013–08 also includes a provision that acts as a limited exemption from the other provisions by

allowing observers to collect samples from silky sharks that are dead on haulback, provided that the collection is part of a research project approved by the WCPFC Scientific Committee. The proposed rule would implement all of these provisions for U.S. fishing vessels, as detailed in the section below titled “Proposed Action.”

Proposed Action

This proposed rule would implement the provisions of CMM 2011–04, CMM 2012–04, and CMM 2013–08, described above, for U.S. fishing vessels used for commercial fishing for HMS in the Convention Area. The proposed rule includes six elements—three elements regarding the oceanic whitetip shark and silky shark and three elements regarding the whale shark. For the oceanic whitetip shark and silky shark, the first element would prohibit the crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS from retaining on board, transshipping, storing, or landing any part or whole carcass of an oceanic whitetip shark or silky shark that is caught in the Convention Area. The second element would require the crew, operator, and owner to release any oceanic whitetip shark or silky shark caught in the Convention Area as soon as possible after the shark is caught and brought alongside the vessel and take reasonable steps for its safe release, without compromising the safety of any persons. The third element takes into consideration that, notwithstanding the other two oceanic whitetip and silky shark elements of the rule, WCPFC observers may collect samples of oceanic whitetip sharks or silky sharks that are dead when brought alongside the vessel and may require the crew, operator, or owner of the vessel to allow or assist them to collect samples in the Convention Area. Observers deployed by NMFS or the Forum Fisheries Agency are currently considered WCPFC observers, as those programs have completed the required authorization process to become part of the WCPFC Regional Observer Programme.

The WCPFC Implementation Act states that regulations promulgated under the act shall apply within the boundaries of any of the States of the United States and any commonwealth, territory or possession of the United States (hereafter “State”) bordering on the Convention Area if the Secretary of Commerce has provided notice to the State, the State does not request an agency hearing, and the Secretary of Commerce has determined that the State

has not, within a reasonable period of time after the promulgation of regulations, enacted laws or promulgated regulations that implement the recommendations of the WCPFC within the boundaries of the State; or has enacted laws or promulgated regulations that implement the recommendations of the WCPFC that are less restrictive than the regulations promulgated under the WCPFC Implementation Act or are not effectively enforced (16 U.S.C. 6907(e)). NMFS will furnish copies of the proposed rule to American Samoa, Guam, Hawaii, and the Commonwealth of the Northern Mariana Islands at the time of publication in the **Federal Register** and will be available to discuss ways to ensure that the conservation and management measures implemented in this rulemaking can be consistently applied to federal, state, and territorial managed fisheries.

For the whale shark, the first element of the proposed rule would prohibit owners, operators, and crew of fishing vessels from setting or attempting to set a purse seine in the Convention Area on or around a whale shark if the animal is sighted prior to the commencement of the set or the attempted set. CMM 2012–04 includes language making the prohibition specific to “a school of tuna associated with a whale shark.” However, it is unclear exactly what this phrase means. Thus, NMFS believes it is appropriate to apply this prohibition to any purse seine set or attempted set on or around a whale shark that has been sighted prior to commencement of the set or attempted set. This prohibition would not apply to sets made in the territorial seas or archipelagic waters of any nation or in the EEZs of the PNA. The proposed rule would also include a definition of the PNA as the Pacific Island countries that are parties to the Nauru Agreement Concerning Cooperation in the Management of Fisheries of Common Interest, as specified on the Web site of the Parties to the Nauru Agreement at www.pnatuna.com. The PNA currently includes the following countries: Federated States of Micronesia, Kiribati, Marshall Islands, Nauru, Palau, Papua New Guinea, Solomon Islands, and Tuvalu. Vessel owners and operators may be subject to similar prohibitions regarding the whale shark in the EEZs of the PNA, if implemented by the PNA in accordance with the Third Arrangement.

The second element for the whale shark in the proposed rule would require the crew, operator, and owner of a fishing vessel to release any whale shark that is encircled in a purse seine

net in the Convention Area, and must take reasonable steps to ensure its safe release, without compromising the safety of any persons. This element also would not apply in the territorial seas or archipelagic waters of any nation, but would apply in the EEZs of the PNA.

The third and final element for the whale shark in the proposed rule would require the owner and operator of a fishing vessel that encircles a whale shark with a purse seine in the Convention Area to ensure that the incident is recorded by the end of the day on the catch report form, or Regional Purse Seine Logsheet (RPL), maintained pursuant to § 300.34(c)(1), in the format specified by the Pacific Islands Regional Administrator. The Pacific Islands Regional Administrator would provide vessel owners and operators with specific instructions for how to record whale shark encirclements on the RPL.

Classification

The Administrator, Pacific Islands Region, NMFS, has determined that this proposed rule is consistent with the WCPFC Implementation Act and other applicable laws, subject to further consideration after public comment.

Executive Order 12866

This proposed rule has been determined to be not significant for purposes of Executive Order 12866.

Regulatory Flexibility Act

An initial regulatory flexibility analysis (IRFA) was prepared, as required by section 603 of the Regulatory Flexibility Act. The IRFA describes the economic impact this proposed rule would have on small entities, if adopted. A description of the action, why it is being considered, and the legal basis for this action are contained in the **SUMMARY** section of the preamble and in other sections of this **SUPPLEMENTARY INFORMATION** section of the preamble. The analysis follows:

Estimated Number of Small Entities Affected

The proposed rule would apply to owners and operators of U.S. fishing vessels used to fish for HMS for commercial purposes in the Convention Area. This includes vessels in the purse seine, longline, tropical troll (including those in American Samoa, the Commonwealth of the Northern Mariana Islands, Guam, and Hawaii), Hawaii handline, Hawaii pole-and-line, and west coast-based albacore troll fleets. The estimated number of affected fishing vessels is as follows, broken

down by fleet: 40 purse seine vessels (based on the number of purse seine vessels licensed under the South Pacific Tuna Treaty as of March 2014); 165 longline vessels (based on the number of longline vessels permitted to fish as of July 2014 under the Fishery Ecosystem Plan for Pacific Pelagic Fisheries of the Western Pacific Region, which includes vessels based in Hawaii (a total of 164 Hawaii Longline Limited Entry permits are available), American Samoa (a total of 60 American Samoa Longline Limited Entry permits are available), and the Mariana Islands); 2,089 tropical troll and 572 Hawaii handline vessels (based on the number of active troll and handline vessels in American Samoa, Guam, the Commonwealth of the Northern Mariana Islands, and Hawaii in 2012, the latest year for which complete data are available); 1 tropical pole-and-line vessel (based on the number of active vessels in 2012), and 13 albacore troll vessels (based on the number of albacore troll vessels authorized to fish on the high seas in the Convention Area as of July 2014). Thus, the total estimated number of vessels that would be subject to the rule is approximately 2,878.

On June 12, 2014, the Small Business Administration (SBA) issued an interim final rule revising the small business size standards for businesses including those in the fishing industry, effective July 14, 2014 (79 FR 33647). The rule increased the size standard for Finfish Fishing to \$20.5 million. Based on (limited) available financial information about the affected fishing fleets and the SBA's definition of a small finfish harvester (i.e., gross annual receipts of less than \$20.5 million, independently owned and operated, and not dominant in its field of operation), and using individual vessels as proxies for individual businesses, NMFS believes that all of the affected fish harvesting businesses are small entities. As indicated above, there are currently 40 purse seine vessels in the affected purse seine fishery. Average annual receipts for each of the 40 vessels during the last three years for which reasonably complete data are available, 2010–2012, were estimated by multiplying the vessel's reported retained catches of each of skipjack tuna, yellowfin tuna, and bigeye tuna in each year by an indicative regional cannery price for that species and year (developed by the Pacific Islands Forum Fisheries Agency and available at <https://www.ffa.int/node/425#attachments>), summing the receipts across species for each year, and averaging the total estimated receipts across the three years. The

estimated average annual receipts for each of the 40 vessels were less than \$20.5 million.

Recordkeeping, Reporting, and Other Compliance Requirements

The reporting, recordkeeping and other compliance requirements of this proposed rule are described earlier in the preamble. The classes of small entities subject to the requirements and the costs of complying with the proposed requirements are described below for each of the six elements of the proposed rule—three elements regarding the oceanic whitetip shark and silky shark and three elements regarding the whale shark.

Oceanic Whitetip Shark and Silky Shark Element (1): Prohibit the crew, operator, and owner of a fishing vessel from retaining on board, transshipping, storing, or landing any oceanic whitetip shark or silky shark: This element would prohibit the crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS from retaining on board, transshipping, storing, or landing any part or whole carcass of an oceanic whitetip shark or silky shark that is caught in the Convention Area. This requirement would not impose any new reporting or recordkeeping requirements. It is not expected to require any professional skills that the affected vessel owners, operators and crew do not already possess. This requirement would apply to owners, operators and crew of any vessel used to fish for HMS for commercial purposes in the Convention Area. Accordingly, it would apply to all vessels identified above. Based on the best available data, oceanic whitetip shark and silky shark are not caught in the Hawaii handline fishery, the Hawaii pole-and-line fishery, or the albacore troll fishery. Thus, compliance costs are expected only in the purse seine, longline, and tropical troll fleets. This requirement would foreclose harvesting businesses' opportunity to retain and sell or otherwise make use of the two species. The compliance cost for each entity can be approximated by the ex-vessel value of the amount of the two species that would be expected to be retained if it were allowed (under no action). Price data for specific shark species and in specific fisheries is lacking, so this analysis assumes that the ex-vessel value of both species in all affected fisheries is \$1.50/kg, which is the 2011 ex-vessel price (converted to 2013 dollars) for sharks generally in Hawaii's commercial pelagic fisheries (which do not include the purse seine fishery, in which the fate and value of

retained sharks are not known). Expected retained amounts of each of the two species in each fishery (under no action) are based on the recent level of fishing effort multiplied by the recent retention rate per unit of fishing effort. For all fisheries except the purse seine fishery, the average of the last five years for which complete data are available, 2008–2012, is used. The analysis of impacts for the purse seine fishery uses fishing effort and the retention rate averaged over 2010 and 2011 because the fleet was substantially smaller than the current 40-vessel size in years previous to 2010, 100% observer coverage started in 2010, and 2011 is the last year for which near-complete data are available. Fishing effort estimates are based on vessel logbook data, except in the case of the American Samoa, CNMI, and Guam troll fisheries, for which creel survey data are used. Recent retention rates in the purse seine and longline fisheries are estimated from vessel observer data. In the Hawaii troll fishery, vessel logbook data are used, and in the American Samoa, CNMI, and Guam troll fisheries, creel survey data are used. Fish numbers are converted to weights based on vessel observer data for each fishery, except for the troll fisheries, for which weight data are lacking and the average weights in the Hawaii deep-set longline fishery are used. The average weights used are, for oceanic whitetip shark and silky shark, respectively: purse seine: 23 kg and 32 kg; Hawaii deep-set longline: 27 kg and 28 kg; Hawaii shallow-set longline: 27 kg and 28 kg; American Samoa longline: 26 kg and 18 kg; and tropical troll: 27 kg (the two species cannot be accurately distinguished in the data and are combined for the purpose of this analysis).

In the purse seine fishery, in which about 40 vessels are expected to participate in the near future, it is estimated that 0.1 oceanic whitetip shark and 2.9 silky shark would be retained (under no action) per vessel per year, on average. Applying the average weights and price given above, these amounts equate to estimated lost annual revenue of about \$140 per vessel, on average.

As indicated above, about 162 vessels are expected to participate in the affected longline fisheries in the near future. The longline fisheries operating in the Convention Area include the Hawaii-based fisheries, which include a tuna-targeting deep-set fishery and swordfish-targeting shallow set fishery, and the American Samoa-based fishery. Occasionally there is also longline fishing by vessels based in the Mariana Islands, where participation is typically

fewer than three vessels in any given year. No vessel observer data are available specifically for the Mariana Islands longline fishery, making it difficult to analyze shark catch rates, but shark catch rates in the other longline fisheries might be reasonable proxies for catch rates in the Mariana Islands fishery. In that case, to the extent either oceanic whitetip shark or silky shark is caught and retained in the Mariana Islands longline fishery in the future, the effects of the proposed rule can be expected to be about the same—on a per-unit of fishing effort basis—as those in the other longline fisheries, as described here. In the Hawaii and American Samoa longline fisheries, it is estimated that 0.2 oceanic whiteip shark and 0.1 silky shark would be retained (under no action) per vessel per year, on average. These amounts equate to estimated lost annual revenue of about \$12 per vessel, on average.

Catch and retention rates of the two shark species in the tropical troll fisheries are difficult to estimate for several reasons. For example, in the Hawaii troll fishery, there is no species code for silky shark so any catches of that species are recorded as unidentified sharks. In the troll fisheries of the three territories, because the two carcharhinid species are retained only infrequently, it is difficult to generate estimates of total catches of the two species with much certainty using the creel surveys that sample only a subset of all fishing trips. Because of these and other limitations, only very approximate estimates can be made. For this analysis, all unidentified sharks in the data are assumed to be oceanic whitetip shark or silky shark, so the resulting estimates are upper-bound estimates. In the Hawaii troll fishery it is estimated that 9 sharks would be retained (under no action) per year, on average, for the fishery as a whole. With approximately 1,694 vessels expected to participate in the fishery (based on the number active in 2012), this equates to about 0.01 sharks per vessel per year, and an estimated lost annual revenue of less than one dollar per vessel. The Guam troll fishery, with about 351 vessels expected to participate in the near future, is expected to retain about 2 sharks per year (under no action), on average, for the fleet as a whole. This equates to about 0.01 sharks per vessel per year, and an estimated annual compliance cost of less than one dollar per vessel. In the American Samoa troll fishery, it is estimated that about 0.3 sharks would be retained, on average, per year (under no action). With about 9 vessels expected to participate in the fishery, this equates to about 0.03 sharks

per vessel per year, and an estimated annual compliance cost of less than one dollar per vessel. The creel survey encountered no retained sharks in the CNMI troll fishery in 2008–2012, so the best estimate of lost annual revenue for each of the approximately 35 vessels expected to participate in this fishery is zero.

Oceanic Whitetip Shark and Silky Shark Element (2): Require the crew, operators, and owners of U.S. fishing vessels used for commercial fishing for HMS in the Convention Area to release any oceanic whitetip shark or silky shark caught in the Convention Area: This element would require the vessel crew, operator, and owner to release any oceanic whitetip shark or silky shark caught in the Convention Area as soon as possible after the shark is caught and brought alongside the vessel and take reasonable steps to ensure its safe release, without compromising the safety of any persons. This requirement would not impose any new reporting or recordkeeping requirements. It is not expected to require any professional skills that the affected vessel owners, operators and crew do not already possess. This requirement could bring costs in the form of reduced efficiency of fishing operations, but it is difficult to assess the costs because it is not possible to predict whether or how vessel operators and crew would change their release/discard practices relative to what they do currently. For purse seine vessels, it is expected that in most cases, the fish would be released after it is brailed from the purse seine and brought on deck. In these cases, the labor involved would probably be little different than current practice for discarded sharks. If the vessel operator and crew determined that it is possible to release the fish before it is brought on deck, this would likely involve greater intervention and time on the part of crew members, with associated labor costs. For longline and troll vessels, it is expected that the fish would be quickly released as it is brought to the side of the vessel, such as by cutting the line or removing the hook. In these cases, no costs would be incurred. In some cases the vessel operator and crew might determine that it is necessary to bring the fish on board the vessel before releasing it. This would involve greater labor than releasing the fish from alongside the vessel, but the circumstances in these cases might be unchanged from the current situation, in which case no new costs would be incurred.

Oceanic Whitetip Shark and Silky Shark Element (3): Require the crew, operators, and owners of U.S. fishing

vessels used for commercial fishing for HMS in the Convention Area to allow and assist observers in the collection of oceanic whitetip shark or silky shark samples: This element would require the vessel crew, operator, and owner to allow and assist a WCPFC observer to collect samples of dead oceanic whitetip sharks or silky sharks when requested to do so by the observer. In such cases, and in any case in which the observer collects a sample of an oceanic whitetip shark or silky shark, the crew, operator, and owner would be relieved of the two requirements listed above. Under existing regulations, operators and crew of vessels with WCPFC Area Endorsements (i.e., vessels authorized to be used for commercial fishing for HMS on the high seas in the Convention Area) are already required to assist observers in the collection of samples. This would effectively expand that requirement—for just these two shark species—to vessels not required to have WCPFC Area Endorsements. This requirement would not impose any new reporting or recordkeeping requirements. It is not expected to require any professional skills that the affected vessel owners, operators and crew do not already possess. Although this element would relieve vessel owners, operators and crew from the requirements of the first two elements described above in those cases where the vessel observer collects a sample of an oceanic whitetip shark or silky shark, it would not be expected to relieve fishing businesses of the costs identified above for the no-retention requirement, since the samples would be kept by the observer and would not be available for sale or other use by the fishing business. This element could also bring additional costs to fishing businesses because it would require the owner, operator, and crew to assist the observer in the collection of samples if requested to do so by the observer. Observers would be under instructions to collect samples only if they do so as part of a program that has been specifically authorized by the WCPFC Scientific Committee, and only from sharks that are dead when brought alongside the vessel. It is not possible to project how often observers would request assistance in collecting samples. When it does occur, it is not expected that sample collection would be so disruptive as to substantially delay or otherwise impact fishing operations, but the fishing business could bear small costs in terms of crew labor, and possibly the loss of storage space that could be used for other purposes.

Whale Shark Element (1): Prohibit owners, operators, and crew of U.S.

fishing vessels used for commercial fishing for HMS in the Convention Area from setting or attempting to set a purse seine on or around a whale shark: This requirement would prohibit owners, operators and crew of fishing vessels from setting or attempting to set a purse seine in the Convention Area on or around a whale shark if the animal is sighted prior to the commencement of the set or the attempted set. This requirement would apply to all U.S. purse seine vessels fishing on the high seas and in the EEZs in the Convention Area, except the EEZs of the PNA. This requirement would not impose any new reporting or recordkeeping requirements. It is not expected to require any professional skills that the affected vessel owners, operators and crew do not already possess. In the event that a whale shark is sighted in the vicinity of a purse seine vessel prior to a desired set, complying with the proposed rule could cause forgone fishing opportunities and result in economic losses. It is difficult to project the frequency of pre-set whale shark-sighting events because such events are not recorded. Historical data on whale shark catches are available, but catches are not equivalent to pre-set whale shark sightings, for two reasons. On the one hand, presumably not all whale sharks within "sightable" distance of a set are actually caught (thus, in this respect, whale shark catch data under-represent pre-set whale shark sighting events). On the other hand, according to anecdotal information from purse seine vessel operators, not all captured whale sharks are seen before the set commences (thus, in this respect, the whale shark catch data over-represent pre-set whale shark-sighting events). Nonetheless, historical whale shark catch rates can provide a rough indicator of the frequency of pre-set whale shark sighting events in the future. Based on unpublished vessel observer data from the FFA observer program, the average whale shark catch rate in 2010–2011 for the U.S. purse seine fishery in the Convention Area, excluding the EEZs of the PNA, was approximately 2 fish per thousand fishing days. The average catch rate during that period in the Convention Area as a whole (including the waters of the PNA EEZs) was about 5 fish per thousand fishing days. For this analysis, this range of 2–5 events per thousand fishing days is used as an estimate of pre-set whale shark-sighting events in the future. Based on the average levels of U.S. purse seine fishing effort in the Convention Area outside the EEZs of the PNA in 2010 and 2011 (462 and 842 fishing days, respectively; NMFS

unpublished data), it can be expected that approximately 652 fishing days per year will be spent by the fleet in that area in the future. At that level of fishing effort, if pre-set whale shark-sighting events occurred in 2 to 5 per thousand fishing days, as described above, they would occur 1.3 to 3.3 times per year, on average, for the fleet as a whole, or 0.03 to 0.08 times per year for each of the 40 vessels in the fleet, on average. In those instances that a whale shark is sighted prior to an intended set, the vessel operator would have to wait and/or move the vessel to find the next opportunity to make a set. The consequences in terms of time lost and distance travelled and associated costs cannot be projected with any certainty. At best, the operator would find an opportunity to make a set soon after the event, and only trivial costs would be incurred. At worst, the vessel operator would lose the opportunity to make a set for the remainder of the day. Under this worst-case assumption, a vessel could lose the net benefits associated with 0.03 to 0.08 fishing days per year, on average. Those lost net benefits cannot be estimated because of a lack of fishing cost data, but information on gross receipts can provide an upper-bound estimate. Using regional cannery prices in 2012 for each of the three marketable tuna species, and the U.S. fleet's average catches and fishing days in 2011–2012, the expected gross receipts per fishing day would be about \$60,000. Thus, an upper-bound estimate of the loss in gross revenue that could occur to a vessel as a result of losing 0.03 to 0.08 fishing days is approximately \$1,800 to \$4,800 per year.

Whale Shark Element (2): Require the crew, operator, and owner of U.S. fishing vessels used for commercial fishing for HMS in the Convention Area to release any whale shark that is encircled in a purse seine net: This element would require the crew, operator, and owner of a fishing vessel to release any whale shark that is encircled in a purse seine net in the Convention Area, and to do so in a manner that results in as little harm to the shark as possible, without compromising the safety of any persons. This requirement would apply to all U.S. purse seine vessels fishing on the high seas and in the EEZs of the Convention Area, including the EEZs of the PNA. This requirement would not impose any new reporting or recordkeeping requirements. It is not expected to require any professional skills that the affected vessel owners, operators and crew do not already

possess. Unpublished historical vessel observer data from the FFA observer program indicates that all whale sharks captured in the U.S. WCPO purse seine fishery are released; that is, they are not retained or marketed. The release requirement, therefore, is not expected to have any effect on fishing operations or to bring any compliance costs. The requirement to release the sharks in a manner that results in as little harm to the shark as possible without compromising the safety of any persons would be a new and potentially burdensome requirement, but it is not possible to quantitatively assess the cost for two reasons. First, it is not clear how often whale sharks would be encircled. As indicated above, the average annual rate by U.S. purse seine vessels in the Convention Area in 2010 and 2011 was about 5 encirclements per thousand fishing days. But the rate in the future is expected to be reduced as a result of the setting prohibition described in the first whale shark element, above. Nonetheless, if 5 encirclements per thousand fishing days is considered an upper-bound projection, then at a future fishing effort rate of 7,991 fishing days per year in the Convention Area (based on the average spent in 2010 and 2011) and 40 vessels in the fleet, an upper-bound projection of the rate of encirclements per vessel is one per year, on average. The second reason for the difficulty in assessing the compliance costs of this requirement is that current vessel practices regarding whale shark releases are not known in detail. Although data on the condition of each captured whale shark is available (e.g., based on unpublished FFA observer data for 2010 and 2011, 68% of captured whale sharks were released alive, 2% were released dead, and the condition of the remainder was unknown), these data do not reveal anything about whether the condition of the released whale sharks could have been better, or what the vessel crew would have had to have done to improve the sharks' condition. In conclusion, this requirement might bring some costs to purse seine vessel operations, in the form of the crew potentially having to spend more time handling encircled whale sharks (at most, one per year per vessel, on average) in order to release them with as little harm as possible.

Whale Shark Element (3): Require the owner and operator of a fishing vessel that encircles a whale shark to record the incident on a catch report form: This requirement would require the owner and operator of a fishing vessel that encircles a whale shark with a purse seine net in the Convention Area to

ensure that the incident is recorded by the end of the day on the catch report form, or Regional Purse Seine Logsheet (RPL) maintained pursuant to 50 CFR 300.34(c)(1), in the format specified by the NMFS Pacific Islands Regional Administrator. This requirement would apply to all U.S. purse seine vessels fishing on the high seas and in the EEZs of the Convention Area, including the EEZs of the PNA. Because catch and effort logbooks are already required to be maintained and submitted in the purse seine fishery, there would be no additional cost associated with submitting the logbook, but vessels would be required to record additional information associated with whale shark encirclements. The required information for each incident would include a description of the steps taken to minimize harm and an assessment of its condition upon its release. This additional information requirement would be added to the information required to be reported under a current information collection (OMB control number 0648–0218; see the section on the Paperwork Reduction Act below for more information). As indicated for the previous element, it is not possible to project the rate of encirclements with certainty, but one encirclement per vessel per year, on average, is an upper-bound projection. NMFS estimates that it would take about 10 minutes to record the required information for each encirclement. At an estimated labor cost of \$25 per hour, the annual cost per vessel would be about \$4.

There would be no disproportionate economic impacts between small and large vessel-operating entities resulting from this rule. Furthermore, there would be no disproportionate economic impacts based on vessel size, gear, or homeport, as all the vessels in the fleets would be subject to the same requirements and NMFS has not identified any factors related to vessel size, gear, or homeport that would lead to disproportionate impacts.

Duplicating, Overlapping, and Conflicting Federal Regulations

NMFS has identified two Federal regulations that overlap with the proposed regulations.

First, the regulation at 50 CFR 300.25(e)(4) prohibits the crew, operator, or owner of a U.S. fishing vessel used to fish for HMS in the eastern Pacific Ocean—specifically, east of 150° W. longitude in the Pacific Ocean, between the latitudes of 40° N. and 40° S.—from retaining on board, transshipping, landing, storing, selling, or offering for sale any part or whole carcass of an oceanic whitetip shark.

The regulation also requires the crew, operator and owner to release unharmed, to the extent practicable, all oceanic whitetip shark when brought alongside the vessel. The area of application of this regulation overlaps with the area of application of the oceanic whitetip shark requirements of these proposed regulations. Specifically, both regulations would apply in the area of overlap between the respective areas of application of the Convention and of the Antigua Convention, which is the area bounded by the latitudes of 4° S. and 40° S. and the longitudes of 130° W. and 150° W. Although the two regulations would overlap geographically, they would not conflict or establish duplicative or redundant requirements because compliance with one of the two regulations would satisfy compliance with the other regulation.

Second, the regulation at 50 CFR 300.215(c)(3)(iii) requires that operators and crew of vessels that are required to have WCPFC Area Endorsements (i.e., vessels authorized to be used for commercial fishing for HMS on the high seas in the Convention Area) assist WCPFC observers in the collection of samples. The proposed rule would establish a similar requirement for all U.S. vessels used for fishing for HMS in the Convention Area, but it would be limited to the collection of oceanic whitetip shark and silky shark samples. Thus, the two regulations would overlap with each with respect to the two shark species and vessels required to have WCPFC Area Endorsements. However, the two regulations would not conflict or establish duplicative or redundant requirements because compliance with one of the two regulations would satisfy compliance with the other.

NMFS has not identified any Federal regulations that duplicate or conflict with the proposed regulations.

Alternatives to the Proposed Rule

NMFS has not identified any significant alternatives to the proposed rule for the oceanic whitetip shark and silky shark elements, other than the no-action alternative. NMFS considered alternatives for the whale shark elements of the proposed rule. As discussed above, the first element of the proposed rule for the whale shark would prohibit owners, operators, and crew of fishing vessels from setting or attempting to set a purse seine in the Convention Area on or around a whale shark if the animal is sighted prior to the commencement of the set or the attempted set. This element would apply on the high seas and in the EEZs of the Convention Area, except for the EEZs of the PNA. CMM 2012–04 states

that “CCMs shall prohibit their flagged vessels from setting a purse seine on a *school of tuna associated with a whale shark* if the animal is sighted prior to the commencement of the set” (emphasis added). NMFS considered developing alternative means of implementing the prohibition on setting on a school of tuna, such as specifying a minimum distance for the prohibition (e.g., no setting within half a mile of a whale shark sighting) or a minimum time period for the prohibition (e.g., no setting within 10 minutes of sighting a whale shark). However, NMFS did not identify any such alternative for this element that would be reasonable and feasible. After a whale shark is sighted, it is unclear where and when it will next be sighted, since sharks do not have to return to the surface regularly to breathe. Therefore, NMFS determined that there is only one reasonable and feasible manner of implementing this element of the proposed rule.

CMM 2012–04 also states that for fishing activities in the EEZs of CCMs north of 30° N. latitude, CCMs shall implement either the provisions of CMM 2012–04 or compatible measures consistent with the obligations under CMM 2012–04. The U.S. purse seine fleet does not fish north of 30° N. latitude in the WCPO. Thus, rather than attempting to develop a separate set of “compatible measures” for EEZs of CCMs north of 30° N. latitude that may or may not be triggered by any actual U.S. purse seine operations, NMFS decided to implement the provisions of CMM 2012–04 for all EEZs in the Convention Area (with the exception of the first element not being applicable to the EEZs of the PNA, as described above). NMFS did not identify any other alternatives for any of the elements of the proposed rule.

Taking no action could result in lesser adverse economic impacts than the proposed action for many affected entities, but NMFS has determined that the no-action alternative would fail to accomplish the objectives of the WCPFC Implementation Act, including satisfying the obligations of the United States as a Contracting Party to the Convention.

Paperwork Reduction Act

This proposed rule contains a change request to a collection-of-information subject to the Paperwork Reduction Act (PRA) that has been approved by the Office of Management and Budget (OMB) under control number 0648–0218, “South Pacific Tuna Act” (the whale shark encirclement reporting requirement). The public reporting burden for the catch report form (also

known as the RPL) under that collection-of-information is estimated to average one hour per response (i.e., per fishing trip), including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Under this proposed rule, in the event that a whale shark is encircled in a purse seine net, information about that event would be required to be included in the catch report form. Providing this additional information would increase the reporting burden by approximately 10 minutes per encirclement, which, given an estimated one encirclement per year and five fishing trips per year, on average, equates to approximately 2 minutes per fishing trip or per response. Therefore, the new estimated burden per response (i.e., per fishing trip) for the catch report form would be 62 minutes. Send comments regarding this burden estimate, or any other aspect of this data collection, including suggestions for reducing the burden, to Michael D. Tosatto, Regional Administrator, NMFS PIRO (see ADDRESSES) and by email to OIRA_Submission@omb.eop.gov or fax to 202-395-7285.

Notwithstanding any other provision of the law, no person is required to respond to, and no person shall be subject to penalty for failure to comply with, a collection of information subject to the requirements of the PRA, unless that collection of information displays a currently valid OMB control number.

List of Subjects in 50 CFR Part 300

Administrative practice and procedure, Fish, Fisheries, Fishing, Marine resources, Reporting and recordkeeping requirements, Treaties.

Dated: August 19, 2014.

Samuel D. Rauch III,
Deputy Assistant Administrator for
Regulatory Programs, National Marine
Fisheries Service.

For the reasons set out in the preamble, 50 CFR part 300 is proposed to be amended as follows:

PART 300—INTERNATIONAL FISHERIES REGULATIONS

■ 1. The authority citation for 50 CFR part 300, subpart O, continues to read as follows:

Authority: 16 U.S.C. 6901 *et seq.*

■ 2. In § 300.211, the definition of “Parties to the Nauru Agreement” is added, in alphabetical order, to read as follows:

§ 300.211 Definitions.

* * * * *
Parties to the Nauru Agreement means the parties to the Nauru Agreement Concerning Cooperation in the Management of Fisheries of Common Interest, as specified on the Web site of the Parties to the Nauru Agreement at www.pnatuna.com.
* * * * *

■ 3. In § 300.218, paragraph (g) is added to read as follows:

§ 300.218 Reporting and recordkeeping requirements.

* * * * *
(g) *Whale shark encirclement reports.* The owner and operator of a fishing vessel of the United States used for commercial fishing in the Convention Area that encircles a whale shark (*Rhincodon typus*) with a purse seine in the Convention Area shall ensure that the incident is recorded by the end of the day on the catch report forms maintained pursuant to § 300.34(c)(1), in the format specified by the Pacific Islands Regional Administrator. This paragraph does not apply to the territorial seas or archipelagic waters of any nation, as defined by the domestic laws and regulations of that nation and recognized by the United States.

■ 4. In § 300.222, paragraphs (rr), (ss), (tt), (uu), and (vv) are added to read as follows:

§ 300.222 Prohibitions.

* * * * *
(rr) Fail to submit, or ensure submission of, a whale shark encirclement report as required in § 300.218(g).
(ss) Set or attempt to set a purse seine on or around a whale shark (*Rhincodon typus*) in contravention of § 300.223(g).
(tt) Fail to release a whale shark encircled in a purse seine net of a fishing vessel as required in § 300.223(h).
(uu) Use a fishing vessel to retain on board, transship, store, or land any part or whole carcass of an oceanic whitetip shark (*Carcharhinus longimanus*) or silky shark (*Carcharhinus falciformis*) in contravention of § 300.226(a).
(vv) Fail to release an oceanic whitetip shark or silky shark as required in § 300.226(b).

■ 5. In § 300.223, paragraphs (g) and (h) are added to read as follows:

§ 300.223 Purse seine fishing restrictions.
* * * * *

(g) Owners, operators, and crew of fishing vessels of the United States used for commercial fishing for HMS in the Convention Area shall not set or attempt to set a purse seine in the Convention Area on or around a whale shark (*Rhincodon typus*) if the animal is sighted at any time prior to the commencement of the set or the attempted set. This paragraph does not apply to the territorial seas or archipelagic waters of any nation, as defined by the domestic laws and regulations of that nation and recognized by the United States, or to areas under the national jurisdiction of the Parties to the Nauru Agreement.

(h) The crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS in the Convention Area must release any whale shark that is encircled in a purse seine net in the Convention Area, and take reasonable steps for its safe release, without compromising the safety of any persons. This paragraph does not apply to the territorial seas or archipelagic waters of any nation, as defined by the domestic laws and regulations of that nation and recognized by the United States.

■ 6. Section 300.226 is added to read as follows:

§ 300.226 Oceanic whitetip shark and silky shark.

(a) The crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS cannot retain on board, transship, store, or land any part or whole carcass of an oceanic whitetip shark (*Carcharhinus longimanus*) or silky shark (*Carcharhinus falciformis*) that is caught in the Convention Area, unless subject to the provisions of paragraph (c) of this section.

(b) The crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS must release any oceanic whitetip shark or silky shark caught in the Convention Area as soon as possible after the shark is caught and brought alongside the vessel, and take reasonable steps for its safe release, without compromising the safety of any persons, unless subject to the provisions of paragraph (c) of this section.

(c) Paragraphs (a) and (b) of this section do not apply in the event that a WCPFC observer collects, or requests the assistance of the vessel crew, operator, or owner in the observer's collection of, samples of oceanic

whitetip shark or silky shark in the Convention Area.

(d) The crew, operator, and owner of a fishing vessel of the United States used for commercial fishing for HMS in the Convention Area must allow and assist a WCPFC observer to collect

samples of oceanic whitetip shark or silky shark in the Convention Area, if requested to do so by the WCPFC observer.

This section of the FEDERAL REGISTER contains documents other than rules or proposed rules that are applicable to the public. Notices of hearings and investigations, committee meetings, agency decisions and rulings, delegations of authority, filing of petitions and applications and agency statements of organization and functions are examples of documents appearing in this section.

DEPARTMENT OF COMMERCE

Submission for OMB Review; Comment Request

The Department of Commerce will submit to the Office of Management and Budget (OMB) for clearance the following proposal for collection of information under the provisions of the Paperwork Reduction Act (44 U.S.C. Chapter 35).

Agency: National Institute of Standards and Technology (NIST).

Title: NIST Summer Institute for Middle School Science Teachers (NIST Summer Institute) and the NIST Research Experience for Teachers (NIST RET) Programs Application Requirements.

OMB Control Number: 0693-0059.

Form Number(s): NIST-1103.

Type of Request: Regular submission (revision of a currently approved information collection).

Number of Respondents: 100.

Average Hours per Response: 1.

Burden Hours: 100.

Needs and Uses: The NIST Summer Institute and the NIST RET are two competitive financial assistance (cooperative agreement) programs that offer middle school (Grades 6–8) science teachers an opportunity to participate in hands-on activities, lectures, tours, visits, or in scientific research with scientists and engineers in NIST laboratories. The aim is to encourage them to inspire students to pursue careers in science, technology, engineering, and mathematics (STEM) fields. This request is for the information collection for form NIST-1103 that must be completed by nominated teachers. The information is used in making cooperative agreement decisions.

Revision: The NIST 1103-A, previously used by DC Public School Teachers applicants due to a separate allowance for a late application period, has been removed from this information

collection request. DC teachers have applied during the regular application process using NIST 1103.

Affected Public: U.S. public school districts, U.S. accredited private educational institutions, and U.S. middle school (Grades 6–8) science teachers.

Frequency: Annually.

Respondent's Obligation: Required to obtain benefits.

This information collection request may be viewed at reginfo.gov. Follow the instructions to view Department of Commerce collections currently under review by OMB.

Written comments and recommendations for the proposed information collection should be sent within 30 days of publication of this notice to OIRA_Submission@omb.eop.gov or fax to (202) 395-5806.

Dated: August 18, 2014.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

DEPARTMENT OF COMMERCE

International Trade Administration

[A-583-853]

Certain Crystalline Silicon Photovoltaic Products From Taiwan: Notice of Amended Preliminary Determination of Sales at Less Than Fair Value

AGENCY: Enforcement and Compliance, International Trade Administration, Department of Commerce.

DATES: *Effective Date:* August 22, 2014.

SUMMARY: The Department of Commerce (“Department”) has determined that it made certain significant ministerial errors in the preliminary determination of sales at less than fair value in the antidumping duty investigation of certain crystalline silicon photovoltaic products from Taiwan, as described below in the “Supplementary Information” section of this notice. The Department corrected these errors and has recalculated the weighted-average dumping margin for a mandatory respondent and the all-others rate, as described below in the “Amended Preliminary Determination” section of this notice.

FOR FURTHER INFORMATION CONTACT:

Magd Zalok or James Martinelli, Enforcement and Compliance, International Trade Administration, U.S. Department of Commerce, 14th Street and Constitution Avenue NW., Washington, DC 20230; telephone: 202-482-4162 or 202-482-2923, respectively.

SUPPLEMENTARY INFORMATION:

Background

On July 31, 2014, the Department published its affirmative preliminary determination that certain crystalline silicon photovoltaic products from Taiwan are being, or are likely to be, sold in the United States at less than fair value, as provided by section 733 of the Tariff Act of 1930, as amended (the “Act”).¹

On July 30, 2014, Motech Industries, Inc. (“Motech”), a mandatory respondent in this investigation, submitted a timely ministerial error allegation with respect to the *Preliminary Determination*. In addition, on August 4, 2014, SolarWorld Industries America, Inc. (“Petitioner”) and tenKsolar (Shanghai) Co., Ltd. (“tenKsolar”), an exporter of Chinese panels that were made of cells produced in Taiwan during the period of investigation, submitted timely ministerial error allegations. Therefore, in accordance with 19 CFR 351.224(e), we have made changes, as discussed below, to the *Preliminary Determination*.

Period of Investigation

The period of investigation (“POI”) is October 1, 2012 through September 30, 2013.

Scope of Investigation

The merchandise covered by these investigations is crystalline silicon photovoltaic cells, and modules, laminates and/or panels consisting of crystalline silicon photovoltaic cells, whether or not partially or fully assembled into other products, including building integrated materials. For purposes of these investigations, subject merchandise also includes modules, laminates and/or panels

¹ See *Certain Crystalline Silicon Photovoltaic Products From Taiwan: Affirmative Preliminary Determination of Sales at Less Than Fair Value and Postponement of Final Determination*, 79 FR 44,395 (July 31, 2014) (“*Preliminary Determination*”).

assembled in the subject country consisting of crystalline silicon photovoltaic cells that are completed or partially manufactured within a customs territory other than that subject country, using ingots that are manufactured in the subject country, wafers that are manufactured in the subject country, or cells where the manufacturing process begins in the subject country and is completed in a non-subject country.

Subject merchandise includes crystalline silicon photovoltaic cells of thickness equal to or greater than 20 micrometers, having a p/n junction formed by any means, whether or not the cell has undergone other processing, including, but not limited to, cleaning, etching, coating, and/or addition of materials (including, but not limited to, metallization and conductor patterns) to collect and forward the electricity that is generated by the cell.

Excluded from the scope of these investigations are thin film photovoltaic products produced from amorphous silicon (a-Si), cadmium telluride (CdTe), or copper indium gallium selenide (CIGS). Also excluded from the scope of these investigations are any products covered by the existing antidumping and countervailing duty orders on crystalline silicon photovoltaic cells, whether or not assembled into modules, from the People's Republic of China.² Also excluded from the scope of these investigations are crystalline silicon photovoltaic cells, not exceeding 10,000 mm² in surface area, that are permanently integrated into a consumer good whose function is other than power generation and that consumes the electricity generated by the integrated crystalline silicon photovoltaic cell. Where more than one cell is permanently integrated into a consumer good, the surface area for purposes of this exclusion shall be the total combined surface area of all cells that are integrated into the consumer good.

Merchandise covered by these investigations is currently classified in the Harmonized Tariff Schedule of the United States (HTSUS) under subheadings 8501.61.0000, 8507.20.8030, 8507.20.8040, 8507.20.8060, 8507.20.8090, 8541.40.6020, 8541.40.6030 and 8501.31.8000. These HTSUS

² See *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Amended Final Determination of Sales at Less Than Fair Value, and Antidumping Duty Order*, 77 FR 73018 (December 7, 2012); *Crystalline Silicon Photovoltaic Cells, Whether or Not Assembled Into Modules, From the People's Republic of China: Countervailing Duty Order*, 77 FR 73017 (December 7, 2012).

subheadings are provided for convenience and customs purposes; the written description of the scope of these investigations is dispositive.

Significant Ministerial Errors

Ministerial errors are defined in 19 CFR 351.224(f) as "errors in addition, subtraction, or other arithmetic function, clerical errors resulting from inaccurate copying, duplication, or the like, and any other type of unintentional error which the {Department} considers ministerial."³ Section 351.224(e) of the Department's regulations provides that the Department "will analyze any comments received and, if appropriate, correct any significant ministerial error by amending the preliminary determination . . ."⁴ A significant ministerial error is defined as a ministerial error, the correction of which, either singly or in combination with other errors, would result in (1) a change of at least five absolute percentage points in, but not less than 25 percent of, the weighted-average dumping margin calculated in the original (erroneous) preliminary determination, or (2) a difference between a weighted-average dumping margin of zero (or *de minimis*) and a weighted-average dumping margin of greater than *de minimis* or vice versa.⁵

In accordance with 19 CFR 351.224(e) and (g)(1), the Department is amending the preliminary determination of sales at less than fair value in the antidumping duty investigation of certain crystalline silicon photovoltaic products from Taiwan to reflect the corrections of significant ministerial errors it made in the margin calculation for Motech, a mandatory respondent in this investigation.⁶ As a result of these corrections, the Department has also amended the all others rate.⁷

Ministerial Error Allegations

For a complete analysis of the ministerial error allegations, see the Ministerial Error Memo.

³ See 19 CFR 351.224(f).

⁴ See 19 CFR 351.224(e).

⁵ See 19 CFR 351.224(g).

⁶ See also Memorandum from Christian Marsh, Deputy Assistant Secretary for Antidumping and Countervailing Duty Operations, to Ronald K. Lorentzen, Acting Assistant Secretary for Enforcement and Compliance, "Amended Preliminary Determination of Certain Crystalline Silicon Photovoltaic Products from Taiwan: Ministerial Error Memorandum ("Ministerial Error Memo"), which is hereby adopted to this notice.

⁷ See Memorandum to the File from James Martinelli, International Trade Compliance Analyst, AD/CVD Operations, Office IV, Enforcement and Compliance, regarding "Antidumping Investigation of Certain Crystalline Silicon Photovoltaic Products from Taiwan: Calculation of the All Others Rate" (August 15, 2014).

Amended Preliminary Determination

As a result of this amended preliminary determination, we have revised the preliminary weighted-average dumping margin for Motech and all others as follows:

Producer or exporter	Weighted-average dumping margin (percent)
Motech Industries, Inc.	20.86
Gintech Energy Corporation	27.59
All Others	24.23

The collection of cash deposits and suspension of liquidation will be revised according to the rates calculated in these amended preliminary results. Because these amended rates result in reduced cash deposits, they will be effective retroactively to July 31, 2014, the date of publication of the *Preliminary Determination*, and parties will be notified of this determination in accordance with section 733(d) and (f) of the Act. *International Trade Commission*

Notification

In accordance with section 733(f) of the Act, we notified the International Trade Commission ("ITC") of our amended preliminary determination.

Notification to Interested Parties

The Department intends to disclose calculations performed in connection with this amended preliminary determination within five days of the date of publication of this notice in accordance with 19 CFR 351.224(b).

This amended preliminary determination is issued and published in accordance with sections 733(f) and 777(i)(1) of the Act and 19 CFR 351.224(e).

Dated: August 15, 2014.

Ronald K. Lorentzen,

Acting Assistant Secretary for Enforcement and Compliance.

BILLING CODE 3510-DS-P

DEPARTMENT OF COMMERCE

National Technical Information Service

Proposed Information Collection; Comment Request; Limited Access Death Master File, Derived From the Social Security Administration's Death Master File, Subscriber Certification Form (Subscriber Certification Form)

AGENCY: National Technical Information Service, Commerce.

ACTION: Notice.

SUMMARY: The Department of Commerce, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995.

DATES: Written comments must be submitted on or before October 21, 2014.

ADDRESSES: Direct all written comments to Jennifer Jessup, Departmental Paperwork Clearance Officer, Department of Commerce, Room 6616, 14th and Constitution Avenue NW., Washington, DC 20230 (or via the Internet at Jjessup@doc.gov).

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the information collection instrument and instructions should be directed to John Hounsell, National Technical Information Service, 5301 Shawnee Rd., Alexandria, VA 22312, jhounsell@ntis.gov, 703-605-6184.

SUPPLEMENTARY INFORMATION:

I. Abstract

The National Technical Information Service (NTIS) Limited Access Death Master File, derived from the Social Security Administration's Death Master File, Subscriber Certification Form (Certification Form) will be used by NTIS to collect information related to the implementation of Section 203 of the Bipartisan Budget Act of 2013 (Pub. L. 113-67)(Act). On March 26, 2014, NTIS issued an interim final rule establishing a temporary certification program for persons who seek access to the Social Security Administration's Public Death Master File (DMF) (<http://www.gpo.gov/fdsys/pkg/FR-2014-03-26/pdf/2014-06701.pdf>). The interim final rule is codified at 15 CFR part 1110. Section 203 of the Act prohibits disclosure of DMF information during the three-calendar-year period following death unless the person requesting the information has been certified under a program established by the Secretary of Commerce.

The Act directs the Secretary of Commerce to establish a fee-based certification program for such access to the DMF. The Secretary of Commerce has delegated the authority to carry out the DMF certification program to the Director, NTIS. The DMF Certification Form collects only information necessary for NTIS to conduct the program. This collection of information is for information necessary to support

the certification process required by the Act for members of the public to be given access to the Death Master File containing information about deceased persons during the three-calendar-year period after that person's death.

II. Method of Collection

The Subscriber Certification Form may be submitted via mail, email, or fax.

III. Data

OMB Control Number: 0692-0013.

Form Number(s): NTIS FM161.

Type of Review: Regular submission, extension of a current information collection.

Affected Public: Individuals or households; businesses or other for-profit organizations; not-for-profit institutions (Users who wish to obtain access to the Death Master File from NTIS).

Estimated Number of Respondents: 700.

Estimated Time per Response: 2 hours.

Estimated Total Annual Burden Hours: 1,400.

Estimated Total Annual Cost to Public: \$140,000 (fees).

IV. Request for Comments

Comments are invited on: (a) whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden (including hours and cost) of the proposed collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology.

Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection; they also will become a matter of public record.

Dated: August 18, 2014.

Gwellnar Banks,

Management Analyst, Office of the Chief Information Officer.

BILLING CODE 3510-04-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List; Proposed Addition

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Proposed Addition to the Procurement List.

SUMMARY: The Committee is proposing to add a service to the Procurement List that will be provided by a nonprofit agency employing persons who are blind or have other severe disabilities.

Comments Must Be Received On Or Before: 9/22/2014.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 10800, Arlington, Virginia 22202-4149.

FOR FURTHER INFORMATION OR TO SUBMIT COMMENTS CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

This notice is published pursuant to 41 U.S.C. 8503(a)(2) and 41 CFR 51-2.3. Its purpose is to provide interested persons an opportunity to submit comments on the proposed action.

Addition

If the Committee approves the proposed addition, the entities of the Federal Government identified in this notice will be required to procure the service listed below from the nonprofit agency employing persons who are blind or have other severe disabilities.

The following service is proposed for addition to the Procurement List for production by the nonprofit agency listed:

Service

Service Type/Locations: Custodial and Grounds Maintenance Service, GSA, PBS, Region 2, Federico Degetau Federal Building and Clemente Ruiz Nazario US Courthouse 150 Carlos Chardon Street, Hato Rey, PR, GSA, PBS, Region 2, GSA Center, Insular Road No. 28, Guaynabo, PR

NPA: The Corporate Source, Inc., New York, NY.

Contracting Activity: GSA/Public Buildings Service, Hato Rey, PR.

Barry S. Lineback,

Director, Business Operations.

BILLING CODE 6353-01-P

COMMITTEE FOR PURCHASE FROM PEOPLE WHO ARE BLIND OR SEVERELY DISABLED

Procurement List Addition

AGENCY: Committee for Purchase From People Who Are Blind or Severely Disabled.

ACTION: Addition to the Procurement List.

SUMMARY: This action adds a product to the Procurement List that will be furnished by the nonprofit agency employing persons who are blind or have other severe disabilities.

DATES: *Effective Date:* September 22, 2014.

ADDRESSES: Committee for Purchase From People Who Are Blind or Severely Disabled, 1401 S. Clark Street, Suite 10800, Arlington, Virginia, 22202-4149.

FOR FURTHER INFORMATION CONTACT: Barry S. Lineback, Telephone: (703) 603-7740, Fax: (703) 603-0655, or email CMTEFedReg@AbilityOne.gov.

SUPPLEMENTARY INFORMATION:

Addition

On June 20, 2014 (79 FR 35320), the Committee for Purchase From People Who Are Blind or Severely Disabled published notice of proposed addition to the Procurement List.

After consideration of the material presented to it concerning capability of qualified nonprofit agency to furnish the product and impact of the addition on the current or most recent contractors, the Committee has determined that the

product listed below is suitable for procurement by the Federal Government under 41 USC 8501-8506 and 41 CFR 51-2.4.

Regulatory Flexibility Act Certification

I certify that the following action will not have a significant impact on a substantial number of small entities. The major factors considered for this certification were:

1. The action will not result in any additional reporting, recordkeeping or other compliance requirements for small entity other than the small organization that will furnish the product to the Government.

2. The action will result in authorizing a small entity to furnish the product to the Government.

3. There are no known regulatory alternatives which would accomplish the objectives of the Javits-Wagner-O'Day Act (41 U.S.C. 8501-8506) in connection with the product proposed for addition to the Procurement List.

End of Certification

Accordingly, the following product is added to the Procurement List:

Product

Measuring Tool, Set, Machinist's, MMTS

NSN: 5280-00-NIB-9919

NPA: Industries for the Blind, Inc., West Allis, WI

Contracting Activity: Army Contracting Command—U.S. Army Tank and Automotive Command, Warren, MI.

Coverage: C-List for 100% of the requirements of the U.S. Army as aggregated by Army Contracting

Command—U.S. Army Tank and Automotive Command, Warren, MI.

Barry S. Lineback,

Director, Business Operations.

(viii) *Date Report Delivered to Congress:* 12 Aug 2014

* As defined in Section 47(6) of the Arms Export Control Act.

POLICY JUSTIFICATION

Saudi Arabia—AWACS Modernization Program

The Kingdom of Saudi Arabia (KSA) has requested a sale of 5 Airborne Warning and Control System (AWACS) Block 40/45 Mission Computing Upgrade systems, 20 Next Generation Identification Friend or Foe (NG IFF) AN/UPX-40, communication equipment, provisioning, spare and repair parts, support equipment, Mission Planning System, repair and return, publications and technical documentation, personnel training and training equipment, U.S. Government and contractor logistics and technical support services, and other related elements of logistics and program support. The Block 40/45 major defense equipment includes new mission computing hardware and software with open architecture—including computers, servers, and mission interactive displays. The NG IFF major defense equipment includes receivers, interrogators and processor hardware for earlier detection of friendly contacts. The total estimated cost is \$2.0 billion.

The proposed sale will contribute to the foreign policy and the national security objectives of the United States by helping to improve the security of a friendly country that has been and continues to be an important force for political stability in the Middle East.

These upgrades are a continuation of efforts to maintain interoperability with U.S. and coalition forces. The Royal Saudi Air Force's (RSAF) AWACS fleet provides early warning of potential airborne threats to Saudi Arabia and manages friendly airborne assets. The sale of this equipment and support will enhance the RSAF's ability to effectively

field, support, and employ this aircraft for the foreseeable future. The KSA has the ability to absorb and use the defense articles and services associated with the AWACS modernization effort.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

Implementation of this proposed sale will not require the assignment of additional U.S. Government or contractor representatives to the KSA.

The principal contractor will be The Boeing Company in Kent, Washington. There are no known offset agreements in connection with this potential sale.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 14-11

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex

Item No. vii

(vii) *Sensitivity of Technology:*

1. Identification and security classification of classified equipment, major components, subsystems, software, technical data (performance, maintenance, operational, R&M, etc.), documentation, training devices and services to be conveyed with the proposed sale:

a. *AWACS Block 40/45:* The new mission computing system with Commercial Off-the Shelf (COTS) equipment significantly enhances the surveillance, identification, situational awareness and battle management capabilities of the AWACS. It will also provide on/off board, multi-source integration that produces "one-target/one-track" automatic track initiation and combat ID, improved data link infrastructure and reduced operator workload. The COTS equipment is Unclassified. The system software will be classified Secret.

b. *Next Generation Identification Friend or Foe (IFF):* The AN/UPX-40 system will include a new IFF Mode 5/ Mode S interrogator to improve tracking and identification of cooperative military and civil targets, reduce fratricide, and a Mode 5/Mode S transponder (AN/APX-119, Mark XIIA Digital Transponder) to respond to interrogations from military and civil

platforms. Hardware will be Mode 5 capable. The hardware and software will be Unclassified. The KIV-77 encryption device is Unclassified until keyed.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar advanced capabilities.

3. A determination has been made that the recipient country can provide the same degree of protection for the sensitive technology being released as the U.S. Government. This sale is necessary in furtherance of the U.S. foreign policy and national security objectives outlined in the Policy Justification.

4. All defense articles and services listed in this transmittal have been authorized for release and export to the Kingdom of Saudi Arabia.

POLICY JUSTIFICATION

Turkey—AIM-120C-7 AMRAAM Missiles

The Government of Turkey has requested a possible sale of 145 AIM-120C-7 Advanced Medium Range Air-to-Air Missiles (AMRAAM), 10 missile guidance sections, and 40 LAU-129 launchers, containers, support equipment, spare and repair parts, integration activities, publications and technical documentation, test equipment, personnel training and training equipment, U.S. Government and contractor logistics, engineering and technical support, and other related elements or logistics and program support. The estimated cost is \$320 million.

Turkey is a partner of the United States in ensuring peace and stability in the region. It is vital to the U.S. national interest to assist our NATO ally in developing and maintaining a strong and ready self-defense. This proposed sale is consistent with those objectives.

The Turkish Air Force (TAF) intends to obtain these missiles to modernize its inventory, which will support its own air defense needs and improve its interoperability with the U.S. and other NATO allies. These missiles will be used on the TAF's F-16 aircraft (and eventually their F-35 aircraft) and will maintain the TAF's air-to-air capability to defend its extensive coastline and borders against future threats. Turkey will have no difficulty absorbing these additional missiles into its armed forces.

The proposed sale of this equipment and support will not alter the basic military balance in the region.

The principal contractor will be Raytheon Corporation in Tucson, Arizona. There are no known offset agreements proposed in connection with this potential sale.

Implementation of this proposed sale will require multiple trips to Turkey involving U.S. Government and contractor representatives for technical reviews/support, program management, and training. U.S. contractor representatives will be required in Turkey for integration, testing, and training. The number and duration are unknown and will be determined during contract negotiations.

There will be no adverse impact on U.S. defense readiness as a result of this proposed sale.

Transmittal No. 13-50

Notice of Proposed Issuance of Letter of Offer Pursuant to Section 36(b)(1) of the Arms Export Control Act

Annex Item No. vii

(vii) *Sensitivity of Technology*

1. The AIM-120C-7 Advanced Medium Range Air-to-Air Missile (AMRAAM) is a Beyond Visual Range weapon designed to engage an enemy well before the pilot can see it. It improves the aerial capabilities of U.S. and allied aircraft to meet the threat of enemy air-to-air weapons. The AIM-120C-7 AMRAAM hardware, including the missile guidance section, is classified Confidential. The AMRAAM is an active radar-guided missile comprised of four sections: propulsion, control/electronics, fragmentation warhead, and guidance contained in a lightweight aluminum structure. The AMRAAM major components and subsystems range from Unclassified to Secret; and technical data and other documentation are classified up to Secret.

2. If a technologically advanced adversary were to obtain knowledge of the specific hardware and software elements, the information could be used to develop countermeasures that might reduce weapon system effectiveness or be used in the development of a system with similar or advanced capabilities.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD-2014-OS-0124]

Privacy Act of 1974; System of Records

AGENCY: Defense Health Agency, DoD.

ACTION: Notice to add a new System of Records.

SUMMARY: The Defense Health Agency proposes to add a new system of records, EDHA 01, entitled "Freedom of Information Act/Privacy Act Requests and Administrative Appeal Records" to its inventory of record systems subject to the Privacy Act of 1974, as amended. This system will be used to process access requests and administrative appeals under FOIA; to process access and amendment requests and administrative appeals under the Privacy Act; for litigation regarding agency action on such requests and administrative appeals; and to assist the DHA in carrying out any other

responsibility under FOIA or the Privacy Act.

DATES: Comments will be accepted on or before September 22, 2014. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

* *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, 2nd Floor, Suite 02G09, Alexandria, VA 22350-3100.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Linda S. Thomas, Chief, Defense Health Agency Privacy and Civil Liberties Office, 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101, or by phone at (703) 681-7500.

SUPPLEMENTARY INFORMATION: The Defense Health Agency notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at the Defense Privacy and Civil Liberties Office Web site at <http://dpclo.defense.gov/>.

The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on (July 28, 2014), to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A-130, "Federal Agency Responsibilities for Maintaining Records About Individuals," dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: August 19, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison
Officer, Department of Defense.

EDHA 01

SYSTEM NAME:

Freedom of Information Act/Privacy Act Requests and Administrative Appeal Records

SYSTEM LOCATION:

Defense Health Agency Privacy and Civil Liberties Office, 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Individuals who submitted a request or administrative appeal under the Freedom of Information Act (FOIA) or the Privacy Act of 1974, as amended (Privacy Act), to the Defense Health Agency (DHA); individuals whose FOIA or Privacy Act request or administrative appeal was referred to DHA from another agency; individuals who are the subject of a DHA FOIA or Privacy Act request or administrative appeal; and attorneys representing an individual in connection with a DHA FOIA or Privacy Act request or administrative appeal.

CATEGORIES OF RECORDS IN THE SYSTEM:

Individual's name, address, contact phone number, fax number, job title, email, case number, FOIA tracking number, Social Security Number (SSN) and/or Department of Defense Identification Number (DoD ID Number).

FOIA or Privacy Act request or administrative appeal: records regarding the request or appeal, including responses, correspondence, supporting documentation; and, in some instances, copies of the requested records or records subject to the administrative appeal.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. 301, Departmental Regulations; 5 U.S.C. 552, Freedom of Information Act; 5 U.S.C. 552a, Privacy Act of 1974, as amended; and E.O. 9397 (SSN), as amended.

PURPOSE(S):

To process access requests and administrative appeals under FOIA; to process access and amendment requests and administrative appeals under the Privacy Act; for litigation regarding agency action on such requests and administrative appeals; and to assist the DHA in carrying out any other responsibility under FOIA or the Privacy Act.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, records in this system of records may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

To other federal, state, and local agencies when it is necessary to coordinate responses or denials.

The DoD Blanket Routine Uses may also apply to this system of records.

Note 1: This system of records may contain individually identifiable health information. The DoD Health Information Privacy Regulation (DoD 6025.18-R) or any successor DoD issuances issued pursuant to the Health Insurance Portability and Accountability Act of 1996 (HIPAA) and 45 CFR Parts 160 and 164, Health and Human Services, General Administrative Requirements and Security & Privacy, respectively, applies to most such health information. DoD 6025.18-R or a successor issuance may place additional procedural requirements on the uses and disclosures of such information beyond those found in the Privacy Act of 1974, as amended, or mentioned in this system of records notice.

Note 2: Except as provided under 42 U.S.C. 290dd-2, records of identity, diagnosis, prognosis or treatment information of any patient maintained in connection with the performance of any program or activity relating to substance abuse education, prevention, training, treatment, rehabilitation, or research which is conducted, regulated, or directly or indirectly assisted by any department or agency of the United States, will be treated as confidential and disclosed only for the purposes and under the circumstances expressly authorized under 42 U.S.C. 290dd-2.

POLICIES AND PRACTICES FOR STORING, RETRIEVING, ACCESSING, RETAINING, AND DISPOSING OF RECORDS IN THE SYSTEM:

STORAGE:

Paper records and/or electronic storage media.

RETRIEVABILITY:

By the name of requesters and appellants; the case numbers assigned to requests and administrative appeals; the name of individuals who are the subject of a request or administrative appeal; and the name of attorneys representing a requester, appellant, or subject of a request or administrative appeal.

SAFEGUARDS:

Physical security: Records are maintained in access-controlled facilities. Physical entry is restricted by use of locks, guards, and administrative procedures to officials that require

access to perform their official duties consistent with the purpose of the collection of the information. All personnel whose official duties require access to the information are trained in the proper safeguarding and use of the information.

Technical security: The system provides two-factor authentication including Common Access Card (CAC) and user ID/passwords. The records in electronic format are maintained on a secure system and, within DHA, transmitted only through a secure network. Records in electronic format transmitted outside DHA's secure network are encrypted in transit. Access to personal information in electronic format is restricted to those who require the data in the performance of their official duties.

RETENTION AND DISPOSAL:

Privacy Act Request/Action Records:
a. Correspondence and supporting documents granting access to all the requested records: Destroy 2 years after date of reply.
b. Responses to requests for nonexistent records, requesters who provide inadequate descriptions and to those who fail to pay agency reproduction fees: Destroy 2 years after date of reply.
c. Responses denying access to all or part of the records requested: Destroy 5 years after date of reply.

FOIA Request/Action Records:
Destroy 2 years after date of reply if all records subject to the request were released; destroy 6 years after date of reply if records subject to the request were denied in full, or in part, or if not released for any other reason.

SYSTEM MANAGER(S) AND ADDRESS:

Chief, FOIA Service Center, Defense Health Agency Privacy and Civil Liberties Office, 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether information about themselves is contained in this system of records should address written inquiries to the Chief, FOIA Service Center, Defense Health Agency Privacy and Civil Liberties Office, 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101.

Written inquiries should contain the subject individual's full name, current address, telephone number, FOIA tracking number, if known, and signature.

If requesting information about a minor or legally incompetent person, the request must be made by the

custodial parent, legal guardian, or party acting in loco parentis of such individual. Written proof of that status may be required before the existence of any information will be confirmed.

RECORD ACCESS PROCEDURES:

Individuals seeking access to information about themselves contained in this system of records should address written inquiries to the Chief, FOIA Service Center, Defense Health Agency Privacy and Civil Liberties Office, 7700 Arlington Boulevard, Suite 5101, Falls Church, VA 22042-5101.

Written inquiries should contain the subject individual's full name, current address, telephone number, a description of the records sought, FOIA tracking number, if known, and signature.

If requesting records about a minor or legally incompetent person, the request must be made by the custodial parent, legal guardian, or party acting in loco parentis of such individual. Written proof of that status may be required before any records will be provided.

CONTESTING RECORD PROCEDURES:

The Office of the Secretary of Defense (OSD) rules for accessing records, for contesting contents and appealing initial agency determinations are published in OSD Administrative Instruction 81, 32 CFR Part 311, or may be obtained from the DHA Privacy and Civil Liberties Office.

RECORD SOURCE CATEGORIES:

Data is provided by the record subject; staff and computer software when handling FOIA/Privacy Act requests and administrative appeals; individuals who file requests and administrative appeals pursuant to FOIA and the Privacy Act; agency records searched in the process of responding to FOIA and Privacy Act requests and appeals; and other agencies that refer FOIA or Privacy Act requests or administrative appeals to DHA or consult with DHA regarding the handling of particular requests.

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD-2014-OS-0122]

Privacy Act of 1974; System of Records

AGENCY: Office of the Secretary of Defense, DoD.

ACTION: Notice to alter a System of Records.

SUMMARY: The Office of the Secretary of Defense proposes to alter a system of records, DWHS P49, entitled "Reasonable Accommodation Program Records" in its inventory of record systems subject to the Privacy Act of 1974, as amended. This system is used to document requests for reasonable accommodation(s) (regardless of type of accommodation) and the outcome of such requests for employees of Washington Headquarters Services/ Human Resources Directorate serviced components with known physical and mental impairments and applicants for employment with Washington Headquarters Services/ Human Resources Directorate serviced components.

DATES: Comments will be accepted on or before September 22, 2014. This proposed action will be effective the date following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal:* <http://www.regulations.gov>.

Follow the instructions for submitting comments.

* *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, 2nd Floor, Suite 02G09, Alexandria, VA 22350-3100.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Allard, Chief, OSD/JS Privacy Office, Freedom of Information Directorate, Washington Headquarters Service, 1155 Defense Pentagon, Washington, DC 20301-1155, or by phone at (571) 372-0461.

SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at the Defense Privacy and

Civil Liberties Office Web site at <http://dpclo.defense.gov/>.

The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on July 16, 2014, to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A-130, "Federal Agency Responsibilities for Maintaining Records About Individuals," dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: August 19, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

BILLING CODE 5001–06–P

DEPARTMENT OF DEFENSE

Office of the Secretary

[Docket ID: DoD–2014–OS–0123]

Privacy Act of 1974; System of Records

AGENCY: Office of the Secretary of Defense, DoD.

ACTION: Notice to add a New System of Records.

SUMMARY: The Office of the Secretary of Defense proposes to add a new system of records, DHRA 14 DoD, entitled “Commercial Travel Information Management System” to its inventory of record systems subject to the Privacy Act of 1974, as amended.

This system establishes a repository of DoD travel records consisting of travel booked within the Defense Travel System as well as through commercial travel vendors in order to satisfy reporting requirements; identify and notify travelers in potential distress due to natural or man-made disaster; assist in the planning, budgeting, and allocation of resources for future DoD travel; conduct oversight operations; analyze travel, budgetary, or other trends; detect fraud and abuse; and respond to authorized internal and external requests for data relating to DoD official travel and travel related services, including premium class travel.

To provide Web site registered guests an online customer support site for submitting inquiries regarding commercial travel within the DoD, including assistance with DTS.

DATES: Comments will be accepted on or before September 22, 2014. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* Federal Rulemaking Portal: <http://www.regulations.gov>. Follow the instructions for submitting comments.

* Mail: Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, 2nd Floor, Suite 02G09, Alexandria, VA 22350–3100.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Ms. Cindy Allard, Chief, OSD/JS Privacy Office, Freedom of Information Directorate, Washington Headquarters Service, 1155 Defense Pentagon, Washington, DC 20301–1155, or by phone at (571) 372–0461.

SUPPLEMENTARY INFORMATION: The Office of the Secretary of Defense notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at <http://dpclo.defense.gov/>.

The proposed system report, as required by 5 U.S.C. 552a(r) of the Privacy Act of 1974, as amended, was submitted on July 10, 2014, to the House Committee on Oversight and Government Reform, the Senate Committee on Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A–130, “Federal Agency Responsibilities for Maintaining Records About Individuals,” dated February 8, 1996 (February 20, 1996, 61 FR 6427).

Dated: August 19, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

DHRA 14 DoD

SYSTEM NAME:

Commercial Travel Information Management System.

SYSTEM LOCATION:

Network Enterprise Center, 1422 Sultan Road, Fort Detrick, MD 21702–9200.

Defense Enterprise Computing Center, 8705 Industrial Boulevard, Building 3900, Tinker AFB, OK 73145–3352.

Back-up: Defense Travel Management Office, 4800 Mark Center Drive, Alexandria, VA 22350–9000.

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

DoD civilian personnel; active, former, and retired military members; Reserve and National Guard personnel;

military academy nominees, applicants, and cadets; foreign national civilian personnel in receipt of DoD issued invitational travel orders; dependents of DoD sponsors who are accompanying the DoD sponsor on travel; and all other individuals in receipt of DoD travel orders. Registered Web site guests submitting inquiries regarding DoD commercial travel.

CATEGORIES OF RECORDS IN THE SYSTEM:

For DoD travelers, information from commercial travel booking systems and the Defense Travel System (DTS): Name, Social Security Number (SSN), truncated SSN, gender, date of birth, email address, Service/Agency, organizational information, mailing address, home address, home, business, and cellular phone numbers, emergency contact information, duty station information, title/rank, civilian/military status information, travel preferences, frequent flyer information, passport information, DoD ID number, financial information to include government and/or personal charge card account numbers and expiration information, government travel charge card transactions, personal checking and/or savings account numbers, government accounting code/budget information, specific trip information to include travel itineraries (includes dates of travel) and reservations, trip record number, trip cost estimates, travel vouchers, travel-related receipts, travel document status information, travel budget information, commitment of travel funds, records of actual payment of travel funds and supporting documentation.

For foreign national civilians on invitational travel orders: Foreign Identification (ID) Number or Individual Taxpayer ID Number, name, date of birth, and passport information.

For dependents who are accompanying the DoD sponsor on travel: Name, date of birth, and passport information.

For registered Web site guests: Name, phone number, email address; if affiliated with DoD, duty station, rank, DoD ID number; if desiring travel alerts, cellular phone number and cellular phone provider; if requiring assistance with DTS, last four of the SSN.

AUTHORITY FOR MAINTENANCE OF THE SYSTEM:

5 U.S.C. Chapter 57, Travel, Transportation, and Subsistence; 10 U.S.C. 135, Under Secretary of Defense (Comptroller); 10 U.S.C. 136, Under Secretary of Defense for Personnel and Readiness; 37 U.S.C. 463, Programs of Compliance, Electronic Processing of Travel Claims; DoD Directive 4500.09E,

Transportation and Traffic Management; DoD Directive 5100.87, Department of Defense Human Resources Activity (DoDHRA); DoD Instruction 5154.31, Commercial Travel Management; DoD Financial Management Regulation 7000.14-R, Vol. 9, Travel Policy; DoD 4500.9-R, Defense Transportation Regulation (DTR), Parts I-V; 41 C.F.R. 300-304, Federal Travel Regulation System; The Joint Federal Travel Regulation (Vol. 1) (Uniformed Service Members); The Joint Travel Regulation (Vol. 2) (Department of Defense Civilian Personnel); and E.O. 9397 (SSN), as amended.

PURPOSE(S):

To establish a repository of DoD travel records consisting of travel booked within DTS as well as through commercial travel vendors in order to satisfy reporting requirements; identify and notify travelers in potential distress due to natural or man-made disaster; assist in the planning, budgeting, and allocation of resources for future DoD travel; conduct oversight operations; analyze travel, budgetary, or other trends; detect fraud and abuse; and respond to authorized internal and external requests for data relating to DoD official travel and travel related services, including premium class travel.

To provide Web site registered guests an online customer support site for submitting inquiries regarding commercial travel within the DoD, including assistance with DTS.

ROUTINE USES OF RECORDS MAINTAINED IN THE SYSTEM, INCLUDING CATEGORIES OF USERS AND THE PURPOSES OF SUCH USES:

In addition to those disclosures generally permitted under 5 U.S.C. 552a(b) of the Privacy Act of 1974, as amended, the records contained herein may specifically be disclosed outside the DoD as a routine use pursuant to 5 U.S.C. 552a(b)(3) as follows:

The DoD Blanket Routine Uses set forth at the beginning of the Office of the Secretary of Defense (OSD) compilation of systems of records notices may apply to this system.

Policies and practices for storing, retrieving, accessing, retaining, and disposing of records in the system:

STORAGE:

Electronic storage media.

RETRIEVABILITY:

Name, email address, passport number, SSN, and/or DoD ID number.

SAFEGUARDS:

Records are stored on secure military installations. Physical controls include

use of visitor registers and identification badges, electronic key card access, and closed-circuit television monitoring. Technical controls including intrusion detection systems, secure socket layer encryption, firewalls, and virtual private networks protect the data in transit and at rest. Physical and electronic access is limited to individuals who are properly screened and cleared on a need-to-know basis in the performance of their official duties. Usernames and passwords, Common Access Cards (CACs), and DoD Public Key Infrastructure (PKI), in addition to role-based access controls are used to control access to the systems data. Procedures are in place to deter and detect browsing and unauthorized access including periodic security audits and monitoring of users' security practices. Backups are stored on encrypted media and secured off-site.

RETENTION AND DISPOSAL:

Maintained for six years and then destroyed.

SYSTEM MANAGER(S) AND ADDRESS:

Deputy Director, Defense Travel Management Office, 4800 Mark Center Drive, Alexandria, VA 22350-9000.

NOTIFICATION PROCEDURE:

Individuals seeking to determine whether information about themselves is contained in this system should address written inquiries to the Deputy Director, Defense Travel Management Office, 4800 Mark Center Drive, Alexandria, VA 22350-9000.

Signed, written requests should contain full name and SSN (or passport number if a foreign national). Web site registered guests should provide full name and email address.

RECORD ACCESS PROCEDURES:

Individuals seeking access to records about themselves contained in this system of records should address written requests to the OSD/Joint Staff Freedom of Information Act Requester Service Center, Office of Freedom of Information, 1155 Defense Pentagon, Washington, DC 20301-1155.

Signed, written requests should contain the name and number of this system of records notice. DoD travelers should provide their full name and SSN; foreign travelers should provide full name and passport number; Web site registered guests should provide full name and email address.

CONTESTING RECORD PROCEDURES:

The OSD rules for accessing records, for contesting contents, and appealing initial agency determinations are contained in OSD Administrative

Instruction 81; 32 CFR part 311; or may be obtained from the system manager.

RECORD SOURCE CATEGORIES:

Individual, existing DoD system (DTS), commercial systems (Global Distribution System, Citi).

EXEMPTIONS CLAIMED FOR THE SYSTEM:

None.

FOR FURTHER INFORMATION CONTACT: Mr. Charles J. Shedrick, Department of the

Air Force Privacy Office, Air Force Privacy Act Office, Office of Warfighting Integration and Chief Information Officer, ATTN: SAF/CIO A6, 1800 Air Force Pentagon, Washington, DC 20330-1800, or by phone at (571)256-2515.

SUPPLEMENTARY INFORMATION: The Department of the Air Force's notices for systems of records subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at the Defense Privacy and Civil Liberties Web site at <http://dpclo.defense.gov/>. The proposed systems reports, as required by 5 U.S.C. 552a(r) of the Privacy Act, as amended were submitted on July 30, 2014 to the House Committee on Oversight and Government Reform, the Senate Committee on Homeland Security and Governmental Affairs, and the Office of Management and Budget (OMB) pursuant to paragraph 4c of Appendix I to OMB Circular No. A-130, "Federal Agency Responsibilities for Maintaining Records About Individuals," dated February 8, 1996, (February 20, 1996, 61 FR 6427).

Dated: August 19, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

F044 AF SG I

SYSTEM NAME:

Civilian Employee Drug Testing Records (June 11, 1997, 62 FR 31793).

CHANGES:

* * * * *

SYSTEM NAME:

Delete entry and replace with "Air Force Drug Testing Program."

* * * * *

CATEGORIES OF INDIVIDUALS COVERED BY THE SYSTEM:

Delete entry and replace with "Air Force active duty, reserve, national guard and civilian personnel who are required to participate in the Air Force drug screening program."

CATEGORIES OF RECORDS IN THE SYSTEM:

Delete entry and replace with "Name, Social Security Number (SSN) and/or Department of Defense Identification number (DoD ID number) Self-identification records; requests for testing submitted by employees, supervisors, and commanders; testing notification; documentary evidence in support of testing decision; chain of custody records regarding testing samples; reports of testing results;

records relating to the type and quality of testing performed; documentary evidence submitted by employee or applicant in rebuttal of test results; reports of medical findings regarding test results; disciplinary/adverse action records to include notification of proposed action and documentary evidence submitted in support thereof, employee's response and documentary evidence submitted in support thereof, and management's action; referrals to counseling/rehabilitation services; and records regarding employee's consent for release of information concerning counseling/rehabilitation progress."

AUTHORITY FOR THE MAINTENANCE OF THE SYSTEM:

Delete entry and replace with "5 U.S.C. 7301, Presidential Regulations; 10 U.S.C. 8013, Secretary of the Air Force: Powers and Duties, delegation by; DoD Directive 1010.9, DoD Civilian Employee Drug-Free Workplace Program; E.O. 12564, Drug-free Federal Workplace; AFI 44-120, Military Drug Demand Reduction Program, and E.O. 9397 (SSN), as amended."

PURPOSE(S):

Delete entry and replace with "To maintain a record on individuals who are identified as having a positive drug test from a random or command directed urinalysis. These records will be used for identifying, tracking, notifying, and retesting of those individuals."

* * * * *

STORAGE:

Delete entry and replace with "Electronic storage media."

RETRIEVABILITY:

Delete entry and replace with "Name, SSN and/or DoD ID number."

SAFEGUARDS:

Delete entry and replace with "Records are accessed by person(s) responsible for servicing the record system in performance of their official duties and by authorized personnel who are properly screened and cleared for need-to-know. Records are only accessed by authorized personnel with Common Access Card (CAC) and need-to-know."

RETENTION AND DISPOSAL:

Delete entry and replace with "Electronic records are destroyed after five years. Electronic records are destroyed by erasing, deleting, or overwriting."

SYSTEM MANAGER(S) AND ADDRESS:

Delete entry and replace with "Headquarters, Air Force Drug Testing

Laboratory, AFMOA/SGBD, 2480 Ladd Street, Bldg 3750, Lackland AFB, TX 78236-5310.”

NOTIFICATION PROCEDURE:

Delete entry and replace with “Individuals seeking to determine whether this system of records contains information on themselves should address written inquiries to the system manager, or the installation Airman and Family Center. Official mailing addresses are published as an appendix to the Air Force’s compilation of systems of records notices.

For verification purposes, individuals should provide their full name, SSN and/or DoD ID Number, any details which may assist in locating records, and their signature.

In addition, the requester must provide a notarized statement or an unsworn declaration made in accordance with 28 U.S.C. 1746, in the following format:

If executed outside the United States: ‘I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature)’.

If executed within the United States, its territories, possessions, or commonwealths: ‘I declare (or certify, verify, or state) under penalty of perjury that the foregoing is true and correct. Executed on (date). (Signature)’.”

RECORD ACCESS PROCEDURES:

Delete entry and replace with “Individuals seeking to access records about themselves contained in this system should address written requests to the system manager, or the installation Airman and Family Center. Official mailing addresses are published as an appendix to the Air Force’s compilation of systems of records notices.

For verification purposes, individuals should provide their full name, SSN and/or DoD ID Number, any details which may assist in locating records, and their signature.

In addition, the requester must provide a notarized statement or an unsworn declaration made in accordance with 28 U.S.C. 1746, in the following format:

If executed outside the United States: ‘I declare (or certify, verify, or state) under penalty of perjury under the laws of the United States of America that the foregoing is true and correct. Executed on (date). (Signature)’.

If executed within the United States, its territories, possessions, or commonwealths: ‘I declare (or certify, verify, or state) under penalty of perjury

that the foregoing is true and correct. Executed on (date). (Signature)’.”

CONTESTING RECORD PROCEDURES:

Delete entry and replace with “The Air Force rules for accessing records and for contesting contents and appealing initial agency determinations are published in Air Force Instruction 33-332, Air Force Privacy Program; 32 CFR part 806b; or may be obtained from the system manager.”

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Department of the Army

[Docket ID: USA-2014-0032]

Privacy Act of 1974; System of Records

AGENCY: Department of the Army, DoD.

ACTION: Notice to delete a System of Records.

SUMMARY: The Department of the Army is deleting a system of records notice in its existing inventory of record systems subject to the Privacy Act of 1974, as amended. The system of records is A0601-100 AHRC, Officer Appointment Files.

DATES: Comments will be accepted on or before September 22, 2014. This proposed action will be effective the day following the end of the comment period unless comments are received which result in a contrary determination.

ADDRESSES: You may submit comments, identified by docket number and title, by any of the following methods:

* *Federal Rulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments.

* *Mail:* Federal Docket Management System Office, 4800 Mark Center Drive, East Tower, 2nd Floor, Suite 02G09, Alexandria, VA 22350-3100.

Instructions: All submissions received must include the agency name and docket number for this **Federal Register** document. The general policy for comments and other submissions from members of the public is to make these submissions available for public viewing on the Internet at <http://www.regulations.gov> as they are received without change, including any personal identifiers or contact information.

FOR FURTHER INFORMATION CONTACT: Mr. Leroy Jones, Department of the Army, Privacy Office, U.S. Army Records

Management and Declassification Agency, 7701 Telegraph Road, Casey Building, Suite 144, Alexandria, VA 22325-3905 or by calling (703) 428-6185.

SUPPLEMENTARY INFORMATION: The Department of the Army systems of records notices subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended, have been published in the **Federal Register** and are available from the address in **FOR FURTHER INFORMATION CONTACT** or at <http://dpclo.defense.gov>. The Department of the Army proposes to delete a system of records notice from its inventory of record systems subject to the Privacy Act of 1974 (5 U.S.C. 552a), as amended. The proposed deletion is not within the purview of subsection (r) of the Privacy Act of 1974 (5 U.S.C. 552a), as amended, which requires the submission of a new or altered system report.

Dated: August 19, 2014.

Aaron Siegel,

Alternate OSD Federal Register Liaison Officer, Department of Defense.

Deletion:

A0601-100 AHRC Officer Appointment Files (March 27, 2013, 78 FR 18565)

Reason: The Officer Records Branch using this system of records notice (SORN) has been discontinued and records are no longer collected. These records have met the approved NARA retention schedule. All current records are covered by SORN A0680-31a AHRC, Officer Personnel Management Information System (OPMIS) (August 18, 2004, 69 FR 51271); therefore, A0601-100 AHRC, Officer Appointment Files can be deleted.

BILLING CODE 5001-06-P

DEPARTMENT OF DEFENSE

Defense Acquisition Regulations System

[Docket Number DARS-2014-0037]

Information Collection Requirement; Defense Federal Acquisition Regulation Supplement; Acquisition of Information Technology

AGENCY: Defense Acquisition Regulations System, Department of Defense (DoD).

ACTION: Notice and request for comments regarding a proposed extension of an approved information collection requirement.

SUMMARY: In compliance with Section 3506(c)(2)(A) of the Paperwork

Reduction Act of 1995 (44 U.S.C. chapter 35), DoD announces the proposed extension of a public information collection requirement and seeks public comment on the provisions thereof. *DoD invites comments on:* (a) Whether the proposed collection of information is necessary for the proper performance of the functions of DoD, including whether the information will have practical utility; (b) the accuracy of the estimate of the burden of the proposed information collection; (c) ways to enhance the quality, utility, and clarity of the information to be collected; and (d) ways to minimize the burden of the information collection on respondents, including the use of automated collection techniques or other forms of information technology. The Office of Management and Budget (OMB) has approved this information collection requirement for use through November 30, 2014. DoD proposes that OMB extend its approval for use for three additional years beyond the current expiration date.

DATES: DoD will consider all comments received by October 21, 2014.

ADDRESSES: You may submit comments, identified by OMB Control Number 0704-0341, using any of the following methods:

- Regulations.gov: <http://www.regulations.gov>. Follow the instructions for submitting comments.
- Email: osd.dfars@mail.mil. Include OMB Control Number 0704-0341 in the subject line of the message.
- Fax: 571-372-6094.
- Mail: Defense Acquisition Regulations System, Attn: Mr. Dustin Pitsch, OUSD(AT&L)DPAP/DARS, Room 3B941, 3060 Defense Pentagon, Washington, DC 20301-3060.

Comments received generally will be posted without change to <http://www.regulations.gov>, including any personal information provided. To confirm receipt of your comment(s), please check www.regulations.gov approximately two to three days after submission to verify posting (except allow 30 days for posting of comments submitted by mail).

FOR FURTHER INFORMATION CONTACT: Mr. Dustin Pitsch, (571) 372-6090. The information collection requirements addressed in this notice are available electronically on the Internet at: <http://www.acq.osd.mil/dpap/dfars/index.htm>. Paper copies are available from Mr. Dustin Pitsch, OUSD(AT&L)DPAP(DARS), Room 3B941, 3060 Defense Pentagon, Washington, DC 20301-3060.

SUPPLEMENTARY INFORMATION:

Title and OMB Number: Defense Federal Acquisition Regulation Supplement (DFARS) Part 239, Acquisition of Information Technology, and the associated clauses at DFARS 252.239-7000 and 252.239-7006; OMB Control Number 0704-0341.

Needs and Uses: This requirement provides for the collection of information from contractors regarding security of information technology; tariffs pertaining to telecommunications services; and proposals from common carriers to perform special construction under contracts for telecommunications services. Contracting officers and other DoD personnel use the information to ensure that information systems are protected; to participate in the establishment of tariffs for telecommunications services; and to establish reasonable prices for special construction by common carriers.

Affected Public: Businesses or other for-profit and not-for-profit institutions.

Number of Respondents: 387.

Responses per Respondent: Approximately 33.

Annual Responses: 12,915.

Average Burden per Response: Approximately 0.6 hour.

Annual Burden Hours: 7,106.

Frequency: On occasion.

Summary of Information Collection

The clause at DFARS 252.239-7000, Protection Against Compromising Emanations, requires that the contractor provide, upon request of the contracting officer, documentation that information technology used or provided under the contract meets appropriate information assurance requirements.

The clause at DFARS 252.239-7006, Tariff Information, requires that the contractor provide to the contracting officer: (1) Upon request, a copy of the contractor's existing tariffs (including changes); (2) before filing, a copy of any application to a Federal, State, or other regulatory agency for new rates, charges, services, or regulations relating to any tariff or any of the facilities or services to be furnished solely or primarily to the Government, and, upon request, a copy of all information, material, and data developed or prepared in support of or in connection with such an application; and (3) a notification to the contracting officer of any application submitted by anyone other than the contractor that may affect the rate or conditions of services under the agreement or contract.

DFARS 239.7408 requires the contracting officer to obtain a detailed special construction proposal from a common carrier that submits a proposal or quotation that has special

construction requirements related to the performance of basic telecommunications services.

Manuel Quinones,

Editor, Defense Acquisition Regulations Council.

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Intent To Grant Exclusive Patent License; Defense Group Inc.

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

SUMMARY: The Department of the Navy hereby gives notice of its intent to grant to Defense Group Inc. a revocable, nonassignable, exclusive license integrated with Defense Group Inc.'s proprietary CoBRA® software platform to practice in the field of use of Public Safety, which shall mean the protection from events involving Chemical, Biological, or Radiological (CBR) airborne plumes that could endanger the safety of the general public from significant danger, injury/harm, or damage; the field of use of Industrial Safety and Monitoring, which shall mean to ensure plant and factory worker protection from hazards involving CBR airborne plumes that could cause injury to personnel; and the field of use of Environmental Monitoring, which shall mean the assessment of environmental impacts of CBR airborne plumes on the local environment in the United States, the Government-owned inventions described in U.S. Patent No. 7,542,884: System and Method for Zero Latency, High Fidelity Emergency Assessment of Airborne Chemical, Biological and Radiological Threats by Optimizing Sensor Placement, Navy Case No. 097,281//U.S. Patent Application No. 13/629,842: Apparatus System and Method of Depicting Plume Arrival Time, Navy Case No. 101,728 and any continuations, divisionals or re-issues thereof.

DATES: Anyone wishing to object to the grant of this license must file written objections along with supporting evidence, if any, not later than September 8, 2014.

ADDRESSES: Written objections are to be filed with the Naval Research Laboratory, Code 1004, 4555 Overlook Avenue SW., Washington, DC 20375-5320.

FOR FURTHER INFORMATION CONTACT: Rita Manak, Head, Technology Transfer

Office, NRL Code 1004, 4555 Overlook Avenue SW., Washington, DC 20375–5320, telephone 202–767–3083. Due to U.S. Postal delays, please fax 202–404–7920, email: rita.manak@nrl.navy.mil or use courier delivery to expedite response.

(AUTHORITY: 35 U.S.C. 207, 37 CFR Part 404.)

Dated: August 18, 2014.

N. A. Hagerty-Ford,

Commander, Office of the Judge Advocate General, U.S. Navy, Federal Register Liaison Officer.

BILLING CODE 3810–FF–P

DEPARTMENT OF DEFENSE

Department of the Navy

Notice of Public Meetings for the Draft Supplemental Environmental Impact Statement/Overseas Environmental Impact Statement for Gulf of Alaska Navy Training Activities

AGENCY: Department of the Navy, DoD.

ACTION: Notice.

SUMMARY: Pursuant to section 102(2)(c) of the National Environmental Policy Act of 1969, regulations implemented by the Council on Environmental Quality (40 Code of Federal Regulations Parts 1500–1508), and Presidential Executive Order 12114, the Department of the Navy (DoN) has prepared and filed with the U.S. Environmental Protection Agency a Draft Supplemental Environmental Impact Statement/Overseas Environmental Impact Statement (EIS/OEIS). The DoN prepared this analysis to update the Gulf of Alaska Navy Training Activities Final EIS/OEIS, which was completed with community input in May 2011 (hereafter referred to as the 2011 GOA Final EIS/OEIS), and to renew federal regulatory permits and authorizations. In the Draft Supplemental EIS/OEIS, the DoN uses a new acoustic modeling method and evaluates new, relevant information, such as new marine mammal density data and new scientific information, and updates environmental analyses, as appropriate. The DoN analyzes data using the Navy Acoustic Effects Model, not previously available for the 2011 GOA Final EIS/OEIS, to evaluate potential effects on marine species from training activities. The National Marine Fisheries Service is a cooperating agency for this Supplemental EIS/OEIS.

With the filing of the Draft Supplemental EIS/OEIS, the DoN is initiating a 60-day public comment

period and has scheduled five public meetings to inform the public and receive comments on the Draft Supplemental EIS/OEIS. This notice announces the dates and locations of the public meetings and provides supplementary information about the environmental planning effort.

Dates And Addresses: The 60-day Draft Supplemental EIS/OEIS public review period will begin August 22, 2014, and end October 20, 2014. The DoN will hold five public meetings to inform the public about the Proposed Action and to provide an opportunity to comment on the adequacy and accuracy of the supplemental environmental analysis. Each of the public meetings will include an open house information session, followed by a short presentation by the DoN. DoN representatives will be available during the open house information sessions to provide information related to the Draft Supplemental EIS/OEIS. Federal, state, and local agencies and officials, as well as interested organizations and individuals are encouraged to provide comments in writing during the public review period or in person at one of the scheduled public meetings.

The public meetings will be held from 5:00 p.m.–8:00 p.m., with a DoN presentation at 6:30 p.m., on the following dates and at the following locations:

1. Monday, September 8, 2014, at the Elks Lodge, 102 W. Marine Way, Kodiak, AK 99615
2. Tuesday, September 9, 2014, at the Z.J. Loussac Library Public Conference Room, 3600 Denali St., Anchorage, AK 99503
3. Wednesday, September 10, 2014, at the Best Western Bidarka Inn Sea Breeze Room, 575 Sterling Highway, Homer, AK 99603
4. Thursday, September 11, 2014, at the Juneau Arts & Humanities Council Main Hall, 350 Whittier St., Juneau, AK 99801
5. Friday, September 12, 2014, at the Mt. Eccles Elementary School Simpler Gymnasium, 201 Adams St., Cordova, AK 99574

Attendees will be able to submit oral and written comments during the public meetings. A court reporter will record oral comments from the public. In the interest of available time, and to ensure all who wish to provide an oral statement to the court reporter have the opportunity to do so, each speaker's comments will be limited to three (3) minutes, which may be extended if meeting attendance permits. Equal weight will be given to oral and written statements. Written comments may also

be submitted via mail to Naval Facilities Engineering Command Northwest, Attention: Ms. Amy Burt—GOA Supplemental EIS/OEIS Project Manager, 1101 Tautog Circle, Suite 203, Silverdale, WA 98315–1101, or electronically via the project Web site (www.GOAIEIS.com). All comments, oral or written, submitted during the public review period will become part of the public record. All comments will be reviewed or responded to in the Final Supplemental EIS/OEIS. Comments must be postmarked or received online by October 20, 2014, for consideration in the Final Supplemental EIS/OEIS.

FOR FURTHER INFORMATION CONTACT: Naval Facilities Engineering Command Northwest, Attention: Ms. Amy Burt—GOA Supplemental EIS/OEIS Project Manager, 1101 Tautog Circle, Suite 203, Silverdale, WA 98315–1101.

SUPPLEMENTARY INFORMATION: A Notice of Intent to prepare this Supplemental EIS/OEIS was published in the **Federal Register** on January 16, 2013 (78 FR 3408).

This Supplemental EIS/OEIS is an update to the 2011 GOA Final EIS/OEIS and Record of Decision (ROD). It will support U.S. Pacific Command, Northern Command, and Joint Task Force Commander training requirements to achieve and maintain Fleet readiness as required by Title 10 of the U.S. Code. The DoN's Proposed Action is the same as the Proposed Action presented in the 2011 GOA Final EIS/OEIS and ROD, which is to continue conducting periodic military training activities in a specific area of the Gulf of Alaska called the Temporary Maritime Activities Area. The Temporary Maritime Activities Area and Proposed Action, including the location, number, and frequency of major training exercises, remain unchanged from the 2011 analysis. The DoN evaluated each resource area discussed in the 2011 GOA Final EIS/OEIS to determine if additional analysis is necessary in the Draft Supplemental EIS/OEIS due to new information or new analysis methods.

In this Draft Supplemental EIS/OEIS, the DoN re-evaluates potential impacts from ongoing military training activities conducted in the Temporary Maritime Activities Area. All resource areas were examined to determine the need for re-analysis in this Draft Supplemental EIS/OEIS. The marine mammal resource analysis for each alternative in the 2011 GOA Final EIS/OEIS was updated. For other resource areas, the 2011 analysis remains valid.

The Supplemental EIS/OEIS supports authorization of incidental takes of

marine mammals under the Marine Mammal Protection Act and incidental takes of threatened and endangered marine mammal species under the Endangered Species Act, which is required every five years. Current federal regulatory permits and authorizations expire in May 2016.

The cumulative impacts of past, present, and other reasonably foreseeable future actions are expected to result in impacts on marine mammals in the Temporary Maritime Activities Area, but the contribution would be small compared to other actions. The Draft Supplemental EIS/OEIS indicates that the incremental contribution of the No Action Alternative, Alternative 1, or Alternative 2 to all other resource areas analyzed would be negligible.

The Draft Supplemental EIS/OEIS was distributed to federal, state, and local agencies, elected officials, and other interested organizations and individuals.

Copies of the Draft Supplemental EIS/OEIS are available for public review at the following public libraries:

1. Alaska State Library, 333 Willoughby Ave., 8th Floor, Juneau, AK 99811
2. Copper Valley Community Library, Mile 186 Glenn Highway, Glennallen, AK 99588
3. Cordova Public Library, 622 First St., Cordova, AK 99574
4. Homer Public Library, 500 Hazel Ave., Homer, AK 99603
5. Kodiak Public Library, 612 Egan Way, Kodiak, AK 99615
6. Seward Community Library, 239 Sixth Ave., Seward, AK 99664
7. University of Alaska Fairbanks/Elmer E. Rasmuson Library, 310 Tanana Drive, Fairbanks, AK 99775
8. Z.J. Loussac Library, 3600 Denali St., Anchorage, AK 99503

The Draft Supplemental EIS/OEIS is also available for electronic viewing at www.GOAIEIS.com. A compact disc of the Draft Supplemental EIS/OEIS will be made available upon written request by contacting: Naval Facilities Engineering Command Northwest, Attention: Ms. Amy Burt—GOA Supplemental EIS/OEIS Project Manager, 1101 Tautog Circle, Suite 203, Silverdale, WA 98315–1101.

Dated: August 14, 2014.

N.A. Hagerty-Ford,

Commander, Office of the Judge Advocate General, U.S. Navy, Federal Register Liaison Officer.

Western Area Power Administration

Agency Information Collection Extension

AGENCY: Western Area Power Administration, DOE.

ACTION: Submission for Office of Management and Budget review; Request for comments.

SUMMARY: Western Area Power Administration (Western), an agency within the Department of Energy (DOE), has submitted an extension to an existing Information Collection Request (ICR) to the Office of Management and Budget (OMB) for review, comment and approval, as required under the Paperwork Reduction Act of 1995. The ICR seeks a 3-year extension for Western's Applicant Profile Data form (APD), OMB Control No. 1910–5136. The ICR described below identifies the request, including the anticipated public burdens. The ICR is necessary for the proper performance of Western's functions. Western markets a limited amount of Federal power. Due to the high demand for Western's power and limited amount of available power, Western needs to be able to collect information under the ICR to evaluate who will receive an allocation. This public process only determines the information Western will collect in its ICR. The actual allocation of Federal power will be done through a separate process and is outside the scope of this notice.

DATES: To ensure consideration, comments regarding this collection must be received on or before

September 22, 2014. The Paperwork Reduction Act requires OMB to make a decision on the extension of the ICR within 60 days after this publication or receipt of the proposed collection of information, whichever is later. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, please advise the DOE Desk Officer at OMB of your intention to make a submission as soon as possible. You may phone the Desk at 202–395–4718.

ADDRESSES: Written comments should be sent to: The DOE Desk Officer, Office of Information and Regulatory Affairs, Office of Management and Budget, New Executive Office Building, Room 10102, 735 17th Street NW., Washington, DC 20503.

A copy of the comments should be sent to Western at PRAComments@wapa.gov or Mr. Ronald Klinefelter, Assistant General Counsel, Western Area Power Administration, Corporate Services Office, 12155 W. Alameda Parkway, Lakewood, CO 80228–8213.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the APD and instructions should be directed to Mr. Ronald Klinefelter at the above address or telephone (720) 962–7010. The APD is available on Western's Web page at ww2.wapa.gov.

SUPPLEMENTARY INFORMATION:

I. Statutory Authority

Reclamation Laws are a series of laws arising from the Desert Land Act of 1872 and include, but are not limited to: The Desert Land Act of 1872, Reclamation Act of 1902, Reclamation Project Act of 1939, and the Acts authorizing each individual project such as the Central Valley Project Authorizing Act of 1937.¹ The Reclamation Act of 1902 established the Federal reclamation program.² The basic principle of the Reclamation Act of 1902 was that the United States, through the Secretary of the Interior, would build and operate irrigation works from the proceeds of public land sales in the 16 arid Western states (a 17th was later added). The Reclamation Project Act of 1939 expanded the purposes of the reclamation program and specified certain terms for contracts that the Secretary of the Interior enters into to

¹ See Ch. 107, 19 stat. 377 (1872), Ch. 1093, 32 Stat. 388 (1902), Ch. 418, 53 Stat. 1187 (1939), Ch. 832, 50 Stat. 844, 850 (1937), all as amended and supplemented.

² See, Ch. 1093, 32 Stat. 388 (1902), as amended and supplemented.

furnish water and power.³ Congress enacted the Reclamation Laws for purposes that include enhancing navigation, protection from floods, reclaiming the arid lands in the Western United States, and for fish and wildlife.⁴ Congress, generally, intended the production of power would be a supplemental feature of the multi-purpose water projects authorized under the Reclamation Laws.⁵ No contract entered into by the United States for power may impair the efficiency of the project for irrigation purposes.⁶ Section 5 of the Flood Control Act of 1944 is read *in pari materia* with Reclamation Laws.⁷ In 1977, the Department of Energy Organization Act transferred the power marketing functions of the Department of the Interior to Western, a separate and distinct administration within DOE.⁸

II. Purpose of Proposed Collection

Western is collecting and will continue to collect the data under its APD to properly perform its function of marketing a limited amount of Federal hydropower. The information Western collects is voluntary. Due to the high demand for Western's power and limited amount of available power, Western will use the information collected in the APD (and has used the information collected under the current OMB-approved control number), in conjunction with its marketing plans, to determine an entity's eligibility and, ultimately, who will receive an allocation of Federal power. As a result, the information Western collects is both necessary and useful.

Western notes the Paperwork Reduction Act and associated **Federal Register** notice is a process whereby Western obtains approval from OMB to collect information from the public. It is a legal requirement Western must comply with before requesting potential preference customers to submit an application for power. The Paperwork Reduction Act process is not the process where interested parties request an allocation of Federal power. The allocation of power from Western is outside the scope of this process and is completed in a separate process by each Western region, when required.

⁸ See, 42 U.S.C. 7152(a)(1)(D).

III. Background to This Process and Responses to Comments

A. Background

On April 2, 2014, in compliance with the Paperwork Reduction Act,⁹ Western published a notice in the **Federal Register** inviting comments on extending Western's APD, OMB Control No. 1910–5136.¹⁰ Western provided a 60-day comment period. As part of that notice, Western also invited comments on: (1) Whether the proposed continued collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) the accuracy of the agency's estimate of burden, including the validity of the methodology and assumptions used; (3) ways to enhance the quality, utility, and clarity of the information to be collected; and (4) ways to minimize the burden of the collection of information on respondents, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology. Western is not proposing any significant changes in the content and format of the APD. As stated in the 60-day **Federal Register** notice, Western posted the changes and a description on why the changes were made on its Web page.¹¹ Western also noted in its Invitation for Comments that there was an error made in 2011 entering the information into ROCIS.gov, the government's regulatory information clearing house.¹² The ROCIS error identified Western as collecting 30 APDs on an average annual basis instead of 33.3. In the final **Federal Register** notices in both 2008 and 2011, Western determined, on average, it will collect 33.3 APDs on an average annual basis.¹³ For the 2014–2017 period, Western will continue to collect 33.3 responses on an average annual basis. Western will have this error corrected when the information is inputted into ROCIS for the 2014–2017 period.

In April 2014, concurrent with the publication of the **Federal Register** notice, Western posted an Invitation for Comments on its Web page. Western emailed over 1,000 potentially interested entities and customer groups, informing them of the publication of the **Federal Register** notice and Invitation

⁹ See 44 U.S.C. 3501, *et seq.*

¹⁰ See 79 FR 18545 (2014).

¹² See *Extension of OMB No. 1910–5136, Invitation for Comments* at p. 6 (2014).

¹³ See 73 FR 31,463 (2008); 76 FR 49,764 (2011).

for Comments. The email went to stakeholders in Western's service territory, which includes, but is not limited to, California, Nevada, Arizona, Utah, New Mexico, Colorado, Wyoming, Montana, Texas, North Dakota and South Dakota.

B. Response to Comments

Western received no public comments.

IV. Information Collection Request: Applicant Profile Data, OMB Control No. 1910–5136

Western has submitted to OMB the request to extend Western's APD. The APD and responses to the APD will not be part of a system of records covered by the Privacy Act¹⁴ and will be available under the Freedom of Information Act.¹⁵

A copy of the APD is available on Western's Web page at ww2.wapa.gov. As discussed, Western is not making any significant changes in the content and format of the APD. As of February 2014, applicants can complete the APD directly online at Western's Web page. The APD, the administrative record for the proposal justifying its continued use, and identifying burden hours are available for inspection and copying at Western's Corporate Services Office.

As part of this process, Western has identified what it believes is the minimum amount of information Western needs for its regional offices to properly perform the functions of the agency. Due to the variations that may develop in each region, the region, through its marketing plan, may determine that it does not need to collect all of the information contained in the APD. As a result, Western will allow each region to use subsets of the form, where one region's APD may request less information than another region's APD. Also, to ensure equitable treatment of applications, when issuing a call for applications, Western may provide additional directions to clarify certain sections of the APD, e.g., identify the year or years to use in preparing the APD. Rather than over collect unnecessary information, Western seeks to collect only the minimal amount of information it needs. Western evaluated the possibility of using the same APD form, instructing applicants to fill out only certain sections; however, this approach could lead to an applicant ignoring or misunderstanding Western's

¹⁴ See 5 U.S.C. 552(a).

¹⁵ See 5 U.S.C. 552. Western reserves the right to redact information to protect confidential or sensitive information, as provided under FOIA.

instructions and providing unnecessary information. Using a subset of information and providing clarifying directions will lead to a more consistent process and will minimize the time an applicant uses to complete the APD.

To receive an allocation of Federal power from Western, the applicant must provide the information requested in the APD. If the requested information is not applicable or is not available, the applicant will note it on the APD. Western will request, in writing, additional information from any applicant whose application is deficient. Western will notify the applicant when the application is due. In the event an applicant fails to provide sufficient information to allow Western to make a determination regarding eligibility by the due date, the application will not be considered.

V. Paperwork Reduction Requirements

A. Introduction

1. *OMB Number:* Western's existing OMB Number is 1910-5136. This number is displayed on the front page of the APD. It expires on September 30, 2014.

2. *Title:* Applicant Profile Data.

3. *Type of Review:* Western is seeking to extend its APD for 3 years.

4. *Purpose:* The APD is necessary for the proper performance of Western's functions. Western markets a limited amount of Federal power. Western has discretion to determine who will receive an allocation. Due to the high demand for Western's power and limited amount of available power under established marketing plans, Western needs to be able to collect information to evaluate who will receive an allocation. As a result, the information Western collects is both necessary and useful. This public process only determines the information Western will collect in its application. The actual allocation of Federal power will be done through a separate process and is outside the scope of this proceeding.

5. *Respondent:* The response is voluntary. However, if an entity seeks an allocation of Federal power, the applicant must submit an APD. Western has identified the following class of respondents as the most likely to apply: Municipalities, cooperatives, public utilities, irrigation districts, Native American Tribes, and Federal and State agencies. The respondents will be

located in Arizona, California, Colorado, Iowa, Kansas, Minnesota, Montana, Nebraska, Nevada, New Mexico, North Dakota, South Dakota, Texas, Utah, and Wyoming. The information submitted on the APD will not be part of a system of records covered by the Privacy Act¹⁶ and will be available under the Freedom of Information Act.¹⁷

6. *Annual Estimated Number of Respondents:* The responses will be periodic and occur when Western has power available under an allocation process. Based on historical data, Western anticipates it will receive approximately 100 requests for power during the 3-year period when the OMB Clearance Number is in effect. This results in an estimated annual average of 33.3 respondents.

7. Number of Burden Hours and Estimated Reporting and Record Keeping Costs:

a. *Initial Application:* Western anticipates that it will take less than 8 hours to complete the APD. Once the respondent completes the APD, it will submit the APD to Western for Western's review. After submitting the APD, provided the APD is complete and no clarification is required, Western does not anticipate requiring any further information for the APD from the applicant, unless the applicant is successful in obtaining a power allocation. The applicant submits only one APD. It does not submit an APD every year. If the applicant receives a power allocation, the applicant will need to complete a standard contract to receive its power allocation. Western's standard contract terms are outside the scope of this process.

b. *Recordkeeping:* There is no mandatory recordkeeping requirement for the applicant if it does not receive an allocation of Federal power. In such case, any recordkeeping of the APD by a respondent is voluntary. For those entities that receive a Federal power allocation, Western requires the successful applicant to keep the information for 3 years after the applicant signs its Federal power contract. The 3-year record retention policy will allow Western sufficient time to administer the contract and to ensure the applicant provided factual

information in its application. A 3-year record retention policy will have little impact on most businesses in the electric utility industry. Western anticipates that it would take less than 1 hour per successful candidate, per year, for recordkeeping purposes. Western anticipates that in a 3-year period, Western will have approximately 30 successful applicants.

c. *Methodology:* Based on the total number of burden hours and the total number of applications described above, Western expects that over a 3-year period, the total burden hours to complete the APD is 800 hours (100 applicants over 3 years × 8 hours per applicant). This converts to an annual hourly burden of 266.667 hours. An entity will only complete the APD once. It is not required each year.

Based on the above, Western anticipates that there will be additional cost burdens for recordkeeping of 1 hour per year for each applicant who receives a Federal power allocation. Western anticipates that over the course of 3 years there will be 30 successful applicants. The power may be allocated in year 1, year 2 or year 3. For the purposes of determining the cost burden, Western will presume all 30 applicants received an allocation in year 1. As a result, the annual hourly burden for recordkeeping is 30 hours.

For the purposes of this cost burden analysis, Western is assuming that a utility staff specialist will complete the APD. Western estimates a utility staff specialist rate, including administrative overhead, to be approximately \$112/hour. For recordkeeping, Western estimates an administrative support rate of \$56/hour. Based on the above, Western estimates the total annual cost as (266.667 hour/year × \$112/hour) + (30 hour/year × \$56/hour) = \$31,546.67 per year.

Using the above estimates, the cost to complete the APD is a one-time cost of \$896. In addition to the one-time cost, the applicant, if it successfully receives a power allocation, will incur an additional expense of 1 hour for recordkeeping per year × \$56 per hour for a total recordkeeping cost of \$168 for 3 years. Thus on a per applicant basis, assuming the applicant receives a Federal power allocation, the total cost for the applicant over a 3-year period is \$1,064.

d. Summary of Burdens:

¹⁶ See 5 U.S.C. 552(a).

¹⁷ See 5 U.S.C. 552. Western reserves the right to redact information to protect confidential or sensitive information, as provided under FOIA.

TABLE 1—ANNUAL HOUR BURDEN ESTIMATES

Activity	Number of respondents	Number of responses per respondent	Average burden hour per response	Sub-total burden hours
APD	33.333	1	8	266.67
Recordkeeping	30	1	1	30.00
Total Burden				296.67

TABLE 2—ANNUAL COST BURDEN ESTIMATE

Instrument	Number of respondents	Number of responses per respondent	Average annual burden hour	Cost per burden hour	Cost per response	Sub-total cost
Prepare APD	33.333	1	8	\$112	\$ 896.00	\$29,866.67
Recordkeeping	30	1	1	56	56.00	1,680.00
Total Cost						31,546.67

The procedure and process for the allocation of power shall be the subject matter of a separate notice and is outside the scope of this process.

B. Does the collection of data avoid unnecessary duplication?

To avoid unnecessary duplication, only entities that desire a new Western allocation are required to submit an APD.

As it relates to each of the components of the APD, there is no duplication. Section 1 is information Western needs to determine who the applicant is, whether the applicant is a statutorily-defined preference entity,¹⁸ and whether the applicant is ready, willing, and able to receive and/or distribute Federal power. Section 2 identifies the amount of Federal power that the applicant requests. Section 3 identifies the applicant's loads. Section 4 identifies the applicant's resources. Section 5 identifies the applicant's transmission delivery arrangements to receive Federal power. Section 6 is voluntary and provides the applicant with the ability to provide any additional information. Section 7 is an attestation that the information provided is true and accurate to the best of the applicant's knowledge.

C. Does the collection reduce the burden on the respondent, including small entities, to the extent practicable and appropriate?

The information requested is the minimum amount of information needed to determine whether the applicant qualifies as a statutorily-defined preference entity and is ready,

willing, and able to receive an allocation of Federal power.¹⁹

D. Does the collection use plain, coherent, and unambiguous language that is understandable to the respondent?

The collection uses plain, coherent, and unambiguous language that is understandable to the target audience. The terms are those used in the electric utility industry. Western does not market power to individual members of the public such as homeowners or shopkeepers. Preference entities are statutorily-designated potential customers who generally are involved in the power business. As a result, the language used in the application is understandable to the target audience.

E. Is the collection consistent with and compatible with the respondent's current reporting and recordkeeping practices to the maximum extent practicable?

The information collection is voluntary. Western will use the information to determine whether an applicant qualifies as a preference entity to receive an allocation of Federal power. As discussed above, there is no mandatory recordkeeping requirement on the applicant if it does not receive an allocation of Federal power. For those entities that receive a Federal power allocation, Western requires that they keep the information for 3 years after Western grants the power allocation and the applicant signs a Federal power contract. The 3-year record retention policy for such applicants allows Western sufficient time to administer the contract and to ensure the applicant

provided factual information in its application. Western anticipates that a 3-year record retention policy will have little impact on most businesses in the power industry who will keep the APD as part of their normal business records. The procedure and process for the allocation of power shall be the subject matter of a separate notice and is outside the scope of this process.

F. Does the collection indicate the retention period for any recordkeeping requirements for the respondent?

The APD identifies that there is no recordkeeping requirement for the respondent if it does not receive an allocation of Federal power. It also identifies that applicants who receive an allocation of Federal power must retain the records for 3 years.

G. Does the collection inform the public of the information the public needs to exercise scrutiny concerning the agency need to collect information (the reasons the information is collected, the way it is used, an estimate of the burden, whether the response is voluntary, required to obtain a benefit, or mandatory and a statement that no person is required to respond unless a valid OMB control number is displayed)?

If an entity desires a Federal power allocation from Western, Western needs certain information to determine whether the entity is eligible to receive power. Western has a limited amount of power available and uses its discretion in allocating power. In order to use its discretion in allocating power, Western will use the information collected on the application. Western will not accept incomplete applications. Western will work with any entities that may need

¹⁸ See e.g., 43 U.S.C. 485h(c).

¹⁹ See e.g., 43 U.S.C. 485h(c).

assistance in completing the application. No person is required to submit any information unless a valid OMB control number is displayed. No person is required to submit any information unless they desire a Federal power allocation.

H. Is the collection developed by an office that has planned and allocated resources for the efficient and effective management and use of the information collected?

Western's power marketing offices will administer and evaluate the applications. Use and management of the collected information has been factored into each office's functions and resource requirements. Historically, Western has requested the same relative information from applicants and effectively used Western resources to utilize and manage the information in its determinations. Each power marketing office will make a recommendation to Western's Administrator on which applicant(s) should be awarded a Federal power allocation based on the information contained in the APD. Western's Administrator shall use his discretion in the final award of power allocations. The procedure and process for the allocation of power shall be the subject matter of a separate notice and is outside the scope of this process.

I. Does the collection use effective and efficient statistical survey methods?

Since the information collected is used to determine whether an applicant receives an allocation of Federal power, this section is inapplicable.

J. Does the collection use information technology to the maximum extent practicable to reduce the burden and to improve data quality, agency efficiency, and responsiveness to the public?

The APD will be accessible for downloading via Western's Web page. Western will accept email submission of the APD, as well as submission via fax or regular mail. Applicants also can enter the information on an electronic APD on Western's Web page.

VII. Invitation for Comments

Western invites public comment on its request to extend its APD that Western submitted to OMB pursuant to the Paperwork Reduction Act of 1995. The Paperwork Reduction Act requires OMB to make a decision on the ICR within 60 days after this publication or receipt of the proposed collection of information, whichever is later.²⁰

Comments should be sent directly to the addresses listed in the **ADDRESSES** Section above.

Dated: August 15, 2014.

ENVIRONMENTAL PROTECTION AGENCY

[EPA-HQ-OPP-2014-0561; FRL-9914-57]

Amendment, Extension, or Issuance of an Experimental Use Permit

AGENCY: Environmental Protection Agency (EPA).

ACTION: Notice.

SUMMARY: EPA has granted amendments, extensions, and issuances of experimental use permits (EUPs) to the pesticide applicants described in Unit II. of the **SUPPLEMENTARY INFORMATION**. An EUP permits use of a pesticide for experimental or research purposes only in accordance with the limitations in the permit.

FOR FURTHER INFORMATION CONTACT: Robert McNally, Biopesticides and Pollution Prevention Division (7511P), Office of Pesticide Programs, Environmental Protection Agency, 1200

²⁰ See 5 CFR 1320.10(b).

Pennsylvania Ave. NW., Washington, DC 20460-0001; main telephone number: (703) 305-7090; email address: BPPDFRNotices@epa.gov.

SUPPLEMENTARY INFORMATION:

I. General Information

A. Does this action apply to me?

This action is directed to the public in general. Although this action may be of particular interest to those persons who conduct or sponsor research on pesticides, the Agency has not attempted to describe all the specific entities that may be affected by this action.

B. How can I get copies of this document and other related information?

The dockets for these actions, identified by docket identification (ID) numbers EPA-HQ-OPP-2013-0254 and EPA-HQ-OPP-2014-0212, are available at <http://www.regulations.gov> or at the Office of Pesticide Programs Regulatory Public Docket (OPP Docket) in the Environmental Protection Agency Docket Center (EPA/DC), West William Jefferson Clinton Bldg., Rm. 3334, 1301 Constitution Ave. NW., Washington, DC 20460-0001. The Public Reading Room is open from 8:30 a.m. to 4:30 p.m., Monday through Friday, excluding legal holidays. The telephone number for the Public Reading Room is (202) 566-1744, and the telephone number for the OPP Docket is (703) 305-5805. Please review the visitor instructions and additional information about the docket available at <http://www.epa.gov/dockets>.

II. EUP

EPA has issued the following EUPs:

1. *8917-EUP-1*. EPA-HQ-OPP-2014-0212. Issuance. Company: J.R. Simplot Company, 5369 West Irving St., Boise, ID 83706. This EUP allows the use of a total of approximately 0.00718 pound of the VNT1 protein that is expected to be expressed by *Rpi-vnt1* gene in 239,375 pounds of Innate TM 2.0 potatoes in the Plant Incorporated Protectant (PIP) on a total of 96.75 acres of potatoes to evaluate the control of potato blight. The program is authorized only in the States of Idaho, Michigan, Nebraska, New York, North Carolina, North Dakota, Oregon, Pennsylvania, Washington, and Wisconsin. Experimental protocol also includes 15.32 maximum border acreage of non-PIP potatoes. Harvested plant material from breeding PIPs have not yet been commercially registered and must not be allowed to enter the food or feed supply. Two positive comments were received to the Notice of Receipt of the application published in the **Federal**

Register of April 9, 2014 (79 FR 19611) (FRL-9908-82). J.R. Simplot Company must provide reports to EPA in accordance with the limitations of the EUP. The EUP is effective from May 13, 2014, to May 30, 2015.

2. *89668-EUP-1*. EPA-HQ-OPP-2013-0254. Amendment and Extension. Company: Robert I. Rose, Ph.D., on behalf of James Mains, Ph.D., Mosquito Mate, Inc., 1122 Oak Hill Dr., Lexington, KY 40505-3322. This EUP allows the use of a total of 249.6 milligrams (mg) of the microbial insecticide, *Wolbachia pipientis* ZAP strain, on a total of 48 acres. The extension and amendment of the EUP allows weekly releases of 100,000 male *Aedes albopictus* mosquitoes containing the microbial active ingredient over a 26-week period. The EUP intends to evaluate the suppression of the population of the naturally occurring *Aedes albopictus* mosquitoes. On mating with the released male mosquitoes, the females are expected to produce non-viable eggs. Mosquito population and eggs will be monitored over approximately 15,213 acres during the EUP and reported annually to Biopesticides and Pollution Prevention Division. The program is authorized only in the States of California (CA), Florida (FL), Kentucky (KY), and New York (NY). The EUP is effective from June 26, 2014, to October 31, 2015, in CA, FL, and KY and to September 30, 2016, in NY.

3. *88347-EUP-1*. EPA-HQ-OPP-2013-0427. Amendment and Extension. Company: Phyllo BioProducts Corporation, 424 Lake Park Ave., #23, Oakland, CA 94610. This EUP allows the use of a total of 8,721 pounds of the insecticide, *Bacillus thuringiensis* subspecies *galleriae* strain SDS-502 fermentation solids, spores, and insecticidal toxins, on a total of 3,300 acres of forested areas to evaluate the control of emerald ash borer (*Agrilus planipennis*). The program is authorized only in the States of Illinois, Minnesota, Pennsylvania, and Wisconsin. The EUP is effective from August 6, 2014, to August 31, 2015.

Authority: 7 U.S.C. 136c.

FEDERAL COMMUNICATIONS COMMISSION

Information Collection Being Submitted for Review and Approval to the Office of Management and Budget

AGENCY: Federal Communications Commission.

ACTION: Notice and request for comment; correction.

SUMMARY: The Federal Communications Commission (FCC) is correcting a notice and request for comment that appeared in the **Federal Register** of August 15, 2014. The document seeks comment on the information collection requirements contained in the Commission's Video Relay Service Reform Order.

DATES: This document corrects the notice and request for comment that appeared in the **Federal Register** of August 15, 2014. Written comments should be submitted on or before September 15, 2014. If you anticipate that you will be submitting comments, but find it difficult to do so within the period of time allowed by this notice, you should advise the contact below as soon as possible.

FOR FURTHER INFORMATION CONTACT: For additional information, please contact Cathy Williams, at (202) 418-2918 or email Cathy.Williams@fcc.gov or PRA@fcc.gov.

SUPPLEMENTARY INFORMATION: This document makes the following corrections to the notice and request for comment, FR Doc. 2014-19290, published August 15, 2014, at 79 FR 48149:

Correction

On page 48150, columns 2 and 3, revise the Privacy Impact Assessment section to read as follows:

Privacy Impact Assessment: This information collection affects individuals or households. The Commission is not collecting personally identifiable information (PII) for the purpose of populating in the database, however, the database is made available and accessible by the Commission and the TRS Fund Administrator. Although TRS users are required to provide their personal identifiable information to register for using TRS service, such information is available only to the Commission, the TRS Fund Administrator, and a third-party independent vendor selected by the Commission's Managing Director and the Commission. The third party vendor and the Commission are required to maintain all registered information, including personal information, in the registration database confidential in

accordance to the directives under contract between the third party vendor and the Commission's Managing Director. The FCC is completing the requirements for a new system of records notice (SORN), FCC/CGB-4, "Internet-based Telecommunications Relay Service-User Registration Database (ITRS-URD)," which will cover the personally identifiable information (PII) that may be collected, maintained, used, and stored, and disposed of when obsolete, and which are part of the information associated with these information collection requirements, *i.e.*, the new SORN will make this information collection comply with all requirements of the Privacy Act of 1974, as amended.

Federal Communications Commission.

BILLING CODE 6712-01-P

FEDERAL COMMUNICATIONS COMMISSION

Notice of Public Information Collection(s) Being Reviewed by the Federal Communications Commission, Comments Requested [Withdrawn]

AGENCY: Federal Communications Commission.

ACTION: Notice; withdrawal of request for comments.

SUMMARY: The Federal Communications Commission published a document requesting comments, as part of its continuing effort to reduce paperwork burden and as required by the Paperwork Reduction Act (PRA) of 1995. The Commission invited the general public and other agencies to comment on whether the proposed collection of information is necessary for the proper performance of the functions of the Commission; however, the Commission withdraws its request for those comments.

DATES: Effective August 22, 2014.

FOR FURTHER INFORMATION CONTACT: Leslie F. Smith at (202) 418-0217, or via the Internet at PRA@fcc.gov.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 3060-XXXX.

Title: FCC Frequent Visitor Building Identification (ID) Badge Database, FCC Form 210.

Form Number: FCC Form 210.

Type of Review: New information collection. Request for comments published at 79 FR 48151, August 15, 2014 is withdrawn from publication in

the **Federal Register** effective August 22, 2014.

Federal Communications Commission.

BILLING CODE 6712-01-P

FEDERAL MARITIME COMMISSION

[Docket No. 14-10]

Econocaribe Consolidators, Inc. v. Amoy International, LLC.; Notice of Filing of Complaint and Assignment

Notice is given that a complaint has been filed with the Federal Maritime Commission (Commission) by Econocaribe Consolidators, Inc. (Econocaribe), hereinafter "Complainant," against Amoy International, LLC (Amoy), hereinafter "Respondents." Complainant states that it is an Ocean Transportation Intermediary with its principal place of business in Miami, FL. Complainant alleges that Respondent Amoy is a FMC licensed Ocean Transportation Intermediary with its place of business in City of Industry, CA.

Complainant alleges that Respondent violated "46 U.S.C. 41104(2)(A), 46 U.S.C. 41102(c) and 46 CFR 515.31(e), and . . . the Shipping Act of 1984 as amended, sections 10(a)(1), (b)(1), (b)(2)(A) & (B) when it "willfully, intentionally, and knowingly misdeclared . . . cargo as new auto parts when in fact it was used baled truck tires, said misdeclaration causing it to be detained by Chinese Customs."

Complainant requests that "Amoy be required to answer the charges herein; that, after due hearing, an order be entered commanding Amoy to cease and desist from its violations of the Shipping Act; and that Amoy be ordered to pay to Econocaribe reparations for the unlawful conduct described . . . in the sum of approximately \$192,811.00, with interest and attorneys fees to be specified hereafter, as provided for under 46 U.S.C. 41305(b), and such other reparations that the Commission deems just and proper.

The full text of the complaint can be found in the Commission's Electronic Reading Room at www.fmc.gov/14-10.

This proceeding has been assigned to the Office of Administrative Law Judges. The initial decision of the presiding officer in this proceeding shall be issued by August 14, 2015 and the final

decision of the Commission shall be issued by February 15, 2016.

Karen V. Gregory,
Secretary.

BILLING CODE 6730-01-P

FEDERAL RESERVE SYSTEM

Formations of, Acquisitions by, and Mergers of Bank Holding Companies

The companies listed in this notice have applied to the Board for approval, pursuant to the Bank Holding Company Act of 1956 (12 U.S.C. 1841 *et seq.*) (BHC Act), Regulation Y (12 CFR part 225), and all other applicable statutes and regulations to become a bank holding company and/or to acquire the assets or the ownership of, control of, or the power to vote shares of a bank or bank holding company and all of the banks and nonbanking companies owned by the bank holding company, including the companies listed below.

The applications listed below, as well as other related filings required by the Board, are available for immediate inspection at the Federal Reserve Bank indicated. The applications will also be available for inspection at the offices of the Board of Governors. Interested persons may express their views in writing on the standards enumerated in the BHC Act (12 U.S.C. 1842(c)). If the proposal also involves the acquisition of a nonbanking company, the review also includes whether the acquisition of the nonbanking company complies with the standards in section 4 of the BHC Act (12 U.S.C. 1843). Unless otherwise noted, nonbanking activities will be conducted throughout the United States.

Unless otherwise noted, comments regarding each of these applications must be received at the Reserve Bank indicated or the offices of the Board of Governors not later than September 18, 2014.

A. Federal Reserve Bank of Richmond (Adam M. Drimer, Assistant Vice President) 701 East Byrd Street, Richmond, Virginia 23261-4528:

1. *Eastern Virginia Bankshares, Inc.*, Tappahannock, Virginia; to acquire 100 percent of the voting shares of Virginia Company Bank, Newport News, Virginia.

B. Federal Reserve Bank of Atlanta (Chapelle Davis, Assistant Vice President) 1000 Peachtree Street NE., Atlanta, Georgia 30309:

1. *WB&T Bankshares, Inc.*, Waycross, Georgia; to acquire 100 percent of the voting shares of The Citizens Exchange Bank, Pearson, Georgia.

C. Federal Reserve Bank of San Francisco (Gerald C. Tsai, Director, Applications and Enforcement) 101 Market Street, San Francisco, California 94105-1579:

1. *Seacoast Commerce Bank Holdings*, San Diego, California; to become a bank holding company by acquiring 100 percent of the voting shares of Seacoast Commerce Bank, San Diego, California.

Board of Governors of the Federal Reserve System, August 19, 2014.

Michael J. Lewandowski,

Associate Secretary of the Board.

BILLING CODE 6210-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Centers for Medicare & Medicaid Services

[CMS-3303-PN]

Medicare and Medicaid Programs; Application From the Accreditation Commission for Health Care, Inc., for Continued Approval of Its Home Health Agency Accreditation Program

AGENCY: Centers for Medicare and Medicaid Services, HHS.

ACTION: Proposed notice.

SUMMARY: This proposed notice acknowledges the receipt of an application from the Accreditation Commission for Health Care Inc., (ACHC) for continued recognition as a national accrediting organization for home health agencies (HHAs) that wish to participate in the Medicare or Medicaid programs. Section 1865(b)(3)(A) of the Social Security Act (the Act) requires that within 60 days of receipt of an organization's complete application, CMS publish a notice that identifies the national accrediting body making the request, describes the nature of the request, and provides at least a 30-day public comment period.

DATES: To be assured consideration, comments must be received at one of the addresses provided below, no later than 5 p.m. on September 22, 2014.

ADDRESSES: In commenting, please refer to file code CMS-3303-PN. Because of staff and resource limitations, we cannot accept comments by facsimile (FAX) transmission. You may submit comments in one of four ways (please choose only one of the ways listed):

1. *Electronically.* You may submit electronic comments on this regulation to <http://www.regulations.gov>. Follow the "Submit a comment" instructions.

2. *By regular mail.* You may mail written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-3303-PN, P.O. Box 8016, Baltimore, MD 21244-8010.

Please allow sufficient time for mailed comments to be received before the close of the comment period.

3. *By express or overnight mail.* You may send written comments to the following address ONLY: Centers for Medicare & Medicaid Services, Department of Health and Human Services, Attention: CMS-3303-PN, Mail Stop C4-26-05, 7500 Security Boulevard, Baltimore, MD 21244-1850.

4. *By hand or courier.* Alternatively, you may deliver (by hand or courier) your written ONLY to the following addresses:

a. For delivery in Washington, DC—Centers for Medicare & Medicaid Services, Department of Health and Human Services, Room 445-G, Hubert H. Humphrey Building, 200 Independence Avenue SW., Washington, DC 20201.

(Because access to the interior of the Hubert H. Humphrey Building is not readily available to persons without federal government identification, commenters are encouraged to leave their comments in the CMS drop slots located in the main lobby of the building. A stamp-in clock is available for persons wishing to retain a proof of filing by stamping in and retaining an extra copy of the comments being filed.)

b. For delivery in Baltimore, MD—Centers for Medicare & Medicaid Services, Department of Health and Human Services, 7500 Security Boulevard, Baltimore, MD 21244-1850.

If you intend to deliver your comments to the Baltimore address, call telephone number (410) 786-7195.

Comments erroneously mailed to the addresses indicated as appropriate for hand or courier delivery may be delayed and received after the comment period.

For information on viewing public comments, see the beginning of the **SUPPLEMENTARY INFORMATION** section.

FOR FURTHER INFORMATION CONTACT: Cindy Melanson, (410) 786-0310, Monda Shaver, (410) 786-3410, or Patricia Chmielewski, (410) 786-6899.

SUPPLEMENTARY INFORMATION:

Inspection of Public Comments: All comments received before the close of the comment period are available for viewing by the public, including any personally identifiable or confidential business information that is included in a comment. We post all comments received before the close of the

comment period on the following Web site as soon as possible after they have been received: <http://www.regulations.gov>. Follow the search instructions on that Web site to view public comments.

Comments received timely will also be available for public inspection as they are received, generally beginning approximately 3 weeks after publication of a document, at the headquarters of the Centers for Medicare & Medicaid Services, 7500 Security Boulevard, Baltimore, Maryland 21244, Monday through Friday of each week from 8:30 a.m. to 4 p.m. To schedule an appointment to view public comments, phone 1-800-743-3951.

I. Background

Under the Medicare program, eligible beneficiaries may receive covered services from a home health agency (HHA) provided certain requirements are met. Sections 1861(o) and 1891 of the Social Security Act (the Act) establish distinct criteria for facilities seeking designation as an HHA. Regulations concerning provider agreements are at 42 CFR part 489 and those pertaining to activities relating to the survey and certification of facilities are at 42 CFR part 488. The regulations at 42 CFR part 484 specify the minimum conditions that an HHA must meet to participate in the Medicare program.

Generally, to enter into an agreement, an HHA must first be certified by a state survey agency as complying with the conditions or requirements set forth in part 484 of our Medicare regulations. Thereafter, the HHA is subject to regular surveys by a state survey agency to determine whether it continues to meet these requirements. There is an alternative, however, to surveys by state agencies.

Section 1865(a)(1) of the Act provides that, if a provider entity demonstrates through accreditation by an approved national accrediting organization that all applicable Medicare conditions are met or exceeded, we will deem those provider entities as having met the requirements. Accreditation by an accrediting organization is voluntary and is not required for Medicare participation.

If an accrediting organization is recognized by the Secretary as having standards for accreditation that meet or exceed Medicare requirements, any provider entity accredited by the national accrediting body's approved program would be deemed to meet the Medicare conditions. A national accrediting organization applying for approval of its accreditation program under part 488, subpart A, must provide

CMS with reasonable assurance that the accrediting organization requires the accredited provider entities to meet requirements that are at least as stringent as the Medicare conditions. Our regulations concerning the approval of accrediting organizations are set forth at § 488.4 and § 488.8(d)(3). The regulations at § 488.8(d)(3) require accrediting organizations to reapply for continued approval of its accreditation program every 6 years or sooner as determined by us.

ACHC's current term of approval for their HHA accreditation program expires February 24, 2015.

II. Approval of Deeming Organizations

Section 1865(a)(2) of the Act and our regulations at § 488.8(a) require that our findings concerning review and approval of a national accrediting organization's requirements consider, among other factors, the applying accrediting organization's requirements for accreditation; survey procedures; resources for conducting required surveys; capacity to furnish information for use in enforcement activities; monitoring procedures for provider entities found not in compliance with the conditions or requirements; and ability to provide CMS with the necessary data for validation.

Section 1865(a)(3)(A) of the Act further requires that we publish, within 60 days of receipt of an organization's complete application, a notice identifying the national accrediting body making the request, describing the nature of the request, and providing at least a 30-day public comment period. We have 210 days from the receipt of a complete application to publish notice of approval or denial of the application.

The purpose of this proposed notice is to inform the public of ACHC's request for continued approval of its HHA accreditation program. This notice also solicits public comment on whether ACHC's requirements meet or exceed the Medicare conditions of participation (CoPs) for HHAs.

III. Evaluation of Deeming Authority Request

ACHC submitted all the necessary materials to enable us to make a determination concerning its request for continued approval of its HHA accreditation program. This application was determined to be complete on June 27, 2014. Under section 1865(a)(2) of the Act and our regulations at § 488.8 (Federal review of accrediting organizations), our review and evaluation of ACHC will be conducted in accordance with, but not necessarily limited to, the following factors:

- The equivalency of ACHC's standards for HHAs as compared with Medicare's HHA CoPs.

- ACHC's survey process to determine the following:

- ++ The composition of the survey team, surveyor qualifications, and the ability of the organization to provide continuing surveyor training.

- ++ The comparability of ACHC's processes to those of state agencies, including survey frequency, and the ability to investigate and respond appropriately to complaints against accredited facilities.

- ++ ACHC's processes and procedures for monitoring a HHA found out of compliance with ACHC's program requirements. These monitoring procedures are used only when ACHC identifies noncompliance. If noncompliance is identified through validation reviews or complaint surveys, the state survey agency monitors corrections as specified at § 488.7(d).

- ++ ACHC's capacity to report deficiencies to the surveyed facilities and respond to the facility's plan of correction in a timely manner.

- ++ ACHC's capacity to provide CMS with electronic data and reports necessary for effective validation and assessment of the organization's survey process.

- ++ The adequacy of ACHC's staff and other resources, and its financial viability.

- ++ ACHC's capacity to adequately fund required surveys.

- ++ ACHC's policies with respect to whether surveys are announced or unannounced, to assure that surveys are unannounced.

- ++ ACHC's agreement to provide CMS with a copy of the most current accreditation survey together with any other information related to the survey as CMS may require (including corrective action plans).

IV. Collection of Information Requirements

This document does not impose information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements. Consequently, there is no need for review by the Office of Management and Budget under the authority of the Paperwork Reduction Act of 1995.

V. Response to Public Comments

Because of the large number of public comments we normally receive on **Federal Register** documents, we are not able to acknowledge or respond to them individually. We will consider all comments we receive by the date and

time specified in the **DATES** section of this preamble, and, when we proceed with a subsequent document, we will respond to the comments in the preamble to that document.

Dated: August 12, 2014.

Marilyn Tavenner,

Administrator, Centers for Medicare & Medicaid Services.

[FR Doc. 2014-19697 Filed 8-21-14; 8:45 am]

BILLING CODE 4120-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2011-N-0084]

Agency Information Collection Activities; Submission for Office of Management and Budget Review; Comment Request; Channels of Trade Policy for Commodities With Residues of Pesticide Chemicals, for Which Tolerances Have Been Revoked, Suspended, or Modified by the Environmental Protection Agency Pursuant to Dietary Risk Considerations

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing that a proposed collection of information has been submitted to the Office of Management and Budget (OMB) for review and clearance under the Paperwork Reduction Act of 1995.

DATES: Fax written comments on the collection of information by September 22, 2014.

ADDRESSES: To ensure that comments on the information collection are received, OMB recommends that written comments be faxed to the Office of Information and Regulatory Affairs, OMB, Attn: FDA Desk Officer, FAX: 202-395-7285, or emailed to oir_submission@omb.eop.gov. All comments should be identified with the OMB control number 0910-0562. Also include the FDA docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: FDA PRA Staff, Office of Operations, Food and Drug Administration, 8455 Colesville Rd., COLE-14526, Silver Spring, MD 20993-0002 PRAStaff@fda.hhs.gov.

SUPPLEMENTARY INFORMATION: In compliance with 44 U.S.C. 3507, FDA has submitted the following proposed

collection of information to OMB for review and clearance.

Channels of Trade Policy for Commodities With Residues of Pesticide Chemicals, for Which Tolerances Have Been Revoked, Suspended, or Modified by the Environmental Protection Agency Pursuant to Dietary Risk Considerations (OMB Control Number 0910-0562)—Extension

The Food Quality Protection Act of 1996, which amended the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Federal Food, Drug, and Cosmetic Act (the FD&C Act), established a new safety standard for pesticide residues in food, with an emphasis on protecting the health of infants and children. The Environmental Protection Agency (EPA) is responsible for regulating the use of pesticides (under FIFRA) and for establishing tolerances or exemptions from the requirement for tolerances for residues of pesticide chemicals in food commodities (under the FD&C Act). EPA may, for various reasons, e.g., as part of a systematic review or in response to new information concerning the safety of a specific pesticide, reassess whether a tolerance for a pesticide residue continues to meet the safety standard in section 408 of the FD&C Act (21 U.S.C. 346a). When EPA determines that a pesticide's tolerance level does not meet that safety standard, the registration for the pesticide may be canceled under FIFRA for all or certain uses. In addition, the tolerances for that pesticide may be lowered or revoked for the corresponding food commodities. Under section 408(j)(2) of the FD&C Act, when the registration for a pesticide is canceled or modified due to, in whole or in part, dietary risks to humans posed by residues of that pesticide chemical on food, the effective date for the revocation of such tolerance (or exemption in some cases) must be no later than 180 days after the date such cancellation becomes effective or 180 days after the date on which the use of the canceled pesticide becomes unlawful under the terms of the cancellation, whichever is later.

When EPA takes such actions, food derived from a commodity that was lawfully treated with the pesticide may not have cleared the channels of trade by the time the revocation or new

tolerance level takes effect. The food could be found by FDA, the Agency that is responsible for monitoring pesticide residue levels and enforcing the pesticide tolerances in most foods (the U.S. Department of Agriculture has responsibility for monitoring residue levels and enforcing pesticide tolerances in egg products and most meat and poultry products), to contain a residue of that pesticide that does not comply with the revoked or lowered tolerance. We would normally deem such food to be in violation of the law by virtue of it bearing an illegal pesticide residue. The food would be subject to FDA enforcement action as an "adulterated" food. However, the channels of trade provision of the FD&C Act addresses the circumstances under which a food is not unsafe solely due to the presence of a residue from a pesticide chemical for which the tolerance has been revoked, suspended, or modified by EPA. The channels of trade provision (section 408(j)(5) of the FD&C Act) states that food containing a residue of such a pesticide shall not be deemed "adulterated" by virtue of the residue, if the residue is within the former tolerance, and the responsible party can demonstrate to FDA's satisfaction that the residue is present as the result of an application of the pesticide at a time and in a manner which were lawful under FIFRA.

In the **Federal Register** of May 18, 2005 (70 FR 28544), we announced the availability of a guidance document entitled "Channels of Trade Policy for Commodities With Residues of Pesticide Chemicals, for Which Tolerances Have Been Revoked, Suspended, or Modified by the Environmental Protection Agency Pursuant to Dietary Risk Considerations." The guidance represents FDA's current thinking on its planned enforcement approach to the channels of trade provision of the FD&C Act and how that provision relates to FDA-regulated products with residues of pesticide chemicals for which tolerances have been revoked, suspended, or modified by EPA pursuant to dietary risk considerations. The guidance can be found at the following link: <http://www.fda.gov/Food/GuidanceRegulation/GuidanceDocuments/RegulatoryInformation/ChemicalContaminantsMetalsNaturalToxinsPesticides/ucm077918.htm>. We

anticipate that food bearing lawfully applied residues of pesticide chemicals that are the subject of future EPA action to revoke, suspend, or modify their tolerances, will remain in the channels of trade after the applicable tolerance is revoked, suspended, or modified. If we encounter food bearing a residue of a pesticide chemical for which the tolerance has been revoked, suspended, or modified, we intend to address the situation in accordance with provisions of the guidance. In general, we anticipate that the party responsible for food found to contain pesticide chemical residues (within the former tolerance) after the tolerance for the pesticide chemical has been revoked, suspended, or modified will be able to demonstrate that such food was handled, e.g., packed or processed, during the acceptable timeframes cited in the guidance by providing appropriate documentation to FDA as discussed in the guidance document. We are not suggesting that firms maintain an inflexible set of documents where anything less or different would likely be considered unacceptable. Rather, we are leaving it to each firm's discretion to maintain appropriate documentation to demonstrate that the food was so handled during the acceptable timeframes.

Examples of documentation which we anticipate will serve this purpose consist of documentation associated with packing codes, batch records, and inventory records. These are types of documents that many food processors routinely generate as part of their basic food-production operations. Accordingly, under the PRA, we are requesting the extension of OMB approval for the information collection provisions in the guidance.

Description of Respondents: The likely respondents to this collection of information are firms in the produce and food-processing industries that handle food products that may contain residues of pesticide chemicals after the tolerances for the pesticide chemicals have been revoked, suspended, or modified.

In the **Federal Register** of June 3, 2014 (79 FR 31944), FDA published a 60-day notice requesting public comment on the proposed collection of information. No comments were received.

We estimate the annual burden of this collection of information as follows:

TABLE 1—ESTIMATED ANNUAL REPORTING BURDEN¹

Activity	Number of respondents	Number of responses per respondent	Total annual responses	Average burden per response	Total hours
Submission of Documentation	1	1	1	3	3

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

We expect the total number of pesticide tolerances that are revoked, suspended, or modified by EPA pursuant to dietary risk considerations in the next 3 years to remain at a low level, as there have been no changes to the safety standard for pesticide residues in food since 1996. Thus, we expect the number of submissions we will receive pursuant to the guidance

document will also remain at a low level. However, to avoid counting this burden as zero, we have estimated the burden at one respondent making one submission a year for a total of one annual submission.

We based our estimate of the hours per response on the assumption that the information requested in the guidance is readily available to the submitter. We

expect that the submitter will need to gather information from appropriate persons in the submitter's company and to prepare this information for submission to FDA. The submitter will almost always merely need to copy existing documentation. We believe that this effort should take no longer than 3 hours per submission.

TABLE 2—ESTIMATED ANNUAL RECORDKEEPING BURDEN¹

Activity	Number of recordkeepers	Number of records per recordkeeping	Total annual records	Average burden per record	Total hours
Develop documentation process	1	1	1	16	16

¹ There are no capital costs or operating and maintenance costs associated with this collection of information.

In determining the estimated annual recordkeeping burden, we estimated that at least 90 percent of firms maintain documentation, such as packing codes, batch records, and inventory records, as part of their basic food production or import operations. Therefore, the recordkeeping burden was calculated as the time required for the 10 percent of firms that may not be currently maintaining this documentation to develop and maintain documentation, such as batch records and inventory records. In previous information collection requests, this recordkeeping burden was estimated to be 16 hours per record. We have retained our prior estimate of 16 hours per record for the recordkeeping burden. As shown in Table 1, we estimate that one respondent will make one submission per year. Although we estimate that only 1 out of 10 firms will not be currently maintaining the necessary documentation, to avoid counting the recordkeeping burden for the 1 submission per year as 1/10 of a recordkeeper, we estimate that 1 recordkeeper will take 16 hours to develop and maintain documentation recommended by the guidance.

Dated: August 19, 2014.

Peter Lurie,

Associate Commissioner for Policy and Planning.

[FR Doc. 2014-19957 Filed 8-21-14; 8:45 am]

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket Nos. FDA-2014-P-0637, FDA-2014-P-0315]

Determination That FUSILEV (Levoleucovorin Calcium), Injection, 175 Milligrams/17.5 Milliliters and 250 Milligrams/25 Milliliters, Were Not Withdrawn From Sale for Reasons of Safety or Effectiveness

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) has determined that FUSILEV (levoleucovorin calcium), Injection, 175 milligrams (mg)/17.5 milliliters (mL) and 250 mg/25 mL, were not withdrawn from sale for reasons of safety or effectiveness. This determination will allow FDA to approve abbreviated new drug applications (ANDAs) for levoleucovorin calcium, injection, 175 mg/17.5 mL and 250 mg/25 mL, if all other legal and regulatory requirements are met.

FOR FURTHER INFORMATION CONTACT:

Darren Eicken, Center for Drug Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 51, Rm. 6206, Silver Spring, MD 20993-0002, 240-402-0978.

SUPPLEMENTARY INFORMATION: In 1984, Congress enacted the Drug Price Competition and Patent Term Restoration Act of 1984 (Pub. L. 98-417) (the 1984 amendments), which authorized the approval of duplicate versions of drug products under an ANDA procedure. ANDA applicants must, with certain exceptions, show that the drug for which they are seeking approval contains the same active ingredient in the same strength and dosage form as the “listed drug,” which is a version of the drug that was previously approved. ANDA applicants do not have to repeat the extensive clinical testing otherwise necessary to gain approval of a new drug application (NDA).

The 1984 amendments include what is now section 505(j)(7) of the Federal Food, Drug, and Cosmetic Act (21 U.S.C. 355(j)(7)), which requires FDA to publish a list of all approved drugs. FDA publishes this list as part of the “Approved Drug Products With Therapeutic Equivalence Evaluations,” which is known generally as the “Orange Book.” Under FDA regulations, drugs are removed from the list if the Agency withdraws or suspends approval of the drug’s NDA or ANDA for reasons of safety or effectiveness or if FDA determines that the listed drug was withdrawn from sale for reasons of safety or effectiveness (§ 314.162 (21 CFR 314.162)).

A person may petition the Agency to determine, or the Agency may

determine on its own initiative, whether a listed drug was withdrawn from sale for reasons of safety or effectiveness. This determination may be made at any time after the drug has been withdrawn from sale, but must be made prior to approving an ANDA that refers to the listed drug (§ 314.161). FDA may not approve an ANDA that does not refer to a listed drug.

FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, are the subjects of NDA 020140, held by Spectrum Pharmaceuticals, and were initially approved on April 29, 2011 (supplemental approval). FUSILEV is indicated for rescue after high-dose methotrexate therapy in osteosarcoma, to diminish the toxicity and counteract the effects of impaired methotrexate elimination and of inadvertent overdosage of folic acid antagonists, and for use in combination chemotherapy with 5-fluorouracil in the palliative treatment of patients with advanced metastatic colorectal cancer.

FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, are currently listed in the "Discontinued Drug Product List" section of the Orange Book. Spectrum Pharmaceuticals has never marketed FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL. In previous instances (see, e.g., 72 FR 9763 and 61 FR 25497), the Agency has determined that, for purposes of §§ 314.161 and 314.162, never marketing an approved drug product is equivalent to withdrawing the drug from sale.

Lachman Consultant Services, Inc. (Lachman), submitted two citizen petitions, dated March 18, 2014, and May 14, 2014 (Docket Nos. FDA-2014-P-0315 and FDA-2014-P-0637, respectively), under 21 CFR 10.30, requesting that the Agency determine whether FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, were withdrawn from sale for reasons of safety or effectiveness.

After considering the Lachman citizen petitions and reviewing Agency records and based on the information we have at this time, FDA has determined under § 314.161 that FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, were not withdrawn from sale for reasons of safety or effectiveness. Lachman has identified no data or other information suggesting that FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, were withdrawn from sale for reasons of safety or effectiveness. We have carefully reviewed our files for records concerning the withdrawal from sale of FUSILEV (levoleucovorin calcium),

Injection, 175 mg/17.5 mL and 250 mg/25 mL. We have also independently evaluated relevant literature and data for possible postmarketing adverse events. We have reviewed the available evidence and determined that these products were not withdrawn from sale for reasons of safety or effectiveness.

Accordingly, the Agency will continue to list FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, in the "Discontinued Drug Product List" section of the Orange Book. The "Discontinued Drug Product List" delineates, among other items, drug products that have been discontinued from marketing for reasons other than safety or effectiveness. ANDAs that refer to FUSILEV (levoleucovorin calcium), Injection, 175 mg/17.5 mL and 250 mg/25 mL, may be approved by the Agency as long as they meet all other legal and regulatory requirements for the approval of ANDAs. If FDA determines that labeling for these drug products should be revised to meet current standards, the Agency will advise ANDA applicants to submit such labeling.

Dated: August 19, 2014.

Peter Lurie,

Associate Commissioner for Policy and Planning.

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA-2013-N-0745]

Reopening of Docket and Request for Comments on the Food and Drug Administration Safety and Innovation Act Action Plan

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice: reopening of docket; request for comments.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the action plan issued as required by section 907 of the Food and Drug Administration Safety and Innovation Act (FDASIA) and the reopening of a public docket for comments pertaining to the action plan.

DATES: Submit electronic or written comments by October 21, 2014.

ADDRESSES: Submit electronic comments to <http://www.regulations.gov>. Submit written comments to the Division of Dockets Management (HFA-305), Food and Drug

Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. All comments should be identified with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT:

Jonca Bull, Office of Minority Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 1, rm. 4239, Silver Spring, MD, 20993-0002, 301-796-8000, jonca.bull@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

I. Background

On July 9, 2012, the President signed FDASIA (Pub. L. 112-144) into law. Section 907 of FDASIA requires that FDA report on and address certain information regarding clinical trial participation by demographic subgroups and subset analysis of the resulting data. Specifically, section 907(a) of FDASIA requires the Secretary of Health and Human Services (the Secretary), acting through the FDA Commissioner, to publish on FDA's Internet Web site a report "addressing the extent to which clinical trial participation and the inclusion of safety and effectiveness data by demographic subgroups including sex, age, race, and ethnicity, is included in applications submitted to the FDA," and provide such publication to Congress. The report, entitled "Reporting of Inclusion of Demographic Subgroups in Clinical Trials and Data Analysis in Applications for Drugs, Biologics, and Devices," was posted on FDA's Internet Web site in August 2013 and is available at <http://www.fda.gov/RegulatoryInformation/Legislation/FederalFoodDrugandCosmeticAct/FDCAAct/SignificantAmendmentstotheFDCAAct/FDASIA/ucm356316.htm>.

Section 907(b) of FDASIA further requires the Secretary, again acting through the Commissioner, to publish an action plan on FDA's Internet Web site and provide such publication to Congress. The action plan is to contain recommendations, as appropriate, to improve the completeness and quality of analyses of data on demographic subgroups in summaries of product safety and effectiveness and in labeling; on the inclusion of such data, or the lack of availability of such data in labeling; and on ways to improve public availability of such data to patients, health care providers, and researchers. These recommendations are to include, as appropriate, a determination that distinguishes between product types and applicability. The action plan is due not later than 1 year after the publication of the report described previously. The action plan entitled

“FDA Action Plan to Enhance the Collection and Availability of Demographic Subgroup Data” is being issued with this notice and is available at <http://www.fda.gov/RegulatoryInformation/Legislation/FederalFoodDrugandCosmeticActFDCAct/SignificantAmendmentstotheFDCAct/FDASIA/ucm356316.htm>.

FDA is reopening the docket for 60 days to provide an opportunity for interested individuals to submit comments on the action plan. When submitting comments please reference the section of the action plan to which your comments pertain. This docket is intended to ensure that stakeholders have an opportunity to provide comments and that such information submitted to FDA is available to all interested persons in a timely fashion.

II. How to Submit Comments

Interested persons may submit either electronic comments regarding this document to <http://www.regulations.gov> or written comments to the Division of Dockets Management (see **ADDRESSES**). It is only necessary to send one set of comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at <http://www.regulations.gov>.

Dated: August 15, 2014.

Leslie Kux,

Assistant Commissioner for Policy.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2011–D–0817]

Evaluation of Sex-Specific Data in Medical Device Clinical Studies; Guidance for Industry and Food and Drug Administration Staff; Availability

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice.

SUMMARY: The Food and Drug Administration (FDA) is announcing the availability of the guidance entitled “Evaluation of Sex-Specific Data in Medical Device Clinical Studies.” This document provides guidance on the study and evaluation of sex-specific data in medical device clinical studies, and it outlines the Center for Devices

and Radiological Health’s (CDRH’s) and Center for Biologics Evaluation and Research’s (CBER’s) expectations regarding sex-specific patient enrollment, data analysis, and reporting of device study information. The guidance is intended to improve the quality and consistency of available data regarding the performance of medical devices in both sexes by encouraging appropriate enrollment by sex in clinical studies of devices, and appropriate interpretation and assessment if data from such studies are analyzed by sex. Evaluation of sex-specific data in medical device clinical studies can benefit patients, their medical providers, clinical researchers, and others.

DATES: Submit either electronic or written comments on this guidance at any time. General comments on Agency guidance documents are welcome at any time.

ADDRESSES: An electronic copy of the guidance document is available for download from the Internet. See the **SUPPLEMENTARY INFORMATION** section for information on electronic access to the guidance. Submit written requests for a single hard copy of the guidance document entitled “Evaluation of Sex-Specific Data in Medical Device Clinical Studies” to the Office of the Center Director, Guidance and Policy Development, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, rm. 5431, Silver Spring, MD 20993–0002; or the Office of Communication, Outreach and Development, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, rm. 3128, Silver Spring, MD 20993–0002. Send one self-addressed adhesive label to assist that office in processing your request.

Submit electronic comments on the guidance to <http://www.regulations.gov>. Submit written comments to the Division of Dockets Management (HFA–305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. Identify comments with the docket number found in brackets in the heading of this document.

FOR FURTHER INFORMATION CONTACT: Jismi Johnson, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, rm. 1524, Silver Spring, MD 20993–0002, 301–796–6424; or Kathryn O’Callaghan, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, rm. 3614, Silver Spring,

MD 20993–0002, 301–796–6349; or Stephen Ripley, Center for Biologics Evaluation and Research, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 71, rm. 7301, Silver Spring, MD 20993, 240–402–7911.

SUPPLEMENTARY INFORMATION:

I. Background

The purpose of this guidance is to outline CDRH’s and CBER’s expectations regarding sex-specific patient enrollment, data analysis, and reporting of medical device study information. The intent is to improve the quality and consistency of available data regarding the performance of medical devices in both sexes by encouraging appropriate enrollment by sex in clinical studies of devices, and appropriate interpretation and assessment when data from such studies are analyzed by sex. This information can benefit patients, their medical providers, clinical researchers, and others. The specific objectives of this guidance are to: (1) Encourage the consideration of sex and associated covariates (e.g., body size, plaque morphology, etc.) during the study design stage; (2) provide recommendations for study design and conduct to encourage appropriate enrollment of each sex (e.g., in proportions generally representative of the demographics of disease distribution, if appropriate); (3) outline recommended sex-specific statistical analyses of study data with a framework for considering sex-specific data when interpreting overall study outcomes; and (4) specify FDA’s expectations for reporting sex-specific information in summaries and labeling for approved or cleared medical devices.

In the **Federal Register** of December 19, 2011 (76 FR 78670), FDA announced the availability of the draft guidance document. Interested persons were invited to comment by March 19, 2012. Multiple comments were received with recommendations pertaining to the evaluation of sex-specific data in clinical studies. In response to these comments, FDA revised the guidance document to clarify the processes of sex-specific data evaluation in clinical studies and policies as appropriate. For more clarity, a decision framework for different clinical study designs was added to the guidance in response to comments received requesting additional information on when various sex-specific statistical recommendations would apply. Additionally, several comments requested that the recommendations in the guidance apply

to the demographic subgroups of age, race, and ethnicity. However, this is outside of the scope of the revised guidance but, where applicable, the guidance was updated with links to other guidances and information related to these other demographic subgroups.

II. Significance of Guidance

This guidance is being issued consistent with FDA's good guidance practices regulation (21 CFR 10.115). The guidance represents the Agency's current thinking on evaluation of sex-specific data in medical device clinical studies. It does not create or confer any rights for or on any person and does not operate to bind FDA or the public. An alternative approach may be used if such approach satisfies the requirements of the applicable statute and regulations.

III. Electronic Access

Persons interested in obtaining a copy of the guidance may do so by downloading an electronic copy from the Internet. A search capability for all CDRH guidance documents is available at <http://www.fda.gov/MedicalDevices/DeviceRegulationandGuidance/GuidanceDocuments/default.htm>. Guidance documents are also available at <http://www.regulations.gov> or <http://www.fda.gov/BiologicsBloodVaccines/GuidanceComplianceRegulatoryInformation/Guidances/default.htm>. Persons unable to download an electronic copy of "Evaluation of Sex-Specific Data in Medical Device Clinical Studies," may send an email request to CDRH-Guidance@fda.hhs.gov to receive an electronic copy of the document. Please use the document number 1727 to identify the guidance you are requesting.

IV. Paperwork Reduction Act of 1995

This guidance refers to currently approved collections of information found in FDA regulations. These collections of information are subject to review by the Office of Management and Budget (OMB) under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501–3520). The collections of information in 21 CFR 812.25(c) have been approved under OMB control number 0910–0078; the collections of information in 21 CFR part 807, subpart E have been approved under OMB control number 0910–0120; the collections of information in 21 CFR part 814, subparts B and E have been approved under OMB control number 0910–0231; the collections of information in 21 CFR part 814, subpart H have been approved under OMB control number 0910–0332; and the collections of information in 21 CFR

part 822 have been approved under OMB control number 0910–0449.

V. Comments

Interested persons may submit either electronic comments regarding this document to <http://www.regulations.gov> or written comments to the Division of Dockets Management (see **ADDRESSES**). It is only necessary to send one set of comments. Identify comments with the docket number found in brackets in the heading of this document. Received comments may be seen in the Division of Dockets Management between 9 a.m. and 4 p.m., Monday through Friday, and will be posted to the docket at <http://www.regulations.gov>.

Dated: August 19, 2014.

Peter Lurie,

Associate Commissioner for Policy and Planning.

BILLING CODE 4164–01–P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Food and Drug Administration

[Docket No. FDA–2014–N–0001]

Revamping Microbiological Test Methods for Contact Lenses Products; Public Workshop

AGENCY: Food and Drug Administration, HHS.

ACTION: Notice of public workshop.

SUMMARY: The Food and Drug Administration (FDA), the American Academy of Ophthalmology (AAO), the American Academy of Optometry (AAOpt), the American Optometric Association (AOA), and the Contact Lens Association of Ophthalmologists, Inc. (CLAO), are cosponsoring a public workshop entitled "Revamping Microbiological Test Methods for Contact Lenses, Products, and Accessories." The purpose of this workshop is to discuss adequate testing of contact lens care products for disinfection efficacy against emerging pathogens as well as common infectious etiologies. Participants will explore the pros and cons of the various proposals for disinfection efficacy testing and aid in developing general recommendations. The workshop will assist in informing the regulatory science for evaluating contact lenses and disinfection efficacy of associated care products as well as improving test methods to mitigate potential infections.

DATES: *Date and Time:* The public workshop will be held on September 12,

2014, from 8 a.m. to 5 p.m. Sign-in will open at 7:30 a.m.

ADDRESSES: *Location:* The public workshop will be held at FDA's White Oak Campus, 10903 New Hampshire Ave., Bldg. 31 Conference Center, the Great Room (rm. 1503A), Silver Spring, MD 20993. Entrance for the public workshop participants (non-FDA employees) is through Building 1 where routine security check procedures will be performed. For parking and security information, please refer to <http://www.fda.gov/AboutFDA/WorkingatFDA/BuildingsandFacilities/WhiteOakCampusInformation/ucm241740.htm>.

FOR FURTHER INFORMATION CONTACT:

Contact Person: Jeffrey Brocious, Center for Devices and Radiological Health, Food and Drug Administration, 10903 New Hampshire Ave., Bldg. 66, Rm. 2252, Silver Spring, MD 20993, 240–402–3797, email: Jeffrey.Brocious@fda.hhs.gov.

SUPPLEMENTARY INFORMATION:

Registration: Registration is \$250 for members of the AAO, AAOpt, AOA, or CLAO; or \$400 for non-members and available on a first-come, first-served basis. Persons interested in attending this public workshop must register online by September 5, 2014, at 4 p.m. EDT. There will be no onsite registration on the day of the public workshop. Early registration is recommended because facilities are limited and, therefore, FDA may limit the number of participants from each organization.

If you need special accommodations due to a disability, please contact Ms. Susan Monahan at susan.monahan@fda.hhs.gov or 301–796–5661 no later than August 28, 2014.

To register for the public workshop, please visit <http://www.clwshop.org/>. Please provide complete contact information for each attendee, including name, title, affiliation, address, email, and telephone number. If there are any questions with registration, please contact Ms. Cindy Groff at cgroff@convergence-us.com. Registrants will receive confirmation after they have been accepted. You will be notified if you are on a waiting list.

Food and beverages will be available for purchase by participants during the workshop breaks. For more information on the workshop, please see the FDA's Medical Devices News & Events—Workshops & Conferences calendar at <http://www.fda.gov/MedicalDevices/NewsEvents/WorkshopsConferences/default.htm>. (Select this public workshop from the posted events list.)

Streaming Webcast of the Public Workshop: The public workshop will

also be Webcast. Persons interested in viewing the Webcast must register online by September 5, 2014. Early registration is recommended because Webcast connections are limited. Organizations are requested to register all participants, but to view using one connection per location. Webcast participants will be sent technical system requirements after registration and will be sent connection access information after September 5, 2014. If you have never attended a Connect Pro event before, test your connection at https://collaboration.fda.gov/common/help/en/support/meeting_test.htm. To get a quick overview of the Connect Pro program, visit http://www.adobe.com/go/connectpro_overview. (FDA has verified the Web site addresses in this document, but FDA is not responsible for any subsequent changes to the Web sites after this document publishes in the **Federal Register**.)

Transcripts: Please be advised that as soon as a transcript is available, it will be accessible at <http://www.regulations.gov>. It may be viewed at the Division of Dockets Management (HFA-305), Food and Drug Administration, 5630 Fishers Lane, rm. 1061, Rockville, MD 20852. A transcript will also be available in either hardcopy or on CD-ROM, after submission of a Freedom of Information request. Written requests are to be sent to the Division of Freedom of Information (ELEM-1029), Food and Drug Administration, 12420 Parklawn Dr., Element Bldg., Rockville, MD 20857. A link to the transcript will also be available approximately 45 days after the public workshop on the Internet at <http://www.fda.gov/MedicalDevices/NewsEvents/WorkshopsConferences/default.htm>. (Select this public workshop from the posted events list). Supplementary information:

I. Background

To ensure that safe and effective contact lenses and associated care products are introduced into the U.S. marketplace, FDA has issued guidance documents, recognized standards that describe the appropriate test methods, and held workshops. In 2009, FDA held a workshop entitled "Microbiological Testing for Contact Lens Care Products" that was cosponsored by AAO, AAOpt, AOA, and CLAO (Ref. 1). Representatives from industry, academia, professional organizations, and regulatory agencies discussed variables to consider when developing disinfection efficacy test methods against *Acanthamoeba* keratitis (AK) as well as current contact lens disinfection tests and limitations.

Although the 2009 workshop began gathering information, there has been a persistent increase in the number of AK cases (Ref. 2). This persistent rise in the number of AK cases has prompted concern about the safety of contact lens care products. While most experts present at a 2008 Ophthalmic Devices Advisory Panel meeting agreed that *Acanthamoeba* should be added as a challenge organism to disinfection efficacy testing methods, consensus has not been reached on the appropriate method for performing this testing (Ref. 3).

At this workshop, the concerning rise in the keratitis associated with *Acanthamoeba* will be discussed as well as the emergence of other pathogens in contact lens related keratitis. The progress made in the development of *Acanthamoeba* test methods will be summarized. The goal of the workshop is to determine uniform testing methods for *Acanthamoeba* disinfection efficacy as well as to discuss methods for conducting real-world simulated testing of contact lens care products. The meeting will bring together scientists, clinicians, and industry experts to discuss critical aspects of disinfection efficacy testing.

The FDA/AAO/AAOpt/AOA/CLAO Workshop will provide FDA with an important opportunity to interact with stakeholders and gain knowledge and information on methods to test commonly used medical devices and would assist the Agency in carrying out its mission to promote and protect the public health.

II. Topics for Discussion at the Public Workshop

Topics to be discussed at the public workshop include, but are not limited to, the following as they relate to contact lenses and their associated care products:

- Emerging infectious pathogens in contact lens related keratitis;
- role of soil in disinfection efficacy testing; and
- *Acanthamoeba* disinfection efficacy test methods.

These topics will be presented by experts in the associated area with more in-depth discussions of the given topics during panel sessions.

III. References

The following references have been placed on display in the Division of Dockets Management (see *Transcripts*) and may be seen by interested persons between 9 a.m. and 4 p.m., Monday through Friday, and are available electronically at <http://www.regulations.gov>. (FDA has verified

the Web site addresses in this reference section, but FDA is not responsible for any subsequent changes to the Web sites after this document publishes in the **Federal Register**.)

BILLING CODE 4164-01-P

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Submission for OMB Review; 30-Day Comment Request; The National Diabetes Education Program (NDEP) Comprehensive Evaluation Plan

SUMMARY: Under the provisions of Section 3507(a)(1)(D) of the Paperwork Reduction Act of 1995, the National Institute of Diabetes and Digestive and Kidney Diseases (NIDDK), the National Institutes of Health (NIH) has submitted to the Office of Management and Budget (OMB) a request for review and approval of the information collection listed below. This proposed information collection was previously published in the **Federal Register** on March 19, 2014, pages 15351 and 15351 [FR DOC #: 2014-06064], and allowed 60 days for public comment. There was 1 public comment received. The purpose of this notice is to allow an additional 30 days for public comment. The National Institutes of Health may not conduct or sponsor, and the respondent is not required to respond to, an information collection that has been extended, revised, or implemented on or after October 1, 1995, unless it displays a currently valid OMB control number.

Direct Comments to OMB: Written comments and/or suggestions regarding the item(s) contained in this notice, especially regarding the estimated public burden and associated response time, should be directed to the: Office of Management and Budget, Office of Regulatory Affairs, OIRA_submission@

omb.eop.gov or by fax to 202-395-6974, Attention: NIH Desk Officer.

DATES: *Comment Due Date:* Comments regarding this information collection are best assured of having their full effect if received within 30-days of the date of this publication.

FOR FURTHER INFORMATION CONTACT: To obtain a copy of the data collection plans and instruments or request more information on the proposed project contact: Ms. Joanne Gallivan, M.S., R.D., Director, National Diabetes Education Program, OCPL, NIDDK, 31 Center Drive, MSC 2560, Bethesda, MD 20892, or call non-toll-free number 301-496-6110, or Email your request, including your address to: joanne_gallivan@nih.gov. Formal requests for additional plans and instruments must be requested in writing.

Proposed Collection: The National Diabetes Education Program (NDEP) Comprehensive Evaluation Plan, 0925-0552, Expiration Date 10/31/2015, REVISION, National Institute of Diabetes and Digestive and Kidney Disease (NIDDK), National Institutes of Health (NIH).

Need and Use of Information Collection: The National Diabetes Education Program (NDEP) is a partnership of the National Institutes of Health (NIH) and the Centers for Disease Control and Prevention (CDC) and more than 200 public and private organizations. The long-term goal of the NDEP is to reduce the burden of diabetes and pre-diabetes in the United States, and its territories, by facilitating the adoption of proven strategies to prevent or delay the onset of diabetes and its complications.

The NDEP evaluation will document the extent to which the NDEP program has been implemented and how successful it has been in meeting program objectives, outlined in the NDEP Strategic Plan. The evaluation relies heavily on data gathered from existing national surveys such as National Health and Nutrition Examination Survey (NHANES), the National Health Interview Survey (NHIS), the Behavioral Risk Factor Surveillance System (BRFSS), among others for this information. This is a continued collection of additional

primary data from NDEP target audiences on some key process and impact measures that are necessary to effectively evaluate the program. The audiences targeted by the NDEP include people at risk for diabetes, people with diabetes and their families, and the public.

OMB approval is requested for changing the data collection methodology from a random-digit-dialing (RDD) telephone survey to a probability-based web-based survey as well as an update of the survey questionnaire which has not been updated since it was first developed in 2006. There are no costs to respondents other than their time. The total estimated annualized burden hours are 833. This represents a modest increase in the burden amount from the previously approved 749 hours to 833 hours, an additional 84 hours overall. This burden reflects an increase of 5 minutes per participant due to survey content changes and an additional 400 participants.

ESTIMATED ANNUALIZED BURDEN HOURS

Type of respondent and instrument	Estimated number of respondents	Estimated number of responses per respondent	Average time per response (in hours)	Estimated total annual burden hours
Adults—Survey instrument	2,500	1	20/60	833

Dated: July 14, 2014.

DEPARTMENT OF HEALTH AND HUMAN SERVICES

National Institutes of Health

Center for Scientific Review; Notice of Closed Meetings

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meetings.

The meetings will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

Name of Committee: Center for Scientific Review Special Emphasis Panel; PAR14-073 Shared Instrumentation; Mass Spectrometry.

Date: September 22-23, 2014.

Time: 8:00 a.m. to 3:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: David R Jollie, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4150, MSC 7806, Bethesda, MD 20892, (301) 435-1722, jollieda@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; PAR14-073 Shared Instrumentation; Mass Spectrometry.

Date: September 22-23, 2014.

Time: 8:00 a.m. to 3:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: John L Bowers, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 4170, MSC 7806, Bethesda, MD 20892, (301) 435-1725, bowersj@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Risk, Prevention, and Health Behavior (AREA) Review.

Date: September 22, 2014.

Time: 10:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: John H. Newman, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 3222, MSC 7808, Bethesda, MD 20892, (301) 435-0628, newmanjh@csr.nih.gov.

Name of Committee: Integrative, Functional and Cognitive Neuroscience Integrated Review Group, Sensorimotor Integration Study Section.

Date: September 23-24, 2014.

Time: 8:00 a.m. to 6:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Virtual Meeting).

Contact Person: John Bishop, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5182, MSC 7844, Bethesda, MD 20892, (301) 408-9664, bishopj@csr.nih.gov.

Name of Committee: Center for Scientific Review Special Emphasis Panel; Myalgic Encephalomyelitis/Chronic Fatigue Syndrome.

Date: September 25, 2014.

Time: 9:00 a.m. to 12:00 p.m.

Agenda: To review and evaluate grant applications.

Place: National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892.

Contact Person: Lynn E Luethke, Ph.D., Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 5166, MSC 7844, Bethesda, MD 20892, (301) 806-3323, luethkel@csr.nih.gov.

DEPARTMENT OF HOMELAND SECURITY**Coast Guard**

[Docket No. USCG–2014–0594]

Certificate of Alternative Compliance for the P/V CHICAGO'S CLASSIC LADY, 1252230

AGENCY: Coast Guard, DHS.

ACTION: Notice.

SUMMARY: The Coast Guard announces that a Certificate of Alternative Compliance was issued for the passenger vessel CHICAGO'S CLASSIC LADY as required by 33 U.S.C. 1605(c) and 33 CFR 81.18.

DATES: The Certificate of Alternative Compliance was issued on July 3, 2014.

ADDRESSES: The docket for this notice is available for inspection or copying at the Docket Management Facility (M-30), U.S. Department of Transportation, West Building Ground Floor, Room W12-140, 1200 New Jersey Avenue SE., Washington, DC 20590, between 9 a.m. and 5 p.m., Monday through Friday, except Federal holidays. You may also find this docket on the Internet by going to <http://www.regulations.gov>, inserting USCG-2014-0594 in the "Keyword" box, and then clicking "Search."

FOR FURTHER INFORMATION CONTACT: If you have questions on this notice, call LT Steven Melvin, District Nine, Prevention Branch, U.S. Coast Guard, telephone 216-902-6343. If you have questions on viewing or submitting material to the docket, call Cheryl Collins, Program Manager, Docket Operations, telephone 202-366-9826.

SUPPLEMENTARY INFORMATION:**Background and Purpose**

A Certificate of Alternative Compliance, as allowed for under 33 U.S.C. 1605(c) and 33 CFR 81.18, has been issued for the P/V CHICAGO'S CLASSIC LADY. The vessel's primary purpose is a passenger-touring vessel that operates on the Chicago River and near coastal waters of Lake Michigan in Southern Illinois. The unique design of the vessel did not lend itself to full compliance with Annex I of the Inland Rules Act.

The Commandant, U.S. Coast Guard, certifies that full compliance with the Inland Rules Act would interfere with the special functions/intent of the vessel and would not significantly enhance the safety of the vessel's operation. Placing the masthead light in the required position would interfere with vessel's ability to navigate on the Chicago River, which has several low bridges making the vessel vulnerable to damage.

The Certificate of Alternative Compliance authorizes the P/V CHICAGO'S CLASSIC LADY to deviate from the requirements set forth in Annex I of the Inland Rules Act by placing its masthead light on the pilothouse visor at a height of 13'7" above the main deck.

This notice is issued under authority of 33 U.S.C. 1605(c), and 33 CFR 81.18.

Dated: August 5, 2014.

P. Albertson,

Captain, U.S. Coast Guard, Chief, Prevention Division, By Direction of the Commander, Ninth Coast Guard District.

BILLING CODE 1505-01-D

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5754-N-01]

60-Day Notice of Proposed Information Collection: Section 3 Business Self-Certification Application

AGENCY: Office of the Assistant Secretary for Fair Housing and Equal Opportunity, HUD.

ACTION: Notice.

SUMMARY: HUD is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* October 21, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street

SW., Room 4176, Washington, DC 20410-5000; telephone 202-402-3400 (this is not a toll-free number) or email at Colette.Pollard@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT:

Staci Gilliam, Director, Economic Opportunity Division, 451 7th Street SW., Washington, DC 20410; email Staci.Gilliam@hud.gov or telephone 202-402-3468. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD is seeking approval from OMB for the information collection described in Section A.

A. Overview of Information Collection

Title of Information Collection: Section 3 Business Self-Certification Application.

OMB Approval Number: 2529-0052.

Type of Request: Extension of currently approved collection.

Form Number: N/A.

Description of the need for the information and proposed use: The information collected from the Section 3 Business Registry Application allows HUD and recipients of covered HUD funding to identify Section 3 Businesses in local communities. The overriding purpose of this information collection is to increase the capacity of recipients of covered HUD assistance (i.e., units of State and local government, Public Housing Authorities, and non-profits), and their developers and contractors, by making it easier to notify Section 3 businesses about local HUD-funded contracting opportunities in fulfillment of the regulatory requirements set forth at 24 CFR Part 135. Information collected from the Section 3 Business Registry Application will be posted in a database of Section 3 Businesses which will be posted on HUD's Web page. Agencies that receive covered HUD funding will be encouraged to use the registry database to notify Section 3 Businesses about the availability of local contracting opportunities.

Respondents: Businesses that are either owned by, or substantially employ, low- or very low-income persons; developers; contractors; Public

Housing Agencies; State and local governments; and the general public.

Estimated Number of Respondents: 2,100.

Estimated Number of Responses: 1.

Frequency of Response: 1.

Average Hours per Response: .33 (20 minutes).

Total Estimated Burdens: 699.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following: (1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) The accuracy of the agency's estimate of the burden of the proposed collection of information; (3) Ways to enhance the quality, utility, and clarity of the information to be collected; and (4) Ways to minimize the burden of the collection of information on those who are to respond; including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses. HUD encourages interested parties to submit comment in response to these questions.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Date: August 14, 2014.

David Ziaya,

Deputy Assistant Secretary for Operations and Management, Fair Housing and Equal Opportunity.

[FR Doc. 2014-20034 Filed 8-21-14; 8:45 am]

BILLING CODE 4210-67-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5758-N-11]

60 Day Notice of Proposed Information Collection: Revision of Transformation Initiative: Sustainable Construction in Indian Country Small Grant Program

AGENCY: Office of the Assistant Secretary for Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: The proposed information collection requirement described below will be submitted to the Office of Management and Budget (OMB) for review, as required by the Paperwork Reduction Act. The Department is soliciting public comments on the subject proposal.

DATES: *Comment Due Date:* October 21, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Collette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410-5000; telephone 202-402-5564 (this is not a toll-free number) or email at Colette.Pollard@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

SUPPLEMENTARY INFORMATION: The Department of Housing and Urban Development will submit the proposed extension of information collection to OMB for review, as required by the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35, as amended). This Notice is soliciting comments from members of the public and affected

agencies concerning the proposed collection of information to: (1) Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility; (2) evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information; (3) enhance the quality, utility, and clarity of the information to be collected; and (4) minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

This Notice also lists the following information:

Title of Proposal: Revision of Transformation Initiative: Sustainable Construction in Indian Country Small Grant Program.

OMB Control Number: 2528-0274.

Description of the Need for the Information and Proposed Use: The information is being collected to monitor performance of grantees to ensure they meet statutory and program goals and requirements.

Agency Form Numbers: SF-424, SF-424 Supplemental, HUD-424-CB, SF-LLL, HUD-2880, HUD-2993, HUD-96010 and HUD-96011.

Members of the Affected Public: Institutions of higher education accredited by a national or regional accrediting agency recognized by the U.S. Department of Education are the official applicants. Estimation of the total number of hours needed to prepare the information collection including number of respondents, frequency of response, and hours of response: Information pursuant to grant award will be submitted quarterly with a final report. The following chart details the respondent burden on a quarterly and annual basis:

	Number of respondents	Total annual responses	Hours per response	Total hours
Quarterly Reports	4	16	6	96
Final Reports	4	4	60	240
Recordkeeping	4	4	4	16
Total	12	24	58	352

Status of the proposed information collection: Pending OMB approval.

Authority: Section 3506 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35, as amended.

Dated: August 15, 2014.

Katherine M. O'Regan,

Assistant Secretary for Policy Development and Research.

60 Day Notice of Proposed Information Collection: 2015 American Housing Survey

AGENCY: Office of Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: The Department of Housing and Urban Development (HUD) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* October 21, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410-5000; telephone 202-402-3400 (this is not a toll-free number) or email at Colette.Pollard@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at Colette.Pollard@hud.gov or telephone 202-402-3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: HUD will submit the proposed information collection package to OMB for review as required by the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35, as amended).

A. Overview of Information Collection

Title of Information Collection: 2015 American Housing Survey.

OMB Control Number: 2528-0017.

Type of Review: Regular Submission.

Description of the need for the information and proposed use: The purpose of the American Housing Survey (AHS) is to supply the public with detailed and timely information about housing quality, housing costs, and neighborhood assets, in support of effective housing policy, programs, and markets. Title 12, United States Code, Sections 1701Z-1, 1701Z-2(g), and 1710Z-10a mandates the collection of this information.

Like the previous surveys, the 2015 AHS will collect "core" data on subjects such as the amount and types of changes in the housing inventory, the physical condition of the housing inventory, the characteristics of the occupants, housing costs for owners and renters, the persons eligible for and beneficiaries of assisted housing, remodeling and repair frequency, reasons for moving, the number and characteristics of vacancies, and characteristics of resident's neighborhood.

In addition to the "core" data, HUD plans to collect "topical" data using a series of topical modules. The topics include: Potential health and safety hazards in the home, modifications made to assist occupants living with disabilities, food insecurity, the use of housing counseling services, and the presence of arts and cultural opportunities in the community.

For the first time since 1985, HUD will draw new national and metropolitan area longitudinal samples for the AHS. The national longitudinal sample will consist of approximately 82,950 housing units, and will include oversample from the largest 15 metropolitan areas and approximately 5,250 HUD-assisted housing units. In addition to the national longitudinal sample, HUD plans to conduct 25 metropolitan area samples, each with approximately 3,000 housing units (for a total 75,000 housing units). Lastly, HUD plans to conduct a "bridge" sample of 9,000 households from the 2013 AHS. The bridge sample will allow for estimation of longitudinal changes

between 2013 and 2015, and facilitates analyses of the impact of survey design changes on 2015 AHS estimates.

Policy analysts, program managers, budget analysts, and Congressional staff use AHS data to advise executive and legislative branches about housing conditions and the suitability of public policy initiatives. Academic researchers and private organizations also use AHS data in efforts of specific interest and concern to their respective communities.

HUD needs the AHS data for two important uses.

1. With the data, policy analysts can monitor the interaction among housing needs, demand and supply, as well as changes in housing conditions and costs, to aid in the development of housing policies and the design of housing programs appropriate for different target groups, such as first-time home buyers and the elderly.

2. With the data, HUD can evaluate, monitor, and design HUD programs to improve efficiency and effectiveness.

Members of affected public: Households.

Estimated Number of Respondents: 166,950.

Estimated Time per Response: 40 minutes.

Frequency of Response: One time every two years.

Estimated Total Annual Burden Hours: 111,300.

Estimated Total Annual Cost: The only cost to respondents is that of their time. The total estimated cost is \$64,500,000.

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C. Section 9(a), and Title 12, U.S.C., Section 1701z-1 et seq.

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection. Submitted comments will become a matter of public record.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

Dated: August 15, 2014.

Katherine O'Regan,

Assistant Secretary for Office of Policy Development and Research.

BILLING CODE 4210-67-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5758-N-13]

60 Day Notice of Proposed Information Collection: 2015 Rental Housing Finance Survey

AGENCY: Office of Policy Development and Research, HUD.

ACTION: Notice.

SUMMARY: The Department of Housing and Urban Development (HUD) is seeking approval from the Office of Management and Budget (OMB) for the information collection described below. In accordance with the Paperwork Reduction Act, HUD is requesting comment from all interested parties on the proposed collection of information. The purpose of this notice is to allow for 60 days of public comment.

DATES: *Comments Due Date:* October 21, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Room 4176, Washington, DC 20410-5000; telephone 202-402-3400 (this is not a toll-free number) or email at Colette.Pollard@hud.gov for a copy of the proposed forms or other available information. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at Colette.Pollard@

hud.gov or telephone 202-402-3400. This is not a toll-free number. Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339.

Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: HUD will submit the proposed information collection package to OMB for review as required by the Paperwork Reduction Act of 1995 (44 U.S.C. chapter 35, as amended).

A. Overview of Information Collection

Title of Information Collection: 2015 Rental Housing Finance Survey.

OMB Control Number: 2528-0276.

Type of Review: Regular Submission.

Description of the need for the information and proposed use: The Rental Housing Finance Survey (RHFS) provides a measure of financial, mortgage, and property characteristics of rental housing properties in the United States. The RHFS focuses on mortgage financing of rental housing properties, with emphasis on new originations for purchase-money mortgages and refinancing, and the characteristics of these new originations.

The 2015 RHFS will collect data on property values of residential structures, characteristics of residential structures, rental status and rental value of units within the residential structures, commercial use of space within residential structures, property management status, ownership status, a detailed assessment of mortgage financing, and benefits received from Federal, state, local, and non-governmental programs.

Many of the questions are the same or similar to those found on the 1995 Property Owners and Managers Survey, the rental housing portion of the 2001 Residential Finance Survey, and the 2012 RHFS. This survey does not duplicate work done in other existent HUD surveys or studies that deal with rental units financing.

Policy analysts, program managers, budget analysts, and Congressional staff can use the survey's results to advise executive and legislative branches about the mortgage finance characteristics of the rental housing stock in the United States and the suitability of public policy initiatives. Academic researchers and private organizations will also be able to utilize the data to facilitate their research and projects.

HUD needs the RHFS data for the following two reasons:

1. This is the only source of information on the rental housing finance characteristics of rental properties.

2. To gain a better understanding of the mortgage finance characteristics of the rental housing stock in the United States to evaluate, monitor, and design HUD programs.

Members of affected public: For profit businesses (Owners and managers of rental properties)

Estimated Number of Respondents: 9,313.

Estimated Time per Response: 60 minutes.

Frequency of Response: One time every two years.

Estimated Total Annual Burden Hours: 6,486.

Estimated Total Annual Cost: The only cost to respondents is that of their time. The total estimated cost is \$6,900,000.

Respondent's Obligation: Voluntary.

Legal Authority: Title 13 U.S.C. Section 9(a), and Title 12, U.S.C., Section 1701z-1 *et seq.*

B. Solicitation of Public Comment

This notice is soliciting comments from members of the public and affected parties concerning the collection of information described in Section A on the following:

(1) Whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;

(2) The accuracy of the agency's estimate of the burden of the proposed collection of information;

(3) Ways to enhance the quality, utility, and clarity of the information to be collected; and

(4) Ways to minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

HUD encourages interested parties to submit comment in response to these questions. Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval of this information collection. Submitted comments will become a matter of public record.

Authority: Section 3507 of the Paperwork Reduction Act of 1995, 44 U.S.C. Chapter 35.

30-Day Notice of Proposed Information Collection: Jobs Plus Pilot Program

AGENCY: Office of the Chief Information Officer, HUD.

ACTION: Notice.

SUMMARY: HUD has submitted the proposed information collection requirement described below to the Office of Management and Budget (OMB) for review, in accordance with the Paperwork Reduction Act. The purpose of this notice is to allow for an additional 30 days of public comment.

DATES: *Comments Due Date:* September 22, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding

this proposal. Comments should refer to the proposal by name and/or OMB Control Number and should be sent to: HUD Desk Officer, Office of Management and Budget, New Executive Office Building, Washington, DC 20503; fax: 202-395-5806. Email: *OIRA_Submission@omb.eop.gov.*

FOR FURTHER INFORMATION CONTACT: Colette Pollard, Reports Management Officer, QDAM, Department of Housing and Urban Development, 451 7th Street SW., Washington, DC 20410; email Colette Pollard at *Colette.Pollard@hud.gov* or telephone 202-402-3400.

Persons with hearing or speech impairments may access this number through TTY by calling the toll-free Federal Relay Service at (800) 877-8339. This is not a toll-free number. Copies of available documents submitted to OMB may be obtained from Ms. Pollard.

SUPPLEMENTARY INFORMATION: This notice informs the public that HUD has submitted to OMB a request for approval of the information collection described in Section A.

The **Federal Register** notice that solicited public comment on the information collection for a period of 60 days was published on June 3, 2014.

A. Overview of Information Collection

Title of Information Collection: Jobs Plus Pilot Program.

OMB Approval Number: 2577-New.

Type of Request: New collection.

Form Number: Not Applicable.

Description of the need for the information and proposed use: The Jobs Plus Pilot Program Information Collection represents a new information request. The OMB approval number for this collection is pending. The information provided by the eligible applicants will be reviewed and evaluated by HUD. The information to be collected by HUD will be used to preliminarily rate applications, to determine eligibility for the Jobs Plus Pilot Grant Competition and to establish grant amounts. The Jobs Plus Pilot Grant Competition Application will be used to determine eligibility and funding for recipients. Respondents of this information collection will be public housing agencies. Forms for this information collection are under development, however it is anticipated that applicants will provide quantitative and qualitative data as well as narrative information for evaluation.

BILLING CODE 4210-67-P

DEPARTMENT OF HOUSING AND URBAN DEVELOPMENT

[Docket No. FR-5750-N-34]

Federal Property Suitable as Facilities To Assist the Homeless

AGENCY: Office of the Assistant Secretary for Community Planning and Development, HUD.

ACTION: Notice.

SUMMARY: This Notice identifies unutilized, underutilized, excess, and surplus Federal property reviewed by HUD for suitability for use to assist the homeless.

FOR FURTHER INFORMATION CONTACT:

Juanita Perry, Department of Housing and Urban Development, 451 Seventh Street SW., Room 7266, Washington, DC 20410; telephone (202) 402-3970; TTY number for the hearing- and speech-impaired (202) 708-2565 (these telephone numbers are not toll-free), or call the toll-free Title V information line at 800-927-7588.

SUPPLEMENTARY INFORMATION: In accordance with 24 CFR part 581 and section 501 of the Stewart B. McKinney Homeless Assistance Act (42 U.S.C. 11411), as amended, HUD is publishing this Notice to identify Federal buildings and other real property that HUD has reviewed for suitability for use to assist the homeless. The properties were reviewed using information provided to HUD by Federal landholding agencies regarding unutilized and underutilized buildings and real property controlled by such agencies or by GSA regarding its inventory of excess or surplus Federal property. This Notice is also published in order to comply with the December 12, 1988 Court Order in *National Coalition for the Homeless v. Veterans Administration*, No. 88-2503-OG (D.D.C.).

Properties reviewed are listed in this Notice according to the following categories: Suitable/available, suitable/unavailable, and suitable/to be excess, and unsuitable. The properties listed in the three suitable categories have been reviewed by the landholding agencies, and each agency has transmitted to HUD: (1) Its intention to make the property available for use to assist the homeless, (2) its intention to declare the property excess to the agency's needs, or (3) a statement of the reasons that the property cannot be declared excess or made available for use as facilities to assist the homeless.

Properties listed as suitable/available will be available exclusively for homeless use for a period of 60 days from the date of this Notice. Where property is described as for "off-site use only" recipients of the property will be required to relocate the building to their

own site at their own expense. Homeless assistance providers interested in any such property should send a written expression of interest to HHS, addressed to Theresa Ritta, Ms. Theresa M. Ritta, Chief Real Property Branch, the Department of Health and Human Services, Room 5B-17, Parklawn Building, 5600 Fishers Lane, Rockville, MD 20857, (301) 443-2265 (This is not a toll-free number.) HHS will mail to the interested provider an application packet, which will include instructions for completing the application. In order to maximize the opportunity to utilize a suitable property, providers should submit their written expressions of interest as soon as possible. For complete details concerning the processing of applications, the reader is encouraged to refer to the interim rule governing this program, 24 CFR part 581.

For properties listed as suitable/to be excess, that property may, if subsequently accepted as excess by GSA, be made available for use by the homeless in accordance with applicable law, subject to screening for other Federal use. At the appropriate time, HUD will publish the property in a Notice showing it as either suitable/available or suitable/unavailable.

For properties listed as suitable/unavailable, the landholding agency has decided that the property cannot be declared excess or made available for use to assist the homeless, and the property will not be available.

Properties listed as unsuitable will not be made available for any other purpose for 20 days from the date of this Notice. Homeless assistance providers interested in a review by HUD of the determination of unsuitability should call the toll free information line at 1-800-927-7588 for detailed instructions or write a letter to Ann Marie Oliva at the address listed at the beginning of this Notice. Included in the request for review should be the property address (including zip code), the date of publication in the **Federal Register**, the landholding agency, and the property number.

For more information regarding particular properties identified in this Notice (i.e., acreage, floor plan, existing sanitary facilities, exact street address), providers should contact the appropriate landholding agencies at the following addresses: AGRICULTURE: Ms. Debra Kerr, Department of Agriculture, Reporters Building, 300 7th Street SW., Room 300, Washington, DC 20024, (202) 720-8873; AIR FORCE: Ms. Connie Lotfi, Air Force Real Property Agency, 143 Billy Mitchell Blvd., San Antonio, TX 78226, (210) 925-3047; COAST GUARD: Commandant, United States Coast Guard, Attn: Jennifer Stomber, 2100 Second St. SW., Stop 7901, Washington, DC 20593-0001; (202) 475-5609; GSA: Mr. Flavio Peres, General Services Administration, Office of Real Property Utilization and Disposal, 1800 F Street NW., Room 7040, Washington, DC 20405, (202) 501-0084; NASA: Mr. Frank T. Bellinger, Facilities Engineering Division, National Aeronautics & Space Administration, Code JX, Washington, DC 20546, (202) 358-1124; NAVY: Mr. Steve Matteo, Department of the Navy, Asset Management Division, Naval Facilities Engineering Command, Washington Navy Yard, 1330 Patterson Ave. SW., Suite 1000, Washington, DC 20374; (202) 685-9426 (These are not toll-free numbers).

Dated: August 14, 2014.

Brian P. Fitzmaurice,

*Director, Division of Community Assistance,
Office of Special Needs Assistance Programs.*

BILLING CODE 4210-67-P

DEPARTMENT OF THE INTERIOR**Office of the Secretary****[GX14AE3800C2000]****National Environmental Policy Act: Implementing Procedures; Revision to Categorical Exclusions for U.S. Geological Survey (516 DM 9)****AGENCY:** Department of the Interior.**ACTION:** Notice.

SUMMARY: This notice announces proposed revisions to two existing categorical exclusions included in the Department of the Interior's Departmental Manual 516 DM 9. The proposed revisions to the categorical exclusions pertain to two types of activities conducted by the U.S. Geological Survey (USGS): the excavation of trenches across potentially active faults to assess the history of earthquakes along those faults; and the removal of hydrologic and water-quality monitoring structures and equipment and restoration of the sites. USGS experience with these activities indicates that they do not have the potential for significant environmental impacts. The intent of the revisions is to improve the efficiency of the environmental review process.

DATES: Comments are due by September 22, 2014.

ADDRESSES: Send comments to Esther Eng, Chief, Environmental Management Branch, USGS, MS-207, 12201 Sunrise Valley Dr., Reston, VA 20192-0002; email: eeng@usgs.gov.

FOR FURTHER INFORMATION CONTACT: Esther Eng, Chief, Environmental Management Branch, USGS, (703) 648-7550, eeng@usgs.gov.

SUPPLEMENTARY INFORMATION:**Background**

The National Environmental Policy Act (NEPA) requires Federal agencies to consider the potential environmental consequences of their proposed actions before deciding whether and how to proceed. The Council on Environmental Quality encourages Federal agencies to use categorical exclusions to protect the environment more efficiently by (a) reducing the resources spent analyzing proposals that generally do not have potentially significant environmental impacts and, (b) focusing resources on proposals that may have significant environmental impacts. The appropriate use of categorical exclusions allows the NEPA review to be concluded without preparing either an environmental assessment (EA) or an environmental impact statement (EIS) (40 CFR 1500.4(p) and 40 CFR 1508.4).

Proposed Categorical Exclusion Revision for Trenching

The Department of the Interior (DOI) proposes to revise an existing categorical exclusion in the Departmental Manual at 516 DM 9, from "Digging of exploratory trenches requiring less than 20 cubic yards of excavation" to "Digging and subsequent site restoration of exploratory trenches not to exceed one acre of surface disturbance." The categorical exclusion would be limited to trenching and associated activities resulting in a total land disturbance of one acre or less, and which do not adversely affect any biological, cultural, or archeological resources. As with any USGS categorical exclusion, each proposed trench excavation must be reviewed for extraordinary circumstances that would preclude use of this categorical exclusion. This requirement is found in DOI regulations at 43 CFR 46.205(c)(1). The DOI's list of extraordinary circumstances, under which a normally excluded action would require further analysis and documentation in an EA or EIS, is found at 43 CFR 46.215.

Analysis for the Trenching Category

The USGS excavates trenches across potentially active faults to assess the history of earthquakes along those faults. The study of ancient earthquakes and their rates of occurrence are known as paleoseismology. Paleoseismic data obtained from trenching studies is a fundamental input for USGS National Seismic Hazard Maps. The USGS National Seismic Hazard Maps, in turn, are used to inform emergency response and to guide building codes.

The USGS and its State and academic partners were involved in approximately 10 fault-trenching activities per year during the last 5 years. A fault trench involves an excavation or series of closely spaced excavations across the surface expression of an active fault to expose deformed soils and deposits. Field geologists map the exposed trench walls and date deformed strata to infer the earthquake history at the site.

Land disturbance in trenching studies is minimized by choosing sites near established roads or previously disturbed sites. Scientists involved in USGS fault-trenching activities were queried about the largest area of trenching disturbance they have encountered in the last 5 years with no significant environmental impacts. Respondents reported a range of upper limits of surface disturbance from .02 to 5 acres, with an average of 1.5 acres and a median of 1 acre. The USGS believes

that environmental impacts are more likely to arise from the extent of surface disturbance than from the depth of a trench. Accordingly, the USGS chose acreage as a more indicative measure of disturbance than volume excavated. Relying upon the last 5 years of experience with fault-trenching, the USGS chose the 1-acre median upper limit of surface disturbance to limit the proposed categorical exclusion.

Prior to trenching activities, external consultations are conducted with appropriate Federal, State, Tribal, and local agencies. When on Federal, State, or Tribal lands, the agency with jurisdiction over the study area is consulted to complete required biological, cultural and archeological evaluations and to obtain any required permits. When trenching on private lands, the landowner is consulted and a written contract or statement is negotiated. USGS research personnel and their contractors work with landowners and responsible agencies to ensure that their expectations for access, duration of the project, and reclamation are clearly followed.

Mitigation measures during trenching activities include avoiding wetland and riparian areas. This not only minimizes impacts, but also prevents groundwater from filling the research trenches. Existing roads are used for access. Other mitigation measures include taking machinery in and out of each trenching site on the same path, minimizing the volume of the excavation, installing silt fences where needed, and following Occupational Safety and Health Administration standards for safety, which include trench dimensions and heights, fencing, and warning signs (to keep out livestock and the public). Trenches are left open on average for 3 weeks before being backfilled.

Site restoration activities include backfilling to existing grade and compacting the fill, seeding the area with non-invasive species, installing biodegradable wattles and erosion-control blankets if slopes were disturbed, and returning the site to pre-excavation condition. While it has always been assumed that site restoration was a part of the trenching activity, "subsequent site restoration" is proposed to be added to the category's description to clarify that it is an integral part of the project.

Sites are revisited in the years following investigations to ensure there is no degradation to the trenching site. Observed degradation has been limited to continued noxious weed growth at sites where weeds were already present at the time of excavation.

The USGS environmental staff reviewed past activities to determine if any unanticipated impacts had occurred as a result of trenching. The staff concluded that a sufficient administrative record exists to demonstrate that fault-trenching activities normally would not have a significant impact on the human environment, with the following limitations: the land surface area disturbed by the trenching and associated activities must be one acre or less; and each trenching site must be reviewed for extraordinary circumstances, including potential impacts to biological, cultural and archeological resources. The review for extraordinary circumstances, which the USGS conducts for all categorical exclusions, ensures that measures would continue to be taken to identify and reduce any significant impacts.

Proposed Revision to the Categorical Exclusion for Water Monitoring Equipment

The DOI proposes to revise another existing categorical exclusion in the Departmental Manual at 516 DM 9 by adding the activity of removing monitoring structures and equipment and site restoration, and by clarifying the purpose of the identified water monitoring equipment. The current category, "Operation, construction and installation of: (a) Water-level or water quality recording devices in wells; (b) pumps in wells; (c) surface-water flow measuring equipment such as weirs and streamgaging stations, and (d) telemetry systems, including contracts therefore." would be changed to "Operation, construction, installation, and removal—including restoration of sites to the pre-structure condition or equivalent of the surrounding environment—of hydrologic and water-quality monitoring structures and equipment including but not limited to weirs, cableways, streamgaging stations, groundwater wells, and meteorologic structures." As with any USGS categorical exclusion, each proposed monitoring structure and equipment removal must also be reviewed for extraordinary circumstances that would preclude use of this categorical exclusion. This requirement is found in DOI regulations at 43 CFR 46.205(c)(1). The DOI's list of extraordinary circumstances under which a normally excluded action would require further analysis and documentation in an EA or EIS is found at 43 CFR 46.215.

Analysis for the Monitoring Equipment Category

One of the seven science mission areas of the USGS, the Water Mission Area, is tasked with collecting and disseminating reliable, impartial, and timely information is needed to understand the Nation's water resources. The Water Mission Area actively promotes the use of this information by decision makers to: (1) Minimize loss of life and property as a result of water-related natural hazards, such as floods, droughts, and land movement; (2) effectively manage groundwater and surface-water resources for domestic, agricultural, commercial, industrial, recreational, and ecological uses; (3) protect and enhance water resources for human health, aquatic health, and environmental quality; and (4) contribute to the wise physical and economic development of our nation's resources for the benefit of present and future generations. To achieve this science mission, the USGS constructs and operates a variety of hydrologic and water-quality monitoring structures and equipment at streams, rivers, springs, wellheads, and other sites across the Nation. After these structures are no longer needed for scientific data collection, they are removed and the site is restored.

A limited number of hydrologic monitoring structures were removed by the USGS before passage of the American Recovery and Reinvestment Act (ARRA) of 2009 due to budgetary constraints. Removal of a large number of hydrologic monitoring structures (commonly, abandoned stilling wells and platform gages) and a small number of cableways was completed with the one-time funding made available under the ARRA to the USGS Deferred Maintenance Program. All equipment inside each structure was retrieved before a stilling well or platform structure was removed. Water intakes to the monitoring structures were completely removed or cut off and then backfilled with sediment so nothing was left above grade. Platforms, walkways, and cableway structures were also removed.

A majority of the USGS hydrologic and water-quality monitoring structures across the nation are installed and operated in cooperation with Federal, State, Tribal, or local agencies that contribute funding for the data collection at the site. Therefore, prior to removal activities, external consultations are conducted with all co-funding agencies. If the monitoring site is located on Federal, State, Tribal, or

local agency property, the agency administering the land is consulted. When the structure is on private land, the landowner is likewise consulted about proposed removal activities. Biological and cultural assessments are conducted when the site is in a sensitive environmental setting or when required by the government agency or private landowner.

Site restoration activities include removal of demolition debris from the site, backfilling holes or depressions to existing grade and compacting the fill, stabilizing any disturbed areas, seeding the area with non-invasive species, and returning the site to pre-structure condition or equivalent to the surrounding environment.

The USGS environmental staff reviewed past activities to determine if any unanticipated impacts had occurred as a result of removing hydrologic and water-quality monitoring equipment at streams, rivers, springs, wellheads, and other sites. The staff concluded that a sufficient administrative record exists to demonstrate that hydrologic and water-quality monitoring structure and equipment removal, including site restoration, normally would not have a significant impact on the quality of the human environment.

The USGS proposes to clarify the current category by re-characterizing the current list of structures as “hydrologic and water-quality monitoring structures and equipment” and by providing examples of typical structures being installed, maintained, and removed. The revised text is intended to more accurately reflect how the category has been interpreted and used by USGS personnel by describing the actions taking place, in lieu of describing current technologies, which may change over time.

Over the past two decades the types of monitoring structures have changed substantially. Advances in technology have produced water monitoring equipment with smaller environmental footprints. For example, the current generation of surface-water monitoring structures commonly being installed consists of an aluminum box with a nominal size of 3 feet by 3 feet by 1 foot mounted to or near a bridge structure. Inside the enclosure are a variety of electronic instruments used to measure and record water levels and water-quality conditions. In contrast, legacy surface-water monitoring equipment consists of concrete or metal stilling wells with mechanical floats located along stream banks or at bridge sites; these wells measure up to 5 ft. in diameter. Installation and removal of the new generation of surface-water

monitoring stations has less potential for environmental impacts.

Public Comments

To be considered, any comments on these proposed revisions to the list of categorical exclusions in the Departmental Manual must be received by the date listed in the **DATES** section of this notice at the location listed in the **ADDRESSES** section. Comments received after that date will be considered only to the extent feasible. Comments, including names and addresses of respondents, will be part of the public record and available for public review at the USGS address shown in the **ADDRESSES** section, during business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Text of Proposed Revisions to 516 DM 9, Section 9.5 Categorical Exclusions

E. Operation, construction, installation, and removal—including restoration of sites to the pre-structure condition or equivalent of the surrounding environment—of hydrologic and water-quality monitoring structures and equipment including but not limited to weirs, cableways, streamgaging stations, groundwater wells, and meteorologic structures.

I. Digging and subsequent site restoration of exploratory trenches not to exceed one acre of surface disturbance.

Dated: July 24, 2014.

Willie R. Taylor,

Director, Office of Environmental Policy and Compliance.

[FR Doc. 2014–19953 Filed 8–21–14; 8:45 am]

BILLING CODE 4310-AM-P

DEPARTMENT OF THE INTERIOR

Bureau of Indian Affairs

[K00621 1314 R3B30]

Draft Environmental Impact Statement for the Samish Indian Nation Trust Acquisition and Casino Project, City of Anacortes, Skagit County, Washington

AGENCY: Bureau of Indian Affairs, Interior.

ACTION: Notice of availability.

SUMMARY: This notice advises the public that the Bureau of Indian Affairs as lead agency, with the Samish Indian Nation and the City of Anacortes, serving as cooperating agencies, intends to file a draft environmental impact statement (DEIS) with the U.S. Environmental Protection Agency for the Samish Indian Nation Trust Acquisition and Casino Project, City of Anacortes, Skagit County, Washington. The DEIS is now available for public review and a public hearing will be held to receive comments.

DATES: The date of the public hearing will be announced at least 15 days in advance through notices in the following newspapers: *Anacortes American* and the *Skagit Valley Herald* and on the following Web site: www.samisheis.com. Written comments on the DEIS must arrive 45 days after EPA publishes its Notice of Availability in the **Federal Register**.

ADDRESSES: You may mail or deliver written comments to Mr. Stanley Speaks, Northwest Regional Director, Bureau of Indian Affairs, Northwest Region, 911 Northeast 11th Avenue, Portland, Oregon 97232. The public hearing will be held at the Fidalgo Bay Resort Community Center, 4701 Fidalgo Bay Road, Anacortes, Washington, 98221. See the **SUPPLEMENTARY INFORMATION** section of this notice for addresses where the DEIS is available for review.

FOR FURTHER INFORMATION CONTACT: Dr. B.J. Howerton, Bureau of Indian Affairs, Northwest Region, 911 Northeast 11th Avenue, Portland, Oregon 97232; fax (503) 231–2275; phone (503) 231–6749.

SUPPLEMENTARY INFORMATION: Compliance with the National Environmental Policy Act (NEPA), and in this situation public review of the DEIS, is part of the administrative process for the evaluation of tribal applications pursuant to section 5 of Indian Reorganization Act (IRA) (25 U.S.C. 465). Pursuant to Council on Environmental Quality National Environmental Policy Act (NEPA) regulations (40 CFR 1506.10), the

publication of the Notice of Availability by the EPA in the Federal Register initiates the 45-day public comment period.

The proposed project consists of the following components: (1) Acquisition in trust of three parcels totaling 11.41 acres, more or less, in accordance with section 5 of the IRA and the procedures in 25 CFR part 151; (2) the Secretary of the Interior's issuance of a reservation proclamation pursuant to section 7 of the IRA (25 U.S.C. 467); and (3) development of a casino facility within the project site. At full build-out, the proposed casino facility would have approximately 48,100 square feet of gaming floor. Access to the project site would be provided via driveways along Thompson Road and Stevenson Road.

The following alternatives are considered in the DEIS: (1) Proposed project; (2) Reduced intensity casino development; (3) Non-gaming alternative; (4) Fidalgo Bay Resort Flats site; and (5) No action. Environmental issues addressed in the DEIS include geology and soils, water resources, air quality, biological resources, cultural and paleontological resources, socioeconomic conditions (including environmental justice), transportation and circulation, land use, public services, noise, hazardous materials, aesthetics, cumulative effects, and indirect and growth inducing effects.

The BIA held a public scoping meeting for the project on September 14, 2011, at the Fidalgo Bay Resort, Anacortes, Washington.

Directions for Submitting Comments: Please include your name, return address, and the caption: "DEIS Comments, Samish Indian Nation Trust Acquisition and Casino Project," on the first page of your written comments.

Locations where the DEIS is Available for Review: The DEIS will be available for review at the Anacortes Public Library located at 1220 10th Street, Anacortes, Washington, 98221, and the Samish Indian Nation Administration Office located at 2918 Commercial Avenue, Anacortes, Washington, 98221. The DEIS is also available online at: <http://www.samisheis.com>. To obtain a compact disc copy of the DEIS, please provide your name and address in writing or by voicemail to Dr. B.J. Howerton, Environmental Protection Specialist, Bureau of Indian Affairs, Northwest Regional Office. Contact information is listed in the **FOR FURTHER INFORMATION CONTACT** section of this notice. Individual paper copies of the DEIS will be provided only upon payment of applicable printing expenses by the requestor for the number of copies requested.

Public Comment Availability: Comments, including names and addresses of respondents, will be available for public review at the BIA address shown in the **ADDRESSES** section during regular business hours, 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask in your comment that your personal identifying information be withheld from public review, the BIA cannot guarantee that this will occur.

Authority: This notice is published in accordance with section 1503.1 of the Council on Environmental Quality regulations (40 CFR 1500 et seq.) and the Department of the Interior Regulations (43 CFR part 46) implementing the procedural requirements of the NEPA (42 U.S.C. 4321 et seq.), and in accordance with the exercise of authority delegated to the Assistant Secretary—Indian Affairs by part 209 of the Department Manual.

Dated: July 29, 2014.

Kevin K. Washburn,

Assistant Secretary—Indian Affairs.

BILLING CODE 4310-W7-P

DEPARTMENT OF THE INTERIOR

Bureau of Land Management

[LWO220000.L10200000.PH0000.00000000]

Renewal of Approved Information Collection

AGENCY: Bureau of Land Management, Interior.

ACTION: 30-day notice and request for comments.

SUMMARY: The Bureau of Land Management (BLM) has submitted an information collection request to the Office of Management and Budget (OMB) to continue the collection of information from applicants for grazing permits and leases, and from holders of grazing permits and leases. The Office of Management and Budget (OMB) previously approved this information collection activity, and assigned it control number 1004-0041.

DATES: The OMB is required to respond to this information collection request within 60 days but may respond after 30 days. For maximum consideration,

written comments should be received on or before September 22, 2014.

ADDRESSES: Please submit comments directly to the Desk Officer for the Department of the Interior (OMB #1004-0041), Office of Management and Budget, Office of Information and Regulatory Affairs, fax 202-395-5806, or by electronic mail at OIRA_submission@omb.eop.gov. Please provide a copy of your comments to the BLM via mail, fax, or electronic mail.

Mail: U.S. Department of the Interior, Bureau of Land Management, 1849 C Street NW., Room 2134LM, Attention: Jean Sonneman, Washington, DC 20240.

Fax: to Jean Sonneman at 202-245-0050.

Electronic mail: Jean_Sonneman@blm.gov.

Please indicate "Attn: 1004-0041" regardless of the form of your comments.

FOR FURTHER INFORMATION CONTACT:

Kimberly Hackett, at 202-912-7216. Persons who use a telecommunication device for the deaf may call the Federal Information Relay Service at 1-800-877-8339, to leave a message for Ms. Hackett. You may also review the information collection request online at <http://www.reginfo.gov/public/do/PRAMain>.

SUPPLEMENTARY INFORMATION: The Paperwork Reduction Act (44 U.S.C. 3501-3521) and OMB regulations at 5 CFR part 1320 provide that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond. In order to obtain and renew an OMB control number, Federal agencies are required to seek public comment on information collection and recordkeeping activities (see 5 CFR 1320.8(d) and 1320.12(a)).

As required at 5 CFR 1320.8(d), the BLM published a 60-day notice in the **Federal Register** on January 10, 2014 (79 FR 1884), and the comment period ended on March 11, 2014. The BLM received one comment. The comment was a general invective about the Federal government, the Department of the Interior, the BLM, and Federal employees. It did not address, and was not germane to, this information collection. Therefore, we have not changed the collection in response to the comment.

The BLM now requests comments on the following subjects:

1. Whether the collection of information is necessary for the proper functioning of the BLM, including

whether the information will have practical utility;

2. The accuracy of the BLM's estimate of the burden of collecting the information, including the validity of the methodology and assumptions used;

3. The quality, utility and clarity of the information to be collected; and

4. How to minimize the information collection burden on those who are to respond, including the use of appropriate automated, electronic, mechanical, or other forms of information technology.

Please send comments as directed under **ADDRESSES** and **DATES**. Please refer to OMB control number 1004-0041 in your correspondence. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

The following information is provided for the information collection:

Title: Authorizing Grazing Use (43 CFR subparts 4110 and 4130).

- Forms:*
- Form 4130-1, Grazing Schedule, Grazing Application;
 - Form 4130-1a, Grazing Preference Transfer Application and Preference Application (Base Property Preference Attachment and Assignment);
 - Form 4130-1b, Grazing Application Supplemental Information;
 - Form 4130-3a, Automated Grazing Application;
 - Form 4130-4, Application for Exchange-of-Use Grazing Agreement; and
 - Form 4130-5, Actual Grazing Use Report.

OMB Control Number: 1004-0041.

Abstract: The Taylor Grazing Act (43 U.S.C. 315-315n) and Subchapters III and IV of the Federal Land Policy and Management Act (43 U.S.C. 1731-1753) authorize and require BLM management of domestic livestock grazing on public lands consistent with land use plans, the principles of multiple use and sustained yield, environmental values, economic considerations, and other relevant factors. Compliance with these statutory provisions necessitates collection of information on matters such as permittee and lessee qualifications for a grazing permit or

lease, base property used in conjunction with public lands, and the actual use of public lands for domestic livestock grazing.

Frequency of Collection: The BLM collects the information on Forms 4130-1, 4130-1a, 4130-1b, and 4130-4 on occasion. The BLM collects the information on Forms 4130-3a and 4130-5 annually. Responses are required in order to obtain or retain a benefit.

Estimated Number and Description of Respondents: Any U.S. citizen or validly licensed business may apply for a BLM grazing permit or lease. The BLM administers nearly 18,000 permits and leases for grazing domestic livestock, mostly cattle and sheep, at least part of the year on public lands. A grazing permit or lease may be effective for up to 10 years and may be renewable if the BLM determines that the terms and conditions of the expiring permit or lease are being met.

Estimated Reporting and Recordkeeping "Hour" Burden: 33,810 responses and 7,811 hours annually.

Estimated Annual Non-Hour Costs: \$30,000.

Estimates of the burdens are itemized below:

Type of response	Number of responses	Time per response (minutes)	Total hours (B × C)
A.	B.	C.	D.
Grazing Schedule—Grazing Application, 43 CFR 4130.1-1, Form 4130-1	3,000	15	750
Grazing Preference Application and Preference Transfer Application (Base Property Preference Attachment and Assignment), 43 CFR 4110.1(c), 4110.2-1(c), and 4110.2-3, Form 4130-1a and related nonform information	900	35	525
Grazing Application Supplemental Information, 43 CFR 4110.1 and 4130.7, Form 4130-1b ...	900	30	450
Automated Grazing Application, 43 CFR 4130.4, Form 4130-3a	14,000	10	2,333
Application for Exchange-of-Use Grazing Agreement (43 CFR 4130.6-1), Form 4130-4	10	18	3
Actual Grazing Use Report, 43 CFR 4130.3-2(d), Form 4130-5	15,000	15	3,750
Totals	33,810	7,811

Jean Sonneman,
Bureau of Land Management, Information
Collection Clearance Officer.

DEPARTMENT OF THE INTERIOR

National Park Service

[NPS-WASO-DPOL-16474; PPWODIREP0;
PPMPSPD1Y.YM0000]

**Notice of October 23-24, 2014, Meeting
of the National Park System Advisory
Board**

AGENCY: National Park Service, Interior.

ACTION: Meeting notice.

SUMMARY: Notice is hereby given in accordance with the Federal Advisory Committee Act, 5 U.S.C. Appendix 1-16, and Parts 62 and 65 of title 36 of the Code of Federal Regulations that the National Park System Advisory Board will meet October 23-24, 2014, in Grand Canyon, Arizona. The agenda will include the review of proposed actions regarding the National Historic Landmarks (NHL) Program and the National Natural Landmarks (NNL) Program. Interested parties are encouraged to submit written comments and recommendations that will be presented to the Board. Interested

parties also may attend the board meeting and upon request may address the Board concerning an area's national significance.

DATES: (a) Written comments regarding any proposed National Historic Landmarks matter or National Natural Landmarks matter listed in this notice will be accepted by the National Park Service until October 21, 2014. (b) The Board will meet on October 23-24, 2014.

ADDRESSES: The meeting will be held in Grand Canyon National Park at the Horace M. Albright Training Center, 1 Albright Avenue, Grand Canyon,

Arizona 86023, telephone (928) 638-7981.

Agenda: On the morning of October 23, the Board will convene its business meeting at 8:15 a.m., Mountain Time, and adjourn for the day at 11:50 a.m. The Board will tour Grand Canyon National Park in the afternoon. On October 24, the Board will reconvene at 9:00 a.m., and adjourn at 3:30 p.m. During the course of the two days, the Board may be addressed by National Park Service Director Jonathan Jarvis and briefed by other National Park Service officials regarding education, leadership development, philanthropy, NPS urban initiatives, and science; deliberate and make recommendations concerning National Historic Landmarks Program proposals, and National Natural Landmarks Program proposals; and receive status briefings on matters pending before committees of the Board.

FOR FURTHER INFORMATION CONTACT:

(a) For information concerning the National Park System Advisory Board or to request to address the Board, contact Shirley Sears, National Park Service, MC 0004–Policy, 1849 C Street NW., Washington, DC 20240, telephone (202) 354-3955, email Shirley_Sears@nps.gov.

(b) To submit a written statement specific to, or request information about, any National Historic Landmarks matter listed below, or for information about the National Historic Landmarks Program or National Historic Landmarks designation process and the effects of designation, contact J. Paul Loether, Chief, National Register of Historic Places and National Historic Landmarks Program, National Park Service, 1849 C Street NW., MC 2280, Washington, DC 20240, email Paul_Loether@nps.gov.

(c) To submit a written statement specific to, or request information about, any National Natural Landmarks Program or National Natural Landmarks designation process and the effects of designation, contact Heather Eggleston, Acting Program Manager, National Natural Landmarks Program, National Park Service, 12795 W Alameda Parkway, Lakewood, Colorado 80228, email Heather_Eggleston@nps.gov.

SUPPLEMENTARY INFORMATION: Matters concerning the National Historic Landmarks Program and National Natural Landmarks Program will be considered by the Board at the morning session of the business meeting on October 23 during which the Board may consider the following:

A. National Historic Landmarks (NHL) Program

NHL Program matters will be considered at the morning session of the

business meeting on October 23, during which the Board may consider the following:

Nominations for NHL Designation

California

- California Powder Works Bridge, Santa Cruz County, CA

Florida

- Marjory Stoneman Douglas House, Miami, FL

Indiana

- Samara (John E. and Catherine E. Christian House), West Lafayette, IN

Massachusetts

- Brookline Reservoir of the Cochituate Aqueduct, Brookline, MA

Michigan

- McGregor Memorial Conference Center, Detroit, MI

Wyoming

- Lake Hotel, Yellowstone National Park, Teton County, WY

Proposed Amendments to Existing NHL Designations

Arkansas

- Fort Smith, Fort Smith, AR (Updated documentation and boundary change)

Montana and North Dakota

- Fort Union, McKenzie and Williams Counties, ND, and Richland and Roosevelt Counties, MT (Updated documentation and boundary change)

Pennsylvania

- Cliveden, Philadelphia, PA (Updated documentation)

Utah

- Mountain Meadows Massacre Site, Washington County, UT (Updated documentation and boundary change)

Proposed Withdrawal of NHL Designation

California

- WAPAMA (Steam Schooner), San Francisco, CA

B. National Natural Landmarks (NNL) Program

NNL Program matters will be considered at the morning session of the business meeting on October 23, during which the Board may consider the following:

Nomination for NNL Designation

Oregon

- Mount Howard-East Peak, Wallowa County, OR

Proposed Amendment to Existing NNL Designation

California

- Cosumnes River Riparian Woodlands, Sacramento County, CA (Proposed Boundary Revision)

The board meeting will be open to the public. The order of the agenda may be changed, if necessary, to accommodate travel schedules or for other reasons. Space and facilities to accommodate the public are limited and attendees will be accommodated on a first-come basis. Anyone may file with the Board a written statement concerning matters to be discussed. The Board also will permit attendees to address the Board, but may restrict the length of the presentations, as necessary to allow the Board to complete its agenda within the allotted time. Before including your address, telephone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you may ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Draft minutes of the meeting will be available for public inspection about 12 weeks after the meeting in the 12th floor conference room at 1201 I Street NW., Washington, DC.

Dated: August 18, 2014.

Shirley Sears,

Acting Chief, Office of Policy.

[NPS-WASO-NRNHL-16342; PPWOCRADIO, PCU00RP14.R50000]

National Register of Historic Places; Notification of Pending Nominations and Related Actions

Nominations for the following properties being considered for listing or related actions in the National Register were received by the National Park Service before July 26, 2014. Pursuant to section 60.13 of 36 CFR part 60, written comments are being accepted concerning the significance of the nominated properties under the National Register criteria for evaluation. Comments may be forwarded by United States Postal Service, to the National Register of Historic Places, National Park Service, 1849 C St. NW., MS 2280, Washington, DC 20240; by all other carriers, National Register of Historic Places, National Park Service, 1201 Eye St. NW., 8th floor, Washington, DC 20005; or by fax, 202-371-6447. Written or faxed comments should be submitted by September 8, 2014. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire

comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 1, 2014.

Rustin Quaide,

Acting Chief, National Register of Historic Places, National Historic Landmarks Program.

BILLING CODE 4312-51-P

DEPARTMENT OF THE INTERIOR**Bureau of Ocean Energy Management
[OMB Control Number 1010-0048]****Information Collection: Geological and Geophysical Explorations of the Outer Continental Shelf; Proposed Collection for OMB Review; Comment Request; MMAA104000**

ACTION: 60-day notice.

SUMMARY: To comply with the Paperwork Reduction Act of 1995 (PRA), the Bureau of Ocean Energy Management (BOEM) is inviting comments on a collection of information that we will submit to the Office of Management and Budget (OMB) for review and approval. The information collection request (ICR) concerns the paperwork requirements in the regulations under 30 CFR 551, Geological and Geophysical (G&G) Explorations of the Outer Continental Shelf.

DATES: Submit written comments by October 21, 2014.

ADDRESSES: Please send your comments on this ICR to the BOEM Information Collection Clearance Officer, Arlene Bajusz, Bureau of Ocean Energy Management, 381 Elden Street, HM-3127, Herndon, Virginia 20170 (mail); or arlene.bajusz@boem.gov (email); or 703-787-1209 (fax). Please reference ICR 1010-0048 in your comment and include your name and return address.

FOR FURTHER INFORMATION CONTACT: Arlene Bajusz, Office of Policy, Regulations, and Analysis at (703) 787-1025 to request a copy of the ICR.

SUPPLEMENTARY INFORMATION:

OMB Control Number: 1010-0048.
Title: 30 CFR 551, Geological and Geophysical (G&G) Explorations of the Outer Continental Shelf.

Form: BOEM-0327, Requirements for G&G Explorations or Scientific Research on the OCS.

Abstract: The Outer Continental Shelf (OCS) Lands Act, as amended (43 U.S.C. 1331 *et seq.* and 43 U.S.C. 1801 *et seq.*), authorizes the Secretary of the Interior to prescribe rules and regulations to administer leasing of mineral resources on the OCS. The OCS Lands Act (43 U.S.C. 1340) states that “any person authorized by the Secretary may conduct geological and geophysical

explorations in the [O]uter Continental Shelf, which do not interfere with or endanger actual operations under any lease maintained or granted pursuant to this subchapter, and which are not unduly harmful to aquatic life in such area.” The section further requires that permits to conduct such activities may only be issued if it is determined that the applicant is qualified; the activities do not result in pollution or create hazardous or unsafe conditions; the activities do not unreasonably interfere with other uses of the area or disturb any site, structure, or object of historical or archaeological significance. Applicants for permits are required to submit form BOEM-0327 to provide the information necessary to evaluate their qualifications, and upon approval, respondents are issued a permit.

The Independent Offices Appropriations Act (31 U.S.C. 9701), the Omnibus Appropriations Bill (Pub. L. 104-133, 110 Stat. 1321, April 26, 1996), and the OMB Circular A-25 authorize Federal agencies to recover the full cost of services that confer special benefits. All G&G permits are subject to cost recovery, and BOEM regulations specify service fees for these requests.

Regulations to carry out these responsibilities are contained in 30 CFR 551 and are the subject of this information collection renewal. BOEM uses the information to ensure there is no environmental degradation, personal harm or unsafe operations and conditions, damage to historical or archaeological sites, or interference with other uses; to analyze and evaluate preliminary or planned drilling activities; to monitor progress and activities in the OCS; to acquire G&G data and information collected under a Federal permit offshore; and to determine eligibility for reimbursement from the government for certain costs. Information on the G&G characteristics of oil- and gas-bearing physiographic regions aids the Secretary in obtaining a proper balance among the potentials for environmental damage, the discovery of oil and gas, and associated impacts on affected coastal States.

In this renewal, BOEM is updating form BOEM-0327 to clarify the types of copies being requested, delete incorrect language, make recommendations for faster processing, and update addresses. To respond to the number of questions BOEM receives from permittees on the form, BOEM is also clarifying wording, providing examples/tables to reduce confusion, and separating requirements by OCS Region to further assist

permittees. BOEM is not asking for more information, just outlining current requirements in more detail. We do not expect these improvements to change the 3-hour burden for the majority of permit applications, which are associated with G&G exploration in the Gulf of Mexico OCS Region.

However, for applications in the Alaska OCS Region and Atlantic OCS, BOEM is adjusting the burden to be significantly higher (300 hours), not because of the form improvements, but because of the requirements to submit environmental information sufficient for the National Environmental Policy Act (NEPA) review about the effects of sound on marine mammals and other protected species. To acquire G&G data, companies need to (1) obtain a BOEM permit, (2) obtain an Incidental Harassment Authorization (IHA) from the National Marine Fisheries Service, and (3) coordinate their activities with the Department of Defense (DOD) and

the National Aeronautics and Space Administration (NASA). Much of this work has already been done for the Gulf of Mexico OCS, where G&G activity has been ongoing for years. While prospective permittees must obtain the IHA and coordinate with DOD and NASA before BOEM issues a permit, the time or burden to fill out form BOEM-0327 and acquire the information for the form remains the same. However, in areas outside of the Gulf of Mexico OCS Region, BOEM is accounting for the total time companies will expend to compile and submit the necessary information to obtain the required authorizations to acquire a BOEM permit in these areas as well as coordinate with DOD/NASA. Therefore, the burden for applicants in the Alaska and Atlantic OCS areas to describe the environmental effects and proposed mitigations is estimated much higher.

To complement the changes made in form BOEM-0327, BOEM is also

separating the requirements in the BOEM-issued permits by OCS Region to further assist permittees. The actual permits are filled in by BOEM and do not incur a respondent hour burden.

We protect proprietary information according to the Freedom of Information Act (5 U.S.C. 552) and its implementing regulations (43 CFR part 2), and under regulations at 30 CFR 551. No items of a sensitive nature are collected. Responses are mandatory.

Frequency: On occasion, annual, or as specified in permits.

Description of Respondents: Potential respondents comprise Federal OCS oil, gas, and sulphur permittees or notice filers.

Estimated Reporting and Recordkeeping Hour Burden: We estimate the burden for this collection to be about 9,876 hours. The following table details the individual components and respective hour burden estimates of this ICR.

BURDEN TABLE

Citation 30 CFR 551	Reporting and recordkeeping requirement	Non-Hour Cost Burden*		
		Hour burden	Average No. of annual responses	Annual burden hours
CFR 551.1 through 551.6				
551.4(a), (b); 551.5(a), (b), (d); 551.6; 551.7.	Apply for permits (form BOEM-0327) to conduct G&G exploration, including deep stratigraphic tests/revisions when necessary. Submit required information.	** 300 AK & ATL	13 Applications	3,900
		3 GOM	74 Applications	222
		87 applications × \$2,012 = \$175,044		
551.4(b); 551.5(c), (d); 551.6.	File notices to conduct scientific research activities, including notice to BOEM prior to beginning and after concluding activities.	1	1 Notice	1
551.6(b) 551.7(b)(5)	Notify BOEM if specific actions should occur; report archaeological resources (no instances reported since 1982). Consult with other users.	1	1 Notice	1

		1	130 Recordkeepers	130
Subtotal	230 responses	230 hours
Total Burden	707 Responses	9,876 Hours
			\$175,044 Non-Hour Cost Burden	

* Fees are subject to modification per inflation annually.

** Burden hours for Alaska Region and Atlantic OCS significantly higher because of NEPA and mitigation requirements. There are currently no such activities ongoing in the Pacific Region.

Estimated Reporting and Recordkeeping Non-Hour Cost Burden: We have identified one non-hour cost burden for this collection of information. Under § 551.5(a) there is an application fee of \$2,012 when respondents submit a permit application (refer to the table above).

Public Disclosure Statement: The PRA (44 U.S.C. 3501, *et seq.*) provides that an agency may not conduct or sponsor a collection of information unless it displays a currently valid OMB control number. Until OMB approves a collection of information, you are not obligated to respond.

Comments: We invite comments concerning this information collection on:

- Whether or not the collection of information is necessary, including whether or not the information will have practical utility;
- The accuracy of our burden estimates;
- Ways to enhance the quality, utility, and clarity of the information to be collected; and
- Ways to minimize the burden on respondents.

If you have costs to generate, maintain, and disclose this information, you should comment and provide your total capital and startup costs or annual operation, maintenance, and purchase of service costs. You should describe the methods you use to estimate major cost factors, including system and technology acquisition, expected useful life of capital equipment, discount rate(s), and the period over which you incur costs. Capital and startup costs include, among other items, computers and software you purchase to prepare for collecting information, monitoring, and record storage facilities. You should not include estimates for equipment or services purchased: (a) Before October 1, 1995; (b) to comply with requirements not associated with the information collection; (c) for reasons other than to provide information or keep records for the Government; or (d) as part of customary and usual business or private practices.

We will summarize written responses to this notice and address them in our submission for OMB approval. As a result of your comments, we will make any necessary adjustments to the burden in our submission to OMB.

Public Availability of Comments: Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time.

While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Dated: August 13, 2014.

Deanna Meyer-Pietruszka,
Chief, Office of Policy, Regulations, and Analysis.

BILLING CODE 4310–MR–P

INTERNATIONAL TRADE COMMISSION

[Investigation Nos. 701–TA–498 and 731–TA–1213 (Final)]

Certain Steel Threaded Rod From India Determinations

On the basis of the record¹ developed in the subject investigations, the United States International Trade Commission (Commission) determines,² pursuant to sections 705(b) and 735(b) of the Tariff Act of 1930 (19 U.S.C. 1671d(b) and 19 U.S.C. 1673d(b)) (the Act), that an industry in the United States is not materially injured or threatened with material injury, and the establishment of an industry in the United States is not materially retarded by reason of imports of certain steel threaded rod from India, provided for in subheading 7318.15.50 of the Harmonized Tariff Schedule of the United States, that have been found by the Department of Commerce (Commerce) to be sold in the United States at less than fair value (LTFV) and subsidized by the Government of India.

Background

The Commission instituted these investigations effective June 27, 2013, following receipt of a petition filed with the Commission and Commerce by All America Threaded Products Inc., Denver, Colorado; Bay Standard Manufacturing Inc., Brentwood, California; and Vulcan Threaded Products Inc., Pelham, Alabama. The final phase of the investigations was scheduled by the Commission following notification of a preliminary determinations by Commerce that imports of certain steel threaded rod from India were subsidized within the meaning of section 703(b) of the Act (19 U.S.C. 1671b(b)) and dumped within the meaning of 733(b) of the Act (19 U.S.C. 1673b(b)). Notice of the scheduling of

¹ The record is defined in sec. 207.2(f) of the Commission's Rules of Practice and Procedure (19 CFR 207.2(f)).

² Commissioner Schmidlein did not participate in these investigations.

the final phase of the Commission's investigations and of a public hearing to be held in connection therewith was given by posting copies of the notice in the Office of the Secretary, U.S. International Trade Commission, Washington, DC, and by publishing the notice in the **Federal Register** on January 17, 2014 (79 FR 3245) and revised on May 2, 2014 (79 FR 25152). The hearing was held in Washington, DC, on March 20, 2014, and all persons who requested the opportunity were permitted to appear in person or by counsel.

The Commission completed and filed its determinations in these investigations on August 18, 2014. The views of the Commission are contained in USITC Publication 4487 (August 2014), entitled *Certain Steel Threaded Rod From India: Investigation Nos. 701–TA–498 and 731–TA–1213 (Final)*.

By order of the Commission.

Issued: August 19, 2014.

Lisa R. Barton,
Secretary to the Commission.

[FR Doc. 2014–19936 Filed 8–21–14; 8:45 am]

BILLING CODE 7020–02–P

INTERNATIONAL TRADE COMMISSION

Notice of Receipt of Complaint; Solicitation of Comments Relating to the Public Interest

AGENCY: U.S. International Trade Commission.

ACTION: Notice.

SUMMARY: Notice is hereby given that the U.S. International Trade Commission has received a complaint entitled *Certain Laser Abraded Denim Garments, DN 3027*; the Commission is soliciting comments on any public interest issues raised by the complaint or complainant's filing under section 210.8(b) of the Commission's Rules of Practice and Procedure (19 CFR 210.8(b)).

FOR FURTHER INFORMATION CONTACT: Lisa R. Barton, Secretary to the Commission, U.S. International Trade Commission, 500 E Street SW., Washington, DC 20436, telephone (202) 205–2000. The public version of the complaint can be accessed on the Commission's Electronic Document Information System (EDIS) at EDIS,¹ and will be available for inspection during official business hours (8:45 a.m. to 5:15 p.m.) in the Office of the Secretary, U.S. International Trade Commission, 500 E

¹ Electronic Document Information System (EDIS): <http://edis.usitc.gov>.

Street SW., Washington, DC 20436, telephone (202) 205-2000.

General information concerning the Commission may also be obtained by accessing its Internet server at United States International Trade Commission (USITC) at USITC.² The public record for this investigation may be viewed on the Commission's Electronic Document Information System (EDIS) at EDIS.³ Hearing-impaired persons are advised that information on this matter can be obtained by contacting the Commission's TDD terminal on (202) 205-1810.

SUPPLEMENTARY INFORMATION: The Commission has received a complaint and a submission pursuant to section 210.8(b) of the Commission's Rules of Practice and Procedure filed on behalf of RevoLaze, LLC and TechnoLines, LLC on August 19, 2014. The complaint alleges violations of section 337 of the Tariff Act of 1930 (19 U.S.C. § 1337) in the importation into the United States, the sale for importation, and the sale within the United States after importation of certain laser abraded denim garments. The complaint names as respondents Abercrombie & Fitch Co. of New Albany, OH; American Eagle Outfitters, Inc. of Pittsburgh, PA; BBC Apparel Group, LLC of New York, NY; Gotham Licensing Group, LLC of New York, NY; The Buckle, Inc. of Kearney, NE; Buffalo International ULC of Canada; 1724982 Alberta ULC of Canada; Diesel S.p.A. of Italy; DL1961 Premium Denim Inc. of New York, NY; Eddie Bauer LLC of Bellevue, WA; The Gap, Inc., of San Francisco, CA; Guess?, Inc. of Los Angeles, CA; H&M Hennes & Mauritz AB of Sweden; H&M Hennes & Mauritz LP of New York, NY; Roberto Cavalli S.p.A. of Italy; Koos Manufacturing, Inc. of South Gate, CA; Levi Strauss & Co. of San Francisco, CA; Lucky Brand Dungarees, Inc. of Los Angeles, CA; Fashion Box S.p.A. of Italy; and VF Corporation of Greensboro, NC. The complainant requests that the Commission issue a general exclusion order, or in the alternative issue a limited exclusion order, and cease and desist orders.

Proposed respondents, other interested parties, and members of the public are invited to file comments, not to exceed five (5) pages in length, inclusive of attachments, on any public interest issues raised by the complaint or section 210.8(b) filing. Comments should address whether issuance of the relief specifically requested by the

complainant in this investigation would affect the public health and welfare in the United States, competitive conditions in the United States economy, the production of like or directly competitive articles in the United States, or United States consumers.

In particular, the Commission is interested in comments that:

- (i) Explain how the articles potentially subject to the requested remedial orders are used in the United States;
- (ii) identify any public health, safety, or welfare concerns in the United States relating to the requested remedial orders;
- (iii) identify like or directly competitive articles that complainant, its licensees, or third parties make in the United States which could replace the subject articles if they were to be excluded;
- (iv) indicate whether complainant, complainant's licensees, and/or third party suppliers have the capacity to replace the volume of articles potentially subject to the requested exclusion order and/or a cease and desist order within a commercially reasonable time; and
- (v) explain how the requested remedial orders would impact United States consumers.

Written submissions must be filed no later than by close of business, eight calendar days after the date of publication of this notice in the **Federal Register**. There will be further opportunities for comment on the public interest after the issuance of any final initial determination in this investigation.

Persons filing written submissions must file the original document electronically on or before the deadlines stated above and submit 8 true paper copies to the Office of the Secretary by noon the next day pursuant to section 210.4(f) of the Commission's Rules of Practice and Procedure (19 CFR 210.4(f)). Submissions should refer to the docket number ("Docket No. 3027") in a prominent place on the cover page and/or the first page. (See Handbook for Electronic Filing Procedures, *Electronic Filing Procedures*⁴). Persons with questions regarding filing should contact the Secretary (202-205-2000).

Any person desiring to submit a document to the Commission in confidence must request confidential treatment. All such requests should be directed to the Secretary to the

Commission and must include a full statement of the reasons why the Commission should grant such treatment. See 19 CFR 201.6. Documents for which confidential treatment by the Commission is properly sought will be treated accordingly. All nonconfidential written submissions will be available for public inspection at the Office of the Secretary and on EDIS.⁵

This action is taken under the authority of section 337 of the Tariff Act of 1930, as amended (19 U.S.C. 1337), and of sections 201.10 and 210.8(c) of the Commission's Rules of Practice and Procedure (19 CFR 201.10, 210.8(c)).

By order of the Commission.

Issued: August 19, 2014.

Lisa R. Barton,

Secretary to the Commission.

BILLING CODE 7020-02-P

DEPARTMENT OF JUSTICE

[OMB Number 1117-0051]

Agency Information Collection Activities; Proposed eCollection eComments Requested; Extension of a Previously Approved Collection: Red Ribbon Week Patch

AGENCY: Drug Enforcement Administration, Department of Justice.
ACTION: 30-day Notice.

SUMMARY: The Department of Justice (DOJ), Drug Enforcement Administration (DEA), will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval in accordance with the Paperwork Reduction Act of 1995. The proposed information collection was previously published in the **Federal Register** Volume 79, Number 120, page 35575 on June 23, 2014, allowing for a 60 comment period.

DATES: Comments are encouraged and will be accepted for an additional 30 days until September 22, 2014.

FOR FURTHER INFORMATION CONTACT: If you have additional comments especially on the estimated public burden or associated response time, suggestions, or need a copy of the proposed information collection instrument with instructions or additional information, please contact Deb Augustine, Acting Chief, Demand Reduction Section, 8701 Morrisette Drive, Springfield, VA 22152 (phone: 202-307-4777). Written comments and/

² United States International Trade Commission (USITC): <http://edis.usitc.gov>.

³ Electronic Document Information System (EDIS): <http://edis.usitc.gov>.

⁴ Handbook for Electronic Filing Procedures: http://www.usitc.gov/secretary/fed_reg_notices/rules/handbook_on_electronic_filing.pdf.

⁵ Electronic Document Information System (EDIS): <http://edis.usitc.gov>.

or suggestions may also be directed to the Office of Management and Budget, Office of Information and Regulatory Affairs, Attention Department of Justice Desk Officer, Washington, DC or send to OIRA_submission@omb.eop.gov.

SUPPLEMENTARY INFORMATION: Written comments and suggestions from the public and affected agencies concerning the proposed collection of information are encouraged. Your comments should address one or more of the following four points:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the Bureau of Justice Statistics, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Evaluate whether and if so how the quality, utility, and clarity of the information to be collected can be enhanced; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Overview of this information collection:

1 *Type of Information Collection:* Extension of the Red Ribbon Week Patch, without changes.

2 *The Title of the Form/Collection:* Red Ribbon Week Patch Activity Report.

3 *The agency form number, if any and the applicable component of the Department sponsoring the collection:* The form number is DEA-316a. The applicable component within the Department of Justice is the Drug Enforcement Administration, Demand Reduction Section.

4 *Affected public who will be asked or required to respond, as well as a brief abstract:*

Primary: Boy Scout and Girl Scout Troop Leaders.

Other: None.

DEA is requesting approval of an extension, with change, to an existing collection that requests information from Boy/Girl Scout Troop Leaders who express an interest in participating in DEA Red Ribbon Week Activities. This information is then used to mail patches to participants as indication of completion of the suggested activities.

5 *An estimate of the total number of respondents and the amount of time*

estimated for an average respondent to respond: An estimated 450 Boy/Girl Scout troop leaders will take part in the Red Ribbon Week Patch activities. It is estimated that it will take 10 minutes to complete the DE-316a, DEA Red Ribbon Week Patch Activity Report.

6 *An estimate of the total public burden (in hours) associated with the collection:* The estimated public burden associated with this collection is 75 hours.

If additional information is required contact: Jerri Murray, Department Clearance Officer, United States Department of Justice, Justice Management Division, Policy and Planning Staff, Two Constitution Square, 145 N Street NE., 3D.405B, Washington, DC 20530.

Dated: August 19, 2014.

Jerri Murray,

Department Clearance Officer for PRA, U.S. Department of Justice.

BILLING CODE 4410-18-P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Department of Labor Events Registration Platform

ACTION: Notice.

SUMMARY: On August 29, 2014, the Department of Labor (DOL) will submit the information collection request (ICR) revision titled, "Department of Labor Events Registration Platform," to the Office of Management and Budget (OMB) for review and approval for use in accordance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501 et seq.). Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 29, 2014.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201406-1290-001 (this link will only become active on August 30, 2014) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OS, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-6881 (this is not a toll-free number); or by email: OIRA_submission@omb.eop.gov. Commenters are encouraged, but not required, to send a courtesy copy of any

comments by mail or courier to the U.S. Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT:

Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or sending an email to DOL_PRA_PUBLIC@dol.gov.

Authority: 44 U.S.C. 3507(a)(1)(D).

SUPPLEMENTARY INFORMATION: This ICR seeks approval under the PRA for revisions to the Department of Labor Events Registration Platform (DOLEMP), previously identified as the Vendor Outreach Session (VOS) Information Management System, information collection. More specifically, the DOL periodically requests the public to register to attend a DOL sponsored event. The DOLEMP is a shared service that allows a DOL agency to collect registration information in a way that can be tailored to a particular event. As the information needed to register for specific events may vary, this ICR provides a generic format an agency may use to obtain any required PRA authorization from the OMB. The DOL seeks OMB approval not to submit an individual event for approval when only those questions on an approved template are asked. Under the proposed revision, an agency would also have the ability to omit one or more questions on the template without the DOL submitting an ICR for specific clearance. An ICR would be required, however, under this generic information collection should additional or other information be asked for some specific event. For example, this ICR submission includes a generic request for continued approval of the VOS component of the DOLEMP. This information collection has been classified as a revision, because of the expanded scope of the information collection to cover additional events. The DOL notes that registration requirements for many events may not require PRA clearance, because the information requested is minimal (e.g., information necessary to identify the attendee, address, etc.); however, other events may require the systematic collection of information that goes beyond the PRA exception to the definition of *information* codified in regulations 5 CFR 1320.3(h)(1).

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an

information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1290-0002. The current approval is scheduled to expire on August 31, 2014; however, the DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. New requirements would only take effect upon OMB approval. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on June 6, 2014 (79 FR 32751).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES** section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1290-0002. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL.

Title of Collection: Department of Labor Events Registration Platform.

OMB Control Number: 1290-0002.

Affected Public: Individuals or Households; State, Local, and Tribal Governments; and Private Sector—businesses or other for-profits, farms, and not-for-profit institutions.

Total Estimated Number of Respondents: 2,200.

Total Estimated Number of Responses: 3,200.

Total Estimated Annual Time Burden: 250 hours.

Total Estimated Annual Other Costs Burden: \$0.

Dated: August 18, 2014.

Michel Smyth,

Departmental Clearance Officer.

[FR Doc. 2014-19964 Filed 8-21-14; 8:45 am]

BILLING CODE 4510-23-P

DEPARTMENT OF LABOR

Agency Information Collection Activities; Submission for OMB Review; Comment Request; Fire Brigades Standard

ACTION: Notice.

SUMMARY: The Department of Labor (DOL) is submitting the Occupational Safety and Health Administration (OSHA) sponsored information collection request (ICR) titled, "Fire Brigades Standard," to the Office of Management and Budget (OMB) for review and approval for continued use, without change, in accordance with the Paperwork Reduction Act of 1995 (PRA), 44 U.S.C. 3501 et seq. Public comments on the ICR are invited.

DATES: The OMB will consider all written comments that agency receives on or before September 22, 2014.

ADDRESSES: A copy of this ICR with applicable supporting documentation; including a description of the likely respondents, proposed frequency of response, and estimated total burden may be obtained free of charge from the RegInfo.gov Web site at http://www.reginfo.gov/public/do/PRAViewICR?ref_nbr=201408-1218-002 (this link will only become active on the day following publication of this notice) or by contacting Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

Submit comments about this request by mail or courier to the Office of Information and Regulatory Affairs, Attn: OMB Desk Officer for DOL-OSHA, Office of Management and Budget, Room 10235, 725 17th Street NW., Washington, DC 20503; by Fax: 202-395-6881 (this is not a toll-free number); or by email:

OIRA_submission@omb.eop.gov.

Commenters are encouraged, but not required, to send a courtesy copy of any comments by mail or courier to the U.S.

Department of Labor-OASAM, Office of the Chief Information Officer, Attn: Departmental Information Compliance Management Program, Room N1301, 200 Constitution Avenue NW., Washington, DC 20210; or by email: DOL_PRA_PUBLIC@dol.gov.

FOR FURTHER INFORMATION CONTACT:

Michel Smyth by telephone at 202-693-4129, TTY 202-693-8064, (these are not toll-free numbers) or by email at DOL_PRA_PUBLIC@dol.gov.

Authority: 44 U.S.C. 3507(a)(1)(D).

SUPPLEMENTARY INFORMATION: This ICR seeks to extend PRA authority for the Fire Brigades Standard information collection codified in regulations 29 CFR 1910.156, which requires each covered employer establishing a fire brigade to write an organizational statement, to ascertain the fitness of workers with specific medical conditions to participate in fire related operations, and to provide appropriate training and information to fire brigade members. Occupational Safety and Health Act sections 2 and 8 authorize this information collection. See 29 U.S.C. 651, 657.

This information collection is subject to the PRA. A Federal agency generally cannot conduct or sponsor a collection of information, and the public is generally not required to respond to an information collection, unless it is approved by the OMB under the PRA and displays a currently valid OMB Control Number. In addition, notwithstanding any other provisions of law, no person shall generally be subject to penalty for failing to comply with a collection of information that does not display a valid Control Number. See 5 CFR 1320.5(a) and 1320.6. The DOL obtains OMB approval for this information collection under Control Number 1218-0075.

OMB authorization for an ICR cannot be for more than three (3) years without renewal, and the current approval for this collection is scheduled to expire on August 31, 2014. The DOL seeks to extend PRA authorization for this information collection for three (3) more years, without any change to existing requirements. The DOL notes that existing information collection requirements submitted to the OMB receive a month-to-month extension while they undergo review. For additional substantive information about this ICR, see the related notice published in the **Federal Register** on May 23, 2014 (79 FR 29803).

Interested parties are encouraged to send comments to the OMB, Office of Information and Regulatory Affairs at the address shown in the **ADDRESSES**

section within thirty (30) days of publication of this notice in the **Federal Register**. In order to help ensure appropriate consideration, comments should mention OMB Control Number 1218-0075. The OMB is particularly interested in comments that:

- Evaluate whether the proposed collection of information is necessary for the proper performance of the functions of the agency, including whether the information will have practical utility;
- Evaluate the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the methodology and assumptions used;
- Enhance the quality, utility, and clarity of the information to be collected; and
- Minimize the burden of the collection of information on those who are to respond, including through the use of appropriate automated, electronic, mechanical, or other technological collection techniques or other forms of information technology, e.g., permitting electronic submission of responses.

Agency: DOL-OSHA.

Title of Collection: Fire Brigades Standard.

OMB Control Number: 1218-0075.

Affected Public: Private Sector—businesses or other for-profits.

Total Estimated Number of Respondents: 3,487.

Total Estimated Number of Responses: 3,487.

Total Estimated Annual Time Burden: 2,510 hours.

Total Estimated Annual Other Costs Burden: \$0.

Dated: August 18, 2014.

Michel Smyth,

Departmental Clearance Officer.

BILLING CODE 4510-26-P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-82,221]

Plexus Corporation; Neenah Operations; Including On-Site Leased Workers From Kelly Services, Inc., Aerotek and Gold Star Solutions, Inc. Neenah, Wisconsin; Notice of Initiation of Investigation To Terminate Certification of Eligibility

Pursuant to section 221 of the Trade Act of 1974, as amended, an investigation was initiated on December

6, 2012 in response to a petition for Trade Adjustment Assistance (TAA) filed by the State of Wisconsin on behalf of workers of Plexus Corporation, Neenah Operations, including on-site leased workers of Kelly Services, Inc., Neenah, Wisconsin (Plexus-Neenah). The petition states “Plexus has factories in Malaysia, China, Mexico, and Europe.” The subject workers are engaged in activities related to the production of printed circuit boards. During the investigation, the Department received information from the subject firm confirming a shift of production by the subject firm of an article like or directly competitive with the printed circuit boards produced by the workers from Neenah, Wisconsin to a foreign country.

Based on information obtained during the investigation, the Department determined that Sections 222(a)(1) and 222(a)(2)(B) of the Trade Act of 1974, as amended, 19 U.S.C. 2272(a), have been met and issued on April 5, 2013 a certification of eligibility to apply for TAA applicable to workers and former workers of Plexus-Neenah, which states “the workers’ firm has shifted to a foreign country the production of an article like or directly competitive with the article produced by the workers which contributed importantly” to worker separations at Plexus-Neenah.

On January 29, 2014, the Department issued an amended certification of eligibility to apply for TAA applicable to leased workers of Aerotek and Gold Star Solutions, Inc. working on-site at Plexus-Neenah.

In a July 24, 2014 press release (“Plexus Commitment to Wisconsin”), Plexus Corporation stated:

In 2012, Plexus experienced a disruptive event when our largest customer at the time, which represented approximately 16% of Plexus’ global revenue, unexpectedly announced its decision to disengage from Plexus. This customer disengagement represented a significant challenge for the Company and unfortunately resulted in the loss of jobs in Wisconsin. These jobs were not moved to Plexus locations outside the U.S. but instead were lost from Plexus altogether as the result of the customer’s decision to move its programs to our competitors’ locations outside the U.S. While the significant customer disengagement was a challenging event for us, we have regained many of the jobs that were lost in 2012 and 2013 and are back on a path of growth in Neenah, Wisconsin.

According to 29 CFR 90.17(a), “Whenever the Director of the Office of Trade Adjustment Assistance has reason to believe, with respect to any certification of eligibility, that the total or partial separations from a firm or appropriate subdivision thereof are no

longer attributable to the conditions specified in section 222 of the Act and § 90.16(b), the Director shall promptly make an investigation.”

In accordance with 29 CFR 90.17(a), the Department will conduct an investigation to determine whether workers and former workers of Plexus-Neenah have met the criteria set forth in the Trade Act of 1974, as amended, and will issue a determination based on this investigation.

Signed in Washington, DC, this 8th day of August, 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

[FR Doc. 2014-19946 Filed 8-21-14; 8:45 am]

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-81,756]

Bay Area Newsgroup East Bay, LLC., a Wholly Owned Subsidiary of California Newspaper Partnership, 2640 Shadelands Drive and 175 Lennon Lane, Walnut Creek, California; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility To Apply for Worker Adjustment Assistance on August 7, 2012, applicable to workers of Bay Area News Group East Bay, LLC, a wholly owned subsidiary of California Newspapers Partnership, Walnut Creek, California. The Department’s notice of determination was published in the **Federal Register** on August 23, 2012 (77 FR 51064 at page 51066).

At the request of a company official, the Department reviewed the certification for workers of the subject firm. The workers’ firm is engaged in activities related to the production of newspapers. The worker group is engaged in advertisement production, including graphic design.

New information from the company revealed that the subject firm has relocated from 2640 Shadelands Drive, Walnut Creek, California to 175 Lennon Lane, Walnut Creek, California.

The intent of the Department’s certification is to include all workers of the firm who were adversely affected by a shift in production of newspapers to a foreign country. Based on these findings, the Department is amending

this certification to also include the workers of 175 Lennon Lane, Walnut Creek, California.

The amended notice applicable to TA-W-81,756 is hereby issued as follows:

“All workers of Bay Area News Group East Bay, LLC, a wholly owned subsidiary of California Newspapers Partnership, 2640 Shadelands Drive and 175 Lennon Lane, Walnut Creek, California, who became totally or partially separated from employment on or after June 15, 2011 through August 7, 2014, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.”

Signed in Washington, DC this 24th day of July, 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR

Employment and Training Administration

[TA-W-83,188; TA-W-83,188a]

John Wiley and Sons, Inc.; Creative Services Group; Wiley Content Management Department and Information Technology Department; Hoboken, New Jersey; John Wiley And Sons, Inc.; Information Technology Department; Somerset, New Jersey; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on November 26, 2013, applicable to workers of John Wiley and Sons, Inc., Creative Services Group, Hoboken, New Jersey. The Department’s notice of determination was published in the **Federal Register** on February 13, 2014 (79 FR 8736).

The Department reviewed the certification for workers of the subject firm. New information from the company revealed that worker separations in the Wiley Content Management Department and the Information Technology Department at the same location in Hoboken, New Jersey (TA-W-83,188) and in the Information Technology Department in Somerset, New Jersey (TA-W-83,188A)

are attributable to the same acquisition of services from a foreign country that contributed importantly to worker separations in the Composition Services Group in Hoboken, New Jersey.

The intent of the Department’s certification is to include all workers of the subject firm who were adversely affected by the firm’s acquisition of services from a foreign country.

Based on these findings, the Department is amending this certification to include workers from Wiley Content Management Department and the Information Technology Department at the Hoboken, New Jersey (TA-W-83,188) location of the subject firm as well as workers from the Information Technology Department at the affiliated location in Somerset, New Jersey (TA-W-83,188A).

The amended notice applicable to TA-W-83,188 is hereby issued as follows:

“All workers of John Wiley and Sons, Inc., Creative Services Group, Wiley Content Management Department, and Information Technology Department, Hoboken, New Jersey (TA-W-83,188) and all workers of John Wiley and Sons, Inc., Information Technology Department, Somerset, New Jersey (TA-W-83,188A) who became totally or partially separated from employment on or after October 30, 2012 through November 26, 2015, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.”

Signed in Washington, DC this 1st day of August, 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

CitiMortgage, Inc., a Subsidiary of Citibank, N.A., Mortgage Default Operations, Home Owner Support Team, Document Support Group and Consumer Operations and Techhnology, Mortgage Operations Fort Mill, South Carolina; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (“Act”),

19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on November 7, 2013 applicable to workers of CitiMortgage, Inc., a subsidiary of Citibank, N.A., Mortgage Default Operations, Home Owner Support Team, Document Support Group, Fort Mill, South Carolina. The Department's notice of determination was published in the **Federal Register** on November 26, 2013 (78 FR 70582).

Based on a petition filed by three workers (TA-W-85,401), the Department reviewed the certification for workers of the subject firm. The workers are engaged in activities related to the supply of mortgage services.

The investigation confirmed that worker separations at CitiMortgage, Inc., a subsidiary of CitiBank, N.A., Consumer Operations and Technology, Mortgage Operations, Fort Mill, South Carolina are attributable to the same acquisition of services from a foreign country that contributed importantly to separations in the Home Owners Support Team, Document Support Group.

The amended notice applicable to TA-W-85,401 is hereby issued as follows:

"All workers of CitiMortgage, Inc., a subsidiary of Citibank, N.A., Mortgage Default Operations, Home Owner Support Team, Document Support Group, and Consumer Operations and Technology, Mortgage Operations, Fort Mill, South Carolina who became totally or partially separated from employment on or after September 24, 2012 through November 7, 2015, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended."

Signed in Washington, DC this 31st day of July, 2014.

Del Min Amy Chen

Certifying Officer, Office of Trade Adjustment Assistance.

[TA-W-83,250]

Evrz Claymont Steel, Including On-Site Leased Workers From Narco, Bernard Personnel (BP) Staffing, Star Building Services, Gettier Security, Tube City IMS, and Penache Mechanical Claymont, Delaware; Amended Certification Regarding Eligibility To Apply for Worker Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended ("Act"), 19 U.S.C. 2273, the Department of Labor issued a Certification of Eligibility to Apply for Worker Adjustment Assistance on February 21, 2014, applicable to workers of Evraz Claymont Steel, including on-site leased workers from BP Staffing and Penache Mechanical, Claymont, Delaware. The Department's notice of determination was published in the **Federal Register** on March 14, 2014 (79 FR 14542).

At the request of the State Workforce Office, the Department reviewed the certification for workers of the subject firm. The workers were engaged in activities related to the production of plate steel.

The investigation confirmed that workers leased from NARCO, Star Building Services, Gettier Security, and Tube City IMS were employed on-site at the Claymont, Delaware location of Evraz Claymont Steel. The Department has determined that these workers were sufficiently under the control of the subject firm to be considered leased workers.

Based on these findings, the Department is amending this certification to include workers leased from NARCO, Star Building Services, Gettier Security, and Tube City IMS working on-site at the Claymont, Delaware location of Evraz Claymont Steel.

The amended notice applicable to TA-W-83,250 is hereby issued as follows:

All workers of Evraz Claymont Steel, including on-site leased workers from NARCO, Bernard Personnel (BP) Staffing, Star Building Services, Gettier Security, Tube City IMS, and Penache Mechanical, who became totally or partially separated from employment on or after November 19, 2012 through February 21, 2016, and all workers in the group threatened with total or partial separation from employment on the date of certification through two years from the date of certification, are eligible to apply for

adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed in Washington, DC, this 31st day of July 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

Investigations Regarding Eligibility To Apply for Worker Adjustment Assistance

Petitions have been filed with the Secretary of Labor under Section 221(a) of the Trade Act of 1974 ("the Act") and are identified in the Appendix to this notice. Upon receipt of these petitions, the Director of the Office of Trade Adjustment Assistance, Employment and Training Administration, has instituted investigations pursuant to Section 221(a) of the Act.

The purpose of each of the investigations is to determine whether the workers are eligible to apply for adjustment assistance under Title II, Chapter 2, of the Act. The investigations will further relate, as appropriate, to the determination of the date on which total or partial separations began or threatened to begin and the subdivision of the firm involved.

The petitioners or any other persons showing a substantial interest in the subject matter of the investigations may request a public hearing, provided such request is filed in writing with the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than September 2, 2014.

Interested persons are invited to submit written comments regarding the subject matter of the investigations to the Director, Office of Trade Adjustment Assistance, at the address shown below, not later than September 2, 2014.

The petitions filed in this case are available for inspection at the Office of the Director, Office of Trade Adjustment Assistance, Employment and Training Administration, U.S. Department of Labor, Room N-5428, 200 Constitution Avenue NW., Washington, DC 20210.

Signed at Washington, DC this 14th day of August 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR**Employment and Training Administration**

[TA-W-83,194]

Merck Sharp & Dohme Corporation; A Subsidiary of Merck & Co., Inc.; Research And Development Group; Including On-Site Leased Workers From Agile-1 And Lancaster Laboratories; West Point, Pennsylvania; Notice of Revised Determination on Reconsideration

On April 8, 2014, the Department of Labor issued an Affirmative Determination Regarding Application for Reconsideration for the workers and former workers of Merck Sharp & Dohme Corp., (MSD), a Subsidiary of Merck & Co., Inc., West Point, Pennsylvania. The appropriate subdivision was later identified as Merck Sharp & Dohme Corporation, a subsidiary of Merck & Co., Inc., Research and Development Group, West Point, Pennsylvania (hereafter referred to as the "R&D Group" or "subject firm"). The Notice was published in the **Federal Register** on April 29, 2014 (79 FR 24013).

In the request for reconsideration, the petitioner stated that the initial investigation of this petition was too broad and did not examine how the functions of the workers of the R&D Group may have been impacted by outsourcing and/or increased imports of like or directly competitive services. Further, the petitioner stated that workers of Merck Sharpe & Dohme Corporation, Merck Research Labs,

Disease Area Biology, In Vitro/In Vivo, Kenilworth, New Jersey (case TA-W-81,413) were certified eligible to apply for adjustment assistance on May 18, 2012 and alleged that workers of the subject firm were impacted by similar circumstances and should also be certified eligible to apply for adjustment assistance.

The group eligibility requirements for workers of a firm under Section 222(a) of the Act, 19 U.S.C. 2272(a), are satisfied if the following criteria are met:

(1) A significant number or proportion of the workers in such workers' firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2)(B)(i)(I) there has been a shift by the workers' firm to a foreign country in the production of articles or supply of services like or directly competitive with those produced/supplied by the workers' firm; OR

(II) there has been an acquisition from a foreign country by the workers' firm of articles/services that are like or directly competitive with those produced/supplied by the workers' firm; AND

(ii) the shift/acquisition must have contributed importantly to the workers' separation or threat of separation.

During the reconsideration investigation, the Department collected information from the petitioner, a former worker of the R&D Group, and the subject firm in order to confirm previously supplied information, address allegations, narrow the scope of the investigation to the R&D Group, and collect new information to determine whether foreign competition impacted the operations at the subject firm.

The reconsideration investigation revealed that the workers in the R&D Group were impacted by a foreign acquisition of R&D functions like or directly competitive with the functions supplied by the workers, which

contributed importantly to separations in the R&D Group.

The reconsideration investigation also revealed that the worker group includes on-site leased workers from Agile-1 and Lancaster Laboratories.

Based upon the findings of the reconsideration investigation, the Department finds that Section 222(a)(1) has been met because a significant number or proportion of the workers in such workers' firm have become totally or partially separated, or are threatened to become totally or partially separated.

The Department also finds that Section 222(a)(2)(B) has been met because the workers' firm has partially acquired from a foreign country services like or directly competitive with the services supplied by the workers, which contributed importantly to worker group separations at the subject firm.

Conclusion

After careful review of the additional facts obtained on reconsideration, I determine that workers of Merck Sharp & Dohme Corporation, a subsidiary of Merck & Co., Inc., Research and Development Group, West Point, Pennsylvania, who were engaged in employment related to the supply of research and development services, meet the worker group certification criteria under Section 222(a) of the Act, 19 U.S.C. 2272(a). In accordance with Section 223 of the Act, 19 U.S.C. 2273, I make the following certification:

All workers of Merck Sharp & Dohme Corporation, a subsidiary of Merck & Co., Inc., Research and Development Group, including on-site leased workers from Agile-1 and Lancaster Laboratories, West Point, Pennsylvania who became totally or partially separated from employment on or after November 1, 2012, through two years from the date of this certification, and all workers in the group threatened with total or partial

separation from employment on date of certification through two years from the date of certification, are eligible to apply for adjustment assistance under Chapter 2 of Title II of the Trade Act of 1974, as amended.

Signed in Washington, DC, this 12th day of August 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

BILLING CODE 4510-FN-P

DEPARTMENT OF LABOR

Employment and Training Administration

Notice of Determinations Regarding Eligibility To Apply for Worker Adjustment Assistance and Alternative Trade Adjustment Assistance

In accordance with Section 223 of the Trade Act of 1974, as amended (19 U.S.C. 2273) the Department of Labor herein presents summaries of determinations regarding eligibility to apply for trade adjustment assistance for workers (TA-W) number and alternative trade adjustment assistance (ATAA) by (TA-W) number issued during the period of *August 4, 2014 through August 8, 2014*.

In order for an affirmative determination to be made for workers of a primary firm and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(a) of the Act must be met.

I. Section (a)(2)(A) all of the following must be satisfied:

A. A significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm, have become totally or partially separated, or are threatened to become totally or partially separated;

B. the sales or production, or both, of such firm or subdivision have decreased absolutely; and

C. increased imports of articles like or directly competitive with articles produced by such firm or subdivision have contributed importantly to such workers' separation or threat of separation and to the decline in sales or production of such firm or subdivision; or

II. Section (a)(2)(B) both of the following must be satisfied:

A. A significant number or proportion of the workers in such workers' firm, or an appropriate subdivision of the firm, have become totally or partially separated, or are threatened to become totally or partially separated;

B. there has been a shift in production by such workers' firm or subdivision to a foreign country of articles like or directly competitive with articles which are produced by such firm or subdivision; and

C. One of the following must be satisfied:

1. The country to which the workers' firm has shifted production of the articles is a party to a free trade agreement with the United States;

2. the country to which the workers' firm has shifted production of the articles to a beneficiary country under the Andean Trade Preference Act, African Growth and Opportunity Act, or the Caribbean Basin Economic Recovery Act; or

3. there has been or is likely to be an increase in imports of articles that are like or directly competitive with articles which are or were produced by such firm or subdivision.

Also, in order for an affirmative determination to be made for secondarily affected workers of a firm and a certification issued regarding eligibility to apply for worker adjustment assistance, each of the group eligibility requirements of Section 222(b) of the Act must be met.

(1) significant number or proportion of the workers in the workers' firm or an appropriate subdivision of the firm have become totally or partially separated, or are threatened to become totally or partially separated;

(2) the workers' firm (or subdivision) is a supplier or downstream producer to a firm (or subdivision) that employed a group of workers who received a certification of eligibility to apply for trade adjustment assistance benefits and such supply or production is related to the article that was the basis for such certification; and

(3) either—

(A) the workers' firm is a supplier and the component parts it supplied for the firm (or subdivision) described in paragraph (2) accounted for at least 20 percent of the production or sales of the workers' firm; or

(B) a loss or business by the workers' firm with the firm (or subdivision) described in paragraph (2) contributed importantly to the workers' separation or threat of separation.

In order for the Division of Trade Adjustment Assistance to issue a certification of eligibility to apply for Alternative Trade Adjustment Assistance (ATAA) for older workers, the group eligibility requirements of Section 246(a)(3)(A)(ii) of the Trade Act must be met.

1. Whether a significant number of workers in the workers' firm are 50 years of age or older.

2. Whether the workers in the workers' firm possess skills that are not easily transferable.

3. The competitive conditions within the workers' industry (i.e., conditions within the industry are adverse).

Affirmative Determinations for Worker Adjustment Assistance

The following certifications have been issued. The date following the company name and location of each determination references the impact date for all workers of such determination.

None.

Affirmative Determinations for Worker Adjustment Assistance and Alternative Trade Adjustment Assistance

The following certifications have been issued. The date following the company name and location of each determination references the impact date for all workers of such determination.

The following certifications have been issued. The requirements of Section 222(a)(2)(A) (increased imports) and Section 246(a)(3)(A)(ii) of the Trade Act have been met.

85,261, Hibu Inc., Cedar Rapids, Iowa.

- 85,391, Second Shift Manufacturing Group, Sylmar, California. June 23, 2013.
- 85,407, Quality Ribbon Mills, Inc., Cumberland, Rhode Island, June 24, 2013.
- 85,414, Commemorative Brands, Inc., Austin, Texas. July 4, 2013.
- 85,416, Motor Coach Holdings, LLC., Loudonville, Ohio, July 7, 2013.

Negative Determinations for Alternative Trade Adjustment Assistance

In the following cases, it has been determined that the requirements of 246(a)(3)(A)(ii) have not been met for the reasons specified.

None.

Negative Determinations for Worker Adjustment Assistance and Alternative Trade Adjustment Assistance

In the following cases, the investigation revealed that the eligibility criteria for worker adjustment assistance have not been met for the reasons specified.

Because the workers of the firm are not eligible to apply for TAA, the workers cannot be certified eligible for ATAA.

The investigation revealed that criteria (a)(2)(A)(I.A.) and (a)(2)(B)(II.A.) (employment decline) have not been met.

85,382, Baldor Electric Company, Fort Smith, Arkansas.

The investigation revealed that criteria (a)(2)(A)(I.B.) (Sales or production, or both, did not decline) and (a)(2)(B)(II.B.) (shift in production to a foreign country) have not been met.

85,362, Catawissa Wood and Components, Inc., Elysburg, Pennsylvania.

The investigation revealed that criteria (a)(2)(A)(I.C.) (increased imports) and (a)(2)(B)(II.B.) (shift in production to a foreign country) have not been met.

85,396, Fabricast Valve, LLC., Longview, Washington.

The workers' firm does not produce an article as required for certification under Section 222 of the Trade Act of 1974.

85,317, Child Care Services, Courtland, Mississippi.

85,394, Merck Sharp & Dohme Corporation, Rahway, New Jersey.

85,399, Sandler & Travis Trade Advisory Services, Inc., Farmington Hills, Michigan.

Determinations Terminating Investigations of Petitions for Worker Adjustment Assistance

After notice of the petitions was published in the **Federal Register** and

on the Department's Web site, as required by Section 221 of the Act (19 USC 2271), the Department initiated investigations of these petitions.

The following determinations terminating investigations were issued because the petitioning groups of workers are covered by active certifications. Consequently, further investigation in these cases would serve no purpose since the petitioning group of workers cannot be covered by more than one certification at a time.

85,281, John Wiley and Sons, Inc., Hoboken, New Jersey.

85,421, YP Holdings LLC., Southfield, Michigan.

I hereby certify that the aforementioned determinations were issued during the period of *August 4, 2014 through August 8, 2014*. These determinations are available on the Department's Web site www.doleta.gov/tradeact/taa/taa_search_form.cfm under the searchable listing of determinations or by calling the Office of Trade Adjustment Assistance toll free at 888-365-6822.

Signed at Washington, DC, this 15th day of August 2014.

Del Min Amy Chen,

Certifying Officer, Office of Trade Adjustment Assistance.

DEPARTMENT OF LABOR

Occupational Safety and Health Administration

[Docket No. OSHA-2014-0021]

General Working Conditions in Shipyard Employment; Extension of the Office of Management and Budget's (OMB) Approval of Information Collection (Paperwork) Requirements

AGENCY: Occupational Safety and Health Administration (OSHA), Labor.

ACTION: Request for public comments.

SUMMARY: OSHA solicits public comments concerning its proposal to extend the Office of Management and Budget's (OMB) approval of the information collection requirements specified in its General Working Conditions in Shipyard Employment Standard (29 CFR part 1915, subpart F).
DATES: Comments must be submitted (postmarked, sent or received) by October 21, 2014.

ADDRESSES:

Electronically: You may submit comments and attachments electronically at <http://www.regulations.gov>, which is the

Federal eRulemaking Portal. Follow the instructions online for submitting comments.

Facsimile: If your comments, including attachments, are not longer than 10 pages you may fax them to the OSHA Docket Office at (202) 693-1648.

Mail, hand delivery, express mail, messenger, or courier service: When using this method, you must submit a copy of your comments and attachments to the OSHA Docket Office, Docket No. OSHA-2014-0021, Occupational Safety and Health Administration, U.S. Department of Labor, Room N-2625, 200 Constitution Avenue NW., Washington, DC 20210. Deliveries (hand, express mail, messenger, and courier service) are accepted during the Department of Labor's and Docket Office's normal business hours, 8:15 a.m. to 4:45 p.m., e.t.

Instructions: All submissions must include the Agency name and the OSHA docket number (OSHA-2014-0021) for the Information Collection Request (ICR). All comments, including any personal information you provide, are placed in the public docket without change, and may be made available online at <http://www.regulations.gov>. For further information on submitting comments see the "Public Participation" heading in the section of this notice titled **SUPPLEMENTARY INFORMATION**.

Docket: To read or download comments or other materials in the docket, go to <http://www.regulations.gov> or the OSHA Docket Office at the address above. All documents in the docket (including this **Federal Register** notice) are listed in the <http://www.regulations.gov> index; however, some information (e.g., copyrighted material) is not publically available to read or download from the Web site. All submissions, including copyrighted material, are available for inspection and copying at the OSHA Docket Office. You may contact Theda Kenney at the address below to obtain a copy of the ICR.

FOR FURTHER INFORMATION CONTACT:

Todd Owen or Theda Kenney, Directorate of Standards and Guidance, OSHA, U.S. Department of Labor, Room N-3609, 200 Constitution Avenue NW., Washington, DC 20210; telephone (202) 693-2222.

SUPPLEMENTARY INFORMATION:

I. Background

The Department of Labor, as part of its continuing effort to reduce paperwork and respondent (i.e., employer) burden, conducts a preclearance consultation program to provide the public with an

opportunity to comment on proposed and continuing information collection requirements in accord with the Paperwork Reduction Act of 1995 (PRA-95) (44 U.S.C. 3506(c)(2)(A)). This program ensures that information is in the desired format, reporting burden (time and costs) is minimal, collection instruments are clearly understood, and OSHA's estimate of the information collection burden is accurate. The Occupational Safety and Health Act of 1970 (the OSH Act) (29 U.S.C. 651 et seq.) authorizes information collection by employers as necessary or appropriate for enforcement of the OSH Act or for developing information regarding the causes and prevention of occupational injuries, illnesses, and accidents (29 U.S.C. 657). The OSH Act also requires that OSHA obtain such information with minimum burden upon employers, especially those operating small businesses, and to reduce to the maximum extent feasible unnecessary duplication of efforts in obtaining information (29 U.S.C. 657).

The Standard on General Working Conditions in Shipyard Employment (29 CFR part 1915, subpart F) covers provisions that address conditions and operations in shipyard employment that may produce hazards for workers. The Subpart is comprised of 14 sections that include housekeeping; lighting; utilities; working alone; vessel radar and communication systems; lifeboats; medical services and first aid; sanitation; control of hazardous energy; safety color code for marking physical hazards; accident prevention signs and tags; retention of DOT markings, placards, and labels; motor vehicle safety equipment, operation and maintenance; and servicing multi-piece and single-piece rim wheels.

II. Special Issues for Comment

OSHA has a particular interest in comments on the following issues:

- Whether the proposed information collection requirements are necessary for proper performance of the Agency's functions, including whether the information is useful;
- The accuracy of OSHA's estimate of the burden (time and costs) of the information collection requirements, including the validity of the methodology and assumptions used;
- The quality, utility, and clarity of the information collected; and
- Ways to minimize the burden on employers who must comply; for example, by using automated or other technological information collection and transmission techniques.

III. Proposed Actions

The Agency is requesting an adjustment increase of 1,731 hours, from 99,645 to 101,376 hours. The increase in hours is a result of updated data showing an increase in the number of affected establishments covered by the standard from 2,725 to 2,759.

The Agency will summarize the comments submitted in response to this notice and will include this summary in the request to OMB to extend the approval of the information collection requirements.

Type of Review: Extension of a currently approved collection.

Title: General Working Conditions in Shipyard Employment Standard (29 CFR part 1915, subpart F).

OMB Control Number: 1218-0259.

Affected Public: Businesses or other for-profits.

Number of Responses: 321,292.

Frequency of Responses: On occasion.

Average Time per Response: Ranges from 10 minutes (.17 hour) to mark stretchers to 20 hours to inspect and update energy control procedures.

Estimated Total Burden Hours: 101,376.

Estimated Cost (Operation and Maintenance): \$3,341.

IV. Public Participation—Submission of Comments on This Notice and Internet Access to Comments and Submissions

You may submit comments in response to this document as follows:

(1) Electronically at <http://www.regulations.gov>, which is the Federal eRulemaking Portal; (2) by facsimile (fax); or (3) by hard copy. All comments, attachments, and other materials must identify the Agency name and the OSHA docket number for the ICR (Docket No. OSHA-2014-0021). You may supplement electronic submissions by uploading document files electronically. If you wish to mail additional materials in reference to an electronic or facsimile submission, you must submit them to the OSHA Docket Office (see the section of this notice titled **ADDRESSES**). The additional materials must clearly identify your electronic comments by your name, date, and the docket number so the Agency can attach them to your comments.

Because of security procedures, the use of regular mail may cause a significant delay in the receipt of comments. For information about security procedures concerning the delivery of materials by hand, express delivery, messenger, or courier service, please contact the OSHA Docket Office at (202) 693-2350, (TTY) (877) 889-5627).

Comments and submissions are posted without change at <http://www.regulations.gov>. Therefore, OSHA cautions commenters about submitting personal information such as social security numbers and date of birth. Although all submissions are listed in the <http://www.regulations.gov> index, some information (e.g., copyrighted material) is not publically available to read or download from this Web site. All submissions, including copyrighted material, are available for inspection and copying at the OSHA Docket Office. Information on using the <http://www.regulations.gov> Web site to submit comments and access the docket is available at the Web site's "User Tips" link. Contact the OSHA Docket Office for information about materials not available from the Web site, and for assistance in using the Internet to locate docket submissions.

V. Authority and Signature

David Michaels, Ph.D., MPH, Assistant Secretary of Labor for Occupational Safety and Health, directed the preparation of this notice. The authority for this notice is the Paperwork Reduction Act of 1995 (44 U.S.C. 3506 et seq.) and Secretary of Labor's Order No. 1-2012 (77 FR 3912).

Signed at Washington, DC, on August 18, 2014.

David Michaels,

Assistant Secretary of Labor for Occupational Safety and Health.

BILLING CODE 4510-26-P

NUCLEAR REGULATORY COMMISSION

[Docket No. 52-043; NRC-2014-0149]

Early Site Permit for the PSEG Site

AGENCY: Nuclear Regulatory Commission.

ACTION: Draft environmental impact statement, notice of availability; public meeting and request for comment.

SUMMARY: Notice is hereby given that the U.S. Nuclear Regulatory Commission (NRC) and the U.S. Army Corps of Engineers (USACE or Corps), Philadelphia District, are issuing for public comment NUREG-2168, "Draft Environmental Impact Statement for the Early Site Permit (ESP) for the PSEG Site." The site is located in Salem County, New Jersey.

DATES: Submit comments by November 6, 2014. Comments received after this date will be considered if it is practical to do so, but the Commission is able to

assure consideration only for comments received on or before this date.

ADDRESSES: In addition to the public meetings for comment (described below) you may submit comments by any of the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for Docket ID NRC–2014–0149. Address questions about NRC dockets to Carol Gallagher; telephone: 301–287–3422; email: Carol.Gallagher@nrc.gov. For technical questions, contact the individual listed in the **FOR FURTHER INFORMATION CONTACT** section of this document.

- *Mail comments to:* Cindy Bladey, Office of Administration, Mail Stop: 3WFN–06–A44M, U.S. Nuclear Regulatory Commission, Washington, DC 20555–0001.

For additional direction on obtaining information and submitting comments, see “Obtaining Information and Submitting Comments” in the **SUPPLEMENTARY INFORMATION** section of this document.

FOR FURTHER INFORMATION CONTACT: Allen Fetter, Office of New Reactors, telephone: 301–415–8556, email: Allen.Fetter@nrc.gov; U.S. Nuclear Regulatory Commission, Mail Stop T6–C32, Washington, DC 20555–0001.

SUPPLEMENTARY INFORMATION:

I. Obtaining Information and Submitting Comments

A. Obtaining Information

Please refer to Docket ID NRC–2014–0149 when contacting the NRC about the availability of information regarding this document. You may obtain publicly-available information related to this action by the following methods:

- *Federal Rulemaking Web site:* Go to <http://www.regulations.gov> and search for NRC Docket ID NRC–2014–0149.

- *NRC’s Agencywide Documents Access and Management System (ADAMS):* You may obtain publicly available documents online in the ADAMS Public Documents collection at <http://www.nrc.gov/reading-rm/adams.html>. To begin the search, select “ADAMS Public Documents” and then select “Begin Web-based ADAMS Search.” For problems with ADAMS, please contact the NRC’s Public Document Room (PDR) reference staff at 1–800–397–4209, 301–415–4737, or by email to pdr.resource@nrc.gov. The draft EIS and an accompanying reader’s guide are available in ADAMS under accession number ML14219A304.

- *NRC’s PDR:* You may examine and purchase copies of public documents at the NRC’s PDR, Room O1–F21, One

White Flint North, 11555 Rockville Pike, Rockville, Maryland 20852.

- *Project Web site:* In addition, the draft EIS can be accessed online at the PSEG ESP specific Web page at <http://www.nrc.gov/reactors/new-reactors/esp/pseg.html>. The Salem Free Public Library at 112 West Broadway, Salem, New Jersey, has also agreed to make the draft EIS available to the public.

B. Submitting Comments

Please include Docket ID NRC–2014–0149 in the subject line of your comment submission, in order to ensure that the NRC is able to make your comment submission available to the public in this docket.

The NRC cautions you not to include identifying or contact information in comment submissions that you do not want to be publicly disclosed in your comment submission. The NRC will post all comment submissions at <http://www.regulations.gov> as well as enter the comment submissions into ADAMS, and the NRC does not routinely edit comment submissions to remove identifying or contact information.

If you are requesting or aggregating comments from other persons for submission to the NRC, then you should inform those persons not to include identifying or contact information that they do not want to be publicly disclosed in their comment submission. Your request should state that the NRC does not routinely edit comment submissions to remove such information before making the comment submissions available to the public or entering the comment submissions into ADAMS.

II. Background

The application submitted by PSEG Power, LLC and PSEG Nuclear, LLC (PSEG) for an ESP was submitted by letter dated May 25, 2010, pursuant to Part 52 of Title 10 of the *Code of Federal Regulations*. A notice of receipt and availability of the application, which included the environmental report, was published in the **Federal Register** on June 18, 2010 (75 FR 34794). A notice of acceptance for docketing of the ESP application was published in the **Federal Register** on August 13, 2010 (75 FR 49539). A notice of intent to prepare a draft environmental impact statement (EIS) and to conduct the scoping process was published in the **Federal Register** on October 15, 2010 (75 FR 63521).

III. Further Information

Certain building activities proposed in association with the ESP require USACE authorization under Section 404

of the Clean Water Act and Section 10 of the Rivers and Harbor Act of 1899. Those activities are described in the draft EIS. PSEG is completing the submission of a Department of the Army permit application to the USACE for Federal authorization of those building activities. The Corps will publish a separate public notice detailing the work proposed for Corps review and authorization. When published, the Corps public notice will be accessible on the USACE, Philadelphia District, Web site at: <http://www.nap.usace.army.mil/Missions/Regulatory/PublicNotices/tabid/4660/Year/2014/Default.aspx>.

IV. Public Meetings for Comment

The NRC and USACE staff will hold two public meetings to present an overview of the draft EIS and to accept public comments on both the document and the associated Department of the Army permit application on Wednesday, October 1, 2014, in Davidow Hall at Salem County Community College, 460 Hollywood Avenue, Carneys Point, New Jersey. The first meeting will convene at 1:00 p.m. and will continue until 4:00 p.m., as necessary. The second meeting will convene at 7:00 p.m., with a repeat of the overview portions of the first meeting, and will continue until 10:00 p.m., as necessary. The meetings will be transcribed and will include: (1) A presentation of the contents of the draft EIS; and (2) the opportunity for interested government agencies, organizations, and individuals to provide comments on the draft report. For comments provided at the public meeting to be considered, they must be provided during the transcribed public meeting either orally or in writing. Additionally, the NRC and USACE staff will host informal discussions one hour before the start of each meeting, during which members of the public may meet and talk with staff members on an informal basis. No formal comments on the draft EIS will be accepted during the informal discussions. The draft EIS is a National Environmental Policy Act of 1969, as amended (NEPA) document that also supports the USACE review of the Department of the Army permit application from PSEG (application # CENAP–OP–R–2009–0157–45).

Persons may pre-register to attend or present oral comments at the meetings by contacting Dr. Allen Fetter, Environmental Project Manager, by telephone at 1–800–368–5642, extension 8556, or via email to Allen.Fetter@nrc.gov no later than September 24, 2014. Members of the public may also register to speak at the

meetings within 15 minutes of the start of each meeting. Individual oral comments may be limited by the time available, depending on the number of persons who register. Members of the public who have not registered may also have an opportunity to speak if time permits. Dr. Fetter will need to be contacted no later than September 24, 2014, if special equipment or accommodations are needed to attend or present information at the public meetings, so that the NRC staff can determine whether the request can be accommodated.

Dated at Rockville, Maryland, this 18th day of August, 2014.

For the Nuclear Regulatory Commission.

Frank Akstulewicz,

*Director, Division of New Reactor Licensing,
Office of New Reactors.*

BILLING CODE 7590-01-P

PEACE CORPS

Information Collection Request; Submission for OMB Review

AGENCY: Peace Corps.

ACTION: 30-Day notice and request for comments.

SUMMARY: The Peace Corps will be submitting the following information collection request to the Office of Management and Budget (OMB) for review and approval. The purpose of this notice is to allow 30 days for public comment in the **Federal Register** preceding submission to OMB. We are conducting this process in accordance with the Paperwork Reduction Act of 1995 (44 U.S.C. Chapter 35).

DATES: Submit comments on or before September 22, 2014.

ADDRESSES: Interested persons are invited to submit comments regarding this proposal. Comments should refer to the proposal by name/or OMB approval number and should be sent via email to: oir_submission@omb.eop.gov or fax to: 202-395-3086. Attention: Desk Officer for Peace Corps.

FOR FURTHER INFORMATION CONTACT: Denora Miller, FOIA/Privacy Act Officer, Peace Corps, 1111 20th Street NW., Washington, DC 20526, (202) 692-1236, or email at pcfpr@peacecorps.gov.

SUPPLEMENTARY INFORMATION: Peace Corps' Office of Volunteer Recruitment and Selection will use the information as an integral part of the selection process to learn whether an applicant possesses the necessary characteristics and skills to serve as a Volunteer.

OMB Control Number: 0420-XXXX.

Title: Interview Rating Tool—Questions.

Type Of Review: New.

Affected Public: Individuals.

Respondents' Obligation To Reply: Voluntary.

Burden To The Public:

- a. Number of Applicants: 20,000
- b. Estimated number of applicants who interview: 4,500
- d. Frequency of response: One time
- e. Completion time: 90 minutes
- f. Annual burden hours: 6,750 hours

General Description Of Collection:

Peace Corps will use this information in order to learn whether an applicant possesses the necessary characteristics and skills to serve as a Volunteer. If Peace Corps were unable to gather responses to the interview questions and record the information requested on this form, the agency would run the risk of sending poorly qualified or unqualified representatives into foreign countries. The communities where Peace Corps assigns Volunteers often observe closely the actions and behaviors of Volunteers, who are representatives of the United States.

Request For Comment: Peace Corps invites comments on whether the proposed collection of information is necessary for proper performance of the functions of the Peace Corps, including whether the information will have practical use; the accuracy of the agency's estimate of the burden of the proposed collection of information, including the validity of the information to be collected; and ways to minimize the burden of the collection of information on those who are to respond, including through the use of automated collection techniques, when appropriate, and other forms of information technology.

This notice issued in Washington, DC, on August 19, 2014.

Denora Miller,

FOIA/Privacy Act Officer, Management.

BILLING CODE 6051-01-P

POSTAL REGULATORY COMMISSION

[Docket No. CP2014-71; Order No. 2158]

New Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning the addition of a Global Reseller Expedited Package Contracts 2 negotiated service agreement. This notice informs the public of the filing,

invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 25, 2014.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Notice of Commission Action
- III. Ordering Paragraphs

I. Introduction

On August 15, 2014, the Postal Service filed notice that it has entered into an additional Global Reseller Expedited Package Contracts 2 (GREP 2) negotiated service agreement (Agreement).¹

To support its Notice, the Postal Service filed a copy of the Agreement, a copy of the Governors' Decision authorizing the product, a certification of compliance with 39 U.S.C. 3633(a), and an application for non-public treatment of certain materials. It also filed supporting financial workpapers.

II. Notice of Commission Action

The Commission establishes Docket No. CP2014-71 for consideration of matters raised by the Notice.

The Commission invites comments on whether the Postal Service's filing is consistent with 39 U.S.C. 3632, 3633, or 3642, 39 CFR part 3015, and 39 CFR part 3020, subpart B. Comments are due no later than August 25, 2014. The public portions of the filing can be accessed via the Commission's Web site (<http://www.prc.gov>).

The Commission appoints Cassie D'Souza to serve as Public Representative in this docket.

III. Ordering Paragraphs

It is ordered:

1. The Commission establishes Docket No. CP2014-71 for consideration of the matters raised by the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, Cassie D'Souza is appointed to serve as an

¹ Notice of Filing a Functionally Equivalent Global Reseller Expedited Package Contracts 2 Negotiated Service Agreement and Application for Non-Public Treatment of Materials Filed Under Seal, August 15, 2014 (Notice).

officer of the Commission to represent the interests of the general public in this proceeding (Public Representative).

3. Comments are due no later than August 25, 2014.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

BILLING CODE 7710-FW-P

POSTAL REGULATORY COMMISSION

[Docket No. CP2014-38; Order No. 2157]

Amendment to Postal Product

AGENCY: Postal Regulatory Commission.

ACTION: Notice.

SUMMARY: The Commission is noticing a recent Postal Service filing concerning an amendment to Priority Mail Contract 80. This notice informs the public of the filing, invites public comment, and takes other administrative steps.

DATES: *Comments are due:* August 25, 2014.

ADDRESSES: Submit comments electronically via the Commission's Filing Online system at <http://www.prc.gov>. Those who cannot submit comments electronically should contact the person identified in the **FOR FURTHER INFORMATION CONTACT** section by telephone for advice on filing alternatives.

FOR FURTHER INFORMATION CONTACT: David A. Trissell, General Counsel, at 202-789-6820.

SUPPLEMENTARY INFORMATION:

Table of Contents

- I. Introduction
- II. Notice of Filings
- III. Ordering Paragraphs

I. Introduction

On August 15, 2014, the Postal Service filed notice that it has agreed to an Amendment to the existing Priority Mail Contract 80 negotiated service agreement approved in this docket.¹ In support of its Notice, the Postal Service includes a redacted copy of the Amendment.

The Postal Service also filed the unredacted Amendment under seal. The Postal Service seeks to incorporate by reference the Application for Non-

¹ Notice of United States Postal Service of Amendment to Priority Mail Contract 80, with Portions Filed Under Seal, August 15, 2014 (Notice).

Public Treatment originally filed in this docket for the protection of information that it has filed under seal. *Id.* at 1.

The Amendment changes the customer's volume commitment for mailing Priority Mail packages during the first and subsequent years of the contract. *Id.*, Attachment A at 1.

The Postal Service intends for the Amendment to become effective one business day after the date that the Commission completes its review of the Notice. Notice at 1. The Postal Service asserts that the Amendment will not impair the cost coverage of the contract. *Id.*

II. Notice of Filings

The Commission invites comments on whether the changes presented in the Postal Service's Notice are consistent with the policies of 39 U.S.C. 3632, 3633, or 3642, 39 CFR 3015.5, and 39 CFR part 3020, subpart B. Comments are due no later than August 25, 2014. The public portions of these filings can be accessed via the Commission's Web site (<http://www.prc.gov>).

The Commission appoints James F. Callow to represent the interests of the general public (Public Representative) in this docket.

III. Ordering Paragraphs

It is ordered:

1. The Commission reopens Docket No. CP2014-38 for consideration of matters raised by the Postal Service's Notice.

2. Pursuant to 39 U.S.C. 505, the Commission appoints James F. Callow to serve as an officer of the Commission (Public Representative) to represent the interests of the general public in this proceeding.

3. Comments are due no later than August 25, 2014.

4. The Secretary shall arrange for publication of this order in the **Federal Register**.

By the Commission.

Ruth Ann Abrams,

Acting Secretary.

SECURITIES AND EXCHANGE COMMISSION

[Release No. 34-72857; File No. SR-NYSEMKT-2014-68]

Self-Regulatory Organizations; NYSE MKT LLC; Notice of Filing and Immediate Effectiveness of Proposed Rule Change Amending Section 332 of the NYSE MKT Company Guide To Provide That Listed Companies Should Pay Listing Fees Due in Connection With the Listing of Additional Securities in the Manner Specified in the Exchange's Invoice

August 18, 2014.

Pursuant to Section 19(b)(1)¹ of the Securities Exchange Act of 1934 (the "Act")² and Rule 19b-4 thereunder,³ notice is hereby given that on August 12, 2014, NYSE MKT LLC (the "Exchange" or "NYSE MKT") filed with the Securities and Exchange Commission (the "Commission") the proposed rule change as described in Items I and II below, which Items have been prepared by the self-regulatory organization. The Commission is publishing this notice to solicit comments on the proposed rule change from interested persons.

I. Self-Regulatory Organization's Statement of the Terms of Substance of the Proposed Rule Change

The Exchange proposes to amend Section 332 of the NYSE MKT Company Guide (the [sic] Company Guide") to provide that listed companies should pay listing fees due in connection with the listing of additional securities in the manner specified in the Exchange's invoice. The text of the proposed rule change is available on the Exchange's Web site at www.nyse.com, at the principal office of the Exchange, and at the Commission's Public Reference Room.

II. Self-Regulatory Organization's Statement of the Purpose of, and Statutory Basis for, the Proposed Rule Change

In its filing with the Commission, the self-regulatory organization included statements concerning the purpose of, and basis for, the proposed rule change and discussed any comments it received on the proposed rule change. The text of those statements may be examined at the places specified in Item IV below. The Exchange has prepared summaries, set forth in sections A, B, and C below,

of the most significant parts of such statements.

A. Self-Regulatory Organization's Statement of the Purpose of, and the Statutory Basis for, the Proposed Rule Change

1. Purpose

The Exchange charges listed companies fees in connection with the listing of additional shares of a class of listed securities. The rates at which those fees are charged are established by Section 142 of the Company Guide. Section 332 of the Company guide specifies that the submission of a listing application in connection with the listing of additional securities must be accompanied by a check in the amount of the applicable listing fee pursuant to Section 142. The Exchange proposes to amend Section 332 to provide that, rather than having a listed company submit a check in connection with a listing application, the Exchange will send an invoice to the listed company upon receipt of the listing application. The invoice will specify the amount of the applicable listing fee and will provide instructions as to how the company should submit its payment. It is the Exchange's expectation for the foreseeable future that its invoices will provide instructions for companies to submit payment by wire transfer. The Exchange wishes to make this change as a matter of internal administrative efficiency and to avoid any inconvenience to listed companies in the event that checks are lost. The Exchange does not believe that the change in policy will impose any significant additional burden on listed companies.

2. Statutory Basis

The Exchange believes that the proposed rule change is consistent with Section 6(b)⁴ of the Act, in general, and furthers the objectives of Section 6(b)(5) of the Act,⁵ in particular in that it is designed to promote just and equitable principles of trade, to foster cooperation and coordination with persons engaged in regulating, clearing, settling, processing information with respect to, and facilitating transactions in securities, to remove impediments to and perfect the mechanism of a free and open market and a national market system, and, in general, to protect investors and the public interest. The Exchange believes that the proposed amendment is consistent with the goal of Section 6(b)(5) to remove

¹ 15 U.S.C. 78s(b)(1).

² 15 U.S.C. 78a.

³ 17 CFR 240.19b-4.

⁴ 15 U.S.C. 78f(b).

⁵ 15 U.S.C. 78f(b)(5).

impediments to and perfect the mechanisms of a free and open market because it simply increases the administrative efficiency with which the Exchange processes listing applications without substantively increasing the burden on listed companies.

B. Self-Regulatory Organization's Statement on Burden on Competition

The Exchange does not believe that the proposed rule changes will impose any burden on competition that is not necessary or appropriate in furtherance of the purpose of the Act. The proposed rule change will have no impact on competition as it simply permits a change in the manner in which listing fees are collected, without changing the amount of those fees.

C. Self-Regulatory Organization's Statement on Comments on the Proposed Rule Change Received From Members, Participants, or Others

No written comments were solicited or received with respect to the proposed rule change.

III. Date of Effectiveness of the Proposed Rule Change and Timing for Commission Action

The Exchange has filed the proposed rule change pursuant to Section 19(b)(3)(A)(iii) of the Act⁶ and Rule 19b-4(f)(6) thereunder.⁷ Because the proposed rule change does not: (i) significantly affect the protection of investors or the public interest; (ii) impose any significant burden on competition; and (iii) become operative prior to 30 days from the date on which it was filed, or such shorter time as the Commission may designate, if consistent with the protection of investors and the public interest, the proposed rule change has become effective pursuant to Section 19(b)(3)(A) of the Act and Rule 19b-4(f)(6)(iii) thereunder.⁸

At any time within 60 days of the filing of such proposed rule change, the Commission summarily may temporarily suspend such rule change if it appears to the Commission that such action is necessary or appropriate in the public interest, for the protection of investors, or otherwise in furtherance of the purposes of the Act.

⁶ 15 U.S.C. 78s(b)(3)(A)(iii).

⁷ 17 CFR 240.19b-4(f)(6).

⁸ 17 CFR 240.19b-4(f)(6)(iii). As required under Rule 19b-4(f)(6), the Exchange provided the Commission with written notice of its intent to file the proposed rule change, along with a brief description and the text of the proposed rule change, at least five business days prior to the date of filing of the proposed rule change.

IV. Solicitation of Comments

Interested persons are invited to submit written data, views, and arguments concerning the foregoing, including whether the proposed rule change is consistent with the Act. Comments may be submitted by any of the following methods:

Electronic Comments

- Use the Commission's Internet comment form (<http://www.sec.gov/rules/sro.shtml>); or
- Send an email to rule-comments@sec.gov. Please include File Number SR-NYSEMKT-2014-68 on the subject line.

Paper Comments

- Send paper comments in triplicate to Secretary, Securities and Exchange Commission, 100 F Street NE., Washington, DC 20549-1090.

All submissions should refer to File Number SR-NYSEMKT-2014-68. This file number should be included on the subject line if email is used. To help the Commission process and review your comments more efficiently, please use only one method. The Commission will post all comments on the Commission's Internet Web site (<http://www.sec.gov/rules/sro.shtml>). Copies of the submission, all subsequent amendments, all written statements with respect to the proposed rule change that are filed with the Commission, and all written communications relating to the proposed rule change between the Commission and any person, other than those that may be withheld from the public in accordance with the provisions of 5 U.S.C. 552, will be available for Web site viewing and printing in the Commission's Public Reference Room, 100 F Street NE., Washington, DC 20549 on official business days between the hours of 10:00 a.m. and 3:00 p.m. Copies of the filing also will be available for inspection and copying at the principal office of the Exchange. All comments received will be posted without change; the Commission does not edit personal identifying information from submissions. You should submit only information that you wish to make available publicly. All submissions should refer to File Number SR-NYSEMKT-2014-68 and should be submitted on or before September 12, 2014.

⁹ 17 CFR 200.30-3(a)(12).

For the Commission, by the Division of Trading and Markets, pursuant to delegated authority.⁹

Kevin M. O'Neill,
Deputy Secretary.

SECURITIES AND EXCHANGE COMMISSION

[File No. 500-1]

In the Matter of ATP Oil & Gas Corp., Cambridge Holdings, Ltd., FTE Networks, Inc., Raystream, Inc., and Shelron Group, Inc.; Order of Suspension of Trading

August 20, 2014.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of ATP Oil & Gas Corp. because it has not filed any periodic reports since the period ended March 31, 2012.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Cambridge Holdings, Ltd. because it has not filed any periodic reports since the period ended September 30, 2011.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of FTE Networks, Inc. because it has not filed any periodic reports since the period ended June 30, 2012.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Raystream, Inc. because it has not filed any periodic reports since the period ended July 31, 2012.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Shelron Group, Inc. because it has not filed any periodic reports since the period ended December 31, 2012.

The Commission is of the opinion that the public interest and the protection of investors require a suspension of trading in the securities of the above-listed companies. Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that trading in the securities of the above-listed companies is suspended for the period from 9:30 a.m. EDT on August 20, 2014, through 11:59 p.m. EDT on September 3, 2014.

By the Commission.

Jill M. Peterson,

Assistant Secretary.

SECURITIES AND EXCHANGE COMMISSION

[File No. 500-1]

International Building Technologies Group, Inc., Regeneca, Inc., Retail Pro, Inc., and Tri-Valley Corporation, Order of Suspension of Trading

August 20, 2014.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of International Building Technologies Group, Inc. because it has not filed any periodic reports since the period ended September 30, 2011.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Regeneca, Inc. because it has not filed any periodic reports since the period ended September 30, 2011.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Retail Pro, Inc. because it has not filed any periodic reports since the period ended December 31, 2007.

It appears to the Securities and Exchange Commission that there is a lack of current and accurate information concerning the securities of Tri-Valley Corporation because it has not filed any periodic reports since the period ended March 31, 2012.

The Commission is of the opinion that the public interest and the protection of investors require a suspension of trading in the securities of the above-listed companies. Therefore, it is ordered, pursuant to Section 12(k) of the Securities Exchange Act of 1934, that trading in the securities of the above-listed companies is suspended for the period from 9:30 a.m. EDT on August 20, 2014, through 11:59 p.m. EDT on September 3, 2014.

By the Commission.

SMALL BUSINESS ADMINISTRATION

Data Collection Available for Public Comments

ACTION: 60-day notice and request for comments.

SUMMARY: The Small Business Administration (SBA) intends to request

approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. Chapter 35 requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before October 21, 2014.

ADDRESSES: Send all comments to Dianna Seaborn, Chief, 7(a) Policy and Program Branch, Office of Financial Assistance, Small Business Administration, 409 3rd Street, 6th Floor, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: Dianna Seaborn, Chief, 7(a) Policy and Program Branch Office Financial Assistance, dianna.seaborn@sba.gov 202-205-3645, or Curtis B. Rich, Management Analyst, 202-205-7030, curtis.rich@sba.gov.

SUPPLEMENTARY INFORMATION: This information collection is provided by SBA lenders and borrowers to provide basic loan information and certifications regarding the disbursement of loan proceeds. SBA relies on this information during the guaranty purchase review process as a component in determining whether to honor a loan guaranty.

Solicitation of Public Comments

SBA is requesting comments on (a) Whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

Summary of Information Collection

(1) *Title:* Settlement Sheet.

Description of Respondents: SBA Lenders and Borrowers.

Form Number: SBA Form 1050.

Total Estimated Annual Responses: 15,000.

Total Estimated Annual Hour Burden: 3,800.

Curtis B. Rich,
Management Analyst.

SUMMARY: The Small Business Administration (SBA) intends to request approval, from the Office of Management and Budget (OMB) for the collection of information described below. The Paperwork Reduction Act (PRA) of 1995, 44 U.S.C. Chapter 35 requires federal agencies to publish a notice in the **Federal Register** concerning each proposed collection of information before submission to OMB, and to allow 60 days for public comment in response to the notice. This notice complies with that requirement.

DATES: Submit comments on or before October 21, 2014.

ADDRESSES: Send all comments to Susan Suckfiel, Supervisory Financial Analyst, Office of Financial Program Operations, Small Business Administration, 409 3rd Street, 6th Floor, Washington, DC 20416.

FOR FURTHER INFORMATION CONTACT: Susan Suckfiel, Supervisory Financial Analyst, Office Financial Program Operations, susan.suckfiel@sba.gov 202-205-6443, or Curtis B. Rich, Management Analyst, 202-205-7030, curtis.rich@sba.gov.

SUPPLEMENTARY INFORMATION: The objective of the debt collection activities is to obtain immediate repayment or arrive at a satisfactory arrangement for future repayment of debts owed to the Government. SBA uses the financial information provided by the debtor on Form 770 in making a determination regarding the compromise of such debts and other liquidation proceedings including litigation by the Agency and/or the Department of Justice.

Solicitation of Public Comments

SBA is requesting comments on (a) Whether the collection of information is necessary for the agency to properly perform its functions; (b) whether the burden estimates are accurate; (c) whether there are ways to minimize the burden, including through the use of automated techniques or other forms of information technology; and (d) whether there are ways to enhance the quality, utility, and clarity of the information.

Summary of Information Collection

(1) *Title:* Financial Statement of Debtor.

Description of Respondents: SBA Lenders.

Form Number: SBA Form 770.

Total Estimated Annual Responses: 5,000.

Total Estimated Annual Hour Burden: 5,000.

SUMMARY: Notice is hereby given of the following determinations: Pursuant to the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000 (and, as appropriate, Delegation of Authority No. 257 of April 15, 2003), I hereby determine that the objects to be included in the exhibition “Innovation and Spectacle: Chinese Ornamental Bronzes,” imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owner or custodian. I also determine that the exhibition or display of the exhibit objects at The Metropolitan Museum of Art, New York, NY, from on or about October 8, 2014, until on or about March 8, 2015, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the exhibit objects, contact Julie Simpson, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6467). The mailing address is U.S. Department of State, SA–5, L/DP, Fifth Floor (Suite 5H03), Washington, DC 20522–0505.

Dated: August 14, 2014.

Kelly Keiderling,*Principal Deputy Assistant Secretary, Bureau of Educational and Cultural Affairs, Department of State.*

Culturally Significant Objects Imported for Exhibition Determinations: “Grand Design: Pieter Coecke van Aelst and Renaissance Tapestry”

SUMMARY: Notice is hereby given of the following determinations: Pursuant to

the authority vested in me by the Act of October 19, 1965 (79 Stat. 985; 22 U.S.C. 2459), Executive Order 12047 of March 27, 1978, the Foreign Affairs Reform and Restructuring Act of 1998 (112 Stat. 2681, *et seq.*; 22 U.S.C. 6501 note, *et seq.*), Delegation of Authority No. 234 of October 1, 1999, Delegation of Authority No. 236–3 of August 28, 2000, and, as appropriate, Delegation of Authority No. 257 of April 15, 2003, I hereby determine that the objects to be included in the exhibition “Grand Design: Pieter Coecke van Aelst and Renaissance Tapestry,” imported from abroad for temporary exhibition within the United States, are of cultural significance. The objects are imported pursuant to loan agreements with the foreign owners or custodians. I also determine that the exhibition or display of the exhibit objects at the Metropolitan Museum of Art, New York, New York, from on or about October 8, 2014, until on or about January 11, 2015, and at possible additional exhibitions or venues yet to be determined, is in the national interest. I have ordered that Public Notice of these Determinations be published in the **Federal Register**.

FOR FURTHER INFORMATION CONTACT: For further information, including a list of the exhibit objects, contact Paul W. Manning, Attorney-Adviser, Office of the Legal Adviser, U.S. Department of State (telephone: 202–632–6469). The mailing address is U.S. Department of State, SA–5, L/DP, Fifth Floor (Suite 5H03), Washington, DC 20522–0505.

Dated: August 14, 2014.

BILLING CODE 4710–05–P**DEPARTMENT OF TRANSPORTATION****Federal Aviation Administration****Aviation Rulemaking Advisory Committee; Charter Renewal**

AGENCY: Federal Aviation Administration (FAA), DOT.

ACTION: Notice of Renewal.

SUMMARY: The FAA announces the charter renewal of the Aviation Rulemaking Advisory Committee (ARAC), a Federal Advisory Committee that works with industry and the public to improve the development of the FAA’s regulations. This charter renewal will take effect on September 17, 2014, and will expire after 2 years.

FOR FURTHER INFORMATION CONTACT:

Renee Pocius, Federal Aviation Administration, 800 Independence Avenue SW., Washington, DC 20591, telephone (202) 267–5093; fax (202) 267–5075; email Renee.Pocius@faa.gov.

SUPPLEMENTARY INFORMATION: Pursuant to section 14(a)(2)(A) of the Federal Advisory Committee Act (Pub. L. 92–463), the FAA is giving notice of the charter renewal for the ARAC. The ARAC was established to provide advice and recommendations to FAA on regulatory matters. The ARAC is composed of representatives from member organizations and associations that represent the various aviation industry segments. The diversity of the Committee ensures the requisite range of views and expertise necessary to discharge its responsibilities. See the ARAC Web site for details on pending tasks at http://www.faa.gov/regulations_policies/rulemaking/committees/documents/.

Issued in Washington, DC, on August 18, 2014.

Lirio Liu,*Designated Federal Officer, Aviation Rulemaking Advisory Committee.*

Federal Transit Administration

[FTA Docket No. FTA–2014– 0022]

Agency Information Collection Activity Under OMB Review

AGENCY: Federal Transit Administration, DOT.

ACTION: Notice of request for comments.

SUMMARY: The Federal Transit Administration invites public comment about its intention to request the Office of Management and Budget's (OMB) approval to renew the following information collection:

Bus Testing Program

The information collected is necessary to determine eligibility of applicants and ensure the proper and timely expenditure of federal funds within the scope of the program. The

Federal Register notice with a 60-day comment period soliciting comments for the Bus Testing Program was published on June 10, 2014 (Citation 79 FR 11). No comments were received from that notice.

DATES: Comments must be submitted before September 22, 2014. A comment to OMB is most effective, if OMB receives it within 30 days of publication.

FOR FURTHER INFORMATION CONTACT: Tia Swain, Office of Administration, Office of Management Planning, (202) 366-0354.

SUPPLEMENTARY INFORMATION:

Title: Bus Testing Program.

(OMB Number: 2132-0550).

Abstract: This collection involves FTA's Bus Testing Program. The information to be collected for the Bus Testing Program is necessary to ensure that buses have been tested at the Bus Testing Center for maintainability, reliability, safety, performance (including breaking performance), structural integrity, fuel economy, emissions, and noise before federal funds can be obligated or expended for the acquisition of a new bus model (including any model using alternative fuels).

Estimated Total Annual Burden: 210 hours.

ADDRESSES: All written comments must refer to the docket number that appears at the top of this document and be submitted to the Office of Information and Regulatory Affairs, Office of Management and Budget, 725—17th Street NW., Washington, DC 20503, Attention: FTA Desk Officer.

Comments are Invited On: Whether the proposed collection of information is necessary for the proper performance of the functions of the Department, including whether the information will have practical utility; the accuracy of the Department's estimate of the burden of the proposed information collection; ways to enhance the quality, utility, and clarity of the information to be collected; and ways to minimize the burden of the collection of information on respondents, including the use of automated collection techniques or other forms of information technology.

Susan Camarena,

Acting Deputy Associate Administrator for Administration.

BILLING CODE 4910-57-P

DEPARTMENT OF TRANSPORTATION

National Highway Traffic Safety Administration

[Docket No. NHTSA-2014-0047; Notice 2]

Mitsubishi Motors North America, Inc., Grant of Petition for Decision of Inconsequential Noncompliance

AGENCY: National Highway Traffic Safety Administration (NHTSA), Department of Transportation (DOT).

ACTION: Grant of Petition.

SUMMARY: Mitsubishi Motors North America, Inc. (MMNA) has determined that certain model year (MY) 2014 Mitsubishi Outlander Sport multipurpose passenger vehicles (MPV) do not fully comply with paragraph S6 of Federal Motor Vehicle Safety Standard (FMVSS) No. FMVSS 205, *Glazing Materials*. MMNA has filed an appropriate report dated April 3, 2014, pursuant to 49 CFR part 573, *Defect and Noncompliance Responsibility and Reports*.

ADDRESSES: For further information on this decision contact Mr. Luis Figueroa, Office of Vehicle Safety Compliance, the National Highway Traffic Safety Administration (NHTSA), telephone (202) 366-5298, facsimile (202) 366-7002.

SUPPLEMENTARY INFORMATION:

I. MMNA's Petition: Pursuant to 49 U.S.C. 30118(d) and 30120(h) and the rule implementing those provisions at 49 CFR part 556, MMNA has petitioned for an exemption from the notification and remedy requirements of 49 U.S.C. Chapter 301 on the basis that this noncompliance is inconsequential to motor vehicle safety.

Notice of receipt of the petition was published, with a 30-day public comment period, on June 6, 2014 in the **Federal Register** (79 FR 32814). One comment was received from Joseph Poley. Mr. Poley stated his belief that in the notice of receipt NHTSA incorrectly referred to the subject glazing as "laminated" when it was actually "tempered." Mr. Poley is correct. In its petition, MMNA referred to the glazing as "tempered." NHTSA inadvertently referred to the glazing as "laminated" in the notice of receipt. To view the petition, the comment, and all supporting documents log onto the Federal Docket Management System (FDMS) Web site at: <http://www.regulations.gov/>. Then follow the online search instructions to locate docket number "NHTSA-2014-0047."

II. Vehicles Involved: Affected are approximately 311 MY 2014 Mitsubishi

Outlander Sport MPVs manufactured from February 12, 2014 through February 21, 2014 that contained mislabeled tempered rear door glazing manufactured by Pilkington North America, Inc. (PNA).

III. Noncompliance: MMNA explains that the noncompliance is that the tempered rear door glazing in the subject vehicles was labeled with the incorrect manufacturer's model number. Specifically, the glazing was labeled with PNA model number "M-131" instead of the correct model number "M-129."

IV. Rule Text: FMVSS No. 205 incorporates ANSI Z26.1-1996 and other industry standards in paragraph S.5.1 by reference. Paragraph S6 of FMVSS No. 205 specifically requires manufacturers to mark the glazing material in accordance with Section 7 of ANSI Z26.1 and to add other markings required by NHTSA. With respect to the subject noncompliance, Section 7 of ANSI Z26.1-1996 specifies that in addition to the item of glazing number and other required markings, the manufacturer shall include a model number which will identify the type of construction of the glazing material.

V. Summary of MMNA's Analyses: MMNA stated its belief that the subject noncompliance relates solely to the product monograms or markings, specifically the use of model number "M-131" instead of "M-129". These rear door windows otherwise meet all other marking and performance requirements of FMVSS No. 205 and ANSI Z26.1. MMNA also stated its belief that NHTSA previously noted that "The stated purposes of FMVSS No. 205 are to reduce injuries resulting from impact to glazing surfaces, to ensure a necessary degree of transparency in motor vehicle windows for driver visibility, and to minimize the possibility of occupants being thrown through the vehicle windows in collisions" (64 FR 70116). MMNA believes that because the affected glazing fully meets all of the applicable performance requirements of FMVSS No. 205 that the absence of the correct model number on the glazing has no effect upon the ability of the glazing to satisfy those purposes and thus perform in the manner intended by FMVSS No. 205.

MMNA also stated its belief that NHTSA has previously granted other petitions that MMNA believes were similar to the subject petition.

MMNA is not aware of any crashes, injuries, customer complaints, or field reports associated with this condition.

MMNA has additionally informed NHTSA that it has corrected the

noncompliance so that all future production vehicles will comply with FMVSS No. 205.

In summation, MMNA believes that the described noncompliance of the subject vehicles is inconsequential to motor vehicle safety, and that its petition, to exempt from providing recall notification of noncompliance as required by 49 U.S.C. 30118 and remedying the recall noncompliance as required by 49 U.S.C. 30120 should be granted.

NHTSA Decision:

NHTSA Analysis: FMVSS No. 205 specifies labeling and performance requirements for automotive glazing. FMVSS No. 205 incorporates ANSI Z26.1 (1996) and other industry standards by reference (S.5.1). Paragraph S6 of FMVSS No. 205 requires manufacturers to mark glazing material in accordance with Section 7 of ANSI Z26.1 (1996) and to add other specific markings required by NHTSA. Section 7 of ANSI Z26.1 (1996) specifies that in addition to other markings required, the manufacturer shall include a model number which will identify the type of construction of the glazing material.

According to the petition, the nature of the noncompliance is the incorrect model number as required in FMVSS No. 205 and ANSI Z26.1 (1996). Mitsubishi has certified that the window complies with all other safety performance requirements of FMVSS No. 205. NHTSA believes that the incorrect model number is inconsequential to vehicle safety since the unmarked glazing complies with the other labeling and performance requirements of the standard. Also, NHTSA believes that the noncompliance would not result in inadvertent replacement of the windows with the wrong glazing because the population with the labeling noncompliance will not be available as replacement/service parts. Mitsubishi has returned all affected glazing to the glazing manufacturer, with the exception of the 311 glazing units that were installed in vehicles destined to be sold in the USA, and the manufacturer scrapped the remainder of the affected population.

NHTSA Decision: In consideration of the foregoing, NHTSA has decided that MMNA has met its burden of persuasion that the FMVSS No. 205 noncompliance is inconsequential to motor vehicle safety. Accordingly, MMNA's petition is hereby granted and MMNA is exempted from the obligation of providing notification of, and a remedy for, that noncompliance under 49 U.S.C. 30118 and 30120.

NHTSA notes that the statutory provisions (49 U.S.C. 30118(d) and 30120(h)) that permit manufacturers to file petitions for a determination of inconsequentiality allow NHTSA to exempt manufacturers only from the duties found in sections 30118 and 30120, respectively, to notify owners, purchasers, and dealers of a defect or noncompliance and to remedy the defect or noncompliance. Therefore, this decision only applies to the subject noncompliant vehicles that MMNA no longer controlled at the time it determined that the noncompliance existed. However, the granting of this petition does not relieve vehicle distributors and dealers of the prohibitions on the sale, offer for sale, or introduction or delivery for introduction into interstate commerce of the noncompliant vehicles under their control after MMNA notified them that the subject noncompliance existed.

Authority: 49 U.S.C. 30118, 30120; Delegations of authority at 49 CFR 1.95 and 501.8.

Jeffrey M. Giuseppe,

Acting Director Office of Vehicle Safety Compliance.

BILLING CODE 4910-59-P

DEPARTMENT OF THE TREASURY

Treasury Directive 75-02 and Directive Publication 75-02, Department of the Treasury National Environmental Policy Act (NEPA) Program

AGENCY: Office of Environment, Health, and Safety, Departmental Offices, Department of the Treasury.

ACTION: Notice.

SUMMARY: The Department of the Treasury (Treasury) is publishing this notice to provide an opportunity for public comment on its draft directive and accompanying guidelines containing policy and procedures for implementing the National Environmental Policy Act of 1969 (NEPA), as amended, Executive Order 11514, as amended, Executive Order 12114, and Council on Environmental Quality (CEQ) regulations for implementing the procedural provisions of NEPA (40 CFR parts 1500-1508). Pursuant to CEQ regulations, Treasury is soliciting comments from members of the interested public.

DATES: Comments must be received by October 21, 2014.

ADDRESSES: Send submissions relating to this Notice to: Department of the Treasury, Office of Environment,

Health, and Safety, Treasury Department Annex, Room 6400K, 1500 Pennsylvania Avenue NW., Washington, DC, 20220. Alternatively, comments relating to this Notice may be submitted electronically via the Federal e-Rulemaking Portal at www.regulations.gov.

FOR FURTHER INFORMATION CONTACT:

Clayt Lauter, Director, Office of Environment, Health & Safety, at 202-622-1712 (not a toll-free number) or clayt.lauter@treasury.gov.

SUPPLEMENTARY INFORMATION:

Request for Comments

The Department of the Treasury encourages interested persons to submit written data, views, or comments. Persons submitting comments should please include their name, address, and other appropriate contact information. You may submit your comments and material by one of the means listed under **ADDRESSES**. If you submit them by mail, submit them in an unbound format, no larger than 8½ by 11 inches, suitable for copying and electronic filing. Treasury will consider all comments received during the comment period.

Background

This directive and accompanying guidelines establish policy and procedures to ensure the integration of environmental considerations into the mission of the Department of the Treasury. They outline roles and responsibilities for compliance with NEPA, and establish a framework for the balanced and proactive consideration of NEPA in the planning and execution of Treasury activities.

Treasury is composed of nine bureaus and three Inspectors General Offices: Bureau of Engraving and Printing (BEP), Bureau of the Fiscal Service (BFS), Departmental Offices (DO), Financial Crimes Enforcement Network (FinCEN), Internal Revenue Service (IRS), United States Mint (Mint), Office of the Comptroller of the Currency (OCC), Alcohol and Tobacco Tax and Trade Bureau (TTB), Community Development Financial Institutions Fund (CDFI), Special Inspector General, Troubled Asset Relief Program (SIGTARP), Office of the Inspector General (OIG), and Treasury Inspector General for Tax Administration (TIGTA). Note: This directive does not apply to CDFI. See 12 CFR part 1815, "Environmental Quality." Treasury's responsibilities include managing federal finances; collecting taxes, and paying bills of the United States; producing currency and coinage; managing government accounts

and the public debt; supervising national banks and thrift institutions; advising on domestic and international financial, monetary, economic, trade and tax policy; enforcing federal finance and tax laws; and investigating and prosecuting tax evaders, counterfeiters, and forgers.

The policies and procedures in the proposed directive and accompanying guidelines will assist Treasury in evaluating its actions in light of the requirements in CEQ regulations and NEPA. These substantive or procedural requirements apply to the program planning and project development in all Treasury bureaus and offices. In particular, there is special consideration of the requirements for public involvement, dispute resolution, intergovernmental coordination, emergency procedures, and handling of sensitive information in Treasury decisionmaking.

This proposed directive and accompanying guidelines include processes for preparing categorical exclusions, environmental assessments, findings of no significant impact, and environmental impact statements. Treasury proposes to use these in conjunction with NEPA, the CEQ regulations at 40 CFR parts 1500–1508, and other pertinent environmental regulations, Executive Orders, statutes, and laws developed for the consideration of environmental impacts of federal actions.

The directive and guidelines were established by reviewing the historical actions and missions of all the Treasury bureaus. They were prepared by bureau representatives with environmental policy and operations responsibilities, under the direction of the Office of Environment, Health, and Safety.

The group reviewed existing law and requirements, agency policies, existing guidance on the implementation of NEPA from the Council on Environmental Quality, and it examined policies and procedures from other federal agencies to identify policies that could be appropriate for the missions of the Treasury Department.

An area of emphasis included the development of appropriate categorical exclusions. The group considered that Treasury's activities are performed primarily in office-type environmental surroundings, but in the case of the Bureau of Engraving and Printing, and United States Mint, manufacturing settings predominate. Likewise, the group examined existing categorical exclusions from other federal departments to determine whether any might be appropriate for Treasury. The resulting list of proposed categorical

exclusions is included in Appendix 1 of the proposed guidelines.

The Department of the Treasury solicits public review of this document and will review and consider those comments before this directive and accompanying guidelines are final.

Nani Coloretti,

Assistant Secretary for Management.

TREASURY DIRECTIVE: 75–02

Date: TBD

Sunset Review: TBD

SUBJECT: Department of the Treasury National Environmental Policy Act (NEPA) Program

1. **PURPOSE.** This directive establishes policy, and assigns responsibilities for implementing the Council on Environmental Quality's (CEQ) regulations for the National Environmental Policy Act (NEPA) found at 40 CFR parts 1500–1508.

2. **SCOPE.** This directive applies to all bureaus, the Departmental Offices, and the Office of Inspector General (OIG), Office of the Treasury Inspector General for Tax Administration (TIGTA), and Office of the Special Inspector General for the Troubled Asset Relief Program (SIGTARP) (collectively referred to as "bureaus"). The provisions of this directive shall not be construed to interfere with or impede the authorities or independence of the Department's Inspectors General. Nor shall they be interpreted to govern environmental considerations related to awards under the Community Development Financial Institutions (CDFI) Fund programs as its NEPA program is regulated under 12 CFR part 1815, "Environmental Quality."

3. **POLICY.**

a. The Department of the Treasury (Treasury) will consider environmental quality as equal with economic, social, and other relevant factors in program development and decision making processes. Additionally, Treasury will fully evaluate its actions to ensure compliance with the requirements of NEPA and the CEQ regulations, where applicable.

b. In assessing the potential environmental impacts of its actions, Treasury will consult early with appropriate federal, state, and local agencies and other organizations to provide decision-makers with the technical and other aspects of environmental planning.

c. When adverse environmental impacts are identified, either direct or indirect, an examination will be made of alternative courses of action, including their potential environmental impacts.

The objective of the environmental review will be to develop a feasible alternative with the least adverse environmental impact. The alternative of not proceeding with the proposal will also be considered.

4. **TERMINOLOGY.** The terminology and definitions contained in 40 CFR part 1508 shall be employed for the purposes of this directive.

5. **RESPONSIBILITIES.**

a. *The Assistant Secretary for Management (ASM)* has the authority to integrate fully all applicable environmental laws and regulations into Treasury's missions and activities. The ASM shall:

(1) seek to ensure that all actions taken by Treasury, with respect to the fulfillment of NEPA and the CEQ regulations, are duly coordinated with appropriate federal, state, and local entities;

(2) provide guidance on environmental policy and requirements;

(3) assist in reviewing and assessing the environmental impact of proposed Treasury actions;

(4) provide guidance in the consideration, application, preparation, scoping, processing, and distribution of categorical exclusions (CEs), environmental assessments (EAs) and environmental impact statements (EISs);

(5) receive for clearance action all CEs, EAs, and EISs, draft and final, originating in Treasury;

(6) receive all CEs, EAs, and EISs submitted by other agencies that address Treasury actions and coordinate the appropriate review and reply;

(7) perform such other functions as are specified in this directive or are appropriate under the CEQ regulations or other instructions or recommendations of agencies charged with carrying out the duties of the statutes listed in Section 8; and

(8) ensure that EAs, EISs and Findings of No Significant Impact (FONSIs) prepared under Treasury's jurisdiction are accessible to the public from the respective bureau's Web site for five years from the date of issuance.

b. *Heads of Bureaus shall:*

(1) prepare, and circulate within Treasury for the consideration of others, EAs and EISs when an action or policy area in question falls under their jurisdiction;

(2) issue any supplementary procedures consistent with this directive for the implementation of NEPA which the bureaus deem necessary. Procedures shall be addressed in accordance with the CEQ regulations (Section 1507.3) and this directive and shall be submitted to the

ASM through the OGC for coordination, review and concurrence.

(3) ensure that communications with CEQ, and other government agencies or individuals on matters concerning Treasury compliance with NEPA and the relevant CEQ regulations are signed by, or coordinated with, the ASM through the OGC. Examples of such communications are letters transmitting CEs, EAs, and EISs, reports, and all Departmental contacts relevant to Treasury compliance with NEPA and the CEQ regulations. Unless special circumstances indicate that a different officer should act, communications announcing decisions to prepare EAs or EISs, requesting comments on draft statements, or transmitting final statements for the information of agencies, shall also be signed by the ASM and, in the case of a non-Treasury entity, shall be addressed to its ASM or equivalent official;

(4) ensure that mitigation measures that have been identified in decision documents (e.g., Records of Decision (RODs)) are carried out. Bureaus shall institute procedures in coordination with their environmental program manager to ensure that the mitigation measures are carried out (Sections 1505.2(c) and 1505.3, CEQ regulations, and CEQ Guidance: Appropriate Use of Mitigation and Monitoring and Appropriate Use of Mitigated Finding of No Significant Impact, issued January 14, 2011). Further, the mitigation must be monitored to assure that it is having the intended environmental benefits;

(5) provide for early involvement in all actions which require some form of federal approval as required by Sections 1501.2(d), and 1500.5 (a, f) of the CEQ regulations;

(6) ensure public involvement in the NEPA process pursuant to Section 1506.6 of the CEQ regulations. Communicate timely and provide electronic documents related to public involvement with the ASM through the Treasury Departmental Offices Environmental Program Manager (EPM) located in the OEHS.

(7) prepare legislative EISs. Bureaus with primary responsibility for legislative proposals originating in Treasury, which will significantly affect the quality of the human environment, shall be responsible for preparing legislative EISs. Close coordination shall be maintained between the ASM through the EPM and bureaus concerning the legislative proposals;

(8) designate a NEPA Point-of-Contact and alternate in their Bureau to coordinate with the EPM;

(9) perform such other functions as specified in this directive; and

(10) be responsive to requests from the CEQ and other relevant agencies for reports or other information in connection with the implementation of NEPA, and for the preparation and circulation of EISs as required by Section 1506.9 of the CEQ regulations.

c. *The Bureau NEPA Points-of-Contact shall collaborate with the EPM to:*

(1) identify actions within their organization requiring an EA or EIS;

(2) ensure that each required assessment or statement is prepared in a timely manner and with the prescribed content by appropriate staff;

(3) ensure compliance with the requirements of NEPA, the CEQ regulations, and this directive by coordinating the review of such statements and assessments, and by maintaining compliance with all applicable scheduling, scoping, consultation, circulation, public hearing, and publication requirements;

(4) maintain effective communication and consultation with the OGC and inform key officials of current developments in environmental policy and programs;

(5) ensure that the assessment of the environmental impact of actions concerning various areas of Treasury policy and operations, and the preparation of EAs and EISs relating thereto, shall be coordinated with the CEQ;

(6) ensure that all NEPA documents releasable to the public are provided to the OGC for review prior to posting on the Department's public Web site; and

(7) participate in and/or monitor the General Services Administration's (GSA) NEPA activities involving Treasury facilities.

d. *The EPM shall receive all EAs and EISs submitted by other agencies for comment and coordinate the appropriate review and reply. If any bureau receives a request for comment directly from another agency, the request, together with the respective documents, shall be referred to the Departmental Offices (DO) Environmental Program Manager for appropriate action. Department of the Treasury comments should be confined to matters within the jurisdiction or expertise of Treasury. However, comments need not be limited to environmental aspects, but may relate to fiscal, economic, and non-governmental matters of concern to the Department.*

6. **IMPLEMENTATION.** Guidance and procedures on implementing this directive are found in Treasury Directive Publication (TD P) 75-02.

9. **CANCELLATION.** Treasury Directive 75-02, "Department of the Treasury Environmental Quality Program," dated September 25, 1990, is superseded.

10. **EMERGENCIES.** In the event of emergencies which may require a bureau to take an action with significant environmental impacts without complying with this directive or the CEQ regulations, the CEQ should be consulted, through the EPM, about alternative arrangements (Section 1506.11, CEQ regulations).

11. **OFFICES OF PRIMARY INTEREST.** The Office of Environment, Health, and Safety. Office of Assistant Secretary for Management.

Nani Coloretti, Assistant Secretary for Management

Treasury Directive Publication 75-02

SUBJECT: Guidelines for Implementing the Department of the Treasury National Environmental Policy Act Program

1. **PURPOSE.** This Treasury Directive Publication (Publication) provides guidelines and procedures for the effective implementation of the Council on Environmental Quality (CEQ) regulations on the National Environmental Policy Act (NEPA).

2. **SCOPE.** This directive publication applies to all bureaus, the Departmental Offices, and the Office of Inspector General (OIG), Office of the Treasury Inspector General for Tax Administration (TIGTA), and Office of the Special Inspector General for the Troubled Asset Relief Program (SIGTARP) (collectively referred to as "bureaus"). The provisions of this directive shall not be construed to interfere with or impede the authorities or independence of the Department's Inspectors General. Nor shall they be interpreted to govern environmental considerations related to awards under the Community Development Financial Institutions (CDFI) Fund programs as its NEPA program is regulated under 12 CFR part 1815, "Environmental Quality."

3. **RELATED DIRECTIVE.** Treasury Directive 75-02, "Department of the Treasury National Environmental Policy Act Program."

4. **RESPONSIBLE OFFICE.** Office of Environment, Health, and Safety (OEHS) within the Office of the Deputy Assistant Secretary for Management and Budget (DASMB).

5. **EARLY INVOLVEMENT IN ACTIONS INITIATED BY PRIVATE OR OTHER NON-FEDERAL ENTITIES.**

(1) To implement the requirements of Section 1501.2(d) of the CEQ regulations with respect to actions planned by private or other non-federal entities that require some form of federal approval (for example, loans, grants, or approvals in connection with bureau managed or regulated facilities), each bureau shall:

(a) prepare, within a reasonable timeframe, generic guidelines describing the scope and level of environmental information required from applicants as a basis for evaluating their proposed actions and make these guidelines available;

(b) provide such guidance on a project-by-project basis to applicants seeking assistance from the bureau;

(c) upon receipt of an application for bureau approval, or notification that an application will be filed, consult as required with other appropriate parties to initiate and coordinate any necessary environmental analyses;

(d) consult with appropriate federal, regional state and local agencies and other potentially interested parties during preliminary planning stages to ensure that all environmental factors are identified;

(e) communicate and consult in a timely manner with the ASM through the Treasury Departmental Offices Environmental Program Manager (EPM) located in the OEHS.

(2) The responsible bureau shall independently evaluate the information submitted by the applicant and, if it accepts that information, shall be responsible for its accuracy. If the bureau chooses to use the information submitted by the applicant in an EA or EIS, it must include the names of the persons responsible for the independent evaluation in a list of preparers (Section 1506.5(a), CEQ regulations).

(3) To facilitate compliance with the requirements above, private applicants and other non-federal entities should be advised to:

(a) contact Treasury as early as possible in the planning process for guidance on the scope and level of environmental information which may be required to be submitted in support of their application;

(b) conduct any studies which are deemed necessary and appropriate by Treasury to determine the impact of the proposed action on the human environment;

(c) submit applications for necessary federal, regional, state and local approvals as early as possible in the planning process;

(d) notify Treasury as early as possible of any other federal, regional, state, local and Indian tribe actions required for project completion so that Treasury may

coordinate all federal environmental reviews; and

(e) notify Treasury of any known parties potentially affected by, or interested in, the proposed action.

6. THE NEPA PROCESS.

a. *Classes of Action Requiring Similar Treatment Under NEPA.*

(1) NEPA actions undertaken by Treasury may be broken down into three main classes of action:

(a) those actions normally requiring EISs, such as proposals for major Treasury building projects involving large land acquisition and construction of large facilities, or for proposed legislation which may have a significant effect on the environment;

(b) those actions normally requiring EAs, but not necessarily EISs, such as proposals to build a new warehouse for non-hazardous storage, production of next generation currency, or approval of plastic liquor bottles or ethanol permits; and

(c) those actions requiring neither an EIS nor an EA; e.g., categorical exclusions (CEs). CEs are actions which meet the definition contained in 40 CFR 1508.4, and, based on past experience with similar actions, typically do not involve significant environmental impacts, either individually or cumulatively.

(2) Treasury does not, in general, have responsibility for actions which will have a significant effect on the quality of the human environment. Decisions as to whether environmental documentation is required shall be made on a case-by-case basis by the head of the bureau involved in conjunction with the ASM through the EPM. Additional guidance may be obtained from the CEQ.

(3) In the event a proposed action falls within either category (a) or (b) of subparagraph (1) above, the bureau should take the appropriate steps outlined in sections 8 and 9 below. If the proposed action is categorically excluded, then the bureau may proceed with implementing the action.

b. *Integrating the NEPA Process with Bureau Planning and Decision Making.*

(1) The ultimate purpose of NEPA is to ensure that public officials make decisions based on an understanding of the environmental consequences of proposed major federal actions. The means provided by NEPA to achieve its goals is called the "NEPA process" and is outlined in Sec. 102 of NEPA [42 USC § 4332].

(2) At all appropriate facilities and organizational levels, bureaus shall integrate their NEPA process within their environmental management system (EMS). To comply with NEPA,

bureaus must ensure that the NEPA process is integrated with bureau planning and decision making as early as possible (Sections 1501.2 and 1505.1, CEQ Regulations). Accordingly, bureaus shall:

(a) ensure, where necessary, final EAs or EISs and related documents accompany proposals through the entire review process;

(b) consider and balance pertinent non-environmental factors with those relating to the environment and consider all practicable alternatives and mitigation measures identified in the environmental documents;

(c) make no decision on a proposed action until the applicable timing requirements have been met;

(d) communicate and consult in a timely manner with the ASM through the EPM; and

(e) prepare a concise public record of the decision at the time it is made, or, for a legislative EIS, at the time of its recommendation to Congress. This record will be prepared in accordance with Section 1505.2 of the CEQ regulations.

7. DOCUMENTING A DEPARTMENT OF THE TREASURY CATEGORICAL EXCLUSION (CE).

a. The head of the bureau shall prepare a Record of Categorical Exclusion Determination when a category of actions repeatedly demonstrates no significant effect on the human environment or the agency has other evidence that a CE is warranted. This might include through scientific evidence or review of other agencies' categorical exclusions.

Appendix 1 lists bureau actions which Treasury has determined do not individually or cumulatively have a significant effect on the human environment. To find that a proposal is categorically excluded, the bureau shall determine the following:

(1) The proposal fits within one of the classes of actions that are listed in Appendix 1; and

(2) There are no extraordinary circumstances related to the proposed action that are present that may have a significant environmental effect. The extraordinary circumstances set forth by the Department of the Treasury are as follows:

(a) An action that results in a project of greater scope or size than typically experienced for a particular category of actions;

(b) Highly controversial environmental effects exist where controversy is defined as: voiced opposition from state/local agencies/tribes, an unusual level of concern raised by the public, or use of unproven

technology with uncertain environmental effects;

(c) Potential impacts to areas of critical environmental concern are found, including, but not limited to, prime or unique agricultural lands, wetlands or floodplains, coastal zones, wilderness areas, aquifers, or wild and scenic rivers;

(d) Potential effects to properties or archaeological resources exist, which are either listed or eligible for listing on the National Register of Historic Places (note: this extraordinary circumstance is not applicable if a separate Section 106 process under the National Historic Preservation Act has been completed resulting in the concurrence of the State Historic Preservation Officer (SHPO) or the Tribal Historic Preservation Officer (THPO) or the signing of a Memorandum of Agreement with the SHPO or THPO and/or the Advisory Council on Historic Preservation);

(e) Adverse effects exist on species endangered, threatened, or proposed to be listed on the List of Endangered or Threatened Species or located in an area designated as Critical Habitat for an endangered or threatened species or other protected resources;

(f) Possible violation exists of federal, state, local, or tribal law for the protection of the environment;

(g) Inconsistencies exist with any federal, state, local or tribal law, requirement or administrative determination relating to the environmental aspects of the action;

(h) Potential for degradation exists, even though slight, of already existing poor environmental conditions;

(i) Presence of hazardous or toxic substances exists at levels which exceed federal, state, local or tribal law or regulations or standards requiring action or attention;

(j) Potential exists for adverse effects on health or safety; or

(k) Potential for significant cumulative impacts exist when the proposed action is combined with other past, present, and reasonably foreseeable future actions, even though the impacts of the proposed action may not be significant by themselves.

(l) The degree to which the possible effects on the human environment are highly uncertain or involve unique or unknown risks.

(m) The degree to which the action may establish a precedent for future actions with significant effects or represents a decision in principle about a future consideration.

b. When it is determined that an activity warrants a CE, the following is required to be documented by the

bureau with an electronic copy sent to the EPM:

(1) A completed Environmental Analysis for Categorical Exclusions form;

(2) A reference to the type of CE being applied. (Appendix 1);

(3) A determination statement which shall be signed and dated by the bureau head. [*Suggested statement language:* Based on my review of information conveyed to me and attached concerning the proposed action designation of a categorical exclusion, I have determined that the proposed action is categorically excluded under Treasury Directive 75-02 and the proposed action is not subject to any extraordinary circumstances and is hereby precluded from further NEPA review.]

c. The EPM will post the final document identifying the CE on the Treasury Department's public Web site.

8. WRITING A DEPARTMENT OF THE TREASURY ENVIRONMENTAL ASSESSMENT (EA).

a. The head of the bureau shall prepare the assessment. The assessment shall be submitted electronically to the ASM through the EPM for review and approval. The EPM will place the final document(s) on the Department of the Treasury Public NEPA Web site.

b. To the extent practicable, other agencies, applicants, and the public should be involved in preparing the EA (see also Section 1501.4.b, CEQ regulations). Responsibility for information provided by applicants for use in preparing an EA or for assessments prepared by an applicant for an organization is outlined in Section 1506.5(b) of the CEQ regulations.

c. Treasury EAs shall:

(1) describe the proposed action and the need for it;

(2) briefly describe the environmental impacts of, and alternatives to, the proposed action, including mitigation measures;

(3) identify and analyze impacts associated with energy (including alternative energy sources) and climate change;

(4) list the agencies and persons consulted;

(5) provide a brief analysis, based upon the above evidence, for determining whether to prepare an Environmental Impact Statement (EIS), or a Finding of No Significant Impact (FONSI); and

(6) make EAs and findings of no significant impact available to the public.

d. NEPA requires that for all proposals for legislation or other major

federal actions significantly affecting the quality of the human environment, the environmental implications of the proposal are to be explored.

e. Whenever a Bureau matter, including the initiation of any action or program previously discontinued, could constitute a major federal action significantly affecting the quality of the human environment, an EA shall be prepared as soon as possible, and at all times prior to the decision to take or to continue the action.

f. An EA need not be prepared if an organization has decided to prepare an EIS on a proposed action.

9. WRITING A DEPARTMENT OF THE TREASURY ENVIRONMENTAL IMPACT STATEMENT (EIS).

a. Once it is determined that an organization shall be responsible for preparing an EIS, a notice of intent shall be promptly published in the **Federal Register**. The EPM will provide consultation while the organization will provide necessary communication to the EPM in order to keep the ASM advised.

b. The scoping process, outlined in Section 1501.7 of the CEQ regulations, shall be used for determining the scope of issues to be addressed and for identifying the significant issues related to the proposed action. The organization involved and in consultation with the SAO through the EPM, shall be responsible for carrying out the scoping process in accordance with the CEQ regulations.

c. Section 1501.5(a) of the CEQ regulations provides that a lead agency shall supervise the preparation of an EIS if more than one federal agency either proposes or is involved in the same action, or is involved in a group of actions directly related to each other because of their functional interdependence or geographical proximity (see also Section 1506.2, CEQ regulations).

d. In the event the preparation of an EIS for a proposed organization action requires the designation of a lead agency for either of these reasons, the head of the organization shall contact the EPM for guidance. The bureaus shall seek out and coordinate with Cooperating Agencies (Federal, tribal or state) for EIS activities as outlined in 1501.5 and 1501.6. Any communications with other agencies which deal with lead agency designations shall be coordinated with the EPM. The criteria and responsibilities for lead and cooperating agencies are outlined in Section 1501.5 and 1501.6 of the CEQ regulations, respectively.

e. EISs shall first be issued in draft, for comment by government agencies and the public. Final EISs that address

comments received shall then be issued. Requirements for preparing and circulating draft and final statements (Part 1502 of the CEQ regulations) are as follows:

(1) *Timing.*

(a) The timing of the preparation, circulation, submission, and public availability of EISs is of great importance. EISs are not intended to be justification documents for proposed actions but are to be objective evaluations of proposed actions and their alternatives in light of all reasonably pertinent environmental considerations (Section 1502.2(g), CEQ regulations).

(b) EISs are then filed with the EPA. The EPA, in turn, publishes a weekly notice in the **Federal Register** of the EISs filed during the preceding week. No decisions on the proposed action may be made by the office/bureau until the following time periods calculated from the publication date of the EPA notice have been observed.

1. Not less than 45 days for comment on draft statements (Section 1506.10(c), CEQ regulations).

2. Not less than 90 days and 30 days, respectively, for public availability of draft and final statements prior to administrative actions. These periods may run concurrently (Section 1506.10(b) and (c), CEQ regulations).

3. Not less than 15 days for public availability of draft statements prior to any relevant hearing on proposed administrative actions (Section 1506.6(c)(2), CEQ regulations).

4. The time periods prescribed in paragraphs 1 through 3 may be extended or reduced, in specific instances, in accordance with Section 1506.10 of the CEQ regulations.

(2) *Securing Information.*

(a) The full resources of Treasury should be utilized in developing the factual and analytic information and reference sources required in the preparation of an EIS. The assistance of other agencies, federal, state, tribal, or local, with jurisdiction by law or special expertise concerning the environmental impacts involved should also be sought. Further, in accordance with Section 1506.3 of the CEQ regulations, bureaus may adopt, in whole or in part, a draft or final EIS prepared elsewhere in the Department or by another federal agency.

(b) If the organization is having difficulty in securing requisite information or needs guidance, the EPM will assist in locating needed information through the CEQ, EPA, or other appropriate sources.

(3) *Writing and Content.*

(a) EISs are to be written in plain language, and may include appropriate graphics, so that bureau decision makers and the public can readily understand them (Section 1502.8, CEQ regulations).

(b) The "scoping" process shall be utilized so that only significant issues related to the proposed action are analyzed in depth. (Section 1501.7, CEQ regulations).

(c) EISs should be as concise as possible while still providing adequate, meaningful, and factual information and analysis to permit an evaluation of the proposed action from the environmental standpoint. Their length shall normally be less than 150 pages, and for proposals of unusual scope or complexity, less than 300 pages (Section 1502.7, CEQ regulations). "Tiering" (Section 1502.20, CEQ regulations) and "incorporation by reference" (Section 1502.21, CEQ regulations) should be used, where appropriate, to insure that statements are kept concise.

(d) Quantitative information about the proposed action, including actual or estimated data on its probable effects, should be included to the greatest extent practicable. If a cost-benefit analysis of the proposed action has been prepared, it should be incorporated by reference or appended to the EIS as an aid in evaluating the environmental consequences (Section 1502.23, CEQ regulations).

(e) All reasonable alternatives and their environmental impacts shall be addressed, to include identifying and analyzing impacts associated with energy (including alternative energy sources) and climate change, regardless of whether or not they are not within the authority of the Department (Section 1502.14(c), CEQ regulations). Appropriate mitigation measures shall also be discussed (Section 1502.14(f), CEQ regulations).

(f) The basic content requirements for EISs are set forth in Section 1502.10–25 of the CEQ regulations. Bureaus shall follow the prescribed outline and content requirements described therein as closely as is feasible in each particular case.

(g) Draft and final statements should refer to the underlying studies, reports, and other documents considered by the preparing organization and indicate how such documents may be obtained. With the exception of standard reference documents, such as congressional materials, the bureau should maintain a file of the respective documents which may be consulted by interested persons. If especially significant documents are attached to the EIS, care should be taken to insure that the statement remains an

essentially self-contained instrument easily understood without the need for undue cross-reference.

(4) *Utilizing Contractors.* A contractor may be selected to prepare the EIS. Organization responsibility, in the event a contractor is employed, is outlined in Section 1506.5 (c) of the CEQ regulations. The work of a contractor, however, must be fully reviewed, endorsed, and fully adopted by the Department of the Treasury for it to be used as the NEPA document of the agency.

(5) *Circulation.* The entire draft and final EIS shall be circulated in accordance with Section 1502.19 of the CEQ regulations. Appendices and unchanged statements may be treated in accordance with Sections 1502.18(d) and 1503.4(c). If the statement is unusually long, the organization may circulate the summary instead (Section 1502.12, CEQ regulations), except that the entire statement shall be furnished as specified in Section 1502.19.

(6) *Public Involvement.* Section 1506.6 of the CEQ regulations requires public involvement in the NEPA process. The relevant bureau will communicate timely and provide electronic documents related to public involvement with the ASM through the OGC, who will be available for consultation with the bureau.

(a) To comply with this requirement, bureaus shall:

1. Provide for public hearings whenever appropriate. Whenever, under the normal policies or procedures of the organization a hearing would be held on a matter requiring the preparation of an EIS, the environmental aspects should be included in the hearing. In other cases, the question of whether a hearing should be held with respect to an environmental matter shall be determined in accordance with the criteria set forth in Section 1506.6 (c) of the CEQ regulations. Normally, all hearings contemplated in this paragraph should be based on a draft EIS which should be made available to the public at least 15 days before the hearing.

2. Provide public notice of NEPA-related hearings, public meetings, and the availability of environmental documents. The notice should be provided by the means most likely to inform those persons and agencies that may be interested or affected.

(a) Section 1506.6(b) of the CEQ regulations provides notification methods that may be used, including publication in local newspapers of general circulation, notice to state and local clearinghouses, and notice by mail.

(b) A notice of the filing and availability of each EIS, draft and final, shall be inserted in the **Federal Register** by the responsible organization.

3. Make EISs and EAs, along with any comments and underlying documents, available to the public on the Department of the Treasury public Web site through a link to their bureau public Web site and pursuant to the Freedom of Information Act (5 U.S.C. 552), the Department's regulations there under (31 CFR part 1), and the disclosure regulations of the bureau (Section 1506.6(f), CEQ regulations).

(a) These materials are to be placed in the public reading room of the Treasury Library in Washington, DC, and the public reading rooms of the organization if any are maintained. The documents may be read or copied during working hours.

(b) Copies to be made available to the public shall normally be provided on paper meeting the requirements of Executive Order (E.O.) 13423 or superseding E.O. and without charge. However, when such costs are significant, the organization may, in accordance with Section 1506.6(f) of the CEQ regulations, establish a fee which shall not exceed the actual cost of reproducing the copies. Multi-page documents are to be duplex printed (double-sided), unless otherwise required.

(6) *Commenting.*

(a) With respect to draft EISs, it is essential that the organizations consult with, and take account of the comments of, appropriate federal, state and local agencies. This shall involve the formal solicitation of review and comments on the draft statement (Section 1503.1, CEQ regulations). When appropriate, procedures for obtaining state and local comments shall be utilized (Section 1503.1(a)(2), CEQ regulations).

(b) Comments should also be requested from individuals or organizations which appear to have a special interest in some significant environmental aspect of the proposed action (Section 1503.1(a)(4), CEQ regulations).

(c) All substantive comments received on draft EISs (or summaries thereof where the comments are exceptionally long), should be attached to final EIS, whether or not each such comment is thought to merit individual discussion in the text of the statement (Section 1503.4(b), CEQ regulations).

(d) Section 102(2)(C) of NEPA requires that the final EIS shall accompany the proposal to which it relates through the agency review process.

10. ACTIONS EXCLUDED IN ACCORDANCE WITH CEQ REGULATIONS.

In accordance with CEQ regulations (40 CFR 1500.6 and 1508.18(a)), some classes of actions may be thought to not trigger NEPA. Consultation with the Office of General Counsel must be initiated at the earliest time such an issue arises.

11. OTHER NEPA REGULATORY PROVISIONS.

(a) *Emergency Actions/Alternate Arrangements:* In the event of an emergency situation, Treasury may be required to take an action to prevent or reduce the risk to the environment, public health, or safety that may impact the human environment without evaluating those impacts under NEPA. 40 CFR 1506 provides that CEQ may grant alternative arrangements for, but not eliminate, NEPA compliance where a national emergency, disaster, or similar great urgency makes it necessary to take actions that merit an environmental impact statement without observing all the provisions of CEQ regulations. The processing times may be reduced or, if the emergency situation warrants, preparation and processing of environmental impact statements may be abbreviated. Upon learning of the emergency situation, the EPM will immediately inform CEQ of the emergency situation when the proposed Treasury action is expected to result in significant impacts on the human environment. In some cases, the emergency action may be covered by an existing NEPA analysis or an exemption. In other cases, it may not be covered. In these cases, the CEQ (in consultation with EPM) will establish alternate arrangements for NEPA compliance. The EPM will provide continued follow-up consultation with CEQ throughout the duration of the emergency situation. The provisions of this section do not apply to actions taken after the emergency situation has been resolved or those related to recovery operations. In an EIS where the proposed action is not expected to result in significant impacts on the human environment, the EPM ensures that the appropriate NEPA documentation is prepared to the extent practicable before or concurrent with the emergency actions required to control the emergency and before any follow-up actions are taken (40 CFR 1506.11).

(b) *Incomplete or Unavailable Information:* If Treasury determines that there is incomplete or unavailable information while evaluating reasonably foreseeable significant adverse effects on the human environment in an EIS, it shall make clear that that such information is lacking.

If this information is essential to choosing a reasonable alternative and obtaining it is not cost prohibitive, Treasury shall include that information. If the information relevant to reasonably foreseeable significant adverse impacts cannot be obtained because the overall costs of obtaining it are exorbitant or the means to obtain it are not known, Treasury shall include within the EIS:

(1) a statement that such information is incomplete or unavailable;

(2) a statement of the relevance of the incomplete or unavailable information to evaluating reasonably foreseeable significant adverse impacts on the human environment;

(3) a summary of existing credible scientific evidence which is relevant to evaluating the reasonably foreseeable significant adverse impacts on the human environment; and

(4) Treasury's evaluation of such impacts based upon theoretical approaches or research methods generally accepted in the scientific community. For the purposes of this section, "reasonably foreseeable" includes impacts which have catastrophic consequences, even if their probability of occurrence is low, provided that the analysis of the impacts is supported by credible scientific evidence, is not based on pure conjecture, and is within the rule of reason.

(c) *Incorporation by Reference:* In order to reduce the size of documents, whenever possible, Treasury will incorporate material by reference into an EIS providing it will not impede Treasury and public review of the action. The incorporated material shall be cited in the document and its content briefly described. No material may be incorporated by reference unless it is reasonably available for inspection by potentially interested persons within the time allowed for comment. Material based on proprietary data which is itself not available for review and comment shall not be incorporated by reference.

12. REQUIREMENTS FOR FLOODPLAIN MANAGEMENT AND PROTECTION OF WETLANDS.

Executive Order 11988, "Floodplain Management," and Executive Order 11990, "Protection of Wetlands," direct federal agencies to ensure that the potential effects of any proposed actions they may take in a floodplain or wetland are considered and evaluated in their decision making.

In a **Federal Register** notice of May 24, 1978 (43 FR 22311), Treasury advised that, as a general rule, it does not engage in activities which would impact on floodplain or wetlands. It was further stated that no separate Treasury

procedures implementing these Executive Orders would be issued, but rather that such procedures would be incorporated in this directive.

(1) To the extent possible, Bureaus are to avoid actions which would result in modification or destruction of floodplain and wetlands and, wherever there is a practicable alternative, are to avoid direct or indirect support of new development or construction in a floodplain or wetlands.

(2) In the case of any proposed Department of the Treasury action which may involve floodplain or wetlands, and which may require the preparation of and EA or EIS, the assessment or statement shall include necessary data on the floodplain or wetlands in keeping with these procedures.

(3) In the event of floodplain or wetlands involvement, the following procedural steps are to be followed. (Although these steps specifically mention floodplain, they are also applicable to wetlands.)

(a) Determine if the proposed action is in a floodplain.

(b) Provide for public involvement in a floodplain management decision making process by informing the public of the intent to locate in the floodplain, and by encouraging public comments thereon.

(c) Identify and evaluate practicable alternatives to locating in a floodplain, including alternative sites, alternative actions, or no action.

(d) If determined that the only practicable alternative is to locate in a floodplain, identify the impacts of the proposed action using the NEPA process and EA or EIS procedures in this directive. Focus especially on the adverse impacts of the proposed action on lives and property in the area, and on natural and beneficial floodplain values.

(e) If harm to, or within, a floodplain may result from the proposed action, determine ways to minimize the harm and to restore and preserve the floodplain values. Measures should be considered to include the use of offsite floodplain/wetland mitigation "banks".

(f) Reevaluate the proposed alternatives, based on the information obtained and consider whether the proposed action is still feasible at the site or should be limited.

(g) A statement of findings and public explanation, including a brief comment period, must be provided for the proposed action if reevaluation determines that the proposed action is the only practicable alternative.

13. PROPOSALS FOR LEGISLATION.

A legislative environmental impact

statement is the detailed statement required by law to be included in a recommendation or report on a legislative proposal (that originates within Treasury) to Congress. A legislative EIS shall be considered part of the formal transmittal of a legislative proposal to Congress, although it may be sent to Congress up to 30 days later to allow time for completion and accuracy. In all instances, the legislative statement must be available in time for Congressional hearings and deliberations in order that it may serve as a basis for public and Congressional debate (Section 1506.8(a), CEQ regulations).

(a) Preparation of a legislative EIS shall conform to the requirements for EISs except as follows:

(1) There need not be a "scoping" process.

(2) The legislative EIS, although prepared in the same manner as a draft EIS, shall be considered that "detailed statement" required by statute. Provided that, when any of the following conditions exist, both a draft and final legislative EIS shall be prepared and circulated as provided in Sections 1503.1 and 1506.10 of the CEQ regulations.

(a) A congressional committee with jurisdiction over the proposal has a rule requiring both draft and final EISs.

(b) The proposal results from a study process required by statute.

(c) Legislative approval is sought for federal or federally assisted construction or other projects which the office/bureau recommends be located at specific geographic locations. For proposals requiring an EIS for the acquisition of space by the GSA, draft and final EISs shall be provided to GSA for use during the approval process.

(d) The organization prepares draft and final statements with an electronic copy to the EPM.

14. FILING AND DISTRIBUTION OF EISs AND SUPPLEMENTAL STATEMENTS.

a. The bureaus will communicate timely and provide electronic versions and written and bound copies, as needed, of their EIS and related documents concerning filing and distribution of EISs and Supplemental Statements with the ASM through the EPM. The EPM will place the documents on the Department of the Treasury Public NEPA Web site, and will be available for bureau consultation.

b. As of October 1, 2012 EPA no longer accepts paper copies or compact discs (CDs) of EISs for filing purposes. EPA's online tool *e-NEPA* (<http://www.epa.gov/compliance/nepa/>

submiteis/e-nepa-guide-on-registration-and-preparing-an-eis-for-electronic-submission.pdf) meets their requirements for EIS filing. All submissions must be made through e-NEPA. At the same time as they are filed with EPA, EISs shall also be sent to commenting agencies and made available to the public (Section 1506.9, CEQ regulations). Any supplement to an EIS shall be made a part of the formal record, if such a record exists, before a final decision on the proposal is made (Section 1502.9(c)(3), CEQ regulations).

15. OTHER REQUIREMENTS.

a. Integrating Departmental Procedures with Other Environmental Review and Consultation Requirements.

(1) Section 1501.7(a)(6) of the CEQ regulations requires that, as part of the scoping process, agencies identify other environmental review and consultation requirements so that any other required analyses or studies may be prepared concurrently and integrated with EAs and EISs.

(2) The attention of the bureaus is directed particularly to the analyses and studies required by the Fish and Wildlife Coordination Act (16 U.S.C. 661, et seq.); the National Historic Preservation Act of 1966, as amended, (16 U.S.C. 470, et seq.); the Endangered Species Act of 1973 (16 U.S.C. 1531, et seq.); E.O. 11988, "Floodplain

Management," dated May 24, 1977; E.O. 11990, "Protection of Wetlands," dated May 24, 1977; CEQ Memorandum, "Interagency Consultation to Avoid or Mitigate Adverse Effects on Rivers in the Nationwide Inventory," dated August 10, 1980; CEQ Memorandum, "Analysis of Impacts on Prime or Unique Agricultural Lands in Implementing the National Environmental Policy," dated August 11, 1980; and other similar requirements.

b. EPA Review.

(1) Section 309 of the Clean Air Act (42 U.S.C. 7609) provides that the EPA Administrator shall comment in writing on the environmental impact of any matter within the area of EPA responsibility. Those areas include air and water quality, noise abatement and control, pesticide regulation, solid waste disposal, and generally applicable environmental radiation criteria and standards.

EPA has developed a set of criteria for rating draft EISs. The rating system provides a basis upon which EPA makes recommendations to the lead agency for improving the draft EIS. These are rated in two categories; rating the Environmental Impact of the Action, and rating the Adequacy of the Draft Environmental Impact Statement. Additional information can be found

here: <http://www.epa.gov/compliance/nepa/comments/ratings.html>

(2) If the EPA Administrator determines that the matter "is unsatisfactory from the standpoint of public health or welfare or environmental quality," the matter is to be referred to the CEQ in accordance with the criteria and procedures outlined in Sections 1504.2 and 1504.3 of the CEQ regulations.

(3) Under Section 102(2)(C) of NEPA, other federal agencies are authorized to make similar reviews and referrals in accordance with the criteria and procedures in Section 1504.2 and 1504.3 of the CEQ regulations.

c. All hardcopy reports required shall be printed on paper containing a minimum of 30 percent postconsumer fiber and also shall be printed or copied double-sided, to the degree possible.

Appendix 1: Categorical Exclusions

Categorical Exclusions (CEs)

The CE is intended to reduce paperwork and eliminate unnecessary EA and EIS preparation. Treasury actions which are considered to be categorically excluded are listed in the table below. The list is not exhaustive and any new CE shall be prepared in accordance with the instructions provided in Treasury Directive Publication (TD P) 75-02. The term "new" includes substantive revisions to existing CEs.

CE#	ADMINISTRATIVE AND REGULATORY ACTIVITIES. These categorical exclusions have the additional requirement to be conducted in conformance with Executive Orders 13423, Strengthening Federal Environmental, Energy, and Transportation Management, and 13514, Federal Leadership in Environmental, Energy, and Economic Performance.
A1	Personnel actions, including recruiting, processing, paying, recordkeeping, and resource management; fiscal, general management, administrative activities, budgeting, other personnel actions, and travel.
A2	Reductions, realignments, or relocation of personnel that do not result in exceeding the infrastructure capacity or change the use of space. An example of a substantial change in use of the supporting infrastructure would be an increase in vehicular traffic beyond the capacity of the supporting road network to accommodate such an increase.
A3	Promulgation of rules, issuance of rulings or interpretations, and the development and publication of policies, orders, directives, notices, procedures, manuals, and other guidance documents of the following nature: (a) Those of a strictly administrative or procedural nature; (b) Those that adopt, without substantive change, statutory or regulatory requirements; (c) Those that implement, without substantive change, procedures, manuals, and other guidance documents; (d) Those that interpret or amend an existing regulation without changing its environmental effect; (e) Technical guidance on safety and security matters; or (f) Guidance for the preparation of security plans.
A4	Information gathering, data analysis and processing, information dissemination, review, interpretation, and development of documents. If any of these activities result in proposals for further action, those proposals must be covered by an appropriate CE. Examples include but are not limited to: (a) Document mailings, publication and distribution, training and information programs, historical and cultural demonstrations, and public affairs actions. (b) Studies, reports, proposals, analyses, literature reviews; computer modeling; and non-intrusive information gathering activities.
A5	Awarding of contracts for technical support services, ongoing management and operation of government facilities.
A6	Procurement of non-hazardous goods and services, and storage, recycling, and disposal of non-hazardous materials and wastes, that complies with applicable requirements and is in support of routine administrative, operational, or maintenance activities. Storage activities must occur on improved land or in existing facilities. Examples of non-hazardous goods and services include, but are not limited to: (a) Office supplies, (b) Equipment, (c) Mobile assets, (d) Utility services, (e) Chemicals and low level radio nuclides for laboratory use, (f) Deployable emergency response supplies and equipment, and, (g) Waste disposal and contracts for waste disposal in established permitted landfills and facilities.

- A7 The commitment of resources, personnel, and funding to conduct audits, surveys, and data collection provided that the technology or procedure involved is well understood and there are no adverse environmental impacts anticipated from it. If any of these commitments result in proposals for further action, those proposals must be covered by an appropriate CE. Examples include, but are not limited to:
- (a) Activities designed to support improvement or upgrade of management of natural resources, such as surveys for threatened and endangered species, wildlife and wildlife habitat, historic properties, and archeological sites; wetland delineations; minimal water, air, waste, material and soil sampling; audits, photography, and interpretation;
 - (b) Minimally-intrusive geological, geophysical, and geo-technical activities, including mapping and engineering surveys.
 - (c) Conducting Facility Audits, Environmental Site Assessments and Environmental Baseline Surveys, and,
 - (d) Vulnerability, risk, and structural integrity assessments of infrastructure.
- CE# OPERATIONAL ACTIVITIES
- B1 Research, development, testing, and evaluation activities, or laboratory operations conducted within existing enclosed facilities consistent with previously established safety levels and in compliance with applicable federal, tribal, state, and local requirements to protect the environment when it will result in no, or de minimis change in the use of the facility. If the operation will increase the extent of potential environmental impacts or is controversial, an EA (and possibly an EIS) is required.
- B2 Transportation of personnel, equipment, and evidentiary materials in wheeled vehicles over existing roads or jeep trails established by federal, tribal, state, or local governments.
- B3 Use and operation of an existing structure that would be compatible with and similar in scope to its ongoing functional uses and would be consistent with previously established safety levels and in compliance with applicable federal, tribal, state, or local requirements to protect the environment.
- B4 Support for or participation in short-lived, beneficial community projects that do not involve construction, or significant physical alteration of the environment. Examples include, but are not limited to:
- (a) Earth Day activities,
 - (b) Cleanup of rivers and parkways, and
 - (c) Participation in "team building" activities.
- B5 Approval of recreational or public activities or events at a location typically used for that type and scope (size and intensity) of activity that would not involve significant physical alteration of the environment. Examples include, but are not limited to:
- (a) Picnics, and
 - (b) Interpretive programs for historic and cultural resources, such as programs in conjunction with state and tribal Historic Preservation Officers, or with local historic preservation or re-enactment groups.
- B6 Initial assignment or realignment of vehicles to existing operational facilities that have the capacity to accommodate such vehicles or where supporting infrastructure changes will be minor.
- B7 Acquisition, installation, maintenance, operation, or evaluation of security equipment to protect people and materials at existing facilities and the eventual removal and disposal of that equipment in compliance with applicable federal, tribal, state, and local requirements to protect the environment. Examples of the equipment include, but are not limited to:
- (a) Low-level x-ray devices,
 - (b) Cameras and biometric devices,
 - (c) Passive inspection devices,
 - (d) Detection or security systems, and,
 - (e) Access controls, screening devices, and traffic management systems.
 - (f) Alarms,
 - (g) Fences and temporary barriers,
 - (h) Preventative security systems.
- B8 Identification, inspections, surveys, or sampling, testing, seizures, quarantines, removals, sanitization, and monitoring of items that cause little or no physical alteration of the environment.
- B9 Routine monitoring and surveillance activities that support law enforcement such as patrols, investigations, and intelligence gathering, but not including any construction activities. This CE would primarily encompass a variety of daily activities performed by Treasury emergency management, operations centers and security personnel.
- CE# REAL ESTATE ACTIVITIES
- C1 Acquisition of an interest in real property and all facilities on such property that is not within or adjacent to environmentally protected areas, including interests less than a fee simple, by purchase, lease, assignment, easement, condemnation, or donation, which does not result in a change in the functional use of the property.
- C2 Lease extensions, renewals, or succeeding leases for real property and all facilities on such property where there is no change in the facility's use and all environmental permits have been acquired and are current.
- C3 Transfer of administrative control over real property, including related personal property, between another federal agency and Treasury that does not result in a change in the functional use of the property.
- C4 Determination that real property is excess to the needs of the Treasury and, in the case of acquired real property, the subsequent reporting of such determination to the General Services Administration.
- CE# REPAIR AND MAINTENANCE ACTIVITIES
- D1 Minor renovations and additions to buildings, roads, grounds, equipment, and other facilities that do not result in a change in the functional use of the real property (e.g. realigning interior spaces of an existing building, adding a small storage shed to an existing building, retrofitting for energy conservation, or installing a small antenna on a building roof).
- D2 Routine upgrade, repair, maintenance, or replacement of equipment and vehicles, or other mobile assets (such as emergency generators) which is substantially the same as that routinely performed by private sector owners.
- D3 Repair and maintenance of Treasury-managed buildings, roads, grounds, and other facilities which do not result in a change in functional use (e.g. replacing a roof, painting a building, resurfacing a road, common pest control activities, restoration of trails and firebreaks, culvert maintenance, grounds maintenance, existing security systems that do not require individual regulatory permits).
- D4 Reconstruction and/or repair by replacement of existing utilities in an existing right-of-way or easement.
- CE# CONSTRUCTION, INSTALLATION, AND DEMOLITION ACTIVITIES
- E1 Installation, operation, maintenance, and removal of utility and communication systems (such as mobile antennas, data processing cable, and similar electronic equipment) that use existing rights-of-way, easements, utility distribution systems, and/or associated facilities.
- E2 Addition to an existing structure or improvement of land where all of the following conditions are met:
- (a) The structure and proposed use are compatible with applicable federal, tribal, state, and local planning and zoning standards and consistent with federally approved state coastal management programs,
 - (b) The site is in a previously disturbed location,

	<ul style="list-style-type: none"> (c) The proposed use will not substantially increase the number of motor vehicles at the facility or in the area, (d) The site and scale of construction or improvement are consistent with those of existing, adjacent, or nearby buildings, and, (e) The construction or improvement will not result in uses that exceed existing support infrastructure capacities (roads, sewer, water, parking, etc.). (f) The original footprint of a Treasury facility is not increased by more than 10 percent.
E3	<p>Acquisition, installation, operation, and maintenance of equipment, devices, and/or controls necessary to mitigate effects of Treasury's actions on health and the environment. Examples include but are not limited to:</p> <ul style="list-style-type: none"> (a) Installation of new emissions and pollution control equipment whose new emissions are minor or offset by emission credits or by the removal of other equipment and it does not result in increased air emissions. The installation is done in compliance with all Federal, state, local and tribal requirements. Examples include adding new equipment for printing currency while using credits to offset the emissions; (b) Noise abatement measures, including construction of noise barriers, installation of noise control materials, or planting native trees and/or native vegetation for use as a noise abatement measure, and, (c) Devices to protect human or animal life, such as raptor electrocution prevention devices, fencing and grating to prevent accidental entry to hazardous or restricted areas, and rescue beacons to protect human life.
E4	Removal or demolition, along with subsequent disposal of debris to permitted or authorized off-site locations, of non-historic buildings, structures, other improvements, and/or equipment in compliance with applicable environmental and safety requirements.
E5	Natural resource management activities to enhance native flora and fauna, including site preparation, and landscaping.
E6	Reconstruction of roads on Treasury facilities, where runoff, erosion, and sedimentation issues are mitigated through implementation of best management practices as described in EPA's National Menu of Best Management Practices for Stormwater Phase II.
E7	Construction of physical fitness and training trails for non-motorized use on Treasury facilities in areas that are not environmentally protected, where run-off, erosion, and sedimentation are mitigated through implementation of best management practices.
CE#	HAZARDOUS/RADIOACTIVE MATERIALS MANAGEMENT AND OPERATIONS
F1	Routine procurement, transportation, distribution, use storage, and off-site disposal of hazardous materials that comply with all applicable federal, state, local, and tribal requirements.
F2	Reuse, recycling, and disposal of solid, medical, radiological, and hazardous waste generated incidental to Treasury activities that comply with applicable federal, state, local, and tribal requirements. Examples include but are not limited to: <ul style="list-style-type: none"> (a) Appropriate treatment and disposal of medical waste conducted in accordance with all federal, state, local and tribal laws and regulations, (b) Temporary storage and disposal of solid waste, conducted in accordance with all federal, state, local and tribal laws and regulations, (c) Disposal of radiological waste through manufacturer return and recycling programs, and, (d) Hazardous waste minimization activities.
F3	Use (that may include the processes of installation, maintenance, non-destructive testing, and calibration), transport, and storage of hand-held, mobile or stationary instruments, containing sealed radiological and radioactive materials, to screen for possible security violations in compliance with commercial manufacturers' specifications, as well as applicable federal requirements to protect the human environment. Examples of such instruments include but are not limited to: <ul style="list-style-type: none"> (a) Gauging devices, tracers, and other analytical instruments, (b) Instruments used in industrial radiography, (c) Systems used in medical and veterinary practices and, (d) Nuclear Regulatory Commission (NRC) approved, sealed, small source radiation devices for scanning vehicles and packages where radiation exposure to employees or the public does not exceed 0.1 rem per year and where systems are maintained within the NRC license parameters at existing facilities.
CE#	TRAINING AND EXERCISES
G1	Training of security personnel using existing facilities where the training occurs in accordance with applicable permits and other requirements for the protection of the environment. This exclusion does not apply to training that involves the use of live chemical, biological, or radiological agents except when conducted at a location designed and constructed to contain the materials used for that training. Examples include but are not limited to: <ul style="list-style-type: none"> (a) Administrative or classroom training, (b) Vehicle operation training, (c) Security specialties, (d) Crowd control training, (e) Enforcement response, self-defense, and interdiction techniques training, and, (f) Techniques for use in fingerprinting and drug analysis.

[FR Doc. 2014-19891 Filed 8-21-14; 8:45 am]

BILLING CODE 4810-25-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort

to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3506(c)(2)(A)). The IRS is soliciting comments concerning information collection requirements related to residence rulings involving U.S. possessions.

DATES: Written comments should be received on or before October 21, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to Christie Preston, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of this regulation should be directed to Kerry Dennis, at Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet, at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION: Title: Residence Rulings Involving U.S. Possessions.

OMB Number: 1545-1930.

Regulation Project Number: T.D. 9248.

Abstract: This document contains final regulations that provide rules for determining *bona fide* residency in the following U.S. possessions: American Samoa, Guam, the Northern Mariana Islands, Puerto Rico, and the United States Virgin Islands under sections 937(a) and 881(b) of the Internal Revenue Code.

Current Actions: There is no change to this final regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Individuals or households or businesses or other for-profit organizations.

Estimated Number of Respondents: 75,000.

Estimated average annual burden hours per respondent: 4 hours.

Estimated Total Burden Hours: 300,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 15, 2014.

BILLING CODE 4830-01-P

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 1096

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104-13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 1096, Annual Summary and Transmittal of U.S. Information Returns.

DATES: Written comments should be received on or before October 21, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to, R. Joseph Durbala, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Martha R. Brinson, Internal Revenue Service, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet at Martha.R.Brinson@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Annual Summary and Transmittal of U.S. Information Returns.
OMB Number: 1545-0108.
Form Number: 1096.

Abstract: Form 1096 is used to transmit information returns (Forms 1099, 1098, 5498, and W-2G) to the IRS service centers. Under Internal Revenue Code section 6041 and related regulations, a separate Form 1096 is used for each type of return sent to the service center by the payer. It is used by IRS to summarize, categorize, and process the forms being filed.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals or households, not-for-profit institutions, farms, Federal government, and State, local or tribal governments.

Estimated Number of Responses: 4,420,919.

Estimated Time per Response: 14 min.

Estimated Total Annual Burden Hours: 1,016,812.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 13, 2014.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Regulation Project

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995,

Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning, accounting for long-term contracts.

DATES: Written comments should be received on or before October 21, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to R. Joseph Durbala, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the regulations should be directed to Martha R. Brinson, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet at Martha.R.Brinson@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Accounting for Long-Term Contracts.

OMB Number: 1545–1650.

Regulation Project Number: TD 8929.

Abstract: The regulation requires the Commissioner to be notified of a taxpayer's decision to sever or aggregate one or more long-term contracts under the regulations. The statement is needed so the Commissioner can determine whether the taxpayer properly severed or aggregated its contract(s). The regulations affect any taxpayer that manufactures or constructs property under long-term contracts.

Current Actions: There are no changes to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations.

Estimated Number of Respondents: 50,000.

Estimated Time per Respondent: 15 minutes.

Estimated Total Annual Burden Hours: 12,500.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 18, 2014.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 2678

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 2678, Employer/Payer Appointment of Agent.

DATES: Written comments should be received on or before October 21, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to R. Joseph Durbala, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Martha R. Brinson, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet at Martha.R.Brinson@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Employer/Payer Appointment of Agent.

OMB Number: 1545–0748.

Form Number: 2678.

Abstract: Internal Revenue Code section 3504 authorizes a fiduciary, agent or other person to perform acts of an employer for purposes of employment taxes. Form 2678 is used to empower an agent with the responsibility and liability of collecting and paying the employment taxes including backup withholding and filing the appropriate tax return.

Current Actions: There are no changes being made to the burden previously approved by OMB at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Businesses or other for-profit organizations, not-for-profit institutions, farms and the Federal Government.

Estimated Number of Respondents: 6,130,000.

Estimated Time per Respondent: 2.24 hours.

Estimated Total Annual Burden Hours: 13,731,000.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. SUPPLEMENTARY INFORMATION:

Title: Credit for Increasing Research Activities.

OMB Number: 1545-0619.

Form Number: 6765.

Abstract: IRC section 38 allows a credit against income tax (Determined under IRC section 41) for an increase in research activities in a trade or business. Form 6765 is used by businesses and individuals engaged in a trade or business to figure and report the credit. The data is used to verify that the credit claimed is correct.

Current Actions: There are no changes being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations and individuals.

Estimated Number of Respondents: 15,805.

Estimated Time per Respondent: 18 hours, 2 minutes.

Estimated Total Annual Burden Hours: 285,281.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. SUPPLEMENTARY INFORMATION:

Title: Cash Reporting by Court Clerks.

OMB Number: 1545-1449.

Regulation Project Number: TD 8652.

Abstract: This regulation concerns the information reporting requirements of the Federal and State court clerks upon receipt of more than \$10,000 in cash as bail for any individual charged with a specified criminal offense. The Internal Revenue Service will use the information to identify individuals with large cash incomes. Clerks must also furnish the information to the United States Attorney for the jurisdiction in which the individual charged with the crime resides and to each person posting the bond whose name is required to be included on for 8300.

Current Actions: There is no change to this existing regulation.

Type of Review: Extension of a currently approved collection.

Affected Public: Federal, state, local or tribal governments.

Estimated Number of Respondents: 250.

Estimated Time per Respondent: 30 minutes.

Estimated Total Annual Burden Hours: 125.

The following paragraph applies to all of the collections of information covered by this notice:

SUPPLEMENTARY INFORMATION:

Title: Notification Requirement for Transfer of Partnership Interest in Electing Investment Partnership (EIP).

OMB Number: 1545-1939.

Notice Number: Notice 2005-32.

Abstract: The American Jobs Creation Act of 2004 amended §§ 734, 743, and 6031 of the Internal Revenue Code. The amendment necessitated the creation of new reporting requirements and procedures for the mandatory basis adjustment provisions of §§ 734 and 743, the procedures for making an electing investment partnership election under § 743(e), and the reporting requirements for electing investment partnerships and their partners. This notice provides interim procedures for partnerships and partners to comply with the mandatory basis adjustment provisions of §§ 734 and 743. This notice also provides interim procedures for electing investment partnerships and their partners to comply with §§ 743(e) and 6031(f).

Current Actions: There are no changes being made to the notice at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organization, individuals, or households.

Estimated Number of Respondents: 266,400.

Estimated Time per Respondent: 2 Hours, 4 minutes.

Estimated Total Annual Burden Hours: 552,100.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on:

(a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

SUPPLEMENTARY INFORMATION:

Title: Credit for Prior Year Minimum Tax—Individuals, Estates, and Trusts.

OMB Number: 1545–1073.

Form Number: 8801.

Abstract: Form 8801 is used by individuals, estates, and trusts to compute the minimum tax credit, if any, available from a tax year beginning after 1986 to be used in the current year or to be carried forward for use in a future year.

Current Actions: Lines 26 and 27 of Part II and all of Part IV have been deleted to reflect the expiration of the refundable portion of the credit per IRC 53(e); PL 109–432, sec 402(a). The title for Part II and the text of line 25 have also been revised. All references to the refundable portion of the minimum tax credit have been removed from the instructions.

Type of Review: Revision of a currently approved collection.

Affected Public: Individuals or households.

Estimated Number of Responses: 12,914.

Estimated Time per Response: 7 hours, 4 mins.

Estimated Total Annual Burden Hours: 91,173.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. DEPARTMENT OF THE TREASURY

Internal Revenue Service

Proposed Collection; Comment Request for Form 1099–K

AGENCY: Internal Revenue Service (IRS), Treasury.

ACTION: Notice and request for comments.

SUMMARY: The Department of the Treasury, as part of its continuing effort to reduce paperwork and respondent burden, invites the general public and other Federal agencies to take this opportunity to comment on proposed and/or continuing information collections, as required by the Paperwork Reduction Act of 1995, Public Law 104–13 (44 U.S.C. 3506(c)(2)(A)). Currently, the IRS is soliciting comments concerning Form 1099–K, Payment Card and Third Party Network Transactions.

DATES: Written comments should be received on or before October 21, 2014 to be assured of consideration.

ADDRESSES: Direct all written comments to R. Joseph Durbala, Internal Revenue Service, Room 6129, 1111 Constitution Avenue NW., Washington, DC 20224.

FOR FURTHER INFORMATION CONTACT: Requests for additional information or copies of the form and instructions should be directed to Kerry Dennis, at Internal Revenue Service, room 6129, 1111 Constitution Avenue NW., Washington, DC 20224, or through the Internet at Kerry.Dennis@irs.gov.

SUPPLEMENTARY INFORMATION:

Title: Payment Card and Third Party Network Transactions.

OMB Number: 1545–2205.

Form Number: Form 1099–K.

Abstract: This form is in response to section 3091(a) of Public Law 110–289, the Housing Assistance Tax Act of 2008 (Div. C of the Housing and Economic Recovery Act of 2010). The form reflects payments made in settlement of merchant card and third party network transactions for purchases of goods and/or services made with merchant cards and through third party networks.

Current Actions: The department has updated its estimated number of responses based on current year filing data and projections of future filings. The increase of 9,434,100 responses,

brings estimates in line with the most recent filings.

Type of Review: Revision of a currently approved collection.

Affected Public: Businesses or other for-profits.

Estimated Number of Respondents: 9,436,100.

Estimated Time per Respondent: 27 minutes.

Estimated Total Annual Burden Hours: 4,246,245.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: July 30, 2014.

SUPPLEMENTARY INFORMATION:
Title: Application for Change in Accounting Method.

OMB Number: 1545-0152.

Form Number: 3115.

Abstract: Form 3115 is used by taxpayers who wish to change their method of computing their taxable income. The form is used by the IRS to determine if electing taxpayers have met the requirements and are able to change to the method requested.

Current Actions: There are no changes in the burden being made to the form at this time.

Type of Review: Extension of a currently approved collection.

Affected Public: Business or other for-profit organizations, individuals, not-for-profit organizations, and farms.

Estimated Number of Respondents: 16,743.

Estimated Time per Respondent: 55 hrs., 29 min.

Estimated Total Annual Burden Hours: 929,066.

The following paragraph applies to all of the collections of information covered by this notice:

An agency may not conduct or sponsor, and a person is not required to respond to, a collection of information unless the collection of information displays a valid OMB control number. Books or records relating to a collection of information must be retained as long as their contents may become material in the administration of any internal revenue law. Generally, tax returns and

tax return information are confidential, as required by 26 U.S.C. 6103.

Request for Comments: Comments submitted in response to this notice will be summarized and/or included in the request for OMB approval. All comments will become a matter of public record. Comments are invited on: (a) Whether the collection of information is necessary for the proper performance of the functions of the agency, including whether the information shall have practical utility; (b) the accuracy of the agency's estimate of the burden of the collection of information; (c) ways to enhance the quality, utility, and clarity of the information to be collected; (d) ways to minimize the burden of the collection of information on respondents, including through the use of automated collection techniques or other forms of information technology; and (e) estimates of capital or start-up costs and costs of operation, maintenance, and purchase of services to provide information.

Approved: August 14, 2014.

R. Joseph Durbala,

IRS Reports Clearance Officer.

DEPARTMENT OF THE TREASURY

Internal Revenue Service

Members of Senior Executive Service Performance Review Boards

AGENCY: Internal Revenue Service (IRS), Department of the Treasury (Treasury).

ACTION: Notice.

SUMMARY: The purpose of this notice is to publish the names of those IRS employees who will serve as members on IRS's Fiscal Year 2014 Senior Executive Service (SES) Performance Review Boards.

DATES: This notice is effective September 2, 2014.

FOR FURTHER INFORMATION CONTACT:

Daniela Petrilli, IRS, 1111 Constitution Avenue NW., Room 7314, Washington, DC 20224, (202) 317-3826.

SUPPLEMENTARY INFORMATION: Pursuant to 5 U.S.C. 4314(c)(4), this notice announces the appointment of members to the IRS's SES Performance Review Boards. The names and titles of the executives serving on the boards are as follows:

John M. Dalrymple, Deputy Commissioner for Services and Enforcement (DCSE)
Margaret A. Sherry, Deputy Commissioner for Operations Support (DCOS)

David P. Alito, Deputy Commissioner, Wage and Investment (W&I)

Sergio E. Arellano, Director, International Business Compliance, Large Business and International (LB&I)

Thomas A. Brandt, Chief Risk Officer and Senior Advisor to the Commissioner, Office of the Commissioner (COMM)

L'Tanya D. Brooks, Director, Media and Publications (W&I)

John S. Burns, Chief, Agency-Wide Shared Services (AWSS)

Carol A. Campbell, Director, Return Preparer Office (DCSE)

Robin L. Canady, Chief Financial Officer, Chief Financial Office (CFO)

Daniel B. Chaddock, Associate Chief Information Officer (CIO), Enterprise Services, Information Technology (IT)
Robert Choi, Director, Employee Plans, Tax Exempt and Government Entities (TEGE)

Cheryl P. Claybough, Industry Director, Communications, Technology and Media (LB&I)

James P. Clifford, Director, Accounts Management (W&I)

Sallie T. Cooper, Director Field Operations, Southern Area, Criminal Investigation (CI)

Kenneth C. Corbin, Deputy Director, Submission Processing (W&I)

Monica H. Davy, Executive Director, Office of Equity, Diversity and Inclusion (COMM)

Nanette M. Downing, Assistant Deputy Commissioner Government Entities/Shared Services (TEGE)

John D. Fort, Director Field Operations, Northern Area (CI)

Karen L. Freeman, Associate CIO, Enterprise Operations (IT)

Carl T. Froehlich, Associate CIO, Strategy and Planning (IT)

Julieta Garcia, Director, Customer Assistance, Relationships and Education (W&I)

Silvana G. Garza, Deputy CIO for Operations (IT)

Linda K. Gilpen, Director, Submission Processing (IT)

Warren R. Gove, Director, Operations (IT)

Dietra D. Grant, Director, Stakeholder Partnership, Education and Communication (W&I)

Darren J. Guillot, Director, Enterprise Collection Strategy, Small Business/Self-Employed (SB/SE)

BILLING CODE 4830-01-P

DEPARTMENT OF VETERANS AFFAIRS

[OMB Control No. 2900-0668]

Agency Information Collection (Supplemental Income Questionnaire (for Philippine Claims Only)) Activity Under OMB Review

AGENCY: Veterans Benefits Administration, Department of Veterans Affairs.

ACTION: Notice.

SUMMARY: In compliance with the Paperwork Reduction Act (PRA) of 1995 (44 U.S.C. 3501-3521), this notice announces that the Veterans Benefits Administration (VBA), Department of Veterans Affairs, will submit the collection of information abstracted below to the Office of Management and Budget (OMB) for review and comment. The PRA submission describes the nature of the information collection and its expected cost and burden; it includes the actual data collection instrument.

DATES: Comments must be submitted on or before September 22, 2014.

ADDRESSES: Submit written comments on the collection of information through www.Regulations.gov, or to Office of Information and Regulatory Affairs, Office of Management and Budget, Attn: VA Desk Officer; 725 17th St. NW., Washington, DC 20503 or sent through electronic mail to oir_submission@omb.eop.gov. Please refer to "OMB Control No. 2900-0668" in any correspondence. During the comment period, comments may be viewed online through the FDMS.

FOR FURTHER INFORMATION CONTACT: Crystal Rennie, Enterprise Records Service (005R1B), Department of Veterans Affairs, 810 Vermont Avenue NW., Washington, DC 20420, (202) 632-7492 or email crystal.rennie@va.gov. Please refer to "OMB Control No. 2900-0668" in any correspondence.

SUPPLEMENTARY INFORMATION:

Title: Supplemental Income Questionnaire (For Philippine Claims Only), VA Form 21-0784.

OMB Control Number: 2900-0668.

Type of Review: Revision of a currently approved collection.

Abstract: Claimants residing in the Philippine complete VA Form 21-0784 to report their countable family income and net worth. VA uses the information to determine the claimant's entitlement to pension benefits.

An agency may not conduct or sponsor, and a person is not required to respond to a collection of information unless it displays a currently valid OMB control number. The **Federal Register**

Notice with a 60-day comment period soliciting comments on this collection of information was published on January 16, 2014, at pages 2940–2941.

Affected Public: Individuals or households.

Estimated Annual Burden: 30 hours.

Estimated Average Burden per

Respondent: 15 minutes.

Frequency of Response: One time.

Estimated Number of Respondents: 120.

Dated: August 19, 2014.

By direction of the Secretary.

Crystal Rennie,

VA Clearance Officer, U.S. Department of Veterans Affairs.

[CMS–1607–F and CMS–1599–F3]

RINs 0938–AS11; 0938–AR12; and 0938–AR53

Medicare Program; Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long-Term Care Hospital Prospective Payment System and Fiscal Year 2015 Rates; Quality Reporting Requirements for Specific Providers; Reasonable Compensation Equivalents for Physician Services in Excluded Hospitals and Certain Teaching Hospitals; Provider Administrative Appeals and Judicial Review; Enforcement Provisions for Organ Transplant Centers; and Electronic Health Record (EHR) Incentive Program

AGENCY: Centers for Medicare and Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: We are revising the Medicare hospital inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals to implement changes arising from our continuing experience with these systems. Some of these changes implement certain statutory provisions contained in the Patient Protection and Affordable Care Act and the Health Care and Education Reconciliation Act of 2010 (collectively known as the Affordable Care Act), the Protecting Access to Medicare Act of 2014, and other legislation. These changes are applicable to discharges occurring on or after October 1, 2014, unless otherwise specified in this final rule. We also are updating the rate-of-increase limits for certain hospitals excluded from the IPPS that are paid on a reasonable cost basis subject to these limits. The updated rate-of-increase limits are effective for cost reporting periods beginning on or after October 1, 2014.

We also are updating the payment policies and the annual payment rates for the Medicare prospective payment system (PPS) for inpatient hospital services provided by long-term care hospitals (LTCHs) and implementing certain statutory changes to the LTCH PPS under the Affordable Care Act and the Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 and the

Protecting Access to Medicare Act of 2014. In addition, we discuss our proposals on the interruption of stay policy for LTCHs and on retiring the “5 percent” payment adjustment for co-located LTCHs. While many of the statutory mandates of the Pathway for SGR Reform Act apply to discharges occurring on or after October 1, 2014, others will not begin to apply until 2016 and beyond.

In addition, we are making a number of changes relating to direct graduate medical education (GME) and indirect medical education (IME) payments. We are establishing new requirements or revising requirements for quality reporting by specific providers (acute care hospitals, PPS-exempt cancer hospitals, and LTCHs) that are participating in Medicare.

We are updating policies relating to the Hospital Value-Based Purchasing (VBP) Program, the Hospital Readmissions Reduction Program, and the Hospital-Acquired Condition (HAC) Reduction Program. In addition, we are making technical corrections to the regulations governing provider administrative appeals and judicial review; updating the reasonable compensation equivalent (RCE) limits, and revising the methodology for determining such limits, for services furnished by physicians to certain teaching hospitals and hospitals excluded from the IPPS; making regulatory revisions to broaden the specified uses of Medicare Advantage (MA) risk adjustment data and to specify the conditions for release of such risk adjustment data to entities outside of CMS; and making changes to the enforcement procedures for organ transplant centers.

We are aligning the reporting and submission timelines for clinical quality measures for the Medicare EHR Incentive Program for eligible hospitals and critical access hospitals (CAHs) with the reporting and submission timelines for the Hospital IQR Program. In addition, we provide guidance and clarification of certain policies for eligible hospitals and CAHs such as our policy for reporting zero denominators on clinical quality measures and our policy for case threshold exemptions.

In this document, we are finalizing two interim final rules with comment period relating to criteria for disproportionate share hospital uncompensated care payments and extensions of temporary changes to the payment adjustment for low-volume hospitals and of the Medicare-Dependent, Small Rural Hospital (MDH) Program.

DATES: *Effective Date:* These final rules are effective on October 1, 2014.

Applicability Dates: The amendments to 42 CFR 405.1811 and 405.1835 are applicable to appeals based on untimely contractor determinations that are pending or were filed on or after August 21, 2008, subject to the rules of administrative finality and reopening at 42 CFR 405.1807 and 405.1885. The provisions discussed in section IV.I.4.c. of the preamble of this final rule are applicable on or after July 1, 2015; and the provisions discussed in section IV.I.5.a. of the preamble of this final rule are applicable on or after January 1, 2015.

Electronic Access

This **Federal Register** document is also available from the **Federal Register** online database through Federal Digital System (FDSys), a service of the U.S. Government Printing Office. This database can be accessed via the Internet at: <http://www.gpo.gov/fdsys>.

Tables Available Only Through the Internet on the CMS Web site

In the past, a majority of the tables referred to throughout this preamble and in the Addendum to the proposed rule and the final rule were published in the **Federal Register** as part of the annual proposed and final rules. However, beginning in FY 2012, some of the IPPS tables and LTCH PPS tables are no longer published in the **Federal Register**. Instead, these tables are available only through the Internet. The IPPS tables for this final rule are available only through the Internet on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled, “FY 2015 IPPS Final Rule Home Page” or “Acute Inpatient—Files for Download”. The LTCH PPS tables for this FY 2015 final rule are available only through the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/LongTermCareHospitalPPS/index.html> under the list item for Regulation Number CMS–1607–F. For complete details on the availability of the tables referenced in this final rule, we refer readers to section VI. of the Addendum to this final rule.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified above should contact Michael Treitel at (410) 786–4552.

Table of Contents

I. Executive Summary and Background	
A. Executive Summary	
1. Purpose and Legal Authority	
2. Summary of the Major Provisions	
3. Summary of Costs and Benefits	
B. Summary	
1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)	
2. Hospitals and Hospital Units Excluded From the IPPS	
3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)	
4. Critical Access Hospitals (CAHs)	
5. Payments for Graduate Medical Education (GME)	
C. Summary of Provisions of Recent Legislation Discussed in This Final Rule	
1. Patient Protection and Affordable Care Act (Pub. L. 111–148) and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152)	
2. American Taxpayer Relief Act of 2012 (Pub. L. 112–240)	
3. Pathway for Sustainable Growth Rate (SGR) Reform Act of 2013 (Pub. L. 113–67)	
4. Protecting Access to Medicare Act of 2014 (Pub. L. 113–93)	
D. Issuance of Notice of Proposed Rulemaking	
E. Public Comments Received in Response to the FY 2015 IPPS/LTCH PPS Proposed Rule	
F. Finalization of Interim Final Rule With Comment Period on Extension of Payment Adjustment for Low-Volume Hospitals and the MDH Program	
G. Finalization of Interim Final Rule With Comment Period Related to Changes to Certain Cost Reporting Procedures for Disproportionate Share Hospital Uncompensated Care Payments	
II. Changes to Medicare Severity Diagnosis-Related Group (MS-DRG) Classifications and Relative Weights	
A. Background	
B. MS-DRG Reclassifications	
C. Adoption of the MS-DRGs in FY 2008	
D. FY 2015 MS-DRG Documentation and Coding Adjustment	
1. Background on the Prospective MS-DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Pub. L. 110–90	
2. Adjustment to the Average Standardized Amounts Required by Pub. L. 110–90	
a. Prospective Adjustment Required by Section 7(b)(1)(A) of Pub. L. 110–90	
b. Recoupment or Repayment Adjustments in FYs 2010 Through 2012 Required by Section 7(b)(1)(B) Pub. L. 110–90	
3. Retrospective Evaluation of FY 2008 and FY 2009 Claims Data	
4. Prospective Adjustments for FY 2008 and FY 2009 Authorized by Section 7(b)(1)(A) of Pub. L. 110–90	
5. Recoupment or Repayment Adjustment Authorized by Section 7(b)(1)(B) of Pub. L. 110–90	

6. Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)
 7. Prospective Adjustment for the MS–DRG Documentation and Coding Effect Through FY 2010
 - E. Refinement of the MS–DRG Relative Weight Calculation
 1. Background
 2. Discussion for FY 2015
 - F. Adjustment to MS–DRGs for Preventable Hospital-Acquired Conditions (HACs), Including Infections for FY 2015
 1. Background
 2. HAC Selection
 3. Present on Admission (POA) Indicator Reporting
 4. HACs and POA Reporting in Preparation for Transition to ICD–10–CM and ICD–10–PCS
 5. Current HACs and Previously Considered Candidate HACs
 6. RTI Program Evaluation
 7. Current and Previously Considered Candidate HACs—RTI Report on Evidence-Based Guidelines
 - G. Changes to Specific MS–DRG Classifications
 1. Discussion of Changes to Coding System and Basis for MS–DRG Updates
 - a. Conversion of MS–DRGs to the International Classification of Diseases, 10th Edition (ICD–10)
 - b. Basis for FY 2015 MS–DRG Updates
 2. MDC 1 (Diseases and Disorders of the Nervous System)
 - a. Intracerebral Therapies: Gliadel® Wafer
 - b. Endovascular Embolization or Occlusion of Head and Neck
 3. MDC 4 (Diseases and Disorders of the Ear, Nose, Mouth and Throat): Avery Breathing Pacemaker System
 4. MDC 5 (Diseases and Disorders of the Circulatory System)
 - a. Exclusion of Left Atrial Appendage
 - b. Transcatheter Mitral Valve Repair: MitraClip®
 - c. Endovascular Cardiac Valve Replacement Procedures
 - d. Abdominal Aorta Graft
 5. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)
 - a. Shoulder Replacement Procedures
 - b. Ankle Replacement Procedures
 - c. Back and Neck Procedures
 6. MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders): Disorders of Porphyria Metabolism
 7. MDC 15 (Newborns and Other Neonates With Conditions Originating in the Perinatal Period)
 8. Medicare Code Editor (MCE) Changes
 9. Changes to Surgical Hierarchies
 10. Changes to the MS–DRG Diagnosis Codes for FY 2015
 - a. Major Complications or Comorbidities (MCCs) and Complications or Comorbidities (CCs) Severity Levels for FY 2015
 - b. Coronary Atherosclerosis Due to Calcified Coronary Lesion
 11. Complications or Comorbidity (CC) Exclusions List
 - a. Background of the CC List and the CC Exclusions List
 - b. CC Exclusions List for FY 2015
12. Review of Procedure Codes in MS–DRGs 981 Through 983, 984 Through 986, and 987 Through 989
 - a. Moving Procedure Codes From MS–DRGs 981 Through 983 or MS–DRGs 987 Through 989 Into MDCs
 - b. Reassignment of Procedures Among MS–DRGs 981 Through 983, 984 Through 986, and 987 Through 989
 - c. Adding Diagnosis or Procedure Codes to MDCs
13. Changes to the ICD–9–CM Coding System
 - a. ICD–10 Coordination and Maintenance Committee
 - b. Code Freeze
14. Public Comments on Issues Not Addressed in the Proposed Rule
 - a. Request for Review and MS–DRG Assignment for ICD–9–CM Diagnosis Code 784.7 Reported with Procedure Code 39.75
 - b. Coding for Extracorporeal Membrane Oxygenation (ECMO) Procedures
 - c. Adding Severity Levels to MS–DRGs 245 Through 251
- H. Recalibration of the FY 2015 MS–DRG Relative Weights
 1. Data Sources for Developing the Relative Weights
 2. Methodology for Calculation of the Relative Weights
 3. Development of National Average CCRs
 4. Bundled Payments for Care Improvement (BPCI) Initiative
- I. Add-On Payments for New Services and Technologies
 1. Background
 2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments
 3. FY 2015 Status of Technologies Approved for FY 2014 Add-On Payments
 - a. Glucarpidase (Trade Brand Voraxaze®)
 - b. DIFICID™ (Fidaxomicin) Tablets
 - c. Zenith® Fenestrated Abdominal Aortic Aneurysm (AAA) Endovascular Graft
 - d. Kcentra™
 - e. Argus® II Retinal Prosthesis System
 - f. Zilver® PTX® Drug Eluting Stent
 4. FY 2015 Applications for New Technology Add-On Payments
 - a. Dalbavancin (Durata Therapeutics, Inc.)
 - b. Heli-FX™ EndoAnchor System (Aptus Endosystems, Inc.)
 - c. CardioMEMS™ HF (Heart Failure) System
 - d. MitraClip® System
 - f. Responsive Neurostimulator (RNS®) System
- III. Changes to the Hospital Wage Index for Acute Care Hospitals
 - A. Background
 - B. Core-Based Statistical Areas for the Hospital Wage Index
 1. Background
 2. Implementation of New Labor Market Area Delineations
 - a. Metropolitan Statistical Areas
 - b. Urban Counties That Became Rural Under the New OMB Delineations
 - c. Rural Counties That Became Urban Under the New OMB Delineations
 - d. Urban Counties That Moved to a Different Urban CBSA Under the New OMB Delineations
- e. Transition Period
- C. Worksheet S–3 Wage Data for the FY 2015 Wage Index
 1. Included Categories of Costs
 2. Excluded Categories of Costs
 3. Use of Wage Index Data by Suppliers and Providers Other Than Acute Care Hospitals Under the IPPS
- D. Verification of Worksheet S–3 Wage Data
- E. Method for Computing the FY 2015 Unadjusted Wage Index
- F. Occupational Mix Adjustment to the FY 2015 Wage Index
 1. Development of Data for the FY 2015 Occupational Mix Adjustment Based on the 2010 Occupational Mix Survey
 2. New 2013 Occupational Mix Survey for the FY 2016 Wage Index
 3. Calculation of the Occupational Mix Adjustment for FY 2015
- G. Analysis and Implementation of the Occupational Mix Adjustment and the FY 2015 Occupational Mix Adjusted Wage Index
 1. Analysis of the Occupational Mix Adjustment and the Occupational Mix Adjusted Wage Index
 2. Application of the Rural, Imputed, and Frontier Floors
 - a. Rural Floor
 - b. Imputed Floor and Alternative, Temporary Methodology for Computing the Rural Floor for FY 2015
 - c. Frontier Floor
 3. FY 2015 Wage Index Tables
- H. Revisions to the Wage Index Based on Hospital Redesignations and Reclassifications
 1. General Policies and Effects of Reclassification and Redesignation
 2. FY 2015 MGCRB Reclassifications
 - a. FY 2015 Reclassification Requirements and Approvals
 - b. Effects of Implementation of New OMB Labor Market Area Delineations on Reclassified Hospitals
 - c. Applications for Reclassifications for FY 2016
 3. Hospitals Redesignated Under Section 1886(d)(8)(B) of the Act
 - a. New Lugar Areas for FY 2015
 - b. Hospitals Redesignated Under Section 1886(d)(8)(B) of the Act Seeking Reclassification by the MGCRB
 - c. Rural Counties No Longer Meeting the Criteria to be Redesignated as Lugar
 4. Waiving Lugar Redesignation for the Out-Migration Adjustment
 5. Update of Application of Urban to Rural Reclassification Criteria
 - I. FY 2015 Wage Index Adjustment Based on Commuting Patterns of Hospital Employees
 - J. Process for Requests for Wage Index Data Corrections
 - K. Notice of Change to Wage Index Development Timetable
 - L. Labor-Related Share for the FY 2015 Wage Index
- IV. Other Decisions and Changes to the IPPS for Operating Costs and Graduate Medical Education (GME) Costs
 - A. Changes to MS–DRGs Subject to the Postacute Care Transfer Policy (§ 412.4)

- B. Changes in the Inpatient Hospital Updates for FY 2015 (§§ 412.64(d) and 412.211(c))
 - 1. FY 2015 Inpatient Hospital Update
 - 2. FY 2015 Puerto Rico Hospital Update
- C. Rural Referral Centers (RRCs): Annual Updates to Case-Mix Index (CMI) and Discharge Criteria (§ 412.96)
 - 1. Case-Mix Index (CMI)
 - 2. Discharges
- D. Payment Adjustment for Low-Volume Hospitals (§ 412.101)
 - 1. Background
 - 2. Provisions of the Protecting Access to Medicare Act of 2014
 - 3. Low-Volume Hospital Definition and Payment Adjustment for FY 2015
- E. Indirect Medical Education (IME) Payment Adjustment (§ 412.105)
 - 1. IME Adjustment Factor for FY 2015
 - 2. IME Add-On Payments for Medicare Part C Discharges to Sole Community Hospitals (SCHs) That Are Paid According to Their Hospital-Specific Rates and Change in Methodology in Determining Payment to SCHs
 - 3. Other Policy Changes Affecting IME
- F. Payment Adjustment for Medicare Disproportionate Share Hospitals (DSHs) (§ 412.106)
 - 1. Background
 - 2. Impact on Medicare DSH Payment Adjustment of Implementation of New OMB Labor Market Area Delineations
 - 3. Payment Adjustment Methodology for Medicare Disproportionate Share Hospitals (DSHs) under Section 3133 of the Affordable Care Act (§ 412.106)
 - a. General Discussion
 - b. Eligibility for Empirically Justified Medicare DSH Payments and Uncompensated Care Payments
 - c. Empirically Justified Medicare DSH Payments
 - d. Uncompensated Care Payments
 - e. Limitations on Review
- G. Medicare-Dependent, Small Rural Hospital (MDH) Program (§ 412.108) and Sole Community Hospitals § 412.92)
 - 1. Background for the MDH Program
 - 2. PAMA of 2014 Provisions for FY 2015
 - 3. Expiration of the MDH Program
 - 4. Effects on MDHs of Adoption of New OMB Delineations
 - 5. Effects on SCHs of Adoption of New OMB Delineations
- H. Hospital Readmissions Reduction Program: Changes for FY 2015 Through FY 2017 (§§ 412.150 Through 412.154)
 - 1. Statutory Basis for the Hospital Readmissions Reduction Program
 - 2. Regulatory Background
 - 3. Overview of Policies for the FY 2015 Hospital Readmissions Reduction Program
 - 4. Refinement of the Readmissions Measures and Related Methodology for FY 2015 and Subsequent Years Payment Determinations
 - a. Refinement of Planned Readmission Algorithm for Acute Myocardial Infarction (AMI), Heart Failure (HF), Pneumonia (PN), Chronic Obstructive Pulmonary Disease (COPD), and Total Hip Arthroplasty and Total Knee Arthroplasty (THA/TKA) 30-Day Readmission Measures
 - b. Refinement of Total Hip Arthroplasty and Total Knee Arthroplasty (THA/TKA) 30-Day Readmission Measure Cohort
 - c. Anticipated Effect of Refinements on Measures
 - 5. No Expansion of the Applicable Conditions for FY 2016
 - 6. Expansion of the Applicable Conditions for FY 2017 To Include Patients Readmitted Following Coronary Artery Bypass Graft (CABG) Surgery Measure
 - a. Background
 - b. Overview of the CABG Readmissions Measure: Hospital-Level, 30-Day, All-Cause, Unplanned Readmission Following Coronary Artery Bypass Graft (CABG) Surgery
 - c. Methodology for the CABG Measure: Hospital-Level, 30-Day, All-Cause, Unplanned Readmission Following Coronary Artery Bypass Graft (CABG) Surgery
 - 7. Maintenance of Technical Specifications for Quality Measures
 - 8. Waiver From the Hospital Readmissions Reduction Program for Hospitals Formerly Paid under Section 1814(b)(3) of the Act (§ 412.152 and § 412.154(d))
 - 9. Floor Adjustment Factor for FY 2015 (§ 412.154(c)(2))
 - 10. Applicable Period for FY 2015
 - 11. Inclusion of THA/TKA and COPD Readmissions Measures to Calculate Aggregate Payments for Excess Readmissions Beginning in FY 2015
 - 12. Hospital Readmissions Reduction Program Extraordinary Circumstances Exceptions
 - I. Hospital Value-Based Purchasing (VBP) Program
 - 1. Statutory Background
 - 2. Overview of Previous Hospital VBP Program Rulemaking
 - 3. FY 2015 Payment Details
 - a. Payment Adjustments
 - b. Base Operating DRG Payment Amount Definition for Medicare-Dependent, Small Rural Hospitals (MDHs)
 - 4. Measures for the FY 2017 Hospital VBP Program
 - a. Measures Previously Adopted
 - b. Changes Affecting Topped-Out Measures
 - c. New Measures for the FY 2017 Hospital VBP Program
 - d. Adoption of the Current CLABSI Measure (NQF #0139) for the FY 2017 Hospital VBP Program
 - e. Summary of Previously Adopted and New Measures for the FY 2017 Hospital VBP Program
 - 5. Additional Measures for the FY 2019 Hospital VBP Program
 - a. Hospital-level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and Total Knee Arthroplasty (TKA)
 - b. PSI-90 Measure
 - 6. Possible Measure Topics for Future Program Years
 - a. Care Transition Measure (CTM-3) Items for HCAHPS Survey
 - b. Possible Future Efficiency and Cost Reduction Domain Measure Topics
 - 7. Previously Adopted and Final Performance Periods and Baseline Periods for the FY 2017 Hospital VBP Program
 - a. Background
 - b. Previously Adopted Baseline and Performance Periods for the FY 2017 Hospital VBP Program
 - c. Clinical Care—Process Domain Performance Period and Baseline Period for the FY 2017 Hospital VBP Program
 - d. Patient and Caregiver-Centered Experience of Care/Care Coordination Domain Performance Period and Baseline Period for the FY 2017 Hospital VBP Program
 - e. Performance Period and Baseline Period for NHSN Measures in the Safety Domain for the FY 2017 Hospital VBP Program
 - f. Efficiency and Cost Reduction Domain Performance Period and Baseline Period for the FY 2017 Hospital VBP Program
 - g. Summary of Previously Adopted and Finalized Performance Periods and Baseline Periods for the FY 2017 Hospital VBP Program
 - 8. Previously Adopted and Finalized Performance Periods and Baseline Periods for Certain Measures for the FY 2019 Hospital VBP Program
 - a. Previously Adopted and Finalized Performance Period and Baseline Period for the FY 2019 Hospital VBP Program for Clinical Care—Outcomes Domain Measures
 - b. Performance Period and Baseline Period for the PSI-90 Safety Domain Measure for the FY 2019 Hospital VBP Program
 - c. Summary of Previously Adopted and Finalized Performance Periods and Baseline Periods for Certain Measures for the FY 2019 Hospital VBP Program
 - 9. Performance Period and Baseline Period for the Clinical Care—Outcomes Domain for the FY 2020 Hospital VBP Program
 - 10. Performance Standards for the Hospital VBP Program
 - a. Background
 - b. Performance Standards for the FY 2016 Hospital VBP Program
 - c. Previously Adopted Performance Standards for the FY 2017, FY 2018, and FY 2019 Hospital VBP Programs
 - d. Additional Performance Standards for the FY 2017 Hospital VBP Program
 - e. Performance Standards for the FY 2019 and FY 2020 Hospital VBP Programs
 - f. Technical Updates Policy for Performance Standards
 - g. Solicitation of Public Comments on ICD-10-CM/PCS Transition
 - 11. FY 2017 Hospital VBP Program Scoring Methodology
 - a. General Hospital VBP Program Scoring Methodology
 - b. Domain Weighting for the FY 2017 Hospital VBP Program for Hospitals That Receive a Score on All Domains
 - c. Domain Weighting for the FY 2017 Hospital VBP Program for Hospitals Receiving Scores on Fewer Than Four Domains
 - 12. Minimum Numbers of Cases and Measures for the FY 2016 and FY 2017 Hospital VBP Program's Quality Domains

- a. Previously Adopted Minimum Numbers of Cases and FY 2016 Minimum Numbers of Cases
- b. Minimum Number of Measures—Safety Domain
- c. Minimum Number of Measures—Clinical Care Domain
- d. Minimum Number of Measures—Efficiency and Cost Reduction Domain
- e. Minimum Number of Measures—Patient and Caregiver Centered Experience of Care/Care Coordination (PEC/CC) Domain
- 13. Applicability of the Hospital VBP Program to Maryland Hospitals
- 14. Disaster/Extraordinary Circumstance Exception under the Hospital VBP Program
- J. Hospital-Acquired Condition (HAC) Reduction Program
 - 1. Background
 - 2. Statutory Basis for the HAC Reduction Program
 - 3. Implementation of the HAC Reduction Program for FY 2015
 - a. Overview
 - b. Payment Adjustment Under the HAC Reduction Program, Including Exemptions
 - c. Measure Selection and Conditions, Including Risk Adjustment Scoring Methodology
 - d. Criteria for Applicable Hospitals and Performance Scoring Policy
 - e. Reporting Hospital-Specific Information, Including the Review and Correction of Information
 - f. Limitation on Administrative and Judicial Review
 - 4. Maintenance of Technical Specifications for Quality Measures
 - 5. Extraordinary Circumstances Exceptions/Exemptions
 - 6. Implementation of the HAC Reduction Program for FY 2016
 - a. Measure Selection and Conditions, including a Risk-Adjustment Scoring Methodology
 - b. Measure Risk Adjustment
 - c. Measure Calculation
 - d. Applicable Time Period
 - e. Criteria for Applicable Hospitals and Performance Scoring
 - f. Rules To calculate the Total HAC Score for FY 2016
 - 7. Future Consideration for the Use of Electronically Specified Measures
- K. Payments for Indirect and Direct Graduate Medical Education (GME) Costs (§§ 412.105 and 413.75 through 413.83)
 - 1. Background
 - 2. Changes in the Effective Date of the FTE Resident Cap, 3-Year Rolling Average, and Intern- and Resident-to-Bed (IRB) Ratio Cap for New Programs in Teaching Hospitals
 - 3. Changes to IME and Direct GME Policies as a Result of New OMB Labor Market Area Delineations
 - a. New Program FTE Cap Adjustment for Rural Hospitals Redesignated as Urban
 - b. Participation of Redesignated Hospitals in Rural Training Track
 - 4. Clarification of Policies on Counting Resident Time in Nonprovider Settings
 - Under Section 5504 of the Affordable Care Act
- 5. Changes to the Review and Award Process for Resident Slots Under Section 5506 of the Affordable Care Act
 - a. Effective Date of Slots Awarded Under Section 5506 of the Affordable Care Act
 - b. Removal of Seamless Requirement
 - c. Revisions to Ranking Criteria One, Seven, and Eight for Applications Under Section 5506
 - d. Clarification to Ranking Criterion Two Regarding Emergency Medicare GME Affiliation Agreements
- 6. Regulatory Clarification Applicable To Direct GME Payments to Federally Qualified Health Centers (FQHCs) and Rural Health Clinics (RHCs) for Training Residents in Approved Programs
- L. Rural Community Hospital Demonstration Program
 - 1. Background
 - 2. FY 2015 Budget Neutrality Offset Amount
- M. Requirement for Transparency of Hospital Charges Under the Affordable Care Act
 - 1. Overview
 - 2. Transparency Requirement Under the Affordable Care Act
- N. Medicare Payment for Short Inpatient Hospital Stays
- O. Suggested Exceptions to the 2-Midnight Benchmark
- P. Finalization of Interim Final Rule With Comment Period on Extension of Payment Adjustment for Low-Volume Hospitals and the Medicare-Dependent, Small Rural Hospital (MDH) Program for FY 2014 Discharges Through March 31, 2014
 - 1. Background
 - 2. Summary of the Provisions of the Interim Final Rule With Comment Period
- Q. Finalization of Interim Final Rule With Comment Period on Changes to Certain Cost Reporting Procedures Related to Disproportionate Share Hospital Uncompensated Care Payments
- V. Changes to the IPPS for Capital-Related Costs
 - A. Overview
 - B. Additional Provisions
 - 1. Exception Payments
 - 2. New Hospitals
 - 3. Hospitals Located in Puerto Rico
 - C. Annual Update for FY 2015
- VI. Changes for Hospitals Excluded From the IPPS
 - A. Rate-of-Increase in Payments to Excluded Hospitals for FY 2015
 - B. Report on Adjustment (Exception) Payments
 - C. Updates to the Reasonable Compensation Equivalent (RCE) Limits on Compensation for Physician Services Provided in Providers (§ 415.70)
 - 1. Background
 - 2. Overview of the Current RCE Limits
 - a. Application of the RCE Limits
 - b. Exceptions to the RCE Limits
 - c. Methodology for Establishing the RCE Limits
 - 3. Changes to the RCE Limits
 - D. Critical Access Hospitals (CAHs)
 - 1. Background
- 2. Proposed and Final Policy Changes Related to Reclassifications as Rural for CAHs
- 3. Revision of the Requirements for Physician Certification of CAH Inpatient Services
- VII. Changes to the Long-Term Care Hospital Prospective Payment System (LTCH PPS) for FY 2015
 - A. Background of the LTCH PPS
 - 1. Legislative and Regulatory Authority
 - 2. Criteria for Classification as an LTCH
 - a. Classification as an LTCH
 - b. Hospitals Excluded From the LTCH PPS
 - 3. Limitation on Charges to Beneficiaries
 - 4. Administrative Simplification Compliance Act (ASCA) and Health Insurance Portability and Accountability Act (HIPAA) Compliance
 - B. Medicare Severity Long-Term Care Diagnosis-Related Group (MS-LTC-DRG) Classifications and Relative Weights for FY 2015
 - 1. Background
 - 2. Patient Classifications into MS-LTC-DRGs
 - a. Background
 - b. Changes to the MS-LTC-DRGs for FY 2015
 - 3. Development of the FY 2015 MS-LTC-DRG Relative Weights
 - a. General Overview of the Development of the MS-LTC-DRG Relative Weights
 - b. Development of the MS-LTC-DRG Relative Weights for FY 2015
 - c. Data
 - d. Hospital-Specific Relative Value (HSRV) Methodology
 - e. Treatment of Severity Levels in Developing the MS-LTC-DRG Relative Weights
 - f. Low-Volume MS-LTC-DRGs
 - g. Steps for Determining the FY 2015 MS-LTC-DRG Relative Weights
 - C. LTCH PPS Payment Rates for FY 2015
 - 1. Overview of Development of the LTCH Payment Rates
 - 2. FY 2015 LTCH PPS Annual Market Basket Update
 - a. Overview
 - b. Revision of Certain Market Basket Updates as Required by the Affordable Care Act
 - c. Adjustment to the Annual Update to the LTCH PPS Standard Federal Rate Under the Long-Term Care Hospital Quality Reporting (LTCHQR) Program
 - 1. Background
 - 2. Reduction to the Annual Update to the LTCH PPS Standard Federal Rate under the LTCHQR Program
 - d. Market Basket Under the LTCH PPS for FY 2015
 - e. Annual Market Basket Update for LTCHs for FY 2015
 - 3. Adjustment for the Final Year of the Phase-In of the One-Time Prospective Adjustment to the Standard Federal Rate under § 412.523(d)(3)
 - D. Revision of LTCH PPS Geographic Classifications
 - 1. Background
 - 2. Use of New OMB Labor Market Area Delineations (“New OMB Delineations”)
 - a. Micropolitan Statistical Areas

- b. Urban Counties That Became Rural Under the New OMB Labor Market Area Delineations
- c. Rural Counties That Became Urban Under the New OMB Labor Market Area Delineations
- d. Urban Counties That Moved to a Different Urban CBSA Under the New OMB Labor Market Area Delineations
- e. Transition Period
- E. Reinstatement and Extension of Certain Payment Rules for LTCH Services—The 25-Percent Threshold Payment Adjustment
 - 1. Background
 - 2. Implementation of Section 1206(b)(1) of Pub. L. 113–67
- F. Discussion of the “Greater Than 3-Day Interruption of Stay” Policy and the Transfer to Onsite Providers Policies Under the LTCH PPS
- G. Moratoria on the Establishment of LTCHs and LTCH Satellite Facilities and on the Increase in the Number of Beds in Existing LTCHs or LTCH Satellite Facilities
- H. Evaluation and Treatment of LTCHs Classified Under Section 1886(d)(1)(B)(iv)(III) of the Act
- I. Description of Statutory Framework for Patient-Level Criteria-Based Payment Adjustment Under the LTCH PPS Under Pub. L. 113–67
 - 1. Overview
 - 2. Additional LTCH PPS Issues
- J. Technical Change
- VIII. Administrative Appeals by Providers and Judicial Review
 - A. Proposed and Final Changes Regarding the Claims Required in Provider Cost Reports and for Provider Administrative Appeals
 - B. Proposed and Final Changes to Conform Terminology From “Intermediary” to “Contractor”
 - C. Technical Correction to § 405.1835 of the Regulations and Corresponding Amendment to § 405.1811 of the Regulations
 - 1. Background and Technical Correction to §§ 405.1811 and 405.1835 of the Regulations
 - 2. Waiver of Notice of Proposed Rulemaking
 - 3. Effective Date and Applicability Date; Finality and Reopening
- IX. Quality Data Reporting Requirements for Specific Providers and Suppliers
 - A. Hospital Inpatient Quality Reporting (IQR) Program
 - 1. Background
 - a. History of the Hospital IQR Program
 - b. Maintenance of Technical Specifications for Quality Measures
 - c. Public Display of Quality Measures
 - 2. Removal and Suspension of Hospital IQR Program Measures
 - a. Considerations in Removing Quality Measures From the Hospital IQR Program
 - b. Removal of Hospital IQR Program Measures for the FY 2017 Payment Determination and Subsequent Years
 - 3. Process for Retaining Previously Adopted Hospital IQR Program Measures for Subsequent Payment Determinations
 - 4. Additional Considerations in Expanding and Updating Quality Measures Under the Hospital IQR Program
 - 5. Previously Adopted Hospital IQR Program Measures for the FY 2016 Payment Determination and Subsequent Years
 - 6. Refinements and Clarification to Existing Measures in the Hospital IQR Program
 - a. Refinement of Planned Readmission Algorithm for 30-Day Readmission Measures
 - b. Refinement of Total Hip Arthroplasty and Total Knee Arthroplasty (THA/TKA) 30-Day Complication and Readmission Measures
 - c. Anticipated Effect of Refinements to Existing Measures
 - d. Clarification Regarding Influenza Vaccination for Healthcare Personnel
 - 7. Additional Hospital IQR Program Measures for the FY 2017 Payment Determination and Subsequent Years
 - a. Hospital 30-day, All-Cause, Unplanned, Risk-Standardized Readmission Rate (RSRR) Following Coronary Artery Bypass Graft (CABG) Surgery
 - b. Hospital 30-day, All-Cause, Risk-standardized Mortality Rate (RSMR) Following Coronary Artery Bypass Graft (CABG) Surgery
 - c. Hospital-Level, Risk-Standardized 30-Day Episode-of-Care Payment Measure for Pneumonia
 - d. Hospital-Level, Risk-Standardized 30-Day Episode-of-Care Payment Measure for Heart Failure
 - e. Severe Sepsis and Septic Shock: Management Bundle Measure (NQF #0500)
 - f. Electronic Health Record-Based Voluntary Measures
 - g. Readoption of Measures as Voluntarily Reported Electronic Clinical Quality Measures
 - h. Electronic Clinical Quality Measures
 - 8. Possible New Quality Measures and Measure Topics for Future Years
 - a. Mandatory Electronic Clinical Quality Measure Reporting for FY 2018 Payment Determination
 - b. Possible Future Electronic Clinical Quality Measures
 - 9. Form, Manner, and Timing of Quality Data Submission
 - a. Background
 - b. Procedural Requirements for the FY 2017 Payment Determination and Subsequent Years
 - c. Data Submission Requirements for Chart-Abstracted Measures
 - d. Alignment of the Medicare EHR Incentive Program Reporting and Submission Timelines for Clinical Quality Measures With Hospital IQR Program Reporting and Submission Timelines
 - e. Sampling and Case Thresholds for the FY 2017 Payment Determination and Subsequent Years
 - f. HCAHPS Requirements for the FY 2017 Payment Determination and Subsequent Years

I. Executive Summary and Background

A. Executive Summary

1. Purpose and Legal Authority

This final rule makes payment and policy changes under the Medicare inpatient prospective payment systems (IPPS) for operating and capital-related costs of acute care hospitals as well as for certain hospitals and hospital units excluded from the IPPS. In addition, it makes payment and policy changes for inpatient hospital services provided by long-term care hospitals (LTCHs) under the long-term care hospital prospective payment system (LTCH PPS). It also makes policy changes to programs associated with Medicare IPPS hospitals, IPPS-excluded hospitals, and LTCHs.

Under various statutory authorities, we are making changes to the Medicare IPPS, to the LTCH PPS, and to other related payment methodologies and programs for FY 2015 and subsequent fiscal years. These statutory authorities include, but are not limited to, the following:

- Section 1886(d) of the Social Security Act (the Act), which sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires that, instead of paying for capital-related costs of inpatient hospital services on a reasonable cost basis, the Secretary use a prospective payment system (PPS).

- Section 1886(d)(1)(B) of the Act, which specifies that certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: rehabilitation hospitals and units; LTCHs; psychiatric hospitals and units; children's hospitals; cancer hospitals; and short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS.

- Sections 123(a) and (c) of Pub. L. 106–113 and section 307(b)(1) of Public Law 106–554 (as codified under section 1886(m)(1) of the Act), which provide for the development and implementation of a prospective payment system for payment for inpatient hospital services of long-term care hospitals (LTCHs) described in section 1886(d)(1)(B)(iv) of the Act.

- Sections 1814(l), 1820, and 1834(g) of the Act, which specify that payments are made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services and that these payments are generally based on 101 percent of reasonable cost.

- Section 1866(k) of the Act, as added by section 3005 of the Affordable Care Act, which establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act, referred to as “PPS-Exempt Cancer Hospitals.”

- Section 1886(d)(4)(D) of the Act, which addresses certain hospital-acquired conditions (HACs), including infections. Section 1886(d)(4)(D) of the Act specifies that, by October 1, 2007, the Secretary was required to select, in consultation with the Centers for Disease Control and Prevention (CDC), at least two conditions that: (a) are high cost, high volume, or both; (b) are assigned to a higher paying MS-DRG when present as a secondary diagnosis (that is, conditions under the MS-DRG system that are complications or comorbidities (CCs) or major complications or comorbidities (MCCs); and (c) could reasonably have been prevented through the application of evidence-based guidelines. Section 1886(d)(4)(D) of the Act also specifies that the list of conditions may be revised, again in consultation with CDC, from time to time as long as the list contains at least two conditions. Section 1886(d)(4)(D)(iii) of the Act requires that hospitals, effective with discharges occurring on or after October 1, 2007, submit information on Medicare claims specifying whether diagnoses were present on admission (POA). Section 1886(d)(4)(D)(i) of the Act specifies that effective for discharges occurring on or after October 1, 2008, Medicare no longer assigns an inpatient hospital discharge to a higher paying MS-DRG if a selected condition is not POA.

- Section 1886(a)(4) of the Act, which specifies that costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. A payment for indirect medical education (IME) is made under section 1886(d)(5)(B) of the Act.

- Section 1886(b)(3)(B)(viii) of the Act, which requires the Secretary to reduce the applicable percentage increase in payments to a subsection (d) hospital for a fiscal year if the hospital does not submit data on measures in a

form and manner, and at a time, specified by the Secretary.

- Section 1886(o) of the Act, which requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year.

- Section 1886(p) of the Act, as added by section 3008 of the Affordable Care Act, which establishes an adjustment to hospital payments for hospital-acquired conditions (HACs), or a Hospital-Acquired Condition (HAC) Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce hospital-acquired conditions.

- Section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act and amended by section 10309 of the Affordable Care Act, which establishes the “Hospital Readmissions Reduction Program” effective for discharges from an “applicable hospital” beginning on or after October 1, 2012, under which payments to those hospitals under section 1886(d) of the Act will be reduced to account for certain excess readmissions.

- Section 1886(r) of the Act, as added by section 3133 of the Affordable Care Act, which provides for a reduction to disproportionate share hospital payments under section 1886(d)(5)(F) of the Act and for a new uncompensated care payment to eligible hospitals. Specifically, section 1886(r) of the Act now requires that, for “fiscal year 2014 and each subsequent fiscal year,” “subsection (d) hospitals” that would otherwise receive a “disproportionate share hospital payment . . . made under subsection (d)(5)(F)” will receive two separate payments: (1) 25 percent of the amount they previously would have received under subsection (d)(5)(F) for DSH (“the empirically justified amount”), and (2) an additional payment for the DSH hospital’s proportion of uncompensated care, determined as the product of three factors. These three factors are: (1) 75 percent of the payments that would otherwise be made under subsection (d)(5)(F); (2) 1 minus the percent change in the percent of individuals under the age of 65 who are uninsured (minus 0.1 percentage points for FY 2014, and minus 0.2 percentage points for FY 2015 through FY 2017); and (3) a hospital’s uncompensated care amount relative to the uncompensated care amount of all DSH hospitals expressed as a percentage.

- Section 1886(m)(6) of the Act, as added by section 1206(a)(1) of the

Pathway for SGR Reform Act of 2013, which provided for the establishment of patient criteria for payment under the LTCH PPS for implementation beginning in FY 2016.

- Section 1206(b)(1) of the Pathway for SGR Reform Act of 2013, which further amended section 114(c) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act, by retroactively reestablishing and extending the statutory moratorium on the full implementation of the 25-percent threshold payment adjustment policy under the LTCH PPS so that the policy will be in effect for 9 years (except for “grandfathered” hospital-within-hospitals (HwHs), which are permanently exempt from this policy); and section 1206(b)(2) (as amended by section 112(b) of Pub. L. 113–93), which together further amended section 114(d) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act to establish a new moratoria (subject to certain defined exceptions) on the development of new LTCHs and LTCH satellite facilities and a new moratorium on increases in the number of beds in existing LTCHs and LTCH satellite facilities beginning January 1, 2015 and ending on September 30, 2017; and section 1206(d), which instructs the Secretary to evaluate payments to LTCHs classified under section 1886(b)(1)(C)(iv)(II) of the Act and to adjust payment rates in FY 2015 or FY 2016 under the LTCH PPS, as appropriate, based upon the evaluation findings.

- Section 1886(m)(5)(D)(iv) of the Act, as added by section 1206 (c) of the Pathway for SGR Reform Act of 2013, which provides for the establishment, no later than October 1, 2015, of a functional status quality measure under the LTCHQR Program for change in mobility among inpatients requiring ventilator support.

In this final rule, we are making technical and conforming changes and nomenclature changes to the regulations regarding the claims required in provider cost reports and for provider administrative appeals to conform terminology from “intermediary” to “contractor”

We are aligning the reporting and submission timelines for clinical quality measures for the Medicare EHR Incentive Program for eligible hospitals and critical access hospitals (CAHs) with the reporting and submission timelines for the Hospital IQR Program. In addition, we provide guidance and clarification of certain policies for eligible hospitals and CAHs such as our

policy for reporting zero denominators on clinical quality measures and our policy for case threshold exemptions.

In addition, this final rule contains several provisions that are not directly related to these Medicare payment systems, such as regulatory revisions to broaden the specified uses and reasons for disclosure of risk adjustment data and to specify the conditions for release of risk adjustment data to entities outside of CMS and changes to the enforcement procedures for organ transplant centers. The specific statutory authority for these other provisions is discussed in the relevant sections below.

2. Summary of the Major Provisions

a. MS-DRG Documentation and Coding Adjustment

Section 631 of the American Taxpayer Relief Act (ATRA, Pub. L. 112-240) amended section 7(b)(1)(B) of Public Law 110-90 to require the Secretary to make a recoupment adjustment to the standardized amount of Medicare payments to acute care hospitals to account for changes in MS-DRG documentation and coding that do not reflect real changes in case-mix, totaling \$11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. This adjustment represents the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110-90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110-90.

While our actuaries estimated that a -9.3 percent adjustment to the standardized amount would be necessary if CMS were to fully recover the \$11 billion recoupment required by section 631 of the ATRA in FY 2014, it is often our practice to delay or phase in rate adjustments over more than one year, in order to moderate the effects on rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases, we made a -0.8 percent recoupment adjustment to the standardized amount in FY 2014. We are making an additional -0.8 percent recoupment adjustment to the standardized amount in FY 2015.

b. Reduction of Hospital Payments for Excess Readmissions

We are making changes in policies to the Hospital Readmissions Reduction Program, which is established under section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act. The Hospital Readmissions Reduction

Program requires a reduction to a hospital's base operating DRG payment to account for excess readmissions of selected applicable conditions. For FYs 2013 and 2014, these conditions are acute myocardial infarction, heart failure, and pneumonia. For FY 2014, we established additional exclusions to the three existing readmission measures (that is, the excess readmission ratio) to account for additional planned readmissions. We also established additional readmissions measures, Chronic Obstructive Pulmonary Disease (COPD), and Total Hip Arthroplasty and Total Knee Arthroplasty (THA/TKA), to be used in the Hospital Readmissions Reduction Program for FY 2015 and future years. We are expanding the readmissions measures for FY 2017 and future years by adding a measure of patients readmitted following coronary artery bypass graft (CABG) surgery. We also are refining the readmission measures and related methodology for FY 2015 and subsequent years payment determinations. In addition, we are providing that the readmissions payment adjustment factors for FY 2015 can be no more than a 3-percent reduction in accordance with the statute. We also are revising the calculation of aggregate payments for excess readmissions to include THA/TKA and COPD readmissions measures beginning in FY 2015.

c. Hospital Value-Based Purchasing (VBP) Program

Section 1886(o) of the Act requires the Secretary to establish a Hospital Value-Based Purchasing (VBP) Program under which value-based incentive payments are made in a fiscal year to hospitals meeting performance standards established for a performance period for such fiscal year. Both the performance standards and the performance period for a fiscal year are to be established by the Secretary.

In this final rule, we are adopting quality measures for the FY 2017, FY 2019, and FY 2020 Hospital VBP Program years and establishing performance periods and performance standards for measures we are adopting for those fiscal years. We are also adopting additional policies related to performance standards and revising the domain weighting previously adopted for the FY 2017 Hospital VBP Program.

d. Hospital-Acquired Condition (HAC) Reduction Program

In this final rule, we are making a change in the scoring methodology with the addition of a previously finalized measure for the FY 2016 payment adjustment under the HAC Reduction

Program. Section 1886(p) of the Act, as added under section 3008(a) of the Affordable Care Act, establishes an adjustment to hospital payments for HACs, or a HAC Reduction program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce HACs, effective for discharges beginning on October 1, 2014 and for subsequent program years. This 1-percent payment reduction applies to a hospital whose ranking is in the top quartile (25 percent) of all applicable hospitals, relative to the national average, of conditions acquired during the applicable period and on all of the hospital's discharges for the specified fiscal year. The amount of payment shall be equal to 99 percent of the amount of payment that would otherwise apply to such discharges under section 1886(d) or 1814(b)(3) of the Act, as applicable.

e. DSH Payment Adjustment and Additional Payment for Uncompensated Care

Section 3133 of the Affordable Care Act modified the Medicare disproportionate share hospital (DSH) payment methodology beginning in FY 2014. Under section 1886(r) of the Act, which was added by section 3133 of the Affordable Care Act, starting in FY 2014, DSHs will receive 25 percent of the amount they previously would have received under the statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remaining amount, equal to 75 percent of what otherwise would have been paid as Medicare DSH payments, will be paid as additional payments after the amount is reduced for changes in the percentage of individuals that are uninsured. Each Medicare DSH hospital will receive its additional amount based on its share of the total amount of uncompensated care for all Medicare DSH hospitals for a given time period. In this final rule, we are updating the uncompensated care amount to be distributed for FY 2015, and we are making changes to the methodology for calculating the uncompensated care payment amounts such that we will combine uncompensated care data for hospitals that have merged in order to calculate the relative share of uncompensated care for the surviving hospital.

f. Hospital Inpatient Quality Reporting (IQR) Program

Under section 1886(b)(3)(B)(viii) of the Act, hospitals are required to report data on measures selected by the Secretary for the Hospital IQR Program in order to receive the full annual percentage increase. In past rules, we

have established measures for reporting and the process for submittal and validation of the data.

We are finalizing a total of 63 measures (47 required and 16 voluntary electronic clinical quality measures) in the Hospital IQR Program measure set for the FY 2017 payment determination and subsequent years. In this final rule, we are finalizing 11 new measures (1 chart-abstracted, 4 claims-based, and 6 voluntary electronic clinical quality measures). We proposed to remove 20 measures, but are only finalizing the removal of 19. The SCIP-INF-4 measure was proposed for removal, but will be retained as it was recently retooled for the 2014 collection period. Ten of these 19 measures are topped-out, chart-abstracted measures that are being retained as voluntary electronic clinical quality measures.

While we are finalizing our proposal to align the reporting and submission timelines of the Medicare EHR Incentive Program with those of the Hospital IQR Program on the calendar year for CQMs that are reported electronically for 2015, we are not finalizing the proposal to require quarterly submission of CQM data. Hospitals can voluntarily submit one calendar year (CY) quarter of data for Q 1, Q 2, or Q3 of 2015 by November 30, 2015, in order to partially fulfill requirements for both programs for CY 2015. In addition, we are finalizing a number of new policies related to the administration of the program, including access to specific NHSN data, updates to validation, and an electronic clinical quality measures validation pilot test.

g. Changes to the LTCH PPS

Section 1206(b) of the Pathway for SGR Reform Act provides for the retroactive reinstatement and extension, for an additional 4 years, of the moratorium on the full implementation of the 25-percent threshold payment adjustment under the LTCH PPS established under section 114(c) of the MMSEA, as further amended by subsequent legislation. In keeping with this mandate, we are reinstating this payment adjustment retroactively for LTCH cost reporting periods beginning on or after July 1, 2013, or October 1, 2013.

Section 1206(b)(2) of the Pathway for SGR Reform Act, as amended by section 112(b) of the Protecting Access to Medicare Act of 2014, provides for new statutory moratoria on the establishment of new LTCHs and LTCH satellite facilities (subject to certain defined exceptions) and a new statutory moratorium on bed increases in existing LTCHs effective for the period

beginning April 1, 2014 and ending September 30, 2017.

In accordance with section 1206(d) of the Pathway for SGR Reform Act of 2013, we are applying a payment adjustment under the LTCH PPS to subclause (II) LTCHs beginning in FY 2015 that will result in payments to this type of LTCH resembling reasonable cost payments under the TEFRA payment system model.

We also discuss our proposed changes to the LTCH interruption of stay policy, which is a payment adjustment that is applied when, during the course of an LTCH hospitalization, a patient is discharged to an inpatient acute care hospital, an IRF, or a SNF for treatment or services not available at the LTCH for a specified period followed by readmittance to the same LTCH. In addition, we are finalizing our proposal to remove the 5-percent payment threshold policy for patient transfers between LTCHs and onsite providers.

3. Summary of Costs and Benefits

- **Adjustment for MS-DRG Documentation and Coding Changes.** We are making a -0.8 percent recoupment adjustment to the standardized amount for FY 2015 to implement, in part, the requirement of section 631 of the ATRA that the Secretary make an adjustment totaling \$11 billion over a 4-year period of FYs 2014, 2015, 2016, and 2017. This recoupment adjustment represents the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110-90 until FY 2013. Prior to the ATRA, this amount could not have been recovered under Public Law 110-90.

While our actuaries estimated that a -9.3 percent recoupment adjustment to the standardized amount would be necessary if CMS were to fully recover the \$11 billion recoupment required by section 631 of the ATRA in FY 2014, it is often our practice to delay or phase in rate adjustments over more than one year, in order to moderate the effects on rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases and the adjustment we made for FY 2014, we are making a -0.8 percent recoupment adjustment to the standardized amount in FY 2015. We estimated that this level of adjustment, combined with leaving the -0.8 percent adjustment made for FY 2014 in place, will recover up to \$2 billion in FY 2015. Taking into account the approximately \$1 billion recovered in FY 2014, this will leave approximately \$8 billion remaining to be recovered by FY 2017.

- **Reduction to Hospital Payments for Excess Readmissions.** The provisions of section 1886(q) of the Act which establishes the Hospital Readmissions Reduction Program are not budget neutral. For FY 2015, a hospital's readmissions payment adjustment factor is the higher of a ratio of a hospital's aggregate payments for excess readmissions to its aggregate payments for all discharges, or 0.97 (that is, or a 3-percent reduction). In this final rule, we estimate that the reduction to a hospital's base operating DRG payment amount to account for excess readmissions of selected applicable conditions under the Hospital Readmissions Reduction Program will result in a 0.2 percent decrease in payments to hospitals for FY 2015 relative to FY 2014.

- **Value-Based Incentive Payments under the Hospital Value-Based Purchasing (VBP) Program.** We estimate that there will be no net financial impact to the Hospital VBP Program for FY 2015 in the aggregate because, by law, the amount available for value-based incentive payments under the program in a given fiscal year must be equal to the total amount of base operating DRG payment amount reductions for that year, as estimated by the Secretary. The estimated amount of base operating DRG payment amount reductions for FY 2015 and, therefore, the estimated amount available for value-based incentive payments for FY 2015 discharges is approximately \$1.4 billion. We believe that the program's benefits will be seen in improved patient outcomes, safety, and in the patient's experience of care. However, we cannot estimate these benefits in actual dollar and patient terms.

- **Payment Adjustment under the HAC Reduction Program for FY 2015.** Under section 1886(p) of the Act, (as added by section 3008 of the Affordable Care Act), the incentive to reduce hospital-acquired conditions with a payment adjustment to applicable hospitals under the HAC Reduction Program is made beginning FY 2015. We estimate that, under this provision, overall payments will decrease approximately 0.3 percent or \$369 million.

- **Medicare DSH Payment Adjustment and Additional Payment for Uncompensated Care.** Under section 1886(r) of the Act (as added by section 3313 of the Affordable Care Act), disproportionate share hospital payments to hospitals under section 1886(d)(5)(F) of the Act are reduced and an additional payment is made to eligible hospitals beginning in FY 2014. Hospitals that receive Medicare DSH

payments will receive 25 percent of the amount they previously would have received under the current statutory formula for Medicare DSH payments in section 1886(d)(5)(F) of the Act. The remainder, equal to 75 percent of what otherwise would have been paid as Medicare DSH payments, will be the basis for determining the additional payments for uncompensated care after the amount is reduced for changes in the percentage of individuals that are uninsured and additional statutory adjustments. Each hospital that receives Medicare DSH payments will receive an additional payment based on its share of the total uncompensated care amount reported by Medicare DSHs. The reduction to Medicare DSH payments is not budget neutral.

For FY 2015, we are providing that the 75 percent of what otherwise would have been paid for Medicare DSH is adjusted to approximately 76.19 percent of the amount for changes in the percentage of individuals that are uninsured and additional statutory adjustments. In other words, our estimate of Medicare DSH payments prior to the application of section 3133 of the Affordable Care Act is adjusted to approximately 57.1 percent (the product of 75 percent and 76.19 percent) and the resulting payment amount is used to create an additional payment to hospitals for their relative share of the total amount of uncompensated care. We project that Medicare DSH payments and additional payments for uncompensated care made for FY 2015 will reduce payments overall by 1.3 percent as compared to the Medicare DSH payments and uncompensated care payments distributed in FY 2014. The additional payments have redistributive effects based on a hospital's uncompensated care amount relative to the uncompensated care amount for all hospitals that are estimated to receive Medicare DSH payments, and the final payment amount is not tied to a hospital's discharges.

- **Hospital Inpatient Quality Reporting (IQR) Program.** In this final rule, we are finalizing 11 new measures (1 chart-abstracted, 4 claims-based, and 6 voluntary electronic clinical quality measures). We proposed to remove 20 measures, but are only finalizing the removal of 19. The SCIP-INF-4 measure was proposed for removal, but will be retained as it was recently retooled for the 2014 collection period. 10 of these 19 measures are topped-out, chart-abstracted measures that are being retained as voluntary electronic clinical quality measures. We estimate that the adoption and removal of these measures

will decrease hospital costs by \$39.8 million.

- **Update to the LTCH PPS Standard Federal Rate and Other Payment Factors.** Based on the best available data for the 423 LTCHs in our database, we estimate that the changes to the payment rates and factors we are presenting in the preamble and Addendum of this final rule, including the update to the standard Federal rate for FY 2015, the changes to the area wage adjustment for FY 2015, and the expected changes to short-stay outliers and high-cost outliers, will result in an increase in estimated payments from FY 2014 of approximately \$62 million (or 1.1 percent). In addition, we estimate that net effect of the projected impact of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the "25 percent threshold" payment adjustment; the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and additional LTCH beds; the revocation of onsite discharges and readmissions policy; and the payment adjustment for "subclause (II)" LTCHs) is estimated to result in an increase in LTCH PPS payments of approximately \$116 million.

The impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, in conjunction with the estimated payment impacts of certain other LTCH PPS policy changes will result in a net increase of \$178 million to LTCH providers. Additionally, we estimate that the costs to LTCHs associated with the completion of the data for the LTCHQR Program to be approximately \$4.7 million more than FY 2014.

B. Summary

1. Acute Care Hospital Inpatient Prospective Payment System (IPPS)

Section 1886(d) of the Social Security Act (the Act) sets forth a system of payment for the operating costs of acute care hospital inpatient stays under Medicare Part A (Hospital Insurance) based on prospectively set rates. Section 1886(g) of the Act requires the Secretary to use a prospective payment system (PPS) to pay for the capital-related costs of inpatient hospital services for these "subsection (d) hospitals." Under these PPSs, Medicare payment for hospital inpatient operating and capital-related costs is made at predetermined, specific rates for each hospital discharge. Discharges are classified according to a list of diagnosis-related groups (DRGs).

The base payment rate is comprised of a standardized amount that is divided

into a labor-related share and a nonlabor-related share. The labor-related share is adjusted by the wage index applicable to the area where the hospital is located. If the hospital is located in Alaska or Hawaii, the nonlabor-related share is adjusted by a cost-of-living adjustment factor. This base payment rate is multiplied by the DRG relative weight.

If the hospital treats a high percentage of certain low-income patients, it receives a percentage add-on payment applied to the DRG-adjusted base payment rate. This add-on payment, known as the disproportionate share hospital (DSH) adjustment, provides for a percentage increase in Medicare payments to hospitals that qualify under either of two statutory formulas designed to identify hospitals that serve a disproportionate share of low-income patients. For qualifying hospitals, the amount of this adjustment varies based on the outcome of the statutory calculations. The Affordable Care Act revised the Medicare DSH payment methodology and provides for a new additional Medicare payment that considers the amount of uncompensated care beginning on October 1, 2013.

If the hospital is an approved teaching hospital, it receives a percentage add-on payment for each case paid under the IPPS, known as the indirect medical education (IME) adjustment. This percentage varies, depending on the ratio of residents to beds.

Additional payments may be made for cases that involve new technologies or medical services that have been approved for special add-on payments. To qualify, a new technology or medical service must demonstrate that it is a substantial clinical improvement over technologies or services otherwise available, and that, absent an add-on payment, it would be inadequately paid under the regular DRG payment.

The costs incurred by the hospital for a case are evaluated to determine whether the hospital is eligible for an additional payment as an outlier case. This additional payment is designed to protect the hospital from large financial losses due to unusually expensive cases. Any eligible outlier payment is added to the DRG-adjusted base payment rate, plus any DSH, IME, and new technology or medical service add-on adjustments.

Although payments to most hospitals under the IPPS are made on the basis of the standardized amounts, some categories of hospitals are paid in whole or in part based on their hospital-specific rate, which is determined from their costs in a base year. For example, sole community hospitals (SCHs) receive the higher of a hospital-specific

rate based on their costs in a base year (the highest of FY 1982, FY 1987, FY 1996, or FY 2006) or the IPPS Federal rate based on the standardized amount. Through and including FY 2006, a Medicare-dependent, small rural hospital (MDH) received the higher of the Federal rate or the Federal rate plus 50 percent of the amount by which the Federal rate is exceeded by the higher of its FY 1982 or FY 1987 hospital-specific rate. As discussed below, for discharges occurring on or after October 1, 2007, but before April 1, 2015, an MDH will receive the higher of the Federal rate or the Federal rate plus 75 percent of the amount by which the Federal rate is exceeded by the highest of its FY 1982, FY 1987, or FY 2002 hospital-specific rate. (We note that the statutory provision for payments to MDHs expires on March 31, 2015, under current law.) SCHs are the sole source of care in their areas, and MDHs are a major source of care for Medicare beneficiaries in their areas. Specifically, section 1886(d)(5)(D)(iii) of the Act defines an SCH as a hospital that is located more than 35 road miles from another hospital or that, by reason of factors such as isolated location, weather conditions, travel conditions, or absence of other like hospitals (as determined by the Secretary), is the sole source of hospital inpatient services reasonably available to Medicare beneficiaries. In addition, certain rural hospitals previously designated by the Secretary as essential access community hospitals are considered SCHs. Section 1886(d)(5)(G)(iv) of the Act defines an MDH as a hospital that is located in a rural area, has not more than 100 beds, is not an SCH, and has a high percentage of Medicare discharges (not less than 60 percent of its inpatient days or discharges in its cost reporting year beginning in FY 1987 or in two of its three most recently settled Medicare cost reporting years). Both of these categories of hospitals are afforded this special payment protection in order to maintain access to services for beneficiaries.

Section 1886(g) of the Act requires the Secretary to pay for the capital-related costs of inpatient hospital services “in accordance with a prospective payment system established by the Secretary.” The basic methodology for determining capital prospective payments is set forth in our regulations at 42 CFR 412.308 and 412.312. Under the capital IPPS, payments are adjusted by the same DRG for the case as they are under the operating IPPS. Capital IPPS payments are also adjusted for IME and DSH, similar to the adjustments made under

the operating IPPS. In addition, hospitals may receive outlier payments for those cases that have unusually high costs.

The existing regulations governing payments to hospitals under the IPPS are located in 42 CFR Part 412, Subparts A through M.

2. Hospitals and Hospital Units Excluded From the IPPS

Under section 1886(d)(1)(B) of the Act, as amended, certain hospitals and hospital units are excluded from the IPPS. These hospitals and units are: Rehabilitation hospitals and units; long-term care hospitals (LTCHs); psychiatric hospitals and units; children’s hospitals; certain cancer hospitals; and short-term acute care hospitals located in Guam, the U.S. Virgin Islands, the Northern Mariana Islands, and American Samoa. Religious nonmedical health care institutions (RNHCIs) are also excluded from the IPPS. Various sections of the Balanced Budget Act of 1997 (BBA, Pub. L. 105–33), the Medicare, Medicaid and SCHIP [State Children’s Health Insurance Program] Balanced Budget Refinement Act of 1999 (BBRA, Pub. L. 106–113), and the Medicare, Medicaid, and SCHIP Benefits Improvement and Protection Act of 2000 (BIPA, Pub. L. 106–554) provide for the implementation of PPSs for rehabilitation hospitals and units (referred to as inpatient rehabilitation facilities (IRFs)), LTCHs, and psychiatric hospitals and units (referred to as inpatient psychiatric facilities (IPFs)). (We note that the annual updates to the LTCH PPS are now included as part of the IPPS annual update document. Updates to the IRF PPS and IPF PPS are issued as separate documents.) Children’s hospitals, certain cancer hospitals, short-term acute care hospitals located in Guam, the U.S. Virgin Islands, the Northern Mariana Islands, and American Samoa, and RNHCIs continue to be paid solely under a reasonable cost-based system subject to a rate-of-increase ceiling on inpatient operating costs, as updated annually by the percentage increase in the IPPS operating market basket.

The existing regulations governing payments to excluded hospitals and hospital units are located in 42 CFR Parts 412 and 413.

3. Long-Term Care Hospital Prospective Payment System (LTCH PPS)

The Medicare prospective payment system (PPS) for LTCHs applies to hospitals described in section 1886(d)(1)(B)(iv) of the Act effective for cost reporting periods beginning on or after October 1, 2002. The LTCH PPS

was established under the authority of section 123 of the BBRA and section 307(b) of the BIPA (as codified under section 1886(m)(1) of the Act). During the 5-year (optional) transition period, a LTCH’s payment under the PPS was based on an increasing proportion of the LTCH Federal rate with a corresponding decreasing proportion based on reasonable cost principles. Effective for cost reporting periods beginning on or after October 1, 2006, all LTCHs are paid 100 percent of the Federal rate. The existing regulations governing payment under the LTCH PPS are located in 42 CFR Part 412, Subpart O. Beginning with FY 2009, annual updates to the LTCH PPS are published in the same documents that update the IPPS (73 FR 26797 through 26798).

4. Critical Access Hospitals (CAHs)

Under sections 1814(l), 1820, and 1834(g) of the Act, payments made to critical access hospitals (CAHs) (that is, rural hospitals or facilities that meet certain statutory requirements) for inpatient and outpatient services are generally based on 101 percent of reasonable cost. Reasonable cost is determined under the provisions of section 1861(v)(1)(A) of the Act and existing regulations under 42 CFR Part 413.

5. Payments for Graduate Medical Education (GME)

Under section 1886(a)(4) of the Act, costs of approved educational activities are excluded from the operating costs of inpatient hospital services. Hospitals with approved graduate medical education (GME) programs are paid for the direct costs of GME in accordance with section 1886(h) of the Act. The amount of payment for direct GME costs for a cost reporting period is based on the hospital’s number of residents in that period and the hospital’s costs per resident in a base year. The existing regulations governing payments to the various types of hospitals are located in 42 CFR Part 413.

C. Summary of Provisions of Recent Legislation Discussed in This Final Rule

The Patient Protection and Affordable Care Act (Pub. L. 111–148), enacted on March 23, 2010, and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152), enacted on March 30, 2010, made a number of changes that affect the IPPS and the LTCH PPS. (Pub. L. 111–148 and Pub. L. 111–152 are collectively referred to as the “Affordable Care Act.”) A number of the provisions of the Affordable Care Act affect the updates to the IPPS and the LTCH PPS and providers and

suppliers. The provisions of the Affordable Care Act that were applicable to the IPPS and the LTCH PPS for FYs 2010, 2011, and 2012 were implemented in the June 2, 2010 **Federal Register** notice (75 FR 31118), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50042) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51476).

The American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240), enacted on January 2, 2013, also made a number of changes that affect the IPPS. We announced changes related to certain IPPS provisions for FY 2013 in accordance with sections 605 and 606 of Public Law 112–240 in a document that appeared in the **Federal Register** on March 7, 2013 (78 FR 14689).

The Pathway for SGR Reform Act of 2013 (Pub. L. 113–67), enacted on December 26, 2013, also made a number of changes that affect the IPPS and the LTCH PPS. We implemented changes related to the low-volume hospital payment adjustment and MDH provisions for FY 2014 in accordance with sections 1105 and 1106 of Public Law 113–67 in an interim final rule with comment period that appeared in the **Federal Register** on March 18, 2014 (79 FR 15022).

The Protecting Access to Medicare Act of 2014 (Pub. L. 113–93), enacted on April 1, 2014, also made a number of changes that affect the IPPS and LTCH PPS.

1. The Patient Protection and Affordable Care Act (Pub. L. 111–148) and the Health Care and Education Reconciliation Act of 2010 (Pub. L. 111–152)

In this final rule, we are making policy changes to implement (or, as applicable, continue to implement in FY 2015) the following provisions (or portions of the following provisions) of the Affordable Care Act that are applicable to the IPPS, the LTCH PPS, and PPS-exempt cancer hospitals for FY 2015:

- Section 3001(a) of Public Law 111–148, which requires the establishment of a hospital inpatient value-based purchasing program under which value-based incentive payments are made in a fiscal year to hospitals that meet performance standards for the performance period for that fiscal year.

- Section 3004 of Public Law 111–148, which provides for the submission of quality data by LTCHs in order for them to receive the full annual update to the payment rates beginning with the FY 2014 rate year.

- Section 3005 of Public Law 111–148, which provides for the establishment of a quality reporting

program for PPS-exempt cancer hospitals beginning with FY 2014, and for subsequent program years.

- Section 3008 of Public Law 111–148, which establishes the Hospital-Acquired Condition (HAC) Reduction Program and requires the Secretary to make an adjustment to hospital payments for applicable hospitals, effective for discharges beginning on October 1, 2014, and for subsequent program years.

- Section 3025 of Public Law 111–148, which establishes a hospital readmissions reduction program and requires the Secretary to reduce payments to applicable hospitals with excess readmissions effective for discharges beginning on or after October 1, 2012.

- Section 3133 of Public Law 111–148, as amended by section 10316 of Public Law 111–148 and section 1104 of Public Law 111–152, which modifies the methodologies for determining Medicare DSH payments and creates a new additional payment for uncompensated care effective for discharges beginning on or after October 1, 2013.

- Section 3401 of Public Law 111–148, which provides for the incorporation of productivity adjustments into the market basket updates for IPPS hospitals and LTCHs.

- Section 10324 of Public Law 111–148, which provides for a wage adjustment for hospitals located in frontier States.

- Sections 3401 and 10319 of Public Law 111–148 and section 1105 of Public Law 111–152, which revise certain market basket update percentages for IPPS and LTCH PPS payment rates for FY 2015.

- Section 5506 of Public Law 111–148, which added a provision to the Act that instructs the Secretary to establish a process by regulation under which, in the event a teaching hospital closes, the Secretary will permanently increase the FTE resident caps for hospitals that meet certain criteria up to the number of the closed hospital's FTE resident caps.

2. American Taxpayer Relief Act of 2012 (ATRA) (Pub. L. 112–240)

In this final rule, we are making policy changes to implement section 631 of the American Taxpayer Relief Act of 2012, which amended section 7(b)(1)(B) of Public Law 110–90 and requires a recoupment adjustment to the standardized amounts under section 1886(d) of the Act based upon the Secretary's estimates for discharges occurring in FY 2014 through FY 2017 to fully offset \$11 billion (which

represents the amount of the increase in aggregate payments from FYs 2008 through 2013 for which an adjustment was not previously applied).

3. Pathway for SGR Reform Act of 2013 (Pub. L. 113–67)

In this final rule, we are making policy changes to implement, or discuss the need for future policy changes, to carry out provisions under section 1206 of the Pathway for SGR Reform Act of 2013. These include:

- Section 1206(a), which provides the establishment of patient criteria for “site neutral” payment rates under the LTCH PPS, portions of which will begin to be implemented in FY 2016.

- Section 1206(b)(1), which further amended section 114(c) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act by retroactively reestablishing, and extending, the statutory moratorium on the full implementation of the 25-percent threshold payment adjustment policy under the LTCH PPS so that the policy will be in effect for 9 years (except for grandfathered hospitals-within-hospitals (HwHs), which are permanently exempt from this policy).

- Section 1206(b)(2), which amended section 114(d) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act to establish new moratoria (subject to certain defined exceptions) on the development of new LTCHs and LTCH satellite facilities and a new moratorium on increases in the number of beds in existing LTCHs and LTCH satellite facilities.

- Section 1206(d), which instructs the Secretary to evaluate payments to LTCHs classified under section 1886(d)(1)(B)(iv)(II) of the Act and to adjust payment rates in FY 2015 or 2016 under the LTCH PPS, as appropriate, based upon the evaluation findings.

4. Protecting Access to Medicare Act of 2014 (Pub. L. 113–93)

In this final rule, we are making policy changes to implement, or making conforming changes to regulations in accordance with, the following provisions (or portions of the following provisions) of the Protecting Access to Medicare Act of 2014 that are applicable to the IPPS and the LTCH PPS for FY 2015:

- Section 105, which extends the temporary changes to the Medicare inpatient hospital payment adjustment for low-volume subsection (d) hospitals through March 31, 2015.

- Section 106, which extends the MDH program through March 31, 2015.
- Section 112, which makes certain changes to Medicare LTCH provisions, including modifications to the statutory moratoria on the establishment of new LTCHs and LTCH satellite facilities.
- Section 212, which prohibits the Secretary from requiring implementation of ICD-10 code sets before October 1, 2015.

D. Issuance of Notice of Proposed Rulemaking

Earlier this year, we published a proposed rule that set forth proposed changes to the Medicare IPPS for operating costs and for capital-related costs of acute care hospitals for FY 2015. The proposed rule appeared in the **Federal Register** on May 15, 2014 (79 FR 27978). In the proposed rule, we also set forth proposed changes relating to payments for IME and GME costs and payments to certain hospitals that continue to be excluded from the IPPS and paid on a reasonable cost basis. In addition, in the proposed rule, we set forth proposed changes to the payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2015.

Below is a summary of the major changes that we proposed to make:

1. Proposed Changes to MS-DRG Classifications and Recalibrations of Relative Weights

In section II. of the preamble of the proposed rule, we included—

- Proposed changes to MS-DRG classifications based on our yearly review, including a discussion of the conversion of MS-DRGs to ICD-10 and the status of the implementation of the ICD-10-CM and ICD-10-PCS systems.
- Proposed application of the documentation and coding adjustment for FY 2015 resulting from implementation of the MS-DRG system.
- Proposed recalibrations of the MS-DRG relative weights.
- Proposed changes to hospital-acquired conditions (HACs) and a listing and discussion of HACs, including infections, that would be subject to the statutorily required adjustment in MS-DRG payments for FY 2015.
- A discussion of the FY 2015 status of new technologies approved for add-on payments for FY 2014 and a presentation of our evaluation and analysis of the FY 2015 applicants for add-on payments for high-cost new medical services and technologies (including public input, as directed by Pub. L. 108-173, obtained in a town hall meeting).

2. Proposed Changes to the Hospital Wage Index for Acute Care Hospitals

In section III. of the preamble to the proposed rule, we proposed revisions to the wage index for acute care hospitals and the annual update of the wage data. Specific issues addressed included the following:

- Proposed changes in CBSAs as a result of new OMB labor market area delineations and proposed policies related to the proposed changes in CBSAs.
- The proposed FY 2015 wage index update using wage data from cost reporting periods beginning in FY 2011.
- Analysis and implementation of the proposed FY 2015 occupational mix adjustment to the wage index for acute care hospitals, including the proposed application of the rural floor, the proposed imputed rural floor, and the proposed frontier State floor.
- Proposed revisions to the wage index for acute care hospitals based on hospital redesignations and reclassifications.
- The proposed adjustment to the wage index for acute care hospitals for FY 2015 based on commuting patterns of hospital employees who reside in a county and work in a different area with a higher wage index.
- The timetable for reviewing and verifying the wage data used to compute the proposed FY 2015 hospital wage index and proposed revisions to that timetable.
- Determination of the labor-related share for the proposed FY 2015 wage index.

3. Other Decisions and Proposed Changes to the IPPS for Operating Costs and GME Costs

In section IV. of the preamble of the proposed rule, we discussed proposed changes or clarifications of a number of the provisions of the regulations in 42 CFR Parts 412 and 413, including the following:

- Proposed changes in postacute care transfer policies as a result of proposed new MS-DRGs.
- Proposed changes to the inpatient hospital updates for FY 2015, including incorporation of the adjustment for hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act.
- The proposed updated national and regional case-mix values and discharges for purposes of determining RRC status.
- Proposed payment adjustment for low-volume hospitals for FY 2015.
- The statutorily required IME adjustment factor for FY 2015 and proposed IME add-on payments for

Medicare Part C discharges to SCHs that are paid according to their hospital-specific rates.

- Effect of expiration of the MDH program on April 1, 2015.
- Proposed changes to the methodologies for determining Medicare DSH payments and the additional payments for uncompensated care.
- Proposed changes to the measures and payment adjustments under the Hospital Readmissions Reduction Program.
- Proposed changes to the requirements and provision of value-based incentive payments under the Hospital Value-Based Purchasing Program.
- Proposed requirements for payment adjustments to hospitals under the HAC Reduction Program for FY 2015.
- Proposed IME and direct GME policy changes regarding the effective date of the FTE resident cap, 3-year rolling average, and IRB ratio cap in new programs in teaching hospitals; effect of new OMB labor market area delineations on certain teaching hospitals training residents in rural areas; clarification of effective date of provisions on counting resident time in nonprovider settings; proposed changes to the process for reviewing applications for and awarding slots made available under section 5506 of the Affordable Care Act by teaching hospitals that close; and clarification regarding direct GME payment to FQHCs and RHCs that train residents in approved programs.

• Discussion of the Rural Community Hospital Demonstration Program and a proposal for making a budget neutrality adjustment for the demonstration program.

- Discussion of the requirements for transparency of hospital charges under the Affordable Care Act.
- Discussion of and solicitation of comments on an alternative payment methodology under the Medicare program for short inpatient hospital stays.
- Discussion of the process for submitting suggested exceptions to the 2-midnight benchmark.

4. Proposed FY 2015 Policy Governing the IPPS for Capital-Related Costs

In section V. of the preamble to the proposed rule, we discussed the proposed payment policy requirements for capital-related costs and capital payments to hospitals for FY 2015 and other related proposed policy changes.

5. Proposed Changes to the Payment Rates for Certain Excluded Hospitals: Rate-of-Increase Percentages

In section VI. of the preamble of the proposed rule, we discussed—

- Proposed changes to payments to certain excluded hospitals for FY 2015.
- Proposed updates to the RCE limits and proposed changes to the methodology for determining such limits for services furnished by physicians to IPPS-excluded hospitals and certain teaching hospitals.
- Proposed CAH related changes regarding reclassifications as rural.
- Proposed changes to the physician certification requirements for services furnished in CAHs.

6. Proposed Changes to the LTCH PPS

In section VII. of the preamble of the proposed rule, we set forth—

- Proposed changes to the payment rates, factors, and other payment rate policies under the LTCH PPS for FY 2015.
- Proposed revisions to the LTCH PPS geographic classifications based on the new OMB delineations.
- Proposals to implement section 1206(b)(1) of the Pathway for SGR Reform Act, which provides for the retroactive reinstatement and extension, for an additional 4 years, of the statutory moratorium on the full implementation of the 25-percent threshold payment adjustment established under section 114(c) of the MMSEA, as further amended by subsequent legislation.
- Proposals to implement section 1206(b)(2) of the Pathway for SGR Reform Act, as amended by section 112(b) of the Protecting Access to Medicare Act of 2014, which provides for moratoria (subject to certain defined exceptions) on the establishment of new LTCHs and LTCH satellite facilities and a moratorium on bed increases in LTCHs effective for the period beginning April 1, 2014, and ending September 30, 2017.
- Proposed changes to the LTCH interruption of stay policy by revising the fixed-day thresholds under the “greater than 3-day interruption of stay policy” to apply a uniform 30-day threshold as an “acceptable standard” for determining a linkage between an index discharge and a readmission.
- Proposal to remove the discharge and readmission requirement, “Special Payment Provisions for Patients Who are Transferred to Onsite Providers and Readmitted to an LTCH” (the “5 percent payment threshold”) beginning in FY 2015.
- Proposal to apply a payment adjustment under the LTCH PPS to

subclause (II) LTCHs beginning in FY 2015 that would result in payments to this type of LTCH resembling reasonable cost payment under the TEFRA payment system model, consistent with the provisions of section 1206(d) of the Pathway for SGR Reform Act of 2013.

7. Proposed Changes to Regulations Governing Administrative Appeals by Providers and Judicial Review of Provider Claims

In section VIII. of the preamble of the proposed rule, we set forth proposals to revise the regulations governing administrative appeals and judicial review of provider claims in Medicare cost reports.

8. Proposed Changes Relating to Quality Data Reporting for Specific Providers and Suppliers

In section IX. of the preamble of the proposed rule, we addressed—

- Proposed requirements for the Hospital Inpatient Quality Reporting (IQR) Program as a condition for receiving the full applicable percentage increase.
- Proposed changes to the requirements for the quality reporting program for PPS-exempt cancer hospitals (PCHQR Program).
- Proposed changes to the requirements under the LTCH Quality Reporting (LTCHQR) Program.

9. Proposed Uses and Release of Medicare Advantage Risk Adjustment Data

In section X. of the preamble of the proposed rule, we set forth proposed regulatory revisions to broaden the specified uses of Medicare Advantage (MA) risk adjustment data and to specify the conditions for release of such risk adjustment data to entities outside of CMS.

10. Proposed Changes to Enforcement Provisions for Organ Transplant Centers

In section XI. of the preamble of the proposed rule, we proposed to revise the regulations governing organ transplant centers that request approval, based on mitigating factors for initial approval and re-approval, for participation in Medicare when the centers have not met one or more of the conditions of participation.

11. Determining Prospective Payment Operating and Capital Rates and Rate-of-Increase Limits for Acute Care Hospitals

In the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2015 prospective payment rates for operating costs and

capital-related costs for acute care hospitals. We also proposed to establish the threshold amounts for outlier cases. In addition, we addressed the proposed update factors for determining the rate-of-increase limits for cost reporting periods beginning in FY 2015 for certain hospitals excluded from the IPPS.

12. Determining Prospective Payment Rates for LTCHs

In the Addendum to the proposed rule, we set forth proposed changes to the amounts and factors for determining the proposed FY 2015 LTCH PPS standard Federal rate. We proposed to establish the adjustments for wage levels (including proposed changes to the LTCH PPS labor market area delineations based on the new OMB delineations), the labor-related share, the cost-of-living adjustment, and high-cost outliers, including the fixed-loss amount, and the LTCH cost-to-charge ratios (CCRs) under the LTCH PPS.

13. Impact Analysis

In Appendix A of the proposed rule, we set forth an analysis of the impact that the proposed changes would have on affected acute care hospitals, LTCHs, and PCHs.

14. Recommendation of Update Factors for Operating Cost Rates of Payment for Hospital Inpatient Services

In Appendix B of the proposed rule, as required by sections 1886(e)(4) and (e)(5) of the Act, we provided our recommendations of the appropriate percentage changes for FY 2015 for the following:

- A single average standardized amount for all areas for hospital inpatient services paid under the IPPS for operating costs of acute care hospitals (and hospital-specific rates applicable to SCHs).
- Target rate-of-increase limits to the allowable operating costs of hospital inpatient services furnished by certain hospitals excluded from the IPPS.
- The standard Federal rate for hospital inpatient services furnished by LTCHs.

15. Discussion of Medicare Payment Advisory Commission Recommendations

Under section 1805(b) of the Act, MedPAC is required to submit a report to Congress, no later than March 15 of each year, in which MedPAC reviews and makes recommendations on Medicare payment policies. MedPAC's March 2014 recommendations concerning hospital inpatient payment policies address the update factor for hospital inpatient operating costs and

capital-related costs for hospitals under the IPPS. We addressed these recommendations in Appendix B of the proposed rule. For further information relating specifically to the MedPAC March 2014 report or to obtain a copy of the report, contact MedPAC at (202) 220-3700 or visit MedPAC's Web site at: <http://www.medpac.gov>.

E. Public Comments Received in Response to the FY 2015 IPPS/LTCH PPS Proposed Rule

We received approximately 653 timely pieces of correspondence containing multiple comments on the FY 2015 IPPS/LTCH PPS proposed rule. We note that some of these public comments were outside of the scope of the proposed rule. These out-of-scope public comments are not addressed in the policy responses in this final rule. Summaries of the public comments that are within the scope of the proposed rule and our responses to those public comments are set forth in the various sections of this final rule under the appropriate headings.

F. Finalization of Interim Final Rule With Comment Period on Extension of Payment Adjustment for Low-Volume Hospitals and the Medicare-Dependent, Small Rural Hospital (MDH) Program for FY 2014 Discharges Through March 31, 2014

In an interim final rule with comment period (CMS-1599-IFC2) that appeared in the **Federal Register** on March 18, 2014, we implemented the extension of the temporary changes to the payment adjustment for low-volume hospitals and the MDH program under the IPPS for FY 2014 (through March 31, 2014) in accordance with sections 1105 and 1106, respectively, of the Pathway for SGR Reform Act of 2013 (79 FR 15022 through 15030). We received four timely pieces of correspondence on this interim final rule with comment period. In section IV.P. of the preamble of this final rule, we summarize the provisions of the interim final rule, summarize and respond to the public comments received, and finalize the provisions of the interim final rule with comment period.

G. Finalization of Interim Final Rule With Comment Period on Changes to Certain Cost Reporting Procedures Related to Disproportionate Share Hospital Uncompensated Care Payments

In an interim final rule with comment period (CMS-1599-IFC) that appeared in the **Federal Register** on October 13, 2013 (78 FR 61191), we revised certain operational considerations for hospitals

with Medicare cost reporting periods that span more than one Federal fiscal year and also made changes to the data that will be used in the uncompensated care payment calculation in order to ensure that data from Indian Health Service (IHS) hospitals are included in Factor 1 and Factor 3 of that calculation (78 FR 61191 through 61197). We received 12 timely pieces of correspondence in response to this interim final rule with comment period. In section IV.Q. of the preamble of this final rule, we summarize the provisions of the interim final rule with comment period, summarize and respond to the public comments received, and finalize the provisions of the interim final rule with comment period.

II. Changes to Medicare Severity Diagnosis-Related Group (MS-DRG) Classifications and Relative Weights

A. Background

Section 1886(d) of the Act specifies that the Secretary shall establish a classification system (referred to as diagnosis-related groups (DRGs)) for inpatient discharges and adjust payments under the IPPS based on appropriate weighting factors assigned to each DRG. Therefore, under the IPPS, Medicare pays for inpatient hospital services on a rate per discharge basis that varies according to the DRG to which a beneficiary's stay is assigned. The formula used to calculate payment for a specific case multiplies an individual hospital's payment rate per case by the weight of the DRG to which the case is assigned. Each DRG weight represents the average resources required to care for cases in that particular DRG, relative to the average resources used to treat cases in all DRGs.

Congress recognized that it would be necessary to recalculate the DRG relative weights periodically to account for changes in resource consumption. Accordingly, section 1886(d)(4)(C) of the Act requires that the Secretary adjust the DRG classifications and relative weights at least annually. These adjustments are made to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources.

B. MS-DRG Reclassifications

For general information about the MS-DRG system, including yearly reviews and changes to the MS-DRGs, we refer readers to the previous discussions in the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43764 through 43766), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50053 through

50055), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51485 through 51487), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53273), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50512).

C. Adoption of the MS-DRGs in FY 2008

For information on the adoption of the MS-DRGs in FY 2008, we refer readers to the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189).

D. FY 2015 MS-DRG Documentation and Coding Adjustment

1. Background on the Prospective MS-DRG Documentation and Coding Adjustments for FY 2008 and FY 2009 Authorized by Pub. L. 110-90

In the FY 2008 IPPS final rule with comment period (72 FR 47140 through 47189), we adopted the MS-DRG patient classification system for the IPPS, effective October 1, 2007, to better recognize severity of illness in Medicare payment rates for acute care hospitals. The adoption of the MS-DRG system resulted in the expansion of the number of DRGs from 538 in FY 2007 to 745 in FY 2008. (In FY 2014, there are 751 MS-DRGs.) By increasing the number of MS-DRGs and more fully taking into account patient severity of illness in Medicare payment rates for acute care hospitals, MS-DRGs encourage hospitals to improve their documentation and coding of patient diagnoses.

In the FY 2008 IPPS final rule with comment period (72 FR 47175 through 47186), we indicated that the adoption of the MS-DRGs had the potential to lead to increases in aggregate payments without a corresponding increase in actual patient severity of illness due to the incentives for additional documentation and coding. In that final rule with comment period, we exercised our authority under section 1886(d)(3)(A)(vi) of the Act, which authorizes us to maintain budget neutrality by adjusting the national standardized amount, to eliminate the estimated effect of changes in coding or classification that do not reflect real changes in case-mix. Our actuaries estimated that maintaining budget neutrality required an adjustment of -4.8 percent to the national standardized amount. We provided for phasing in this -4.8 percent adjustment over 3 years. Specifically, we established prospective documentation and coding adjustments of -1.2 percent for FY 2008, -1.8 percent for FY 2009, and -1.8 percent for FY 2010.

On September 29, 2007, Congress enacted the TMA [Transitional Medical

Assistance], Abstinence Education, and QI [Qualifying Individuals] Programs Extension Act of 2007 (Pub. L. 110–90). Section 7(a) of Public Law 110–90 reduced the documentation and coding adjustment made as a result of the MS–DRG system that we adopted in the FY 2008 IPPS final rule with comment period to –0.6 percent for FY 2008 and –0.9 percent for FY 2009, and we finalized the FY 2008 adjustment through rulemaking, effective October 1, 2007 (72 FR 66886).

For FY 2009, section 7(a) of Public Law 110–90 required a documentation and coding adjustment of –0.9 percent, and we finalized that adjustment through rulemaking effective October 1, 2008 (73 FR 48447). The documentation and coding adjustments established in the FY 2008 IPPS final rule with comment period, which reflected the amendments made by section 7(a) of Public Law 110–90, are cumulative. As a result, the –0.9 percent documentation and coding adjustment for FY 2009 was in addition to the –0.6 percent adjustment for FY 2008, yielding a combined effect of –1.5 percent.

2. Adjustment to the Average Standardized Amounts Required by Pub. L. 110–90

a. Prospective Adjustment Required by Section 7(b)(1)(A) of Pub. L. 110–90

Section 7(b)(1)(A) of Public Law 110–90 requires that, if the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different than the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, the Secretary shall make an appropriate adjustment under section 1886(d)(3)(A)(vi) of the Act. Section 1886(d)(3)(A)(vi) of the Act authorizes adjustments to the average standardized amounts for subsequent fiscal years in order to eliminate the effect of such coding or classification changes. These adjustments are intended to ensure that future annual aggregate IPPS payments are the same as the payments that otherwise would have been made had the prospective adjustments for documentation and coding applied in FY 2008 and FY 2009 reflected the change that occurred in those years.

b. Recoupment or Repayment Adjustments in FYs 2010 Through 2012 Required by Section 7(b)(1)(B) Pub. L. 110–90

If, based on a retroactive evaluation of claims data, the Secretary determines that implementation of the MS–DRG system resulted in changes in documentation and coding that did not reflect real changes in case-mix for discharges occurring during FY 2008 or FY 2009 that are different from the prospective documentation and coding adjustments applied under section 7(a) of Public Law 110–90, section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an additional adjustment to the standardized amounts under section 1886(d) of the Act. This adjustment must offset the estimated increase or decrease in aggregate payments for FYs 2008 and 2009 (including interest) resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustment applied under section 7(a) of Public Law 110–90. This adjustment is in addition to making an appropriate adjustment to the standardized amounts under section 1886(d)(3)(A)(vi) of the Act as required by section 7(b)(1)(A) of Public Law 110–90. That is, these adjustments are intended to recoup (or repay, in the case of underpayments) spending in excess of (or less than) spending that would have occurred had the prospective adjustments for changes in documentation and coding applied in FY 2008 and FY 2009 matched the changes that occurred in those years. Public Law 110–90 requires that the Secretary only make these recoupment or repayment adjustments for discharges occurring during FYs 2010, 2011, and 2012.

3. Retrospective Evaluation of FY 2008 and FY 2009 Claims Data

In order to implement the requirements of section 7 of Public Law 110–90, we performed a retrospective evaluation of the FY 2008 data for claims paid through December 2008 using the methodology first described in the FY 2009 IPPS/LTCH PPS final rule (73 FR 43768 and 43775) and later discussed in the FY 2010 IPPS/R Y 2010 LTCH PPS final rule (74 FR 43768 through 43772). We performed the same analysis for FY 2009 claims data using the same methodology as we did for FY 2008 claims (75 FR 50057 through 50068). The results of the analysis for the FY 2011 IPPS/LTCH PPS proposed and final rules, and subsequent evaluations in FY 2012, supported that the 5.4 percent estimate accurately

reflected the FY 2009 increases in documentation and coding under the MS–DRG system. We were persuaded by both MedPAC’s analysis (as discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50064 through 50065)) and our own review of the methodologies recommended by various commenters that the methodology we employed to determine the required documentation and coding adjustments was sound.

As in prior years, the FY 2008, FY 2009, and FY 2010 MedPAR files are available to the public to allow independent analysis of the FY 2008 and FY 2009 documentation and coding effects. Interested individuals may still order these files through the CMS Web site at: <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/LimitedDataSets/> by clicking on MedPAR Limited Data Set (LDS)-Hospital (National). This CMS Web page describes the file and provides directions and further detailed instructions for how to order.

Persons placing an order must send the following: A Letter of Request, the LDS Data Use Agreement and Research Protocol (refer to the Web site for further instructions), the LDS Form, and a check (refer to the Web site for the required payment amount) to:

Mailing address if using the U.S. Postal Service: Centers for Medicare & Medicaid Services, RDDC Account, Accounting Division, P.O. Box 7520, Baltimore, MD 21207–0520.

Mailing address if using express mail: Centers for Medicare & Medicaid Services, OFM/Division of Accounting—RDDC, 7500 Security Boulevard, C3–07–11, Baltimore, MD 21244–1850.

4. Prospective Adjustments for FY 2008 and FY 2009 Authorized by Section 7(b)(1)(A) of Pub. L. 110–90

In the FY 2010 IPPS/R Y 2010 LTCH PPS final rule (74 FR 43767 through 43777), we opted to delay the implementation of any documentation and coding adjustment until a full analysis of case-mix changes based on FY 2009 claims data could be completed. We refer readers to the FY 2010 IPPS/R Y LTCH PPS final rule for a detailed description of our proposal, responses to comments, and finalized policy. After analysis of the FY 2009 claims data for the FY 2011 IPPS/LTCH PPS final rule (75 FR 50057 through 50073), we found a total prospective documentation and coding effect of 5.4 percent. After accounting for the –0.6 percent and the –0.9 percent documentation and coding adjustments in FYs 2008 and 2009, we found a remaining documentation and coding

effect of 3.9 percent. As we have discussed, an additional cumulative adjustment of – 3.9 percent would be necessary to meet the requirements of section 7(b)(1)(A) of Public Law 110–90 to make an adjustment to the average standardized amounts in order to eliminate the full effect of the documentation and coding changes that do not reflect real changes in case-mix on future payments. Unlike section 7(b)(1)(B) of Public Law 110–90, section 7(b)(1)(A) does not specify when we must apply the prospective adjustment, but merely requires us to make an “appropriate” adjustment. Therefore, as we stated in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50061), we believed the law provided some discretion as to the manner in which we applied the prospective adjustment of – 3.9 percent. As we discussed extensively in the FY 2011 IPPS/LTCH PPS final rule, it has been our practice to moderate payment adjustments when necessary to mitigate the effects of significant downward adjustments on hospitals, to avoid what could be widespread, disruptive effects of such adjustments on hospitals. Therefore, we stated that we believed it was appropriate to not implement the – 3.9 percent prospective adjustment in FY 2011 because we finalized a – 2.9 percent recoupment adjustment for that fiscal year. Accordingly, we did not propose a prospective adjustment under section 7(b)(1)(A) of Public Law 110–90 for FY 2011 (75 FR 23868 through 23870). We noted that, as a result, payments in FY 2011 (and in each future fiscal year until we implemented the requisite adjustment) would be higher than they would have been if we had implemented an adjustment under section 7(b)(1)(A) of Public Law 110–90.

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51489 and 51497), we indicated that, because further delay of this prospective adjustment would result in a continued accrual of unrecoverable overpayments, it was imperative that we implement a prospective adjustment for FY 2012, while recognizing CMS’ continued desire to mitigate the effects of any significant downward adjustments to hospitals. Therefore, we implemented a – 2.0 percent prospective adjustment to the standardized amount instead of the full – 3.9 percent.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53274 through 53276), we completed the prospective portion of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 by finalizing a – 1.9 percent adjustment to the standardized amount for FY 2013. We stated that this adjustment would

remove the remaining effect of the documentation and coding changes that do not reflect real changes in case-mix that occurred in FY 2008 and FY 2009. We believed that it was imperative to implement the full remaining adjustment, as any further delay would result in an overstated standardized amount in FY 2013 and any future fiscal years until a full adjustment was made.

We noted again that delaying full implementation of the prospective portion of the adjustment required under section 7(b)(1)(A) of Public Law 110–90 until FY 2013 resulted in payments in FY 2010 through FY 2012 being overstated. These overpayments could not be recovered by CMS as section 7(b)(1)(B) of Public Law 110–90 limited recoupments to overpayments made in FY 2008 and FY 2009.

5. Recoupment or Repayment Adjustment Authorized by Section 7(b)(1)(B) of Pub. L. 110–90

Section 7(b)(1)(B) of Public Law 110–90 requires the Secretary to make an adjustment to the standardized amounts under section 1886(d) of the Act to offset the estimated increase or decrease in aggregate payments for FY 2008 and FY 2009 (including interest) resulting from the difference between the estimated actual documentation and coding effect and the documentation and coding adjustments applied under section 7(a) of Public Law 110–90. This determination must be based on a retrospective evaluation of claims data. Our actuaries estimated that there was a 5.8 percentage point difference resulting in an increase in aggregate payments of approximately \$6.9 billion. Therefore, as discussed in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50062 through 50067), we determined that an aggregate adjustment of – 5.8 percent in FYs 2011 and 2012 would be necessary in order to meet the requirements of section 7(b)(1)(B) of Public Law 110–90 to adjust the standardized amounts for discharges occurring in FYs 2010, 2011, and/or 2012 to offset the estimated amount of the increase in aggregate payments (including interest) in FYs 2008 and 2009.

It is often our practice to phase in payment rate adjustments over more than one year in order to moderate the effect on payment rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases, in the FY 2011 IPPS/LTCH PPS final rule, we made an adjustment to the standardized amount of – 2.9 percent, representing approximately half of the aggregate adjustment required under section 7(b)(1)(B) of Public Law 110–90, for FY 2011. An adjustment of this

magnitude allowed us to moderate the effects on hospitals in one year while simultaneously making it possible to implement the entire adjustment within the timeframe required under section 7(b)(1)(B) of Public Law 110–90 (that is, no later than FY 2012). For FY 2012, in accordance with the timeframes set forth by section 7(b)(1)(B) of Public Law 110–90, and consistent with the discussion in the FY 2011 IPPS/LTCH PPS final rule, we completed the recoupment adjustment by implementing the remaining – 2.9 percent adjustment, in addition to removing the effect of the – 2.9 percent adjustment to the standardized amount finalized for FY 2011 (76 FR 51489 and 51498). Because these adjustments, in effect, balanced out, there was no year-to-year change in the standardized amount due to this recoupment adjustment for FY 2012. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53276), we made a final +2.9 percent adjustment to the standardized amount, completing the recoupment portion of section 7(b)(1)(B) of Public Law 110–90. We note that with this positive adjustment, according to our estimates, all overpayments made in FY 2008 and FY 2009 have been fully recaptured with appropriate interest, and the standardized amount has been returned to the appropriate baseline.

6. Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA)

Section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment or adjustments totaling \$11 billion by FY 2017. This adjustment represents the amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. As discussed earlier, this delay in implementation resulted in overstated payment rates in FYs 2010, 2011, and 2012. The resulting overpayments could not have been recovered under Public Law 110–90.

Similar to the adjustments authorized under section 7(b)(1)(B) of Public Law 110–90, the adjustment required under section 631 of the ATRA is a one-time recoupment of a prior overpayment, not a permanent reduction to payment rates. Therefore, any adjustment made to reduce payment rates in one year would eventually be offset by a positive adjustment, once the necessary amount of overpayment is recovered.

As we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515

through 50517), our actuaries estimate that a –9.3 percent adjustment to the standardized amount would be necessary if CMS were to fully recover the \$11 billion recoupment required by section 631 of the ATRA in FY 2014. It is often our practice to phase in payment rate adjustments over more than one year, in order to moderate the effect on payment rates in any one year. Therefore, consistent with the policies that we have adopted in many similar cases, and after consideration of the public comments we received, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517), we implemented a –0.8 percent recoupment adjustment to the standardized amount in FY 2014. We stated that if adjustments of approximately –0.8 percent are implemented in FYs 2014, 2015, 2016, and 2017, using standard inflation factors, we estimate that the entire \$11 billion will be accounted for by the end of the statutory 4-year timeline. As estimates of any future adjustments are subject to slight variations in total savings, we did not provide for specific adjustments for FYs 2015, 2016, or 2017 at that time. We stated that we believed that this level of adjustment for FY 2014 was a reasonable and fair approach that satisfies the requirements of the statute while mitigating extreme annual fluctuations in payment rates. In addition, we again noted that this –0.8 percent recoupment adjustment, and future adjustments under this authority, will be eventually offset by an equivalent positive adjustment once the full \$11 billion recoupment requirement has been realized.

Consistent with the approach discussed in the FY 2014 rulemaking for recouping the \$11 billion required by section 631 of the ATRA, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27997 through 27998), we proposed an additional –0.8 percent recoupment adjustment to the standardized amount for FY 2015. We estimated that this level of adjustment, combined with leaving the –0.8 percent adjustment made for FY 2014 in place, would recover up to \$2 billion in FY 2015. Taking into account the approximately \$1 billion recovered in FY 2014, this would leave approximately \$8 billion remaining to be recovered by FY 2017.

Comment: Several commenters restated their previous position, as set forth in comments submitted in response to the FY 2014 IPPS/LTCH PPS proposed rule and summarized in the FY 2014 IPPS/LTCH PPS final rule, that CMS overstated the impact of documentation and coding effects for prior years. Commenters cited potential deficiencies in the CMS methodology

and disagreed that the congressionally mandated adjustment is warranted. However, the majority of these commenters conceded that CMS is required by section 631 of the ATRA to recover \$11 billion by FY 2017, and supported CMS' policy to phase in the adjustments over a 4-year period.

Response: We appreciate the commenters' support. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517) for our response to the commenters' position that CMS overstated the impact of documentation and coding effects.

After consideration of the public comments we received, we are finalizing the proposal to make an additional –0.8 percent adjustment to the standardized amount for FY 2015. Considering the –0.8 percent adjustment made in FY 2014, we expect the combined impact of these adjustments will be to recover \$2 billion dollars in overpayments in FY 2015. Combined with the estimated \$1 billion adjustment made in FY 2014, we estimate that \$3 billion of the \$11 billion in overpayments required to be recovered by section 631 of the ATRA will be accounted for.

We continue to believe that if adjustments of approximately –0.8 percent are implemented in FYs 2014, 2015, 2016, and 2017, using standard inflation factors, the entire \$11 billion will be accounted for by the end of the statutory 4-year timeline. As we explained in the FY 2014 IPPS/LTCH PPS final rule, estimates of any future adjustments are subject to slight variations in total savings. Therefore, we have not yet addressed specific adjustments for FY 2016 and FY 2017. We continue to believe that the –0.8 percent adjustment for FY 2015 is a reasonable and fair approach that will help satisfy the requirements of the statute while mitigating extreme annual fluctuations in payment rates. In addition, we again note that this –0.8 percent recoupment adjustment, and future adjustments under this authority, will be eventually offset by an equivalent positive adjustment once the full \$11 billion recoupment requirement has been realized.

7. Prospective Adjustment for the MS-DRG Documentation and Coding Effect Through FY 2010

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517), we discussed the possibility of applying an additional prospective adjustment to account for the cumulative MS-DRG documentation and coding effect through FY 2010. In that final rule, we stated that if we were to apply such an

adjustment, we believed the most appropriate additional adjustment was –0.55 percent. However, we decided not to apply such an adjustment in FY 2014, in light of the need to make the retrospective adjustments required by the ATRA. We continue to believe that if we were to apply an additional prospective adjustment for the cumulative MS-DRG documentation and coding effect through FY 2010, the most appropriate additional adjustment is –0.55 percent. However, we did not propose such an adjustment for FY 2015, in light of the ongoing recoupment required by the ATRA. We will consider whether such an additional adjustment is appropriate in future years' rulemaking.

Comment: Commenters reiterated their concern, as set forth in comments submitted in response to the FY 2014 IPPS/LTCH PPS proposed rule and summarized in the FY 2014 IPPS/LTCH PPS final rule, that CMS overstated the adjustment factor for documentation and coding, including the revised –0.55 percent factor to adjust for documentation and coding that occurred in FY 2010. Commenters believed that adjustments related to FY 2010 documentation and coding are not required under section 631 of the ATRA. Commenters urged CMS to not consider additional adjustments, other than those required by section 631 of the ATRA.

Response: We appreciate the commenters' concerns. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50515 through 50517) for our response to the commenters' position that CMS overstated the impact of documentation and coding effects. We did not propose to make any additional prospective adjustment to address the cumulative documentation and coding effect through FY 2010 for FY 2015. We will consider these comments in future years' rulemaking.

E. Refinement of the MS-DRG Relative Weight Calculation

1. Background

Beginning in FY 2007, we implemented relative weights for DRGs based on cost report data instead of charge information. We refer readers to the FY 2007 IPPS final rule (71 FR 47882) for a detailed discussion of our final policy for calculating the cost-based DRG relative weights and to the FY 2008 IPPS final rule with comment period (72 FR 47199) for information on how we blended relative weights based on the CMS DRGs and MS-DRGs.

As we implemented cost-based relative weights, some public

commenters raised concerns about potential bias in the weights due to “charge compression,” which is the practice of applying a higher percentage charge markup over costs to lower cost items and services, and a lower percentage charge markup over costs to higher cost items and services. As a result, the cost-based weights would undervalue high-cost items and overvalue low-cost items if a single cost-to-charge ratio (CCR) is applied to items of widely varying costs in the same cost center. To address this concern, in August 2006, we awarded a contract to the Research Triangle Institute, International (RTI) to study the effects of charge compression in calculating the relative weights and to consider methods to reduce the variation in the CCRs across services within cost centers. For a detailed summary of RTI’s findings, recommendations, and public comments that we received on the report, we refer readers to the FY 2009 IPPS/LTCH PPS final rule (73 FR 48452 through 48453). In addition, we refer readers to RTI’s July 2008 final report titled “Refining Cost to Charge Ratios for Calculating APC and MS-DRG Relative Payment Weights” (http://www.rti.org/reports/cms/HHSM-500-2005-00291/PDF/Refining_Cost_to_Charge_Ratios_200807_Final.pdf).

In the FY 2009 IPPS final rule (73 FR 48458 through 48467), in response to the RTI’s recommendations concerning cost report refinements, we discussed our decision to pursue changes to the cost report to split the cost center for Medical Supplies Charged to Patients into one line for “Medical Supplies Charged to Patients” and another line for “Implantable Devices Charged to Patients.” We acknowledged, as RTI had found, that charge compression occurs in several cost centers that exist on the Medicare cost report. However, as we stated in the FY 2009 IPPS final rule, we focused on the CCR for Medical Supplies and Equipment because RTI found that the largest impact on the MS-DRG relative weights could result from correcting charge compression for devices and implants. In determining the items that should be reported in these respective cost centers, we adopted the commenters’ recommendations that hospitals should use revenue codes established by the AHA’s National Uniform Billing Committee to determine the items that should be reported in the “Medical Supplies Charged to Patients” and the “Implantable Devices Charged to Patients” cost centers. Accordingly, a new subscribed line for “Implantable Devices Charged to Patients” was

created in July 2009. This new subscribed cost center has been available for use for cost reporting periods beginning on or after May 1, 2009.

As we discussed in the FY 2009 IPPS final rule (73 FR 48458) and in the CY 2009 OPSS/ASC final rule with comment period (73 FR 68519 through 68527), in addition to the findings regarding implantable devices, RTI also found that the costs and charges of computed tomography (CT) scans, magnetic resonance imaging (MRI), and cardiac catheterization differ significantly from the costs and charges of other services included in the standard associated cost center. RTI also concluded that both the IPPS and the OPSS relative weights would better estimate the costs of those services if CMS were to add standard cost centers for CT scans, MRIs, and cardiac catheterization in order for hospitals to report separately the costs and charges for those services and in order for CMS to calculate unique CCRs to estimate the costs from charges on claims data. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50075 through 50080), we finalized our proposal to create standard cost centers for CT scans, MRIs, and cardiac catheterization, and to require that hospitals report the costs and charges for these services under new cost centers on the revised Medicare cost report Form CMS-2552-10. (We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50075 through 50080) for a detailed discussion of the reasons for the creation of standard cost centers for CT scans, MRIs, and cardiac catheterization.) The new standard cost centers for CT scans, MRIs, and cardiac catheterization are effective for cost reporting periods beginning on or after May 1, 2010, on the revised cost report Form CMS-2552-10.

In the FY 2009 IPPS final rule (73 FR 48468), we stated that, due to what is typically a 3-year lag between the reporting of cost report data and the availability for use in ratesetting, we anticipated that we might be able to use data from the new “Implantable Devices Charged to Patients” cost center to develop a CCR for “Implantable Devices Charged to Patients” in the FY 2012 or FY 2013 IPPS rulemaking cycle. However, as noted in the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43782), due to delays in the issuance of the revised cost report Form CMS 2552-10, we determined that a new CCR for “Implantable Devices Charged to Patients” might not be available before FY 2013. Similarly, when we finalized the decision in the FY 2011 IPPS/LTCH PPS final rule to add new cost centers

for CT scans, MRIs, and cardiac catheterization, we explained that data from any new cost centers that may be created will not be available until at least 3 years after they are first used (75 FR 50077). In preparation for the FY 2012 IPPS/LTCH PPS rulemaking, we checked the availability of data in the “Implantable Devices Charged to Patients” cost center on the FY 2009 cost reports, but we did not believe that there was a sufficient amount of data from which to generate a meaningful analysis in this particular situation. Therefore, we did not propose to use data from the “Implantable Devices Charged to Patients” cost center to create a distinct CCR for “Implantable Devices Charged to Patients” for use in calculating the MS-DRG relative weights for FY 2012. We indicated that we would reassess the availability of data for the “Implantable Devices Charged to Patients” cost center for the FY 2013 IPPS/LTCH PPS rulemaking cycle and, if appropriate, we would propose to create a distinct CCR at that time.

During the development of the FY 2013 IPPS/LTCH PPS proposed and final rules, hospitals were still in the process of transitioning from the previous cost report Form CMS-2552-96 to the new cost report Form CMS-2552-10. Therefore, we were able to access only those cost reports in the FY 2010 HCRIS with fiscal year begin dates on or after October 1, 2009, and before May 1, 2010; that is, those cost reports on Form CMS-2552-96. Data from the Form CMS-2552-10 cost reports were not available because cost reports filed on the Form CMS-2552-10 were not accessible in the HCRIS. Further complicating matters was that, due to additional unforeseen technical difficulties, the corresponding information regarding charges for implantable devices on hospital claims was not yet available to us in the MedPAR file. Without the breakout in the MedPAR file of charges associated with implantable devices to correspond to the costs of implantable devices on the cost report, we believed that we had no choice but to continue computing the relative weights with the current CCR that combines the costs and charges for supplies and implantable devices. We stated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53281 through 53283) that when we do have the necessary data for supplies and implantable devices on the claims in the MedPAR file to create distinct CCRs for the respective cost centers for supplies and implantable devices, we hoped that we would also have data for an analysis of

creating distinct CCRs for CT scans, MRIs, and cardiac catheterization, which could then be finalized through rulemaking. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53281), we stated that, prior to proposing to create these CCRs, we would first thoroughly analyze and determine the impacts of the data, and that distinct CCRs for these new cost centers would be used in the calculation of the relative weights only if they were first finalized through rulemaking.

At the time of the development of the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27506 through 27507), we had a substantial number of hospitals completing all, or some, of these new cost centers on the FY 2011 Medicare cost reports, compared to prior years. We stated that we believed that the analytic findings described using the FY 2011 cost report data and FY 2012 claims data supported our original decision to break out and create new cost centers for implantable devices, MRIs, CT scans, and cardiac catheterization, and we saw no reason to further delay proposing to implement the CCRs of each of these cost centers. Therefore, beginning in FY 2014, we proposed to calculate the MS-DRG relative weights using 19 CCRs, creating distinct CCRs from cost report data for implantable devices, MRIs, CT scans, and cardiac catheterization (78 FR 27509).

We refer readers to the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27507 through 27509) and final rule (78 FR 50518 through 50523) in which we presented data analyses using distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization. The FY 2014 IPPS/LTCH PPS final rule also set forth our responses to public comments we received on our proposal to implement these CCRs. As explained in more detail in the FY 2014 IPPS/LTCH PPS final rule, we finalized our proposal to use 19 CCRs to calculate MS-DRG relative weights beginning in FY 2014—the then existing 15 cost centers and the 4 new CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization. Therefore, beginning in FY 2014, we calculated the IPPS MS-DRG relative weights using 19 CCRs, creating distinct CCRs for implantable devices, MRIs, CT scans, and cardiac catheterization.

2. Discussion of Policy for FY 2015

As we stated in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27999), to calculate the MS-DRG relative

weights for FY 2015, we used two data sources: the MedPAR file as the claims data source and the HCRIS as the cost report data source. We adjusted the charges from the claims to costs by applying the 19 national average CCRs developed from the cost reports. The description of the calculation of the 19 CCRs and the MS-DRG relative weights for FY 2015 is included in section II.H. of the preamble of this final rule.

Comment: One commenter supported CMS' plans to continue to use data from the implantable devices cost center to create a distinct CCR for implantable devices in the calculation of the FY 2015 relative weights. The commenter also urged CMS to promote transparency by making detailed data from the implantable device cost center available to the public so that hospitals could evaluate these costs in the context of overall hospital charges.

Response: We did not propose any changes to the methodology or data sources for the FY 2015 CCRs and relative weights. Regarding the commenter's request to make data from the implantable devices cost center available to the public, we note that hospital cost report data, via HCRIS, are available to the public. For more information, we refer to readers to the CMS Web site at: <http://www.cms.gov/Research-Statistics-Data-and-Systems/Files-for-Order/CostReports/index.html?redirect=/costReports>.

F. Adjustment to MS-DRGs for Preventable Hospital-Acquired Conditions (HACs), Including Infections for FY 2015

1. Background

Section 1886(d)(4)(D) of the Act addresses certain hospital-acquired conditions (HACs), including infections. This provision is part of an array of Medicare tools that we are using to promote increased quality and efficiency of care. Under the IPPS, hospitals are encouraged to treat patients efficiently because they receive the same DRG payment for stays that vary in length and in the services provided, which gives hospitals an incentive to avoid unnecessary costs in the delivery of care. In some cases, conditions acquired in the hospital do not generate higher payments than the hospital would otherwise receive for cases without these conditions. To this extent, the IPPS encourages hospitals to avoid complications.

However, the treatment of these conditions can generate higher Medicare

payments in two ways. First, if a hospital incurs exceptionally high costs treating a patient, the hospital stay may generate an outlier payment. Because the outlier payment methodology requires that hospitals experience large losses on outlier cases before outlier payments are made, hospitals have an incentive to prevent outliers. Second, under the MS-DRG system that took effect in FY 2008 and that has been refined through rulemaking in subsequent years, certain conditions can generate higher payments even if the outlier payment requirements are not met. Under the MS-DRG system, there are currently 261 sets of MS-DRGs that are split into 2 or 3 subgroups based on the presence or absence of a complication or comorbidity (CC) or a major complication or comorbidity (MCC). The presence of a CC or an MCC generally results in a higher payment.

Section 1886(d)(4)(D) of the Act specifies that, by October 1, 2007, the Secretary was required to select, in consultation with the Centers for Disease Control and Prevention (CDC), at least two conditions that: (a) Are high cost, high volume, or both; (b) are assigned to a higher paying MS-DRG when present as a secondary diagnosis (that is, conditions under the MS-DRG system that are CCs or MCCs); and (c) could reasonably have been prevented through the application of evidence-based guidelines. Section 1886(d)(4)(D) of the Act also specifies that the list of conditions may be revised, again in consultation with the CDC, from time to time as long as the list contains at least two conditions.

Effective for discharges occurring on or after October 1, 2008, under the authority of section 1886(d)(4)(D) of the Act, Medicare no longer assigns an inpatient hospital discharge to a higher paying MS-DRG if a selected condition is not present on admission (POA). Thus, if a selected condition that was not POA manifests during the hospital stay, it is considered a HAC and the case is paid as though the secondary diagnosis was not present. However, even if a HAC manifests during the hospital stay, if any nonselected CC or MCC appears on the claim, the claim will be paid at the higher MS-DRG rate. In addition, Medicare continues to assign a discharge to a higher paying MS-DRG if a selected condition is POA. When a HAC is not POA, payment can be affected in a manner shown in the diagram below

2. HAC Selection

Beginning in FY 2007, we have set forth proposals, and solicited and responded to public comments, to implement section 1886(d)(4)(D) of the Act through the IPPS annual rulemaking process. For specific policies addressed in each rulemaking cycle, including a detailed discussion of the collaborative interdepartmental process and public input regarding selected and potential candidate HACs, we refer readers to the following rules: The FY 2007 IPPS proposed rule (71 FR 24100) and final rule (71 FR 48051 through 48053); the FY 2008 IPPS proposed rule (72 FR 24716 through 24726) and final rule with comment period (72 FR 47200 through 47218); the FY 2009 IPPS proposed rule (73 FR 23547) and final rule (73 FR 48471); the FY 2010 IPPS/LTCH PPS proposed rule (74 FR 24106) and final rule (74 FR 43782); the FY 2011 IPPS/LTCH PPS proposed rule (75 FR 23880) and final rule (75 FR 50080); the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25810 through 25816) and final rule (76 FR 51504 through 51522); the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27892 through 27898) and final rule (77 FR 53283 through 53303); and the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27509 through 27512) and final rule (78 FR 50523 through 50527). A complete list of the 11 current categories of HACs is included on the CMS Web site at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Hospital-Acquired_Conditions.html.

3. Present on Admission (POA) Indicator Reporting

Collection of POA indicator data is necessary to identify which conditions were acquired during hospitalization for the HAC payment provision as well as for broader public health uses of Medicare data. In previous rulemaking, we provided both CMS and CDC Web site resources that are available to hospitals for assistance in this reporting effort. For detailed information regarding these sites and materials, including the application and use of POA indicators, we refer the reader to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51506 through 51507).

Currently, as we have discussed in the prior rulemaking cited under section II.I.2. of the preamble of this final rule, the POA indicator reporting requirement only applies to IPPS hospitals because they are subject to this HAC provision. Non-IPPS hospitals, including CAHs, LTCHs, IRFs, IPFs, cancer hospitals, children's hospitals, RNHCIs, and the Department of Veterans Affairs/Department of Defense hospitals, are exempt from POA reporting.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50524 through 50525), we noted that hospitals in Maryland operating under a statutory waiver were not paid under the IPPS, but rather were paid under the provisions of section 1814(b)(3) of the Act, and therefore prior to FY 2014 these hospitals were exempt from reporting POA indicators. However, we believed it was appropriate to require them to use POA indicator reporting on their claims so that we could include their data and

have as complete a dataset as possible when we analyze trends and make further payment policy determinations, such as those authorized under section 1886(p) of the Act. Therefore, in the FY 2014 IPPS/LTCH PPS final rule, we finalized our policy that hospitals in Maryland that formerly operated under section 1814(b)(3) of the Act were no longer exempt from the POA indicator reporting requirement beginning with claims submitted on or after October 1, 2013, including all claims for discharges on or after October 1, 2013. We noted that, while this requirement was not effective until October 1, 2013, hospitals in Maryland could submit data with POA indicators before that date with the expectation that these data would be accepted by Medicare's claims processing systems. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50712) for a discussion of our FY 2014 final policies to implement section 1886(p) of the Act that are applicable to Maryland hospitals.)

Subsequent to our FY 2014 rulemaking, the State of Maryland entered into an agreement with CMS, effective January 1, 2014, to participate in CMS' new Maryland All-Payer Model, a 5-year hospital payment model. This model is being implemented under section 1115A of the Act, as added by section 3021 of the Affordable Care Act, which authorizes the testing of innovative payment and service delivery models, including models that allow States to "test and evaluate systems of all-payer payment reform for the medical care of residents of the State, including dual eligible individuals." Section 1115A of the Act

authorizes the Secretary to waive such requirements of titles XI and XVIII of the Act as may be necessary solely for purposes of carrying out section 1115A of the Act with respect to testing models.

Under the agreement with CMS, Maryland will limit per capita total hospital cost growth for all payers, including Medicare. In order to implement the new model, effective January 1, 2014, Maryland elected to no longer have Medicare make payments to Maryland hospitals in accordance with section 1814(b)(3) of the Act. Maryland also represented that it is no longer in continuous operation of a demonstration project reimbursement system since July 1, 1977, as specified under section 1814(b)(3) of the Act. Because Maryland hospitals are no longer paid under section 1814(b)(3) of

the Act, they are no longer subject to those provisions of the Act and related implementing regulations that are specific to section 1814(b)(3) hospitals. Although CMS has waived certain provisions of the Act for Maryland hospitals, as set forth in the agreement between CMS and Maryland and subject to Maryland's compliance with the terms of the agreement, CMS has not waived the POA indicator reporting requirement. In other words, the changes to the status of Maryland hospitals under section 1814(b)(3) of the Act as described above do not in any way change the POA indicator reporting requirement for Maryland hospitals.

There are currently four POA indicator reporting options, "Y", "W", "N", and "U", as defined by the ICD-9-CM Official Guidelines for Coding and Reporting. We note that prior to

January 1, 2011, we also used a POA indicator reporting option "1". However, beginning on or after January 1, 2011, hospitals were required to begin reporting POA indicators using the 5010 electronic transmittal standards format. The 5010 format removes the need to report a POA indicator of "1" for codes that are exempt from POA reporting. We issued CMS instructions on this reporting change as a One-Time Notification, Pub. No. 100-20, Transmittal No. 756, Change Request 7024, effective on August 13, 2010, which can be located at the following link on the CMS Web site: http://www.cms.gov/manuals/downloads/Pub100_20.pdf.) The current POA indicators and their descriptors are shown in the chart below:

Indicator	Descriptor
Y	Indicates that the condition was present on admission.
W	Affirms that the hospital has determined that, based on data and clinical judgment, it is not possible to document when the onset of the condition occurred.
N	Indicates that the condition was not present on admission.
U	Indicates that the documentation is insufficient to determine if the condition was present at the time of admission.

Under the HAC payment policy, we treat HACs coded with "Y" and "W" indicators as POA and allow the condition on its own to cause an increased payment at the CC and MCC level. We treat HACs coded with "N" and "U" indicators as Not Present on Admission (NPOA) and do not allow the condition on its own to cause an increased payment at the CC and MCC level. We refer readers to the following rules for a detailed discussion of POA indicator reporting: the FY 2009 IPPS proposed rule (73 FR 23559) and final rule (73 FR 48486 through 48487); the FY 2010 IPPS/RY 2010 LTCH PPS proposed rule (74 FR 24106) and final rule (74 FR 43784 through 43785); the FY 2011 IPPS/LTCH PPS proposed rule (75 FR 23881 through 23882) and final rule (75 FR 50081 through 50082); the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25812 through 25813) and final rule (76 FR 51506 through 51507); the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27893 through 27894) and final rule (77 FR 53284 through 53285); and the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27510 through 27511) and final rule (78 FR 50524 through 50525).

In addition, as discussed previously in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53324), the 5010 format allows the reporting and, effective January 1, 2011, the processing of up to 25 diagnoses and 25 procedure codes. As such, it is necessary to report a valid

POA indicator for each diagnosis code, including the principal diagnosis and all secondary diagnoses up to 25.

4. HACs and POA Reporting in Preparation for Transition to ICD-10-CM and ICD-10-PCS

In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51506 and 51507), in preparation for the transition to the ICD-10-CM and ICD-10-PCS code sets, we indicated that further information regarding the use of the POA indicator with the ICD-10-CM/ICD-10-PCS classifications as they pertain to the HAC policy would be discussed in future rulemaking.

At the March 5, 2012 and the September 19, 2012 meetings of the ICD-9-CM Coordination and Maintenance Committee, an announcement was made with regard to the availability of the ICD-9-CM HAC list translation to ICD-10-CM and ICD-10-PCS code sets. Participants were informed that the list of the ICD-9-CM selected HACs has been translated into codes using the ICD-10-CM and ICD-10-PCS classification system. It was recommended that the public review this list of ICD-10-CM/ICD-10-PCS code translations of the selected HACs available on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. The translations can be found under the link titled "ICD-10-

CM/PCS MS-DRG v30 Definitions Manual Table of Contents—Full Titles—HTML Version in Appendix I—Hospital-Acquired Conditions (HACs)." This CMS Web site regarding the ICD-10-MS-DRG Conversion Project is also available on the CMS Web site at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/icd10_hacs.html. We encouraged the public to submit comments on these translations through the HACs Web page using the CMS ICD-10-CM/PCS HAC Translation Feedback Mailbox that was set up for this purpose under the Related Links section titled "CMS HAC Feedback."

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50525), we stated that the final HAC list translation from ICD-9-CM to ICD-10-CM/ICD-10-PCS would be subject to formal rulemaking. We encouraged readers to review the educational materials and draft code sets available for ICD-10-CM/ICD-10-PCS on the CMS Web site at: <http://www.cms.gov/ICD10/>. In addition, we stated that the draft ICD-10-CM/ICD-10-PCS Coding Guidelines could be viewed on the CDC Web site at: <http://www.cdc.gov/nchs/icd/icd10cm.htm>.

The HACs code translation list from ICM-9-CM to ICD-10-CM/ICD-10-PCS is available to the public on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/ICD-10-MS->

DRG-Conversion-Project.html. We note that Appendix I of the ICD-10-CM/PCS MS-DRG V31R Definitions Manual Table of Contents—Full Titles files (available in both text and HTML formats) are posted on the Web site and contain the DRA HACs translated to ICD-10.

We note that section 212 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93), enacted on April 1, 2014, provides that the Secretary may not adopt ICD-10 prior to October 1, 2015. This effectively delayed the transition from ICD-9-CM to ICD-10. The Secretary expects to release a final rule in the near future that will include a new compliance date for use of ICD-10.

5. Current HACs and Previously Considered Candidate HACs

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28002), we did not propose to add or remove categories of the HACs. However, we indicated that we continue to encourage public dialogue about refinements to the HAC list by written stakeholder comments about both previously selected and potential candidate HACs. We refer readers to section II.F.6. of the FY 2008 IPPS final rule with comment period (72 FR 47202 through 47218) and to section II.F.7. of the FY 2009 IPPS final rule (73 FR 48774 through 48491) for detailed discussion supporting our determination regarding each of these conditions. We also refer readers to section II.F.5. of the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27892 through 27898), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53285 through 53292) for the HAC policy for FY 2013, and the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27509 through 27512) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50523 through 50527) for the HAC policy for FY 2014.

Comment: Some commenters stated they were pleased the CMS did not propose to expand the list of categories or conditions subject to the Deficit

Reduction Act of 2005 provisions that would reduce payment for HACs not present on admission. However, one commenter suggested that CMS remove “falls and trauma” from the categories of conditions to which the HAC policy applies. Another believed that iatrogenic pneumothorax with thoracentesis and accidental puncture/bleeding with paracentesis are two conditions that meet the HAC criteria for inclusion and urged CMS to expand the HAC program in FY 2015 to include them.

Response: We value and appreciate these public comments, and we will take the comments and suggestions into consideration in future rulemaking.

Comment: One commenter recognized the importance of targeting HACs, but stated that the DRA HAC program does not recognize that certain conditions are not 100 percent preventable, despite adherence to evidence-based practices. The commenter noted that facilities that treat patients with greater comorbidities and complex conditions are at a greater risk for penalties. Specifically, the commenter reiterates concerns about the inclusion of Surgical Site Infections (SSI) Following Cardiac Implantable Electronic Device (CIED) as a HAC category. The commenter stated that there are many variables that may contribute to the risk of CIED-related infections and that the implanting physician may not be able to control all circumstances (for example, pre-operative white blood cell count, fever within 24 hours, and timing of perioperative antibiotic administration).

Response: In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51510 through 51511), we addressed commenters’ concerns regarding the preventability of DRA HACs and noted that the statute does not require that a condition be “always preventable” in order to qualify as an HAC. We stated that the statute indicated that the condition be “reasonably preventable,” which necessarily implies something less than 100 percent.

Comment: One commenter recommended that CMS address the question that its hospital customers have posed regarding the effect of the DRA HAC policy when a patient is discharged from a hospital and then returns to a hospital to have a foreign object removed. Specifically, the commenter stated that hospitals need to be better informed about how Medicare payment changes if the hospital removing the foreign object is the same hospital at which the foreign object was left or is a different hospital, and if the foreign object is removed during an outpatient procedure or during an inpatient procedure.

Response: Questions related to payment for HACs are dependent upon how the conditions are coded and reported with ICD-9-CM and the corresponding POA indicator. The American Hospital Association (AHA) Central Office™ is the national clearinghouse for medical coding advice. Coding inquiries can be directed to the following AHA Web site: <http://www.CodingClinicAdvisor.com>. Instructions for how to assign the correct POA indicator can be found in the ICD-9-CM Official Guidelines for Coding and Reporting located at the CDC Web site: http://www.cdc.gov/nchs/icd/icd9cm_addenda_guidelines.htm. Also, illustrations of how to assign POA indicators are included in the Present on Admission (POA) Indicator Reporting by Acute Inpatient Prospective Payment System (IPPS) Hospitals Fact Sheet located on the CMS Hospital-Acquired Conditions Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/EducationalResources.html> in the “Downloads” section. Table 1: CMS POA Indicator Reporting Options, Description, and Payment contains an explanation of when payment for a condition is made or not made, based on the POA indicator assigned, as shown below.

POA indicator	Description	Medicare payment
Y	Diagnosis was present at time of inpatient admission	Payment made for condition by Medicare, when an HAC is present.
N	Diagnosis was not present at time of inpatient admission ..	No payment made for condition by Medicare, when an HAC is present.
U	Documentation insufficient to determine if condition was present at the time of inpatient admission.	No payment made for condition by Medicare, when an HAC is present.
W	Clinically undetermined. Provider unable to clinically determine whether the condition was present at the time of inpatient admission.	Payment made for condition by Medicare, when an HAC is present.

6. RTI Program Evaluation

On September 30, 2009, a contract was awarded to RTI to evaluate the impact of the Hospital-Acquired Condition-Present on Admission (HAC-POA) provisions on the changes in the incidence of selected conditions, effects on Medicare payments, impacts on coding accuracy, unintended consequences, and infection and event rates. This was an intra-agency project with funding and technical support from CMS, OPHS, AHRQ, and CDC. The evaluation also examined the implementation of the program and evaluated additional conditions for future selection. The contract with RTI ended on November 30, 2012. Summary reports of RTI's analysis of the FYs 2009, 2010, and 2011 MedPAR data files for the HAC-POA program evaluation were included in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50085 through 50101), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51512 through 51522), and the FY 2013 IPPS/LTCH PPS final rule (77 FR 53292 through 53302). Summary and detailed data also were made publicly available on the CMS Web site at: http://www.cms.gov/HospitalAcqCond/01_Overview.asp and the RTI Web site at: <http://www.rti.org/reports/cms/>.

In addition to the evaluation of HAC and POA MedPAR claims data, RTI also conducted analyses on readmissions due to HACs, the incremental costs of HACs to the health care system, a study of spillover effects and unintended consequences, as well as an updated analysis of the evidence-based guidelines for selected and previously considered HACs. Reports on these analyses have been made publicly available on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/index.html>.

7. Current and Previously Considered Candidate HACs—RTI Report on Evidence-Based Guidelines

The RTI program evaluation includes a report that provides references for all evidence-based guidelines available for each of the selected and previously considered candidate HACs that provide recommendations for the prevention of the corresponding conditions. Guidelines were primarily identified using the AHRQ National Guidelines Clearing House (NGCH) and the CDC, along with relevant professional societies. Guidelines published in the United States were used, if available. In the absence of U.S. guidelines for a specific condition, international guidelines were included.

Evidence-based guidelines that included specific recommendations for the prevention of the condition were identified for each of the selected conditions. In addition, evidence-based guidelines also were found for the previously considered candidate conditions. RTI prepared a final report to summarize its findings regarding evidence-based guidelines. This report can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/Downloads/Evidence-Based-Guidelines.pdf>.

Subsequent to this final report, RTI was awarded an FY 2014 Evidence-Based Guidelines Monitoring contract. Under the contract, RTI was to provide a summary report of all evidence-based guidelines available for each of the selected and previously considered candidate HACs that provide recommendations for the prevention of the corresponding conditions. This report is usually delivered to CMS annually in a May/June timeframe. We received the updated 2014 report and have made it available to the public on the CMS Hospital-Acquired Conditions Web page in the "Downloads" section at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/HospitalAcqCond/index.html?redirect=/HospitalAcqCond/>.

G. Changes to Specific MS-DRG Classifications

1. Discussion of Changes to Coding System and Basis for MS-DRG Updates

a. Conversion of MS-DRGs to the International Classification of Diseases, 10th Revision (ICD-10)

Providers use the code sets under the ICD-9-CM coding system to report diagnoses and procedures for Medicare hospital inpatient services under the MS-DRG system. A later coding edition, the ICD-10 coding system, includes the International Classification of Diseases, 10th Revision, Clinical Modification (ICD-10-CM) for diagnosis coding and the International Classification of Diseases, 10th Revision, Procedure Coding System (ICD-10-PCS) for inpatient hospital procedure coding, as well as the Official ICD-10-CM and ICD-10-PCS Guidelines for Coding and Reporting. The ICD-10 coding system was initially adopted for transactions conducted on or after October 1, 2013, as described in the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Administrative Simplification: Modifications to Medical Data Code Set Standards to Adopt ICD-10-CM and ICD-10-PCS Final Rule published in the **Federal**

Register on January 16, 2009 (74 FR 3328 through 3362) (hereinafter referred to as the "ICD-10-CM and ICD-10-PCS final rule"). However, the Secretary of Health and Human Services issued a final rule that delayed the compliance date for ICD-10 from October 1, 2013, to October 1, 2014. That final rule, entitled "Administrative Simplification: Adoption of a Standard for a Unique Health Plan Identifier; Addition to the National Provider Identifier Requirements; and a Change to the Compliance Date for ICD-10-CM and ICD-10-PCS Medical Data Code Sets," CMS-0040-F, was published in the **Federal Register** on September 5, 2012 (77 FR 54664) and is available for viewing on the Internet at: <http://www.gpo.gov/fdsys/pkg/FR-2012-09-05/pdf/2012-21238.pdf>. On April 1, 2014, the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113-93) was enacted, which specified that the Secretary may not adopt ICD-10 prior to October 1, 2015. Section 212 of Public Law 113-93, titled "Delay in Transition from ICD-9 to ICD-10 Code Sets," provides that "[t]he Secretary of Health and Human Services may not, prior to October 1, 2015, adopt ICD-10 code sets as the standard for code sets under section 1173(c) of Act. On May 1, 2014, the Secretary announced plans to release an interim final rule in the near future that will include a new compliance date to require the use of ICD-10 beginning October 1, 2015. The rule will also require HIPAA covered entities to continue to use ICD-9-CM through September 30, 2015.

The anticipated move to ICD-10 necessitated the development of an ICD-10-CM/ICD-10-PCS version of the MS-DRGs. CMS began a project to convert the ICD-9-CM-based MS-DRGs to ICD-10 MS-DRGs. In response to the FY 2011 IPPS/LTCH PPS proposed rule, we received public comments on the creation of the ICD-10 version of the MS-DRGs, which will be implemented at the same time as ICD-10 (75 FR 50127 and 50128). While we did not propose an ICD-10 version of the MS-DRGs in the FY 2011 IPPS/LTCH PPS proposed rule, we noted that we have been actively involved in converting current MS-DRGs from ICD-9-CM codes to ICD-10 codes and sharing this information through the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee. We undertook this early conversion project to assist other payers and providers in understanding how to implement their own conversion projects. We posted ICD-10 MS-DRGs based on Version 26.0 (FY 2009) of the MS-DRGs. We

also posted a paper that describes how CMS went about completing this project and suggestions for other payers and providers to follow. Information on the ICD-10 MS-DRG conversion project can be found on the ICD-10 MS-DRG Conversion Project Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. We have continued to keep the public updated on our maintenance efforts for ICD-10-CM and ICD-10-PCS coding systems, as well as the General Equivalence Mappings that assist in conversion through the ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee. Information on these committee meetings can be found on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html>.

During FY 2011, we developed and posted Version 28.0 of the ICD-10 MS-DRGs based on the FY 2011 MS-DRGs (Version 28.0) that we finalized in the FY 2011 IPPS/LTCH PPS final rule on the CMS Web site. This ICD-10 MS-DRGs Version 28.0 also included the CC Exclusion List and the ICD-10 version of the hospital-acquired conditions (HACs), which was not posted with Version 26.0. We also discussed this update at the September 15-16, 2010 and the March 9-10, 2011 meetings of the ICD-9-CM Coordination and Maintenance Committee. The minutes of these two meetings are posted on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html>.

We reviewed comments on the ICD-10 MS-DRGs Version 28.0 and made updates as a result of these comments. We called the updated version the ICD-10 MS-DRGs Version 28-R1. We posted a Definitions Manual of ICD-10 MS-DRGs Version 28-R1 on our ICD-10 MS-DRG Conversion Project Web site. To make the review of Version 28-R1 updates easier for the public, we also made available pilot software on a CD ROM that could be ordered through the National Technical Information Service (NTIS). A link to the NTIS ordering page was provided on the CMS ICD-10 MS-DRGs Web page. We stated that we believed that, by providing the ICD-10 MS-DRGs Version 28-R1 Pilot Software (distributed on CD ROM), the public would be able to more easily review and provide feedback on updates to the ICD-10 MS-DRGs. We discussed the updated ICD-10 MS-DRGs Version 28-R1 at the September 14, 2011 ICD-9-CM Coordination and Maintenance Committee meeting. We encouraged the public to continue to review and provide comments on the ICD-10 MS-

DRGs so that CMS could continue to update the system.

In FY 2012, we prepared the ICD-10 MS-DRGs Version 29.0, based on the FY 2012 MS-DRGs (Version 29.0) that we finalized in the FY 2012 IPPS/LTCH PPS final rule. We posted a Definitions Manual of ICD-10 MS-DRGs Version 29.0 on our ICD-10 MS-DRG Conversion Project Web site. We also prepared a document that describes changes made from Version 28.0 to Version 29.0 to facilitate a review. The ICD-10 MS-DRGs Version 29.0 was discussed at the ICD-9-CM Coordination and Maintenance Committee meeting on March 5, 2012. Information was provided on the types of updates made. Once again the public was encouraged to review and comment on the most recent update to the ICD-10 MS-DRGs.

CMS prepared the ICD-10 MS-DRGs Version 30.0 based on the FY 2013 MS-DRGs (Version 30.0) that we finalized in the FY 2013 IPPS/LTCH PPS final rule. We posted a Definitions Manual of the ICD-10 MS-DRGs Version 30.0 on our ICD-10 MS-DRG Conversion Project Web site. We also prepared a document that describes changes made from Version 29.0 to Version 30.0 to facilitate a review. We produced mainframe and computer software for Version 30.0, which was made available to the public in February 2013. Information on ordering the mainframe and computer software through NTIS was posted on the ICD-10 MS-DRG Conversion Project Web site. The ICD-10 MS-DRGs Version 30.0 computer software facilitated additional review of the ICD-10 MS-DRGs conversion.

We provided information on a study conducted on the impact of converting MS-DRGs to ICD-10. Information on this study is summarized in a paper entitled "Impact of the Transition to ICD-10 on Medicare Inpatient Hospital Payments." This paper was posted on the CMS ICD-10 MS-DRGs Conversion Project Web site and was distributed and discussed at the September 15, 2010 ICD-9-CM Coordination and Maintenance Committee meeting. The paper described CMS' approach to the conversion of the MS-DRGs from ICD-9-CM codes to ICD-10 codes. The study was undertaken using the ICD-9-CM MS-DRGs Version 27.0 (FY 2010) which was converted to the ICD-10 MS-DRGs Version 27.0. The study estimated the impact on aggregate payment to hospitals and the distribution of payments across hospitals. The impact of the conversion from ICD-9-CM to ICD-10 on Medicare MS-DRG hospital payments was estimated using FY 2009 Medicare claims data. The study found

a hospital payment increase of 0.05 percent using the ICD-10 MS-DRGs Version 27.0.

CMS provided an overview of this hospital payment impact study at the March 5, 2012 ICD-9-CM Coordination and Maintenance Committee meeting. This presentation followed presentations on the creation of ICD-10 MS-DRGs Version 29.0. A summary report of this meeting can be found on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html>. At this March 2012 meeting, CMS announced that it would produce an update on this impact study based on an updated version of the ICD-10 MS-DRGs. This update of the impact study was presented at the March 5, 2013 ICD-9-CM Coordination and Maintenance Committee meeting. The study found that moving from an ICD-9-CM-based system to an ICD-10 MS-DRG replicated system would lead to DRG reassignments on only 1 percent of the 10 million MedPAR sample records used in the study. Ninety-nine percent of the records did not shift to another MS-DRG when using an ICD-10 MS-DRG system. For the 1 percent of the records that shifted, 45 percent of the shifts were to a higher weighted MS-DRG, while 55 percent of the shifts were to lower weighted MS-DRGs. The net impact across all MS-DRGs was a reduction by 4/10000 or minus 4 pennies per \$100. The updated paper is posted on the CMS Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html> under the "Downloads" section. Information on the March 5, 2013 ICD-9-CM Coordination and Maintenance Committee meeting can be found on the CMS Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials.html>. This update of the impact paper and the ICD-10 MS-DRG Version 30.0 software provided additional information to the public who were evaluating the conversion of the MS-DRGs to ICD-10 MS-DRGs.

CMS prepared the ICD-10 MS-DRGs Version 31.0 based on the FY 2014 MS-DRGs (Version 31.0) that we finalized in the FY 2014 IPPS/LTCH PPS final rule. In November 2013, we posted a Definitions Manual of the ICD-10 MS-DRGs Version 31.0 on the ICD-10 MS-DRG Conversion Project Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. We also prepared a document that described changes made from Version 30.0 to Version 31.0 to facilitate a review. We

produced mainframe and computer software for Version 31.0, which was made available to the public in December 2013. Information on ordering the mainframe and computer software through NTIS was posted on the CMS Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html> under the “Related Links” section. This ICD–10 MS–DRGs Version 31.0 computer software facilitated additional review of the ICD–10 MS–DRGs conversion. We encouraged the public to submit to CMS any comments on areas where they believed the ICD–10 MS–DRGs did not accurately reflect grouping logic found in the ICD–9–CM MS–DRGs Version 31.0.

We reviewed comments received and developed an update of ICD–10 MS–DRGs Version 31.0, which we called ICD–10 MS–DRGs Version 31.0–R. We have posted a Definitions Manual of the ICD–10 MS–DRGs Version 31.0–R on the ICD–10 MS–DRG Conversion Project Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. We also prepared a document that describes changes made from Version 31.0 to Version 31.0–R to facilitate a review. We will continue to share ICD–10–MS–DRG conversion activities with the public through this Web site.

b. Basis for FY 2015 MS–DRG Updates

CMS encourages input from our stakeholders concerning the annual IPPS updates when that input is made available to us by December 7 of the year prior to the next annual proposed rule update. For example, to be considered for any updates or changes in FY 2016, comments and suggestions should be submitted by December 7, 2014. The comments that were submitted in a timely manner for FY 2015 are discussed below in this section.

Following are the changes we proposed to the MS–DRGs for FY 2015. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28004), we invited public comment on each of the MS–DRG classification proposed changes described below, as well as our proposals to maintain certain existing MS–DRG classifications, which also are

discussed below. In some cases, we proposed changes to the MS–DRG classifications based on our analysis of claims data. In other cases, we proposed to maintain the existing MS–DRG classification based on our analysis of claims data. For the FY 2015 proposed rule, our MS–DRG analysis was based on claims data from the December 2013 update of the FY 2013 MedPAR file, which contains hospital bills received through September 30, 2013, for discharges occurring through September 30, 2013. In our discussion of the proposed MS–DRG reclassification changes that follows, we refer to our analysis of claims data from the “December 2013 update of the FY 2013 MedPAR file.”

As explained in previous rulemaking (76 FR 51487), in deciding whether to propose to make further modification to the MS–DRGs for particular circumstances brought to our attention, we considered whether the resource consumption and clinical characteristics of the patients with a given set of conditions are significantly different than the remaining patients in the MS–DRG. We evaluated patient care costs using average costs and lengths of stay and relied on the judgment of our clinical advisors to decide whether patients are clinically distinct or similar to other patients in the MS–DRG. In evaluating resource costs, we considered both the absolute and percentage differences in average costs between the cases we selected for review and the remainder of cases in the MS–DRG. We also considered variation in costs within these groups; that is, whether observed average differences were consistent across patients or attributable to cases that were extreme in terms of costs or length of stay, or both. Further, we considered the number of patients who will have a given set of characteristics and generally preferred not to create a new MS–DRG unless it would include a substantial number of cases.

2. MDC 1 (Diseases and Disorders of the Nervous System)

a. Intracerebral Therapies: Gliadel® Wafer

During the comment period for the FY 2014 IPPS/LTCH PPS proposed rule, we

received a public comment that we considered to be outside the scope of that proposed rule. We stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50550) that we would consider this issue in future rulemaking as part of our annual review process. The commenter requested that a new MS–DRG be created for intracerebral therapies, including implantation of chemotherapeutic agents. Specifically, the commenter referred to the Gliadel® Wafer for the treatment of High-Grade Malignant Gliomas (HGGs) defined as aggressive tumors originating in the brain.

The Gliadel® Wafer has been discussed in prior rulemaking, including the FY 2004 IPPS proposed rule (68 FR 27187) and final rule (68 FR 45354 through 45355 and 68 FR 45391 through 45392); the FY 2005 IPPS proposed rule (69 FR 28221 through 28222) and final rule (69 FR 48957 through 48971); and the FY 2008 IPPS/LTCH PPS final rule (72 FR 47252 through 47253). We refer readers to these prior discussions for further background information regarding the Gliadel® Wafer.

Effective October 1, 2002, ICD–9–CM procedure code 00.10 (Implantation of chemotherapeutic agent) was created to identify and describe insertion of the Gliadel® Wafer. This procedure code is assigned to MS–DRG 023 (Craniotomy with Major Device Implant/Acute Complex Central Nervous System (CNS) PDX with MCC or Chemo Implant) in MDC 1. According to the commenter, this current MS–DRG assignment does not compensate providers adequately for the expenses incurred to perform the surgery and implantation of the wafer device. The commenter noted that MS–DRG 023 has a national average payment rate of approximately \$28,016. However, the commenter stated, “the acquisition cost for 1 box of the Gliadel® Wafer alone (typical utilization per procedure is 8 wafers or 1 box) is \$29,035.”

We conducted an analysis using claims data from the December 2013 update of the FY 2013 MedPAR file. Our findings are shown in the table below.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 023—All cases	5,383	10.98	\$36,982
MS–DRG 023—Cases with procedure code 00.10	158	7.0	34,027

As shown in the table above, there were a total of 5,383 cases in MS-DRG 023 with an average length of stay of 10.98 days and average costs of \$36,982. The number of cases reporting procedure code 00.10 in MS-DRG 023 totaled 158, with an average length of stay of 7.0 days and average costs of \$34,027.

The data clearly demonstrate that the volume of cases reporting procedure code 00.10 within MS-DRG 023 have a shorter average length of stay and are lower in average costs in comparison to all the cases in the MS-DRG. As we stated in the proposed rule, given the low volume of cases, shorter average length of stay, and lower average costs, the data do not support the creation of a new MS-DRG for cases utilizing the Gliadel® Wafer. In addition, our clinical advisors determined that cases reporting procedure code 00.10 are appropriately assigned within MS-DRG 023.

As discussed in the FY 2005 IPPS final rule (69 FR 48959), Gliadel® Wafer cases were assigned to a new DRG that was clinically coherent and reflected the resources used to treat those cases, which appropriately addressed the concerns of commenters who raised questions regarding DRG assignment for those cases at that time. Subsequently, with the adoption of the MS-DRGs, in the FY 2008 IPPS/LTCH PPS final rule (72 FR 47252 through 47253), we assigned all cases utilizing the Gliadel® Wafer technology to MS-DRG 023, the higher severity level, and revised the title of this MS-DRG in recognition of the complexity and costs associated with the implantation. Our clinical advisors continue to support this assignment for these same reasons. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to create a new MS-DRG for FY 2015 for cases where ICD-9-CM procedure code 00.10 is reported. We invited public comments on our proposal to maintain the current MS-DRG structure.

Comment: Several commenters supported CMS' proposal to maintain cases reporting procedure code 00.10 in MS-DRG 23, stating it was reasonable given the data and information provided.

Response: We appreciate the commenters' support.

Comment: Some commenters believed that MS-DRG 23 does not provide adequate payment to hospitals that perform craniotomies with insertion of the Gliadel® Wafer. These commenters suggested the MedPAR data are flawed for a number of reasons. The commenters indicated that, upon conducting their own analysis of FY 2012 MedPAR data, there appears to be

confusion among providers on how to accurately report procedure code 00.10. The commenters reported that, during their analysis, they encountered claims where procedure code 00.10 was reported for diagnoses of several other types of cancers (small and large bowel, pancreatic, and liver) that were completely unrelated to the brain. One commenter suggested that several providers who have reported procedure code 00.10 did not ever purchase the Gliadel® Wafer product. This commenter noted that it is unclear if the product should be classified as an implant or a drug within the revenue codes and that this uncertainty results in additional confusion. The same commenter urged CMS to consider more input from the professional community and Medicare beneficiaries, as well as data sources other than the MedPAR file when evaluating MS-DRG assignments for low volume procedures so as not to restrict access to care for patients in need of this intracerebral therapy.

Response: We acknowledge the commenters' concerns. With regard to confusion on how to accurately report procedure code 00.10 and concern that the code is being reported for other types of cancers besides brain cancer, we point out that the AHA's Coding Clinic for ICD-9-CM has provided coding instruction and examples for how to appropriately assign and report this code. Specifically, Coding Clinic Fourth Quarter, 2002, explains how the chemotherapy wafer is utilized in brain cancer and that chemotherapy wafers also have been used to treat the liver and bladder as well as other sites. We also note that the terms associated with procedure code 00.10 within ICD-9-CM are not restricted solely for use of the Gliadel® Wafer product. The ICD-9-CM coding classification system is not device specific.

With respect to the comment that providers are confused as to assigning an implant or drug revenue code to the Gliadel® Wafer product, we note that where explicit instructions are not provided, providers should report their charges under the revenue code that will result in the charges being assigned to the same cost center to which the cost of those services are assigned in the cost report. We appreciate the commenter's suggestion to obtain additional input from the professional community.

Comment: One commenter recommended that a new MS-DRG be created specifically for the Gliadel® Wafer product. The commenter stated that it is unacceptable for CMS to state there are too few cases to do so.

Response: As explained in the FY 2015 IPPS/LTCH PPS proposed rule, our

analysis of the claims data and our clinical advisors did not support creation of a new MS-DRG. Furthermore, the MS-DRGs are a classification system intended to group together those diagnoses and procedures with similar clinical characteristics and utilization of resources. Basing a new MS-DRG on such a small number of cases could lead to distortions in the relative payment weights for the MS-DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS-DRG provides greater stability for annual updates to the relative payment weights. Moreover, our clinical advisors have examined this issue and continue to advise us that the procedure code 00.10 cases are appropriately classified within MS-DRG 23 because they are clinically similar based on both the craniotomy and the insertion of the device, among other reasons. Our advisors reaffirmed their assessment that the groupings were not overly broad or heterogeneous, reiterating that the clinical flexibility of both physicians and hospitals is maximized when larger cohorts of clinically similar patients are grouped and the costs averaged. They note that many factors are considered when comparing groups of patients, including such factors as length of stay, cost of specific devices, type of device, type of procedure, and anatomical location, among others, and stated that the commenter did not identify any factors that would necessitate an atypical small, separate grouping when these cases are categorized. Our clinical advisors do not support creating a new MS DRG for such a small number of cases but would not support creating a separate DRG even if the volume of cases was large.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current structure for MS-DRG 23 for FY 2015.

b. Endovascular Embolization or Occlusion of Head and Neck

We received a request to change the MS-DRG assignment for the following three ICD-9-CM procedure codes representing endovascular embolization or occlusion procedures of the head and neck:

- 39.72 (Endovascular (total) embolization or occlusion of head and neck vessels);
- 39.75 (Endovascular embolization or occlusion of vessel(s) of head or neck using bare coils); and
- 39.76 (Endovascular embolization or occlusion of vessel(s) of head or neck using bioactive coils).

These three procedure codes are currently assigned to the following eight MS-DRGs under MDC 1. Cases assigned to MS-DRGs 020, 021, and 022 require a principal diagnosis of hemorrhage. Cases assigned to MS-DRGs 023 and 024 require the insertion of a major implant or an acute complex central nervous system (CNS) principal diagnosis. Cases assigned to MS-DRGs 025, 026, and 027 do not have a principal diagnosis of hemorrhage, an acute complex CNS principal diagnosis, or a major device implant.

- MS-DRG 020 (Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage with MCC)
- MS-DRG 021 (Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage with CC)
- MS-DRG 022 (Intracranial Vascular Procedures with Principal Diagnosis of Hemorrhage without CC/MCC)
- MS-DRG 023 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with MCC or Chemo Implant)
- MS-DRG 024 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis without MCC)
- MS-DRG 025 (Craniotomy & Endovascular Intracranial Procedures with MCC)
- MS-DRG 026 (Craniotomy & Endovascular Intracranial Procedures with CC)
- MS-DRG 027 (Craniotomy & Endovascular Intracranial Procedures without CC/MCC)

The requestor recommended that cases with procedure codes 39.72, 39.75, and 39.76 be moved from MS-DRGs 025, 026, and 027 to MS-DRGs 023 and 024, even when there is no reported acute complex CNS principal diagnosis or a major device implant. The requestor stated that unruptured aneurysms can be treated by a minimally invasive technique utilizing endovascular coiling. The requestor noted that a microcatheter is inserted into a groin artery and navigated through the vascular system to the location of the aneurysm. The coils are inserted through the microcatheter into the aneurysm in order to occlude (fill) the aneurysm from inside the blood vessel. Once the coils are implanted, the blood flow pattern within the aneurysm is altered. The requestor stated that these cases do not have a principal diagnosis of hemorrhage because the treatment is for an unruptured aneurysm which has not hemorrhaged. Furthermore, the requestor stated that only a few of these cases without hemorrhage have a complex CNS principal diagnosis. Therefore, the requestor believed that most of the cases should be assigned to MS-DRGs 025, 026, and 027.

The requestor stated that the average costs of coil cases captured by procedure codes 39.72, 39.75, and 39.76 are significantly higher than other cases within MS-DRGs 025, 026, and 027 where most of the coil cases are

assigned. As stated earlier, the requestor recommended that cases with procedure codes 39.72, 39.75, and 39.76 be moved to MS-DRGs 023 and 024, even when there is not an acute complex CNS principal diagnosis or a major device implant reported.

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for cases of endovascular embolization or occlusion of head and neck. The table below shows our findings. For MS-DRGs 025, 026, and 027, the cases identified by procedure code 39.72, 39.75, or 39.76 (endovascular embolization or occlusion of head and neck) have higher average costs and shorter lengths of stay in comparison to all the cases within each of those respective MS-DRGs. The average costs of cases in MS-DRG 024 are \$4,049 higher than the average costs of the 1,731 endovascular embolization or occlusion of head and neck procedures cases in MS-DRG 027 (\$26,250 versus \$22,201). The findings also show that the 524 cases with procedure code 39.72, 39.75, or 39.76 with average costs of \$41,030 in MS-DRG 025 are closer to the average costs of \$36,982 for cases in MS-DRG 023. Lastly, we found that the 721 endovascular embolization or occlusion of head and neck procedure cases in MS-DRG 026 have average costs of \$27,998 compared to average costs of \$26,250 for cases in MS-DRG 024.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 23—All cases	5,383	10.98	\$36,982
MS-DRG 24—All cases	1,745	6.30	26,250
MS-DRG 25—All cases	15,937	9.68	29,722
MS-DRG 25—Cases with procedure code 39.72, 39.75, or 39.76	524	7.97	41,030
MS-DRG 26—All cases	8,520	6.16	21,194
MS-DRG 26—Cases with procedure code 39.72, 39.75, or 39.76	721	3.14	27,998
MS-DRG 27—All cases	10,326	3.30	16,389
MS-DRG 27—Cases with procedure code 39.72, 39.75, or 39.76	1,731	1.66	22,201

Our clinical advisors reviewed the results of our examination and determined that the endovascular embolization or occlusion of head and neck procedures are appropriately classified within MS-DRGs 025, 026, and 027 because they do not have an acute complex CNS principal diagnosis or a major device implant which would add to their clinical complexity. Cases in MS-DRG 024 have average costs that are \$4,049 higher than cases in MS-DRG 027 with procedure code 39.72, 39.75, or 39.76. We acknowledge that the 1,245 cases with procedure code 39.72, 39.75, or 39.76 in MS-DRGs 025 and 026 have

average costs that are closer to those in MS-DRGs 023 and 024. However, these cases are 1,245 of the total 2,976 cases that would be involved if we moved all MS-DRGs 025, 026, and 027 cases with procedure code 39.72, 39.75, or 39.76 to MS-DRGs 023 and 024, even if they did not have an acute complex CNS principal diagnosis or a major device implant. Based on these findings and the recommendations from our clinical advisors, we determined that proposing to move endovascular embolization or occlusion of head and neck procedures from MS-DRGs 025, 026, and 027 to MS-DRGs 023 and 024 was not

warranted. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to maintain the current MS-DRG assignments for endovascular embolization or occlusion of head and neck procedures. We invited public comments on our proposal.

Comment: A number of commenters supported CMS' proposal to maintain the current MS-DRG assignment for codes 39.72, 39.75, or 39.76 in MS-DRGs 025, 026, and 027. The commenters stated this was reasonable, given the data and information provided.

A number of commenters objected to the proposal to maintain the current MS-DRG assignments for endovascular embolizations captured in codes 39.72, 39.75 and 39.76. The commenters recommended that CMS move the three codes to MS-DRGs 023 and 024. The commenters stated that the coils used in the endovascular embolizations are expensive and the endovascular procedures require substantial additional resources. The commenters stated that their hospitals are significantly underpaid for these cases. The commenters recommended that endovascular embolization codes 39.72, 39.75 and 39.76 be classified a "Major Device Implants" and therefore assigned to MS-DRGs 023 and 024.

Several commenters recommended that CMS create new severity subgroups within MS-DRG 024 to indicate cases with CC and cases without CC/MCC. The commenters recommended a three-level severity split as follows:

- MS-DRG 023 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with MCC or Chemo Implant);
- MS-DRG 024 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with CC); and
- MS-DRG XXX (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis without CC/MCC)

The commenters recommended that endovascular embolizations captured in codes 39.72, 39.75 and 39.76 be added to these three recommended MS-DRGs as part of the Major Device Implant group.

One of the commenters recommended the creation of a new set of MS-DRGs to capture intracranial endovascular embolization procedures if CMS decided not to modify the current MS-DRGs by moving codes 39.72, 39.75, and 39.76 to MS-DRGs 023 and 024. The commenter suggested the following titles for the recommended new MS-DRGs:

- Recommended new MS-DRG 043 (Intracranial Endovascular Embolization Procedures with MCC)
- Recommended new MS-DRG 044 (Intracranial Endovascular Embolization Procedures with CC)
- Recommended new MS-DRG 045 (Intracranial Endovascular Embolization Procedures with Device Implant without CC/MCC).

The commenter acknowledged that there were a limited number of other intracranial endovascular procedures that could also be considered for inclusion in the new base MS-DRG with this new option. The commenter supported including any additional intracranial endovascular embolization procedures that CMS deemed to be clinically appropriate.

Response: We appreciate the commenters' support of our proposal to maintain the current MS-DRG assignment. We examined the commenters' recommendation of subdividing MS-DRG 024 by adding an additional severity level (with CC and without CC/MCC). The findings from the examination of the claims data in the December 2013 update of the FY 2013 MedPAR file on endovascular embolization or occlusion of head and neck procedures are shown in the first table below. We applied the following criteria established in FY 2008 (72 FR 47169) to determine if the creation of a new CC or MCC subgroup within a base MS-DRG was warranted:

- A reduction in variance of costs of at least 3 percent.
- At least 5 percent of the patients in the MS-DRG fall within the CC or MCC subgroup.
- At least 500 cases are in the CC or MCC subgroup.
- There is at least a 20 percent different in average costs between subgroups.
- There is a \$2,000 difference in average costs between subgroups.

In order to warrant creation of a CC or MCC subgroup within a base MS-DRG, the subgroup must meet all five of the criteria.

ENDOVASCULAR EMBOLIZATION OR OCCLUSION OF HEAD AND NECK PROCEDURES

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 23—All cases	5,383	10.98	\$36,982
MS-DRG 24—All cases	1,745	6.30	26,250

The following table shows the number of cases that would be within each of the new requested three MS-DRGs, including the two proposed severity levels.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 23 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with MCC or Chemo Implant)	5,383	10.98	\$36,982
Proposed MS-DRG 24 (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis with CC or Chemo Implant)	1,211	7.65	27,360
Proposed MS-DRG XX (Craniotomy with Major Device Implant/Acute Complex CNS Principal Diagnosis without CC/MCC or Chemo Implant)	534	3.25	23,733

We determined that the requested new severity subdivision of with CC and without CC/MCC would meet only four of the five criteria. The requested new with CC and without CC/MCC severity levels do not meet the criterion that

there is at least a 20 percent difference in average costs between subgroups.

Because the requested new severity level does not meet all five criteria, we are not modifying MS-DRG 024 to create severity levels for cases with CC and cases without CC/MCC.

We also evaluated the request to add endovascular embolizations captured by codes 39.72, 39.75 and 39.76 to the group labeled "Major Device Implants" within MS-DRGs 023 and 024. Major Device Implants within MS-DRGs 023 and 024 include the following three sets

of intracranial neurostimulator procedures. Each of the three is composed of the implantation of an intracranial neurostimulator pulse generator which is implanted in the patient, as well as the insertion of a neurostimulator lead which is inserted through a burr hole in the skull into the patient's brain.

- 01.20 (Cranial implantation or replacement of neurostimulator pulse generator) and 02.93 (Implantation or replacement of intracranial neurostimulator lead(s))
- 02.93 (Implantation or replacement of intracranial neurostimulator lead(s)) and 86.95 (Insertion or replacement of multiple array neurostimulator pulse generator, not specified as rechargeable)
- 02.93 (Implantation or replacement of intracranial neurostimulator lead(s)) and 86.98 (Insertion or replacement of multiple array (two or more) rechargeable neurostimulator pulse generator)

Our clinical advisors reviewed this issue and advised us not to classify endovascular embolization procedures in the same manner as patients who receive intracranial neurostimulators. They advised against classifying endovascular embolizations as Major Device Implants for several reasons. First, the endovascular embolization device itself is a simple mechanical device, such as a wire, not a complex electronic device. The work involved in configuring the neurostimulator device to the patient, both before and after insertion, is significantly different from that of the endovascular embolizations. Second, endovascular embolizations are not devices implanted through an open procedure as are intracranial neurostimulator pulse generators and neurostimulator leads. Our clinical advisors stated that open procedures, including open procedures to implant the generator but especially including open skull procedures, from a clinical

standpoint are significantly different than endovascular procedures, both in terms of the work, the facilities, the risks, and recovery rates (length of stay). Our clinical advisors specifically stated that the insertion of coils through an endovascular approach is not similar to the insertion of a complex electronic device. Endovascular embolizations do not match the clinical complexity and severity of the intracranial neurostimulators which have greater lengths of stay. Our clinical advisors stated that care of patients who receive endovascular embolizations is not at the same severity level as for those patients who have a major device implant such as an intracranial neurostimulator or those patients with an acute complex central nervous system principal diagnosis. Therefore, our clinical advisors recommended not moving endovascular embolizations to MS-DRGs 023 or 024. They recommended maintaining their current assignments in MS-DRGs 025, 026, and 027.

We evaluated the request to create a new set of MS-DRGs to capture intracranial endovascular embolization procedures. The requestor recommended including codes 39.72, 39.75, and 39.76 and any other procedures which CMS deemed appropriate. Our clinical advisors stated that codes 39.72, 39.75, and 39.76 were appropriately assigned to MS-DRGs 025, 026, and 027 because they are clinically similar to other cases in MS-DRGs 025, 026, and 027. In addition, as stated earlier, these cases do not match the clinical complexity and severity of the intracranial neurostimulators within MS-DRGs 023 and 024. For these reasons, our clinical advisors did not support creating a new set of MS-DRG for these codes and any additional intracranial endovascular embolization procedures.

After consideration of public comments we received, we are finalizing our proposal to maintain the current MS-DRG assignments for codes

39.72, 39.75 and 39.76 in MS-DRGs 025, 026, and 027.

3. MDC 4 (Diseases and Disorders of the Ear, Nose, Mouth and Throat): Avery Breathing Pacemaker System

We received a request to create a new MS-DRG for the Avery Breathing Pacemaker System. This system is also called a diaphragmatic pacemaker and is captured by ICD-9-CM procedure code 34.85 (Implantation of diaphragmatic pacemaker). The requestor stated that the diaphragmatic pacemaker is indicated for adult and pediatric patients with chronic respiratory insufficiency that would otherwise be dependent on ventilator support. The procedure consists of surgically implanted receivers and electrodes mated to an external transmitter by antennas worn over the implanted receivers. The external transmitter and antennas send radiofrequency energy to the implanted receivers under the skin. The receivers then convert the radio waves into stimulating pulses sent down the electrodes to the phrenic nerves, causing the diaphragm to contract. The requestor stated that this normal pattern is superior to mechanical ventilators that force air into the chest. The requestor also stated that the system is expensive; the device cost is approximately \$57,000. According to the requestor, given the cost of the device, hospitals are reluctant to use it. The requestor did not make a specific MS-DRG reassignment request.

When used for a respiratory failure patient, procedure code 34.85 is assigned to MS-DRGs 163, 164, and 165 (Major Chest Procedures with MCC, with CC, and without CC/MCC, respectively).

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for diaphragmatic pacemaker cases. The following table shows our findings.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 163—All cases	11,766	13.13	\$34,308
MS-DRG 163—Cases with procedure code 34.85	13	2.23	\$29,406
MS-DRG 164—All cases	16,087	6.58	\$18,352
MS-DRG 164—Cases with procedure code 34.85	34	1.71	\$23,406
MS-DRG 165—All cases	9,207	3.91	\$13,081
MS-DRG 165—Cases with procedure code 34.85	1	1.00	\$22,977

There were only 48 cases of diaphragmatic pacemakers within MS-DRGs 163, 164, and 165. The average costs of these diaphragmatic pacemaker cases ranged from \$22,977 for the single

case in MS-DRG 165 to \$29,406 for the cases in MS-DRG 163, compared to the average costs for all cases in MS-DRGs 163, 164, and 165, which range from \$13,081 to \$34,308. The average cost for

diaphragmatic pacemaker cases in MS-DRG 163 was lower than that for all cases in MS-DRG 163, \$29,406 compared to \$34,308 for all cases. The average cost for diaphragmatic

pacemaker cases was higher for MS-DRG 164, \$23,406 compared to \$18,352 for all cases. While the average cost for the single diaphragmatic pacemaker case was significantly higher for MS-DRG 165, \$22,977 compared to \$13,081, we were unable to determine if additional factors might have impacted the higher cost for this single case.

We stated in the FY 2015 IPPS/LTCH PPS proposed rule that, given the small number of diaphragmatic pacemaker cases that we found, we did not believe that there was justification for creating a new MS-DRG. Basing a new MS-DRG on such a small number of cases could lead to distortions in the relative payment weights for the MS-DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS-DRG provides greater stability for annual updates to the relative payment weights. We noted that, as discussed in section II.G.4.c. of the preamble of the proposed rule, one of the criteria we apply in evaluating whether to create new severity subgroups within an MS-DRG is whether there are at least 500 cases in the CC or MCC subgroup. While this criterion is used to evaluate whether to create a severity subgroup within an MS-DRG, applying it here suggests that creating a new MS-DRG for only 48 cases would not be appropriate. Although the average costs of these diaphragmatic pacemaker cases are higher than the average costs of all cases in MS-DRG 164, the average costs are lower than all cases in MS-DRG 163. We believe the current MS-DRG assignment is appropriate and that the data do not support creating an MS-DRG because there are so few cases.

Our clinical advisors reviewed this issue and determined that the diaphragmatic pacemaker cases are appropriately classified within MS-DRGs 163, 164, and 165 because they are clinically similar to other cases of patients with major chest procedures within MS-DRGs 163, 164, and 165. Our clinical advisors did not support creating a new MS-DRG for such a small number of cases.

Based on the results of the examination of the claims data, the recommendations from our clinical advisors, and the small number of diaphragmatic pacemaker cases, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to create a new MS-DRG for diaphragmatic pacemaker cases for FY 2015. We proposed to maintain the current MS-DRG assignments for diaphragmatic pacemaker cases. We invited public comments on our proposal.

Comment: A number of commenters supported CMS' proposal to maintain the current MS-DRG assignment for diaphragmatic pacemakers. The commenters stated that the proposal was reasonable given the data and information presented.

Another commenter expressed appreciation for the analysis performed on this issue, but disagreed with the conclusion to leave diaphragmatic pacemakers in MS-DRGs 163, 164, and 165. The commenter stated that, although the number of cases identified (48) is small, they are unique in both their costs and their length of stay. The commenter stated that these cases do not represent the full universe of Medicare beneficiaries who would be good candidates for the diaphragmatic pacemaker. The commenter expressed surprise at the average cost data presented in the table in the proposed rule. The commenter stated that it sells this system directly to hospitals and does not know what insurance plan covers the procedure. However, in investigating systems hospitals reported with code 34.85, the commenter stated that it discovered that this code covers systems provided by other manufacturers and that the cost of devices by other manufacturers is lower than the Avery system and is closer to the costs in CMS' claims data. The commenter stated that the Avery system is fully implantable, whereas other systems are not. The commenter asserted that one other system has percutaneous lead wires that leave the patients; therefore, the other system is not totally implantable. The commenter made inquiries of hospitals and found that a majority of those hospitals contacted were using a lower priced system. The commenter stated that by grouping multiple manufacturers' devices into the same MS-DRG, with the same payment rate, CMS was limiting physician and patient choice of a device. The commenter recommended that MS-DRG payments be made based on the equipment provided and allow hospitals to recoup the costs of each system used.

The commenter stated that inadequate payment discourages hospitals from offering the service to patients. The commenter also stated that these cases are anomalies in the current MS-DRGs to which they are assigned and should be classified into a single, unique MS-DRG that would be clinically and financially coherent. The commenter believed that such a correction could increase the number of eligible Medicare beneficiaries who would benefit from use of the device, allowing them to stop using mechanical

ventilation, which would greatly improve their overall health and quality of life.

The commenter also stated that the average costs for 35 of the cases with procedure code 34.85 exceed the average costs of the other cases in the MS-DRG to which they are assigned. The commenter stated that it found the average length of stay for all 48 cases to be substantially less than the average length of stay for all of the other cases. Therefore, the commenter stated that the costs for the hospital are related primarily to the device and not to the direct hospital care provided to the patients. The commenter stated that the small number of diaphragmatic pacemaker cases compared to the large volume of other cases in each MS-DRG means that the unique cost factors of most of the pacemaker cases will never be reflected in the payment for these MS-DRGs. The commenter stated that hospitals have no incentive to make the service available to patients who could use the system. The commenter stated that the number of individuals who can use the pacemaker is small because of the comparatively small volume of individuals who suffer from the conditions that make the pacemaker necessary, but there are more than 48 Medicare beneficiaries who could benefit from the device.

The commenter further questioned the rationale for not basing a new MS-DRG on such a small number of cases. The commenter questioned the reference to the use of 500 cases, which is one of the criteria for a severity level, when the requestor did not want a severity level, but instead was requesting a new MS-DRG for these Avery Diaphragmatic Pacemaker cases.

In conclusion, the commenter urged CMS to create a new MS-DRG for procedure code 34.85.

Response: We appreciate the commenters' support for our proposal not to change the MS-DRG for diaphragmatic pacemakers. As noted by one commenter, the ICD-9-CM procedure codes capture the procedure performed, in this case the implantation of a diaphragmatic pacemaker. The codes are not manufacturer specific. This is the case for all types of implanted devices such as cardiac pacemakers, defibrillators, and orthopedic devices. The procedure codes are grouped into clinically appropriate MS-DRGs. MS-DRGs were not created to capture a device by a single manufacturer. It is assumed that hospitals and their physician staff will select the appropriate devices. CMS makes Medicare payments to hospitals for groups of similar patients within

each MS-DRG. The average costs provided in the tables above were based on Medicare patients reported to have received a diaphragmatic pacemaker. Hospitals have been receiving payments by diagnosis-related groups for several decades and are aware that average payments will exceed the costs of some cases and be less than the costs of other cases. They are aware that the selection of a particular manufacturer, or a particular device made by one manufacturer, should be consistent with the needs of the patient. Our data do not identify which manufacturer's devices the hospitals and physicians chose to utilize.

As stated earlier, given the small number of diaphragmatic pacemaker cases, we do not believe there is justification for creating a new MS-DRG. Basing a new MS-DRG on such a small number of cases could lead to distortions in the relative payment weights for the MS-DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS DRG provides greater stability for annual updates to the relative payment weights.

Our clinical advisors reviewed this issue and the public comments received and continue to advise that that the diaphragmatic pacemaker cases are appropriately classified within MS-DRGs 163, 164, and 165 because they are clinically similar to other cases of

patients with major chest procedures within MS-DRGs 163, 164, and 165. They stated that the clinical flexibility of both physicians and hospitals is maximized when larger cohorts of clinically similar patients are grouped and the costs averaged. Our clinical advisors note that many factors are considered when comparing groups of patients, including such factors as length of stay, cost of specific devices, type of device, type of procedure, and anatomical location, among others. They stated that the commenter did not identify any factors that they had failed to consider when categorizing these cases. Our clinical advisors do not support creating a new MS DRG for such a small number of cases.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current MS-DRG assignments for diaphragmatic pacemaker cases within MS-DRGs 163, 164, and 165.

4. MDC 5 (Diseases and Disorders of the Circulatory System)

a. Exclusion of Left Atrial Appendage

We received a request to move the exclusion of the left atrial appendage procedure, which is a non-O.R. procedure and captured by ICD-9-CM procedure code 37.36 (Excision, destruction or exclusion of left atrial appendage (LAA)), from MS-DRGs 250 (Percutaneous Cardiovascular without

Coronary Artery Stent with MCC) and 251 (Percutaneous Cardiovascular without Coronary Artery Stent without MCC) to MS-DRGs 237 (Major Cardiovascular Procedures with MCC) and 238 (Major Cardiovascular Procedures without MCC). The requestor stated that the exclusion of the left atrial appendage procedure code 37.36 is not clinically coherent with the other procedures in MS-DRGs 250 and 251 and that this current assignment to MS-DRGs 250 and 251 does not compensate providers adequately for the expenses incurred to perform this procedure and placement of the device.

The exclusion of the left atrial appendage procedure involves a percutaneous placement of a snare/suture around the left atrial appendage to close it off. The exclusion of the left atrial appendage procedure takes place in the cardiac catheterization laboratory under general anesthesia and is a catheter based closed-chest procedure instead of an open heart surgical technique to treat the same clinical condition, with the same intended results. The procedure can be performed by either an interventional cardiologist or an electrophysiologist.

We analyzed claims data from the December 2013 update of the FY 2013 MedPAR file for cases assigned to MS-DRGs 250 and 251 and MS-DRGs 237 and 238. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 250—All cases	9,174	6.90	\$21,319
MS-DRG 250—Cases with procedure code 37.36	61	7.21	29,637
MS-DRG 251—All cases	26,331	3.01	14,614
MS-DRG 251—Cases with procedure code 37.36	341	3.01	18,298
MS-DRG 237—All cases	17,813	9.66	35,642
MS-DRG 238—All cases	33,644	3.73	24,511

The data in the table above show that, while the average costs of the atrial appendage exclusion procedures are higher (\$29,637) than those for all cases (\$21,319) within MS-DRG 250 and are higher (\$18,298) than for all cases (\$14,614) within MS-DRG 251, they are lower than those in MS-DRGs 237 (\$35,642) and 238 (\$24,511). Our clinical advisors reviewed this issue and recommended not moving these stand-alone percutaneous cases to MS-DRGs 237 and 238 because they do not consider them to be major cardiovascular procedures. Our clinical advisors stated that cases reporting ICD-9-CM procedure code 37.36 are appropriately assigned within MS-DRG 250 and 251 because they are

percutaneous cardiovascular procedures and are clinically similar to other procedures within the MS-DRG. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to reassign exclusion of atrial appendage procedure cases from MS-DRGs 250 and 251 to MS-DRGs 237 and 238 for FY 2015. We invited public comments on our proposal to maintain the current MS-DRG structure for the exclusion of the left atrial appendage.

Comment: Several commenters supported CMS' proposal to maintain the current MS-DRGs 250 and 251 assignment for exclusion of the left atrial appendage. Several commenters disagreed with the proposal and recommended that CMS assign

exclusion of the left atrial appendage to MS-DRG 237 and 238 because the procedure can be performed as a standalone percutaneous procedure or in combination with an open chest procedure such as cardiac bypass surgery. The commenters stated that when the procedure is performed in conjunction with an open chest procedure, the procedure is performed in a surgical suite. Therefore, the commenters recommended that exclusion of the left atrial appendage be assigned to MS-DRGs 237 and 238 when it is a standalone procedure.

Response: We appreciate the commenters' support for our proposal to maintain the current MS-DRG assignment for the exclusion of atrial

appendage procedures. We are not accepting the commenters' recommendation to move the cases to MS-DRGs 237 and 238. Our clinical advisors reviewed these public comments and continue to maintain that cases reporting ICD-9-CM procedure code 37.36 are appropriately assigned within MS-DRG 250 and 251 because they are percutaneous cardiovascular procedures and are clinically similar to other procedures within the MS-DRGs. They also stated that when performed with an open chest procedure, these procedures would map to a clinically appropriate open chest MS-DRG under the current MS-DRG logic. Our clinical advisors confirmed that although these are not insignificant procedures, the procedures are not considered to be major cardiovascular procedures on the same scale and with similar characteristics as cases grouped together in MS-DRGs 237 and 238.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current MS-DRG assignment for exclusion of atrial appendage in MS-DRGs 250 and 251 for FY 2015.

b. Transcatheter Mitral Valve Repair: MitraClip®

The MitraClip® System (hereafter referred to as MitraClip®) for transcatheter mitral valve repair has been discussed in extensive detail in previous rulemaking, including the FY

2012 IPPS/LTCH PPS proposed rule (76 FR 25822) and final rule (76 FR 51528 through 51529) and the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27902 through 27903) and final rule (77 FR 53308 through 53310), in response to requests for MS-DRG reclassification, as well as, in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27547 through 27552) under the new technology add-on payment policy. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50575), the application for a new technology add-on payment for MitraClip® was unable to be considered further due to lack of FDA approval by the July 1, 2013 deadline.

Subsequently, on October 24, 2013, MitraClip® received FDA approval. As a result, the manufacturer has submitted new requests for both an MS-DRG reclassification and new technology add-on payment for FY 2015. We refer readers to section II.I. of the preamble of the proposed rule and this final rule for a discussion regarding the application for MitraClip® under the new technology add-on payment policy. Below we discuss the MS-DRG reclassification request.

The manufacturer's request for MS-DRG reclassification involves two components. The first component consists of reassigning cases reporting a transcatheter mitral valve repair using the MitraClip® from MS-DRGs 250 and 251 (Percutaneous Cardiovascular

Procedure without Coronary Artery Stent with MCC and without MCC, respectively) to MS-DRGs 216 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC), 217 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization with CC), 218 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC), 219 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC), 220 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization with CC), and 221 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization without CC/MCC). The second component of the manufacturer's request was for CMS to examine the creation of a new base MS-DRG for transcatheter valve therapies.

Effective October 1, 2010, ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant) was created to identify and describe the MitraClip® technology.

To address the first component of the manufacturer's request, we conducted an analysis of claims data from the December 2013 update of the FY 2013 MedPAR file for cases reporting procedure code 35.97 in MS-DRGs 250 and 251. The table below shows our findings.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 250—All cases	9,174	6.90	\$21,319
MS-DRG 250—Cases with procedure code 35.97	67	8.48	39,103
MS-DRG 251—All cases	26,331	3.01	14,614
MS-DRG 251—Cases with procedure code 35.97	127	3.94	25,635

As displayed in the table above, the data demonstrate that, for MS-DRG 250, there were a total of 9,174 cases with an average length of stay of 6.90 days and average costs of \$21,319. The number of cases reporting the ICD-9-CM procedure code 35.97 in MS-DRG 250 totaled 67 with an average length of stay of 8.48 days and average costs of \$39,103. For MS-DRG 251, there were a total of 26,331 cases with an average length of stay of 3.01 days and average

costs of \$14,614. There were 127 cases found in MS-DRG 251 reporting the procedure code 35.97 with an average length of stay of 3.94 days and average costs of \$25,635. We recognize that the cases reporting procedure code 35.97 have a longer length of stay and higher average costs in comparison to all the cases within MS-DRGs 250 and 251. However, as stated in prior rulemaking (77 FR 53309), it is a fundamental principle of an averaged payment

system that half of the procedures in a group will have above average costs. It is expected that there will be higher cost and lower cost subsets, especially when a subset has low numbers.

We also evaluated the claims data from the December 2013 update of the FY 2013 MedPAR file for MS-DRGs 216 through 221. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 216—All cases	10,131	15.41	\$65,478
MS-DRG 217—All cases	5,374	9.51	44,695
MS-DRG 218—All cases	882	6.88	39,470
MS-DRG 219—All cases	17,856	11.63	54,590
MS-DRG 220—All cases	21,059	7.13	38,137

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 221—All cases	4,586	5.32	34,310

The data in our findings did not warrant reassignment of cases reporting use of the MitraClip®. We stated in the proposed rule that if we were to propose reassignment of cases reporting procedure code 35.97 to MS-DRGs 216 through 221, they would be significantly overpaid, as the average costs range from \$34,310 to \$65,478 for those MS-DRGs. In addition, our clinical advisors did not support reassigning these cases. They noted that the current MS-DRG assignment is appropriate for the reasons stated in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53309). To reiterate, our clinical advisors noted that the current MS-DRG assignment is reasonable because the operating room resource utilizations of percutaneous procedures, such as those found in MS-DRGs 250 and 251, tend to group together, and are generally less costly than open procedures, such as those found in MS-DRGs 216 through 221. Percutaneous procedures by organ system represent groups that are reasonably clinically coherent. More significantly, our clinical advisors stated that postoperative resource utilization is significantly higher for open procedures with much greater morbidity and consequent recovery needs. Because the equipment, technique, staff, patient populations, and physician specialty all tend to group by type of procedure (percutaneous or open), separately grouping percutaneous procedures and open procedures is more clinically consistent. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to modify the current MS-DRG assignment for cases reporting procedure code 35.97 from MS-DRGs 250 and 251 to MS-DRGs 216 through 221 for FY 2015. We invited public comments on our proposal to not make any modifications to the current MS-DRG logic for these cases.

Comment: Several commenters supported the proposal to maintain cases reporting procedure code 35.97 in MS-DRGs 250 and 251, stating it was reasonable given the data and information provided.

Response: We acknowledge and appreciate the commenters' support.

Comment: Some commenters suggested that cases utilizing the MitraClip® should be compensated similarly to mitral valve procedures that are performed with an open approach due to the time, staff and resources involved. Commenters reported that this

novel technology has improved the quality of life for patients suffering from congestive heart failure. However, the commenters indicated that due to inadequate payment, their respective facilities are not able to offer the MitraClip® to the entire population that is eligible for it. The commenters also indicated that patients do not have access to this life-saving technology not only due to the lack of adequate payment to providers but also due to the cost of the device. Another commenter reported that "the price of the device should be reduced to a level that is feasible for both sponsor and hospital." Commenters also suggested that congestive heart failure readmissions would be reduced if patients could be treated with the MitraClip®.

Response: As explained in the FY 2015 IPPS/LTCH PPS proposed rule, our clinical advisors believe that the current MS-DRG assignment for the MitraClip® is reasonable because the operating room resource utilizations of percutaneous procedures, such as those found in MS-DRGs 250 and 251, tend to group together, and are generally less costly than open procedures. In addition, the data do not support reassignment. We stated in the proposed rule that if we were to propose reassignment of cases reporting procedure code 35.97 to MS-DRGs 216 through 221, they would be significantly overpaid, as the average costs range from \$34,310 to \$65,478 for those MS-DRGs and the average costs for cases reporting procedure code 35.97 are \$30,286 for MS-DRGs 250 and 251.

Comment: One commenter suggested an alternative option regarding MS-DRG reassignment for the MitraClip® and requested that CMS reassign cases reporting procedure code 35.97 from MS-DRGs 250 and 251 to MS-DRGs 237 and 238 (Major Cardiovascular Procedures with MCC and without MCC, respectively) with concurrent approval of the new technology add-on payment application. The commenter stated that this would allow the MitraClip® to be recognized in MS-DRGs involving a major cardiovascular procedure with an implantable device.

Response: We did not propose to reassign cases reporting procedure code 35.97 from MS-DRGs 250 and 251 to MS-DRGs 237 and 238. Therefore, we consider this comment to be outside of the scope of the FY 2015 IPPS/LTCH PPS proposed rule. We note that, as

referenced in section II.G.1.b. of the preamble of this final rule, we encourage input from our stakeholders concerning the annual IPPS updates when that input is made available to us by December 7 of the year prior to the next annual proposed rule update. For example, to be considered for any updates or changes in FY 2016, comments and suggestions should be submitted by December 7, 2014.

We note that the MitraClip® technology is discussed in section II.I. of the preamble of this final rule under the new technology add-on payment policy.

After consideration of the public comments we received, we are finalizing our proposal to not modify the current MS-DRG assignment for cases reporting procedure code 35.97 from MS-DRGs 250 and 251 to MS-DRGs 216 through 221 for FY 2015.

As indicated above, the second component of the manufacturer's request involved the creation of a new base MS-DRG for transcatheter valve therapies. We also received a similar request from another manufacturer recommending that CMS create a new MS-DRG for procedures referred to as endovascular cardiac valve replacement procedures. We reviewed each of these requests using the same data analysis, as set forth below. The discussion for endovascular cardiac valve replacement procedures is included in section II.G.4.c. of the preamble of this final rule and includes findings from the analysis and our proposals and final policies for each of these similar, but distinct requests.

c. Endovascular Cardiac Valve Replacement Procedures

As noted in the previous section related to the MitraClip® technology, we received two requests to create a new base MS-DRG for what was referred to as "transcatheter valve therapies" by one manufacturer and "endovascular cardiac valve replacement" procedures by another manufacturer. Below we summarize the details of each request and review results of the data analysis that was performed.

Transcatheter Valve Therapies

The request related to transcatheter valve therapies consisted of creating a new MS-DRG that would include the MitraClip® technology (ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant)), along

with the following list of ICD–9–CM procedure codes that identify the various types of valve replacements performed by an endovascular or transcatheter technique:

- 35.05 (Endovascular replacement of aortic valve);
- 35.06 (Transapical replacement of aortic valve);
- 35.07 (Endovascular replacement of pulmonary valve);

- 35.08 (Transapical replacement of pulmonary valve); and
- 35.09 (Endovascular replacement of unspecified valve).

We performed analysis of claims data from the December 2013 update of the FY 2013 MedPAR file for both the percutaneous mitral valve repair and the transcatheter/endovascular cardiac valve replacement codes in their respective MS–DRGs. The percutaneous mitral valve repair with implant

(MitraClip®) procedure code is currently assigned to MS–DRGs 250 and 251, while the transcatheter/endovascular cardiac valve replacement procedure codes are currently assigned to MS–DRGs 216, 217, 218, 219, 220, and 221. As illustrated in the table below, the data demonstrate that, for MS–DRGs 250 and 251, there were a total of 194 cases reporting procedure code 35.97, with an average length of stay of 5.5 days and average costs of \$30,286.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRG 250 through 251—Cases with procedure code 35.97	194	5.5	\$30,286

Upon analysis of cases in MS–DRGs 216 through 221 reporting the cardiac valve replacement procedure codes, we

found a total of 7,287 cases with an average length of stay of 8.1 days and

average costs of \$53,802, as shown in the table below.

MS–DRG	Number of cases	Average length of stay	Average costs
MS–DRGs 216 through 221—Cases with procedure codes 35.05, 35.06, 35.07, 35.08 and 35.09	7,287	8.1	\$53,802
MS–DRGs 216 through 221—Cases without procedure codes 35.05, 35.06, 35.07, 35.08 and 35.09	52,601	10.1	47,177

The data clearly demonstrate that the volume of cases for the transcatheter/endovascular cardiac valve replacement procedures is much higher in comparison to the volume of cases for the percutaneous mitral valve repair (MitraClip®) procedure (7,287 compared to 194). In addition, the average costs of the transcatheter/endovascular cardiac valve replacement procedures are significantly higher than the average costs of the percutaneous mitral valve repair with implant (\$53,802 compared to \$30,286).

Our clinical advisors did not support grouping a percutaneous valve repair procedure with transcatheter/endovascular valve replacement procedures. They do not believe that these procedures are clinically coherent or similar in terms of resource consumption because the MitraClip® technology identified by procedure code 35.97 is utilized for a percutaneous mitral valve repair, while the other technologies, identified by procedure codes 35.05 through 35.09, are utilized for transcatheter/endovascular cardiac valve replacements. Consequently, the data analysis and our clinical advisors did not support the creation of a new MS–DRG. Therefore, for FY 2015, we did not propose to create a new MS–DRG to group cases reporting the percutaneous mitral valve repair (MitraClip®) procedure with transcatheter/endovascular cardiac

valve replacement procedures. We invited public comments on our proposal.

Comment: One commenter recommended reassignment of procedure code 35.97 to a more appropriate MS–DRG. However, the commenter did not offer a specific recommendation as to which MS–DRG would be more appropriate.

Response: We appreciate the commenter’s recommendation. However, as the commenter did not provide a specific MS–DRG to which procedure code 35.97 should be reassigned, we were unable to evaluate the recommendation. As we noted earlier, and as referenced in section II.G.1.b. of the preamble of this final rule, we encourage input from our stakeholders concerning the annual IPPS updates when that input is made available to us by December 7 of the year prior to the next annual proposed rule update. For example, to be considered for any updates or changes in FY 2016, comments and suggestions should be submitted by December 7, 2014.

Comment: One commenter urged CMS to reassign procedure code 35.97 from its current assignment in MS–DRGs 250 and 251 to a more appropriate MS–DRG that would better recognize case complexity as a major cardiovascular procedure with a permanent implant. This commenter

specifically recommended the inclusion of transcatheter mitral valve repair (TMVR) within the newly proposed MS–DRGs 266 and 267, and to subsequently retitle these MS–DRGs, “Endovascular Transcatheter Valve Therapy with Implant.”

Response: As stated in the FY 2015 IPPS/LTCH PPS proposed rule, our analysis did not support including cases reporting procedure code 35.97 for percutaneous mitral valve repair procedures together with transcatheter/endovascular cardiac valve replacement procedures in a new MS–DRG. The average costs of the transcatheter/endovascular cardiac valve replacement procedures are significantly higher than the average costs of the percutaneous mitral valve repair procedures with implant (\$53,802 compared to \$30,286).

In addition, our clinical advisors did not support grouping a percutaneous valve repair procedure with transcatheter/endovascular valve replacement procedures. They do not believe that these procedures are clinically coherent or similar in terms of resource consumption because the MitraClip® technology identified by procedure code 35.97 is utilized for a percutaneous mitral valve repair, while the other technologies, identified by procedure codes 35.05 through 35.09, are utilized for transcatheter/endovascular cardiac valve replacements.

Comment: One commenter disagreed with the CMS analysis that transcatheter mitral valve repair (TMVR) is significantly different than transcatheter aortic valve replacement (TAVR). The commenter asserted that “unlike alternative open repair and replacement procedures, a heart valve prosthesis is being manipulated/modified from a Transcatheter approach; whether the prosthesis serves to ‘replace’ or ‘repair’ an existing valve is irrelevant in regards to resource consumption.” The commenter urged CMS to consider all transcatheter valve procedures equally with respect to DRG assignment.

Response: We disagree with the commenter that TMVR and TAVR are not significantly different. As explained in the FY 2015 IPPS/LTCH PPS proposed rule, our analysis of the claims data and the recommendation from our clinical advisors do not support treating TMVR and all transcatheter valve procedures equally with respect to MS-DRG assignment. As noted previously, the average costs of the transcatheter/endovascular cardiac valve replacement procedures are significantly higher than the average costs of the percutaneous

mitral valve repair procedures with implant (\$53,802 compared to \$30,286).

After consideration of the public comments we received, we are finalizing our proposal to not create a new MS-DRG to group cases reporting the percutaneous mitral valve repair (MitraClip®) procedure with transcatheter/endovascular cardiac valve replacement procedures.

Endovascular Cardiac Valve Replacement

The similar but separate request relating to endovascular cardiac valve replacement procedures consisted of creating a new MS-DRG that would only include the various types of cardiac valve replacements performed by an endovascular or transcatheter technique. In other words, this request specifically did *not* include the MitraClip® technology (ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant)) and only included the list of ICD-9-CM procedure codes that identify the various types of valve replacements performed by an endovascular or transcatheter technique (ICD-9-CM

procedure codes 35.05 through 35.09) as described earlier in this section.

The human heart contains four major valves—the aortic, mitral, pulmonary, and tricuspid valves. These valves function to keep blood flowing through the heart. When conditions such as stenosis or insufficiency/regurgitation occur in one or more of these valves, valvular heart disease may result. Cardiac valve replacement surgery is performed in an effort to correct these diseased or damaged heart valves. The endovascular or transcatheter technique presents a viable option for high-risk patients who are not candidates for the traditional open surgical approach.

We reviewed the claims data from the December 2013 update of the FY 2013 MedPAR file for cases in MS-DRGs 216 through 221. Our findings are shown in the chart below. The data analysis shows that cardiac valve replacements performed by an endovascular or transcatheter technique represent a total of 7,287 of the cases in MS-DRGs 216 through 221, with an average length of stay of 8.1 days and higher average costs (\$53,802 compared to \$47,177) in comparison to all of the cases in MS-DRGs 216 through 221.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRGs 216 through 221—Cases with procedure codes 35.05, 35.06, 35.07, 35.08 and 35.09	7,287	8.1	\$53,802
MS-DRGs 216 through 221—Cases without procedure codes 35.05, 35.06, 35.07, 35.08 and 35.09	52,601	10.1	47,177

As the data appear to indicate support for the creation of a new base MS-DRG, based on our evaluation of resource consumption, patient characteristics, volume, and costs between the cardiac valve replacements performed by an endovascular or transcatheter technique and the open surgical technique, we then applied our established criteria to determine if these cases would meet the requirements to create subgroups. We use five criteria established in the FY 2008 IPPS final rule (72 FR 47169) to review requests involving the creation of a new CC or an MCC subgroup within a base MS-DRG. As outlined in the FY 2012 IPPS proposed rule (76 FR 25819), the original criteria were based on average charges but were later converted to average costs. In order to warrant creation of a CC or an MCC subgroup within a base MS-DRG, this subgroup must meet all of the following five criteria:

- A reduction in variance of costs of at least 3 percent.
 - At least 5 percent of the patients in the MS-DRG fall within the CC or the MCC subgroup.
 - At least 500 cases are in the CC or the MCC subgroup.
 - There is at least a 20-percent difference in average costs between subgroups.
 - There is a \$2,000 difference in average costs between subgroups.
- In applying the five criteria, we found that the data support the creation of a new MS-DRG subdivided into two severity levels. We also consulted with our clinical advisors. Our clinical advisors stated that patients receiving endovascular cardiac valve replacements are significantly different from those patients who undergo an open chest cardiac valve replacement. They noted that patients receiving endovascular cardiac valve replacements are not eligible for open chest cardiac valve procedures because

of a variety of health constraints. This highlights the fact that peri-operative complications and post-operative morbidity have significantly different profiles for open chest procedures compared with endovascular interventions. This is also substantiated by the different average lengths of stay demonstrated by the two cohorts. Our clinical advisors further noted that separately grouping these endovascular valve replacement procedures provides greater clinical cohesion for this subset of high-risk patients.

In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to create the following MS-DRGs for endovascular cardiac valve replacements:

- Proposed new MS-DRG 266 (Endovascular Cardiac Valve Replacement with MCC); and
- Proposed new MS-DRG 267 (Endovascular Cardiac Valve Replacement without MCC).

Proposed new MS-DRGs for endovascular cardiac valve replacement	Number of cases	Average length of stay	Average costs
Proposed New MS-DRG 266 with MCC	3,516	10.6	\$61,891
Proposed New MS-DRG 267 without MCC	3,771	5.7	46,259

We invited public comments on our proposal to create these new MS-DRGs for FY 2015.

Comment: Several commenters supported the proposal to create new MS-DRGs for endovascular cardiac valve replacement procedures. One commenter noted that “the endovascular or transcatheter approach presents a viable option for high-risk patients who are not candidates for the traditional open chest surgical approach. The proposed MS-DRGs better align the more extensive cardiac valve procedures based on clinical coherence and similar resource costs.” Another commenter stated that, by establishing these new MS-DRGs, “CMS will continue to be able to collect the necessary information that will help assure appropriate payment in the future as these technologies evolve.” Other commenters supported creation of the new MS-DRGs, noting it was reasonable given the data and information provided. Another commenter applauded CMS for proposing the two new MS-DRGs, noting that “this decision will allow patients, particularly women, to have increased access to innovative therapies that will ease their suffering from the debilitating effects of severe aortic stenosis.”

Response: We appreciate the commenters’ support.

Comment: One commenter commended CMS for proposing new

MS-DRGs to identify endovascular/transcatheter valve procedures. However, the commenter suggested that CMS reconsider the title of the proposed MS-DRGs. The commenter noted that the accepted nomenclature is “transcatheter” and not “endovascular”.

Response: We acknowledge that many individuals prefer the use of the term “transcatheter”, such as occurs in the frequently used acronym TAVR (transcatheter aortic valve replacement). However, we note that this nomenclature is by no means universal. “Endovascular” is also used to describe these procedures. The current ICD-9-CM procedure code for TAVR, for example, is 35.05 (Endovascular replacement of aortic valve). Recognizing that universal agreement on medical nomenclature is still an unachievable goal at the present time, we have elected to retain the term “endovascular” to maintain consistency with the current ICD-9-CM terminology.

After consideration of the public comments we received, we are finalizing our proposal to create new MS-DRG 266 (Endovascular Cardiac Valve Replacement with MCC) and MS-DRG 267 (Endovascular Cardiac Valve Replacement without MCC).

d. Abdominal Aorta Graft

We received a request that we change the MS-DRG assignment for procedure code 39.71 (Endovascular implantation

of other graft in abdominal aorta), which is assigned to MS-DRGs 237 and 238 (Major Cardiovascular Procedures with MCC and without MCC, respectively). The requestor asked that we reassign procedure code 39.71 to MS-DRGs 228, 229, and 230 (Other Cardiothoracic Procedures with MCC, with CC, and without CC/MCC, respectively). The requestor stated that the average cost of endovascular abdominal aorta graft implantation cases is significantly higher than other cases in MS-DRGs 237 and 238. The requestor stated that the average cost of endovascular abdominal aorta graft implantation cases is closer to those in MS-DRGs 228, 229, and 230.

The requestor stated that the goal of endovascular repair for abdominal aneurysm is to isolate the diseased, aneurismal portion of the aorta and common iliac arteries from continued exposure to systemic blood pressure. The procedure involves the delivery and deployment of endovascular prostheses, also referred to as a graft, as required to isolate the aneurysm above and below the extent of the disease. The requestor stated that this significantly reduces patient morbidity and death caused by leakage and/or sudden rupture of an untreated aneurysm.

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for cases of endovascular abdominal aorta graft implantations. The following table shows our findings.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 237—All cases	17,813	9.66	\$35,642
MS-DRG 237—Cases with procedure code 39.71	2,093	8.30	44,898
MS-DRG 238—All cases	33,644	3.73	24,511
MS-DRG 238—Cases with procedure code 39.71	15,483	2.30	28,484
MS-DRG 228—All cases	1,543	13.48	52,315
MS-DRG 229—All cases	2,003	7.47	32,070
MS-DRG 230—All cases	493	4.95	29,281

As this table shows, endovascular abdominal aorta graft implantation cases have higher average costs and shorter lengths of stay than all cases within MS-DRGs 237 and 238. The average cost for endovascular abdominal aorta graft implantation cases in MS-DRG 237 is \$9,256 greater than that for all cases in MS-DRG 237 (\$44,898 compared to \$35,642). The average cost for endovascular abdominal aorta graft

implantation cases in MS-DRG 238 is \$3,973 higher than that for all cases in MS-DRG 238 (\$28,484 compared to \$24,511). Cases in MS-DRG 228 have average costs that are \$7,417 higher than the endovascular abdominal aorta graft implantation cases in MS-DRG 237 (\$52,315 compared to \$44,898). MS-DRG 228 and MS-DRG 237 both contain cases with MCCs. Cases in MS-DRG 229, which contain a CC, have average

costs that are \$3,586 higher than average costs of the endovascular abdominal aorta graft implantation cases in MS-DRG 238, which do not contain an MCC (\$32,070 compared to \$28,484). Cases in MS-DRG 230, which have neither an MCC nor a CC, have average costs that are \$797 higher than the endovascular abdominal aorta graft implantation cases in MS-DRG 238 (\$29,281 compared to \$28,484). While the average costs were

higher for endovascular abdominal aorta graft implantation cases compared to all cases within MS-DRGs 237 and 238, each MS-DRG has some cases that are higher and some cases that are lower than the average costs for the entire MS-DRG. MS-DRGs were developed to capture cases that are clinically consistent with similar overall average resource requirements. This results in some cases within an MS-DRG having costs that are higher than the overall average and other cases having costs that are lower than the overall average. This may be due to specific types of cases included within the MS-DRGs or to the fact that some cases will simply require additional resources on a specific admission. However, taken as a whole, the hospital will be paid an appropriate amount for the group of cases that are assigned to the MS-DRG. We believe the endovascular abdominal aorta graft implantation cases are appropriately grouped with other procedures within MS-DRGs 237 and 238.

Our clinical advisors reviewed this issue and determined that the endovascular abdominal aorta graft implantation cases are appropriately classified within MS-DRGs 237 and 238 because they are clinically similar to the other procedures in MS-DRGs 237 and 238, which include other procedures on the aorta. While the endovascular abdominal aorta graft implantation cases have higher average costs than the average for all cases within MS-DRGs 237 and 238, our clinical advisors do not believe this justifies moving the cases to MS-DRGs 228, 229 and 230, which involve a different set of cardiothoracic surgeries.

As we stated in the FY 2015 IPPS/LTCH PPS proposed rule, based on the results of examination of the claims data and the recommendations of our clinical advisors, we did not believe that proposing to reclassify endovascular abdominal aorta graft implantation cases from MS-DRGs 237 and 238 was warranted. We proposed to maintain the current MS-DRG assignments for endovascular abdominal aorta graft implantation cases. We invited public comments on our proposal.

Comment: A number of commenters supported CMS' proposal to maintain the current MS-DRG assignments for endovascular abdominal aorta graft implantation cases. The commenters stated that the proposal was reasonable given the data and information provided. One commenter disagreed with the proposal and stated that endovascular abdominal aorta graft implantation cases should be reassigned to MS-DRGs 228, 229, and 230. The

commenter stated that neither MS-DRGs 237 and 238 nor MS-DRGs 228, 229, and 230 have absolute clinical coherence and that there are a mix of procedures in both set of MS-DRGs. The commenter also expressed concern that CMS was prioritizing clinical coherence over total resource cost in deciding not to approve this request to assign procedure code 39.71 to MS-DRGs 228, 229, and 230. The commenter stated that if CMS is concerned about the perception regarding clinical coherence of the MS-DRG assignment for procedures represented by code 39.71, CMS should change the titles for these five MS-DRGs to accommodate the evolution of these procedures while also allowing for new indications of various types of grafts in the aorta and its branches. The commenter did not suggest specific new MS-DRG titles for MS-DRGs 228, 229, 230, 237, and 238.

Response: We appreciate the commenters' support for our proposal to maintain the current assignments for endovascular abdominal aorta graft implantation cases in MS-DRGs 237 and 238. We are not accepting the commenter's suggestion that we modify the titles of MS-DRGs 228, 229, 230, 237, and 238 in order to justify the reassignment of abdominal aorta graft procedures to MS-DRGs 228, 229, and 230. Our clinical advisors reviewed this issue and disagree with the commenters' statement that CMS puts too high a priority on the clinical coherence of the MS-DRGs. MS-DRGs were developed based on clinical similarities of groups of medical and surgical patients. We also consider average costs of these patients in evaluating the need to make modifications to the MS-DRGs. However, for the reasons described previously, we do not believe that the higher average costs for the endovascular abdominal aorta graft implantation cases as compared to the average for all cases within MS-DRGs 237 and 238 warrant reassigning these cases to MS-DRGs 228, 229, and 230. We will continue to evaluate the need to make updates to the MS-DRGs to better capture procedures of the aorta and its branches. We welcome any specific recommendations for refinements to better capture changes in medical treatment. Any requests for MS-DRG updates must be received by December 7, 2014, in order to be considered for the FY 2016 proposed rule.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current assignments for endovascular abdominal aorta graft implantation cases in MS-DRGs 237 and 238.

5. MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue)

a. Shoulder Replacement Procedures

We received a request to change the MS-DRG assignment for shoulder replacement procedures. This request involved the following two procedure codes:

- 81.88 (Reverse total shoulder replacement); and
- 81.97 (Revision of joint replacement of upper extremity).

With respect to procedure code 81.88, the requestor asked that reverse total shoulder replacements be reassigned from MS-DRGs 483 and 484 (Major Joint/Limb Reattachment Procedure of Upper Extremities with CC/MCC and without CC/MCC, respectively) to MS-DRG 483 only. The reassignment of procedure code 81.88 from MS-DRGs 483 and 484 was discussed previously in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50534 through 50536). The result of reassigning reverse shoulder replacements from MS-DRGs 483 and 484 to MS-DRG 483 only would be that this procedure would be assigned to MS-DRG 483 whether or not the case had a CC or an MCC. The requestor stated that reverse shoulder replacement procedures are more clinically cohesive with higher severity MS-DRGs due to the complexity and resource consumption of these procedures. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50534 through 50536) for a discussion of the reverse total shoulder replacement.

The requestor also recommended that we reassign what it described as another shoulder procedure involving procedure code 81.97, which is assigned to MS-DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively), to MS-DRG 483. We point out that MS-DRG 483 contains upper joint replacements, including shoulder replacements. MS-DRG 483 does not contain any joint revision procedures. Similar to the request for reassignment of procedure code 81.88, this would mean that procedure code 81.97 would be assigned to MS-DRG 483 whether or not the case had a CC or an MCC. If CMS did not support this recommendation for moving procedure code 81.97 to MS-DRG 483, the requestor recommended an alternative reassignment to MS-DRG 515 (Other Musculoskeletal System and Connective Tissue O.R. procedures with MCC) even if the case had no MCC.

We point out that, while the requestor refers to procedure code 81.97 as a

shoulder procedure, the code description actually includes revisions of joint replacements of a variety of upper extremity joints, including those in the elbow, hand, shoulder, and wrist.

As stated earlier, reverse shoulder replacements are assigned to MS-DRGs 483 and 484. Revisions of upper joint replacements are assigned to MS-DRGs 515, 516, and 517. We examined claims

data from the December 2013 update of the FY 2013 MedPAR file for MS-DRGs 483 and 484. The following table shows our findings of cases of reverse shoulder replacement.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 483—All cases	14,220	3.20	\$18,807
MS-DRG 483—Cases with procedure code 81.88	7,086	3.19	20,699
MS-DRG 484—All cases	23,183	1.95	16,354
MS-DRG 484—Cases with procedure code 81.88	9,633	2.03	18,719
Proposed Revised MS-DRG 483 with all severity levels included	37,403	2.4	17,287

As the above table shows, MS-DRG 484 reverse shoulder replacement cases have similar average costs to those in MS-DRG 483 (\$18,719 for reverse shoulder replacements in MS-DRG 484 compared to \$18,807 for all cases in MS-DRG 483). However, in reviewing the data, we observed that the claims data no longer support two severity levels for MS-DRGs 483 and 484.

We use the five criteria established in FY 2008 (72 FR 47169) to review requests involving the creation of a new CC or MCC subgroup within a base MS-DRG. As outlined in the FY 2012 IPPS/LTCH PPS proposed rule (76 FR 25819), the original criteria were based on average charges but were later converted to average costs. In order to warrant creation of a CC or an MCC subgroup within a base MS-DRG, the subgroup must meet all of the following five criteria:

- A reduction in variance of costs of at least 3 percent.

- At least 5 percent of the patients in the MS-DRG fall within the CC or MCC subgroup.

- At least 500 cases are in the CC or MCC subgroup.

- There is at least a 20-percent difference in average costs between subgroups.

- There is a \$2,000 difference in average costs between subgroups.

We found through our examination of the claims data from the December 2013 update of the FY 2013 MedPAR file that the two severity subgroups of MS-DRG 483 and 484 no longer meet the fourth criterion of at least a 20-percent difference in average costs between subgroups. We found that there is a \$2,453 difference in average costs between MS-DRG 483 and MS-DRG 484. The difference in average costs would need to be \$3,761 to meet the fourth criterion. Therefore, our claims data support collapsing MS-DRGs 483 and 484 into a single MS-DRG. Our

clinical advisors reviewed this issue and agreed that there is no longer enough difference between the two severity levels to justify separate severity subgroups for MS-DRGs 483 and 484, which include a variety of upper joint replacements. Therefore, our clinical advisors supported our recommendation to collapse MS-DRGs 483 and 484 into a single MS-DRG.

In the FY 2015 IPPS/LTCH PPS proposed rule, based on the results of examination of the claims data and the advice of our clinical advisors, we proposed to collapse MS-DRGs 483 and 484 into a single MS-DRG by deleting MS-DRG 484 and revising the title of MS-DRG 483 to read “Major Joint/Limb Reattachment Procedure of Upper Extremities”.

The following table shows our findings of cases of revisions of upper joint replacement from the December 2013 update of the FY 2013 MedPAR file.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 515—All cases	3,407	9.22	\$22,191
MS-DRG 515—Cases with procedure code 81.97	88	5.66	22,085
MS-DRG 516—All cases	8,502	5.34	14,356
MS-DRG 516—Cases with procedure code 81.97	799	2.84	18,214
MS-DRG 517—All cases	5,794	3.28	12,172
MS-DRG 517—Cases with procedure code 81.97	1,256	2.07	15,920
MS-DRG 483—All cases	14,220	3.20	18,807

Cases identified by code 81.97 in MS-DRGs 515, 516, and 517 have lower average costs and shorter lengths of stay than all cases in MS-DRG 515. The average costs of cases in MS-DRG 515 are \$3,977 higher than the average costs of the cases with procedure code 81.97 in MS-DRG 516 (\$22,191 compared to \$18,214). The average costs of cases in MS-DRG 515 are \$6,271 higher than cases with procedure code 81.97 in MS-DRG 517 (\$22,191 compared to \$15,920).

The table above shows that the average costs of cases in MS-DRG 483

are \$3,278 lower than the average costs of cases with procedure code 81.97 in MS-DRG 515 (\$18,807 compared to \$22,085). The average costs of cases in MS-DRG 483 are \$593 higher than the average costs of cases with procedure code 81.97 in MS-DRG 516 (\$18,807 compared to \$18,214). The average costs of cases in MS-DRG 483 are \$2,887 higher than the average costs of cases with procedure code 81.97 in MS-DRG 517 (\$18,807 compared to \$15,920).

The claims data did not support moving all procedure code 81.97 cases to MS-DRG 515 or MS-DRG 483,

whether or not there is a CC or an MCC. We also pointed out once again that procedure code 81.97 is a nonspecific code that captures revisions to not only the shoulder, but also a variety of upper extremity joints including those in the elbow, hand, shoulder, and wrist. Therefore, we have no way of determining how many cases reporting procedure code 81.97 were actually shoulder procedures as opposed to procedures on the elbow, hand, or wrist.

Our clinical advisors reviewed this issue and determined that the revisions of upper joint replacement procedures

are appropriately classified within MS-DRGs 515, 516, and 517, which include other joint revision procedures. They did not support moving revisions of upper joint replacement procedures to MS-DRG 515, whether or not there is an MCC. They supported the current classification, which bases the severity level on the presence of a CC or an MCC. They also did not support moving revisions of upper joint replacement procedures to MS-DRG 483, whether or not there is a CC or an MCC, because these revisions are not joint replacements. Based on the results of our examination and the advice of our clinical advisors, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose moving revisions of upper joint replacement procedures to MS-DRG 515 or MS-DRG 483, whether or not there is a CC or an MCC.

In summation, we proposed to collapse MS-DRGs 483 and 484 into a single MS-DRG by deleting MS-DRG 484 and revising the title of MS-DRG 483 to read "Major Joint/Limb Reattachment Procedure of Upper Extremities". We proposed to maintain the current MS-DRG assignments for revisions of upper joint replacement procedures in MS DRGs 515, 516, and 517. We invited public comments on our proposals.

Comment: A number of commenters supported the proposal to collapse MS-DRGs 483 and 484 into a single MS-DRG by deleting MS-DRG 484 and revising the title of MS-DRG 483 to read "Major Joint/Limb Reattachment Procedure of Upper Extremities." The commenters stated that the proposal was reasonable given the data and information provided.

One commenter stated that collapsing the two MS-DRGs is supported by claims data indicating little cost difference between cases in the current two severity levels. Several commenters stated that the new, single MS-DRG represented clinically cohesive procedures with similar complexity and resource consumption.

Response: We appreciate the commenters' support for our proposal to collapse MS-DRGs 483 and 484 into a single MS-DRG by deleting MS-DRG 484 and revising the title of MS-DRG 483 to read "Major Joint/Limb Reattachment Procedure of Upper Extremities".

After consideration of the public comments we received, we are adopting as final, without modification, our proposal to collapse MS-DRGs 483 and 484 into a single MS-DRG by deleting MS-DRG 484 and revising the title of MS-DRG 483 to read "Major Joint/Limb

Reattachment Procedure of Upper Extremities".

Comment: A number of commenters supported the proposal to maintain the MS-DRG assignment for code 81.97 in MS-DRGs 515, 516, and 517. The commenters stated that the recommendation was reasonable given the data and information provided. One commenter disagreed with the proposal and stated that code 81.97 would be more accurately classified in MS-DRG 483 (Major Joint/Limb Reattachment of Upper Extremities with CC/MCC) because MS-DRG 483 includes upper extremity procedures.

Response: We appreciate the commenters' support for our proposal to maintain the current MS-DRG assignment for code 81.97 in MS-DRGs 515, 516, and 517. We disagree with the commenter that code 81.97 is similar to other procedures currently assigned to MS-DRG 483. MS-DRG 483 contains replacements, not revisions, of the wrist, shoulder, and elbow as well as reattachments of the forearm. Revision of the joint could include a variety of procedures to joints of the upper extremity. Procedure code 81.97 is a nonspecific code that captures revisions to not only the shoulder, but also a variety of upper extremity joints including those in the elbow, hand, shoulder, and wrist. Therefore, we have no way of determining how many cases reporting procedure code 81.97 were actually shoulder procedures as opposed to procedures on the elbow, hand, or wrist.

Our clinical advisors reviewed this issue and continue to advise that code 81.97 not be reassigned to MS-DRG 483 because the procedure is neither a replacement nor a reattachment procedure as are the current procedures within MS-DRG 483. In addition, the code captures a variety of joint revisions of the upper extremities and is not clinically similar to the replacements and reattachment procedures in MS-DRG 483. Our clinical advisors recommend that code 81.97 continue to be assigned to MS-DRG 515, 516, and 517.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current assignment of code 81.97 in MS-DRG 515, 516, and 517.

b. Ankle Replacement Procedures

We received a request to change the MS-DRG assignment for two ankle replacement procedures. The request involved the following two procedure codes:

- 81.56 (Total ankle replacement); and

- 81.59 (Revision of joint replacement of lower extremity, not elsewhere classified).

The reassignment of procedure code 81.56 from MS-DRGs 469 and 470 (Major Joint Replacement or Reattachment of Lower Extremity with MCC and without MCC, respectively) to a new MS-DRG or, alternatively, to MS-DRG 469 was discussed in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50536 through 50537). We refer readers to this final rule for a discussion of ankle replacement procedures. The requestor asked that we again evaluate reassigning total ankle replacement procedures. The requestor also asked that we reassign what it referred to as another ankle replacement revision procedure captured by procedure code 81.59 (Revision of joint replacement of lower extremity, not elsewhere classified), which is assigned to MS-DRGs 515, 516, and 517 (Other Musculoskeletal System and Connective Tissue O.R. Procedures with MCC, with CC, and without CC/MCC, respectively).

The requestor asked that we reassign procedure code 81.56 from MS-DRGs 469 and 470 to MS-DRG 483 (Major Joint/Limb Reattachment Procedure of Upper Extremities with CC/MCC) and rename the MS-DRG to better capture the additional lower extremity cases. The requestor stated that the result would be assignment of lower joint procedures to an MS-DRG that currently captures only upper extremity cases and assignment to the highest severity level even if the case did not have a CC or an MCC. If CMS did not find this acceptable, the requestor made an alternative recommendation of assigning procedure code 81.56 to MS-DRG 469 and renaming the MS-DRG to better capture the additional cases. Cases would be assigned to the highest severity level whether or not the case had an MCC.

The requestor also recommended that procedure code 81.59, which is assigned to MS-DRGs 515, 516, and 517, be reassigned to MS-DRG 483 and that the MS-DRG be given a new title to better capture the additional lower extremity cases. The requestor stated that the result would be assignment of lower joint procedures to an MS-DRG that currently captures only upper extremity cases and assignment to the highest severity level even if the patient did not have a CC or an MCC. If CMS did not support this recommendation, the requestor suggested two additional recommendations. One involves moving procedure code 81.59 to MS-DRG 515 even when the case had no MCC. The other recommendation was to move

procedure code 81.59 to MS-DRG 469, whether or not the case had a MCC.

We point out that while the requestor refers to procedure code 81.59 as a revision of an ankle replacement, the code actually includes revisions of joint

replacements of a variety of lower extremity joints including the ankle, foot, and toe.

The following table shows the number of total ankle replacement cases, average length of stay, and average costs for

procedure code 81.56 in MS-DRGs 469 and 470 found in claims data from the December 2013 update of the FY 2013 MedPAR file compared to all cases within MS-DRGs 469, 470, and 483.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 469—All cases	25,916	7.22	\$22,548
MS-DRG 469—Cases with procedure code 81.56	32	6.19	27,419
MS-DRG 470—All cases	406,344	3.25	15,119
MS-DRG 470—Cases with procedure code 81.56	1,379	2.13	19,332
MS-DRG 483	14,220	3.20	18,807

In summary, the requestor asked us to reassign procedure code 81.56 in MS-DRGs 469 and 470 to one of the following two options: MS-DRG 483 (highest severity level); or MS-DRG 469 (highest severity level).

As the table for total ankle replacement above shows, the average cost of cases with procedure code 81.56 in MS-DRG 469 is \$27,419 and \$19,332 in MS-DRG 470. This compares with the average costs of all cases in MS-DRGs 469 and 470 of \$22,548 and \$15,119, respectively. While the average cost of cases reporting procedure code 81.56 in MS-DRG 469 is \$4,871 higher than the average cost for all cases in MS-DRG 469, we point out that there were only 32 cases. The relatively small number of cases may have been impacted by other factors such as complications or comorbidities. Several expensive cases could impact the average costs for a very small number of patients. The average cost of cases reporting procedure code 81.56 in MS-DRG 470 is \$4,213 higher than the average cost for all cases in MS-DRG 470. While the average costs are higher, within all MS-DRGs, some cases have higher and some cases have lower average costs. MS-DRGs are groups of clinically similar cases that have similar overall costs. Within a group of cases, one would expect that some cases have costs that are higher than the overall average and some cases have costs that are lower than the overall average.

MS-DRG 469 ankle replacement cases have average costs that are \$8,612 higher than the average costs of all cases in MS-DRG 483 (\$27,419 compared to \$18,807). Moving these cases (procedure code 81.56) to MS-DRG 483 would result in payment below average costs compared to the current MS-DRG assignment in MS-DRG 469. Furthermore, as noted earlier, moving total ankle replacement cases to MS-DRG 483 would result in a lower extremity procedure being added to what is now an upper extremity MS-

DRG. This would significantly disrupt the clinical cohesion of MS-DRG 483.

The average costs of all cases in MS-DRG 469 are \$3,216 higher than the average costs of those cases with procedure code 81.56 in MS-DRG 470 (\$22,548 compared to \$19,332). The data did not support moving procedure code 81.56 cases to MS-DRG 483 or 469 because it would not result in payments that more accurately reflect their current average costs. Our clinical advisors reviewed this issue and determined that the ankle replacement cases are appropriately classified within MS-DRGs 469 and 470 with the severity level leading to the MS-DRG assignment. They did not support moving these cases to MS-DRG 483 because ankle replacements, which are lower joint procedures, are not clinically similar to upper joint replacement procedures. Based on the results of examination of the claims data, the issue of clinical cohesion, and the recommendations from our clinical advisors, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to move total ankle procedures to MS-DRG 483 or MS-DRG 469 when there is no MCC. We proposed to maintain the current MS-DRG assignments for ankle replacement cases. We invited public comments on our proposal.

Comment: A number of commenters supported the proposal to maintain the current MS-DRG assignments for ankle replacement cases. The commenters stated the proposal was reasonable given the data and information provided. Several other commenters urged CMS to reconsider its decision and to create a new MS-DRG for total ankle replacements for FY 2015 that is more appropriate both in terms of resource utilization and clinical cohesiveness, and reassign ICD-9-CM procedure code 81.56 to the new MS-DRG. The commenters stated that, despite evidence that the current Medicare assignment results in payments to hospitals below the average

costs for total ankle replacement procedures, and the greater clinical complexity of total ankle replacements relative to other procedures that map to these same MS-DRGs, CMS proposed to maintain the current MS-DRG assignment for total ankle replacement procedures. The commenters stated that total ankle replacement is a complex surgical procedure involving the replacement of the damaged parts of three bones (talus, tibia, and fibula) that make up the articulations of the ankle, as compared to two bones in most other total joint replacement procedures, including hips and knees. The commenters stated that the resources involved with total ankle replacement procedures are not comparable to other procedures in the major joint MS-DRG and that failure to establish a new MS-DRG that more appropriately reflects the higher cost will likely compromise patient access to this procedure.

One commenter acknowledged that there are a relatively small volume of total ankle replacement procedures compared to total hip and total knee replacements. However, the commenter suggested that this imbalance in case volume of total ankle replacements compared to total hip and knee replacements dampens the influence of actual hospital cost data for the total ankle replacements. The commenter recommended that all total ankle replacements be assigned to MS-DRG 469 even if the case does not have a MCC. This commenter acknowledged that the average cost of cases with procedure code 81.56 in MS-DRG 470 is \$19,332 compared to average cost of \$22,548 for all cases in MS-DRG of 469. However, the commenter suggested that moving all total ankle replacements to MS-DRG 469 was more appropriate than having cases assigned to MS-DRGs 469 and 470 based on the presence of an MCC. The commenter also acknowledged CMS' statement that under the MS-DRG system in general, some cases will have average costs

higher than the overall average costs for the MS-DRG, while other cases will have lower average costs. However, the commenter stated that this was an insufficient rationale to apply to total ankle replacements. The commenter disagreed with the determination of the CMS clinical advisors that ankle replacement cases are appropriately classified within MS-DRGs 469 and 470, based on severity level. The commenter stated that total ankle replacement is a complicated surgery that involves the replacement of the damaged parts of the three bones that make up the ankle joint, as compared to two bones in hip and knee replacement procedures. The commenter stated that this surgery required a specialized skill set, operative technique, and level of operating room resource utilization that is vastly dissimilar from that of total hip and total knee replacements. The commenter recommended that CMS create a new MS-DRG for total ankle replacements or move all total ankle replacements to MS-DRG 469.

Response: We appreciate the commenters' support for our proposal to maintain the current MS-DRG assignment for total ankle replacements. We are not accepting the commenter's recommendation to create a new MS-DRG for total ankle replacements or to move all cases to MS-DRG 469. We point out that there were only 1,411 total ankle replacements with 32 cases in MS-DRG 469 and 1,379 cases in MS-DRG 470. Creating a new MS-DRG for this single procedure would not be appropriate. MS-DRGs were created to provide payment to hospitals for groups of clinically similar conditions and procedures. MS-DRGs were not created to provide payment for each single procedure. MS-DRGs 469 and 470 contain replacement and reattachment procedures of the lower extremity, including those of the hip, knee, ankle, foot, lower leg, and thigh. Within each MS-DRG, there will be cases with costs higher than the average costs and others with costs below the average costs.

Basing a new MS-DRG on a small number of cases could lead to distortions in the relative payment weights for the MS DRG because several expensive cases could impact the overall relative payment weight. Having larger clinically cohesive groups within an MS-DRG provides greater stability for annual updates to the relative payment weights. We also point out that combining total ankle replacements into a single new MS-DRG would result in the same payment for cases with an MCC as those without an MCC. As indicated above, total ankle replacements with MCCs have average costs of \$27,419 and those without MCCs have average costs of \$19,332. Combining all total ankle replacements into a single, newly created MS-DRG would reduce the payment accuracy of cases with different severity levels.

We also disagree with the recommendation to move all total ankle replacement to MS-DRG 469. As stated earlier, total ankle replacements with MCCs have average costs of \$27,419 and those without MCCs have average costs of \$19,332. The average cost of all cases in MS-DRG 469 (which includes cases with MCCs) is \$22,548. We point out again that, under the MS-DRGs, some cases will have average costs higher than the overall average costs for the MS-DRG while other cases will have lower average costs. The total ankle replacements are appropriately assigned to MS-DRGs 469 and 470 based on the presence of a MCC.

Our clinical advisors reviewed the public comments and clinical data and continue to support maintaining the current MS-DRG assignment for total ankle replacements. They advised that total ankle replacements are appropriately assigned to MS-DRGs 469 and 470 along with other major joint replacement and reattachment procedures of the lower extremities because they are all replacement and reattachment procedures of the lower extremities. Our clinical advisors noted that, whereas they consider average cost as one element of the decision, they

expect the average cost of any subset to be different than the average cost of the MS-DRG, as that is inherent in a system of averages. They note that average length of stay, another metric of resource usage, is lower than the MS-DRG average for this subgroup. Even more importantly, they further noted that leaving these procedures in a MS-DRG with other lower extremity procedures promotes greater clinical consistency than could be achieved by moving the ankle procedures into an upper extremity DRG. They noted that, for the inpatient prospective system, clinical consistency includes not just technical considerations of the surgery or device costs but also consideration of pre- and post-operative patient care needs, medications, and care for common comorbid conditions, among other factors. Finally, our clinical advisors also pointed out that creating a new MS-DRG for total ankle replacements would result in combining cases with average length of stay of 6.19 days for cases with MCC and 2.13 days for cases without MCC. The cases are more appropriately assigned to MS-DRGs 469 and 470 with the two severity levels. Our clinical advisors do not support creating a new MS-DRG which would contain only total ankle replacements.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current MS-DRG assignment for total ankle replacements in MS-DRGs 469 and 470.

The following table shows our findings from examination of the claims data from the December 2013 update of the FY 2013 MedPAR file for the number of cases reporting procedure code 81.59 in MS-DRGs 515, 516, and 517 (revision of joint replacement of lower extremity) and their average length of stay and average costs as compared to all cases within MS-DRGs 515, 516, and 517 (where procedure code 81.59 is currently assigned), as well as data for MS-DRGs 469 and 483.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 515—All cases	3,407	9.22	\$22,191
MS-DRG 515—Cases with procedure code 81.59	5	6.00	16,988
MS-DRG 516—All cases	8,502	5.34	14,356
MS-DRG 516—Cases with procedure code 81.59	16	3.00	16,998
MS-DRG 517—All cases	5,794	3.28	12,172
MS-DRG 517—Cases with procedure code 81.59	40	1.80	13,704
MS-DRG 483—All cases	25,916	722	22,548
MS-DRG 469—All cases	14,220	3.20	18,807

The requestor asked that all cases with procedure code 81.59 in MS-DRGs 515, 516, and 517 be assigned to one of the following three choices:

- MS-DRG 483 (highest severity level);
- MS-DRG 515 (highest severity level) whether or not there is an MCC; or
- MS-DRG 469 (highest severity level).

Our review of data from the above revision of joint replacement of lower extremity table shows that cases in MS-DRG 483 have average costs that are \$5,560 higher than the average costs of cases with procedure code 81.59 in MS-DRG 515; \$5,550 greater than those in MS-DRG 516; and \$8,844 greater than those in MS-DRG 517 (\$22,548 compared to \$16,988; \$22,548 compared to \$16,998, and \$22,548 compared to \$13,704, respectively). As mentioned earlier, MS-DRG 483 is currently composed of only upper extremity procedures. Moving lower extremity procedures into this MS-DRG would disrupt the clinical cohesiveness of MS-DRG 483.

The average costs of all cases in MS-DRG 469 are \$18,807, compared to average costs of \$16,988, \$16,998, and \$13,703 for procedure code 81.59 cases in MS-DRGs 515, 516, and 517, respectively. The data did not support moving all procedure code 81.59 cases to MS-DRG 469 even when there is no MCC. We also point out that moving cases with procedure code 81.59 to MS-DRG 469 would disrupt the clinical cohesiveness of MS-DRG 469, which currently captures major joint replacement or reattachment procedures of the lower extremity. Procedure code 81.59 includes revisions of joint replacements of a variety of lower extremity joints including the ankle, foot, and toe. This nonspecific code would not be considered a major joint procedure. The code captures revisions of an ankle replacement as well as a more minor revision of the toe.

Our clinical advisors reviewed this issue and determined that the revision of joint replacement of lower extremity cases are appropriately classified within MS-DRGs 515, 516, and 517 where revisions of other joint replacements are captured. They supported the current severity levels in MS-DRGs 515, 516, and 517, which allow the presence of a CC or an MCC to determine the severity level assignment. They did not support moving these cases to MS-DRG 483, which is applied to upper extremity procedures because these procedures are not clinically consistent with revisions of lower joint procedures.

They also did not support moving these cases to MS-DRG 469 when there is no MCC because these procedures are not joint replacement procedures. Based on the findings of our examination of the claims data, the issue of clinical cohesion, and the recommendations from our clinical advisors, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to move the revision of joint replacement of lower extremity cases to MS-DRGs 483 or 469, whether or not there is an MCC. We proposed to maintain the current MS-DRG assignments for revision of joint replacement of lower extremity cases.

In summary, we proposed to maintain the current MS-DRG assignment for total ankle replacements in MS-DRGs 469 and 470 and revision of joint replacement of lower extremity procedures in MS-DRGs 515, 516, and 517. We invited public comments on our proposals.

Comment: A number of commenters supported the proposal to maintain the current MS-DRG assignment for code 81.59. One commenter agreed with this proposal given the lack of specificity for this code which does not identify the specific joint being revised. The commenter recommended that CMS create the following new ICD-9-CM procedure code: 81.58 (Revision of ankle replacement, not otherwise specified). Once this code is created, the commenter recommended that this new code be assigned to MS-DRGs 466, 467, and 468 and that these MS-DRGs be renamed Revision of Hip, Knee or Ankle (with MCC, with CC, and without CC/MCC, respectively).

Response: We appreciate the commenters' support for our proposal not to change the MS-DRG assignment for code 81.59. We agree with the commenter who pointed out that code 81.59 does not identify the joint being revised and, therefore, code 81.59 should continue to be assigned to MS-DRGs 515, 516, and 517. ICD-10-PCS codes provide greater detail than do ICD-9-CM codes and provide the ability to identify the joint being revised. As mentioned earlier, the Secretary announced plans to release an interim final rule in the near future that will include a new compliance date to require the use of ICD-10 beginning October 1, 2015. The interim final rule will also require HIPAA covered entities to continue to use ICD-9-CM through September 30, 2015. Given this timeline, it will not be possible to create a new ICD-9-CM procedure code for the next annual update on October 1, 2015 because ICD-10 will be implemented on

that date. However, ICD-10-PCS will provide the necessary level of detail.

After consideration of the public comments we received, we are finalizing our proposal to maintain the current MS-DRG assignment for total ankle replacements in MS-DRGs 469 and 470 and revision of joint replacement of lower extremity procedures in MS-DRGs 515, 516, and 517.

c. Back and Neck Procedures

We received a request to reassign cases identified with a complication or comorbidity (CC) in MS-DRG 490 (Back & Neck Procedures Except Spinal Fusion with CC/MCC or Disc Device/Neurostimulator) to MS-DRG 491 (Back & Neck Procedures Except Spinal Fusion without CC/MCC or Disc Device/Neurostimulator). The requester suggested that we create a new MS-DRG that would be subdivided based solely on the "with MCC or Disc Device/Neurostimulator" and the "without MCC" (and no device) criteria.

For the FY 2008 rulemaking cycle, we performed a comprehensive analysis of all the spinal DRGs as we proposed (72 FR 24731 through 24735) and finalized (72 FR 47226 through 47232) adoption of the MS-DRGs. With the revised spinal MS-DRGs, we were better able to identify a patient's level of severity, complexity of service, and utilization of resources. This was primarily attributed to the new structure for the severity level designations of "with MCC," "with CC," and "non-CC" (or without CC/MCC). Another contributing factor was that we incorporated specific procedures and technologies into the GROUPE logic for some of those spinal MS-DRGs. Specifically, as noted above, in the title of MS-DRG 490, we accounted for disc devices and neurostimulators because the data demonstrated that the procedures utilizing those technologies were more complex and required greater utilization of resources.

According to the requester, since that time, concerns have been expressed in the provider community regarding inadequate payment for MS-DRG 490 when these technologies are utilized. An analysis conducted by the requester alleged that the subset of patients identified in the "with MCC or disc device/neurostimulator" group are different with regard to resource use from the "without CC/MCC" (and no device) patient group.

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for MS-DRGs 490 and 491. The table below shows our findings.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 490—All cases	16,930	4.53	\$13,727
MS-DRG 491—All cases	25,778	2.20	8,151

As shown in the table above, there were a total of 16,930 cases in MS-DRG 490 with an average length of stay of 4.53 days and average costs of \$13,727. For MS-DRG 491, there were a total of 25,778 cases with an average length of stay of 2.20 days and average costs of \$8,151.

We then analyzed the data for MS-DRGs 490 and 491 by subdividing cases based on the “with MCC or Disc Device/

Neurostimulator” and the “without MCC” (and no device) criteria. We found a total of 3,379 cases with an average length of stay of 6.6 days and average costs of \$21,493 in the “with MCC or Disc Device/Neurostimulator” group and a total of 39,329 cases with an average length of stay of 2.8 days and average costs of \$9,405 in the “without MCC” and no device group. Due to the wide range in the volume of cases,

length of stay, and average costs between these two subgroups, we concluded that further analysis of the data using a separate “with CC” (and no device) subset of patients was warranted.

Therefore, we evaluated the data using a three-way severity level split that consisted of the three subgroups shown in the table below.

ADDITIONAL ANALYSIS FOR BACK & NECK PROCEDURES EXCEPT SPINAL FUSION: DISC DEVICE/NEUROSTIMULATOR

Severity level split	Number of cases	Average length of stay	Average costs
—With MCC or disc device/neurostimulator	3,379	6.6	\$21,493
—With CC	13,551	3.9	11,791
—Without CC/MCC	25,778	2.2	8,151

For the first subgroup, “with MCC or Disc Device/Neurostimulator,” we found a total of 3,379 cases with an average length of stay of 6.6 days and average costs of \$21,493. In the second subgroup, “with CC” (no device), we found a total of 13,551 cases with an average length of stay of 3.9 days and average costs of \$11,791. In the third subgroup, “without CC/MCC” (no device), we found a total of 25,778 cases with an average length of stay of 2.2 days and average costs of \$8,151.

The results of this additional data analysis demonstrate a better distribution of cases with regard to length of stay and average costs. Our clinical advisors agreed that a patient’s severity of illness is captured more appropriately with this subdivision. The data also meet the established criteria for creating subgroups within a base MS-DRG as discussed earlier.

As the subdivision of the claims data based on these subgroups better captures a patient’s severity level and utilization of resources and is supported by our clinical advisors, in the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to create three new MS-DRGs and to delete MS-DRGs 490 and 491. We proposed that these proposed new MS-DRGs would be titled as follows and would be effective as of October 1, 2014:

- Proposed new MS-DRG 518 (Back & Neck Procedures Except Spinal Fusion with MCC or Disc Device/Neurostimulator);

- Proposed new MS-DRG 519 (Back & Neck Procedures Except Spinal Fusion with CC); and
- Proposed new MS-DRG 520 (Back & Neck Procedures Except Spinal Fusion without CC/MCC).

We invited public comments on our proposal to create these proposed new MS-DRGs for FY 2015.

Comment: Several commenters supported the proposal to delete MS-DRGs 490 and 491 and to create three new MS-DRGs that better account for a patient’s severity of illness and utilization of resources when disc devices and neurostimulators are involved. One commenter stated that the new MS-DRGs would enable CMS to assess utilization of resources for these services and ensure that “important innovation in device dependent neurosurgical procedures is adequately accounted for and reimbursed appropriately.” Another commenter expressed its appreciation for CMS’ careful data analysis that resulted in the development of the proposal. This commenter noted “that the data presented by CMS make a compelling case for the proposed three subdivisions, because it would more appropriately compensate hospitals for the costs associated with implantation of a disc device or neurostimulator than the current two-division framework.” Another commenter applauded CMS’ past efforts to assure MS-DRGs 490 and 491 reflect the most appropriate payment amounts for these procedures. This commenter stated “the proposed

three-way split of cases in current MS-DRGs 490 and 491 demonstrates a better distribution of cases with regard to resource use. CMS should proceed with its proposed change to this MS-DRG category to improve the accuracy of the payments, consistent with its criteria for establishing severity levels within the MS-DRGs.” Another commenter noted that “subdividing the code set into three distinct MS-DRGs is not only a more accurate representation of the clinical condition experienced by the patient, but also better categorizes the resources expended by the facility, as evidenced by the supporting claims data.”

Response: We thank the commenters for their support. As noted in the FY 2015 IPPS/LTCH PPS proposed rule, the additional data analysis demonstrated a better distribution of cases with regard to length of stay and average costs. Our clinical advisors also agreed that a patient’s severity of illness is captured more appropriately with this subdivision. Lastly, the data also meet the established criteria for creating subgroups within a base MS-DRG as discussed earlier.

After consideration of the public comments we received, for FY 2015 we are adopting as final our proposal to create new MS-DRG 518 (Back & Neck Procedures Except Spinal Fusion with MCC or Disc Device/Neurostimulator); MS-DRG 519 (Back & Neck Procedures Except Spinal Fusion with CC); and MS-DRG 520 (Back & Neck Procedures Except Spinal Fusion without CC/MCC).

6. MDC 10 (Endocrine, Nutritional and Metabolic Diseases and Disorders): Disorders of Porphyrin Metabolism

We received a comment on the FY 2014 IPPS/LTCH PPS proposed rule that we considered out of scope for the proposed rule. We stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50550) that we would consider this issue in future rulemaking as part of our annual review process. The request was for the creation of a new MS-DRG to better identify cases where patients with disorders of porphyrin metabolism exist, to recognize the resource requirements in caring for these patients, to ensure appropriate payment for these cases, and to preserve patient

access to necessary treatments. This issue has been discussed previously in the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27904 and 27905) and final rule (77 FR 53311 through 53313).

Porphyria is defined as a group of rare disorders (“porphyrias”) that interfere with the production of hemoglobin that is needed for red blood cells. While some of these disorders are genetic (inborn) and others can be acquired, they all result in the abnormal accumulation of hemoglobin building blocks, called porphyrins, which can be deposited in the tissues where they particularly interfere with the functioning of the nervous system and the skin. Treatment for patients suffering from disorders of porphyrin

metabolism consists of an intravenous injection of Panhematin® (hemin for injection). In 1984, this pharmaceutical agent became the first approved drug for a rare disease to be designated under the Orphan Drug Act. The requestor stated that it is the only FDA-approved prescription treatment for acute intermittent porphyria. ICD-9-CM diagnosis code 277.1 (Disorders of porphyrin metabolism) describes these cases, which are currently assigned to MS-DRG 642 (Inborn and Other Disorders of Metabolism).

We analyzed claims data from the December 2013 update of the FY 2013 MedPAR file for cases assigned to MS-DRG 642. Our findings are shown in the table below.

MS-DRG	Number of cases	Average length of stay	Average costs
MS-DRG 642—All cases	1,486	4.61	\$8,151
MS-DRG 642—Cases with principal diagnosis code 277.1	299	5.98	13,303

As shown in the table above, we found a total of 1,486 cases in MS-DRG 642, with an average length of stay of 4.61 days and average costs of \$8,151. We then analyzed the data for cases reporting diagnosis code 277.1 as the principal diagnosis in this same MS-DRG. We found a total of 299 cases, with an average length of stay of 5.98 days and average costs of \$13,303.

While the data show that the average costs for the 299 cases reporting a principal diagnosis code of 277.1 were higher than the average costs for all cases in MS-DRG 642 (\$13,303 compared to \$8,151), the number of cases is small. In the FY 2015 IPPS/LTCH PPS proposed rule, we stated that, given the small number of porphyria cases, we did not believe there is justification for creating a new MS-DRG. Basing a new MS-DRG on such a small number of cases could lead to distortions in the relative payment weights for the MS-DRG because several expensive cases could impact the overall relative payment weight. Having larger clinical cohesive groups within an MS-DRG provides greater stability for annual updates to the relative payment weights. In addition, as discussed earlier, one of the criteria we apply in evaluating whether to create new severity subgroups within an MS-DRG is whether there are at least 500 cases in the CC or MCC subgroup. While this criterion is used to evaluate whether to create a severity subgroup within an MS-DRG, applying it here suggests that creating a new MS-DRG for cases reporting a principal diagnosis of code 277.1 would not be appropriate.

Our clinical advisors reviewed this issue and recommended no MS-DRG change for porphyria cases because they fit clinically within MS-DRG 642.

In summary, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to create a new MS-DRG for porphyria cases. We invited public comments on our proposal to maintain porphyria cases in MS-DRG 642.

Comment: Several commenters supported the proposal to maintain porphyria cases in MS-DRG 642 and to not create a new MS-DRG for these cases.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to maintain porphyria cases in MS-DRG 642 and to not create a new MS-DRG for these cases.

7. MDC 15 (Newborns and Other Neonates With Conditions Originating in the Perinatal Period)

We received a request to evaluate the MS-DRG assignment of seven ICD-9-CM diagnosis codes in MS-DRG 794 (Neonate with Other Significant Problems) under MDC 15. The requestor stated that these codes have no bearing on the infant, and are not representative of a neonate with a significant problem. The requestor recommended that we change the MS-DRG logic so that the following seven ICD-9-CM codes would not lead to assignment of MS-DRG 794. The requestor recommended that the diagnoses be added to the “only secondary diagnosis” list under MS-

DRG 795 (Normal newborn) so that the case would be assigned to MS-DRG 795 (Normal newborn).

- V17.0 (Family history of psychiatric condition)
- V17.2 (Family history of other neurological Diseases)
- V17.49 (Family history of other cardiovascular diseases)
- V18.0 (Family history of diabetes mellitus)
- V18.19 (Family history of other endocrine and metabolic diseases)
- V18.8 (Family history of infectious and parasitic diseases)
- V50.3 (Ear piercing)

In the case of a newborn with one of these diagnosis codes reported as a secondary diagnosis, the case would be assigned to MS-DRG 794. The commenter believed that any of these seven diagnosis codes (noted above), when reported as a secondary diagnosis for a newborn case, should be assigned to MS-DRG 795 instead of MS-DRG 794.

Our clinical advisors reviewed this request and concurred with the commenter that the seven ICD-9-CM diagnosis codes noted above should not continue to be assigned to MS-DRG 794, as there is no clinically usable information reported in those codes identifying significant problems. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28017), we proposed to reassign these following seven diagnoses to the “only secondary diagnosis list” under MS-DRG 795 so that the case would be assigned to MS-DRG 795.

- V17.0 (Family history of psychiatric condition)
- V17.2 (Family history of other neurological diseases)
- V17.49 (Family history of other cardiovascular diseases)
- V18.0 (Family history of diabetes mellitus)
- V18.19 (Family history of other endocrine and metabolic diseases)
- V18.8 (Family history of infectious and parasitic diseases)
- V50.3 (Ear piercing)

We invited public comments on this proposal.

Comment: Several commenters supported the proposal to reassign the identified seven diagnoses to the “only secondary diagnosis” list under MS-DRG 795 so that the case would be assigned to MS-DRG 795.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to reassign the following seven diagnoses to the “only secondary diagnosis list” under MS-DRG 795 so that the case would be assigned to MS-DRG 795:

- V17.0 (Family history of psychiatric condition)
- V17.2 (Family history of other neurological diseases)
- V17.49 (Family history of other cardiovascular diseases)
- V18.0 (Family history of diabetes mellitus)
- V18.19 (Family history of other endocrine and metabolic diseases)
- V18.8 (Family history of infectious and parasitic diseases)
- V50.3 (Ear piercing)

8. Medicare Code Editor (MCE) Changes

The Medicare Code Editor (MCE) is a software program that detects and reports errors in the coding of Medicare claims data. Patient diagnoses, procedure(s), and demographic information are entered into the Medicare claims processing systems and are subjected to a series of automated screens. The MCE screens are designed to identify cases that require further review before classification into an MS-DRG.

As discussed in section II.G.1.a. of the preamble of this final rule, we developed an ICD-10 version of the current MS-DRGs, which are based on ICD-9-CM codes. We refer to this version of the MS-DRGs as the ICD-10 MS-DRGs Version 31.0-R. In November 2013, we also posted a Definitions of Medicare Code Edits Manual of the ICD-10 MCE Version 31.0 on the ICD-10 MS-DRG Conversion Project Web

site at: <http://www.cms.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. We produced mainframe and computer software for Version 31.0 of the MS-DRG GROUPER with Medicare Code Editor, which was made available to the public in December 2013. Information on ordering the mainframe and computer software through NTIS was posted on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html> under the “Related Links” section. This ICD-10 MS-DRG GROUPER with Medicare Code Editor Version 31.0 computer software facilitated additional review of the ICD-10 MS-DRGs conversion. We encouraged the public to submit to CMS any comments on areas where they believed the ICD-10 MS-DRG GROUPER and MCE did not accurately reflect the logic and edits found in the ICD-9-CM MS-DRG GROUPER and MCE Version 31.0.

We also have posted an ICD-10 version of the current MCE, which is based on ICD-9-CM codes, and refer to that version of the MCE as the ICD-10 MCE Version 31.0-R. Both of these documents are posted on our ICD-10 MS-DRG Conversion Project Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD10/ICD-10-MS-DRG-Conversion-Project.html>. We will continue to share ICD-10 MS-DRG and MCE conversion activities with the public through this Web site.

In the FY 2015 IPPS/LTCH PPS proposed rule, for FY 2015, we proposed to remove extracranial-intracranial (EC-IC) bypass surgery from the “Noncovered Procedure” edit code list for Version 32.0 of the MCE. This procedure is identified by ICD-9-CM procedure code 39.28 (Extracranial-intracranial (EC-IC) vascular bypass).

Because of the complexity of appropriately classifying the circumstances under which the EC-IC bypass surgery may, or may not, be considered reasonable and necessary for certain conditions, we proposed to remove the MCE “Noncovered Procedure” edit for EC-IC bypass surgery from the “Noncovered Procedure” edit code list for Version 32.0 of the MCE. We invited public comments on this proposal.

Comment: Several commenters supported the proposal to remove the MCE “Noncovered Procedure” edit for EC-IC bypass surgery (procedure code 39.28) from the “Noncovered Procedure” edit code list for Version 32.0 of the MCE. The commenters stated that the proposal was reasonable given the information that was provided. Commenters also agreed that because of

the complexity of appropriately classifying the circumstances under which the EC-IC bypass surgery may be considered reasonable and necessary for certain conditions, the Medicare noncovered procedure edit for EC-IC bypass surgery should be removed.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal to remove procedure code 39.28 (Extracranial-intracranial (EC-IC) vascular bypass) from the noncovered procedure edit effective FY 2015.

9. Changes to Surgical Hierarchies

Some inpatient stays entail multiple surgical procedures, each one of which, occurring by itself, could result in assignment of the case to a different MS-DRG within the MDC to which the principal diagnosis is assigned. Therefore, it is necessary to have a decision rule within the GROUPER by which these cases are assigned to a single MS-DRG. The surgical hierarchy, an ordering of surgical classes from most resource-intensive to least resource-intensive, performs that function. Application of this hierarchy ensures that cases involving multiple surgical procedures are assigned to the MS-DRG associated with the most resource-intensive surgical class.

Because the relative resource intensity of surgical classes can shift as a function of MS-DRG reclassification and recalibrations, for FY 2015, we reviewed the surgical hierarchy of each MDC, as we have for previous reclassifications and recalibrations, to determine if the ordering of classes coincides with the intensity of resource utilization.

A surgical class can be composed of one or more MS-DRGs. For example, in MDC 11, the surgical class “kidney transplant” consists of a single MS-DRG (MS-DRG 652) and the class “major bladder procedures” consists of three MS-DRGs (MS-DRGs 653, 654, and 655). Consequently, in many cases, the surgical hierarchy has an impact on more than one MS-DRG. The methodology for determining the most resource-intensive surgical class involves weighting the average resources for each MS-DRG by frequency to determine the weighted average resources for each surgical class. For example, assume surgical class A includes MS-DRGs 001 and 002 and surgical class B includes MS-DRGs 003, 004, and 005. Assume also that the average costs of MS-DRG 001 are higher than that of MS-DRG 003, but the average costs of MS-DRGs 004 and 005 are higher than the average costs of MS-

DRG 002. To determine whether surgical class A should be higher or lower than surgical class B in the surgical hierarchy, we would weigh the average costs of each MS-DRG in the class by frequency (that is, by the number of cases in the MS-DRG) to determine average resource consumption for the surgical class. The surgical classes would then be ordered from the class with the highest average resource utilization to that with the lowest, with the exception of “other O.R. procedures” as discussed below.

This methodology may occasionally result in assignment of a case involving multiple procedures to the lower-weighted MS-DRG (in the highest, most resource-intensive surgical class) of the available alternatives. However, given that the logic underlying the surgical hierarchy provides that the GROUPER search for the procedure in the most resource-intensive surgical class, in cases involving multiple procedures, this result is sometimes unavoidable.

We note that, notwithstanding the foregoing discussion, there are a few instances when a surgical class with a lower average cost is ordered above a surgical class with a higher average cost. For example, the “other O.R. procedures” surgical class is uniformly ordered last in the surgical hierarchy of each MDC in which it occurs, regardless of the fact that the average costs for the MS-DRG or MS-DRGs in that surgical class may be higher than those for other surgical classes in the MDC. The “other O.R. procedures” class is a group of procedures that are only infrequently related to the diagnoses in the MDC, but are still occasionally performed on patients with cases assigned to the MDC with these diagnoses. Therefore, assignment to these surgical classes should only occur if no other surgical class more closely related to the diagnoses in the MDC is appropriate.

A second example occurs when the difference between the average costs for two surgical classes is very small. We have found that small differences generally do not warrant reordering of the hierarchy because, as a result of reassigning cases on the basis of the hierarchy change, the average costs are likely to shift such that the higher-ordered surgical class has lower average costs than the class ordered below it.

Based on the changes that we proposed to make for FY 2015, as discussed in sections II.G.4.c., II.G.5.a., and II.G.5.c. of the preamble of the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to revise the surgical hierarchy for MDC 5 (Diseases and Disorders of the Circulatory System) and MDC 8 (Diseases and Disorders of the Musculoskeletal System and Connective Tissue) as follows:

In MDC 5, we proposed to sequence proposed new MS-DRG 266 (Endovascular Cardiac Valve Replacement with MCC) and proposed new MS-DRG 267 (Endovascular Cardiac Valve Replacement without MCC) above MS-DRG 222 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/HF/Shock with MCC).

In MDC 8, we proposed to delete MS-DRGs 490 (Back & Neck Procedures Except Spinal Fusion with CC/MCC or Disc Device/Neurostimulator) and MS-DRG 491 (Back & Neck Procedures Except Spinal Fusion without CC/MCC or Disc Device/Neurostimulator) from the surgical hierarchy. We proposed to sequence proposed new MS-DRG 518 (Back & Neck Procedure Except Spinal Fusion with MCC or Disc Device/Neurostimulator), proposed new MS-DRG 519 (Back & Neck Procedure Except Spinal Fusion with CC), and proposed new MS-DRG 520 (Back & Neck Procedure Except Spinal Fusion without CC/MCC) above MS-DRG 492 (Lower Extremity and Humerus Procedure Except Hip, Foot, Femur with MCC).

We invited public comments on our proposals.

Comment: We did not receive any public comments opposing our proposals for the surgical hierarchy. Commenters expressed general support for the proposals, noting they were reasonable given the information that was provided.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing our proposal for MDC 5 to sequence new MS-DRG 266 (Endovascular Cardiac Valve Replacement with MCC) and new MS-DRG 267 (Endovascular Cardiac Valve Replacement without MCC) above MS-

DRG 222 (Cardiac Defibrillator Implant with Cardiac Catheterization with AMI/HF/Shock with MCC). We also are finalizing our proposal for MDC 8 to delete MS-DRG 490 (Back & Neck Procedures Except Spinal Fusion with CC/MCC or Disc Device/Neurostimulator) and MS-DRG 491 (Back & Neck Procedures Except Spinal Fusion without CC/MCC or Disc Device/Neurostimulator) from the surgical hierarchy. We are sequencing new MS-DRG 518 (Back & Neck Procedure Except Spinal Fusion with MCC or Disc Device/Neurostimulator), new MS-DRG 519 (Back & Neck Procedure Except Spinal Fusion with CC), and new MS-DRG 520 (Back & Neck Procedure Except Spinal Fusion without CC/MCC) above MS-DRG 492 (Lower Extremity and Humerus Procedure Except Hip, Foot, Femur with MCC), effective FY 2015.

10. Changes to the MS-DRG Diagnosis Codes for FY 2015

a. Major Complications or Comorbidities (MCCs) and Complications or Comorbidities (CC) Severity Levels for FY 2015

A complete updated MCC, CC, and Non-CC Exclusion List is available via the Internet on the CMS Web site at: <http://cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html> as follows:

- Table 6I (Complete MCC list);
- Table 6J (Complete CC list); and
- Table 6K (Complete list of CC Exclusions).

b. Coronary Atherosclerosis Due to Calcified Coronary Lesion

We received a request that we change the severity level for ICD-9-CM diagnosis code 414.4 (Coronary atherosclerosis due to calcified coronary lesion) from a non-CC to an MCC. This issue was previously discussed in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27522) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50541 through 50542).

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for ICD-9-CM diagnosis code 414.4. The following chart shows our findings.

Code	Diagnosis description	CC level	Cnt 1	Cnt 1 impact	Cnt 2	Cnt 2 impact	Cnt 3	Cnt 3 impact
414.4	Coronary atherosclerosis due to calcified lesion.	Non-CC	1,796	1.16	3,056	2.18	2,835	3.01

We ran the above data as described in the FY 2008 IPPS final rule with comment period (72 FR 47158 through 47161). The C1 value reflects a patient with no other secondary diagnosis or with all other secondary diagnoses that are non-CCs. The C2 value reflects a patient with at least one other secondary diagnosis that is a CC, but none that is an MCC. The C3 value reflects a patient with at least one other secondary diagnosis that is an MCC.

The chart above shows that the C1 finding is 1.16. A value close to 1.0 in the C1 field suggests that the diagnosis produces the same expected value as a non-CC. A value close to 2.0 suggests the condition is more like a CC than a non-CC, but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or a non-CC. The C2 finding was 2.18. A C2 value close to 2.0 suggests the condition is more like a CC than a non-CC, but not as significant in resource usage as an MCC when there is at least one other secondary diagnosis that is a CC but none that is an MCC. While the C1 value of 1.16 is above the 1.0 value for a non-CC, it does not support reclassification to an MCC. As stated earlier, a value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or a non-CC. The C2 finding of 2.18 also does not support reclassifying this diagnosis code to an MCC. Our clinical advisors reviewed the data and evaluated this condition. They

recommended that we not change the severity level of diagnosis code 414.4 from a non-CC to an MCC. They did not believe that this diagnosis would increase the severity level of patients. They pointed out that a similar code, diagnosis code 414.2 (Chronic total occlusion of coronary artery), is a non-CC. Our clinical advisors believe that diagnosis code 414.4 represents patients who are less severe than diagnosis code 414.2. Considering the C1 and C2 ratings of diagnosis code 414.4 and the input from our clinical advisors, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose to reclassify diagnosis code 414.4 to an MCC; the diagnosis code would continue to be considered a non-CC.

Therefore, based on the data and clinical analysis, we proposed to maintain diagnosis code 414.4 as a non-CC. We invited public comments on our proposal.

Comment: Several commenters supported the proposal to keep diagnosis code 414.4 as a non-CC. One commenter requested that diagnosis code 414.4, when present as a secondary diagnosis, be included on the MCC list. The commenter believed that treating calcified coronary lesions with atherectomy is underpaid by the Medicare program for patients requiring percutaneous coronary intervention when calcified coronary lesions prevent successful angioplasty and placement of coronary stents. The commenter further stated that treating coronary calcification is significantly more

difficult to treat, requires more time and equipment, and has clinical outcomes that are much worse compared to treating noncalcified or mildly calcified coronary obstructions. Consequently, the commenter believed it costs hospitals more to treat patients with calcified coronary lesions and that hospitals should be compensated for their expense to treat coronary atherosclerosis in Medicare beneficiaries. The commenter recognized the opinion of our clinical advisors that patients with a code 414.4 diagnosis are less severe than those with a code 414.2 diagnosis, but disagreed with that opinion. The commenter believed that both disease states add substantial treatment time and costs to the providers, health care systems, and society and both are worthy of classification as an MCC.

Response: We appreciate the commenters' support for our proposal to maintain code 414.4 as a non-CC. We are not accepting the commenter's recommendation to change this code to an MCC because our clinical data do not support such a change. The data continue to support keeping diagnosis code 414.4 as a non-CC and do not support changing the code to an MCC, for the reasons described above.

We examined claims data from the December 2013 update of the FY 2013 MedPAR file for ICD-9-CM diagnosis code 414.2. The following chart shows our findings.

Code	Diagnosis description	CC level	Cnt 1	Cnt 1 impact	Cnt 2	Cnt 2 impact	Cnt 3	Cnt 3 impact
414.2	Chronic total occlusion of coronary artery.	Non-CC	15,814	1.25	21,483	2.09	19,955	3.04

The chart above for diagnosis code 414.2 shows that the C1 finding is 1.25. A value close to 1.0 in the C1 field suggests that the diagnosis produces the same expected value as a non-CC. A value close to 2.0 suggests the condition is more like a CC than a non-CC, but not as significant in resource usage as an MCC. A value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or a non-CC. The C2 finding was 2.09. A C2 value close to 2.0 suggests the condition is more like a CC than a non-CC, but not as significant in resource usage as an MCC when there is at least one other secondary diagnosis that is a CC but none that is an MCC. While the C1 value of 1.25 is above the 1.0 value for a non-CC, it does not support reclassification to an MCC. As

stated earlier, a value close to 3.0 suggests the condition is expected to consume resources more similar to an MCC than a CC or a non-CC. The C2 finding of 2.09 also does not support reclassifying this diagnosis code to an MCC.

Our clinical advisors reviewed the data and evaluated the severity level for both diagnosis code 414.4 and 414.2. They continue to recommend that we not change the severity level of diagnosis code 414.4 from a non-CC to an MCC. Furthermore, they recommend that we not change the severity level for diagnosis code 414.2. They do not believe that the diagnosis represented by either code would increase the severity level of patients. After reviewing the commenter's justification for changing diagnosis code 414.4 from

a non-CC to an MCC, our clinical advisors continue to recommend that we not change the severity level of diagnosis code 414.4 from a non-CC to an MCC. They again pointed out that diagnosis code 414.2 is a similar code and is a non-CC. As noted, they also recommend maintaining diagnosis code 414.2 as a non-CC. Our clinical advisors continue to believe that diagnosis code 414.4 represents patients who are less severe than diagnosis code 414.2.

After consideration of the public comments we received, the C1 and C2 ratings in our claims data, and the input from our clinical advisors, we are finalizing our proposal to not reclassify diagnosis code 414.4 from a non-CC to an MCC; the diagnosis code will continue to be considered a non-CC.

11. Complications or Comorbidity (CC) Exclusions List

a. Background of the CC List and the CC Exclusions List

Under the IPPS MS-DRG classification system, we have developed a standard list of diagnoses that are considered CCs. Historically, we developed this list using physician panels that classified each diagnosis code based on whether the diagnosis, when present as a secondary condition, would be considered a substantial complication or comorbidity. A substantial complication or comorbidity was defined as a condition that, because of its presence with a specific principal diagnosis, would cause an increase in the length of stay by at least 1 day in at least 75 percent of the patients. However, depending on the principal diagnosis of the patient, some diagnoses on the basic list of complications and comorbidities may be excluded if they are closely related to the principal diagnosis. In FY 2008, we evaluated each diagnosis code to determine its impact on resource use and to determine the most appropriate CC subclassification (non-CC, CC, or MCC) assignment. We refer readers to sections II.D.2. and 3. of the preamble of the FY 2008 IPPS final rule with comment period for a discussion of the refinement of CCs in relation to the MS-DRGs we adopted for FY 2008 (72 FR 47152 through 47171).

b. CC Exclusions List for FY 2015

In the September 1, 1987 final notice (52 FR 33143) concerning changes to the DRG classification system, we modified the GROUPER logic so that certain diagnoses included on the standard list of CCs would not be considered valid CCs in combination with a particular principal diagnosis. We created the CC Exclusions List for the following reasons: (1) To preclude coding of CCs for closely related conditions; (2) to preclude duplicative or inconsistent coding from being treated as CCs; and (3) to ensure that cases are appropriately classified between the complicated and uncomplicated DRGs in a pair. As we indicated above, we developed a list of diagnoses, using physician panels, to include those diagnoses that, when present as a secondary condition, would be considered a substantial complication or comorbidity. In previous years, we have made changes to the list of CCs, either by adding new CCs or deleting CCs already on the list.

In the May 19, 1987 proposed notice (52 FR 18877) and the September 1, 1987 final notice (52 FR 33154), we explained that the excluded secondary

diagnoses were established using the following five principles:

- Chronic and acute manifestations of the same condition should not be considered CCs for one another;
- Specific and nonspecific (that is, not otherwise specified (NOS)) diagnosis codes for the same condition should not be considered CCs for one another;
- Codes for the same condition that cannot coexist, such as partial/total, unilateral/bilateral, obstructed/unobstructed, and benign/malignant, should not be considered CCs for one another;
- Codes for the same condition in anatomically proximal sites should not be considered CCs for one another; and
- Closely related conditions should not be considered CCs for one another.

The creation of the CC Exclusions List was a major project involving hundreds of codes. We have continued to review the remaining CCs to identify additional exclusions and to remove diagnoses from the master list that have been shown not to meet the definition of a CC.¹

In the FY 2015 IPPS/LTCH PPS proposed rule, for FY 2015, we did not propose any changes to the CC Exclusion List. Therefore, we did not develop or publish Tables 6G (Additions to the CC Exclusion List) or Table 6H (Deletions from the CC

¹ We refer readers to the FY 1989 final rule (53 FR 38485, September 30, 1988) for the revision made for the discharges occurring in FY 1989; the FY 1990 final rule (54 FR 36552, September 1, 1989) for the FY 1990 revision; the FY 1991 final rule (55 FR 36126, September 4, 1990) for the FY 1991 revision; the FY 1992 final rule (56 FR 43209, August 30, 1991) for the FY 1992 revision; the FY 1993 final rule (57 FR 39753, September 1, 1992) for the FY 1993 revision; the FY 1994 final rule (58 FR 46278, September 1, 1993) for the FY 1994 revisions; the FY 1995 final rule (59 FR 45334, September 1, 1994) for the FY 1995 revisions; the FY 1996 final rule (60 FR 45782, September 1, 1995) for the FY 1996 revisions; the FY 1997 final rule (61 FR 46171, August 30, 1996) for the FY 1997 revisions; the FY 1998 final rule (62 FR 45966, August 29, 1997) for the FY 1998 revisions; the FY 1999 final rule (63 FR 40954, July 31, 1998) for the FY 1999 revisions; the FY 2001 final rule (65 FR 47064, August 1, 2000) for the FY 2001 revisions; the FY 2002 final rule (66 FR 39851, August 1, 2001) for the FY 2002 revisions; the FY 2003 final rule (67 FR 49998, August 1, 2002) for the FY 2003 revisions; the FY 2004 final rule (68 FR 45364, August 1, 2003) for the FY 2004 revisions; the FY 2005 final rule (69 FR 49848, August 11, 2004) for the FY 2005 revisions; the FY 2006 final rule (70 FR 47640, August 12, 2005) for the FY 2006 revisions; the FY 2007 final rule (71 FR 47870) for the FY 2007 revisions; the FY 2008 final rule (72 FR 47130) for the FY 2008 revisions; the FY 2009 final rule (73 FR 48510); the FY 2010 final rule (74 FR 43799); the FY 2011 final rule (75 FR 50114); the FY 2012 final rule (76 FR 51542); the FY 2013 final rule (77 FR 53315); and the FY 2014 final rule (78 FR 50541). In the FY 2000 final rule (64 FR 41490, July 30, 1999), we did not modify the CC Exclusions List because we did not make any changes to the ICD-9-CM codes for FY 2000.

Exclusion List). We developed Table 6K (Complete List of CC Exclusions), which is available only via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Because of the length of Table 6K, we are not publishing it in the Addendum to this final rule. Each of these principal diagnosis codes for which there is a CC exclusion is shown with an asterisk and the conditions that will not count as a CC are provided in an indented column immediately following the affected principal diagnosis. Beginning with discharges on or after October 1 of each year, the indented diagnoses are not recognized by the GROUPER as valid CCs for the asterisked principal diagnoses.

A complete updated MCC, CC, and Non-CC Exclusions List is available via the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>.

Because there were no proposed new, revised, or deleted diagnosis or procedure codes for FY 2015, we have not developed Table 6A (New Diagnosis Codes), Table 6B (New Procedure Codes), Table 6C (Invalid Diagnosis Codes), Table 6D (Invalid Procedure Codes), Table 6E (Revised Diagnosis Code Titles), and Table 6F (Revised Procedure Codes) to the final rule and they are not published as part of this final rule.

We did not propose any additions or deletions to the MS-DRG MCC List for FY 2015 nor any additions or deletions to the MS-DRG CC List for FY 2015. Therefore, as we proposed, for this final rule, we have not developed Tables 6I.1 (Additions to the MCC List), 6I.2 (Deletions to the MCC List), 6J.1 (Additions to the CC List), and 6J.2 (Deletions to the CC List), and they are not published as part of this final rule.

Alternatively, the complete documentation of the GROUPER logic, including the current CC Exclusions List, is available from 3M/Health Information Systems (HIS), which, under contract with CMS, is responsible for updating and maintaining the GROUPER program. The current MS-DRG Definitions Manual, Version 31.0, is available on a CD for \$225.00. This manual may be obtained by writing 3M/HIS at the following address: 100 Barnes Road, Wallingford, CT 06492; or by calling (203) 949-0303, or by obtaining an order form at the Web site: <http://www.3MHIS.com>. Please specify the revision or revisions requested. Version 32.0 of this manual, which includes the final FY 2015 MS-DRG changes, is available on a CD for

\$225.00. This manual may be obtained by writing 3M/HIS at the address provided above; or by calling (203) 949-0303; or by obtaining an order form at the Web site at: <http://www/3MHIS.com>. Please specify the revision or revisions requested.

12. Review of Procedure Codes in MS DRGs 981 Through 983; 984 Through 986; and 987 Through 989

Each year, we review cases assigned to former CMS DRG 468 (Extensive O.R. Procedure Unrelated to Principal Diagnosis), CMS DRG 476 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis), and CMS DRG 477 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis) to determine whether it would be appropriate to change the procedures assigned among these CMS DRGs. Under the MS-DRGs that we adopted for FY 2008, CMS DRG 468 was split three ways and became MS-DRGs 981, 982, and 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). CMS DRG 476 became MS-DRGs 984, 985, and 986 (Prostatic O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively). CMS DRG 477 became MS-DRGs 987, 988, and 989 (Nonextensive O.R. Procedure Unrelated to Principal Diagnosis with MCC, with CC, and without CC/MCC, respectively).

MS-DRGs 981 through 983, 984 through 986, and 987 through 989 (formerly CMS DRGs 468, 476, and 477, respectively) are reserved for those cases in which none of the O.R. procedures performed are related to the principal diagnosis. These MS-DRGs are intended to capture atypical cases, that is, those cases not occurring with sufficient frequency to represent a distinct, recognizable clinical group. MS-DRGs 984 through 986 (previously CMS DRG 476) are assigned to those discharges in which one or more of the following prostatic procedures are performed and are unrelated to the principal diagnosis:

- 60.0 (Incision of prostate);
- 60.12 (Open biopsy of prostate);
- 60.15 (Biopsy of periprostatic tissue);
- 60.18 (Other diagnostic procedures on prostate and periprostatic tissue);
- 60.21 (Transurethral prostatectomy);
- 60.29 (Other transurethral prostatectomy);
- 60.61 (Local excision of lesion of prostate);
- 60.69 (Prostatectomy, not elsewhere classified);
- 60.81 (Incision of periprostatic tissue);

- 60.82 (Excision of periprostatic tissue);
- 60.93 (Repair of prostate);
- 60.94 (Control of (postoperative) hemorrhage of prostate);
- 60.95 (Transurethral balloon dilation of the prostatic urethra);
- 60.96 (Transurethral destruction of prostate tissue by microwave thermotherapy);
- 60.97 (Other transurethral destruction of prostate tissue by other thermotherapy); and
- 60.99 (Other operations on prostate).

All remaining O.R. procedures are assigned to MS-DRGs 981 through 983 and 987 through 989, with MS-DRGs 987 through 989 assigned to those discharges in which the only procedures performed are nonextensive procedures that are unrelated to the principal diagnosis.²

Our review of MedPAR claims data showed that there were no cases that merited movement or should logically be assigned to any of the other MDCs. Therefore, for FY 2015, we did not propose to change the procedures assigned among these MS-DRGs.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not making any changes to the procedures assigned to MS-DRGs 981 through 983, MS-DRGs

²The original list of the ICD-9-CM procedure codes for the procedures we consider nonextensive procedures, if performed with an unrelated principal diagnosis, was published in Table 6C in section IV. of the Addendum to the FY 1989 final rule (53 FR 38591). As part of the FY 1991 final rule (55 FR 36135), the FY 1992 final rule (56 FR 43212), the FY 1993 final rule (57 FR 23625), the FY 1994 final rule (58 FR 46279), the FY 1995 final rule (59 FR 45336), the FY 1996 final rule (60 FR 45783), the FY 1997 final rule (61 FR 46173), and the FY 1998 final rule (62 FR 45981), we moved several other procedures from DRG 468 to DRG 477, and some procedures from DRG 477 to DRG 468. No procedures were moved in FY 1999, as noted in the final rule (63 FR 40962), in the FY 2000 (64 FR 41496), in the FY 2001 (65 FR 47064), or in the FY 2002 (66 FR 39852). In the FY 2003 final rule (67 FR 49999), we did not move any procedures from DRG 477. However, we did move procedure codes from DRG 468 and placed them in more clinically coherent DRGs. In the FY 2004 final rule (68 FR 45365), we moved several procedures from DRG 468 to DRGs 476 and 477 because the procedures are nonextensive. In the FY 2005 final rule (69 FR 48950), we moved one procedure from DRG 468 to 477. In addition, we added several existing procedures to DRGs 476 and 477. In FY 2006 (70 FR 47317), we moved one procedure from DRG 468 and assigned it to DRG 477. In FY 2007, we moved one procedure from DRG 468 and assigned it to DRGs 479, 553, and 554. In FYs 2008, 2009, 2010, 2011, 2012, 2013, and 2014, no procedures were moved, as noted in the FY 2008 final rule with comment period (72 FR 46241), in the FY 2009 final rule (73 FR 48513), in the FY 2010 final rule (74 FR 43796), in the FY 2011 final rule (75 FR 50122), in the FY 2012 final rule (76 FR 51549), in the FY 2013 final rule (77 FR 53321), and in the FY 2014 final rule (78 FR 50545).

984 through 986, and MS-DRGs 987 through 989 for FY 2015.

a. Moving Procedure Codes From MS-DRGs 981 Through 983 or MS-DRGs 987 Through 989 Into MDCs

We annually conduct a review of procedures producing assignment to MS-DRGs 981 through 983 (Extensive O.R. procedure unrelated to principal diagnosis with MCC, with CC, and without CC/MCC, respectively) or MS-DRGs 987 through 989 (Nonextensive O.R. procedure unrelated to principal diagnosis with MCC, with CC, and without CC/MCC, respectively) on the basis of volume, by procedure, to see if it would be appropriate to move procedure codes out of these MS-DRGs into one of the surgical MS-DRGs for the MDC into which the principal diagnosis falls. The data are arrayed in two ways for comparison purposes. We look at a frequency count of each major operative procedure code. We also compare procedures across MDCs by volume of procedure codes within each MDC.

We identify those procedures occurring in conjunction with certain principal diagnoses with sufficient frequency to justify adding them to one of the surgical MS-DRGs for the MDC in which the diagnosis falls. As noted above, there were no cases that merited movement or that should logically be assigned to any of the other MDCs. Therefore, for FY 2015, we did not propose to remove any procedures from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into one of the surgical MS-DRGs for the MDC into which the principal diagnosis is assigned.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not removing any procedures from MS-DRGs 981 through 983 or MS-DRGs 987 through 989 into one of the surgical MS-DRGs into which the principal diagnosis is assigned for FY 2015.

b. Reassignment of Procedures Among MS-DRGs 981 Through 983, 984 Through 986, and 987 Through 989

We also annually review the list of ICD-9-CM procedures that, when in combination with their principal diagnosis code, result in assignment to MS-DRGs 981 through 983, 984 through 986 (Prostatic O.R. procedure unrelated to principal diagnosis with MCC, with CC, or without CC/MCC, respectively), and 987 through 989, to ascertain whether any of those procedures should be reassigned from one of these three MS-DRGs to another of the three MS-DRGs based on average costs and the length of stay. We look at the data for

trends such as shifts in treatment practice or reporting practice that would make the resulting MS-DRG assignment illogical. If we find these shifts, we would propose to move cases to keep the MS-DRGs clinically similar or to provide payment for the cases in a similar manner. Generally, we move only those procedures for which we have an adequate number of discharges to analyze the data.

There were no cases representing shifts in treatment practice or reporting practice that would make the resulting MS-DRG assignment illogical, or that merited movement so that cases should logically be assigned to any of the other MDCs. Therefore, for FY 2015, we did not propose to move any procedure codes among these MS-DRGs.

We did not receive any public comments on our proposal. Therefore, as we proposed, we are not moving any procedure codes among these MS-DRGs for FY 2015.

c. Adding Diagnosis or Procedure Codes to MDCs

Based on the review of cases in the MDCs, as described above in sections II.G.2. through 7. of the preamble of this final rule, we did not propose to add any diagnosis or procedure codes to MDCs for FY 2015. We did not receive any public comments on our proposal. Therefore, as we proposed, we are not adding any diagnosis or procedure codes to MDCs for FY 2015.

13. Changes to the ICD-9-CM System

a. ICD-10 Coordination and Maintenance Committee

In September 1985, the ICD-9-CM Coordination and Maintenance Committee was formed. This is a Federal interdepartmental committee, co-chaired by the National Center for Health Statistics (NCHS), the Centers for Disease Control and Prevention, and CMS, charged with maintaining and updating the ICD-9-CM system. The final update to ICD-9-CM codes was to be made on October 1, 2013. Thereafter, the name of the Committee was changed to the ICD-10 Coordination and Maintenance Committee, effective with the March 19-20, 2014 meeting. The ICD-10 Coordination and Maintenance Committee will address updates to the ICD-10-CM, ICD-10-PCS, and ICD-9-CM coding systems. The Committee is jointly responsible for approving coding changes, and developing errata, addenda, and other modifications to the coding systems to reflect newly developed procedures and technologies and newly identified diseases. The Committee is also responsible for

promoting the use of Federal and non-Federal educational programs and other communication techniques with a view toward standardizing coding applications and upgrading the quality of the classification system.

The official list of ICD-9-CM diagnosis and procedure codes by fiscal year can be found on the CMS Web site at: <http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html>. The official list of ICD-10-CM and ICD-10-PCS codes can be found on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/index.html>.

The NCHS has lead responsibility for the ICD-10-CM and ICD-9-CM diagnosis codes included in the Tabular List and Alphabetic Index for Diseases, while CMS has lead responsibility for the ICD-10-PCS and ICD-9-CM procedure codes included in the Tabular List and Alphabetic Index for Procedures.

The Committee encourages participation in the above process by health-related organizations. In this regard, the Committee holds public meetings for discussion of educational issues and proposed coding changes. These meetings provide an opportunity for representatives of recognized organizations in the coding field, such as the American Health Information Management Association (AHIMA), the American Hospital Association (AHA), and various physician specialty groups, as well as individual physicians, health information management professionals, and other members of the public, to contribute ideas on coding matters. After considering the opinions expressed at the public meetings and in writing, the Committee formulates recommendations, which then must be approved by the agencies.

The Committee presented proposals for coding changes for implementation in FY 2015 at a public meeting held on September 18-19, 2013, and finalized the coding changes after consideration of comments received at the meetings and in writing by November 15, 2013.

The Committee held its 2014 meeting on March 19-20, 2014. It was announced at this meeting that any new ICD-10-CM/PCS codes for which there was consensus of public support and for which complete tabular and indexing changes would be made by May 2014 would be included in the October 1, 2014 update to ICD-10-CM/ICD-10-PCS. For FY 2015, there are no new, revised, or deleted ICD-10-CM diagnosis codes or ICD-10-PCS procedure codes, and no new, revised, or deleted ICD-9-CM diagnosis or procedure codes.

Copies of the minutes of the procedure codes discussions at the Committee's September 18-19, 2013 meeting and March 19-20, 2014 meeting can be obtained from the CMS Web site at: http://cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/03_meetings.asp. The minutes of the diagnosis codes discussions at the September 18-19, 2013 meeting and March 19-20, 2014 meeting are found at: <http://www.cdc.gov/nchs/icd/icd9cm.html>. These Web sites also provide detailed information about the Committee, including information on requesting a new code, attending a Committee meeting, and timeline requirements and meeting dates.

We encourage commenters to address suggestions on coding issues involving diagnosis codes to: Donna Pickett, Co-Chairperson, ICD-10 Coordination and Maintenance Committee, NCHS, Room 2402, 3311 Toledo Road, Hyattsville, MD 20782. Comments may be sent by email to: dfp4@cdc.gov.

Questions and comments concerning the procedure codes should be addressed to: Patricia Brooks, Co-Chairperson, ICD-10 Coordination and Maintenance Committee, CMS, Center for Medicare Management, Hospital and Ambulatory Policy Group, Division of Acute Care, C4-08-06, 7500 Security Boulevard, Baltimore, MD 21244-1850. Comments may be sent by email to: patricia.brooks2@cms.hhs.gov.

In the September 7, 2001 final rule implementing the IPPS new technology add-on payments (66 FR 46906), we indicated we would attempt to include proposals for procedure codes that would describe new technology discussed and approved at the Spring meeting as part of the code revisions effective the following October.

Section 503(a) of Public Law 108-173 included a requirement for updating ICD-9-CM codes twice a year instead of a single update on October 1 of each year. This requirement was included as part of the amendments to the Act relating to recognition of new technology under the IPPS. Section 503(a) amended section 1886(d)(5)(K) of the Act by adding a clause (vii) which states that the "Secretary shall provide for the addition of new diagnosis and procedure codes on April 1 of each year, but the addition of such codes shall not require the Secretary to adjust the payment (or diagnosis-related group classification) . . . until the fiscal year that begins after such date." This requirement improves the recognition of new technologies under the IPPS system by providing information on these new technologies at an earlier date. Data will

be available 6 months earlier than would be possible with updates occurring only once a year on October 1.

While section 1886(d)(5)(K)(vii) of the Act states that the addition of new diagnosis and procedure codes on April 1 of each year shall not require the Secretary to adjust the payment, or DRG classification, under section 1886(d) of the Act until the fiscal year that begins after such date, we have to update the DRG software and other systems in order to recognize and accept the new codes. We also publicize the code changes and the need for a mid-year systems update by providers to identify the new codes. Hospitals also have to obtain the new code books and encoder updates, and make other system changes in order to identify and report the new codes.

The ICD-10 (previously the ICD-9-CM) Coordination and Maintenance Committee holds its meetings in the spring and fall in order to update the codes and the applicable payment and reporting systems by October 1 of each year. Items are placed on the agenda for the Committee meeting if the request is received at least 2 months prior to the meeting. This requirement allows time for staff to review and research the coding issues and prepare material for discussion at the meeting. It also allows time for the topic to be publicized in meeting announcements in the **Federal Register** as well as on the CMS Web site. The public decides whether or not to attend the meeting based on the topics listed on the agenda. Final decisions on code title revisions are currently made by March 1 so that these titles can be included in the IPPS proposed rule. A complete addendum describing details of all diagnosis and procedure coding changes, both tabular and index, is published on the CMS and NCHS Web sites in May of each year. Publishers of coding books and software use this information to modify their products that are used by health care providers. This 5-month time period has proved to be necessary for hospitals and other providers to update their systems.

A discussion of this timeline and the need for changes are included in the December 4-5, 2005 ICD-9-CM Coordination and Maintenance Committee Meeting minutes. The public agreed that there was a need to hold the fall meetings earlier, in September or October, in order to meet the new implementation dates. The public provided comment that additional time would be needed to update hospital systems and obtain new code books and coding software. There was considerable concern expressed about the impact this

new April update would have on providers.

In the FY 2005 IPPS final rule, we implemented section 1886(d)(5)(K)(vii) of the Act, as added by section 503(a) of Public Law 108-173, by developing a mechanism for approving, in time for the April update, diagnosis and procedure code revisions needed to describe new technologies and medical services for purposes of the new technology add-on payment process. We also established the following process for making these determinations. Topics considered during the Fall ICD-10 (previously ICD-9-CM) Coordination and Maintenance Committee meeting are considered for an April 1 update if a strong and convincing case is made by the requester at the Committee's public meeting. The request must identify the reason why a new code is needed in April for purposes of the new technology process. The participants at the meeting and those reviewing the Committee meeting summary report are provided the opportunity to comment on this expedited request. All other topics are considered for the October 1 update. Participants at the Committee meeting are encouraged to comment on all such requests. There were no requests approved for an expedited April 1, 2014 implementation of a code at the September 18-19, 2013 Committee meeting. Therefore, there were no new codes implemented on April 1, 2014.

ICD-9-CM addendum and code title information is published on the CMS Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html?redirect=/icd9ProviderDiagnosticCodes/01overview.asp#TopofPage>. ICD-10-CM and ICD-10-PCS addendum and code title information is published on the CMS Web site at <http://www.cms.gov/Medicare/Coding/ICD10/index.html>. Information on ICD-10-CM diagnosis codes, along with the Official ICD-10-CM Coding Guidelines, can also be found on the CDC Web site at: <http://www.cdc.gov/nchs/icd/icd10cm.html>. Information on new, revised, and deleted ICD-10-CM/ICD-10-PCS codes is also provided to the AHA for publication in the *Coding Clinic for ICD-10*. AHA also distributes information to publishers and software vendors.

CMS also sends copies of all ICD-9-CM coding changes to its Medicare contractors for use in updating their systems and providing education to providers.

The code titles are adopted as part of the ICD-10 (previously ICD-9-CM) Coordination and Maintenance

Committee process. Therefore, although we publish the code titles in the IPPS proposed and final rules, they are not subject to comment in the proposed or final rules.

b. Code Freeze

In the January 16, 2009 ICD-10-CM and ICD-10-PCS final rule (74 FR 3340), there was a discussion of the need for a partial or total freeze in the annual updates to both ICD-9-CM and ICD-10-CM and ICD-10-PCS codes. The public comment addressed in that final rule stated that the annual code set updates should cease 1 year prior to the implementation of ICD-10. The commenters stated that this freeze of code updates would allow for instructional and/or coding software programs to be designed and purchased early, without concern that an upgrade would take place immediately before the compliance date, necessitating additional updates and purchases.

HHS responded to comments in the ICD-10 final rule that the ICD-9-CM Coordination and Maintenance Committee has jurisdiction over any action impacting the ICD-9-CM and ICD-10 code sets. Therefore, HHS indicated that the issue of consideration of a moratorium on updates to the ICD-9-CM, ICD-10-CM, and ICD-10-PCS code sets in anticipation of the adoption of ICD-10-CM and ICD-10-PCS would be addressed through the Committee at a future public meeting.

The code freeze was discussed at multiple meetings of the ICD-9-CM Coordination and Maintenance Committee and public comment was actively solicited. The Committee evaluated all comments from participants attending the Committee meetings as well as written comments that were received. The Committee also considered the delay in implementation of ICD-10 until October 1, 2014. There was an announcement at the September 19, 2012 ICD-9-CM Coordination and Maintenance Committee meeting that a partial freeze of both ICD-9-CM and ICD-10 codes will be implemented as follows:

- The last regular annual update to both ICD-9-CM and ICD-10 code sets was made on October 1, 2011.
- On October 1, 2012 and October 1, 2013, there will be only limited code updates to both ICD-9-CM and ICD-10 code sets to capture new technology and new diseases.
- On October 1, 2014, there were to be only limited code updates to ICD-10 code sets to capture new technology and diagnoses as required by section 503(a) of Public Law 108-173. There were to

be no updates to ICD–9–CM on October 1, 2014.

- On October 1, 2015, one year after the originally scheduled implementation of ICD–10, regular updates to ICD–10 were to begin.

On May 15, 2014, CMS posted an updated Partial Code Freeze schedule on the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD10/ICD-9-CM-Coordination-and-Maintenance-Committee-Meetings.html>. This updated schedule provided information on the extension of the partial code freeze until 1 year after the implementation of ICD–10. As stated earlier, on April 1, 2014, the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93) was enacted, which specified that the Secretary may not adopt ICD–10 prior to October 1, 2015. On May 1, 2014, the Department announced that it expects to release a interim final rule in the near future that will include a new compliance date to require the use of ICD–10 beginning October 1, 2015. The rule will also require HIPAA covered entities to continue to use ICD–9–CM through September 30, 2015.

Accordingly, the updated schedule for the partial code freeze is as follows:

- The last regular annual updates to both ICD–9–CM and ICD–10 code sets were made on October 1, 2011.
 - On October 1, 2012, October 1, 2013, and October 1, 2014, there will be only limited code updates to both the ICD–9–CM and ICD–10 code sets to capture new technologies and diseases as required by section 1886(d)(5)(K) of the Act.
 - On October 1, 2015, there will be only limited code updates to ICD–10 code sets to capture new technologies and diagnoses as required by section 1886(d)(5)(K) of the Act. There will be no updates to ICD–9–CM, as it will no longer be used for reporting.
 - On October 1, 2016 (1 year after implementation of ICD–10), regular updates to ICD–10 will begin.
- The ICD–10 (previously ICD–9–CM) Coordination and Maintenance Committee announced that it would continue to meet twice a year during the freeze. At these meetings, the public will be encouraged to comment on whether or not requests for new

diagnosis and procedure codes should be created based on the need to capture new technology and new diseases. Any code requests that do not meet the criteria will be evaluated for implementation within ICD–10 one year after the implementation of ICD–10, once the partial freeze is ended.

Complete information on the partial code freeze and discussions of the issues at the Committee meetings can be found on the ICD–10 Coordination and Maintenance Committee Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/meetings.html>. A summary of the September 19, 2012 Committee meeting, along with both written and audio transcripts of this meeting, is posted on the Web site at: <http://www.cms.hhs.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials-Items/2012-09-19-MeetingMaterials.html>.

This partial code freeze has dramatically decreased the number of codes created each year as shown by the following information.

TOTAL NUMBER OF CODES AND CHANGES IN TOTAL NUMBER OF CODES PER FISCAL YEAR

ICD–9–CM codes			ICD–10–CM and ICD–10–PCS codes		
Fiscal year	No.	Change	Fiscal year	No.	Change
FY 2009 (October 1, 2008):			FY 2009:		
Diagnoses	14,025	348	ICD–10–CM	68,069	+5
Procedures	3,824	56	ICD–10–PCS	72,589	– 14,327
FY 2010 (October 1, 2009):			FY 2010:		
Diagnoses	14,315	290	ICD–10–CM	69,099	+1,030
Procedures	3,838	14	ICD–10–PCS	71,957	– 632
FY 2011 (October 1, 2010):			ICD–10–CM	69,368	+269
Diagnoses	14,432	117	ICD–10–PCS	72,081	+124
Procedures	3,859	21	FY 2012:		
FY 2012 (October 1, 2011):			ICD–10–CM	69,833	+465
Diagnoses	14,567	135	ICD–10–PCS	71,918	– 163
Procedures	3,877	18	FY 2013:		
FY 2013 (October 1, 2012):			ICD–10–CM	69,832	– 1
Diagnoses	14,567	0	ICD–10–PCS	71,920	+2
Procedures	3,878	1	FY 2014:		
FY 2014 (October 1, 2013):			ICD–10–CM	69,823	– 9
Diagnoses	14,567	0	ICD–10–PCS	71,924	+4
Procedures	3,882	4	FY 2015:		
FY 2015 (October 1, 2014):			ICD–10–CM	69,823	0
Diagnoses	14,567	0	ICD–10–PCS	71,924	0
Procedures	3,882	0			

As mentioned earlier, the public is provided the opportunity to comment on any requests for new diagnosis or procedure codes discussed at the ICD–10 Coordination and Maintenance Committee meeting. The public has supported only a limited number of new codes during the partial code freeze, as can be seen by data shown above. We have gone from creating several hundred new codes each year to

creating only a limited number of new ICD–9–CM and ICD–10 codes. At the September 18–19, 2013 and March 19–20, 2014 Committee meetings, we discussed any requests we had received for new ICD–10–CM diagnosis and ICD–10–PCS procedure codes that were to be implemented on October 1, 2014. We did not discuss ICD–9–CM codes. The public was given the opportunity to comment on whether or not new ICD–10–CM and ICD–10–

PCS codes should be created, based on the partial code freeze criteria. The public was to use the criteria as to whether codes were needed to capture new diagnoses or new technologies. If the codes do not meet those criteria for implementation during the partial code freeze, consideration was to be given as to whether the codes should be created after the partial code freeze ends one year after the implementation of ICD–10–CM/PCS. We invited public

comments on any code requests discussed at the September 18–19, 2013 and March 19–20, 2014 Committee meetings for implementation as part of the October 1, 2014 update. The deadline for commenting on code proposals discussed at the September 18–19, 2013 Committee meeting was November 15, 2013. The deadline for commenting on code proposals discussed at the March 19–20, 2014 Committee meeting was April 18, 2014.

14. Public Comments on Issues Not Addressed in the Proposed Rule

We received three public comments regarding MS–DRG issues that were outside of the scope of the proposals included in the FY 2014 IPPS/LTCH PPS proposed rule. Below we summarize these public comments. However, because we consider these public comments to be outside of the scope of the proposed rule, we are not responding to them in this final rule. As stated in section II.G.1.b. of the preamble of this final rule, we encourage individuals with comments about MS–DRG classifications to submit these comments no later than December 7 of each year so they can be considered for possible inclusion in the annual proposed rule and, if included, may be subjected to public review and comment. We will consider these public comments for possible proposals in future rulemaking as part of our annual review process.

a. Request for Review and MS–DRG Reassignment for ICD–9–CM Diagnosis Code 784.7 Reported With Procedure Codes 39.75 and 39.76

One commenter expressed concern regarding specific procedure codes that are assigned to MS–DRGs 981 through 983; 984 through 986; and 987 through 989 in relation to our discussion of the annual review of these MS–DRGs in section II.G.12. of the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28020). The commenter noted that the endovascular embolization of the arteries of the branches of the internal maxillary artery is frequently performed for intractable posterior epistaxis. The commenter stated that, currently, diagnosis code 784.7 (Epistaxis) reported with procedure codes 39.75 (Endovascular embolization or occlusion of vessel(s) of head or neck using bare coils) and 39.76 (Endovascular embolization or occlusion of vessel(s) of head or neck using bioactive coils) groups to MS–DRG 981 (Extensive O.R. Procedure Unrelated to Principal Diagnosis with MCC), MS–DRG 982 (Extensive O.R. Procedure Unrelated to Principal

Diagnosis with CC), and MS–DRG 983 (Extensive O.R. Procedure Unrelated to Principal Diagnosis without CC/MCC). The commenter indicated that it also found this grouping with ICD–10 diagnosis code R04.0 (Epistaxis) reported with artery occlusion procedure codes. The commenter requested that CMS review these groupings and consider the possibility of reassigning these procedure codes into a more specific MS–DRG.

We consider this public comment to be outside of the scope of the FY 2015 IPPS/LTCH PPS proposed rule and therefore are not addressing it in this final rule. However, we will consider this public comment for possible proposals in future rulemaking as part of our annual review process.

b. Coding for Extracorporeal Membrane Oxygenation Procedures (ECMO)

Several commenters expressed concern that hospitals may not be correctly reporting extracorporeal membrane oxygenation (ECMO) and percutaneous cardiopulmonary bypass procedures. The commenters requested that CMS inform hospitals that they should appropriately code each procedure separately because each code captures different procedures.

We consider this coding issue to be outside of the scope of the FY 2015 IPPS/LTCH PPS proposed rule. We refer commenters to the American Hospital Association's Central Office on Coding, which has responsibility for providing coding advice on such specific coding issues through its publication *Coding Clinic*.

c. Adding Severity Levels to MS–DRGs 245 through 251

One commenter recommended including additional severity levels under MS–DRG 245 (AICD Generator Procedures); MS–DRG 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with MCC or 4+ Vessels/Stents); MS–DRG 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC); MS–DRG 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents); MS–DRG 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC); MS–DRG 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent with MCC); and MS–DRG 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent without MCC).

We consider this public comment to be outside of the scope of the FY 2015 IPPS/LTCH PPS proposed rule, and

therefore are not addressing it in this final rule. However, we will consider the comment for possible proposals in future rulemaking as part of our annual review process.

H. Recalibration of the FY 2015 MS–DRG Relative Weights

1. Data Sources for Developing the Relative Weights

In developing the FY 2015 system of weights, we used two data sources: Claims data and cost report data. As in previous years, the claims data source is the MedPAR file. This file is based on fully coded diagnostic and procedure data for all Medicare inpatient hospital bills. The FY 2013 MedPAR data used in this final rule include discharges occurring on October 1, 2012, through September 30, 2013, based on bills received by CMS through March 31, 2014, from all hospitals subject to the IPPS and short-term, acute care hospitals in Maryland (which at that time were under a waiver from the IPPS under section 1814(b)(3) of the Act). The FY 2013 MedPAR file used in calculating the relative weights includes data for approximately 10,090,385 Medicare discharges from IPPS providers. Discharges for Medicare beneficiaries enrolled in a Medicare Advantage managed care plan are excluded from this analysis. These discharges are excluded when the MedPAR “GHO Paid” indicator field on the claim record is equal to “1” or when the MedPAR DRG payment field, which represents the total payment for the claim, is equal to the MedPAR “Indirect Medical Education (IME)” payment field, indicating that the claim was an “IME only” claim submitted by a teaching hospital on behalf of a beneficiary enrolled in a Medicare Advantage managed care plan. In addition, the March 31, 2014 update of the FY 2013 MedPAR file complies with version 5010 of the X12 HIPAA Transaction and Code Set Standards, and includes a variable called “claim type.” Claim type “60” indicates that the claim was an inpatient claim paid as fee-for-service. Claim types “61,” “62,” “63,” and “64” relate to encounter claims, Medicare Advantage IME claims, and HMO no-pay claims. Therefore, the calculation of the relative weights for FY 2015 also excludes claims with claim type values not equal to “60.” The data exclude CAHs, including hospitals that subsequently became CAHs after the period from which the data were taken. We note that the FY 2015 relative weights are based on the ICD–9–CM diagnoses and procedure codes from the MedPAR

claims data, grouped through the ICD-9-CM version of the FY 2015 GROUPER (Version 32). The second data source used in the cost-based relative weighting methodology is the Medicare cost report data files from the HCRIS. Normally, we use the HCRIS dataset that is 3 years prior to the IPPS fiscal year. Specifically, we used cost report data from the March 31, 2014 update of the FY 2012 HCRIS for calculating the FY 2015 cost-based relative weights.

2. Methodology for Calculation of the Relative Weights

As we explain in section II.E.2. of the preamble of this final rule, we are calculating the FY 2015 relative weights based on 19 CCRs, as we did for FY 2014. The methodology we used to calculate the FY 2015 MS-DRG cost-based relative weights based on claims data in the FY 2013 MedPAR file and data from the FY 2012 Medicare cost reports is as follows:

- To the extent possible, all the claims were regrouped using the FY 2015 MS-DRG classifications discussed in sections II.B. and II.G. of the preamble of this final rule.

- The transplant cases that were used to establish the relative weights for heart and heart-lung, liver and/or intestinal, and lung transplants (MS-DRGs 001, 002, 005, 006, and 007, respectively) were limited to those Medicare-approved transplant centers that have cases in the FY 2012 MedPAR file. (Medicare coverage for heart, heart-lung, liver and/or intestinal, and lung transplants is limited to those facilities that have received approval from CMS as transplant centers.)

- Organ acquisition costs for kidney, heart, heart-lung, liver, lung, pancreas, and intestinal (or multivisceral organs) transplants continue to be paid on a reasonable cost basis. Because these acquisition costs are paid separately from the prospective payment rate, it is necessary to subtract the acquisition charges from the total charges on each transplant bill that showed acquisition charges before computing the average cost for each MS-DRG and before eliminating statistical outliers.

- Claims with total charges or total lengths of stay less than or equal to zero were deleted. Claims that had an amount in the total charge field that differed by more than \$10.00 from the sum of the routine day charges, intensive care charges, pharmacy charges, special equipment charges, therapy services charges, operating

room charges, cardiology charges, laboratory charges, radiology charges, other service charges, labor and delivery charges, inhalation therapy charges, emergency room charges, blood charges, and anesthesia charges were also deleted.

- At least 92.2 percent of the providers in the MedPAR file had charges for 14 of the 19 cost centers. All claims of providers that did not have charges greater than zero for at least 14 of the 19 cost centers were deleted. In other words, a provider must have no more than five blank cost centers. If a provider did not have charges greater than zero in more than five cost centers, the claims for the provider were deleted. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50551) for the edit threshold related to FY 2014 and prior fiscal years).

- Statistical outliers were eliminated by removing all cases that were beyond 3.0 standard deviations from the geometric mean of the log distribution of both the total charges per case and the total charges per day for each MS-DRG.

- Effective October 1, 2008, because hospital inpatient claims include a POA indicator field for each diagnosis present on the claim, only for purposes of relative weight-setting, the POA indicator field was reset to "Y" for "Yes" for all claims that otherwise have an "N" (No) or a "U" (documentation insufficient to determine if the condition was present at the time of inpatient admission) in the POA field.

Under current payment policy, the presence of specific HAC codes, as indicated by the POA field values, can generate a lower payment for the claim. Specifically, if the particular condition is present on admission (that is, a "Y" indicator is associated with the diagnosis on the claim), it is not a HAC, and the hospital is paid for the higher severity (and, therefore, the higher weighted MS-DRG). If the particular condition is not present on admission (that is, an "N" indicator is associated with the diagnosis on the claim) and there are no other complicating conditions, the DRG GROUPER assigns the claim to a lower severity (and, therefore, the lower weighted MS-DRG) as a penalty for allowing a Medicare inpatient to contract a HAC. While the POA reporting meets policy goals of encouraging quality care and generates program savings, it presents an issue for the relative weight-setting process. Because cases identified as HACs are

likely to be more complex than similar cases that are not identified as HACs, the charges associated with HAC cases are likely to be higher as well. Therefore, if the higher charges of these HAC claims are grouped into lower severity MS-DRGs prior to the relative weight-setting process, the relative weights of these particular MS-DRGs would become artificially inflated, potentially skewing the relative weights. In addition, we want to protect the integrity of the budget neutrality process by ensuring that, in estimating payments, no increase to the standardized amount occurs as a result of lower overall payments in a previous year that stem from using weights and case-mix that are based on lower severity MS-DRG assignments. If this would occur, the anticipated cost savings from the HAC policy would be lost.

To avoid these problems, we reset the POA indicator field to "Y" only for relative weight-setting purposes for all claims that otherwise have an "N" or a "U" in the POA field. This resetting "forced" the more costly HAC claims into the higher severity MS-DRGs as appropriate, and the relative weights calculated for each MS-DRG more closely reflect the true costs of those cases.

Once the MedPAR data were trimmed and the statistical outliers were removed, the charges for each of the 19 cost groups for each claim were standardized to remove the effects of differences in area wage levels, IME and DSH payments, and for hospitals located in Alaska and Hawaii, the applicable cost-of-living adjustment. Because hospital charges include charges for both operating and capital costs, we standardized total charges to remove the effects of differences in geographic adjustment factors, cost-of-living adjustments, and DSH payments under the capital IPPS as well. Charges were then summed by MS-DRG for each of the 19 cost groups so that each MS-DRG had 19 standardized charge totals. These charges were then adjusted to cost by applying the national average CCRs developed from the FY 2012 cost report data.

The 19 cost centers that we used in the relative weight calculation are shown in the following table. The table shows the lines on the cost report and the corresponding revenue codes that we used to create the 19 national cost center CCRs.

Cost center group name (19 total)	MedPAR charge field	Revenue codes contained in MedPAR charge field	Cost report line description	Cost from HCRIS (Worksheet C, Part 1, Column 5 and line number) Form CMS-2552-10	Charges from HCRIS (Worksheet C, Part 1, Column 6 & 7 and line number) Form CMS-2552-10	Medicare charges from HCRIS (Worksheet D-3, Column & line number) Form CMS-2552-10

We refer readers to the FY 2009 IPPS/LTCH PPS final rule (73 FR 48462) for a discussion on the revenue codes included in the Supplies and Equipment and Implantable Devices CCRs, respectively.

3. Development of National Average CCRs

We developed the national average CCRs as follows:

Using the FY 2012 cost report data, we removed CAHs, Indian Health Service hospitals, all-inclusive rate hospitals, and cost reports that represented time periods of less than 1 year (365 days). We included hospitals located in Maryland because we include their charges in our claims database. We then created CCRs for each provider for each cost center (see prior table for line items used in the calculations) and removed any CCRs that were greater than 10 or less than 0.01. We normalized the departmental CCRs by dividing the CCR for each department by the total CCR for the hospital for the purpose of trimming the data. We then took the logs of the normalized cost center CCRs and removed any cost center CCRs where the log of the cost center CCR was greater or less than the mean log plus/minus 3 times the standard deviation for the log of that cost center CCR. Once the cost report data were trimmed, we calculated a Medicare-specific CCR. The Medicare-specific CCR was determined by taking the Medicare charges for each line item from Worksheet D-3 and deriving the Medicare-specific costs by applying the hospital-specific departmental CCRs to the Medicare-specific charges for each line item from Worksheet D-3. Once each hospital's Medicare-specific costs were established, we summed the total Medicare-specific costs and divided by the sum of the total Medicare-specific charges to produce national average, charge-weighted CCRs.

After we multiplied the total charges for each MS-DRG in each of the 19 cost centers by the corresponding national

average CCR, we summed the 19 "costs" across each MS-DRG to produce a total standardized cost for the MS-DRG. The average standardized cost for each MS-DRG was then computed as the total standardized cost for the MS-DRG divided by the transfer-adjusted case count for the MS-DRG. The average cost for each MS-DRG was then divided by the national average standardized cost per case to determine the relative weight.

The FY 2015 cost-based relative weights were then normalized by an adjustment factor of 1.645837 so that the average case weight after recalibration was equal to the average case weight before recalibration. The normalization adjustment is intended to ensure that recalibration by itself neither increases nor decreases total payments under the IPPS, as required by section 1886(d)(4)(C)(iii) of the Act.

The 19 national average CCRs for FY 2015 are as follows:

Group	CCR
Routine Days	0.489
Intensive Days	0.407
Drugs	0.192
Supplies & Equipment	0.292
Implantable Devices	0.349
Therapy Services	0.344
Laboratory	0.128
Operating Room	0.212
Cardiology	0.123
Cardiac Catheterization	0.133
Radiology	0.165
MRIs	0.087
CT Scans	0.043
Emergency Room	0.195
Blood and Blood Products	0.360
Other Services	0.405
Labor & Delivery	0.398
Inhalation Therapy	0.181
Anesthesia	0.114

Since FY 2009, the relative weights have been based on 100 percent cost weights based on our MS-DRG grouping system.

When we recalibrated the DRG weights for previous years, we set a threshold of 10 cases as the minimum number of cases required to compute a

reasonable weight. In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to use that same case threshold in recalibrating the MS-DRG relative weights for FY 2015. Using data from the FY 2013 MedPAR file, there were 8 MS-DRGs that contain fewer than 10 cases. Under the MS-DRGs, we have fewer low-volume DRGs than under the CMS DRGs because we no longer have separate DRGs for patients aged 0 to 17 years. With the exception of newborns, we previously separated some DRGs based on whether the patient was age 0 to 17 years or age 17 years and older. Other than the age split, cases grouping to these DRGs are identical. The DRGs for patients aged 0 to 17 years generally have very low volumes because children are typically ineligible for Medicare. In the past, we have found that the low volume of cases for the pediatric DRGs could lead to significant year-to-year instability in their relative weights. Although we have always encouraged non-Medicare payers to develop weights applicable to their own patient populations, we have received frequent complaints from providers about the use of the Medicare relative weights in the pediatric population. We believe that eliminating this age split in the MS-DRGs will provide more stable payment for pediatric cases by determining their payment using adult cases that are much higher in total volume. Newborns are unique and require separate MS-DRGs that are not mirrored in the adult population. Therefore, it remains necessary to retain separate MS-DRGs for newborns. All of the low-volume MS-DRGs listed below are for newborns. In FY 2015, because we do not have sufficient MedPAR data to set accurate and stable cost relative weights for these low-volume MS-DRGs, we proposed to compute relative weights for the low-volume MS-DRGs by adjusting their final FY 2014 relative weights by the percentage change in the average weight of the cases in other MS-DRGs. The crosswalk table is shown below:

Low-volume MS-DRG	MS-DRG title	Crosswalk to MS-DRG
768	Vaginal Delivery with O.R. Procedure Except Sterilization and/or D&C.	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
789	Neonates, Died or Transferred to Another Acute Care Facility.	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
790	Extreme Immaturity or Respiratory Distress Syndrome, Neonate.	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
791	Prematurity with Major Problems	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
792	Prematurity without Major Problems	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
793	Full-Term Neonate with Major Problems ..	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).

Low-volume MS-DRG	MS-DRG title	Crosswalk to MS-DRG
794	Neonate with Other Significant Problems	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).
795	Normal Newborn	Final FY 2014 relative weight (adjusted by percent change in average weight of the cases in other MS-DRGs).

We did not receive any public comments on this proposal and, therefore, are finalizing it for FY 2015 as proposed.

4. Bundled Payments for Care Improvement (BPCI) Initiative

The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. On January 31, 2013, CMS announced the health care organizations selected to participate in the BPCI initiative. For additional information on the BPCI initiative, we refer readers to the CMS' Center for Medicare and Medicaid Innovation's Web site at <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html> and to section IV.H.4. of the preamble of the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343) for a discussion on the BPCI initiative.

In the FY 2013 IPPS/LTCH PPS final rule, for FY 2013 and subsequent fiscal years, we finalized a policy to treat hospitals that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process without regard to a hospital's participation within these bundled payment models (that is, as if a hospital were not participating in those models under the BPCI initiative). Therefore, for FY 2015, we proposed to continue to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals participating in the BPCI initiative in our ratesetting process.

Comment: One commenter was concerned about the policy to treat all providers that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and

ratesetting process without regard to a hospital's participation within these bundled payment models. The commenter stated that while it is unlikely to have a demonstrable effect in FY 2015, the BPCI initiative has just begun and has few participants compared to the total number of PPS hospitals. The commenter further stated that the cohort is expected to expand dramatically, given the additional round of applications, and it expected participants to focus their cost reduction activities in select MS-DRGs, which could skew specific weights and inappropriately shift payments to other MS-DRGs. The commenter added that providers that are not part of the initiative cannot be expected to reach the same performance levels without the same tools available within the BPCI. The commenter recommended that CMS reconsider removing BPCI participants from the IPPS relative weight setting process.

Response: As the commenter stated, the BPCI initiative is unlikely to have a demonstrable effect for FY 2015. Accordingly, we are finalizing our proposal to continue to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations for FY 2015. However, we will monitor the possible impact that hospitals enrolled in the BPCI initiative may have on the MS-DRG relative weights in future fiscal years.

I. Add-On Payments for New Services and Technologies

1. Background

Sections 1886(d)(5)(K) and (L) of the Act establish a process of identifying and ensuring adequate payment for new medical services and technologies (sometimes collectively referred to in this section as "new technologies") under the IPPS. Section 1886(d)(5)(K)(vi) of the Act specifies that a medical service or technology will be considered new if it meets criteria established by the Secretary after notice and opportunity for public comment. Section 1886(d)(5)(K)(ii)(I) of the Act specifies that a new medical service or technology may be considered for new technology add-on payment if, "based

on the estimated costs incurred with respect to discharges involving such service or technology, the DRG prospective payment rate otherwise applicable to such discharges under this subsection is inadequate." We note that beginning with discharges occurring in FY 2008, CMS transitioned from CMS-DRGs to MS-DRGs.

The regulations at 42 CFR 412.87 implement these provisions and specify three criteria for a new medical service or technology to receive the additional payment: (1) The medical service or technology must be new; (2) the medical service or technology must be costly such that the DRG rate otherwise applicable to discharges involving the medical service or technology is determined to be inadequate; and (3) the service or technology must demonstrate a substantial clinical improvement over existing services or technologies. Below we highlight some of the major statutory and regulatory provisions relevant to the new technology add-on payment criteria as well as other information. For a complete discussion on the new technology add-on payment criteria, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51572 through 51574).

Under the first criterion, as reflected in § 412.87(b)(2), a specific medical service or technology will be considered "new" for purposes of new medical service or technology add-on payments until such time as Medicare data are available to fully reflect the cost of the technology in the MS-DRG weights through recalibration. We note that we do not consider a service or technology to be new if it is substantially similar to one or more existing technologies. That is, even if a technology receives a new FDA approval, it may not necessarily be considered "new" for purposes of new technology add-on payments if it is "substantially similar" to a technology that was approved by FDA and has been on the market for more than 2 to 3 years. In the FY 2006 IPPS final rule (70 FR 47351) and the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43813 and 43814), we explained our policy regarding substantial similarity in detail.

Under the second criterion, § 412.87(b)(3) further provides that, to be eligible for the add-on payment for

new medical services or technologies, the MS-DRG prospective payment rate otherwise applicable to the discharge involving the new medical services or technologies must be assessed for adequacy. Under the cost criterion, to assess the adequacy of payment for a new technology paid under the applicable MS-DRG prospective payment rate, we evaluate whether the charges for cases involving the new technology exceed certain threshold amounts. Table 10 that was released with the FY 2014 IPPS/LTCH PPS final rule contains the final thresholds that we use to evaluate applications for new technology add-on payments for FY 2015. We refer readers to the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2014-IPPS-Final-Rule-Home-Page.html> for a complete viewing of Table 10 from the FY 2014 IPPS/LTCH PPS final rule.

In the September 7, 2001 final rule that established the new technology add-on payment regulations (66 FR 46917), we discussed the issue of whether the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule at 45 CFR Parts 160 and 164 applies to claims information that providers submit with applications for new technology add-on payments. We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51573) for complete information on this issue.

Under the third criterion, § 412.87(b)(1) of our existing regulations provides that a new technology is an appropriate candidate for an additional payment when it represents “an advance that substantially improves, relative to technologies previously available, the diagnosis or treatment of Medicare beneficiaries.” For example, a new technology represents a substantial clinical improvement when it reduces mortality, decreases the number of hospitalizations or physician visits, or reduces recovery time compared to the technologies previously available. (We refer readers to the September 7, 2001 final rule for a more detailed discussion of this criterion (66 FR 46902).)

The new medical service or technology add-on payment policy under the IPPS provides additional payments for cases with relatively high costs involving eligible new medical services or technologies while preserving some of the incentives inherent under an average-based prospective payment system. The payment mechanism is based on the cost to hospitals for the new medical service or technology. Under § 412.88, if the costs of the discharge (determined

by applying cost-to-charge ratios (CCRs) as described in § 412.84(h)) exceed the full DRG payment (including payments for IME and DSH, but excluding outlier payments), Medicare will make an add-on payment equal to the lesser of: (1) 50 percent of the estimated costs of the new technology (if the estimated costs for the case including the new technology exceed Medicare’s payment); or (2) 50 percent of the difference between the full DRG payment and the hospital’s estimated cost for the case. Unless the discharge qualifies for an outlier payment, the additional Medicare payment is limited to the full MS-DRG payment plus 50 percent of the estimated costs of the new technology.

Section 503(d)(2) of Public Law 108-173 provides that there shall be no reduction or adjustment in aggregate payments under the IPPS due to add-on payments for new medical services and technologies. Therefore, in accordance with section 503(d)(2) of Public Law 108-173, add-on payments for new medical services or technologies for FY 2005 and later years have not been subjected to budget neutrality.

In the FY 2009 IPPS final rule (73 FR 48561 through 48563), we modified our regulations at § 412.87 to codify our longstanding practice of how CMS evaluates the eligibility criteria for new medical service or technology add-on payment applications. That is, we first determine whether a medical service or technology meets the newness criterion, and only if so, do we then make a determination as to whether the technology meets the cost threshold and represents a substantial clinical improvement over existing medical services or technologies. We also amended § 412.87(c) to specify that all applicants for new technology add-on payments must have FDA approval or clearance for their new medical service or technology by July 1 of each year prior to the beginning of the fiscal year that the application is being considered.

The Council on Technology and Innovation (CTI) at CMS oversees the agency’s cross-cutting priority on coordinating coverage, coding and payment processes for Medicare with respect to new technologies and procedures, including new drug therapies, as well as promoting the exchange of information on new technologies between CMS and other entities. The CTI, composed of senior CMS staff and clinicians, was established under section 942(a) of Public Law 108-173. The Council is co-chaired by the Director of the Center for Clinical Standards and Quality (CCSQ) and the Director of the Center for

Medicare (CM), who is also designated as the CTI’s Executive Coordinator.

The specific processes for coverage, coding, and payment are implemented by CM, CCSQ, and the local claims-payment contractors (in the case of local coverage and payment decisions). The CTI supplements, rather than replaces, these processes by working to assure that all of these activities reflect the agency-wide priority to promote high-quality, innovative care. At the same time, the CTI also works to streamline, accelerate, and improve coordination of these processes to ensure that they remain up to date as new issues arise. To achieve its goals, the CTI works to streamline and create a more transparent coding and payment process, improve the quality of medical decisions, and speed patient access to effective new treatments. It is also dedicated to supporting better decisions by patients and doctors in using Medicare-covered services through the promotion of better evidence development, which is critical for improving the quality of care for Medicare beneficiaries.

To improve the understanding of CMS’ processes for coverage, coding, and payment and how to access them, the CTI has developed an “Innovator’s Guide” to these processes. The intent is to consolidate this information, much of which is already available in a variety of CMS documents and in various places on the CMS Web site, in a user-friendly format. This guide was published in August 2008 and is available on the CMS Web site at: http://www.cms.gov/CouncilonTechInnov/Downloads/InnovatorsGuide5_10_10.pdf.

As we indicated in the FY 2009 IPPS final rule (73 FR 48554), we invite any product developers or manufacturers of new medical technologies to contact the agency early in the process of product development if they have questions or concerns about the evidence that would be needed later in the development process for the agency’s coverage decisions for Medicare.

The CTI aims to provide useful information on its activities and initiatives to stakeholders, including Medicare beneficiaries, advocates, medical product manufacturers, providers, and health policy experts. Stakeholders with further questions about Medicare’s coverage, coding, and payment processes, or who want further guidance about how they can navigate these processes, can contact the CTI at CTI@cms.hhs.gov.

We note that applicants for add-on payments for new medical services or technologies for FY 2016 must submit a

formal request, including a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement, along with a significant sample of data to demonstrate that the medical service or technology meets the high-cost threshold. Complete application information, along with final deadlines for submitting a full application, will be posted as it becomes available on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/newtech.html>. To allow interested parties to identify the new medical services or technologies under review before the publication of the proposed rule for FY 2016, the CMS Web site also will post the tracking forms completed by each applicant.

2. Public Input Before Publication of a Notice of Proposed Rulemaking on Add-On Payments

Section 1886(d)(5)(K)(viii) of the Act, as amended by section 503(b)(2) of Public Law 108–173, provides for a mechanism for public input before publication of a notice of proposed rulemaking regarding whether a medical service or technology represents a substantial clinical improvement or advancement. The process for evaluating new medical service and technology applications requires the Secretary to—

- Provide, before publication of a proposed rule, for public input regarding whether a new service or technology represents an advance in medical technology that substantially improves the diagnosis or treatment of Medicare beneficiaries;
- Make public and periodically update a list of the services and technologies for which applications for add-on payments are pending;
- Accept comments, recommendations, and data from the public regarding whether a service or technology represents a substantial clinical improvement; and
- Provide, before publication of a proposed rule, for a meeting at which organizations representing hospitals, physicians, manufacturers, and any other interested party may present comments, recommendations, and data regarding whether a new medical service or technology represents a substantial clinical improvement to the clinical staff of CMS.

In order to provide an opportunity for public input regarding add-on payments for new medical services and

technologies for FY 2015 prior to publication of the FY 2015 IPPS/LTCH PPS proposed rule, we published a document in the **Federal Register** on November 29, 2013 (78 FR 71555 through 71557), and held a town hall meeting at the CMS Headquarters Office in Baltimore, MD, on February 12, 2014. In the announcement notice for the meeting, we stated that the opinions and alternatives provided during the meeting would assist us in our evaluations of applications by allowing public discussion of the substantial clinical improvement criterion for each of the FY 2015 new medical service and technology add-on payment applications before the publication of the FY 2015 proposed rule.

Approximately 91 individuals registered to attend the town hall meeting in person, while additional individuals listened over an open telephone line. We also live-streamed the town hall meeting and posted the town hall on the CMS YouTube Web page at: http://www.youtube.com/watch?v=WXYr_TILfKo&list=TLiu1B_AxXsinTW6EEn4BVUdR4iEM61eV4. We considered each applicant's presentation made at the town hall meeting, as well as written comments submitted on the applications that were received by the due date of January 21, 2014, in our evaluation of the new technology add-on payment applications for FY 2015 in the proposed rule.

In response to the published document and the New Technology Town Hall meeting, we received written comments regarding the applications for FY 2015 new technology add-on payments. We summarized these comments in the preamble of the proposed rule or, if applicable, indicated that there were no comments received, at the end of each discussion of the individual applications in the proposed rule.

A number of attendees at the New Technology Town Hall meeting provided comments that were unrelated to the “substantial clinical improvement” criterion. As explained above and in the **Federal Register** document announcing the New Technology Town Hall meeting (78 FR 71555 through 71557), the purpose of the meeting was specifically to discuss the substantial clinical improvement criterion in regard to pending new technology add-on payment applications for FY 2015. Therefore, we did not summarize those comments in the proposed rule. Commenters were informed that they were welcome to resubmit these comments during the comment period in response to

proposals presented in the proposed rule. We summarize and respond to these comments under the applicable discussions within this final rule.

We also received public comments in response to the proposed rule relating to topics such as marginal cost factors for new technology add-on payments, mapping new technologies to the appropriate MS–DRG, deeming a new technology a substantial clinical improvement if it receives HDE approval from the FDA, and the use of external data in determining the cost threshold. Because we did not request public comments nor propose to make any changes to any of the issues above, we are not summarizing these public comments nor responding to them in this final rule.

Another commenter asked CMS to consider the implications of the new technology add-on payment policy on antibiotics that fall under the current IPPS and, in particular, the Hospital VBP Program for which the inclusion of the MRSA bacteremia measure and the *C-difficile* measure are proposed. The commenter was concerned that current payment policy will be inadequate and place further financial pressure on hospitals. The commenter stated that CMS must consider the evolving payment paradigm facing inpatient facilities (IQR, HAC, and VBP) and ensure that these various policies do not have competing goals. Although we agree with the commenter that CMS should consider the evolving payment paradigm facing inpatient facilities regarding payment reductions under the Hospital IQR Program, the HAC Reduction Program, and the Hospital VBP Program and ensure that these various policies do not have competing goals, we are not providing a detailed response because we did not present any policy proposals concerning these issues.

Comment: One commenter expressed concern that services identified as appropriate for new technology add-on payments do not receive the new technology add-on payment even when the claims for these services are correctly submitted to the Medicare administrative contractors (MACs). The commenter stated that the MACs are often unable to explain the reason for the failure to include the new technology add-on payment or answer inquiries regarding this issue. The commenter recommended that CMS provide additional education to the MACs regarding CMS regulations related to services available for new technology add-on payments.

Response: We encourage providers to work with their MACs to ensure that the

new technology add-on payments are accurately and appropriately made. If MACs are having any issues, they can contact the CMS Central Office for further assistance. Also, the regulations at § 412.88 explain how the new technology add-on payments are made. We note that, under certain conditions, even if an approved new technology was billed on the claim, a new technology add-on payment may not be made, such as if the total payment for the claim without the new technology add-on payment exceeds the costs of the case. In addition, each year after the final rule, CMS issues a transmittal to the MACs listing the eligibility and maximum add-on payment for each approved new technology.

3. FY 2015 Status of Technologies Approved for FY 2014 Add-On Payments

a. Glucarpidase (Trade Brand Voraxaze®)

BTG International, Inc. submitted an application for new technology add-on payments for Glucarpidase (trade brand Voraxaze®) for FY 2013. Glucarpidase is used in the treatment of patients who have been diagnosed with toxic methotrexate (MTX) concentrations as a result of renal impairment. The administration of Glucarpidase causes a rapid and sustained reduction of toxic MTX concentrations.

Voraxaze® was approved by the FDA on January 17, 2012. Beginning in 1993, certain patients could obtain expanded access for treatment use to Voraxaze® as an investigational drug. Since 2007, the applicant has been authorized to recover the costs of making Voraxaze® available through its expanded access program. We describe expanded access for treatment use of investigational drugs and authorization to recover certain costs of investigational drugs in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53346 through 53350). Voraxaze® was available on the market in the United States as a commercial product to the larger population as of April 30, 2012. In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27936 through 27939), we expressed concerns about whether Voraxaze® could be considered new for FY 2013. After consideration of all of the public comments received, in the FY 2013 IPPS/LTCH PPS final rule, we stated that we considered Voraxaze® to be “new” as of April 30, 2012, which is the date of market availability.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology payments for Voraxaze® and consideration of the public comments we received in

response to the FY 2013 IPPS/LTCH PPS proposed rule, we approved Voraxaze® for new technology add-on payments for FY 2013. Cases of Voraxaze® are identified with ICD-9-CM procedure code 00.95 (Injection or infusion of glucarpidase). The cost of Voraxaze® is \$22,500 per vial. The applicant stated that an average of four vials is used per Medicare beneficiary. Therefore, the average cost per case for Voraxaze® is \$90,000 (\$22,500 × 4). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for Voraxaze® is \$45,000 per case.

As stated above, the new technology add-on payment regulations provide that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (§ 412.87(b)(2)). Our practice has been to begin and end new technology add-on payments on the basis of a fiscal year, and we have generally followed a guideline that uses a 6-month window before and after the start of the fiscal year to determine whether to extend the new technology add-on payment for an additional fiscal year. In general, we extend add-on payments for an additional year only if the 3-year anniversary date of the product's entry on the market occurs in the latter half of the fiscal year (70 FR 47362).

With regard to the newness criterion for Voraxaze®, as stated above, we consider the beginning of the newness period to commence when Voraxaze® was first available on the market on April 30, 2012. Because the 3-year anniversary date for Voraxaze® will occur in the latter half of FY 2015 (April 30, 2015), we proposed to continue new technology add-on payments for this technology for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: Several public commenters supported the proposal to continue new technology add-on payments for Voraxaze® for FY 2015.

Response: We appreciate the commenters' support. Because the 3-year anniversary date for Voraxaze® will occur in the latter half of FY 2015 (April 30, 2015), we are finalizing our proposal to continue to make new technology add-on payments for Voraxaze® for FY 2015.

b. DIFICID™ (Fidaxomicin) Tablets

Optimer Pharmaceuticals, Inc. submitted an application for new technology add-on payments for FY 2013 for the use of DIFICID™ tablets. As indicated on the labeling submitted to the FDA, the applicant noted that Fidaxomicin is taken twice a day as a daily dosage (200 mg tablet twice daily = 400 mg per day) as an oral antibiotic. The applicant asserted that Fidaxomicin provides potent bactericidal activity against *C. Diff.*, and moderate bactericidal activity against certain other gram-positive organisms, such as enterococcus and staphylococcus. Unlike other antibiotics used to treat CDAD, the applicant noted that the effects of Fidaxomicin preserve bacteroides organisms in the fecal flora. These are markers of normal anaerobic microflora. The applicant asserted that this helps prevent pathogen introduction or persistence, which potentially inhibits the re-emergence of *C. Diff.*, and reduces the likelihood of overgrowths as a result of vancomycin-resistant Enterococcus (VRE). Because of this narrow spectrum of activity, the applicant asserted that Fidaxomicin does not alter this native intestinal microflora.

In the FY 2013 IPPS/LTCH PPS proposed rule (77 FR 27939 through 27941), we expressed concern that DIFICID™ may not be eligible for new technology add-on payments because eligibility is limited to new technologies associated with procedures described by ICD-9-CM codes. We further stated that drugs that are only taken orally (such as DIFICID™) may not be eligible for consideration for new technology add-on payments because there is no procedure associated with these drugs and, therefore, no ICD-9-CM code(s). In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53350 through 53358), after consideration of the public comments received, we revised our policy to allow the use of National Drug Codes (NDCs) to identify oral medications that have no inpatient procedure for the purposes of new technology add-on payments. The revised policy is effective for payments for discharges occurring on or after October 1, 2012. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on this issue.

With regard to the newness criterion, Fidaxomicin was approved by the FDA on May 27, 2011, for the treatment of CDAD in adult patients, 18 years of age and older. In the FY 2013 IPPS/LTCH PPS final rule, we established that the beginning of the newness period for this technology is its FDA approval date of May 27, 2011.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for DIFICID™ and consideration of the public comments we received in response to the FY 2013 IPPS/LTCH PPS proposed rule, we approved DIFICID™ for new technology add-on payments for FY 2013. Cases of DIFICID™ are identified with ICD-9-CM diagnosis code 008.45 (Intestinal infection due to *Clostridium difficile*) in combination with NDC code 52015-0080-01. Providers must report the NDC on the 837i Health Care Claim Institutional form (in combination with ICD-9-CM diagnosis code 008.45) in order to receive the new technology add-on payment. According to the applicant, the cost of DIFICID™ is \$2,800 for a 10-day dosage. The average cost per day for DIFICID™ is \$280 (\$2,800/10). Cases of DIFICID™ within the inpatient setting typically incur an average dosage of 6.2 days, which results in an average cost per case for DIFICID™ of \$1,736 (\$280 × 6.2). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum new technology add-on payment for DIFICID™ is \$868.

As stated above, the new technology add-on payment regulations provide that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (§ 412.87(b)(2)).

The manufacturer commented through a letter to CMS, prior to the publication of the proposed rule, requesting that CMS extend the eligibility for a third year of new technology add-on payments for DIFICID™ in FY 2015. The manufacturer maintained that the technology still meets all three criteria for new technology add-on payments. Regarding the substantial clinical improvement criterion, the applicant stated that DIFICID™ continues to remain the only FDA-approved treatment to demonstrate substantial clinical improvement over existing therapies. No new treatments for CDAD have been approved by the FDA since DIFICID™. The applicant further stated that a third year of new technology add-on payments for DIFICID™ would continue to reduce access barriers in the acute care hospital inpatient setting, which would support the appropriate use of DIFICID™, a treatment that offers

a substantial clinical improvement over existing therapies.

With respect to the cost criterion, the applicant stated that DIFICID™ continues to meet the cost criterion. Using claims data from the FY 2012 MedPAR file, the applicant provided updated data from the two analyses described in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53350 through 53358), and demonstrated that the average case-weighted standardized charge per case exceeded the average case-weighted thresholds under both analyses. The applicant stated that the new technology add-on payment is intended to offer additional payments to support patient access and appropriate use of new technologies for a period of time until the MS-DRGs are adjusted to reflect the cost of the new technology. The applicant believed that the analyses conducted with the most recent MedPAR claims data available demonstrate that the MS-DRG recalibrations are insufficient to accommodate the cost associated with CDAD and new technologies to treat CDAD under the IPPS within the allotted timeframe of 2 years. According to the applicant, these payment amounts remain an obstacle for the appropriate use of new technologies for CDAD that demonstrate substantial clinical improvement over existing treatments, such as DIFICID™. The applicant concluded that a third year of new technology add-on payments for DIFICID™ is needed to allow sufficient data for future MS-DRG recalibration analyses.

With regard to newness criterion, the manufacturer commented that it believed that the technology still meets the newness criterion for the following reason: § 412.87(b)(2) states that “A medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the International Classification of Diseases, Ninth Revision, Clinical Modification (ICD-9-CM) code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). After CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered ‘new’ under the criterion of this section.” The manufacturer noted that DIFICID™ was not assigned an ICD-9-CM procedure code and DIFICID™ is the first product for which no inpatient procedure is associated to receive a new technology add-on payment since the

implementation of the new technology add-on payment policy.

The manufacturer also cited the FY 2013 IPPS/LTCH PPS final rule (77 FR 53352), which indicated that “Hospitals currently code and report procedures and more invasive services such as surgeries, infusion of drugs, and specialized procedures such as cardiac catheterizations. Hospitals neither code nor report self-administered drugs.” Therefore, the manufacturer contended that, as an oral therapy, neither DIFICID™ nor its administration was assigned an ICD-9-CM procedure code and, therefore, the technology should still be eligible for the new technology add-on payments.

The manufacturer further noted that, in the FY 2013 IPPS/LTCH PPS final rule, because an ICD-9-CM procedure code for the administration of an oral medication did not exist and hospitals had no other mechanism to report the use of DIFICID™, for FY 2013, CMS instructed hospitals to report the DIFICID™ NDC on hospital inpatient claims to receive the new technology add-on payment for DIFICID™. Prior to October 1, 2012, hospitals did not use NDCs on hospital inpatient claims, which prevented CMS from isolating DIFICID™ cases and their associated costs. The manufacturer further stated that the NDC methodology was a bold change in policy and inpatient billing processes, and it stands to reason that, because of hospitals unfamiliarity with reporting NDCs on inpatient claims, hospitals’ use of the DIFICID™ NDC would greatly lag behind the traditional use of ICD-9-CM procedure codes. As such, the manufacturer reasoned that any lag in hospital reporting would directly impact CMS’ ability to track and analyze the cost data associated with DIFICID™ cases.

The manufacturer also noted that on August 31, 2012, CMS issued Transmittal 2539, which is a change request for MACs concerning updates for the upcoming fiscal year. The manufacturer stated that because the new technology add-on heading was omitted in the transmittal, this change request did not highlight the NDC billing approach to ensure that hospitals recognized the important change, which may have caused hospitals to overlook the claim reporting instructions for DIFICID™.

The manufacturer added that Transmittal 2539 and a Medicare Learning Network® Matters (MLN) article were rescinded and replaced by Transmittal 2627 on January 4, 2013. The manufacturer noted that among CMS’ reasons for replacing the transmittal was to insert the omitted

new technology add-on section heading. The manufacturer stated that, although the original transmittal further supports that collection of DIFICID™-specific data did not begin until at least October 1, 2012, CMS' reissuance of the claims processing instructions, and the missing header in the initial instructions, effectively delayed implementation of the new technology add-on payments for 3 months past the October 2012 beginning date. The manufacturer also believed that the need to replace the transmittal underlies hospitals' difficulties instituting claims' reporting instructions to receive new technology add-on payments for DIFICID™ at the hospital level.

The manufacturer noted that anecdotal feedback from hospitals, which was shared with CMS during a meeting in June 2013, suggests that some hospitals faced challenges implementing the appropriate billing and coding processes. The manufacturer was concerned that that these challenges were, in part, caused by the missing header, and that these challenges may have impacted whether eligible cases were properly billed and coded to receive the new technology add-on payment for DIFICID™. The manufacturer was further concerned that the effects of any lag or delay caused by unfamiliarity with reporting NDCs and the missing header would also impact the data available to CMS to recalibrate the MS-DRGs and, separately, to evaluate the impact of the new technology add-on payment for DIFICID™. The manufacturer further explained that, while DIFICID™ was available to hospitals after its launch in July 2011, hospitals had no experience reporting NDCs until October 2012, and may not have recognized the opportunity to, or understood the mechanism for doing so, until after January 2013. For the purposes of inpatient data collection and ratesetting, the manufacturer believed that this meant that 2 complete years of DIFICID™ costs would not be fully reflected in the Medicare claims data for the FY 2015 MS-DRG recalibrations.

The manufacturer also analyzed the 100 percent sample of the Standard Analytical File (SAF) for CY 2012, which contained first quarter claims data for FY 2013, the first 3 months that DIFICID™ was eligible for the new technology add-on payments. The manufacturer found a total of 43,608 cases with a diagnosis of CDI. Of these 43,608 cases, the manufacturer found 38 cases across 26 hospitals that reported new technology add-on payments for DIFICID™ on submitted claims. The manufacturer stated that this

preliminary data suggests that the number of cases available for MS-DRG recalibrations for FY 2015 is limited. The manufacturer stated that it is currently attempting to secure FY 2013 MedPAR claims data and that it will likely provide further insights on these issues.

In addition, the manufacturer noted that prior new technology add-on payment application approvals have involved technologies with much narrower patient populations compared to DIFICID™, allowing the costs of those technologies to influence the MS-DRG relative payment weights for the small number of MS-DRGs with which they are associated. The manufacturer explained that, unlike other technologies approved for new technology add on payments, the DIFICID™ therapeutic value, while limited to patients with CDAD, is used in patients across a wide range of MS-DRGs due to it being reported as a secondary diagnosis in two-thirds of the cases compared to other technologies, which are assigned to a relatively small number of MS-DRGs. For example, cases involving the Spiration IBV® Valve System, which was granted approval for new technology add-on payments in FY 2010, primarily mapped to three MS-DRGs: 163 (Major Chest Procedures with MCC); 164 (Major Chest Procedures with CC); and 165 (Major Chest Procedures without CC/MCC). In its analysis of the FY 2012 MedPAR data for the cost criterion, the manufacturer found cases using DIFICID™ mapped to 544 unique MS-DRGs. Under the 100 percent sample of the SAF for CY 2012, the 38 cases mentioned above mapped to 20 different MS-DRGs. The manufacturer maintained that because of the diffuse nature of the DIFICID™ cases mapping to many MS-DRGs, it believed an extension of the newness period is required for the costs to be adequately reflected in the MS-DRG relative payment weights. In the unique case of DIFICID™ for the treatment of CDAD, the manufacturer stated that 2 years of new technology add-on payments is insufficient to allow the 544 MS-DRGs to be recalibrated to sufficiently reflect the cost of the use of DIFICID™, a treatment that offers significant clinical improvement over existing therapies.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28032 through 28033), we responded to the comments above. Specifically, with regard to the technology's newness, as discussed in the FY 2005 IPPS final rule (69 FR 49003), the timeframe that a new technology can be eligible to receive new technology add-on payments

begins when data become available. Section 412.87(b)(2) clearly states that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (depending on when a new code is assigned and data on the new service or technology become available for DRG recalibration). Section 412.87(b)(2) also states that after CMS has recalibrated the DRGs, based on available data, to reflect the costs of an otherwise new medical service or technology, the medical service or technology will no longer be considered "new" under the criterion of this section. Therefore, regardless of whether a technology can be individually identified by a separate ICD-9-CM code or whether it can only be identified using a NDC code, if the costs of the technology are included in the charge data, and the MS-DRGs have been recalibrated using that data, then the technology can no longer be considered "new" for the purposes of this provision. We further stated in that final rule that the period of newness does not necessarily start with the approval date for the medical service or technology, and does not necessarily start with the issuance of a distinct code. Instead, it begins with availability of the product on the U.S. market, which is when data become available. We have consistently applied this standard, and believe that it is most consistent with the purpose of new technology add-on payments.

In addition, similar to our discussion in the FY 2006 IPPS final rule (70 FR 47349), we do not believe that case volume is a relevant consideration for making the determination as to whether a product is "new." Consistent with the statute, a technology no longer qualifies as "new" once it is more than 2 to 3 years old, irrespective of how frequently it has been used in the Medicare population. Similarly, this same determination is applicable no matter how many MS-DRGs the technology is spread across. Therefore, if a product is more than 2 to 3 years old, we consider its costs to be included in the MS-DRG relative weights whether its use in the Medicare population has been frequent or infrequent. We recognize that using an NDC was a novel billing practice under the IPPS. Nevertheless, even though hospitals may not have coded all uses of DIFICID™ with the NDC, hospital bills would still include charges for all items and services furnished to a Medicare patient, including use of DIFICID™. Therefore, even though we may be not be able to

identify all uses of DIFICID™ in the Medicare charge data, hospital charges for the MS-DRGs would continue to reflect use of this technology.

With respect to the Transmittal 2539 omitting the header referenced above, as noted above, CMS corrected this issue as soon as possible by rescinding and reissuing this transmittal. Additionally, as noted by the manufacturer, this transmittal was meant for MACs and not hospitals. We believe the guidance issued in Transmittal 2539 clearly described to MACs how hospitals were to report the NDC on the inpatient claim in order to identify cases using DIFICID™ for purposes of new technology add-on payments. Additionally, the MLN article that the manufacturer referred to above (MLN articles are typically a summary of transmittals for the general public) clearly indicated that DIFICID™ was new for FY 2013 new technology add-on payments and clearly described how to properly code DIFICID™ on the inpatient bill in order to receive the new technology add-on payment for FY 2013. The MLN article can be downloaded from the CMS Web site at: <http://www.cms.gov/Outreach-and-Education/Medicare-Learning-Network-MLN/MLNMattersArticles/downloads/MM8041.pdf>.

After considering the manufacturer's comments above, as we explained in the FY 2015 IPPS/LTCH PPS proposed rule, we continue to consider the beginning of the newness period to commence when DIFICID™ was first approved by the FDA on May 27, 2011. Because the 3-year anniversary date of the product's entry on the U.S. market occurred in the second half of the fiscal year (after April 1, 2014), we continued new technology add-on payments for DIFICID™ for FY 2014. However, for FY 2015, the 3-year anniversary date of the product's entry on the U.S. market occurred on May 27, 2014, which is prior to the beginning of FY 2015. Therefore, we proposed to discontinue new technology add-on payments for DIFICID™ for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: One commenter stated that CMS has the authority to grant a third year of new technology add-on payments for DIFICID™. The commenter stated that if Congress intended for the Secretary to begin the data collection period described in the statute based on the date of FDA approval, Congress would have done so. The commenter added that it agrees that, as a threshold matter, a product must be "new." Specifically, the commenter reasoned that Congress did

not intend to make available the new technology add-on payment for technologies that have been approved for years and received a unique code years later. The commenter believed that once a product is deemed "new," the statute requires that data are to be collected for 2 to 3 years from the date of the ICD-9-CM code assignment. The commenter believed that CMS has the authority to first deem a product new and then collect data two to three years from the date of the inpatient code assignment. The commenter explained that sections 1886(d)(5)(K)(i) and 1886(d)(5)(K)(ii) of the Act mandate two separate legal requirements. The commenter further stated that this policy would mitigate the effect of older technologies that receive ICD-9-CM codes many years after their FDA approval date being eligible for new technology add-on payments. Therefore, the commenter stated that, under this policy, DIFICID™ is eligible for a third year of new technology add-on payments.

The commenter also quoted the FY 2005 IPPS final rule (69 FR 49002 through 49003) where CMS stated the following: "Using the ICD-9-CM code alone is not an appropriate test of newness because technologies that are new to the market are automatically placed into the closest ICD-9-CM category when they first come on the market, unless the manufacturer requests the assignment of a new ICD-9-CM code because existing codes do not adequately reflect or describe the medical service or device. The services and technologies that have been placed into existing ICD-9-CM codes have been paid for using those descriptors." The commenter believed that this policy is not relevant to oral drugs because hospitals do not typically code for oral medications. Therefore, the commenter stated that CMS must make a special exception for oral drugs and rely on the statutory authority to measure the length of time for data collection for new technology add-on payments based on the date of the "hospital inpatient code."

Response: As discussed above, and as we stated in the FY 2005 IPPS final rule (69 FR 49003), the timeframe that a new technology can be eligible to receive new technology add-on payments begins when data become available. We have consistently applied this standard, and believe that it is most consistent with the purpose of new technology add-on payments. We refer readers to the discussion above and the FY 2005 IPPS final rule (69 FR 49002 through 49003) for further details regarding this issue. For these reasons, we disagree

with the commenter that DIFICID™ is eligible for a third year of new technology add-on payments.

With respect to the second comment, while oral drugs are not typically coded by hospitals, we maintain what we stated in the FY 2005 IPPS final rule that the services and technologies that have been assigned existing ICD-9-CM codes have been paid for using those descriptors. Although DIFICID™ did not receive a specific ICD-9-CM code, it can be described or identified through additional ICD-9-CM procedure or diagnosis codes (such as diagnosis code 008.45, Intestinal infection due to *Clostridium difficile*). Moreover, as we noted above and in the proposed rule, hospital charges would include charges for all items and services furnished to a Medicare beneficiary, including use of DIFICID™. Therefore, we disagree with the commenter and continue to believe that DIFICID™ is no longer new nor is any special exception warranted.

Comment: Several commenters reiterated the arguments made by the manufacturer as explained above and in the proposed rule that DIFICID™ should be eligible for new technology add-on payments in FY 2015.

Response: After considering these comments, for the reasons stated above and in the proposed rule, we consider the beginning of the newness period to commence when DIFICID™ was first approved by the FDA on May 27, 2011. The 3-year anniversary date of the product's entry on the U.S. market occurred on May 27, 2014, which is prior to the beginning of FY 2015. Therefore, we are finalizing our proposal to discontinue new technology add-on payments for DIFICID™ for FY 2015.

c. Zenith® Fenestrated Abdominal Aortic Aneurysm (AAA) Endovascular Graft

Cook® Medical submitted an application for new technology add-on payments for the Zenith® Fenestrated Abdominal Aortic Aneurysm (AAA) Endovascular Graft (Zenith® F. Graft) for FY 2013. The applicant stated that the current treatment for patients who have had an AAA is an endovascular graft. The applicant explained that the Zenith® F. Graft is an implantable device designed to treat patients who have an AAA and who are anatomically unsuitable for treatment with currently approved AAA endovascular grafts because of the length of the infrarenal aortic neck. The applicant noted that, currently, an AAA is treated through an open surgical repair or medical management for those patients not

eligible for currently approved AAA endovascular grafts.

With respect to newness, the applicant stated that FDA approval for the use of the Zenith® F. Graft was granted on April 4, 2012. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53360 through 53365), we stated that because the Zenith® F. Graft was approved by the FDA on April 4, 2012, we believed that the Zenith® F. Graft met the newness criterion as of that date.

After evaluation of the newness, costs, and substantial clinical improvement criteria for new technology add-on payments for the Zenith® F. Graft and consideration of the public comments we received in response to the FY 2013 IPPS/LTCH PPS proposed rule, we approved the Zenith® F. Graft for new technology add-on payments for FY 2013. Cases involving the Zenith® F. Graft that are eligible for new technology add-on payments are identified by ICD-9-CM procedure code 39.78 (Endovascular implantation of branching or fenestrated graft(s) in aorta). In the application, the applicant provided a breakdown of the costs of the Zenith® F. Graft utilizing bare metal (renal) alignment stents was \$17,264. Of the \$17,264 in costs for the Zenith® F. Graft, \$921 is for components that are used in a standard Zenith AAA Endovascular Graft procedure. Because the costs for these components are already reflected within the MS-DRGs (and are no longer “new”), in the FY 2013 IPPS/LTCH PPS final rule, we stated that we do not believe it is appropriate to include these costs in our calculation of the maximum cost to determine the maximum add-on payment for the Zenith® F. Graft. Therefore, the total maximum cost for the Zenith® F. Graft is \$16,343 (\$17,264—\$921). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum add-on payment for a case involving the Zenith® F. Graft is \$8,171.50.

As stated above, the new technology add-on payment regulations provide that “a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology” (§ 412.87(b)(2)). With regard to the newness criterion for the Zenith® F. Graft, as stated above, we consider the beginning of the newness period to commence when the Zenith® F. Graft was approved by the FDA on

April 4, 2012. Because the 3-year anniversary date of the entry of the Zenith® F. Graft on the U.S. market will occur in the second half of the fiscal year (April 4, 2015), we proposed to continue new technology add-on payments for this technology for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: Several commenters supported the proposal to continue new technology add-on payments for the Zenith® F. Graft for FY 2015.

Response: We appreciate the commenters’ support. Because the 3-year anniversary date for Zenith® F. Graft will occur in the latter half of FY 2015 (April 4, 2015), we are finalizing our proposal to continue to make new technology add-on payments for the Zenith® F. Graft for FY 2015.

d. Kcentra™

CSL Behring submitted an application for new technology add-on payments for Kcentra™ for FY 2014. Kcentra™ is a replacement therapy for fresh frozen plasma (FFP) for patients with an acquired coagulation factor deficiency due to warfarin and who are experiencing a severe bleed. Kcentra™ contains the Vitamin K dependent coagulation factors II, VII, IX and X, together known as the prothrombin complex, and antithrombotic proteins C and S. Factor IX is the lead factor for the potency of the preparation. The product is a heat-treated, non-activated, virus filtered and lyophilized plasma protein concentrate made from pooled human plasma. Kcentra™ is available as a lyophilized powder that needs to be reconstituted with sterile water prior to administration via intravenous infusion. The product is dosed based on Factor IX units. Concurrent Vitamin K treatment is recommended to maintain blood clotting factor levels once the effects of Kcentra™ have diminished.

Kcentra™ was approved by the FDA on April 29, 2013. In the FY 2014 IPPS/LTCH PPS final rule, we approved new ICD-9-CM procedure code 00.96 (Infusion of 4-Factor Prothrombin Complex Concentrate) which uniquely identifies Kcentra™.

In the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27538), we noted that we were concerned that Kcentra™ may be substantially similar to FFP and/or Vitamin K therapy. In the FY 2014 IPPS/LTCH PPS final rule, in response to comments submitted by the manufacturer, we stated that we agree that Kcentra™ may be used in a patient population that is experiencing an acquired coagulation factor deficiency

due to Warfarin and who are experiencing a severe bleed currently but are ineligible for FFP, particularly for use by IgA deficient patients and other patient populations that have no other treatment option to resolve severe bleeding in the context of an acquired Vitamin K deficiency. In addition, FFP is limited because it requires special storage conditions while Kcentra™ is stable for up to 36 months at room temperature thus allowing hospitals that otherwise would not have access to FFP (for example, small rural hospitals as discussed by the applicant in its comments) to keep a supply of Kcentra™ and treat patients who would possibly have no access to FFP. We noted that FFP is considered perishable and can be scarce by nature (due to production and other market limitations) thus making some hospitals unable to store FFP, which limits access to certain patient populations in certain locations. Therefore, we stated that we believe that Kcentra™ provides a therapeutic option for a new patient population and is not substantially similar to FFP. Also, we gave credence to the information presented by the manufacturer that Kcentra™ provides a simple and rapid repletion relative to FFP and reduces the risk of a transfusion reaction relative to FFP because it does not contain ABO antibodies and does not require ABO typing. As a result, we concluded that Kcentra™ is not substantially similar to FFP, and that it meets the newness criterion.

After evaluation of the newness, cost, and substantial clinical improvement criteria for new technology add-on payments for Kcentra™ and consideration of the public comments we received in response to the FY 2014 IPPS/LTCH PPS proposed rule, we approved Kcentra™ for new technology add-on payments for FY 2014 (78 FR 50575 through 50580). Cases involving Kcentra™ that are eligible for new technology add-on payments are identified by ICD-9-CM procedure code 00.96. In the application, the applicant estimated that the average Medicare beneficiary would require an average dosage of 2500 International Units (IU). Vials contain 500 IU at a cost of \$635 per vial. Therefore, cases of Kcentra™ would incur an average cost per case of \$3,175 (\$635 x 5). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the technology or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum add-on payment for a

case of Kcentra™ is \$1,587.50 for FY 2014.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50579), we stated that new technology add-on payments for Kcentra™ would not be available with respect to discharges for which the hospital received an add-on payment for a blood clotting factor administered to a Medicare beneficiary with hemophilia who is a hospital inpatient. Under section 1886(d)(1)(A)(iii) of the Act, the national adjusted DRG prospective payment rate is “the amount of the payment with respect to the operating costs of inpatient hospital services (as defined in subsection (a)(4) of this section)” for discharges on or after April 1, 1988. Section 1886(a)(4) of the Act excludes from the term “operating costs of inpatient hospital services” the costs with respect to administering blood clotting factors to individuals with hemophilia. The costs of administering a blood clotting factor to a Medicare beneficiary who has hemophilia and is a hospital inpatient are paid separately from the IPPS. (For information on how the blood clotting factor add-on payment is made, we refer readers to Section 20.7.3 of Chapter Three of the Medicare Claims Processing Manual, which can be downloaded from the CMS Web site at: <http://cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf>.) In addition, we stated that if Kcentra™ is approved by the FDA as a blood clotting factor, we believed that it may be eligible for blood clotting factor add-on payments when administered to Medicare beneficiaries with hemophilia. We make an add-on payment for Kcentra™ for such discharges in accordance with our policy for payment of a blood clotting factor, and the costs would be excluded from the operating costs of inpatient hospital services as set forth in section 1886(a)(4) of the Act.

Section 1886(d)(5)(K)(i) of the Act requires the Secretary to “establish a mechanism to recognize the costs of new medical services and technologies under the payment system established under this subsection” beginning with discharges on or after October 1, 2001. We believe that it is reasonable to interpret this requirement to mean that the payment mechanism established by the Secretary recognizes only costs for those items that would otherwise be paid based on the prospective payment system (that is, “the payment system established under this subsection”). As noted above, under section 1886(d)(1)(A)(iii) of the Act, the national adjusted DRG prospective payment rate is the amount of payment for the operating costs of inpatient hospital

services, as defined in section 1886(a)(4) of the Act, for discharges on or after April 1, 1988. We understand this to mean that a new medical service or technology must be an operating cost of inpatient hospital services paid based on the prospective payment system, and not excluded from such costs, in order to be eligible for the new technology add-on payment. We pointed out that new technology add-on payments are based on the operating costs per case relative to the prospective payment rate as described in § 412.88. Therefore, we believe that new technology add-on payments are appropriate only when the new technology is an operating cost of inpatient hospital services and are not appropriate when the new technology is excluded from such costs.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50579), we stated that we believe that hospitals may only receive new technology add-on payments for discharges where Kcentra™ is an operating cost of inpatient hospital services. In other words, a hospital would not be eligible to receive the new technology add-on payment when it is administering Kcentra™ in treating a Medicare beneficiary who has hemophilia. In those instances, Kcentra™ is specifically excluded from the operating costs of inpatient hospital services in accordance with section 1886(a)(4) of the Act and paid separately from the IPPS. However, when a hospital administers Kcentra™ to a Medicare beneficiary who does not have hemophilia, the hospital would be eligible for a new technology add-on payment because Kcentra™ would not be excluded from the operating costs of inpatient hospital services. Therefore, discharges where the hospital receives a blood clotting factor add-on payment are not eligible for a new technology add-on payment for the blood clotting factor. We refer readers to Chapter Three, Section 20.7.3 of the Medicare Claims Processing Manual for a complete discussion on when a blood clotting factor add-on payment is made. The manual can be downloaded from the CMS Web site at: <http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/clm104c03.pdf>.

As stated above, the new technology add-on payment regulations provide that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (§ 412.87(b)(2)). With regard to the newness criterion for Kcentra™, as stated above, we consider the beginning of the newness period to

commence when Kcentra™ was approved by the FDA on April 29, 2013. Because Kcentra™ is still within the 3-year newness period, we proposed to continue new technology add-on payments for this technology for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: Several commenters supported the proposal to continue new technology add-on payments for Kcentra™ for FY 2015.

Response: We appreciate the commenters' support. Because the 3-year anniversary date for Kcentra™ will occur in the second half of FY 2016 (April 29, 2016), we are finalizing our proposal to continue to make new technology add-on payments for Kcentra™ FY 2015.

e. Argus® II Retinal Prosthesis System

Second Sight Medical Products, Inc. submitted an application for new technology add-on payments for the Argus® II Retinal Prosthesis System (Argus® II System) for FY 2014. The Argus® II System is an active implantable medical device that is intended to provide electrical stimulation of the retina to induce visual perception in patients who are profoundly blind due to retinitis pigmentosa (RP). These patients have bare or no light perception in both eyes. The system employs electrical signals to bypass dead photo-receptor cells and stimulate the overlying neurons according to a real-time video signal that is wirelessly transmitted from an externally worn video camera. The Argus® II implant is intended to be implanted in a single eye, typically the worse-seeing eye. Currently, bilateral implants are not intended for this technology. According to the applicant, the surgical implant procedure takes approximately 4 hours and is performed under general anesthesia.

The Argus® II System consists of three primary components: (1) An implant which is an epiretinal prosthesis that is fully implanted on and in the eye (that is, there are no percutaneous leads); (2) external components worn by the user; and (3) a “fitting” system for the clinician that is periodically used to perform diagnostic tests with the system and to custom-program the external unit for use by the patient. We describe these components more fully below.

- *Implant:* The retinal prosthesis implant is responsible for receiving information from the external components of the system and electrically stimulating the retina to induce visual perception. The retinal

implant consists of: (a) A receiving coil for receiving information and power from the external components of the Argus® II System; (b) electronics to drive stimulation of the electrodes; and (c) an electrode array. The receiving coil and electronics are secured to the outside of the eye using a standard scleral band and sutures, while the electrode array is secured to the surface of the retina inside the eye by a retinal tack. A cable, which passes through the eye wall, connects the electronics to the electrode array. A pericardial graft is placed over the extra-ocular portion on the outside of the eye.

- **External Components:** The implant receives power and data commands wirelessly from an external unit of components, which include the Argus II Glasses and Video Processing Unit (VPU). A small lightweight video camera and transmitting coil are mounted on the glasses. The telemetry coils and radio-frequency system are mounted on the temple arm of the glasses for transmitting data from the VPU to the implant. The glasses are connected to the VPU by a cable. This VPU is worn by the patient, typically on a belt or a strap, and is used to process the images from the video camera and convert the images into electrical stimulation commands, which are transmitted wirelessly to the implant.

- **“Fitting System”:** To be able to use the Argus® II System, a patient’s VPU needs to be custom-programmed. This process, which the applicant called “fitting”, occurs in the hospital/clinic shortly after the implant surgery and then periodically thereafter as needed. The clinician/physician also uses the “Fitting System” to run diagnostic tests (for example, to obtain electrode and impedance waveform measurements or to check the radio-frequency link between the implant and external unit). This “Fitting System” can also be connected to a “Psychophysical Test System” to evaluate patients’ performance with the Argus® II System on an ongoing basis.

These three components work together to stimulate the retina and allow a patient to perceive phosphenes (spots of light), which they then need to learn to interpret. While using the Argus® II System, the video camera on the patient-worn glasses captures a video image. The video camera signal is sent to the VPU, which processes the video camera image and transforms it into electrical stimulation patterns. The electrical stimulation data are then sent to a transmitter coil mounted on the glasses. The transmitter coil sends both data and power via radio-frequency (RF) telemetry to the implanted retinal

prosthesis. The implant receives the RF commands and delivers stimulation to the retina via an array of electrodes that is secured to the retina with a retinal tack.

In patients with RP, the photoreceptor cells in the retina, which normally transduce incoming light into an electro-chemical signal, have lost most of their function. The stimulation pulses delivered to the retina via the electrode array of the Argus® II System are intended to mimic the function of these degenerated photoreceptors cells. These pulses induce cellular responses in the remaining, viable retinal nerve cells that travel through the optic nerve to the visual cortex where they are perceived as phosphenes (spots of light). Patients learn to interpret the visual patterns produced by these phosphenes.

With respect to the newness criterion, according to the applicant, the FDA designated the Argus® II System a Humanitarian Use Device in May 2009 (HUD designation #09-0216). The applicant submitted a Humanitarian Device Exemption (HDE) application (#H110002) to the FDA in May 2011 to obtain market approval for the Argus® II System. The HDE was referred to the Ophthalmic Devices Panel of the FDA’s Medical Devices Advisory Committee for review and recommendation. At the Panel’s meeting held on September 28, 2012, the Panel voted 19 to 0 that the probable benefits of the Argus® II System outweigh the risks of the system for the proposed indication for use. The applicant received the HDE approval from the FDA on February 14, 2013. Currently there are no other approved treatments for patients with severe to profound RP. The Argus® II System has an IDE number of G050001 and is a Class III device. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50580 through 50583), we approved new ICD-9-CM procedure code 14.81 (Implantation of Epiretinal Visual Prosthesis), which uniquely identifies the Argus® II System. The other two codes approved by CMS are for removal, revision, or replacement of the device. More information on these codes can be found on the CMS Web site at: <http://cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/ICD-9-CM-C-and-M-Meeting-Materials-Items/2013-03-05-MeetingMaterials.html>.

After evaluation of the new technology add-on payment application and consideration of public comments received, we concluded that the Argus® II System met all of the new technology add-on payment policy criteria. Therefore, we approved the Argus® II System for new technology add-on payments in FY 2014 (78 FR 50580

through 50583). Cases involving the Argus® II System that are eligible for new technology add-on payments are identified by ICD-9-CM procedure code 14.81. We note that section 1886(d)(5)(K)(i) of the Act requires that the Secretary establish a mechanism to recognize the costs of new medical services or technologies under the payment system established under that subsection, which establishes the system for paying for the operating costs of inpatient hospital services. The system of payment for capital costs is established under section 1886(g) of the Act, which makes no mention of any add-on payments for a new medical service or technology. Therefore, it is not appropriate to include capital costs in the add-on payments for a new medical service or technology. In the application, the applicant provided a breakdown of the costs of the Argus® II System. The total operating cost of the Argus® II System is \$144,057.50. Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum add-on payment for a case involving the Argus® II System for FY 2014 is \$72,028.75.

As stated above, the new technology add-on payment regulations provide that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology (§ 412.87(b)(2)). With regard to the newness criterion for the Argus® II System, as stated above, we consider the beginning of the newness period to commence when the Argus® II System was approved by the FDA on February 14, 2013. Because the Argus® II System is still within the 3-year newness period, we proposed to continue new technology add-on payments for this technology for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: Several commenters supported the proposal to continue new technology add-on payments for the Argus® II System for FY 2015. Some commenters noted that, while the Argus® II System received FDA approval on February 14, 2013, it was not available on the U.S. market until December 20, 2013. The commenters explained that as part of this lengthy process, the manufacturer first had to submit a request to the Federal Communications Commission (FCC) for a waiver of section 15.209(a) of the FCC

rules to allow the manufacturer to then apply for FCC authorization to utilize this specific RF band. The FCC granted the request for a waiver of the rules on November 30, 2011. After receiving the FCC waiver of section 15.209(a), the manufacturer was required to obtain a Grant of Equipment Authorization to utilize the specific RF band, which the FCC issued on December 20, 2013. Therefore, the commenters stated that the date the Argus® II System first became available for commercial sale in the United States was December 20, 2013.

Response: We appreciate the commenters' input and support. We agree with the commenters that due to the delay described above, the date of newness for the Argus® II System is now December 20, 2013, instead of February 14, 2013. Because the 3-year anniversary date for the Argus® II System will occur in the first half of FY 2017 (December 20, 2016), we are finalizing our proposal to continue to make new technology add-on payments for the Argus® II System for FY 2015.

f. Zilver® PTX® Drug Eluting Peripheral Stent

Cook® Medical submitted an application for new technology add-on payments for the Zilver® PTX® Drug Eluting Peripheral Stent (Zilver® PTX®) for FY 2014. The Zilver® PTX® is intended for use in the treatment of peripheral artery disease (PAD) of the above-the-knee femoropopliteal arteries (superficial femoral arteries). According to the applicant, the stent is percutaneously inserted into the artery(s), usually by accessing the common femoral artery in the groin. The applicant stated that an introducer catheter is inserted over the wire guide and into the target vessel where the lesion will first be treated with an angioplasty balloon to prepare the vessel for stenting. The applicant indicated that the stent is self-expanding, made of nitinol (nickel titanium), and is coated with the drug Paclitaxel. Paclitaxel is a drug approved for use as an anticancer agent and for use with coronary stents to reduce the risk of re-narrowing of the coronary arteries after stenting procedures.

The applicant received FDA approval on November 15, 2012, for the Zilver® PTX®. The applicant maintains that the Zilver® PTX® is the first drug-eluting stent used for superficial femoral arteries. The technology is currently described by ICD-9-CM procedure code 00.60 (Insertion of drug-eluting stent(s) of the superficial femoral artery).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50583 through 50585), after

evaluation of the new technology add-on payment application and consideration of the public comments received, we approved the Zilver® PTX® for new technology add-on payments in FY 2014. Cases involving the Zilver® PTX® that are eligible for new technology add-on payments are identified by ICD-9-CM procedure code 00.60. As explained in the FY 2014 IPPS/LTCH PPS final rule, to determine the amount of Zilver® PTX® stents per case, instead of using the amount of stents used per case based on the ICD-9-CM codes, the applicant used an average of 1.9 stents per case based on the Zilver® PTX® Global Registry Clinical Study. The applicant stated in its application that the anticipated cost per stent is approximately \$1,795. Therefore, cases of the Zilver® PTX® would incur an average cost per case of \$3,410.50 ($\$1,795 \times 1.9$). Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum add-on payment for a case of the Zilver® PTX® is \$1,705.25 for FY 2014.

As stated above, the new technology add-on payment regulations provide that “a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology” (§ 412.87(b)(2)). With regard to the newness criterion for the Zilver® PTX®, as stated above, we consider the beginning of the newness period to commence when the Zilver® PTX® was approved by the FDA on November 15, 2012. Because the Zilver® PTX® is still within the 3-year newness period, we proposed to continue new technology add-on payments for this technology for FY 2015.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on this proposal.

Comment: Several commenters supported the proposal to continue new technology add-on payments for the Zilver® PTX® for FY 2015.

Response: We appreciate the commenters' support. Because the 3-year anniversary date for the Zilver® PTX® will occur in the first half of FY 2016 (November 12, 2015), we are finalizing our proposal to continue to make new technology add-on payments for the Zilver® PTX® FY 2015.

4. FY 2015 Applications for New Technology Add-On Payments

We received seven applications for new technology add-on payments for FY

2015, three of which were applications resubmitted from FY 2014. However, one applicant withdrew its application prior to the publication of the proposed rule. In addition, the applicant for the Watchman® System withdrew its application prior to the publication of this final rule. In accordance with the regulations under § 412.87(c), applicants for new technology add-on payments must have FDA approval by July 1 of each year prior to the beginning of the fiscal year that the application is being considered. A discussion of the five remaining applications is presented below.

Comment: One commenter stated that CMS was critical of evidence presented by the applicants to support their claims that the new technology represents a substantial clinical improvement. The commenter explained that CMS finds fault with peer-reviewed literature, registry data, meta-analysis of clinical trials, lack of long-term outcome data, age of clinical trial participants below the age of Medicare beneficiaries, single arm studies, non-inferiority studies, and weak primary efficacy results. The commenter urged CMS to avoid blanket judgments on what types of evidence are considered adequate and to carefully consider the totality of the circumstances associated with a particular product. The applicant concluded that, given the list of evidence cited by CMS, it would appear that only head to head trials are sufficient to show substantial clinical improvement over standard of care, but it is important to note that in the case of first in class products, such trials are not feasible.

Another commenter shared similar concerns and stated that a study may be designed to measure noninferiority when compared to conventional treatment, but the results of the study may demonstrate superiority in terms of other measures, such as reduced pain, decreased recovery time or shorter hospitalizations. In addition, the commenter stated that study data that provide information regarding patient outcomes may be more important than whether the study was designed as a superiority trial or a noninferiority trial. The commenter concluded that a policy to require superiority studies, or at least to question noninferiority studies, could have negative results, including delaying patient access to innovative treatments, improved care outcomes, curtailing innovation, and discouraging competition. The commenter stated that CMS should give great weight to the totality of the evidence, including non-inferiority studies and other methodological approaches, as it

considers approval of applications for new technology add-on payments.

Some commenters stated that CMS has a precedent of accepting noninferiority studies to evaluate technologies under the substantial clinical improvement criterion. In particular, these commenters indicated that CMS approved new technology add-on payments for Fidaxomicin in FY 2013 (77 FR 53350–53358) and Kcentra™ in FY 2014 (78 FR 50575–50580) and that both of these technologies submitted data from clinical trials demonstrating non-inferiority. One commenter stated that CMS' approval of Fidaxomicin for new technology add-on payments establishes a precedent for approval for a technology that shows non-inferiority for a primary end point in addition to the acceptance of other clinically important secondary analysis, and that precedent should be used to approve all technologies. Another commenter stated that CMS' approval of Kcentra™ for new technology add-on payments is an example of how a technology can use data from randomized controlled trials demonstrating noninferiority to show that the technology represents a substantial clinical improvement.

One commenter stated that non-inferiority trials are a well-established and appropriately accepted standard, and noninferiority designs are the only affordable and ethical option for drug developers in researching acute bacterial skin and skin structure infections. The commenter also stated that primary focus for developing new agents targeted for acute bacterial skin and skin structure infection patients is not to improve clinical cure rates, but to “enhance the efficiency and cost effectiveness of achieving clinical cures, ease therapeutic administration (and, therefore, improve compliance) and limit avoidable exposure to healthcare acquired infections (which, when they occur, significantly increase costs and create patient safety risks).” The commenter urged CMS to clarify that it has not suggested or proposed to adopt a blanket judgment approach against technologies studied on a noninferiority basis.

Response: We appreciate the commenters' input and support. CMS always considers the totality of the clinical evidence whenever it makes a substantial clinical improvement determination. We agree with the commenters that we approved new technology add-on payments for Fidaxomicin and Kcentra™ by determining that both of these technologies not only met the newness and cost criteria for new technology

add-on payments, but also represented a substantial clinical improvement in the treatment options available for Medicare beneficiaries. We also appreciate that the commenter reviewed the policies we established in FY 2002 (66 FR 46902) with regard to the substantial clinical improvement criterion and clarified in FY 2008 (72 FR 47301). We continue to believe, as we did in FY 2008, that it is a reasonable concern that establishing specific data standards may make it more difficult for an applicant to qualify for a new technology add-on payment because such standards cannot account for the various types of new technologies that may become available in the future and the types of requirements that those novel technologies may or may not be able to meet. In other words, we clarify that we did not propose to establish nor are we establishing a blanket judgment approach against technologies studied on a non-inferiority basis. As we stated in the final rule that appeared in the **Federal Register** on September 7, 2001 (referred to hereinafter as the Inpatient New Technology Add-on Payment Final Rule), one of the ways to determine if a technology meets the substantial clinical improvement criterion is for the applicant to demonstrate that use of the technology significantly improves clinical outcomes for a patient population as compared with currently available treatments (66 FR 46914). In that rule, we finalized the policy that we would require applicants to submit evidence to demonstrate this. For the purposes of seeking additional payment from Medicare under the IPPS, we believe that it is preferable, when possible, for applicants to submit evidence that demonstrates superiority of the applicant technology as compared with currently available treatments. We note that this superiority can be derived, extrapolated, or inferred from noninferiority studies in which the results demonstrate a far greater delta than proposed in the power analysis. This belief is based on earlier experiences, which we described in the FY 2002 final rule: “[W]e would point out that various new technologies introduced over the years have been demonstrated to have been less effective than initially thought, or in some cases even potentially harmful. We believe it is in the best interest of Medicare beneficiaries to proceed very carefully with respect to the incentives created to quickly adopt new technology” (66 FR 46913). However, we point out that in that same rule, we provide two additional ways for an applicant technology to demonstrate substantial

clinical improvement: if the device offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments; or if the device offers the ability to diagnose a medical condition in a patient population where that medical condition is currently undetectable or offers the ability to diagnose a medical condition earlier in a patient population than allowed by currently available methods. There must also be evidence that the use of the device to make a diagnosis affects the management of the patient's care. (We refer readers to the Inpatient New Technology Add-on Payment Final Rule (66 FR 46914).) Similarly, for these two additional ways to meet the substantial clinical improvement criterion, we continue to believe that it is appropriate to require that applicants submit evidence that the technology in fact meets the criterion through one of these two ways. We do not require an applicant to meet the criterion in more than one of these ways, but emphasize that we require evidence to support an applicant's claim. If an applicant chooses to demonstrate that use of its technology significantly improves clinical outcomes, we believe that it is appropriate for CMS to consider all of the evidence presented in determining whether there is sufficient objective clinical evidence to determine if a new technology meets the substantial clinical improvement criterion.

a. Dalbavancin (Durata Therapeutics, Inc.)

Durata Therapeutics, Inc. submitted an application for new technology add-on payments for FY 2015 for the use of Dalbavancin. Dalbavancin is an intravenous (IV) lipoglycopeptide antibiotic administered as a once-weekly 30-minute infusion via a peripheral line for the treatment of patients with acute bacterial skin and skin structure infections, or ABSSSI. According to the applicant, Dalbavancin's unique pharmacokinetic profile demonstrates rapid bactericidal activity that is potent and sustained against serious gram-positive bacteria, including methicillin-resistant *Staphylococcus aureus* (MRSA).

With respect to the newness criterion, the applicant stated that Dalbavancin's once-weekly dosing, a simpler regimen than the current standard of care (Vancomycin) of daily or multiple-times daily intravenous dosing, allows for the discontinuation of IV access with its attendant risks of line-related thrombosis and infection. The applicant submitted a New Drug Approval Application (NDA) on September 26,

2013, and as stated in the FY 2015 IPPS/LTCH PPS proposed rule, anticipated FDA approval of Dalbavancin sometime in May of 2014. The applicant also applied for a new ICD-10-PCS code to describe the administration of Dalbavancin, which was presented at the March 19–20, 2014 ICD-10 Coordination and Maintenance Committee meeting. To date, no ICD-10-PCS code specifically describes the administration of Dalbavancin. However, if approved, the new ICD-10-PCS code will be effective on October 1, 2014. We also note in section II.G. of the preamble of this final rule that, per section 212 of the PAMA (Pub. L. 113–93), the Secretary announced plans to establish a new compliance date for ICD-10. We also discuss in that section the requests for ICD-10-PCS codes for FY 2015. We refer readers to section II.G. of the preamble of this final rule for a complete discussion of these issues.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the technology meets the newness criterion. However, we did not receive any public comments regarding whether the technology meets the newness criterion. After the publication of the FY 2015 IPPS/LTCH PPS proposed rule, we were informed that the applicant received FDA approval for the use of the technology on May 23, 2014. Therefore, for purposes of consideration for FY 2015 IPPS new technology add-on payments, we believe that the technology should be considered “new” as of May 23, 2014, when the technology received FDA approval.

We note that in the FY 2010 IPPS/RV 2010 LTCH PPS final rule (74 FR 43813 through 43814), we established criteria for evaluating whether a new technology is substantially similar to an existing technology, specifically: (1) whether a product uses the same or a similar mechanism of action to achieve a therapeutic outcome; (2) whether a product is assigned to the same or a different MS-DRG; and (3) whether the new use of the technology involves the treatment of the same or similar type of disease and the same or similar patient population. If a technology meets all three of the criteria above, it would be considered substantially similar to an existing technology and would not be considered “new” for purposes of new technology add-on payments.

In evaluating the first criterion, the applicant stated that Dalbavancin’s mechanism of action is unique compared to other antibiotics as it involves the interruption of cell wall synthesis resulting in bacterial cell death. Furthermore, the applicant cited

Dalbavancin’s long half-life as the factor that differentiates itself from existing antibacterial agents active against MRSA. With respect to the second criterion, as we stated in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28036), we believe that cases of ABSSSI that use Dalbavancin or other antibiotics for treatment would be assigned to the same MS-DRGs. Finally, with respect to the third criterion, we believe that Dalbavancin and other antibiotics used to treat cases of ABSSSI treat the same disease and patient population. Based on evaluation of the substantially similarity criteria, we stated in the FY 2015 IPPS/LTCH PPS proposed rule, it appears that Dalbavancin is not substantially similar to other antibiotics for the treatment of ABSSSI because it does not use the same or a similar mechanism of action to achieve a therapeutic outcome.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments regarding whether Dalbavancin is substantially similar to existing antibiotics and whether Dalbavancin meets the newness criterion. However, we did not receive any public comments discussing whether Dalbavancin is substantially similar to existing antibiotics in the context of the newness criterion. After further evaluation of the new technology add-on payment application, we believe that Dalbavancin is not substantially similar to other antibiotics for the treatment of ABSSSI because it does not use the same or a similar mechanism of action to achieve a therapeutic outcome.

According to the applicant, Dalbavancin is indicated to treat gram-positive ABSSSIs, such as cellulitis or erysipelas, and MRSA. These conditions may be a primary diagnosis, but are often secondary to an underlying condition such as diabetes, heart failure, and pressure ulcers, among others. Therefore, the technology is eligible to be used across all MS-DRGs. To demonstrate that it meets the cost criterion, the applicant searched the FY 2012 MedPAR file (across all MS-DRGs) for cases where at least one ABSSSI ICD-9-CM code was present on the claim, including those where MRSA was present on a claim with an ABSSSI diagnosis. Specifically, the applicant searched for cases with one of the following diagnosis codes: 035 (Erysipelas); 681.00 (Cellulitis and abscess of finger, unspecified); 681.01 (Felon); 681.02 (Onychia and paronychia of finger); 681.10 (Cellulitis and abscess of toe, unspecified); 681.11 (Onychia and paronychia of toe); 681.9 (Cellulitis and abscess of unspecified

digit); 682.0–682.9 (Other cellulitis and abscess of face, neck, trunk, upper arm and forearm, hand except fingers and thumb, buttock, leg except foot, foot except toes, specified sites, unspecified sites); 686.00 (Pyoderma, unspecified); 686.01 (Pyoderma gangrenosum); 686.09 (Other pyoderma); 686.1 (Pyogenic granuloma of skin and subcutaneous tissue); 686.8 (Other specified local infections of skin and subcutaneous tissue); 686.9 (Unspecified local infection of skin and subcutaneous tissue); 958.3 (Posttraumatic wound infection not elsewhere classified); 998.51 (Infected postoperative seroma); and 998.59 (Other postoperative infection). The applicant believed that these cases represent potential cases eligible for the administration of Dalbavancin.

The applicant found 570,698 cases across 682 MS-DRGs and noted that almost 25 percent of the total number of cases would map to MS-DRGs 603 (Cellulitis without MCC), while the top 10 MS-DRGs accounted for almost half (or 49 percent) of the total number of cases. Of the 682 MS-DRGs, only 90 of these MS-DRGs accounted for 1,000 cases or more. The applicant standardized the charges for all 570,698 cases, which equated to an average case-weighted standardized charge per case of \$46,138. We note that the applicant did not inflate the charges nor did it include charges for Dalbavancin in the average case-weighted standardized charge per case. The applicant calculated an average case-weighted threshold of \$44,255 across all MS-DRGs. Therefore, the applicant asserted the average case-weighted standardized charge per case (without inflating and including charges for Dalbavancin) exceeds the average case-weighted threshold of \$44,255 (as indicated in Table 10 of the FY 2014 IPPS/LTCH PPS final rule). Therefore, the applicant maintained that Dalbavancin meets the cost criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments regarding whether Dalbavancin meets the cost criterion, particularly with regard to the assumptions and methodology used in the applicant’s analysis.

Comment: The applicant submitted a public comment maintaining that Dalbavancin meets the cost criterion requirement because the cost of the target cases exceeds the average case-weighted cost threshold requirement prior to accounting for an inflation factor, or including the costs of Dalbavancin. The applicant further stated that it also included the “costs of Dalbavancin in its analysis to further

demonstrate that Dalbavancin exceeds the established NTAP cost threshold.”

Response: We appreciate the applicant's response. We reviewed the applicant's analysis. We note that, while the applicant's analysis included the charges associated with Dalbavancin in their final cost estimate, the applicant did not remove the charges for the current therapy for treating acute bacterial skin and skin structure infections. We agree that the applicant's analysis using data from all 570,698 cases across 682 MS-DRGs showed that Dalbavancin exceeds the average case-weighted threshold prior to the inclusion of inflation factors and charges associated with Dalbavancin.

We note that it is unclear to what degree Dalbavancin would be used in each of these cases across the specific MS-DRGs, in part, because a procedure code has not been established to identify the technology's use in the claims data. Therefore, we reviewed the additional analyses using the claims data submitted by the applicant to substantiate that the technology meets the cost criterion. For example, in the data submitted by the applicant, the top 10 MS-DRGs ranked by case volume constitute roughly half of the cases with at least one ICD-9-CM code associated with acute bacterial skin infections. These 10 MS-DRGs include: MS-DRG 0603 (Cellulitis Without MCC); MS-DRG 0602 (Cellulitis With MCC); MS-DRG 0871 (Septicemia or Severe Sepsis Without MV 96+ Hours With MCC); MS-DRG 0863 (Postoperative & Post-Traumatic Infections Without MCC); MS-DRG 0872 (Septicemia or Severe Sepsis Without MV 96+ Hours Without MCC); MS-DRG 0300 (Peripheral Vascular Disorders With CC); MS-DRG 0292 (Heart Failure & Shock with CC); MS-DRG 0862 (Postoperative & Post-Traumatic Infections With MCC); MS-DRG 0857 (Postoperative or Post-Traumatic Infections With O.R. Procedure With CC); and MS-DRG 0853 (Infectious and Parasitic Diseases With O.R. Procedure With MCC). An average case-weighted threshold and standardized charges could be calculated using these MS-DRGs and compared to determine if the standardized charges exceed the average case-weighted threshold for these top 10 MS-DRGs.

In summary, we agree with the applicant that the technology meets the cost criterion.

With regard to substantial clinical improvement, as previously stated by the applicant, Dalbavancin is a new intravenous (IV) lipoglycopeptide antibiotic administered as a once-weekly 30 minute infusion via a

peripheral line for the treatment of patients with acute bacterial skin and skin structure infections, or ABSSSI. The applicant noted that, in the setting of continuing emergence of resistance among gram-positive pathogens worldwide, there is an increasing medical need for new antibacterial agents with enhanced gram-positive activity. The applicant cited the Infectious Diseases Society of America (IDSA),³ stating the need for a multi-pronged approach to address the impact of antibiotic resistance. In addition, the applicant stated the FDA has also designated MRSA as a pathogen of special interest which allows an antibiotic effective against this organism to be designated as a “Qualified Infectious Disease Product,” recognizing the medical need for drugs to treat infections caused by this pathogen. The applicant believed that having a medicinal agent with clinical efficacy against gram-positive pathogens, including MRSA and CA-MRSA, a favorable benefit/risk ratio, and a favorable pharmacokinetics profile allowing convenient dosing in inpatients and outpatients with the potential for minimizing patient noncompliance would be a valuable addition to the antibacterial armamentarium for the treatment of ABSSSI. The applicant also noted that, when taking Dalbavancin, there is no need for oral step-down therapy.

The applicant suggested that Dalbavancin offers treatment advantages over other available options for therapy for skin infections as a result of the following:

- Improved potency against key bacterial pathogens with the concentration of Dalbavancin required to kill key target pathogens lower relative to other antibiotics commonly used to treat such pathogens;
- Retained activity against staphylococcus aureus resistant to other antibiotics;
- Improved safety profile as Dalbavancin exhibits more favorable tolerability and safety than alternative approved antibacterial drugs in areas such as no evidence of thrombocytopenia as seen with linezolid and tedezolid, superior infusion related tolerability relative to other antibiotics, an absence or reduction of drug specific toxicities, and once a week dosing of IV Dalbavancin avoids pitfalls of patient noncompliance with an oral medication;
- Lack of drug interactions due to metabolic profile which minimizes risk of unexpected adverse events when co-

administered with other compounds as seen with linezolid and quinupristin/dalfopristin;

- Decreased requirement for therapeutic interventions, specifically the need for an intravenous catheter as Dalbavancin is administered once a week, thus reducing catheter related infection as well;
- Reduced time to patient defined recovery;
- Reduced mortality rate as demonstrated in the combined phase of the Discover 1 and Discover 2 clinical trials;
- The potential for avoidance of admission to the hospital as Dalbavancin allows the utilization of a weekly treatment regimen, thus potentially increasing the convenience of outpatient therapy for patients.

The applicant conducted three phase three randomized, controlled, double blinded clinical trials. The first was the pivotal VER001-9 study with a total of 873 patients with ABSSSIs, which compared the safety and efficacy of IV Dalbavancin with possible switch to oral placebo to IV Linezolid with possible switch to oral Linezolid. According to the applicant, the primary efficacy endpoint of clinical response at test of 14 days with a plus or minus of 2 days after completion of therapy demonstrated comparable clinical efficacy to linezolid and met the requirement of statistical demonstration of non-inferiority. In the clinically evaluable population, 88.9 percent of patients who received Dalbavancin compared to 91.2 percent of patients who received vancomycin/linezolid were clinical successes. The applicant also noted that Dalbavancin had an improved safety profile compared to Linezolid as the overall incidence and percentage of adverse events and deaths were lower in the Dalbavancin group, which was statistically significant.

The second and third clinical trials were the Discover 1 and Discover 2 trials, which enrolled a total of 1,312 patients with ABSSSI and compared IV Dalbavancin with IV placebo every 12 hours to match Vancomycin with possible switch to oral Vancomycin to IV Vancomycin with IV placebo to match IV Dalbavancin with possible switch to oral Linezolid. The applicant reported that in both studies, the primary efficacy outcome measure was clinical response in 48 to 72 hours post-study drug initiation and a secondary outcome measure was clinical status at the end of treatment visit (day 14) in the Intent to Treat (ITT) and clinically evaluable at End of Treatment populations. Clinical status was also

³“Bad Bugs, No Drugs,” July 2004.

determined at the short-term follow-up and long-term follow-up visits.

According to the applicant, the Discover 1 trial demonstrated that 83.3 percent of patients in the ITT population who received Dalbavancin were responders at 48 to 72 hours after the start of therapy compared to 81.8 percent of patients who received Vancomycin/Linezolid. The applicant also noted that Dalbavancin was non-inferior to Vancomycin/Linezolid (Absolute Difference in Success Rates (95 percent confidence interval): -4.6 percent; 7.9 percent).

The applicant further noted that the Discover 2 trial showed similar results to the Discover 1 trial. Specifically, the trial demonstrated that 76.8 percent of patients in the ITT population who received Dalbavancin were responders at 48 to 72 hours after the start of therapy compared to 78.3 percent of patients who received Vancomycin/Linezolid. The applicant again noted that Dalbavancin was non-inferior to Vancomycin/Linezolid (Absolute Difference in Success Rates (95 percent confidence interval): -7.4 percent; 4.6 percent).

The applicant found Dalbavancin to be effective against MRSA and other gram-positive bacteria associated with ABSSSI. The applicant stated that 25 percent of patients in the study were treated without an inpatient admission.

We stated in the FY 2015 IPPS/LTCH PPS proposed rule that we are concerned with the details of the trial design and the primary efficacy endpoints used within those trials that were used to provide the clinical data supplied by the applicant. All of the trials were noninferiority studies, which prevent any determination as to substantial clinical improvement from the trial data. The primary efficacy endpoint was defined as having no increase in lesion size, and no fever 48 to 72 hours after drug initiation. The secondary endpoint was a >20 percent reduction in infection area at defined points in time. At neither endpoint is the patient oriented endpoint of resolution of infection increased. With these limitations in using efficacy data to establish substantial clinical improvement, the applicant suggested that the outpatient treatment, elimination of central lines and avoidance of hospitalization all *may* improve safety, avoid treatment-associated infections and improve patient satisfaction, and that these factors demonstrate substantial clinical improvement. While the factors mentioned may be true, the applicant did not present any evidence to support its assertions.

We invited public comments on whether Dalbavancin meets the substantial clinical improvement criterion, including public comments in response to our concern that the applicant has only provided efficacy data of noninferiority, and no data for the other suggested benefits.

Comment: Several commenters stated that Dalbavancin meets the substantial clinical improvement criteria and, therefore, CMS should approve the application for new technology add-on payments in FY 2015.

Response: We appreciate the commenters' input. We considered these public comments in our determination of whether this technology represents a substantial clinical improvement in the treatment options currently available to Medicare beneficiaries.

Comment: As previously summarized, some of the commenters stated that CMS has a precedent of accepting noninferiority studies to evaluate technologies under the substantial clinical improvement criterion. In particular, these commenters indicated that CMS approved new technology add-on payments for Fidaxomicin in FY 2013 (77 FR 53350 through 53358) and Kcentra™ in FY 2014 (78 FR 50575 through 50580), and both of these technologies submitted data from clinical trials demonstrating noninferiority. One commenter stated that CMS' approval of Fidaxomicin for new technology add-on payments establishes a precedent for approval for a technology that shows noninferiority for a primary end point in addition to the acceptance of other clinically important secondary analysis. The commenters believed that precedent should be used to approve the application for new technology add-on payments for Dalbavancin. Another commenter stated that CMS' approval of Kcentra™ for new technology add-on payments is an example of how a technology can use data from randomized controlled trials demonstrating noninferiority to show that technology represents a substantial clinical improvement.

The applicant also provided additional data from its clinical trials on the degree to which patients who were improving were permitted to stop their treatment after 10 days. The data showed that patients randomized to Dalbavancin were more likely to stop therapy at 10 days, and less likely to continue treatment through 14 days. The applicant stated that by day 10 most patients were being treated on an outpatient basis on oral therapy (either with an oral placebo or oral linezolid), and that treatment was discontinued at

the patient's discretion. The applicant further stated that "the implication of this finding is that, from the patient's perspective, resolution of the underlying infection was occurring more rapidly for those randomized to Dalbavancin."

Response: We refer readers to section II.I.4. of the preamble of this final rule for our detailed response to commenters' concerns regarding noninferiority trials.

We believe that our preliminary assessment (and final determination described later in this section) with regard to Dalbavancin is consistent with prior determinations made with regard to other approved technologies, including the two technologies identified by the commenters, Fidaxomicin and Kcentra™. With regard to Fidaxomicin, we note that we stated that we believed that it represented a treatment option with the potential to decrease utilization, reduce the recurrence of clostridium-difficile associated disease (CDAD), and improve quality of life. We also note that we considered the information the applicant provided with regard to the endpoints in its clinical trial, which as the commenters point out, were indeed to demonstrate that the effects of administering Fidaxomicin were non-inferior to administering Vancomycin. (We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53357 through 53358).) Similarly, with regard to Kcentra™, we note that we stated that we believed that it provided a rapid beneficial resolution of the patient's blood clotting factor deficiency, decreases the risk of exposure to blood borne pathogens, and reduces the rate of transfusion-associated complications. These conclusions also were based on information the applicant provided with regard to the endpoints in its clinical trial. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50578 through 50579).) However, we note that in their clinical trials, these applicants were able to show a wider margin of difference between the treatment and control groups. The small margin of difference between the groups in this study leads us to conclude that any additional analysis of the trial data would be unlikely to demonstrate superiority of the treatment group.

With regard to the additional data the applicant provided regarding days of therapy, it is our understanding that most patients in both groups were on oral therapy by day 10 and that patients in both groups were allowed to discontinue their therapy at their discretion. The treatment group was more likely to discontinue use of

Dalbavancin by day 10. We believe that it is difficult to assess the degree to which this implied that resolution of the underlying infection was occurring more rapidly, or would meet our definition of substantial clinical improvement. However, in light of the data from the applicant's non-inferiority trial, which did not show a wide margin of difference between the treatment and control groups, we do not believe that this is sufficient objective evidence to determine that Dalbavancin is a substantial clinical improvement in the treatment options available for Medicare beneficiaries.

Comment: Many commenters described how they believed that Dalbavancin's administration would improve patient safety and reduce adverse events, improve medication compliance, and reduce potential additional health care utilization.

With regard to patient safety and adverse events, many commenters asserted that using Dalbavancin does not require an indwelling IV access, unlike treatments using Vancomycin and, therefore, it is self-evident that the potential for catheter-associated infections is eliminated. Some of these commenters emphasized the importance of reducing catheter-associated infections, and noted that Dalbavancin could help achieve this goal.

In addition, with regard to patient safety and adverse events, the applicant provided references discussing the frequency of central venous catheter complications nationally. The applicant also provided data from their pivotal clinical trial showing the number and proportion of patients who died and those with adverse events, including drug-related adverse events and treatment-related serious adverse events. The applicant asserted that the data showed that fewer patients randomized to Dalbavancin died relative to the standard of care, showing that one patient (0.2 percent) treated with Dalbavancin died while 7 patients (1.1 percent) treated with Vancomycin/Linezolid died. Notably, while these data showed with a p value of 0.05 that 33 percent of patients treated with Dalbavancin had an adverse event compared to 38 percent of patients treated with Vancomycin or Linezolid, the data also showed that it was difficult to distinguish between the two groups in terms of drug-related adverse events and treatment-related serious adverse event. The data showed that 12 percent of patients treated with Dalbavancin experienced a drug-related adverse event compared to 14 percent of patients treated with Vancomycin/Linezolid with a p value of 0.45. The

data also showed that 0.3 percent of patients treated with Dalbavancin experienced a treatment-related serious adverse event compared to 0.6 percent of patients treated with Vancomycin/Linezolid with a p value of 0.41. In addition to these data, the applicant also presented data collected in their clinical program that compared the infusion-related adverse events of patients receiving Dalbavancin to those of patients receiving commonly used alternative agents. These data showed that 2.2 percent of patients treated with Dalbavancin experienced an infusion-related adverse event, while 3.1 of comparator agent patients experienced an infusion-related adverse event.

One commenter, having reviewed the applicant's clinical trial data, concluded that while the safety profile to date of Dalbavancin appears similar to Vancomycin, the ultimate determination of safety must await broader clinical use. The commenter noted that future clinical trials are needed to define the safety profile of Dalbavancin.

Response: We appreciate commenters' input and the additional data submitted by the applicant.

We disagree with commenters that it is self-evident that the technology eliminates the potential for catheter-associated infections, particularly with respect to indwelling catheters. It is not clear if these patients already would have had indwelling catheters in place, whether for antibiotic administration or other purposes. Therefore, it is not evident that simply having the option of an antibiotic that does not require an indwelling catheter would eliminate the potential for catheter-associated infections. We agree with the commenters that the administration of Dalbavancin could reduce the potential for these infections in patients that otherwise would not have an indwelling catheter, but note that it was not possible to discern the degree to which this potential reduction occurs based on the data and comments provided.

As previously stated, we appreciate the applicant's submission of additional data from its trials regarding safety and adverse events. We agree with the applicant that Dalbavancin appears to be associated with fewer infusion-associated adverse events and patient deaths relative to the comparator group. We note that the applicant's data showed that drug-related and treatment-related serious adverse events appeared to be less frequent for patients treated with Dalbavancin relative to the comparator group, but that it was not clear to what degree the groups actually differed because the p values were in excess of 0.4. We also agree with the

commenter that stated that it would appear that more clinical use and data should be gathered to more fully develop Dalbavancin's safety profile.

Comment: Many commenters stated that they believed that Dalbavancin would improve medication compliance and reduce potential additional health care utilization. Some commenters noted that patients diagnosed with acute bacterial skin and skin structure infections are often treated as inpatients. One commenter noted that the rate of these skin and skin structure infections are higher than they have ever historically been. One commenter described these hospitalizations as unnecessary. Another commenter stated that while Dalbavancin is not more efficacious than Vancomycin, it is easier to administer. The commenter concluded that Dalbavancin would make it possible to treat patients with complicated skin and skin structure infections that might otherwise require hospitalization on an outpatient basis without compromising efficacy and without the need for either laboratory monitoring or an indwelling intravenous catheter. Several commenters noted that less pharmacist monitoring time was required for the administration of Dalbavancin relative to Vancomycin. Several commenters stated that no additional data beyond the pivotal trials are needed to show that a single infusion involves fewer administrations and requires less health care resources than a course of therapy that lasts a week or more. One commenter described the importance of medication compliance in the context of treating a patient population that faces socioeconomic hardships. Specifically, the commenter noted that noncompliant patients are more likely to present to the emergency department with worsening infections and that Dalbavancin's dosing profile reduces the risk of noncompliance that is typically associated with oral therapy.

Response: We appreciate the commenters' input. We agree with the commenters that there is the possibility that Dalbavancin could make it possible for certain patients to be treated on an outpatient basis rather than as inpatients of a hospital. We further agree with commenters that there is the potential for treatment benefits for Medicare beneficiaries that would help avoid hospitalizations, including avoiding potential future iatrogenic events. However, we are concerned that neither the applicant, nor any of the commenters, provided specific information or data regarding the reduced resource use that they believe would occur. It is common that benefits

from events that appear to be “self-evident,” as suggested by the commenters, prove to not be beneficial events when subjected to the rigors of a clinical trial.

After consideration of the public comments we received, we do not believe that Dalbavancin meets the substantial clinical improvement criterion to qualify the technology for new technology add-on payments under the IPPS in FY 2015. In particular, we do not believe there is sufficient objective clinical evidence to determine that Dalbavancin significantly improves clinical outcomes for Medicare beneficiaries in order for the technology to qualify for new technology add-on payments. While we recognize that Dalbavancin has met FDA standards for safety and effectiveness, the new technology add-on payment application process and approval requires a demonstration of a substantial clinical improvement, which is not inherent in the FDA’s regulatory process. We recognize that the technology is the first drug designated as a Qualified Infectious Disease Product (QIDP) to receive FDA approval and was granted QIDP designation because it is an antibacterial or antifungal human drug intended to treat serious or life-threatening infections. We are equally committed to encouraging increased development and approval of new antibacterial drugs, providing physicians and patients with important new treatment options and will support this endeavor by providing payment for Dalbavancin through our prospective payment processes. However, in the case of this application, we do not believe that the technology meets the substantial clinical improvement criterion. Therefore, we are not approving new technology add-on payments for Dalbavancin for FY 2015.

b. Heli-FX™ EndoAnchor System (Aptus Endosystems, Inc.)

The Heli-FX™ EndoAnchor System is indicated for use in the treatment of patients whose endovascular grafts during treatment of aortic aneurysms have exhibited migrations or endoleaks, or in the treatment of patients who are at risk of such complications, and in whom augmented radial fixation and/or sealing is required to regain or maintain adequate aneurysm exclusion.

The Heli-FX™ EndoAnchor System is comprised of the following three components: (1) The EndoAnchor Implant; (2) the Heli-FX™ Applier; and (3) the Heli-FX™ Guide with Obturator. The Heli-FX™ EndoAnchor System is a mechanical fastening device that is designed to enhance the long-term

durability and reduce the risk of repeat interventions in endovascular aneurysm repair (EVAR) and thoracic endovascular aneurysm repair (TEVAR). By deploying a small helical screw (the Heli-FX™ EndoAnchors) to connect the endograft to the aorta, the Heli-FX™ System seeks to provide a permanent seal and fixation, similar to the stability achieved with an open surgical anastomosis.

The original Heli-FX™ EndoAnchor System, designed for treating abdominal aortic aneurysms (AAA), was cleared by the FDA through the “de novo” 510(k) process on November 21, 2011 (reference K102333). The Heli-FX™ Thoracic System, which allows the expanded use of the Heli-FX™ EndoAnchor System technology to the treatment of thoracic aortic aneurysms (TAA), was cleared by the FDA on August 14, 2012 (reference K121168).

The applicant submitted two applications for approval for new technology add-on payment in FY 2015: one for the treatment of AAAs and the other for the treatment of TAA repair. We note that, as stated in the Inpatient New Technology Add-on Payment Final Rule (66 FR 46915), two applications are necessary in this instance, because patients that may be eligible for use of the technology under the first indication are not expected to be assigned to the same MS-DRGs as patients receiving treatment using the new technology under the second indication. Specifically, patients who have endovascular grafts implanted for the treatment of AAA map to MS-DRGs 237 (Major Cardiovascular Procedures with MCC) and 238 (Major Cardiovascular Procedures without MCC), while patients who have endovascular grafts implanted for the treatment of TAA map to MS-DRGs 219 (Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheter with MCC), 220 (Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheter with CC), and 221 (Cardiac Valve and Other Major Cardiothoracic Procedure without Cardiac Catheter without CC/MCC). Each indication/application must also meet the cost criterion and the substantial clinical improvement criterion in order to be eligible for new technology add-on payments beginning in FY 2015. We discuss both of these applications below.

(1) Heli-FX™ EndoAnchor System for the Treatment of AAA (Heli-FX™ AAA)

As mentioned above, the original Heli-FX™ EndoAnchor System, designed for treating patients diagnosed with AAA, was cleared by the FDA

through the “de novo” 510(k) process on November 21, 2011 (reference K102333). According to the applicant, the device became available to Medicare beneficiaries following the product launch at the Society of Vascular Surgery (SVS) Annual Meeting held on June 7–9, 2012. Therefore, the applicant maintained that the Heli-FX™ AAA meets the “newness” criterion because the technology was not available on the U.S. market until June 2012. The applicant explained that the delay in the general market availability of the original Heli-FX™ AAA, following initial FDA clearance, was mainly because of the regulatory uncertainty inherent in the “de novo” 510(k) process. This uncertainty prevented the manufacturer from being able to secure the venture capital funding that was necessary to prepare for commercialization before obtaining market clearance. The ability to secure venture capital through the fundraising process was dependent upon the FDA clearance. According to the applicant, funding to commercially market the technology was not obtained until June 2012. In subsequent discussions with the applicant, the applicant confirmed that the Heli-FX™ AAA was available on the U.S. market as of November 2011. Further, the applicant acknowledged that four implantations were performed on Medicare beneficiaries between November 2011 and June 2012. Therefore, the Heli-FX™ AAA is considered “new” as of November 2011 when the technology was cleared by the FDA and became available on the U.S. market.

Section 412.87(b)(2) of the regulations state that a medical service or technology may be considered new within 2 or 3 years after the point at which data begin to become available reflecting the ICD-9-CM code assigned to the new service or technology. Our past practice has been to begin and end the eligibility for new technology add-on payments on a fiscal year basis. We have generally followed a guideline that uses a 6-month window, before and after the beginning of the fiscal year, to determine whether to still consider a technology “new” and extend approved new technology add-on payments for an additional fiscal year. In general, a technology is still considered “new” (and eligible to receive new technology add-on payments) only if the 3-year anniversary date of the product’s entry on the market occurs in the latter half of the fiscal year. (We refer readers to 70 FR 47362.) With regard to the newness criterion for the Heli-FX™ AAA, as stated above, we consider the beginning

of the newness period for the device to begin when the technology first became available on the U.S. market in November 2011. As previously stated, the applicant acknowledged that four implantations were performed on Medicare beneficiaries between November 2011 and June 2012. Therefore, the costs of the Heli-FX™ AAA are currently reflected in the MS-DRGs, and the 3-year anniversary date under the newness criterion for the product's entry on the U.S. market will occur during November 2014 (the first half of FY 2015). As such, we do not believe that the Heli-FX™ AAA meets the newness criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the Heli-FX™ AAA meets the newness criterion. We note that the applicant requested an ICD-10-PCS code, and presented comments at the March 2014 ICD-10 Coordination & Maintenance Committee meeting. We also note in section II.G. of the preamble of this final rule that, per section 212 of the PAMA (Pub. L. 113-93), the Secretary announced plans to establish a new compliance date for ICD-10-PCS. We also discuss in that section requests for ICD-10-PCS codes for FY 2015. We refer readers to section II.G. of the preamble of this final rule for a complete discussion of these issues.

Comment: The applicant submitted a public comment in response to the concerns that CMS presented in the FY 2015 IPPS/LTCH PPS proposed rule regarding the newness criterion. The applicant noted that questions raised by CMS centered solely on whether the Heli-FX™ AAA was charged to Medicare prior to the product launch in June 2012. Additionally, the applicant asserted that CMS did not reference the relevance of the April 1 date for purposes of determining whether a technology meets the newness criterion.

Based on CMS' concerns presented in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28039), the applicant conducted another review of the data previously provided to CMS. As previously submitted, there were four cases where the applicant was able to determine that the Heli-FX AAA was implanted in Medicare beneficiaries, and where charges were submitted to Medicare, prior to the product launch. These procedures occurred on April 24, 2012, May 7, 2012, May 23, 2012, and June 4, 2012. The applicant stated that because all of these cases were completed after April 1, 2012, it believes that the Heli-FX™ AAA meets the newness criterion for FY2015.

Response: In a further follow-up discussion to clarify the availability of

the Heli-FX™ AAA, the applicant's representatives noted that, although not in large quantities, the Heli-FX AAA was available to patients prior to April 1, 2012. We appreciate the information the applicant provided regarding the newness criterion. As we explained in the FY 2015 IPPS/LTCH PPS proposed rule, in general, a new technology is still considered "new" (and eligible to receive new technology add-on payments) only if the 3-year anniversary date of the product's entry on the market occurs in the latter half of the fiscal year. Although the applicant has stated that the initial four implantations were after April 1, 2012, the technology was still available prior to April 1, 2012. Therefore, we still consider the beginning of the newness period for the device to begin when the technology first became available on the U.S. market in November 2011, which is prior to April 1, 2012. As stated in the FY 2015 IPPS/LTCH PPS proposed rule, the 3-year anniversary date under the newness criterion for the product's entry on the U.S. market will occur during November 2014 (the first half of FY 2015). As such, the Heli-FX™ AAA does not meet the newness criterion and, therefore, is not eligible for new technology add-on payments for FY 2015.

To demonstrate that the technology meets the cost criterion, the applicant researched claims data from the 100 percent sample of the 2012 Inpatient Hospital Standard Analytical File (SAF) for cases reporting either procedure code 39.71 (Endovascular implantation of other graft in abdominal aorta), or procedure code 39.79 (Other endovascular procedures on other vessels) in the first or second procedure position on the claim, in combination with one of the following primary diagnosis codes: 441.4 (Abdominal aneurysm without mention of rupture); 996.1 (Mechanical complication of other vascular device, implant, and graft); or 996.74 (Other complications due to other vascular device, implant, and graft). The applicant believed that this combination of ICD-9-CM codes identifies cases treated for AAA. We note that the 2012 SAF dataset includes all claims submitted from hospitals paid under the IPPS for calendar year 2012.

The applicant focused its analysis on MS-DRGs 237 and 238 because these are the MS-DRGs that cases treated with the implantation of endovascular grafts for AAAs would most likely map to. The applicant found a total of 8,142 cases, and noted that 9.35 percent of the total number of cases would map to MS-DRG 237, and 90.65 percent of the total number of cases would map to

MS-DRG 238. The applicant standardized the charges for all 8,142 cases. Using the inflation factor of 1.47329 published in the FY 2014 IPPS/LTCH final rule (78 FR 50982), the applicant inflated the standardized charges by 14.88 percent (the applicant multiplied $1.47329 \times 1.47329 \times 1.47329$ in order to inflate the charges from 2012 to 2015). The applicant then added the charges for the Heli-FX™ AAA to the standardized charges by dividing the cost of the Heli-FX™ AAA device by each individual hospital specific CCR from the FY 2012 impact file. This equated to an average case-weighted inflated standardized charge per case of \$111,613. The applicant noted that the average case-weighted inflated standardized charge per case did not contain additional operating room charges that relate to the Heli-FX™ AAA. Therefore, the applicant determined that it was necessary to add an additional \$1,440 for operating room charges, which was based on an additional half hour of operating room time from one hospital, to the average case-weighted standardized charge per case. This resulted in an average case-weighted standardized charge per case of \$113,053. The applicant calculated an average case-weighted threshold of \$86,278 across both MS-DRGs 237 and 238. The applicant noted that the average case-weighted standardized charge per case, computed without including the additional operating room charges that relate to the Heli-FX™ AAA, exceeded the average case-weighted threshold of \$86,278. Therefore, the applicant maintained that the technology meets the cost criterion.

The applicant also submitted claims data from the ANCHOR (Aneurysm Treatment Using the Heli-FX Aortic Securement System Global Registry) study to demonstrate that the technology meets the cost criterion. A total of 51 cases were submitted with 11.76 percent of all the cases mapping to MS-DRG 237, and 88.24 percent of all the cases mapping to MS-DRG 238. The applicant standardized the charges for all 51 cases, and determined an average case-weighted standardized charge per case of \$128,196. The applicant calculated an average case-weighted threshold of \$87,118 across MS-DRGs 237 and 238. Therefore, because the average case-weighted standardized charge per case exceeds the average case-weighted threshold, the applicant maintained that the technology meets the cost criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the Heli-FX™ AAA meets the cost criterion,

particularly with regard to the assumptions and methodology used in the applicant's analyses.

Comment: Some commenters believed that the high cost of the Heli-FX™ device would deter facilities from using it.

Response: As discussed above, because the Heli-FX™ AAA does not meet the newness criterion, it is not eligible for new technology add-on payments for FY 2015. Therefore, we are not summarizing the details of this comment nor are we responding to the issues presented in this discussion. However, we do address this comment in the later discussion of the Heli-FX™ EndoAnchor System for the Treatment of Thoracic Aortic Aneurysms.

We discuss whether the Heli-FX™ EndoAnchor System (for the treatment of AAA and TAA) represents a substantial clinical improvement over other treatments used for the repair of both abdominal and thoracic aortic aneurysms in one discussion below.

(2) Heli-FX™ EndoAnchor System for the Treatment of Thoracic Aortic Aneurysms (Heli-FX™ TAA)

The Heli-FX™ TAA, which allows the expanded use of the Heli-FX™ EndoAnchor System technology to TAA repair, was cleared by the FDA on August 14, 2012 (reference K121168). The new system consists of a longer delivery device with additional tip configurations to allow the helical EndoAnchor technology to treat TAA. A line extension to the original Heli-FX™ EndoAnchor System, allowing improved treatment of AAA patients with larger aortic neck diameters, was cleared by the FDA on April 12, 2013 (reference K130677).

With regard to the newness criterion for the Heli-FX™ TAA, we consider the newness period for the device to begin when the technology was approved by the FDA on August 14, 2012. Because the 3-year anniversary date of the product's entry on the U.S. market would occur in the second half of FY 2015 (August 14, 2015), we believe that the Heli-FX™ TAA meets the newness criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the Heli-FX™ TAA meets the newness criterion. As noted above, the applicant requested an ICD-10-PCS code, and presented comments at the March 2014 ICD-10 Coordination & Maintenance Committee meeting. We also note in section II.G. of the preamble of this final rule that, per section 212 of the PAMA (Pub. L. 113-93), the Secretary announced plans to establish a new compliance date for the

ICD-10-PCS. We also discuss in that section requests for ICD-10-PCS codes for FY 2015. We refer readers to section II.G. of the preamble of this final rule for a complete discussion these issues. We did not receive any public comments on whether the Heli-FX™ TAA meets the newness criterion.

To demonstrate that the Heli-FX™ TAA meets the cost criterion, similar to the analysis performed for the Heli-FX™ AAA, the applicant researched claims data from the 100 percent sample of the 2012 SAF for cases reporting procedure code 39.73 (Endovascular implantation of graft in thoracic aorta) in the first or second procedure position on the claim, in combination with one of the following primary diagnosis codes: 404.93 (Hypertensive heart and chronic kidney disease, unspecified, with heart failure and chronic kidney disease stage V or end-stage renal disease); 441.01 (Dissection of aorta, thoracic); 441.03 (Dissection of aorta, thoracoabdominal); 441.2 (Thoracic aneurysm without mention of rupture); 441.4 (Abdominal aneurysm without mention of rupture); 441.7 (Thoracoabdominal aneurysm, without mention of rupture); 996.1 (Mechanical complication of other vascular device, implant, and graft); or 996.74 (Other complications due to other vascular device, implant, and graft). The applicant believed that this combination of ICD-9-CM codes identifies cases treated for TAA. We note that the 2012 SAF dataset includes all claims submitted from hospitals paid under the IPPS for CY 2012.

The applicant focused its analysis on MS-DRGs 219, 220, and 221 because these are the MS-DRGs to which cases treated with the implantation of endovascular grafts for TAA repair would most likely map. The applicant found a total of 642 cases, and noted that 27.88 percent of the total number of cases would map to MS-DRG 219, 40.50 percent of the total number of cases would map to MS-DRG 220, and 31.62 percent of the total number of cases would map to MS-DRG 221. The applicant standardized the charges for all 642 cases. Using the inflation factor of 1.47329 published in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50982), the applicant inflated the standardized charges by 14.88 percent (the applicant multiplied $1.47329 \times 1.47329 \times 1.47329$ in order to inflate the charges from 2012 to 2015). The applicant then added the charges for the Heli-FX™ TAA to the standardized charges by dividing the cost of the Heli-FX™ TAA by each individual hospital specific CCR from the FY 2012 impact file. This equated to an average case-

weighted inflated standardized charge per case of \$156,625. The applicant noted that the average case-weighted inflated standardized charge per case did not contain additional operating room charges related to the use of this technology. Therefore, the applicant determined that it was necessary to add an additional \$2,160 for operating room charges, which was based on an additional 45 minutes of operating room time from one hospital, to the average case-weighted standardized charge per case. This resulted in an average case-weighted standardized charge per case of \$158,785. The applicant calculated an average case-weighted threshold of \$141,194 across MS-DRGs 219, 220, and 221. The applicant noted that the average case-weighted standardized charge per case, without including charges for additional operating room time, exceeded the average case-weighted threshold of \$141,194. Therefore, the applicant maintained that the technology meets the cost criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the Heli-FX™ TAA meets the cost criterion, particularly with regard to the assumptions and methodology used in the applicant's analysis.

Comment: Some commenters stated that the high cost of the Heli-FX™ device would deter facilities from using it. Therefore, the commenters supported the approval of the Heli-FX™ TAA for new technology add-on payment in order to assist with cost coverage so that more facilities would be willing to use the device in the treatment of their patients.

Response: We appreciate the commenters' input and support. We agree with the commenters that the Heli-FX™ TAA meets the cost criterion.

(3) Evaluation of the Substantial Clinical Improvement Criterion for the Heli-FX™ EndoAnchor System for the Treatment of Abdominal and Thoracic Aortic Aneurysms

The applicant stated that the Heli-FX™ EndoAnchor System represents a substantial clinical improvement for the following reasons: the technology improves overall rates of aneurysm exclusion and long-term success after EVAR by increasing the integrity and long-term durability of the proximal seal and fixation; the technology reduces the risk and rate of secondary interventions and readmissions due to aneurysm-related complications (for example, endoleaks, migration, aneurysm enlargement) caused by failure of the proximal seal; the technology improves the general applicability of EVAR to

patients with a broader spectrum of aortoiliac anatomy, including those with hostile proximal neck anatomy; and the technology reduces the rigor of life-long imaging follow-up for EVAR patients by reducing the rate of late failure and increasing the post-EVAR rates of aneurysm sac regression due to complete, endoleak-free durable aneurysm exclusion.

While current devices and capabilities are greatly improved over the first generation of devices, the applicant noted that EVAR treatments using the first generation of devices has not proven to be as durable, anatomically applicable, or complication-free as open surgery.^{4 5 6 7} Several critical and life-threatening limitations continue to require improvement to these devices and procedures, including the need to reduce serious early and late device and procedure-related complications, such as loss of stability, and integrity and robustness of the clinical proximal aortic landing zone, and to offer an alternative method of EVAR to a broader segment of the patient population.

The applicant provided literature, analyses of data from the “STAPLE-2” clinical trial and the ANCHOR Registry, and a meta-analysis of EVAR trials to demonstrate that the Heli-FX™ EndoAnchor System represents a substantial clinical improvement above current treatments available. We summarize the information provided by the applicant that supports the clinically beneficial results of using the Heli-FX™ EndoAnchor System.

The “STAPLE-2” clinical trial enrolled 155 patients at 25 U.S. centers between September 2007 and January 2009. Clinical (and imaging) data are available for 147, 139 and 125 patients at 1-year, 2-year, and 3-year follow-up, respectively, representing the complete data sets at these time points. Patients enrolled in the clinical trial and observed under the study will continue to be followed per protocol for 5 years following aneurysm repair. According to

the applicant, the results of the trial and study demonstrate that the Heli-FX™ EndoAnchor System is associated with an extremely low rate of proximal neck-related issues in long-term follow-up. The applicant maintained that this determination results in improved outcomes for aortic aneurysm patients, and reduced rate of re-interventions, which are associated with hospital admissions, procedural risks, and reversions to increased follow-up frequency requiring more physician visits and radiographic imaging studies.

The data used for this analysis was extracted from the clinical database on February 1, 2013, and are identical to those used to generate the most recent Annual Progress Report (APR) submitted to the FDA, as required under the U.S. IDE regulations.

While the “STAPLE-2” clinical trial was conducted exclusively with the Aptus AAA endograft (which remains investigational), the applicant believed that the use of the Heli-FX™ EndoAnchor System-related data is applicable to the use of the anchor with the compatible Cook, Gore, and Medtronic manufactured endografts in treatment anatomies for AAA and TAA cases.

Through 3-year follow-up, the applicant noted that there have been no anchor fractures as observed by the core lab. Further, there have been no relative migrations of the Heli-FX™ EndoAnchor System as compared to other endografts reported by the core laboratory.

In the analysis of the “STAPLE-2” clinical trial data at 1-year follow-up, the applicant noted that the core lab observed no proximal migrations, and a single case of Type I endoleak. A single secondary intervention was required to address the Type I endoleak in a patient with a circumferentially incomplete proximal neck within the 1-year follow-up period.

The applicant further noted that no additional Type I endoleaks have been observed beyond the 1-year follow-up in any patient enrolled in the trial. In addition, there were no reported instances of aneurysm rupture, vessel perforation, vessel dissection, catheter embolization, enteric fistula, infection, Type III endoleak, conversion, allergic reactions, renal emboli, or patient death associated with the use of the Heli-FX™ EndoAnchor System. Further, there have been no reports of bleeding or hematoma at the EndoAnchor penetration locations in the aortic neck.

Beyond the 1-year follow-up, three patients have demonstrated proximal migrations less than 1 cm. None of these

cases were associated with Type I endoleaks or aneurysm sac expansions.

The applicant then compared migrations and Type I endoleaks data from the “STAPLE-2” clinical trial to analogous data from five compatible AAA endografts that were not anchored (data taken from published SSE data obtained from the FDA’s Web site). One year of data was compared because this timeframe is what is reported in a standard fashion from IDE trials of endografts. The applicant noted that the Heli-FX™ EndoAnchor System data compares favorably against the data obtained in U.S. pivotal trials of devices that did not employ discrete independent fixation means, particularly when viewed in light of the shorter average neck lengths treated in the “STAPLE-2” clinical trial versus those involving the Cook, Gore, and Medtronic manufactured endografts. According to the applicant, the number of proximal migrations were low across devices as reported in the SSE data, and an analysis using the Fisher’s exact method demonstrated no statistically significant differences when compared to the anchored endografts used in the “STAPLE-2” clinical trial (all p=NS). The incidence of Type I endoleaks and the need for secondary interventions to address them was significantly lower for the Heli-FX™ EndoAnchor System endografts analyzed under the “STAPLE-2” clinical trial versus the Medtronic, AneuRx, and Talent manufactured endografts (p=0.026 versus AneuRx and p=0.015 versus Talent). The applicant stated that the applicability of post-hoc statistical analyses is limited. However, the applicant believed that because the data being compared under the analyses were collected through similar protocols and with the same endpoint definitions, post-hoc comparisons were deemed appropriate. The applicant further believed that the comparison of this data demonstrates that the Heli-FX™ EndoAnchor System is associated with very low rates of Type I endoleaks and migrations.

The applicant also provided data from the ANCHOR Registry, which is a post-market, prospective, observational, multi-center, international, dual-arm study designed to capture real-world data on the usage patterns and clinical results associated with the use of the Heli-FX™ EndoAnchor System as a method of treatment for patients in need of EVAR. The applicant explained that the ANCHOR Registry represents a growing body of data on the application of the Heli-FX™ EndoAnchor System used as a method of endovascular aortic aneurysm repair. The applicant noted

⁶ De Bruin, J.L., Baas, A.F., Buth, J., et al, “Long-Term Outcome of Open or Endovascular Repair of Abdominal Aortic Aneurysm,” *New England Journal of Medicine*, May 2010, Vol. 362(20), pp. 1881–1889.

⁷ Greenhalgh, R.M., Brown, L.C., Powell, J.T., et al, “Endovascular versus open repair of abdominal aortic aneurysm,” *New England Journal of Medicine*, May 2010, Vol. 362(20), pp. 1863–1871.

that to its knowledge, the anatomical challenges present in the registry are greater than those in any large scale published series. The applicant further noted that, although long-term results are limited, the acute results demonstrate a high level of device safety, technical feasibility and acute success in a patient population with few viable options.

Primary safety for the ANCHOR Registry is being measured as a composite of freedom from device or procedure-related serious adverse events through 1-year follow-up following the Heli-FX™ EndoAnchor System implantation. Primary effectiveness is being measured as a composite of acute technical success and freedom from Type Ia endoleaks and endograft migrations through 1-year follow-up. Inclusion and exclusion criteria are minimal, essentially following the IFU requirements. Patients are being followed in the registry by their physician's standard of care for 5 years.

Enrollment in the ANCHOR Registry began in March 2012. Through August 2013, a total of 258 patients were enrolled at 40 participating centers (29 located in the United States and 11 located in the European Union), and data are available in the registry's database. Of these, 195 patients (76 percent) were enrolled in the primary arm, having the Heli-FX™ EndoAnchor System implanted at the time of their initial aneurysm treatment, either as a prophylactic measure, or to address an acute leak seen on completion arteriography. The remaining patients (63 or 24 percent) were enrolled in the revision arm, having the Heli-FX™ EndoAnchor Systems implanted at a secondary procedure to arrest migration, or address endoleaks discovered on follow-up in previously implanted endografts.

The applicant noted that physicians are choosing to apply the Heli-FX™ EndoAnchor System in a subset of patients that are at a higher risk for proximal neck-related complications during follow-up. The large average sac diameter in the revision arm suggested that these patients' initial treatments were unsuccessful and, as such, they have experienced continued sac expansion post-EVAR. These patients also represent a high-risk subset of patients.

Acute results are measured in terms of technical success. In the primary arm, 193 of 194 procedures were successful, and in the revision arm, 57 of 63 procedures were successful. All technical failures were persistence of Type Ia endoleaks. There has been a

single re-intervention at 69 days post-EndoAnchor implantation for a persistent Type Ia endoleak in one patient in the revision arm, in which the Heli-FX™ EndoAnchor System combined with a proximal cuff were unable to completely resolve the endoleak. There have been no device-related serious adverse events.

As mentioned above, because the "STAPLE-1",⁸ and "STAPLE-2" clinical trials were single-arm studies, no data are available from them to assess the impact of the Heli-FX™ EndoAnchor System on endograft performance. To make this assessment, a meta-analysis was conducted. The meta-analysis combined long-term AAA endograft performance from endografts marketed in the United States, and compared these measures to those from long-term follow-up in the "STAPLE-2" trial.

According to the applicant, the key findings from the meta-analysis are as follows:

- Heli-FX™ EndoAnchors reduced the proportion of treated aneurysms with enlargement greater than 5 mm at 3 years from 12.7 percent to 3.9 percent (p=.002).

- Heli-FX EndoAnchor System reduced the proportion of leaks requiring treatment at 3 years from 12 percent to 1.3 percent (p.001).

- Heli-FX™ EndoAnchor System reduced (all-cause) mortality at 3 years from 18.8 percent to 8.4 percent (p=.002). However, this does not appear to have been totally mediated by AAA-related mortality, which was reduced by the Heli-FX™ EndoAnchor System from 2.5 percent to 0.7 percent at 3 years (but was not statistically significant, p=.372).

According to the applicant, in general, patients in the ANCHOR Registry were similar to the patients in the AAA endograft studies. The applicant noted that the results of the analysis using the Fisher's Exact Tests were consistent between the All-Studies' comparisons and the IDE-Studies' comparisons: All-Cause Mortality, Leaks requiring Treatment, and Enlargement were all significantly lower at 3 years in the endografts implanted with the Heli-FX™ EndoAnchor System than in standard endografts.

The applicant asserted that the meta-analysis shows that there is objective evidence that the Heli-FX™ EndoAnchor System effectively reduces well-documented problems with

endografts. By providing the endograft with better apposition to the native artery, the applicant noted that the Heli-FX™ EndoAnchor System reduces the rates of enlargement and endoleaks requiring treatment. The applicant further noted that these results were consistent in the All-Studies' and IDE Studies' meta-analyses. The applicant believed that lower rates of leaks requiring intervention would save payers money over the long term.

The applicant observed that, while there was no significant improvement in the rate of ruptures with the Heli-FX™ EndoAnchor System, this may be due to the fact that leaks were treated and, thereby, prevented any ruptures. The applicant believed that the higher rate of treated endoleaks in endografts implanted without the Heli-FX™ EndoAnchor System provides for this hypothesis. Also, migration did not appear to be significantly reduced by the Heli-FX™ EndoAnchor System (3.5 percent at 3 years in both groups; p=1.0).

Finally, the applicant concluded that, overall, the lower complication rates seen with the Heli-FX™ EndoAnchor System in the meta-analysis provide evidence of the clinical benefits and likely economic benefits associated with the use of the Heli-FX™ EndoAnchor System. The applicant believed that the technology may be especially helpful in patients with difficult anatomy, and that it may be reasonable to consider using the Heli-FX™ EndoAnchor System prophylactically in the treatment of all such patients.

In addition to the formal study data from the "STAPLE-2" trial, the Global ANCHOR Registry, and the meta-analysis based on these, the applicant provided published peer-reviewed literature that represent an early state of scientific data dissemination outside of non-company sponsored clinical studies, which is commensurate with the recent market approvals of the Heli-FX™ EndoAnchor System technology. The applicant believed that these data demonstrate strong initial physician enthusiasm and resulting favorable clinical results in their experience to date. The applicant noted that the general body of scientific literature is considered meaningful and growing for this early stage of market introduction. However, the applicant asserted that the literature supports the study and meta-analysis data above that documents that improved clinical outcomes were observed, including outcomes in a broader range of patients that are often ineligible for, or at greatest risk with, EVAR.

⁸ Deaton, D.H., Mehla, M., Kasirajan, K., et al, "The Phase I Multi-center Trial (Staple-1) of the Apts Endovascular Repair System: Results at 6 Months and 1 Year," *Journal of Vascular Surgery*, 2009, Vol. 49, pp. 851-857 (discussion on pp. 857-858.)

In the FY 2015 IPPS/LTCH PPS proposed rule, we stated that we are concerned that the three sources of data, the “STAPLE–2” clinical trial, the Anchor registry, and the literature review that the applicant submitted to support their application are not high quality evidence. The “STAPLE–2” study was a single-arm study and only used one endograft, the registry is an observational study, and the literature review does not provide clinical data. Also, the meta-analysis of all the submitted data is only as good as the data used. While the clinical data submitted suggests that some outcomes such as EVAR failure are improved, we stated that we are concerned that there is not enough clinical evidence to support the substantial clinical improvement criterion.

We invited public comments on whether the submitted data demonstrate that the Heli-FX™ EndoAnchor System represents a substantial clinical improvement in the treatment of Medicare beneficiaries, particularly in regard to the concerns we identified.

Comment: Several commenters stated that the Heli-FX™ System meets the substantial clinical improvement criterion and, therefore, CMS should approve the Heli-FX™ System for new technology add-on payments in FY 2015.

Response: We appreciate the commenters’ support. We considered these comments in our determination of whether the Heli-FX™ System represents a substantial clinical improvement in the treatment options available to Medicare beneficiaries.

Comment: The applicant commented in response to CMS’ concerns presented in the FY 2015 IPPS/LTCH PPS proposed rule regarding the lack of enough high quality evidence to support the substantial improvement criterion because the three sources of data submitted by the applicant were not considered to be ‘high quality evidence.’ Specifically, CMS stated that it believed that the meta-analysis of submitted data is only as good as the data used, the STAPLE–2 Pivotal FDA Study was a single arm study and only used one Endograft, and the ANCHOR Registry is an observational study and the literature review does not provide clinical data. The applicant first outlined some basic background information into the EVAR regulatory process.

With respect to the concerns regarding the meta-analysis of submitted data being only as good as the data used, the applicant asserted that it has not attempted to substantiate the finding of substantial clinical improvement through a single source of information.

The applicant believed that the entirety of evidence demonstrated that this criterion was met as stated in its application. Specifically, the applicant stated that the Heli-FX™ EndoAnchor System offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatments, including the primary cases with hostile necks and complex revisions (refer to the ANCHOR Registry data demonstrating 90.2 percent of hostile necks in the population). The technology has shown significantly improved clinical outcomes for the short proximal aortic neck patient population when compared to current available treatments (refer to STAPLE–2 average neck length of 22.1mm, shorter than any conventional Endograft IDE Study), and has been shown to reduce aneurysm related mortality (refer to the meta-analysis results). The applicant further stated that the Heli-FX™ has also been shown to reduce proximal neck related device complications and reduced subsequent therapeutic interventions (refer to STAPLE–2 where no late Type 1 endoleaks or proximal neck related revisions were required), and with previously unseen aneurysm sac regression (refer to STAPLE–2 which showed the highest reported at 81.7 percent at 3 years), indicating more rapid resolution of the disease process. Based on all of the above information, the applicant stated that it believes that the Heli-FX™ EndoAnchor System has met this evidentiary threshold for the substantial clinical improvement criterion.

The applicant also addressed CMS’ concerns about the quality of evidence that the Aptus’ single arm STAPLE–2 study may provide, specifically, that the STAPLE–2 Pivotal FDA Study was a single arm study and only used one Endograft. According to the applicant, the STAPLE–2 Study was a two arm study of patients treated with the Aptus Stent Graft in conjunction with the EndoAnchors versus an historical open surgical control (SVS Lifeline database). The applicant stated that this kind of trial design is typical for U.S. pre-market IDE EVAR Studies with current Endovascular stent grafts. According to the applicant, many of the recently approved endografts in the United States used a similar study design and the FDA has no requirement for a concurrent surgical control. The applicant noted that in no case for the device regulatory approval processes for recent endografts were randomization or blinding utilized.

The applicant also addressed CMS’ concern that the STAPLE–2 Study

utilized a single type of Endograft. According to the applicant, while the STAPLE–2 Study utilized a single type of Endograft, this may provide a uniquely compelling indication of substantial clinical improvement based on two aspects relating to STAPLE–2. While the Endograft was an entirely conventional design utilizing Polyester fabric supported by a Nitinol stent structure with infrarenal fixation and an unsupported main body (eliminating any contribution of columnar strength to aid in fixation), the applicant stated that this Endograft has no other means of fixation beyond the Aptus EndoAnchors. Despite this, the applicant stated that results indicated highly favorable proximal seal related outcomes in this most challenging proximal neck anatomy patient population. In this cohort, the proximal necks in STAPLE–2 patients contained the shortest average neck length of any conventional (non-Fenestrated) Endograft evaluated in a U.S. PMA trial to date. The applicant further stated that unlike other endografts, such as the Medtronic Endurant or the Gore Excluder, being utilized with Heli-FX currently both in the ANCHOR trial and commercially worldwide, the graft studied in STAPLE–2 has no inherent fixation, active or otherwise. The applicant explained that this is because there are no integral hooks, barbs, supra-renal fixation, “anatomical fixation” or “anchor pins” or other means to secure the Aptus Endograft beyond the fixation provided by the Heli-FX™ EndoAnchors. In effect, because the Heli-FX™ is the only source of fixation for the graft studied, the applicant stated that it represents a “worst case” and significant performance challenge of the clinical effectiveness of the Heli-FX™ EndoAnchors. Despite this worst-case aspect of no inherent fixation in the STAPLE–2 Endograft other than Heli-FX™ EndoAnchors for Endograft fixation and sealing to the aortic wall, the applicant reported that there were excellent clinical and technical results with respect to proximal neck seal and fixation. This was observed despite the very short proximal necks treated in the study cohort. The applicant noted that the aneurysm size regression is also among the most rapid and highest frequency seen with any Endograft U.S. IDE study. The applicant stated that in the setting of an Endograft with no means of fixation beyond the Heli-FX™ EndoAnchors, this is especially meaningful and indicative of the EndoAnchor capabilities with more advanced, current generation commercial Endografts.

With respect to CMS' concern that the ANCHOR Registry is an observational study, the applicant believed that the Anchor Registry provides important, highly valuable and meaningful evidence in support of the substantial clinical improvement criterion. The applicant stated that the ANCHOR Registry is a formal, Institutional Review Board (IRB) and Ethics Committee (EC) approved Post-Market Study that utilizes a Core Lab and a Safety Medical Reviewer for aneurysm related outcomes, anatomical adjudication for all patients at each follow-up time-point, as well as clinical outcomes acutely and in follow-up. The applicant further noted that the use of a Core Lab and a Safety Medical Reviewer in the setting of EVAR for both baseline and outcome data and the associated aneurysm anatomical aspects is extremely rare and, therefore, so far only the ANCHOR Registry has utilized this approach within the known EVAR Registries. The applicant stated that this optimizes the scientific rigor and robustness of this real-world study. The applicant further noted that there are currently 417 patients enrolled (there were 258 patients at the time of the application), with core lab analysis available for 311 subjects, and the data has continued to be highly favorable in what is now among the most hostile proximal necks studied in any Endograft population seen in the scientific literature. The applicant asserted that a key and applicable aspect where Heli-FX™ is having significant patient impact (including as seen in the patients' challenging proximal neck anatomy in STAPLE-2 and ANCHOR cohorts) is offering a treatment option for a patient population ineligible for currently available treatments. While the applicant acknowledged the important and favorable aneurysm exclusion results and expanded patient applicability provided by the recently FDA-approved Cook Zenith Fenestrated Endograft system, which expanded proximal neck capabilities as low as 4mm in length, there are situations affecting patients which limit access to this advanced Endograft technology. The applicant believed that these higher risk situations often require physicians to utilize Heli-FX™ EndoAnchors with conventional Endografts in sub-optimal proximal neck anatomy. The applicant asserted that this is especially applicable in patients deemed unsuitable for open surgical repair.

With respect to CMS' concern that the literature review did not provide clinical data, the applicant acknowledged that the non-STAPLE-2

and ANCHOR related Heli-FX™ peer-reviewed scientific literature did not constitute formal clinical data in themselves, but nonetheless the applicant believed that the information provided the manuscripts to highlight the various applicability and utility of the Heli-FX™ in various settings, including primary revision, in AAA and TAA.

Response: We appreciate the applicant's response to our concerns presented in the proposed rule. While we recognize that Heli-FX™ EndoAnchor System has received regulatory approval for marketing, therefore meeting FDA standards for safety and effectiveness, the new technology add-on payment process requires demonstration of a substantial clinical improvement, which is not inherent in the FDA's regulatory process. As previously stated, we believe that data used to support substantial clinical improvement should come from high quality evidence. For example, well-designed studies that compare the new technology to other similar services that the applicant is contending will be replaced by the new technology. We did not suggest that the comparative should have been an open, surgical procedure. The substantial clinical improvement criterion requires that technologies demonstrate substantial clinical improvement over existing technologies. In this case, we would have liked to have seen a randomized trial comparing the use of Heli-FX™ anchors with various endografts such as hooks, barbs, supra-renal fixation, anatomical fixation or anchor pins using the same brands of endografts. That data, if positive, would have been sufficient to demonstrate substantial clinical improvement over existing technologies.

Further, we also believe that the alternatives just mentioned—hooks, barbs, supra-renal fixation, anatomical fixation, or anchor pins—are alternatives to the Heli-FX™ System and the data submitted does not support that patients have no other alternatives. Therefore, based on the reasoning above, we do not believe that the Heli-FX™ System meets the substantial clinical improvement criterion.

After consideration of the public comments we received, and as discussed above, we conclude that the Heli-FX™ AAA does not meet the newness criterion and, therefore, the technology is not eligible for new technology add-on payments for FY 2015. The Heli-FX™ TAA meets the newness and cost criteria. However, as discussed above, the Heli-FX™ AAA and TAA do not meet the substantial

clinical improvement criterion. Therefore, we are not approving new technology add-on payments for the Heli-FX™ TAA because the technology does not meet the substantial clinical improvement criterion.

c. CardioMEMS™ HF (Heart Failure) Monitoring System

CardioMEMS, Inc. submitted an application for new technology add-on payment for FY 2015 for the CardioMEMS™ HF (Heart Failure) Monitoring System, which is an implantable hemodynamic monitoring system comprised of an implantable sensor/monitor placed in the distal pulmonary artery. Pulmonary artery hemodynamic monitoring is used in the management of heart failure. The CardioMEMS™ HF Monitoring System measures multiple pulmonary artery pressure parameters for an ambulatory patient to measure and transmit data via a wireless sensor to a secure Web site.

The CardioMEMS™ HF Monitoring System utilizes radiofrequency (RF) energy to power the sensor and to measure pulmonary artery (PA) pressure and consists of three components: an Implantable Sensor with Delivery Catheter, an External Electronics Unit, and a Pulmonary Artery Pressure Database. The system provides the physician with the patient's PA pressure waveform (including systolic, diastolic, and mean pressures) as well as heart rate. The sensor is permanently implanted in the distal pulmonary artery using transcatheter techniques in the catheterization laboratory where it is calibrated using a Swan-Ganz catheter. PA pressures are transmitted by the patient at home in a supine position on a padded antenna, pushing one button which records an 18-second continuous waveform. The data also can be recorded from the hospital, physician's office or clinic.

The hemodynamic data, including a detailed waveform, are transmitted to a secure Web site that serves as the Pulmonary Artery Pressure Database, so that information regarding PA pressure is available to the physician or nurse at any time via the Internet. Interpretation of trend data allows the clinician to make adjustments to therapy and can be used along with heart failure signs and symptoms to adjust medications.

The applicant believed that a large majority of patients receiving the sensor would be admitted as an inpatient to a hospital with a diagnosis of acute or chronic heart failure, which is typically described by ICD-9-CM diagnosis code 428.43 (Acute or chronic combine systolic and diastolic heart failure) and the sensor would be implanted during

the inpatient stay. The applicant stated that for safety considerations, a small portion of these patients may be discharged and the sensor would be implanted at a future date in the hospital outpatient setting. In addition, there would likely be a group of patients diagnosed with chronic heart failure who are not currently hospitalized, but who have been hospitalized in the past few months for which the treating physician believes that regular pulmonary artery pressure readings are necessary to optimize patient management. Depending on the patient's status, the applicant stated that these patients may have the sensor implanted in the hospital inpatient or outpatient setting.

The applicant received FDA approval on May 28, 2014. The CardioMEMS™ HF Monitoring System is currently described by ICD-9-CM procedure code 38.26 (Insertion of implantable pressure sensor without lead for intracardiac or great vessel hemodynamic monitoring).

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments regarding how the CardioMEMS™ HF System meets the newness criterion. We did not receive any public comments concerning how the CardioMEMS™ HF Monitoring System meets the newness criterion. Therefore, after evaluation of the information provided by the applicant, we believe that the CardioMEMS™ HF Monitoring System meets the newness criterion, and we consider the technology to be "new" as of May 28, 2014, when the technology received FDA approval.

With respect to cost criterion, the applicant submitted actual claims from the CHAMPION⁹ clinical trial. Of the 550 patients enrolled in the trial, the applicant received 310 hospital bills. The applicant excluded the following claims: incomplete or missing procedure codes, incomplete charge information and bills that were statistical outliers (three standard deviations away from the geometric mean). This resulted in a final cohort of 138 claims. The applicant noted that cases treated with the CardioMEMS™ HF Monitoring System would typically map to MS-DRG 264 (Other Circulatory System Operating Room Procedures). Using the 138 clinical trial claims, the applicant standardized the charges and

added charges for the CardioMEMS™ HF Monitoring System (because the clinical trial claims did not contain charges for the CardioMEMS™ HF Monitoring System). This resulted in an average case-weighted standardized charge per case of \$79,218.

Using the FY 2014 Table 10 thresholds, the threshold for MS-DRG 264 is \$60,172. Because the average case-weighted standardized charge per case exceeded the threshold amount, the applicant maintained that the CardioMEMS™ HF Monitoring System would meet the cost criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether or not the CardioMEMS™ HF System meets the cost criterion. We did not receive any public comments regarding whether or not the CardioMEMS™ HF System meets the cost criterion. Based on the analysis above, we believe the CardioMEMS™ HF System meets the cost criterion.

With regard to substantial clinical improvement, the applicant asserted that elevated PA pressures occur prior to signs and symptoms of heart failure and changes in PA pressures provide a sound physiologic basis for its management. The applicant also contended that, until the creation of the CardioMEMS wireless PA implant, knowledge of PA pressure was only feasible in the hospital with the performance of a right heart catheterization. According to the applicant, the CardioMEMS HF Monitoring System provides physicians knowledge of PA pressure while the patient is at home, allowing proactive management to prevent heart failure decompensation and hospitalization.

The applicant cited clinical data from the CHAMPION trial. The trial is a prospective, multicenter, randomized, single-blinded clinical trial conducted in the United States, designed to evaluate the safety and efficacy of the CardioMEMS™ HF Monitoring System in reducing heart failure-related hospitalizations in a subset of subjects suffering from heart failure. The applicant shared several major findings from the CHAMPION trial as described below.

The primary efficacy endpoint of the CHAMPION trial was the rate of HF hospitalizations during the first 6 months of randomized access. There were 84 heart failure hospitalizations in the treatment group compared with 120 heart failure hospitalizations in the control group. This difference between the groups represented a 28-percent reduction in the rate of hospitalization for heart failure in the treatment group

(0.32 hospitalizations per patient in the treatment group versus 0.44 hospitalizations per patient in the control group, $p=0.0002$). Although not a primary end point, the rate of HF hospitalizations after 18 months was 33 percent lower in the treatment group than in the control group.

According to the applicant, secondary endpoints of the CHAMPION trial are changes in pulmonary artery pressures, proportion of subjects hospitalized, days alive outside of the hospital, quality of life (QOL), and heart failure management which demonstrated the following results:

- Pulmonary Artery Pressures: At baseline, both treatment and control patients had similar PA mean pressures. The change in pressure over the first 6 months was evaluated by integrating the area under the pressure curve (AUC). At 6 months of follow-up, the treatment group had a significantly greater reduction in AUC of -155.7 mmHg days compared to the control group which had an increase in AUC of $+33.1$ mmHg-days; $p=0.0077$.

- Proportion of Subjects Hospitalized: During the 6-month follow-up period, the proportion of subjects hospitalized for 1 or more HF hospitalizations was significantly lower in the treatment group (55 out of 270 patients) than in the control group (80 out of 280 patients) (20.4 percent versus 28.6 percent; $p=0.0292$).

- Days Alive Outside of the Hospital: At 6 months, treatment patients had a nonsignificant and clinically not meaningful increase in days alive outside of the hospital (174.4 versus 172.1; $p=0.0280$) and fewer average days in the hospital (2.2 versus 3.8; $p=0.0246$) compared to control patients.

- Quality of Life: The heart failure specific quality of life was assessed with the MLHFQ total score at 6 months. The average total score in the treatment group was 45.2 ± 26.4 which was significantly better than the average total score in the control group 50.6 ± 24.8 ($p=0.0236$). The difference in total quality of life was primarily due to the physical domain. The average physical score for the treatment group (19.8 ± 11.2) was significantly better than the control group (22.4 ± 10.9) ($p=0.0096$). There was also a significant difference in the emotional domain with an average score of 9.5 ± 8.1 for the treatment group and 11.0 ± 7.7 for the control group ($p=0.0398$).

- Heart Failure Management: Physicians responded to treatment of patients' elevated PA pressures by making medication changes to lower PA pressures and reduce the risk for HF hospitalization. Physicians documented

⁹ Abraham WT, Adamson PB, Bourge RC, Aaron MF, Costanzo MR, Stevenson LW, Strickland W, Neelaguru S, Raval N, Krueger S, Weiner S, Shavelle D, Jeffries B, Yadav JS; for the CHAMPION Trial Study Group. *Wireless pulmonary artery hemodynamic monitoring in chronic heart failure: a randomized controlled trial*. *Lancet*, February 19, 2011, Vol. 377(9766), pp:658-666.

all medication changes for all patients and indicated whether the change was made in response to PA pressures or standard of care information. During the 6-month follow-up period, physicians made approximately one additional HF medication change per patient per month in the treatment group when compared to the control group. Specifically, treatment patients had 1.55 medication changes per month on average compared to control patients having 0.65 medication changes per month ($p < 0.0001$). The difference in HF management between the treatment and control group was due to HF medication changes made in response to PA pressures.

The study met the two primary safety endpoints: (1) freedom from device/system related complications (DSRC); and (2) freedom from sensor failure. The protocol pre-specified objective performance criterion (OPC) were that at least 80 percent of patients were to be free from DSRC and at least 90 percent were to be free from pressure sensor failure. Of the 575 patients in the safety population, 567 (98.6 percent) were free from DSRC at 6 months (lower confidence limit 97.3 percent, $p < 0.0001$). This lower limit of 97.3 percent is greater than the pre-specified OPC of 80 percent. There were no sensor explants or repeat implants and all sensors were operational at 6 months for a freedom from sensor failure of 100 percent (lower confidence limit 99.3 percent, $p < 0.0001$). This lower limit of 99.3 percent is greater than the pre-specified OPC of 90 percent.

The applicant also noted that the CardioMEMS™ HF System reduces the occurrence of HF hospitalizations in NYHA Class III heart failure patients. According to the applicant, the device had very few device and system related complications occurring over the course of the clinical trial. All primary and secondary study endpoints were successfully achieved. In addition, the CHAMPION trial suggests the safety and effectiveness of the device was maintained during longer term follow-up.

After reviewing the information provided by the applicant, we stated in the FY 2015 IPPS/LTCH PPS proposed rule that we have the following concerns. The applicant did not discuss long-term outcomes, specifically death. We stated that we believe additional long-term outcome information and information regarding how the technology changes long-term outcomes would further assist in our determination of whether the technology represents a substantial clinical improvement. With regard to

the clinical trial, information from the randomized access period and the open access period did not include the total number of deaths in each group. While the data support a reduction in total hospitalizations, the rate of hospitalization in each group (0.32 versus 0.44) does not appear to be clinically meaningful. This is supported by total days alive out of the hospital being virtually identical in both groups. Finally, we stated that we are concerned about the cause of the significant dropouts in the Kaplan Meier curves which further demonstrates lack of impact on survival.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether or not the CardioMEMS™ HF Monitoring System technology represents a substantial clinical improvement in the treatment options available to Medicare beneficiaries.

Comment: Several commenters, including various physicians, supported the approval of new technology add-on payment for the CardioMEMS™ HF Monitoring System.

Response: We appreciate the commenters' support. We considered these comments in our determination of whether the CardioMEMS™ HF Monitoring System represents a substantial clinical improvement.

Comment: The applicant submitted a public comment, which included responses to each of CMS' concerns presented in the proposed rule. CMS' major concern outlined in the FY 2015 IPPS/LTCH PPS proposed rule was the lack of mortality data to support the improvement seen in the specified endpoint, hospitalizations. The applicant provided information that the Randomized Access Period includes approximately 800 patient-years of follow-up, with an average patient follow-up of 18 months. The primary endpoint of the CHAMPION trial was HF hospitalizations because it remains a major clinical and public health problem, which is inadequately addressed by current treatment options. Although the trial was not powered to assess mortality, the applicant stated that the data showed strong favorable trends for reduced mortality, and a highly significant reduction for HF hospitalization or mortality. During the first 6 months of follow-up, the applicant stated that the proportion of patients who died that were enrolled in the treatment group ($n=15$, 5.6 percent) was lesser than in the proportion patients who died that were enrolled in the control Group ($n=20$, 7.1 percent), with a nonsignificant but favorable relative risk reduction rate of 23 percent

(HR 0.77, 95 percent CI 0.40–1.51, $p=0.4484$). During the entire Randomized Access Period, the applicant stated that the proportion of patients who died that were enrolled in the treatment group ($n=50$, 18.5 percent) was lesser than the proportion of patients that were enrolled in the control group ($n=64$, 22.9 percent), with a nonsignificant but favorable relative risk reduction rate of 20 percent (HR 0.80, 95 percent CI 0.55–1.15, $p=0.2303$).

The applicant further stated that in measuring the combined impact of mortality and HF hospitalizations on the study population, analysis of the time to death or first HF hospitalization is frequently used. During the first 6 months of the Randomized Access Period, the applicant noted that the proportion of patients who died or that had at least one HF hospitalization that were enrolled in the treatment group ($n=63$, 23.3 percent) was lesser than the proportion of patients who died or that had at least one HF hospitalization that were enrolled in the control group ($n=91$, 32.5 percent), with a significant relative risk reduction rate of 31 percent (HR 0.69, 95 percent CI 0.50–0.95; $p=0.0239$). During the entire Randomized Access Period, the applicant noted that the proportion of patients who died or had at least one HF hospitalization that were enrolled in the treatment group ($n=121$, 44.8 percent) was lesser than the proportion of patients who died or had at least one HF hospitalization that were enrolled in the control group ($n=145$, 51.8 percent), with a significant relative risk reduction rate of 23 percent (HR 0.77, 95 percent CI 0.60–0.98, $p=0.0330$). The applicant further noted that other endpoints other than time to event analyses are event rate analyses for repeat events, including HF hospitalization rates (primary efficacy endpoint) and all cause hospitalization rates. The applicant also indicated that event rate analyses for composite events also are frequently used to assess the impact of both mortality and HF hospitalizations (combined deaths and HF hospitalization rates) and total morbidity and mortality (combined deaths and all cause hospitalizations rates). According to the applicant, the large treatment effect size on long-term outcomes and the low number needed to treat and prevent hospitalizations and deaths demonstrated that CardioMEMS™ HF Monitoring System represents a substantial clinical improvement.

CMS also was concerned that while the data supported a reduction in total hospitalizations, the rate of

hospitalization in each group (0.32 versus 0.44) does not appear to be clinically meaningful. The applicant stated in response that the days alive outside of the hospital (DAOH) endpoint was a secondary endpoint in the CHAMPION trial. The applicant further stated that the endpoint is used in clinical trials as an alternative measure for evaluating the combined impact of mortality and hospitalizations on the study population. Endpoints that are traditionally used to measure this combined effect include time to event analyses (for example, time to death or first HF hospitalization) and composite event rate analyses (for example, rate of death and repeat HF hospitalizations). The applicant noted that, for many HF drug and device trials, these more traditional analyses are frequently used as the primary or co-primary efficacy endpoints. The applicant further stated that the DAOH endpoint is susceptible to many influences including variable follow-up time (that is, patients with longer follow-up time have the potential for more DAOH than patients with shorter follow-up time), the length of the study duration interval for which the DAOH endpoint is being analyzed, and differences in proportion of patients experiencing a mortality or hospitalization event relative to the proportion of patients not experiencing a mortality or hospitalization event (that is, a shorter duration interval will have a greater proportion of patients without any events when compared to a longer duration interval where the proportion of patients experiencing events increases over time). In response to CMS' concerns in regard to the numerical similarity of DAOH between the treatment and control groups which is based on the shorter follow-up interval of 6 months, the applicant stated that during this shorter follow-up interval, approximately 70 percent of the patients did not experience a mortality or HF hospitalization event. The applicant stated that indication skews the dataset because these patients are experiencing 100 percent in measurement of DAOH. Despite this fact, the applicant stated that there was a statistically significant difference of 2.3 days in favor of the treatment group. The applicant asserted that a treatment effect that increases the number of DAOH by 2.3 days over a 6-month period is clinically meaningful to this patient population, as evidenced by the improved quality of life of the patients that were enrolled in the treatment group. DAOH rates were also analyzed over a longer period of follow-up during the Randomized Access Period. To

reduce the effects of variable follow-up time and to have a consistent study duration interval, DAOH was analyzed over the first 12 months of follow-up. Patients enrolled in the treatment group being managed using the CardioMEMS™ HF Monitoring System experienced 6.1 more DAOH than the patients that were enrolled in the control group after 12 months of follow-up. The applicant believed that this increase represents a substantial clinical improvement with respect to current treatment options available to Medicare beneficiaries.

In regard to CMS' concern about the cause of the significant dropouts in the Kaplan Meier curves, which further demonstrates lack of impact on survival, the applicant provided the following information in response. According to the applicant, the dropout rates in the CHAMPION trial were low; the patients transitioning from Randomized to Open Access are being misconstrued as dropouts. The applicant reported that CHAMPION enrolled 550 patients from September 2007 to October 2009. In addition, all of the patients remained in their randomized groups until the last patient enrolled in the CHAMPION trial completed at least 6 months of follow-up. As result of this enrollment over time, the applicant stated that the average patient follow-up in the Randomized Access Period was significantly longer at 18 months. The applicant further indicated that patients with a lower enrollment number and implanted earlier in 2008 had the potential for longer follow-up times in the Randomized Access Period than patients with a higher enrollment number and implanted later in 2009. As a result, the applicant believed that these patients are being construed as dropouts on the Kaplan Meier curve, but actually are patients being censored at the time of their transition to the Open Access Period. According to the applicant, because the maximum follow-up for the Randomized Access Period was already achieved, patients in this category were not eligible or "at risk" for the longer follow-up periods represented in the Kaplan Meier curve understanding that the follow-up time is now part of the Open Access Period.

In response to CMS' invitation for public comments on whether or not the CardioMEMS™ HF Monitoring System technology represents a substantial clinical improvement in the Medicare population, the applicant stated that heart failure is a significant clinical burden to Medicare beneficiaries, their caregivers, and hospitals throughout the U.S. health care system. The applicant believed that rising HF hospitalizations

rates and the increasing cost of care for Medicare beneficiaries diagnosed with HF and the detrimental effect the condition is having on the U.S. health care system is not sustainable.

The applicant believed that the CardioMEMS™ HF Monitoring System technology represents a substantial clinical improvement treatment options available to Medicare beneficiaries. In the CHAMPION trial, 245 patients (45 percent) were 65 years or older at the time of sensor implantation (120 in the treatment group and 125 in the control group). Patients who were enrolled in the treatment group and managed on the basis of PA pressure information obtained from the CardioMEMS™ HF Monitoring System had a significantly reduced HF hospitalization rate (0.34 events/patient-year) compared to patients who were enrolled in the control group (0.67 events/patient-year) and managed according to best available practices (HR 0.51, 95 percent CI 0.37–0.70, $p < 0.0001$).

Response: We appreciate the applicant's response to each of CMS' concerns and the additional data provided. Other than data indicating that the primary endpoint of reduced hospitalizations was met, additional longer term data demonstrated improved mortality. Therefore, we believe that the data indicates that the CardioMEMS™ Monitoring System meets the substantial clinical improvement criterion.

After consideration of the public comments we received, we believe that the CardioMEMS™ HF Monitoring System meets all of the new technology add-on payment policy criteria. Therefore, we are approving the CardioMEMS™ HF Monitoring System for new technology add-on payments in FY 2015. Cases involving the CardioMEMS™ HF Monitoring System that are eligible for new technology add-on payments will be identified by ICD–9–CM procedure code 38.26 (Insertion of implantable wireless pressure sensor for intracardiac or great vessel hemodynamic monitoring), which was effective October 1, 2011. With the new technology add-on payment application, the applicant stated that the total operating cost of the CardioMEMS™ HF Monitoring System is \$17,750. Under § 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS–DRG payment for the case. As a result, the maximum payment for a case involving the CardioMEMS™ HF Monitoring System is \$8,875 for FY 2015.

d. MitraClip® System

Abbott Vascular submitted an application for new technology add-on payments for the MitraClip® System for FY 2015. (We note that the applicant submitted an application for new technology add-on payments for FY 2014 but failed to receive FDA approval by the July 1 deadline.) The MitraClip® System is a transcatheter mitral valve repair system that includes a MitraClip® device implant, a Steerable Guide Catheter, and a Clip Delivery System. It is designed to perform reconstruction of the insufficient mitral valve for high-risk patients who are not candidates for conventional open mitral valve repair surgery.

Mitral regurgitation (MR), also referred to as mitral insufficiency or mitral incompetence, occurs when the mitral valve fails to close completely causing the blood to leak or flow backwards (regurgitate) into the left ventricle. If the amount of blood that leaks backwards into the left ventricle is minimal, then intervention is usually not necessary. However, if the amount of blood that is regurgitated becomes significant, this can cause the left ventricle to work harder to meet the body's need for oxygenated blood. Severity levels of MR can range from grade 1+ through grade 4+. If left untreated, severe MR can lead to heart failure and death. The American College of Cardiology (ACC) and the American Heart Association (AHA) issued practice guidelines in 2006 that recommended intervention for moderate/severe or severe MR (grade 3+ to 4+). The applicant stated that the MitraClip® System is "indicated for percutaneous reduction of significant mitral regurgitation . . . in patients who have been determined to be at prohibitive risk for mitral valve surgery by a heart team, which includes a cardiac surgeon experienced in mitral valve surgery and a cardiologist experienced in mitral valve disease and in whom existing comorbidities would not preclude the expected benefit from correction of the mitral regurgitation."

The MitraClip® System mitral valve repair procedure is based on the double-orifice surgical repair technique that has been used as a surgical technique in open chest, arrested-heart surgery for the treatment of MR since the early 1990s. According to the applicant, in utilizing "the double-orifice technique, a portion of the anterior leaflet is sutured to the corresponding portion of the posterior leaflet using standard techniques and forceps and suture, creating a point of permanent coaptation ("approximation") of the two

leaflets. When the suture is placed in the middle of the valve, the valve will have a functional double orifice during diastole."

With regard to the newness criterion, the MitraClip® System received a premarket approval from the FDA on October 24, 2013. The MitraClip® System is indicated "for the percutaneous reduction of significant symptomatic mitral regurgitation (MR \geq 3+) due to primary abnormality of the mitral apparatus (degenerative MR) in patients who have been determined to be at prohibitive risk for mitral valve surgery by a heart team, which includes a cardiac surgeon experienced in mitral valve surgery and a cardiologist experienced in mitral valve disease, and in whom existing comorbidities would not preclude the expected benefit from reduction of the mitral regurgitation." The MitraClip® System became immediately available on the U.S. market following FDA approval. The MitraClip® System is a Class III device, and has an investigational device exemption (IDE) for the EVEREST study (Endovascular Valve Edge-to-Edge Repair Study)—IDE G030061, and for the COAPT study (Cardiovascular Outcomes Assessment of the MitraClip Percutaneous Therapy for Health Failure Patients with Functional Mitral Regurgitation)—IDE G120024. Effective October 1, 2010, ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant) was created to identify and describe the MitraClip® System technology.

CMS received a formal National Coverage Decision (NCD) request from the Society of Thoracic Surgeons (STS), the American College of Cardiology Foundation (ACCF), the Society for Cardiovascular Angiography and Interventions (SCAI), and the American Association for Thoracic Surgery (AATS) jointly asking that CMS cover Transcatheter Mitral Valve Repair procedures using a system that has received FDA premarket approval (PMA) for the treatment of MR when performed according to an FDA-approved indication. We refer readers to the CMS Web site at: <http://www.cms.gov/medicare-coverage-database/details/nca-tracking-sheet.aspx?NCAId=273> for information related to this ongoing NCD. The tracking sheet for this National Coverage Analysis (NCA) indicates an expected NCA completion date of August 13, 2014, which is after the FY 2015 IPPS/LTCH PPS final rule is scheduled to be published. The processes for evaluation and determination of an NCD, and the processes for evaluation and approval of an application for new technology add-

on payments are made independent of each other. However, any payment made under the Medicare program for services provided to a beneficiary would be contingent on CMS' coverage of the item, and any restrictions on the coverage would apply.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on how the MitraClip® System meets the newness criterion for purposes of new technology add-on payments and the issues that may arise from concurrent NCD requests and new technology add-on payment application review and approval processes.

Comment: The applicant stated that the technology is a first in kind and is not substantially similar to any FDA approved technology on the market. Therefore, the applicant believed that the technology meets the newness criterion. Several other public comments believed that the MitraClip® System meets the newness criterion.

Response: We appreciate the commenters' input. After consideration of the application, we agree with the commenters that the MitraClip® System meets the newness criterion. Therefore, for purposes of determining eligibility for FY 2015 IPPS new technology add-on payments, we consider the technology to be "new" as of October 24, 2013, and will use ICD-9-CM procedure code 35.97 (Percutaneous mitral valve repair with implant) to identify the technology for new technology add-on payments.

Comment: One commenter noted that the application to request a NCD was not made by the applicant, as stated in the proposed rule. Rather, the commenter stated that this request was made by a coalition of four national physician specialty societies that specialize in treating patients diagnosed with valve disease.

Response: We appreciate the commenter's input concerning this clarification.

With regard to the cost criterion, the applicant conducted two analyses. The applicant noted that, while ICD-9-CM procedure code 35.97 maps to MS-DRGs 246 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent with Major Complication or Comorbidity (MCC) or 4+ Vessels/Stents), 247 (Percutaneous Cardiovascular Procedure with Drug-Eluting Stent without MCC), 248 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent with MCC or 4+ Vessels/Stents), 249 (Percutaneous Cardiovascular Procedure with Non-Drug-Eluting Stent without MCC), 250 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI with

MCC), and 251 (Percutaneous Cardiovascular Procedure without Coronary Artery Stent or AMI without MCC), clinical experience with the MitraClip® System device has demonstrated that it is extremely rare for a patient to receive stents concurrently during procedures using the MitraClip® System device. The applicant further cited the FY 2013 IPPS/LTCH PPS final rule (77 FR 53308) which stated, “According to the Food and Drug Administration’s (FDA’s) terms of the clinical trial for MitraClip® System, the device is to be implanted in patients without any additional surgeries performed. Therefore, based on these terms, we stated that while the procedure code is assigned to MS–DRGs 246 through 251, the most likely MS–DRG assignments would be MS–DRGs 250 and 251.” As a result, the applicant stated that it conducted its analyses solely for MS–DRGs 250 and 251 to demonstrate that the cases involving the MitraClip® System device meet the incremental cost thresholds provided in Table 10 for those MS–DRGs.

The applicant researched the FY 2012 MedPAR file for claims for cases reporting ICD–9–CM procedure code 35.97. Under the first analysis and methodology, the applicant noted that this search yielded actual claims for cases in which the MitraClip® System device was used in procedures performed in an IDE study type setting, and hospitals obtained the MitraClip® System device at a reduced investigational price. The applicant further stated that it is likely that hospitals did not report the charges for the investigational device, or submitted claims for charges that were significantly less than the actual device acquisition costs (we refer readers to the explanation below). The applicant found 57 cases in MS–DRG 250 (29.38 percent of the total number of cases), and 137 cases in MS–DRG 251 (70.61 percent of the total number of cases), which resulted in an average case-weighted standardized charge per case of \$232,670.

The applicant standardized the charges using the FY 2014 IPPS final rule impact file, and inflated the result using three different inflation factors. We note that, since the applicant used FY 2012 MedPAR data, we believe it is appropriate to use comparable data for standardization. Therefore, we believe use of the FY 2012 final rule impact file is more appropriate rather than the FY 2014 final rule impact file. The first analysis and methodology used an inflation factor of 4.57 percent, which was based on data from the BLS’ non-seasonally adjusted CPI for all urban

consumers between January 2011 and January 2013. This resulted in an average case-weighted standardized charge per case of \$94,517. The second methodology under the first analysis used an inflation factor of 9.92 percent, which was based on the 2-year charge inflation factor listed in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50982). This resulted in an average case-weighted standardized charge per case of \$96,199. The third methodology used under the first analysis used an inflation factor of 4.63 percent, which was based on the Medicare Economic Index (MEI) from the IPPS market basket update between the third quarter of 2012 projected through the third quarter of 2014. This resulted in an average case-weighted standardized charge per case of \$91,570. The applicant noted that all three methodologies used under the first analysis to determine each respective average case-weighted standardized charge per case were calculated without any adjustments to reflect the reduced investigational price, or inadequate hospital claim reporting and billing.

Using the FY 2014 IPPS Table 10 thresholds, the average case-weighted threshold for MS–DRGs 250 and 251 is \$71,467 (all calculations above were performed using unrounded numbers). Because the average case-weighted standardized charge per case for the applicable MS–DRGs calculated under each methodology under the first analysis discussed above exceeds the average case-weighted threshold amount, the applicant maintained that the technology meets the cost criterion.

Under the second analysis, which used the same premise as the first analysis, the applicant researched the FY 2012 MedPAR file for claims for cases reporting procedure code 35.97 that mapped to MS–DRGs 250 and 251, except that the applicant excluded charges related to the MitraClip® System by removing all charges from the claim that would map to the implantable cost center on the cost report. The applicant then standardized the charges, inflated the result using the three inflation factors above, and added a fixed amount of commercial charges based on post-FDA approval pricing. This resulted in an average case-weighted standardized charge per case of \$139,536 under the first inflation factor (4.57 percent), \$142,364 under the second inflation factor (9.2 percent), and \$139,568 under the third inflation factor (4.63 percent).

Using the FY 2014 IPPS Table 10 thresholds, the average case-weighted threshold for MS–DRGs 250 and 251 is \$71,467 (all calculations above were performed using unrounded numbers).

Because the average case-weighted standardized charge per case for the applicable MS–DRGs calculated under all three methodologies discussed above exceeds the average case-weighted threshold amount, the applicant maintained that the MitraClip® System meets the cost criterion.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether or not the MitraClip® System meets the cost criterion. In addition, we invited public comments on the methodologies used by the applicant in its two analyses.

Comment: In response to CMS’ statement in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28049) that it believed use of the FY 2012 final rule impact file is more appropriate rather than the FY 2014 final rule impact file for standardization, the applicant submitted the following supplemental data updating its cost analyses.

With regard to the second analysis, the applicant submitted revised data using the FY 2012 MedPAR file and the FY 2012 impact file to standardize the charges. We note that in the proposed rule we inadvertently listed \$232,670 as the average case-weighted standardized charge per case. This amount is the average case-weighted non-standardized charge per case. Based on the revised data, the corrected average case-weighted standardized charge per case is \$151,111.

Using the same methodology described above and the FY 2012 impact file, under the second analysis, the applicant determined an inflated average case-weighted standardized charge per case of \$136,479 under the first inflation factor (4.57 percent), \$139,151 under the second inflation factor (9.2 percent), and \$139,509 under the third inflation factor (4.63 percent). The applicant compared these amounts to the average case-weighted threshold of \$71,467 for MS–DRGs 250 and 251 (all calculations above were performed using unrounded numbers). Because the inflated average case-weighted standardized charge per case for the applicable MS–DRGs calculated under all three methodologies discussed above exceeds the average case-weighted threshold amount of \$71,467, the applicant maintained that the MitraClip® System meets the cost criterion.

The applicant also revised the second analysis using FY 2013 MedPAR and the FY 2013 impact file. Based on this data, similar to above, the applicant searched the FY 2013 MedPAR file for claims for cases reporting ICD–9–CM procedure code 35.97. The applicant found 43 cases in MS–DRG 250 (28.66

percent of the total number of cases), and 107 cases in MS–DRG 251 (71.33 percent of the total number of cases), which resulted in an average case-weighted standardized charge per case of \$149,725.

The first methodology used an inflation factor of 3.20 percent, which was based on data from the BLS' non-seasonally adjusted CPI for all urban consumers between January 2012 and January 2013. This resulted in an inflated average case-weighted standardized charge per case of \$152,945 (which included a fixed amount of commercial charges based on post-FDA approval pricing). The second methodology used an inflation factor of 11.46 percent (second quarter of FY 2012 through first quarter of FY 2014), which was based on the outlier inflation factor in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28321). This resulted in an inflated average case-weighted standardized charge per case of \$158,425 (which included a fixed amount of commercial charges based on post-FDA approval pricing). The third methodology used an inflation factor of 4.53 percent, which was based on the MEI from the IPPS market basket update between the third quarter of 2013 projected through the third quarter of 2015. This resulted in an average case-weighted standardized charge per case of \$153,827 (which included a fixed amount of commercial charges based on post-FDA approval pricing).

Using the FY 2014 IPPS Table 10 thresholds, the average case-weighted threshold for MS–DRGs 250 and 251 is \$75,772 (all calculations above were performed using unrounded numbers). Because the inflated average case-weighted standardized charge per case for the applicable MS–DRGs calculated under each methodology under this analysis discussed above exceeds the average case-weighted threshold amount, the applicant maintained that the technology meets the cost criterion.

Several other commenters believed that the MitraClip® System meets the cost criterion.

Response: We appreciate the applicant's submission of the supplemental data. We agree with the commenters that the MitraClip® System meets the cost criterion. We note that in section II.I.4.b. of the preamble of this final rule, we denied the applicant's request to reassign cases reporting a TMVR using the MitraClip® System from MS–DRGs 250 and 251 to MS–DRGs 216 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization with MCC), 217 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization

with CC), 218 (Cardiac Valve & Other Major Cardiothoracic Procedures with Cardiac Catheterization without CC/MCC), 219 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization with MCC), 220 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization with CC), and 221 (Cardiac Valve & Other Major Cardiothoracic Procedures without Cardiac Catheterization without CC/MCC). We also denied the applicant's request to create a new base MS–DRG for transcatheter valve therapies. We refer readers to section II.G. for a complete discussion on these requests.

The applicant asserted that the MitraClip® System meets the substantial clinical improvement criterion. Severe MR is associated with significant morbidity and mortality rates, and is a progressive condition. For symptomatic patients diagnosed with significant MR, surgical repair or replacement is considered the gold standard—offering improvements in symptoms and longer survival rates. However, the applicant explained that studies have indicated that a significant proportion of patients are not eligible for mitral valve repair and/or replacement surgery because of risk factors, including reduced left ventricular function, significant comorbidities, and advanced age. As a result, the applicant stated that there is a significant unmet clinical need for patients diagnosed with severe MR who are too high-risk for surgery, who are receiving palliative medical management.

The applicant also stated that the MitraClip® System meets the substantial clinical improvement criterion based on clinical studies^{10 11 12 13 14 15 16 17 18} that

have consistently shown that procedures performed using the MitraClip® System device lead to a significant reduction of MR; improvements in left ventricular (LV) function including LV volumes and dimensions; improved patient outcomes as measured by improvements in New York Heart Association (NYHA) functional class, improvement in health-related quality of life measures, and reductions in heart-failure related hospitalizations; and significantly lower mortality rates than predicted surgical mortality rates.

The applicant cited clinical data from the EVEREST II High-Risk Study and the EVEREST II (REALISM) Continued Access Study/Registry. The applicant also cited clinical data from a high-risk cohort of patients (the EVEREST II High-Risk Cohort), which is an integrated analysis of the following: (1) patients within the EVEREST II High-Risk Study who met eligibility criteria for being too high-risk to undergo mitral valve repair surgery; and (2) patients within the EVEREST II (REALISM) Continued Access Study/Registry who were too high-risk for surgery using identical eligibility inclusion criteria. The applicant also cited data from the Prohibitive Risk Degenerative Mitral Regurgitation (DMR) Cohort, which is an analysis of retrospectively evaluated high-risk patients diagnosed with DMR enrolled in the EVEREST II studies that had 1-year follow-up available.

In addition to the published clinical experience from the EVEREST studies, the applicant cited data on the use of the MitraClip® System device in a "real-world" setting published recently by a select number of European centers as part of their individual and/or multi-center commercial experience or enrollment in the MitraClip® System device group of the ACCESS–EU post-approval clinical trial in Europe. The European use of the MitraClip® System device is focused on patients who are

¹⁷ Reichenspurner, H., et al., "Clinical Outcomes Through 12 Months in Patients With Degenerative Mitral Regurgitation Treated With the MitraClip Device in the ACCESS–Europe Phase I Trial," *European Journal of Cardiology-and Thoracic Surg*, 2013, Vol. 15, pp. 919–927.

¹⁸ Whitlow, et al., "Acute And 12-Month Results With Catheter-Based Mitral Valve Leaflet Repair: The EVEREST II (Endovascular Valve Edge-to-Edge Repair) High Risk Study," *Journal of American College of Cardiology*, 2012, Vol. 59, pp. 130–139.

too high-risk for surgery, and patients who are selected for therapy using a multi-disciplinary “heart team” approach.

The applicant stated that published reports on the MitraClip® System device and the procedures in which the device was used have consistently demonstrated a significant reduction in MR incidents that have been durable out to 1, 2, 3, and 4 years. The applicant cited the EVEREST II High-Risk Study (an analysis of 78 patients diagnosed with degenerative or functional MR enrolled in the trial), which stated that “objective measures of MR grade improved in the MitraClip™ group, including MR grade of ≤2+ in 78 percent of surviving patients at 1 year. These patients also experienced clinically significant improvements in left ventricular volume measurements. The clinical significance of these improvements is reflected in the NYHA class improvements. At baseline, 89 percent of patients were NYHA III/IV, improving to Class I/II in 74 percent of surviving patients at 12 months. Quality of life scores also improved significantly. Finally, the number of admissions for heart failure was significantly reduced compared to the year prior to MitraClip™ therapy.”

The applicant cited clinical outcomes from the Prohibitive Risk DMR cohort. These results are the basis of the FDA premarket approval. Major effectiveness endpoints evaluated at 12 months demonstrated clinically important improvements in MR severity, with MR severity grades of 3+/4+ decreasing from 90.4 percent at baseline to 16.7 percent at 1 year; NYHA Class III/IV decreasing from 86.6 percent at baseline to 13.1 percent at 1 year; and the SF-36 Physical/Mental scale measuring 33.4/46.6 at baseline increasing to 39.4/52.2 at 1 year.

The applicant stated in its new technology add-on payment application that, “Heart failure hospitalizations were reduced by 73 percent in the 12 months post MitraClip™ procedure from the 12 month pre-MitraClip™ procedure . . .,” and “the primary safety analysis indicated low procedural (30-day) mortality (6.3 percent) after MitraClip™ in comparison with the STS predicted surgical mortality risk score for these patients (13.2 percent).”

The applicant discussed published results¹⁹ “assessing the relationship between the magnitude of reduction in

MR and left ventricular (LV) and left atrial (LA) remodeling after the MitraClip™ therapy.” In this study of patients diagnosed with significant (grade 3+ or 4+) DMR or functional MR (FMR), the authors found that, “even reduction of MR severity to moderate (2+) is associated with LV and LA reverse remodeling. In both DMR and FMR, reduction in left ventricular end-diastolic volume (LVEDV) and LA volumes were improved proportionally to the degree of MR reduction at one year.”

In conclusion, the applicant cited data from the ACCESS-EU study, which noted improvement in disease-specific quality of life measures, including the Minnesota Living with Heart Failure Questionnaire and Six-Minute Walk Test. The applicant also provided data supporting the overall safety and effectiveness of the MitraClip® System device in European “real-world” outcome studies.

We stated in the FY 2015 IPPS/LTCH PPS proposed rule that, as noted in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27547 through 27552), we are concerned that the applicant revised its initial FDA request for the use of the MitraClip® System device in all patients diagnosed with significant MR, after learning that the FDA expressed concern that the initial study, EVEREST II, demonstrated that, while the MitraClip® System device had clinically meaningful improvements in LV volume and QOL, the surgical option had better outcomes than the MitraClip® System device in surgical candidates. The FDA then required a second trial focused on high surgical risk patients. We noted that the data evaluated by the FDA and presented by the applicant in its application for new technology add-on payments included information from the following:

- EVEREST I feasibility trial; enrollment 2003–2006; 55 patients.
- EVEREST II RCT; enrollment 2005–2008; 279 patients.
- EVEREST II High-Risk Study; enrollment 2007–2008; 78 patients. (A comparator group of 36 patients was identified from patients who were screened for the study, but did not meet the mitral valve anatomic criteria for placement of the device.)
- EVEREST (REALISM) Continued Access Study and compassionate use; enrollment 2009–2013; 49 patients.

The applicant provided comparisons of various outcomes prior to the procedure using the MitraClip® System device and outcomes 12 months later. MR severity, LV end diastolic volume, NYHA Class, SF36 Physical/Mental scale, and heart failure hospitalization

rates all had clinically meaningful improvements. For the EVEREST II HRS, the applicant provided analysis demonstrating a significant survival benefit (76 percent versus 55 percent/ $p < 0.047$) over the comparator group.

We stated in the FY 2015 IPPS/LTCH PPS proposed rule that in our review of the clinical trials’ data, we have the following key points of concern:

- Post-hoc analyses of pooled data sets retain all of the individual shortcomings of the individual data sets;
- Pooling does not enhance the utility and scientific value of uncontrolled single-arm registries with no comparators; and
- Inappropriate pooling introduces additional confounders.

We stated that it is also unclear if the appropriate target population for the MitraClip® System device has been identified because the clinical trials conducted by the applicant included patients diagnosed with both DMR and FMR. This makes it difficult to determine which group of patients may benefit more, or less, from the new technology. For example, in a subgroup analysis of the EVEREST II RCT, the authors concluded that, older patients and those patients diagnosed with FMR or abnormal left ventricular function had results more comparable to surgical repair. Data results from 2 years of the EVEREST II RCT also demonstrated that surgery reduced incidents of MR more than the procedures performed using the percutaneous MitraClip® System device. However, both the surgical patients and the patients who were treated using the MitraClip® System device showed comparable results for improved left ventricular function, NYHA functional class, and quality of life.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether this technology meets the substantial clinical improvement criterion, particularly in comparison to other surgical therapies, such as mitral valve repair or replacement, and the appropriate target population for this technology.

Comment: A number of commenters agreed with the applicant that the MitraClip® System meets the substantial clinical improvement criterion. The commenters also recommended the approval of the MitraClip® System for new technology add-on payments in FY 2015. One commenter, an association of thoracic surgeons, expressed support for the approval of the MitraClip® System for new technology add-on payments. The commenter explained that the MitraClip® System provides a treatment option to Medicare beneficiaries that

¹⁹ Grayburn, et al., “The Relationship between the Magnitude of Reduction in Mitral Regurgitation Severity and Left Ventricular and Left Atrial Reverse Remodeling after MitraClip Therapy,” Circulation in Cardiovascular Imaging, September 2013, epub, September 6, 2013.

represents a substantial clinical improvement for patients who are too high risk for surgical mitral valve repair or replacement. Other commenters indicated that they had experience using the MitraClip® System.

Response: We appreciate the commenters' support. Many of the commenters described their positive experiences using the MitraClip® System, which improved the clinical outcome of the patients treated. Furthermore, the commenters believed that most, if not all, of the cases treated using the MitraClip® System would have had no other treatment option available. In addition, the commenters asserted that the MitraClip® System helped to provide improvements to the quality of life of the patients treated with the technology. We considered the commenters' positive experiences using the MitraClip® System in our determination of whether the MitraClip® System represents a substantial clinical improvement in the treatment options available to Medicare beneficiaries.

Comment: The applicant submitted a public comment that stated peer-reviewed evidence supported the belief that the MitraClip® System meets the substantial clinical improvement criterion. The applicant further noted that in previous rulemaking, CMS has indicated that new technologies represent a substantial clinical improvement if "the device offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatment." The commenter believed that the MitraClip® System meets this criterion when used in accordance with the FDA-approved indication for the treatment of prohibitive risk degenerative mitral regurgitation (DMR). Specifically, the applicant stated that for those patients who are ineligible for surgery due to prohibitive surgical risk, the MitraClip® System offers the first available option to mechanically correct their mitral valve disease and, therefore, improve cardiac functioning and functional status and quality of life, while decreasing heart failure related hospitalizations and potentially reducing mortality.

The applicant reiterated the opinion that the clinical evidence^{20 21} demonstrated that the technology

represents a substantial clinical improvement in the treatment options available to Medicare beneficiaries for the following reasons:

- A majority of patients experience MR reduction from 3+/4+ to ≤2+ after the procedure. This improvement is sustained in 83 percent of patients at 12 months. Results at 2 years demonstrated that 82.5 percent of surviving patients remained at ≤2+, which demonstrated that there is no evidence of deterioration of MR severity between 1-year and 2-year follow up.

- Reduction in MR with the MitraClip therapy to ≤2+ has been shown to provide significant symptomatic DMR patients with meaningful clinical benefits including reduction of left ventricular volumes.

- Patients experienced clinically important improvement in NYHA Functional Class at 12 months; roughly 87 percent of patients experienced NYHA Class III or Class IV symptoms at baseline, which improved to less than 15 percent at 12 months.

- Despite the elderly and highly comorbid nature of the population, quality of life scores improved. The improvements in both the Physical Component Summary and Mental Component Summary scores exceeded the 2–3 point threshold generally considered to represent a minimum clinically important difference.

- Heart failure hospitalizations were reduced by 73 percent in the 12 months post-MitraClip procedure from the 12 months pre-MitraClip procedure.

The commenter concluded that, in recognition of these benefits, the 2014 AHA/ACC Guidelines for the Management of Patients with Valvular Heart Disease recommended the MitraClip therapy as a treatment option for the FDA-approved indication. The commenter noted that the guidelines state that TMVR may be considered for severely symptomatic patients (NYHA Class III to Class IV) with chronic severe primary MR (stage D) who have favorable anatomy for the repair procedure and a reasonable life expectancy, but who have a prohibitive surgical risk because of severe comorbidities and remain severely symptomatic despite optimal GDMT for HF.

The applicant also addressed CMS' concerns presented in the proposed rule. Specifically, with respect to the concern regarding the appropriate target population for this technology, the commenter believed that the target population has been clearly defined in the FDA approval indication and associated labeling for the MitraClip® System. The applicant noted that since

the publication of the proposed rule, as stated above, the AHA/ACC has reviewed the MitraClip® System evidence and updated their guidelines to recommend consideration for the use of the MitraClip® System for patients meeting the FDA-approved indication. In addition, the applicant indicated that the CMS Coverage and Analysis Group has also reviewed the MitraClip® evidence and issued a proposed decision memorandum to extend coverage for the FDA-approved indication at highly experienced centers of excellence meeting specific criteria. Further, the applicant noted that detailed multi-society requirements have been published specifying operator and institutional criteria for performing the MitraClip® System procedure, and these have been incorporated by CMS into the proposed decision memorandum. Finally, the applicant stated that it has worked together with national societies and CMS to establish a new mitral module of the national TVT registry to systematically track adherence to these requirements by all health care centers using the MitraClip® System and to collect data on patient outcomes with linkage to the CMS claims database.

With respect to CMS' concerns regarding how the MitraClip® system compares to other surgical therapies, such as mitral valve repair or replacement, the applicant stated that clinical outcomes from the prohibitive risk DMR Cohort were determined by the FDA to adequately establish the safety, effectiveness, and positive benefit-risk profile of the MitraClip® System for the indicated population, and these data are the basis for Premarket Approval Application (PMA) approval. In conclusion of thought, the applicant stated that the FDA concluded that the totality of clinical evidence demonstrated the reasonable assurance of safety and effectiveness of the MitraClip® System to reduce MR and provide patient benefit in this discrete and specific patient population.

The applicant also commented that the prohibitive risk DMR Cohort, on which FDA approval was granted, included 127 consecutively-enrolled patients who completed 12 months of follow-up after treatment with the MitraClip® System device. The applicant explained that this Cohort included 25 patients from the EVEREST II High Risk Registry (HRR) study, 98 patients from the high risk arm of the REALISM Continued Access study, and 4 Compassionate Use patients. The applicant further explained that the four Compassionate Use patients are included for analysis in the Prohibitive

²⁰ Lim et al. Improved Functional Status and Quality of Life in Prohibitive Surgical Risk Patients With Degenerative Mitral Regurgitation Following Transcatheter Mitral Valve Repair with the MitraClip® System, *JACC* (2013), In Press, Accepted Manuscript, Available online 31 October 2013.

²¹ MitraClip® Clip Delivery System Instructions for Use, at abbottvascular.com/ifu.

Risk DMR Cohort because they meet the definition of prohibitive risk and all valve anatomic criteria for eligibility. For inclusion in this Cohort, three physicians (two experienced mitral valve surgeons and one experienced mitral valve cardiologist) had to concur that the patient met the definition of prohibitive risk.

The applicant further stated that patients in the prohibitive risk DMR Cohort were all enrolled under a highly-rigorous IDE clinical trial protocol that included pre-specified eligibility criteria and adjudicated endpoints. The applicant stated that pooling of the EVEREST II Continued Access Study (REALISM) data with EVEREST II HRR was intended and pre-specified in the REALISM protocol. The applicant noted that one of the REALISM protocol's stated objectives was to gather additional safety and effectiveness data to support the PMA. The applicant further stated that the same device design was used, and care was taken to ensure the two studies had identical entry criteria, data collection, monitoring, and analysis methods. In addition, the applicant stated that the REALISM protocol defined the evaluation of poolability and specified clinically important baseline variables to be compared. The applicant stated that the majority (10/13) of these baseline characteristics, especially high-risk characteristics/comorbidities, was similar in REALISM and HRR, resulting in comparable average STS predicted mortality risk scores.

The applicant stated that the findings from the prohibitive risk DMR Cohort were highly consistent with real-world evidence from a large number of published European studies that included similar groups of high-risk patients.

The applicant concluded that despite some limitations in evaluating evidence from pooled datasets, it should be noted that all available evidence on the MitraClip® System consistently indicate that the use of this technology provides both mechanistic and clinical benefit for these high surgical risk patients.

Response: We appreciate the applicant's subsequent analysis of data. With respect to the substantial clinical improvement represented by this technology, we considered all the case specific clinical information presented by the applicant and the public to determine whether there is evidence to support a conclusion that the use of the MitraClip® System represents a substantial clinical improvement in the treatment options available to Medicare beneficiaries. Specifically, we considered the peer-reviewed medical

literature, clinical studies, and the clinically accepted use of the device. We believe that it is important that the MitraClip® System be used in the treatment of the appropriate target population and that the NCD will establish the appropriate Medicare patient population for this procedure. We agree with the applicant that the MitraClip® System offers a treatment option for a patient population unresponsive to, or ineligible for, currently available treatment; specifically those patients that have been determined to be at prohibitive risk for mitral valve surgery (per the FDA indications). In addition, we received positive comments from a major cardiovascular and a major thoracic society and from many physicians who indicated that the MitraClip® System helped to produce positive clinical outcomes by providing a treatment option for patients with no other available options, as well as resolving MR. Furthermore, the MitraClip® System is the only device currently available to mechanically correct mitral valve disease. Without the availability of this device, patients with DMR might otherwise receive general treatment to maintain their condition, which would eventually result in death rather than a treatment to resolve their condition. Also, the MitraClip® System can be an effective treatment option that improves quality of life and reduces heart failure symptoms and hospitalizations. Therefore, after reviewing the totality of the evidence, we believe that the MitraClip® System represents a substantial clinical improvement over existing therapies. We remain interested in seeing whether the clinical evidence will continue to find that the MitraClip® System will be effective. We will continue to monitor the clinical data as the data become available.

After consideration of the public comments we received, we are approving the MitraClip® System for new technology add-on payments in FY 2015. As noted above, any payment made under the Medicare program for services provided to a beneficiary is contingent upon CMS' coverage of the item, and any restrictions on the coverage apply. This approval is on the basis of using the MitraClip® consistent with any coverage decision that will be issued by CMS after the publication of this final rule. Subject to any coverage determinations made by CMS regarding the MitraClip® System, cases involving the MitraClip® System that are eligible for the new technology add-on payments will be identified by ICD-9-

CM procedure code 35.97. The average cost of the MitraClip® System is reported as \$30,000. Under section 412.88(a)(2), new technology add-on payments are limited to the lesser of 50 percent of the average cost of the device or 50 percent of the costs in excess of the MS-DRG payment for the case. As a result, the maximum add-on payment for a case involving the MitraClip® System is \$15,000 for FY 2015.

e. Responsive Neurostimulator (RNS®) System

NeuroPace, Inc. submitted an application for new technology add-on payments for FY 2015 for the use of the RNS® System. (We note that the applicant submitted an application for new technology add-on payments for FY 2014, but failed to receive FDA approval prior to the July 1 deadline.) Seizures occur when brain function is disrupted by abnormal electrical activity. Epilepsy is a brain disorder characterized by recurrent, unprovoked seizures. According to the applicant, the RNS® System is the first implantable medical device (developed by NeuroPace, Inc.) for treating persons diagnosed with epilepsy whose partial onset seizures have not been adequately controlled with antiepileptic medications. The applicant further stated that, the RNS® System is the first closed-loop, responsive system to treat partial onset seizures. Responsive electrical stimulation is delivered directly to the seizure focus in the brain when abnormal brain activity is detected. A cranially implanted programmable neurostimulator senses and records brain activity through one or two electrode-containing leads that are placed at the patient's seizure focus/foci. The neurostimulator detects electrographic patterns previously identified by the physician as abnormal, and then provides brief pulses of electrical stimulation through the leads to interrupt those patterns. Stimulation is delivered only when abnormal electrocorticographic activity is detected. The typical patient is treated with a total of 5 minutes of stimulation a day. The RNS® System incorporates remote monitoring, which allows patients to share information with their physicians remotely.

With respect to the newness criterion, the applicant stated that some patients diagnosed with partial onset seizures that cannot be controlled with antiepileptic medications may be candidates for the vagus nerve stimulator (VNS) or for surgical removal of the seizure focus. According to the applicant, these treatments are not appropriate for, or helpful to, all

patients. Therefore, the applicant believed that there is an unmet clinical need for additional therapies for partial onset seizures. The applicant further stated that the RNS® System addresses this unmet clinical need by providing a novel treatment option for treating persons diagnosed with medically intractable partial onset seizures. The applicant received FDA premarket approval in November 2013. The following ICD–9–CM procedure codes are used to identify this technology: 01.20 (Cranial implantation or replacement of neurostimulator pulse generator); 01.29 (Removal of cranial neurostimulator pulse generator); and 02.93 (Implantation or replacement of intracranial neurostimulator lead(s)).

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the technology meets the newness criterion. However, we did not receive any public comments in response to the proposed rule regarding whether the technology meets the newness criterion. The applicant received FDA premarket approval on November 14, 2013. Therefore, for the purpose of evaluation for determining eligibility for FY 2015 IPPS new technology add-on payments, we consider this technology to be “new” as of November 14, 2013, and we will use the following ICD–9–CM procedure codes to identify the technology for purposes of new technology add-on

payments: 01.20 (Cranial implantation or replacement of neurostimulator pulse generator); 01.29 (Removal of cranial neurostimulator pulse generator); and 02.93 (Implantation or replacement of intracranial neurostimulator lead(s)).

With regard to the cost criterion, the applicant stated that substantially all cases eligible for the RNS® System would map to MS–DRG 024 (Craniotomy with Major Device Implant/Acute Complex Central Nervous System Principal Diagnosis without MCC). The applicant further stated that, while it is possible for some cases to occur in MS–DRG 023 (Craniotomy with Major Device Implant/Acute Complex Central Nervous System Principal Diagnosis with MCC or Chemotherapy Implant), it would be extremely rare because the applicant believed that these major complications and/or comorbidities would probably preclude a patient from receiving treatment using the RNS® System because the technology is an elective procedure.

The applicant submitted two analyses to demonstrate that the technology meets the cost criterion. For the first analysis, the applicant used clinical trial claims data collected in the RNS® System Pivotal Clinical Investigation to calculate the anticipated average case-weighted standardized charge per case. The applicant maintained that this analysis best represents the anticipated

charges for the technology because it is based on actual cases treated using this technology. The applicant analyzed 163 claims from 28 hospitals participating in the clinical trial. Five claims from one hospital were excluded because no hospital-specific information regarding standardization was available. The resulting 158 claims included dates of service ranging from May 2006 through May 2009. The average case-weighted standardized charge per case for these 158 claims was \$54,691.

The applicant then standardized the charges for each claim. The applicant noted that it was not necessary to remove any charges from these claims because the technology was provided at no charge in the trial. After standardizing the charges for each claim, the applicant inflated the charges reported on each claim using the BLS’ CPI–IP data covering the same period. Specifically, because the publicly available FY 2012 MedPAR data do not identify the month of the discharge on inpatient claims, but do identify the calendar quarter, the applicant used a mid-month convention to determine the relevant monthly CPI–IP for each calendar quarter. The applicant then calculated the percentage change from the relevant quarter to the quarter of the most recently available CPI–IP, which was the August 2013 CPI–IP. Specifically, the applicant used the following assumptions:

FY 2012 calendar quarter	Midpoint of quarter	CPI IP	Percent change to August 2013
Q4 2011	Nov-11	242.672	7.93
Q1 2012	Feb-11	245.721	6.59
Q2 2012	May-11	247.646	5.76
Q3 2012	Aug-11	248.856	5.25
Most recent as of application	Aug-13	261.915	

Source as cited by applicant: Bureau of Labor Statistics’ Web site, accessed October 13, 2013; Base Period: December 1996 = 100.

After inflating the charges, the applicant estimated charges for the RNS® System by multiplying the device cost to the hospital by an anticipated hospital markup of 100 percent, or conversely by dividing the device cost by a CCR of 0.50. The applicant based its estimated CCR on four analyses. First, the applicant reviewed the 2007 and 2008 reports prepared by RTI for CMS on charge compression, which found that the national aggregate CCR for devices and implants was 0.43 and 0.467, as presented in the respective reports. Second, the applicant queried hospitals participating in the RNS® System Pivotal trial, and these queries yielded a mean and median CCR for implantable devices of 0.37 and 0.36,

respectively. Third, the applicant reviewed data from the (All Payor) Premier database for cases performed during 2000 through 2010 that reported ICD–9 CM procedure codes 02.93 and/or 86.95 on a claim, and calculated a mean and median CCR for implanted leads and neurostimulators of 0.50 and 0.44, respectively. The applicant then reviewed other discussions of past new technology add-on payment applications published in the **Federal Register**, and noted that other applicants used lower CCRs (higher markups) for implanted devices than the CCR of 0.50 used in the applicant’s analyses.

Using this approach, the applicant added the anticipated hospital charge

for the implantable RNS® System to the average case-weighted standardized charge per case, and determined a final average case-weighted standardized charge per case of \$128,723. The anticipated hospital charge for the implantable RNS® System is \$73,900. Using the FY 2014 IPPS Table 10 thresholds, the threshold for MS–DRG 024 is \$91,197. Because the final average case-weighted standardized charge per case of \$128,723 for MS–DRG 024 exceeds the average case-weighted threshold amount, the applicant maintained that the RNS® System meets the cost criterion.

In the second analysis, which the applicant characterizes as supplementary, the applicant

researched the FY 2012 MedPAR file for cases reporting the following combinations of ICD-9-CM procedure codes: 02.93 and 86.95, or procedure codes 02.93 and 01.20 that mapped to MS-DRG 024. The applicant found 383 claims for cases reporting the combination of ICD-9-CM procedure codes 02.93 and 01.20, and pointed out that these cases were coded with procedure code 01.20 in error because no new RNS® System implantations occurred after May 2009. The applicant analyzed these 383 claims, and found that more than 90 percent of these cases had a primary or secondary diagnosis of Parkinson's disease, essential tremor, or dystonia. These diagnoses are FDA-approved indications for deep brain stimulation (DBS). In addition, the applicant noted that the total covered charges for these cases were less than the estimated charges for a full DBS system, and hypothesized that these cases did not represent implantation of a full DBS system, but did represent the implantation of leads only. The applicant contacted two hospitals that reported claims for cases where total covered charges were less than the charges for a full DBS system, and the hospitals confirmed that their claims represented lead implantations only. Therefore, for the second analysis, the applicant included all of the cases assigned to MS-DRG 024 reporting a combination of ICD-9-CM procedure codes 02.93 and 86.95, and all of the cases assigned to MS-DRG 024 reporting a combination of ICD-9-CM procedure codes 02.93 and 01.20 where the covered charges were greater than, or equal to, the estimated charges of a full DBS system. The applicant maintained that 374 claims from 106 providers met this criterion, and data represented claims from the fourth calendar quarter of 2011 through the third calendar quarter of 2012. Based on this assumption, the applicant calculated an average case-weighted standardized charge per case of \$65,555.

The applicant then removed DBS charges from the average case-weighted standardized charge per case. The applicant estimated charges for a full DBS system, and maintained that the average cost for a full DBS system is \$25,979. Similar to its first analysis, the applicant assumed a CCR of 0.50, or 100 percent markup, which resulted in estimated charges for a full DBS system of \$51,958. After removing the DBS system charges, the applicant inflated the charges to the current period using the same methodology in the first analysis, added charges for the RNS® System, and determined a final average

case-weighted standardized charge per case of \$130,233. As noted above, the anticipated hospital charge for the implantable RNS® System is \$73,900. Using the FY 2014 IPPS Table 10 thresholds, the average case-weighted threshold for MS-DRG 024 is \$91,197. Because the final average standardized charge per case of \$130,233 for MS-DRG 024 exceeds the threshold amount, the applicant maintained that the RNS® System meets the cost criterion.

Under either analysis, the applicant maintained that the final average case-weighted standardized charge per case would exceed the average case-weighted threshold.

In the FY 2015 IPPS/LTCH PPS proposed rule, we invited public comments on whether the RNS® System meets the cost criterion, particularly based on the assumptions and methodology used in the applicant's analyses. However, we did not receive any public comments in response to the proposed rule regarding whether this technology meets the cost criterion. After further evaluation of the new technology add-on payment application, we believe that the technology meets the cost criterion.

With regard to substantial clinical improvement, as previously stated, some patients diagnosed with partial onset seizures may not be able to control their seizures with antiepileptic medications, VNS, or with surgical removal of the seizure focus. The applicant stated that the RNS® System provides treatment for those patients diagnosed with partial onset seizures who fail treatment with antiepileptic medications, or VNS therapy, and who are ineligible for respective surgery because of the extent and/or location of the seizure focus, or patients who do not elect surgery. According to the applicant, the RNS® System clinical trials provide Class I evidence that treatment using the RNS® System substantially reduces disabling seizures in patients diagnosed with severe epilepsy, who have tried and failed treatment with antiepileptic medications, and in many cases, VNS or epilepsy surgery. The applicant maintained that the results from their clinical trials demonstrate significant and sustained improvements in health outcomes over the controlled period and over the long term. The applicant conducted a feasibility trial, which was designed to demonstrate adequate safety of its treatment, and provide evidence of effectiveness to support commencement of a randomized double-blinded pivotal trial. In addition, the applicant has an ongoing long-term treatment clinical investigation trial (LTT trial) to assess

the long-term safety and effectiveness of the treatment on patients who have completed either the Feasibility trial, or the RNS® System Pivotal trial for an additional seven years. The LTT trial started in April 2006, and the final patient is expected to complete the trial in 2018. The applicant noted that patients enrolled in the LTT trial continued to experience a reduction in seizures over several years of follow-up, further demonstrating the positive effect of responsive stimulation from the RNS® System is durable.

The applicant stated that their pivotal trial met its primary effectiveness endpoint by proving that there was a statistically significant greater reduction in seizures in the treatment group compared to the control group ($p = 0.012$). Significant improvements at 1 and 2 years post-implant included:

- A significant reduction in disabling seizures of 44 percent and 53 percent at 1 and 2 years, respectively;
- Fifty-five percent of patients who reached 2 years post-implant experienced a 50 percent or greater reduction in seizures; and
- Significant improvements in overall quality of life, as well as individual quality of life measures including memory, language, attention, concentration and medication effects.

The applicant asserted that there was no negative effect of treatment using the RNS® System on neuropsychological function (including verbal functioning, visual spatial processing, and memory) or mood. The applicant concluded that the RNS® System Pivotal trial provides Class I evidence that responsive cortical stimulation is effective in significantly reducing seizure frequency in adults with one or two seizure foci who have failed two or more antiepileptic medication trials. The applicant stated that experience across all of the RNS® System trials demonstrates the reduction in seizure frequency of disabling partial onset seizures improves over time. In addition, the applicant noted that sustained improvements were also seen in quality of life. Finally, the applicant noted that safety and tolerability measures compare favorably to alternative treatments, such as antiepileptic medications, VNS, and epilepsy surgery.

With regard to the substantial clinical improvement criterion, we stated in the proposed rule that we are concerned that the average age of the patients enrolled in the applicant's trials was 35 years. Although the applicant maintained that 31 percent of the patients enrolled in the pivotal trial were Medicare beneficiaries, we are unsure of the extent to which this

technology would be used by Medicare beneficiaries because of the relatively young age of the majority of the patients enrolled in the pivotal trial. We also are concerned that further clarification on how the RNS® System compares to other neurostimulation treatments was not provided by the applicant.

Because the applicant included claims with DBS charges in one of its cost analyses, we believe that the similarities and differences between DBS and the RNS® System may also be relevant under the substantial clinical improvement criterion. In addition, we stated in the proposed rule that we are concerned that the time period in the clinical trial may not be sufficient to confirm durability. In the RNS® System Pivotal Clinical Investigation, the primary effectiveness endpoint considered seizure frequency over the last 3 months of the blinded period of the trial. We note that the applicant is currently conducting a 5-year study.

We invited public comments on whether the RNS® System meets the substantial clinical improvement criterion, particularly in regard to the degree in which the technology would be used by Medicare beneficiaries, the comparison to other neurostimulation treatments, and its durability.

Comment: Commenters stated that the technology is currently used and will continue to be used in the treatment of Medicare beneficiaries who have been diagnosed with epilepsy. One commenter noted that 31 percent of individuals in the RNS® System clinical trial were Medicare beneficiaries, and all of these individuals were enrolled in the Medicare program because of a disability as opposed to being enrolled in the Medicare program because of their age. In addition, the commenter provided an analysis of data obtained from publicly available databases, specifically using the Premier Perspective all payor database for the time period from 2008 through 2013 and the CMS MedPAR database for FY 2012 and FY 2013. This analysis showed that, for Medicare beneficiaries who have been diagnosed with medically intractable partial epilepsy, 72 to 77 percent of the Medicare claims were submitted for payment of services provided to patients who were under the age of 65. The commenter also queried the public Web sites of the healthcare centers that participated in the RNS® System Pivotal trial, which included data on patients who have participated in specific programs directed by 120 adult comprehensive epilepsy centers, and found that these centers reported that 33 percent of their patients who have been diagnosed with

epilepsy were enrolled in the Medicare program and 76 percent of these Medicare beneficiaries were under the age of 65. Several other commenters asserted that patients who have been diagnosed with epilepsy and receive treatment using this technology would be eligible for Medicare based on a disabling condition. The commenter provided examples of the types of patients that they have treated who are younger than the age of 65, but who are insured through the Medicare program based on a disabling condition.

Response: We appreciate the information detailed within the commenter's analysis. We agree with the commenters that this technology will be available for use by Medicare beneficiaries.

Comment: Commenters provided comparison analyses for this technology and VNS therapy, DBS, surgical resection, and other medications, and also conducted assessments of the durability of the RNS® System. (We further discuss the results of the comparison analyses and assessments conducted by these commenters below.) Many of these commenters pointed out that this technology is capable of capturing and storing information regarding seizure activity, which could enable the use of this technology to initiate possible changes in medical management of patients treated with an implant over time.

In comparison to VNS therapy, commenters stated that the RNS® System is a closed loop system that provides electrical stimulation in response to brain activity, while VNS therapy is an open loop system that provides electrical stimulation continuously or intermittently at programmed intervals. In addition, commenters stated that the RNS® System can be applied directly to the seizure focus or foci in the brain, while VNS therapy provides stimulation to the vagus nerve. The commenters noted that this distinction represents an improvement relative to VNS therapy because patients receive less stimulation using the RNS® System. The commenters also pointed out that the side effects of VNS therapy, such as hoarseness, coughing, and throat pain, are distressing and uncomfortable for patients and can make VNS therapy difficult to tolerate. These commenters also noted that these side effects do not emerge with the use of the RNS® System. One commenter provided data from the clinical trials for VNS therapy, which showed that more than half of the patients treated with VNS therapy "perceived" stimulation. The commenter also provided data from

clinical trials for VNS therapy that showed that the side effects for VNS therapy included voice alternation, increased coughing, pharyngitis, dyspnea, dyspepsia, nausea, and laryngismus. The commenter compared the indications from the clinical trial data with data from the RNS® System trials, which indicate that there were no patients with ongoing complaints related to "perception of stimulation," although some patients experienced symptoms such as flashing lights or focal muscle twitching. The commenter stated that stimulation with the RNS® System was adjusted for patients experiencing these symptoms, such that the symptoms became imperceptible. Many commenters stated that they were able to use the RNS® System to reduce the frequency of seizures in patients who have been diagnosed with epilepsy for whom VNS therapy did not reduce seizures. One commenter provided clinical trial data regarding VNS therapy that showed that in two studies in blinded periods VNS therapy reduced median seizures per day by 6 to 23 percent, and that over 3 years VNS therapy reduced median seizures per day by 31 to 41 percent. The commenter also provided clinical trial data regarding the RNS® System that showed in the blinded period a 28 percent reduction of median seizures per day compared to 19 percent for the control group. In addition, the commenter also provided clinical trial data regarding the RNS® System that showed that over 3 years the RNS® System reduced median seizures by 44 to 60 percent. The commenter also pointed out that 34 percent of patients enrolled in the RNS® System trial were previously treated with VNS therapy, but experienced positive outcomes with the RNS® System.

In comparison to DBS, commenters stated that the RNS® System was not approved by the FDA for treatment of epilepsy, and DBS is not considered to be the standard of care for the treatment of epilepsy by the American Academy of Neurology or the American Epilepsy Society. The commenters stated that they did not have experience with the RNS® System to compare with DBS to because it is not typically used, or approved for, treating patients diagnosed with epilepsy. One commenter noted that DBS is only available to patients on an experimental or investigational basis for the treatment of epilepsy. Another commenter stated that no direct comparison trial has been conducted between DBS and the RNS® System. The commenter reviewed data from a clinical trial that studied the use

of DBS treatment of the anterior nucleus of the thalamus in subjects with medically intractable partial seizures. While the commenter stated that some of the data appeared to be comparable to the results of the RNS[®] System trials in terms of seizure reduction and quality of life, differences existed in the construction of the trials, including inclusion and exclusion criteria and primary efficacy endpoints. The commenter also stated that, similar to VNS therapy, DBS provides continuous or intermittent stimulation at program intervals, resulting in more stimulation being delivered than delivered using the RNS[®] System.

In comparison to surgical resection, commenters noted that the RNS[®] System can be used when surgical resection is not available as a treatment option. Commenters stated that some patients who have been diagnosed with epilepsy have seizure focus or foci area(s) in regions of the brain that should not be removed because removal would result in serious neurological defects. Therefore, commenters stated that the RNS[®] System represents a treatment option for patients who have been diagnosed with epilepsy for whom surgery is not an option. In addition, commenters stated that they were able to use the RNS[®] System to reduce the frequency of seizures in patients who had been treated with surgical resection and did not experience a reduction in seizures after surgery.

In comparison to antiepileptic medications used to treat patients who have been diagnosed with epilepsy, commenters stated that the RNS[®] System offers a treatment option that does not have the unpleasant side effects associated with some of these medications. The commenters stated that these side effects include problems with cognition or coordination, depression, and fatigue.

With regard to durability, one commenter provided data from the RNS[®] System clinical trial for 6 years. The results of the trial indicate that the median percent reduction in seizures compared to the baseline year was sustained or improved at 60 percent 3 years after implantation and 66 percent 6 years after implantation. The median follow-up time for this group of patients based on the trial's data was 5.4 years. The commenter indicated that these results are comparable, or better, for the subset of patients who were enrolled in the RNS[®] System clinical trial and that were Medicare beneficiaries. The commenter further stated that the updated data showed that the proportion of patients who were enrolled in the RNS[®] System clinical

trial that experienced extended periods of seizure freedom of 3 or 6 months was slightly larger than previously shared in the November 1, 2012 new technology add-on payment application for the RNS[®] System.

Response: We appreciate the commenters' input. We agree with the commenters that the RNS[®] System offers a treatment option for a patient population that is unresponsive to currently available treatments. Specifically, we agree with the commenters that the RNS[®] System clinical trial data showed that the technology reduces seizure frequency in patients who have received treatment with VNS therapy or surgical resection and continued to have seizures subsequent to those treatments. We also agree with the commenters that the technology could be a treatment option for patients for whom surgical resection is not appropriate due to the location of the seizure focus or foci area(s). In addition, we agree with the commenters that use of the device improves clinical outcomes compared to currently available treatments. For example, it appears that seizure reduction over time using the RNS[®] System appears to be at least comparable with documented seizure reductions using VNS therapy, although no direct comparison of the two systems has been completed, and the RNS[®] System appears not to have the side effects that have been associated with VNS therapy. We agree with the commenters that it is inappropriate to compare the RNS[®] System to a technology that is not FDA approved for the same treatment.

After consideration of the public comments we received, we believe that the RNS[®] System meets all of the new technology add-on payment criteria. Therefore, we are approving new technology add-on payments for the RNS[®] System for FY 2015. Cases involving the RNS[®] System that are eligible for new technology add-on payments will be identified using the following ICD-9-CM procedure codes: 01.20 (Cranial implantation or replacement of neurostimulator pulse generator) in combination with 02.93 (Implantation or replacement of intracranial neurostimulator lead(s)). According to the applicant, cases using the RNS[®] System would incur an anticipated cost per case of \$36,950. Under § 412.88(a)(2) of the regulations, new technology add-on payments are limited to the lesser of 50 percent of the average costs of the device or 50 percent of the costs in excess of the MS-DRG payment rate for the case. As a result, the maximum add-on payment for cases

involving the RNS[®] System is \$18,475 for FY 2015.

III. Changes to the Hospital Wage Index for Acute Care Hospitals

A. Background

Section 1886(d)(3)(E) of the Act requires that, as part of the methodology for determining prospective payments to hospitals, the Secretary adjust the standardized amounts "for area differences in hospital wage levels by a factor (established by the Secretary) reflecting the relative hospital wage level in the geographic area of the hospital compared to the national average hospital wage level." We currently define hospital labor market areas based on the delineations of statistical areas established by the Office of Management and Budget (OMB). A discussion of the FY 2015 hospital wage index based on the statistical areas appears under section III.B. of the preamble of this final rule.

Section 1886(d)(3)(E) of the Act requires the Secretary to update the wage index annually and to base the update on a survey of wages and wage-related costs of short-term, acute care hospitals. This provision also requires that any updates or adjustments to the wage index be made in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. The adjustment for FY 2015 is discussed in section II.B. of the Addendum to this final rule.

As discussed in section III.H. of the preamble of this final rule, we also take into account the geographic reclassification of hospitals in accordance with sections 1886(d)(8)(B) and 1886(d)(10) of the Act when calculating IPPS payment amounts. Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amounts so as to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B), 1886(d)(8)(C), and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. The budget neutrality adjustment for FY 2015 is discussed in section II.A.4.b. of the Addendum to this final rule.

Section 1886(d)(3)(E) of the Act also provides for the collection of data every 3 years on the occupational mix of employees for short-term, acute care hospitals participating in the Medicare program, in order to construct an occupational mix adjustment to the wage index. A discussion of the occupational mix adjustment that we are applying to the FY 2015 wage index

appears under section III.F. of the preamble of this final rule.

B. Core-Based Statistical Areas for the Hospital Wage Index

1. Background

The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The statistical areas used in FY 2014 are based on OMB standards published on December 27, 2000 (65 FR 82228) and Census 2000 data and Census Bureau population estimates for 2007 and 2008 (OMB Bulletin No. 10–02). For a discussion of OMB's delineations of CBSAs and our implementation of the CBSA definitions, we refer readers to the preamble of the FY 2005 IPPS final rule (69 FR 49026 through 49032). We also discussed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51582) and the FY 2013 IPPS/LTCH PPS final rule (77 FR 53365) that, in 2013, OMB planned to announce new labor market area delineations based on new standards adopted in 2010 (75 FR 37246) and the 2010 Census of Population and Housing data. As stated in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27552) and final rule (78 FR 50586), on February 28, 2013, OMB issued OMB Bulletin No. 13–01, which established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. A copy of this bulletin may be obtained at <http://www.whitehouse.gov/sites/default/files/omb/bulletins/2013/b-13-01.pdf>. According to OMB, “[t]his bulletin provides the delineations of all Metropolitan Statistical Areas, Metropolitan Divisions, Micropolitan Statistical Areas, Combined Statistical Areas, and New England City and Town Areas in the United States and Puerto Rico based on the standards published on June 28, 2010, in the **Federal Register** (75 FR 37246 through 37252) and Census Bureau data.” In this FY 2015 IPPS/LTCH PPS final rule, when referencing the new OMB geographic boundaries of statistical areas, we are using the term “delineations” rather than the term “definitions” that we have used in the past, consistent with OMB's use of the terms (75 FR 37249).

In order to implement these changes for the IPPS, it is necessary to identify

the new labor market area delineation for each county and hospital in the country. While the revisions OMB published on February 28, 2013 are not as sweeping as the changes OMB announced in 2003, the February 28, 2013 bulletin does contain a number of significant changes. For example, under the new OMB delineations, there would be new CBSAs, urban counties that would become rural, rural counties that would become urban, and existing CBSAs would be split apart. In addition, the effect of the new OMB delineations on various hospital reclassifications, the out-migration adjustment (established by section 505 of Pub. L. 108–173), and treatment of hospitals located in certain rural counties (that is, “Lugar” hospitals) provided for under section 1886(d)(8)(B) of the Act must be considered. These are just a few of the many issues that need to be reviewed regarding the effects of the new OMB labor market area delineations prior to proposing and establishing policies.

However, because the bulletin was not issued until February 28, 2013, with supporting data not available until later, and because the changes made by the bulletin and their ramifications needed to be extensively reviewed and verified, we were unable to undertake such a lengthy process before publication of the FY 2014 IPPS/LTCH PPS proposed rule and, thus, did not implement changes to the wage index for FY 2014 based on these new OMB delineations. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50586), we stated that we intended to propose changes to the wage index based on the new OMB delineations in the FY 2015 IPPS/LTCH PPS proposed rule. As discussed below, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28054 through 28064), we proposed to implement the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index.

2. Implementation of New Labor Market Area Delineations

As discussed previously, CMS did not implement the new OMB labor market area delineations for FY 2014 because we needed sufficient time to assess the new changes. We believe it is important for the IPPS to use the latest labor market area delineations available as soon as is reasonably possible in order to maintain a more accurate and up-to-date payment system that reflects the reality of population shifts and labor market conditions. While CMS and other stakeholders have explored potential alternatives to the current CBSA-based labor market system (we

refer readers to the CMS Web site at: www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Wage-Index-Reform.html), no consensus has been achieved regarding how best to implement a replacement system. As discussed in the FY 2005 IPPS final rule (69 FR 49027), “While we recognize that MSAs are not designed specifically to define labor market areas, we believe they do represent a useful proxy for this purpose.” We further believe that using the most current delineations will increase the integrity of the IPPS wage index system by creating a more accurate representation of geographic variations in wage levels. We have reviewed our findings and impacts relating to the new OMB delineations, and find no compelling reason to delay implementation. Therefore, we proposed to implement the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28055), we also proposed to use these new delineations to calculate area wage indexes in a manner that is generally consistent with the CBSA-based methodologies finalized in the FY 2005 IPPS final rule, and refined in subsequent rulemaking. We also proposed a wage index transition period applicable to all hospitals that experience negative impacts due to the proposed implementation of the new OMB delineations. This transition is discussed in more detail below.

Comment: Commenters were supportive of the proposal to adopt the new OMB delineations. One commenter, while supportive of CMS' proposal to adopt the new OMB delineations, effective for FY 2015, recommended that CMS adopt an alternative hospital wage index system in future rulemaking. Another commenter suggested that CMS implement new labor market area definitions to distinguish “core” urban areas from surrounding areas within a CBSA.

Response: We appreciate the support for our proposal to adopt the new OMB delineations. For FY 2015, we did not propose any modification to the current CBSA-based labor market area methodology, aside from proposing to adopt the new OMB labor market area delineations. However, we thank the commenters for their continued interest in examining alternative means for defining labor market areas. CMS presented an alternative wage index methodology in a Report to Congress on April 11, 2012 (<http://www.cms.gov/>

Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/Downloads/Wage-Index-Reform-Report-to-Congress-2012.zip). As discussed in the report, implementation of such a reform would require revisions to several statutory provisions that provide various forms of wage index reclassification and redesignation. Until a consensus on wage index reform is achieved, we believe that implementing the most recent OMB delineations is critical in maintaining the efficacy and integrity of the Medicare hospital wage index system. We did not propose, nor will we finalize, any additional changes to the CBSA-based labor market area delineations, including the concept of defining core and noncore portions of a CBSA.

After consideration of the public comments we received, we are finalizing the implementation of the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective beginning with the FY 2015 IPPS wage index. We received public comments on our proposals with respect to the use of these new OMB delineations to calculate the area wage indexes and the transition periods, which we address in sections III.B.2.a. through d. of the preamble of this final rule. We also finalize our policies in those sections.

a. Micropolitan Statistical Areas

As discussed in the FY 2005 IPPS final rule (69 FR 49029 through 49032), CMS considered whether to use Micropolitan Statistical Areas to define the labor market areas for the purpose of the IPPS wage index. OMB defines a “Micropolitan Statistical Area” as a CBSA “associated with at least one urban cluster that has a population of at least 10,000, but less than 50,000” (75 FR 37252). We refer to these areas as Micropolitan Areas. After extensive impact analysis, CMS determined the best course of action would be to treat all hospitals located in Micropolitan Areas as “rural” and include them in the calculation of each State’s rural wage index. Because Micropolitan areas tend to encompass smaller population centers and contain fewer hospitals than MSAs, we determined that if Micropolitan Areas were to be treated as separate labor market areas, the IPPS wage index would have included drastically more single-provider labor market areas. This larger number of labor market areas with fewer hospitals

could create instability in year-to-year wage index values for a large number of hospitals; could reduce the averaging effect of the wage index, thus lessening some of the efficiency incentive inherent in a system based on the average hourly wages for a large number of hospitals; and could arguably create an inequitable system when so many hospitals have wage indexes based solely on their own wage data while other hospitals’ wage indexes are based on an average hourly wage across many hospitals. For these reasons, we adopted a policy to include Micropolitan Areas in the State’s rural wage area, and have continued this policy through the present.

Based upon the new 2010 Decennial Census data, a number of urban counties have switched status and have joined or became Micropolitan Areas, and some counties that once were part of a Micropolitan Area, under current OMB delineations, have become urban. Overall, there are fewer Micropolitan Areas (541) under the new OMB delineations based on the 2010 Census than existed under the latest data from the 2000 Census (581). We believe that the best course of action would be to continue the policy established in the FY 2005 IPPS final rule and include hospitals located in Micropolitan Areas in each State’s rural wage index. These areas continue to be defined as having relatively small urban cores (populations of 10,000–49,999). We do not believe it would be appropriate to calculate a separate wage index for areas that typically may include only a few hospitals for the reasons set forth in the FY 2005 IPPS/LTCH PPS final rule, as discussed above. Therefore, in conjunction with our proposal to implement the new OMB labor market area delineations beginning in FY 2015, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28055), we proposed to continue to treat Micropolitan Areas as “rural” and to include the Micropolitan Areas in the calculation of each State’s rural wage index.

Comment: A number of commenters supported CMS’ proposal to continue to treat Micropolitan Areas as rural for hospital wage index purposes.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, in conjunction with our policy to implement the new OMB labor market area delineations

beginning in FY 2015, we are continuing to treat Micropolitan Areas as “rural” and to include the Micropolitan Areas in the calculation of each State’s rural wage index.

b. Urban Counties That Became Rural Under the New OMB Delineations

As previously discussed, we proposed to implement the new OMB labor market area delineations (based upon the 2010 Decennial Census data) beginning in FY 2015. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28055 through 28056), we stated that our analysis shows that a total of 37 counties (and county equivalents) and 12 hospitals that were once considered part of an urban CBSA would be considered to be located in a rural area, beginning in FY 2015, under these new OMB delineations. In the proposed rule, we included a listing of the 37 urban counties that would be rural if we finalized our proposal to implement the new OMB delineations.

We proposed that the wage data for all hospitals currently located in the 37 urban counties listed in the proposed rule would be considered rural under the new OMB delineations when calculating their respective State’s rural wage index. We stated that we recognize that rural areas typically have lower area wage index values than urban areas, and hospitals located in these counties may experience a negative impact in their IPPS payment due to the proposed adoption of the new OMB delineations. We refer readers to section III.B.2.e. of the preamble of this final rule for a discussion of the proposed and finalized wage index transition period, in particular, the discussion regarding the 3-year transition for hospitals located in these specific counties.

Comment: Commenters were supportive of the proposal to adopt the new OMB delineations, including the proposed reassignment of counties from urban areas to rural areas.

Response: We appreciate the commenters’ support.

As discussed above, we are finalizing our proposal to adopt the new OMB delineations. After consideration of the public comments we received, we also are finalizing our proposed reassignment of counties from urban areas to rural areas based on these new OMB delineations. The following chart lists the 37 urban counties that are considered to be rural under this policy.

COUNTIES THAT WILL LOSE URBAN STATUS AND BECOME RURAL

County	State	Previous CBSA No.	CBSA
Greene County	IN	14020	Bloomington, IN.
Anson County	NC	16740	Charlotte-Gastonia-Rock Hill, NC-SC.
Franklin County	IN	17140	Cincinnati-Middletown, OH-KY-IN.
Stewart County	TN	17300	Clarksville, TN-KY.
Howard County	MO	17860	Columbia, MO.
Delta County	TX	19124	Dallas-Fort Worth-Arlington, TX.
Pittsylvania County	VA	19260	Danville, VA.
Danville City	VA	19260	Danville, VA.
Preble County	OH	19380	Dayton, OH.
Gibson County	IN	21780	Evansville, IN-KY.
Webster County	KY	21780	Evansville, IN-KY.
Franklin County	AR	22900	Fort Smith, AR-OK.
Ionia County	MI	24340	Grand Rapids-Wyoming, MI.
Newaygo County	MI	24340	Grand Rapids-Wyoming, MI.
Greene County	NC	24780	Greenville, NC.
Stone County	MS	25060	Gulfport-Biloxi, MS.
Morgan County	WV	25180	Hagerstown-Martinsburg, MD-WV.
San Jacinto County	TX	26420	Houston-Sugar Land-Baytown, TX.
Franklin County	KS	28140	Kansas City, MO-KS.
Tipton County	IN	29020	Kokomo, IN.
Nelson County	KY	31140	Louisville/Jefferson County, KY-IN.
Geary County	KS	31740	Manhattan, KS.
Washington County	OH	37620	Parkersburg-Marietta-Vienna, WV-OH.
Pleasants County	WV	37620	Parkersburg-Marietta-Vienna, WV-OH.
George County	MS	37700	Pascagoula, MS.
Power County	ID	38540	Pocatello, ID.
Cumberland County	VA	40060	Richmond, VA.
King and Queen County	VA	40060	Richmond, VA.
Louisa County	VA	40060	Richmond, VA.
Washington County	MO	41180	St. Louis, MO-IL.
Summit County	UT	41620	Salt Lake City, UT.
Erie County	OH	41780	Sandusky, OH.
Franklin County	MA	44140	Springfield, MA.
Ottawa County	OH	45780	Toledo, OH.
Greene County	AL	46220	Tuscaloosa, AL.
Calhoun County	TX	47020	Victoria, TX.
Surry County	VA	47260	Virginia Beach-Norfolk-Newport News, VA-NC.

c. Rural Counties That Became Urban Under the New OMB Delineations

As previously discussed, we proposed to implement the new OMB labor market area delineations (based upon the 2010 Decennial Census data) beginning in FY 2015. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28056 through 28058), we indicated that analysis of these OMB labor market area delineations shows that a total of 105 counties (and county equivalents) and 81 hospitals that were located in rural areas would be located in urban areas under the new OMB delineations. In the proposed rule, we included a listing of the 105 rural counties that would be urban if we finalized our proposal to implement the new OMB delineations.

We proposed that when calculating the area wage index, the wage data for hospitals located in these 105 rural counties would be included in their new respective urban CBSAs. Typically, hospitals located in an urban area would receive a higher wage index value than hospitals located in their State's rural area. However, with regard to the wage index applicable to individual hospitals, we proposed to implement a transitional wage index adjustment for any hospital that would receive a lower wage index under the new OMB delineations than it would have received under the current CBSA definitions. We refer readers to section III.B.2.e. of the preamble of this final rule for further discussion of this transition.

Comment: Commenters were supportive of the proposal to adopt the new OMB delineations, including the proposed reassignments of counties from rural areas to urban areas for purposes of the wage index.

Response: We appreciate the commenters' support.

As discussed above, we are finalizing our proposal to adopt the new OMB delineations. After consideration of the public comments we received, we also are finalizing our proposed reassignment of counties from rural to urban for purposes of the wage index based on these new OMB delineations. The following chart lists the 105 rural counties that will be urban for purposes of the wage index for FY 2015 under this policy.

COUNTIES THAT WILL LOSE RURAL STATUS AND BECOME URBAN

County	State	New CBSA No.	CBSA
Uturado Municipio	PR	10380	Aguadilla-Isabela, PR.
Linn County	OR	10540	Albany, OR.
Oldham County	TX	11100	Amarillo, TX.

COUNTIES THAT WILL LOSE RURAL STATUS AND BECOME URBAN—Continued

County	State	New CBSA No.	CBSA
Morgan County	GA	12060	Atlanta-Sandy Springs-Roswell, GA.
Lincoln County	GA	12260	Augusta-Richmond County, GA-SC.
Newton County	TX	13140	Beaumont-Port Arthur, TX.
Fayette County	WV	13220	Beckley, WV.
Raleigh County	WV	13220	Beckley, WV.
Golden Valley County	MT	13740	Billings, MT.
Oliver County	ND	13900	Bismarck, ND.
Sioux County	ND	13900	Bismarck, ND.
Floyd County	VI	13980	Blacksburg-Christiansburg-Radford, VA.
De Witt County	IL	14010	Bloomington, IL.
Columbia County	PA	14100	Bloomsburg-Berwick, PA.
Montour County	PA	14100	Bloomsburg-Berwick, PA.
Allen County	KY	14540	Bowling Green, KY.
Butler County	KY	14540	Bowling Green, KY.
St. Mary's County	MD	15680	California-Lexington Park, MD.
Jackson County	IL	16060	Carbondale-Marion, IL.
Williamson County	IL	16060	Carbondale-Marion, IL.
Franklin County	PA	16540	Chambersburg-Waynesboro, PA.
Iredell County	NC	16740	Charlotte-Concord-Gastonia, NC-SC.
Lincoln County	NC	16740	Charlotte-Concord-Gastonia, NC-SC.
Rowan County	NC	16740	Charlotte-Concord-Gastonia, NC-SC.
Chester County	SC	16740	Charlotte-Concord-Gastonia, NC-SC.
Lancaster County	SC	16740	Charlotte-Concord-Gastonia, NC-SC.
Buckingham County	VA	16820	Charlottesville, VA.
Union County	IN	17140	Cincinnati, OH-KY-IN.
Hocking County	OH	18140	Columbus, OH.
Perry County	OH	18140	Columbus, OH.
Walton County	FL	18880	Crestview-Fort Walton Beach-Destin, FL.
Hood County	TX	23104	Dallas-Fort Worth-Arlington, TX.
Somervell County	TX	23104	Dallas-Fort Worth-Arlington, TX.
Baldwin County	AL	19300	Daphne-Fairhope-Foley, AL.
Monroe County	PA	20700	East Stroudsburg, PA.
Hudspeth County	TX	21340	El Paso, TX.
Adams County	PA	23900	Gettysburg, PA.
Hall County	NE	24260	Grand Island, NE.
Hamilton County	NE	24260	Grand Island, NE.
Howard County	NE	24260	Grand Island, NE.
Merrick County	NE	24260	Grand Island, NE.
Montcalm County	MI	24340	Grand Rapids-Wyoming, MI.
Josephine County	OR	24420	Grants Pass, OR.
Tangipahoa Parish	LA	25220	Hammond, LA.
Beaufort County	SC	25940	Hilton Head Island-Bluffton-Beaufort, SC.
Jasper County	SC	25940	Hilton Head Island-Bluffton-Beaufort, SC.
Citrus County	FL	26140	Homosassa Springs, FL.
Butte County	ID	26820	Idaho Falls, ID.
Yazoo County	MS	27140	Jackson, MS.
Crockett County	TN	27180	Jackson, TN.

d. Urban Counties That Moved to a Different Urban CBSA Under the New OMB Delineations

As we stated in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28058 through 28060), in addition to rural counties becoming urban and urban counties becoming rural, several urban counties would shift from one urban CBSA to another urban CBSA under our proposal to adopt the new OMB delineations. In certain cases, adopting the new OMB delineations would involve a change only in CBSA name or number, while the CBSA continues to encompass the same constituent counties. For example, CBSA 29140 (Lafayette, IN) would experience both a change to its number and its name, and become CBSA 29200 (Lafayette-West Lafayette, IN), while all of its three constituent counties would remain the same. For the proposed rule, we identified 19 counties that would remain in a CBSA that experienced a change in name or number under the new delineations, but would retain the same constituent counties. In the proposed rule, we included a table listing those 19 counties.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28059), we did not discuss further in this section the above

proposed changes because they are inconsequential changes with respect to the IPPS wage index. However, we did discuss that, in other cases, which if we adopted the new OMB delineations, counties would shift between existing and new CBSAs, changing the constituent makeup of the CBSAs.

In one type of change, an entire CBSA would be subsumed by another CBSA. For example, CBSA 37380 (Palm Coast, FL) currently is a single county (Flagler, FL) CBSA. Flagler County would become a part of CBSA 19660 (Deltona-Daytona Beach-Ormond Beach, FL) under the new OMB delineations.

In another type of change, some CBSAs have counties that would split off to become part of or to form entirely new labor market areas. For example, CBSA 37964 (Philadelphia Metropolitan Division) currently is comprised of five Pennsylvania counties (Bucks, Chester, Delaware, Montgomery, and Philadelphia). We stated that if we adopted the new OMB delineations, Montgomery, Bucks, and Chester counties would split off and form the new CBSA 33874 (Montgomery County-Bucks County-Chester County, PA Metropolitan Division), while Delaware and Philadelphia counties would remain in CBSA 37964.

Finally, in some cases, a CBSA would lose counties to another existing CBSA if we adopted the new OMB delineations. For example, Lincoln County and Putnam County, WV would move from CBSA 16620 (Charleston, WV) to CBSA 26580 (Huntington-Ashland, WV–KY–OH). CBSA 16620 still would exist in the new labor market delineations with fewer constituent counties.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28059 through 28060), we included a listing of the urban counties that would move from one urban CBSA to another urban CBSA if we adopted the new OMB delineations. If hospitals located in these counties move from one CBSA to another under the new OMB delineations, there may be impacts, both negative and positive, upon their specific wage index values. We referred readers to section III.B.2.e. of the preamble of the proposed rule for a discussion of our proposals to moderate the impact of our proposed adoption of the new OMB delineations.

Comment: Commenters were supportive of the proposal to adopt the new OMB delineations, including the proposed reassignments of counties

from one urban area to another urban area.

Response: We appreciate the commenters' support.

As discussed above, we are finalizing our proposal to adopt the new OMB delineations. After consideration of the

public comments we received, we also are finalizing our proposed reassignment of counties from one urban area to another urban area for purposes of the wage index based on these new OMB delineations. The

following chart identifies the 19 counties that remain in a CBSA that experienced a change in name or number under this policy, but will retain the same constituent counties for purposes of the FY 2015 wage index.

COUNTIES THAT WILL REMAIN IN CBSA THAT CHANGED NUMBER

Prior CBSA No.	New CBSA No.	County	State

e. Transition Period

(1) Background

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28060), we stated that, overall, we believe implementing the new OMB labor market area delineations would result in wage index values being more representative of the actual costs of labor in a given area. However, we recognized that some hospitals would experience decreases in wage index values as a result of the implementation of the new labor market area delineations. We also realize that some hospitals would have higher wage index values due to the implementation of the new labor market area delineations.

We explained that, in the past, we have provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts. For example, when implementing the new OMB definitions after the 2000 Census in the FY 2005 IPPS final rule (69 FR 49032 through 49034) for FY 2005, we evaluated several options to ease the transition to the new CBSA system.

As discussed in that FY 2005 IPPS final rule, we determined that the transition to the current wage index system would have the largest negative impacts upon hospitals that were originally considered urban, but would be considered rural under the new labor market area definitions. To alleviate the decreased payments associated with having a rural wage index, in calculating the area wage index, in the FY 2005 IPPS final rule, we allowed urban hospitals that became rural under new definitions to maintain their assignment to the labor market area where they were located for FY 2004. This adjustment was granted for a period of 3 fiscal years.

In the FY 2005 IPPS final rule, for all hospitals that experienced negative payment impacts due to adoption of new labor market area definitions (for

example, they were moved to an urban CBSA with a lower wage index value than their previous rural or urban labor market area), we implemented a 1-year blended adjustment. We calculated wage indexes for all hospitals using both old and new labor market definitions. Hospitals received 50 percent of their wage index based on the new OMB delineations, and 50 percent of their wage index based on their current labor market area. This adjustment only applied to hospitals that would have experienced a drop in wage index values due to a change in labor market area definitions. Hospitals that benefitted from the labor market area transition received their new wage index at the time the new labor market area definitions became effective.

We continue to have the same concerns expressed in the FY 2005 IPPS final rulemaking. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28060 through 28064), we proposed a similar transition methodology to mitigate any negative financial impacts experienced by hospitals due to our proposal to implement the new OMB labor market area delineations for FY 2015.

(2) Transition for Hospitals in Urban Areas That Would Become Rural

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28060 through 28061), for hospitals that are currently located in an urban county that would become rural under the new OMB delineations, and would have no form of wage index reclassification or redesignation in place for FY 2015 (that is, MGCRB reclassifications under section 1886(d)(10) of the Act, redesignations under section 1886(d)(8)(B) of the Act, or rural reclassifications under section 1886(d)(8)(E) of the Act), we proposed a policy to assign them the urban wage index value of the CBSA in which they are physically located for FY 2014 for a period of 3 fiscal years (with the rural

and imputed floors applied and with the rural floor budget neutrality adjustment applied to the area wage index). As stated in the FY 2005 IPPS proposed rule (69 FR 28252), we have in the past provided transitions when adopting changes that have significant payment implications, particularly large negative impacts. We believe it is appropriate to apply a 3-year transition period for hospitals located in urban counties that would become rural under the new OMB delineations, given the potentially significant payment impacts for these hospitals. This is consistent with the transition policy adopted in FY 2005 (69 FR 49032 through 49034). We continue to believe, as we stated in the FY 2005 IPPS final rule (69 FR 49033), that the longer transition period is appropriate because, as a group, we expect these hospitals would experience a steeper and more abrupt reduction in their wage index due to the labor market revisions compared to other hospitals. Assigning these hospitals the urban wage index value of the CBSA in which they are physically located for FY 2014 for a period of 3 fiscal years (with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied to the area wage index) would be the most similar to the actual payment wage index that these hospitals received in FY 2014, thereby minimizing the negative impact of adopting the new OMB delineations for these hospitals. Accordingly, for FYs 2015, 2016, and 2017, assuming no other form of wage index reclassification or redesignation is granted, we proposed to assign these hospitals the area wage index value of the urban CBSA in which they were geographically located in FY 2014 (with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied to the area wage index). For example, if urban CBSA 12345 consisted of three counties in FY 2014, and, under the new OMB

delineations, one of those counties, County X, would no longer be part of CBSA 12345 and would become rural for FY 2015, we proposed that hospitals in County X would be assigned the FY 2015 wage index of CBSA 12345, computed using the remaining two counties, with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied to the area wage index. We believe that assigning the wage index of the hospitals' current area is the simplest and most effective method for mitigating negative payment impacts due to the proposed adoption of the new OMB delineations. We have identified relatively few hospitals that are located in urban counties that would become rural, and fewer yet that do not have a reclassification or redesignation in effect for FY 2015. Because we believe that these urban to rural transitions would be the most likely to cause significant negative payment impacts, we believe that these hospitals should be granted a longer transition period than hospitals that may be switching between urban labor market areas, which as discussed later, we proposed to apply a 1-year blended wage index.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28061), we noted that there are situations where a hospital cannot be assigned the wage index value of the CBSA to which it geographically belonged in FY 2014 because that CBSA would be split and no longer exist and some or all of the constituent counties would be added to another urban labor market area under the new OMB delineations. If the hospital cannot be assigned the wage index value of the CBSA to which it is geographically located in FY 2014 because that CBSA would be split apart and no longer exist, and some or all of its constituent counties would be added to another urban labor market area under the new OMB delineations, we proposed that hospitals located in such counties that would become rural under the new OMB delineations would be assigned the wage index of the FY 2015 urban labor market area that contains the urban county in their FY 2014 CBSA to which they are closest (with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied) for a period of 3 fiscal years. We believe this approach of assigning the wage index of the FY 2015 urban labor market area that contains the urban county in their FY 2014 CBSA to which they are closest (with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied) would most closely

approximate the hospitals' FY 2014 actual payment wage index, thereby minimizing the negative effects of the proposed change in the OMB delineations. For example, George County, MS and Jackson County, MS, together, in FY 2014, comprise the urban CBSA 37700 (Pascagoula, MS). Under the new OMB delineations, George County would be considered rural and Jackson County, MS would become part of the urban labor market area of Gulfport-Biloxi-Pascagoula, MS (CBSA 25060). In this instance, we proposed that hospitals in George County, MS would be assigned the FY 2015 wage index for CBSA 25060 (Gulfport-Biloxi-Pascagoula, MS), with the rural and imputed floors applied and with the rural floor budget neutrality adjustment applied.

Furthermore, we proposed that any hospital that is currently located in an urban county that would become rural for FY 2015 under the new OMB delineations, but also has a reclassification or redesignation in effect for FY 2015 (from a pre-existing reclassification or redesignation granted prior to FY 2015), would not be eligible for the 3-year transition wage index. This is because if the hospital is reclassified or redesignated in some manner, it would instead receive a wage index that reflects its own choice to obtain its reclassified or redesignated status. Accordingly, if a hospital is currently located in an urban county that would become rural for FY 2015 under the new OMB delineations and such hospital sought and was granted reclassification or redesignation for FY 2015 or such hospital seeks and is granted any reclassification or redesignation for FY 2016 or FY 2017, we proposed that the hospital would permanently lose its 3-year transitional assigned wage index status, and would not be eligible to reinstate it. For example, if a hospital that is currently urban but would become rural under the new OMB delineations received a 3-year transition wage index in FY 2015 based on the wage index of the urban CBSA to which it was geographically located in FY 2014 and then by its own choice, reclassifies to obtain a different area wage index in FY 2016, the hospital would not be eligible to reinstate the transition wage index, even if it opts to cancel its reclassification for FY 2017. We proposed the transition adjustment to assist hospitals if they experience a negative payment impact specifically due to the proposed adoption of the new OMB delineations in FY 2015. If a hospital chooses in a future fiscal year to forego this transition adjustment by

obtaining some form of reclassification or redesignation, we do not believe reinstatement of this transition adjustment would be appropriate. The purpose of the adjustment is to assist hospitals that may be negatively impacted by the new OMB delineations in transitioning to a wage index based on these delineations. By obtaining a reclassification or redesignation, we believe that the hospital has made the determination that the transition adjustment is not necessary because it has other viable options for mitigating the impact of the transition to the new OMB delineations.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28061), with respect to the wage index computation, we proposed to follow our existing policy regarding the inclusion of a hospital's wage index data in the CBSA in which it is geographically located (we refer readers to Step 6 of the method for computing the unadjusted wage index in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51592)). Accordingly, beginning with FY 2015, we proposed that the wage data of all hospitals receiving this type of 3-year transition adjustment would be included in the statewide rural area in which they are geographically located under the new OMB labor market area delineations. After the 3-year transition period, beginning in FY 2018, we proposed that these formerly urban hospitals discussed above would receive their statewide rural wage index, absent any reclassification or redesignation.

In addition, we proposed that the hospitals receiving this 3-year transition because they are in counties that were urban under the current CBSA definitions, but would be rural under the new OMB delineations, would not be considered urban hospitals. Rather, they would maintain their status as rural hospitals for other payment considerations. This is because our proposal to apply a 3-year transitional wage index for these newly rural hospitals only applies for the purpose of calculating the wage index under our proposal to adopt the new CBSA delineations. We did not propose transitions for other IPPS payment policies that may be impacted by the proposed adoption of the new CBSA delineations. However, we will continue to apply the existing regulations at § 412.102 with respect to determining DSH payments in the first year after a hospital loses urban status (we refer readers to section II.B.2.e.(7) of the preambles of the proposed rule and this final rule).

Comment: Commenters were supportive of CMS' proposals to provide

a 3-year transition adjustment for hospitals that are shifting from urban to rural areas. Commenters appreciated CMS' attempt to mitigate the negative effects of the application of the new OMB labor market delineations. Some commenters questioned why hospitals that switch from urban to rural could benefit from a longer 3-year transition adjustment, while other hospitals that would also be negatively affected by the transition could only benefit from a single year of a blended transition adjustment. They suggested a similar 3-year transition adjustment for all hospitals experiencing a negative impact, including hospitals that are moving from urban to urban, or are not moving at all, but are being impacted by other hospitals moving in or out of the labor market area.
