Response: Our intent for the NHSN VAE Outcome measure as part of the LTCHQR Program is to collect and report data in alignment with NHSN measure specifications. Specifically, we will collect and report data on the two SIRs (VAC and IVAC) in alignment with the NHSN specifications. The measure would not be reported via a “roll-up,” or combined prevalence or incidence count of the five clinical conditions mentioned in the comment (ventilator-associated pneumonia (VAP), pulmonary edema, acute respiratory distress syndrome (ARDS), sepsis, and atelectasis). In the event that the measure specifications are revised through ongoing measure development by the CDC, the measure steward, we will align the data collection and reporting for the measure with revised measure specifications.

Comment: A commenter expressed concerns about the NHSN VAE Outcome measure based on recent publications (Klouwenberg et al., 2014 240 and Lilly et al., 2014 241) and noted that these studies demonstrate that the new definition of VAE has poor sensitivity for detecting clinically verified VAP. The commenter expressed concern about the appropriateness of developing a quality measure based upon a clinical definition that research has shown to have poor sensitivity. The commenter encouraged CMS to work with stakeholders to improve the VAE definition before implementing the NHSN VAE Outcome measure. 

Response: We appreciate the commenter’s concern regarding the sensitivity of the measure for detecting clinically verified VAP. Ultimately, it is a clinical diagnosis that is made by taking into account several pieces of information at the bedside. There is not a universally accepted standard approach that all LTCHs can agree on. With this in mind, the intent of VAE surveillance is not to provide a new surveillance VAP definition but instead to provide an objective measure—based on information that should be available for any patient on mechanical ventilation in any facility—that captures a broad range of conditions and complications in patients on mechanical ventilation understanding that infections are not the only potentially preventable complications of mechanical ventilation. Research indicates the VAE algorithm detects clinical conditions that may be preventable, including, but not limited to, pneumonia, ARDS, atelectasis, and pulmonary edema.

Comment: Several commenters recommended that CMS delay the January 1, 2016, implementation start

259 Data from CMS–CDC correspondence on February 10, 2014.

date for this measure. A commenter recommended CMS delay implementation until data submitted under the new VAE algorithm is reviewed for reliability and in order to allow time to support adequate training and resources for VAE data collection. Several commenters expressed a need for the NHSN VAE Outcome measure to be further tested and refined for the LTCH setting before it is adopted for use in the LTCHQR Program.

A few commenters expressed a concern that the NHSN VAE Outcome measure was developed and tested in the acute care setting and recommended that CMS exercise caution in implementing the measure in the LTCH setting. A commenter stated there is need for better data on VAEs and responsiveness to quality improvement programs before the measure is considered suitable for inter-facility comparisons or pay-for-performance programs. This commenter asked that the implementation of NHSN VAE Outcome measure be delayed until the measure can be validated in the LTCH setting, more is known about what portion of VAE is preventable, and until risk adjustment strategies for the measure have been developed. Another commenter expressed similar concerns about lack of LTCH-specific data currently available under the new VAE algorithm and stated that implementation of the measure in the LTCHQR Program would be premature until further data is available and standards of care are developed for preventing VAEs.

Response: The CDC algorithm was developed for several health care settings, including LTCHs. While initial testing was conducted in acute care setting, the CDC continues to test the algorithm and to modify it based on assessment and end-user feedback. Further, LTCHs are acute care facilities and hence, while setting-specific testing is important, based on extensive evidence cited in our proposal, we believe that the impact this measure could have on the quality of care and patient outcomes in the LTCH setting justifies the need to implement this measure beginning January 1, 2016. CMS will continue to work closely with the CDC to review measure testing results and feedback on an ongoing basis and continue to assess the validity and reliability of this measure and its impact on the quality of care in LTCHs.

Comment: A few commenters expressed concern about the resource-intensive nature for data collection for this measure. A commenter expressed concern about the limitations of existing resources in LTCHs and noted that implementation of the measure will divert resources to NHSN VAE Outcome measure data collection and reporting activities and away from other valuable prevention activities. A commenter noted that some LTCHs do not have EHRs to facilitate data collection for this measure. Another commenter noted the complexity of the measure algorithm and the variety of patient scenarios that could be implicated and stated that these represent additional burden in collecting data for the NHSN VAE Outcome measure.

Response: Based on evidence cited in our proposal, we believe the impact this measure could have on quality of care and patient outcomes justifies additional resources needed for measure data collection. We recognize that the implementation of this measure adds data collection and reporting burdens for facilities; however, we believe the initial burden to implement the measure and train staff is necessary to improve the quality of care for patients in the LTCHs. In addition, in 2013, approximately 25 percent (n=105) of all currently Medicare-certified LTCHs reported data on this measure to CDC’s NHSN; this is evidence in support the feasibility of implementation of this measure in the LTCH setting.242 In addition, this measure was developed to facilitate potential automated outcome detection, which could eventually lead to decreased burden for LTCH.

Further, CMS and CDC will undertake training and stakeholder communication and outreach efforts in CY 2015 and CY 2016 to support the implementation of this measure in the LTCHQR Program, similar to our ongoing efforts since 2012 to support the implementation of previously adopted measures, including the CLABSI, CAUTI, and Healthcare Professional Influenza Vaccination measures.

In addition to soliciting comments on our proposal to adopt the NHSN VAE Outcome measure for the LTCHQR Program, we also invited comments on our proposal to use the CDC’s NHSN system for data collection and submission for this measure.

We received no comments on the use of the NHSN system for data collection and submission of the VAE Outcome measure. Therefore we are finalizing the National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure, as proposed, for FY 2018 payment update determination and subsequent years.

FUTURE MEASURES AND MEASURE TOPICS UNDER CONSIDERATION FOR PROPOSAL FOR THE LTCH QUALITY REPORTING PROGRAM

- Measures addressing Ventilator Bundle.
- Measures addressing avoidable injuries secondary to polypharmacy.
- Application of Hospital-Based Inpatient Psychiatric Services (HBIPS)-2 Hours of Physical Restraint Use (NQF #0640).
- Application of Percent of Residents Who Were Physically Restrained (Long Stay) (NQF #0687).
- Professional Influenza Vaccination

- Severe Sepsis and Septic Shock: Management Bundle.

242 Data from CMS–CDC correspondence on February 10, 2014.
**FUTURE MEASURES AND MEASURE TOPICS UNDER CONSIDERATION FOR PROPOSAL FOR THE LTCH QUALITY REPORTING PROGRAM—Continued**

<table>
<thead>
<tr>

</tr>
<tr>
<td>• Measures addressing pain control—patients’ preference.</td>
</tr>
</tbody>
</table>

**Comment:** Commenters supported the addition of patient experience of care measures for use in the LTCHQR Program. Specifically, a commenter supported an application of the HCAHPS survey for use in the LTCHQR Program. The commenter supported the collection of patient and caregiver experience through surveys that provide feedback that only a patient or their caregiver can provide. The commenter urged CMS to undertake the necessary testing to modify the HCAHPS survey to be appropriate for use within the LTCHQR Program. The commenter suggested some modifications to the HCAHPS that would be necessary prior to implementation. These include testing the HCAHPS questions in LTCHs and the addition of new questions about key topics relevant to the LTCH patient population. The commenter added that for many patients proxy respondents would be necessary to achieve a reliable response rate.

**Response:** We appreciate the commenters’ support of the HCAHPS survey in the LTCHQR Program, and we will take their recommendations into consideration in our measure development and testing efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

**Comment:** Commenters noted that the bundle was endorsed for the acute care hospital setting and would need refinement and testing for use in the LTCH setting. Another commenter recommended additional review of “Severe Sepsis and Septic Shock: Management Bundle” before proposing the bundle as a formal measure. The commenter noted that although sepsis is one of the leading causes of hospitalization and readmissions and results in significant morbidity, mortality, and increased cost in health care, the current bundle definition, including central line placement and central hemodynamic monitoring, may have other unintended consequences. The commenter underscored the NQF Patient Safety Standing Committee’s recent recommendation that the item requiring measurement of central venous pressure be removed from this bundle. The commenter added that this recommendation is based on recent literature published on sepsis protocols, which found no significant benefit of the mandated use of central venous catheterization and central hemodynamic monitoring in all patients.

**Response:** We appreciate the commenters’ acknowledgement of the significant burden sepsis can cause on health care outcomes and costs. We will take their comments regarding this measure into consideration in our measure development efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

**Comment:** A commenter did not support the inclusion of the “Institute for Healthcare Improvement Ventilator Bundle,” as several components of the bundle (daily sedation reduction and daily weaning of ventilator settings) may not be applicable to patients who are on a long-term ventilator and may never be weaned. Another commenter supported the development of palliative care measures for the LTCHQR Program. Another commenter recommended CMS consider development and pilot testing of measure(s) related to antimicrobial stewardship, citing this measurement area as an important one given the fact that LTCHs are often at the epicenter of clusters and outbreaks of multidrug-resistant organisms. Another commenter recommended CMS consider including The Joint Commission tobacco performance measure set in the LTCHQR Program since identifying and treating tobacco use is a cost-effective and medically effective clinical intervention demonstrated to improve health and reduce costs. Another commenter supported the addition of care coordination measures in the LTCHQR Program and noted that since patients in the LTCH setting often receive services from multiple providers, a care coordination measure would represent an important opportunity to ensure holistic, high-quality care for the LTCH population. Finally, a commenter indicated support and a recommendation to include new quality measures, after the measures have been fully developed, tested, and endorsed by a multi-stakeholder consensus organization. The commenter supported quality of life, functional
status, and other patient-reported outcomes performance measures.

Response: We appreciate the commenters’ recommendations, and we will take the commenters’ suggestions into consideration in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

9. Form, Manner, and Timing of Quality Data Submission for the FY 2016 Payment Determination and Subsequent Years

a. Background

Section 1886(m)(5)(C) of the Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit to the Secretary data on quality measures specified by the Secretary and that such data shall be submitted in a form and manner, and at a time, specified by the Secretary. As required by section 1886(m)(5)(A)(i) of the Act, for any LTCH that does not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to a given rate year, any annual update to the standard Federal rate for discharges for the hospital during the rate year must be reduced by two percentage points.

b. Finalized Timeline for Data Submission Under the LTCHQR Program for the FY 2016 and FY 2017 Payment Determinations (Except NQF #0680 and NQF #0431)

In the FY 2014 IPPS/LTCPPPS final rule (78 FR 50857 through 50861 and 50878 through 50881), we finalized the data submission timelines and submission deadlines for measures for the FY 2016 and FY 2017 payment determinations. We refer readers to the FY 2014 IPPS/LTCPPPS final rule for a more detailed discussion of these timelines and deadlines. Specifically, we refer readers to the table at 78 FR 50878 of the FY 2014 IPPS/LTCPPPS final rule for the data collection period and submission deadlines for the FY 2016 payment determination and the tables at 78 FR 50881 of that final rule for the data collection timelines and submission deadlines for the FY 2017 payment determination.

c. Revision to the Previously Adopted Data Collection Period and Submission Deadlines for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 Payment Determination and Subsequent Years

In the FY 2014 IPPS/LTCPPPS final rule (78 FR 50858 through 50861), we revised the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure for the FY 2016 payment determination and subsequent years. In that rule (78 FR 50861, 50880 through 50882), we also revised the data collection period and submission deadlines for the FY 2016 through FY 2018 payment determinations for this measure.

For the reasons discussed in section IX.C.6.a. of the preamble of the proposed rule (79 FR 28262), we proposed to change to the data collection timeframes and submission deadlines for the FY 2016 payment determination and subsequent years. Specifically, as discussed in section IX.C.6.a. of the preamble of the proposed rule, for the FY 2016 payment determination, we proposed submission deadlines of February 15, 2015, and May 15, 2015, for this measure for data collection periods October 1-December 31, 2014, and January 1-March 31, 2015, respectively, instead of the previously finalized submission deadline of May 15, 2015, for the data collection period of October 1, 2014-April 30, 2015. The changes applicable to this measure (NQF #0680) are illustrated below for the FY 2016 payment determination. Please refer to section IX.C.6 of the preamble of this final rule for further information regarding this revision.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2016 PAYMENT DETERMINATION FOR PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

<table>
<thead>
<tr>
<th>Data collection period (CY):</th>
<th>Final submission deadlines for the LTCHQR program FY 2016 payment determination</th>
</tr>
</thead>
</table>

Further, as discussed in section IX.C.6.a. of the preamble of the proposed rule (79 FR 28262), we proposed similar deadlines for the FY 2017 payment determination and subsequent years for the LTCHQR Program. The changes applicable to this measure (NQF #0680) are illustrated below.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2017 PAYMENT DETERMINATION AND SUBSEQUENT YEARS FOR PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

<table>
<thead>
<tr>
<th>Data collection period (CY):</th>
<th>Final submission deadlines for the LTCHQR program payment determination (FY)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q4 of the CY two years before the payment determination year (for example, October 1—December 31, 2015 for the FY 2017 payment determination).</td>
<td>February 15 of the FY preceding the payment determination year (for example, February 15, 2016 for the FY 2017 payment determination).</td>
</tr>
<tr>
<td>Q1 of the CY one year before the payment determination year (for example, January 1—March 31, 2016 for the FY 2017 payment determination).</td>
<td>May 15 of the FY preceding the payment determination year (for example, May 15, 2016 for the FY 2017 payment determination).</td>
</tr>
</tbody>
</table>

We invited public comment on our proposal to revise the data collection timeline for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF
#0680) for the FY 2016 payment determination and subsequent years.

Comment: A few commenters supported CMS’ proposal to revise the data collection period and submission deadlines for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 payment determination and subsequent years. A commenter also noted this alignment reflects the influenza season and will reduce data entry time for LTCH staff.

Response: We greatly appreciate commenters’ support of our proposal to revise the data collection period and submission deadlines for NQF #0680 to better align with the influenza vaccination season.

Comment: A commenter recommended that the NQF #0680 measure not apply to patients transferred from acute care hospitals since this would represent a duplicative compliance requirement between the two care settings.

Response: We did not propose any changes to measure specifications for NQF #0680. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50860), the specifications for NQF #0680 are written to ensure that “LTCHs follow current clinical guidelines to assess whether a patient should receive an influenza vaccine and to ensure that, when clinically indicated, each patient only receives one influenza vaccine.” For patients who did not receive the influenza vaccine in the LTCH, item O0250 on the LTCH CARE Data Set allows the LTCH to indicate why the vaccine was not received in the facility, including selecting an option indicating that the patient received the vaccine outside of the facility.

In addition, because this measure reports on patients who received the influenza vaccine either inside or outside the facility/hospital, for a patient who received the vaccine at another facility prior to arriving at the LTCH, there is no incentive for the LTCH to over-vaccinate or provide duplicative vaccination. Facilities will need to adhere to the principles of proper care coordination and documentation to avoid over-immunization as well as under-immunization. However, the measure specifications are designed to encourage facilities to vaccinate only when the patient has not already received the vaccination in another setting and only when clinically indicated. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50860) for more information on this topic.

After consideration of the public comments we received, we are finalizing the revision to the data collection period and submission timeline for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 payment determination and subsequent years.

d. Data Submission Mechanisms for the FY 2018 Payment Determination and Subsequent Years for New LTCHQR Program Quality Measures and for Revisions to Previously Adopted Quality Measures

For the two functional status measures and the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28270), we proposed that all LTCHs would be required to collect data using the LTCH CARE Data Set. We will release the technical data submission specifications and update LTCHQR Program Manual for the LTCH CARE Data Set (Version 3.00) to include items related to the functional status measures and the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure in CY 2015. The QIES ASAP system would remain the data submission mechanism for the LTCH CARE Data Set. Further information on data submission of the LTCH CARE Data Set for the LTCHQR Program Reporting using the QIES ASAP system is available at: https://www.cms.gov/Medicare/Medicare-CompleteCare-Program/LTCHCAREDataSet/Downloads/LTCHCAREDataSet.html. For the NHSN VAE Outcome measure, we proposed that LTCHs would be required to use the CDC’s NHSN reporting and submission infrastructure. Details related to the procedures for using CDC’s NHSN for data submission and information on definitions, numerator data, denominator data, data analyses, and measure specifications for the NHSN VAE Outcome Measure can be found at: http://www.cdc.gov/nhsn/PDFs/pscManual/10–VAE_FINAL.pdf.

We invited public comments on these proposals.

Comment: A commenter supported the use of the LTCH CARE Data Set for the two functional status measures. The commenter appreciated CMS’ use of the LTCH CARE Data Set to streamline reporting across acute and post-acute settings.

Response: We appreciate the commenter’s feedback and support of the use of the LTCH CARE Data Set for collection of the functional status measures.

We received no comments on our proposed data submission mechanisms for the NHSN VAE Outcome measure.

After consideration of the public comments we received, we are finalizing that all LTCHs would use the LTCH CARE Data Set (Version 3.00) to collect data for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) and the two functional status measures. We are also finalizing that the QIES ASAP system will remain the data submission mechanism for the LTCH CARE Data Set. Further, we are finalizing that for the NHSN VAE Outcome measure, LTCHs would use the CDC’s NHSN reporting and submission infrastructure for the LTCHQR Program.

e. Data Collection Period and Submission Deadlines Under the LTCHQR Program for the FY 2018 Payment Determination

In sections IX.C.9.c. and f. of the preamble of this final rule, we discuss our proposal, for the FY 2016 payment determination and subsequent years, to revise the data collection period and submission deadlines for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) measure and, for the FY 2018 payment determination and subsequent years, to revise the data collection period and submission deadlines for the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50862), we adopted the data collection period and submission deadlines for the remaining quality measures applicable to the FY 2018 payment determination as listed in the following tables.
### Timeline for Submission of LTCHQR Program Quality Data for the FY 2018 Payment Determination: Influenza Vaccination Coverage Among Healthcare Personnel (NQF #0431)

<table>
<thead>
<tr>
<th>Data collection period</th>
<th>Final submission deadlines for the LTCHQR program FY 2018 payment determination</th>

<td>April 1, 2016–December 31, 2016.</td>
</tr>
</tbody>
</table>

### Submission Deadlines of LTCHQR Program Quality Data for the FY 2018 Payment Determination: National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure

<table>
<thead>
<tr>
<th>Data collection period</th>
<th>Final submission deadlines for the LTCHQR program FY 2018 payment determination</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q3 (July–September 2016)</td>
<td>November 15, 2016.</td>
</tr>
</tbody>
</table>
We invited public comment on the proposed data collection timeline and quarterly submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 payment determination.

Comment: Commenters supported CMS’ proposal to delay the start of data collection for the NQF #0674 measure until April 1, 2016, for the FY 2018 payment determination.

Response: We appreciate commenters’ support of our proposal to revise the data collection period and quarterly submission deadlines for the application of NQF #0674 and are finalizing the proposed revision to the data collection period and quarterly submission deadlines for this measure for the FY 2018 payment determination. We reiterate that this change in data collection of this measure would only apply to the FY 2018 payment determination year only; for all subsequent years, data collection for this measure would begin on January 1 and continue through December 31.

After consideration of the public comments we received, we are finalizing the data collection period and quarterly submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 payment determination, as proposed. For all subsequent years, data collection for this measure would begin on January 1 and continue through December 31.

g. Data Collection Timelines and Submission Deadlines Under the LTCHQR Program for the FY 2019 Payment Determination and Subsequent Years

For the quality measures applicable to the FY 2019 payment determination and subsequent years, including those that we proposed in section IX.C.7. of the preamble of the proposed rule, we proposed the following data collection timelines and submission deadlines.

## Data Collection Period and Submission Deadlines of LTCHQR Program Quality Data for the FY 2019 Payment Determination

<table>
<thead>
<tr>
<th>NQF measure ID or measure name (when NQF measure ID not available)</th>
<th>Data collection period</th>
</tr>
</thead>
<tbody>
<tr>
<td>Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678).</td>
<td>January 1, 2017–December 31, 2017.</td>
</tr>
</tbody>
</table>

*Note that data collection implementation begins Q2.

We reiterate that this change in data collection period and quarterly submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 payment determination.

**DATA COLLECTION TIMELINES AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION FOR THE APPLICATION OF PERCENT OF RESIDENTS EXPERIENCING ONE OR MORE FALLS WITH MAJOR INJURY (LONG STAY) (NQF #0674)**

<table>
<thead>
<tr>
<th>Data collection period: CY 2016</th>
<th>Final submission deadlines for the LTCHQR program FY 2018 payment determination</th>
</tr>
</thead>
<tbody>
<tr>
<td>Q3 (July–September 2016) ... November 15, 2016.</td>
<td></td>
</tr>
</tbody>
</table>

*Note that data collection implementation begins Q2.

We invited public comment on the proposed rule (79 FR 28272), we proposed, for the FY 2018 payment determination only, to move the start date for data collection of this measure to April 1, 2016, instead of the previously finalized start date of January 1, 2016. Data collection and submission of this measure will continue through December 31, 2016, as previously finalized for the FY 2018 payment determination. This change in the data collection start date will only affect CY 2016 data collection and submission for the LTCHQR Program for the FY 2018 payment determination. For all subsequent years, data collection for this measure will begin on January 1 and continue through December 31. We note that these proposed changes will be applicable only to the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, and not applicable to any other LTCHQR Program measures, proposed or adopted, unless explicitly stated. We refer readers to section IX.C.6. of the preamble of this final rule for further information and rationale.
### DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION—Continued

<table>
<thead>
<tr>
<th>NQF measure ID or measure name (when NQF measure ID not available)</th>
<th>Data collection period</th>

</thead>
</table>

#### DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION: INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431)

<table>
<thead>
<tr>
<th>Data collection period</th>
<th>Final submission deadlines for the LTCHQR Program FY 2019 payment determination</th>
</tr>
</thead>
</table>

We invited public comment on these proposals. We received no comments on these proposals. Therefore, we are finalizing the data collection period and submission deadlines for the FY 2019 payment determination and subsequent years, as proposed. 10. LTCHQR Program Data Completion Thresholds for the FY 2016 Payment Determination and Subsequent Years

**a. Overview**

Section 1886(m)(5)(C) of the Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit to the Secretary data on quality measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. As required by section 1886(m)(5)(A)(i) of the Act, for any LTCH that does not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to a given fiscal year, any annual update to the standard Federal rate for discharges for the hospital during the rate fiscal year must be reduced by two percentage points. To date, we have not established a standard for compliance other than that LTCHs submit all applicable
required data for all finalized measures, by the previously finalized quarterly deadlines. In response to input from our stakeholders seeking additional specificity related to the LTCHQR Program compliance affecting FY payment update determinations and, due to the importance of ensuring the integrity of quality data submitted to CMS, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28273 through 28275), we proposed to set specific LTCHQR Program thresholds for completeness of LTCH quality data beginning with data affecting the FY 2016 payment determination and subsequent years.

The LTCHQR Program, through the FY 2012, FY 2013, and FY 2014 IPPS/LTCH PPS final rules, requires LTCHs to submit quality data using two separate data collection/submission mechanisms: Measures collected using the LTCH CARE Data Set (LCDS) are submitted through the CMS Quality Improvement Evaluation System (QIES); and measures stewarded by the CDC (such as Healthcare-Associated Infection (HAI) and vaccination measures), are submitted using the CDC’s National Healthcare Safety Network (NHSN). We have also previously finalized a claims-based measure (All-Cause Unplanned Discharge from Long Term Care Hospitals); however, claims-based measures do not require LTCHs to actually submit quality data to CMS, as they are calculated using claims data submitted to CMS for payment purposes. For claims-based measures, there is no submitted quality data to which we could apply data completion thresholds.

To ensure that LTCHs are meeting an acceptable standard for completeness of submitted data, we proposed that for the FY 2016 payment determination and subsequent years, LTCHs meet or exceed two separate program thresholds: One threshold for completion of quality measures data collected using the LCDS and submitted through QIES; and a second threshold for quality measures data collected and submitted using the CDC’s NHSN. We proposed that LTCHs must meet or exceed both thresholds discussed below, in order to avoid receiving a 2 percent point reduction to their annual payment update for a given FY, beginning with FY 2016.

We proposed to hold LTCHs accountable for different data completion thresholds for each of the two data submission mechanisms; an 80 percent data completion threshold for data collected using the LCDS and submitted through the QIES mechanism; and a 100 percent data completion threshold for data submitted through the CDC’s NHSN. We proposed to hold LTCHs to the higher data completion threshold for the CDC’s NHSN initially, because many LTCHs have been mandated by States to report infection data using the CDC’s NHSN system for surveillance purposes, prior to the start of the LTCHQR Program on October 1, 2012, and, therefore, we believe LTCHs are more familiar with the NHSN collection and submission process.

In contrast, LTCHs had never submitted quality data using a standardized data collection instrument before October 1, 2012, such as the LCDS submitted through the QIES mechanism. In addition, we require the submission of LCDS admission and discharge data through QIES, in order for LTCHs to meet the proposed data accuracy compliance standard, which with regard to discharge data, may be more difficult to collect on patients that are discharged emergently or against medical advice, in effect making it more difficult to meet a higher level of compliance initially. Lastly, through the FY 2014 IPPS/LTCH PPS final rule, we finalized accelerated quarterly deadlines for submission of quality data, beginning January 2014, of 45 days beyond the end of each CY quarter, as opposed to the 135 day post-quarterly deadline LCDS were previously required to meet. We feel that this is an additional challenge that LTCHs may face. We invited comment on other obstacles LTCHs may face in meeting a higher level of compliance with regard to submission of quality data using the LCDS.

Comment: A few commenters noted that individual LTCHs may have a higher than average percentage of incomplete data due to emergent discharges, as well as patients with fecal management systems. Commenters stated that emergent discharges do not allow for the collection of complete data, and that CMS guides LTCHs to enter a dash (-) for item H0400 (Bowel Continence) for those patients that have fecal management systems in place, rendering any associated admission assessment incomplete. These commenters suggested that 10 percent to 15 percent of any LTCH’s patients may fall under one of the two above categories, making it difficult to comply with proposed data completion thresholds. Finally, the commenters suggested that completeness in the LTCH CARE Data Set Planned Discharge assessment is a metric of a facility’s completeness with quality reporting completion thresholds.

Response: The proposed data completion threshold for data submitted using the LTCH CARE Data set is 80 percent. We have considered emergent discharges as one reason that LTCHs may not meet data completion thresholds approaching 100 percent. While we understand that LTCHs may not have the opportunity to complete data item H0400 (Bowel Continence) for those patients with fecal management systems in place, we believe that LTCHs should be able to meet our currently proposed threshold of 80 percent and can confirm that the majority of LTCHs are meeting this threshold presently. With respect to the future expansion of our data completion threshold policy, we will monitor LTCH performance on each required item and take steps to account for any such low response rate. If we find that the majority of LTCHs are failing to consistently respond to any one of our required items, we will either take action to modify that item on the LTCH CARE Data Set, or we will address the problem as it relates to data completion threshold compliance in future rulemaking.

With regard to the commenters’ suggestion that we base completion thresholds on only planned discharge assessment, we respectfully disagree. We believe that the LTCH CARE Data Set admission assessment is an important factor in collecting data with regard to risk adjustment items. However, we will consider the effect of the inclusion of unplanned discharge data elements in our compliance determinations based on data completion thresholds, as we monitor this program.

b. LTCHQR Program Data Completion Threshold for the Required LTCH CARE Data Set (LCDS) Data Items

The LCDS is composed of data collection items designed to inform quality measure calculations, including risk-adjustment calculations, as well as internal consistency checks for logical inaccuracies. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28274), we proposed that beginning with quality data affecting the FY 2016 payment determination and subsequent years, LTCHs must meet or exceed a proposed LCDS data completion threshold of 80 percent. We proposed to assess the completeness of submitted data by verifying that for all LCDS assessments submitted by any given LTCH, at least 80 percent of those LCDS Assessments must have 100 percent of the required quality data items completed, where, for the purposes of this rule, “completed” is defined as having provided actual patient data, as opposed to a non-
informative response, such as a dash (-), that indicates the LTCH was unable to provide patient data. The proposed threshold of 80 percent is based on the need for substantially complete records, which allows appropriate analysis of quality measure data for the purposes of updating quality measure specifications as they undergo yearly and triennial measure maintenance reviews with the NQF. In addition, complete data is needed to understand the validity and reliability of quality data items, including risk-adjustment models. Finally, we want to ensure complete quality data from LTCHs, which will ultimately be reported to the public, allowing our beneficiaries to gain an understanding of LTCH performance related to these quality metrics, and helping them to make informed health care choices.

Our data suggest that the majority of current LTCHs are in compliance with, or exceeding, this proposed threshold already. Our decision to set this proposed data completion threshold at a lower level initially, with the intent to raise the proposed 80 percent threshold in subsequent program years, is based on our understanding that LTCHs are still new to quality reporting, and that their experience and understanding, with respect to reporting quality data using a standardized data collection instrument, and thus their compliance, will increase over time. However, we invited public comment on circumstances that might prevent LTCHs from meeting this level of compliance contain 100 percent of all required quality data items, will be subject to a reduction of 2 percentage points to the applicable FY annual payment update beginning with FY 2016. In order to establish this program threshold, we analyzed all LCDS submissions from January 2013 through September 2013, and believe that the majority of LTCHs will be able to meet the proposed 80 percent data completion threshold. It is our intent to raise this threshold over the next 2 years, through the formal notice-and-comment rulemaking process. As stated above, we feel that as LTCHs continue to submit data using a standardized data collection instrument, such as the LCDS, and as they continue to take advantage of the resources we provide to guide LTCHs in their submission of this data (national trainings, CMS Special Open Door Forums, LTCHQR Program Manual, and technical trainings available on our Web site), we feel LTCH performance with respect to data completion will improve over time. We proposed that this threshold will have to be met by LTCHs, in addition to the CDC NHSN threshold discussed below, in order to avoid receiving a 2 percentage point reduction to the applicable FY annual payment update.

c. LTCHQR Program Data Completion Threshold For Measures Submitted Using the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN)

The LTCHQR Program through the FY 2012, FY 2013, and FY 2014 IPPS/LTCH PPS final rules, requires that LTCHs submit CDC’s LTCH-QR quality measure data using the CDC’s NHSN, including data for the previously finalized CAUTI, CLABSI, and Influenza Vaccination Coverage among Healthcare Personnel (HCP) quality measures. More specifically, we require LTCHs follow CDC quality measure protocols, which require the LTCHs to complete all data fields required for both numerator and denominator data within NHSN, including the “no events” field for any month during which no infection events were identified. LTCHs are required to submit this data on a monthly basis (except for the HCP measure, which is only required to be reported once per year). However, LTCHs have until the associated quarterly deadline (45 calendar days beyond the end of each CY quarter) by which to report infection data to the CDC for each of the three months within any given quarter. For more information on the LTCHQR Program quarterly deadlines, we refer readers to section IX.C.9.b. of the preamble of this final rule.

In the FY 2015 IPPS/LTCH PPS rule (79 FR 28275), we proposed that beginning with FY 2016 payment determination and subsequent years, this previously finalized requirement for monthly reporting must be met in addition to the proposed LCDS data completion threshold discussed above in order to avoid a 2 percentage point reduction to the applicable FY annual payment update. That is, we proposed that LTCHs must meet a threshold of 100 percent for their experience with the NHSN, achieved by submitting relevant infection, vaccination, or other required quality measure data for each month of any given CY, in addition to meeting the above-proposed data item completion threshold for required quality data items on the LCDS. As the LTCHQR Program expands, and LTCHs begin reporting measures that were previously finalized, but not yet implemented, or newly proposed and finalized measures, we proposed to apply this same threshold.

d. Application of the 2 Percentage Point Reduction for LTCHs That Fail To Meet the Data Completion Thresholds

As we discussed above, we have proposed that LTCHs must meet two separate data completion thresholds in order to avoid a 2 percentage point reduction to their applicable FY annual payment update; a data completion threshold of 80 percent for those required data elements collected using the LCDS and submitted through QIES; and a second data completion threshold of 100 percent for quality measure data submitted through the CDC’s NHSN. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275), we proposed that these data completion thresholds must be met in addition to the data validation threshold of 75 percent we discuss below, in order to avoid a 2 percentage point reduction to their applicable FY annual payment update. While we proposed that LTCHs must meet both the proposed data completion and data validation thresholds, LTCHs cannot have their applicable annual payment update reduced twice. That is, should an LTCH fail to meet either one or both of the proposed thresholds, it will only receive one reduction of 2 percentage points to its applicable fiscal year annual payment update.

We invited public comment on these proposals.

Comment: A few commenters supported CMS’ proposal to establish data completion thresholds, noting that it is a fundamental step to ensure the accuracy of the LTCH quality reporting data. A few commenters stated that CMS’ proposed policy will facilitate more accurate public reporting in the future and agreed with our proposed numeric standards.

Response: We thank the commenters for their support.

Comment: Commenters recommended that CMS apply the data completion standards no earlier than the FY 2017 payment determination, instead of FY 2016. These commenters further stated that a significant amount of data for FY 2016 has already been collected and submitted and that it would be inappropriate and unfair to apply the data completion standards to data submitted before the standards were
even proposed and therefore known to LTCHs.

Response: Currently, the compliance standard applicable to each LTCH is to timely submit all required quality data, and LTCHs should already be ensuring that the data that they submit is complete and accurate. Thus, applying the data completion standards to CY 2014 data merely ensures that LTCHs are complying with applicable standards and that payments made to LTCHs are based on complete and accurate quality data.

Comment: A commenter suggests that LTCHs should not be penalized by a 2 percentage point reduction to the annual payment update based on completion thresholds, citing that emergency discharges make it difficult to complete assessments.

Response: We believe that the number of unplanned discharges in LTCHs is not so substantial that it will prevent LTCHs from meeting or exceeding the proposed data completion threshold of 80 percent for data submitting using the LTCH CARE Data Set. We will continue to monitor submission patterns and completion thresholds for all data items and appropriately investigate and address any submission patterns that lead us to believe that a systematic issue is preventing LTCHs from complying with our data completion thresholds.

After consideration of the public comments we received, we are finalizing the LTCHQR Program data completion threshold for the FY 2016 payment determination and subsequent years, as proposed.

11. Data Validation Process for the FY 2016 Payment Determination and Subsequent Years

a. Data Validation Process

Historically, we have built consistency and internal validation checks into our data submission specifications to ensure that the basic elements of the LCDS assessments conform to requirements such as proper format and facility information. These internal consistency checks are automated and occur during the LTCH submission process, and help ensure the integrity of the data submitted by LTCHs by rejecting submissions or issuing warnings when LTCH data contain logical inconsistencies. These internal consistency checks are referred to as “system edits” and are further outlined in the LTCH Data Submission Specifications version 1.01, which are available for download on the LTCH Quality Reporting Technical Information Web page at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Assessment-ltchQualityReporting/LTCHTechnicalInformation.html.

Validation is intended to provide added assurance of the accuracy of the data that will be reported to the public as required by section 1886(m)[5][E] of the Act. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275 through 28276) we proposed, for the FY 2016 payment determination and subsequent years, to validate the data elements submitted to CMS for quality purposes. Initially, for the FY 2016 payment determination, this data accuracy validation will apply only to the LCDS items that inform the measures Percent of Patients or Residents with Pressure Ulcers That Are New or Have Worsened (Short-Stay) (NQF #0678). We intend to expand this validation process for quality measures affecting the FY 2017 payment determination and subsequent years through future notice-and-comment rulemaking.

We proposed to validate the data elements submitted to CMS for Percent of Residents or Patients with Pressure Ulcers That Are New or Have Worsened (Short-Stay) (NQF #0678) under the LTCHQR Program by requesting the minimum chart data necessary to confirm a statistically valid random sample of 260 LTCHs. From the random sample of 260 LTCHs, 5 LCDS assessments submitted through the National Assessment Collection Database would be randomly selected by the CMS validation contractor. In accordance with § 164.512 (d)(1)(ii) of the HIPAA Privacy Rule, we would request from these LTCHs the specified portions of the 5 Medicare patient charts that correspond to the randomly selected assessments, which would need to be copied and submitted via traceable mail to a CMS contractor for validation. We proposed that the specific portions of the 5 beneficiary charts would be identified in the written request, but may include: Admission and discharge assessments, relevant nursing notes following the admission, relevant nursing notes preceding the discharge, physician admission summary and discharge summary, and any Assessment of Pressure Ulcer Form the facility may utilize. We proposed that the CMS contractor would utilize the portions of the patient charts to compare that information with the quality data submitted to CMS. Differences that would affect measure outcomes or measure rates would be identified and reported to CMS. These differences may include but are not limited to unreported worsened pressure ulcers.

We proposed that all data that has been submitted to the National Assessment Collection Database under the LTCHQR Program would be subject to the data validation process. Specifically, we proposed that the contractor would request copies of the randomly selected medical charts from each LTCH via certified mail (or other traceable methods that require an LTCH representative to sign for CMS correspondence), and the LTCH would have 45 days from the date of the request (as documented on the request letter) to submit the requested records to the contractor. If the LTCH does not comply within 30 days, the contractor would send a second certified letter to them, reminding the LTCH that it must return copies of the requested medical records within 45 calendar days following the date of the initial contractor medical record request. If the LTCH still does not comply, then the contractor would assign a “zero” score to each measure in each missing record. If, however, the LTCH complies, the contractor would review the data submitted by the LTCH on the LCDS assessments for the required data elements associated with the Pressure Ulcer measure, until such time that LTCHs begin to submit additional quality measures that are collected using the LCDS. Initially, this review would consist solely of those required data elements that inform the Pressure Ulcer measure calculation and checks for logical inconsistencies. As LTCHs begin to report additional finalized measures, we intend to expand this validation process to quality measures affecting the FY 2017 payment determination and subsequent years, through future notice-and-comment rulemaking. The contractor would then calculate the percentage of matching data elements, which would constitute a validation score. Because we would not be validating all records, we would need to calculate a confidence interval that incorporates a potential sampling error.

To receive the full FY 2016 annual payment update, we proposed that LTCHs in the random sample must attain at least a 75 percent validation score, based upon our validation process, which would use charts requested from patient assessments submitted for CY 2013. We would calculate a 95 percent confidence interval associated with the observed validation score. If the upper bound of this confidence interval is below the 75 percent cutoff point, we would not consider a hospital’s data to be “validated” for payment purposes. We
proposed that LTCHs failing the validation requirements would be subject to the 2 percent annual payment update reduction, beginning with their fiscal year annual payment update. In addition, all LTCHs validated would receive educational feedback, including specific case details.

Comment: Several commenters believed that the proposed validation is a fundamental step to ensure the accuracy of the LTCH quality reporting data. Response: We thank the commenters for their support for this proposal.

Comment: Several commenters suggested that CMS begin the validation standards no earlier than FY 2017. Although the commenters believed that validation is an important step to ensuring that hospitals are collecting measure data appropriately, they believed it would be inappropriate to validate data submitted for FY 2016 payment determination, as much of those data will be submitted prior to the effective date of CMS’ finalized data accuracy validation policy on October 1, 2014.

Response: We agree that validation is important not only to ensure hospitals are collecting data accurately, but also in providing feedback to LTCHs regarding possible differences in the findings of our validation effort. We believe the feedback a facility will receive, even if they are well above the validation minimum, could be valuable to both the LTCHs and to CMS. We are confident that most LTCHs have been submitting data accurately. Although much of the data for FY 2016 has been submitted, the FY 2013 IPPS/LTCH PPS final rule (77 FR 53620) states that LTCHs are required to submit the subset of data elements necessary to enable CMS to validate that the pressure ulcer measure data elements were accurately reported. We believe that we are operating within our authority to validate quality data. Currently, the compliance standard applicable to each LTCH is to timely submit all required quality data, and LTCHs should already be ensuring that the data that they submit is complete and accurate. Thus, validating CY 2014 data ensures that LTCHs are complying with applicable standards and that payments made to LTCHs are based on complete and accurate quality data.

Comment: Several commenters recommended that the CMS make the validation process as transparent as possible, particularly since it is new to the LTCHQR Program. Response: We will use the requested charts to validate the following data elements: Functional mobility: “Lying to Sitting on Side of Bed;” “Bowel continence;” “Active Diagnosis;” “PVD;” “Active Diagnosis;” “Diabetes Mellitus;” “Height;” “Weight;” “Worsening stage 2 Pressure Ulcer;” “Worsening stage 3 Pressure Ulcer;” and, “Worsening stage 4 Pressure Ulcer.” We intend to share our data accuracy validation findings with the randomly selected LTCHs, so that they may gain an understanding of any discrepancies between the medical record and the LTCH CARE Data Assessment to which the medical record is being compared. We will also incorporate examples of our findings into LTCH training, special open door forums, and LTCH manuals, ensuring that the greater LTCH community benefits from this validation effort as well.

b. Application of the 2 Percentage Point Reduction for LTCHs That Fail To Meet the Data Accuracy Threshold
In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28276) we proposed that LTCHs must meet a data accuracy threshold of 75 percent in order to avoid receiving a 2 percentage point reduction to their applicable fiscal year annual payment update. We proposed that this proposed data accuracy threshold of 75 percent must be met in addition to the proposed data completion thresholds (80 percent for data collected using the LTCH CARE Data Set and submitted using QIES, and 100 percent for data submitted using the CDC’s NHSN), in order to avoid receiving a 2 percentage point reduction to their applicable FY annual payment update. While we proposed that LTCHs must meet both the proposed data accuracy and data completion thresholds, LTCHs cannot have their applicable annual payment update reduced twice. That is, should an LTCH fail to meet either one or both of the proposed thresholds (data completion and/or data accuracy), it will only receive one reduction of 2 percentage points to its applicable FY annual payment update.

We invited public comment on these proposals and suggestions to improve the utility of the approach or to reduce the burden on LTCHs.

Comment: A commenter noted that 260 LTCHs would represent approximately 60 percent of the entire industry, which they believed was excessive.

Response: We thank the commenter for voicing this concern and will take the proportion into consideration in future rulemaking.

Comment: A commenter asked whether “IPPS comparable” cases will be required to meet LTCHQR Program requirements or those that fall under ACH reporting requirements.

Response: We presume that the commenter is referring to current short stay outlier policy, but they could be referencing future regulation under the SGR Reform Act, where the IPPS comparable amount is one of the payment options for a “site neutral” case. Regardless, the facility/unit would be subject to the LTCHQR Program, as it is still an LTCH when it is paid an IPPS comparable amount, and the payment is a form of LTCH PPS payment.

Comment: A commenter recommended that CMS annually announce which LTCHs will be subject to validation and disseminate information about when these LTCHs should expect to begin receiving requests for medical records.

Response: We recognize the need to communicate with LTCHs whether or not they will be selected for validation. We will use the LTCHQR Program website, as well as direct communication with LTCHs selected for validation, to communicate time frames and deadlines regarding the data accuracy validation effort. In addition, we will use the LTCHQR Program website to announce, and offer access to, a new listserve specifically for the LTCHQR Program, which will be used to communicate with the provider community in the near future.

Comment: Commenters expressed concern that the threshold compliance of 75 percent agreement was too high for this first attempt to validate the Pressure Ulcer data. Commenters suggested that there would be a great deal of variability in the reporting of the Pressure Ulcer measure and that this should be an opportunity for CMS to educate LTCHs on appropriate documentation and reporting to improve the process. Commenters suggested that a 60 percent compliance threshold would be more appropriate validation.

Response: We note that the 75 percent agreement is the single point estimate of the proportion in agreement; we proposed that the upper bound of a 95 percent confidence interval be the value that must exceed the 75 percent compliance threshold. We believe this takes into account the inherent variability to be found in the pressure ulcer data. In addition, the 75 percent proportion agreement is consistent with the other data quality programs currently underway, for example, the Hospital IQR Program, 42 CFR 412.140(6)(2), and the Hospital OQR Program, 42 CFR 419.46(e)(2). We feel it is important to promote consistent...
standards when we deal with the various quality data we are collecting. Comment: A commenter requested CMS promulgate regulations for the validation process and provide the credentials, inter-rater reliability and detail the training provided to the contractor performing the validation.

Response: We will make any future data accuracy validation regulations known to the LTCH community through future notice-and-comment rulemaking. All chart reviews will be performed by a licensed registered nurse trained in medical record review and comparison, utilizing the quality measure data specifications in the LTCH Quality Reporting Program Manual. Specified training will be provided before the actual reviews, which will include ensuring that there is inter-rater reliability among the reviewers prior to implementation of the data validation process.

Comment: A few commenters suggested that CMS adopt a two-level data validation process similar to the process used by the MACs for the IRF Compliance Percentage Threshold. An initial small sample of charts would be requested from the facilities randomly selected for validation. If the facility did not meet the initial threshold for compliance, a larger, second sample of charts would be requested. The commenters believed that 5 charts is too small of a sample size and that if two of the five charts selected for review are perceived to contain errors the facility would not meet the 75 percent validation score. Lastly, the commenters suggested that CMS select the LTCHs for validation from all LTCHs participating in the Medicare program.

Response: We will consider this approach for future years. We understand the concern regarding a relatively low sample of charts, but wish to explain that the overall validation score will be determined based on the aggregate percentage of reported elements (out of all reportable elements) in all of the sampled charts, not on the percentage of reported elements in each individual chart. Each chart will be evaluated on the 9 required data elements. Finally, we would like to confirm that the sample of randomly selected LTCHs will be drawn from the universe of all Medicare-certified LTCHs, as suggested by the commenter.

After consideration of the public comments we received, we have decided to further explore suggestions from commenters before finalizing the LTCH data validation process that we proposed. Therefore, we are not finalizing our LTCH data validation proposal at this time.

12. Public Display of Quality Measure Data for the LTCHQR Program

Under section 1886(m)(5)(E) of the Act, the Secretary is required to establish procedures for making data submitted under section 1886(m)(5)(C) of the Act available to the public. Section 1886(m)(5)(E) of the Act requires that such procedures shall ensure that an LTCH has the opportunity to review the data that is to be made public with respect to the LTCH prior to such data being made public. The statute also requires that the Secretary report quality measures that relate to services furnished in inpatient settings in LTCHs on our Web site. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53637), we received and responded to public comments regarding the public reporting of quality data under the LTCHQR Program.

Currently, we are developing plans regarding the implementation of these provisions. We appreciate the need for transparency into the processes and procedures that will be implemented to allow for public reporting of the LTCHQR Program data and to afford LTCHs the opportunity to review that data before it is made public. At this time, we have not established procedures or timelines for public reporting of data, but we intend to include related proposals in future rulemaking.

We welcomed public comment on what we should consider when developing future proposals related to public reporting of quality measures for the LTCHQR Program.

Comment: Several commenters encouraged CMS to work with LTCHs to ensure an opportunity to review potential displays of quality data and to provide feedback prior to public reporting.

Response: We thank the commenters for taking the time to express these views and suggestions regarding public reporting and will take it into consideration for future public reporting development.

Comment: A commenter noted CMS should develop reports in the CASPER Reporting Application to indicate patients included in the Pressure Ulcer measure.

Response: We plan to begin designing and making CASPER reports accessible for LTCHs in the near future.

We thank the commenters for the responses, and we will consider them as we develop future proposals related to public reporting of quality measures for the LTCHQR Program.

13. LTCHQR Program Submission Exception and Extension Requirements for the FY 2017 Payment Determination and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50883 through 50885), we referred to these requirements as submission “waiver” requirements. We proposed to instead use the phrase “exception and extension” requirements for purposes of clarity. For the FY 2017 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28276 through 28277), we proposed to continue using the LTCHQR Program’s requirements that we adopted in the FY 2014 IPPS/LTCH PPS final rule for the FY 2015 payment determination and subsequent years, although the term “waiver” is replaced by “exception and extension.”

In the FY 2014 IPPS/LTCH PPS final rule, we finalized a process for LTCHs to request and for us to grant waivers with respect to the quality data reporting requirements of the LTCHQR Program for one or more quarters, beginning with the FY 2015 payment determination, when there are certain extraordinary circumstances beyond the control of the LTCH. We proposed to continue to use this previously finalized process.

In the event that an LTCH seeks to request a submission exception or extension for quality reporting purposes, the LTCH must request an exception or extension within 30 days of the date that the extraordinary circumstances occurred by submitting a written request to CMS via email to the LTCH mailbox at LTCHQRPRReconsiderations@cms.hhs.gov. Exception or extension requests sent to CMS through any other channel will not be considered as a valid request for an exception or extension from the LTCHQR Program’s reporting requirements for any payment determination. The written request must contain all of the finalized requirements in the FY 2014 IPPS/LTCH PPS final rule, and on our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCHQuality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html.

When an exception or extension is granted, an LTCH will not incur payment reduction penalties for failure to comply with the requirements of the LTCHQR Program, for the timeframe specified by CMS. If an LTCH is granted an exception, we will not require that the LTCH submit any quality data for a given period of time. If we grant an
extension to an LTCH, the LTCH will still remain responsible for submitting quality data collected during the time frame in question, although we will specify a revised deadline by which the LTCH must submit this quality data.

In addition, in the FY 2014 IPPS/LTCH PPS final rule, we finalized a policy that allowed CMS to grant exceptions or extensions to LTCHs that have not requested them if it is determined that extraordinary circumstances affects an entire region or locale. We stated that if this determination was made, we will communicate this decision through routine communication channels to LTCHs and vendors, including, but not limited to, issuing memos, emails, and notices at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html. More information on the LTCHQR Program exception and extension requirements and processes, and all related announcements may be found at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html.

For the FY 2017 payment determination and subsequent years, we proposed that we may grant an exception or extension to LTCHs if we determine that a systemic problem with one of our data collection systems directly affected the ability of the LTCH to submit data. Because we do not anticipate that these types of systemic problems will happen often, we do not anticipate granting a waiver or extension on this proposed basis frequently. We proposed that if we make the determination to grant an exception or extension, we would communicate this decision through routine communication channels to LTCHs and vendors, including, but not limited to, issuing memos, emails, and notices on our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html.

We invited public comment on these proposals.

Comment: A few commenters supported the proposed Exception/Exemption proposal.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing the LTCHQR Program submission exception and extension requirements for the FY 2017 payment determination and subsequent years, as proposed.

14. LTCHQR Program Reconsideration and Appeals Procedures for the FY 2016 Payment Determination and Subsequent Years

a. Previously Finalized LTCHQR Program Reconsideration and Appeals Procedures for the FY 2014 and FY 2015 Payment Determinations

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50885 through 50887), we finalized a voluntary process that allowed LTCHs the opportunity to seek reconsideration of our initial noncompliance decision for the FY 2014 and FY 2015 payment determinations. We refer readers to that rule for a discussion of this process.

b. LTCHQR Program Reconsideration and Appeals Procedures for the FY 2016 Payment Determination and Subsequent Years

For the FY 2016 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28277 through 28278), we proposed to adopt an updated process, as described below, that will enable an LTCH to request a reconsideration of our initial noncompliance decision in the event that an LTCH believes that it was incorrectly identified as being subject to the 2-percentage point reduction to its annual payment due to noncompliance with the LTCHQR Program reporting requirements for a given reporting period.

For the FY 2016 payment determination, and subsequent years, we proposed that an LTCH would receive a notification of noncompliance if we determine that the LTCH did not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to the applicable fiscal year and that the LTCH is therefore subject to a 2-percentage point reduction in the applicable payment determination as required by section 1886(m)(5)(A)(i) of the Act. We would only consider requests for reconsideration after an LTCH has been found to be noncompliant and not before.

An LTCH would have 30 days from the date of the initial notification of noncompliance to review its payment determination and submit to us a request for reconsideration. This proposed time frame would allow us to balance our desire to ensure that LTCHs have the opportunity to request reconsideration with our need to complete the process and provide LTCHs with our reconsideration decision in a timely manner.

Notified LTCHs are required and any subsequent notifications from CMS would be sent via a traceable delivery method, such as certified U.S. mail or registered U.S. mail. We proposed that an LTCH may withdraw its request at any time and may file an updated request within the proposed 30-day deadline. We also proposed that, in very limited circumstances, we may grant a request by an LTCH to extend the proposed deadline for reconsideration requests. It would be the responsibility of an LTCH to request an extension and demonstrate that extenuating circumstances existed that prevented the filing of the reconsideration request by the proposed deadline.

We also proposed that as part of the LTCH’s request for reconsideration, the LTCH would be required to submit all supporting documentation and evidence demonstrating: (1) Full compliance with all LTCHQR Program reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the LTCH was not able to comply with the requirements during the reporting period. We would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request. The documentation and evidence may include copies of any communications that demonstrate its compliance with the program’s requirements, as well as any other records that support the LTCH’s rationale for seeking reconsideration. A sample list of acceptable supporting documentation and evidence, as well as instructions for LTCHs to retrieve copies of the data submitted to CMS for the appropriate program year can be found on our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html.

We proposed that an LTCH wishing to request a reconsideration of our initial noncompliance determination would be required to do so by submitting an email to the following email address: LTCHQRProgramReconsiderations@cms.hhs.gov. Any request for reconsideration submitted to us by an LTCH would be required to follow the guidelines outlined on our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html.

Following receipt of a request for reconsideration, we will provide—by return email acknowledgment, using the contact information provided in the reconsideration request, to the CEO or
CEO-designated representative that the request has been received; and

• Once we have reached a decision regarding the reconsideration request, an email to the LTCH CEO or CEO-designated representative, using the contact information provided in the reconsideration request, regarding our decision.

We proposed to require an LTCH that believes it was incorrectly identified as being subject to the 2-percentage point reduction to its annual payment update to submit a timely request for reconsideration and receive a decision on that request before the LTCH can file an appeal with the Provider Reimbursement Review Board (PRRB). If the LTCH is dissatisfied with the decision rendered at the reconsideration level, the LTCH could appeal the decision with the PRRB under 42 CFR 405.1835. We believe this proposed process is more efficient and less costly for CMS and for LTCHs because it decreases the number of PRRB appeals by resolving issues earlier in the process. Additional information about the reconsideration process including requirements for submitting a reconsideration request is posted on our Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment- Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html.

We invited public comment on the proposed procedures for reconsideration and appeals.

Comment: Several commenters supported the proposal to continue the reconsideration process for FY 2016.

Response: We thank the commenters for their support.

Comment: A commenter supported the reconsideration process, but believed that it should be expanded to include data validation.

Response: We believe the current reconsideration process could be utilized for reconsideration of the validation findings, as long as all of the documentation used for the request for reconsideration was submitted at the time of validation. As noted above, we are finalizing our data completeness proposal, but we are not finalizing our data validation proposal at this time.

Comment: A commenter stated that CMS should set the reconsideration process in regulation as has been done in other administrative appeals processes. In addition, the commenter did not believe that CMS has demonstrated the ability to manage this level of administrative complexity in a prompt manner. The commenter believed that CMS should allow LTCHs to appeal to the PRRB without having to go through CMS first.

Response: We plan to propose regulations for reconsideration in future rulemaking. We note that while some CMS programs have codified their reconsideration processes in regulations, not all CMS reconsideration processes have been codified. We disagree that we have not demonstrated the ability to manage this level of additional administrative complexity. The LTCHQR Program completed all reconsiderations and notified all LTCHs of those reviews within 60 days in FY 2013. We believe that requiring LTCHs to first submit to the CMS reconsideration process prior to requesting a hearing at the PRRB will allow us the opportunity to overturn an erroneous decision when we have a systematic process and resources in place to do so, and ultimately decrease any unnecessary burden on the PRRB process.

After consideration of the public comments we received, we are finalizing the LTCHQR Program reconsideration and appeals procedures for the FY 2016 payment determination and subsequent years, as proposed.

15. Electronic Health Records (EHR) and Health Information Exchange (HIE)

We are also interested in understanding the current state of electronic health record (EHR) adoption and use of Health Information Exchange (HIE) in the LTCH community. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28278) we solicited feedback and input from LTCHs and the public on EHR adoption and HIE usage. We noted that are especially interested in LTCH feedback and input on the following questions:

• Have you adopted an EHR in your LTCH setting?

• If your LTCH setting uses EHRs, what functional aspects of EHRs do you find most important (for example, the ability to send or receive transfer of care information; the ability to support medication orders/medication reconciliation)?

• Does the EHR system used in your LTCH setting support interoperable document exchange with other healthcare providers (for example, acute care hospitals, physician practices, skilled nursing facilities, etc.)?

In addition to seeking public feedback and input on the feasibility and desirability of EHR adoption and use of HIE in LTCHs, we stated that we are also interested in public comments on the need to develop electronic clinical quality measures, and the benefits and limitations of implementing these measures for LTCHs.

Comment: Commenters expressed support of the adoption and use of EHRs, HIEs and electronic prescribing in the LTCH setting. The commenters suggested that it is a critical step to achieving efficiencies and improving the quality of care provided by LTCHs, and that it is important to allow LTCHs to exchange information with other types of providers to improve care coordination and to participate in Accountable Care Organizations and other reform efforts.

Response: We thank the commenters for their support.

Comment: Some commenters urged CMS to consider a funding incentive program for the adoption of EHR technology by LTCHs that includes the same opportunities afforded to eligible physicians, CAHs, and acute care hospitals under the HITECH provisions of Public Law 111–5, the American Recovery and Reinvestment Act of 2009.

The commenters noted that the lack of funding is a significant challenge to EHR adoption in the LTCH setting and calls into question the feasibility of requiring EHR use. Another commenter suggested that it is premature to consider the further development of electronic clinical quality measures for the LTCH setting until compensation is offered for implementing EHRs.

Response: We believe that these recommendations and concerns are important considerations related to EHR adoption and HIE usage in the LTCH setting and help to inform our understanding of these issues.

Comment: Several commenters indicated that their LTCHs have adopted EHR technology and indicated challenges they have been facing. First, the amount of information generated by the EHRs can be overwhelming, and there is a significant challenge associated with utilizing the information in a timely and meaningful way. Second, the lack of interoperability between acute care hospitals’ and LTCH EHRs make information exchange difficult. Third, the information currently being collected by HIEs are rudimentary and does not necessarily meet the information needs to LTCHs.

A commenter indicated that not all proposed and new LTCH quality measures utilize EHR information and, therefore, suggested that LTCHs face the burden of manually reviewing each patient’s entire medical record regardless of whether EHR technology has been adopted.

Response: We thank the commenters for their observations. We believe that these concerns are important
considerations related to EHR adoption and HIE usage in the LTCH setting and help to inform our understanding of these issues.

D. Electronic Health Record (EHR) Incentive Program and Meaningful Use (MU)

1. Background

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). We refer to this program as the EHR Incentive Program. Eligible hospitals (EHs) and critical access hospitals (CAHs) may qualify for incentive payments under Medicare (authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrate meaningful use of CEHRT, which includes reporting on clinical quality measures (CQMs) using CEHRT. Sections 1886(b)(3)(B) and 1814(l) of the Act also establish downward payment adjustments under Medicare, beginning with fiscal year 2015, for eligible hospitals and CAHs that are not meaningful users of CEHRT for certain associated reporting periods. We refer to this part of the EHR Incentive Program as the Medicare EHR Incentive Program. Sections 1903(a)(3)(F) and 1903(l) of the Act provide the statutory basis for Medicaid incentive payments.

The set of CQMs from which eligible hospitals and CAHs will report under the EHR Incentive Program beginning in FY 2014 is listed in Table 10 of the EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087). We continue to believe there are important synergies with respect to the Medicare EHR Incentive Program and the Hospital IQR Program. We believe the financial incentives under the Medicare EHR Incentive Program for the adoption and meaningful use of CEHRT by EHRs and CAHs will encourage the adoption and use of CEHRT for the electronic reporting of CQMs under the Hospital IQR Program. We expect that the electronic submission of quality data from EHRs under the Medicare EHR Incentive Program will provide a foundation for establishing the capacity of hospitals to send, and for CMS to receive, CQMs via CEHRT for certain Hospital IQR Program measures.

2. Alignment of the Medicare EHR Incentive Program Reporting and Submission Timelines for Clinical Quality Measures With Hospital IQR Program Reporting and Submission Timelines

We believe it is important to continue our goal of aligning the Medicare EHR Incentive Program with the Hospital IQR Program because alignment of these programs will serve to reduce hospital reporting burden and encourage the adoption and meaningful use of CEHRT by eligible hospitals and CAHs. Section 1886(n)(3)(B)(iii) of the Act requires that, in selecting measures and establishing the form and manner for reporting measures under the Medicare EHR Incentive Program, the Secretary shall seek to avoid redundant or duplicative reporting with reporting otherwise required, including reporting under section 1886(b)(3)(B)(viii) of the Act (the Hospital IQR Program). The reporting and submission timelines for the Medicare EHR Incentive Program for eligible hospitals and CAHs currently operate on a Federal fiscal year basis, while the reporting and submission timelines for the Hospital IQR Program currently operate on a calendar year basis. This difference may create confusion and additional burden for hospitals attempting to report data to both programs. To alleviate this possible confusion, reduce provider burden, and strengthen our commitment to aligning programs, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28278 through 28279) we proposed to align the reporting and submission periods for clinical quality measures for the Medicare EHR Incentive Program with that of the Hospital IQR Program on a calendar year basis. We realized during the Medicare EHR Incentive Program to the calendar year would mean shifting the timeline for reporting and submission of CQMs such that the submission period would continue through February of the subsequent calendar year rather than ending in November as it is currently done, and therefore would delay the incentive eligibility assessment, and subsequently delay the Medicare EHR incentive payments under Medicare made to eligible hospitals and CAHs. In order to ease the transition of the reporting period to the calendar year, and to prevent the delay of Medicare EHR incentive payments, we proposed to incrementally shift the Medicare EHR Incentive Program reporting periods for CQMs. Specifically, for 2015 and 2016, we proposed for the Medicare EHR Incentive Program to require calendar year reporting for CQM data that are submitted electronically, but require that the data be reported only for the first three calendar quarters (that is, January through March, April through June and July through September) allowing the reporting period, incentive eligibility assessment, and incentive payments to remain on their current schedule.

We noted that this proposal would only apply for eligible hospitals and CAHs submitting CQMs electronically for 2015 and 2016, and that hospitals demonstrating meaningful use for the first time in 2015 or 2016 would still be required to report CQMs by attestation for a continuous 90-day period in FY 2015 or 2016, or report CQMs electronically, by July 1 of the given year to avoid the Medicare penalty in the subsequent year as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905). Medicaid-only providers would continue to report according to State requirements. The proposal would not change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System. This proposal would allow us to align the CQM reporting periods for the Medicare EHR Incentive Program with that of the Hospital IQR Program without delaying payment of the Medicare EHR incentive payments for 2015 and 2016.

To further align CQM reporting for the two programs, we proposed to require quarterly reporting of electronically reported CQMs for the Medicare EHR Incentive Program to align with the currently established quarterly electronic CQM reporting periods for the Hospital IQR Program. Additionally, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28242 through 28243) the Hospital IQR Program proposed to change its submission period for electronic CQMs from annual to quarterly submission. We refer readers to the Hospital IQR Program discussion in section IX.A.7.h. of the preamble of that proposed rule for more information about this proposal. Therefore, for the CY 2015 and 2016 reporting periods, we also proposed to align the Medicare EHR Incentive Program submission period with that being proposed for the Hospital IQR Program. The table below illustrates the current reporting periods, and the following table further illustrates our proposals.
We invited public comment on these proposals. Comment: Many commenters supported CMS’ proposed alignment between the Medicare EHR Incentive Program and Hospital IQR Program. Commenters appreciated CMS’ efforts to align these programs and felt alignment would reduce overall quality reporting burden. Several commenters specifically expressed their support of the proposal to align the reporting and submission timelines of CQMs for the Medicare EHR Incentive Program with reporting and submission timelines for the Hospital IQR Program stating that this alignment would reduce confusion among the programs and reduce reporting burden. A few commenters noted that the proposal did not address the reporting and submission timeline for reporting CQMs via attestation, or the reporting and submission timelines of the meaningful use objectives. Some of these commenters requested that CMS clarify whether those timelines would also be affected by this proposal. Response: We appreciate the comments in support of our alignment efforts with the Hospital IQR Program, and agree that our proposal to align timelines for the programs would reduce confusion and reporting burden. For this reason, we are finalizing our proposal, with the modifications discussed below, to align the reporting and submission timelines for CQMs that are reported electronically for the Medicare EHR Incentive Program with the reporting and submission timelines of the Hospital IQR Program on the calendar year for 2015. Although it is still our general goal to continue this alignment on a calendar year basis for 2016, we are not finalizing the proposals for 2016 at this time and will address the policy for 2016 in future rulemaking. We will continue to evaluate our policies for 2016, and maintain our goal of alignment with the Hospital IQR Program.

We note that we did not propose to change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System, and thus, the policy will remain the same. We also note that we will consider these comments and possible alignment of CQMs reported by attestation in future rule making.

Comment: Many commenters expressed their views regarding CMS’ proposal to require quarterly submission of CQMs reported electronically for the Medicare EHR Incentive Program. In general, commenters felt it was premature to require quarterly submission of CQMs in 2015 for the Medicare EHR Incentive Program given the delays with certification of EHR technology in 2014 and anticipated delays with CAHPS certification in 2015. Some commenters requested the proposal to require quarterly reporting of CQMs for Medicare EHR Incentive Program and Hospital IQR Program to align the reporting and submission timelines for CQMs that are reported by attestation via the Registration and Attestation System, or for CQMs that are reported electronically for the Medicare EHR Incentive Program. A few commenters noted that the proposal did not address the reporting and submission timeline for reporting CQMs via attestation, or the reporting and submission timelines of the meaningful use objectives. Some of these commenters requested that the proposal to require quarterly submission of CQMs for Medicare EHR Incentive Program and Hospital IQR Program to align the reporting and submission timelines for CQMs that are reported by attestation via the Registration and Attestation System, or for CQMs that are reported electronically for the Medicare EHR Incentive Program. A few commenters noted that the proposal did not address the reporting and submission timeline for reporting CQMs via attestation, or the reporting and submission timelines of the meaningful use objectives. Some of these commenters requested that the proposal to require quarterly submission of CQMs for Medicare EHR Incentive Program and Hospital IQR Program to align the reporting and submission timelines for CQMs that are reported by attestation via the Registration and Attestation System, or for CQMs that are reported electronically for the Medicare EHR Incentive Program.
changes in attestation requirements. Commenters also expressed concerns over whether EHRs would be ready for quarterly reporting by the first quarter of 2015, and suggested that CMS consider a pilot program for quarterly reporting instead of requiring it for 2015.

Response: We refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to quarterly reporting. We appreciate and understand the commenters’ concerns regarding quarterly reporting, and understand the feedback we have received from stakeholders concerning delays in certification of EHR technology. We additionally acknowledge that our requirement to report the most recent version of the CQMs as finalized below poses a challenge to eligible hospitals and CAHs in implementing quarterly reporting as EHR vendors can be certified to 2014 CEHRT without updating to the most recent version of CQMs. We recognize that at this time, we do not plan to offer quarterly reporting on a pilot basis in 2015.

Based on commenters’ concerns, and the additional challenges posed by requiring the most recent version of the CQMs for 2015 reporting, we have decided not to finalize our proposal to require quarterly submission of electronically reported CQMs for the Medicare EHR Incentive Program in 2015, and instead maintain in 2015 our policy of one annual submission period to align with the submission period for CQMs reported electronically under the Hospital IQR Program. This annual submission period begins on January 2 and ends on November 30 (for example, for the reporting periods in 2015, the submission period is January 2, 2015 through November 30, 2015).

In addition, and to align with the Hospital IQR Program in 2015, we are not finalizing our proposal to require three quarters of CQM data for calendar year 2015. Instead, for CQM data submitted electronically, we will require one calendar quarter of data for 2015 from either Q1 (January 1, 2015–March 31, 2015), Q2 (April 1, 2015–June 30, 2015), or Q3 (July 1, 2015–September 30, 2015). As noted above, at this time, we are not finalizing any proposals related to our reporting and submission requirements for 2016. We refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to quarterly reporting.

We also note that this policy only applies for eligible hospitals and CAHs submitting CQMs electronically for 2015. Therefore, as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905), hospitals demonstrating meaningful use for the first time in 2015 are still required to report CQMs by attestation for a continuous 90-day period in FY 2015, or to report CQMs electronically, by July 1 of the given year to avoid the Medicare penalty in the subsequent year. Medicaid-only providers will continue to report according to State requirements. In addition, as stated above, this policy does not change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System.

In summary, after consideration of the public comments we received, we are finalizing our proposal, with the modifications described above, to align the reporting and submission timelines of the Medicare EHR Incentive Program with those of the Hospital IQR Program on the calendar year for CQMs that are reported electronically in 2015.

We are not finalizing our proposal to require quarterly submission of CQM data for 2015; instead, we will maintain one annual submission period. We are also not finalizing our proposal to require three calendar quarters of CQM data for 2015, but instead, for data submitted electronically, we will require one calendar quarter of data from Q1, Q2, or Q3 of 2015. We are not finalizing our proposals for 2016 in this final rule, and will address the policy for 2016 in future rule making.

3. Quality Reporting Data Architecture Category III (QRDA–III) Option in 2015

In the EHR Incentive Program Stage 2 final rule (77 FR 54068), we finalized two options for eligible hospitals and CAHs to electronically submit CQMs beginning in FY 2014 under the Medicare EHR Incentive Program. Option 1 was to electronically submit aggregate-level CQM data using QRDA–III. Option 2 was to electronically submit data using a method similar to the 2012 and 2013 EHR Incentive Program electronic reporting pilot for EHs and CAHs, which used QRDA–I (patient-level data). We also stated in that final rule that, consistent with section 1886(n)(3)(B)(ii) of the Act, in the event the Secretary does not have the capacity to receive CQM data electronically, eligible hospitals and CAHs that are beyond their first year of meaningful use may continue to report aggregate CQM results through attestation.

We noted in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50904 through 50905) that we had determined that the electronic submission of aggregate-level data using QRDA–III would not be feasible in 2014 for eligible hospitals and CAHs under the Medicare EHR Incentive Program. Therefore, for the 2014 reporting period under the Medicare EHR Incentive Program, eligible hospitals and CAHs would have the option to continue to report aggregate CQM results through attestation. We stated that we would reassess this policy for the 2015 and future reporting periods.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28279 through 28280), we stated that we have determined that the electronic submission of aggregate-level data using QRDA–III will not be feasible in 2015 for eligible hospitals and CAHs under the Medicare EHR Incentive Program. Therefore, for the 2015 reporting period under the Medicare EHR Incentive Program, eligible hospitals and CAHs would have the option to continue to report aggregate CQM results through attestation. We noted that submissions of aggregate CQM data via attestation would not satisfy the reporting requirements for the Hospital IQR Program, and consistent with our proposal above regarding alignment of these programs, attested CQM data would need to be submitted for one full fiscal year in 2015 via the Registration and Attestation System, and would not require quarterly submissions. Hospitals in their first year of demonstrating meaningful use in 2015 would still be required to report CQMs by attestation for a continuous 90-day period in FY 2015, or report CQMs electronically, by July 1, 2015 to avoid the Medicare penalty in FY 2016 as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905). We also noted that this policy does not apply to the Medicaid EHR Incentive Program.

In order to remain aligned with the Hospital IQR Program, and because over 66 percent of hospitals that participate in the Hospital IQR Program are already meaningful users, we strongly recommended that hospitals that are eligible to participate in both programs electronically submit up to 16 electronic clinical quality measures of the 28 inpatient measures identified by the Hospital IQR Program. We also noted that keeping the two programs aligned will ultimately reduce reporting burden for
hospitals. We note again that reporting via attestation would not count towards the reporting requirements for the Hospital IQR Program.

Comment: Several commenters expressed views related to CMS’ proposal not to accept aggregate-level data using QRDA–III for reporting in 2015. Most commenters were disappointed to learn that it was not feasible for CMS’ systems to accept QRDA–III files in 2015 and urged CMS to continue to improve systems such that we would be able to accept QRDA–III data in the future. Some commenters requested further discussion of CMS’ plan to accept QRDA–III data in the future.

Response: We understand the concerns raised by commenters, and we expect to continue to review and improve our systems for future years to be able to accept aggregate level QRDA–III files. We note that our plans regarding the acceptance of QRDA–III files will be addressed in future rule making.

Comment: A few commenters suggested that CMS and ONC remove the requirement for EHR technology designed for the inpatient setting to be certified to produce QRDA–II formatted files if CMS would not be able to receive QRDA–III data in the future in order to prevent unnecessary work related to the development of these files.

Response: We appreciate the commenters’ concerns and suggestion. As we continue to review and improve our systems, we will continue to evaluate whether QRDA–III is a feasible option for future years and whether changes to existing policies would be appropriate.

Comment: A few commenters requested additional information about the storage and maintenance of QRDA–I files.

Response: We note that the storage and maintenance of QRDA–I files is outside the scope of this final rule.

After consideration of the public comments we received, and for the reasons set forth above, we are finalizing the policy as proposed. For the Medicare EHR Incentive Program, eligible hospitals and CAHs may report their CQMs electronically using QRDA–I (patient-level data) or via attestation (aggregate-level data). We note again that reporting via attestation would not count towards the reporting requirements for the Hospital IQR Program.

4. Electronically Specified Clinical Quality Measures (CQMs) Reporting for 2015

In the EHR Incentive Program Stage 2 final rule, we finalized the CQMs that eligible hospitals and CAHs would be required to report for purposes of meeting the CQM component of meaningful use under the EHR Incentive Program starting in 2014 (77 FR 54083 through 54087 Table 10). These CQMs are updated routinely to account for changes, including but not limited to changes in billing and diagnosis codes and changes in medical practices. The requirements specified in the EHR Incentive Program Stage 2 final rule allow for the reporting of different versions of the CQMs. For 2015, it is not technically feasible for CMS to accept data that is electronically reported according to the specifications of the older versions of the CQMs, including versions that may be allowed for reporting under the EHR Incentive Program. We stated in the EHR Incentive Program Stage 2 final rule that, consistent with section 1886(n)(3)(B)(ii) of the Act, in the event that the Secretary does not have the capacity to receive CQM data electronically, eligible hospitals and CAHs may continue to report aggregate CQM results through attestation (77 FR 54088). In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280) we proposed that eligible hospitals and CAHs that seek to report CQMs electronically under the Medicare EHR Incentive Program must use the most recent version of the electronic specifications for the CQMs and have CEHRT that is tested and certified to the most recent version of the electronic specifications for the CQMs.

Eligible hospitals and CAHs that do not wish to report CQMs electronically using the most recent version of the electronic specifications (for example, if their CEHRT has not been certified for that particular version) would be allowed to report CQM data by attestation for the Medicare EHR Incentive Program.

We invited public comment on these proposals. We have addressed several of the public comments received in this section of this final rule, and we also refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to CQM versions.

Comment: Commenters expressed concern and requested clarification regarding the timeframe between the posting of the specifications and the start of the reporting period.

Response: As we discussed above, and in section IX.D.2. of the preamble of this final rule, we are not finalizing our proposal to require quarterly submission of electronically reported CQMs for 2015. For electronic reporting of CQM data for 2015, we will require one calendar quarter of data from Q1, Q2 or Q3 of 2015 submitted during the period January 2, 2015–November 30, 2015. We believe this revised policy will allow additional time for eligible hospitals and CAHs to implement the updates required to submit the most recent version of the CQMs in 2015.

Comment: One commenter suggested that CMS accept multiple versions of CQMs during the reporting year to account for the period of transition between CQM versions.

Response: We appreciate the commenter’s suggestion, but unfortunately, as noted above, for 2015, it is not technically feasible for us to accept data that is electronically reported according to the specifications of the older versions of the CQMs, including versions that may be allowed for reporting under the EHR Incentive Program. We note that eligible hospitals and CAHs that do not wish to report CQMs electronically using the most recent version of the electronic specifications would be allowed to
report CQM data by attestation for the Medicare EHR Incentive Program.

Comment: One commenter supported the proposal to require that eligible hospitals and CAHs ensure that their CEHRT products are tested and certified to the most recent version of the electronic specifications for the CQMs, and many others opposed the recertification requirement siting the additional burden and cost recertification would impose.

Response: We have received feedback from stakeholders regarding the difficulty and expense of having to test and recertify CEHRT products to the most recent version of the electronic specifications for the CQMs. While we still believe eligible hospitals and CAHs should test and certify their products to the most recent version of the electronic specifications for the CQMs when feasible, we understand the burdens associated with this requirement. Therefore, to avoid this added burden, we are not finalizing our proposal to require all CEHRT products to be certified to the most recent version of the electronic specifications for the CQMs. Please note that, although we are not requiring recertification, eligible hospitals and CAHs must still report the most recent version of the electronic specifications for the CQMs.

After consideration of the public comments we received, and for the reasons set forth above, we are finalizing the policy that eligible hospitals and CAHs that seek to report CQMs electronically under the Medicare EHR Incentive Program must use the most recent version of the electronic specifications for the CQMs, however, we will not require eligible hospitals and CAHs to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the CQMs. Therefore, to avoid this added burden, we are not finalizing our proposal to require all CEHRT products to be certified to the most recent version of the electronic specifications for the CQMs. Please note that, although we are not requiring recertification, eligible hospitals and CAHs must still report the most recent version of the electronic specifications for the CQMs.

5. Clarification Regarding Reporting Zero Denominators

As we stated in the EHR Incentive Program Stage 2 final rule (77 FR 54079) we expect eligible hospitals and CAHs to adopt EHR technology that includes CQMs relevant to each eligible hospital’s or CAH’s patient mix. We understand, however, that there are situations in which an eligible hospital or CAH does not have data to report on a particular CQM, and its EHR is not certified to additional CQMs that can be used to replace that CQM with another for which it has data. For example, a health system with multiple eligible hospitals may have an EHR certified for 16 CQMs, which is the minimum number of required CQMs for reporting, but not all of the eligible hospitals or CAHs in the health system may have cases to report on those particular 16 CQMs. We have received questions on how eligible hospitals and CAHs should meet their reporting requirements in this situation; therefore, in the FY 2015 IPPS/LTCPPS proposed rule (79 FR 28280) we clarified our policy as set forth below regarding the reporting of a zero denominator for the purposes of the Medicare EHR Incentive Program and the Hospital IQR Program.

If the eligible hospital’s or CAH’s EHR is certified to a CQM, but the eligible hospital or CAH does not have patients that meet the denominator criteria of that CQM, the eligible hospital or CAH can submit a zero in the denominator for that CQM. Submission of a zero in the denominator for a CQM counts as a successful submission for that CQM for both the Medicare EHR Incentive Program and the Hospital IQR Program. For example, if the eligible hospital or CAH within the previously mentioned health system does not provide maternity services, but one of the 16 CQMs the health system’s EHR is certified to is a maternity measure, that eligible hospital’s or CAH’s EHR may render a zero in the denominator for that CQM. The eligible hospital or CAH would therefore report a zero denominator for that maternity care CQM, and this would count toward the 16 required CQMs for the Medicare EHR Incentive Program and the Hospital IQR Program. Eligible hospitals or CAHs within that health system for which that maternity CQM does apply would provide data on that measure.

Comment: Commenters supported and appreciated the clarification regarding zero denominators. Some commenters requested clarification as to whether the above stated zero denominator policy would be effective in CY 2015 or upon publication of this final rule.

Response: The clarification set forth in the FY 2015 IPPS/LTCPPS proposed rule (79 FR 28280) and stated above represents our current policy. The additional information and examples provided in the proposed rule were intended for clarification only and do not represent a change to our existing policy.

Comment: One commenter requested clarification as to whether this policy extends to issues resulting from the maintenance of value sets specifically related to medications codified in RxNorm required by the CQM specifications. The commenter stated that these issues often result in a zero denominator being produced by the Medicare EHR, and went on to suggest that these issues may be resolved by modifying CQM specifications to be more in line with how medications are evaluated in the Hospital IQR Program chart-abstracted measures.

Response: While we cannot explore all the possible explanations and reasons why an EHR would produce a zero denominator in this final rule, we hope that the above clarification regarding zero denominators will provide guidance in these instances.

6. Case Threshold Exemption Policy; Clarification for 2014 and Change for 2015

In the EHR Incentive Program—Stage 2 final rule (77 FR 54080), we finalized the policy that eligible hospitals and CAHs that have 5 or fewer discharges per quarter in the same quarter as their reporting period in FY 2014, or 20 or fewer discharges per full FY reporting period beginning in FY 2015, for which data are being electronically submitted (Medicare and non-Medicare combined) as defined by the clinical quality measure’s denominator population are exempted from reporting the CQM. To be eligible for the exemption, eligible hospitals and CAHs must submit their aggregate population and sample size counts for Medicare and non-Medicare discharges for the CQM for the reporting period.

In the Health Information Technology: Revisions to the 2014 Edition Electronic Health Record Certification Criteria; Medicare and Medicaid Programs; Revisions to the Electronic Health Record Incentive Program interim final rule, we revised the case threshold exemption policy to make it applicable for eligible hospitals and CAHs in all stages of meaningful use beginning with FY 2013, including those that are demonstrating meaningful use for the first time and submitting CQMs by attestation (77 FR 72988 through 72989). Eligible hospitals and CAHs with 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period) as defined by the CQM’s denominator population would be exempted from reporting on that CQM.

We stated in the interim final rule (77 FR 72989) that beginning in FY 2014, the reporting requirement is to report 16 CQMs covering at least 3 domains from a list of 29 CQMs. We stated further that in order to be exempted from reporting fewer than 16 CQMs, the eligible hospital or CAH must use the CQM specification to qualify for the case threshold exemption for more than 13 of the 29 CQMs. The
eligible hospital or CAH does not meet the criteria for a case threshold exemption for 13 or more CQMs, the eligible hospital or CAH would be able to report at least 16 CQMs. Likewise, we stated that if the CQMs for which the eligible hospital or CAH can meet the case threshold of discharges do not cover at least 3 domains, the eligible hospital or CAH would be exempt from the requirement to cover the remaining domains. For example, if the eligible hospital or CAH does not meet the case threshold of discharges for 13 clinical quality measures, and thus could report 16 clinical quality measures, but the 16 clinical quality measures cover only 2 of the 3 domains, the eligible hospital or CAH would be exempt from covering the third domain.

For the reporting periods in 2014, our policy requires that an eligible hospital or CAH that claims a case threshold exemption for one CQM must choose another CQM on which to submit data, or continue to invoke the case threshold exemption until it exceeds 13 case thresholds of discharges and may therefore report fewer than the 16 required CQMs. This policy assumes that the eligible hospital or CAH has an EHR that is certified to more than the minimum of 16 CQMs, and the eligible hospital or CAH has other CQMs in its EHR to choose from for reporting. We realize, however, that there could be many EHRs that are certified to only the minimum of 16 CQMs required by ONC’s regulations at 45 CFR 170.102 (the definition of “Base EHR’’), and for eligible hospitals and CAHs using those EHRs, this policy may result in the eligible hospital or CAH needing to submit data on a CQM for which the EHR is not certified. It was not our intent to have eligible hospitals or CAHs report on measures for which their EHRs are not certified.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280 through 28281), beginning with the reporting periods in 2015, we proposed to change the case threshold exemption policy so that if an eligible hospital or CAH qualifies for an exemption from reporting on a particular CQM, the exemption would count toward the 16 required CQMs. For example, if the eligible hospital’s or CAH’s EHR is certified to report 16 CQMs, and for one of those CQMs the eligible hospital or CAH has 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period) as defined by the CQM’s denominator population, the eligible hospital or CAH would report data for the 15 CQMs for which the case threshold exemption does not apply, and invoke a case threshold exemption for the one CQM for which the exemption does apply for a total of 16 CQMs.

We expect eligible hospitals and CAHs to adopt EHR technology that includes CQMs relevant to the eligible hospital’s or CAH’s case mix, though we understand that in some cases, the eligible hospital or CAH may not meet the case threshold of discharges for a particular CQM. We believe this proposed policy better reflects our intent for eligible hospitals and CAHs to report on only those measures for which their EHRs are certified while meeting the reporting requirements for the Medicare EHR Incentive Program and Hospital IQR Program.

We invited public comment on this proposal.

Comment: Several comments supported the proposed change to CMS’ case threshold exemption policy. Commenters felt that this change in policy acknowledged that an eligible hospital or CAH should receive credit for meeting the CQM even though the eligible hospital or CAH may not meet the case threshold of discharges for that particular CQM.

Response: We appreciate the comments in support of our proposal. After consideration of the public comments we received, we are finalizing the policy as proposed. We note that for CQM data reported by atestation, this policy applies to eligible hospitals or CAHs that have 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period), as defined by the CQM’s denominator population. For CQM data submitted electronically in 2015, this policy applies to eligible hospitals or CAHs that have 5 or fewer discharges during their chosen reporting period of one calendar quarter, as defined by the CQM’s denominator population. We note that because there is no option for a full year reporting period for data submitted electronically in 2015, the exemption based on 20 or fewer discharges for a full year EHR reporting period would not apply.

X. Revision of Regulations Governing Use and Release of Medicare Advantage Risk Adjustment Data

A. Background

Section 1853 of the Act requires the Secretary to make payments to Medicare Advantage (MA) organizations offering local and regional MA plans with respect to coverage of individuals enrolled under Medicare Part C. Section 1853(a)(1)(C) of the Act requires the Secretary to adjust such payments for such risk factors as age, disability status, gender, institutional status, and such other factors as the Secretary determines appropriate, including health status. To support these risk adjustments, section 1853(a)(3)(B) of the Act requires submission of data by MA organizations regarding the services provided to enrollees and other information the Secretary deems necessary but does not limit the Secretary’s use of such data or information. Section 1106 of the Act authorizes the Secretary to adopt regulations governing release of information gathered in the course of administering programs under the Act.

Implementing regulations at 42 CFR 422.310 set forth the requirements for the submission of risk adjustment data that CMS uses to risk-adjust payments. MA organizations must submit data, in accordance with CMS instructions, to characterize the context and purposes of items and services provided to their enrollees by a provider, supplier, physician, or other practitioner. Section 422.310(d)(1) provides that MA organizations submit risk adjustment data to CMS as specified by CMS. Risk adjustment data refers to data submitted in two formats: comprehensive data equivalent to Medicare fee-for-service claims data (often referred to as encounter data); and data in abbreviated formats (often referred to as RAPS data).

Section 422.310(f) currently specifies CMS’ uses of the risk adjustment data.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to revise the existing regulation at § 422.310(f) to broaden the specified uses and disclosures of risk adjustment data in order to strengthen program management and increase transparency in the MA program, and to specify the conditions for release of risk adjustment data to entities outside of CMS.

We received approximately 28 pieces of correspondence from MA organizations and trade associations, beneficiary advocacy organizations, hospital systems and trade associations, a government agency, a research firm, and individuals. Summaries of and responses to the public comments on the uses and bases for disclosure of risk adjustment data (§ 422.310(f)(1)) are presented in section X.B.1 of the preamble of this final rule. Summaries of and responses to the public comments on the conditions for release of risk adjustment data outside of CMS.
Audits from the data eligible for release. Additional data collected as part of
urged CMS to restrict the inclusion of charge information. These commenters
audits, which could include price and data that CMS proposed to release
that, without a specific exclusion, the § 422.310(a) through (d).
addition, we noted that paragraph (d)(1)
authorize any additional use or release for the proposed § 422.310(f) to
audits. We stated that we did not intend
paragraph (e) for the purpose of risk adjustment data submitted by MA organizations. In the proposed
rule, we clarified that CMS' uses of these data may include disclosure to CMS contractors or other agents that perform activities or analyses on CMS' behalf in connection with authorized use of the data. The existing specified purposes are: (1) To determine the risk adjustment factors used to adjust payments, as required under §§ 422.304(a) and (c); (2) to update risk adjustment models; (3) to calculate Medicare DSH percentages; (4) to conduct quality review and improvement activities; and (5) for Medicare coverage purposes. We proposed to restructure paragraph (f) to identify the purposes for which CMS may use and release risk adjustment data and to impose certain conditions on any release of that data.
We proposed to revise paragraph (f) to add four purposes, as paragraphs (f)(1)(vi) through (ix), for which CMS may use risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes permitted by other laws. We stated our expectation that, in general, comprehensive risk adjustment data submitted by MA organizations, which MA organizations began submitting to CMS effective CY 2012, will enable CMS to generate improved data analyses that could support Medicare program evaluations, demonstration designs, and CMS' effective and efficient operational management of the Medicare program. Risk adjustment data also could be useful to support public health initiatives by governmental entities and to advance health care-related research by universities and other research organizations. We stated that we also believe that risk adjustment data can support CMS' program integrity activities, such as MA Program and other Federal health care and related programs. This general term encompasses audits, investigations, efforts to combat waste, fraud, and abuse, and any other actions designed to ensure that the program operates within its authority including audits, evaluations, and investigations by the Office of the Inspector General (OIG) as well as CMS' own efforts. In addition, we stated that risk adjustment data may be useful in supporting Medicare administrative activities, such as the review of the validity of bid and medical loss ratio data submitted by MA organizations. Finally, we proposed to acknowledge that other laws may permit other uses of risk adjustment data and that this regulation is not intended to supersede such other laws.
Regarding the use of risk adjustment data outside of CMS, we proposed at § 422.310(f)(2) that other HHS agencies, other Federal executive branch agencies, States, and external entities would only be able to obtain from CMS and use risk adjustment data for one or more of the purposes listed in proposed paragraph (f)(1). An external entity may be an individual, group, or organization. In the proposed rule, we acknowledged our expectation that other HHS agencies and other Federal executive branch agencies may request these data for the same purposes CMS proposed to use the data and that we believe such use is appropriate. Under our proposal, other agencies that evaluate and analyze the Medicare program, perform health care-related research, support public health initiatives, perform activities in the administration of the Medicare program, or conduct activities to support program integrity in the Medicare program and other Federal health care and related programs would be able to access and use risk adjustment data for these purposes. States, while conducting program integrity activities for Medicaid programs or in the administration of Medicare-Medicaid demonstrations (for example, refer to the Web site at: http://www.cms.gov/Medicare-Medicaid-Coordination/Medicare-and-Medicaid-Coordination/Medicare-Medicaid-Coordination-Office/FinancialAlignmentInitiative/FinancialModelstoSupportStatesEffortsinCareCoordination.html), may access and use risk adjustment data under the proposal. We stated that we anticipate that nongovernmental external entities would generally only gain access to risk adjustment data under this proposal in connection with public health initiatives and health care-related research, as such external entities appear to have limited, if any, roles in the other purposes identified in our proposal.
Regarding the use of risk adjustment data for purposes permitted by other laws, we noted that, to the extent that a requestor has separate statutory authority for requiring CMS disclosure of data, our proposed provisions would not limit or supersede such authority. For example, some Congressional support agencies may compel release of data under separate statutory authority, such as 31 U.S.C. 716, 2 U.S.C. 166(d)(1) and 601(d), and section 1805 of the Act (42 U.S.C. 1395b–6), for the purposes of conducting Congressional oversight, monitoring, making recommendations, and analysis of the Medicare program. In addition, the OIG has separate statutory authority under section 1128I of the Act (42 U.S.C. 1320a–7k), coupled with section 6(a) of the Inspector General Act of 1978 (5 U.S.C. App. 3) authorizing the OIG to access data as necessary to perform its responsibilities. This regulation will not limit that authority.

Finally, in the proposed rule, we stated that we are seeking to balance protection of the Medicare program, public health research, and the proprietary interests of MA organizations with the need to effectively administer Federal health care programs and to encourage research into better ways to provide health care. We also noted a goal of the proposal to increase transparency in the administration of the Medicare program. We sought public comments on the proposed uses and release of data and how else to achieve the necessary balance. In particular, we solicited public comments on the extent to which a commercial purpose underlying a request for risk adjustment data should be a factor in evaluating whether the request is for one of the purposes that permit a disclosure under this regulation or if one of the purposes in paragraph (f)(1) of §422.310, for which CMS would disclose data under this section, should address commercial uses of the data. The topic of commercial purposes is discussed later in section X.B.2. of the preamble of this final rule as a condition of data release.

Comment: Several commenters supported CMS’ proposal for expanding the use and distribution of MA risk adjustment data to support and strengthen the Medicare program, as well as supporting public health initiatives and health care-related research. Commenters stated that risk adjustment data are valuable to researchers for analyzing health care trends, public health research initiatives, and improving management of the Medicare program. These commenters expressed support of CMS’ efforts to move toward greater transparency through the release of risk adjustment data. One commenter believed that greater data transparency would not only further public health research but also might serve to further educate consumer organizations, patient advocates, and ultimately beneficiaries about the Medicare program. Generally, commenters supporting the proposals in the proposed rule simultaneously recognized the importance of balancing these goals with the importance of protecting the confidentiality of beneficiary information, and one commenter agreed with CMS’ proposal to aggregate data on negotiated rates paid to providers.

Response: We appreciate the commenters’ support.

Comment: A number of commenters generally addressed the proposed uses of risk adjustment data, characterizing the listed purposes as too broad and asking CMS to more specifically and narrowly define them. One commenter stated that the purposes, as stated in the proposed rule, are so broad that it is necessary to justify release of these sensitive data for almost any research activity. Several commenters were concerned that having permitted uses of risk adjustment data for such broad-based purposes leaves a large gap in the protection of potentially proprietary information, especially given the concern about usage of these data by agencies with limited knowledge or understanding of the data and how to make accurate interpretations.

Response: Section 1853 of the Act does not limit the uses of risk adjustment data, and section 1106 of the Act authorizes the adoption of regulations governing how CMS will disclose data obtained in the course of CMS’ duties. We have reviewed the proposed purposes of risk adjustment data (which are for analytical purposes), and we do not believe that they are too broad. We reiterate that the list of permissible bases under this regulation for use and disclosure is exhaustive and that uses of the risk adjustment data that are outside of the scope of these nine categories will not be authorized. Accordingly, we see no compelling reason to further limit uses of this data by eliminating or narrowing any of the proposed purposes.

Comment: Several commenters expressed concern about CMS’ use of risk adjustment data, under the purpose stated under §422.310(f)(1)(ix), “for purposes permitted by other laws.” Commenters requested CMS to further clarify this purpose in regulation, for example, to distinguish Federal laws from State laws and to specify that this provision only applies to health care laws. Another commenter asked how CMS intends to evaluate the other laws that permit use or release of these data; for example, would CMS allow risk adjustment data to be used to evaluate risk adjustments for insurance exchanges created under the Affordable Care Act? and, if so, the commenter expressed concern that the data would not provide a valid or
accurate comparison, given the unique patient population.

Response: As we noted in the preamble of the proposed rule, we believe it is important to acknowledge that this regulation is not intended to supersede other laws that permit other uses of risk adjustment data. For example, this regulation cannot override separate statutory authorities that require CMS disclosure of data to other Federal agencies. We refer readers, for example, to 31 U.S.C. 716; 2 U.S.C. 166(d)(1) and 66(d); and section 1805 of the Act (42 U.S.C. 1395b–6).

Regarding the commenters’ request that we further specify in regulation text the types of laws to which paragraph (f)(1)(ix) applies (such as Federal laws versus State laws), we do not believe that detailed specification of laws is necessary because we believe it is clear that only laws that apply to CMS or to data held by CMS are within the scope of the provision. However, in response to these comments, we are finalizing the regulation at § 422.310(f)(1)(ix) to state “for purposes authorized by other applicable laws” to emphasize that the provisions in other laws must be applicable to CMS and to MA risk adjustment data.

Finally, we are not sure what the commenter means by evaluating other laws other than as a request for clarification that this provision encompasses laws that are applicable to CMS or to data held by CMS. If the question is about how we would determine the appropriateness of a research topic and study design that involves both Medicare and another program enacted under other laws, we do not believe we can comment on the appropriateness of specific designs in this preamble. The approval of any research study requesting use of MA risk adjustment data would be handled through the existing process CMS uses for data sharing, as described elsewhere in this preamble in the discussion of paragraph (f)(2)(ii) of § 422.310.

Comment: One commenter asked CMS to expressly limit, in regulatory text, the bases upon which nongovernmental entities receive the data to one purpose: Support of public health initiatives and other health care-related research. Furthermore, one commenter stated that neither States nor external entities should receive the data to conduct quality review and improvement activities, for activities to support the administration of the Medicare program, or for activities conducted to support program integrity (§ 422.310(f)(1)(iv), (f)(1)(vii), or (f)(1)(viii)) because these are purposes exclusive to the Federal Medicare program. Another commenter stated that it is unclear what uses States would have for these data, given the Federal administration of the MA program and the difference in populations enrolled in MA plans and commercial health insurance coverage, for which States may be administering risk adjustment or other programs, or Medicaid coverage, for which a State Medicaid agency would administer benefits, concluding that States should not receive the MA risk adjustment data.

Response: We have reviewed our proposed purposes and believe that there may be cases in which researchers, whether external entities or other governmental agencies, might have well-designed research projects that meet CMS’ stringent requirements, under our longstanding data sharing procedures, thus warranting use of the data for an approved project. For example, other Federal governmental agencies may want to use the data to conduct research on new developments in risk adjustment models or an external entity may want to propose research on the design of quality measures that could apply to beneficiaries in both the MA and FFS programs. Both of these examples illustrate the point that greater data transparency could improve administration of the Medicare program and improve public health. As noted in the preamble of the proposed rule, we also believe that risk adjustment data can support program integrity activities in the Medicare program and in other Federal health care and related programs funded in whole or in part by Federal funds.

Furthermore, we believe that our approach to determining whether to disclose risk adjustment data, which incorporates the Medicare Part A/B and Part D minimum necessary data policy, with additional restrictions to protect beneficiary privacy and commercially sensitive information of MA organizations, strikes an appropriate balance between the significant benefits of furthering knowledge through health care research and concerns regarding the release of risk adjustment data. Finally, we believe this process has sufficient protections to ensure compliance with the applicable laws and guard against the potential misuse of data. External entities requesting access to risk adjustment data will have to enter into a Data Use Agreement with us that includes provisions protecting the data from improper release.

Comment: One commenter asked CMS to further define what CMS means by external entities in paragraphs (f)(1) and (f)(2) of § 422.310.

Response: An external entity may be an individual, group, or organization that is not a Federal executive branch agency or a State.

After consideration of the public comments we received, we are finalizing, as proposed, the four additional permitted uses of risk adjustment data at § 422.310(f)(1)(vi) through (f)(1)(ix), with the exception that we are changing the language for the purpose under paragraph (f)(1)(ix) to read: “For purposes authorized by other applicable laws.”

2. Conditions for CMS Release of Data

The existing regulations at § 422.310 do not specify conditions for release by CMS of risk adjustment data that are submitted by MA organizations to CMS. In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to add a paragraph (2) to § 422.310(f) to address CMS’ release of such data to non-CMS entities. First, as discussed above in connection with proposed paragraph (f)(1), our proposal was limited to the risk adjustment data described in § 422.310(a) through (d) and did not include the medical records and other data collected separately under paragraph (e) for the purpose of risk adjustment data validation (RADV) audits. We stated that we did not intend for the proposed revision to § 422.310(f) to authorize any additional use or release of the data described in paragraph (e).

Second, we proposed that CMS would release only the minimum data that CMS determines is necessary to fulfill the analytical or operational goal for a particular project. In other words, our proposal provided that CMS could determine that the appropriate data release for an approved research project is a subset of encounter data records requested to conduct the proposed inquiry (instead of all encounter data in CMS’ systems for all years and provider types) or is a subset of the abbreviated data requested.

Third, we proposed that CMS may release data under this authority to other HHS agencies, other Federal executive branch agencies, States, and external entities, as identified in paragraph (f)(1) (discussed above) and subject to a number of
additional limitations: (i) Applicable Federal laws; (ii) CMS data sharing procedures; (iii) protection of beneficiary identifier elements and beneficiary confidentiality, including: (A) a prohibition against public disclosure of beneficiary identifying information; (B) release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, Congressional support agencies, and States only when such information is needed to accomplish the purpose(s) of the disclosure; and (C) release of beneficiary identifying information to external entities only to the extent needed to link datasets; and (iv) the aggregation of payment data to protect commercially sensitive data. These limitations were included at proposed paragraphs (f)(2)(i) through (f)(2)(iv), respectively, of § 422.310. We solicited public comment on other conditions or limitations on the release of this data that will help maintain a balance between protecting confidential and proprietary information with the need to effectively administer Federal health care programs and to encourage research into better ways to provide health care. We also solicited public comments on the extent to which a commercial purpose underlying a request for risk adjustment data should be a factor in evaluating whether the request is for one of the purposes that permit a disclosure under this regulation or if one of the purposes in paragraph (f)(1) of § 422.310, for which CMS would disclose data under this section, should address commercial uses of the data.

Under the provisions at proposed § 422.310(f)(2)(iv), we would aggregate payment data to protect commercially sensitive information. We stated our belief that release of payment data at the level of the encounter record might reveal proprietary negotiated payment rates between MA plans and providers. Given the commercially sensitive nature of this information, we did not propose to release payment data at the level of the encounter record without taking steps to protect the commercially sensitive information. In the interest of providing as much transparency as possible, while at the same time protecting proprietary information related to the payments made by MA organizations to health care providers, we proposed to authorize release of aggregate payment information. For example, we could aggregate the payment data by service category, by plan, by contract, or across contracts. We sought public comments on these or other approaches to aggregating payment data for release and whether the specified options are sufficiently aggregated to protect commercially sensitive information. In addition, we sought public comment on our conclusion that releasing payment rates at the level of the encounter data record would reveal proprietary negotiated payment rates. Specifically, we requested public comment on what strategies might be used under which payment data could be released while protecting commercially sensitive information.

Comment: A number of commenters argued that no risk adjustment data should be released to protect the proprietary nature of encounter data, including data on payments, diagnoses, National Provider Identifiers (NPIs), among other data fields. A few commenters used “payment data” when referring to terms such as “service categories” and “diagnoses.”

Response: In reviewing the comments, we observed that several commenters distinguished payment data from other elements of encounter data, while other commenters did not make this distinction and instead used the term “risk adjustment data” or “encounter data” when arguing that all data should be aggregated. Therefore, our response here is intended make clearer the distinction between payment data and other data elements.

In the proposed rule, we stated at § 422.310(f)(2)(iii) that beneficiary identifier elements would not be disclosed to protect beneficiary confidentiality, and we stated at § 422.310(f)(2)(iv) that payment data would be aggregated as necessary to protect commercially sensitive data. Our proposed rule thus implied that data outside of these two protected categories would be released without redaction or aggregation. In light of some comments we received, we are concerned that the regulation text should be more detailed in describing the risk adjustment data that does not fall into the two protected categories at § 422.310 (f)(2)(iii) and (f)(2)(iv). Therefore, we are finalizing this rule with two changes to the regulation text. First, to clarify that the term “payment data” means the dollar amounts reported on an associated encounter data record, we are finalizing § 422.310(f)(2)(iv) to use the more specific phrase “dollar amounts reported for the associated encounter” instead of “payment data.” Therefore, in this final rule, we have revised § 422.310(f)(2)(iv) to specify risk adjustment data subject to the aggregation of dollar amounts reported for the encounter to protect commercially sensitive data. (We note that dollar amounts are only reported in encounter data records and not in the other type of risk adjustment data referred to as abbreviated (RAPS) data.)

This rule does not address the release of data that relates to how much CMS pays MA organizations. In the final rule, CMS–4144–F, published in the Federal Register on April 15, 2011 (76 FR 21432), we adopted regulations on that topic.

Second, we are clarifying that risk adjustment data elements that do not fall into either of the two protected categories (beneficiary identifiers and dollar amounts) are subject to release without redaction or aggregation, respectively. Specifically, we are adding paragraph (f)(2)(v) to clarify that risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv), respectively. (We note that we use the term “redaction” to include deletion, encryption, and obscuring or changing the form of the data for legal or security purposes.) We discuss in more detail below our analysis of this new language.

Comment: A number of commenters responded to the request for public comments on the release of payment data and possible ways they could be aggregated in order to protect commercially sensitive information. Many commenters thanked CMS for the opportunity to comment on this issue and expressed gratitude for CMS’ concern to protect proprietary information on prices negotiated between MA organizations and health care providers.

Response: We appreciate the commenters’ support.

Comment: A number of commenters addressed the aggregation of risk adjustment payment data for release under this rule. Several commenters asked that CMS only release payment data that have been aggregated to the national or regional level. Some commenters were concerned that the release of such data, even in an aggregated form, has the potential to provide detailed insight about aspects of MA plan experience under the MA program (for example, utilization and cost experience) that are fundamental to bidding and benefit design decisions and, as a result, release of these data would undermine the integrity of the bidding process and the competitive structure of the MA marketplace, both in terms of plan competition for enrollees and competitive negotiations with providers over payment rates. One commentor stated that public transparency of negotiated rates could...
actually inflate prices by discouraging private negotiations that can result in lower prices for some buyers. One commenter who requested regional aggregation expressed concern that if CMS discloses payment data at a lower level of aggregation, it may be easy for competitors to identify sensitive business information on smaller plans and on plans serving targeted populations or providing specific services, such as SNP plans, which would undermine their market position. Another commenter requested that CMS not release payment data at all (at the encounter level or aggregated). Several other commenters asked that aggregated payment data only be released to government agencies and not to external entities. One commenter made the general request that CMS aggregate the data in a manner and at a level that protect the confidentiality of information and that take into account that an organization in some instances may be the principal MA plan in a particular geographic region. Some commenters argued that using encounter data fields such as contract, plan, and provider identifiers as categories by which to aggregate payment data could still lead to exposure of sensitive business strategies (including details about exclusive contracts, pricing, incentive programs, and other information that would disadvantage identifiable plans).

A number of commenters provided suggestions for approaches to aggregation of payment data. One commenter suggested releasing national per member per month averages, which would protect negotiated rates while still allowing comparison with other areas of Medicare spending. Another commenter suggested aggregating risk adjustment payment data at a county level in areas where there are three or more MA plans, but in areas with two or less MA plans aggregation should be done across counties. In addition, this commenter suggested that CMS identify when area-specific aggregation approaches are needed, such as where a single MA plan dominates a market and could be identifiable even where there are multiple plans within one or across several counties. Several commenters suggested releasing only aggregated data at either service level categories in the MA bid or at the level of HCCs in the Part C risk adjustment model. Finally, one commenter suggested that CMS make available average pricing per relative value unit (RVU) for given geography of sensitive demographic categories, which could provide helpful information regarding payment levels without exposing commercially sensitive negotiated rates.

Response: We appreciate all the responses to our request for comment on ways to aggregate risk adjustment payment data, and we will take these ideas and concerns into consideration when determining the appropriate level of aggregation of the dollar amounts associated with each encounter. We understand the commenters’ concerns about the propriety nature of the payment data and believe that this rule, as finalized, provides the flexibility to protect commercially sensitive data as necessary. It is important to note that, in some instances, the payment data may not require aggregation to protect commercial sensitivity; for example, a request could be made for data that are over 15 years old that is not relevant to current payment amounts. In this case, we would need to assess the unique circumstance of the request and determine if the data were or were not commercially sensitive, and we may decide after consideration to release the data at the encounter level because the need to protect commercially sensitive data is not implicated.

We note that we do not agree that only payment data aggregated at the national level should ever be disclosed for any approved research project because such a narrow approach would eliminate too many research questions appropriate to the permitted uses of the data under § 422.310(f)(1) and would not account for situations where less than a national level of aggregation is sufficient to protect the commercial interests of the applicable MA organization(s). In addition, we are not convinced that the release of aggregated payment data would have the negative impact on competition and the integrity of the MA bidding process that is described by a number of commenters. CMS expects to aggregate the dollar amounts on encounter data records as necessary to prevent researchers from determining payment amounts to individual providers, and in this way would protect competition.

Response: We understand the commenters’ concerns that risk adjustment data may not provide a complete picture of the costs associated with care of MA plan enrollees due to the alternative payment arrangements. However, we believe that broader release of risk adjustment data to external entities can increase the positive contributions researchers make to the evaluation and function of the MA program and improve the efficiency of the program and the clinical care of its beneficiaries, which is in the interest of public health. Specifically, it is in the interest of the public health to share this information with entities outside of CMS, as the work of these entities will assist CMS in evaluating the MA program and assessing related policies to improve the clinical care of beneficiaries. In addition, broader release of the data also has the potential to assist in addressing public health issues of the population in general beyond just Medicare beneficiaries. Regarding the suggestion to provide...
approved requestors with information on the limitations of encounter data, we believe this is a good suggestion and will consider what disclaimers are appropriate to accomplish this.

Comment: A number of commenters also expressed concern about the proprietary nature of other data elements in the encounter record in addition to payment data, stating that releasing plan-specific and provider-specific data such as diagnoses, service categories, Current Procedural Terminology codes (CPTs), and NPIs has the potential to provide detailed insight about aspects of MA plan experience under the MA program that are fundamental to bidding and benefit design decisions and could undermine the competitive structure of the health care market in many areas. In contrast, one commenter agreed that proprietary payment data should be aggregated to protect proprietary information on negotiated prices, but further emphasized that all other encounter claims data should be widely available to commercial entities—including providers, medical societies, ERISA plans and insurers—for the purposes of improving the value of health care to the consumer (subject to privacy protections under HIPAA and other statutes).

Response: In the proposed rule, we only raised the issue of commercial sensitivity with regard to payment data. As noted in an earlier response, we are clarifying that the term “payment data” means the dollar amounts reported on an associated encounter data record, and that the encounter data elements that do not fall into either of the two protected categories of beneficiary identifiers and dollar amounts are subject to release without redaction or aggregation, respectively. We are not persuaded by the argument that data elements aside from beneficiary identifiers and dollar amounts require protection because they are relevant to competition that MA organizations face. We are mirroring the effort within CMS to increase transparency through broadened release of Parts A and B data. We routinely make Medicare FFS claim data available to interested parties for research, and these data include information on procedure codes and diagnosis codes. Furthermore, on April 9, 2014, CMS released detailed service use data on nearly 1 million physicians and health care providers. Thus, as clarified in § 422.310(f)(2)(v), CMS will release risk adjustment data—other than beneficiary identifier data described in § 422.310(f)(2)(iii) and dollar amounts reported for associated encounter described in § 422.310(f)(2)(iv)—without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv), respectively.

Comment: One commenter was concerned that encounter data from Medicare-Medicaid Plan (MMP) demonstrations would be used for analyses, such as OIG studies and validation of bids and medical loss ratios, and believed this would be a mistake because these are new plans and there remain many operational questions about submission of this encounter data, including coordinating with States and processing and submitting claims in a manner seamless to both the member and provider.

Response: Our policy on the use and release of risk adjustment data in this final rule will apply the same way to the Medicare risk adjustment data of MMP demonstrations as it does to the risk adjustment data of MA organizations. We appreciate the comment on the important distinctions in the encounter data collection process for MMP data compared to MA data, and we will consider the unique aspects of MMP data in their ultimate application.

Comment: Several commenters asked CMS to provide a definition of commercially sensitive.

Response: There is extensive case law under the Trade Secrets Act (18 U.S.C. 1905) and FOIA Exemption 4 (5 U.S.C. 552(b)(4)) that addresses the concept of commercially sensitive, and we do not believe this is an appropriate venue for summarizing the case law. We also discuss the relationship of this regulation to the Trade Secrets Act and FOIA below.

We add that two commenters appeared to blur the concepts of commercially sensitive and commercial purpose; therefore, we are clarifying here that these are unrelated concepts for the purpose of this rulemaking. Issues around releasing data for a commercial purpose pertain to CMS’ data sharing procedures and are discussed in a separate comment and response below.

Comment: Several commenters asserted that even risk adjustment data aggregated up to the level of contract or parent organization (for example, service category and diagnosis data) could be considered to meet the elements required for application of the exemption under FOIA Exemption 4 (5 U.S.C. 552(b)(4)). The commenters stated that risk adjustment data submitted by an MA organization are protected by 45 CFR 5.65(b)(1) because: (1) It is supplied by someone outside the government having a financial interest in the information; namely the MA organization providing the data; (2) it is “confidential commercial or financial information” and proprietary and confidential; and (3) disclosure of each MA organization’s service category and/or diagnosis data could result in competitive harm for the MA organization.

Response: In response to comments arguing that the Trade Secrets Act (18 U.S.C. 1905) or FOIA exemptions prohibit release of this information on the basis that the information is the confidential commercial information of the MA organization, we do not believe that the release of the risk adjustment data under our final rule will violate either the Trade Secrets Act or FOIA. With respect to the risk adjustment data described in paragraph § 422.310(f)(2)(iv), the regulation explicitly provides for aggregation at the level necessary to protect commercially sensitive data. Under this regulation, when CMS aggregates, as necessary, the dollar amounts associated with the risk adjustment data—whether at a regional, contract or other level—any detailed (encounter-level) data protected by the Trade Secrets Act or FOIA will be withheld from disclosure. With respect to the risk adjustment data described at § 422.310(f)(2)(v), we are not persuaded that data elements aside from beneficiary identifiers and dollar amounts require protection and, therefore, are adopting a regulation that directs disclosure of such information (assuming all other conditions in this rule are met to obtain such a release) without redaction or aggregation.

Section 1106(a) of the Act (42 U.S.C. 1320d(a)) provides authority to enact regulations that would enable the agency to release information filed with this agency. (See Parkridge Hospital, Inc. v. Califano, 625 F.2d 719, 724–25 (6th Cir. 1980).) We have engaged in notice-and-comment rulemaking to promulgate regulations to enable the disclosure of the data described at § 422.310(f)(2)(v). The Trade Secrets Act permits government officials to release otherwise confidential information when authorized by law. A substantive regulation issued following notice-and-comment rulemaking such as this one, provides the authorization of law required by the Trade Secrets Act. Because the Trade Secrets Act would allow disclosure, Exemption 4 (5 U.S.C. 552(b)(4)), which is as coextensive with the Trade Secrets Act, would also not preclude disclosure with respect to the information that would be released under this final rule. We recognize that this conclusion would not apply to the dollar amounts data described in paragraph § 422.310(f)(2)(iv).

Comment: Several commenters stated that releasing payment data may trigger
antitrust concerns within both the health plan and provider communities, and cited the August 1996 “Statements of Antitrust Enforcement Policy” (http://www.ftc.gov/sites/default/files/documents/reports/revised-federal-trade-commission-justice-department-policy-statements-health-care-antitrust/hlhhh3s.pdf), where the Federal Trade Commission and the Department of Justice laid out several conditions for an antitrust safety zone (pages 44 and 45) related to the collective release of negotiated provider payment rates, noting that there would be instances where negotiated rates possibly could be discerned, such as areas with a dominant private payer.

Response: We are not clear what the “collective release of negotiated provider payment rates” has to do with this rulemaking. We understand the term “collective” in this context to mean more than one actor releasing its own specific rates. When CMS approves a release of aggregated payment data under this rule, that release is performed by one actor and not a collective of some sort. Further, our proposed policy of aggregating payment data as necessary will protect the proprietary nature of the payment data. In cases where there is a dominant private payer in a certain geographic area, we will take this into account when determining the appropriate level of aggregation. We understand the Federal Trade Commission and the Department of Justice guidance to address when health care providers act in concert to share or release their payment terms and what circumstances those enforcement agencies believe would ameliorate any collusive intent in such actions. However, this rulemaking pertains to a single actor (CMS), not to a collective action; specifically, CMS may release risk adjustment data for approved research projects, and these are data that were submitted to CMS by MA organizations on the basis of requirements in statute and regulation regarding risk adjustment data collection in the MA program. The underlying negotiation of the payment terms, such as whether the health care providers collectively negotiated them and the respective negotiating position of the MA organizations and the parties, are not part of the information submitted to CMS or disclosed by CMS under § 422.310.

Comment: A few commenters stated that payment data should not be collected by CMS as part of encounter data and should not be used by CMS or released outside of CMS because such data are not relevant to risk adjustment.

Response: We believe that payment data are useful for all of the purposes set forth in this regulation, including, but not limited to, the purpose of risk-adjusting payments to MA organizations. Therefore, we are finalizing in this rule the release of aggregated payment data as necessary to protect commercially sensitive data, subject to all the conditions established in this rule.

Comment: A number of commenters raised issues about the timing for release of risk adjustment data under the rule. Some commenters supported release of risk adjustment data to improve transparency; one commenter stated that there is an urgent need for more reliable consumer comparison shopping tools due to extreme provider price variations in local healthcare markets, and Medicare data could be valuable for this purpose. A few commenters requested that CMS delay release of encounter data to any governmental agency outside of CMS and/or delay release to external entities. A number of other commenters presented requests for two different types of delay in release of encounter data: (1) A routine delay for all data releases; and (2) a delay applicable only to the first few years of encounter data collected by CMS. First, commenters requested that CMS implement a routine lag in release of encounter data. Some commenters argued that, before release of the data for any given year, CMS should ensure that the data are complete and accurate, for example by validating and identifying any limitations in the data. Other commenters suggested timeframes of between 4 and 6 years for such routine lags, arguing that CMS should allow an established number of years pass before release because utilization, pricing, and similar data elements remain sensitive for a number of years (and could be used for trending competitor’s patterns), and many MA organizations have multi-year contracts with their providers (5 or more years), making data even a few years old still commercially sensitive in a marketplace.

Second, a few commenters requested that CMS never release encounter data that was submitted in the initial years of required submission (in particular, that data for 2012 dates of service—the first year of submission—never be released). Alternatively, other commenters suggested that CMS lag release of data from the initial years of submission because: (1) Implementation of encounter data collection via CMS’ encounter data submission (EDS) has required frequent and ongoing systems development and modifications on the part of the agency and MA organizations since the initiative began in January 2012, which has resulted in challenges in submission and acceptance of encounter data; and (2) the ICD–10 code set transition likely will result in some instances in which encounter data are incomplete or inaccurate for the 2015 data year, as providers adjust to the coding differences.

Response: Regarding commenters’ requests that CMS implement both routine multi-year lags in release of encounter data and targeted delays in the release of encounter data from the initial years of submission, we believe that such delays in release to any agencies and entities described in this rule would defeat the goals of improving transparency in the Medicare program and allowing researchers to use data in a timely manner to improve the administration of and advance policy research on the Medicare program. Also, we refer readers to our response elsewhere in this preamble regarding the impact of such releases on MA bidding.

However, CMS recognizes that there are circumstances unique to the process for collecting risk adjustment data that should be addressed in the timing of releases of such data. CMS allows 13 months after the end of a risk adjustment data collection year for MA organizations to update the risk adjustment data submitted under § 422.310; this period provides MA organizations an opportunity to identify and correct errors in data they have submitted for that data collection year, and ensures that the risk adjustment data is complete and accurate. We do not plan to regularly release risk adjustment data for a data collection year prior to the completion of this period because of the possibility that the data may contain errors or be incomplete for the applicable year.

Therefore, to clarify our processes for the purposes of this rule, we have added paragraph (f)(3) to § 422.310, which states that risk adjustment data will not be available for release under paragraph (f) unless:

• The risk adjustment reconciliation for the applicable payment year has been completed;
• CMS determines that the data release is necessary under paragraph (f)(1)(vi) for emergency preparedness purposes before reconciliation; or
• CMS determines that extraordinary circumstances exist to release the data before reconciliation.

An example of an extraordinary circumstance would be a request by the Department of Justice for data for a qui tam case under the False Claims Act.
We believe these restrictions on the timing of data releases will address some of the commenters’ concerns.

Comment: A few commenters suggested that CMS not release encounter data until CMS uses it for risk-adjusted payment purposes in place of RAPS data. One commenter stated that no data should be released until MA organizations are provided with the MAO–004 encounter data reports because these reports will allow the MA organizations to validate that encounter data are complete for risk adjustment purposes.

Response: First, we do not agree with the commenters that CMS’ transition from the use of RAPS data to encounter data for risk-adjusted payment should be a prerequisite for releasing encounter data for the purposes under this final rule. The data are valuable for other purposes besides calibration of the risk adjustment model, as listed in paragraph (f)(1) of § 422.310, and the release of the data is important for transparency. Second, the MAO–004 report, also known as a filtering report, will contain detailed information on which diagnoses are eligible for risk adjustment purposes and will be part of the process that CMS will undertake for risk score calculation. The intent of this report is to assist MA organizations and other encounter data submitters to understand risk score calculation; it is not intended to support validation by MA organizations of the encounters that they have submitted to CMS. Therefore, we do not believe that these filtering reports are a prerequisite to releasing encounter data associated with any payment year.

Comment: A number of commenters responded to our request for public comment on releasing risk adjustment data for commercial purposes. Many commenters asked CMS not to release data to external entities for commercial purposes. Commenters also noted that CMS does not currently release Part A, Part B, or Part D data for commercial purposes, and argued that CMS should have a consistent policy for release of data for commercial purposes across all Medicare programs, including the Part C Medicare Advantage program; these commenters cited CMS’ discussion about such a consistent policy in a final rule, CMS–4159–F, published on May 23, 2014 (79 FR 29844).

In contrast, one commenter supported the use of risk adjustment data by commercial entities to conduct research when the research is focused on legislative, regulatory, or policy development, improving the Medicare program, including projects focused on patterns of care of MA enrollees. This commenter suggested that if CMS moves to define commercial purpose, it should do so narrowly so that, for example, firms requesting data releases under the rule for research on regulatory or policy issues for their clients would not have this type of work construed as commercial. Another commenter stated that encounter data should be widely available to commercial entities, including providers, medical societies, ERISA plans, and insurers, for purposes of improving the value of health care to the consumer. This commenter encouraged CMS to put providers and insurers on an equal footing with each other, with respect to sharing of public data on safety, quality, volume, and intensity of care. Finally, a number of commenters requested that CMS define the term “commercial purposes.”

Response: We appreciate all of the responses to our request for public comments on releasing risk adjustment data for commercial purposes. We recognize that some commenters would like risk adjustment data to be available for commercial purposes, while others are concerned about external entities having risk adjustment data releases approved for projects that have commercial purposes and/or for researchers employed by commercial entities. We consider the issue of whether or not a request for data has a commercial purpose to be an issue that should be addressed under CMS’ data sharing policies, which are referenced in § 422.310(f)(2)(ii) of this rule. Regarding “commercial purposes,” we refer commenters to page 30674 of the preamble of the final rule, CMS–4119–F, published on May 28, 2008 (73 FR 30664), where, for example, there is discussion of research whose primary purpose is to contribute to general knowledge in the public domain.

We agree with commenters that it is appropriate to have consistent policies for the release of data across the original Medicare (Parts A and B) program, the Part D prescription drug program, and the Part C Medicare Advantage program. Although we are not changing CMS’ existing policy against releasing data for commercial purposes at this time, we note that, in the event the policy regarding the release of Parts A, B, and D data for commercial purposes were to change, we also would revise our Part C risk adjustment data sharing policies to be consistent with that change. Therefore, if a request for the data under the current policy is for one of the purposes outlined in paragraph (f)(1)(i) through (iv) and also for a commercial purpose, we would consider the commercial purpose as a barrier to the release in the same way here as in the other Medicare programs.

Comment: A few commenters expressed concern about how CMS will evaluate requests for risk adjustment data release. One commenter asked CMS to keep in mind that broad disclosures of data could lead to creation of non-Federal databases, which could negatively affect the privacy and security of beneficiary-specific data. Another commenter cautioned that, in determining what is a minimum dataset necessary for a particular data request, CMS must not approve release of a subset of data or variables that omits critical data, resulting in an analysis with false assumptions about MA encounters. In addition, other commenters were particularly concerned about requests by external entities. One commenter stated that, in evaluating requests from commercial entities, CMS should consider relationships between the corporate and research arms of the commercial entity, and CMS should not assume that data released for research purposes will not be made available to related commercial entities unless specific prohibitions are put in place, or that published research findings will not be used for commercial purposes. Another commenter also expressed concern that external entities may use data released to them for a CMS-approved research project for purposes that go beyond the initial intent of the request.

Response: We will release only the minimum data necessary for a particular study design that CMS has determined meets a use (analytical purpose) finalized in this final rule and if the research project also complies with all other conditions established in this final rule. We believe that CMS’ longstanding data sharing procedures (a condition for data release referenced at § 422.310(f)(2)(ii)) will allow CMS to determine the appropriateness of a requested data set and will limit inappropriate use of encounter data. CMS considers all data requests to ensure that the use of the data will not exploit or negatively impact Medicare beneficiaries.

In order for a researcher to gain access to CMS data, the researcher must complete an application process, including submission of a research protocol. The researcher must receive approval of the protocol from CMS. In addition, all requesters are required to sign a Data Use Agreement with the agency that limits the use of the data to only the approved purposes. The Data Use Agreements that CMS uses have mechanisms. For example, one of CMS’
Data Use Agreement forms states: “The User acknowledges that penalties under § 1106(a) of the Social Security Act [42 U.S.C. 1306(a)], including possible imprisonment, may apply with respect to any disclosure of information in the files(s) that is inconsistent with the terms of the Agreement. The User further acknowledges that criminal penalties under the Privacy Act [5 U.S.C. 552a(i)(3)] apply if it is determined that the User, or any individual employed or affiliated therewith, knowingly and willfully obtained the file(s) under false pretenses. The User also acknowledges that criminal penalties may be imposed under 18 U.S.C. 641.”

We believe these restrictions are necessary in order to ensure that data are only requested in compliance with the requirements of the regulations and CMS data sharing procedures, and that data shared by CMS are appropriately protected and are not reused or redisclosed without the necessary approval. Under our data sharing policies, we generally require the requester not to disclose the data to third parties without specific written authorization from us. CMS expects that researchers who receive a CMS-approved release of risk adjustment data will abide by the law, policies, and procedures surrounding use of that data, particularly where the regulation conditions release of the data on CMS data procedures being followed. Comment: A few commenters requested that, when CMS is making a determination about whether to release risk adjustment data to a requestor, CMS reach out to MA organizations to consult on whether to approve the request. One commenter stated that plans would appreciate the opportunity to advise the agency of any specific concerns they have with respect to release of data for certain purposes and to certain entities, while another commenter asked CMS to allow plans to deny certain requests for data. Finally, a few commenters stated that whenever a stakeholder’s data is part of an approved release, that stakeholder should have access to the entire data release for purposes of verification, equity, and accuracy.

Response: Under this rulemaking, we will use CMS existing data sharing procedures (in accordance with § 422.310(f)(2)(iiii) for responding to requests for risk adjustment data. It is not part of CMS’ data sharing procedures to contact a submitter of data (for example, a FFS provider, a Part D sponsor, or an MA organization) whenever a researcher requests or receives approval for access to a data set for a study that includes some of that particular submitter’s data (unless the request is made under FOLIA). Nor, is it part of the CMS’ data sharing procedures to allow an MA organization or another entity to have approval rights in regards to the release of data. In addition, this rule itself sets the standards under which data will be released. Therefore, CMS will not be notifying MA organizations or their contracted providers when data requests that may include their risk adjustment data are received or approved. Finally, CMS could not simply release a risk adjustment data set to a stakeholder that had not received approval through CMS data sharing procedures simply on the grounds that the stakeholder’s risk adjustment data submissions to CMS comprise one part of a data file released to a researcher for an approved study.

One of the best ways MA organizations can address their concerns about the accuracy of risk adjustment data available for release is to continue working with CMS to improve the quality of risk adjustment data they submit to CMS.

Comment: One commenter opposed the release of beneficiary identifying information to external entities, including other HHS agencies, other Federal Executive Branch agencies, Congressional support agencies, and States. Another commenter encouraged CMS to establish and impose appropriate penalties for any breach of privacy related to beneficiary identifiable information by external entities.

Response: We understand the need to protect beneficiary identifying information. As finalized in § 422.310(f)(2)(iii) of the regulation, CMS release of risk adjustment data is subject to the protection of beneficiary identifier elements and beneficiary confidentiality, including—

• A prohibition against public disclosure of beneficiary identifying information;
• Release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, and States only when such information is needed; and
• Release of beneficiary identifying information to external entities only to the extent needed to link datasets.

Any release of beneficiary-identifiable data must follow the policies in CMS’ data sharing procedures. We intend to protect the beneficiary data through, for example, encryption, or removal of the confidential fields when risk adjustment data is released. As we discussed above and in the final rule, CMS–4159–F, published on May 23, 2014 (79 FR 29844), all users accessing beneficiary identifiable data are required to sign CMS’ Data Use Agreement, which addresses privacy and security for the data CMS discloses. The Data Use Agreement also contains provisions regarding access to and storage of CMS data to ensure that beneficiary identifiable information is stored in a secure system and handled according to CMS’ security policies. CMS has an established process to evaluate requests for data to ensure that there are appropriate safeguards in place to protect beneficiary privacy. We believe this process contains the necessary checks to ensure that the risks of the disclosure are minimal.

Comment: One commenter requested CMS to release risk adjustment data by creating an MA encounter data Standard Analytic File (SAF) in limited data set form (LDS) to extend research that can currently be done by users of LDS SAFs across sites using fee-for-service Medicare claims data. A few other commenters argued that these data should be routinely available through public use files, not just through the project-specific process set forth in this rule.

Response: We appreciate the suggestions and will take them into consideration for future additional guidance. With regard to the issue of Public Use Files, we believe that the nature of data—see the discussion above—make it appropriate to include the protections imposed by this rule, including the limits on the purpose of the disclosure, release of only the minimum necessary data, the incorporation of CMS data sharing policies and procedures, and additional protections for certain data elements.

After consideration of the public comments we received, we are finalizing, as proposed, the policies regarding CMS release of data in § 422.310(f)(2), with the exception of five changes to the regulation text. First, we clarify that the paragraph (f)(1)(iv) purpose permitted by other laws is for “purposes authorized by other applicable laws.” Second, we have deleted the term “congressional support agencies” from paragraph (f)(2)(B) in order to be consistent with the introductory language at paragraph (f)(2) of this regulation. Third, to clarify that data aggregation will be of the dollar amounts reported on an associated encounter data record, we are finalizing paragraph (f)(2)(iv) to state that subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data. Fourth, in order to explicitly address the
risk adjustment data elements that do not fall into either of the two protected categories (beneficiary identifiers and dollar amounts) and to clarify that such data are subject to release without redaction or aggregation, we are finalizing an additional paragraph (f)(2)(v) to state that risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section, respectively. Finally, we are adding paragraph (f)(3) to §422.310 to clarify when risk adjustment data will be available for release, to state that risk adjustment data will not be available for release under paragraph (f) unless—

- The risk adjustment reconciliation for the applicable payment year has been completed;
- CMS determines that the data release is necessary under paragraph (f)(1)(vi) of the section for emergency preparedness purposes before reconciliation; or
- CMS determines that extraordinary circumstances exist to release the data before reconciliation.

3. Technical Change

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to amend §422.300, which identifies the basis and scope of the regulations for payments to MA organizations, to add a reference to section 1106 of the Social Security Act, which governs the release of information gathered in the course of administering our programs under the Act. We did not receive any public comments on this technical change, and we are finalizing without modification our proposed amendment to §422.300, to add a reference to section 1106 of the Social Security Act, which governs the release of information gathered in the course of administering our programs under the Act.

XI. Changes to Enforcement Provisions for Organ Transplant Centers

A. Background

In February 2004, the Office of the Inspector General (OIG) published a report entitled “Medicare-Approved Heart Transplant Centers” (OEI–01–02–00520), in which the OIG outlined three recommendations for CMS’ oversight of heart transplant centers: (1) that CMS expedite the development of continuing criteria for volume and survival-rate performance and for periodic recertification; (2) that CMS develop guidelines and procedures for taking actions against centers that do not meet Medicare criteria for volume and survival-rate performance requirements; and (3) that CMS take immediate steps to improve its ability to maintain accurate and timely data regarding the performance of transplant centers. As part of CMS’ efforts to strengthen oversight of organ transplant centers, we published the final rule “Medicare Program: Hospital Conditions of Participation, Requirements for Approval and Re-approval of Transplant Centers to Perform Organ Transplants” on March 30, 2007 in the Federal Register (72 FR 15198) that established conditions of participation (CoPs) for organ transplant centers and applied the survey and certification enforcement process (that is used for all other providers and suppliers of Medicare services) to Medicare-approved transplant centers. In the preamble of that final rule, we discussed our efforts to improve organ donation and transplantation services and our goals to: (1) Protect patients who are awaiting organ transplantation; (2) establish key quality and procedural standards; and (3) improve outcomes for patients (such as patient survival) and reduce Medicare expenses by decreasing the likelihood that a transplant would fail. In the March 30, 2007 final rule, we codified the CoPs for transplant centers at 42 CFR Part 482, Subpart E (§§482.68 through 482.104) and the special procedures for approval and re-approval of organ transplant centers at 42 CFR 488.61. The CoPs set forth explicit expectations for outcomes, patient safety, informed choice, and quality of transplantation services. In particular, §§482.80 and 482.82 specify that a transplant center’s outcomes are not acceptable if, among other factors, the number of observed patient deaths or graft failures 1 year after receipt of a transplant exceeds the risk-adjusted expected number by 1.5 times, based on the most recent program-specific report from the Scientific Registry of Transplant Recipients (SRTR). Failure to meet transplant center requirements will lead CMS to deny approval or re-approval of a center’s Medicare participation under §488.61. However, §§488.61(a)(4) and (c)(4) authorize CMS to consider mitigating factors when determining approval and re-approval, respectively, for a transplant center that has not met the data submission, clinical experience, or outcome requirements, or other CoPs, if the center submits a formal, written request for such a review. The existing regulations do not limit the factors that CMS may consider, but enumerate, at a minimum, the following factors to be considered: (1) The extent to which outcome measures are met or exceeded; (2) the availability of Medicare-approved transplant centers in the area; and (3) extenuating circumstances that may have a temporary effect on a transplant center meeting the requirements under the CoPs, such as a natural disaster. CMS approval or re-approval based on mitigating factors permits a transplant center to operate as a Medicare-approved transplant center under certain circumstances despite a finding of noncompliance. Under existing regulations at §§488.61(b)(4)(iv) and (c)(4)(iv), CMS will not approve a center with condition-level deficiencies but may reapprove a center with standard-level deficiencies.

B. Basis for Proposed and Final Policies

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27977), we proposed to strengthen, clarify, and provide additional transparency for the survey, certification, and enforcement procedures under §488.61 for transplant centers that are requesting initial approval or re-approval for participation in the Medicare program when the centers have not met one or more of the CoPs but wish to have certain mitigating factors taken into consideration.

1. Expansion of Mitigating Factors Based on CMS’ Experience

The existing organ transplant enforcement regulation at §488.61 does not provide detailed information on the factors generally needed for approval or re-approval of a request based on mitigating factors that a transplant center may make in order to participate, or continue to participate, in Medicare. However, since the adoption of the organ transplant CoPs and corresponding enforcement regulations, we have expanded our knowledge regarding: (a) The factors and processes that promote improvement in transplant center outcomes; and (b) other mitigating factors that merit explicit recognition under CMS regulations.

Most of the requests that we have approved based on mitigating factors have been for transplant centers that were out of compliance with CMS outcomes requirements, but were then able to (a) effect substantial program improvements and (b) based on meaningful post-transplant survival data, demonstrate recent and much improved patient and graft survival subsequent to those program reforms. These performance improvements occurred after the program was cited for substandard performance by CMS and was at risk of losing Medicare

2 CV
participation, usually while the program was operating during the mitigating factors review process or under a Binding Systems Improvement Agreement (SIA) with CMS. Under an SIA, CMS agrees to extend the effective date of a prospectively scheduled termination from Medicare participation (that is, denial of re-approval) and holds in temporary abeyance a final review of the transplant center’s mitigating factors request, if the transplant center agrees to engage in a structured regimen of quality improvement to improve performance during a specified period of time. At the end of the SIA period (typically 12 months), we review the transplant center’s performance and make a final decision as to whether: (a) The transplant center’s patient and graft survival is within the acceptable limits set forth in the regulations; or (b) the transplant center qualifies for approval or re-approval based on mitigating factors.

As of August 2013, CMS had rendered a final determination for 129 requests for approval to operate as a Medicare-approved transplant center based on mitigating factors. Of those determinations, 48 of the requests (37.8 percent) were approved based on information provided by the transplant center on its mitigating factors alone (that is, without entering into an SIA) because the transplant program had implemented substantial program improvements during the extended CMS review period, and CMS concluded that the most recent patient and graft survival data (taking into consideration the lag time in data inherent in the SRTR reports) demonstrated current compliance with outcome requirements. Another 33 requests (25.6 percent) were eventually approved on the basis of each transplant program’s successful SIA completion and much improved outcome data for the affected program. A total of 24 requests (18.6 percent) involved transplant programs that were approved (and the transplant centers were permitted to continue Medicare participation) because CMS determined that the transplant centers met the outcome requirements during the time period it took for CMS to review the mitigating factors request, based on a new SRTR report that because available during the 210-day mitigating factors review period. Requests from another 2 programs (1.6 percent) were approved in which the programs had not enter into an SIA but had made extensive use of innovative practices involving key factors that were not included in the SRTR risk-adjustment methodology. An additional 2 requests (1.6 percent) were approved because natural disasters temporarily impacted the transplant centers. Finally, 20 requests (15.5 percent) were denied approval based on mitigating factors because the programs failed to meet the outcome or clinical experience requirements and were not able to demonstrate improvements and recent outcomes or experience that would warrant approval based on mitigating factors. These 20 programs voluntarily withdrew their participation from the Medicare program.

Comment: Commenters supported CMS' efforts to add clarity and increase transparency, and most commenters conveyed specific suggestions for further clarity or revision.

Response: We appreciate the thoughtful nature of all comments we received and the specificity of the suggestions that were made. We address those specific suggestions below in the context of each relevant section of our proposed language.

2. Coordination With Efforts of the Organ Procurement and Transplantation Network (OPTN) and Health Resources and Services Administration

When we adopted the outcome standards for transplant programs in 2007, we sought to harmonize CMS’ outcome standards with standards of the Organ Procurement and Transplantation Network (OPTN) so that transplant centers would have a single, consistent set of outcome expectations on which to focus. We also sought to organize CMS activities in a manner that would reinforce and continue the OPTN as the first line of external review and quality improvement for transplant centers. The OPTN is the unified transplant network established under the National Organ Transplant Act (NOTA) of 1984. The NOTA called for the network to be operated by a private, nonprofit organization under Federal contract. The OPTN is a public-private partnership that links all of the professionals involved in the donation and transplantation system. The primary goals of the OPTN are to: (a) Increase the effectiveness and efficiency of organ-sharing and equity in the national system of organ allocation; and (b) increase the supply of donated organs available for transplantation. For more details about the OPTN, we refer readers to the Web site at: http://www.srtr.org/faqs/16.aspx.

Comment: One commenter stated that an important lesson learned over the past several years is the need to further coordinate and reconcile differences between the requirements and processes used by CMS and the OPTN in regulating the quality of services provided by transplant centers throughout the country.

Response: We concur with the value of coordinating requirements and processes to the extent permitted by the different roles played by the OPTN and CMS. Our desire to coordinate with HRSA and OPTN gave rise to many of the proposals discussed here. Further, staff from the United Network for Organ Sharing (UNOS, that is under contract with HRSA) and CMS developed a cross-walk of the OPTN and CMS requirements, updated the cross-walk in July 2014, and published it online at: http://www.optn.transplant.hrsa.gov/content/policiesAndBylaws/evaluation_plan.asp. While CMS and OPTN have many mutually-reinforcing requirements, the two organizations largely cover different aspects of the transplant universe. The OPTN, for example, excels at the data reporting and management that CMS does not address, but CMS reinforces OPTN through a CMS requirement that transplant centers timely and adequately report data in accordance...
with OPTN requirements. Similarly, there are other areas not covered by OPTN that CMS addresses (such as the CMS requirement that every transplant program have an effectively functioning, internal quality assessment and performance improvement (QAPI) system). CMS, HRSA, and the OPTN observed both CMS’ and OPTN’s onsite surveys in the past year, with the intent to identify areas to reduce the burden on transplant programs, as well as improve the efficiency of the survey process. Although the surveys are conducted very differently based on the distinct roles of the two agencies, the OPTN has now combined the living donor survey with its regular survey to eliminate the need for an additional survey. HRSA and CMS also maintain monthly meetings and, as the need arises, more frequent meetings of workgroups.

Another recent development was the CMS final rule (“Medicare and Medicaid Programs; Regulatory Provisions to Promote Program Efficiency, Transparency, and Burden Reduction; Part II: Final Rule”) published in the Federal Register on May 12, 2014 (79 FR 27106) designed to reduce regulatory burden and increase efficiency. Among other features, the rule permits CMS to vary the frequency of onsite transplant center surveys compared to the earlier and standard CMS 3-year cycle that applied to all transplant programs. CMS maintains continuous review of transplant outcomes, responds to complaints at any time, and is notified by transplant centers when there is a major change in a center. With these continuous activities, and the added flexibility of the May 12, 2014 final rule, we expect to extend the average onsite survey frequency to a range of approximately 3 to 5 years. We expect some centers will be surveyed more frequently than the average and other centers less frequently, depending on CMS’ assessment of the need for a survey of a particular program. We expect that this change will help reduce the extent to which any particular transplant program will have two different surveys (ONPT and CMS) that occur within a proximate time of each other. We look forward to continuing to work with HRSA, UNOS, OPTN, and the transplant community on these and other coordination issues.

G. Provisions of the Proposed and Final Regulations

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to revise the regulations at § 488.61 to include specific additional provisions describing and expanding the mitigating factors that CMS may consider when evaluating requests and explain the conditions under which each factor would apply.

Comment: One commenter recommended that CMS modify § 482.82 of the regulations to state that a transplant center that does not meet the data submission, clinical experience, or outcomes requirements would be considered to be out of compliance at the Condition level only if CMS determines that a mitigating factors request would not be approved. In other words, a mitigating factors request would be processed before citing a center for a deficiency at a Condition level.

Response: We are not adopting this recommendation for a number of important reasons. First, the mitigating factors provision is intended to enable CMS to recognize special situations so that we may calibrate enforcement actions appropriately. The provision is not intended to remove the possibility of enforcement or the likelihood of enforcement if appropriate corrections are not made.

Second, we believe the mitigating factors and SIA processes have been quite successful in promoting improved patient outcomes as a direct result of the full hospital alignment in support of each involved transplant center. Based on the past 7 years of experience with programs that have had substandard outcomes, we believe that strong whole-institution support has been generated directly in response to the deficiency citation and accompanied by clear potential for enforcement action against a program that has had substandard performance.

We note that most transplant programs maintain excellent outcomes continuously and are not cited for noncompliance with CMS outcome expectations. Another group of transplant programs temporarily exceed the outcomes thresholds based on a single SRTR report, but soon manifest outcomes within the acceptable tolerance limits in the next report. Such programs may be cited by CMS at a Standard level, rather than the Condition level, because the results are evident in only a single SRTR report. A Standard level citation requires corrective action but does not require mitigating factors approval because a Standard level citation by itself does not put the program on a schedule for termination of Medicare participation. A smaller third group of transplant programs experience long-term problems that are only partially addressed by CMS at the Condition level, but engage with the OPTN and soon recover. These programs may apply for approval based on mitigating factors, but are more likely than other applicants to be approved without greater involvement with CMS. An even smaller group of programs are cited by CMS at the Condition level and are eventually approved based on mitigating factors, but only after an extended period of time and a more involved regimen of quality improvement through an SIA. CMS’ policy has been to cite at the Condition level only if the tolerance limits are exceeded in the most recent SRTR report and in at least one other SRTR report within the past five SRTR reports. Although the number and percentages vary depending on the particular SRTR reports involved, we generally find that approximately 9 to 11 percent of the programs do not meet the CMS outcome thresholds in any one particular SRTR report. However, only approximately 3 to 4 percent of the programs tend to fail to meet the outcomes requirement in the most recent SRTR report and in at least one other report of the most recent 5 reports. This number is further reduced during the 210-day period that we permit for consideration of a mitigating factors request by CMS. The 210-day period allows sufficient time for a sixth SRTR report to appear and perhaps show evidence of outcomes that would remove the deficiency and remove the need for mitigating factors approval.

As a result of the way we implemented the citation and mitigating factors processes, those programs cited by CMS at the Condition level tend to be programs that generally have more extensive issues for which full hospital alignment and support are most needed, or programs that, for a variety of reasons, have been immune to prior efforts to improve outcomes. We believe we have structured CMS enforcement actions in a manner that permits considerable time for a transplant program to take action on its own, and allow many programs to engage successfully with the OPTN for timely resolution. However, for the residual, smaller number of programs that have not been so successful, our experience indicates that it is questionable whether the hospital alignment and other actions needed to achieve substantial and sustainable improvement would have occurred without the clear prospect that Medicare participation might soon end. The fact that many of the transplant programs cited at the Condition level had already been engaged with the OPTN in a peer review process without prior involvement by CMS lends credence to the belief that the clear, and potentially imminent, ending of
Medicare participation has been the stimulant that eventually brought the various departments of the hospital together to finally achieve the results that had eluded the many dedicated individuals who had previously labored to achieve better outcomes.

Third, only two situations involved mitigating factors where approval was based on natural disasters, two situations involved extensive use of innovative practices, and a small number of situations involved clinical experience. The remainder, constituting the vast preponderance of mitigating factors requests we have received, involved transplant programs whose patient or graft survival outcomes exceeded the tolerance limits in the CMS regulation for programmatic reasons. Whole such cases have never been approved, the approval has been based on recovery and improvement in outcomes during the extended time period (210 days) that CMS permits for mitigating factors consideration or the even longer time period that CMS permits under an SIA. We believe that eventual approval of a mitigating factors request should not be construed to imply that the substandard outcomes never occurred, or to obscure the history or facts that led to the recovery efforts. We regard such history as important matters of public record.

Transplant programs that may be approved based on mitigating factors due to confirmed innovative practice may be an area for which the commenter’s suggestion has merit, and we will give further consideration to this area for potential future action. Unlike mitigating factors approval that is made pursuant to recovery from a period of substandard outcomes or even natural disaster, approval of mitigating factors due to innovative practice may indicate the absence of a deficiency in the first place.

We will be pleased to continue a dialogue with the transplant community regarding these issues and to consider other approaches to ensure that a strenuous improvement effort, such as that which is required in an SIA, is not misinterpreted.

1. Expansion of Mitigating Factors List, Content, and Timeframe

In the FY 2015 IPPS/LTCH PPS proposed rule, we noted that the regulations at § 488.61(a)(4) and (c)(4) provide three specific mitigating factors for review by CMS when determining whether a transplant center can be approved or re-approved, respectively, based on mitigating factors. These mitigating factors are: (1) The extent to which outcome measures are met or exceeded; (2) the availability of Medicare-approved transplant centers in the area; and (3) extenuating circumstances that may have a temporary effect on meeting the CoPs. In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to move the listing of mitigating factors from paragraphs (a)(4)(i) through (a)(4)(iii) and (c)(4)(i) through (c)(4)(iii) to new proposed paragraphs (f), (g), and (h) under § 488.61, and to include additional factors under these three new proposed paragraphs that may be reviewed in addition to the existing three factors. We proposed to move existing paragraphs (a)(4)(iv) and (c)(4)(iv) to the proposed new paragraph (g)(2). We also proposed to provide clarification of the existing three mitigating factors and the conditions under which they would apply. Finally, we proposed to revise the preexisting paragraphs (a)(4) and (c)(4) of § 488.61 to include cross-references to the new proposed paragraphs (f), (g), and (h).

We note that an administrative rule we published in the Federal Register on May 12, 2014 (79 FR 27106) within days of publication of the FY 2015 IPPS/LTCH PPS proposed rule renumbered the elements of § 488.61(c) and added § 488.61(c)(3)(v) and made other amendments to this section. Specifically, the May 12, 2014 administrative rule removed § 488.61(a)(7), revised the introductory text of paragraphs (c) and (c)(1), and revised paragraph (c)(1)(ii). In addition, the final administrative rule removed paragraphs and redesignated paragraphs (c)(3), (c)(4), and (c)(5) as paragraphs (c)(2), (c)(3), and (c)(4), respectively. Finally, the final administrative rule revised the text of newly designated paragraphs (c)(2), (c)(3)(i), and (c)(3)(ii), added a new paragraph (c)(3)(v), and revised paragraph (e). As a result of these changes, in this final rule, we are replacing the renumbered paragraphs of § 488.61(c)(3)(i) through (c)(3)(iii) after the administrative final rule as § 488.61(f)(1)(i), (f)(1)(ii), and (f)(1)(iii), respectively. Furthermore, paragraph § 488.61(c)(3)(iv) is moved to the new § 488.61(g)(2). We are also incorporating the new paragraph that was added in the final administrative rule (§ 488.61(c)(3)(v)) as the new paragraph § 488.61(f)(1)(iv).

We note that in all subsequent references involving § 488.61(c), we use the regulatory citations as revised by the May 12, 2014 final rule (79 FR 27106) and described above. Under proposed new paragraph (f)(1), we proposed to move and relist the three mitigating factors currently under both paragraphs (a)(4)(ii) through (a)(4)(iii) and paragraphs (c)(3)(i) through (c)(3)(iii). We further proposed to expand the mitigating factors that CMS may consider by adding more description to those factors, as well as by adding new factors that may be reviewed. We also proposed to specify the procedures and timeframes for transplant centers to request consideration for approval based on mitigating factors.

Specifically, in proposed new paragraph (f)(1), we proposed to specify the mitigating factors, except for situations of immediate jeopardy, as described below:

- The extent to which outcome measures are not met or exceeded (existing paragraphs (a)(4)(i) and (c)(3)(i); proposed paragraph (f)(1)(i)).
- Availability of Medicare-approved transplant centers in the area (existing paragraphs (a)(4)(ii) and (c)(3)(ii); proposed paragraph (f)(1)(ii)).
- Extenuating circumstances (for example, natural disaster) that may have a temporary effect on meeting the CoPs (existing paragraphs (a)(4)(iii) and (c)(3)(iii); proposed paragraph (f)(1)(iii)).
- Program improvements that substantially address root causes of graft failures or patient deaths and that have been implemented and institutionalized on a sustainable basis (proposed new paragraph (f)(1)(iv)).
- Recent patient and graft survival data to determine if there is sufficient clinical experience and survival for CMS to conclude that the program is in compliance with CMS requirements, except for the data lag inherent in the reports from the SRTR (proposed new paragraph (f)(1)(v)).
- Extensive use of innovative transplantation practices relative to other transplant programs, such as a high rate of transplantation of individuals who are highly sensitized or children who have undergone the Fontan procedure, where CMS finds that the innovative practices are supported by evidence-based, published research or nationally recognized standards or Institutional Review Board (IRB) approvals, and the SRTR risk-adjustment methodology does not take the relevant key factors into consideration (proposed new paragraph (f)(1)(vi)).
- The program’s performance, based on the OPTN method of calculating patient and graft survival, is within the OPTN’s thresholds for acceptable performance and does not flag OPTN performance review under the applicable OPTN policy (proposed new paragraph (f)(1)(vii)).
Under proposed new paragraph (f)(2), we proposed to include details for the content of the request for consideration of mitigating factors, based on examples that have proven to be most useful in considering successful mitigating factors requests. Specifically, we proposed that a request for consideration of mitigating factors include sufficient information to permit an adequate review and understanding of the transplant program, the factors that have contributed to outcomes, program improvements or innovations that have been implemented or planned, and, in the case of natural disasters, the recovery actions planned. Examples of information to be submitted with each request could include, but are not limited to, the following:

(i) The name and contact information for the transplant hospital and the names and roles of key personnel of the transplant program;

(ii) The type of organ transplant program(s) for which approval is requested;

(iii) The CoPs that the program failed to meet, and with respect to which the transplant center is requesting CMS’ review of mitigating factors;

(iv) The rationale and relevant supporting evidence for CMS’ review, where applicable;

(v) Root Cause Analysis of patient deaths and graft failures, including factors the program has identified as likely causal or contributing factors for patient deaths and graft failures;

(vi) Program improvements or innovations (where applicable) that have been implemented and improvements that are planned;

(vii) Patient and donor/organ selection criteria and evaluation protocols, including methods for pre-transplant patient evaluation by cardiologists, hematologists, nephrologists, and psychiatrists or psychologists, to the extent applicable;

(viii) Organizational chart with full-time equivalent levels, roles, and structure for reporting to hospital leadership;

(ix) Waitlist management protocols and practices relevant to outcomes;

(x) Pre-operative management protocols and practices;

(xi) Immunosuppression/infection prophylaxis protocols;

(xii) Post-transplant monitoring and management protocols and practices;

(xiii) Quality Assessment and Performance Improvement (QAPI) Program meeting minutes from the most recent four meetings and attendance rosters from the most recent 12 months;

(xiv) Quality dashboard and other performance indicators;

(xv) Recent outcomes data for both patient survival and graft survival; and

(xvi) Documentation of whether the program has engaged with the OPTN to review program outcomes, the status of any such review, and any steps taken to address program outcomes in accordance with the OPTN review.

Under proposed new paragraph (f)(3), we proposed to specify a timeline for the transplant program to submit a request for mitigating factors and to make clear that, for requests related to clinical experience or outcomes, the program has additional time within which to submit supporting information. Specifically, we proposed that within 10 days after CMS has issued formal written notice of a Condition-level deficiency to the program, CMS must receive notice of the program’s request to seek consideration of mitigating factors. CMS would require that all information necessary for consideration be received within 30 days of CMS’ initial notification for any deficiency, except a deficiency based on insufficient clinical experience or outcomes; and within 120 days of CMS’ written notification for a deficiency based on insufficient clinical experience or outcomes. Failure of a transplant program to meet these timeframes may be the basis for denial of requests for consideration based on mitigating factors.

Comment: One commenter stated that mitigating factors consideration should not be available for either initial applications or for deficiencies that involve process requirements (as opposed to clinical experience or outcomes). Examples of process requirements include the requirement to match donor and recipient blood types, ensure informed consent, or engage in multi-disciplinary planning. The commenter suggested that if the mitigating factors provision applied to process CoPs, CMS should clarify the circumstances under which a program ought to apply for mitigating factors rather than submit a plan of correction. The commenter suggested that process CoPs be handled through plans of correction rather than through mitigating factors.

Response: We agree that all process CoPs should be handled through the plan of correction process and that only a deficiency involving data submission, clinical experience, or outcomes should involve both the required plan of correction and an optional mitigating factors request. A transplant program cited for a process CoP deficiency (or any deficiency) for Medicare reinstatement. In such situations, the latest available SRTR report may still show the program to have substandard outcomes or lack of sufficient clinical experience, and is seeking Medicare reinstatement, or has withdrawn or lost Medicare participation due to substandard outcomes or lack of sufficient clinical experience, and is seeking reinstatement. In such situations, we also agree with the commenter that CMS may consider, one commenter
suggested that not every request should necessarily be required to cover all of the factors listed. Instead, the factors covered should be tailored to the particular circumstances in question.

Response: We agree with the commenter. The intent of § 488.61(f)(1) was not to require every application to address every possible factor, but to recognize CMS' obligation to consider all of the listed factors, as applicable. We acknowledge the potential for confusion on this matter, and therefore, at § 488.61(f)(1) in this final rule, we have clarified that CMS will consider such mitigating factors as may be appropriate in light of the nature of the deficiency and circumstances involved. We would not necessarily expect a program that requests consideration on the basis of innovative practice, for example, to detail all the improvements that have been implemented. We would instead expect such a program to explain its innovative practice, the extent of such practice, the evidentiary basis that established it as an innovative practice, the particular cases in the applicable SRTR report that involved innovative practices, and similar factors applicable to the use and outcomes of innovative approaches.

Comment: One commenter noted that a final rule published in the Federal Register on May 12, 2014 (79 FR 21706) made changes to § 488.61(c)(4), renumbering it as § 488.61(c)(3) and adding a factor at § 488.61(c)(3)(v), and specifying that CMS would consider program improvements that address root causes of patient deaths or graft failures if the improvements are supported by recent outcomes data that permit CMS to conclude that the program is in compliance with CMS outcomes expectations. In other words, in the May 12, 2014 final rule, CMS sought to clarify that both program improvements and recent data showing acceptable outcomes, together, comprise a single critical factor in our determination as to whether mitigating factors approval should be granted. CMS also sought to make clear that it will examine data that are more recent than the data in the latest available SRTR report that covers a retrospective 2.5 year period. The commenter observed that the subsequent regulation proposed in the FY 2015 IPPS/LTC PPS proposed rule would move this provision to the new § 488.61(f)(1)(iv) and (f)(1)(v) as two separate considerations, making it unclear whether both improved data and substantial improvements are needed. The commenter asked that CMS clarify that both program must demonstrate both substantial improvements and recent improved outcomes data, or whether program improvements without better outcomes data would suffice. The commenter expressed the opinion that it should be sufficient for a program to demonstrate that it had implemented substantial program improvements on a sustainable basis, without having to provide recent outcomes data that allow CMS to conclude that the improvements have resulted in recent observed deaths or graft failures that are less than 150 percent of the risk-adjusted expected number 1 year after transplant. Several other commenters simply stated that these parts of the proposed regulation were not entirely clear and should be clarified.

Response: We believe that program improvements and data showing improved outcomes subsequent to the program improvements are both needed and should be considered as a single two-sided but integrated consideration. We do not agree that mitigating factors should be approved without recent data that demonstrate actual improvements in outcomes in the manner described above. In our considerable experience with more than 129 mitigating factor applications, we have encountered many situations where program improvements were implemented on a sustainable basis, but outcomes either did not improve or did not improve sufficiently to bring the program into compliance within a reasonable period of time. Often the problem was that the improvements were well-warranted, but insufficient. Often the improvements did not address root causes, and the root causes did not become apparent until a multidisciplinary peer review team (organized under an SIA) conducted an onsite review and, together with the transplant program staff, gained new insights into systemic factors that contributed to substandard outcomes. In other cases, the program implemented improvements that were within the transplant program’s purview, but the hospital did not alter other aspects of hospital operations that were instrumental in affecting patient or graft survival. The transplant programs often were aware of other hospital-wide factors that were important, but were unable to effect change in those hospital-wide factors until the hospital agreed to enter into an SIA with CMS. Examples of hospital-wide factors include, but are not limited to, the working relationships between the transplant center and the intensive care unit (ICU), availability of transplant-trained specialty physicians (such as in cardiology, hepatology, anesthesiology, or nephrology), adequacy of staffing levels, and information technology support, among others.

With regard to the requested clarification for the new section § 488.61(f)(1)(iv) of the regulations, we note that the SRTR data, upon which the CMS outcomes expectations rely, cover a retrospective 2.5 year period. The data are further dependent on a 1-year post-transplant period during which patient and graft survival are tracked. We appreciate that a transplant program may implement improvements and it will take time for the results of the improvements to become manifest in the SRTR data. This new section is intended to make clear that CMS will examine data that are more recent than the data in the latest available SRTR report. We will make a judgment as to the usability of those data depending on the number of transplants and the number of post-transplant survival time available to be analyzed after major program improvements have been implemented. For example, a kidney transplant center may conduct 80 transplants per year, but have only 35 transplants that both occurred after the major program improvements were implemented and also have a sufficient post-transplant survival period (1-year post-transplant survival period) to constitute data that are reasonable to use in evaluating outcomes. It is not likely that the 35 transplant cases would be included in the latest available SRTR report. Nonetheless, this number of cases with such a post-transplant tracking period may be sufficient and would be considered by CMS. We acknowledge that, by looking at a time period shorter than the 2.5 year period of the SRTR reports and looking only at the observed/expected ratio, we may approve programs that seem to have improved outcomes d by chance. However, if there is a combined demonstration of implemented program changes and an improved survival ratio based on adequate numbers, we believe the risk is warranted. We also do not mean to imply that 35 cases is a magic number, but is illustrative for purposes of clarifying CMS' intention.

Therefore, we are finalizing these provisions at § 488.61(f)(1)(iv) as a combined factor (program improvements plus improved outcomes data). The final paragraph is consistent with the final regulation published as § 488.61(c)(3)(v) on May 12, 2014 (79 FR 27106), but now is moved to the new § 488.61(f)(1)(iv). Paragraph (f)(1)(iv) of § 488.61 in this new final rule now combines the two factors that were proposed in the FY 2015 IPPS/LTC PPS proposed rule as § 488.61(f)(1)(iv) and (f)(1)(v).
Comment: With regard to the content of mitigating factors requests described in proposed §488.61(f)(2), one commenter suggested that instructions related to specific information that must be included as part of a mitigating factors request should not be included in regulations but, instead, in CMS instructions that can be more easily modified as transplant centers and CMS gain additional experience with the types of information that may be useful. The commenter also expressed concern that it appeared that all the information was required of every request even if certain items were not relevant.

Response: We appreciate the commenter’s concerns. On the basis of 7 years of experience and review of 129 mitigating factors requests, we are confident that there are certain items of information that are almost always important in a mitigating factors request. We agree that not every item is needed in every request. Therefore, in this final rule, we reorganized into various categories the informational items for a mitigating factors request that were originally proposed in the new §488.61(f)(2). In this final rule, the first category is comprised of items required for all requests (new paragraphs (f)(2)(i) through (f)(2)(iv)). Additional information required for requests pertaining to data submission, clinical experience, or outcomes is then described in new paragraph (f)(2)(v), versus additional material required of requests pertaining to innovative practice (new paragraph (f)(2)(vi)), versus requests based on natural disasters or emergencies (new paragraph (f)(2)(vii)). We believe that this reorganization makes it clear that information not pertinent to the request is not needed, while continuing to provide additional transparency and continuing to communicate (in advance of a request) the type of information that a transplant center should be prepared to provide if it wishes to request consideration of mitigating factors.

Comment: With regard to the proposed content at §488.61(f)(2), one commenter stated that it did not believe CMS has the authority to require a root cause analysis of patient deaths or graft failures that is specified by the program as a patient safety work product (PSWP) and submitted to (or received from) a Patient Safety Organization (PSO). Further, the commenter stated that to require such disclosure may place a transplant center in a situation in which it must choose between foregoing a mitigating factors review, which could keep the center open, or face fines under the Patient Safety and Quality Improvement Act of 2005 (PSQIA).

Response: By way of background, the PSQIA amended Title IX of the Public Health Service Act (PHSA) (42 U.S.C. 299 et seq.). Section 921(7)(A) of the PSQIA defines “patient safety work product” (PSWP) as including “any data, reports, records, memoranda, analyses (such as root cause analyses) . . . which are assembled or developed by a provider for reporting to a patient safety organization and are reported to a patient safety organization.” Section 921(7)(B) of the PSQIA clarifies that PSWP does not include certain information, such as a patient’s medical record (section 921(7)(B)(i) of the PSQIA) or “information that is collected, maintained, or developed separately, or exists separately, from a patient safety evaluation system . . .” (section 921(7)(B)(ii) of the PSQIA). Section 921(7)(B)(iii) of the PSQIA further specifies that “nothing in this part shall be construed to limit . . . the reporting of information to a Federal, State, or local governmental agency for public health surveillance, investigation, or other public health purposes or health oversight purposes.” In addition, section 922(c)(1)(C) of the PSQIA provides for an exception to the privilege and confidentiality restrictions for “disclosure of identifiable patient safety work product if authorized by each provider identified in such work product.”

We appreciate the commenter’s concerns. However, after 7 years and 129 mitigating factors reviews, we have not experienced this problem in relation to organ transplant centers. This may be because adequate root cause analyses of peri- and post-transplant deaths or graft failures require such specialized expertise that the more generalized patient safety expertise of PSOs is less likely than in other areas to be the resource to which transplant centers turn.

We also note that, in certain other types of providers where the PSQIA has arisen as an issue, the providers have often taken advantage of the exceptions in the PSQIA. For example, in section 921(7)(B)(ii) or section 921(7)(B)(iii) of the PSQIA, CMS does not require submission of a PSWP, and hospitals have choices with regard to what to place in a patient safety evaluation system as a PSWP, to what extent the hospital will use any of the exceptions provided in the PSQIA as noted above, and to what extent the hospital will seek to demonstrate compliance with the CoPs through the provision of other information. With regard to root cause analyses, rather than being a cause of Medicare termination, we have found root cause analyses to have been among the most important considerations in CMS decisions to grant mitigating factors approval that allowed continued Medicare participation for most of the requests we have received. In many cases, the analyses demonstrated the program’s definite capability to identify root causes. In other cases, the analyses demonstrated the program’s clear inability to conduct adequate root cause analyses, but CMS review of the analyses (by clinical and quality improvement personnel, both in-house and contracted) allowed us to gain sufficient insights, particularly with respect to areas that might be further investigated, that we determined an SIA and more time would be warranted for the transplant program to make improvements. Rather than constituting an expectation that leads to closure of a transplant program, our experience of the root cause analyses has been that they prevented many programs from termination of Medicare participation and from experiencing risk that such termination might have led to closure.

Finally, the regulations at §482.21 and §482.96 oblige each hospital and transplant program to maintain an effectively functioning quality assessment and performance improvement system. A key expectation is that every adverse event be identified and investigated and the results of the investigation used to prevent recurrence. In the case of patient deaths and graft survival, this means root cause analyses to identify systemic factors that may have caused or contributed to the adverse events. The ability of a transplant program to demonstrate that it has adequately conducted such analyses, used the results to prevent recurrence, and has the capability to continue to do so is fundamental to the program’s demonstration of compliance required by CMS regulations.

Therefore, we are retaining in this final regulation the language we originally proposed.

Comment: One commenter objected to the provision at proposed §488.61(f)(2)(iv)(L) that each program must describe whether it has engaged with the OPTN to review program outcomes, the status of any such review, and any steps taken to address program outcomes pursuant to the OPTN review. The commenter believed that this provision would unnecessarily mandate disclosure of the institution’s involvement with the peer review function of the OPTN under 42 CFR 121.10(b). The commenter stated that assurances of confidentiality and protection from disclosure are the foundations of effective medical peer
review processes. The commenter suggested that the proposed paragraph be modified to specify only submission of the steps taken by the program to address program outcomes. Another commenter suggested that the proposed language at § 488.61(f)(1) be expanded to include consideration of whether the Membership and Professional Standards Committee (MPSC) of the OPTN has reviewed the program’s performance and found it acceptable.

Response: We appreciate the tremendous value of the OPTN peer review process and its statutory responsibilities under the National Organ Transplant Act (Pub. L. 98–507). We believe that the MPSC process of the OPTN may often result in improved outcomes, thereby rendering a CMS Condition-level deficiency citation unnecessary, or at least setting the stage for approval of a mitigating factors request during the extended period of time CMS allows for consideration of such requests. While we had proposed the regulatory language in order to further strengthen CMS coordination with the OPTN, we also appreciate the nature of the peer review process itself, as described by the commenter. Therefore, in this final rule, we have removed reference to the OPTN peer review process that was originally proposed at § 488.61(f)(2)(iv)(L). We note that programs may still voluntarily disclose any engagement with the MPSC of the OPTN. If the program is entering into an SIA with CMS, the program may also wish to disclose whether the OPTN has already conducted a recent onsite peer review of the program so that CMS may consider if an adjustment to the SIA peer review is warranted, or it may choose to describe any recent onsite peer review without reference to whether the onsite review was conducted under OPTN auspices or not.

Comment: With regard to the timelines for submitting information that we proposed at § 488.61(f)(3), several commenters suggested that more than the proposed 10 days be permitted for a program to notify CMS of an intent to apply for mitigating factors consideration, and 30 days to submit written documentation when the pertinent deficiencies do not involve citation for clinical experience or outcomes. These commenters suggested that 20 days and 45 days, respectively, should be permitted.

Response: With respect to mitigating factors, the 10-day timeline only obliges programs to notify CMS of the program’s intent to request such consideration, and no information is required beyond a simple statement of intent. We regard the 10-day timeframe for submission of a simple notice of intent to be a reasonable expectation. With the modification in this final discussed above (in which the mitigating factors provision is limited to deficiencies of data submission, clinical experience, or outcomes), the 30-day time period is no longer necessary. We already proposed to permit a longer period of time (120 days) for submission of the application when the deficiency is for data submission, clinical experience, and outcomes. Therefore, we are finalizing the rule with the proposed 10-day and 120-day timelines. We have removed the reference to the 30-day time period. In response to comments that suggested more time might be needed in some cases, we also added a provision in this final rule that permits CMS to extend the timelines for good cause. An example of a good cause would be a natural disaster, such as the 2013 Hurricane Sandy event, that may intervene in the middle of the applicable period.

After consideration of the public comments we received, we are retaining the 10-day timeframe to notify CMS of an intent to apply for mitigating factors, reorganizing § 488.61(f)(1) and making it clear that not all factors pertain to every application, retaining the proposed § 488.61(f)(1)(iv) as a combined factor (program improvements plus improved outcomes data, consistent with the May 12, 2014 final regulation (79 FR 27106)) but with the paragraph moved to the new and clarified § 488.61(f)(1)(iv), and retaining the reorganized content of § 488.61(f)(1)(iv) removal of references to a transplant program’s engagement with the OPTN.

2. Results of Mitigating Factors Review

Under proposed new § 488.61(g), we proposed to clarify and expand on the description of the mitigating factors review process and results. Under existing regulations, a transplant center seeking initial approval or re-approval of Medicare participation based on the presence of mitigating factors is required to submit a formal written request to the CMS Central Office, as described earlier. If there are no deficiencies that constitute immediate jeopardy to a patient’s health and safety, in limited circumstances, CMS may approve continued Medicare participation based on mitigating factors. However, where a transplant program demonstrates that it is making significant progress toward correction and program improvement, but does not yet qualify for approval based on mitigating factors there may be merit, in many cases, in temporarily extending the effective date of the program’s Medicare participation termination in exchange for a hospital’s agreement to engage in a significant and directed regimen of further quality improvement under a Systems Improvement Agreement (SIA). As we noted above, programs that have entered into SIAs have demonstrated significant improvements. Therefore, we proposed to provide an explicit procedure in the regulations at proposed new § 488.61(g)(1)(iii) for CMS to offer an SIA and hold in abeyance a final decision on the mitigating factors request until the SIA period has ended. Proposed new paragraphs (g)(1)(i), (g)(1)(ii), and (g)(1)(iii) outline the three outcomes of CMS mitigating factors decisions: (i) Initial approval or re-approval of a program’s Medicare participation based upon consideration of mitigating factors; (ii) denial of the program’s request; or (iii) offer of a time-limited SIA when a transplant program has waived its appeal rights, has committed to substantial program improvements that address root causes and are institutionally supported by the hospital’s governing body on a sustainable basis, and has requested more time to design or implement additional improvements or demonstrate compliance with CMS outcome requirements. Under the proposed new paragraph (g)(1)(iii), we would clarify that, during the SIA, CMS holds the mitigating factors request in abeyance and makes a final decision to approve or deny Medicare participation when the SIA is ended, based on the results of the program’s performance of the SIA.

Existing regulations state that CMS will not approve any program with a Condition-level deficiency. However, CMS could approve a program with a Standard-level deficiency upon receipt of an acceptable plan of correction. A Condition-level deficiency represents a serious classification and, unless the deficiency is remedied, precludes a provider from participating in Medicare. A Standard-level deficiency represents a less serious deficiency, such as one in which just a small part of a CoP is found to be out of compliance. We proposed to move this to the proposed new paragraph § 488.61(g)(2).

We did not receive any public comments on this proposal and, therefore, are finalizing it as proposed.

3. System Improvement Agreements (SIAs)

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27977), we proposed to add proposed new paragraph (h) to § 488.61 to set forth the purpose, intent, and contents of an SIA
and the timeframes for an approved SIA with CMS.

a. Purpose and Intent of an SIA

Based on information and documentation provided by the transplant program at the time of its request, CMS may determine that, despite a deficiency or deficiencies, the transplant center has made substantial progress, has full support of the hospital governing body, and is on a quality improvement path that promises to improve prospects for patient survival. In such cases, we exercise our limited discretion to offer the transplant program the opportunity to enter into an SIA. In the absence of a written request for consideration on the basis of mitigating factors, CMS would otherwise proceed with the proposed date of termination based on noncompliance with one or more of the CoPs. In the proposed regulation, we clarified and specified the terms for such SIAs.

CMS may offer an SIA to a transplant program if the transplant center can show that it has identified, or is actively improving its identification of, the root causes of its noncompliance and if the transplant center has initiated actions to correct those root causes. However, if we conclude that a transplant center does not qualify for initial approval or re-approval based on mitigating factors, the proposed rule would explicitly provide CMS with the option of offering a time-limited SIA to those transplant centers that have demonstrated progress in making substantive program improvements to address root causes of deficient outcomes, agree to undertake a structured regimen of further quality improvement, and agree to waive their appeal rights. In some instances, a voluntary period of inactivity of the transplant center is warranted, or a period of inactivity may be required by CMS as a condition of an SIA approval, as a requirement of initiating an SIA for a specified period, or until certain milestones are achieved.

During the SIA period, CMS’ oversight and enforcement authority continue and CMS may conduct routine unannounced surveys, complaint investigations, and/or terminate the transplant center’s participation in the Medicare program if there is not substantial compliance with Federal requirements under 42 CFR Part 482 or if the program fails to follow the terms of the SIA. In consideration for the opportunity to continue to participate in the Medicare program under an SIA during the structured improvements and corrections are made, despite having been found to be in noncompliance with the requirements, a transplant center would be required to waive any appeal rights that it may have, either administratively or judicially, if CMS ultimately terminates Medicare participation or denies initial approval of the transplant center. We proposed that such a waiver applies, regardless of whether revocation or termination of approval/re-approval occurs due to a finding that the hospital failed to fulfill the terms of the SIA or due to the deficiency findings that the SIA was designed to address, pursuant to CMS’ enforcement authority under the regulations.

A transplant center’s approval to operate as a Medicare-approved transplant center does not guarantee any subsequent re-approvals and may be time-limited. The transplant center must submit a separate request for consideration of mitigating factors, including updated supporting documentation each time a CMS review (generally on a 3 to 5 year cycle) or complaint investigation determines that the transplant center does not meet one or more of the data submission, clinical experience, and outcomes requirements, or other CoPs. At such time, we would review any prior mitigating factors approval to determine if the circumstances that originally warranted approval would still apply. However, in the case of past mitigating factors approval based on innovative practice, CMS may seek information in advance of a recertification survey to determine if the reasons for past approval still prevail and, in such a case, CMS may consider mitigating factors concomitantly with the recertification survey.

We did not receive any public comments in this policy and, therefore, finalizing it as proposed.

b. Description and Contents of an SIA

The SIA is a binding agreement between CMS and the hospital within which a transplant center operates. A transplant center, in turn, may have one or more organ-specific programs, such as a heart, kidney, pancreas, liver, or lung transplant program. Each SIA is focused on a particular organ transplant program. The SIA is a plan for a series of actions, activities, and goals that provide opportunities for the hospital and transplant center to conduct internal improvement analysis and action, and engage external experts to ensure that the transplant center is in compliance with evidence-based standards and advances in the field that would optimize the care provided to patients.

Through an SIA, CMS is able to offer transplant centers additional time to achieve compliance with the CoPs through a structured and monitored process. In particular, the use of the formal SIA process reflects CMS’ recognition that it may sometimes require more than the usual time to correct the 1-year post-transplant patient or graft survival and have the results of such improvement become manifest in the tracking data, to develop and implement a plan to correct low-volume performance rates. We generally do not expect to use an SIA in cases of noncompliance with other CoPs, although we do not preclude such a possibility if highly unusual circumstances are present.

The SIA process (discussed in more detail below) has demonstrated effectiveness in improving patient and graft survival. An important measure of outcome is the extent to which observed patient deaths 1 year after transplant compare with the risk-adjusted expected number of deaths or graft failure for a particular transplant program. The SRTR risk adjustment methodology (used to calculate the expected numbers) takes into consideration the characteristics of the donors and recipients (for example, factors that have a bearing on the risk to patient or graft survival, such as diabetes, hypertension, advanced age, or cold ischemic time of the organ to be transplanted, among others). For example, the national number of expected deaths 1 year after transplant for all transplant centers in the United States is 1.0. A transplant center that had twice the expected number of deaths would have a standardized mortality ratio (SMR) of 2.0. As of August 2013, adult kidney transplant programs cited by CMS for substandard outcomes and placed on a Medicare enforcement track, for which there was a 2-year post-CMS survey tracking period (N=15), improved their average SMR for 1-year post-transplant patient survival performance rate from 2.05 to 1.17 (close to the 1.0 national average). The transplant centers under an approved SIA improved their outcomes from an average SMR ranging from 2.41 before the SIA to 0.76 after the SIA (much better than the national average). Transplant centers not cited for substandard kidney transplant outcomes improved outcomes slightly from 0.89 to 0.84.244

In proposed new §488.61(h), we proposed to explicitly incorporate and specify elements that have been important to the successful use of the SIA structure. We proposed to define an SIA as a binding agreement, entered into voluntarily by the hospital and CMS, through which CMS extends the effective date of a prospectively scheduled termination of the center’s Medicare participation (thereby permitting the program additional time to achieve compliance with the CoPs), contingent on the hospital’s agreement to participate in a structured regimen of quality improvement activities and subsequent demonstration of improved outcomes. In some cases, transplant programs have entered a period of inactivity—voluntarily, or imposed as a condition of the SIA.

Under proposed new §488.61(h)(1)(i) through (h)(1)(x), we proposed that in the SIA, in exchange for additional time to initiate or continue activities to achieve compliance with the CoPs, the transplant center must agree to a regimen of specified activities, including (but not limited to) all of the following:

- Patient notification about the degree and type of noncompliance by the program, an explanation of what the program improvement efforts mean for patients, and financial assistance to defray the out-of-pocket costs of copayments and testing expenses for any wait-listed individual who wishes to be listed with another program (proposed paragraph (h)(1)(i)).
- An independent peer review team that conducts an onsite assessment of program policies, staffing, operations, relationship to hospital services, and factors that contribute to program outcomes; that suggests quality improvements the hospital should consider; that provides both verbal and written feedback to the hospital; and that provides a verbal debriefing to CMS. Neither the hospital nor the peer review team is required to provide a written report to CMS. The peer review team would include a transplant surgeon with expertise in the relevant organ type(s), a transplant administrator, an individual with expertise in transplant QAPI systems, a social worker or psychologist, and a specialty physician with expertise in conditions particularly relevant to the applicable organ type(s) (such as a cardiologist, nephrologist, or hepatologist). Except for the transplant surgeon, CMS may permit substitution of an individual with one type of expertise for another individual who has expertise particularly needed for the type of challenges experienced by the program, such as substitution of an infection control specialist in lieu of, or in addition to, a social worker (proposed paragraph (h)(1)(iii)).
- An action plan that addresses systemic quality improvements and is updated after the onsite peer review (proposed paragraph (h)(1)(iii)).
- An onsite consultant whose qualifications are approved by CMS, and who provides services for 8 days per month on average for the duration of the agreement, except that CMS may permit a portion of the time to be spent offsite and may agree to fewer consultant days each month after the first 3 months of the SIA (proposed paragraph (h)(1)(iv)).
- A comparative effectiveness analysis that compares policies, procedures, and protocols of the transplant program with those of other programs in areas of endeavor that are relevant to the transplant center’s current quality improvement needs (proposed paragraph (h)(1)(v)).
- Development of increased proficiency, or demonstration of current proficiency, with patient-level data from the SRTR and the use of registry data to analyze outcomes and inform quality improvement efforts (proposed paragraph (h)(1)(vi)).
- A staffing analysis that examines the level, type, training, and skill of staff in order to inform transplant center efforts to ensure the engagement and appropriate training and credentialing of staff (proposed paragraph (h)(1)(vii)).
- Activities to strengthen the performance of the Quality Assessment and Performance Improvement (QAPI) Program to ensure full compliance with the requirements at §482.96 (proposed paragraph (h)(1)(viii)).
- Monthly (unless otherwise specified) reporting and conference calls with CMS regarding the status of programmatic improvements, the results of the actions, data, reports, or other deliverables specified in the SIA, and regarding the number of transplants, and the death and graft failures that occur within 1 year post-transplant (proposed paragraph (h)(1)(ix)).
- Additional or alternative requirements specified by CMS, tailored to the transplant program type and circumstances (proposed paragraph (h)(1)(x)).

**Comment:** One commenter suggested that less detail be provided with regard to the content of an SIA in favor of more flexibility for CMS and transplant centers. Another commenter observed that the SIA content was robust and could conceivably constitute a best practice for transplant centers. The commenter also noted that, despite the high specificity of the required activities, proposed language at §488.61(h)(1)(x) allowing CMS to specify alternate requirements, provides the flexibility needed if there are elements a transplant program cannot meet due to circumstances beyond its control.

**Response:** We agree that the requirements are reasonably robust and specific. The SIA content was developed after early experiences in 2007–2010 with lesser requirements that failed to generate the results needed for a number of programs to generate and sustain improvement outcomes. We then entered into a number of SIAs that had additional requirements which we did not include here, either because they proved unnecessary in many cases or caused excessive risk avoidance on the part of some transplant centers. The remaining requirements we proposed have now been well-tested in 35 SIAs so far, with exceptional success. We agree with the commenter who observed that the language proposed at §488.61(h)(1)(x) allows CMS with advisable flexibility to tailor alternate requirements when necessary. In response to the concern of the first commenter, however, in this final rule, we expanded §488.61(h)(1)(x) to allow CMS the ability to waive certain enumerated elements of the SIA (rather than requiring alternates) if the agency finds that the program has already adequately fulfilled the task.

**Comment:** Several commenters stated that transplant programs should not be obliged to waive their appeal rights in order to engage in an SIA with CMS.

**Response:** We do not agree. Prior to any SIA, each transplant program will already have had full opportunity to appeal a prospectively scheduled termination of Medicare participation. Further, while a prospective termination deriving from all other CoP deficiencies must be resolved within 90 days, in the case of clinical experience or outcomes, CMS sets the prospective Medicare termination at 210 days and allows for consideration of mitigating factors. We provide for an SIA for certain programs when a program is making substantial progress but is not able to demonstrate compliance or qualify for outright approval of its mitigating factors request within the 210-day period. Under an SIA, CMS agrees to extend the prospectively scheduled Medicare termination date for up to another 12 months. Given these considerations, we do not agree that a program should be able to reach the end of an SIA, fail to demonstrate the improvements necessary, and then appeal. We believe such an arrangement would only serve
to prolong the termination date and reduce incentives to correct deficiencies and achieve compliance promptly. Further, in our experience to date, only one transplant program has chosen to appeal a Medicare termination for any reason. The affected hospital involved expended considerable legal effort, over the course of a year, and did not prevail. In the succeeding year, the program applied for reinstatement and was eventually recertified for Medicare participation after making further improvements and demonstrating compliance with the CMS clinical experience and outcomes requirements.

In short, in the case of an SIA, we provide for an exceptional extension of time and believe it is preferable for the available resources of all parties to be invested in the process of improving patient care rather than in a legal contest. If a program wishes to appeal, we suggest the appeal be made within the 60-day post-notification period permitted by regulation rather than pursue an SIA (because the SIA would require waiver of appeal rights).

After consideration of the public comments we received, we are making a minor change at § 488.61(h)(1)(x) to allow some added flexibility to the SIA content, and are otherwise finalizing § 488.61(h)(1)(i) through (h)(1)(ix) as proposed.

c. Effective Period for an SIA

Under proposed new § 488.61(h)(2), we proposed to specify that an SIA will be established for a 12-month period, subject to CMS’ discretion to determine if a shorter time period would suffice. At the hospital’s request and at CMS’ discretion, CMS may extend an SIA for up to one additional 6-month period.

Comment: A number of commenters supported these time periods.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing § 488.61(h)(2) as proposed.

XII. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC’s recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary’s recommendations regarding MedPAC’s recommendations. We have reviewed MedPAC’s March 2014 “Report to the Congress: Medicare Payment Policy” and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule.

MedPAC recommendations for the IPPS for FY 2015 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653–7226, or visit MedPAC’s Web site at: http://www.medpac.gov.

XIII. Other Required Information

A. Requests for Data From the Public

In order to respond promptly to public requests for data related to the prospective payment system, we have established a process under which commenters can gain access to raw data on an expedited basis. Generally, the data are now available on compact disc (CD) format. However, many of the files are available online at: http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html. We listed the data files and the cost for each file, if applicable, in the FY 2015 IPPS/ LTCH PPS proposed rule (79 FR 28288 through 28289).

Commenters interested in discussing any data used in constructing the proposed rule and this final rule should contact Nisha Bhat at (410) 786–5320.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the Federal Register and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

• The need for the information collection and its usefulness in carrying out the proper functions of our agency.
• The accuracy of our estimate of the information collection burden.
• The quality, utility, and clarity of the information to be collected.
• Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28289 through 28294), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). We discuss and respond to any public comments we received in the relevant sections.

2. ICRs for Add-On Payments for New Services and Technologies

Section II.I.1. of the preamble of the proposed rule and of this final rule discuss add-on payments for new services and technologies. Specifically, this section states that applicants for add-on payments for new medical services or technologies for FY 2016 must submit a formal request. A formal request includes a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement. In addition, the request must contain a significant sample of the data to demonstrate that the medical service or technology meets the high-cost threshold.

We believe the burden associated with this requirement is exempt from the PRA under 5 CFR 1320.3(c), which defines the agency collection of information subject to the requirements of the PRA as information collection imposed on 10 or more persons within any 12-month period. This information collection does not impact 10 or more entities in a 12-month period. In FYs 2008, 2009, 2010, 2011, 2012, 2013, FY 2014, and FY 2015, we received 1, 4, 5, 3, 3, 5, and 7 applications, respectively.

We did not receive any public comments regarding this information collection.

3. ICRs for the Occupational Mix Adjustment to the FY 2015 Index (Hospital Wage Index Occupational Mix Survey)

Section III.F. of the preamble of the proposed rule (79 FR 28066 through 28067) and this final rule discusses the occupational mix adjustment to the proposed and final FY 2015 wage index, respectively. While the preamble of these rules does not contain any new ICRs, we note that there is an OMB approved information collection request associated with the hospital wage index.

Section 304(c) of Public Law 106–554 amended section 1886(d)(3)(E) of the Act to require CMS to collect data at least once every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program in order to construct an occupational mix adjustment to the wage index. We collect the data via the occupational mix survey.

The burden associated with this information collection requirement is
the time and effort required to collect and submit the data in the Hospital Wage Index Occupational Mix Survey to CMS. The aforementioned burden is subject to the PRA: it is currently approved under OMB control number 0938–0907. We did not receive any public comments regarding this information collection.

4. Hospital Applications for Geographic Reclassifications by the MGCRB

Section III.H.2. of the preambles of the proposed rule (79 FR 28070 through 28075) and of this final rule discuss proposed and final changes to the wage index based on hospital reclassifications. As stated in that section, under section 1886(d)(10) of the Act, the MGCRB has the authority to accept short-term IPPS hospital applications requesting geographic reclassification for wage index and to issue decisions on these requests by hospitals for geographic reclassification for purposes of payment under the IPPS. The burden associated with this application process is the time and effort necessary for an IPPS hospital to complete and submit an application for reclassification to the MGCRB. The burden associated with this requirement is subject to the PRA. It is currently approved under OCN 0938–0573.

We did not receive any public comments regarding this information collection.

5. ICRs for Application for GME Resident Slots

The information collection requirements associated with the preservation of resident cap positions from closed hospitals, addressed under section IV.J.3. of the preamble of this final rule, are not subject to the Paperwork Reduction Act, as stated in section 5506 of the Affordable Care Act.

6. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

The Hospital IQR Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment (RHQDAPU) Program) was originally established to implement section 501(b) of the MMA, Public Law 108–173. This program expanded our voluntary Hospital Quality Initiative. The Hospital IQR Program originally consisted of a “starter set” of 10 quality measures. The collection of information associated with the original starter set of quality measures was previously approved under OMB control number 0938–0918. All of the information collection requirements previously approved under OMB control number 0938–0918 have been combined with the information collection request previously approved under OMB control number 0938–1022. We no longer use OMB control number 0938–0918.

We added additional quality measures to the Hospital IQR Program and submitted the information collection request to OMB for approval. This expansion of the Hospital IQR measures was part of our implementation of section 5001(a) of the DRA. Section 1886(b)(3)(B)(viii)(III) of the Act, added by section 5001(a) of the DRA, requires that the Secretary expand the “starter set” of 10 quality measures that were established by the Secretary as of November 1, 2003, to include measures “that the Secretary determines to be appropriate for the measurement of the quality of care furnished by hospitals in inpatient settings.” The burden associated with these reporting requirements was previously approved under OMB control number 0938–1022.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 50966), we stated that for the FY 2016 payment determinations and subsequent years updates, we sought OMB approval for a revised information collection request using the same OMB control number (0938–1022). The FY 2014 IPPS/LTCH PPS final rule (78 FR 50955) does not change the method for information collection requests. In a revised request for the FY 2017 payment determination, we will add the four claims-based measures and one chart-abstracted measure that we are finalizing in this final rule as proposed. The claims-based measures are: (1) Hospital 30-day, all-cause, unplanned, risk-standardized readmission rate (RSRR) following coronary artery bypass graft (CABG) surgery; (2) Hospital 30-day, all-cause, risk-standardized mortality rate (RSMR) following coronary artery bypass graft (CABG) surgery; (3) Hospital-level, risk-standardized 30-day episode-of-care payment measure for pneumonia; and (4) Hospital-level, risk-standardized 30-day episode-of-care payment measure for heart failure. The chart-abstracted measure we are finalizing in this final rule is: Severe sepsis and septic shock: management bundle (NQF #0500).

Because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe no additional information collection will be required from the hospitals for the four finalized claims based measures. However, we believe that the chart-abstracted measure will cause some additional burden.

In addition, there will be a reduction in the burden as a result of removing 10 total measures in this rule.245 We note that we are not removing SCIP-Inf-4 Cardiac Surgery Patients with Controlled 6 a.m. Postoperative Blood Glucose as proposed. The measures we are removing are: (1) AMI–1 Aspirin at Arrival; (2) AMI–3 ACEI/ARB for left ventricular systolic dysfunction; (3) AMI–5 Beta-blocker prescribed at discharge; (4) AMI–8a Timing of Receipt of Primary Percutaneous Coronary Intervention (PCI); (5) HF–2 Evaluation of left ventricular systolic function; (6) SCIP-Inf-1 Prophylactic antibiotic received within 1 hour prior to surgical incision; (7) SCIP-Inf-2 Prophylactic antibiotic selection for surgical patients; (8) SCIP-Inf-3 Prophylactic antibiotics discontinued within 24 hours after surgery end time (48 hours for cardiac surgery); (9) SCIP-Inf-6 Appropriate hair removal; (10) SCIP-Inf-9 Postoperative urinary catheter removal on post-operative day 1 or 2 with day of surgery being day zero; (11) SCIP–VTE–2: Surgery patients who received appropriate VTE prophylaxis within 24 hours pre/post-surgery; (12) SCIP Cardiovascular-2: Surgery Patients on a Beta Blocker prior to arrival who received a Beta Blocker during the perioperative period; (13) PN–6: Appropriate initial antibiotic selection; (14) STK–2 Antithrombotic therapy for ischemic stroke; (15) STK–3 Anticoagulation therapy for Afib/flutter; (16) STK–5 Antithrombotic therapy by the end of hospital day 2; (17) STK–10 Assessed for rehab; and (18) VTE–4 Patients receiving un-fractionated Heparin with doses/labs monitored by protocol, and (19) one structural measure: Participation in a systematic database for cardiac surgery.

The numbers included in our finalized policy more accurately reflect the burden associated with the Hospital IQR Program than the estimates provided in our proposal. In the FY 2014 IPPS/LTCH PPS final rule, we estimated that the burden for the FY 2016 payment determination was 1,775 hours annually per hospital and 5.86 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program (78 FR 50956). These estimates (at 78 FR 50956 for chart-abstracted measures) were based on the projected numbers of records to be abstracted for VTE and stroke. Using actual data from the Hospital IQR Program’s clinical data warehouse, we...
have since revised these estimates downward to 1,309 hours per hospital and 4.3 million hours across all hospitals.

We believe that there will be a reduction in burden for hospitals due to 14 of the 19 chart-abstracted measures that we are removing: (1) AMI–8a Timing of Receipt of Primary Percutaneous Coronary Intervention (PCI); (2) HF–2 Evaluation of left ventricular systolic function; (3) SCIP-Inf-1 Prophylactic antibiotic received within 1 hour prior to surgical incision; (4) SCIP-Inf-2 Prophylactic antibiotic selection for surgical patients; (5) SCIP-Inf-3 Prophylactic antibiotics discontinued within 24 hours after surgery end time (48 hours for cardiac surgery); (6) SCIP-Inf-9 Postoperative urinary catheter removal on postoperative day 1 or 2 with day of surgery being day zero; (7) SCIP–VTE–2: Surgery patients who received appropriate VTE prophylaxis within 24 hours pre/post-surgery; (8) SCIP Cardiac–Vascular–2: Surgery Patients on a Beta Blocker prior to arrival who received a Beta Blocker during the perioperative period; (9) PN–6 Appropriate initial antibiotic selection; (10) STK–2 Antithrombotic therapy for ischemic stroke; (11) STK–3 Anticoagulation therapy for Afib/flutter; (12) STK–5 Antithrombotic therapy by the end of hospital day 2; (13) STK–10 Assessed for rehab; and (14) VTE–4 Patients receiving un-fractionated Heparin with doses/labs monitored by protocol.

The remaining four chart-abstracted measures that we are removing have been previously suspended from the program; therefore, their removal will not impact the reporting burden. The structural measure we are removing, Participation in a Systematic Database for Cardiac Surgery (NQF #0113), has an estimated burden of nearly zero hours; therefore, its removal will not result in a significant burden reduction.

Therefore, for the FY 2017 payment determination, we estimate a net reduction in burden accounting for both the addition of one chart-abstracted measure, severe sepsis and septic shock: Management bundle (NQF #0500), as well as our removal of 19 measures (both chart-abstracted and structural) to be 160 hours annually per hospital. We estimate the total reduction in burden for chart abstraction and structural measures for the approximately 3,300 Hospital IQR Program-participating hospitals to be 0.5 million hours (please note the stated number appears to be off by 0.1 due to rounding).

In addition, we intend to enroll up to 100 hospitals in a voluntary large scale test of validation for electronic clinical quality measures for the Hospital IQR Program. We estimate a total burden of 16 hours for each participating hospital. We intend to reimburse hospitals $26 per hour for up to 16 hours for their participation in this test. Details regarding this reimbursement rate are as follows:

- The labor performed can be accomplished by medical records and health information technology staff, with a mean hourly wage in general medical and surgical hospitals of $19.24,246
- Applying OMB Circular A–76, we assumed full fringe benefits of 36.25 percent, for a fully burdened labor rate of $26.25 per hour, that accounts for the full cost of labor. The circular is available at

http://www.whitehouse.gov/sites/default/files/omb/assets/omb/circulars/a076/a076_incl_tech_correction.pdf.

For the FY 2017 payment determination, we are encouraging hospitals to voluntarily submit up to 16 measures electronically for the Hospital IQR Program in a manner that would permit eligible hospitals to partially align Hospital IQR Program requirements with some requirements under the Medicare EHR Incentive Program. We estimate that the total burden associated with the electronic clinical quality measure reporting option will be similar to the burden outlined for hospitals in the EHR Incentive Program Stage 2 final rule (77 FR 53968 through 54162). As described above for participation in the test of validation for electronic clinical quality metrics in the Hospital IQR Program, we believe an individual with commensurate skills will submit electronic clinical quality measures on behalf of the hospital at a rate of approximately $26.00 per hour. Therefore, we believe it will cost a hospital approximately $277.33 ($26.00 x 10 hours and 40 minutes) to report 16 measures. This estimate is based on up to 600 hospitals completing HAI Templates averaging 18 hours per quarter for 4 quarters. This burden is 10,800 hours more than that for the FY 2016 payment determination as finalized in the FY 2014 IPPPS/LTCH PPS final rule (78 FR 50822 through 50825) of 32,400 hours, because the HAI measures are to be validated for 4 quarters instead of 3 quarters. However, this change for the FY 2017 payment determination was previously finalized (78 FR 50822 through 50825).

Using the estimates above, we estimate an overall reduction in burden from the FY 2016 estimate. We anticipate the reduction in total burden for hospitals to be 160 hours per hospital for the FY 2017 payment determination, as compared to FY 2016, for reporting chart-abstracted and structural measures, completing forms, reviewing reports, and submitting validation templates across all hospitals. This burden estimate includes new, readopted, and previously finalized measures. The estimate excludes the burden associated with the NSNH and HCAHPS measures, both of which are submitted under separate information collection requests and are approved under separate OMB control numbers.

The table below describes the hospital burden associated with the previously finalized Hospital IQR Program requirements, and shows how they changed based upon the policies finalized for the FY 2017 payment determination. The numbers included in our finalized policy more accurately reflect the burden associated with the Hospital IQR Program over the estimates provided in our proposal. The burden estimates in this final rule are the estimates for which we are requesting OMB approval.

### TABLE: Burden Impact of Hospital IQR Program Requirements

<table>

* This number is unknown at the time this table was prepared because final submission deadlines have not passed. Because the burden associated with participation is negative, we conservatively assumed the number of participating hospitals to be 0 in summary calculations included in the narrative.

** Maximum numbers were used in summary calculations included in the narrative.

7. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in section IX.B. of the preamble of the proposed rule and this final rule, section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year.

In this final rule, we are finalizing our proposal to adopt one new clinical effectiveness measure (External Beam Radiotherapy for Bone Metastases) for the FY 2017 program and subsequent years, which will increase the total number of measures for the FY 2017 PCHQR measure set to 19 measures.

We also are finalizing an update to the specifications for the five previously finalized clinical process/oncology care measures to require PCHs to report all-patient data for each of these measures, and adopting a new sampling methodology that PCHs can use to report these measures, as well as the External Beam Radiotherapy measure.

We believe that requiring PCHs to report the new External Beam Radiotherapy for Bone Metastases measure, as well as to use the sampling methodology, will not be burdensome. At least seven PCHs are currently reporting quality measure data (including population and sampling data for HCAHPS measures) on a voluntary basis to CMS. PCHs may also have experience submitting quality and population/sample size data to other entities, such as State survey agencies and The Joint Commission. As a result, we believe that the new reporting requirements, if we adopt them, will not significantly impact PCHs.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), we included burden estimates for the FY 2015 and FY 2016 programs. We noted in that final rule that those estimates represented a worst case scenario of estimated burden. We are providing a revised burden estimate for FY 2016 and a burden estimate for FY 2017 that take into account our finalized sampling methodologies for all applicable measures. The anticipated burden of burden on PCHs for the FY 2016 program and the anticipated new burden on PCHs for the FY 2017 program consist of the following: New measure training and measure maintenance, and the time required for collection, aggregation, and submission of data for all measures.

We estimate that 11 PCHs will submit quality measure data on approximately 37,596 cancer cases annually beginning with FY 2016 and FY 2017. In addition, we estimate that PCHs will spend 0.5 hours on chart abstraction and data submission per case/event, 0.5 hours on training per each new measure, 0.25 hours on measure maintenance per each existing measure, and a maximum of 5 hours summarizing and reporting population and sample size counts for the six SCIP measures and five oncology care measures.

We are reducing the burden estimates for the HCAHPS Survey, the six SCIP measures, and the five clinical process/oncology care measures in this final rule to take into consideration the sampling that PCHs may use for these measures. As a result, we estimate that the reporting burden on each PCH for the FY 2016 program will be 18,758 hours. We estimate that the reporting burden on each PCH for FY 2017 would increase by 50 hours because PCHs will be required to report an additional quality measure (External Beam Radiotherapy for Bone Metastases).

Therefore, we estimate the overall burden for all of the FY 2017 PCHQR Program requirements to be 18,808 hours per PCH. This FY 2017 estimate, which includes an additional finalized measure, represents a decrease of 33,122 hours per PCH from the FY 2016 burden estimate of 51,930 hours that we published in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), or an overall decrease of 64 percent in the number of hours for each PCH. Coupled with our estimated salary costs, this revised estimate results in a net reduction in estimated cost of $472,362 per PCH. We believe that this burden estimate more accurately captures the hour and cost impact on PCHs participating in the PCHQR Program and reflects our efforts to minimize the burden impact through the proposed adoption of a new sampling methodology that PCHs can use to report the clinical process/oncology care measures.

However, we note that these estimates are based on PCH reporting of Medicare data only. We intend to update the burden estimate to more accurately reflect the burden on PCHs for reporting all-patient data in future years.

Comment: One commenter supported CMS’ efforts to reduce the reporting burden of the PCHQR Program but raised concern about the variation in estimated burden between the Hospital IQR Program and PCHQR Program, and the possibility that the large variation in PCH patient volume may leave some PCHs with a greater burden than is estimated on average. The commenter...
also noted that the burden estimates provided in the FY 2015 IPPS/LTCH PPPS proposed rule do not consider the need for PCHs to build a reporting infrastructure, report non-Medicare data, or make efforts to ensure consistent application of measure specifications across PCHs.

Response: We thank the commenter for their support and will consider this feedback for future years. We incorporated a sampling approach for non-Medicare patients, abstraction, training, computer edits, and labor hours in our burden estimates. We also note that we will revise our estimates to account for the burden associated with reporting patient level data for the six SCIP measures in future years, once we have data on which submission option PCHs select for SCIP data submission. Finally, in response to the commenter’s concern that our burden estimates do not account for ensuring consistent application of measure specifications across PCHs, we note that it is our role to ensure that PCHs report each measure consistent with the measure specifications and, therefore, this task does not affect PCH burden.

We will submit a revision of the information collection request currently approved under OMB 0938–1175 to account for the aforementioned changes to the PCHQR Program.

8. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IV.I. of the preamble of the proposed rule and of this final rule, we discuss requirements for the Hospital VBP Program. Specifically, in this final rule, we are adopting three new measures for the FY 2017 Hospital VBP Program: (1) Methicillin-Resistant Staphylococcus aureus (MRSA) Bacteremia; (2) Clostridium difficile; and (3) PC–01: Elective Delivery Prior to 39 Completed Weeks Gestation. The first two measures are measures of healthcare-associated infections reported via the CDC’s National Healthcare Safety Network (NHSN) and the latter is a chart-abstracted measure.

We also are adopting Hospital-level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and Total Knee Arthroplasty (TKA) for the FY 2019 Hospital VBP Program. As provided for in section 1886(o)(2)(A) of the Act, all of these additional measures are required for the Hospital IQR Program. Therefore, their inclusion in the Hospital VBP Program does not result in any additional burden because the Hospital VBP Program uses data that are required for the Hospital IQR Program.

9. ICRs for the Long-Term Care Hospital Quality Reporting (LTCHQR) Program

As discussed in sections IX.C.3. through IX.C.5. of the preamble of the proposed rule and of this final rule, for the LTCHQR Program, for the FY 2015 payment determination and subsequent years, we are retaining the following three quality measures: (1) National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138); (2) National Healthcare Safety Network (NHSN) Central Line Catheter-Associated Blood Stream Infection Event (CLABSI) Outcome Measure (NQF #0139); and (3) Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678). For the FY 2016 payment determination and subsequent years, we are retaining the following two measures in addition to the measures finalized for previous years: (1) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680); and (2) Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431). For the FY 2017 payment determination and subsequent years, we are retaining the following three measures in addition to the measures finalized for previous years: (1) National Health Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-resistant Staphylococcus aureus (MRSA) Bacteremia Outcome Measure (NQF #1716); (2) National Health Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Clostridium difficile Infection (CDI) Outcome Measure (NQF #1717); and (3) All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals. For the FY 2018 payment determination and subsequent years, we are retaining the following measure in addition to the measures finalized for previous years: Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).

As discussed in section IX.C.7. of the preamble of the proposed rule and this final rule, we are finalizing three new quality measures for inclusion in the LTCHQR Program for the FY 2018 payment determination and subsequent years: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; (2) Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support; and (3) National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.

Six of the previously adopted and newly finalized measures will be collected via the NHSN. The NHSN is a secure, Internet-based healthcare-associated infection (HAI) tracking system maintained and managed by the CDC. The NHSN enables health care facilities to collect and use data about HAIs, adherence to clinical practices known to prevent HAIs, and other adverse events within their organizations. NHSN data collection occurs via a Web-based tool hosted by the CDC and provided free of charge to facilities. We believe that any burden increase related to complying with the submission of the proposed NHSN VAE Outcome measure would be minimal because LTCHs have already completed the initial setup of the NHSN submission process and have become familiar with reporting data in the NHSN system due to the requirement to report CAUTI and CLABSI measures. While this requirement is subject to the PRA, we believe that the associated burden is approved under OMB control number 0920–0666, for those measures previously finalized, with an expiration date of November 31, 2016.

The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals is a Medicare claims-based measure. Because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe that this measure will not add any additional reporting burden for LTCHs.

The remaining five previously adopted and newly finalized measures will be collected utilizing the LTCH CARE Data Set. The LTCH CARE Data Set, in its current form, has been approved under OMB control number 0938–1175. Additions will need to be made to the LTCH CARE Data Set in order to allow for collection of the two functional status measures we are finalizing in section IX.C.7.a. of the preamble of this final rule: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; and (2) Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requires Ventilator Support. The revised data collection will be required to OMB for approval. While this requirement is subject to the PRA, we believe the
associated burden is either approved under OMB control number 0938–1163, for those measures previously finalized, with an expiration date of June 30, 2016, or is contained in this updated information collection request section.

Assuring data accuracy is vital to public reporting programs. However, as discussed in section IX.C.11. of the preamble of this final rule, we are not finalizing our proposal, for the FY 2016 payment determination and subsequent years, to validate data submitted to CMS on the LTCH CARE Data Set at this time.

We discuss and respond to public comments we received on these information collection requirements in the section IX.C. of the preamble of this final rule.

10. Electronic Health Record (EHR) Incentive Program and Meaningful Use (MU)

In section IX.D. of the preamble of the proposed rule and of this final rule, we discuss our proposal to align the Medicare EHR Incentive Program reporting and submission timelines for clinical quality measures for eligible hospitals and CAHs with the Hospital IQR Program's reporting and submission timelines. In addition, we provide guidance and clarification of certain policies for reporting zero denominators on clinical quality measures and our policy on case threshold exemptions. Because these proposals for data collection would align with the reporting requirements in place for the Hospital IQR Program, we do not believe there is any additional burden for this collection of information.

11. ICR Regarding Revision of Regulations Governing Use and Release of Medicare Advantage (MA) Risk Adjustment Data (§ 422.310(f))

Medicare Advantage (MA) organizations are required to submit risk adjustment data to CMS organizations under current authority at § 422.310(b) through (d). The changes we are finalizing regarding the use and release of MA risk adjustment data under section X. of the preamble of this final rule do not change the requirements on MA organizations for submission of information to CMS, which have been in place for several years. Therefore, these finalized changes do not impose new information collection requirements on MA organizations. Consequently, because there are no new information collection requirements in our proposal, the proposal does not require a review from OMB under the authority of the Paperwork Reduction Act of 1995.

G. Waiver of 60-Day Delay in the Effective Date

We ordinarily provide a 60-day delay in the effective date of the provisions of a rule in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553(d), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in the effective date if the Secretary finds, for good cause, that the delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued. 5 U.S.C. 553(d)(3); 5 U.S.C. 801(2).

The Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long Term Care Hospital Prospective Payment System are fiscal year payment systems, and we typically issue the final rule by August 1 of each year to both comply with the requirement to annually review and update these payment systems and ensure that the payment policies for these systems are effective, following the required 60-day delay in the effective date, on October 1, the first day of the fiscal year to which the policies are intended to apply. If the agency finds, for good cause, that a 60-day delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued, the agency may specify an earlier effective date. The timeframes for developing annual rules are extremely compressed and processing issues complicated this year's rule. We believe it would be contrary to the public interest to delay the effective date of the payment system portions of this rule. We therefore specify that those portions of the rule will be effective October 1.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping, rural areas, X-rays.

42 CFR Part 412

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 488

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons stated in the preamble of this final rule, the Centers for Medicare & Medicaid Services is confirming, as final, interim rules published on October 3, 2013 (78 FR 61191) and March 18, 2014 (79 FR 15022) and is further amending 42 CFR Chapter IV as set forth below:

Title 42—Public Health

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

Subpart R—Provider Reimbursement Determinations and Appeals

1. The authority citation for Subpart R continues to read as follows:

Authority: Secs. 205, 1102, 1814(b), 1815(a), 1833, 1861(v), 1871, 1872, 1878, and 1886 of the Social Security Act (42 U.S.C. 405, 1302, 1395f(b), 1395g(a), 1395i, 1395hh, 1395ii, 1395oo, and 1395ww).

2. Section 405.1811 is amended by—

a. Revising paragraphs (a) introductory text and (a)(3).

b. Revising paragraph (b) introductory text.

c. Redesignating paragraph (c) as paragraph (e).

d. Adding new paragraphs (c) and (d).

e. Revising newly redesignated paragraph (e).

The revisions and additions read as follows:

§ 405.1811 Right to contractor hearing; contents of, and adding issues to, hearing request.

(a) Right to hearing on final contractor determination. A provider (but no other
individual, entity, or party) has a right to a contractor hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

* * * * *

(3) Unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider’s hearing request is no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination.

(b) Contents of request for a contractor hearing on final contractor determination. The provider’s request for a contractor hearing under paragraph (a) of this section must be submitted in writing to the contractor, and the request must include the elements described in paragraphs (b)(1) through (b)(3) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (b)(1), (b)(2), or (b)(3) of this section, the contractor hearing officer may dismiss with prejudice the appeal or take any other remedial action he or she considers appropriate.

* * * * *

(c) Right to hearing based on untimely contractor determination.

Notwithstanding the provisions of paragraph (a) of this section, a provider (but no other individual, entity, or party) has a right to a contractor hearing, as a single provider appeal, for a cost reporting period if—

(1) A final contractor determination for the provider’s cost reporting period is not issued (through no fault of the provider) within 12 months after the date of receipt by the contractor of the provider’s perfected cost report or amended cost report (as specified in § 413.24(f) of this chapter). The date of receipt by the contractor of the provider’s perfected cost report or amended cost report is presumed to be the date the contractor stamped “Received” on such cost report unless it is shown by a preponderance of the evidence that the contractor received the cost report on an earlier date.

(2) Unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider’s hearing request is no later than 180 days after the expiration of the 12 month period for issuance of the final contractor determination (as determined in accordance with paragraph (c)(1) of this section); and

(3) The amount in controversy (as determined in accordance with § 405.1839) is at least $1,000 but less than $10,000.

(d) Contents of request for a contractor hearing based on untimely contractor determination. The provider’s request for a contractor hearing under paragraph (c) of this section must be submitted in writing to the contractor, and the request must include the elements described in paragraphs (d)(1) through (d)(3) of this section. If the provider submits a hearing request that does not meet the requirements of paragraphs (d)(1), (d)(2), or (d)(3) of this section, the contractor hearing officer may dismiss with prejudice the appeal or take any other remedial action he or she considers appropriate.

(1) A demonstration that the provider satisfies the requirements for a contractor hearing as specified in paragraph (c) of this section.

(2) An explanation (for each specific item at issue) of the following:

(i) Why the provider believes Medicare payment is incorrect for each disputed item (or, where applicable, why the provider is unable to determine whether Medicare payment is correct because it does not have access to underlying information concerning the calculation of Medicare payment).

(ii) How and why the provider believes Medicare payment must be determined differently for each disputed item.

(iii) If the provider self-disallows a specific item, a description of the nature and amount of each self-disallowed item and the reimbursement or payment sought for the item.

(3) A copy of documentary evidence the provider considers necessary to satisfy the hearing request requirements of paragraphs (d)(1) and (d)(2) of this section.

(e) Adding issues to the hearing request. After filing a hearing request in accordance with paragraphs (a) and (b), or paragraphs (c) and (d), of this section, a provider may add specific Medicare payment issues to the original hearing request by submitting a written request to the contractor hearing officer, only if—

(1) The request to add issues complies with the requirements of paragraphs (a) and (b), or paragraphs (c) and (d), of this section as to each new issue.

(2) The specific matters at issue raised in the initial hearing request and the matters identified in subsequent requests to add issues, when combined, satisfy the amount in controversy requirements of paragraph (a)(2) or paragraph (c)(3) of this section.

(3) The contractor hearing officer receives the provider’s request to add issues no later than 60 days after the expiration of the applicable 180-day period prescribed in paragraph (a)(3) or paragraph (c)(2) of this section.

§ 405.1835 Right to Board hearing; contents of, and adding issues to, hearing request.

(a) Right to hearing on final contractor determination. A provider (but no other individual, entity, or party) has a right to a Board hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

* * * * *

(3) Unless the provider qualifies for a good cause extension under § 405.1836, the date of receipt by the Board of the provider’s hearing request is no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination.

(b) Contents of request for a Board hearing on final contractor determination. The provider’s request for a Board hearing under paragraph (a) of this section must be submitted in writing to the Board, and the request must include the elements described in paragraphs (b)(1) through (b)(4) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (b)(1), (b)(2), or (b)(3) of this section, the Board may dismiss with prejudice the appeal or take any other remedial action it considers appropriate.

* * * * *

(c) Right to hearing based on untimely contractor determination.

Notwithstanding the provisions of paragraph (a) of this section, a provider (but no other individual, entity, or party) has a right to a Board hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

§ 405.1835 Right to Board hearing; contents of, and adding issues to, hearing request.

(3) Unless the provider qualifies for a good cause extension under § 405.1836, the date of receipt by the Board of the provider’s hearing request is no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination.

(b) Contents of request for a Board hearing on final contractor determination. The provider’s request for a Board hearing under paragraph (a) of this section must be submitted in writing to the Board, and the request must include the elements described in paragraphs (b)(1) through (b)(4) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (b)(1), (b)(2), or (b)(3) of this section, the Board may dismiss with prejudice the appeal or take any other remedial action it considers appropriate.

* * * * *

(c) Right to hearing based on untimely contractor determination.

Notwithstanding the provisions of paragraph (a) of this section, a provider (but no other individual, entity, or party) has a right to a Board hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

(1) A final contractor determination for the provider’s cost reporting period is not issued (through no fault of the provider) within 12 months after the date of receipt by the contractor of the provider’s perfected cost report or amended cost report (as specified in § 413.24(f) of this chapter). The date of receipt by the contractor of the provider’s perfected cost report or amended cost report is presumed to be the date the contractor stamped “Received” on such cost report unless it is shown by a preponderance of the evidence that the contractor received the cost report on an earlier date.

(2) Unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider’s hearing request is no later than 180 days after the expiration of the 12 month period for issuance of the final contractor determination (as determined in accordance with paragraph (c)(1) of this section); and

(3) The amount in controversy (as determined in accordance with § 405.1839) is at least $1,000 but less than $10,000.
provider’s perfected cost report or amended cost report is presumed to be the date the contractor stamped “Received” on such cost report unless it is shown by a preponderance of the evidence that the contractor received the cost report on an earlier date.

(2) Unless the provider qualifies for a good cause extension under §405.1836, the date of receipt by the Board of the provider’s hearing request is no later than 180 days after the expiration of the 12 month period for issuance of the final contractor determination (as determined in accordance with paragraph (c)(1) of this section); and

(3) The amount in controversy (as determined in accordance with §405.1839) is $10,000 or more.

(d) Contents of request for a Board hearing based on untimely contractor determination. The provider’s request for a Board hearing under paragraph (c) of this section must be submitted in writing to the Board, and the request must include the elements described in paragraphs (d)(1) through (d)(4) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (d)(1), (d)(2), or (d)(3) of this section, the Board may dismiss with prejudice the appeal or take any other remedial action it considers appropriate.

(1) A demonstration that the provider satisfies the requirements for a Board hearing as specified in paragraph (c) of this section.

(2) An explanation (for each specific item at issue) of the following:

(i) Why the provider believes Medicare payment is incorrect for each disputed item (or, where applicable, why the provider is unable to determine whether Medicare payment is correct because it does not have access to underlying information concerning the calculation of Medicare payment).

(ii) How and why the provider believes Medicare payment must be determined differently for each disputed item.

(iii) If the provider self-disallows a specific item, a description of the nature and amount of each self-disallowed item and the reimbursement or payment sought for the item.

(3) A copy of any documentary evidence the provider considers necessary to satisfy the hearing request requirements of paragraphs (d)(1) and (d)(2) of this section.

(4) With respect to a provider under common ownership or control, the name and address of its parent corporation, and a statement that meets all of the requirements of paragraphs (b)(4)(i) and (b)(4)(ii) of this section.

(e) Adding issues to the hearing request. After filing a hearing request in accordance with paragraphs (a) and (b), or paragraphs (c) and (d), of this section, a provider may add specific Medicare payment issues to the original hearing request by submitting a written request to the Board only if—

(1) The request to add issues complies with the requirements of paragraphs (a) and (b), or paragraphs (c) and (d), of this section as to each new issue.

(2) The specific matters at issue raised in the initial hearing request and the matters identified in subsequent requests to add issues, when combined, satisfy the amount in controversy requirements of paragraph (a)(2) or paragraph (c)(3) of this section.

(3) The Board receives the provider’s request to add issues no later than 60 days after the expiration of the applicable 180-day period prescribed in paragraph (a)(3) or paragraph (c)(2), of this section.

Nomenclature Changes

Subpart R [Amended]

■ 4. Amend Subpart R by removing the term or phrase in the first column and replace it with the term or phrase in the second column:

Remove Add
an intermediary a contractor
intermediary contractor
intermediaries’ contractors’
intermediary’s contractor’s

Subpart X—Rural Health Clinic and Federally Qualified Health Center Services

■ 5. The authority citation for Subpart X continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 6. Section 405.2468 is amended by revising paragraph (f)(1) to read as follows:

§405.2468 Allowable costs.

* * * * *

(f) * * *

(1) Effective for portions of cost reporting periods occurring on or after January 1, 1999, if an RHC or an FQHC incurs “all or substantially all” of the costs for the training program in the nonhospital setting, the requirements of paragraphs (e) and (e)(1) through (e)(5) of this section, or a long-term care hospital satellite facility that meets the requirements of §412.22(h), if the long-term care hospital satellite facility meets the following criteria on or before December 29, 2007, or prior to April 1, 2014, as applicable:

* * * * *

(B) * * *

(2)(i) Has expended prior to December 29, 2007, at least 10 percent (or, if less, $2.5 million) of the estimated cost of the
Qualifying counties are determined based upon OMB standards, using the most recent OMB standards for delineating statistical areas adopted by CMS.

(1) The applicable percentage change for updating the standardized amount for all hospitals in all areas is—

(i) For fiscal year 2005 through fiscal year 2009, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section; and

(ii) For fiscal year 2010, for discharges—

(A) On or after October 1, 2009 and before April 1, 2010, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section; and

(B) On or after April 1, 2010 and before October 1, 2010, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less 0.25 percentage point.

(iii) For fiscal year 2011, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this subchapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less 0.25 percentage point.

(iv) For fiscal years 2012 and 2013, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less 0.25 percentage point.

For years 2014 through 2015, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.3 percentage point.

For fiscal year 2015, the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (d)(3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.2 percentage point.

(ii) Any reduction pursuant to this paragraph (d)(2) will apply only to the fiscal year involved and will not be taken into account in computing the applicable percentage change for a subsequent fiscal year.

(3) Beginning fiscal year 2015, in the case of a “subsection (d) hospital,” as defined under section 1886(d)(1)(B) of the Act, that is not a meaningful electronic health record (EHR) user as defined in Part 495 of this chapter for the applicable EHR reporting period and does not receive an exception, three-fourths of the percentage increase in the market basket index (as defined in §413.40(a)(3) of this chapter) for prospective payment hospitals is reduced—

(b) * * *

For discharges—

(i) For FY 2005 through FY 2010 and the portion of FY 2015 beginning on April 1, 2015, and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital’s most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this section) from the nearest “subsection (d)” (section 1886(d) of the Act) hospital.

(ii) For FY 2011 through FY 2014, and the portion of FY 2015 before April 1, 2015, a hospital must have fewer than 1,600 Medicare discharges, as defined in paragraph (a) of this section, during the fiscal year, based on the hospital’s Medicare discharges from the most recently available MedPAR data as determined by CMS, and be located more than 15 road miles, as defined in paragraph (a) of this section, from the nearest “subsection (d)” (section 1886(d) of the Act) hospital.

* * * * *
§ 412.102 Special treatment: Hospitals located in areas that are changing from urban to rural as a result of a geographic redesignation.

An urban hospital that was part of an MSA, but was redesignated as rural as a result of the most recent OMB standards for delineating statistical areas adopted by CMS, may receive an adjustment to its rural Federal payment amount for operating costs for 2 successive fiscal years as provided in paragraphs (a) and (b) of this section.

(1) Effective on or after October 1, 1983 and before October 1, 2014, if a hospital’s status continues to be rural as a result of geographic redesignation, its rural average standardized amount and disproportionate share payments are adjusted on the basis of an additional amount that equals two-thirds of the difference between the urban standardized amount and disproportionate share payments applicable to the hospital before its geographic redesignation and the rural standardized amount and disproportionate share payments otherwise applicable to the Federal fiscal year for which the adjustment is made.

(2) Effective on or after October 1, 2014, if a hospital’s status continues to be rural as a result of geographic redesignation, its disproportionate share payments are adjusted on the basis of an additional amount that equals one-third of the difference between the urban standardized amount and disproportionate share payments applicable to the hospital before its geographic redesignation and the rural standardized amount and disproportionate share payments otherwise applicable to the Federal fiscal year for which the adjustment is made.

§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.

(a) * * *

(6) For any period on or after October 1, 2014, a CAH in a county that was not in an urban area as defined by the Office of Management and Budget (OMB), but was included in an urban area as a result of the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, may be reclassified as being located in a rural area for purposes of meeting the rural location requirement at § 485.610(b) of this chapter for a period of 2 years, beginning with the date of the implementation of the new labor market area delineations, if it meets any of the requirements under paragraph (a)(1), (a)(2), or (a)(3) of this section.

* * * * *

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

(a) * * *

(1) * * *

(ii)(A) For new programs started prior to October 1, 2012, the exception for new programs described in paragraph (f)(1)(vii) of this section applies to each new program individually for which the full-time equivalent cap may be adjusted based on the period of years equal to the minimum accredited length of each new program.

(b) For new programs started on or after October 1, 2012, the exception for new programs described in paragraph (f)(1)(vii) of this section applies to each new program individually during the cost reporting periods prior to the beginning of the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the first new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(o)(1) of this chapter, and prior to the beginning of the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(o)(3) of this chapter.

* * * * *

(f)(1)(iv) * * *

(iv)(D) A rural hospital redesignated as urban after September 30, 2004, as a result of the most recent census data and implementation of the new labor market area definitions announced by OMB on June 6, 2003, may retain the increases to its full-time equivalent resident cap that it received under paragraphs (f)(1)(iv)(A) and (f)(1)(vii) of this section while it was located in a rural area. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital may retain any existing increases to its FTE resident cap that it had received prior to when the redesignation became effective. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital...
may receive an increase to its FTE resident cap for a new program, in accordance with paragraph (e) of this section, if it received a letter of accreditation for the new program and/or started training residents in the new program prior to the redesignation becoming effective.

(v)(A) For a hospital’s cost reporting periods beginning on or after October 1, 1997, and before October 1, 1998, the total number of full-time equivalent residents for payment purposes is equal to the average of the actual full-time equivalent resident counts (subject to the requirements listed in paragraphs (f)(1)(ii)(C) and (f)(1)(iv) of this section) for that cost reporting period and the preceding cost reporting period.

(B) For a hospital’s cost reporting periods beginning on or after October 1, 1998, the total number of full-time equivalent residents for payment purposes is equal to the average of the actual full-time equivalent resident count (subject to the requirements set forth in paragraphs (f)(1)(ii)(C) and (f)(1)(iv) of this section) for that cost reporting period and the preceding two cost reporting periods.

(C) For new programs started prior to October 1, 2012, if a hospital qualified for an adjustment to the limit established under paragraph (f)(1)(iv) of this section for new medical residency programs created under paragraph (f)(1)(vii) of this section, the count of residents participating in new medical residency training programs above the number included in the hospital’s full-time equivalent count for the cost reporting period ending during calendar year 1996 is added after applying the averaging rules in paragraph (f)(1)(v)(B) of this section for a period of years.

Residents participating in new medical residency training programs are included in the hospital’s full-time equivalent count before applying the averaging rules after the period of years has expired. For purposes of this paragraph, for each new program started, the period of years equals the minimum accredited length for each new program. The period of years for each new program begins when the first resident begins training in each new program.

(D) For new programs started on or after October 1, 2012, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e) of this chapter, full-time equivalent residents participating in new medical residency training programs are excluded from the hospital’s full-time equivalent count before applying the averaging rules during the cost reporting periods prior to the beginning of the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of each new program started for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(1) of this chapter, and prior to the beginning of the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of each individual new program started, for hospitals which for the which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(3) of this chapter. Beginning with the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the first new program started for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(1) of this chapter, and beginning with the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of each individual new program started for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(3) of this chapter, full-time equivalent residents participating in new medical residency training programs are included in the hospital’s full-time equivalent count before applying the averaging rules in paragraph (f)(1)(v)(B) of this section.

(E) Subject to the provisions of paragraph (f)(1)(ix) of this section, full-time equivalent residents that are displaced by the closure of either another hospital or another hospital’s program are added to the full-time equivalent count after applying the averaging rules in paragraph (f)(1)(v)(B) of this section for the receiving hospital for the duration of time that the displaced residents are training at the receiving hospital.

(F) Subject to the provisions of paragraph (f)(1)(x) of this section, effective for cost reporting periods beginning on or after April 1, 2000, full-time equivalent residents at an urban hospital in a rural track program are included in the urban hospital’s rolling average calculation described in this paragraph (f)(1)(v)(B).

14. Section 412.106 is amended by revising paragraph (g)(1)(iii)(C) to read as follows:

§412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *

(g) * * *

(1) * * * *

(iii) * * *

(C) For fiscal year 2014 and for fiscal year 2015, CMS will base its estimates of the amount of hospital uncompensated care on the most recent available data on utilization for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section.

* * * * *

§412.108 [Amended]

15. In §412.108, paragraph (a)(1) introductory text and paragraph (c)(2)(iii) introductory text, remove the date “April 1, 2014” and add in its place the date “April 1, 2015”.

16. Section 412.140 is amended by revising paragraph (c)(2) to read as follows:

§412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(c) * * *

(2) Exception. Upon request by a hospital, CMS may grant an extension or exemption of one or more data submission deadlines in the event of extraordinary circumstances beyond the control of the hospital. Specific requirements for submission of a request for an extension or exemption are available on QualityNet.org.

* * * * *

17. Section 412.152 is amended by revising the definition of “Applicable hospital” to read as follows:

§412.152 Definitions for the Hospital Readmissions Reduction Program.

* * * * *

Applicable hospital is a hospital described in section 1886(d)(1)(B) of the Act.

* * * * *

§412.154 [Amended]

18. Section 412.154 is amended by removing and reserving paragraph (d).

19. Section 412.160 is amended by revising the definitions of “Base operating DRG payment amount” and “Performance standards” to read as follows:

§412.160 Definitions for the Hospital Value-Based Purchasing (VBP) Program.

* * * * *

Base operating DRG payment amount means the following:

(1) With respect to a subsection (d) hospital (as defined in section 1886(d)(1)(B) of the Act), the wageadjusted DRG operating payment plus
any applicable new technology add-on payments under subpart F of this part. This amount is determined without regard to any payment adjustments under the Hospital Readmissions Reduction Program, as specified under § 412.154. This amount does not include any additional payments for indirect medical education under § 412.105, the treatment of a disproportionate share of low-income patients under § 412.106, outliers under subpart F of this part, or a low volume of discharges under § 412.101.

(2) With respect to a Medicare-dependent, small rural hospital that receives payments under § 412.106(c) or a sole community hospital that receives payments under § 412.92(d), the wage-adjusted DRG operating payment plus any applicable new technology add-on payments under subpart F of this part. This amount does not include any additional payments for indirect medical education under § 412.105, the treatment of a disproportionate share of low-income patients under § 412.106, outliers under subpart F of this part, or a low volume of discharges under § 412.101. With respect to a Medicare-dependent, small rural hospital that receives payments under § 412.106(c) (for discharges occurring in FY 2013) or a sole community hospital that receives payments under § 412.92(d), this amount also does not include the difference between the hospital-specific payment rate and the Federal payment rate determined under subpart D of this part.

Performance standards are the levels of performance that hospitals must meet or exceed in order to earn points under the Hospital VBP Program, and are calculated with respect to a measure for a fiscal year no later than 60 days prior to the start of the performance period for that measure for that fiscal year. The performance standards for a measure may be updated as follows:

(1) To make a single correction to correct a calculation error, data issue, or other problem that would significantly change the performance standards; or

(2) To incorporate nonsubstantive technical updates made to the measure between the time that CMS first displays the performance standards for that measure for a fiscal year and the time that CMS calculates hospital performance on that measure at the conclusion of the performance period for that measure for a fiscal year.

§ 412.161 Applicability of the Hospital Value-Based Purchasing (VBP) Program

The Hospital VBP Program applies to hospitals, as that term is defined in § 412.160.

§ 412.172 [Amended]

21. Section 412.172 is amended by removing and reserving paragraph (c).

22. Section 412.232 is amended by revising paragraph (b)(2) to read as follows:

§ 412.232 Criteria for all hospitals in a rural county seeking urban redesignation.

* * * * *

(2) For fiscal years beginning with FY 2005, the group of hospitals must demonstrate that the county in which the hospitals are located meets the standards for redesignation to an MSA as an outlying county using the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data.

* * * * *

23. Section 412.234 is amended by revising paragraph (a)(3)(iv) to read as follows:

§ 412.234 Criteria for all hospitals in an urban county seeking redesignation to another urban area.

(a) * * *

(3) * * *

(iv) For Federal fiscal year 2008 and thereafter, hospitals located in counties that are in the same Combined Statistical Area (CSA) or Core-Based Statistical Area (CBSA) (under the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data) as the urban area to which they seek redesignation qualify as meeting the proximity requirement for redesignation.

* * * * *

24. Section 412.500 is amended by adding paragraphs (a)(4), (a)(5), and (a)(6) to read as follows:

§ 412.500 Basis and scope of subpart.

(a) * * *

(4) Section 4302(a) of Public Law 111–5, which amended sections 114(c) and (d) of Public Law 110–173 relating to several moratoria on the establishment of new long-term care hospitals and satellite facilities and on the increase in the number of beds in existing long-term care hospitals and satellite facilities under the long-term care hospital prospective payment system.

(5) Sections 3106(a) and 10312(a) of Public Law 111–148, which extended certain payment rules and moratoria under the long-term care hospital prospective payment system by further amending sections 114(c) and (d) of Public Law 110–173.

(6) Section 1206 of Public Law 113–67, which further extended certain payment rules and moratoria under the long-term care hospital prospective payment system by amending sections 114(c) and (d) of Public Law 110–173, and which:

(i) Added a new section 1886(m)(6) to the Act to establish a site neutral payment amount for long-term care hospital discharges that fail to meet the applicable criteria in cost reporting periods beginning on or after October 1, 2015; and

(ii) Requires the Secretary’s review of the payment rates and regulations governing long-term care hospitals established under section 1886(d)(1)(B)(iv)(II) of the Act and application of payment adjustments based on that review.

* * * * *

25. Section 412.521 is amended by revising paragraph (a)(2) to read as follows:

§ 412.521 Basis for payment.

(a) * * *

(2) Except as provided for in § 412.526, the amount of payment under the prospective payment system is based on the Federal payment rate established in accordance with § 412.523, including adjustments described in § 412.525, and, if applicable during a transition period, on a blend of the Federal payment rate and the cost-based reimbursement rate described in § 412.533.

* * * * *

26. Section 412.523 is amended by adding a new paragraph (c)(3)(xi) to read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xi) For long-term care hospital prospective payment system fiscal year beginning October 1, 2014, and ending September 30, 2015. The standard Federal rate for the long-term care hospital prospective payment system beginning October 1, 2014, and ending September 30, 2015, is the standard Federal rate for the previous long-term care hospital prospective payment system fiscal year updated by 2.2 percent, and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *
§ 412.525 [Amended]
■ 27. Section 412.525 is amended by removing and reserving paragraph (d)(3).
■ 28. A new § 412.526 is added to read as follows:

§ 412.526 Payment provisions for a “subclause (II)” long-term care hospital.
(a) Definition. A “subclause (II)” long-term care hospital is a hospital that qualifies as an LTCH under section 1886(d)(1)(B)(iv)(III) of the Act.
(b) Method of payment. (1) For cost reporting periods beginning on or after October 1, 2003 and before September 30, 2014, payment to a “subclause (II)” long-term care hospital is made under the prospective payment system specified in § 412.1(a)(4) and Subpart O of this part.
(2) For cost reporting periods beginning on or after October 1, 2014, payment to a “subclause (II)” long-term care hospital is made under the prospective payment system specified in § 412.1(a)(4) and under Subpart O of this part, as adjusted. The adjusted payment amount is determined based on reasonable cost, as described at § 412.526(c).
(c) Determining the adjusted payment for Medicare inpatient operating and capital-related costs under the reasonable cost-based reimbursement rules. Medicare inpatient operating costs are paid based on reasonable cost, subject to a ceiling. The ceiling is the aggregate upper limit on the amount of a hospital’s net Medicare inpatient operating costs that the program will recognize for payment purposes, as determined under paragraph (c)(1) of this section.
(1) Ceiling. For each cost reporting period, the ceiling is determined by multiplying the updated target amount, as defined in paragraph (c)(2) of this section, for that period by the number of Medicare discharges paid under this subpart during that period.
(2) Target amounts. (i) For cost reporting periods beginning during Federal fiscal year 2015, the target amount equals the hospital’s target amount determined under § 413.40(c)(4) for its cost reporting period beginning during Federal fiscal year 2000, updated by the applicable annual rate-of-increase percentages specified in § 413.40(c)(3) to the subject period.
(ii) For subsequent cost reporting periods, the target amount equals the hospital’s target amount for the previous cost reporting period updated by the applicable annual rate-of-increase percentage specified in § 413.40(c)(3) for the subject cost reporting period.
(3) Payment for inpatient operating costs. For cost reporting periods subject to this section, the hospital’s Medicare allowable net inpatient operating costs for that period (as defined at § 413.40(a)(3)) are paid on a reasonable cost basis, subject to that hospital’s ceiling (as determined under paragraph (c)(1) of this section) for that period.
(4) Payment for inpatient capital-related costs. Medicare allowable net inpatient capital costs are paid on a reasonable cost basis, in accordance with the regulations under Part 413 of this chapter.
(5) Adjustments for extraordinary circumstances—(i) General rules. (A) CMS may adjust the ceiling determined under paragraph (c)(1) of this section for one or more cost reporting periods when unusual inpatient operating costs have resulted in the hospital exceeding its ceiling imposed under this section due to extraordinary circumstances beyond the hospital’s control. These circumstances include, but are not limited to, strikes, fire, earthquakes, floods, or similar unusual occurrences with substantial cost effects.
(B) When the hospital requests an adjustment, CMS makes an adjustment only to the extent that the hospital’s operating costs are reasonable, attributable to the circumstances specified separately, identified by the hospital, and verified by the Medicare administrative contractor.
(ii) Process for adjustment requests. The provisions of §§ 413.40(e)(1) through (e)(5) of this subchapter are applicable to extraordinary circumstances adjustment requests under this section.
§ 412.532 [Removed]
■ 29. Section 412.532 is removed.
■ 30. Section 412.534 is amended by—
■ a. Revising paragraphs (c)(1) introductory text and (c)(1)(i).
■ b. Removing the year “2013” and adding in its place the year “2016” in paragraph (c)(1) and (c)(2) paragraph heading.
■ c. Revising paragraph (c)(3).
■ d. Removing the year “2013” and adding in its place the year “2016” in paragraphs (d)(1) paragraph heading, (d)(1)(i), and (d)(2) paragraph heading.
■ e. Revising paragraph (d)(3).
■ f. Removing the year “2013” and adding in its place the year “2016” in paragraphs (e)(1) paragraph heading, (e)(1)(i), and (e)(2) paragraph heading.
■ g. Revising paragraph (e)(3).
■ h. Revising paragraphs (h) introductory text, (h)(4), and (h)(5).
■ i. Removing paragraph (h)(6).
(3) For a long-term care hospital satellite facility described in § 412.22(h)(3)(i), for cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments are made under the rules at §§ 412.500 through 412.541 with no adjustment under this section.
(4) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments for a long-term care hospital satellite facility described in § 412.22(h)(3)(i) will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 75 percent.
(5) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments for a long-term care hospital satellite facility described in § 412.22(h)(3)(i) will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 75 percent.
(6) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments for a long-term care hospital satellite facility described in § 412.22(h)(3)(i) will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 75 percent.
(7) Effective date of policies in this section for certain co-located long-term care hospitals and satellite facilities of long-term care hospitals. Except as specified in paragraph (h)(4) of this section, the policies set forth in this paragraph (h) apply to Medicare patient discharges that were admitted from a hospital located in the same building or on the same campus as a long-term care hospital.
hospital described in § 412.23(e)(2)(i) that meets the criteria in § 412.22(f) and a satellite facility of a long-term care hospital as described under § 412.22(h)(3)(i) for discharges occurring in cost reporting periods beginning on or after July 1, 2007.

(4) For a long-term care hospital or a satellite facility that, as of December 29, 2007, was co-located with an entity that did not provide services payable under section 1886(d) of the Act at the off-campus location, the policies set forth in this paragraph (h) and in § 412.536 do not apply for discharges occurring in cost reporting periods beginning on or after July 1, 2007.

(5) For a long-term care hospital or a satellite facility that, as of December 29, 2007, was co-located with an entity that did not provide services payable under section 1886(d) of the Act at the off-campus location, the policies set forth in this paragraph (h) and in § 412.536 do not apply for discharges occurring in cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016.

34. Section 413.75 is amended by—

35. Section 413.75 is amended by—

36. Section 413.75 is amended by—

37. Section 413.75 is amended by—
program started, for hospitals for which the FTE may be adjusted in accordance with §413.79(e)(1), and prior to the beginning of the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started, for hospitals for which the FTE cap may be adjusted in accordance with §413.79(e)(3). Beginning with the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the first new program started for hospitals for which the FTE cap may be adjusted in accordance with §413.79(e)(1), and beginning with the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started for hospitals for which the FTE cap may be adjusted in accordance with §413.79(e)(3), FTE residents participating in new medical residency training programs are included in the hospital’s FTE count before applying the averaging rules.

* * * * *

(k) (i) Effective prior to October 1, 2014, if an urban hospital had established a rural track training program under the provisions of this paragraph (k) with a hospital located in a rural area and that rural area subsequently becomes an urban area due to the most recent geographical location delineations adopted by CMS, one of the following two conditions must be met by the end of a period that begins when the most recent OMB standards for delineating statistical areas are adopted by CMS: the hospital that has been redesignated from rural to urban must reclassify as rural under §412.103 of this chapter, for purposes of IME only; or the urban hospital must find a new site that is rural in accordance with this paragraph (k) with a hospital located in a rural area and that rural area subsequently becomes an urban area due to the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, regardless of whether the redesignation of the rural hospital occurs during the 3-year period that is used to calculate the urban hospital’s rural track FTE limit, or after the 3-year period used to calculate the urban hospital’s rural track FTE limit, the urban hospital may continue to adjust its FTE resident limit in accordance with this paragraph (k) based on the rural track programs started prior to the change in the hospital’s geographic designation. In order for the urban hospital to receive or use the adjustment to its FTE resident cap for training FTE residents in the rural track residency program that was started prior to the most recent OMB standards for delineating statistical areas are adopted by CMS and continues through the end of the second residency training year following the date the most recent OMB delineations are adopted by CMS: the hospital that has been redesignated from rural to urban must reclassify as rural under §412.103 of this chapter, for purposes of IME only; or the urban hospital must find a new site that is geographically rural consistent with the most recent geographical location delineations adopted by CMS. In order to receive an adjustment to its FTE resident cap for an additional new rural track residency program, the urban hospital must participate in a rural track program with sites that are geographically rural based on the most recent geographical location delineations adopted by CMS.

PART 422—MEDICARE ADVANTAGE PROGRAM

39. The authority citation for Part 422 continues to read as follows:

38. Section 415.70 is amended by revising paragraph (b) to read as follows:

§415.70 Limits on compensation for physician services in providers.

(b) Methodology for establishing limits. (1) For cost reporting periods beginning before January 1, 2015: CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty and type of location using the best available data.

(2) For cost reporting periods beginning on or after January 1, 2015: CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty using the best available data.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

37. The authority citation for Part 415 continues to read as follows:

38. Section 415.70 is amended by revising paragraph (b) to read as follows:

§415.70 Limits on compensation for physician services in providers.

(b) Methodology for establishing limits. (1) For cost reporting periods beginning before January 1, 2015: CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty and type of location using the best available data.

(2) For cost reporting periods beginning on or after January 1, 2015: CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty using the best available data.

* * * * *

PART 422—MEDICARE ADVANTAGE PROGRAM
(i) To determine the risk adjustment factors used to adjust payments, as required under §§ 422.304(a) and (c);
(ii) To update risk adjustment models;
(iii) To calculate risk adjustment percentages;
(iv) To conduct quality review and improvement activities;
(v) For Medicare coverage purposes;
(vi) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research;
(vii) For activities to support the administration of the Medicare program;
(viii) For activities conducted to support program integrity; and
(ix) For purposes authorized by other applicable laws.

(2) CMS release of data. Regarding data described in paragraphs (a) through (d) of this section, CMS may release the minimum data it determines is necessary for one or more of the purposes listed in paragraph (f)(1) of this section to other HHS agencies, other Federal executive branch agencies, States, and external entities in accordance with the following:

(i) Applicable Federal laws;
(ii) CMS data sharing procedures;
(iii) Subject to the protection of beneficiary identifier elements and beneficiary confidentiality, including—
(A) A prohibition against public disclosure of beneficiary identifying information;
(B) Release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, States, and external entities only when such information is needed; and
(C) Release of beneficiary identifying information to external entities only to the extent needed to link datasets.
(iv) Subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data.

(v) Risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section, respectively.

(3) Risk adjustment data will not become available for release under this paragraph (f) unless—

(i) The risk adjustment reconciliation for the applicable payment year has been completed;
(ii) CMS determines that data release is necessary under paragraph (f)(1)(vi) of this section for emergency preparedness purposes before reconciliation; or
(iii) CMS determines that extraordinary circumstances exist to release the data before reconciliation.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

42. The authority citation for Part 424 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

43. Section 424.11 is amended by revising paragraph (d)(5) to read as follows:

§ 424.11 General procedures.

(d) * * *

(5) For all inpatient hospital services, including inpatient psychiatric facility services, a delayed certification may not extend past discharge.

* * * * *

44. Section 424.15 is amended by revising paragraph (b) to read as follows:

§ 424.15 Requirements for inpatient CAH services.

(b) Certification begins with the order for inpatient admission. All certification requirements must be completed, signed, and documented in the medical record no later than 1 day before the date on which the claim for payment for the inpatient CAH service is submitted.

* * * * *

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

47. The authority citation for Part 488 continues to read as follows:

48. Section 488.61 is amended by—

(a) Revising paragraphs (a)(4) and (c)(3);
(b) Adding new paragraphs (f), (g), and (h).

The revisions and additions read as follows:

§ 488.61 Special procedures for approval and re-approval of organ transplant centers.

(a) * * *

(4) CMS will consider mitigating factors in accordance with paragraphs (f), (g), and (h) of this section.

(c) * * *

(3) CMS will consider mitigating factors in accordance with paragraphs (f), (g), and (h) of this section.

(f) Consideration of mitigating factors in initial approval and re-approval survey, certification, and enforcement actions for transplant centers.

(1) Factors. Except for situations of immediate jeopardy or deficiencies other than failure to meet requirements of § 488.80 or § 488.82, CMS will consider such mitigating factors as may be appropriate in light of the nature of the deficiency and circumstances, including (but not limited to) the following, in making a decision of initial and re-approval of a transplant center that does not meet the data submission, clinical experience, or outcome requirements:

(i) The extent to which outcome measures are not met or exceeded;
(ii) Availability of Medicare-approved transplant centers in the area;
(iii) Extenuating circumstances (for example, natural disaster) that have a temporary effect on meeting the conditions of participation;

(iv) Program improvements that substantially address root causes of graft failures or patient deaths, that have been implemented and institutionalized on a sustainable basis, and that are supported by outcomes more recent than the latest available SRTR report, for which there is a sufficient post-transplant patient and graft survival period and a sufficient number of transplants such that CMS finds that the program demonstrates present-day compliance with the requirements at §482.80(c)(2)(ii)(C) or §482.82(c)(2)(ii)(C) of this chapter;

(v) Whether the program has made extensive use of innovative transplantation practices relative to other transplant programs, such as a high rate of transplantation of individuals who are highly sensitized or children who have undergone a Fontan procedure and are transplanted to most other transplant programs, where CMS finds that the innovative practices are supported by evidence-based published research literature or nationally recognized standards or Institution Review Board (IRB) approvals, and the SRTR risk-adjustment methodology does not take the relevant key factors into consideration; and

(vi) Whether the program’s performance, based on the OPTN method of calculating patient and graft survival, is within the OPTN’s thresholds for acceptable performance and does not flag OPTN performance review under the applicable OPTN policy.

(2) Content. A request for consideration of mitigating factors must include sufficient information to permit an adequate review and understanding of the transplant program, the factors that have contributed to outcomes, program improvements or innovations that have been implemented or planned, and in the case of natural disasters, the recovery actions planned. Examples of information to be submitted with each request include (but are not limited to) the following:

(i) The name and contact information for the transplant hospital and the names and roles of key personnel of the transplant program;

(ii) The type of organ transplant program(s) for which approval is requested;

(iii) The conditions of participation that the program does not meet for which the transplant center is requesting CMS’ review for mitigating factors;

(iv) The program’s organizational chart with full-time equivalent levels, roles, and structure for reporting to hospital leadership;

(v) For applications involving substandard patient or graft survival, the rationale and supporting evidence for CMS’ review includes, but is not limited to—

(A) Root Cause Analysis for patient deaths and graft failures, including factors the program has identified as likely causal or contributing factors for patient deaths and graft failures;

(B) Program improvements that have been implemented and improvements that are planned;

(C) Patient and donor/organ selection criteria and evaluation protocols, including methods for pre-transplant patient evaluation by cardiologists, hematologists, nephrologists, and psychiatrists or psychologists to the extent applicable;

(D) Waitlist management protocols and practices relevant to outcomes;

(E) Pre-operative management protocols and practices;

(F) Immunosuppression/infection prophylaxis protocols;

(G) Post-transplant monitoring and management protocols and practices;

(H) Quality Assessment and Performance Improvement (QAPI) Program meeting minutes from the most recent four meetings and attendance rosters from the most recent 12 months;

(I) Quality dashboard and other performance indicators; and

(J) The most recent data regarding transplants that have been made and for outcomes in terms of both patient survival and graft survival;

(vi) For requests based on innovative practice:

(A) A description of the innovations that have been implemented and identification of the specific cases for which the innovative practices are relevant so as to enable the patient and graft survival data for such cases to be compared with all other transplants for at least the period covered by the latest available SRTR report;

(B) The literature, research, or other evidentiary basis that supports consideration of the practice(s) as innovative.

(vii) For requests based on natural disasters or public health emergency:

(A) A description of the disaster or emergency, the specific impact on the program, the time periods of the event(s) and of its immediate recovery aftermath;

(B) Identification of the transplants that occurred during the period for which the request is being made; and

(C) The approximate date when the program believes it substantially recovered from the event(s), or believes it will recover if substantial recovery has not been accomplished at the time of the request.

(3) Timing. Within 10 days after CMS has issued formal written notice of a condition-level deficiency to the program, CMS must receive notification of the program’s intent to seek mitigating factors approval or re-approval, and receive all information for consideration of mitigating factors within 120 days of the CMS written notice for a deficiency due to data submission, clinical experience or outcomes at §482.80 or §482.82 of this chapter. Failure to meet these timeframes may be the basis for denial of mitigating factors. However, CMS may permit an extension of the timeline for good cause, such as a declared public health emergency.

(g) Results of mitigating factors review.

(1) Actions. Upon review of the request to consider mitigating factors, CMS may take the following actions:

(i) Approve initial approval or re-approval of a program’s Medicare participation based upon approval of mitigating factors;

(ii) Deny the program’s request for Medicare approval or re-approval based on mitigating factors.

(iii) Offer a time-limited Systems Improvement Agreement, in accordance with paragraph (h) of this section, when a transplant program has waived its appeal rights, has implemented substantial program improvements that address root causes and are institutionally supported by the hospital’s governing body on a sustainable basis, and has requested more time to design or implement additional improvements or demonstrate compliance with CMS outcome requirements. Upon completion of the Systems Improvement Agreement or a CMS finding that the hospital has failed to meet the terms of the Agreement, CMS makes a final determination of whether to approve or deny a program’s request for Medicare approval or re-approval based on mitigating factors. A Systems Improvement Agreement follows the process specified in paragraph (h) of this section.

(2) Limitation. CMS will not approve any program with a condition-level deficiency. However, CMS may approve a program with a standard-level deficiency upon receipt of an acceptable plan of correction.

(b) Transplant Systems Improvement Agreement. A Systems Improvement Agreement is a binding agreement, entered into voluntarily by the hospital
control specialist in lieu of, or in addition to, a social worker;
(iii) An action plan that addresses systemic quality improvements and is updated after the onsite peer review;
(iv) An onsite consultant whose qualifications are approved by CMS, and who provides services for 8 days per month on average for the duration of the agreement, except that CMS may permit a portion of the time to be spent offsite and may agree to fewer consultant days each month after the first 3 months of the Systems Improvement Agreement;
(v) A comparative effectiveness analysis that compares policies, procedures, and protocols of the transplant program with those of other programs in areas of endeavor that are relevant to the center’s current quality improvement needs;
(vi) Development of increased proficiency, or demonstration of current proficiency, with patient-level data from the Scientific Registry of Transplant Recipients and the use of registry data to analyze outcomes and inform quality improvement efforts;
(vii) A staffing analysis that examines the level, type, training, and skill of staff in order to inform transplant center efforts to ensure the engagement and appropriate training and credentialing of staff;
(viii) Activities to strengthen performance of the Quality Assessment and Performance Improvement Program to ensure full compliance with the requirements of §482.96 and §482.21 of this chapter;
(ix) Monthly (unless otherwise specified) reporting and conference calls with CMS regarding the status of programmatic improvements, results of the deliverables in the Systems Improvement Agreement, and the number of transplants, deaths, and graft failures that occur within 1 year post-transplant; and
(x) Additional or alternative requirements specified by CMS, tailored to the transplant program type and circumstances. CMS may waive the content elements at paragraphs (h)(1)(v), (h)(1)(vi), (h)(1)(vii), or (h)(1)(viii) of this section if it finds that the program has already adequately conducted the activity, the program is already proficient in the function, or the activity is clearly inappropriate to the deficiencies that led to the Agreement.
(2) Timeframe. A Systems Improvement Agreement will be established for up to a 12-month period, subject to CMS’s determination if a shorter timeframe may suffice. At the hospital’s request, CMS may extend the agreement for up to an additional 6-month period.
Dated: July 24, 2014.
Marilyn Tavenner,
Administrator, Centers for Medicare & Medicaid Services.
Dated: July 29, 2014.
Sylvia M. Burwell,
Secretary, Department of Health and Human Services.
Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective with Cost Reporting Periods Beginning on or after October 1, 2014, and Payment Rates for LTCHs Effective for Discharges Occurring on or after October 1, 2014

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2015 for acute care hospitals. We also are setting forth the rate-of-increase percentages for updating the target amounts for certain hospitals excluded from the IPPS for FY 2015. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are establishing the rate-of-increase percentages for updating the target amounts for certain hospitals excluded from the IPPS that are effective for cost reporting periods beginning on or after October 1, 2014.

In addition, we are setting forth a description of the methods and data we used to determine the standard Federal rate that will be applicable to Medicare LTCHs for FY 2015.

In general, except for SCHs, MDHs, and hospitals located in Puerto Rico, for FY 2015, each hospital’s payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest payment: the Federal national rate (including, as discussed in section IV.F. of the preamble of this final rule,
uncompensated care payments under section 1886(e)(2) of the Act; the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge.

We note that, as discussed in section IV.G. of the preamble of this final rule, section 1106 of Public Law 113–67, enacted on December 26, 2013, extended the MDH program through the end of FY 2013 (that is, for discharges occurring after September 30, 2013) through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of Public Law 113–93, enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Prior to the enactment of Public Law 113–67, the MDH program was only to be in effect through the end of FY 2013. Under current law, the MDH program will expire for discharges on or after April 1, 2015.

Under section 1886(d)(5)(C) of the Act, MDHs historically have been paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever was higher. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated hospital-specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor.

For hospitals located in Puerto Rico, the payment per discharge is based on the sum of 25 percent of an updated Puerto Rico-specific rate based on average costs per case of Puerto Rico hospitals for the base year and 75 percent of the Federal national rate. (We refer readers to section II.D.2. of this Addendum for a complete description.)

As discussed below in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2015. In section III. of this Addendum, we are discussing our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2015.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the Internet) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.
- The labor-related share that is applied to the standardized amounts and Puerto Rico-specific standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(B) and 1886(d)(9)(C)(iv) of the Act. For FY 2015, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section IV.B. of the preamble of this final rule for a complete discussion on the FY 2015 inpatient hospital update. Below is a table with these four options:

<table>
<thead>
<tr>
<th>FY 2015</th>

- An update of 2.2 percent to the Puerto Rico-specific standardized amount (that is, the FY 2015 estimate of the market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point), in accordance with section 1886(d)(9)(C)(i) of the Act, as amended by section 401(c) of Public Law 109–173, which sets the update to the Puerto Rico-specific standardized amount equal to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act.
- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.
- An adjustment to ensure the wage index changes are budget neutral, as
provided for under section 1886(d)(3)(E)(i) of the Act. We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62 percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2014 budget neutrality factor and applying a revised factor.
- As discussed below and in section III. of the preamble of this final rule, an adjustment to offset the cost of the transitional wage index provisions provided by CMS as a result of the adoption of the new OMB labor market area delineations.
- An adjustment to ensure the effects of the rural community hospital demonstration program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, are budget neutral as required under section 410A(c)(2) of Public Law 108–173.
- An adjustment to remove the FY 2014 outlier offset and apply an offset for FY 2015, as provided for under section 1886(d)(3)(B) of the Act.
- As discussed below and in section II.D. of the preamble of this final rule, a recoupment to meet the requirements of section 631 of ATRA to adjust the standardized amount to offset the estimated amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

Beginning in FY 2008, we applied the budget neutrality adjustment for the rural floor to the hospital wage indexes rather than the standardized amount. As we did for FY 2014, for FY 2015, consistent with current law, we are continuing to apply the rural floor budget neutrality adjustment to hospital wage indexes rather than the standardized amount. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2015 wage index for the rural floor. We note that, in section III.G.2.b. of the preamble to this final rule, we are extending the imputed floor policy (both the original methodology and alternative methodology) for another year, through September 30, 2015.

Therefore, for FY 2015, in this final rule, we are continuing to include the imputed floor (calculated under the original and alternative methodologies) in calculating the uniform, national rural floor budget neutrality adjustment, which will be reflected in the FY 2015 wage index.

**A. Calculation of the Adjusted Standardized Amount**

1. Standardization of Base-Year Costs or Target Amounts

   In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. For Puerto Rico hospitals, the Puerto Rico-specific standardized amount is based on per discharge averages of adjusted target amounts from a base period (section 1886(d)(9)(B)(i) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d)(9) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS. The September 1, 1987 final rule (52 FR 33043 and 33066) contains a detailed explanation of how the target amounts were determined and how they are used in computing the Puerto Rico rates.

   Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include casemix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

   In accordance with section 1886(d)(3)(E) of the Act, the Secretary estimates, from time-to-time, the proportion of hospitals’ costs that are attributable to wages and wage-related costs. In general, the standardized amount is divided into labor-related and nonlabor-related amounts; only the proportion considered to be the labor-related amount is adjusted by the wage index. Section 1886(d)(3)(E) of the Act requires that 62 percent of the standardized amount be adjusted by the wage index, unless doing so would result in lower payments to a hospital than would otherwise be made. (Section 1886(d)(9)(C)(v)(II) of the Act extends this provision to the labor-related share for hospitals located in Puerto Rico.)

   For FY 2015, we are using the national and Puerto Rico-specific labor-related and nonlabor-related shares established for FY 2014, using the FY 2010-based hospital market basket. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related: “[T]he Secretary shall adjust the proportion, (as estimated by the Secretary from time to time) of hospitals’ costs which are attributable to wages and wage-related costs, of the DRG prospective payment rates . . . We refer to the proportion of hospitals’ costs that are attributable to wages and wage-related costs as the “labor-related share.” For FY 2015, as discussed in section III. of the preamble of this final rule, we are continuing to use a labor-related share of 69.6 percent for the national standardized amounts, and 63.2 percent for the Puerto Rico-specific standardized amount, if the hospital has a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals whose wage index values are less than or equal to 1.0000. For all IPPS hospitals whose wage index values are greater than 1.0000, we are applying the wage index to a labor-related share of 69.6 percent of the national standardized amount.

   For FY 2015, all Puerto Rico hospitals have a wage index value that is less than 1.0000 because the average hourly rate of every hospital in Puerto Rico divided by the national average hourly rate (the sum of all salaries and hours for all hospitals in the 50 United States and Puerto Rico) results in a wage index that is below 1.0000. However, when we divide the average hourly rate of every hospital located in Puerto Rico by the Puerto Rico-specific national average hourly rate (the sum of all salaries and hours for all hospitals located only in Puerto Rico), we determine a Puerto Rico-specific wage index value for some hospitals that is either above, or below 1.0000, depending on the hospital’s location within Puerto Rico. Therefore, for hospitals located in Puerto Rico, we are applying a labor-related share of 63.2 percent if its Puerto Rico-specific wage index is greater than 1.0000. For hospitals located in Puerto Rico whose Puerto Rico-specific wage index values are less than or equal to 1.0000, we are applying a labor share of 62 percent.
The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the Internet on the CMS Web site.

2. Computing the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update.

Section 1886(d)(9)(A)(ii)(II) of the Act equalizes the Puerto Rico-specific urban and rural area rates. Accordingly, we are calculating the FY 2015 national average standardized amount and Puerto Rico-specific standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this final rule, we are using the revised and rebased FY 2010-based IPPS operating and capital market baskets for FY 2015 (which replaced the FY 2006-based IPPS operating and capital market baskets in FY 2014). As discussed in section IV.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are reducing the FY 2015 applicable percentage increase (which is based on IHS Global Insight, Inc.’s (IGI’s) second quarter 2014 forecast of the FY 2010-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2015) of 0.5 percentage point, which is calculated based on IGI’s second quarter 2014 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are further updating the standardized amount for FY 2015 by the estimated market basket percentage increase less 0.2 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by section 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services comprising routine, ancillary, and special care unit hospital inpatient services.

Based on IGI’s 2014 second quarter forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the most recent forecast of the hospital market basket increase for FY 2015 is 2.9 percent. As discussed above, for FY 2015, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that could be applied to the standardized amount. We refer readers to section IV. of the preamble of this final rule for a complete discussion on the FY 2015 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that would be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the Internet on the CMS Web site reflect these differential amounts.

Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(i) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject to the IPPS). Accordingly, we are establishing an applicable percentage increase to the Puerto Rico-specific standardized amount of 2.2 percent for FY 2015.

Although the update factors for FY 2015 are set by law, we are required by section 1886(e)(4) of the Act to recommend, taking into account MedPAC’s recommendations, appropriate update factors for FY 2015 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our proposed recommendations in the Federal Register for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

4. Other Adjustments to the Average Standardized Amount

As in the past, we are adjusting the FY 2015 standardized amount to remove the effects of the FY 2014 geographic reclassifications and outlier payments before applying the FY 2015 updates. We then apply budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2015 payment policies.

We do not remove the prior year’s budget neutrality adjustments for recategorization and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year’s adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic recategorizations). We include outlier payments in the simulations because they may be affected by changes in these parameters.

In order to appropriately estimate aggregate payments in our modeling, we make several inclusions and exclusions so that the appropriate universe of claims and charges are included. We discuss IME Medicare Advantage payment amounts, fee-for-service only claims, and charges for anti-hemophilic blood factor and organ acquisition below.

Consistent with our methodology established in the FY 2011 IPPS/LTC PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payment amounts are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is
not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total “operating DRG payments,” which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

In addition, consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a "Claim Type" of 60 (which is a field on the MedPAR file that indicates a claim is a fee-for-service claim).

Finally, consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examined the MedPAR file and removed pharmacy charges for anti-platelet and anti-cholesterol medication (which are paid separately under the IPPS) with an indicator of "3" for blood clotting with a revenue code of "0636" from the covered charge field for the budget neutrality adjustments. We also removed organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for innovation.cms.gov/initiatives/Bundled-Payments/index.html.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI initiative prior fiscal years for the IPPS payment modeling and ratesetting process (which includes recalibration of the MS–DRG relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital’s participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). Therefore, for FY 2015, as discussed in section II.H.4. of the preamble to this final rule, as we proposed, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals in the BPCI initiative in our ratesetting process.

The Affordable Care Act established the Hospital Readmissions Reduction Program and the Hospital VBP Program which adjust payments to certain IPPS hospitals beginning with discharges on or after October 1, 2012. Because the adjustments made under these programs affect the estimation of aggregate IPPS payments, in this final rule, consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for these programs within our budget neutrality calculations. We discuss the treatment of these two programs in the context of budget neutrality adjustments below.

Section 1886(q) of the Act establishes the “Hospital Readmissions Reduction Program” effective for discharges from an “applicable hospital” beginning on or after October 1, 2012, under which payments to those hospitals under section 1886(d) of the Act are reduced to account for certain excess readmissions. Under the Hospital Readmissions Reduction Program, for discharges beginning on October 1, 2012 discharges from an “applicable hospital” are paid at an amount equal to the product of the “base operating DRG payment amount” and an “adjustment factor” that accounts for excess readmissions for the hospital for the fiscal year plus any applicable add-on payments. We refer readers to section IV.H. of the preamble of this final rule for full details of our implementation of and FY 2015 policy changes to the Hospital Readmissions Reduction Program. We also note that the Hospital Readmissions Reduction Program provided for under section 1886(q) of the Act is not budget neutral.

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which, for discharges beginning on October 1, 2012, value-based incentive payments are made in a fiscal year to eligible subsection (d) hospitals that meet performance standards established for a performance period for that fiscal year. As specified under section 1886(o)(7)(B)(ii) of the Act, these value-based incentive payments are funded by a reduction applied to each eligible hospital’s base-operating DRG payment amount, for each discharge occurring in the fiscal year. As required by section 1886(o)(7)(A) of the Act, the total amount of allocated funds available for value-based incentive payments with respect to a fiscal year is equal to the total amount of base-operating DRG payment reductions, as estimated by the Secretary. In a given fiscal year, hospitals may earn a value-based incentive payment amount for a fiscal year that is greater than, equal to, or less than the reduction amount, based on their performance on quality measures under the Hospital VBP Program. Thus, the Hospital VBP Program is estimated to have no net effect on overall payments. We refer readers to section IV.L. of the preamble of this final rule for full details regarding the Hospital VBP Program.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations. For example, when we calculate the budget neutrality factor for MS–DRG recategorization and recalibration of the relative weights, we compare aggregate payments estimated using the prior year’s GROUPER and relative weights to estimated payments using the new GROUPER and relative weights. (We refer readers to section II.A.4.a. of this Addendum for full details.) Other factors, such as the DSH and IME payments adjustments, are the same on both sides of the comparison because we are only seeking to ensure that aggregate payments do not increase or decrease as a result of the changes of MS–DRG recategorization and recalibration.

In order to properly determine aggregate payments on each side of the comparison, as we did for FY 2014, for FY 2015 and subsequent years, we are continuing to apply the hospital readmissions payment adjustment and the hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that
we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53587 through 53688). That is, we are applying the readmissions payment adjustment factor and the hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the purpose of calculating the FY 2015 readmissions payment adjustment factors, we are using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the prior fiscal year’s applicable period because hospitals have had the opportunity to review and correct these data before the data were made public under the policy we adopted regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. For FY 2015, in this final rule, we are calculating the readmissions payment adjustment factors using excess readmission ratios and aggregate payments on both sides of the comparison for hospital-specific readmissions based on admissions from the finalized applicable period for FY 2015 as hospitals have had the opportunity to review and correct these data under our policy regarding the reporting of hospital-specific readmission rates consistent with section 1886(q)(6) of the Act. We discuss our policy regarding the reporting of hospital-specific readmission rates for FY 2015 in section IV.H.3.f. of the preamble of this final rule. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400).)

In addition, for FY 2015, in this final rule, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we are using proxy hospital VBP payment adjustment factors for FY 2015 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2015 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments will receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the current statutory formula set forth under section 1866(d)(3)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1866(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2015 and subsequent years (as we did for FY 2014), we are including estimated empirically justified Medicare DSH payments on both sides of the comparison for our budget neutrality calculations using wage indexes based on the current statistical areas used in FY 2014. We finally note that the wage index value is calculated and assigned to a hospital based on the hospital’s labor market area. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The current statistical areas used in FY 2014 are based on OMB standards published on December 27, 2000 (65 FR 62228) and Census 2000 data and Census Bureau population estimates for 2007 and 2008 (OMB Bulletin No. 10–02). For purposes of determining all of the FY 2014 budget neutrality factors, we determined aggregate payments on each side of the comparison for our budget neutrality calculations using wage indexes based on the current CBSAs.

As stated in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27552) and final rule (78 FR 50586), on February 28, 2013, OMB issued OMB Bulletin No. 13–01, which established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of the Hospital PPS. In order to implement these changes for the IPPS, it was necessary to identify the
new OMB labor market area delineation for each county and hospital in the country. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50586), we stated that we intended to propose changes to the wage index policy based on the new OMB delineations in the FY 2015 IPPS/LTCH PPS proposed rule. As discussed in section III. of the preamble of this final rule, as we proposed, we are adopting the new OMB labor market area delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index.

Consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations, we are using wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors discussed below (with the exception of the transitional budget neutrality factor and outlier threshold as explained below). We also note that, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an “adjustment or update” to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

a. Recalibration of MS–DRG Relative Weights and Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(3)(E)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.H. of the preamble of this final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index.

Section 1886(d)(3)(E)(ii) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2015, we are adjusting 100 percent of the wage index factor for each country. In the FY 2014 IPPS/LTCH PPS final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor equal to 0.997543. As discussed in section IV. of this Addendum, we also are applying the MS–DRG reclassification and recalibration budget neutrality factor of 0.997543 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2014.

Comment: Several commenters stated that CMS miscalculated the MS–DRG reclassification and recalibration budget neutrality adjustment factor presented in the proposed rule. The commenters noted that the budget neutrality adjustment factor of 0.992938 presented in the proposed rule was much lower than historical levels. The commenters also noted that, for the last 5 years, the budget neutrality adjustment factor has been between 0.996731 (FY 2011) and 0.998431 (FY 2013). In addition, the commenters informed CMS that they attempted to replicate the calculation of this budget neutrality adjustment factor, but were unable to do so. The commenters added that in May of 2014, CMS posted a revised set of MS–DRG relative weights on the CMS Web site via the Internet because a number of postacute care transfer-adjusted cases for certain MS–DRGs presented in the FY 2015 IPPS/LTCH PPS proposed rule were inadvertently miscalculated. However, the commenters stated that they were still not able to verify the budget neutrality adjustment factor using the updated MS–DRG relative weights. The commenters stated that, by using the revised MS–DRGs, they calculated a revised budget neutrality adjustment factor of 1.000301. The commenters recommended that CMS examine the calculation of the budget neutrality adjustment factor and, if necessary, revise the budget neutrality adjustment factor for the FY 2015 IPPS/LTCH PPS final rule.

Response: We appreciate the commenters’ input. As the commenters requested, we examined the calculation of the budget neutrality adjustment
factor presented in the proposed rule. We agree with the commenters that the MS–DRG reclassification and recalibration budget neutrality adjustment factor was calculated incorrectly during the development of the proposed rule due to the inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS–DRGs. Using the updated MS–DRG relative weights, we calculated a revised proposed budget neutrality adjustment factor similar to the factor calculated by the commenters. For FY 2015, in this final rule, using accurate postacute care transfer-adjusted cases for these MS–DRGs, we have calculated a MS–DRG reclassification and recalibration budget neutrality factor of 0.997543, which is consistent with historical levels.

In response to the commenters’ concerns regarding verifying the accuracy of the budget neutrality adjustment factor, we announced through information posted via the Internet on the CMS Web site at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2015-IPPS-Proposed-Rule-Home-Page-Items/FY2015-IPPS-Proposed-Rule-Data-Files.html that there was an inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS–DRGs. Therefore, after the publication of the FY 2015 IPPS/LTCH PPS proposed rule, we also posted via the Internet on the CMS Web site a revised table of the proposed MS–DRG relative weights for FY 2015. It is our goal to strive for accuracy in regard to our adjustment factor calculations, and we appreciate the commenters’ recognition of the mistake and for pointing out the effects of the miscalculation during the comment period. However, we believe that the 60-day comment period affords the public an appropriate opportunity to review and comment on all of the proposals presented throughout the entire FY 2015 IPPS/LTCH PPS proposed rule. We are not changing our proposed policy in calculating this budget neutrality adjustment factor. Therefore, we do not believe that an additional opportunity for comment necessary.

Comment: The commenter also noted that CMS did not explicitly state which labor-related share percentages were used in the calculation of the MS–DRG reclassification and recalibration budget neutrality adjustment factor. In addition, the commenter did not believe that it was appropriate to use the new OMB delineations in the calculation of the MS–DRG reclassification and recalibration budget neutrality adjustment factor. The commenter requested that CMS address why it is appropriate to apply the new OMB delineations in the MS–DRG reclassification and recalibration budget neutrality adjustment factor and how and whether the new OMB delineations impact the calculation of the final budget neutrality adjustment factor. The commenter also requested that CMS identify which labor-related share percentages were in each component of the payment simulation model used to calculate the final budget neutrality adjustment factor.

Response: As discussed in section III.B.(2)[e][6] of the preamble of this final rule and consistent with past practice (69 FR 49034), we are not adopting the new OMB delineations, in and of themselves, in a budget neutral manner. However, we are adopting the transitional policies we have effectuated in a budget neutral manner as we describe below. We do not believe that the revision to the labor market areas in and of itself constitutes an “adjustment or update” to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act. Therefore, the new OMB delineations did not impact the calculation of the final budget neutrality adjustment factor. Also, as stated in the FY 2015 IPPS/LTCH PPS proposed rule and above, consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality adjustment factor calculations, we are using wage indexes based on the new OMB delineations in the determination of all of the budget neutrality adjustment factors discussed below (with the exception of the transitional budget neutrality factor and outlier fixed-loss threshold as explained below).

We also did not include the labor-related share percentages used in the calculation of the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor presented in the proposed rule. For FY 2015, in this final rule, as requested by the commenters, we present the labor-related share percentages used in the calculation of the budget neutrality adjustment factor in response to public comments we received in the discussion above, which are the same labor-related share percentages used for the proposed rule.

In order to meet the statutory requirements that we do not take into account the labor-related share of 62 percent when computing wage index budget neutrality adjustment factor, it was necessary to use a three-step process to comply with the requirements that MS–DRG reclassification and recalibration of the relative weights and the updated wage index and labor-related share have no effect on aggregate payments for IPPS hospitals. Under the first step, we determined an MS–DRG reclassification and recalibration budget neutrality adjustment factor of 0.997543 (by using the same methodology described above to determine the MS–DRG reclassification and recalibration budget neutrality factor for the Puerto Rico standardized amount and hospital-specific rates). Under the second step, to compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes we used FY 2013 discharge data to simulate payments and compared the following:

• Aggregate payments using the new OMB labor market area delineations for FY 2015, FY 2015 relative weights and the FY 2014 pre-reclassified wage indexes, applied the FY 2014 labor-related share of 69.6 percent to all hospitals (regardless of whether the hospital’s wage index was above or below 1.0000), and applied the FY 2015 hospital readmissions payment adjustment and the FY 2015 estimated hospital VBP payment adjustment; and

• Aggregate payments using the new OMB labor market area delineations for FY 2015, FY 2015 relative weights and the FY 2015 pre-reclassified wage indexes, applied the labor-related share for FY 2015 of 69.6 percent to all hospitals (regardless of whether the hospital’s wage index was above or below 1.0000), and applied the same FY 2015 hospital readmissions payment adjustments and estimated FY 2015 hospital VBP payment adjustments applied above.

In addition, we applied the MS–DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2014 to FY 2015. By applying this methodology, we determined a budget neutrality adjustment factor of 1.001443 for changes to the wage index. Finally, we multiplied the MS–DRG reclassification and recalibration budget neutrality adjustment factor of 0.997543 (derived in the first step) by the budget neutrality adjustment factor of 1.001443 for changes to the wage index (derived in the second step) to determine the MS–DRG reclassification and recalibration and updated wage index budget neutrality adjustment factor of 0.998982.
b. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, sections 1886(d)(10) of the Act provide for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustment provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in “applying any budget neutrality adjustment with respect to such index” under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2015, we used FY 2013 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, FY 2015 relative weights, and FY 2015 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2015 hospital readmissions payment adjustments and the estimated FY 2015 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, FY 2015 relative weights, and FY 2015 wage data after such reclassifications, and applied the same hospital readmissions payment adjustments and the estimated hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Tables 9A2 and 9C2, which are posted on the CMS Web site. These tables reflect reclassification crosswalks based on the new OMB labor market area delineations for FY 2015, and apply the policies explained in section III. of the preamble to this final rule. Based on these analyses, we calculated a budget neutrality adjustment factor of 0.990406 to ensure that the effects of these provisions are budget neutral, consistent with the statute.

The FY 2015 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2014 budget neutrality adjustment factor. We note that the FY 2015 budget neutrality adjustment reflects FY 2015 wage index reclassifications approved by the MGCRB or the Administrator.

c. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) and the imputed floor under § 412.64(b)(4) are equal to the aggregate prospective payments that would have been made in the absence of such provisions. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G.2.b. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural and imputed floor is a national adjustment to the wage index.

As noted above and as discussed in section III.G.2.b. of the preamble of this final rule, in the FY 2012 IPPS/LTCH PPS final rule, we extended the imputed floor calculated under the original methodology through FY 2013 (76 FR 51593). In the FY 2013 IPPS/LTCH PPS final rule, we established an alternative methodology for calculating the imputed floor and established a policy that the minimum wage index value for an all-urban state would be the higher of the value determined under the original methodology or the value computed using the alternative methodology (77 FR 53368 through 53369). Consistent with the methodology for treating the imputed floor, similar to the methodology we used in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53368 through 53369), we included this alternative methodology for computing the imputed floor index in the calculation of the uniform, national rural floor budget neutrality adjustment for FY 2014. For FY 2015, as discussed in section III.G.2.b. of the preamble of this final rule, we are extending the imputed floor using the higher of the value determined under the original methodology or the alternative methodology for FY 2015. Therefore, in order to ensure that aggregate payments to hospitals are not affected, similar to prior years, we will follow our policy of including the imputed floor in the rural floor budget neutrality adjustment to the wage index.

As discussed above, for FY 2015, we are implementing the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index. Therefore, the budget neutrality adjustment for the rural floor and imputed floor will be calculated using the new OMB delineations.

Under the OMB delineations used for FY 2014, the imputed floor (both the original methodology and alternative methodology) was applied to New Jersey and Rhode Island because these were the only two all-urban States. Under OMB’s 2010 revised delineations based on Census 2010 data, in addition to New Jersey and Rhode Island, Delaware will become an all-urban state. Therefore, for FY 2015, the imputed floor will be applied to the wage index for hospitals located in New Jersey, Rhode Island, and Delaware.

Similar to our calculation in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593 and 51788), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53689), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50975 through 50976), for FY 2015, we are calculating a national rural Puerto Rico wage index (used to adjust the labor-related share of the national standardized amount for hospitals located in Puerto Rico which receive 75 percent of the national standardized amount) and a rural Puerto Rico-specific wage index (which is used to adjust the labor-related share of the Puerto Rico-specific standardized amount for hospitals located in Puerto Rico that receive 25 percent of the Puerto Rico-specific standardized amount). Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2015 rural Puerto Rico wage index is based on the policy adopted in the FY 2006 IPPS final rule with comment period (72 FR 47323).

That is, we will use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the new OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2015 rural Puerto Rico wage index is calculated based on the average of the FY 2015 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38800); San Juan, PR (CBSA 41900) and San Juan- Carolina-Caguas, PR (CBSA 41980).
To calculate the national rural floor and imputed floor budget neutrality adjustment factors and the Puerto Rico-specific rural floor budget neutrality adjustment factor, we used FY 2013 discharge data to simulate payments, the FY 2015 new OMB labor market area delineations, and post-reclassified national and Puerto Rico-specific wage indexes and compared the following:

- The national and Puerto Rico-specific simulated payments without the national rural floor and imputed floor and Puerto Rico-specific rural floor applied; and
- The national and Puerto Rico-specific simulated payments with the national rural floor and imputed floor and Puerto Rico-specific rural floor applied.

Based on this comparison, we determined a national rural budget neutrality adjustment factor of 0.989507 and the Puerto Rico-specific budget neutrality adjustment factor of 0.991291. The national adjustment was applied to the national wage indexes to produce a national rural floor budget neutral wage index and the Puerto Rico-specific adjustment was applied to the Puerto Rico-specific wage indexes to produce a Puerto Rico-specific rural floor budget neutral wage index.

**Comment:** Many commenters opposed the continued application of a nationwide rural floor budget neutrality adjustment. Some commenters noted that under the current rural floor policy, all hospitals located in Massachusetts are eligible for the rural floor wage index as a result of one rural hospital, which resulted in an approximate 4.9 percent increase in payments for hospitals located in Massachusetts and creates a disparity when considering the wage index of other hospitals around the country. The commenters also noted that under the rural floor policy, hospitals located in California will also receive an increase in payments of approximately $196 million as a result of the application of the rural floor policy. The commenters stated that the adverse consequences of applying a nationwide rural floor budget neutrality adjustment have been recognized by CMS, MedPAC, and many others over the past several years. The commenters believed that the Medicare wage index system cannot accomplish its objective of ensuring that payments for the wage component of labor accurately reflect actual wage costs until this policy is corrected. Other commenters recommended that CMS consider applying the rural floor budget neutrality adjustment through a State-specific budget neutrality adjustment factor, as CMS has previously applied.

**Response:** We appreciate the commenters’ input and for informing us of their concerns. Section 3141 of Public Law 111–148 requires that a national budget neutrality adjustment be applied in implementing the rural floor policy. Therefore, absent a legislative change enacted by Congress, we are unable to change the rural floor budget neutrality adjustment from a national to a State-specific adjustment.

**Comment:** Some commenters recommended that CMS consider implementing a policy under the IPPS and the OPPS that would result in only hospitals located in rural areas being included in the statewide rural floor wage index used for urban hospitals located in areas with wage indexes that are lower than the statewide rural wage index. The commenters believed that such a policy would prevent urban hospitals from reclassifying to rural status simply to improve the rural wage index, which might be used as a floor for urban hospitals located in areas of a State that have lower wage index values. The commenters also noted that they believed that CMS has the regulatory authority to make such a policy change without the enactment of Congressional legislation.

**Response:** We appreciate the commenters’ input. We did not make any proposals to change the rural floor wage index policy. Any changes to this policy would first need to be proposed through rulemaking. Consequently, we are not making any changes to address the commenters’ concerns at this time. With respect to the commenter who recommended that CMS establish a rural floor policy, we do not believe that there is any statistical basis to support this calculation. In addition, we are unclear how such a wage index floor policy could be implemented nor do we believe that this suggestion meets the requirement of the statute. With respect to the other commenters’ suggestions, we first need to determine if the revised policy that the commenters suggested would be inconsistent with any longstanding policy or statutory requirement. We will consider the commenters’ suggestions in future rulemaking.

**Comment:** One commenter requested that CMS provide an updated, detailed, State-specific analysis of the effect of a nationwide rural floor budget neutrality adjustment. The commenter specifically noted the estimated “windfall” expected to be received by hospitals located in Massachusetts as a result of the rural floor policy, and requested that CMS provide data and additional analysis of the impacts of a national rural floor budget neutrality adjustment. In addition, commenters questioned whether the addition of one rural hospital located in Franklin County, Massachusetts reduced the impact of the Massachusetts rural floor wage index from FY 2014 to FY 2015.

**Response:** We have provided an updated State-specific analysis of the effect of the rural floor budget neutrality adjustment in Appendix A of the Addendum to this final rule. We also discuss in Appendix A to this final rule the increase in payments the hospitals in Massachusetts are expected to receive as a result of the rural floor wage index policy.

We discuss below the reduced impact of the rural floor wage index policy for hospitals located in Massachusetts from FY 2014 to FY 2015. In FY 2014, CMS calculated that 60 hospitals would benefit from the Massachusetts rural floor wage index, resulting in an estimated $167.6 million being received by hospitals located in Massachusetts as a result of the national rural floor budget neutrality adjustment. In FY 2015, fewer hospitals located in Massachusetts (51) have been identified as benefiting from
the rural floor wage index, and the fiscal impact of rural floor budget neutrality adjustment has been reduced. Below we explain why nine providers (60 minus 51) received the Massachusetts rural floor wage index in FY 2014, but not in FY 2015.

The commenters are correct that the addition of one rural hospital located in Franklin County, Massachusetts reduced the impact of the rural floor wage index in FY 2015, as compared to the impact of the rural floor wage index in FY 2014. To further clarify, in FY 2014, there was only one geographically located rural hospital in Massachusetts (located in Nantucket County). Therefore, the Massachusetts pre- and post-reclassified rural wage index in the calculation of the reclassification budget neutrality adjustment, and the application of the rural floor budget neutrality adjustment, was established based on wage data from that one hospital located in Nantucket County, Massachusetts. For FY 2015, another hospital, which is defined as “urban”, under the current delineations, is now considered to be “rural” under the new OMB delineations. Specifically, this hospital is located in Franklin County, Massachusetts, which is no longer considered to be part of CBSA 44140 (Springfield, MA) under the new OMB delineations, and is now considered to be geographically located in a rural area. However, under the new OMB delineations, Franklin County meets the requirements under section 1886(d)(10) of the Act (without application of the rural floor budget neutrality adjustment). Therefore, in FY 2015, any hospital located within Franklin County is deemed an “urban” labor market (that is, the hospitals are considered “Lugar” hospitals). The calculation of the FY 2015 Massachusetts pre-reclassified rural wage index, which is used in the calculation of reclassification budget neutrality adjustment, is calculated based on the two geographically located rural hospitals (one from Franklin County and one from Nantucket County). The average hourly wage of the Franklin County hospital is lower than the average hourly wage of the Nantucket County hospital, lowering the pre-reclassified rural wage index for FY 2015 relative to FY 2014.

With respect to budget neutrality, as described earlier in this Addendum, we first calculate and apply the MS–DRG and wage index budget neutrality adjustment, then the reclassification budget neutrality adjustment, and then the rural floor budget neutrality adjustment. This analysis focuses on the reclassification and rural floor budget neutrality adjustments and applies the requirement of section 1886(d)(8)(C)(iii) of the Act, which specifies that an area’s post-reclassified wage index (without application of the rural floor budget neutrality adjustment) may not be reduced below the State’s post-reclassified rural wage index value (without application of the rural floor budget neutrality adjustment), as a result of reclassification. As stated in the FY 1992 IPPS final rule (56 FR 43220 through 43221), if reclassification (either to or from an area) would lower an area’s post-reclassified wage index (without application of the rural floor budget neutrality adjustment) below the State’s post-reclassified rural wage index (without application of the rural floor budget neutrality adjustment), CMS assigns those areas the post-reclassified rural wage index value for that State (without application of the rural floor budget neutrality adjustment). For this to occur, the area’s pre-reclassified wage index value must be greater than or equal to the State’s pre-reclassified rural wage index value prior to calculating the effects of the reclassification budget neutrality adjustment.

As discussed above in section II.A.4.b. of this Addendum regarding the reclassification budget neutrality adjustment, to ensure that the effects of applying sections 1886(d)(8)(B) and (C), and 1886(d)(10) of the Act are budget neutral, we compare FY 2015 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C), and 1886(d)(10) of the Act (that is, pre-reclassified wage data) to FY 2015 wage data after such reclassifications (that is, the post-reclassified wage data). Specifically, we compared the Massachusetts pre-reclassified rural wage index (Column C in the table below) to the pre-reclassified area wage index (Column B in the table below). (We note that the Massachusetts pre-reclassified rural wage index is comprised from the wage data of two rural hospitals, one located in Franklin County, Massachusetts and one located in Nantucket County, Massachusetts.) If a hospital’s pre-reclassified area wage index (Column B in the table below) is greater than or equal to the Massachusetts pre-reclassified rural wage index (Column C in the table below), then we compare the Massachusetts post-reclassified rural wage index (Column F in the table below, which is based on the wage data from one rural hospital located in Nantucket County, and does not include the hospital located in Franklin County because it has been reclassified as an urban Lugar hospital) to the post-reclassified area wage index (Column E in the table below). For hospitals that receive reclassification in FY 2015, if the hospital’s post-reclassified area wage index (Column E in the table below) is less than the Massachusetts post-reclassified rural wage index (Column F in the table below), then we assign the hospital the Massachusetts post-reclassified rural wage index (Column F in the table below) prior to application of the rural floor budget neutrality adjustment. The nine hospitals were reclassified for FY 2015, and their post-reclassified area wage index (Column E in the table below) is less than the Massachusetts post-reclassified rural wage index (Column F in the table below). Therefore, although there are other hospitals located in Massachusetts that also have been reclassified, only the nine hospitals meet both conditions and are being assigned the Massachusetts post-reclassified rural wage index (without application of the rural floor budget neutrality adjustment).

Specifically, when we compared the Massachusetts pre-reclassified wage index to Massachusetts post-reclassified wage index in the calculation of the reclassification budget neutrality adjustment, the area’s pre-reclassified rural wage index value for the nine hospitals is greater than or equal to the Massachusetts pre-reclassified rural wage index value of 1.1447 (which is calculated based on the wage data from the two rural hospitals). After application of the reclassifications, the area’s post-reclassified wage index value for these nine hospitals is lower than the Massachusetts post-reclassified rural wage index value of 1.3477 (which only includes wage data from one rural hospital located in Nantucket County, Massachusetts). Therefore, in accordance with our reclassification hold-harmless methodology, these nine hospitals are assigned the Massachusetts post-reclassified rural wage index value of 1.3477 within the calculation of the reclassification budget neutrality adjustment, prior to the calculation and application of the rural floor budget neutrality adjustment. The impact of this increase in payments (Column B compared to Column F for the nine hospitals) is factored into the reclassification budget neutrality adjustment factor, which is applied to standardized amount. The table below illustrates the various wage indexes in each step of the process described above and why these nine hospitals were assigned the Massachusetts post-
reclassified rural wage index prior to the application of the rural floor budget neutrality adjustment.

</table>

**Note:** All wage indexes in this table do not include application of the rural floor budget neutrality adjustment.

The next step in the sequence of our calculation of the budget neutrality adjustment factor is to calculate the rural floor budget neutrality adjustment, which is applied to the wage index. For the 51 hospitals located in Massachusetts, their post-reclassified area wage index is compared to the Massachusetts rural floor wage index (consisting of the one rural hospital located in Nantucket County). Because their post-reclassified area wage index value is lower than the Massachusetts rural floor wage index value of 1.3477, the hospitals are assigned the Massachusetts rural floor wage index value of 1.3477. Therefore, a rural floor budget neutrality adjustment factor is applied to the wage indexes of the 51 hospitals to account for the increase in payments as a result of the application of the rural floor wage index policy. However, with regard to the nine reclassified hospitals, they have already been assigned a post-reclassified wage index value of 1.3477, which is equal to the Massachusetts rural wage index.

In addition to the 3-year transition period for hospitals being transitioned from urban to rural status as discussed above, we are finalizing, as we proposed, a 1-year blended wage index transitional policy for all hospitals that will experience any decrease in their wage index value (that is, a hospital’s actual wage index value used for payment, which accounts for all applicable effects of reclassification and redesignation) exclusively as a result of the implementation of the new OMB delineations. Similar to the policy adopted in the FY 2005 IPPS final rule (69 FR 49033), a post-reclassified wage index with the rural and imputed floor applied is computed based on the hospital’s FY 2014 CBSA (that is, using all of its FY 2014 constituent county/ies), and another post-reclassified wage index with the rural and imputed floor applied will be computed based on the hospital’s FY 2015 CBSA (that is, the FY 2015 constituent county/ies). We compared these two wage indexes. If the FY 2015 wage index using the FY 2015 CBSAs is lower than the FY 2015 wage index using the FY 2014 CBSAs, we are computing a blended wage index consisting of 50 percent of each of the two wage indexes added together. This blended wage index is the hospital’s wage index for FY 2015. Hospitals that benefit from the adoption of the new OMB delineations are assigned their new wage index based on the new OMB delineations. We refer readers to section III. of the preamble of this final rule for a complete discussion on the transitional wage index policy.

In the past, CMS has budget neutralized transitional wage indexes. Because we are establishing a policy that allows for the application of a transitional wage index only when it benefits the hospital, we believe that it would be appropriate to ensure that such a transitional policy does not increase aggregate Medicare payments beyond the payments that would be made had we simply adopted the new OMB delineations without any transitional provisions. Therefore, for FY 2015, we proposed to use our exceptions and adjustments authority under section 1886(d)(5)(I)(i) of the Act to make an adjustment to the national and Puerto Rico-specific standardized amounts to ensure that total payments, including the effect of the transitional wage index provisions, will equal what payments would have been if we had fully adopted the new OMB delineations without any transitional provisions. We did not receive any public comments on this proposal and are finalizing our proposal to make this adjustment under section 1886(d)(5)(I)(i) of the Act.

Also, because we did not receive any public comments on this proposal we are finalizing our proposal to use the methodology proposed in the proposed rule in this final rule to calculate the transitional wage index.
budget neutrality adjustment factor. We discuss the calculation of this adjustment factor below.

As stated above, the 50/50 blended wage indexes use post-reclassified wage index data with the rural and imputed floor applied computed based on FY 2014 CBSAs. Because the 50/50 blended methodology uses data based on FY 2014 CBSAs, in order to properly calculate the transitional budget neutrality factor, it was first necessary to calculate the following budget neutrality factors based on the FY 2014 CBSAs: An MS–DRG and wage index budget neutrality, a reclassification budget neutrality, and a rural floor budget neutrality. It was necessary to compute the first three budget neutrality factors of MS–DRG, wage index, and reclassification budget neutrality (which are applied to the standardized amount) to ensure that the calculation of the rural and imputed floor budget neutrality factor applied to the wage index based on FY 2014 CBSAs is accurate. We calculated these four budget neutrality factors using the same methodology stated above, but used the FY 2014 CBSAs instead of the FY 2015 CBSAs on both sides of the comparison.

After calculating all of the budget neutrality factors using FY 2014 and FY 2015 CBSAs, to calculate the transitional wage index budget neutrality factor for FY 2015, we used FY 2013 discharge data to simulate payments and compared the following: • Aggregate payments using new OMB delineations for FY 2015, the FY 2015 relative weights, FY 2015 wage data after such reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act (using the new OMB delineations), the applied rural floor budget neutrality factor to the wage index (using the new OMB delineations), and applied the FY 2015 hospital readmissions payment adjustments and the estimated FY 2015 hospital VBP payment adjustments; and • Aggregate payments using FY 2015 relative weights, FY 2015 wage data after applying the transitional wage indexes, and applied the same hospital readmissions payment adjustments and the estimated hospital VBP payment adjustments applied above. We note that hospitals that did not receive the transitional 50/50 blended wage index were assigned the post-reclassified wage index values with the rural floor budget neutrality adjustment based on the FY 2015 new OMB delineations.

Based on these simulations, we calculated a budget neutrality adjustment factor of 0.998859. Therefore, for FY 2015, we are applying a transitional wage index budget neutrality adjustment factor of 0.998859 to the national average and Puerto Rico-specific standardized amounts to ensure that the effects of these transitional wage indexes are budget neutral.

We note that the budget neutrality adjustment factor calculated above is based on the increase in payments in FY 2015 that would result from the transitional wage indexes. Therefore, we are applying this budget neutrality adjustment factor as a one-time adjustment to the FY 2015 national and Puerto Rico-specific standardized amounts in order to offset the increase in payments in FY 2015 as a result of these transitional wage indexes. For subsequent fiscal years, we will not take into consideration the adjustment factor applied to the national and Puerto Rico-specific standardized amounts in the previous fiscal year’s update when calculating the current fiscal year transitional wage index budget neutrality adjustment factor (that is, this adjustment will not be applied cumulatively). Because we are establishing a 3-year transitional wage index policy for urban hospitals that became rural as a result of the adoption of the new OMB delineations, we intend to establish transitional wage index budget neutrality adjustment factors to apply to the FY 2016 and FY 2017 national and Puerto Rico-specific standardized amounts during those respective rulemaking cycles. Similar to the policy for FY 2015, we intend to propose that the FYs 2016 and 2017 adjustments would be applied as “one-time” adjustments and not cumulative adjustments applied each fiscal year.

e. Case-Mix Budget Neutrality Adjustment

(1) Background

Below we summarize the recoupment adjustment to the FY 2015 payment rates, as required by section 631 of ATRA, to account for the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies for FY 2015 in this final rule and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

(2) Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA) to the National Standardized Amount

Section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110–90 to require the Secretary to make a recoupment adjustment totaling $11 billion by FY 2017. Our actuaries estimated that if CMS were to fully account for the $11 billion recoupment required by section 631 of ATRA in FY 2014, a one-time −0.9 percent adjustment to the standardized amount would be necessary. It is often our practice to delay or phase-in payment rate adjustments over more than 1 year, in order to moderate the effect on payment rates in any 1 year. Therefore, consistent with the policies that we have adopted in many similar cases, for FY 2014, we applied a −0.8 percent adjustment to the standardized amount. In this final rule, as we proposed, we are applying an additional −0.8 percent adjustment to the standardized amount for FY 2015. We note that, as section 631 of the ATRA instructs the Secretary to make a recoupment adjustment only to the standardized amount, this adjustment would not apply to the Puerto Rico-specific standardized amount and hospital-specific payment rates.

f. Rural Community Hospital Demonstration Program Adjustment

As discussed in section IV.L. of the preamble of this final rule, section 410A of Public Law 108–173 originally required the Secretary to establish a demonstration program that modifies reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) of Public Law 108–173 requires that “[i]n conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.”

Sections 3123 and 10313 of the Affordable Care Act extended the demonstration program for an additional 5-year period, and allowed up to 30 hospitals to participate in 20 States with low population densities determined by the Secretary. (In determining which States to include in the expansion, the Secretary is required to use the same criteria and data that the Secretary used to determine the States for purposes of the initial 5-year period.) In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53449 through 53453), in
order to achieve budget neutrality, we adjusted the national IPPS payment rates by an amount sufficient to account for the added costs of this demonstration program as described in section IV.K. of that final rule. In other words, we applied budget neutrality across the payment system as a whole rather than merely across the participants of this demonstration program, consistent with past practice. We stated that we believe the language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that “aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration . . . was not implemented,” but does not identify the range across which aggregate payments must be held equal.

As we did for FY 2014, for FY 2015, we are adjusting the national IPPS payment rates according to the same methodology that we used for FY 2013, as set forth in section IV.L. of the preamble of this final rule, to account for the estimated additional costs of the demonstration program for FY 2015. For FY 2015, in this final rule, the estimated amount of this budget neutrality adjustment factor applied to the national IPPS payment rates for FY 2015 is $54,177,144. In addition, similar to previous years, we are including in the budget neutrality offset amount the amount by which the actual demonstration costs corresponding to an earlier given year (which would be determined once we have finalized cost reports for that year) exceeded the budget neutrality offset amount finalized in the corresponding year’s IPPS final rule. For this FY 2015 IPPS/LTCH PPS final rule, we have calculated the amount by which the actual costs of the demonstration in FY 2008 (that is, the costs of the demonstration for the 10 hospitals that participated in FY 2008, as shown in these hospitals’ finalized cost reports for the cost report period beginning in that calendar year), exceeded that amount that was finalized in the FY 2008 IPPS final rule. For FY 2015, in this final rule, we are establishing a budget neutrality offset amount of $10,389,771 for FY 2008.

We also are currently working with the MACs that service the hospitals participating in the demonstration to obtain finalized cost reports for FYs 2009, 2010, 2011, and 2012). These data were unavailable for this final rule. However, depending on our progress in obtaining these cost reports, we may include in the FY 2016 IPPS final rule the difference between the demonstration costs for one or more of these years and the amounts that were finalized in the respective fiscal years’ final rules.

Therefore, the final total budget neutrality offset amount that we are applying to the FY 2015 IPPS payment rates is $64,566,915. This amount is the sum of two separate components: (1) the difference between the total estimated FY 2014 reasonable cost amount to be paid under the demonstration to the 22 participating hospitals participating in the demonstration program for covered inpatient services, and the total estimated amount that would otherwise be paid to the participating hospitals in FY 2014 without the demonstration ($54,177,144); and (2) the amount by which the actual costs of the demonstration for FY 2008, which are calculated in accordance with the finalized cost reports for the hospitals that participated in the demonstration during FY 2008, exceed the budget neutrality offset amount that was finalized in the FY 2008 IPPS final rule ($10,389,771).

Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2015, we computed a factor of 0.99931 for the rural community hospital demonstration program budget neutrality adjustment that will be applied to the IPPS standard Federal payment rate.

### g. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the outlier threshold as the outlier “fixed-loss cost threshold.” To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital’s CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2015 is 80 percent, the same marginal cost factor we have used since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating outlier payments by the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. Similarly, section 1886(d)(9)(B)(iv) of the Act requires the Secretary to reduce the average standardized amount applicable to hospitals located in Puerto Rico to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm.

(1) **FY 2015 Outlier Fixed-Loss Cost Threshold**

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977–50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for detailed discussion of the changes.

For FY 2015, we proposed to continue to use the same methodology that we used in FY 2014. As we have done in the past, to calculate the proposed FY 2015 outlier threshold, we simulated payments by applying proposed FY 2015 payment rates and policies using cases from the FY 2013 MedPAR file. Therefore, in order to determine the proposed FY 2015 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2013 to FY 2015. As discussed in the FY 2014 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology...
used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals. Under this new methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2015, we proposed to compare the second quarter of FY 2012 through the first quarter of FY 2013 (January 1, 2012, through December 31, 2012) to the second quarter of FY 2013 through the first quarter of FY 2014 (January 1, 2013, through December 31, 2013). This rate-of-change is 5.6 percent (1.055736) or 11.5 percent (1.114579) over 2 years.

Comment: Commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. The commenters stated that the first quarter of the FY 2014 MedPAR claims were not released to the public. The commenters requested that CMS release the claims data used to calculate the charge inflation factor used in the proposed rule. One commenter, a provider, requested that CMS reevaluate the calculation of the inflation factor because it far exceeds the inflation factors used in labor markets that the provider operates within.

Response: In the FY 2014 IPPS/LTCCH PPS proposed rule, we proposed to adopt a new methodology to compare periods of 1-year of the most recent charge data in order to inflate charges. Commenters supported this proposal and it was adopted for FY 2014 and future years in the FY 2014 IPPS/LTCCH PPS final rule (78 FR 50978). We note that we did not provide additional data for the first quarter of FY 2013, which was used to inflate charges in the FY 2014 IPPS/LTCCH PPS proposed rule, nor was it requested during the comment period for the FY 2014 IPPS/LTCCH PPS proposed rule. We further note that our charge inflation policy from FY 2005 through FY 2013 also compared the most recent charge data using a 6-month comparison instead of a 1-year comparison. Similar to above, we did no provide additional data for the first quarter of the applicable fiscal year, nor was it requested during the comment period for those years.

Consistent with this policy, for FY 2015, we proposed to compare the most recent charge data from the second quarter of FY 2012 through the first quarter of FY 2013 (January 1, 2012, through December 31, 2012) to the second quarter of FY 2013 through the first quarter of FY 2014 (January 1, 2013, through December 31, 2013).

In response to the commenters who requested a restructuring of the limited data set files for the FY 2015 IPPS/LTCCH PPS proposed and final rule to provide an additional quarter of MedPAR claims data, we did not have sufficient time to restructure the files as the commenters requested prior to the publication of the proposed and this final rule. Consistent with our longstanding policy since FY 2005, we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. We will consider how best to provide additional information on the charge inflation factor for future years.

With respect to the commenter requesting that CMS reevaluate the calculation of the inflation factor, we believe that our measure of charge inflation accurately reflects the national charge inflation. Our charge inflation factor represents the average percentage increase in charge inflation for all hospitals. We recognize that charge inflation may vary geographically, and we do not believe that it is appropriate to base the charge inflation factor on selective labor markets because we apply this charge inflation factor to all claims for all hospitals.

As we have done in the past, in the FY 2015 IPPS/LTCCH PPS proposed rule we proposed to establish the FY 2015 outlier threshold using hospital CCRs from the December 2013 update to the Provider-Specific File (PSF)—the most recent available data at the time of the proposed rule. We also proposed that if more recent data became available we would use that data to calculate the final FY 2015 outlier threshold. For FY 2015, we also proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

In the FY 2014 IPPS/LTCCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we did for FY 2014, for FY 2015, we proposed to adjust the CCRs from the December 2013 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2012 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2013 update of the PSF. Under the proposed rule we used total transfer-adjusted cases from FY 2013 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule we calculated a December 2012 operating national average case-weighted CCR of 0.295101 and a December 2013 operating national average case-weighted CCR of 0.289587. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2012 operating national average case-weighted CCR from the December 2013 operating national average case-weighted CCR and then dividing the result by the December 2012 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.981315.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, for the proposed rule we calculated a December 2012 capital national average case-weighted CCR of 0.025079 and a December 2013 capital national average case-weighted CCR of 0.024868. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2012 capital national average case-weighted CCR from the December 2013 capital national average case-weighted CCR and then dividing the result by the December 2012 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.991587.

Consistent with our methodology used in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCRs. On average, it takes approximately 9 months for a fiscal intermediary or MAC to tentatively settle a cost report from the fiscal year end of a hospital’s cost reporting period. The average “age” of hospitals’ CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2015 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.
Comment: One commenter matched the CCRs used for the proposed rule impact file to the December 2013 PSF and found that 126 providers’ CCRs did not match. The commenter noted that although an extremely high percentage of providers’ CCRs matched the data in the December 2013 update, the average percent difference for those CCRs that did not match is much higher than any other comparison from prior years. The commenter stated that this difference could lead to differences in the calculated fixed-loss threshold. The commenter further stated that the data demonstrated that CMS used significantly outdated CCRs to make projections for the FY 2015 fixed-loss threshold. The commenter recommended that this error be rectified in the final rule, which would result in a substantially reduced threshold. In addition, the commenter recommended that CMS use the most recently updated PSF file for the final rule.

Response: With regard to the commenter’s finding of 126 providers with CCRs from the proposed rule impact file that did not match the data in the December 2013 PSF, as stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we apply the following edits to providers’ CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF. We believe that the edits above are the reason why the commenter found that 126 providers had CCRs in the impact file that did not match the CCRs in the December 2013 PSF, and contributed to the average percentage difference for those CCRs that did not match. We also believe that we have accurately calculated and applied these statewide average CCRs and will continue to monitor any large variances in the future. With regard to using the most recently updated PSF file for the final rule, we responded to a similar comment below.

As stated above, for FY 2015, we applied the proposed FY 2015 payment rates and policies using cases from the FY 2013 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2015, we are applying transitional wage indexes because of the adoption of the new OMB labor market area delineations. Also, as discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.C.3. of the preamble of this final rule, in accordance with section 10324(a) of the Affordable Care Act, beginning in FY 2011, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We noted that the frontier State floor adjustments will be calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State will receive a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the proposed outlier threshold for FY 2015, it was necessary to apply the transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2015. If we did not take the above into account, our estimate of total FY 2015 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2015 outlier payments, we proposed not to make any adjustments for the possibility that hospitals’ CCRs and outlier payments may be reconciled upon cost report settlement. We stated that we continue to believe that, due to the policy implemented in the June 9, 2003 Outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our reconciliation criteria, reconciliation occurs in instances where a hospital’s actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, we proposed not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Comment: One commenter expressed concern that CMS did not consider outlier reconciliation in the development of the outlier threshold. The commenter stated that CMS did not provide any objective data concerning the number of hospitals that have been subject to outlier reconciliation and the amounts recovered. The commenter further stated that, in February 2003, the Secretary signed what the commenter described as an emergency interim final rule that would have corrected the outlier threshold and included outlier reconciliation payments (in the calculation of the outlier threshold), but that rule was not issued because of objections from the Office of Management and Budget. The commenter asserted that if it was possible to account for outlier reconciliation payments at the initial implementation of the outlier reconciliation policy in the calculation of the threshold, it should be possible to do so 10 years later. The commenter also searched cost reports from the HCRIS database for the years 2003 through 2010 (Form CMS–2552–96 and CMS–2552–10) and, based on these data, provided its estimate that the annual amounts recovered by CMS through reconciliation totaled $108,934,425. The commenter believed that these data can be used to provide a baseline and trend information to assess whether outlier reconciliation is a significant factor to be considered in the development of the outlier threshold. The commenter noted that it was unable to extract outlier reconciliation payment information from cost reports filed under Form CMS–2552–10. The commenter was unsure why this data was not being captured. Therefore, the commenter requested that CMS disclose in the final rule and future rulemaking the amount CMS has recovered through reconciliation by year.

Another commenter cited a report issued by the Office of Inspector General (OIG) on June 28, 2012, entitled “The Centers for Medicare & Medicaid Services Did Not Reconcile Medicare Outlier Payments in Accordance With Federal Regulations and Guidance” (A–07–10–02764), which reviewed the reconciliation process for outlier payments under the IPPS. The commenter stated that the 2012 OIG report identified approximately $664 million in unreconciled outlier payments, which is a material amount.
in relation to total outlier payments. Moreover, the commenter further stated that CMS now has approximately 10 full fiscal years of experience with reconciliation from which to project the impact of its reconciliation in the upcoming fiscal year. As such, the commenter asserted that CMS’ policy of refusing to account for the impact of reconciliation in setting the FY 2015 outlier fixed-loss cost threshold is neither reasonable nor consistent with the outlier provisions of the statute.

The same commenter cited the OIG report issued on November 13, 2013, entitled “Medicare Hospital Outlier Payments Warrant Increased Scrutiny” (OEI–06–10–00520). The commenter stated that the proposed outlier fixed-loss cost threshold appears improperly inflated and, therefore, overstated because CMS does not report, and has not taken any actions to report, any steps to account for “high-outlier” payments identified in the report. The commenter further stated that it is neither consistent with the outlier provisions of the statute nor reasonable for CMS, in modeling outlier payments for the upcoming fiscal year, to include outlier payments that were based on excessively high charges for particular MS–DRGs and not based on truly unusually high costs. The commenter concluded that such payments will presumably be recouped by CMS and outlier payments reconciled in any year. We also note that, in general, CMS has not disclosed or discussed what, if anything, it has done to address this issue in setting the outlier fixed-loss cost threshold for FY 2015.

Response: A similar comment was received in response to the policies presented in last year’s rule. We appreciate the commenter’s input and for informing us of its concern regarding our policy of not including outlier reconciliation within the development of the outlier fixed-loss cost threshold. The commenter provided data from HCRIS that demonstrated total outlier reconciliation payments from 2003 through 2010 were $78,934,425, which equates to approximately $13,616,803 annually. Assuming that the totals provided by the commenter are correct, we do not believe that this relatively small annual amount would have an impact on the outlier threshold because total outlier payments are approximately $4.3 billion. Further, with regard to the draft final rule referenced by the commenter, that draft document was never finalized or published in the Federal Register (neither in a proposed or interim basis), or implemented in any way. We also disagree with the commenter’s characterization of the draft interim final rule. That draft rule would not have adjusted the outlier threshold by accounting for payment changes as a result of outlier reconciliation, as the commenter suggested. Rather, the draft interim final rule merely would have calculated a new fixed-loss threshold to be applied for the remainder of Federal fiscal year 2003 using the same data that originally had been used for that purpose, but excluding data from 123 hospitals whose percentage of outlier payments relative to total DRG payments increased by at least 5 percentage points between FY 1999 and FY 2001, and whose case-mix (the average DRG relative weight value for all of a hospital’s Medicare cases) adjusted charges increased at a rate at or above the 95th percentile rate of charge increase for all hospitals (46.63 percent) over the same period. As previously stated, this draft rule was never finalized or published in the Federal Register. Therefore, that document has little, if any, relevance to the current discussion.

As stated in prior final rules, we continue to believe that, as a result of the policy implemented in the June 9, 2003 outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement as demonstrated by the total outlier payments provided by the commenter. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our outlier reconciliation criteria, reconciliation occurs in instances where a hospital’s actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our similar assumption that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, as we proposed, we are finalizing our proposal not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Also, outlier reconciliation is a function of the cost report and MACs record the outlier reconciliation amount on each provider’s cost report (and are not required to report these data to CMS outside of the cost report settlement process). Therefore, the outlier reconciliation data that the commenter requested should be publicly available through the cost report. With regard to the commenter not being able to retrieve the data for outlier reconciliation payments from cost reports filed under Form CMS–2552–10, we received a similar comment in response to last year’s proposed rule, as summarized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50980). We will continue to follow up with our information systems team to ensure this information is readily available to the public. Since the effective date of Change Request 7192 on April 1, 2011, we have approved the reconciliation of outlier payments for some hospitals. Other hospitals that were flagged for outlier reconciliation are still under review for approval. In addition, some hospitals flagged for outlier reconciliation may experience a delay in reconciling their outlier payments due to circumstances that prevent the MACs from finalizing the hospital’s cost report (such as other payments that may need to be reconciled aside from outlier payments).

We disagree with the commenter that stated that we should not include outlier payments that were based on excessively high charges for particular MS–DRGs and not based on truly unusually high costs because such payments will presumably be recouped by CMS and outlier reconciliations are performed. As the MACs continue to perform these outlier reconciliations, they record these amounts on the cost report, which are then publicly available through the HCRIS database. Also, CMS has requested that the MACs submit to CMS the reconciled outlier amounts. We will continue to track these outlier reconciliations as stated in our response to the OIG report.

As stated in prior final rules, we continue to believe that, as a result of the policy implemented in the June 9, 2003 outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement as demonstrated by the total outlier payments provided by the commenter. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our outlier reconciliation criteria, reconciliation occurs in instances where a hospital’s actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our similar assumption that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, as we proposed, we are finalizing our proposal not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Also, outlier reconciliation is a function of the cost report and MACs record the outlier reconciliation amount on each provider’s cost report (and are not required to report these data to CMS outside of the cost report settlement process). Therefore, the outlier reconciliation data that the commenter requested should be publicly available through the cost report. With regard to the commenter not being able to retrieve the data for outlier reconciliation payments from cost reports filed under Form CMS–2552–10, we received a similar comment in response to last year’s proposed rule, as summarized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50980). We will continue to follow up with our information systems team to ensure this information is readily available to the public. As stated in prior final rules, we continue to believe that, as a result of the policy implemented in the June 9, 2003 outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement as demonstrated by the total outlier payments provided by the commenter. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our outlier reconciliation criteria, reconciliation occurs in instances where a hospital’s actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our similar assumption that CCRs accurately measure hospital costs based on information available to us at the time we set the outlier threshold. For these reasons, as we proposed, we are finalizing our proposal not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.
charges, the hospital probably will not meet the outlier reconciliation criteria. As described in sections IV.H. and IV.I., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under §412.152 and the Hospital VBP Program under §412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We noted that, to the extent section 1886(r) of the Act modifies the existing DSH payment methodology under section 1886(d)(5)(F), the new uncompensated care payment under section 1886(r)(2), like the empirically justified Medicare DSH payment under section 1886(r)(1), may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A). As we did for FY 2014, for FY 2015, we stated that we also are proposing to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We stated that we continue to believe that allocating an eligible hospital’s estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be paying estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we stated that we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used in FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2015, we stated that we are proposing to include estimated FY 2015 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we stated we are proposing to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we proposed an outlier fixed-loss cost threshold for FY 2015 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, uncompensated care payment, and any add-on payments for new technology, plus $25,799.

In the proposed rule we noted that the proposed FY 2015 fixed-loss cost threshold is higher than the FY 2014 final outlier fixed-loss cost threshold of $21,748. We stated that we believe that the increase in the charge inflation factor (compared to the FY 2014 charge inflation factor) contributed to a higher proposed outlier fixed-loss threshold for FY 2015. As charges increase, so do outlier payments. As a result, it was necessary for us to raise the proposed outlier fixed-loss cost threshold to decrease the amount of outlier payments expended in order to reach the 5.1 percent target.

Comment: Some commenters were surprised by the magnitude of the increase of the outlier threshold in the proposed rule compared to the threshold of $21,748 for FY 2014. The commenters explained that, for FY 2013, CMS currently estimates that outliers are 4.81 percent of total MS–DRG payments. The commenters asserted that, given the threshold for FY 2013 of $21,821 was similar to the outlier threshold for FY 2014, they find little justification for a dramatic increase in the threshold for FY 2015.

The commenters also stated that it is important that CMS is aware of the magnitude of inaccuracies when estimating the actual outlier payout for prior years or calculating the current outlier threshold. The commenters noted that, in prior years, CMS has estimated outlier payments for a FY in one year and then the next year revises the estimate at a much lower number than the initial estimate. The commenters cited the FY 2013 outlier estimate as an example where CMS estimated total outlier payments for FY 2013 in the FY 2014 IPPS/LTC PPS proposed rule as 5.17 percent and then revised this number in the FY 2015 IPPS/LTC PPS proposed rule to 4.81 percent.

The commenters also noted that with each rulemaking the final outlier threshold established by CMS is always lower than the threshold set forth in the proposed rule. One commenter speculated that this is most likely as result of the use of updated CCRs or other data in calculating the final outlier threshold. As a result, the commenter emphasized the need for CMS to use the most recent data available when calculating the outlier threshold. The commenter stated that, with regard to the current rulemaking, CMS used data from the December 2013 PSF in the proposed rule, when the March 2014 PSF was available at the time the proposed rule was issued. Using the March 2014 PSF, the commenter calculated an outlier threshold of $25,375 (compared to the threshold presented in the proposed rule of $25,799, which used the December 2013 PSF).

Response: When we conduct our modeling to determine the outlier threshold, we factor in all payments and policies that would affect actual payments for the current year in order to estimate that outlier payments are 5.1 percent of total MS–DRG payments. While we recognize that outlier payments have been below the 5.1 percent target in prior fiscal years, we do not believe that these lower payouts are relevant to the current fiscal year because they do not lend greater accuracy to the estimate of payments that are 5.1 percent of total MS–DRG payments for FY 2015. We also note that in response to commenters’ concerns, last year we modified our outlier threshold calculation by changing the way we adjust the CCRs. We also changed the measure of inflation from using 6 months of claims data to 1 year of claims data. CMS shares the commenters’ belief that outlier payments in every fiscal year meet the 5.1 percent target, and we made these changes to improve our methodology for calculating the outlier threshold. As in prior years, CMS will continue to consider any suggestions made by the commenters to improve the accuracy of the calculation of the outlier threshold. CMS’ historical policy is to use the best available data when setting the
payment rates and factors in both the proposed and final rules. Sometimes there are variables that change between the proposed and final rule as result of the availability of more recent data, such as the charge inflation factor and the CCR adjustment factors that can cause fluctuations in the threshold amount. Other factors such as changes to the wage indexes and market basket increase can also cause the outlier fixed-loss cost threshold to fluctuate between the proposed rule and the final rule each year. We use the latest data that is available at the time of the development of the proposed and final rules, such as the most recent update of MedPAR claims data and CCRs from the most recent update of the PSF. With regard to the commenter noting the availability of the March 2014 PSF at the time the proposed rule was issued, this file was not available when we calculated the proposed outlier fixed-loss cost threshold as part of the development of the proposed rule. Therefore, for the proposed rule, we used the latest update available, which was the December 2013 PSF. If we were to wait for the March 2014 PSF to become available, this would cause further delay of publication of the proposed rule, leading to a possible further delay of issuance of the final rule in a timely fashion.

Comment: One commenter stated that as a result of the large increase in the proposed outlier threshold it suspected that CMS is duplicating its charge increases through the use of the charge inflation factor. The commenter believed that this duplication is compounded by the fact that the CCRs would also reflect high charges. The commenter believed that these two issues are artificially inflating the threshold while hospitals have lower costs. The commenter offered an alternative threshold of $24,340, by measuring the change in outlier percentage payments of 5.1 percent for FY 2015 compared to the FY 2014 outlier estimate of 5.79 percent (5.1 percent minus 5.79 percent = −0.69 percent divided by 5.79 percent = 11.92 percent). The commenter recommended using a forecast correction of 100 plus 11.92 percent based on their calculation above.

Response: We disagree with the commenter. We believe that our measure and application of the charge inflation factor is accurate and appropriate as explained in the proposed rule. As discussed, we apply a 2-year charge inflation factor because we use claims from FY 2013 for FY 2015. Also, the CCRs we use come directly from the PSF, which comes directly from hospitals’ cost reports. We believe that these CCRs are accurate. We also are unsure what “high charges” to which the commenter referred. Further, as noted above, section 1886(d)(5)(A)(iv) of the Act requires outlier payments to be not less than 5 percent nor more than 6 percent of total estimated or projected payments in that year. Therefore, we cannot adopt the commenter’s suggestion to use a forecast correction to compute the outlier threshold. When we calculate the threshold, we use the latest data that are available at the time of the proposed and final rule as in order to estimate that outlier payments are 5.1 percent of total payments.

Comment: One commenter noted that CMS did not indicate if it has made any additional changes to its methodology to exclude the charges for hemophilia clotting factors from the calculation of the fixed-loss outlier threshold. The commenter noted that CMS provides a methodology for excluding such charges from MedPAR data for the budget neutrality calculation. The commenter wanted to ensure that such efforts also resulted in the exclusion of such charges from MedPAR data used for the calculation of the fixed-loss threshold as well.

Response: We appreciate the commenter’s input and for seeking clarification on the calculation of the fixed-loss outlier threshold. Similar to what is done in the budget neutrality calculation, CMS excludes the charges for hemophilia clotting factors from the calculation of the fixed-loss outlier threshold.

Comment: One commenter stated that in its public comment submitted in response to the FY 2014 IPPS/LTCCH PPS proposed rule regarding outliers, it explained why uncompensated care payments should be included as part of the fixed-loss threshold calculation. The commenter noted that it is clear why CMS considered this in the FY 2015 IPPS/LTCCH PPS proposed rule. The commenter wanted to ensure that updates to the uncompensated care payment calculation are also considered in the final rule.

Response: As discussed above, we included updates to the uncompensated care payment calculation as part of the fixed-loss outlier threshold calculation in this final rule. After consideration of the public comments we received, we are not making any changes to our methodology in this final rule for FY 2015. Therefore, we are using the same methodology we proposed to calculate the final outlier threshold.

As we have done in the past, to calculate the final FY 2015 outlier threshold, we simulated payments by applying FY 2015 payment rates and policies using cases from the FY 2013 MedPAR file. Therefore, in order to determine the final FY 2015 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2013 to FY 2015. As discussed in the FY 2014 IPPS/LTCCH PPS final rule, we believe that a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case. To compute the 1-year average annualized rate-of-change in charges per case for FY 2013, we compared the third quarter of FY 2012 through the second quarter of FY 2013 (April 1, 2012, through March 31, 2013) to the third quarter of FY 2013 through the second quarter of FY 2014 (April 1, 2013, through March 31, 2014). This rate-of-change is 5.1 percent (1.050917) or 10.4 percent (1.104427) over 2 years.

As we have done in the past, we are establishing the FY 2015 outlier threshold using hospital CCRs from the March 2014 update to the Provider-Specific File (PSF)—the most recent available data at the time of development of this final rule. For FY 2015, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). In the FY 2014 IPPS/LTCCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year. Therefore, as we did for FY 2014, for FY 2015, we are adjusting the CCRs from the March 2014 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2013 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2014 update of the PSF. We note that we used total transfer-adjusted cases from FY 2013 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison as this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.
Using the methodology above, we calculated a March 2013 operating national average case-weighted CCR of 0.292377 and a March 2014 operating national average case-weighted CCR of 0.28714. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2013 operating national average case-weighted CCR from the March 2014 operating national average case-weighted CCR and then dividing the result by the March 2013 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.982088.

We also used the same methodology above to adjust the capital CCRs. Specifically, we calculated a March 2013 capital national average case-weighted CCR of 0.025143 and a March 2014 capital national average case-weighted CCR of 0.024849. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the March 2013 capital national average case-weighted CCR from the March 2014 capital national average case-weighted CCR and then dividing the result by the March 2013 capital national average case-weighted CCR. This resulted in a capital national CCR adjustment factor of 0.998307.

Consistent with our methodology in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCR. On average, it takes approximately 9 months for a fiscal intermediary or MAC to tentatively settle a cost report from the fiscal year end of a hospital’s cost reporting period. The average “age” of hospitals’ CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2015 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.

As stated above, for FY 2015, we applied the FY 2015 payment rates and policies using cases from the FY 2013 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2015, we are applying transitional wage indexes because of the adoption of the new OMB labor market area delineations. Also, as discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTC PPS final rule (75 FR 50160 and 50161) and in section III.C.6. of the preamble of this final rule in accordance with section 10324(a) of the Affordable Care Act, beginning in FY 2011, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments are calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State receives a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment is not subject to budget neutrality, and is only extended to hospitals geographically located within a frontier State. However, for purposes of estimating the outlier threshold for FY 2015, it was necessary to apply the transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2015. If we did not take the above into account, our estimate of total FY 2015 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), as we proposed and for the reasons discussed above, in our projection of FY 2015 outlier payments, we are not making any adjustments for the possibility that hospitals’ CCRs and outlier payments may be reconciled upon cost report settlements.

As described in sections IV.H. and IV.L., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we are excluding the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the existing DSH payment methodology under section 1886(d)(5)(F), the new uncompensated care payment under section 1886(r)(2), like the empirically justified Medicare DSH payment under section 1886(r)(1), may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A). As we did for FY 2014, for FY 2015, for the reasons discussed above, we also allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. Specifically, we are using the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we calculated a final outlier fixed-loss cost threshold for FY 2015 equal to the prospective payment rate for the MS–DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus $24,758.

We note that the final FY 2015 fixed-loss cost threshold is higher than the FY 2014 final outlier fixed-loss cost threshold of $21,748. We believe that the increase in the charge inflation factor (compared to the FY 2014 charge inflation factor) contributed to a higher outlier fixed-loss threshold for FY 2015. As charges increase, so do outlier payments. As a result, it was necessary for us to raise the outlier fixed-loss cost threshold to decrease the amount of outlier payments expended in order to reach the 5.1 percent target.

Also, the final FY 2015 fixed-loss cost threshold is lower than the FY 2015 proposed outlier fixed-loss cost threshold of $25,799. As discussed above, the proposed MS–DRG reclassification and recalibration budget neutrality factor was calculated incorrectly in the proposed rule as a result of the inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS–DRGs. We believe that the corrected factor, which offsets less money from the
standardized amount, results in less outlier payments. Therefore, it was necessary to lower the outlier threshold from the proposed rule in the final rule in order to reach the 5.1 percent target.

(2) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2015 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 6.27 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we are reducing the FY 2015 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that will be applied to the standardized amount based on the FY 2015 outlier threshold are as follows:

<table>
<thead>
<tr>
<th></th>
<th>Operating standardized amounts</th>
<th>Capital federal rate</th>
</tr>
</thead>
<tbody>
<tr>
<td>National</td>
<td>0.948998</td>
<td>0.937327</td>
</tr>
<tr>
<td>Puerto Rico</td>
<td>0.926575</td>
<td>0.915412</td>
</tr>
</tbody>
</table>

We are applying the outlier adjustment factors to the FY 2015 payment rates after removing the effects of the FY 2014 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at §412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the fiscal intermediary or MAC computes operating CCRs greater than 1.23 or capital CCRs greater than 0.172, or hospitals for which the fiscal intermediary or MAC is unable to calculate a CCR (as described under §412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the Internet on the CMS Web site) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the fiscal intermediary or MAC is unable to compute a hospital-specific CCR within the above range. Effective for discharges occurring on or after October 1, 2014, these statewide average ratios will replace the ratios posted on our Web site at http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY-2014-IPPS-Final-Rule-Home-Page-Items/FY-2014-IPPS-Final-Rule-CMS-1599-F-Tables.html.

Table 8B listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B will be used during FY 2015 when hospital-specific CCRs based on the latest settled cost report are either not available, or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that have assigned the statewide average operating and/or capital CCRs to work with their fiscal intermediary or MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the fiscal intermediary or MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR ratio at any time as long as the guidelines of Change Request 3966 are followed. In addition, as mentioned above, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation, we refer readers to the CMS Web site: http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf.

(3) FY 2013 and FY 2014 Outlier Payments

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50983 through 50984), we stated that, based on available data, we estimated that actual FY 2013 outlier payments would be approximately 4.77 percent of actual total MS–DRG payments. This estimate was computed based on simulations using the FY 2012 MedPAR file (discharge data for FY 2012 claims). That is, the estimate of actual outlier payments did not reflect actual FY 2013 claims, but instead reflected the application of FY 2013 payment rates and policies to available FY 2012 claims.

Our current estimate, using available FY 2013 claims data, is that actual outlier payments for FY 2013 were approximately 4.86 percent of actual total MS–DRG payments. Therefore, the data indicate that, for FY 2013, the percentage of actual outlier payments relative to actual total payments is lower than we projected for FY 2013. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2013 are equal to 5.1 percent of total MS–DRG payments.

We currently estimate that, using the latest CCRs from the March 2014 update of the PSF, actual outlier payments for FY 2014 will be approximately 5.71 percent of actual total MS–DRG payments, approximately 0.61 percentage point higher than the 5.1 percent we projected when setting the outlier policies for FY 2014. This estimate of 5.71 percent is based on simulations using the FY 2013 MedPAR file (discharge data for FY 2013 claims).

5. FY 2015 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the Internet) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2015. The Puerto Rico amounts are shown in Table 1C listed and published in section VI. of this.
Addendum (and available via the Internet on the CMS Web site). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 69.6 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2015.

Under section 1886(d)(9)(A)(ii) of the Act, the Federal portion of the Puerto Rico payment rate is based on the discharge-weighted average of the national large urban standardized amount (this amount is set forth in Table 1A). The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2015 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). This table also includes the Puerto Rico-specific standardized amounts. The labor-related share applied to the Puerto Rico-specific standardized amount is the labor-related share of 63.2 percent, or 62 percent, depending on which provides higher payments to the hospital. (Section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would result in lower payments to the hospital.)

The following table illustrates the changes from the FY 2014 national standardized amount. The second through fifth columns display the changes from the FY 2014 standardized amounts for each applicable FY 2015 standardized amount. The first row of the table shows the updated (through FY 2014) average standardized amount after restoring the FY 2014 offsets for outlier payments, demonstration budget neutrality, the geographic recategorization budget neutrality, and the retrospective documentation and coding adjustment under section 7(b)(1)(B) of Public Law 110–90. The MS–DRG recategorization and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2014 adjustment factors are not removed from this table.

**B. Adjustments for Area Wage Levels and Cost-of-Living**

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the Internet), contain the labor-related and nonlabor-related shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2015. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

   Sections 1886(d)(5)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national and Puerto Rico prospective payment rates, respectively, to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2015 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

   Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make "such adjustments . . . as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii." Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals...
located in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively).

For FY 2014, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAS to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are using the same COLA factors established in FY 2014 for FY 2015 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. Below is a table listing the COLA factors for FY 2015.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, the next update to the COLA factors for Alaska and Hawaii would occur in FY 2018.

**C. Calculation of the Prospective Payment Rates**

General Formula for Calculation of the Prospective Payment Rates for FY 2015

In general, the operating prospective payment rate for all hospitals paid under the IPPS located outside of Puerto Rico, except SCHs and MDHs, for FY 2015 equals the Federal rate (which includes uncompensated care payments).

We note that, as discussed in section IV.G. of the preamble of this final rule, section 1106 of Public Law 113–67, enacted on December 26, 2013, extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of Public Law 113–93, enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Prior to the enactment of Public Law 113–67, the MDH program was only to be in effect through the end of FY 2013. Under current law, the MDH program will expire for discharges beginning on April 1, 2015.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section IV.F. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2015 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below.

The prospective payment rate for MDHs for FY 2015 discharges occurring before April 1, 2015 equals the higher of the Federal rate or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described below. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987 or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

The prospective payment rate for hospitals located in Puerto Rico for FY 2013 equals 25 percent of the Puerto Rico-specific rate plus 75 percent of the applicable national rate.

**1. Federal Rate**

The Federal rate is determined as follows:

Step 1—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 2—Multiply the labor-related portion of the standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—For hospitals located in Alaska and Hawaii, multiply the nonlabor-related portion of the standardized amount (adjusted, if applicable, under Step 3).

Step 4—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount (adjusted, if applicable, under Step 3).

Step 5—Multiply the final amount from Step 4 by the relative weight corresponding to the applicable MS–DRG (Table 5 listed in section VI. of this Addendum and available via the Internet).

The Federal payment rate as determined in Step 5 may then be further adjusted if the hospital qualifies for either the IME or DSH adjustment. In addition, for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b), the payment in Step 5 would be increased by the formula described in section IV.D. of the preamble of this final rule. The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

**2. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)**

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate (which, as discussed in section IV.F. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for MDHs for FY 2015 discharges occurring before April 1, 2015 equals the higher of the Federal rate or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described below. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987 or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

The prospective payment rate for hospitals located in Puerto Rico for FY 2013 equals 25 percent of the Puerto Rico-specific rate plus 75 percent of the applicable national rate.
discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge. For a more detailed discussion of the calculation of the hospital-specific rates, we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082). We also refer readers to section IV.F. of the preamble of this final rule for a complete discussion on empirically justified Medicare DSH and uncompensated care payments.

b. Updating the FY 1982, FY 1987, FY 1996 and FY 2006 Hospital-Specific Rate for FY 2015

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

<table>
<thead>
<tr>
<th>Market Basket Rate-of-Increase</th>
<th>Hospital submitted quality data and is a meaningful EHR user</th>
<th>Hospital submitted quality data and is not a meaningful EHR user</th>
<th>Hospital did not submit quality data and is a meaningful EHR user</th>

<td>0.75</td>
</tr>
</tbody>
</table>

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section IV.B. of the preamble of this final rule.

In addition, because SCHs and MDHs use the same MS–DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS–DRG classifications and the recalibration of the MS–DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, a SCH’s and MDH’s hospital-specific rate is adjusted by the MS–DRG reclassification and recalibration budget neutrality factor of 0.997543, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH will receive for its discharges beginning on or after October 1, 2014, and the payment rate that an MDH will receive for its discharges beginning on or after October 1, 2014, and before April 1, 2015. We note that, in this final rule, for FY 2015, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section I.I.D. of the preamble of this final rule for a complete discussion regarding our policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

3. General Formula for Calculation of Prospective Payment Rates for Hospitals Located in Puerto Rico Beginning on or After October 1, 2014, and Before October 1, 2015

Section 1886(d)(9)(E)(iv) of the Act provides that, effective for discharges occurring on or after October 1, 2004, hospitals located in Puerto Rico are paid based on a blend of 75 percent of the national prospective payment rate and 25 percent of the Puerto Rico-specific rate.

a. Puerto Rico-Specific Rate

The Puerto Rico-specific prospective payment rate is determined as follows:

Step 1—Select the applicable average standardized amount considering the applicable wage index (obtained from Table 1C published in section VI. of this Addendum and available via the Internet).

Step 2—Multiply the labor-related portion of the standardized amount by the applicable Puerto Rico-specific wage index.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS–DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet).

Step 5—Multiply the result in Step 4 by 25 percent.

b. National Prospective Payment Rate

The national prospective payment rate is determined as follows:

Step 1—Select the applicable national average standardized amount.

Step 2—Multiply the labor-related portion of the national average standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the national average standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS–DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet on the CMS Web site).
Step 5—Multiply the result in Step 4 by 75 percent.

The sum of the Puerto Rico-specific rate and the national prospective payment rate computed above equals the prospective payment rate for a given discharge for a hospital located in Puerto Rico. This payment rate is then further adjusted if the hospital qualifies for either the IME or DSH adjustment.

Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2015

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, over a 10-year transition period (which extended through FY 2001) the payment methodology for Medicare acute care hospital inpatient capital-related costs changed from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the capital Federal rate for FY 2015, which is effective for discharges occurring on or after October 1, 2014. The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except “new” hospitals under §412.304(c)(2)) are paid based on the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at §412.308(c)(1), to account for capital input price increases and other factors. The regulations at §412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, §412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated proportion of payments for exceptions under §412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under §412.348(f) for qualifying hospitals. Therefore, in accordance with §412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(i) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for blended payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. In accordance with section 1886(d)(9)(A) of the Act, under the IPPS for acute care hospital operating costs, hospitals located in Puerto Rico paid for operating costs under a special payment formula. Effective October 1, 2004, in accordance with section 504 of Public Law 108–173, the methodology for operating payments made to hospitals located in Puerto Rico under the IPPS was revised to make payments based on a blend of 25 percent of the applicable standardized amount specific to Puerto Rico hospitals and 75 percent of the applicable national average standardized amount. In conjunction with this change to the operating blend percentage, effective with discharges occurring on or after October 1, 2004, we also revised the methodology for computing capital payments made to hospitals located in Puerto Rico to be based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the national capital Federal rate (69 FR 49185).

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2015. In particular, we explain why the FY 2015 capital Federal rate increases approximately 1.2 percent, compared to the FY 2014 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we estimate that capital payments per discharge will increase approximately 1.5 percent during that same period. Because capital payments constitute about 10 percent of hospital payments, a percent change in the capital Federal rate yields only about a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

a. Description of the Update Framework

Under §412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate-of-increase as appropriate each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2015 under that framework is 1.5 percent based on the best data available at this time. The update factor under that framework is based on a projected 1.5 percent increase in the FY 2010-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the FY 2013 DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed below in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2015 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are applying in the update framework for FY 2015.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

• The average resource use of Medicare patients changes (“real” case-mix change);
• Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (“coding effects”); and
• The annual DRG reclassification and recalibration changes may not be budget neutral (“recalibration effect”).

We define real case-mix change as actual changes in the mix (and resource
requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2015, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase will also equal 0.5 percent for FY 2015. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, as proposed, the net adjustment for case-mix change in FY 2015 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year’s changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2013 DRG reclassification and recalibration as part of our update for FY 2015. We estimate that FY 2013 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2015.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. A forecast error of 0.0 percentage point was calculated for the FY 2015 update. Historically, when forecast error of the CIP is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. Current historical data indicate that the forecasted FY 2013 rate-of-increase of the FY 2006-based CIP (1.2 percent) used in calculating the FY 2013 update factor slightly understated the actual realized FY 2013 price increases of the FY 2006-based CIP (1.3 percent) by 0.1 percentage point because the prices associated with both the depreciation and other capital-related cost categories grew more quickly than anticipated. Because this forecast error does not exceed the 0.25 percentage point threshold, as we proposed, we are making a 0.0 percentage point adjustment for forecast error in the update for FY 2015.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflects how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measurement is based on a 5-year average. We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CIP for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity increases that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual increase is due to each of these factors. The capital update framework thus provides an add-on to the input price index of one-half of the estimated annual increase in intensity, to allow for increases within DRG severity and the adoption of quality-enhancing technology.

In this final rule, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2015 (we refer readers to the FY 2013 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2015, we are using an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2007 and extending through FY 2012. Based on these data, we estimated that case-mix constant intensity declined during FY’s 2007 through 2012. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2015. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2015.

Above, we described the basis of the components used to develop the 1.5 percent capital update factor under the capital update framework for FY 2015 as shown in the table below.

b. Comparison of CMS and MedPAC Update Recommendation

In its March 2014 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS payments for FY 2015. (We refer readers to MedPAC’s Report to the Congress: Medicare Payment Policy, March 2014, Chapter 3.)
2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related IPPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2014, we estimated that outlier payments for capital will equal 6.07 percent of inpatient capital-related payments based on the capital Federal rate in FY 2014. Based on the thresholds as set forth in section II.A of this Addendum, we estimate that outlier payments for capital-related costs will equal 6.27 percent for inpatient capital-related payments based on the capital Federal rate in FY 2015. Therefore, we are applying an outlier adjustment factor of 0.9373 in determining the capital Federal rate for FY 2015. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2015 will be slightly higher than the percentage for FY 2014.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2015 outlier adjustment of 0.9373 is a −0.21 percent change from the FY 2014 outlier adjustment of 0.9393. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2015 is 0.9979 (0.9373/0.9393). Thus, the outlier adjustment will decrease the FY 2015 capital Federal rate by 0.21 percent compared to the FY 2014 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. Because we implemented a separate GAF for Puerto Rico, we apply separate budget neutrality adjustments for the national GAF and the Puerto Rico GAF. We apply the same budget neutrality factor for DRG reclassifications and recalibration nationally and for Puerto Rico. Separate adjustments were unnecessary for FY 1998 and earlier because the GAF for Puerto Rico was implemented in FY 1998.

To determine the factors for FY 2015, we compared (separately for the national capital rate and the Puerto Rico capital rate) estimated aggregate capital Federal rate payments based on the FY 2014 MS–DRG classifications and relative weights and the FY 2014 GAFs to estimated aggregate capital Federal rate payments based on the FY 2014 MS–DRG classifications and relative weights and the FY 2015 GAFs. To achieve budget neutrality for the changes in the national GAFs, based on calculations using updated data, we are applying an incremental budget neutrality adjustment factor of 0.9999 for FY 2015 to the previous cumulative FY 2014 adjustment factor of 0.9891, yielding an adjustment factor of 0.9890 through FY 2015. For the Puerto Rico GAFs, we are applying an incremental budget neutrality adjustment factor of 1.0012 for FY 2015 to the previous cumulative FY 2014 adjustment factor of 1.0076, yielding a cumulative adjustment factor of 1.0088 through FY 2015.

We then compared estimated aggregate capital Federal rate payments based on the FY 2014 MS–DRG relative weights and the FY 2015 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2015 MS–DRG classifications and relative weights and the FY 2015 GAFs. The incremental adjustment factor for DRG classifications and changes in relative weights is 0.9987 both nationally and for Puerto Rico. The cumulative adjustment factors for MS–DRG classifications and changes in relative weights and for changes in the GAFs through FY 2015 are 0.9877 nationally and 1.0075 for Puerto Rico. (We note that all the values are calculated with unrounded numbers.) The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under §412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS–DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor (the national capital rate and the Puerto Rico capital rate are determined separately) for changes in the GAF (including geographic reclassification) and the MS–DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The cumulative adjustment factor accounts for the MS–DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects of the GAFs of FY 2015 geographic reclassification decisions made by the MGCRB compared to FY 2014 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2015

For FY 2014, we established a capital Federal rate of $429.31 (78 FR 50990). We are establishing an update of 1.5 percent in determining the FY 2015 capital Federal rate for all hospitals. As a result of this update and the budget neutrality factors discussed above, we are establishing a national capital Federal rate of $434.26 for FY 2015. The national capital Federal rate for FY 2015 was calculated as follows:

- The FY 2015 update factor is 1.015, that is, the update is 1.5 percent.
- The FY 2015 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS–DRG classifications and relative weights and changes in the GAFs is 0.9986.
- The FY 2015 outlier adjustment factor is 0.9373.

We note that, as discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS–DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2015.

Because the FY 2015 capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a
disproportionate share of low-income patients, we are not making additional adjustments in the capital Federal rate for these factors, other than the budget neutrality factor for changes in the MS–DRG classifications and relative weights and for changes in the GAFs.

We are providing the following chart that shows how each of the factors and adjustments for FY 2015 affects the computation of the FY 2015 national capital Federal rate in comparison to the FY 2014 national capital Federal rate. The FY 2015 update factor has the effect of increasing the capital Federal rate by 1.5 percent compared to the FY 2014 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital Federal rate by 0.14 percent. The FY 2015 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.21 percent compared to the FY 2014 capital Federal rate. The combined effect of all the changes will increase the national capital Federal rate by 1.15 percent compared to the FY 2014 national capital Federal rate.

### COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2014 CAPITAL FEDERAL RATE AND FY 2015 CAPITAL FEDERAL RATE

</tbody>
</table>

1 The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2014 to FY 2015 resulting from the application of the 0.9986 GAF/DRG budget neutrality adjustment factor for FY 2015 is a net change of 0.9986 (or –0.14 percent).

2 The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2015 outlier adjustment factor is 0.9373/0.9933, or 0.0979 (or –21 percent).

In this final rule, we also are providing the following chart that shows how the final FY 2015 capital Federal rate differs from the proposed FY 2015 capital Federal rate as presented in the FY 2015 IPPS/LTCH PPS proposed rule.

5. Special Capital Rate for Puerto Rico Hospitals

Section 412.374 provides for the use of a blended payment system for payments made to hospitals located in Puerto Rico under the PPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. Under the broad authority of section 1886(g) of the Act, beginning with discharges occurring on or after October 1, 2004, capital payments made to hospitals located in Puerto Rico are based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the capital Federal rate. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS (including Puerto Rico).

To adjust hospitals’ capital payments for geographic variations in capital costs, we apply a GAF to both portions of the blended capital rate. The GAF is calculated using the operating IPPS wage index, and varies depending on the labor market area or rural area in which the hospital is located. We use the Puerto Rico wage index to determine the GAF for the Puerto Rico part of the capital-blended rate and the national wage index to determine the GAF for the national part of the blended capital rate. Because we implemented a separate GAF for Puerto Rico in FY 1998, we also apply separate budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF. However, we apply the same budget neutrality adjustment factor for MS–DRG reclassifications and recalibration nationally and for Puerto Rico. The budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF and the budget neutrality factor for MS–DRG reclassifications and recalibration (which is the same nationally and for Puerto Rico) are discussed in section III.A.3. of this Addendum.

In computing the payment for a particular Puerto Rico hospital, the Puerto Rico portion of the capital rate (25 percent) is multiplied by the Puerto Rico-specific GAF for the labor market area in which the hospital is located, and the national portion of the capital rate (75 percent) is multiplied by the national GAF for the labor market area in which the hospital is located (which is computed from national data for all hospitals in the United States and Puerto Rico).

For FY 2014, the special capital rate for hospitals located in Puerto Rico was $209.82 (78 FR 50991). With the changes we are making to the factors used to determine the capital Federal rate, the FY 2015 special capital rate for hospitals in Puerto Rico is $209.10.

Comment: One commenter noted that the proposed capital standard Federal rate for Puerto Rico is approximately less than half of the proposed national capital standard Federal rate. The commenter asserted that this...
“disparity” is “not consistent with the basic reality of Puerto Rico” because average capital costs in Puerto Rico are not that dissimilar from those in the United States.

Response: We appreciate the commenter’s attention to the proposed capital Federal rates for Puerto Rico hospitals. While it is not clear what the commenter was specifically requesting, we believe the commenter may have been suggesting that CMS increase the Puerto Rico specific capital Federal rate to reduce the difference between it and the national capital Federal rate. The commenter is correct that the proposed Puerto Rico capital standard Federal rate is approximately half of the proposed national capital standard Federal rate, which has consistently been the difference since those rates were established. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the national capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS, including Puerto Rico. The commenter did not provide any empirical data to demonstrate that the capital-related costs in Puerto Rico are similar to those in the United States, nor that the blended payment methodology for capital-related costs to hospitals located in Puerto Rico at § 412.374 (that is, 25 percent of the Puerto Rico capital rate and 75 percent of the national capital Federal rate) does not result in appropriate capital IPPS payments for Puerto Rico hospitals. Consequently, we are unable to assess and directly respond to the statements included in the comment. Therefore, in this final rule, we have determined that the Puerto Rico capital Federal rate for FY 2015 is consistent with our current policy.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2015

For purposes of calculating payments for each discharge during FY 2015, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier thresholds for FY 2015 are in section II.A. of this Addendum. For FY 2015, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS–DRG plus the fixed-loss amount of $24,758.

Currently, as provided under § 412.394(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year. We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. In the FY 2014 IPPS/LTC PP index rule (78 FR 50603 through 50607), we rebased and revised the CIPI to a FY 2010 base year to reflect the more current structure of capital costs in hospitals. For a complete discussion of this rebasing, we refer readers to the FY 2014 IPPS/LTC PPS final rule.

2. Forecast of the CIPI for FY 2015

Based on the latest forecast by IHS Global Insight, Inc. (second quarter of 2014), we are forecasting the FY 2010-based CIPI to increase 1.5 percent in FY 2015. This reflects a projected 2.0 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 2.7 percent increase in other capital expense prices in FY 2015, partially offset by a projected 1.1 percent decline in vintage-weighted interest expenses in FY 2015. The weighted average of these three factors produces the forecasted 1.5 percent increase for the FY 2010-based CIPI as a whole in FY 2015.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2015

Payments for services furnished in children’s hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital’s own historical cost experience, subject to a rate-of-increase ceiling. Per discharge limit (the target amount as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital’s own cost experience in its base year, and updated annually by a rate-of-increase percentage. (We note that, in accordance with § 403.752(a), RNHCIs are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

In the FY 2015 IPPS/LTC PPS proposed rule, we proposed that the FY 2015 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children’s hospitals, and the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, as well as RNHCIs would be the estimated percentage increase in the FY 2015 IPPS operating market basket, in accordance with applicable regulations at § 413.40. As we did in FY 2014, we proposed to use the percentage increase in the FY 2010-based IPPS operating market basket to update these target amounts. Based on IHS Global Insight, Inc.’s 2014 first quarter forecast, we estimated that the FY 2010-based IPPS operating market basket update for FY 2015 was 2.7 percent (that is, the estimate of the market basket rate-of-increase). However, we proposed that if more recent data become available for the final rule, we would use it to calculate the IPPS operating market basket update for FY 2015.
We did not receive any public comments on our proposals. Based on updated data from IHS Global Insight, Inc.’s 2014 second quarter forecast, we estimate that the final FY 2010-based IPPS operating market basket update for FY 2015 is 2.9 percent (that is, the estimate of the market basket rate-of-increase).

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VII. of the preamble of this final rule and section V. of the Addendum to this final rule for the update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2015. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate Federal Register documents.

V. Updates to the Payment Rates for the LTCH PPS for FY 2015

A. LTCH PPS Standard Federal Rate for FY 2015

1. Background

In section VII. of the preamble of this final rule, we discuss our updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2015.

Under § 412.523(c)(3)(ii) of the regulations, for LTCH PPS rate years beginning FY 2004 through FY 2006, we updated the standard Federal rate annually by a factor to adjust for the most recent estimate of the increases in prices of an appropriate market basket of goods and services for LTCHs. We established this policy of annually updating the standard Federal rate because, at that time, we believed that was the most appropriate method for updating the LTCH PPS standard Federal rate for years after the initial implementation of the LTCH PPS in FY 2003. Therefore, under § 412.523(c)(3)(ii), for FYs 2004 through 2006, the annual update to the LTCH PPS standard Federal rate was equal to the previous rate year’s Federal rate updated by the most recent estimate of increases in the appropriate market basket of goods and services included in covered inpatient LTCH services.

In determining the annual update to the standard Federal rate for FY 2007, based on our ongoing monitoring activity, we believed that, rather than solely using the most recent estimate of the LTCH PPS market basket update as the basis of the annual update factor, it was appropriate to adjust the standard Federal rate to account for the effect of documentation and coding in a prior period that was unrelated to patients’ severity of illness (71 FR 27818).

Accordingly, we established under § 412.523(c)(3)(iii) that the annual update to the standard Federal rate for FY 2007 was zero percent based on the most recent estimate of the LTCH PPS market basket at that time, offset by an adjustment to account for changes in case-mix in prior periods due to the effect of documentation and coding that were unrelated to patients’ severity of illness. For FY 2008 through FY 2011, we also made an adjustment for the effect of documentation and coding that was unrelated to patients’ severity of illness in establishing the annual update to the standard Federal rate as set forth in the regulations at §§ 412.523(c)(3)(iv) through (c)(5)(vii). For FYs 2012, 2013, and 2014, we updated the standard Federal rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by section 1886(m)(3)(A) of the Act as set forth in the regulations at §§ 412.523(c)(3)(viii) through (c)(5)(ix).

Section 1886(m)(3)(A) of the Act, as added by section 3401(c) of the Affordable Care Act, specifies that, for rate year 2010 and each subsequent rate year, any annual update to the standard Federal rate shall be reduced:

- For rate year 2010 through 2019, by the other adjustment specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(i)(II) of the Act (which we refer to as “the multifactor productivity (MFP) adjustment”) as discussed in section VII.C.2. of the preamble of this final rule.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VII.C.2.a. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term “fiscal year” (FY) rather than “rate year” (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term “fiscal year” rather than “rate year” for 2011 and subsequent years.)

For FY 2014, consistent with our historical practice, we established an update to the LTCH PPS standard Federal rate based on the full estimated increase in the LTCH PPS market basket of 2.5 percent and the 0.8 percentage point reductions required by sections 1886(m)(3)(A)(i) and 1886(m)(3)(A)(ii) with 1886(m)(4)(C) of the Act. Accordingly, at § 412.523(c)(3)(x) of the regulations, we established an annual update of 1.7 percent to the standard Federal rate for FY 2014 (78 FR 50761 through 50763).

For FY 2015, as discussed in greater detail in section VII.C.2. of the preamble of this final rule, consistent with our proposal, we are establishing an annual update to the LTCH PPS standard Federal rate based on the full estimated increase in the LTCH PPS market basket, less the MFP adjustment consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. In addition, as discussed in greater detail in section VII.C.2. of the preamble of this final rule, beginning in FY 2014, the annual update will be further reduced by 2.0 percentage points for LTCHs that fail to submit quality reporting data in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act.

Specifically, in this final rule, based on the best available data, we are establishing an annual update to the standard Federal rate of 2.2 percent, which is based on the full estimated increase in the LTCH PPS market basket of 2.9 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. As discussed in greater detail in section VII.C.2.c. of the preamble of this final rule, for LTCHs that fail to submit the required quality reporting data for FY 2015 in accordance with the LTCHQR Program, the annual update is further reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act. Accordingly, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.2 percent for LTCHs that fail to submit the required quality reporting data for FY 2015. This 0.2 percent update is calculated based on the full estimated increase in the LTCH PPS market basket of 2.9 percent, less a MFP adjustment of 0.5 percentage point, less an additional adjustment of 0.2 percentage point required by the statute, and less 2.0 percentage points for failure to submit quality reporting data as required by section 1886(m)(5) of the Act.

2. Development of the FY 2015 LTCH PPS Standard Federal Rate

We continue to believe that the annual update to the LTCH PPS standard Federal rate should be based on...
on the most recent estimate of the increase in the LTCH PPS market basket, including any statutory adjustments. Consistent with our historical practice and as we proposed, for FY 2015, we are applying the annual update to the LTCH PPS standard Federal rate from the previous year. Furthermore, in determining the standard Federal rate for FY 2015, consistent with our proposal, we also are making certain regulatory adjustments. Specifically, we are applying an adjustment factor for the final year of the 3-year phase-in of the one-time prospective adjustment to the standard Federal rate under § 412.523(d)(3), as discussed in greater detail in section VII.C.3. of the preamble of this final rule. In addition, in determining the FY 2015 standard Federal rate, we are applying a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data, including the policy to adopt the new OMB delineations, and labor-related share) in accordance with § 412.523(d)(4).

In the FY 2014 PPS/LTCH PPS final rule (78 FR 50993 and 50993), we established an annual update to the LTCH PPS standard Federal rate of 1.7 percent for FY 2014 based on the full estimated LTCH PPS market basket increase of 2.5 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. Therefore, consistent with our proposal, under § 412.523(c)(3)(ii), we are applying a factor of 1.022 to the FY 2014 standard Federal rate of $40,607.31 to determine the FY 2015 standard Federal rate. These factors are based on IGI’s second quarter 2014 forecast, which are the best available data at this time. For LTCHs that fail to submit quality reporting data for FY 2015 under the LTCHQR Program, consistent with our proposal, under § 412.523(c)(3)(ii) in conjunction with § 412.523(c)(4), we are reducing the annual update to the LTCH PPS standard Federal rate by an additional 2.0 percentage points consistent with section 1886(m)(5) of the Act. Therefore, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.2 percent (that is, 2.2 percent minus 2.0 percentage points, or an update factor of 1.002) for FY 2015 for LTCHs that fail to submit the required quality reporting data for FY 2015 under the LTCHQR Program. We also are establishing that the standard Federal rate for FY 2015 will be further adjusted by an adjustment factor of 0.98734 for FY 2015 under the final year of the 3-year phase-in of the one-time prospective adjustment at § 412.523(d)(3)(ii). In addition, for FY 2015, we are applying an area wage level budget neutrality factor of 1.0016703 to the standard Federal rate to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, we are establishing a standard Federal rate of $41,043.71 (calculated as $40,607.31 × 1.022 × 0.98734 × 1.0016703) for FY 2015. The standard Federal rate of $41,043.71 will apply in determining the payments for FY 2015 discharges from LTCHs that submit quality reporting data for FY 2015 in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act. For LTCHs that fail to submit quality reporting data for FY 2015 in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act, we are establishing a standard Federal rate of $40,240.51 (calculated as $40,607.31 × 1.002 × 0.98734 × 1.0016703) for FY 2015.

B. Adjustment for Area Wage Rates under the LTCH PPS for FY 2015

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal rate to account for differences in LTCH area wage levels under section 1886(d)(8) of the Act.

When we implemented the LTCH PPS, we established a 5-year transition to the full area wage level adjustment. The area wage level adjustment was completely phased-in for cost reporting periods beginning in FY 2007. Therefore, for cost reporting periods beginning on or after October 1, 2006, the applicable LTCH area wage index values are the full LTCH PPS area wage index values calculated based on acute care hospital inpatient wage index data without taking into account geographic reclassification under section 1886(d)(8) and section 1886(d)(10) of the Act. For additional information on the phase-in of the area wage level adjustment under the LTCH PPS, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56015 through 56019) and the RY 2008 LTCH PPS final rule (72 FR 26891).

2. Geographic Classifications (Labor Market Areas) Based on the New OMB Delineations

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH’s Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an “urban area,” or a “rural area,” as defined in § 412.503. Under § 412.503, an “urban area” is defined as a Metropolitan Statistical Area (MSA) or a Metropolitan division, where applicable, as defined by the Executive...
OMB and a “rural area” is defined as any area outside of an urban area.

The CBSA-based geographic classification (labor market area) definitions currently used under the LTCH PPS, effective for discharges occurring on or after July 1, 2005, are based on the OMB’s CBSA definitions that were developed based on 2000 U.S. Census data. As discussed in greater detail in section VII.D. of the preamble of this final rule, OMB announced revisions to the statistical boundaries of its labor market areas for MSAs, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the uses of the delineations of these areas in OMB Bulletin No. 13-01, issued on February 28, 2013 (referred hereinafter as the “new OMB delineations”). As previously stated, at that time, the FY 2014 IPPS/LTCH PPS proposed rule was in the advanced stages of development, and the proposed FY 2014 LTCH PPS area wage indexes had already been developed based on the previous OMB CBSA-based labor market area definitions that are currently used to define CBSA-based labor market areas (referred hereinafter as “CBSA designations”) under the LTCH PPS. Therefore, we did not implement changes to the CBSA designations under the LTCH PPS for FY 2014 based on the new OMB labor market areas delineations that were developed based on 2010 Decennial Census data. Rather, to allow for sufficient time to assess the new changes and their ramifications, we stated that we intended to propose to adopt the new OMB delineations, and the corresponding changes to the area wage index values based on those delineations, under the LTCH PPS for FY 2015 through notice and comment rulemaking. This approach was consistent with the approach used under the IPPS. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50994 through 50995).)

As discussed in section VII.D. of the preamble of this final rule, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are adopting the new OMB delineations beginning in FY 2015. We believe that these new OMB delineations are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that the new OMB delineations will ensure that the LTCH PPS area wage level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We note that this policy is consistent with the IPPS policy discussed in section II.I.B. of the preamble of this final rule. For additional details on our policy to adopt the new OMB delineations, we refer readers to section VII.D. of the preamble of this final rule.

3. LTCH PPS Labor-Related Share

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH’s PPS Federal prospective payment adjustment is paid by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs (Wages and Salaries; Employee Benefits; Professional Fees Labor-Related, Administrative and Business Support Services; and All-Other: Labor-Related Services) and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS and the development of the RPL market basket can be found in the FY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we revised and rebased the market basket used under the LTCH PPS by adopting the newly created FY 2009-based LTCH-specific market basket. In addition, we determined the labor-related share for FY 2013 as the sum of the FY 2013 relative importance of each labor-related cost category of the FY 2009-based LTCH-specific market basket. For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).

Consistent with our historical practice, in the FY 2014 IPPS/LTCH PPS final rule (76 FR 50995 through 50996), we determined the LTCH PPS labor-related share for FY 2014 based on the FY 2014 relative importance of each labor-related cost category, which reflected the different rates of price change for these cost categories between the base year (FY 2009) and FY 2014. Specifically, based on IGI’s second quarter 2013 forecast of the FY 2009-based LTCH-specific market basket, we established a labor-related share under the LTCH PPS for FY 2014 of 62.537 percent.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28335), we proposed to establish a labor-related share under the LTCH PPS for FY 2015 of 62.571 percent based on IGI’s first quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. Consistent with our historical practice, we also proposed that if more recent data became available, we would use that data to determine the final FY 2015 labor-related share under the LTCH PPS. We did not receive any public comments on this proposal. Therefore, we are adopting the policy as final without modification.

For FY 2015, in this final rule, we are establishing a labor-related share under the LTCH PPS of 62.306 percent based on IGI’s second quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. The table below shows the FY 2015 labor-related share relative importance using IGI’s second quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. The sum of the relative importance for FY 2015 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees Labor-Related, Administrative and Business Support Services; and All Other: Labor-Related Services) is 58.116 percent. We are establishing that the portion of capital-related costs that is influenced by the local labor market will continue to be estimated to be 46 percent. Because the relative importance for capital-related costs will be 9.109 percent of the FY 2009-based LTCH-specific market basket in FY 2015, we are taking 46 percent of 9.109 percent to determine the labor-related share of capital-related costs for FY 2015, which will result in 4.190 percent (0.46 x 9.109). We then added that 4.190 percent for the capital-related cost amount to the 58.116 percent for the operating cost amount to determine the total labor-related share for FY 2015. Therefore, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are establishing a labor-related share under the LTCH PPS for FY 2015 of 62.306 percent. This labor-related share is determined using the same methodology as used in calculating all previous fiscal years LTCH labor-related shares.
4. LTCH PPS Wage Index for FY 2015

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH’s actual location without regard to the “urban” or “rural” designation of any related or affiliated provider.

In the FY 2014 LTCH PPS final rule (78 FR 50996 through 50997), we calculated the FY 2014 LTCH PPS area wage index values using the same data used for the FY 2014 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2010), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2014 LTCH PPS area wage index values consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time, and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28336 through 28337), to determine the applicable area wage index values under the LTCH PPS for FY 2015, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we proposed to use wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2011, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act. We proposed to use FY 2011 wage data because these data are the most recent complete data available. We also noted that these are the same data used to compute the proposed FY 2015 acute care hospital inpatient wage index, as discussed in section III. of the preamble of that proposed rule. We proposed to compute the FY 2015 LTCH PPS area wage index values consistent with the proposed “urban” and “rural” geographic classifications (that is, using the proposed new OMB labor market area delineations), and consistent with our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. We also proposed to continue to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, under our proposed methodology for determining the FY 2015 LTCH PPS area wage index values, we proposed to continue to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. (We refer readers to section V.B.4. of the Addendum to the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28336 through 28337) for additional details regarding our proposals pertaining to the development of the LTCH PPS wage index values for FY 2015, which we are adopting as final without modification in this final rule, as discussed below.)

Comment: One commenter provided information received from a procured contractor that attempted to replicate the proposed FY 2015 LTCH wage index values using the IPPS wage index data from the FY 2011 cost report data that CMS made available on its Web site. As part of that analysis, the contractor also explored the variance between the FY 2014 LTCH PPS wage index values and the proposed FY 2015 LTCH wage index values for certain LTCHs that were projected to experience a relatively significant change in their wage index. In particular, the analysis prepared by the commenter’s contractor focused on specific CBSAs (particularly CBSA 23540 and CBSA 34740) that were projected to experience “a significant decline” in their wage index values for FY 2015 when compared to FY 2014, although there has been no change in the constituent of hospitals used to compute the wage index values for these areas. The commenter requested that CMS reexamine the wage data used to calculate the FY 2015 LTCH PPS wage index values for CBSAs that would experience a decrease in their wage index values for FY 2015 when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, and to explain the cause for those decreases.

Response: As requested by the commenter, we reexamined the IPPS wage data used to calculate the FY 2015 LTCH PPS wage index values for CBSAs that were projected to experience a decrease in their wage index values for FY 2015 when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, focusing our attention on the CBSAs referenced by the commenter. We found no issues with the IPPS hospital wage data from the FY 2011 cost reports, or with the calculation of
the FY 2015 LTCH PPS wage index values. In exploring the cause for the decrease in the wage index values for CBSAs projected to experience a “significant decline” in their FY 2015 wage index values when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, we found that many of these CBSAs were comprised of three or less hospitals. A labor market area’s wage index value is calculated as the ratio of the labor market area’s average hourly wage to the national average hourly wage. Labor market areas (CBSAs) with fewer providers are generally subject to less stability in year-to-year wage index values because there is less of an averaging effect, wherein even relatively minor changes in one provider’s wage data can produce a relatively “significant” effect on the wage index value for that area. This is because such a change in one provider’s wage data has a relatively greater effect on the CBSA’s average hourly wage (based solely on the limited number of hospitals in that area) when compared to the effect that such a change has on the national average hourly wage (which is based on wage data from all hospitals). We note that there also are CBSAs that were projected to experience a “significant increase” in their wage index values for the same reason. We believe that these wage index changes are appropriate because these values are based on the most recent data available that reflect the relative hospital wage level in a geographic area (CBSA) in comparison to the national average hospital wage level.

After consideration of the public comments we received, in this final rule, we are finalizing our proposals pertaining to the development of the LTCH PPS wage index values for FY 2015, without modification. Therefore, consistent with our historical methodology, to determine the applicable area wage index values under the LTCH PPS for FY 2015, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are using wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2011, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act. We are using FY 2011 wage data because these data are the most recent complete data available. These areas are the same data used to compute the FY 2015 acute care hospital inpatient wage index values, as discussed in section III. of the preamble of this final rule. (For our rationale for using IPPS hospital wage data as a proxy for determining the area wage index values used under the LTCH PPS, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 44024 through 44025).) The FY 2015 LTCH PPS wage area index values were computed consistent with the “urban” and “rural” geographic classifications (that is, using the new OMB labor market area delineations), as discussed in section VII.D. of the preamble of this final rule, and consistent with the reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS). As with the IPPS wage index, we are continuing to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, as discussed in section III.C. of the preamble of this final rule. Furthermore, in determining the FY 2015 LTCH PPS area wage index values, we are continuing to use our existing policy for determining area wage index values for areas where there are no IPPS wage data using the methodology we established in the FY 2009 LTCH PPS final rule. For more information about this methodology, including an explanation of and rationale for our policy for determining LTCH PPS wage index values for areas that have no IPPS wage data, we refer readers to the FY 2009 LTCH PPS final rule (73 FR 26817 through 26818).

There are currently no LTCHs located in labor market areas without IPPS hospital wage data (or IPPS hospitals). However, as discussed in the proposed rule, if an LTCH were to open in one of these labor market areas, LTCH PPS wage index values for such an area would be calculated using our established methodology. Under our existing methodology, the LTCH PPS wage index values for these CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2011 IPPS wage data that we are using to determine the FY 2015 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for the urban area Hinesville, GA (CBSA 25980). Consistent with the methodology discussed above, we calculated the FY 2015 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on FY 2011 IPPS wage data that we are using to determine the FY 2015 LTCH PPS area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, as discussed in the proposed rule, it is not necessary to use our established methodology to calculate an LTCH PPS wage index value for proposed rural areas with no IPPS wage data for FY 2015. We note that, as IPPS wage data are dynamic, it is possible that rural areas without IPPS wage data will vary in the future.

For FY 2015, we are adopting the new OMB delineations under the LTCH PPS, as discussed in greater detail in section VII.D. of the preamble of this final rule. Under this policy, there will be some changes to the current CBSA compositions as a result of the new OMB delineations, which will result in the creation of new CBSAs, “urban” counties that are now “rural,” “rural” counties that are now “urban,” and existing CBSAs that are divided into separate boundaries. Under existing § 412.503, an “urban area” is defined as a Metropolitan Statistical Area as defined by the Executive OMB, and a “rural area” is defined as any area outside of an urban area. We are not making any changes to the current definitions of “urban area” and “rural area” because our policy to use the new OMB delineations under the LTCH PPS is consistent with the definitions in existing § 412.503.

As discussed in section VII.D.2.e. of the preamble of this final rule, overall we believe that using the new OMB delineations will result in LTCH PPS area wage index values being more representative of the actual costs of labor in a given area. However, we also recognize that, as a result of our policy to adopt the new OMB delineations, some LTCHs will experience decreases in area wage index values, while other LTCHs will experience increases in area wage index values. Therefore, to mitigate any short-term instability in
LTCH PPS payments that could result from our policy to adopt the new OMB delineations, in section VII.D.2.e. of the preamble of this final rule, we are finalizing our proposed transitional wage index policy. Under our transitional wage index policy, any LTCH that will experience a decrease in its area wage index solely as a result of the policy to adopt the new OMB delineations under the LTCH PPS will receive a blended area wage index for FY 2015. That is, for purposes of determining an LTCH’s area wage index for FY 2015, we are computing LTCH PPS area wage index values using the area wage data discussed above under both the current (FY 2014) CBSA designations and the new OMB delineations. If the area wage index value under the new OMB delineations is lower than the area wage index value under the FY 2014 CBSA designations, the LTCH will be paid based on a blended area wage index for FY 2015, which will be computed as the sum of 50 percent of each wage index value (referred to as the 50/50 blended wage index), as described below.

Specifically, under the transitional wage index policy that we are establishing in this final rule, to determine the applicable area wage index value for each LTCH that will be effective for discharges occurring on or after October 1, 2014, through September 30, 2015, we computed the following two area wage index values:

1. The wage index values calculated using the new OMB delineations; and
2. The wage index values calculated using the current (FY 2014) CBSA designations.

The FY 2015 LTCH area wage index values calculated using the new OMB delineations are presented in Table 12A for urban areas and Table 12B for rural areas associated with this final rule, which are available via the Internet on the CMS Web site. The FY 2015 LTCH area wage index values calculated using the current (FY 2014) CBSA designations are presented in Table 12C for urban areas and Table 12D for rural areas associated with this final rule, which are available via the Internet on the CMS Web site. Where applicable, the wage index values in Tables 12C and 12D will be used to calculate a LTCH’s 50/50 blended wage index value under the transitional wage index policy. Under our transitional wage index policy, an LTCH will only receive the 50/50 blended area wage index value for FY 2015 if the LTCH’s area wage index value under the new OMB delineations (shown in Table 12A or 12B) is lower than the area wage index value under the FY 2014 CBSA designations (shown in Tables 12C or 12D). If an LTCH’s area wage index under the new OMB delineations (shown in Tables 12A or 12B) is higher than the wage index under the FY 2014 CBSA designations (shown in Tables 12C or 12D), we will pay the LTCH based on 100 percent of the area wage index under the new OMB delineations shown in Tables 12A or 12B (as such the LTCH will not receive the 50/50 blended area wage index). Furthermore, as discussed below and in section VII.D.2.e. of the preamble of this final rule, we are applying this transitional wage index policy in a budget neutral manner. Each LTCH’s labor market area under the new OMB delineations and the current (FY 2014) CBSA-based labor market area designation can be found in the LTCH PPS impact file for this final rule, which is available via the Internet on the CMS Web site.

5. Budget Neutrality Adjustment for Changes to the Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28337 through 28338), in accordance with § 412.523(b)(4), we proposed to apply an area wage level adjustment budget neutrality factor to adjust the standard Federal rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using our existing methodology. In determining the area wage level adjustment budget neutrality factor for FY 2015 under § 412.523(d)(4), we also proposed to include the proposed transitional wage index policy under the proposed adoption of the new OMB delineations (that is, the proposed 50/50 blended area wage index values for LTCHs that would experience a decrease in their area wage index solely as a result of the proposed adoption of the new OMB delineations under the LTCH PPS) to ensure that the proposed changes to the area wage level adjustments would be budget neutral. We did not receive any public comments on our proposals pertaining to the FY 2015 budget neutrality adjustment for changes to the area wage level adjustment. Therefore, in this final rule, we are adopting our proposal as final without modification.

In this final rule, for FY 2015, in accordance with § 412.523(d)(4), we are applying an area wage level adjustment budget neutrality factor to adjust the standard Federal rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). In addition to the updates for FY 2015 to the area wage index data and labor-related share discussed above, as discussed above and in section VII.D.2.e. of the preamble of this final rule, we are establishing a transitional wage index policy to mitigate the impacts of adopting changes to the LTCH PPS labor market areas (CBSAs) based on the new OMB delineations. Because our transitional wage index policy for LTCHs that will experience a decrease in their area wage index solely as a result of the adoption of the new OMB delineations under the LTCH PPS will result in an increase in estimated aggregate LTCH PPS payments without such changes, we are including the 50/50 blended area wage index when determining the area wage level adjustment budget neutrality factor that we are applying to the standard Federal rate under § 412.523(d)(4) to ensure that any changes to the area wage-level adjustments are budget neutral.

For this final rule, using the steps in the methodology described in section VII.D.2.e. of this preamble, we determined a FY 2015 area wage level
adjustment budget neutrality factor of 1.0016703. Accordingly, in section V.A.2. of the Addendum to this final rule, to determine the FY 2015 LTCH PPS standard Federal rate, we are applying an area wage level adjustment budget neutrality factor of 1.0016703, in accordance with § 412.523(d)(4). The FY 2015 LTCH PPS standard Federal rate shown in Table 1E of the Addendum to this final rule reflects this adjustment factor.

C. LTCH PPS Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels described above.

Prior to FY 2014, we used the most recent updated COLA factors obtained from the U.S. Office of Personnel Management (OPM) Web site at http://www.opm.gov/oca/cola/rates.asp to adjust the LTCH PPS payments for LTCHs located in Alaska and Hawaii. Statutory changes have transitioned the Alaska and Hawaii COLAs to locality pay (phased in over a 3-year period beginning in January 2010, with COLA rates being frozen as of October 28, 2009, and then proportionately reduced to reflect the phase-in of locality pay). For FY 2013, we believed that it was appropriate to use “frozen” COLA factors to adjust payments, while we explored alternatives for updating the COLA factors in the future, and we continued to use the same “frozen” COLA factors used in FY 2012 to adjust the nonlabor-related portion of the standard Federal rate for LTCHs located in Alaska and Hawaii in FY 2013 under § 412.525(b). We also established a methodology to update the COLA factors for Alaska and Hawaii every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014 (77 FR 53712 through 53713). The methodology we established is based on a comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also incorporates a 25-percent cap on the CPI-updated COLA factors, which is consistent with a statutorily mandated 25-percent cap that was applied to OPM’s published COLA factors. We believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the standard Federal rate for LTCHs located in Alaska and Hawaii. (For additional details on the methodology we established in the FY 2013 IPPS/LTCH PPS final rule to update the COLA factors for Alaska and Hawaii beginning in FY 2014, we refer readers to section VII.D.3. of the preamble of that final rule (77 FR 53481 through 53482).)

For FY 2014, we updated the COLA factors published for Alaska and Hawaii by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in FY 2013 IPPS/LTCH PPS final rule. Under our finalized methodology, we used COLA factors for FY 2014 for the three specified urban areas of Alaska (Anchorage, Fairbanks and Juneau) of 1.23; for the City and County of Honolulu, the County of Kauai, the County of Maui, the County of Kalawao, and “All other” areas of Alaska of 1.25; and for the County of Hawaii of 1.19. For additional details on our policy, we refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50997 through 50998).

Under our finalized policy, we update the COLA factors using the methodology described above every 4 years; the first year began in FY 2014 (77 FR 53482). Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28338), for FY 2015, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we proposed to continue to use the COLA factors based on the 2009 OPM COLA factors updated through 2012 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2014 IPPS/LTCH PPS final rule. We did not receive any public comments on this proposal. Therefore, in this final rule, we are adopting the policy as final without modification.

Accordingly, in this final rule, for FY 2015, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are continuing to use the COLA factors established in the FY 2014 IPPS/LTCH PPS final rule, which were based on the 2009 OPM COLA factors updated through 2012 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50998) for a discussion of the FY 2014 COLA factors.)

Consistent with our historical practice, we are establishing that the COLA factors shown in the table below will be used to adjust the nonlabor-related portion of the standard Federal rate for LTCHs located in Alaska and Hawaii under § 412.525(b).

D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. Background

Under the broad authority conferred upon the Secretary by section 123 of the BBRA as amended by section 307(b) of the BIPA, in the regulations at §412.525(a), we established an adjustment for additional payments for outlier cases that have extraordinarily high costs relative to the costs of most discharges. We refer to these cases as high cost outliers (HCOs). Providing additional payments for outliers strongly improves the accuracy of the LTCH PPS in determining resource costs at the patient and hospital level. These additional payments reduce the financial losses that would otherwise be incurred when treating patients who require more costly care and, therefore, reduce the incentives to underserve these patients. We set the outlier threshold before the beginning of the applicable rate year so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS.

Under §412.525(a) in the regulations (in conjunction with §412.503), we make outlier payments for any discharges if the estimated cost of a case exceeds the adjusted LTCH PPS payment for the MS–LTC–DRG plus a fixed-loss amount. Specifically, in accordance with §412.525(a)(3) (in conjunction with §412.503), we make an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the patient case and the outlier threshold, which is the sum of the adjusted Federal prospective payment for the MS–LTC–DRG and the fixed-loss amount. The fixed-loss amount is the amount used to limit the loss that a hospital will incur under the outlier policy for a case with unusually high costs. This results in Medicare and the LTCH sharing financial risk in the treatment of extraordinarily costly cases. Under the LTCH PPS HCO policy, the LTCH’s loss is limited to the fixed-loss amount and a fixed percentage of costs above the outlier threshold (adjusted MS–LTC–DRG payment plus the fixed-loss amount). The fixed percentage of costs is called the marginal cost factor. We calculate the estimated cost of a case by multiplying the Medicare allowable charge by the hospital’s overall hospital cost-to-charge ratio (CCR)

Under the LTCH PPS HCO policy at §412.525(a), we determine a fixed-loss amount based on the maximum loss that an LTCH can incur under the LTCH PPS for a case with unusually high costs before the LTCH will receive any additional payments. We calculate the fixed-loss amount by estimating aggregate payments with and without an outlier policy. The fixed-loss amount results in estimated total outlier payments being projected to be equal to 8 percent of projected total LTCH PPS payments. Currently, MedPAR claims data and CCRs based on data from the most recent Provider-Specific File (PSF) (or from the applicable statewide average CCR if an LTCH’s CCR data are faulty or unavailable) are used to establish a fixed-loss threshold amount under the LTCH PPS.

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

The following is a discussion of CCRs that are used in determining payments for HCO and SSO cases under the LTCH PPS, at §412.525(a) and §412.529, respectively. Although this section is specific to HCO cases, because CCRs and the policies and methodologies pertaining to them are used in determining payments for both HCO and SSO cases (to determine the estimated cost of the case at §412.529(d)(2)), we are discussing the determination of CCRs under the LTCH PPS for both of these types of cases simultaneously.

In determining both HCO payments (at §412.525(a)) and SSO payments (at §412.529), we calculate the estimated cost of the case by multiplying the LTCH’s overall CCR by the Medicare allowable charges for the case. In general, we use the LTCH’s overall CCR, which is computed based on either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period, in accordance with §412.525(a)(4)(iv)(B) and §412.529(f)(4)(ii) for HCOs and SSOs, respectively. (We note that, in some instances, we use an alternative CCR, such as the statewide average CCR in accordance with the regulations at §412.525(a)(4)(iv)(C) and §412.529(f)(4)(iii), or a CCR that is specified by CMS or that is requested by the hospital under the provisions of the regulations at §412.525(a)(4)(iv)(A) and §412.529(f)(4)(i)). Under the LTCH PPS, a single prospective payment per discharge is made for both inpatient operating and capital-related costs. Therefore, we compute a single “overall” or “total” LTCH-specific CCR based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual (Pub. 100–4)) as compared to total charges. Specifically, an LTCH’s CCR is calculated by dividing an LTCH’s total Medicare costs (that is, the sum of its operating and capital inpatient routine and ancillary costs) by its total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges).

b. LTCH Total CCR Ceiling

Generally, an LTCH is assigned the applicable statewide average CCR if, among other things, an LTCH’s CCR is found to be in excess of the applicable maximum CCR threshold (that is, the LTCH CCR ceiling). This is because CCRs above this threshold are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases. Therefore, under our established policy, generally, if an LTCH’s calculated CCR is above the applicable ceiling, the applicable LTCH PPS statewide average CCR is assigned to the LTCH instead of the CCR computed from its most recent (settled or tentatively settled) cost report data.

In this final rule, using our established methodology for determining the LTCH total CCR ceiling (described above), based on IPPS total CCR data from the March 2014 update of the PSF, consistent with our proposal, we are establishing a total CCR ceiling of 1.346 under the LTCH PPS for FY 2015 in accordance with §412.525(a)(4)(iv)(C)(2) for HCOs and §412.529(f)(4)(iii)(B) for SSOs.

c. LTCH Statewide Average CCRs

Our general methodology established for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling (described above) because it is based on “total” IPPS CCR data. Under the LTCH PPS HCO policy at §412.525(a)(4)(iv)(C) and the SSO policy at §412.529(f)(4)(iii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) new LTCHs that have not yet submitted their first Medicare cost report (for this purpose, consistent with current policy, a new LTCH is defined as an entity that has not accepted assignment of an existing hospital’s provider agreement in accordance with §489.18); (2) LTCHs whose CCR is in excess of the LTCH CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example,
missing or faulty data). Other sources of data that the MAC may consider in determining an LTCH’s CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, we are continuing to use, in our proposal, we are continuing to use, our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS “total CCR” data from the March 2014 update of the PSF, consistent with our proposal, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that would be effective for discharges occurring on or after October 1, 2014 through September 20, 2015, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet).

Under the changes to the LTCH PPS labor market areas based on the new OMB delineations, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island would be classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut and Massachusetts have areas that are designated as rural, there are no short-term, acute care IPPS hospitals or LTCHs located in those areas as of March 2014. Therefore, consistent with our existing methodology, we are using the national average total CCR for rural IPPS hospitals for rural Connecticut and Massachusetts in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet).

In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, consistent with our proposal, we are continuing to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

d. Reconciliation of LTCH HCO and SSO Payments

We note that under the LTCH PPS HCO policy at §412.525(a)(4)(iv)(D) and the LTCH PPS SSO policy at §412.529(f)(4)(iv), the payments for HCO and SSO cases, respectively, are subject to reconciliation. Specifically, any reconciliation of outlier payments is based on the CCR that is calculated based on a ratio of cost-to-charge data computed from the relevant cost report determined at the time the cost report coinciding with the discharge is settled. For additional information, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100–4) as added by Change Request 7192 (Transmittal 2111, December 3, 2010) and the FY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. Establishment of the LTCH PPS Fixed-Loss Amount for FY 2015

When we implemented the LTCH PPS, as discussed in the August 30, 2002 LTCH PPS final rule (67 FR 56022 through 56026), under the broad authority of section 123 of the BBRA as amended by section 307(b) of BIPA, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS. To determine the fixed-loss amount, we estimate outlier payments and total LTCH PPS payments for each case using claims data from the MedPAR files. Specifically, to determine the outlier payment for each case, we estimate the cost of the case by multiplying the Medicare covered charges from the claim by the LTCH’s CCR. Under §412.525(a)(3) (in conjunction with §412.503), if the estimated cost of the case exceeds the outlier threshold, we make an outlier payment equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (that is, the sum of the adjusted Federal prospective payment for the MS–LTC–DRG and the fixed-loss amount).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 53715), we presented our policies regarding the methodology and data we used to establish the fixed-loss amount of $13,314 for FY 2014, which was calculated using our existing methodology to calculate the fixed-loss amount (based on the data and the rates and policies presented in that final rule) in order to maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments. Consistent with our historical practice of using the best data available, in determining the fixed-loss amount for FY 2014, we used the most recent available LTCH claims data and CCR data, that is, LTCH claims data from the March 2013 update of the FY 2012 MedPAR file and CCRs from the March 2013 update of the PSF, as these data were the most recent complete LTCH data available at that time.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 24321), we proposed to continue to use our existing methodology to calculate a fixed-loss amount for FY 2015 using the best available data that would maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (based on the rates and policies presented in this proposed rule). Specifically, based on the most recent complete LTCH data available at that time (that is, LTCH claims data from the March 2014 update of the FY 2013 MedPAR file and CCRs from the March 2014 update of the PSF), we proposed to determine a fixed-loss amount for FY 2015 that would result in estimated outlier payments projected to be equal to 8 percent of total estimated payments in FY 2015. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we proposed a fixed-loss amount of $15,730 for FY 2015, and also proposed to make an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted Federal LTCH payment for the MS–LTC–DRG and the proposed fixed-loss amount of $15,730).

Comment: One commenter expressed support for the proposed fixed-loss amount, and stated that the proposed increase for FY 2015 is justified. That same commenter also requested that CMS provide its most recent estimate of the percentage payout of high-cost outlier payments for the current fiscal year. Another commenter expressed concern that the proposed increase in the fixed-loss amount would result in significant financial losses for hospitals that treat a comparatively high volume of outlier cases, and recommended that the increase be transitioned in over 2 years to reduce the impact of this increase in the fixed-loss amount.

Response: We appreciate the commenter’s support for the proposed fixed-loss amount, and agree that the increase is necessary to maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (as explained in
the proposed rule). In section I.K. of the regulatory impact analysis in the Appendix to this final rule, we state that we currently estimate that HCO payments will be approximately 7.9 percent of the estimated total LTCH PPS payments in FY 2014 based on the most recent data available.

While we understand the commenter’s concern regarding the financial impact an increase in the fixed-loss amount may have on the outlier payments to some LTCH’s, we do not believe that the increase should be phased-in over 2 years. The intent of the HCO policy is to provide an additional payment to LTCH cases that have unusually high costs while at the same time balancing an incentive for LTCHs to treat expensive patients and provide cost efficient care. (We refer readers to the FY 2003 LTCH PPS final rule (67 FR 56025) for further details regarding the intent of this policy.) Under our historical HCO policy, this balance is achieved by making outlier payments that are intended to approximate the marginal cost of providing care above the fixed-loss threshold. We believe that phasing-in the increase to the fixed-loss amount would be inconsistent with the intent of the LTCH PPS HCO policy because such a policy would reduce the incentive to provide cost efficient care by resulting in estimated outlier payments that are in excess of 8 percent of total estimated payments in FY 2015.

For additional detail on the rationale for setting the HCO payment “target” at 8 percent of total estimated LTCH PPS payments, we refer readers to the FY 2003 LTCH PPS final rule (67 FR 56022 through 56024). Furthermore, any auxiliary adjustment to the fixed-loss amount, such as a transition, would result in making outlier payments that would not be directly related to the cost of providing care to unusually costly cases in FY 2015. When we determine the annual fixed-loss amount, we include all payments and policies that would affect actual payments for the current fiscal year in order to ensure the most accurate determination of a fixed-loss amount that would result in estimated outlier payments equaling 8 percent of total estimated for the fiscal year. Including an auxiliary adjustment, such as a transition, that is not relative to the current fiscal year does not lend greater accuracy to the determination of a fixed-loss amount that would result in estimated outlier payments equaling 8 percent of total estimated payments in FY 2015. For these reasons, we continue to believe that our policies are consistent with the original intent of the HCO policy under the LTCH PPS and, therefore, we are not adopting the commenter’s suggestion to phase-in the increase to the fixed-loss amount for FY 2015.

In this final rule, after consideration of the public comments we received, we are adopting our proposals related to the calculation of the fixed-loss amount for FY 2015 as final without modification. For FY 2015, consistent with our proposal, we are continuing to use our existing methodology to calculate a fixed-loss amount for FY 2015 using the best available data that would maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (based on the rates and policies presented in this final rule). Specifically, for this final rule, we used LTCH claims data from the March 2014 update of the FY 2013 MedPAR file and CCRs from the March 2014 update of the PSF to determine a fixed-loss amount that will result in estimated outlier payments projected to be equal to 8 percent of total estimated payments in FY 2015 because these data are the most recent complete LTCH data available at this time. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of BIPA, we are establishing a fixed-loss amount of $14,972 for FY 2015. Therefore, we are making an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted Federal LTCH payment for the MS–LTC–DRG and the fixed-loss amount of $14,972). We note that the fixed-loss amount of $14,792 for FY 2015 is lower than the proposed FY 2015 fixed-loss amount of $15,730. This decrease is primarily a result of updated data used to calculate the fixed-loss amount in this final rule, such as the most recent available LTCH claims data in the MedPAR file, CCRs in the PSF, and the estimate of the LTCH PPS market basket update factors. We also note that the fixed-loss amount of $14,972 for FY 2015 is slightly higher than the FY 2014 fixed-loss amount of $13,314. Based on our payment simulations using the most recent available data at this time, the final increase in the fixed-loss amount for FY 2015 is necessary to maintain the existing requirement that estimated outlier payments equal 8 percent of estimated total LTCH PPS payments. Maintaining the fixed-loss amount at the current level would result in HCO payments that are more than the current regulatory 8-percent requirement because a lower fixed-loss amount would result in more cases qualifying as outlier cases, as well as higher outlier payments for qualifying HCO cases because the maximum loss that an LTCH must incur before receiving an HCO payment (that is, the fixed-loss amount) would be smaller. For these reasons, we believe that raising the fixed-loss amount is appropriate and necessary to maintain that estimated outlier payments would equal 8 percent of estimated total LTCH PPS payments as required under § 412.525(a). (As noted above, for further information on the existing 8 percent HCO “target” requirement, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56022 through 56024)).

4. Application of the Outlier Policy to SSO Cases

As we discussed in the August 30, 2002 final rule (67 FR 56026), under some rare circumstances, an LTCH discharge could qualify as an SSO case (as defined in the regulations at § 412.529 in conjunction with § 412.503) and also as an HCO case. In this scenario, a patient could be hospitalized for less than five-sixths of the geometric average length of stay for the specific MS–LTC–DRG, and yet incur extraordinarily high treatment costs. If the estimated costs exceeded the HCO threshold (that is, the SSO payment plus the fixed-loss amount), the discharge is eligible for payment as an HCO. Therefore, for an SSO case in FY 2015, the HCO payment would be 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the fixed-loss amount of $14,972 and the amount paid under the SSO policy as specified in § 412.529).

E. Update to the IPPS Comparable/Equivalent Amounts To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule, we established a policy for reflecting the changes to the Medicare IPPS DSH payment adjustment methodology for by section 3133 of the Affordable Care Act in the calculation of the “IPPS comparable amount” under the SSO policy at § 412.529 and the “IPPS equivalent amount” under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the “IPPS comparable amount” and the “IPPS equivalent amount” includes an amount for inpatient operating costs “for the costs of serving a disproportionate share of low-income patients.” Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, inpatient IPPS hospitals receive an empirically justified Medicare DSH payment equal
to 25 percent of the amount they
otherwise would have received under
the statutory formula for Medicare DSH
payments prior to the amendments
made by the Affordable Care Act. The
remaining amount, equal to an estimate
of 75 percent of the amount that
otherwise would have been paid as
Medicare DSH payments, reduced to
reflect changes in the percentage of
individuals under the age of 65 who are
uninsured, is made available to make
additional payments to each hospital
that qualifies for Medicare DSH
payments and that has uncompensated
care. The additional uncompensated
care payments are based on the
hospital's amount of uncompensated
care for a given time period relative to
the total amount of uncompensated care
for that same time period reported by all
IPPS hospitals that receive Medicare
DSH payments.

To reflect the statutory changes to the
Medicare DSH payment adjustment
methodology in the calculation of the
"IPPS comparable amount" and the
"IPPS equivalent amount" under the
LTCH PPS, we stated that we will
include a reduced Medicare DSH
payment amount that reflects the
projected percentage of the payment
amount calculated based on the
statutory Medicare DSH payment
formula prior to the amendments made
by the Affordable Care Act that will be
paid to eligible IPPS hospitals as
empirically justified Medicare DSH
payments and uncompensated care
payments in that year (that is, a
percentage of the operating DSH
payment amount that has historically
been reflected in the LTCH PPS
payments that is based on IPPS rates).
We also stated that the projected
percentage will be updated annually,
consistent with the annual
determination of the amount of
uncompensated care payments that will
be made to eligible IPPS hospitals. As
explained in the FY 2014 IPPS/LTCH
PPS final rule (79 FR 50766 through
50767), we believe that this approach
results in appropriate payments under
the LTCH PPS and is consistent with
our intention that the "IPPS comparable
amount" and the "IPPS equivalent
amount" under the LTCH PPS closely
resemble what an IPPS payment would
have been for the same episode of care,
while recognizing that some features of
the IPPS cannot be translated directly
into the LTCH PPS.

For FY 2014, aggregate Medicare IPPS
operating DSH payments are projected
to be reduced to 95.7 percent of the
amount that would otherwise have been
paid under the statutory Medicare DSH
payment formula prior to the
amendments made by the Affordable
Care Act. Accordingly, for FY 2014, the
calculation of the "IPPS comparable
amount" under § 412.529 and the "IPPS
equivalent amount" under § 412.534
and § 412.536 includes an applicable
operating Medicare DSH payment
amount that is equal to 95.7 percent
of the operating Medicare DSH payment
amount based the current statutory
Medicare DSH payment formula (that is,
the operating Medicare DSH payment
amount historically included in those
calculations. (We refer readers the FY
2012 IPPS/LTCH PPS final rule (76 FR
50766).)

In the FY 2015 IPPS/LTCH PPS
proposed rule (79 FR 28341 through
28342), we discussed that, for FY 2015,
based on the latest data available, we
project that the reduction in the amount
of Medicare DSH payments pursuant to
section 1886(r)(1) of the Act, along with
the proposed payments for
uncompensated care under section
1886(r)(2) of the Act, would result in
overall Medicare DSH payments
amount based on the statutory Medicare
DSH payments that would otherwise have been made in the
absence of amendments made by the
Affordable Care Act. Therefore, we
proposed that the calculation of the
"IPPS comparable amount" under
§ 412.529 and the "IPPS equivalent
amount" under § 412.534 and § 412.536
for FY 2015 includes an applicable
operating Medicare DSH payment
amount that would be equal to 85.26
percent of the operating Medicare DSH
payment amount based on the statutory
Medicare DSH payment formula prior
to the amendments made by the
Affordable Care Act. We also proposed
that, consistent with our historical practice of
using the most recent data available, if
more recent data became available for
the final rule, we would use that data to
determine the percentage of the
operating Medicare DSH payment
amount based on the statutory Medicare
DSH payment formula prior to the
amendments made by the Affordable
Care Act. As discussed in greater detail in
section IV.F.3.d.(2) of the preamble of
this final rule, based on the most recent
data available, our estimate of 75
percent of the amount that would
otherwise have been paid as Medicare
DSH payments (under the methodology
outlined in section 1886(e)(2) of the Act)
will be adjusted to 57.14 percent of that
amount to reflect the change in the
percentage of individuals that are
uninsured. The resulting amount will
then be used to determine the amount of
uncompensated care payments that
will be made to eligible IPPS hospitals in
FY 2015. In other words, Medicare
DSH payments prior to the amendments
made by the Affordable Care Act are
adjusted to 57.14 percent (the product of
75 percent and 76.19 percent) and the
resulting amount will be used to
calculate the uncompensated care
payments to eligible hospitals. As a
result, for FY 2015, we project that the
reduction in the amount of Medicare
DSH payments pursuant to section
1886(r)(1) of the Act, along with the
payments for uncompensated care
under section 1886(r)(2) of the Act, will
result in overall Medicare DSH
payments of 82.14 percent of the
amount of Medicare DSH payments that
would otherwise have been made in the
absence of amendments made by the
Affordable Care Act (that is, 25 percent
+ 57.14 percent = 82.14 percent).

We did not receive any public
comments on this proposal and therefore
we are adopting this policy as
final without modification. In this final
rule, for FY 2015, we are establishing
that the calculation of the "IPPS
comparable amount" under § 412.529
and the "IPPS equivalent amount"
under § 412.534 and § 412.536 will
include an applicable operating
Medicare DSH payment amount that
will be equal to 82.14 percent of the
operating Medicare DSH payment
amount based on the statutory Medicare
DSH payment formula prior to the
amendments made by the Affordable
Care Act.

F. Computing the Adjusted LTCH PPS
Federal Prospective Payments for FY 2015

Section 412.525 sets forth the
adjustments to the LTCH PPS standard
Federal rate. Under §412.525(c), the
standard Federal rate is adjusted to
account for differences in area wages by
multiplying the labor-related share of
the standard Federal rate by the
applicable LTCH PPS wage index (FY
2015 values are shown in Tables 12A
through 12D listed in section VI. of the
Addendum of this final rule and are
available via the Internet). The standard
Federal rate is also adjusted to account
for the higher costs of LTCHs located in
Alaska and Hawaii by the applicable
COLA factors (the FY 2015 factors are
shown in the chart in section V.C. of
this Addendum) in accordance with
§412.525(b). In this final rule, we are
establishing a standard Federal rate for
FY 2015 of $41,043.71 (applicable to
discharges from LTCHs that submit the
required quality reporting data for FY
2015 in accordance with the LTCHQR Program under section 1886(m)(5) of the Act, as discussed above in section V.A.2. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS Federal standard rate for FY 2015 in the following example:

Example:

During FY 2015, a Medicare patient is in an LTCH located in Chicago, Illinois (CBSA 16974). The FY 2015 LTCH PPS wage index value for CBSA 16974 is 1.0419 (obtained from Table 12A listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The Medicare patient is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2015 of 0.9098 (obtained from Table 11 listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The LTCH submitted quality reporting data for FY 2015 in accordance with the LTCHQR Program under section 1886(m)(5) of the Act.

To calculate the LTCH’s total adjusted Federal prospective payment for this Medicare patient in FY 2015, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2015 standard Federal rate ($41,043.71) by the labor-related share (62.306 percent) and the wage index value (1.0419). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted standard Federal rate (37.694 percent; adjusted for cost of living, if applicable) to determine the adjusted Federal rate, which is then multiplied by the MS–LTC–DRG relative weight (0.9098) to calculate the total adjusted Federal LTCH PPS prospective payment for FY 2015 ($38,316.42). The table below illustrates the components of the calculations in this example.

<table>
<thead>
<tr>

* LTCH PPS standard Federal rate applicable to discharges from LTCHs that submit the required quality data in accordance with the LTCHQR Program under section 1886(m)(5) of the Act.

VI. Tables Referenced in This Final Rule and Available Only Through the Internet on the CMS Web site

This section lists the tables referred to throughout the preamble of this final rule and in this Addendum. In the past, a majority of these tables were published in the Federal Register as part of the annual proposed and final rules. However, similar to FY’s 2012 through 2014, for the FY 2015 rulemaking cycle, the IPPS and LTCH tables will not be published in the Federal Register in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the Internet. Specifically, all IPPS Tables listed below with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will be available only through the Internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the Federal Register as part of the annual proposed and final rules.

As discussed in sections II.G.11. and 13. of the preamble of this final rule, Tables 6A through 6F will not be issued with this FY 2015 final rule because there are no new, revised, or deleted diagnosis or procedure codes for FY 2015. As discussed in section IV.D. of this final rule, section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93), enacted on April 1, 2014, extended, through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015), the temporary changes in the low-volume hospital definition and methodology for determining the payment adjustment originally made by the Affordable Care Act (and extended by subsequent legislation). We refer the reader to section IV.D. of the preamble of this final rule for complete details on the low-volume hospital payment adjustment. Therefore, Table 14 associated with this final rule lists the FY 2015 low-volume payment adjustments for potentially eligible hospitals that also meet the distance criterion for low-volume hospital status. As discussed in section IV.H.11. of the preamble of this final rule, we are providing proxy FY 2015 readmission payment adjustment factors in Table 15A issued with this final rule. After the completion of the review and corrections process, we will publish the final FY 2015 readmissions payment adjustment factors in Table 15B on the CMS IPPS Web site. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital’s total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section IV.J. of the preamble of this final rule, we are not providing the hospital-level data (such as a proxy list of providers subject to the HAC Reduction Program in FY 2015 in Table 17) in conjunction with this final rule. Finally, a hospital’s Factor 3 is the proportion of the uncompensated care amount that a DSH will receive under section 3133 of the Affordable Care Act. Factor 3 is the hospital’s estimated number of Medicaid days and Medicare SSI days relative to the estimate of all DSHs’ Medicaid days and Medicare SSI days. Therefore, Table 18 contains the FY 2015 Medicare DSH uncompensated care payment Factor 3 for all hospitals and identifies whether or not a hospital is projected to receive DSH and, therefore, eligible to receive the additional payment for uncompensated care for FY 2015.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified below should contact Michael Treitel at (410) 786-4552.

The following IPPS tables for this FY 2015 final rule are available only through the Internet on the CMS Web site at: http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html. Click on the link on the left side of the screen titled, “FY 2015 IPPS Final Rule Home Page” or “Acute Inpatient—Files for Download”.

## Appendix A: Economic Analyses

### I. Regulatory Impact Analysis

#### A. Introduction

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. A regulatory impact analysis (RIA) must be prepared for major rules with economically...
significant effects ($100 million or more in any 1 year).

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2015 acute care hospital operating and capital payments will redistribute amounts in excess of $100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, will result in an estimated $654 million decrease in FY 2015 operating payments (or −0.6 percentage point) and an estimated $32 million increase in FY 2015 capital payments (or 1.6 percent change). These changes are relative to payments made in FY 2014. The impact analysis of the capital payments can be found in section I.J. of this Appendix. In addition, as described in section I.K. of this Appendix, LTCHs are expected to experience an increase in payments by $62 million in FY 2015 relative to FY 2014.

Our operating impact estimate includes the −0.8 percent documentation and coding adjustment to the IPPS standardized amount, which represents part of the recoupment required under section 631 of the ATRA. In addition, our operating payment impact estimate includes the 2.2 percent hospital update to the standardized amount (which includes the estimated 2.9 percent market basket update less 0.5 percentage point for the multifactor productivity adjustment and less 0.2 percentage point required under the Affordable Care Act). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the impacts on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

B. Statement of Need

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS payment system.

C. Objectives of the IPPS

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2015, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 32 Indian Health Service hospitals in our database, which were excluded from our analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2014, there were 3,396 IPPS acute care hospitals included in our analysis. This represents approximately 56 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,326 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. IPPS-excluded hospitals and units include IPFs, IRFs, LTCHs, RNHCIs, children’s hospitals, 11 cancer hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, which are paid under separate payment systems. Children’s hospital payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2015 is discussed in section I.L. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of March 2014, there were 98 children’s hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling. The Affordable Care Act requires an adjustment for multifactor productivity (currently estimated to be 0.5 percentage point for FY 2015) and a 0.2 percentage point reduction to the market basket update resulting in a 2.2 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section IV.B. of the preamble of this final rule. Children’s hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that are paid based on reasonable costs subject to the rate-of-increase limits. Consistent with current law, based on the National Hospital Impact and Performance Measurement (IHPM) data, the 11 cancer hospitals, the 5 short-term acute care hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that are paid based on reasonable costs subject to the rate-of-increase limits. Consistent with current law, based on the National Hospital Impact and Performance Measurement (IHPM) data, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that are paid based on reasonable costs subject to the rate-of-increase limits.
percentage increase in the FY 2015 IPPS operating market basket, estimated at 2.9 percent, without the reductions required under the Affordable Care Act.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limit since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be paid. We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of the rate-of-increase limit, or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2015 for operating costs of acute care hospitals. The FY 2015 updates to the capital payments to acute care hospitals are discussed in section I.J. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2015 operating payments will decrease by 0.6 percent compared to FY 2014. In addition to the applicable percentage increase, this amount reflects the FY 2015 recoupment adjustment for documentation and coding described in section I.H. of this Appendix, the application of the final rule of 0.8 percent to the IPPS national standardized amounts. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating IPPS for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that will allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based on our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2013 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the operating IPPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in the number or lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2013 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters cited above. Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2015 are discussed in section I.J. of this Appendix.

We discuss the following changes below:

• The effects of the changes to the relative weights and MS–DRG grouper.
• The effects of the changes in hospitals’ wage index values reflecting updated wage data from hospitals’ cost reporting periods beginning during FY 2011, compared to the FY 2010 wage data, and the adoption of the new OMB delineations to calculate the FY 2015 wage index.
• The combined effects of the recalculation of the MS–DRG relative weights as required by section 1886(d)(4)(C) of the Act and the wage index (including the updated wage data and the adoption of new OMB labor market area delineations), including the wage and recalibration budget neutrality factors.
• The effects of the geographic reclassifications by the MGCRB (as of publication of this final rule) and the effects of the adoption of the new OMB labor market area delineations on these reclassifications, that will be effective for FY 2015.
• The effects of the rural floor and imputed floor with the application of the national budget neutrality factor applied to the wage index where the rural floor and imputed floor wage index are calculated based on the adoption of the new OMB labor market area delineations.
• The effects of the adoption of the new labor market area delineations announced by OMB in February 2013 on hospital redesignations.
• The effects of the 3-year transition for urban hospitals becoming rural under the new OMB delineations and the 1-year transitional blended wage index for hospitals whose FY 2015 wage indexes decrease solely as a result of adopting the new OMB delineations.
• The effects of the frontier State wage index adjustment under the new OMB provision that requires that hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.
• The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108–173, which for an increase in a hospital’s wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes.
• The effects of the policies for implementation of the Hospital Readmissions Reduction Program under section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, that adjusts a hospital’s base operating DRG amount by an adjustment factor to account for a hospital’s excess readmissions.
• The effects of the policies for continued implementation of section 3133 of the Affordable Care Act that reduces Medicare DSH payments to 25 percent of what hospitals had been previously paid under section 1886(d)(5)(F) of the Act and establishes an additional payment to be made to hospitals that receive DSH payments for their relative share of the total amount of uncompensated care.

The total estimated change in payments based on the FY 2015 policies relative to payments based on FY 2014 policies that include the applicable percentage increase of 2.2 percent (or 2.9 percent market basket update with a reduction of 0.5 percentage point for the multifactor productivity adjustment, and a 0.2 percentage point reduction, as required under the Affordable Care Act). The total estimated change in payments for FY 2015 reflects the extension of MDH payment status for the first 6 months of FY 2015, in accordance with the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93) enacted on April 1, 2014.

We note that in the FY 2015 IPPS/LTCH PPS proposed rule we provided the effects of section 1886(o) of the Act, as added by section 3008 of the Affordable Care Act, which establishes payment reductions under the HAC Reduction Program. Hospitals ranked in the lowest 25 percent of performance on HACs are subject to a 1-percentage reduction in total IPPS payments. We are finalizing policies related to the HAC Reduction Program in this final rule, but as described earlier in this final rule, because the HAC scores are currently undergoing 30-day review and correction by the hospitals, we are not providing hospital-level data or a hospital-level payment impact in conjunction with the FY 2015 IPPS. We do provide an estimate of the overall payment impact in section I.H.8 of this Appendix A along with a discussion of the impact of these changes.
2015 applicable percentage increase of 2.2 percent and the documentation and coding recoupment adjustment of 0.8 percent to the Federal standardized amount; the FY 2014 MS–DRG GROUPER (Version 31.0); the current FY 2014 CBSCA designations for hospitals based on OMB definitions; the FY 2014 wage index; and no MGCRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS–DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 1006(a)(3) of Public Law 109–171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111–5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111–148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2015, we are establishing that hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 1.475 percent. At the time that this impact was prepared, 56 hospitals did not receive the full market basket rate-of-increase for FY 2014 because they failed to submit quality data submission process or did not choose to participate. For purposes of the simulations shown below, we modeled the payment changes for FY 2015 using a reduced update for these 56 hospitals. However, we do not have enough information at this time to determine which hospitals will not receive the full update factor for FY 2015.

Beginning in FY 2015, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user must include a reduction of one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2015, we are establishing that hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of 1.475 percent. Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(viii) of the Act and also do not submit quality data under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 1.475 percent. Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of 0.75 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality information data and a one-quarter reduction of the market basket update for being identified as not a meaningful EHR user. For FY 2015, we have yet to finalize a list of hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act. Therefore, we are not including this adjustment to the standardized amount (for those hospitals that are not meaningful EHR users) in our modeling of aggregate payments for FY 2015. We intend to release a final list of hospitals that are not meaningful EHR users in September 2014. Hospitals identified on this list will be paid based on the applicable standardized amount in Table 1A and Table 1B for discharges occurring in FY 2015.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2015 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2014 to FY 2015. Three factors did not separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2015 using an applicable percentage increase of 2.2 percent. This is then added incrementally to the baseline, finally arriving at the FY 2015 model. This simulation allows us to isolate the effects of each change.

The next four rows of Table I contain hospitals categorized according to their geographic location: all urban, which is further divided into large urban and other urban; and rural. Therefore, the 3,396 acute care hospitals included in the analysis.

The next three groupings examine the impacts of the changes on hospitals grouped based on hospitals’ FY 2015 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(9)(B) of the Act that have implications for capital payments) are 2,563; 1,413; 1,150; and 833, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped based on whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,357 nonteaching hospitals in our analysis, 795 teaching hospitals with fewer than 100 residents, and 24 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs).

There were 193 RRCs, 325 SCHs, and 162
MDHs (MDH status is extended through March 31, 2015 only under Pub. L. 113–93), 124 hospitals that are both SCHs and RRCs, and 15 hospitals that are MDHs and RRCs (MDH status is extended through March 31, 2015 only under Pub. L. 113–93).

The next series of groupings are based on the type of ownership and the hospital’s Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2012 or FY 2011 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the MGCRB for FY 2015. The second grouping shows the MGCRB rural reclassifications.

The final category shows the impact of the policy changes on the 15 cardiac hospitals.

</table>
because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2013 and hospital cost report data are from reporting periods beginning in FY 2012 and FY 2011.

This column displays the payment impact of the hospital rate update and the documentation and coding adjustment including the 2.9 percent update plus the 0.5 percent productivity adjustment and the 2.2 percent market basket update plus the 0.8 percent documentation and coding adjustment to the national standardized amount.

This column displays the payment impact of the changes to the MS-DRG weights and the application of the recalibration budget neutrality factor of 0.99742 in accordance with section 1886(d)(4)(C)(iii) of the Act.

This column displays the application of the recalibration budget neutrality factor of 0.99742 in accordance with section 1886(d)(4)(C)(iii) of the Act.
This column displays the payment impact of the update to wage index data using FY 2011 cost report data and the new OMB labor market area delineations. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 1.001443. This column displays the combined payment impact of the changes in Columns 3 through 4 and the cumulative budget neutrality factor for MS-DRG and wage changes in accordance with section 1886(d)(4)(C)(iii) of the Act and section 1886(d)(3)(E) of the Act. The cumulative wage and recalibration budget neutrality factor of 0.998982 is the product of the wage budget neutrality factor and the recalibration budget neutrality factor. Shown here are the effects of geographic recombinations by the Medicare Geographic Classification Review Board (MGCRB) along with the effects of the adoption of the new OMB labor market area delineations on these recombinations. The effects demonstrate the FY 2015 payment impact of going from no recombinations to the recombinations scheduled to be in effect for FY 2015. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.990406. This column displays the effects of the rural floor and imputed floor based on the adoption of new OMB labor market area delineations. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The rural floor budget neutrality factor (which includes the imputed floor) applied to the wage index is 0.989507. This column displays the effects of the adoption of the new OMB labor market area delineations. It does not reflect the 3-year transition for hospitals that are currently located in urban counties that would become rural under the new OMB delineations and the one-year transition to the new OMB delineations where the wage indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB delineations, and 50 percent of their wage index based on their current labor market area. Rather, it shows the impact of the new OMB delineations fully implemented in FY 2015. This column shows the effects of both the 3-year transition for hospitals that are currently located in urban counties that become rural under the new OMB delineations, and the 50:50 blended wage index adjustments in a budget neutral manner. For FY 2015, we are applying both the 3-year transition and 50:50 blended wage index adjustments in a budget neutral manner, with a budget neutrality factor of 0.998859 applied to the standardized amount. This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are nonbudget neutral policies. This column displays the impact of the implementation of the Hospital Readmissions Reduction Program, section 3025 of the Affordable Care Act, a nonbudget neutral provision that adjusts a hospital’s payment for excess readmissions. This column displays the impact of the implementation of section 3133 of the Affordable Care Act that reduces Medicare DSH payments by 75 percent and establishes an additional uncompensated care payment. This column shows the changes in payments from FY 2014 to FY 2015. It reflects the impact of the FY 2015 hospital update and the adjustment for documentation and coding. It also reflects changes in hospitals' reclassification status in FY 2015 compared to FY 2014, and the extension of MDH payment status for the first half of FY 2015, under Pub. L. 113-93 enacted on April 1, 2014. It incorporates all of the changes displayed in Columns 2, 5, 6, 7, 8, 9, 10, 11, and 12 (the changes displayed in Columns 3 and 4 are included in Column 5). The sum of these impacts may be different from the percentage changes shown here due to rounding and interactive effects.
a. Effects of the Hospital Update and Documentation and Coding Adjustment
(Column 2)

As discussed in section II.D. of the preamble of this final rule, this column includes the hospital update, including the 2.9 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act. In addition, this column includes the FY 2015 documentation and coding recoupmemt adjustment of –0.8 percent on the national standardized amount as part of the recoupment required by section 631 of the ATRA. As a result, we are making a 1.4 percent update to the national standardized amount. This column also includes the 2.2 percent update to the hospital-specific rates which also includes the 2.9 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act.

Overall, hospitals will experience a 1.5 percent increase in payments primarily due to the combined effects of the hospital update and documentation and coding adjustment on the national standardized amount and the hospital update to the hospital-specific rate. Hospitals that are paid under the hospital-specific rate, namely SCHs, will experience a 2.2 percent increase in payments; therefore, hospital categories with SCHs paid under the hospital-specific rate will experience increases in payments of more than 1.4 percent.

b. Effects of the Changes to the MS–DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 3)

Column 3 shows the effects of the changes to the MS–DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS–DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2015 MS–DRG relative weights will be 100 percent cost-based and 100 percent MS–DRGs. For FY 2015, the MS–DRGs are calculated using the FY 2013 MedPAR data group to the Version 32.0 (FY 2015) MS–DRGs. The methodology to calculate the relative weights and the reclassification changes to the GROUPER and in more detail in section II.H. of the preamble of this final rule.

The “All Hospitals” line in Column 3 indicates that changes due to the MS–DRGs and relative weights will result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.997543 on to the standardized amount. Hospital categories that generally treat more surgical cases than medical cases will experience increases in their payments due to the changes to the relative weight methodology. Rural hospitals will experience a 0.3 percentage decrease in payments because on FY 2010 wages published to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience an increase in payments by 0.2 percent as those hospitals treat more surgical cases than medical cases.

c. Effects of the Wage Index Changes
(Column 4)

Column 4 shows the impact of updated wage data using FY 2011 cost report data and the new OMB labor market area delineations, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under hospitals tend to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience an increase in payments by 0.2 percent as those hospitals treat more surgical cases than medical cases.

As discussed in section II.D. of the preamble of this final rule, the FY 2015 recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The wage budget neutrality factor is 1.001443, and the overall payment change is zero percent.

Column 4 shows the impacts of updating the wage data using FY 2011 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, will lead to a 0.0 percent change for all hospitals as shown in Column 4.

In looking at the wage data itself, the national average hourly wage increased 1.02 percent compared to FY 2014. Therefore, the only manner in which to maintain or exceed the previous year’s wage index was to match or exceed the national 1.02 percent increase in average hourly wage. Of the 3,387 hospitals with wage data for both FYs 2014 and 2015, 1,372 or 46.4 percent will experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2015 relative to FY 2014. Among urban hospitals, 4 will experience a decrease of more than 10 percent, with 2 urban hospital experiencing an increase of more than 10 percent. Seventy-six urban hospitals will experience an increase or decrease of at least 5 percent or more but less than or equal to 10 percent. Among rural hospitals, none will
experience a decrease of more than 5 percent, but 5 rural hospitals will experience an increase of greater than 5 percent but less than or equal to 10 percent. However, 841 rural hospitals will experience decreases of less than or equal to 5 percent, while 2,220 urban hospitals will experience increases or decreases of less than or equal to 5 percent. Two hundred thirty-nine urban and no rural hospitals will not experience a change in their wage index. These figures reflect changes in the “pre-reclassified, occupational mix-adjusted wage index.” That is, the wage index before the application of geographic reclassification, the rural and imputed floors, the out-migration adjustment, and other wage index exceptions and adjustments. We note that this analysis was performed by applying the new OMB labor market area delineations to the FY 2015 wage data and also by recomputing the FY 2014 final wage data to reflect the new OMB delineations. (We refer readers to sections III.G.2. through III.I. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the “post-reclassified” wage index or “payment wage index,” the wage index that includes the exceptions and adjustments (as reflected in Tables 2, 4A, 4B, 4C, and 4D of the Addendum to this final rule, which are available via the Internet on the CMS Web site) is used to adjust the labor-related share of a hospital's standardized amount, either 69.6 percent or 62 percent, depending upon whether a hospital's wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the chart below may illustrate a somewhat larger or smaller change than will occur in a hospital’s payment wage index and total payment. The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

<table>

d. Combined Effects of the MS–DRG and Wage Index Changes (Column 5)

Section 1886(d)(4)(C)(iii) of the Act requires that changes to MS–DRG reclassifications and the relative weights cannot increase or decrease aggregate payments. In addition, section 1886(d)(3)(E) of the Act requires that any updates or adjustments to the wage index are to be budget neutral. We computed a wage budget neutrality factor of 1.001443 and a recalibration budget neutrality factor of 0.997543 (which is applied to the Puerto Rico-specific standardized amount and the hospital-specific rates). The product of the two budget neutrality factors is the cumulative wage and recalibration budget neutrality factor. The cumulative wage and recalibration budget neutrality adjustment is 0.998982, or approximately 0.10 percent, which is applied to the national standardized amounts. Because the wage budget neutrality and the recalibration budget neutrality are calculated under different methodologies according to the statute, when the two budget neutralities are combined and applied to the standardized amount, the overall payment impact is not necessarily budget neutral. However, in this final rule, we are estimating that the changes in the MS–DRG relative weights and updated wage data with wage and budget neutrality applied will result in a 0.0 percent change in payments.

e. Effects of MGCRB Reclassifications (Column 6)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on other bases than where they are geographically located). The changes in Column 6 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2015 and the effects of the adoption of the new OMB labor market area delineations on these reclassifications which affect hospitals’ wage index area assignments. By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital’s reclassification request for the purpose of using another area’s wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals had 45 days from publication of the IPPS proposed rule in the Federal Register to decide whether to withdraw or terminate an approved geographic reclassification for the following year. The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.990406 to ensure that the effects of the reclassification (as per section 1886(d)(10) of the Act) are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification will increase payments to rural hospitals by an average of 1.5 percent. By region, all the rural hospital categories will experience increases in payments due to MGCRB reclassifications.

Table 9A listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site reflects the reclassifications for FY 2015.

f. Effects of the Rural and Imputed Floor, Including Application of National Budget Neutrality (Column 7)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RY 2010 LTCH PPS final rule, the FYs 2011, 2012, 2013 and 2014 IPPS/ LTCH PPS final rules, and this final rule, section 4410 of Public Law 108-333 established the rural floor by requiring that the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We apply a uniform budget neutrality adjustment to the wage index. The imputed floor, which is also included in the calculation of the budget neutrality adjustment to the wage index, was extended in FY 2012 for 2 additional years. In the past, only urban hospitals in New Jersey received the imputed floor. As discussed in the FY 2015 IPPS/LTCH PPS final rule (77 FR 53369), we established an alternative temporary methodology for the imputed floor, which resulted in an imputed floor for Rhode Island for FY 2013. For FY 2014, we extended the imputed rural floor, as calculated under the original methodology and the alternative methodology. For FY 2015, we are extending the imputed rural floor for one year, as calculated under the original methodology and the alternative methodology. As a result, New Jersey, Rhode Island, and Delaware are able to receive an imputed floor. In New Jersey, 15 out of 64 hospitals will receive the imputed floor, and 4 out of 11 hospitals in Rhode Island will receive the imputed floor for FY 2015. In the FY 2015 IPPS/LTCH PPS proposed rule (78 FR 28356), we stated that one out of six hospitals in Delaware would benefit from the imputed floor. However, in this final rule, no hospitals are benefitting from the imputed floor in Delaware because the CBSA wage index for each CBSA in Delaware under the new OMB delineations is equal to or higher than the rural imputed floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally, and the imputed floor is paid on the rural floor budget neutrality factor applied to the wage index nationally. We have calculated an FY 2015 rural floor budget neutrality factor to be applied to the wage index of 0.989507, which reduces wage indexes by 1.0 percent.

Column 7 shows the projected impact of the rural floor and imputed floor with the
national rural floor budget neutrality factor applied to the wage index based on the new OMB labor market area delineations. The column compares the post-reclassification FY 2015 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2015 wage index of providers with the rural floor and imputed floor adjustment based on the new OMB labor market area delineations. Only urban hospitals can benefit from the rural and imputed floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 422 hospitals will benefit from the rural and imputed floors in FY 2015, while the remaining 2,974 IPPS hospitals in our model have their wage index reduced by the rural floor budget neutrality adjustment of 0.989507 (or 1.0 percent). We project that, in aggregate, rural hospitals will experience a 0.3 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage index downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project hospitals located in urban areas will experience no change in payments because increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region can expect a 2.8 percent increase in payments primarily due to the application of the rural floor in Massachusetts. Fifty-one urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality of 1.3336, increasing payments overall to Massachusetts by an estimated $156 million. During most past years, there have been no IPPS hospitals located in rural areas in Massachusetts. There was one IPPS hospital that was reclassified to rural Massachusetts (under section 1886(d)(8)(E) of the Act) which established the Massachusetts rural floor, but the wage index resulting from that hospital’s data was not high enough for any urban hospital to benefit from the rural floor policy. However, for the FY 2012 wage index, the rural floor for Massachusetts was established by a hospital that converted from a CAH to an IPPS hospital that is geographically located in rural Massachusetts. The rural floor in Massachusetts continues to be set by the wage index of the hospital in rural Massachusetts that converted from CAH to IPPS status. We estimate that Massachusetts hospitals will receive approximately a 4.9 percent increase in IPPS payments due to the application of the rural floor in FY 2015.

We wish to make note of a situation that occurred in the rural floor impact calculation for Massachusetts. In FY 2014, CMS calculated that 60 hospitals would benefit from the Massachusetts rural floor, resulting in an estimated $167.6 million being received by Massachusetts hospitals via the national rural floor budget neutrality adjustment. In FY 2015, fewer Massachusetts hospitals, 51 hospitals, have been identified as benefitting from the rural floor, and the fiscal impact of national budget neutrality has been reduced. We have received inquiries from commenters regarding this reduction, speculating whether the addition of one rural hospital in Franklin County, MA reduced the impact of the Massachusetts rural floor. The commenters are correct that the addition of one rural hospital in Massachusetts reduced the impact of the rural floor in FY 2015 as compared to the impact of the rural floor in FY 2014. We refer readers to section I.A.4.(c) of the Addendum to this final rule for a complete discussion on this issue.

Urban Puerto Rico hospitals are expected to experience a 0.0 percent change in payments as a result of the application of a Puerto Rico rural floor with the application of the Puerto Rico rural floor budget neutrality adjustment. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.991291 or –0.87 percent. The Puerto Rico-specific wage index adjustment factor is calculated based on the new OMB labor market area delineations, including the rural floor budget neutrality. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.991291 or –0.87 percent. The Puerto Rico-specific wage index adjustment factor is calculated based on the new OMB labor market area delineations, including the rural floor budget neutrality. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.991291 or –0.87 percent. The Puerto Rico-specific wage index adjustment factor is calculated based on the new OMB labor market area delineations, including the rural floor budget neutrality. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.991291 or –0.87 percent. The Puerto Rico-specific wage index adjustment factor is calculated based on the new OMB labor market area delineations, including the rural floor budget neutrality.
FY 2015 IPPS ESTIMATED PAYMENTS DUE TO RURAL FLOOR AND IMPUTED FLOOR WITH NATIONAL BUDGET NEUTRALITY

**g. Impact of the New OMB Delineations (Column 8)**

Column 8 shows the effects of the adoption of the new OMB labor market area delineations. This column compares the payments under the rural and imputed floor wage index with rural floor budget neutrality calculated under the new OMB delineations and the payments under the rural and imputed floor wage index with budget neutrality calculated under the current OMB delineations. It does not reflect the 3-year transition for hospitals that are currently located in urban counties that become rural under the new OMB delineations and the 1-year transition to the new OMB delineations where the wage indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB delineations, and 50 percent of their wage index based on their current labor market area. Rather, it shows the impact of the new OMB delineations fully implemented for FY 2015. Approximately 609 hospitals have their wage index impacted due to the new OMB delineations. Urban New England and rural Middle Atlantic hospitals will experience the largest decreases in payments due to the new OMB delineations being fully implemented.
for FY 2015, with payment decreases of 0.5 and 0.2 percent, respectively. Urban non-DSH hospitals, nonteaching and non-DSH hospitals, and Lugar hospitals will experience the largest increases in payments due to the new OMB delineations being fully implemented as of FY 2015, each with payment increases of 0.2 percent.

h. Application of the CBSA Transition Wage Index With Budget Neutrality (Column 9)

As discussed earlier in this final rule, for FY 2015, we are using the most recent labor market area delineations issued by OMB but we established a transition period in certain circumstances. Specifically, we established a 3-year transition for hospitals that are currently located in an urban county that becomes rural under the new OMB labor market area delineations under which such hospitals will be assigned the urban wage index value of the CBSA in which they are physically located as of FY 2014 for a period of 3 fiscal years (that is, for FYs 2015, 2016, and 2017). We also are establishing a 1-year blended wage index for all hospitals that experience any decrease in their actual payment wage index (that is, a hospital’s actual wage index used for payment, which accounts for all applicable effects of reclassification and redesignation) exclusively due to the implementation of the new OMB labor market area delineations. We are providing that a post-reclassified wage index with the rural and imputed floor applied be computed based on the hospital’s FY 2014 CBSA (that is, using all of its FY 2014 constituent county/ies), and another post-reclassified wage index with the rural and imputed floor applied be computed based on the hospital’s new FY 2015 CBSA (that is, the FY 2015 constituent county/ies).

We compared these two wage indices. If the FY 2015 wage index with FY 2015 CBSAs was lower than the FY 2015 wage index with FY 2014 CBSAs, we computed a blended wage index of 50 percent of each of the two wage indexed added together. This blended wage index is the hospital’s wage index for FY 2015. This adjustment only applies to hospitals that will experience a decrease in their actual payment wage index exclusively due to the implementation of the new OMB labor market area delineations. Hospitals that benefit from the new OMB labor market area delineations receive their new wage index based on the new OMB labor market area delineations. We refer readers to section III.B. of the preamble to this final rule for a complete discussion on the transition wage indices. Lastly, we are applying both the 3-year transition and 50/50 blended wage index adjustments in a budget neutral manner. We are making an adjustment to the standardized amount to ensure that the total payments, including the effect of the transition provisions, equal what payments would have been if we had not provided for these transitional wage indexes.

Collective effects of the adoption of the new OMB labor market area delineations, including the 3-year hold harmless provision for hospitals that are currently located in an urban county that becomes rural under the new OMB delineations and the 1-year transition to the new OMB delineations where the wage indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB delineations and 50 percent of their wage index based on their current labor market area. For FY 2015, we are applying both the 3-year transition and 50/50 blended wage indexes in a budget neutral manner, with a budget neutrality factor of 0.9998895 (or −0.1 percent) applied to the standardized amount to ensure that the total payments, including the effect of the transition provisions, equal what payments would have been if we had not provided for these transitional wage indexes. This column shows the payment impact of the transitional wage index. For columns 1 through 8, the payment impacts and budget neutrality factors have been calculated under the new OMB delineations. Under the 1-year transition to the new OMB delineations, hospitals that would have experienced a decrease in payments due to the new OMB delineations being fully implemented (that is, a hospital that experience any decrease alleviated due to the transition. Urban New England hospitals and Middle Atlantic hospitals will experience a 0.2 percent and 0.3 percent increase respectively in payments due to the application of the transitional wage index adjustment. This column shows the payment impact of the transitional wage index adjustment, while urban South Atlantic, East North Central, East South Central, West North Central, West South Central, Mountain and Pacific hospitals will experience a −0.1 percent change in payments due to the transitional budget neutrality adjustment of −0.1 percent applied to the standard Federal rate.

c. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 10)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage index of 1.00 of the county wage index (that is, the FY 2014 constituent county/ies), and another post-reclassified wage index based on the hospital’s new FY 2015 CBSA (that is, the FY 2015 constituent county/ies). Urban New England hospitals and Middle Atlantic hospitals will experience an increase in payments by 0.1 percent. Rural hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and is estimated to result in an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index area(s), weighted by the overall percentage of workers who are employed in and paid with a higher wage index. There are an estimated 273 providers that will receive the out-migration wage adjustment in FY 2015. Rural hospitals generally qualify for the adjustment, resulting in a 0.1 percent increase in payments. This provision appears to benefit Section 401(a)(21) (RHCs) in that they will experience a 2.0 percent and 0.6 percent increase in payments, respectively. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase to be approximately $53 million.

d. Effects of the Reductions Under the Hospital Readmissions Reduction Program (Column 11)

Column 11 shows our estimates of the effects of the policies for reductions in payments under the Hospital Readmissions Reduction Program, which was established as section 3025 of the Affordable Care Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital’s base operating DRG payments to account for excess readmissions, which for FY 2015, is based on a hospital’s risk-adjusted readmission rate during a 3-year period for five applicable conditions: acute myocardial infarction, heart failure, pneumonia, total hip and total knee arthroplasty and chronic obstructive pulmonary disease. This provision is not budget neutral. A hospital’s readmission adjustment is the higher of a ratio of the hospital’s aggregate payments for excess readmissions to their aggregate payments for all discharges, or a floor, which has been defined in the statute as 0.97 (or a 3.0 percent reduction) for FY 2015. A hospital’s base operating DRG payment (that is, wage-adjusted DRG payment amount, as discussed in section IV.G. of the preamble of this final rule) is the portion of the IPPS payment subject to the readmissions payment adjustment (DSH, IME, outliers and low-volume add-on payments are subject to the readmissions adjustment). For FY 2015, we have revised the definition of base operating DRG payment for MDHs to include the hospital-specific add-on amount, as discussed earlier in this final rule such that the this hospital-specific add-on amount is also subject to the readmissions payment.
adjustment. In this final rule, we estimate that 2,638 hospitals will have their base operating DRG payments reduced by their hospital-specific readmissions adjustment, an increase from FY 2014, due to the addition of new readmissions measures in the program. As a result, we estimate that the Hospital Readmissions Reduction Program will result in a 0.2 percent decrease in payments relative to FY 2014. We estimate that the Hospital Readmissions Reduction Program will result in a 0.4 percent decrease in payments relative to no provision (or a decrease of $424 million).

Teaching non-DSH hospitals experience a decrease in payments of 0.3 percent relative to last year, while teaching DSH hospitals experience an additional 0.1 percent decrease in payments relative to last year. Puerto Rico hospitals will show a 0.0 percent change in payments because they are exempt from the provision.

k. Effects of the Changes to Medicare DSH Payments (Column 12)

Column 12 shows the effects of the adjustments to Medicare DSH payments made under section 3133 of the Affordable Care Act. Urban hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the former statutory formula for Medicare DSH payments. The remainder, equal to an estimate of 75 percent of what otherwise formerly would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and additional statutory adjustments, is available to make additional payments to each hospital that qualifies for Medicare DSH payments. Each Medicare DSH hospital will receive an additional payment based on its estimated share of the total amount of uncompensated care for all Medicare DSH hospitals. The reduction to Medicare DSH payments is not budget neutral.

For FY 2015, we are establishing that the amount to be distributed on the basis of uncompensated care, which is 75 percent of our estimate of what otherwise would have been paid in Medicare DSH payments (that is, Factor 1 multiplied by Factor 2). In the FY 2015 IPPS/LTCH PPS proposed rule the uncompensated care payment was 75 percent of what otherwise would have been paid for Medicare DSH payments adjusted by a Factor 2 of 94.3 percent. Assuming DSH payments are constant, the FY 2015 uncompensated care payment is approximately 14 percent points less than the uncompensated care amount that we distributed for FY 2014. As a result, we project that, compared to the empirically justified DSH payments and the uncompensated care payments made last year, payments for FY 2015 will be reduced overall by 1.3 percent as compared to Medicare DSH payments made last year under the first year of the implementation of section 3133 of the Affordable Care Act. The uncompensated care methodology has redistributive effects based on a Medicare DSH hospital’s low income insured patient days (sum of Medicaid patient days and Medicare SSI patient days) relative to the Medicaid patient days and Medicare SSI patient days of non-teaching hospitals, and the final payment amount is not tied to a hospital’s discharges.

Rural West South Central and Rural Pacific will experience a 0.3 percent change in DSH and uncompensated care payments. Hospitals with low Medicare utilization (Medicare days are less than 25 percent of total inpatient days) will experience the largest decreases in payments of 3.0 percent.

l. Effects of All FY 2015 Changes (Column 13)

Column 13 shows our estimate of the changes in payments per discharge from FY 2014 and FY 2015, resulting from all changes reflected in the final rule for FY 2015. It includes combined effects of the previous columns in the table.

The average decrease in payments under the IPPS for all hospitals is approximately 0.6 percent for FY 2015 relative to FY 2014. As discussed in section II.D. of the preamble of this final rule, this column includes the FY 2015 documentation and coding recoupment adjustment of -0.8 percent on the national standardized amount as part of the recoupment required under section 631 of the ATRA. In addition, this column includes the annual hospital update of 2.2 percent to the national standardized amount. This annual hospital update includes the 2.9 percent market basket update, the reduction of 0.5 percent attributable to multi-factor productivity adjustment, and the 0.2 percentage point reduction under section 3401 of the Affordable Care Act. Hospitals paid under the hospital-specific rate will receive a 2.2 percent hospital update described above. As described in Column 2, the annual hospital update with the documentation and coding recoupment adjustment for hospitals paid under the national standardized amount combined with the annual hospital update for hospitals paid under the hospital-specific rate will result in a 1.5 percent increase in payments in FY 2015 relative to FY 2014. Column 11 shows the estimated 0.2 percent decrease in payments due to the reductions in payments under the Hospital Readmissions Reduction Program relative to FY 2014.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2015 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2014 with the estimated average payments per discharge for FY 2015, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 13 of Table I.

H. Effects of Other Policy Changes

In addition to those policy changes discussed above that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed below.

1. Effects of Policy on MS–DRGs for Preventable HACs, Including Infections

In section II.F. of the preamble of this final rule, we discuss our implementation of section 1886(d)(4)(D) of the Act, which requires the Secretary to identify conditions that are: (1) high cost, high volume, or both; (2) result in the assignment of a case to an MS–DRG that has a higher payment when present as a secondary diagnosis; and (3) could reasonably have been prevented through application of evidence-based guidelines. For discharges occurring on or after October 1, 2008, hospitals will not receive additional payment for cases in which one of the selected conditions was not present on admission, unless, based on data and clinical judgment, it cannot be determined at the time of admission whether a condition is present. That is, the case will be paid as though the secondary diagnosis were not present. However, the statute also requires the Secretary to continue counting the condition as a secondary diagnosis that results in a higher IPPS payment when doing the budget neutrality calculations for MS–DRG reclassifications and recalibration. Therefore, we will perform our budget neutrality calculations as though the payment provision did not apply, but Medicare will make a lower payment to the hospital for the specific case that includes the secondary diagnosis. Thus, the provision results in cost savings to the Medicare program.

We note that the provision will only apply when one or more of the selected conditions are the only secondary diagnosis or diagnoses present on the claim that will lead to higher payment. Medicare beneficiaries will generally have multiple secondary diagnoses during a hospital stay, such that beneficiaries having one MCC or CC will frequently have additional conditions that also will generate higher payment. Only a small percentage of the cases will have only one secondary diagnosis that would lead to a higher payment. Therefore, if at least one nonselected secondary diagnosis that leads to higher payment is on the claim, the case will continue to be assigned to the lower paying MS–DRG and there will be no Medicare savings from that case.

The HAC payment provision went into effect on October 1, 2008. Our savings estimates for the next 5 fiscal years are shown below:

In section IV.J. of the preamble of this final rule, we are making changes to the HAC Reduction Program for FY 2015. We refer readers to section I.H.6. of this Appendix A for a discussion of the impact of these changes.

2. Effects of Policy Relating to New Medical Service and Technology Add-On Payments

In section II.I. of the preamble to this final rule, we discuss five applications for add-on payments for new medical services and technologies for FY 2015, as well as the status of the new technologies that were approved to receive new technology add-on payments in FY 2014. We
note that one of the applications (for the Watchman® System) discussed in the proposed rule withdrew its application prior to the publication of this final rule.

As explained in the preamble to this final rule, add-on payments for new medical services and devices under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.L.4. of the preamble of this final rule, we are approving three of the five applications (CardioMEMS® HF Monitoring System, MitraClip® System, and RNS® System) for new technology add-on payments for FY 2015. As we proposed, in this final rule, we also are continuing to make new technology add-on payments in FY 2015 for Kcentra®, Argus® II Retinal Prosthesis System, the Zilver® PTX® Drug Eluting Peripheral Stent, Voraxaze®, and the Zenith® F. Graft (because all of these technologies are still within the 3-year anniversary of the product’s entry onto the market). We note that new technology add-on payments are limited to the lesser of: (1) 50 percent of the costs of the new technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard MS–DRG payment for the case. Because it is not possible to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in add-on payments for FY 2015 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. Based on the applicant’s estimate from FY 2013, we currently estimate that new technology add-on payments for Voraxaze® will increase overall FY 2015 payments by $6,300,000. Based on the applicant’s estimate from FY 2013, we currently estimate that new technology add-on payments for the Zenith® F. Graft will increase overall FY 2015 payments by $4,085,750. Based on the applicant’s estimate for FY 2014, we currently estimate that new technology add-on payments for the Argus® II Retina Prosthesis System will increase overall FY 2015 payments by $3,601,437. Based on the applicant’s estimate for FY 2014, we currently estimate that new technology add-on payments for the Zilver® PTX® Drug Eluting Peripheral Stent will increase overall FY 2015 payments by $5,449,888. Based on the applicant’s estimate for FY 2014, we currently estimate that new technology add-on payments for the CardioMEMS® HF Monitoring System will increase overall FY 2015 payments by $3,601,437. Based on the applicant’s estimate for FY 2015, we currently estimate that new technology add-on payments for the MitraClip® System will increase overall FY 2015 payments by $27,000,000 (maximum add-on payment of $15,000 * 1,800 patients). Based on the applicant’s estimate for FY 2015, we currently estimate that new technology add-on payments for the RNS® System will increase overall FY 2015 payments by $12,922,500 (maximum add-on payment of $16,475 * 700 patients).
whether the SCH is paid based on the Federal rate or its hospital-specific rate. In addition, we also are establishing that for purposes of the comparison of payments based on the Federal rate and payments based on the hospital-specific rate, IME payments under section 1886(o)(7) of the Act for Medicare Part C patients will no longer be included as part of the Federal rate payment. Because the IPPS Federal rate used in the MDH payment methodology is the same IPPS Federal rate that is used in the SCH payment methodology, this change to the comparison of payments based on the Federal rate and payments based on the hospital-specific rate also applies to the Federal rate payment amount used to determine payment to MDHs that are teaching hospitals (that is, in the determination of the payment amount in addition to the Federal rate payment that is equal to 75 percent of the amount by which the hospital-specific rate payment exceeds the Federal rate payment), as discussed in section IV.E.2. of the preamble of this final rule.

We estimate that the policy at section IV.E.2. of the preamble of this final rule will result in an increase in payments to approximately 45 hospitals that are both SCHs or MDHs and teaching hospitals of approximately $5.3 million in FY 2015.

In section V.G. of the preamble of this final rule, we briefly discuss the statutory extension of the MDH program through March 31, 2015, that is, through the first half of FY 2015, by section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93), Hospitals that qualify as MDHs receive the higher of operating IPPS payments made under the Federal standardized amount or the payments made under the Federal standardized amount plus 75 percent of the amount by which the hospital-specific rate (a hospital-specific cost-based rate) exceeds the Federal standardized amount. Based on the latest available data we have for 177 MDHs, we project that 166 MDHs will receive the blended payment (that is, the Federal standardized amount plus 75 percent of the amount by which the hospital-specific rate exceeds the Federal standardized amount) for the first half of FY 2015 (that is, for discharges occurring through March 31, 2015). We estimate that those hospitals will experience an overall increase in payments of approximately $70.7 million as compared to our previous estimates of payments to these hospitals for FY 2015 prior to the extension of the MDH program through March 31, 2015, by section 106 of Public Law 113–93.

7. Effects of Changes Under the FY 2015 Hospital Value-Based Purchasing (VBP) Program

Section 1886(o)(1)(B) of the Act directs the Secretary to make value-based incentive payments under the Hospital VBP Program to hospitals that meet performance standards during the performance period for discharges occurring on or after October 1, 2012. These incentive payments will be funded for FY 2015 through a reduction to the FY 2015 base operating DRG payment for each discharge of 1.50 percent, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2016 is 1.75 percent and for FY 2017 and subsequent years, it is 2 percent.

We are required to ensure that the total amount available for value-based incentive payments is equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

We refer readers to the Hospital Inpatient VBP Program final rule (76 FR 26490 through 26547), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74527 through 74547), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53567 through 53614), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50677 through 50707), and the CY 2014 OPPS/ASC final rule with comment period (78 FR 75120 through 75121) for further explanation of the details of the Hospital VBP Program.

We specifically refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53582 through 53592) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50678 through 50679), for discussions of the measures and other policies that we adopted for the FY 2015 and FY 2016 Hospital VBP Programs.

In section IV.I. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2015 Hospital VBP Program, which, in accordance with section 1886(o)(7)(C)(iii) of the Act, will be 1.50 percent of base operating DRG payments, or a total of approximately $1.4 billion. This estimated available pool for FY 2015 is based on the historical pool of hospitals that were eligible to participate in the FY 2014 Hospital VBP Program and the payment information from the March 2014 update to the FY 2013 MedPAR file.

The estimated impacts of the FY 2015 Hospital VBP Program by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2014 Hospital VBP Program TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors used estimated annual base operating DRG payment amounts derived from the March 2014 update to the FY 2013 MedPAR file. The impact analysis factors can be found in Table 16 associated with this final rule (available via the Internet on the CMS Web site).

The impact analysis shows that, for the FY 2015 Hospital VBP Program, the number of hospitals that will receive an increase in base operating DRG payment amount is slightly lower than the number of hospitals that will receive a decrease. Among urban hospitals, those in the New England, South Atlantic, East North Central, East North Central, and West South Central regions will have an increase, on average, in base operating DRG payment amount, and among rural hospitals, those in the New England and East North Central regions will have an increase, on average, in base operating DRG payment amounts.

Both urban and rural hospitals in the Middle Atlantic, East South Central, Mountain, and Pacific regions and rural hospitals in the South Atlantic, West North Central, and West South Central regions will receive an average decrease in base operating DRG payment amount. As the percent of DSH payments increases, we see a decrease in base operating DRG payment amount, while as the Medicare utilization (MCR) percent increases, we see an increase in base operating DRG payment amount.

Nonteaching and teaching hospitals will have an average decrease in base operating DRG payment amount.

### Impact Analysis of Base Operating DRG Payment Amount Changes Resulting from the FY 2015 Hospital VBP Program

Actual FY 2015 Hospital VBP Program TPSs will not be reviewed and corrected by hospitals until after this FY 2015 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2014 Hospital VBP Program are used for this updated impact analysis.

8. Effects of Changes to the HAC Reduction Program for FY 2015

In section IV.J. of the preamble of this final rule, we are establishing measures, scoring, and a risk adjustment methodology to implement the FY 2015 payment reduction under the HAC Reduction Program. Section 1886(p) of the Act, as added under section 3008(a) of the Affordable Care Act, establishes an adjustment to hospital payments for HACs, or a HAC Reduction Program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce HACs, effective for discharges occurring on October 1, 2014 and for subsequent program years.

We note that hospitals will have a payment impact for the first time in FY 2015. For FY 2015, we are presenting the overall impact of the HAC Reduction Program provision along with other IPPS payment provision impacts in section I.G. of this Appendix A. The table and analyses that we are presenting below show the distributional effect of the measures and scoring system for the HAC Reduction Program included in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50729).

For FY 2015, we note that we finalized a Total HAC Score methodology in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50729) that assigns weights for Domain 1 and Domain 2 at 35 percent and 65 percent, respectively. Based on this methodology, the table below presents data on the proportion of hospitals, by structural characteristic, in the worst performing quartile based on the 35/65 weighting scheme.

The data for this simulation are derived from the AHRQ PSI results based on Medicare FFS discharges from July 2011 through June 2013, using version 4.5a of the AHRQ software, and CDC measure results were used based on Standard Infection Ratios (SIRs) calculated with data reported to the National Healthcare Safety Network for infections occurring during January 2012 and December 2013. To analyze the results by hospital characteristic, the FY 2015 proposed rule impact file were used. Of the 3,352 hospitals included in this analysis, 3,310 hospitals were included for geographic location, bed size, region, DSH percent, and teaching status; 3,270 for ownership; and 3,196 for MCR percent. These differences in denominator are due to the source of the hospital characteristic data. This analysis does not include Maryland hospitals as Maryland hospitals are exempt by waiver from the HAC Reduction Program in FY 2015.

The percentage of hospitals for each characteristic (column 3) indicates the percent of hospitals in each level of characteristic. For example, with regard to geographic region, 40.4 percent of hospitals (or 1,338 hospitals) are characterized as large urban; 33.8 percent of hospitals (or 1,119 hospitals) are characterized as other urban; and 25.8 percent of hospitals (or 853 hospitals) are characterized as rural. The percentage of hospitals in the worst performing quartile (column 5) indicates the proportion of hospitals for each characteristic that would be penalized. For example, in regards to geographic location, 26.6 percent of hospitals (or 356 hospitals) characterized as large urban will be subject to a payment adjustment; 23.0 percent of hospitals (or 257 hospitals) characterized as other urban will be subject to a payment adjustment; and 15.2

percent of hospitals (or 113 hospitals) characterized as rural will be subject to a payment adjustment.

With regard to geographic location of urban hospitals by bed size, 15.7 percent of hospitals (or 98 hospitals) characterized as urban hospitals with bed size of 0–99 beds will be subject to a payment adjustment; 20.7 percent of hospitals (or 155 hospitals) characterized as urban hospitals with bed size of 100–199 beds will be subject to a payment adjustment; 29.7 percent of hospitals (or 136 hospitals) characterized as urban hospitals with bed size of 200–299 beds will be subject to a payment adjustment; 27.7 percent of hospitals (or 72 hospitals) characterized as urban hospitals with bed size of 300–399 beds will be subject to a payment adjustment; 41.2 percent of hospitals (or 63 hospitals) characterized as urban hospitals with bed size of 400–499 beds will be subject to a payment adjustment; and 42.0 percent of hospitals (or 89 hospitals) characterized as urban hospitals with bed size of 500 or more beds will be subject to a payment adjustment.

With regard to geographical location of rural hospitals by bed size, 11.7 percent of hospitals (or 39 hospitals) characterized as rural hospitals with bed size of 0–99 beds will be subject to a payment adjustment; 12.5 percent of hospitals (or 37 hospitals) characterized as rural hospitals with bed size of 100–199 beds will be subject to a payment adjustment; 18.0 percent of hospitals (or 9 hospitals) characterized as rural hospitals with bed size of 200–299 beds will be subject to a payment adjustment; and 29.7 percent of hospitals (or 11 hospitals) characterized as rural hospitals with bed size of 300–399 beds will be subject to a payment adjustment.

With regard to region of rural hospitals, 18.2 percent of hospitals (or 4 hospitals) characterized as rural in the New England region will be subject to a payment adjustment; 12.5 percent of hospitals (or 7 hospitals) characterized as rural in the Mid-Atlantic region will be subject to a payment adjustment; 19.4 percent of hospitals (or 8 hospitals) characterized as rural in the Mountain region will be subject to a payment adjustment; and 25.0 percent of hospitals (or 12 hospitals) characterized as rural in the Pacific region will be subject to a payment adjustment.

With regard to region of urban hospitals, 30.3 percent of hospitals (or 36 hospitals) characterized as urban in the New England region will be subject to a payment adjustment; 30.2 percent of hospitals (or 96 hospitals) characterized as urban in the Mid-Atlantic region will be subject to a payment adjustment; 24.3 percent of hospitals (or 98 hospitals) characterized as urban in the South Atlantic region will be subject to a payment adjustment; 22.5 percent of hospitals (or 88 hospitals) characterized as urban in the East North Central region will be subject to a payment adjustment; 22.1 percent of hospitals (or 33 hospitals) characterized as urban in the West South Central region will be subject to a payment adjustment; 22.0 percent of hospitals (or 304 hospitals) characterized as urban in the West North Central region will be subject to a payment adjustment; and 22.6 percent of hospitals (or 44 hospitals) characterized as urban in the Mountain region will be subject to a payment adjustment.

With regard to the type of ownership characteristic, 22.7 percent of hospitals (or 429 hospitals) characterized as voluntary will be subject to a payment adjustment; 19.5 percent of hospitals (or 207 hospitals) characterized as proprietary will be subject to a payment adjustment; and 13.2 percent of hospitals (or 113 hospitals) characterized as nonprofit will be subject to a payment adjustment.

With regard to the MCR percent characteristic, 37.4 percent of hospitals (or 145 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; 22.6 percent of hospitals (or 447 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; 14.4 percent of hospitals (or 101 hospitals) characterized in the 50–64 MCR percent will be subject to a payment adjustment; and 9.4 percent of hospitals (or 12 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the teaching status characteristic, 17.0 percent of hospitals (or 391 hospitals) characterized as nonteaching will be subject to a payment adjustment; 25.7 percent of hospitals (or 198 hospitals) characterized as teaching and no DSH will be subject to a payment adjustment; and 56.4 percent of hospitals (or 137 hospitals) characterized as teaching and DSH will be subject to a payment adjustment.

With regard to the urban teaching and DSH characteristic, 35.6 percent of hospitals (or 294 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; 25.0 percent of hospitals (or 32 hospitals) characterized as teaching and no DSH will be subject to a payment adjustment; and 22.1 percent of hospitals (or 8 hospitals) characterized as no teaching and no DSH will be subject to a payment adjustment.

With regard to the 0–99 MCR percent characteristic, 29.7 percent of hospitals (or 72 hospitals) characterized as 0–99 MCR percent will be subject to a payment adjustment; 46 hospitals (or 101 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the payment adjustment characteristic, 18.2 percent of hospitals (or 33 hospitals) characterized as payment adjustment will be subject to a payment adjustment; 15.9 percent of hospitals (or 60 hospitals) characterized as payment adjustment will be subject to a payment adjustment; 12.2 percent of hospitals (or 14 hospitals) characterized as payment adjustment will be subject to a payment adjustment; and 113 hospitals (or 113 hospitals) characterized as nonpayment adjustment will be subject to a payment adjustment.

With regard to the 25–49 MCR percent characteristic, 15.7 percent of hospitals (or 30 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; 15.4 percent of hospitals (or 10 hospitals) characterized in the 50–64 MCR percent will be subject to a payment adjustment; and 11 hospitals (or 11 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the 0–24 MCR percent characteristic, 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; and 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment.

With regard to the teaching status characteristic, 25.7 percent of hospitals (or 198 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; and 56.4 percent of hospitals (or 137 hospitals) characterized as teaching and DSH will be subject to a payment adjustment.

With regard to the urban teaching and DSH characteristic, 35.6 percent of hospitals (or 294 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; and 25.0 percent of hospitals (or 32 hospitals) characterized as teaching and no DSH will be subject to a payment adjustment; and 22.1 percent of hospitals (or 8 hospitals) characterized as no teaching and no DSH will be subject to a payment adjustment.

With regard to the type of ownership characteristic, 22.7 percent of hospitals (or 429 hospitals) characterized as voluntary will be subject to a payment adjustment; and 19.5 percent of hospitals (or 207 hospitals) characterized as proprietary will be subject to a payment adjustment.

With regard to the MCR percent characteristic, 37.4 percent of hospitals (or 145 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; 22.6 percent of hospitals (or 447 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; and 14.4 percent of hospitals (or 101 hospitals) characterized in the 50–64 MCR percent will be subject to a payment adjustment; and 9.4 percent of hospitals (or 12 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the payment adjustment characteristic, 18.2 percent of hospitals (or 33 hospitals) characterized as payment adjustment will be subject to a payment adjustment; and 15.9 percent of hospitals (or 60 hospitals) characterized as payment adjustment will be subject to a payment adjustment.

With regard to the 25–49 MCR percent characteristic, 15.7 percent of hospitals (or 30 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; and 11 hospitals (or 11 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the 0–24 MCR percent characteristic, 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; and 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment.

With regard to the teaching status characteristic, 25.7 percent of hospitals (or 198 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; and 56.4 percent of hospitals (or 137 hospitals) characterized as teaching and DSH will be subject to a payment adjustment.

With regard to the urban teaching and DSH characteristic, 35.6 percent of hospitals (or 294 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; and 25.0 percent of hospitals (or 32 hospitals) characterized as teaching and no DSH will be subject to a payment adjustment; and 22.1 percent of hospitals (or 8 hospitals) characterized as no teaching and no DSH will be subject to a payment adjustment.

With regard to the type of ownership characteristic, 22.7 percent of hospitals (or 429 hospitals) characterized as voluntary will be subject to a payment adjustment; and 19.5 percent of hospitals (or 207 hospitals) characterized as proprietary will be subject to a payment adjustment.

With regard to the MCR percent characteristic, 37.4 percent of hospitals (or 145 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; 22.6 percent of hospitals (or 447 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; and 14.4 percent of hospitals (or 101 hospitals) characterized in the 50–64 MCR percent will be subject to a payment adjustment; and 9.4 percent of hospitals (or 12 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the payment adjustment characteristic, 18.2 percent of hospitals (or 33 hospitals) characterized as payment adjustment will be subject to a payment adjustment; and 15.9 percent of hospitals (or 60 hospitals) characterized as payment adjustment will be subject to a payment adjustment.

With regard to the 25–49 MCR percent characteristic, 15.7 percent of hospitals (or 30 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; and 11 hospitals (or 11 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

With regard to the 0–24 MCR percent characteristic, 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; and 13.2 percent of hospitals (or 12 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment.
## PROPORTION OF HOSPITALS IN THE WORST PERFORMING QUARTILE (75TH PERCENTILE) OF THE TOTAL HAC SCORE BY HOSPITAL CHARACTERISTIC FOR THE FY 2015 HAC REDUCTION PROGRAM—Continued

Source: FY 2015 HAC Reduction Program Final Rule Results provided by R&A contract. Scores are based on AHRQ PSI 90 data from July 2011 through June 2013 and CLABSI and CAUTI results from January 2012 to December 2013. Hospital Characteristics are based on FY 2015 Proposed Rule Impact File released May 20, 2014.

* The total number of hospitals with hospital characteristic data (3,310 for geographic location, bed size, region, DSH percent and teaching status; 3,270 for type of ownership; and 3,186 for MCR) do not add up to the total number of hospitals eligible for the HAC Reduction program (3,352) because 42 hospitals are not included in the FY 2015 impact file and not all hospitals have data for all characteristics.

* This column is the percent of all hospitals with each characteristic that were eligible for the program and included in the FY 15 impact file.

* Percentages may not sum to 100 due to rounding.

* This column is the percent of hospitals within each characteristic that are in the worse performing quartile.

* Total excludes the 46 Maryland hospitals.

* Large Urban hospitals are hospitals located in large urban areas (populations over 1 million).

* A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero.
9. Effects of Policy Changes Relating to Payments for Direct GME and IME

Under section IV.K.2. of the preamble of this final rule, we discuss our revisions to simplify and streamline the timing of CMS’s policies related to when the FTE resident caps, the 3-year rolling average, and the IRB ratio cap would become effective for new teaching hospitals, stating that the FTE resident caps, rolling average, and IRB ratio cap will be effective simultaneously, beginning with the applicable hospital’s cost reporting period that coincides with or follows the start of the sixth program year of the first new program started. We are specifying that this policy regarding the effective dates of the FTE residency caps, rolling average, and IRB ratio cap for FTE resident slots in new programs is consistent with the methodology for calculation of the FTE resident caps as described in the FY 2013 IPPS/LTC and PPS final rule, and implemented at 42 CFR 413.79(e)(1) and (3). That is, this policy is effective for urban hospitals that have not yet had FTE resident caps established under § 413.79(e)(1), and for rural hospitals, on or after October 1, 2012. This policy will increase the amount of time that the new programs will be exempt from the FTE resident caps by several months, depending on the cost reporting period of the new teaching hospital. The estimate of possible cost of this policy is less than $5 million a year and, therefore, is negligible.

In section IV.K.3.a. of the preamble of this final rule, we discuss our policies related to the effect of new OMB labor market area delineations on teaching hospitals training residents in rural areas. Under existing regulations a new teaching hospital has 5 years from when it first begins training residents in its first new program to grow its cap. If the teaching hospital is a rural teaching hospital, it can continue to receive permanent cap adjustments even after the initial 5-year cap-building period ends if it trains residents in a new program. As a result of the implementation of the new OMB delineations, some teaching hospitals may be redesignated from being located in a rural area to an urban area, thereby losing their ability to increase their caps again after their initial 5-year cap-building period. Effective October 1, 2014, if a rural hospital has received a letter of accreditation for a new program and/or started training residents in the new program prior to being redesignated as urban, it can continue growing that program for the remainder of the cap-building period and receive a permanent cap adjustment for that new program. Once the cap-building period for the new program that was started while the hospital was still rural expires, the teaching hospital that has been redesignated as urban will no longer be able to receive any additional permanent cap adjustments.

In section IV.K.3.b. of the preamble of this final rule, we discuss our policy change related to a redesignated hospital’s participation in a rural track program. Under existing regulations, if an urban hospital rotates residents to a separately accredited rural track program at a rural site(s) for more than one-half of the duration of the program, the urban hospital may receive an adjustment to its cap for training those FTE residents, referred to as the rural track FTE limitation.

We are providing that, effective October 1, 2014, if a rural hospital participating in a rural track is in an area redesignated by OMB as urban after residents started training in the rural track, the methodology that is used to calculate the urban hospital’s rural track FTE limitation, the urban hospital may still receive a cap adjustment for that rural track.

We are providing that, effective October 1, 2014, if the rural hospital participating in the rural track is in an area redesignated as urban, the redesignated urban hospital can continue to be considered a rural hospital for purposes of the rural track for a transition period that would begin effective with the implementation date of the new OMB delineations and last through the end of the second residency training year following implementation of the new OMB delineations. However, during that transition period, either the rural hospital that has been redesignated as urban must reclassify as rural under § 412.160 for Medicare payments or, the urban hospital must find a new geographically rural site to participate as the rural site for purposes of the rural track, in order for the urban hospital to receive payment under § 413.79(k)(1) or (k)(2) for the rural track program after the transition period ends.

We estimate that these policies discussed under IV.K.3.a. and b. of the preamble of this final rule will have a very minimal, if any, impact on Medicare expenditures. These policies will only be applied to, at the most, very few hospitals, (if any at all and very few) and will only apply once every 10 years as a result of OMB changes in labor market area delineations due to a recent Census.

In sections IV.K.5.a. and b. of the preamble of this final rule, we are making some changes to the current application process for and awarding of cap slots from closed hospitals under section 5506 of the Affordable Care Act that will be effective for hospital closures announced on or after October 1, 2014. We are providing an alternate method for proxying the permanent awarding of cap slots from closed hospitals that are receiving a temporary cap adjustment under § 413.79(h) will also receive a permanent cap adjustment under section 5506. In this instance the hospital will only be able to receive the permanent cap adjustment once the temporary cap adjustment for an equivalent number of FTE residents expires, in which case there would be no duplication of FTE resident slots.

In addition, under section IV.K.5.c. of the preamble of this final rule, we are modifying the ranking criteria used to award slots under section 5506. First, we are no longer allowing hospitals to apply for cap relief, which is included under current Ranking Criterion Eight. This change means that hospitals will be awarded slots under section 5506 for taking over a closed hospital’s residency training program, having participated with a closed hospital in a Medicare GME affiliated group, taking over part of a closed hospital’s program, expanding or starting a new primary care or general surgery program, and expanding or starting a new nonprimary care or nongeneral surgery program. Second, Ranking Criterion One currently applies to hospitals that are assuming (or have assumed) an entire program from the hospital that closed. We are revising this Ranking Criterion to provide priority to a hospital whose FTE resident caps were erroneously reduced by CMS under section 5503 of the Affordable Care Act, contrary to the specific statutory provision at section 1886(h)(8)(A)(ii)(I) of the Act, and the CMS Central Office was made aware of the error prior to the posting of the FY 2015 proposed rule. We do not believe there is any cost associated with these policies. We will continue assigning all of the closed hospital’s slots; only the specific hospitals awarded the slots may change.

10. Effects of Implementation of Rural Community Hospital Demonstration Program

In section IV.L. of the preamble of this final rule, we discuss our implementation of section 410A of Public Law 108–173, as amended, which requires the Secretary to conduct a demonstration that would modify reimbursement for inpatient services for up to 30 rural community hospitals. Section 410A(c)(2) requires that “[i]n conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary under this section do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.” As discussed in section IV.L. of the preamble of this final rule, in the IPPS final rules for each of the previous 10 fiscal years, we have estimated the additional

Federal Register / Vol. 79, No. 163 / Friday, August 22, 2014 / Rules and Regulations 50433
payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we are adjusting the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we are applying budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality across this manner. The statutory language requires that “aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration . . . was not implemented” but does not identify the range across which aggregate payments must be held equal.

We are adjusting the national IPPS rates according to the methodology set forth elsewhere in this final rule. The adjustment to the national IPPS rates to account for estimated demonstration cost for FY 2014 for the 7 “pre-expansion” participating hospitals that are currently participating in the demonstration and the 15 additional hospitals participating as a result of the expansion of the demonstration under the Affordable Care Act is $54,177,144. In addition, in this final rule, we are adding to the adjustment of the national IPPS rates the amount by which the actual costs of the demonstration for FY 2008 (as shown in the finalized cost reports for cost reporting periods beginning in FY 2008 for the hospitals that participated in the demonstration during FY 2008) exceed the budget neutrality offset amount that was finalized in the FY 2008 IPPS final rule ($10,389,771). Thus, the resulting total ($64,566,915) is the amount for which an adjustment to inpatient rates for FY 2015 is calculated.

11. Effects of Changes Related to Reclassification as Rural for CAHs

In section V.L.D.2. of the preamble of this final rule, we discuss our policies relating to reclassifications of CAHs as a result of the adoption of the new OMB labor market area delineations. A facility is eligible for designation as a CAH only if it is either physically located in a rural area or has been reclassified as rural under 42 CFR 412.103. CAHs can be affected by the recent OMB labor market area delineations because facilities that are currently participating as CAHs that were previously located in rural areas may now be located in urban areas as a result of the new delineations. Previously, in both in the FY 2005 IPPS final rule and the FY 2010 IPPS/LTCH PPS final rule, we revised the regulations to give currently participating CAHs 2 years, from the effective date of the earlier OMB designations, to reclassify as rural facilities. However, these regulation changes were specific to a particular timeframe, the change that we are making to the regulations is not specific to a particular timeframe but will also apply to future OMB labor market area delineations. We estimate that this policy will have little or no impact on Medicare expenditures because we expect that virtually all of the affected CAHs will be granted rural status by the State in which they are located and, therefore, will be able to apply for reclassification as rural under §412.103 in order to retain their CAH status.

12. Effects of Revision of the Requirements for Physician Certification of CAH Inpatient Services

In section V.L.D.3. of the preamble of this final rule, we discuss the statutory requirement for physician certification of CAH inpatient services. For inpatient CAH services to be payable under Medicare Part A, the physician certifying that the individual may reasonably be expected to be discharged or transferred to a hospital within 96 hours after admission to the CAH. These statutory requirements are addressed in the regulations at 42 CFR 424.15. In order to provide CAHs with additional flexibility in meeting certification requirements, we are amending the regulation text at §424.11(d)(5) to remove the phrase “or critical access hospital inpatient”. In addition, we are revising the regulations at §424.15(b) to read as follows: “Certification begins with the order for inpatient admission. All certification requirements must be completed, signed, and documented in the medical record no later than 1 day before the date on which the claim for the inpatient CAH service is submitted.” We do not believe there is any significant impact on Medicare expenditures associated with these changes because we are simply providing CAHs with additional flexibility in meeting the statutory requirement for physician certification of CAH inpatient services. The underlying statutory requirement itself is unchanged.

13. Effects of Changes Relating to Technical Correction to Administrative Appeals by Providers and Judicial Review

In section VIII. of the preamble to this final rule, we discuss the technical correction to the regulations to eliminate provider dissatisfaction as a requirement for PRRB jurisdiction over appeals based on timely contractor determinations as well as the change in terminology in Part 405 and Part 413 from “intermediary” or “fiscal intermediary” to “contractor”. There is no impact to the provider resulting from these provisions.

I. Effects of Update to the Reasonable Compensation Equivalent (RCE) Limits for Compensation for Physician Services Provided in Providers

In section V.L.B. of the preamble of this final rule, we discuss our finalized policy to update and revise the methodology used to calculate the reasonable compensation equivalent (RCE) limits for compensation for physician services provided in providers, in accordance with our regulations at 42 CFR 415.70(d)(2). For CY 2015, we estimate that 59 cancer and children’s hospitals and 46 IPPS teaching hospitals will be subject to the RCE limits. We estimate the costs associated with the updated RCE limits for CY 2015 to be approximately $40 million. We do not expect this RCE limit update to impact a significant number of small, rural entities; therefore, a full impact analysis is not required.

J. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented below, we used data from the March 2014 update of the FY 2013 MedPAR file and the March 2014 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2014 update of the most recently available hospital cost report data (FYs 2011 and 2012) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described below.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2014 update of the FY 2013 MedPAR file, we simulated payments under the capital IPPS for FY 2014 and FY 2015 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at §412.312. The basic methodology for calculating capital IPPS payments in FY 2015 is as follows: (Standard Federal Rate) x (DRG weight) x (GAF) x (COLA for hospitals located in Alaska and Hawaii) x (1 + DSH Adjustment Factor + IME adjustment factor, if applicable).

In addition to the other adjustments, hospitals may also receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital’s case-mix.
added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index will increase by 0.5 percent in both FYs 2014 and 2015.
- We estimate that Medicare discharges will be approximately 11.6 million in FY 2014 and 11.7 million in FY 2015.
- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this final rule, the update is 1.5 percent for FY 2015.
- In addition to the FY 2015 update factor, the FY 2015 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9986 and an outlier adjustment factor of 0.9373. As discussed in section V.L.C. of the preamble of this final rule, we are not making an additional MS–DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2015.

2. Results

We used the actuarial model described above to estimate the potential impact of our changes for FY 2015 on total capital payments per case, using a universe of 3,396 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the March 2014 update of the FY 2013 MedPAR file, the March 2014 update to the PSF, and the most recent cost report data from the March 2014 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2014 and estimated total payments per case for FY 2015 based on the FY 2015 payment policies. Column 2 shows estimates of payments per case under our model for FY 2014. Column 3 shows estimates of payments per case under our model for FY 2015. Column 4 shows the total percentage change in payments from FY 2014 to FY 2015. The change represented in Column 4 includes the 1.5 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2015 are expected to increase as compared to capital payments per case in FY 2014. This expected increase is due primarily to the approximately 1.2 percent increase in the capital Federal rate for FY 2015 as compared to the FY 2014 capital Federal rate. (For a discussion of the determination of the capital Federal rate, we refer readers to section III.A. of the Addendum to this final rule.) Overall, across all hospitals, the changes to the GAFs are expected to have no net effect on capital payments. However, regionally, the effects of the changes to the GAFs on capital payments are consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix.

Overall, there is an increase in capital payments per case due to the effects of changes to the MS–DRG reclassifications and recalibrations, with more of this increase expected for urban hospitals. However, this increase is offset by projected changes in outlier payments for both urban and rural hospitals. Rural areas are expected to experience an offset to the projected increase in capital payments per case due to the effects of changes to the GAFs.

The net impact of these changes is an estimated 1.5 percent change in capital payments per case from FY 2014 to FY 2015 for all hospitals (as shown below in Table III).

The geographic comparison shows that, on average, all hospitals are expected to experience an increase in capital IPPS payments per case in FY 2015 as compared to FY 2014. As we stated above, these expected increases are primarily due to the increase in the capital Federal rate. Capital IPPS payments per case for hospitals in “large urban areas” are expected to have an estimated increase of 1.7 percent, while hospitals in rural areas, on average, are expected to experience a 1.0 percent increase in capital payments per case from FY 2014 to FY 2015. Capital IPPS payments per case for “other urban hospitals” are estimated to increase 1.4 percent. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for urban hospitals as compared to rural hospitals is the increase in capital payments to urban hospitals due to changes to the MS–DRG relative weights and the effect of changes in the GAFs. The increase in capital payments due to changes to the MS–DRG relative weights is slightly lower for rural hospitals than it is for urban hospitals. In addition, rural hospitals are expected to experience a slight decrease in capital payments due to the effect of changes in the GAFs, while urban hospitals are expected to experience a slight increase in capital payments due to the effect of changes in the GAFs.

The comparisons by region show that the estimated increases in capital payments per case from FY 2014 to FY 2015 in urban areas range from a 2.4 percent increase for the Pacific urban region to a 0.9 percent increase for the West South Central urban region. For rural regions, the Pacific rural region is expected to experience the largest increase in capital IPPS payments per case of 2.4 percent, while the Mountain rural region is projected to have the smallest increase in capital payments per case of 0.5 percent, compared to FY 2014 payments per case. Unlike most other urban and rural regions where changes in the GAFs either contribute to a projected decrease in capital payments or only a small increase in capital payments, the changes in the GAFs are a primary contributor to the expected increase in capital IPPS payments per case for the Pacific urban and rural regions. A larger than average decrease in capital payments per case for the Mountain rural area due to the change in outliers offsets the projected increases to that area’s capital payments per case in FY 2015 compared to FY 2014.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are estimated to experience an increase in capital payments per case from FY 2014 to FY 2015. The increase in capital payments for voluntary hospitals is estimated at 1.6 percent, and for proprietary and government hospitals the increase is estimated to be 1.4 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for recategorization for purposes of the wage index for FY 2015. Recategorization for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2015, we show the average capital payments per case for reclassified hospitals for FY 2015. Urban reclassified hospitals are expected to experience an increase in capital payments of 2.1 percent, whereas for urban nonreclassified hospitals, the expected increase is 1.4 percent. The estimated percentage increase for rural reclassified hospitals is 1.0 percent, and for rural nonreclassified hospitals, the estimated percentage increase is 0.7 percent. Other reclassified hospitals (that is, hospitals reclassified under section 1886(d)(8)(B) of the Act) are expected to experience the largest increase (2.2 percent) in capital payments from FY 2014 to FY 2015.

K. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VII of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2015. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify those policies, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

Currently, there are 422 LTCHs included in this impacts analysis, which includes data for 80 nonprofit (voluntary ownership control) LTCHs, 330 proprietary LTCHs, and 12 LTCHs that are government-owned and operated. (We note that, although there are currently approximately 430 LTCHs, for purposes of this impact analysis, we excluded the data of all inclusive rate providers and the LTCHs that are paid in accordance with demonstration projects, consistent with the development of the FY 2015 MS–LTC–DRG relative weights (discussed in section VII.B.3.c. of the preamble of this final rule). In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, including the 2.2 percent annual update for LTCHs that fail to submit quality data, the annual update to the LTCH PPS standard Federal rate is reduced by 2.0 percentage points in FY 2015.)

The standard Federal rate for FY 2014 is $40,607.31 for LTCHs that submit quality data in accordance with the requirements of section 1886(m)(5)(C) of the Act. For FY 2015, we are establishing a standard Federal rate of $41,043.71 (for LTCHs that submit quality data in accordance with the requirements of section 1886(m)(5)(C) of the Act, which reflects the 2.2 percent annual update to the LTCHPPS standard Federal rate, and the area wage budget neutrality factor of 1.0016703 to ensure that the changes in the wage index, including the implementation of the new OMB delineations, and labor-related share do not influence aggregate payments, and the final year of the phase-in of a one-time prospective adjustment factor of 0.98734. For LTCHs that fail to submit data for the LTCHQR Program, in accordance with section 1886(m)(5)(C) of the Act, we are establishing a standard Federal rate of $40,240.51. This reduced standard Federal rate reflects the updates described above as well as the required 2.0 percentage point reduction to the annual update for failure to submit data to the LTCHQR Program. We note that the factors described above to determine the FY 2015 standard Federal rate are applied to the FY 2014 Federal standard rate set forth under §142.52[c][3][ix][A] (that is, §40,607.31).

Based on the best available data for the 422 LTCHs in our database, we estimate that the annual update to the standard Federal rate for FY 2015, the update to the MS–LTC–DRG classifications relative weights for FY 2015 (discussed in section VII.B. of the preamble to this final rule), and the changes to the area wage adjustment for FY 2015 (discussed in section V.B. of the Addendum to this final rule), in addition to an estimated increase in HCO payments will result in an increase in estimated HCO payments from FY 2014 to FY 2015 of approximately $62 million. Based on the 2.2 percent annual update for FY 2015 and a one-time prospective adjustment factor of 0.98734 (approximately 1.3 percent), the projected increase in aggregate LTCH PPS payments of 0.9 percent shown in column 6 of Table IV also includes estimated payments for SSO cases that are paid using special methodologies that are not affected by the annual update to the standard Federal rate. Therefore, for all hospital categories, the projected increase in payments based on the standard Federal rate is slightly less than the

Note: This table includes data for LTCHs that fail to submit quality data, the annual update to the LTCH PPS standard Federal rate is reduced by 2.0 percentage points in FY 2015.
net effect of the 2.2 percent annual update and the approximate – 1.3 percent one-time prospective adjustment factor (or 0.9 percent) for FY 2015. Because we are applying an area wage level budget neutrality factor to the standard Federal rate, the annual update to the wage data includes the updating of the new OMB delineations, and labor-related share does not impact the increase in aggregate payments.

As discussed in section V.B. of the Addendum to this final rule, we are updating the wage data for FY 2015 based on the most recent available data and the adoption of the new OMB labor market area delineations. Under our adoption of the new OMB delineations, we are establishing and applying a transitional blended wage index for FY 2015 for LTCHs that will have a lower wage index value under those delineations, as discussed in section VII.D.2. of the preamble of this final rule. Therefore, this column reflects the blended wage index that is calculated as a 50/50 blend of the wage index under the current CBSA designations and the wage index under the new OMB delineations under our transitional wage index policy. In addition, we are slightly lowering the labor-related share from 62.537 percent to 62.306 percent under the LTCH PPS for FY 2015, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs based on the FY 2009-based LTCH-specific market basket. We also are applying a one-time prospective adjustment factor of 1.0016703, which increases the standard Federal rate approximately 0.17 percent. Therefore, the changes to the wage data, including the adoption of the new OMB delineations, and labor-related share do not result in a change in estimated aggregate LTCH PPS payments.

Table IV below shows the impact of the payment rate and the policy changes on LTCH PPS payments for FY 2015 presented in this final rule by comparing estimated FY 2014 payments to estimated FY 2015 payments. The projected increase in payment rates from FY 2014 to FY 2015 of 1.1 percent is attributable to the impacts of the change to the standard Federal rate (0.9 percent in Column 6) and the effect of the estimated slight increase in payments for HCO cases (0.1 percent) and an estimated increase in payments for SSO cases (0.1 percent). We currently estimate total HCO payments are projected to increase slightly from FY 2014 to FY 2015 in order to ensure that the estimated HCO payments will be 8 percent of the total estimated LTCH PPS payments in FY 2015. An analysis of the most recent available LTCH PPS claims data (that is, FY 2013 claims data from the March 2014 update of the MedPAR file) indicates that the FY 2014 HCO threshold of $13,314 (as established in the FY 2014 IPPS/LTCH PPS final rule) may result in HCO payments in FY 2014 that are slightly below the estimated 8 percent. Specifically, we currently estimate that HCO payments will be approximately 7.9 percent of the estimated total LTCH PPS payments in FY 2014. We estimate that the impact of the slight increase in HCO payments will result in approximately a 0.1 percent increase in estimated payments from FY 2014 to FY 2015, on average, for all LTCHs. Furthermore, in calculating the estimated HCO payments for FYs 2014 and 2015, we increased estimated costs by the applicable market basket percentage increase as projected by our actuaries. This increase in estimated costs also results in a projected increase in SSO payments of approximately 0.2 percent relative to last year. The net result of these projected changes in HCO and SSO payments in FY 2015 is an estimated change in aggregate payments of 0.3 percent. We note that estimated SSO cases comprise approximately 12 percent of the estimated total LTCH PPS payments, and estimated payments for HCO cases comprise approximately 8 percent of the estimated total FY 2015 LTCH PPS payments. Payments for HCO cases are based on 80 percent of the estimated cost of the case above the HCO threshold, while the majority of the payments for SSO cases (approximately 60 percent) are based on the estimated cost of the case.

In addition to the projected increase in LTCH PPS payments per discharge of approximately 3.5 percent from FY 2014 to FY 2015, as shown in Table IV below, we also estimate that the net effect of the projected impact of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the “25-percent policy” payment adjustment; the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and additional LTCH beds; the revocation of onsite discharges and readmissions policy; and the payment adjustment for “subclause (II) LTCHs”) will result in a $116 million increase in aggregate LTCH PPS payments in FY 2015. The individual impact of these policy changes are discussed in greater detail below in section I.K.3.b. of this Appendix.

As we discuss in detail throughout this final rule, based on the most recent available data, we believe that the provisions of this final rule relating to the LTCH PPS will result in an increase in estimated aggregate LTCH PPS payments and that the resulting LTCH PPS payment amounts will result in appropriate Medicare payments.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 1.2 percent increase in estimated payments per discharge for FY 2015 as compared to FY 2014 for rural LTCHs that will result from the changes presented in this final rule, as well as the effect of estimated changes to HCO and SSO payments. This estimated impact is based on the data for the 22 rural LTCHs in our database (out of 422 LTCHs) for which complete data were available. The projected increase in LTCH PPS payments from FY 2014 to FY 2015 for rural LTCHs (1.2 percent) is slightly greater than the national average increase (1.1 percent). The estimated increase in LTCH PPS payments from FY 2014 to FY 2015 for rural LTCHs is primarily due to the increase to the standard Federal rate.

3. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs “maintain budget neutrality.” We believe that the statute’s mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal rate under § 412.53(f)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

As discussed above in section I.K.1. of this Appendix, we project an increase in aggregate LTCH PPS payments per discharge in FY 2015 relative to FY 2014 of approximately $62 million based on the 422 LTCHs in our database. As discussed below in section I.K.3.b. of this Appendix, we also estimate that the net effect of the projected impact of certain other LTCH PPS policy changes will result in a $116 million increase in aggregate LTCH PPS payments in FY 2015.

b. Impact of Certain LTCH PPS Policy Changes

(1) Reinstatement of the Moratorium on the Full Implementation of the “25-Percent Policy” Payment Adjustment (§ 412.534 and § 412.536) and Reinstatement of the Moratorium on the Development of New LTCHs and LTCH Satellites and Additional LTCH beds (§ 412.23(e) and §§ 412.23(e)(6) and (7))

Section 1206(b) of Public Law 113–67 provides for the retroactive reinstatement and extension, for an additional 4 years, of the moratorium on the full implementation of the 25-percent threshold payment adjustment (referred to as the “25-percent policy” payment adjustment) established under section 114(c) of the MMA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act. As discussed in section VII.E. of the preamble of this final rule, we are reinstating this payment adjustment retroactively for LTCH cost reporting periods beginning on or after July 1, 2013 or October 1, 2013, as applicable under the regulations at § 412.534 and § 412.536.

Section 1206(b)(2) of Public Law 113–67, as amended by section 112(b) of the Protecting Access to Medicare Act of 2–14 (Pub. L. 113–93), provides for moratoria on the establishment of new LTCHs and LTCH satellite facilities and on bed increases in LTCHs effective for the period beginning April 1, 2014, and ending September 30, 2017. This statutory provision also provides specific exceptions to the moratorium on the establishment of new LTCHs and LTCH satellites. We are implementing this policy under the regulations at § 412.23(e) and § 412.23(e)(6) and (7), respectively. For additional details, refer to section VII.G. of the preamble of this final rule.

Our Office of the Actuary projects that the reinstatement of “25-percent policy” adjustment policy will result in
approximately a $120 million increase in aggregate LTCH PPS payments in FY 2015. In addition, our Office of the Actuary projects that the portion of the moratoria on the establishment of new LTCHs and LTCH satellite facilities and additional LTCH beds that was in effect in FY 2015 is estimated to result in approximately a $30 million reduction in aggregate LTCH PPS payments in FY 2015. Therefore, we project our implementation of both of these statutory provisions will result in approximately a $90 million decrease in aggregate LTCH PPS payments in FY 2015.

c. Impact on Providers

The basic methodology for determining a per discharge LTCH PPS payment is set forth under § 412.515 through § 412.536. In addition to the basic MS–LTC–DRG payment (the standard Federal rate multiplied by the MS–LTC–DRG relative weight), we make adjustments for differences in area wage levels, a COLA for LTCHs located in Alaska and Hawaii, and hospital ownership. LTCHs may also receive HCO payments for those cases that qualify based on the threshold established each year.

To understand the impact of the changes to the LTCH PPS payments presented in this final rule on different categories of LTCHs for FY 2015, it is necessary to estimate payments per discharge for FY 2014 using the rates, factors (including the FY 2014 GROUOPER [Version 31.0]), and relative weights and the policies established in the FY 2014 IPPS/ LTCH PPS final rule (78 FR 50753 through 50760 and 51002). It is also necessary to estimate the payments per discharge that will be made under the LTCH PPS rates and factors, and GROUOPER (Version 32.0) for FY 2015 (as discussed in section VII of the preamble of this final rule). These estimates of FY 2014 and FY 2015 LTCH PPS payments are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for SSO and HCO cases in each year.

We also evaluated the change in estimated FY 2014 payments to estimated FY 2015 payments (on a per discharge basis) for each category of LTCHs. We are establishing a standard Federal rate for FY 2015 of $41,043.71 (for LTCHs that submit quality data under the requirements of the LTCHQR Program), which includes the 2.2 percent annual update, the area wage budget neutrality factor of 1.0016703, and a one-time prospective adjustment to the standard Federal rate for FY 2015 of 0.98734 (approximately −1.3 percent). For LTCHs that fail to submit data to the LTCH Quality Reporting Program, we are establishing a standard Federal rate for FY 2015 of $40,240.51 that includes a 2.0 percentage point reduction applied to the annual update under the requirements of the LTCHQR Program, which includes a 2.2 percent annual update, the area wage budget neutrality factor of 1.0016703.

For purposes of this impact analysis, to estimate per discharge payments under the LTCH PPS, we simulated payments on a case-by-case basis using LTCH claims from the FY 2013 MedPAR files. For modeling estimated LTCH PPS payments for FY 2014, we used the FY 2014 standard Federal rate (that is, $40,607.31 for LTCHs that fail to submit quality data under the requirements of the LTCHQR Program) used to make payments for LTCH discharges occurring on or after October 1, 2013 through September 30, 2014.

For modeling estimated LTCH PPS payments for FY 2015, we used the FY 2015 standard Federal rate of $41,043.71 (for LTCHs that submit quality data under the requirements of the LTCHQR Program), which includes a one-time prospective adjustment of 0.98734 for FY 2015 for the final year of the 3-year phase-in.

As discussed above, our impact analysis includes the application of an area wage level budget neutrality factor of 1.0016703 (as discussed in section VII.B.5 of the Addendum to this final rule). Furthermore, in modeling estimated LTCH PPS payments for both FY 2014 and FY 2015 in this impact analysis, we applied the FY 2014 and the FY 2015 adjustments for differences in area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, we adjusted for differences in area wage levels in determining estimated FY 2014 payments using the current LTCH PPS labor-related share of 62.537 percent (78 FR 50995 through 50996) and the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2014 IPPS/LTCH PPS final rule (which are available via the Internet on the CMS Web site). We also applied the FY 2014 COLA factors shown in the table in section V.C. of the Addendum to that final rule (78 FR 50997 through 50998) to adjust the FY 2014 nonlabor-related share (37.463 percent) for LTCHs located in Alaska and Hawaii.

Similarly, we adjusted for differences in area wage levels in determining the estimated FY 2015 payments using the FY 2015 LTCH PPS labor-related share of 62.306 percent and the FY 2015 wage index values, including the 50/50 blended wage index, determined from the wage index values presented in Tables 12A through 12D listed in section VI. of the Addendum to this final rule (and available via the Internet). We also applied the FY 2015 COLA factors shown in the table in section V.C. of the Addendum to this final rule to the FY 2015 nonlabor-related share (37.694 percent) for LTCHs located in Alaska and Hawaii.

As discussed above, our impact analysis reflects an estimated change in payments for SSO cases, as well as an estimated increase in payments for HCO cases (as described in...
section V.D. of the Addendum to this final rule. In modeling payments for SSO and HCO cases in FY 2015, we applied an inflation factor of 5.0 percent (determined by OACT) to estimate the costs of each case using the charges reported on the claims in the FY 2013 MedPAR files and the best available CCRs from the March 2014 update of the PSF. Furthermore, in modeling estimated LTCH PPS payments for FY 2015 in this impact analysis, we used the FY 2015 fixed-loss amount of $14,972 (as discussed in section V.D. of the Addendum to this final rule).

These impacts reflect the estimated “losses” or “gains” among the various classifications of LTCHs from FY 2014 to FY 2015 based on the payment rates and policy changes presented in this final rule. Table IV illustrates the estimated aggregate impact of the LTCH PPS among various classifications of LTCHs.

The first column, LTCH Classification, identifies the type of LTCH.

The second column lists the number of LTCHs of each classification type.

The third column identifies the number of LTCH cases.

The fourth column shows the estimated payment per discharge for FY 2014 (as described above).

The fifth column shows the estimated payment per discharge for FY 2015 (as described above).

The sixth column shows the percentage change in estimated payments per discharge from FY 2014 to FY 2015 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule, including the 2.0 percentage point reduction to the update to the standard Federal rate for LTCHs that fail to submit data to the LTCHQR Program) and the final year of the phase-in of a one-time prospective adjustment factor for FY 2015.

The seventh column shows the percentage change in estimated payments per discharge from FY 2014 to FY 2015 for changes to the area wage level adjustment (that is, the wage indexes, including the implementation of the new OMB delineations, and the labor-related share), including the application of an area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this final rule). This column includes the wage index calculated as a 50/50 blend of the wage index under the current CBSSA designations and the wage index under the new OMB delineations under our transitional wage index policy for the implementation of the new OMB delineations.

The eighth column shows the percentage change in estimated payments per discharge from FY 2014 (Column 4) to FY 2015 (Column 5) for all changes (and includes the effect of estimated changes to HCO and SSO payments).

¹ Estimated FY 2015 LTCH PPS payments based on the payment rate and factor changes presented in the preamble of and the Addendum to this final rule.
² Percent change in estimated payments per discharge from FY 2014 to FY 2015 for the annual update to the standard Federal rate and the one-time prospective adjustment factor for FY 2015 as discussed in section V.A.2. of the Addendum to this final rule.
³ Percent change in estimated payments per discharge from FY 2014 to FY 2015 for changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this final rule).
⁴ Percent change in estimated payments per discharge from FY 2014 to FY 2015 for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the standard Federal rate (column 6) and the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in both estimated payments to SSO cases that are paid based on estimated costs and aggregate HCO payments (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

e. Results
Based on the most recent available data for 422 LTCHs, we have prepared the following summary of the impact (as shown above in Table IV) of the LTCH PPS payment rate and policy changes presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge are expected to increase 1.1 percent, on average, for all LTCHs from FY 2014 to FY 2015 as a result of the payment rate and policy changes presented in this final rule, including an estimated slight increase in HCO payments. This estimated 1.1 percent increase in LTCH PPS payments per discharge from the FY 2014 to FY 2015 for all LTCHs (as shown in Table IV) was determined by comparing estimated FY 2015 LTCH PPS payments (using the payment rates and factors discussed in this final rule) to estimated FY 2014 LTCH PPS payments (as described in section I.K.3.d. of this Appendix).

We are establishing a standard Federal rate of $41,043.71 (or a standard Federal rate of $40,240.51 for LTCHs that failed to submit data under the requirements of the LTCHQR Program) for FY 2015. Specifically, we are updating the standard Federal rate for FY 2015 by 2.2 percent, which is based on the latest estimate of the LTCH PPS market basket increase (2.9 percent), the reduction of 0.5 percentage point for the MFP adjustment, and the 0.2 percentage point reduction consistent with sections 1886(m)(3) and (m)(4) of the Act. For LTCHs that fail to submit quality data under the requirements of the LTCHQR Program, as required by section 1886(m)(3)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the standard Federal rate.

In addition, we are applying a one-time prospective adjustment factor for FY 2015 of 0.98734 (approximately −1.3 percent) to the standard Federal rate for the final year of the 3-year phase-in.

We noted earlier in this section that, for most categories of LTCHs, as shown in Table IV (Column 6), the payment increase due to the 2.2 percent annual update to the standard Federal rate and the application of a one-time prospective adjustment factor for FY 2015 of approximately −1.3 percent for the final year of the 3-year phase-in is projected to result in approximately a 0.8 percent increase in estimated payments per discharge for all LTCHs from FY 2014 to FY 2015.

In addition, our estimate of the changes in payments due to the update to the standard Federal rate also reflects estimated payments for SSO cases that are paid using special methodologies that are not affected by the update to the standard Federal rate. For these reasons, we estimate that payments may increase by less than 0.9 percent for certain hospital categories due to the annual update to the standard Federal rate and the application of the final phase of the one-time prospective adjustment for FY 2015.

1. Location
Based on the most recent available data, the vast majority of LTCHs are located in rural areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 4 percent of all LTCH cases are treated in these rural hospitals. The impact analysis presented in Table IV shows that the average percent increase in estimated payments per discharge from FY 2014 to FY 2015 for all hospitals is 1.1 percent for all changes. For rural LTCHs, the percent change for all changes is estimated to be a 1.2 percent increase, while for urban LTCHs, we estimate the increase will be 1.1 percent. Large urban LTCHs are projected to experience an increase of 1.2 percent in estimated payments per discharge from FY 2014 to FY 2015, while other urban LTCHs are projected to experience an increase of 1.0 percent in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV.

2. Participation Date
LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest percentage of LTCH cases (approximately 45 percent) are in hospitals that began participating in the Medicare program.
between October 1993 and September 2002, and they are projected to experience a 1.0 percent increase in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV.

Approximately 4 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience a higher than average percent increase (2.4 percent) in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV. Approximately 10 percent of LTCHs that began participating in the Medicare program between October 1983 and September 1993. These LTCHs are projected to experience a 1.1 percent increase in estimated payments from FY 2014 to FY 2015. LTCHs that began participating in the Medicare program after October 1, 2002, which treat approximately 39 percent of all LTCH cases, are projected to experience a 1.1 percent increase in estimated payments from FY 2014 to FY 2015.

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the most recent available data, approximately 19 percent of LTCHs are identified as voluntary (Table IV). The majority (nearly 78 percent) of LTCHs are identified as proprietary while government-owned and operated LTCHs represent about 3 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience an above average increase in payments of 1.4 percent, proprietary LTCHs are expected to experience an increase of 1.1 percent in payments, while government-owned and operated LTCHs are expected to experience an increase in payments that is less than the national average of 0.6 percent from FY 2014 to FY 2015.

(4) Census Region

Estimated payments per discharge for FY 2015 are projected to increase for LTCHs located in all regions in comparison to FY 2014. Of the 9 census regions, we project that the increase in estimated payments per discharge will have the largest positive impact on LTCHs in the New England and Middle Atlantic regions (2.4 percent and 1.8 percent, respectively as shown in Table IV). The estimated percent increase in payments per discharge from FY 2014 to FY 2015 for those regions is largely attributable to the changes in the area wage level adjustment.

In contrast, LTCHs located in the South Atlantic and West South Central regions are projected to experience the smallest increase in estimated payments per discharge from FY 2014 to FY 2015. The lower than national average estimated increase in payments of 0.8 percent is primarily due to estimated decreases in payments associated with the changes to the area wage level adjustment.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. Most bed size categories are projected to receive either a slightly higher or slightly lower than average increase in estimated payments per discharge from FY 2014 to FY 2015. We project that small LTCHs (0–24 beds) will experience a 0.8 percent increase in payments, which is less than the nation average mostly due to decreases in the area wage level adjustment, while large LTCHs (200+ beds) will experience an above average increase in payments. LTCHs with between 75 and 124 beds are expected to experience an above average increase in payments per discharge from FY 2014 to FY 2015 (1.2 percent).

4. Effect on the Medicare Program

As noted previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments in FY 2015 relative to FY 2014 of approximately $62 million (or approximately 1.1 percent) for the 422 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to care for Medicare beneficiaries under the LTCH PPS, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program.

L. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In section IX.A. of the preamble of this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase in payment for the FY 2017 payment determination. We are removing a total of 19 measures from the Hospital IQR Program for the FY 2017 payment determination and subsequent years, which begins in the CY 2015 reporting period. The first five measures are: (1) AMI–1 Aspirin at arrival (NQF #1032); (2) AMI–3 ACEI/ARB for left ventricular systolic dysfunction (NQF #0137); (3) AMI–5 Beta-blocker prescribed at discharge (NQF #0160); (4) SCIP INF–6 Appropriate Hair Removal; and (5) Participation in a national database for cardiac surgery (NQF #1103). Of these five measures, the first four are currently suspended. The fifth measure was recommended by the MAP for removal because it is “topped-out.” We believe that an additional 14 chart-abstracted measures are “topped-out,” based on the previously adopted criteria, and we are removing them from the FY 2017 payment determination and subsequent years measure set. However, we are retaining the electronic clinical quality measure version of 10 of these chart-abstracted measures for Hospital IQR Program reporting as discussed in section IX.A.7.f. of the preamble of this final rule.

We are also adding one chart-abstracted measure for the FY 2017 payment determination and subsequent years in this final rule: Securing the Hospital Acute- and Shock-management bundle (NQF #0500).

We are incorporating refinements for several measures for the FY 2017 payment determination and subsequent years that were previously adopted in the Hospital IQR Program. These refinements have either arisen out of the NQF endorsement maintenance process, or during our internal efforts to harmonize measure approaches. The measure refinements include the following: (1) Refining the planned readmission algorithm for all seven readmission measures included in the Hospital IQR Program; (2) modifying the hip/knee readmission and complication measure cohorts to exclude index admissions with a secondary fracture diagnosis; and (3) modifying the hip/knee complication measure to not count as complications coded as “present on admission” during the index admission. We do not anticipate any hospital burden associated with these revisions, as each is based on claims submitted by hospitals for payment purposes.

Information is not available to determine the precise number of hospitals that would not meet the requirements to receive the full annual percentage increase for the FY 2017 payment determination. Historically, an average of 100 hospitals that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year. We anticipate that because of the new requirements we are finalizing for reporting for the FY 2017 payment determination, the number of hospitals not receiving the full annual percentage increase may be higher than average. The highest number of hospitals failing to meet program requirements was approximately 200 after the introduction of new NHSN reporting requirements. If the number of hospitals failing does increase because of new requirements, we anticipate that over the long run, this number will decline as hospitals gain more experience with these requirements.

In the FY 2014 IPPS/LTCH PPS final rule, we estimated that the burden for the FY 2016 payment determination was 1,775 hours annually per hospital and 5.86 million hours across all 3,300 hospitals participating in the Hospital IQR Program (78 FR 59056).

However, we have re-estimated the total number of hours associated with the requirements finalized for the FY 2016 payment determination to 1,149 hours per hospital or a total of 4.3 million hours for all hospitals using more recent information from the clinical data warehouse than was available in August 2013.

As discussed in section XIII.B. of the preamble of this final rule, we estimate that our proposal for the addition and removal of measures will result in an overall reduction in the total burden for hospitals for the FY 2017 payment determination for reporting chart-abstracted and structural measures, completing forms, reviewing reports, and submitting validation templates of 160 hours per hospital or 0.5 million hours across all hospitals compared to the total burden for participating hospitals in the Hospital IQR Program for the FY 2016 payment determination. The numbers included in our final rule may not accurately reflect the burden associated with our program than the estimates provided in our proposal. As a result, the total burden for approximately 3,300 hospitals for the FY 2017 payment determination will be 1,149 hours per hospital or 3.8 million hours across all hospitals. This burden estimate includes
both the newly finalized measures and the measures we are continuing. The burden estimates in this final rule are the estimates for which we are requesting OMB approval. The table below describes the hospital burden associated with the Hospital IQR Program requirements.

<table>
<thead>
<tr>
<th>Hospital IQR Program Requirement</th>

* This number is unknown at the time this table was prepared because final submission deadlines have not passed. Because the burden associated with participation is negative, we assumed this number to be 0 in summary calculations included in the narrative.

** Maximum numbers were used in summary calculations included in the narrative.

We estimate that the total burden associated with the voluntary electronic clinical quality measure reporting option will be similar to the burden outlined for hospitals in the Medicare EHR Incentive Program Stage 2 final rule (77 FR 53968 through 54162). In this rule, we finalize a policy allowing hospitals to submit data for a maximum of 16 measures that can be used to satisfy partial requirements for both programs. We estimate that each hospital that participates in the voluntary electronic quality measure reporting option could realize a maximum reduction in burden of up to approximately 425 hours by submitting data for all 12 required chart-abstracted measures that are also electronically specified.

M. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program for FY 2017

In section IX.B. of the preamble of this final rule, we discuss our policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. In this final rule, we are requiring that PCHs submit data on one additional measure beginning with the FY 2017 program which will increase the total number of measures in the FY 2017 PCHQR measure set to 19 measures. We also are updating the specifications for the five previously finalized clinical process/oncology care measures to require PCHs to report all-patient data for each of these measures, and to adopt a new sampling methodology that PCHs can use to report these measures, as well as the newly finalized EBRT for bone metastases measure. We also are providing PCHs with two reporting options to report the clinical process/oncology care, SCIP, and clinical process/cancer specific treatment measures.

The impact of the new requirements for the PCHQR Program is expected to be minimal overall because some PCHs are already submitting previously adopted quality measure data to CMS. As a result, these PCHs are familiar with our IT infrastructure and programmatic operations. In addition to fostering transparency and facilitating public reporting, we believe our requirements will help maintain our trust in our system, which can lead to improvements in quality of care and achieving better health outcomes, which outweighs burdens.

One expected effect of the PCHQR Program is to keep the public informed of the quality of care provided by PCHs. We will publicly display quality measure data collected under the PCHQR Program as required under the Act. These data will be displayed on the Hospital Compare Web site. The goals of making these data available to the public in a user-friendly and relevant format, include but are not limited to: (1) Allowing the public to compare PCHs in order to make informed health care decisions regarding care setting; and (2) providing information about current trends in health care. Furthermore, PCHs can use their own health care quality data for many purposes such as in risk management programs, healthcare associated infection prevention programs, and research and development activities, among others.

N. Effects of Requirements for the Long-Term Care Hospital Quality Reporting (LTCHQR) Program for FY 2015 Through FY 2018

In section IX.C. of the preamble of this final rule, we discuss the implementation of section 1886(m)(5) of the Act, which was added by section 3004(a) of the Affordable Care Act. Section 1886(m)(5) of the Act provides that, for rate year 2014 and each subsequent year, any LTCH that does not submit data to the Secretary in accordance with section 1886(m)(5)(C) of the Act shall receive a 2-percentage point reduction to the annual update to the standard Federal rate for discharges for the hospital during the applicable fiscal year. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51839 through 51840), we estimated that only a few LTCHs would not be penalized full annual percentage increase in any fiscal year as a result of failure to submit data under the LTCHQR Program. Information is not available to determine the precise number of LTCHs that would not meet the requirements to receive the full annual percentage increase for the FY 2016 payment determination. At the time this analysis was prepared, 8 of the 442 active Medicare-certified LTCHs did not receive the full annual percentage increase for the FY 2014 payment determination. We believe that a majority of LTCHs will continue to collect and submit data for the FY 2015 payment determination and subsequent years because they will continue to view the LTCHQR Program as an important step in improving the quality of care patients receive in the LTCHs. We believe that the burden associated with the LTCHQR Program is the time and effort associated with data collection. There are approximately 442 LTCHs currently reporting quality data to CMS.

In this final rule, we are retaining seven previously finalized measures, revising two previously finalized measures, and are finalizing three additional quality measures for inclusion in the LTCHQR Program. In section IX.C.7. of the preamble of this final rule, we are finalizing three new quality measures for inclusion in the LTCHQR Program affecting the FY 2018 payment determination and subsequent years: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; (2) Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support; and (3) National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.

Six of the previously adopted and newly finalized measures will be collected via the NHSN. In section IX.C.7.b. of the preamble of this final rule, we are finalizing our proposal to collect the NHSN VAE Outcome Measure. Normally, we would only discuss the burden associated with those measures that were proposed or finalized in any given rule. Because we have access to information that now indicates our previous calculations for the CALTI, CLABSI, MRSA, and CDI were incorrect (we estimated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50959 through 50964) that LTCHs would submit six infection events per month for each of these measures), we offer below the recalculation of the associated burden. Based on submissions to the NHSN, we now estimate...
that each LTCH will make approximately 7 NHSN submissions per month; 1 MRSA event; 1 CDI event; 2 CLABSI events; 3 CAUTI events (84 events per LTCH annually). This equates to a total of approximately 37,128 submissions of events to the NHSN per year (includes CAUTI, CLABSI, MRSA, and CDI). The CDC estimated the public reporting burden of the collection of information for each measure to include the time for reviewing instructions, searching existing data sources, and maintaining the data needed, and completing and reviewing the collection of information. MRSA and CDI events are estimated to require an average of 15 minutes per response (10 minutes of clinical (RN) time, and 5 minutes of clerical (Medical Record or Healthcare Information Technician)). CAUTI is estimated to require an average of 29 minutes per response, and CLABSI events are estimated to require an average of 32 minutes per response.

In addition, each LTCH must also complete a Patient Safety Monthly Reporting Plan estimated at 35 minutes per Plan and a Denominator for Specialty Care Area, which is estimated at 5 hours per month. Based on this estimate, we expect each LTCH will expend 6.6 hours per month for each LTCH, 103.2 hours annually for each LTCH or 45,614.4 hours annually for all LTCHs reporting to the NHSN.

In addition, each LTCH must submit the Influenza Vaccination Coverage among Healthcare Personnel (NQF #0641), which is an estimated 5.2 hours annually per LTCH, or an additional 73.66 hours for all LTCHs annually. In total, the burden we have recalculated for all previously finalized measures (including CAUTI, CLABSI, MRSA, CDI, HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) will equal 103.4 hours annually per LTCH or 45,072.8 hours for all LTCHs annually.

For the newly finalized VAE measure, which will also be reported by LTCHs through the CDC’s NHSN, the CDC estimates that each LTCH will submit 1 VAE per month, which will require approximately 22 minutes of clinical time per response. This equates to 22 minutes per LTCH monthly, 4.4 hours per LTCH annually, and 1,944.8 hours for all LTCHs annually. According to the US Bureau of Labor and Statistics, the mean hourly wage for a registered nurse (RN) is $33.13.251 According to the U.S. Bureau of Labor Statistics, the mean hourly wage for a registered nurse (RN) is $33.13.251 However, in order to account for overhead and fringe benefits, we have doubled the mean hourly wage, making it $66.26 for an RN and $33.62 for a Medical Record or Health Information Technician. We estimate that the annual cost per each LTCH for the previously finalized measures, for which we have recalculated burden (including CAUTI, CLABSI, MRSA, CDI, HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) to be $6,770.10 and that the total yearly cost to all LTCHs for the submission of data to NHSN will be $2,992,384.20. We estimate that the total cost for the newly finalized VAE measure is $10,640.36 based on new information regarding the number of infection events reported by LTCHs per month, is $6,770.10 per LTCH annually, or $2,992,384.20 for all LTCHs annually. The total cost per LTCH for the three newly finalized measures in this final rule (Functional Outcome Measure: Change in Mobility among Inpatients requiring Ventilator Support, Percent of LTCH Inpatients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function—for the FY 2018 payment determination and subsequent years, in addition, the LTCH CARE Data Set will be used to report the previously finalized measure. We estimate the additional elements for the two newly finalized functional status measures, which will take 13.5 minutes of nursing/clinical staff time to report data for admission assessment and 13 minutes of nursing/clinical staff time to report data for Discharge assessment, for a total of 26.5 minutes. In accordance with OMB control number 0920–0666, we estimate 202,050 discharges from all LTCHs annually, with an additional burden of 26.5 minutes. This would equate to 89,238.75 total hours or 201.9 hours per LTCH. We believe this work will be completed by RN staff. As previously noted, according to the US Bureau of Labor Statistics, the mean hourly wage for a registered nurse (RN) is $33.13.251 However, in order to account for overhead and fringe benefits, we have doubled the mean hourly wage, making it $66.26 for an RN. The total cost related to the two newly finalized functional status measures referenced above is estimated at $13,377.89 per LTCH annually, or $5,913,027.38 for all LTCHs annually.

As discussed in section IX.C.7.a.1 of the preamble of this final rule, in response to several public comments concerning that the proposed functional status measures are excessively burdensome, and that the included data items used to collect the data for the measures had “low response rates” during demonstration testing, we have decided to reduce the number of LTCH CARE Data Set data items required for the measure Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. We have reduced the number of data items for this quality measure from the originally proposed 45 to 35. We estimate that this reduction effectively reduces the annual cost per LTCH from the originally estimated $5,913,027.38 to $4,574,178.44. This equates to a reduction of $1,338,851.38 per LTCH annually, or $1,338,851.38 for all LTCHs annually.

Lastly, as discussed in section IX.C.11. of the preamble of this final rule, in response to public comments, we are not finalizing our proposal to validate the accuracy of LTCH data at this time.

In summary, the total cost for all previously finalized HAIs and vaccination measures (CAUTI, CLABSI, MRSA, CDI, HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) reported through the CDC’s NHSN, that we have recalculated based on new information regarding the number of infection events reported by LTCHs per month, is $6,770.10 per LTCH annually, or $2,992,384.20 for all LTCHs annually. The total cost per LTCH for the three newly finalized measures in this final rule (Functional Outcome Measure: Change in Mobility among Inpatients requiring Ventilator Support, Percent of LTCH Inpatients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function) is $10,640.36 per LTCH annually, or $4,703,039.12 for all LTCHs annually.

Comment: Several commenters expressed concern over the burden associated with collection the two functional status measures we proposed.

Response: For a full discussion of the public comments, our responses, and our associated analysis of the reduction in required data items for the measure Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, we refer readers to the comment and response portion of section IX.C.7.a.1 of the preamble of this final rule. As we discuss above, as a result of our response, we have reduced our estimate of the burden for these measures, as we are finalizing them, by $1,338,851.38.

Comment: One commenter expressed concern over the burden with which the LTCH program is growing year to year, noting that there has been a 300 percent increase in burden each year, and that hospitals cannot endure such increases. This commenter further noted that the total cost for the
LATCHQR Program to all LTCHs, with the inclusion of the three additional finalized measures in this rule is close to $12 million, while the initially estimated cost for the LTCHQR Program in the FY 2012 IPPS/LTCH PPS final rule was $750,000.

Recognize that the commenter’s reference to $750,000 is a reference to our estimate in section IX.b.6 the FY 2012 IPPS/LTCH PPS final rule of the costs of submitting the CAUTI and CLABSI data to NHSN (76 FR 51780 through 51781). Our estimate of the costs of the LTCHQR Program in that final rule (76 FR 51839) was $1,128,440. Our original estimate in the FY 2012 IPPS/LTCH PPS final rule was based on projected costs for the program, as we had no data related to the rate of submission of our proposed measures.

While the commenter is correct that the estimates in the proposed FY 2015 IPPS/LTCH PPS proposed rule, as well as this final rule, equal approximately $12 million, we would like to take this opportunity to explain the impact of the final estimate in the FY 2012 IPPS/LTCH PPS final rule was based on projected costs for the program, as we had no data related to the rate of submission of our proposed measures.

In subsequent years, as we added measures to the LTCHQR Program and as we have obtained a better understanding of the rate at which LTCHs would submit HA1 data to the NHSN, we calculated and recalculated these costs in order to provide a more accurate representation of the program costs. As we have done in past rules, based on new information CTOC, we have again recalculated the program costs related to previously finalized quality measures and required data submission. The estimates contained within this final rule resulted from actual CDC data regarding the rate of submission of all quality measures submitted via the CDC’s NHSN, as well as from OMB-approved burden estimates for each of these measures. In addition, we accounted for actual burden, such as the Patient Safety Reporting Plan and Denominator for Specific Quality Measures, which together added an additional 64.2 hours per year per provider or 28,248 hours for all LTCHs. Finally, in the FY 2015 IPPS/LTCH PPS proposed rule, as well as this final rule, we accounted for overhead and fringe benefits, which effectively doubled many of our earlier cost estimates. Our inclusion of these costs (overhead and fringe), which we have not included in the past, is a substantial factor associated with the increase in burden.

We believe that this cost estimate cannot be compared to the cost estimate in the FY 2014 and previous IPPS/LTCH PPS final rules, without recognition of the factors discussed above. However, we are mindful of the burden of LTCHQR Program requirements and we have attempted to balance the need for a robust LTCHQR Program.

Under section X. of the preamble of this final rule, we are revising the existing regulations at §422.310(f) to broaden the specified uses of Medicare Advantage (MA) risk adjustment data in order to strengthen program management and increase transparency in the MA program and to specify the conditions for release of risk adjustment data to entities outside of CMS. We are also proposing to specify four additional purposes for which CMS may use or release risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes authorized by other applicable laws. In addition, the existing regulations do not specify conditions for release by CMS of risk adjustment data submitted by MA organizations. Therefore, we are adding regulatory language to address CMS’ release of such data to non-CMS entities.

We have determined that the regulatory amendments do not impose any mandatory costs on entities that may choose, under this newly finalized policy, to request data files from CMS for their research analyses or other purposes listed in the proposal. Requesting data from CMS is at the discretion of the requester. Therefore, we have determined that there are no economically significant effects of the provisions. We also have determined that the regulatory amendments will not impose a burden on the entity requesting data files.

Q. Effects of Changes to Enforcement Provisions for Organ Transplant Centers

Under section XI. of the preamble of this final rule, we are finalizing our proposals to expand and clarify the current organ transplant regulation as it relates to a transplant program’s ability to request approval for participation in Medicare based on mitigating factors, the timelines for such review, and potential System Improvement Agreements that may allow a transplant program to improve outcomes and avert Medicare termination for non-compliance with regulations.

Under section X. of the preamble of this final rule, we are revising the existing regulations at §422.310(f) to broaden the specified uses of Medicare Advantage (MA) risk adjustment data in order to strengthen program management and increase transparency in the MA program and to specify the conditions for release of risk adjustment data to entities outside of CMS. We are also proposing to specify four additional purposes for which CMS may use or release risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes authorized by other applicable laws. In addition, the existing regulations do not specify conditions for release by CMS of risk adjustment data submitted by MA organizations. Therefore, we are adding regulatory language to address CMS’ release of such data to non-CMS entities.

We have determined that the regulatory amendments do not impose any mandatory costs on entities that may choose, under this newly finalized policy, to request data files from CMS for their research analyses or other purposes listed in the proposal. Requesting data from CMS is at the discretion of the requester. Therefore, we have determined that there are no economically significant effects of the provisions. We also have determined that the regulatory amendments will not impose a burden on the entity requesting data files.

Under section X. of the preamble of this final rule, we are revising the existing regulations at §422.310(f) to broaden the specified uses of Medicare Advantage (MA) risk adjustment data in order to strengthen program management and increase transparency in the MA program and to specify the conditions for release of risk adjustment data to entities outside of CMS. We are also proposing to specify four additional purposes for which CMS may use or release risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes authorized by other applicable laws. In addition, the existing regulations do not specify conditions for release by CMS of risk adjustment data submitted by MA organizations. Therefore, we are adding regulatory language to address CMS’ release of such data to non-CMS entities.

We have determined that the regulatory amendments do not impose any mandatory costs on entities that may choose, under this newly finalized policy, to request data files from CMS for their research analyses or other purposes listed in the proposal. Requesting data from CMS is at the discretion of the requester. Therefore, we have determined that there are no economically significant effects of the provisions. We also have determined that the regulatory amendments will not impose a burden on the entity requesting data files.

The savings to the Federal Government associated with the policies in this final rule are estimated at $756 million.
B. LTCHs

As discussed in section I.L of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS. As discussed in section I.L of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, in conjunction with the estimated payment impacts of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the "25-percent threshold" payment adjustment, the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and increase in the number of LTCH beds; the revocation of onsite discharges and readmissions policy; and the payment adjustment for "subclause (II)" LTCHs), is projected to result in an increase in estimated aggregate LTCH PPS payments in FY 2015 relative to FY 2014 of approximately $178 million based on the data for 422 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A-4 (available at http://www.whitehouse.gov/omb/ circulars/a004/a-4.pdf), in Table VI below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to the changes to the LTCH PPS. Table VI provides our best estimate of the estimated increase in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 422 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs). Lastly, we present the costs to LTCHs associated with the completion of the data for the LTCHQR Program at $4.7 million than in FY 2014.

The cost to the Federal Government associated with the policies for LTCHs in this final rule is estimated at $178 million.

V. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than $7.0 million to $35.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SRA Web site at: http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals would have a significant impact on small entities as explained in this Appendix. Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.L of this Appendix. MACs are not considered to be small entities. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. In FY 2015 IPPS/LTCH PPS proposed rule, we solicited public comments on our estimates and analysis of the impact of our proposals on those small entities. Any public comments that we received and our responses are presented throughout this final rule.

VI. Impact on Small Rural Hospitals

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties, for purposes of section 1102(b) of the Act, we define as rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

VII. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold level is approximately $141 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

VIII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the Puerto Rico-specific standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we have made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2015, we plan to include the Secretary’s recommendation for the update factors for IRFs and IPFs in separate Federal Register documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC’s recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2015

A. FY 2015 Inpatient Hospital Update

As discussed in section IV.B. of the preamble to this final rule, for FY 2015,
consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(iiii) of the Act and a 33 1/3 percent reduction to three-fourths of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.2 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xii) and 1886(b)(3)(B)(x) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of the MFP adjustment and the additional FY 2015 adjustment of 0.2 percentage point may result in the applicable percentage increase being less than zero.

In the FY 2015 IPPS/LTCH PPS proposed rule, based on the most recent data available at that time, in accordance with section 1886(b)(3)(B) of the Act, we proposed to establish the FY 2015 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.’s (IGI’s) first quarter 2014 forecast of the FY 2010-based IPPS market basket rate-of-increase with historical data through fourth quarter 2013, which was estimated to be 2.7 percent. Based on the most recent data available for this FY 2015 final rule, in accordance with section 1886(b)(3)(B) of the Act, we are establishing the FY 2015 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.’s (IGI’s) second quarter 2014 forecast of the FY 2010-based IPPS market basket rate-of-increase, which is estimated to be 2.9 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B.1. of the preamble of this final rule, we are establishing a multifactor productivity (MFP) adjustment (the 10-year moving average of MFP for the period ending FY 2015) of 0.5 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, as discussed in section IV.B.1. of the preamble of this final rule, we are establishing the applicable percentage increases for the FY 2015 updates based on IGI’s second quarter 2014 forecast of the FY 2010-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as outlined in the table below.

B. Update for SCHs and MDHs for FY 2015

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2015 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

As discussed in section IV.G. of the preamble of this final rule, section 1106 of the Pathway for SGR Reform Act of 2013 (Pub. L. 113–67), enacted on December 26, 2013, extended the MDH program from the end of FY 2013 through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93), enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Prior to the enactment of Public Law 113–67, the MDH program was to be in effect through the end of FY 2013 only. The MDH program expires for discharges beginning on April 1, 2015, under current law. Accordingly, the update of the hospital-specific rates for FY 2015 for MDHs will apply in determining payments for FY 2015 discharges occurring before April 1, 2015.

As mentioned above, the update to the hospital-specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(ii) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2015 Puerto Rico Hospital Update

Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(ii) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for facilities located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth in section 1886(b)(3)(B)(ii) of the Act as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject
to the IPPS). According to section 1886(o)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children’s hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.9 percent.

For FY 2015, consistent with policy set forth in section II. of this Addendum, we are recommending an update for LTCHs for FY 2015 based on changes in economy-wide productivity and an additional reduction required by section 1886(m)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

For LTCHs that fail to submit quality data for FY 2015, we are applying an annual update to the LTCH PPS standard Federal rate of 0.2 percent (that is, the current FY 2015 estimate of the market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point). Accordingly, we are applying an update factor of 1.002 in determining the LTCH PPS standard Federal rate for FY 2015. For LTCHs that fail to submit quality data, we are applying an annual update to the LTCH PPS standard Federal rate of 0.2 percent (that is, the final annual update for FY 2015 of 2.2 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying an update factor of 1.002 in determining the LTCH PPS standard Federal rate for FY 2015.

Furthermore, we are making an adjustment for the final year of the 3-year phase-in of the one-time prospective adjustment to the standard Federal rate under § 412.523(d)(3) by applying a factor of 0.97834 (or approximately –1.3 percent) in FY 2015, consistent with current law.

III. Secretary’s Recommendations

MedPAC is recommending an inpatient hospital update equal to 3.25 percent for FY 2015. MedPAC’s rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs. For the Puerto Rico-specific standardized amount, we are recommending an update of 2.2 percent.

In addition to making a recommendation for IPPS hospitals, in accordance with section 1886(o)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children’s hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.9 percent.

For FY 2015, consistent with policy set forth in section VII. of the preamble of this final rule, we are recommending an update of 2.2 percent (that is, the current FY 2015 estimate of the LTCH PPS market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point) to the LTCH PPS standard Federal rate.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2014 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates equal to 3.25 percent concurrent with changes to the outpatient prospective payment system and with initiating change to the LTCH PPS. We refer the reader to the March 2014 MedPAC report, which is available for download at www.medpac.gov for a complete discussion on this recommendation. MedPAC expects Medicare margins to remain low in 2014. At the same time, MedPAC’s analysis finds that efficient hospitals have been able to maintain positive Medicare margins while maintaining a relatively high quality of care.

Response: With regard to MedPAC’s recommendation of an update to the hospital inpatient rates equal to 3.25 percent, for FY 2015, as discussed above, sections 3401(a) and 10319(a) of the Affordable Care Act amended section 1886(b)(3)(B) of the Act. Section 1886(b)(3)(B) of the Act, as amended by these sections, sets the requirements for the FY 2015 applicable percentage increase. Therefore, we are establishing an applicable percentage increase for FY 2015 of 2.2 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with these statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

Medicare Program; FY 2015 Hospice Wage Index and Payment Rate Update; Hospice Quality Reporting Requirements and Process and Appeals for Part D Payment for Drugs for Beneficiaries Enrolled in Hospice

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule will update the hospice payment rates and the wage index for fiscal year (FY) 2015 and continue the phase-out of the wage index budget neutrality adjustment factor (BNAF). This rule provides an update on hospice payment reform analyses, potential definitions of “terminal illness” and “related conditions,” and information on potential processes and appeals for Part D payment for drugs while beneficiaries are under a hospice election. This rule will specify timeframes for filing the notice of election and the notice of termination/revocation; add the attending physician to the hospice election form, and require hospices to document changes to the attending physician; require hospices to complete their hospice aggregate cap determinations within 5 months after the cap year ends, and remit any overpayments; and update the hospice quality reporting program. In addition, this rule will provide guidance on determining hospice eligibility; information on the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM); and will further clarify how hospices are to report diagnoses on hospice claims. Finally, the rule will make a technical regulations text change.

DATES: Effective Date: These regulations are effective on October 1, 2014.

FOR FURTHER INFORMATION CONTACT: Debra Dean-Whittaker, (410) 786–0848 for questions regarding the CAHPS® Hospice Survey.

Roxanne Dupert-Frank, (410) 786–9667 for questions regarding the hospice quality reporting program.

Deborah Larwood, (410) 786–9500 for questions regarding process and appeals for Part D payment for drugs while beneficiaries are under a hospice election.

Owen Osaghae, (410) 786–7550 for questions regarding the hospice inpatient and aggregate cap determinations.

For general questions about hospice payment policy, please send your inquiry via email to: hospicepolicy@cms.hhs.gov.

SUPPLEMENTARY INFORMATION: Wage index addenda will be available only through the internet on the CMS Web site at: [http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/index.html]. Readers who experience any problems accessing any of the wage index addenda related to the hospice payment rules that are posted on the CMS Web site identified above should contact Hillary Loeffler at 410–786–0456.

I. Executive Summary
A. Purpose
This final rule will update the payment rates for hospices for fiscal year (FY) 2015 as required under section 1814(i) of the Social Security Act (the Act), based on the hospital market basket updates and the Hospital Wage Index. The Affordable Care Act also requires the Secretary to implement revisions to the hospice payment methodology no earlier than October 1, 2013; as such, this final rule updates the public on our hospice payment reform activities. This final rule also discusses potential definitions of “terminal illness” and “related conditions,” and information on potential processes and appeals for Part D payment for drugs while beneficiaries are under a hospice election. This rule will specify the timeframes for filing the hospice notice of election and the notice of termination/revocation; will require that the attending physician be identified on the hospice election form; and will require changes in the attending physician be documented. Will require expedited hospice self-reporting of their aggregate cap determinations; and will provide updates to the hospice quality reporting program. Additionally, this rule provides guidance on determining a patient’s eligibility for hospice; discusses the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM); clarifies how hospices will report diagnoses, in accordance with current ICD–9–CM guidelines, on hospice claims; and will make a technical regulations text change.

B. Summary of the Major Provisions
In section III.A of this final rule, we provide information on hospice behavior and trends that raises program integrity concerns, including reform analyses related to beneficiaries dying without skilled visits at the end of life; utilization of General Inpatient Care (GIP), Continuous Home Care (CHC), or Inpatient Respite Care (IRC); live discharges; and non-hospice spending for hospice beneficiaries during a hospice election. The findings discussed raise questions about whether some hospices are operating within the intent of the Medicare Hospice benefit established by the Congress. In 2010, section 3132(a) of the Affordable Care Act amended section 1814(i)(6) of the Act to authorize the Secretary of the Department of Health and Human Services (the Secretary) to collect additional data and information determined appropriate to revise payments for hospice care (no earlier than October 1, 2013) and for other purposes. An initial step of hospice payment reform is to clarify hospice payment policy, and when necessary, to enable policies to safeguard beneficiaries and the Medicare hospice benefit.
In response to the concerning trends and comments received in response to prior rulemaking, in section III.B, we solicited comments on the definitions of “terminal illness” and “related conditions” to strengthen and clarify the current concepts of holistic and comprehensive hospice care under the Medicare hospice benefit. In addition, we solicited comments on processes that Part D plan sponsors could use to coordinate with Medicare hospices in determining coverage of drugs for hospice beneficiaries and resolving disagreements between the parties.

We provide guidance on determining the beneficiary’s eligibility for hospice in section III.C.

In section III.D, we will require that hospices complete their aggregate cap determination using a pro-forma spreadsheet and payment data not earlier than 3 months after the cap year end, to determine their cap overpayment no later than 5 months after the cap year, and remit any overpayments at that time. Given concerns about hospices’ increasingly exceeding their aggregate cap, along with the increases in the average overpayment per beneficiary, we believe that this procedural change is necessary to better safeguard the Medicare Trust Fund.

In section III.E, we will require hospices to file both the notice of election (NOE) and the notice of termination/revocation (NOTR) on behalf of beneficiaries within 5 calendar days after the effective date of election or of discharge/revocation, respectively. If an NOE is not filed timely, the days from the effective date of election to the date of filing the NOE will be the financial responsibility of the hospice. We will allow a waiver of this consequence of late-filing an NOE in certain exceptional circumstances.

In section III.F, we will require the hospice to identify the attending physician on the election form and to document changes to the attending physician.

This final rule will update the hospice wage index with more current wage data, and the BNAF will be reduced by an additional 15 percent for a total cumulative BNAF reduction of 85 percent as described in section III.G.2. The total BNAF phase-out will be complete by FY 2016. This final rule will also update the hospice payment rates for FY 2015 by 2.1 percent as described in section III.G.3.

In section III.H of this final rule, we discuss updates to the hospice quality reporting program, including participation requirements for CY 2015 regarding the CAHPS® Hospice Survey, and remind the hospice industry that last year we set the July 1, 2014 implementation date for the Hospice Item Set and the January 1, 2015 implementation date for the CAHPS® Hospice Survey.

More than seven new quality measures will be derived from these tools; therefore, no new measures were proposed this year. Section III.H of this rule also will make changes related to the reconsideration process, extraordinary circumstance extensions or exemptions, and hospice quality reporting program (HQRP) eligibility requirements for newly certified hospices.

In section III.I, we solicit comments on processes that Part D plan sponsors could use to coordinate with Medicare hospices in determining coverage of drugs for hospice beneficiaries and resolving disagreements between the parties.

In section III.J, we discuss the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and clarify appropriate diagnosis reporting on hospice claims per ICD–9–CM Coding Guidelines. Claims will be returned to the provider if the claim listed a non-specific symptom diagnosis as the principal hospice diagnosis.

Finally, we will make a technical regulations text change in section III.K pertaining to the definition of “social worker”.

II. Background

A. Hospice Care

Hospice care is an approach to treatment that recognizes that the impending death of an individual warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment. A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through use of a broad spectrum of professionals and other caregivers, with the goal of making the individual as physically and emotionally comfortable as possible. Hospice is compassionate patient and family-centered care for those who are terminally ill. It is a comprehensive, holistic approach to treatment that recognizes that the impending death of an individual necessitates a change from curative to palliative care.

Medicare regulations define palliative care as “patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering.” Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy, access to information, and choice (42 CFR 418.3). Palliative care is at the core of hospice philosophy and care practices, and is a critical component of the Medicare hospice benefit. As stated in the June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32088), palliative care is an approach that “optimizes quality of life by anticipating, preventing, and treating suffering.” The goal of palliative care in hospice is to improve the quality of life of individuals, and their families, facing the issues associated with a life-threatening illness through the prevention and relief of suffering by means of early identification, assessment and treatment of pain and
other issues. This is achieved by the hospice interdisciplinary team working with the patient and family to develop a comprehensive care plan focused on coordinating care services, reducing unnecessary diagnostics or ineffective therapies, and offering ongoing conversations with individuals and their families about changes in the disease. It is expected that this comprehensive care plan will shift over time to meet the changing needs of the patient and family as the individual approaches the end-of-life.

Medicare hospice care is palliative care for individuals with a prognosis of living 6 months or less if the terminal illness runs its normal course. As generally accepted by the medical community, the term “terminal illness” refers to an advanced and progressively deteriorating illness, and that the illness is diagnosed as incurable (see section III.B for a discussion). When an individual is terminally ill, many health problems are brought on by underlying condition(s), as bodily systems are interdependent. In the June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32088), we stated that “the medical director must consider the primary terminal condition, related diagnoses, current subjective and objective medical findings, current medication and treatment orders, and information about unrelated conditions when considering the initial certification of the terminal illness.”

As referenced in our regulations at §418.22(b)(1), to be eligible for Medicare hospice services, the patient’s attending physician (if any) and the hospice medical director must certify that the individual is terminally ill, that is, the individual’s prognosis is for a life expectancy of 6 months or less if the terminal illness runs its normal course as defined in section 1861(dd)(3)(A) of the Act and our regulations at §418.3. The certification of terminal illness must include a brief narrative explanation of the clinical findings that supports a life expectancy of 6 months or less as part of the certification and recertification forms, as stated in §418.22(b)(3).

The goal of hospice care is to make the hospice patient as physically and emotionally comfortable as possible, with minimal disruption to normal activities, while remaining primarily in the home environment. Hospice care uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through the use of a broad spectrum of professional and other caregivers and volunteers. While the goal of hospice care is to allow for the individual to remain in his or her home environment, circumstances during the end-of-life may necessitate short-term inpatient admission to a hospital, skilled nursing facility (SNF), or hospice facility for procedures necessary for pain control or acute or chronic symptom management that cannot be managed in any other setting. These acute hospice care services are to ensure that any new or worsening symptoms are intensively addressed so that the individual can return to his or her home environment under a home level of care. Short-term, intermittent, inpatient respite services are also available to the family of the hospice patient when needed to relieve the family or other caregivers. Additionally, an individual can receive continuous home care during a period of crisis in which an individual requires primarily continuous nursing care to achieve palliation or management of acute medical symptoms so that the individual can remain at home. Continuous home care may be covered on a continuous basis for as much as 24 hours a day, and these periods must be predominantly nursing care per our regulations at §418.204. A minimum of 8 hours of nursing, or nursing and aide, care must be furnished on a particular day to qualify for the continuous home care rate (§418.302(e)(4)).

Hospices are expected to comply with all civil rights laws, including the provision of auxiliary aids and services to ensure effective communication with patients or patient care representatives with disabilities consistent with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act, and to provide language access for such persons who are limited in English proficiency, consistent with Title VI of the Civil Rights Act of 1964. Further information about these requirements may be found at http://www.hhs.gov/ocr/civilrights.

B. History of the Medicare Hospice Benefit

Before the creation of the Medicare hospice benefit, hospice was originally run by volunteers who cared for the dying. During the early development stages of the Medicare hospice benefit, hospice advocates were clear that they wanted a Medicare benefit available that provided all-inclusive care for terminally-ill individuals, provided pain relief and symptom management, and offered the opportunity to die with dignity in the comfort of one’s home rather than in an institutional setting.1

As stated in the August 22, 1983 proposed rule entitled “Medicare Program; Hospice Care” (48 FR 38146), “the hospice experience in the United States has placed emphasis on home care. It offers physician services, specialized nursing services, and other forms of care in the home to enable the terminally ill individual to remain at home in the company of family and friends as long as possible.” The concept of a patient “electing” the hospice benefit and being certified as terminally ill were two key components in the legislation responsible for the creation of the Medicare Hospice Benefit (section 122 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), (Pub. L. 97–248)). Section 122 of TEFRA created the Medicare Hospice Benefit, which was implemented on November 1, 1983. Under sections 1812(d) and 1861(dd) of the Social Security Act (the Act), codified at 42 U.S.C. 1395t(d) and 1395x(dd), we provide coverage of hospice care for terminally ill Medicare beneficiaries who elect to receive care from a Medicare-certified hospice. Our regulations at §418.54(c) stipulate that the comprehensive hospice assessment must identify the patient’s physical, psychosocial, emotional, and spiritual needs related to the terminal illness and related conditions, and address those needs in order to promote the hospice patient’s well-being, comfort, and dignity throughout the dying process. The comprehensive assessment must take into consideration the following factors: the nature and condition causing admission (including the presence or lack of objective data and subjective complaints); complications and risk factors that affect care planning; functional status; imminence of death; and severity of symptoms (§418.54(c)). The Medicare hospice benefit requires the hospice to cover all reasonable and necessary palliative care related to the terminal prognosis and related conditions, as described in the patient’s plan of care. The December 16, 1983 Hospice final rule (48 FR 56008) requires hospices to cover care for interventions to manage pain and symptoms. Clinically, related conditions are any physical or mental conditions that are related to or caused by either the terminal illness or the medications used to manage the terminal illness.2

2 Harder, PharmD, CGP, Julia. (2012). To Cover or Not To Cover: Guidelines for Covered Medications in Hospice Patients. The Clinician. 7(2), p1–3.
See section III.B of this final rule for a discussion on a possible Medicare hospice definition of “related conditions.” Additionally, the hospice Conditions of Participation at § 418.56(c) require that the hospice must provide all reasonable and necessary services for the palliation and management of the terminal illness, related conditions and interventions to manage pain and symptoms. Therapy and interventions must be assessed and managed in terms of providing palliation and comfort without undue symptom burden for the hospice patient or family. For example, a hospice patient with lung cancer (the principal terminal diagnosis) may receive inhalants for shortness of breath (related to the terminal condition). The patient may also suffer from metastatic bone pain (a related condition) and will be treated with opioid analgesics. As a result of the opioid therapy, the patient may suffer from constipation (a related condition) and require a laxative for symptom relief. It is often not a single diagnosis that represents the terminal prognosis of the patient, but the combined effect of several conditions, which could include not only the physical, but the emotional, psychosocial and spiritual, that makes the patient’s condition terminal. In the December 16, 1983 Hospice final rule (48 FR 56010 through 56011), regarding what is related versus unrelated to the terminal illness, we stated: “. . . we believe that the unique physical condition of each terminally ill individual makes it necessary for these decisions to be made on a case-by-case basis. It is our general view that hospice care is required to provide virtually all the care that is needed by terminally ill patients.” Therefore, unless there is clear evidence that a condition is unrelated to the terminal prognosis, all services will be considered related. It is also the responsibility of the hospice physician to document why a patient’s medical needs will be unrelated to the terminal prognosis.

As stated in the December 16, 1983 Hospice final rule, the fundamental premise upon which the hospice benefit was designed was the “revocation” of traditional curative care and the “election” of hospice care for end-of-life symptom management and maximization of quality of life (48 FR 56008). After electing hospice care, the patient typically returns to the home from an institutionalized setting or remains in the home, to be surrounded by family and friends, and to prepare emotionally and spiritually for death while receiving expert symptom management and other supportive services. Election of hospice care also includes waiving the right to Medicare payment for curative treatment for the terminal prognosis, and instead receiving palliative care to manage pain or symptoms.

The benefit was originally designed to cover hospice care for a finite period of time that roughly corresponded to a life expectancy of 6 months or less. Initially, beneficiaries could receive three election periods: two 90-day periods and one 30-day period. Currently, Medicare beneficiaries can elect hospice care for two 90-day periods and an unlimited number of subsequent 60-day periods; however, the expectation remains that beneficiaries have a life expectancy of 6 months or less if the terminal illness runs its normal course.

C. Services Covered by the Medicare Hospice Benefit

One requirement for coverage under the Medicare Hospice Benefit is that hospice services must be reasonable and necessary for the palliation and management of the terminal illness and related conditions. Section 1861(dd)(1) of the Act establishes the services that are to be rendered by a Medicare certified hospice program. These covered services include: nursing care; physical therapy; occupational therapy; speech-language pathology therapy; medical social services; home health aide services (now called hospice aide services); physician services; homemaker services; medical supplies (including drugs and biologics); medical appliances; counseling services (including dietary counseling); short-term inpatient care (including both respite care and procedures necessary for pain control and acute or chronic symptom management) in a hospital, nursing facility, or hospice inpatient facility; continuous home care during periods of crisis and only as necessary to maintain the terminally ill individual at home; and any other item or service which is specified in the plan of care and for which payment may otherwise be made under Medicare, in accordance with Title XVIII of the Act.

Section 1814(a)(7)(B) of the Act requires that a written plan for providing hospice care to a beneficiary who is a hospice patient be established before care is provided by, or under arrangements made by, that hospice program and that the written plan be periodically reviewed by the beneficiary’s attending physician (if any), the hospice medical director, and an interdisciplinary group (described in section 1861(dd)(2)(B) of the Act). The services offered under the Medicare hospice benefit must be available, as needed, to beneficiaries 24 hours a day, 7 days a week (section 1861(dd)(2)(A)(i) of the Act). Upon the implementation of the hospice benefit, the Congress expected hospices to continue to use volunteer services, though these services are not reimbursed by Medicare (see Section 1861(dd)(2)(E) of the Act (48 FR 38149)). As stated in the August 22, 1983 Hospice proposed rule, the hospice interdisciplinary group should be comprised of paid hospice employees as well as hospice volunteers (48 FR 38149). This expectation is in line with the history of hospice and philosophy of holistic, comprehensive, compassionate, end-of-life care.

Before the Medicare hospice benefit was established, the Congress requested a demonstration project to test the feasibility of covering hospice care under Medicare. The National Hospice Study was initiated in 1980 through a grant sponsored by the Robert Wood Johnson and John A. Hartford Foundations and CMS (then, the Health Care Financing Administration (HCFA)). The demonstration project was conducted between October 1980 and March 1983. The project summarized the hospice care philosophy as the following:

- Patient and family know of the terminal condition.
- Further medical treatment and intervention are indicated only on a supportive basis.
- Pain control should be available to patients as needed to prevent rather than to just ameliorate pain.
- Interdisciplinary teamwork is essential in caring for patient and family.
- Family members and friends should be active in providing support during the death and bereavement process.
- Trained volunteers should provide additional support as needed.

The cost data and the findings on what services hospices provided in the demonstration project were used to design the Medicare hospice benefit. The identified hospice services were incorporated into the service requirements under the Medicare hospice benefit. Importantly, in the August 22, 1983 hospice proposed rule, we stated “the hospice benefit and the resulting Medicare reimbursement is not intended to diminish the voluntary spirit of hospices” (48 FR 38149).
D. Medicare Payment for Hospice Care

Sections 1812(d), 1813(a)(4), 1814(a)(7), 1814(i), and 1861(dd) of the Act, and our regulations in part 418, establish eligibility requirements, payment standards and procedures, define covered services, and delineate the conditions a hospice must meet to be approved for participation in the Medicare program. Part 418, subpart G, provides for a per diem payment in one of four prospectively-determined rate categories of hospice care (routine home care, continuous home care, inpatient respite care, and general inpatient care), based on each day a qualified Medicare beneficiary is under hospice care (once the individual has elected). This per diem payment is to include all of the hospice services needed to manage the beneficiaries’ care, as required by section 1861(dd)(1) of the Act. There has been little change in the hospice payment structure since the benefit’s inception. The per diem rate based on level of care was established in 1983, and this payment structure remains today with some adjustments, as noted below:

1. Omnibus Budget Reconciliation Act of 1989

Section 6005(a) of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101–239) amended section 1814(i)(1)(C) of the Act and provided for the following two changes in the methodology concerning updating the daily payment rates:

(1) effective January 1, 1990, the daily payment rates for routine home care and other services included in hospice care were increased to equal 120 percent of the rates in effect on September 30, 1989; and

(2) the daily payment rate for routine home care and other services included in hospice care for fiscal years beginning on or after October 1, 1990, were the payment rates in effect during the previous Federal fiscal year increased by the hospital market basket percentage increase.

Section 4441(a) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105–33) amended section 1814(i)(1)(C)(ii)(VI) of the Act to establish updates to hospice rates for FYS 1998 through 2002. Hospice rates were updated by a factor equal to the hospital market basket percentage increase, minus 1 percentage point. Payment rates for FYS from 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYS will be the hospital market basket percentage increase for the FY. The Act requires us to use the inpatient hospital market basket to determine hospice payment rates.

3. FY 1998 Hospice Wage Index Final Rule

In the August 8, 1997 FY 1998 Hospice Wage Index final rule (62 FR 42860), we implemented a new methodology for calculating the hospice wage index based on the recommendations of a negotiated rulemaking committee. The original hospice wage index was based on 1981 Bureau of Labor Statistics hospital data and had not been updated since 1983. In 1994, because of disparity in wages from one geographical location to another, the Hospice Wage Index Negotiated Rulemaking Committee was formed to negotiate a new wage index methodology that could be accepted by the industry and the government. This Committee was comprised of representatives from national hospice associations; rural, urban, large and small hospices; and multi-site hospices; consumer groups; and a government representative. The Committee decided that in updating the hospice wage index, aggregate Medicare payments to hospices would remain budget neutral to payments calculated using the 1983 wage index, to cushion the impact of using a new wage index methodology. To implement this policy, a Budget Neutrality Adjustment Factor (BNAF) will be computed and applied annually to the pre-floor, pre-reclassified hospital wage index when deriving the hospice wage index, subject to a wage index floor.

4. FY 2010 Hospice Wage Index Final Rule

Inpatient hospital pre-floor and pre-reclassified wage index values, as described in the August 8, 1997 Hospice Wage Index final rule, are subject to either a budget neutrality adjustment or application of the wage index floor. Wage index values of 0.8 or greater are adjusted by the (BNAF). Starting in FY 2010, a 7-year phase-out of the BNAF began (August 6, 2009 FY 2010 Hospice Wage Index Final rule, (74 FR 39384)), with a 10 percent reduction in FY 2010, an additional 15 percent reduction for a total of 25 percent in FY 2011, an additional 15 percent reduction for a total of 40 percent reduction in FY 2012, an additional 15 percent reduction for a total of 55 percent in FY 2013, and an additional 15 percent reduction for a total 70 percent reduction in FY 2014. The phase-out will continue with an additional 15 percent reduction for a total reduction of 85 percent in FY 2015, and an additional 15 percent reduction for complete elimination in FY 2016. We note that the BNAF is an adjustment which increases the hospice wage index value. Therefore, the BNAF reduction is a reduction in the amount of the BNAF increase applied to the hospice wage index value. It is not a reduction in the hospice wage index value or in the hospice payment rates.

5. The Affordable Care Act

Starting with FY 2013 (and in subsequent fiscal years), the market basket percentage update under the hospice payment system referenced in sections 1814(i)(1)(C)(ii)(VII) and 1814(i)(1)(C)(iii) of the Act will be annually reduced by changes in economy-wide productivity, as specified in section 1886(b)(3)(B)(xi)(II) of the Act, as amended by section 3123(a) of the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by the Health Care and Education Reconciliation Act (Pub. L. 111–152) (the Affordable Care Act). In FY 2013 through FY 2019, the market basket percentage update under the hospice payment system will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions as specified in section 1814(i)(1)(C)(i) of the Act). In addition, sections 1814(i)(5)(A) through (C) of the Act, as amended by section 3132(a) of the Affordable Care Act, require hospices to begin submitting quality data, based on measures to be specified by the Secretary, for FY 2014 and subsequent fiscal years. Beginning in FY 2014, hospices which fail to report quality data will have their market basket update reduced by 2 percentage points.

Section 1814(a)(7)(D)(i) of the Act was amended by section 3132 (b)(2)(D)(i) of the Affordable Care Act, and requires, effective January 1, 2011, that a hospice physician or nurse practitioner have a face-to-face encounter with the beneficiary to determine continued eligibility of the beneficiary’s hospice care prior to the 180th-day recertification and each subsequent recertification, and to attest that such visit took place. When implementing this provision, we decided that the 180th-day recertification and subsequent recertifications corresponded to the recertification for a beneficiary’s third or subsequent benefit period (CY 2011 Home Health Prospective Payment System final rule (75 FR 70435)). Further, section 1814(i)(6) of the Act, as amended by section 3132(a)(1)(B) of the Affordable Care Act, authorizes the Secretary to
collect additional data and information determined appropriate to revise payments for hospice care and other purposes. The types of data and information suggested in the Affordable Care Act would capture accurate resource utilization, which could be collected on claims, cost reports, and possibly other mechanisms, as the Secretary determines to be appropriate. The data collected may be used to revise the methodology for determining the payment rates for routine home care and other services included in hospice care, no earlier than October 1, 2013, as described in section 1814(i)(6)(D) of the Act. In addition, we are required to consult with hospice programs and the Medicare Payment Advisory Commission (MedPAC) regarding additional data collection and payment revision options.

6. FY 2012 Hospice Wage Index Final Rule

When the Medicare Hospice Benefit was implemented, the Congress included an aggregate cap on hospice payments, which limits the total aggregate payments any individual hospice can receive in a year. The Congress stipulated that a “cap amount” be computed each year. The cap amount was set at $6,500 per beneficiary when first enacted in 1983 and is adjusted annually by the change in the medical care expenditure category of the consumer price index for urban consumers from March 1984 to March of the cap year (section 1814(i)(2)(B) of the Act). The cap year is defined as the period from November 1st to October 31st. As we stated in the August 4, 2011 FY 2012 Hospice Wage Index final rule (76 FR 47308 through 47314), for the 2012 cap year and subsequent cap years, the hospice aggregate cap will be calculated using the patient-by-patient proportional methodology, within certain limits. We will allow existing hospices the option of having their cap calculated via the original streamlined methodology, also within certain limits. New hospices will have their cap determinations calculated using the patient-by-patient proportional methodology. The patient-by-patient proportional methodology and the streamlined methodology are two different methodologies for counting beneficiaries when calculating the hospice aggregate cap. A detailed explanation of these methods is found in the August 4, 2011 FY 2012 Hospice Wage Index final rule (76 FR 47308 through 47314). If a hospice’s total Medicare reimbursement for the cap year exceeded the hospice aggregate cap, then the hospice must repay the excess back to Medicare.

E. Trends in Medicare Hospice Utilization

Since the implementation of the hospice benefit in 1983, and especially within the last decade, there has been substantial growth in hospice utilization. The number of Medicare beneficiaries receiving hospice services has grown from 513,000 in FY 2000 to over 1.3 million in FY 2013. Similarly, Medicare hospice expenditures have risen from $2.9 billion in FY 2000 to an estimated $15.1 billion in FY 2013. Our Office of the Actuary (OACT) projects that hospice expenditures are expected to continue to increase, by approximately 8 percent annually, reflecting an increase in the number of Medicare beneficiaries, more beneficiary awareness of the Medicare Hospice Benefit for end-of-life care, and a growing preference for care provided in home and community-based settings. However, this increased spending is partly due to an increased average lifetime length of stay for beneficiaries, from 54 days in 2000 to 86 days in 2011, an increase of 59 percent.

There have also been noted changes in the diagnosis patterns among Medicare hospice enrollees. Specifically, there were notable increases between 2002 and 2007 in neurologically-based diagnoses, including various dementia diagnoses. Additionally, there have been significant increases in the use of non-specific, symptom-classified diagnoses, such as “debility” and “adult failure to thrive.” In FY 2012, “debility” and “adult failure to thrive” were the first and third most common hospice diagnoses, respectively. “Debility” and “adult failure to thrive” continue to be among the most common hospice principal diagnoses (14 percent), and those, combined with “dementia” and Alzheimer’s disease constituted approximately 30 percent of all claims-reported principal diagnosis codes reported in FY 2013 (see Table 2 below).

**Note(s):** The frequencies shown represent beneficiaries that had at least one claim with the specific ICD–9–CM code reported as the principal diagnosis. Beneficiaries could be represented multiple times in the results if they have multiple claims during that time period with different principal diagnoses.

III. Provisions of the Proposed Regulations and Responses to Comments

On May 8, 2014, we published a proposed rule in the Federal Register (79 FR 26538–26587) entitled, FY 2015 Hospice Wage Index and Payment Rate Update; Hospice Quality Reporting Requirements and Process and Appeals for Part D Payment for Drugs for Beneficiaries Enrolled in Hospice (herein referred to as the FY 2015 Hospice Wage Index proposed rule). The FY 2015 Hospice Wage Index proposed rule updated the public on several issues and set forth the following proposals:

- We discussed recent payment reform analyses related to beneficiaries dying without skilled visits at the end of life; utilization of General Inpatient Care (GIP), Continuous Home Care (CHC), or Inpatient Respite Care (IRC); live discharges; and non-hospice spending for hospice beneficiaries during a hospice election.
- We solicited comments on the definition of “terminal illness” and “related conditions.”
- We provided guidance on determining eligibility for hospice care.
- We proposed to require that hospices determine their inpatient and/or aggregate cap overpayment within 5 months after the cap year, and proposed to further amend §418.308 and §405.371 to state that payments to a hospice would be suspended in whole or in part, for failure to file a self-determined inpatient and aggregate cap determination no later than 5 months after the end of the cap year (that is, by March 31st of each year).
- We proposed to amend §418.24(a) to require that a hospice must file the Notice of Election (NOE) with its Medicare Administrative Contractor (MAC) within 3 calendar days after the hospice effective date of election. We also proposed that for those hospices that do not file the NOE timely (that is, within 3 calendar days after the effective date of election), Medicare would not cover and pay for days of hospice care from the effective date of election to the date of filing of the NOE. In addition, we proposed that these days be considered the financial responsibility of the hospice; the hospice could not bill the beneficiary for them.
- We proposed to revise the regulations at §418.26 and §418.28 to require hospices to file a Notice of Termination or Revocation (NOTR) within 3 calendar days after the effective date of a beneficiary’s discharge or revocation, if they have not already filed a final claim.
- We proposed to amend the regulations at §418.24(b)(1) to require the election statement to identify the attending physician, and to include an acknowledgement that the attending physician was chosen by the patient. We also proposed that if a patient (or representative) wants to change his or her designated attending physician, he or she must file a statement with the hospice which identifies the new attending physician and includes the date the change is to be effective, the date that the statement is signed, and the patient’s (or representative’s) signature, along with an acknowledgement that this change in the attending physician is the patient’s (or representative’s) choice.
- We provided a preliminary update to the FY 2015 hospice wage index, continuing to use the hospital pre-floor, pre-classified wage index as the source data, and provided a preliminary update to the FY 2015 hospice payment rates.
- We proposed in §418.312 that newly certified hospices that receive notice of their CMS certification number on or after November 1, 2014, for payments to be made in FY 2016, be excluded from the quality reporting requirements for the FY 2016 payment determination, as data submission and analysis would not be possible for a hospice receiving notification of their certification this late in the reporting time period. We also proposed that in future years, hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY.
- We proposed that approved survey vendors meet all of the minimum business requirements and follow the detailed technical specifications for survey administration as published in the CAHPS® Hospice Survey specifications manual. We proposed to codify the CAHPS® Hospice Survey vendor requirements to be effective with the FY 2017 Annual Payment Update (APU) (as proposed in §418.312). We also proposed that no organization, firm, or business that owns, operates, or provides staffing for a hospice be permitted to administer its own Hospice CAHPS® survey or administer the survey on behalf of any other hospice in the capacity as a Hospice CAHPS® survey vendor.
- We described a potential coordination of benefits and appeals process for Part D payment for drugs while beneficiaries are under a hospice election, and solicited comments to guide us in making a possible proposal in future rulemaking. We solicited comments on whether hospices need to determine, in a specific amount of time, a beneficiary’s drug and biological needs and communicate with the Part D plan sponsor or to the other payer and/or provider, verbally or in writing, to ensure that there is no lapse of reasonable and necessary drugs and biologicals or other items or services for the palliation and management of the terminal illness and related conditions. We also solicited comments on steps a hospice could take to reconcile payment responsibility with Part D plans or with other payers or providers.
- We provided an update on the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and coding guidelines for hospice claims reporting.
- We proposed to make at technical correction in §418.3 to delete an obsolete definition for a “social worker.”

We provided for a 60 day comment period on the FY 2015 Hospice Wage Index proposed rule. We received 114 public comments from the Medicare Payment Advisory Commission, Medicare beneficiary advocacy groups, hospice providers, state and national hospice associations, hospice and end-of-life care organizations and experts, hospice financial experts and consultants, attorneys, Part D sponsors, pharmacy associations, private insurance plans, and private individuals. In general, commenters provided thoughtful and diverse comments on the proposed policies. We also received comments that are outside the scope of this rule. We will take these comments under consideration when evaluating current hospice policies.

Summaries of the public comments received on the proposals and our responses to those comments are provided in the appropriate sections in the preamble of this final rule.

A. Hospice Payment Reform: Research and Analyses

Section 3132(a) of the Affordable Care Act amended section 1814(i)(6) of the Act to authorize the Secretary to collect additional data and information determined appropriate to revise payments for hospice care and for other purposes. The data collected may be used to revise the methodology for determining the payment rates for routine home care and other services included in hospice care, no earlier than October 1, 2013, as described in section 1814(i)(6)(D) of the Act. We are also required to consult with hospice...
programs and the Medicare Payment Advisory Commission (MedPAC) regarding additional data collection and payment revision options. Since 2010, we have been working with our hospice reform contractor, Abt Associates, to review the most current peer-reviewed literature; conduct research and analyses; identify potential vulnerabilities in the current payment system; and research and develop hospice payment model options. We recently required additional information on hospice claims regarding drugs and certain durable medical equipment, effective April 1, 2014; and are in the process of finalizing changes to the hospice cost report to better collect data on the costs of providing hospice care. The additional information on hospice claims and the hospice cost report will be used in our hospice payment reform efforts, once the data are available for analysis.

The research and analyses conducted thus far on available Medicare claims and cost report data have highlighted hospice utilization trends that raise concerns regarding the viability of the Medicare hospice program and the impact of beneficiary access to quality end of life care. In March 2009, the Medicare Payment Advisory Commission (MedPAC) recommended that Medicare improve its payment system for hospice services to address a misalignment between Medicare’s payments and hospice’s costs that created incentives for providers to enroll patients who are more likely to have long stays because those stays are more profitable than short ones (http://www.medpac.gov/chapters/Mar09_Ch06.pdf). MedPAC’s June 2013 Report to Congress on Medicare and the Health Care Delivery System reiterated concerns about utilization trends and suggested that such trends were driven by a misalignment in the payment system (http://www.medpac.gov/chapters/Jun13_Ch05.pdf). MedPAC’s June 2013 report added that, while payment reform would better align payments with costs, additional administrative controls were necessary to balance incentives and strengthen provider compliance. As such, we believe that a critical goal of the Medicare hospice payment system is to strengthen and safeguard the current scope of the Medicare hospice benefit. This will provide a solid foundation on which to reform the methodology used to pay for Medicare hospice services. Program integrity is being addressed immediately while we develop further data and research to address payment reform in the near future.

Abt Associates, with its subcontractor Brown University, has developed a technical report entitled, “Medicare Hospice Payment Reform: Analyses to Support Payment Reform,” dated May 1, 2014 (hereafter, referred to as the May 2014 Technical Report) that thoroughly describes the analytic file and extensive work performed on analyzing current hospice utilization data, of which many of the results of the analyses are presented in this final rule. Both the May 2014 Technical Report and an updated literature review are available on our hospice center Web page at: http://www.cms.gov/Center/Provider-Type/Hospice-Center.html in the “Research and Analyses” section. We further examined hospice utilization data and developed a provider-level file to identify aberrant hospice behavior. The provider-level file contains information on beneficiaries who were discharged (alive or deceased) in calendar year (CY) 2012 and includes claims data from January 1, 2010 through December 31, 2012. Some of the findings described in this section, are based on this provider-level file.

### Table 3—Frequency and Percentage of Decedents Not Receiving Skilled Visits at the End of Life, Calendar Year 2012

<table>
<thead>
<tr>
<th>Number of decedents</th>
<th>Percentage of decedents with no skilled visits</th>
</tr>
</thead>
<tbody>
<tr>
<td>No skilled visits on last day (and last day was RHC)</td>
<td>656,355</td>
</tr>
<tr>
<td>No skilled visits on last two days (and last two days were RHC)</td>
<td>622,334</td>

<td>585,648</td>
</tr>
<tr>
<td>No skilled visits on last four days (and last four days were RHC)</td>
<td>551,359</td>
</tr>
</tbody>
</table>

Note(s): Skilled visit was considered to be a visit from a social worker, therapist, or nurse. Source: Beneficiaries whose last days of hospice enrollment were billed to the RHC level of care using 100% of hospice days from the Hospice Standard Analytic File (SAF), Calendar Year (CY) 2012.

Further analysis of skilled visits during the last two days of life found that 10.3 percent of very short stay decedents (5 days or less) did not receive skilled visits during the last two days of life. In contrast, 15.9 percent of decedents with lengths of stay 181 days or longer did not receive visits in the last two days of life. Newer hospices (5
years or less since Medicare certification) were more likely to have decedents with no skilled visits during the last two days of life (17.8 percent) compared to older hospices (6 years or more since Medicare certification; 14.0 percent). We also found geographic differences in this analysis. The five states with the lowest percentage of decedents with no skilled visits on the last two days of life included: Wisconsin (5.7 percent), North Dakota (7.3 percent), Vermont (7.5 percent), Tennessee (7.5 percent), and Kansas (8.7 percent). The five states with the highest percentage of decedents with no skilled visits on the last two days of life included: New Jersey (23 percent), Massachusetts (22.9 percent), Oregon (21.2 percent), Washington (21 percent), and Minnesota (19.4 percent).

Using the provider-level file referenced above, we also found that, on average, hospices did not report any skilled visits in the last two days of life for 9.7 percent of their decedents who died receiving routine home care. Nearly 5 percent of hospices did not provide any skilled visits in the last two days of life to more than 50 percent of their decedents receiving routine home care on those last two days; the average lifetime length of stay among those decedents was 143 days. We note that the average lifetime length of stay in our provider-level file was 95.4 days (among beneficiaries who were discharged alive or deceased in CY 2012). Furthermore, we found that 34 hospices did not make any skilled visits in the last 48 hours of life to any of their decedents who died while receiving routine home care.

2. General Inpatient Care, Continuous Home Care, and Inpatient Respite Care Utilization

Medicare Conditions of Participation require hospices to demonstrate that they are able to provide all four levels of care—Routine Home Care (RHC), General Inpatient Care (GIP), Continuous Home Care (CHC) and Inpatient Respite Care (IRC) to be a certified Medicare hospice provider. As stated in our regulations at §418.302(b)(4), a GIP day is a day in which an individual who has elected to receive hospice care, receives general inpatient care in an inpatient facility for pain control or acute or chronic symptom management which cannot be managed in other settings. For FY 2014, the payment rate for GIP was $694.19 per day compared to $156.06 for a day of RHC.

While the goal of hospice care is to allow for the individual to remain in his or her home environment, circumstances during the end-of-life may necessitate short-term inpatient admission to a hospital, skilled nursing facility (SNF), or hospice inpatient facility for procedures necessary for pain control or acute or chronic symptom management that cannot be managed in any other setting. These acute hospice care services are to ensure that any new or worsening symptoms are intensively addressed so that the individual can return to his or her home environment under a home level of care.

As part of our reform work, we analyzed CY 2012 data to better understand GIP utilization. We found that 77.3 percent of beneficiaries did not have any GIP care in 2012. Using provider-level data for beneficiaries discharged in 2012, we also found that 21.1 percent did not provide GIP care to any of their beneficiaries. While there are appropriate circumstances where a hospice provides no GIP (for example, when a provider only has a few patients, none of whom needs GIP), we are concerned that more than a fifth of hospices not providing any GIP may be an indication that hospice beneficiaries do not have adequate access to a necessary level of care for acute or chronic symptom management. We also found that there were site of service differences such that the longest GIP length of stay was in the inpatient hospice setting (6.1 days) and shortest at in the inpatient hospital setting (4.5 days). Over two-thirds of GIP days were provided in an inpatient hospice setting (68 percent), and about a quarter of GIP days were provided in an inpatient hospital (24.9 percent). Only 5.5 percent of GIP days were provided in a SNF.

As stated in our regulations at §418.302(b)(2), a continuous home care day is a day on which an individual who has elected to receive hospice care, is not in an inpatient facility, and receives hospice care consisting predominantly of nursing care on a continuous basis at home. Home health aide (also known as a hospice aide) or homemaker services, or both, may also be provided on a continuous basis. Continuous home care is only furnished during brief periods of crisis as described in §418.204(a), and only as necessary to maintain the terminally ill patient at home. Continuous home care may be continuous 24 hours a day for as much as 24 hours a day, and these periods must be predominantly nursing care per our regulations at §418.204. A minimum of 8 hours of care must be furnished on a particular day to qualify for the continuous home care rate (§418.302(e)(4)).

As part of our reform work, we analyzed CY 2012 data to better understand CHC utilization. Overall, approximately 0.4 percent of all hospice days in 2012 were billed as CHC, but that percentage decreases to 0.2 when a large chain provider with a large percentage of its hospice days billed as CHC was excluded. Although 42.7 percent of hospices billed at least 1 day of CHC, we found considerable variation in the share of CHC days among hospices that provided any CHC. Almost 90 percent of hospices that provided any CHC had less than 1 percent of their days billed as CHC, but four hospices billed more than 10 percent of their days as CHC. Forty hospices accounted for 46 percent of all CHC days and a single hospice accounted for over a quarter of all CHC days. Among hospices who billed for providing CHC, 9.4 percent provided over half of their CHC days to beneficiaries residing in a nursing home. For CHC, a hospice must provide a minimum of 8 hours of care during a 24-hour day, which begins and ends at midnight.

Finally, we analyzed inpatient respite care (IRC) utilization in CYs 2005 through 2012. IRC is provided in an approved facility, as needed, on an occasional basis to relieve the family caregivers for up to 5 consecutive days. Payment for IRC is subject to the requirement that it may not be provided consecutively for more than 5 days at a time. As stated in our regulations at §418.302(e)(5), payment for the sixth and any subsequent day of respite care is made at the routine home care rate. Overall, while the percentage of beneficiaries receiving at least 1 day of IRC care increased from 1.44 percent in CY 2005 to 3.4 percent in CY 2012, only a small percentage of beneficiaries utilize IRC. We also found that 26 percent of hospices did not bill for any IRC days in CY 2012. IRC is a critical part of the Medicare hospice benefit, providing vital support and relief to the patient’s caregiver and family. We will continue to monitor utilization of IRC level of care, over time, to ensure beneficiaries receiving hospice care have access to respite services for their caregivers.

The variation in the provision of GIP, CHC, and IRC could suggest that the level of hospice care that a beneficiary receives may not always be driven by patient factors. Medicare Conditions of Participation require hospices to...
demonstrate that they are able to provide all four levels of care—RHC, GIP, CHC, and IRC—in order to be a certified Medicare hospice provider. We will continue to monitor GIP, CHC, and IRC use to identify hospices with aberrant utilization patterns, to identify hospices that may be in violation of the CoPs or of payment regulations, and to refer hospices identified through our analysis to Survey and Certification, to the Office of Financial Management, and to the Center for Program Integrity for further investigation.

3. Hospice Live Discharges

Currently, federal regulations allow a patient who has elected to receive Medicare hospice services to revoke that election at any time. That patient may re-elect hospice benefits at any time for any other election period that is still available. However, federal regulations provide limited opportunity for a Medicare hospice provider to discharge a patient from its care. In accordance with 418.26, discharge from hospice care is permissible when the patient moves out of the provider’s service area, is determined to be no longer terminally ill, or for cause. Hospices may not automatically or routinely discharge the patient at its discretion, even if the care may be costly or inconvenient. Neither should the hospice request or demand that the patient revoke his/her election.

Our regulations also state that if the hospice patient (or his/her representative) revokes the hospice election, Medicare coverage of hospice care for the remainder of that period is forfeited. The patient may, at any time, re-elect to receive hospice coverage for any other election period that he or she is eligible to receive (§ 418.28(c)(3) and § 418.24(e)). During the time period between revocation/discharge and the re-election of the hospice benefit, Medicare coverage would resume for those Medicare benefits previously waived.

Prior to 2012, claims data provided limited information about the reason a hospice patient was discharged from a hospice’s care. Starting July 1, 2012, the discharge information collected on the Medicare claim was expanded to capture the reason for all types of discharge, that is, if the discharge was due to a death, revocation, transfer to another hospice, moving out of the hospice’s service area, discharge for cause, or due to the patient no longer being considered terminally ill (that is, no longer qualifying for hospice services). Between 2000 and 2012, the overall rate of live discharges increased from 13.2 percent of hospice discharges to 18.1 percent in 2012. In 2010, the rate of live discharges varied by state (from 12.8 percent in Connecticut to 40.5 percent in Mississippi) and by hospice provider (from a 25th percentile of 9.5 percent to 75th percentile of 26.4 percent). Furthermore, analysis of our provider-level file shows that of the 3,702 hospices in our file, 71 hospices had a live discharge on 100 percent of their beneficiaries. The average lifetime length of stay for these hospices was 193 days compared to the national average lifetime length of stay of 95.4 days (among beneficiaries who were discharged alive or deceased in CY 2012). We have shared this information with the Office of Financial Management and with the Center for Program Integrity for their review and follow-up.

One study of hospice live discharges in cancer patients noted that smaller hospices and for-profit hospices had a higher rate of hospice live discharges.5 Our subcontractors at Brown University studied 2010 hospice live discharges among all diagnoses, finding that not-for-profit hospice programs had a lower rate of hospice live discharges than for-profit hospice programs (14.6 percent vs. 22.4 percent, p<=.001). Small for-profit hospices in operation 5 years or less had a higher rate of hospice live discharges compared to older, for-profit hospices (31.5 percent vs. 12.8 percent, p<=.001). We are also concerned over patterns of revocations and elections of the Medicare hospice benefit for the purpose of potentially avoiding costly hospitalizations, expensive procedures, drugs, or services. In 2010, 13,770 out of the 182,172 live discharges had a pattern of hospice discharge, hospital admission, and hospice readmission. These cases accounted for $126 million dollars in Medicare payments for the hospitalization between hospice election periods. Nearly half of these Medicare payments are accounted for in ten states with the highest rate of this pattern of discharges (that is, MS, OK, AL, SC, MD, VA, TX, NJ, GA, and LA accounted for $56.0 million dollars of the hospitalization costs).

We understand that the rate of live discharges should not be zero, given the uncertainties of prognostication and the ability of patients and their families to revoke the hospice election at any time. However, Medicare hospice care is a comprehensive, coordinated care model designed to optimize quality of life by anticipating, preventing, and treating pain and symptoms. We are concerned that patterns of discharge, hospital admission, and hospice readmission do not provide a comprehensive, coordinated care experience for terminally ill patients.

4. Non-hospice Spending for Hospice Beneficiaries During an Election

When a beneficiary elects the Medicare hospice benefit, he or she waives the right to Medicare payment for services related to terminal illness and related conditions, except for services provided by the designated hospice and the attending physician. However, Medicare payment is allowed for covered Medicare items or services which are unrelated to the terminal illness and related conditions. When a hospice beneficiary receives items or services unrelated to the terminal illness and related conditions from a non-hospice Part A or Part B provider, that provider can bill Medicare for the items or services, but must include on the claim a GW modifier (if billed on a professional claim) or condition code 07 (if billed on an institutional claim). When a hospice beneficiary with Part D coverage receives medications unrelated to the terminal illness and related conditions, Prescription Drug Events (PDEs) are billed to Part D and do not require a modifier or a condition code.

In follow up to our initial analysis of hospice drug costs paid through Part D (78 FR 48245–48246), we analyzed the magnitude of Medicare spending outside of the hospice benefit for items or services provided to hospice beneficiaries during a hospice election from Parts A, B, and D. In CY 2012, we found that Medicare paid $710.1 million for Part A and Part B items or services while a beneficiary was receiving hospice care. We estimated that 76.5 percent of the $710.1 million included either a GW modifier or a condition code 07 on the claim, which indicated that the services identified by the provider or supplier as unrelated to the terminal illness and related conditions. The remaining 23.5 percent of this $710.1 million was for claims without a GW modifier or condition code 07, some of which may have been processed due to late filing of the notice of election (NOE).

The $710.1 million paid for Part A and Part B items or services was for durable medical equipment (7.0 percent), inpatient care (care in long-term care hospitals, inpatient rehabilitation facilities, acute care hospitals; 28.6 percent), outpatient Part B services (16.0 percent), other Part B services (also known as physician, practitioner and supplier claims, such

---

as labs and diagnostic tests, ambulance transports, and physician office visits; 37.4 percent), skilled nursing facility care (5.7 percent), and home health care (4.5 percent). Part A and Part B non-hospice spending occurred mostly for hospice beneficiaries who were at home (43.3 percent). We also found that 28.3 percent of hospice beneficiaries were in a nursing facility, 14.1 percent were in an inpatient setting, 10.2 percent were in an assisted living facility, and 4.1 percent were in other settings. Although the average daily rate of expenditures outside the hospice benefit was $7.91, we found differences amongst states where beneficiaries receive care. The highest rates per day occurred for hospice beneficiaries residing in West Virginia ($13.91), or in the South (Florida ($13.17), Texas ($12.45), Mississippi ($11.91), and South Carolina ($10.16)).

Another area of concern in high non-hospice Medicare spending occurring during a hospice election is hospital emergency department (ED) visits and observation stays. Ninety-five percent of these ED visits and observation stays were billed and paid outside of the hospice benefit with condition code 07 on the claim. Using data on CY 2010 hospice admissions, followed through discharge or December 31, 2011 (whichever came first), we found that 8.8 percent of hospice beneficiaries had a total of 87,720 ED visits/observation stays billed to Medicare during their hospice election, at a cost of $268.4 million. The majority of these beneficiaries (77.6 percent) only experienced a single ED visit/observation stay, but 20.9 percent had between 2 and 4 ED visits/observation stays during their election, and 1.4 percent had more than 5 ED visits/observation stays during their hospice election. Although some beneficiaries may go directly to the ED rather than contacting the hospice first, 22.3 percent had 2 or more ED visits; these results may indicate that the hospice is not aware of the beneficiary’s condition, the hospice is not being responsive to the beneficiary needs, or related conditions are being treated as if they were unrelated. Most ED visits/observation stays occurred in younger beneficiaries with non-cancer diagnoses, in beneficiaries in newer hospices, and in beneficiaries receiving care in the South, with Mississippi and Oklahoma having the highest rates (21.1 and 20.5 ED visits/observation stays per 100 hospice admissions, respectively). The most frequently occurring Diagnosis Related Groups (DRGs) associated with these ED visits/observation stays were septicemia or severe sepsis, kidney and urinary tract infections, hip and femur procedures, simple pneumonia and pleurisy, and gastrointestinal hemorrhage. Some of these frequently occurring DRGs are conditions which are common at end-of-life, and could be attended to in the home or with a GIP level of care. This raises concerns about whether the ED visits/observation stays were actually related to the terminal illness and related conditions and should have been covered by the hospice.

In addition to analyzing data from Parts A and B of Medicare, we analyzed CY 2012 Part D data which showed $417.9 million in total drug spending by Medicare, states, beneficiaries, and other payers, for hospice beneficiaries during a hospice election. Table 4 details the various components of Part D spending.

Source: Abt Associates analysis of 100% 2012 Medicare Claim Files. For more information on the components above and on Part D data, go to the Research Data Assistance Center’s (ResDAC’s) Web site at http://www.resdac.org/.

The portion of the $417.9 million total Part D spending which was paid by Medicare is the sum of the Low Income Cost-Sharing Subsidy and the Covered Drug Plan Paid Amount, or $334.9 million.

**Medicare Spending**: In total, actual non-hospice Medicare expenditures occurring during a hospice election in CY 2012 were $710.1 million for Parts A and B spending, plus $334.9 million for Part D spending, or approximately $1 billion dollars. This figure is comparable to the estimated $1 billion MedPAC reported during its December 2013 public meeting. Associated with this $1 billion in Medicare spending were cost sharing liabilities such as co-payments and deductibles that beneficiaries incurred. Hospice beneficiaries had $135.5 million in cost-sharing for items and services that were billed to Medicare Parts A and B, and $48.2 million in cost-sharing for drugs that were billed to Medicare Part D, while they were in a hospice election. In total, this represents a 2012 beneficiary liability of $183.7 million for Parts A, B, and D items or services provided to hospice beneficiaries during a hospice election. Therefore, the total non-hospice costs paid by Medicare or
due from beneficiaries for items or services provided to hospice beneficiaries during a hospice election were over $1.2 billion in CY 2012.

All-Payer Spending: Under Part D, gross covered drug cost on a claim includes the amount paid by the Part D plan, the beneficiary’s cost sharing, and any amounts paid by others on the beneficiary’s behalf. These latter amounts include the low-income subsidy amount paid by Medicare for beneficiaries who are subsidy-eligible, amounts paid by other payers whose payments can be counted toward the beneficiary’s true out-of-pocket (TrOOP) costs, and amounts paid by others whose payments, though not TrOOP-eligible, reduce the amount of the beneficiary’s liability. Accumulated gross covered drug costs are used to establish the beneficiary’s position in the benefit. That is, these costs determine when the beneficiary has met a plan’s deductible, if any, and moves into the initial coverage period, and when his or her initial coverage period ends and the coverage gap begins. TrOOP, whether paid by the beneficiary or on the beneficiary’s behalf by a TrOOP-eligible payer, determines when the beneficiary has met the annual out-of-pocket threshold and moves into the catastrophic phase of the benefit. Thus, administration of the Medicare prescription drug benefit is dependent upon both gross covered drug costs and TrOOP. As such, we are also describing total non-hospice Part D spending, both Medicare and non-Medicare. Non-hospice Part D spending for hospice beneficiaries during a hospice election was incurred by Medicare, by States, by the Veterans Administration, by TRICARE, by charities, and by other payers, in addition to the cost-sharing liabilities incurred by beneficiaries.

Part D spending by all-payers that occurred for hospice beneficiaries during a hospice election, including beneficiary cost-sharing, totaled $417.9 million in CY 2012. If this is added to the $710.1 million in Medicare spending for Parts A and B, and $135.5 million in cost sharing for Parts A and B, total non-hospice costs are $1.3 billion. We do not have data on other payers’ spending for Part A or Part B services. Of note, 51.6 percent of this $1.3 billion is associated with 373 hospices, with an average total per beneficiary of $1,289 in non-hospice costs.

For the current guidance regarding the coordination between Part D sponsors and hospices, we refer readers to visit the Hospice Center Web page’s Spotlight section or the Coordination of Benefit section at: http://www.cms.gov/Center/Provider-Type/Hospice-Center.html.

The dollars spent by Part D and by beneficiaries for drugs covered outside of the hospice benefit for hospice beneficiaries during a hospice election raise concerns about whether some of these drugs should have been paid for by the hospice. We examined drug costs incurred by hospices from 2004 to 2012, using hospice cost report data adjusted to constant 2010 dollars. We saw a declining trend in the drug costs per patient day, with costs declining from a mean of $20 per patient-day in 2004 to $11 per patient-day in 2012 (see Table 5 below). We recognize that many hospices have become more efficient in their operations, but we are concerned that the decline in drug costs is of a magnitude that could suggest that some hospices are not providing, and thus are not incurring the costs for, all needed patient medications.

Source: Freestanding hospice cost reports with HCRIS release date of 1/23/2014. The costs are averaged at the provider-level and adjusted to constant 2010 dollars using the Producer Price Index for prescription pharmaceuticals.

Notes: We excluded cost reports with period less than 10 months or greater than 14 months, missing information or negative reported values for total costs or payments, were in the top and bottom 1% of cost per day, were in the top and bottom 5% of provider margins, and where the aggregate of cost centers does not equal total costs as reported.

We will continue to monitor non-hospice Medicare spending for beneficiaries during hospice elections.

B. Solicitation of Comments on Definitions of “Terminal Illness” and “Related Conditions”

1. The Development of the Medicare Hospice Benefit

Dame Cicely Saunders introduced the idea of hospice care in the United States during a lecture at Yale University in 1963. During the same decade, the international best-seller, On Death and Dying, published in 1969, by Dr. Elisabeth Kubler-Ross, helped to bring death out of secrecy and brought new public awareness and discussion about dying to health care policymakers. Her interviews with over 500 dying patients shed new light on the dying process, as well as the needs and treatment wishes of those who were at the end-of-life. Her hallmark work argued for end-of-life care provided in the home, rather than in an institution, and stressed the importance of patients’ being an integral part of their treatment decision-making.7 In 1970, there were no formal hospice programs in the United States. However, healthcare providers started to recognize the need for a care delivery model to address the needs of those individuals who no longer wanted to seek out the aggressive, medical, curative model of healthcare for advancing illnesses and injuries. They also focused on a care delivery model that would provide pain and symptom relief that would offer an alternative to

hospitilization and would focus on the “total person,” as he or she approached the end-of-life. The hospice model of care, which had been previously introduced to the United States by Cicely Saunders, was viewed to be the type of care delivery model that could offer those services.

In 1972, Dr. Elisabeth Kubler-Ross testified at the first national hearings on the subject of death with dignity, conducted by the U.S. Senate Special Committee on Aging, and the first hospice legislation was introduced in the United States Senate, but was not enacted. Florence Wald, the Dean of the Yale School of Nursing, who attended the 1963 lecture given by Cicely Saunders, along with two pediatricians and a chaplain, founded the first United States hospice, Connecticut Hospice, in 1974. Ongoing meetings between hospice providers and hospice leaders evolved into the formation of the National Hospice Organization in 1978 (now called the National Hospice and Palliative Care Organization, or NHPCO). The first “Standards of a Hospice Program of Care” were published by National Hospice Organization in 1979. Even during the early stages of hospice development, hospice leaders were working with key legislative leaders to develop a system to reimburse hospice care in the United States. However, it was evident that before governmental reimbursement could occur, data had to be collected and analyzed to demonstrate what hospices actually provided and what costs were involved in rendering hospice care. The Health Care Finance Administration (HCFA)—now known as the Centers for Medicare & Medicaid Services (CMS)—conducted a national demonstration of 26 hospices throughout the country to study the effect of reimbursed hospice care. The results of this demonstration, as well as those sponsored by the private health insurance sector and private foundations, and along with the testimony of multiple hospice industry leaders, legislators and hospice families, helped to formulate the structure of the Medicare Hospice Benefit.

During Congressional committee hearings regarding the development of a Medicare hospice benefit, testimony by Paul Willging, deputy administrator of HCFA, expressed caution about embracing benefit expansions that could lead to unexpected consequences and said that HCFA “must clearly define what we would pay for and to whom, in order to meet our responsibilities to patients, providers and the taxpayers.” Other stakeholders agreed that a Medicare hospice benefit needed to be structured to promote an optimum movement from a point of view of controlling costs and offering the most appropriate means of service without the development of a system that focused on just getting maximum reimbursement from Medicare. Stakeholders also agreed that unique characteristics of hospice care should be maintained. The goal was not to have the Federal government provide total support to hospice programs; rather, legislation would be enacted that would supplement the continued support of the local community, private sector and other resources which allow hospices to maintain their unique identity, spirit of volunteerism and altruistic focus. The National Hospice Organization president, Dr. Edwin Olsen, testified at the March 25, 1982 Congressional hearing that, at that time, most American hospices were community charities by design and intent, and that hospice offered an integrated service. Hospices funded not as an add-on, but as a comprehensive alternative to the typical ways of caring for the terminally ill and their families. The hospice industry, as discussed in Dr. Olsen’s testimony, was very clear that their goal was to maintain that alternative service for those who were approaching end-of-life.

Hospice industry leaders also expressed the importance of hospice program accountability. Hospices would be accountable for and able to control the quality and delivery of patients admitted for hospice care, instead of having to “broker” the patients out to other providers for reimbursement and convenience. Hospice advocates stressed the importance of maintaining continuous clinical control over all aspects of care to ensure a successful hospice program and framers of the benefit recognized this fact by requiring professional management responsibility. Although there were ongoing concerns by HCFA, the Congress, and the hospice industry about the potential misuse of a new hospice benefit, Section 122 of the Tax Equity and Fiscal Responsibility Act (TEFRA) of 1982 (Pub. L. 97–248, enacted on September 3, 1982) expanded the scope of Medicare benefits by authorizing coverage for hospice care for terminally ill beneficiaries.

2. Legislative History of the Medicare Hospice Benefit

After Medicare coverage of hospice care was authorized by the Congress, the General Accounting Office (now Government Accountability Office, or GAO) summarized the legislative intent of the Medicare hospice benefit in a July 13, 1983 letter. In this letter, the GAO acknowledged that there was no standard definition of what a hospice was or what services an organization must provide to be considered a hospice. However, the GAO stated that it was generally agreed upon that the hospice concept in the United States is one program of care in which an organized interdisciplinary team systematically provides palliative care (relief of pain and other symptoms) and supportive services to patients with terminal illnesses. This letter further stated that the hospice objective is to make a patient’s remaining days as comfortable and meaningful as possible and to help the family cope with the stress by making the necessary arrangements to accommodate the changes in the patient’s illness and death. The GAO letter also reiterated that hospices must directly provide certain core services including nursing, physician services and counseling services and must either directly, or through arrangements, provide physical therapy, occupational therapy, speech-language pathology, home hospice aides, homemakers, services, drugs, medical supplies and appliances and short-term inpatient care. The letter concluded by stating that the Congress would continue to monitor the effectiveness of the Medicare Hospice Benefit.

3. The Medicare Hospice Benefit: A Changing Philosophy of Care?

12 Written testimony by Dr. Edwin J. Olsen, director of the National Hospice Organization, to the Subcommittee on Health of the Committee of Ways and Means, House of Representatives, March 25, 1982.
the hospice demonstration program, which was ongoing at the time of enactment, the equity of the reimbursement system, method and benefit structure put into effect under the hospice provision, including the feasibility and advisability of a prospective reimbursement system for hospice care and other aspects of the hospice program.17

Further description of the Medicare hospice benefit design was provided in a report prepared by the Congressional staff for the Senate Committee on Finance on September 9, 1983. In this report, four basic principles were presented, which according to hospice advocates, distinguish hospice care from the traditional health care system:

1. The patient and his/her family are considered the unit of care.
2. A multidisciplinary team is used to assess the physical, psychological and spiritual needs of the patient and family to develop an overall plan of care and to provide coordinated care.
3. Pain and collateral symptoms associated with the terminal illness and previous treatments are controlled, but no heroic efforts are made to cure the patient.
4. Bereavement follow-up is provided to help the family cope with their emotional suffering.18

It was also noted that the statute provides that an individual, upon making an election to receive hospice coverage, would be deemed to have waived payments for certain other benefits in addition to choosing a palliative mode of treatment, except in “exceptional and unusual circumstances” as the Secretary may provide (section 1812(d)(2)(A) of the Act). Furthermore, the hospice plan of care must include assessment of the individual’s needs and identification of the services to meet those needs including the management of discomfort and symptom relief.

Several Senators testified at a September 15, 1983 Hearing before the Subcommittee on Health of the Committee on Finance regarding ongoing concerns with the new Medicare hospice benefit. These Senators made it clear that the new healthcare delivery system—hospice—was to offer an alternative to institutionalized care for the terminally ill. Concerns were expressed over the possibility that “store front” hospices would crop up as a result of Medicare reimbursement being made available for this service. The Senators stated that they wanted to maintain flexibility within the benefit without creating incentives for fraud and abuse.19 Similarly, industry advocates were also concerned that availability of Medicare reimbursement would attract interest from those simply interested in a new source of revenue. The hospice industry agreed that the Medicare hospice benefit was created, not as a new revenue source for providers, but as a benefit choice for patients and their families.20 Terminally ill Medicare beneficiaries could decide not to elect hospice care, and they would continue to be able to receive all other Medicare services available, such as home health services that include skilled nursing and home health aide care, inpatient hospital services, supplies, medications, and DME. For example, in response to recent home health rulemaking, we received anecdotal comments that some home health agencies are providing palliative care to homebound terminally ill individuals who have not elected the hospice benefit. In those instances, the patient is receiving home health aide services, nursing care, and supplies needed under the home health benefit, and the DME and medications that the patient needs are still covered under Medicare Parts B and D. However, we note that, with the exception of home health, these services typically have associated co-payments and would be rendered through various different providers or suppliers, perhaps with a lack of continuity and coordination that would be provided under the Medicare hospice benefit. Under the Medicare hospice benefit, the hospice-eligible individual would receive all of those services, and more, with the hospice provider assuming the clinical and professional responsibility of coordinating all of the necessary care and services with minimal beneficiary cost sharing required outside of the hospice benefit.

3. Hospice Care Today

The Medicare hospice benefit was a unique addition to the U.S. health care system. Prior to the implementation of the Medicare hospice benefit, the government reimbursed providers based on the cost of delivering care. Reimbursement under the Medicare hospice benefit is a fixed, per day, per level of care prospective payment structure. By creating a fixed payment for hospice care, the provider is at risk for costs that exceed the payment amount; and, if the fixed payment exceeds the cost of care, the hospice is allowed to keep the gain. Under the Medicare hospice benefit, the provider has clinical flexibility in how hospices can render care to best meet the needs of the individual patient and his or her family. This is viewed as a joint partnership between the providers of care and the federal government to provide services and the financial payment for those services for those who are dying. Hospice advocates, during the development of the benefit, welcomed this type of reimbursement structure for the flexibility it afforded in providing individualized hospice services.21 The hospice industry continues to recognize that the Medicare hospice benefit has always been a risk-based clinical and economic model of care stating that the fixed reimbursement model means “a fixed sum for all-inclusive end of life care.”22 Similar to the more recent medical home model for primary care, hospice has always been patient-centered, comprehensive, team-based, coordinated, accessible, focused on quality and safety, and extends throughout the continuum of care.

Throughout the development of the Medicare hospice benefit, experts in the hospice field believed that the success or failure of hospice, under Medicare, would depend on the hospice plan of care, appropriate implementation of the plan of care, and the hospice team sharing the same philosophy of patient-centered, comprehensive, and holistic care.23 A coordinated, collaborative approach to each and every hospice patient and his or her family was considered to be the most important component of the success of the Medicare hospice benefit.24

19 Testimony by Senators George Mitchell and Roger W. Jepsen. Testimony before the Subcommittee on Health of the Committee on Finance, United States Senate, September 15, 1983.
20 Position paper submitted by Donald J. Gaetz, president, National Hospice Organization, “Subcontracting for Nursing Services under the Medicare Hospice Benefit.” Testimony before the Subcommittee on Health of the Committee on Finance, United States Senate, September 15, 1983.
21 Testimony by Dr. Daniel Hadlock, Hospice, Inc, before the Select Committee on Aging, House of Representatives, May 25, 1983.
development of the Medicare hospice benefit, there were concerns by both the Congress and the hospice industry regarding the potential for fraud and abuse by some providers resulting from the enactment of a Medicare hospice benefit.25 One drafter of the legislation expressed that he wanted to maintain benefit flexibility by allowing hospices to render individualized care, promoting access to needed services, and providing high quality care while maintaining fiscal integrity of the Medicare Trust Funds.26 This was a benefit founded in trust—trust that hospices would provide the comprehensive care and services promised during the benefit development and trust that Medicare would be a partner in helping to share the costs.27 It was very clear throughout the development, and years after the implementation of the Medicare hospice benefit, that hospices were expected to make good on their promise to do a better job than conventional Medicare services for those who were end-of-life.28 Deliberately, the law made no provision for discharging a hospice patient except under very limited circumstances and only after making attempts to rectify those circumstances.29 This meant that once a beneficiary elected hospice and was under one of the three 60-day election periods, a hospice could not just discharge a patient for the sake of cost or convenience. Currently, there are two 90-day election periods and unlimited 60-day election periods, as long as the beneficiary continues to meet eligibility criteria, hospices are still limited in the reasons for discharge, and still cannot discharge a hospice beneficiary for cost or convenience. Our regulations at §418.26(a) state the reasons a hospice can discharge a beneficiary from hospice services. Since the implementation of the Medicare hospice benefit, hospice utilization continues to grow. More Medicare beneficiaries are becoming aware and educated of the benefits of hospice care. In recent years, the percentage of Medicare deaths for patients under a hospice election has increased from 20 percent in 2000 to 44 percent in 2012. Total expenditures have increased from over $9.2 billion in 2006 to over $15.1 billion in 2013. This observed growth far outpaces the annual market basket increases and is not solely reflective of an increase in utilization. We note that average spending per beneficiary has increased substantially between 2006 and 2013 from approximately $9,833 in 2006 to $11,458 in 2013.30

Section 3132(a) of the Affordable Care Act provides statutory authority for CMS to reform the hospice payment system no earlier than October 1, 2013. We presented data in the FY 2014 Hospice Wage Index and Payment Rate Update Final Rule, regarding diagnosis reporting on hospice claims and opioids paid under Part D for beneficiaries in a hospice election (78 FR 48234). Recent analysis of other Part A, Part B and Part D spending in 2012 (including beneficiarystory cost-sharing payments of $135.5 million for Parts A and B and $48.2 million for Part D) shows that there was an additional $1 billion in total Medicare spending during a hospice election (see section III.A.4). This includes Part A payments for outpatient hospitalizations and SNF stays, as well as Part B payments for outpatient and physician services, diagnostic tests and imaging, and ambulance transports. There is concern that many of these services should have been provided under the Medicare hospice benefit as they very likely were for services related to the terminal illness and related conditions. This strongly suggests that hospice services are being “unbundled”, negating the hospice philosophy of comprehensive, holistic care and shifting the costs to other parts of Medicare, and creating additional cost-sharing burden to those vulnerable Medicare beneficiaries who are at end-of-life. Duplicative payments for hospice-covered services also threaten the program integrity and fiscal viability of the hospice benefit.

Reports by both the Medicare Payment Advisory Committee (MedPAC) and the Office of the Inspector General (OIG) expressed similar concerns regarding the unbundling of services meant to be covered under the hospice per diem, capitated payment system. Similar to the analysis presented above, MedPAC also analyzed non-hospice utilization and spending patterns through Parts A, B and D for Medicare hospice beneficiaries. MedPAC also concluded that over $1 billion FFS spending was attributed to providing services reported as unrelated to the terminal conditions of hospice enrollees. MedPAC went on to state that 58 percent of Medicare hospice enrollees received a service or drug outside of the hospice benefit over the course of a hospice episode. The highest shares of spending were on drugs and inpatient services.31 In addition, the OIG reported in June of 2012 that Medicare could be paying twice for prescription drugs for beneficiaries receiving services under the Medicare hospice benefit and recommended that CMS increase its oversight to make sure that Part D is not paying for medications already included in the Medicare hospice per diem payment rates.32 As a result of the OIG report, the CMS’ Center for Program Integrity (CPI) began recoupment efforts for analogesics from Part D plan sponsors.

Ongoing Part D memo guidance has also been issued to clarify existing coverage and payment policies. All Part D memo guidance can be found on the Hospice Center Web page under “Coordination of Benefits” at http:// www.cms.gov/Center/Provider-Type/Hospice-Center.html. In addition, the proposed rule solicited comments on processes that could be developed to address the inappropriate Part D reimbursement for medications that should be covered under the Medicare hospice per diem (see Section III.I). The purpose of these Part D guidance memos, in response to OIG reports of possible duplication of payment for drugs under the hospice per diem and Part D plans, was to outline the expectations regarding coordination of benefits and coverage responsibility between Part D plan sponsors and hospices. The ongoing concern is that

hospices are not providing the broad range of medications required by hospice beneficiaries during a hospice election, especially for those drugs classified as analgesics, antianxiolytic, antiemetics and laxatives (generally considered essential medications for palliation in a hospice population). Comments received, regarding this memo guidance, highlighted that there are multiple interpretations as to the meaning of what are considered "related conditions." Additionally, it was noted in these comments that the terms, "terminal illness," "terminal diagnosis," "qualifying terminal diagnosis," and "terminal prognosis" were used interchangeably and with varying interpretations as to their meanings.

We believe the summary of the "Development of the Hospice Benefit" and the "Legislative history of the Medicare Hospice Benefit" clearly captures the expectation that hospices are to provide holistic and comprehensive services under the Medicare hospice benefit. As stated in the 1983 proposed and final rules, and reiterated in the FY 2014 Hospice Wage Index and Rate Update proposed and final rules: "It is our general view that the waiver required by law is a broad one and that hospices are required to provide virtually all of the care that is needed by terminally ill patients" (48 FR 56010). Our expectation continues to be that hospices offer and provide comprehensive, virtually all-inclusive care, and with a patient-centered approach. In order to preserve the Medicare hospice benefit and ensure that Medicare beneficiaries continue to have access to comprehensive, high-quality and appropriate end-of-life hospice care, we will continue to examine program vulnerabilities and implement appropriate safeguards in the Medicare hospice benefit, when appropriate.

4. Definition of "Terminal Illness"

Since the implementation of the Medicare hospice benefit, we have defined a "terminally ill" individual to mean "that the individual has a medical prognosis that his or her life expectancy is 6 months or less if the illness runs its normal course" (§ 418.3). We have always interpreted "terminally ill" to mean a time frame of life expectancy and expect that the individual’s whole condition plays a role in that prognosis. Comments received in response to prior years’ proposed rules state that standing, preexisting conditions should not be considered related to a patient’s terminal illness or related conditions and that chronic, stable conditions play little to no role in a patient’s terminal illness or related conditions. Commenters have also stated that controlled pain and symptoms are not considered to be related to a patient’s terminal illness or related conditions, that not all pain is related to the terminal illness and related conditions, and that comorbidities and the maintenance of comorbidities are not related to a patient’s terminal illness or related conditions. These commenters believed these types of conditions should not be included in the bundle of services covered under the Medicare hospice benefit. As previously stated in response to those comments, we believe these conditions are included in the bundle of covered hospice services. The original implementing regulations of the Medicare hospice benefit, beginning with the 1983 Hospice proposed and final rules (48 FR 38146 and 48 FR 56008), articulate a set of requirements that do not delineate between pre-existing, chronic, or controlled conditions. To be eligible to receive hospice services under the Medicare hospice benefit, the individual must be entitled to Part A and must be certified as being terminally ill, meaning that his or her medical prognosis is a life expectancy of 6 months or less if the illness runs its normal course. We have recognized throughout the federal regulations at 42 CFR Part 418 that the total person is to be assessed, including acute and chronic conditions, as well as controlled and uncontrolled conditions, in determining an individual’s terminal prognosis. All body systems are interrelated; all conditions, active or not, have the potential to affect the total individual. The presence of comorbidities is recognized as potentially contributing to the overall status of an individual and should be considered when determining the terminal prognosis. The National Hospice and Palliative Care Organization (NHPCO) defines "comorbidity," as: "known factors or pathological disease impacting on the primary health problem and generally attributed to increased risk for poor health status outcomes." 34

We have defined "palliative care"—the nature of the care provided under the hospice benefit—in our regulations at § 418.3 to mean patient and family-centered care that optimizes quality of life by anticipating, preventing and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social and spiritual needs and to facilitate patient autonomy, access to information and choice. Note that, in this definition, palliative care is to anticipate and prevent, as well as treat, suffering. This indicates that hospices are to be proactive in their care approach and not just reactive to pain and symptoms after they arise.

Because hospice care is unique in its comprehensive, holistic, and palliative philosophy and practice, we want to ensure that the hospice services under the Medicare hospice benefit are preserved and not diluted, or unbundled in any way. For context, the definition of illness means "an abnormal process in which aspects of the social, physical, emotional, or intellectual condition and function of a person are diminished or impaired compared with that person’s previous condition." 35 An intensive review of the history of hospice, hospice philosophy and legislative actions described above provided the basis for discussion among several CMS clinical leaders across several agency components as to the meaning of “terminal illness” within the context of the Medicare hospice benefit. After a review of all of the history listed above, the clinical collaborative effort across CMS solicited comments on the following definition of “terminal illness”*: “Abnormal and advancing physical, emotional, social and/or intellectual processes which diminish and/or impair the individual’s condition such that there is an unfavorable prognosis and no reasonable expectation of a cure; not limited to any one diagnosis or multiple diagnoses, but rather it can be the collective state of diseases and/or injuries affecting multiple facets of the whole person, are causing progressive impairment of body systems, and there is a prognosis of a life expectancy of 6 months or less.” We did not propose any definitions but asked for public input on this definition for possible future rulemaking.

5. Definition of “Related Conditions”

Section 1812(d)(2) of the Act provides that an individual, upon making an election to receive hospice coverage, would be deemed to have waived payments for certain other benefits.

---

except in “exceptional and unusual circumstances as the Secretary may provide.” Comments received on the 1983 Hospice proposed rule specifically asked for further CMS clarification regarding the concept of “related conditions.” Specifically, the commenters suggested a more detailed definition of what constitutes care for a patient’s terminal illness or related conditions (which is the responsibility of the hospice) and what constitutes care for unrelated conditions (for which out-of-hospice Medicare payment may be made) (48 FR 56010). Our response was: “...we have not received any suggestions for identifying ‘exceptional or unusual’ circumstances that warranted the inclusion of a specific provision in the regulations to accommodate them. Most of the comments that were made attempted to suggest this exception as a means of routinely providing non-hospice Medicare financing for the expense of costly services needed by hospice patients, and we do not view this as an appropriate interpretation of the law” (48 FR 56011). The law allows for circumstances in which services needed by a hospice beneficiary would be completely unrelated to the terminal illness and related conditions, but we believe that this situation would be the rare exception rather than the norm. We reiterated this position in the FY 2014 Hospice Wage Index and Rate Update proposed rule (78 FR 27826) as a reminder of the expectation of the holistic nature of hospice services that shall be provided under the hospice benefit, as well as to remind hospices about diagnosis reporting on hospice claims.

Therefore, in keeping with the tenets of hospice philosophy described in this section, the intent of the Medicare hospice benefit, expectations of comprehensive care, and in response to previous and ongoing stakeholder comments, the CMS solicited comments on the following definition of “related conditions”: “Those conditions that result directly from terminal illness; and/or result from the treatment or medication management of terminal illness; and/or which interact or potentially interact with terminal illness; and/or which are contributory to the symptom burden of the terminally ill individual; and/or are conditions which are contributory to the prognosis that the individual has a life expectancy of 6 months or less.” We did not propose an alternative definition, but asked for public input on this definition for possible future rulemaking.

We received a significant number of comments representing diverse stakeholder groups on the definitions of “terminal illness” and “related conditions” and the impact it may have on the stakeholder groups whom provided comments. We will consider these comments and the issues raised for possible future rulemaking.

We also received several comments from End Stage Renal Disease (ESRD) stakeholder groups, noting that the solicitation of comments on the definition of “terminal illness” and “related conditions” would impede access to hospice services for ESRD beneficiaries with non-renal terminal conditions. ‘These commenters stated that many hospices do not admit patients with ESRD because they do not want to bear the financial liability for covering dialysis. These commenters went on to say that if CMS proposes these definitions, that there should be an exception to allow those patients receiving dialysis to continue to do so under Part B while receiving hospice care under Part A. We would like to clarify that the solicitation of comments regarding the definitions of “terminal illness” and “related conditions” was not intended to address ESRD beneficiary access to hospice services with non-renal terminal conditions. As such, the current policy at Chapter 11 of the Medicare Benefit Policy Manual (Pub. 100–02), which states: “If the patient’s terminal condition is not related to ESRD, the patient may receive covered services under both the ESRD benefit and Part A benefit. Hospice agencies can provide hospice services to patients who wish to continue dialysis treatment”. remains in effect.

C. Guidance on Determining Beneficiaries’ Eligibility for Hospice

An individual must be certified by the hospice medical director and the individual’s attending physician (if designated by the individual) as being terminally ill, meaning that the individual has a medical prognosis of a life expectancy of 6 months or less in order to receive the Medicare hospice benefit. However, we also have recognized the challenges in prognostication. It has always been our expectation that the certifying physicians will use their best clinical judgment, based on the initial and updated comprehensive assessments and collaboration with the hospice interdisciplinary group (IDG) to determine if the individual has a life expectancy of six months or less with each certification. As stated in previous rules, in reaching a decision to certify that the patient is terminally ill, the hospice medical director must consider at least the following information per our regulations at § 418.25(b):

- Diagnosis of the terminal condition of the patient.
- Other health conditions, whether related or unrelated to the terminal condition.
- Current clinically relevant information supporting all diagnoses.

We do recognize that making a prognosis is not an exact science. Section 322 of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) amended section 1814(a) of the Act by clarifying that the certification of an individual who elects hospice “shall be based on the physician’s or medical director’s clinical judgment regarding the normal course of the individual’s illness.” The amendment clarified that the certification is based on a clinical judgment regarding the usual course of a terminal illness, and recognizes the fact that making medical prognostications regarding life expectancy is not exact. However, the amendment regarding the physician’s clinical judgment does not negate the fact that there must be a clinical basis for a certification. A hospice is required to make certain that the physician’s clinical judgment can be supported by clinical information and other documentation that provide a basis for the certification of 6 months or less if the illness runs its normal course.

While the expectation remains that the hospice physician will determine a beneficiary’s eligibility for hospice, this is not to say that this decision cannot be reviewed if there is a question as to whether or not the clinical documentation supports a patient’s hospice eligibility as hospice services provided must be reasonable and necessary for the palliation and management of the terminal illness and related conditions. The goal of any review for eligibility is to ensure that hospices are thoughtful in their eligibility determinations so that hospice beneficiaries are able to access their benefits appropriately. CMS’ right to review clinical documentation that supports physician certifications has been established in federal court and by the agency in an administrative ruling. (See, for example, HCFMA Ruling, 93–1 Weight to be Given to a Treating Physician’s Opinion in Determining Medicare Coverage of Inpatient Care in a Hospital or Skilled Nursing Facility (May 18, 1993); Maximum Comfort, Inc v. Leavitt (512 F.3d 1081 (9th Cir. 2007)); MacKenzie Medical Supply v. Leavitt (506 F.3d 341 (4th Cir. 2007))). In order
to be covered under Medicare Part A, the care must also be reasonable and necessary. There has always been a statutory prohibition (section 1862(a)(1)(C) of the Act) against payment under the Medicare program for services which are not reasonable and necessary for the palliation or management of terminal illness. Additionally, section 1869(a)(1) of the Act makes clear that the Secretary makes determinations concerning entitlement, coverage and payment of benefits under part A and part B of Medicare.

We are reminding providers that there are multiple public sources available to assist in determining whether a patient meets Medicare hospice eligibility criteria (that is, industry-specific clinical and functional assessment tools and information on MAC Web sites). Additionally, we expect that hospices will use their expert clinical judgment in determining eligibility for hospice services. We expect that documentation supporting a 6-month or less life expectancy is included in the beneficiary’s medical record and available to the MACs when requested.

If a beneficiary improves and/or stabilizes sufficiently over time while in hospice such that he/she no longer has a prognosis of 6 months or less from the most recent recertification evaluation or definitive interim evaluation, that beneficiary should be considered for discharge from the Medicare hospice benefit. Such beneficiaries can be re-enrolled for a new benefit period when a decline in their clinical status is such that their life expectancy is again 6 months or less. On the other hand, beneficiaries in the terminal stage of their illness that originally qualified for the Medicare hospice benefit but stabilize or improve while receiving hospice care, yet have a reasonable expectation of continued decline for a life expectancy of less than 6 months, remain eligible for hospice care. The hospice medical director must assess and evaluate the full clinical picture of the Medicare hospice beneficiary to make the determination whether the beneficiary still has a medical prognosis of 6 months or less, regardless of whether the beneficiary has stabilized or improved. There are prognostication tools available for hospices to assist in thoughtful evaluation of Medicare beneficiaries for determining terminally ill eligibility for the Medicare hospice benefit. We expect hospice providers to use the full range of tools available, including guidelines, comprehensive assessments, and the complete medical record, as necessary, to make responsible and thoughtful determinations regarding terminally ill eligibility.

We have always acknowledged the uniqueness of every Medicare beneficiary and support thorough and thoughtful evaluation in determining whether beneficiaries meet the eligibility criteria for being certified as terminally ill. We continue to support the concept of shared decision-making, patient choice and the right care at the right time to allow Medicare beneficiaries full and appropriate access to their Medicare benefits, including hospice care. Furthermore, Medicare hospice beneficiaries have certain guaranteed rights. If the hospice or designated attending physician believes that the hospice beneficiary is no longer eligible for hospice care because his or her condition has improved, and the beneficiary does not agree with that determination, the hospice beneficiary has the right to request a review of his or her case. The hospice should provide the hospice beneficiary with a notice that explains his or her right to an expedited review by a contracted independent reviewer hired by Medicare, called a Quality Improvement Organization (QIO). If the hospice beneficiary asks for this appeal, the QIO will determine if the beneficiary continues to meet eligibility requirements for hospice services. The provider is expected to continue to provide services for the patient following a favorable decision by a QIO. In the QIO decision, the QIO should advise the provider as to why it disagrees with the hospice claim, which should help the provider to re-evaluate the discharge decision. If at another point in time during a hospice election, the hospice believes that the patient is no longer hospice eligible, the provider should timely deliver a CMS–10123 to notify the patient of its decision to discharge. The patient could again appeal to the QIO. Medicare beneficiaries have the right to be included in decisions about their care, the right to a fair process to appeal decisions about payment of services, and the right to privacy and confidentiality. No proposals were made regarding hospice eligibility nor were comments solicited. This discussion only provides background information regarding current procedures for determining eligibility for hospice services under the Medicare hospice benefit and beneficiary appeal rights.

D. Timeframe for Hospice Cap Determinations and Overpayment Remittances

When the Medicare hospice benefit was implemented, the Congress included 2 limits on payments to hospices: an inpatient cap and an aggregate cap, as described in sections 1861(dd)(2)(A)(iii) and 1814(j)(2)(A) through (C) of the Act. The hospice inpatient cap limits the total number of Medicare inpatient days to no more than 20 percent of a hospice’s total Medicare hospice days. The intent of the inpatient cap was to ensure that hospice remained a home-based benefit. The hospice aggregate cap limits the total aggregate payment any individual hospice can receive in a year. The intent of the hospice aggregate cap was to protect Medicare from spending more for hospice care than it would for conventional care at the end of life.

The aggregate cap amount was set at $6,500 per beneficiary when first enacted in 1983; this was an amount hospice advocates agreed was well above the average cost of caring for a hospice patient.36 The $6,500 amount is adjusted annually by the change in the medical care expenditure category of the consumer price index for urban consumers from March 1984 to March of the cap year. For the 2013 cap year, the cap amount was $26,157.50 per beneficiary. The cap year is defined as the period from November 1st to October 31st, and was set in place in the December 16, 1983 hospice final rule (48 FR 56022).

The cap amount is multiplied by the number of Medicare beneficiaries who received hospice care from a particular hospice during the year, resulting in its hospice aggregate cap, which is the allowable amount of Medicare payments that hospice can receive for that cap year. There are two different methods for counting a hospice’s beneficiaries: the streamlined and the patient-by-patient proportional methods. Which method a hospice can use to count beneficiaries depends on a number of factors, as described in our regulations at § 418.309 and in section 90.2.3 of the hospice Benefit Policy Manual (IOM 100–02, chapter 9, available at http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c09.pdf). A hospice’s total Medicare payments for the cap year cannot exceed the hospice’s aggregate cap. If its aggregate cap is exceeded, the hospice must repay the excess back to Medicare.

While hospices rarely exceed the inpatient cap, in its March 2012 Report to the Congress, MedPAC reported that

an increasing number of hospices are exceeding the aggregate cap. MedPAC also noted that above-cap hospices were almost all for-profit with very long lengths of stay, high live discharge rates, and very high profit margins before the return of cap overpayments. The percentage of hospices exceeding the aggregate cap rose from 2.6 percent in 2002 to a peak of 12.5 percent in 2009. In 2010, the percentage of hospices exceeding the aggregate cap decreased to 10.1 percent.

Our hospice reform contractor also performed analysis on the number of hospices exceeding the aggregate cap with results similar to MedPAC’s, where an increasing percentage of hospices exceeded their caps from 2006 (9.1 percent) to a peak in 2009 (12.8 percent), followed by a decline through 2011 (10.5 percent). However, the analysis shows an increase in 2012, with 11.6 percent of hospices exceeding their aggregate caps. Additionally, analysis of above-cap hospices showed that the average overpayment per beneficiary has increased over time, up 35.2 percent from 2006 ($7,384) to 2012 ($9,983). Using above-cap hospices, we also found that the average overpayment amount went from $732,103 in 2006 to $440,727 in 2011, but that this downward trend is estimated to change in 2012, when the average overpayment amount is estimated to increase to $547,011.

We also compared hospices’ year-end percentage of their aggregate cap total that they had received in Medicare payments over time. Specifically, we examined where hospices ended their cap year in terms of Medicare reimbursements received, relative to that year’s aggregate cap limit, by comparing the 2006 cap year to the 2012 cap year. Analysis revealed that more hospices ended the 2012 cap year “just below” their aggregate cap than in 2006. The cap analyses which are referenced in this section are available in the May 2014 Technical Report that was posted in May, 2014 on our Hospice Center Web page at: http://www.cms.gov/Center/Provider-Type/Hospice-Center.html.

The results from these recent analyses on the hospice aggregate cap highlight the importance of hospices monitoring their aggregate cap and ensuring that the beneficiaries under their care are truly eligible for hospice services. In the FY 2010 hospice wage index proposed rule, we solicited comments on the aggregate hospice cap (74 FR 18920–18922). Many commenters wanted more timely notification of cap overpayments. Many also requested that hospices be given access to beneficiaries’ full hospice utilization history, as having this information would enable hospices to better manage their aggregate cap.

In response to concerns from hospices, we redesigned the Provider Statistical and Reimbursement (PS&R) system in 2011, so that hospices can now easily manage their inpatient and aggregate caps. The redesigned PS&R enables hospices to calculate estimated caps to monitor their cap status at different points during the cap year, and also enables them to calculate their caps after the cap year ends.

Our current practice is for the Medicare Administrative Contractors (MACs) to complete the hospice cap determinations for both the inpatient and aggregate caps 16 to 24 months after the cap year in order to demand any overpayment. We are concerned about this long timeframe, particularly given that the percentage of hospices exceeding the aggregate cap is increasing, along with the average overpayment per beneficiary. To better safeguard the Medicare Trust Funds, we believe that demands for cap overpayments should occur sooner. This is now possible due to the redesigned PS&R system.

Therefore, for the 2014 cap year and subsequent cap years, we propose to amend §418.308 and require that hospices complete their inpatient and aggregate caps determination within 5 months after the cap year ends (that is, by March 31) and remit any overpayments at that time. We proposed that the MACs would then reconcile all payments at the final cap determination. If a provider fails to file its inpatient and aggregate cap determination 5 months after the end of the cap year, we proposed that payments to the provider would be suspended in whole or in part until the self-determined cap is filed with the Medicare contractor. We proposed to further amend §418.308 and §405.371 to state that payments to a hospice would be suspended in whole or in part, for failure to file a self-determined inpatient and aggregate cap determination. This is similar to the current practice followed by all other provider types that file cost reports with MACs.

We proposed that hospices would be provided a pro-forma spreadsheet that they would use to calculate their caps to remit any overpayments. The redesigned PS&R system provides the inpatient and aggregate beneficiary counts, and Medicare payments that are needed to calculate any inpatient or aggregate cap overpayments. The redesigned system can provide needed data whether a hospice uses the streamlined method or the patient-by-patient proportional method for its aggregate cap calculation. All hospices are required to register in Individuals Authorized Access to CMS Computer Services (IACS) and obtain their PS&R report from the PS&R system. Hospices experiencing difficulties can request a copy of their PS&R report from their MAC.

Twenty six public comments and our responses are summarized below.

**Comment:** Several commenters suggested that the Medicare Administrative Contractors (MACs) should complete the initial cap determination instead of the hospices. Some of the concerns are that the proposal would increase the hospices administrative costs, and this would be especially burdensome for small hospices. There were suggestions that CMS establish criteria to target providers that are more likely to exceed the cap if the concern was about the MACs workload.

**Response:** The reason for this proposal is for hospices to determine and remit any overpayment. We do not believe this proposal would be overly burdensome to the hospices; some hospices are already using the information needed to complete the self-determined cap to manage their cap. The net reimbursement and beneficiary count needed to calculate the cap overpayment are reported on the Provider Statistical & Reimbursement (PS&R) report. A pro-forma spreadsheet for calculating the cap will be provided. The MACs are still required to issue the final cap determination and reconcile any overpayments received.

**Comment:** Some commenters suggested that the cap calculation should be integrated with the cost report that hospices are currently required to file in order to minimize the administrative burden on the hospices.

**Response:** This suggestion is not practical at this time. The hospice cap period of November 1–October 31 is not aligned with the hospices’ various cost reporting fiscal years, and the hospice cap calculation is not based on the Medicare cost report.

**Comment:** Commenters were concerned that the proposal for hospices to file a self-determined cap calculation and remit any overpayment within 5 months after the cap period would not achieve the stated goal of protecting the Medicare Trust Funds. Early calculation of the hospice cap liability will underestimate the amount owed by hospices that are over the cap. The
months proposed for hospices to file their self-determined cap is vulnerable to gaming because a hospice could choose to perform its cap calculation immediately after the close of the cap year when its cap liability will be lowest. Some commenters suggested that CMS should instruct providers not to request data to calculate their cap liability earlier than 90 days after the end of the cap period in order to allow for most of the hospice claims to be processed before the completion of the cap calculation.

Response: We agree that allowing up to 5 months to calculate the cap without a minimum time for allowing claims to process is vulnerable to “gaming” by hospices. The goal is to require the hospices to submit an accurate cap determination within 5 months of the end of the cap year. In order to increase the reliability of the determination, we will require that hospices use payment data not earlier than 3 months after the cap year to determine their cap overpayment due 5 months after the cap year. This will improve the accuracy of the calculation by ensuring that most claims have been processed, while still allowing a reasonable period of time for the hospice to complete the calculation.

For example, the cap year ending October 31, 2015 would result in the hospice providing its cap determination and any associated overpayment to their MAC by March 31, 2016. In order to allow a reasonable number of claims to be processed, the hospice shall wait at least 3 months after the end of the cap year, or January 31, 2016, before attempting to calculate the cap overpayment. Thus, the cap determination would be calculated after January 31, 2016 but before March 31, 2016 and the overpayment would be submitted at the same time as the cap determination.

We plan to continue to monitor hospices that may be “gaming” the system, and CMS has the option of performing a cap review at any time after the end of the cap year, if needed. In addition, MACs will review the hospices’ cap determinations at a later time in order to ensure that they are accurate and to reconcile them with updated claims data.

Comment: Several commenters suggested that CMS should not recoup any overpayment as a result of the self-determined cap calculation until the MACs issue the final cap determination.

Response: While completing the self-determined calculation as proposed will inform hospices about whether or not they are over the cap, as early as possible, it will not protect the Medicare Trust Fund if the overpayments are not recouped. Other provider types that file Medicare cost reports 5 months after the cost reporting year end are required to remit any overpayments at the time the cost reports are filed. Sometimes the final settlements of Medicare cost reports are issued 2 to 3 years after the cost reports were filed. The same process is proposed for hospice providers, since the cap calculations are not reconciled on the cost reports themselves. MACs will reconcile the final payments when it issues the final cap determination. The final cap determination includes the appeal rights for the hospice.

Comment: Several commenters were concerned that the proposal did not address the availability of the Extended Repayment Schedule (ERS) for providers that exceed the cap.

Response: This proposal is not changing the current ERS availability. Providers that have overpayments as a result of the self-determined cap calculation will follow the same process that was in effect prior to this requirement.

Comment: A commenter suggested that CMS should consider eliminating the requirement that hospices determine the inpatient cap overpayment because the calculation involved is more complex than those required for determining the aggregate cap. Since most providers do not exceed the inpatient cap, they are not experienced in performing the calculation required.

Response: We agree with the commenter that most providers do not exceed the inpatient cap limitation, and that calculation of the inpatient cap is more complex than the aggregate cap calculation. We are eliminating the requirement that hospices complete a self-determined inpatient cap liability in order to address stakeholders concerns regarding the complexity of the calculation. The Medicare contractors will continue to calculate the inpatient cap limitation. We will continue to monitor the inpatient cap and consider implementing in the future if needed. However, the self-determined aggregate cap calculation proposal is being implemented in this final rule.

Comment: Some commenters suggested that the MACs be required to review the providers’ submitted self-determined cap amounts and alert hospices of any discrepancies in the calculation or provide notice of acceptance of the hospices’ calculations.

Response: The MACs will review the submitted self-determined cap calculation for errors but not necessarily recalculate the submitted cap in all cases for accuracy. The MACs will issue a final cap determination at a later date. Under the current process, providers have the option of using their data to file the cap report if they disagree with the PS&R report. Providers using their data to file their cap calculation will need to provide documentation to support the calculations. The MAC will subsequently issue a final cap determination, which will include appeal rights for the hospice.

Comment: A commenter suggested that the MACs should provide advance notification to the hospices regarding the requirement to file a cap determination and the due date.

Response: We are not requiring the MACs to send advance notification to the hospices at this time. We will work with the MACs in order to distribute educational material regarding the calculation of the cap as soon as possible after the PS&R. While all hospices have been instructed to obtain their own PS&R reports, some may not have used such reports. Hospices will be informed of their requirements through various educational materials.

Comment: A commenter that supported the proposal suggested that CMS delay this requirement to allow providers time to prepare for the changes, and allow those that currently do not have access to the PS&R system to register. Another suggested that CMS phase-in the proposal over a three year period.

Response: We do not believe phasing the requirement that hospices calculate their cap overpayment over a three year period will reduce the burden on hospices and will ensure hospices’ ability to calculate the cap accurately. We appreciate the commenter’s concern about providers who are not currently registered to obtain their PS&R report. Providers have received instructions regarding access to the PS&R system on numerous occasions, and we will work with the MACs to remind providers how to access the PS&R system, and explain how to access and utilize the hospice reports.

Comment: Some commenters raised concern about the ability of hospices that are not registered in CMS’ authentication and authorization system (IACS) to obtain a copy of their PS&R report. A commenter stated that since most providers only access the PS&R system once in a year, their accounts are deactivated after six months of inactivity and would be unable to obtain a copy of their PS&R report. The
commenter suggested that CMS change the deactivation of account after six months of inactivity.

Response: The security protocol of the CMS authentication and authorization system needed to access the PS&R system is beyond the scope of this proposal. It should be noted, however, that accounts are not deactivated after six months of inactivity. Accounts are only deactivated when a user fails to recertify its account, which is usually once a year. The system sends out several notification emails 45 days prior to the recertification date, and everyday 15 days prior to the due date. Providers that failed to change their password every 60 days need only to complete the specific password steps in order to reset their password. Since the PS&R reports will be a source of information for calculation of the caps, we do not expect problems with system inactivity subsequent to the issuance of this final rule.

Comment: A commenter suggested that the CMS employ electronic delivery of important notices, like overpayment determinations.

Response: This is outside the scope of this proposal.

Comment: A commenter was concerned that providers are not able to obtain the beneficiary count for patients served by more than one provider, and that this information is only available to the MACs.

Response: This statement is not accurate. The PS&R report provides summary beneficiary count for patients served by more than one hospice, and the summary report is available for providers to request.

Comment: Some commenters suggested that CMS should include in the proposal a time frame for the MACs to complete the final cap reviews

Response: We are not proposing a requirement at this time. We will continue to work with the MACs regarding this process.

Comment: A commenter noted that the proposed rulemaking under the Affordable Care Act required that Medicare providers and suppliers to report and return overpayments 60 days from the date the liability is identified. CMS should provide hospices 60 days from 150 days to refund any overpayment as a result of the self-cap determination.

Response: We agree that the Affordable Care Act requires that providers and suppliers report and refund overpayments within 60 days from when identified. The Overpayment rule resulting from the Affordable Care Act has not been finalized as of the date this rule was finalized; and therefore, is outside of the scope of this proposal. As noted above, the requirement that hospices pay the overpayment when they file their cap determination is similar to the requirement for other provider types that final payment reconciliation are completed on the Medicare cost report.

Comment: Some commenters applauded the proposal stating that it allows hospices to better manage their cap, and they will be aware of their cap situation soon after the cap year in order to implement changes to better manage their cash flow in light of hospices’ responsibility to reconcile their overpayments with amounts allowed by CMS.

Response: We agree with the commenters and thank them for their support.

Final action: We are finalizing the proposal to require hospices to submit the aggregate cap determination 5 months after the end of the cap year and refund any overpayment with the filed cap determination. We are eliminating the proposal that hospices complete the self-determined inpatient cap limitation as part of this proposal, but will continue to monitor the inpatient cap and consider implementing in the future if needed. In addition, we are requiring hospices to wait at least 3 months after the end of the cap year to calculate the self-determined aggregate cap, in order to include a reasonable number of claims. Finally, we are finalizing the proposal that hospices which fail to file their self-determined cap determination will have their payments suspended.

E. Timeframes for Filing the Notice of Election and Notice of Termination/Revocation

1. Timeframe for Filing the Notice of Election

A distinctive characteristic of the Medicare hospice benefit is that it requires patients (or their representative) to intentionally choose hospice care through an election. As part of that election, patients (or their representative) acknowledge that they fully understand the palliative, rather than curative, nature of hospice care. Another important aspect of the election is a waiver of beneficiary rights to Medicare payment for any Medicare services related to the terminal illness and related conditions during a hospice election except when provided by, or under arrangement by, the designated hospice, or by the individual’s attending physician if he/she is not employed by the designated hospice ($418.24(c)(6)).

Because of this waiver, providers other than the designated hospice or attending physician cannot receive payment for services to a hospice beneficiary unless those services are unrelated to the terminal illness and related conditions. For our claims processing system to properly enforce this waiver, it is necessary for the hospice election to be recorded in the claims processing system as soon as possible after the election occurs. A survey of the four Medicare Administrative Contractors (MACs) revealed that 16.2 percent of NOEs are filed within 2 days of the effective date of election, 39.2 percent of NOEs are filed within 5 days of the effective date of election, and 62.1 percent of NOEs are filed within 10 days of the effective date of election. Prompt recording of the notice of election (NOE) prevents inappropriate payments, as claims filed by providers other than the hospice or the attending physician will be rejected by the system, unless those claims are for items or services unrelated to the terminal illness and related conditions. Prompt filing of the NOE also protects beneficiaries from financial liability from deductibles and cost sharing for items or services provided during a hospice election which are related to the terminal prognosis.

Once a NOE is filed, the hospice election and benefit period are established in the Common Working File (CWF) and in the Daily Transaction Report (DTRR). The CWF is used by Part A and Part B providers, and the DTRR is used by Part D plan sponsors, to determine whether a beneficiary is a hospice patient. The information is necessary for providers and suppliers to properly handle claims for beneficiaries under a hospice election.

Our hospice reform contractor has performed analyses of Medicare expenditures for drugs and services provided to hospice beneficiaries during a hospice election. These analyses found that Medicare Part D was paying for many drugs that should have been provided by the hospice during a hospice election. We also found that Parts A and B were paying claims for items or services from non-hospice providers during a hospice election (See section III.A.4), though some of these claims may have been appropriate. Once a hospice election is established in the CWF, in order for claims from other providers to process, the claim must be from the attending physician and coded with a “CW” modifier, or for items or services unrelated to the terminal illness and related conditions and must be coded with either a condition code of “07” or a “GW” modifier. However, in calendar year 2012, 10,500 claims and 2.4 million line items, totaling $159...
been discharged alive from hospice as a key problem in determining payment responsibility. Commenters suggested that CMS require that the NOE be filed within a short timeframe of election (for example, within 48 hours).

The CWF is also used by hospices to identify the current benefit period, which helps hospices determine when a face-to-face encounter is required. We have received requests for assistance from hospices where a beneficiary was previously admitted to and then discharged from another hospice, which had not yet filed the NOE, creating a problem for the current hospice in determining the correct benefit period. This can lead to the current hospice not meeting the face-to-face requirement. Additionally, because of sequential billing requirements, the current hospice would have to cancel its NOE and all of its billing for that beneficiary to allow the previous hospice to input its NOE and billing. Once the previous hospice had filed its claims and recorded the beneficiary’s discharge, the current hospice could then resubmit its NOE and its claims. The failure of the first hospice to file its NOE promptly created an administrative burden for the Medicare contractor.

In summary, prompt filing of the NOE avoids compliance problems with the statutorily mandated face-to-face requirement. It also avoids creating burdensome situations for hospices when sequential billing requirements are not met. Finally, because Medicare payments for services related to the terminal illness and related conditions are waived once a hospice election is in place, it is crucial that the NOE be filed promptly to safeguard the integrity of the Medicare Trust Fund, and help protect beneficiaries from inappropriate financial liability due to cost sharing and deductibles for services related to the terminal prognosis. For all of these reasons, we proposed that a hospice must file the NOE with its Medicare contractor within 3 calendar days after the hospice effective date of election, regardless of how the NOE is filed (by direct data entry, or sent by mail or messenger). We believe that this proposed requirement would relieve hospices of the burden created when some minority of hospices do not file their NOEs promptly, would avoid inappropriate payments to other Part A, Part B, or Part D providers, and would safeguard beneficiaries from inappropriate financial liability due to cost sharing and deductibles.

Currently, payment for hospice services begins on the effective date of the hospice election, regardless of when the NOE was filed. A commenter on the December 6, 2013 CMS memorandum clarifying drug payment responsibility between Part D, hospice, and beneficiaries suggested that without enforcement actions, hospices would not file NOEs within a short timeframe. We agree that providing a consequence for failing to file NOEs timely would encourage compliance. Therefore, we proposed that for those hospices that do not file the NOE timely (that is, within 3 calendar days after the effective date of election), Medicare would not cover and pay for days of hospice care from the effective date of election to the date of filing of the NOE. We proposed that these days be considered the financial responsibility of the hospice; the hospice could not bill the beneficiary for them. We believe that this is a reasonable step, which would not be burdensome to hospices, would help us to safeguard the integrity of the Medicare Trust Fund, and help protect beneficiaries from inappropriate financial liability.

Once filed, the process of posting an NOE to the CWF after direct data entry (DDE) takes 1 to 5 days, depending on the host site. If an NOE is not submitted by DDE, the current policy requires hospices to send it to the Medicare contractor by mail or messenger. This policy remains in place; however, hospices may need to use overnight mail or an overnight messenger to ensure that paper NOEs are received by the Medicare contractor within the required timeframe after the effective date of election (On average, only 68 NOEs are filed by mail or messenger per year). Using a speedier form of delivery will ensure that a paper NOE’s filing is not delayed by the transit time needed to get the document from the hospice to the Medicare contractor.

2. Timeframe for Filing the Notice of Termination/Revocation

In accordance with 42 CFR 418.26, hospices may discharge patients for only three reasons: (1) Due to cause; (2) due to the patient’s no longer being terminally ill; or (3) due to the patient’s moving outside the hospice’s service area. In contrast, hospice patients are free to revoke their election to hospice care at any time. Upon discharge or revocation, a beneficiary resumes the Medicare coverage that had previously been waived by the hospice election. It is important for hospices to record the beneficiary’s discharge or revocation in the claims processing system in a timely manner. As previously noted, a number of those commenting on the December 6, 2013 CMS memorandum clarifying
drug payment responsibility between Part D, hospices, and beneficiaries wrote that it was critical for beneficiary revocations and live discharges from hospice to be recorded as soon as possible within CMS claims processing systems. Commenters on this Part D memorandum wrote that prompt recording of revocations or discharges is necessary to ensure that the beneficiary is able to access needed items or services, and to ensure that payment for the item or service is from the appropriate source. Providers are allowed 12 months to file a claim, so if a hospice is not prepared to file a final claim quickly, it should instead file a termination/revocation of election notice, so that the claims processing systems are updated to no longer show the beneficiary as being under a hospice election. Hereafter, we will refer to this as a Notice of Termination or Revocation (NOTR).

We proposed to revise the regulations at §418.26 and §418.28 to require hospices to file a NOTR within 3 calendar days after the effective date of a beneficiary’s discharge or revocation, if they had not already filed a final claim. This would safeguard beneficiaries from any delays or difficulties in accessing needed drugs, items, or services that could occur if the CWF or DTRR continued to show a hospice election in place when in fact it was revoked or a discharge occurred. It would also avoid costs and administrative burden to non-hospice providers and to the claims processing systems that occur for claims for items or services provided after discharge or revocation, which would be rejected if the claims processing system continued to show the beneficiary as being under a hospice election.

Comments we received with regard to the proposals to file the NOE and NOTR within 3 calendar days and the consequence for filing the NOE late are summarized below.

Comment: Nearly all commenters supported placing timeframes around the NOE and NOTR for the reasons noted in the proposed rule, but hospices cited circumstances that would make it difficult for them to comply within the proposed timeframe and some requested we phase-in the proposal. Hospice commenters suggested using business days instead of calendar days, or timeframes of 5 to 10 calendar days. Primarily beneficiary advocacy groups, pharmacy groups, and Part D plan sponsors supported 3 calendar days, with one commenter supporting 2 calendar days for the NOE and the NOTR to be filed. These commenters also identified administrative burden issues and beneficiary impact concerns if the NOE and NOTR are not filed as soon as possible. A few commenters asked us to clarify the timeframe for NOE filing and for when a revocation begins. Another suggested that the NOE filing statistics in the rule demonstrated that hospices could not file their NOEs within a short timeframe.

Response: In response to comments received, we are finalizing the requirement for hospices to file the NOE within 5 calendar days after the effective date of the election and to file the NOTR within 5 calendar days after the date of the discharge or revocation (unless the hospice has already submitted the final claim). A timely-filed NOE is one that is submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election. A timely-filed NOTR is one that is submitted to and accepted by, the Medicare contractor within 5 calendar days after the effective date of discharge or revocation, posting to the CWF may not occur within that same time frame. The date of posting to the CWF is not a reflection of whether the NOE or NOTR is considered timely-filed. We believe these timeframes provide an appropriate balance of concerns expressed by the diverse comments received on the proposal, and eliminates the need to phase-in the required timeframe implemented in this final rule. Prompt filing of the NOE and NOTR is essential to protecting the Medicare Trust Fund; minimizing the effect on beneficiaries’ cost-sharing; and preserving access to non-hospice services. We considered the feasibility of using business days versus calendar days; however, the Medicare claims processing system cannot distinguish between calendar days and business days. Therefore, we are not able to consider counting business days for this policy. The NOE filing timeframe statistics included in the proposed rule only indicate historical filing practices and do not indicate hospices’ inability to file NOEs in a more timely fashion once a filing timeframe is implemented. As described in the existing CMS Claims Processing Manual (IOM 100–04, Chapter 11, Section 20.1.1), hospices are to submit the NOE “as soon as possible”. This final policy is one that is submitted to and accepted by the Medicare contractor within 5 calendar days after the hospice election or hospice discharge/revocation, posting to the CWF may not occur within that same time frame. The date of posting to the CWF is not a reflection of whether the NOE or NOTR is considered timely-filed. We believe these timeframes provide an appropriate balance of concerns expressed by the diverse comments received on the proposal, and eliminates the need to phase-in the required timeframe implemented in this final rule. Prompt filing of the NOE and NOTR is essential to protecting the Medicare Trust Fund; minimizing the effect on beneficiaries’ cost-sharing; and preserving access to non-hospice services. We considered the feasibility of using business days versus calendar days; however, the Medicare claims processing system cannot distinguish between calendar days and business days. Therefore, we are not able to consider counting business days for this policy. The NOE filing timeframe statistics included in the proposed rule only indicate historical filing practices and do not indicate hospices’ inability to file NOEs in a more timely fashion once a filing timeframe is implemented. As described in the existing CMS Claims Processing Manual (IOM 100–04, Chapter 11, Section 20.1.1), hospices are to submit the NOE “as soon as possible”. This final policy is one that is submitted to and accepted by the Medicare contractor within 5 calendar days after the effective date of the election or timely-file the NOTR within 5 calendar days after the effective date of a beneficiary’s discharge or revocation, which would be a date earlier than the date the revocation is made, as described at 42 CFR 418.28.

Some hospice commenters identified various technical reasons as to why an NOE or NOTR may not be timely-filed. We encourage hospices to consider available electronic means of transmitting data that nurses in the field may utilize to send the election statement to their administrative office. For example, secure fax or secure email is an easily accessible means of secure data transmission. We believe that it is prudent for hospices, as a business, to establish contingency plans for situations where administrative staff who normally file the NOEs or NOTRs are on vacation, unavailable due to illness, or are unexpectedly unavailable.

We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking.

Comment: A few commenters opposed the proposed consequence for late NOEs. Some commenters felt it would be unfair for hospices to experience financial consequences due to exceptional circumstances that are beyond the control of the hospice, which cause the NOE to be filed untimely. Several commenters suggested that the provider liable days resulting from failing to meet the 3 calendar day timeframe for NOE filing could cause unintended consequences, including delaying admissions.

Response: We agree that there are some circumstances that may be beyond the control of the hospice where it may not be possible to timely-file the NOE within 5 calendar days after the effective date of election or timely-file the NOTR within 5 calendar days after the effective date of a beneficiary’s discharge or revocation. For revocations, existing policy requires that the beneficiary must provide the hospice with a signed statement that he or she is revoking the benefit, including the effective date of the revocation, which cannot be a date earlier than the date the revocation is made, as described at 42 CFR 418.28.

We encourage hospices to submit the NOE and NOTR (if a final claim has not been submitted) as soon as possible and not wait until the 5th calendar day after the effective date of the election or discharge/revocation. For revocations, existing policy requires that the beneficiary must provide the hospice with a signed statement that he or she is revoking the benefit, including the effective date of the revocation, which cannot be a date earlier than the date the revocation is made, as described at 42 CFR 418.28.

Some hospice commenters identified various technical reasons as to why an NOE or NOTR may not be timely-filed. We encourage hospices to consider available electronic means of transmitting data that nurses in the field may utilize to send the election statement to their administrative office. For example, secure fax or secure email is an easily accessible means of secure data transmission. We believe that it is prudent for hospices, as a business, to establish contingency plans for situations where administrative staff who normally file the NOEs or NOTRs are on vacation, unavailable due to illness, or are unexpectedly unavailable.

We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking.

Some hospice commenters identified various technical reasons as to why an NOE or NOTR may not be timely-filed. We encourage hospices to consider available electronic means of transmitting data that nurses in the field may utilize to send the election statement to their administrative office. For example, secure fax or secure email is an easily accessible means of secure data transmission. We believe that it is prudent for hospices, as a business, to establish contingency plans for situations where administrative staff who normally file the NOEs or NOTRs are on vacation, unavailable due to illness, or are unexpectedly unavailable.

We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking.
Medicare contractor. The date the NOE election up to the date the NOE is submitted to, and which do not timely-file the NOE (that would be applied. For those hospices above, examples such as personnel procedures a hospice would follow. Based on the exceptions described above prevents a hospice from timely-filing its NOE, the hospice must document the circumstance to support a request for an exception, which would waive the consequences of filing the NOE late. Using that documentation, the hospice’s Medicare contractor will determine if a circumstance encountered by a hospice qualifies for an exception to the consequences for filing an NOE more than 5 calendar days after the effective date of election. If the request for an exception is denied, the Medicare contractor will retain the decision of the denial. Hospices retain their usual appeal rights on the claim for payment. The Medicare contractors will provide hospices with information on how to request an exceptional circumstance and a waiver of the consequence of filing the NOE late after the publication of this final rule. Sub-regulatory guidance will detail the procedures a hospice would follow. Based on the exceptions described above, examples such as personnel issues; internal IT systems issues that the hospice may experience; the hospice not knowing the requirements; and failure of the hospice to have back-up staff to file the NOE are not acceptable circumstances that meet the exceptions. Therefore, late-filing consequences would be applied. For those hospices which do not timely-file the NOE (that is, the NOE is submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election), Medicare will not cover and pay for the days of hospice care from the effective date of election up to the date the NOE is submitted to, and accepted by, the Medicare contractor. The date the NOE is submitted to, and accepted by, the Medicare contractor would be a covered day. Given the longer timeframe for timely-filing the NOE and the exceptional circumstances that we are implementing, we do not believe that hospices would delay admitting beneficiaries to avoid provider liable days. We will monitor for any unintended consequences of the policy. Under the Medicare hospice benefit, hospices are responsible for providing all care and services to the beneficiary for the palliation and management of the terminal illness and related conditions from the effective date of election to the date of death, or effective date of discharge/revocation, even if some of those days are a provider liability due to a late-filed NOE. The hospice remains responsible for covering all hospice medical, nursing, counseling, social work, and aide services, as well as all hospice drugs, DME, supplies, etc. as needed by the patient, in accordance with the plan of care, during provider liable days. Comment: Multiple commenters suggested a consequence for NOTRs filed late because they considered the filing of the NOTR as more critical from a beneficiary access to care standpoint. Late-filing of the NOTR could create problems for beneficiaries in accessing Part D medications or critical Medicare services, with a few commenters recommending a shorter timeframe than that for the NOE. Response: We appreciate the comments recommending a consequence for late-filing of NOTRs in order to protect the beneficiary’s access to timely care and ensuring that the appropriate party is responsible for care and services. We are not implementing consequences for the late-filing of the NOTR at this time, but will consider doing so in future rulemaking. Comment: Many commenters described systems issues which make filing NOEs and NOTRs cumbersome, or which lead to delays in posting NOE or NOTR data to CMS systems such as the CWF or Part D’s DTRR. Some of these commenters noted concerns with the DDE filing system, the inability to batch and transmit data directly from electronic health records, the inability of FISS to accept electronic files, sequential billing requirements, and also offered other recommendations. Several commenters suggested that CMS address its systems issues, suggesting that CMS systems be required to post NOE information to CWF within 1 to 3 days. Several comments requested various technical clarifications and/or shared concerns with CMS’s data systems to support the proposal to timely-file the NOE and NOTR. One comment stated if NOTR filing procedures should be consistent with current instructions for reporting occurrence codes in claims submissions so that the reason for the discharge would be clear. Response: Before the implementation of the HIPAA transactions and code sets standards in 2003, CMS accepted hospice NOEs via Electronic Data Interchange (EDI) batch submission using the UB–92 flat file claim format. HIPAA implementation eliminated the UB–92 flat file format for claims processing, replacing it with the 837 Institutional (837I) claim transaction. The 837I format requires reporting at least one delivered service and other data elements that are not appropriate to an NOE, so an EDI claim transaction could no longer be used for this purpose. At that time, a great majority of hospice NOEs were already being processed via Direct Data Entry (DDE) into Medicare claims processing systems. CMS determined that DDE submission of NOEs met the business needs of Medicare and most hospices. While many hospices have now adopted electronic health record technology that could facilitate the creation and submission of electronic NOEs, no standard for such submission currently exists. There would be significant implementation challenges associated with creating an interface between any new non-claim format and Medicare claims processing systems. CMS plans to explore options to resume electronic batch submission of hospice NOEs in the future and welcomes input from the hospice industry regarding how electronic submission of NOEs could be feasible. Commenters who stated that sequential billing requirements prevent timely filing of NOEs are in error. While sequential billing requirements continue to apply, if a previous hospice has not filed any or all of its claims for a beneficiary, the current hospice is not prevented by CMS’s claims processing systems from timely-filing its NOE (bill type 8xA). Similarly, there is no restriction within CMS claims processing systems on a current hospice’s ability to file its NOTR if a previous hospice has not filed any or all of its claims for that beneficiary. We are investigating possible improvements or process changes within CMS systems to increase the timeliness of updates. As part of that, we are open to discussions with the industry regarding sequential billing requirements or the Electronic Data Interchange (EDI). Finally, since the claims processing function of the NOTR is simply to post a revocation date for the beneficiary in the CWF, additional information identifying the reason for the discharge is not necessary. This information would
duplicate what is provided when the claim is filed.  

Comment: One commenter asked if the proposals related to the NOE filing that we finalize would apply when Medicare is a secondary payer.  

Response: The timely-filing NOE requirement applies whether Medicare is the primary or secondary payer.  

Comment: We received comments in the context of coordinating Part D and hospice. These comments provided recommendations for various processes for information flow to be considered.  

Response: We appreciate the comments received related to coordination between hospices and Part D sponsors. We will consider these in the overall development of a coordination process, which we solicited comments on in Section III.I.  

Comments: A few hospice commenters stated that they may not know the principal diagnosis or the attending physician to include with the NOE within the proposed 3 calendar days after the effective date of election, and noted that the comprehensive assessment occurs over a 5 day period.  

Response: As noted previously, we are finalizing a timely-filing NOE policy that requires the NOE to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of hospice election, which is 2 days longer than the proposed timeframe. Since beneficiaries must be certified as terminally ill by the hospice physician and the patient’s attending physician (if any) within 2 calendar days after the effective date of election, the principal diagnosis and attending physician chosen by the beneficiary are known to the hospice prior to the end of the timely-filing NOE timeframe. In addition, coding guidelines are very clear as to how to determine a primary diagnosis when multiple potential principle diagnoses may exist. These coding guidelines can be found at: http://www.cdc.gov/nchs/data/icd/icd9cm/icd9cm_guidelines_2011.pdf. We also disagree that the comprehensive assessment must be completed for the hospice to know which diagnosis is the principal diagnosis. The initial assessment would determine the patient’s immediate care and support needs within 48 hours after the election of hospice care, as described in 418.54, and would be completed within the timely-filing NOE timeframe. The initial assessment should support the information documented by hospice and/or attending physician (if any) during the patient certification of eligibility for hospice care. The hospice physician and/or attending physician should be able to provide that information because they have had to review the beneficiary’s medical documentation to determine whether or not to certify the patient as eligible for hospice care. While the comprehensive assessment may determine the breadth of specific needs of the patient, it would not be the primary driver in determining the beneficiary’s principal diagnosis to be included on the NOE.  

Final action: We are finalizing a timely-filing NOE policy that requires the NOE to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election, and a timely-filing NOTR policy that requires the NOTR to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of the discharge/revocation (unless the hospice has already filed a final claim). We are finalizing provider liable days for late filing of NOEs, as proposed. We are also finalizing specific exceptions that, if applicable, would allow for a waiver of the provider liable days for not filing NOEs within 5 days after the effective date of election. We emphasize that prompt filing of the NOE and the NOTR is essential to protecting the Medicare Trust Fund; minimizing the effect on beneficiaries’ cost-sharing; and preserving access to non-hospice services. This finalized policy imposes an upper limit as to when the NOE is to be submitted without the imposition of provider liable days due to late filing of the NOE and an upper limit to when the NOTR is to be submitted after the discharge or revocation of the hospice beneficiary. As such, we strongly encourage hospices to submit the NOE and NOTR as soon as possible and not wait until the 5th calendar day after the date of the election or discharge/revocation. We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking. We have changed the regulatory text shown at the end of this final rule to reflect the policies described above.  

F. Addition of the Attending Physician to the Hospice Election Form  

The term “attending physician” is defined differently in different health care settings. For the Medicare hospice benefit, “attending physician” has a specific definition found in the Social Security Act at 1861(dd)(3)(B) that the term means, with respect to an individual, the physician (as defined in subsection (aa)(5), who may be employed by a hospice program, whom the individual identifies as having the most significant role in the determination and delivery of medical care to the individual at the time the individual makes an election to receive hospice care. Our regulations at § 418.3 include a definition for “attending physician,” based on the above mentioned statutory language. We define it as either 1) a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he or she performs that function or action; or 2) a nurse practitioner who meets the training, education, and experience requirements described elsewhere in our regulations. The definition also sets out the requirement that the patient identify the attending physician at the time he or she elects to receive hospice care, as having the most significant role in the determination and delivery of the individual’s medical care.  

We require that the National Provider Identifier (NPI) of the attending physician be included on the NOE and on each claim. An attending physician can be a physician or a nurse practitioner, as long as he or she meets the requirements outlined in our regulations discussed above. The hospice patient (or his or her representative), not the hospice, chooses the attending physician. This differs from some non-hospice settings, where an attending may be a clinician assigned to provide care to the patient. This requirement is included as part of the CoPs at § 418.52(c)(4), which state that the patient has the right to choose his or her attending physician. The hospice CoPs at § 418.64(a)(3) further require that if the attending physician is unavailable, the hospice medical director, hospice contracted physician, and/or hospice physician employee is responsible for meeting the medical needs of the patient. Therefore, the patient should receive all needed care, whether that care is provided by hospice doctors, hospice nurse practitioners (NPs), or by the designated attending physician. Hospices can bill Part A for reasonable and necessary physician services provided to hospice beneficiaries by its doctors, regardless of whether those doctors are the designated attending. However, our regulations at § 418.304(e) do not permit Medicare to be billed for reasonable and necessary physician services provided by NPs unless the NP is the attending physician, as defined in § 418.3. We have recently heard anecdotal reports of hospices changing a patient’s attending physician when the patient moves to an inpatient setting for inpatient care, often to a nurse.
practitioner. We have also heard reports of hospices assigning an attending physician based upon whoever is available. Medicare contractors noted that the NPI of the attending physician reported on claims was sometimes changing, and differed from that reported on the NOE. Additionally, using CY 2010 and CY 2011 data, we found that 35 percent of beneficiaries had Part B claims during their hospice election from more than one physician who claimed to be their designated attending physician. The reports of hospices changing a patient’s attending physician are of great concern since the statute emphasizes that the attending physician must be chosen by the patient (or his or her representative). Finally, we have also received anecdotal reports that some hospices are not getting the signature of the attending physician on the initial certification. If a beneficiary has designated an attending physician, that physician must sign the initial certification for Medicare to cover and pay for hospice services, unless the attending is a NP.

To ensure the attending physician of record is properly documented in the patient’s medical record, we proposed to amend the regulations at §418.24(b)(1) and require the election statement to include the patient’s choice of attending physician. The proposed information identifying the attending physician should be recorded on the election statement in enough detail so that it is clear which physician or NP was designated as the attending physician. Hospices have the flexibility to include this information on their election statement in whatever format works best for them, provided the content requirements in §418.24(b) are met. The language on the election form should include an acknowledgement by the patient (or representative) that the designated attending physician was the patient’s (or representative’s) choice.

In addition, we further proposed that if a patient (or representative) wants to change his or her designated attending physician, he or she must follow a procedure similar to that which currently exists for changing the designated hospice. Specifically, the patient (or representative) must file a signed statement with the hospice that identifies the new attending physician in enough detail so that it is clear which physician or NP was designated as the new attending physician. Additionally, we proposed that the statement include the date the change is to be effective, the date that the statement is signed, and the patient’s (or representative’s) signature, along with an acknowledgement that this change in the attending physician is the patient’s (or representative’s) choice. The effective date of the change in attending physician cannot be earlier than the date the statement is signed. We believe that such a change would help ensure that any changes in the identity of the attending physician would be the result of the patient’s free choice.

Public comments and our response to comments regarding the changes to §418.24(b)(1) and 418.24(f) requiring the election statement to include the patient’s choice of attending physician and other requirements are summarized below.

Comments: Nearly all commenters wrote that they supported protecting beneficiary choice of the attending physician. The majority of commenters supported our proposal to identify the attending physician on the election form, with several affirming that they already follow this procedure. The main objection to identifying the attending physician on the election form was concern that the patient may not know whom he or she would like to serve as his or her attending physician at the time of election, and that this requirement could delay admission. One commenter asked that the hospice physician or NP be allowed to act as the attending until the patient’s choice could be determined. One commenter suggested that we require the election form to state that the beneficiary (or representative) has the right to choose his or her attending physician, and that the chosen physician does not need to be employed by the hospice. Another commenter asked that we use “provider neutral” language, and refer to the “attending clinician” rather than the attending physician, as the attending could be a physician (MD or DO) or an advanced practice nurse. Two commenters suggested we determine patient and family satisfaction with the attending physician before implementing new requirements. Some commenters felt that the proposal would not change existing behavior and that the proposed requirements increase administrative burden on the hospice. A few commenters encouraged Medicare contractor and/or hospice survey oversight rather than a regulation change.

Response: We appreciate the comments supporting our proposal and the protection of beneficiary choice, and are implementing the requirement to identify the attending physician on the election form as proposed. Regarding comments that the beneficiary might not know the attending at the time of election, the definition of “attending physician” in the Medicare statute requires that the beneficiary identify the attending physician “at the time of election”. Therefore, this timeframe for identifying the attending physician was not part of our proposal but is an existing statutory requirement at section 1861(dd)(3)(B) of the Act. Most beneficiaries have had encounters with physicians prior to their decision to elect hospice care and many typically have longstanding relationships with their healthcare providers. If a hospice beneficiary has had a physician actively involved in their care prior to a hospice election, it is reasonable to expect that the hospice beneficiary will not have difficulty identifying that physician who has the most significant role in the determination and delivery of medical care to them. And, for those individuals who do not have any established and/or longstanding relationships with a healthcare provider, he/she may choose not to identify an attending physician, or may choose to identify a hospice physician or NP as his or her attending physician. We do not prohibit a patient (or representative) from choosing a hospitalist as the attending physician, though we suggest that the hospice explain to the patient (or representative) that a hospitalist on call follows patients who are hospitalized.

As indicated in our regulations at 42 CFR 418.20, in order to be eligible to elect hospice care, the beneficiary must be certified as terminally ill. That certification process occurs before election, and involves the patient’s attending physician (if any). We did not receive any comments raising concerns about identifying the attending physician at the time of election when the definition of “attending physician” was first proposed in 1983 (48 FR 56009). The definition of “attending physician” was changed in section 408 of the Medicare Modernization Act of 2003, and the hospice regulations were updated in the August 15, 2005 FY 2006 Hospice Wage Index Final rule (70 FR 45139–45140). There were no comments received about this longstanding timeframe in the discussion of the changes to the definition of “attending physician” in this final rule. The June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32089 through 32090) also discussed the definition of “attending physician”, and again, there were no comments that raised concerns regarding this timeframe. Since identifying an attending physician at time of hospice election has been a requirement in place for over 30 years, and has not appeared to cause any delay in admission, we do
not believe that including the information that identifies the attending physician on the election form would now begin to create delays in admission to hospice care.

In the proposed rule, we gave hospices the flexibility to include this information identifying the attending physician on their election statement in whatever format works best for them, provided the content requirements in §418.24(b) are met. We wrote that the language on the election form should include an acknowledgement by the patient (or representative) that the designated attending physician was the patient’s (or representative’s) choice. We believe that this language remains sufficient, and do not agree with the commenters that asked that the acknowledgement also include language indicating that the chosen attending physician need not be an employee of the hospice. The decision as to who is or is not the attending physician belongs solely to the patient (or representative) regardless of that attending physician’s employment relationship (or lack thereof) with the hospice. We do not prohibit attending physicians from being hospice employees as long as it is the patient’s choice to decide whether or not to have an attending physician and who that attending physician will be during the patient’s hospice care. Because “attending physician” is defined in the statute, we are also unable to use provider neutral language such as “attending clinician” to describe this position. As articulated in this section, the statutory definition of the “attending physician” at section 1861(dd)(3)(B) of the Act means either a physician or a nurse practitioner, and does not permit broadening the term to include other health care professionals.

We do not agree that we should wait to consider patient or family satisfaction data before implementing any new requirements related to the attending physician. While a few commenters suggested that we not make this regulatory change to the election statement, but instead allow Medicare contractors and survey enforcement to deal with any failure to comply with the regulations, we expect this policy to improve Medicare contractor enforcement and oversight activities as well as State survey activities. The hospice CoPs at §418.52 include regulations related to the choice of attending physician and are enforced by State surveys.

Comment: While some commenters supported having changes in the attending physician documented by the hospice, many commenters felt that this would cause undue burden to the hospice and to patients or their families during a period of crisis. A number of commenters asked that we clarify what constitutes a change in the attending physician, and mentioned scenarios when changes frequently occur, such as when the patient receives GIP care. A number of commenters wrote that most changes come about because the attending is unwilling or unavailable to continue following the patient, particularly as the patient’s care becomes more complex and the hospice physician’s role increases.

Some commenters asked that we allow verbal changes, or changes from representatives by email or by fax. One wrote that it would be unfair for an NP to provide physician services, and for the hospice not to be able to bill for those services because that NP is not the designated attending physician. One commenter was concerned that our proposal implied that changing the attending physician is not appropriate.

Response: We recognize that there are many legitimate reasons for a patient to change an attending physician. However, the choice of the new attending physician belongs solely to the patient (or representative), and the intent of this proposal is to further safeguard and protect that beneficiary choice. A patient cannot be required or coerced to change his or her attending physician.

The hospice should document, in the medical record, situations where the attending physician is no longer willing or available to follow the patient. The hospice can then inform the patient or representative that he or she may choose someone else to serve in that role. In making such a choice, the patient or representative should be informed that he or she can choose a physician or a nurse practitioner as the attending physician, and that this individual could be from the community or from the hospice. Because the attending physician is typically someone with whom the patient had a relationship before electing to receive hospice care, the role of the attending physician is to provide a long term perspective on the patient and family that takes into account their medical and personal history. Ideally, this conversation with the patient (or representative) would occur when the patient is stable, and the patient (or representative) is able to make a decision without the stress of a medical crisis or in the midst of a transition to inpatient care. The patient is not required to make a change, and if he or she chooses not to do so, then the hospice physician or NP would step in to provide all needed care.

We are concerned that many commenters appear to believe that it is necessary to change the attending physician when a patient transitions to GIP or other inpatient care, and that changing the attending physician would cause undue burden to the hospice and to patients or their families during a period of crisis. A hospice patient is not required to change his or her attending physician in order to receive inpatient care, regardless of the setting. If the attending physician does not have privileges at the hospital(s) the hospice contracts with for inpatient care, or does not wish to care for the patient in an inpatient setting, then according to our CoPs at §418.64(o)(5), the hospice physician or NP must provide any needed physician’s services. The patient does not need to designate the hospice physician or NP as his or her attending physician for this to occur. However, while the hospice can bill Medicare Part A for its employed or contracted physicians providing needed physician services to its patients, it can only do so for its NPs if the NP is the designated attending physician. This limitation on hospice NP billing is in the hospice regulations at §418.304(e) and is based on the statutory language surrounding physician billing. The statutory definition of “physician services” at section 1861(g) of the Act requires that the individual performing the services be a physician. “Physicians” are defined at section 1861(r) of the Act, and do not include NPs. However the statute does permit attending physicians to bill for their services at section 1812(d)(2)(A) of the Act, and defines attending physicians to include NPs at section 1861(dd)(3)(B) of the Act.

We noted in the preamble of the proposed rule that “attending physician” is defined differently in different settings. If the patient is in a hospital, the hospital may assign a hospitalist to the patient, and the hospice does not consider the hospitalist to be the “attending physician.” However, that individual does not meet the hospice definition of “attending physician” unless the beneficiary chooses the hospital assigned attending physician to be their hospice attending physician. The clinician who meets the hospice definition of “attending physician” should provide needed care to the hospice patient in the hospital. If that hospice attending physician is unavailable, then the hospice physician or NP would need to do so. The hospice should coordinate the patient’s care during the inpatient stay by communicating with the hospitalist. If the hospice attending physician is
involved in the patient’s care during an inpatient stay, that hospice attending physician will need to coordinate with any hospitalists that the hospital may have assigned, and of course with the hospice.

We believe that commenters’ concerns about stress on families during times of transition, and the burden of additional paperwork, resulted from hospices’ erroneously believing that the attending physician must be changed for each GIP stay. With the clarification provided in this rule, we do not believe that the procedures we proposed for documenting a change in attending physician need to be revised, and are implementing the proposal without changes. When an attending physician is changed by the beneficiary (or representative), the required information documenting that change can be securely faxed or emailed to the hospice.

We reiterate that if the attending physician cannot provide needed physician services, then the hospice physician or NP is required by the hospice CoPs to do so.

Response: We agree that our proposals will not completely resolve the issues related to inappropriate physician billing. We expect that the hospice beneficiary receives all needed items and services for the palliation and management of the terminal illness and related conditions from the hospice or the attending physician. However, sometimes hospice beneficiaries decide to seek continued treatment without the knowledge of the hospice for their terminal illness and related conditions, utilizing items or services provided by or through entities other than the hospice attending physician. The hospice may need to remind beneficiaries of the waiver of Medicare payment for services related to the terminal illness and related conditions provided by non-hospice providers (other than the attending physician), which is part of their election, and of their liability for those related services. Hospice beneficiaries also retain their right to use non-hospice providers for items or services unrelated to the terminal illness and related conditions, and Medicare will pay for those covered items or services.

The hospice CoPs at §418.56(e) require that hospices “ensure that the interdisciplinary group maintains responsibility for directing, coordinating, and supervising the care and services provided” whether the care and services are provided directly or under arrangement and to “provide ongoing sharing of information with other non-hospice healthcare providers furnishing services unrelated to the terminal illness and related conditions.” Therefore, the care coordination role of hospices is one that is to be collaborative with all providers of a beneficiary’s care, including non-hospice providers. The expectation is that hospices would have established collaborative care coordination and communication relationships with other providers to ensure the best interests of its patients. We also agree that more education is needed around this issue to hospices and to physicians, and will be issuing a MedLearn Matters article and possibly other Medicare education products on the topic. We also plan to address Part B billing by physicians inappropriately using the attending physician modifier on claims in the future. Finally, we will update informational materials on the hospice benefit that Medicare makes available to beneficiaries to increase awareness of the choices available to them related to the attending physician.

Response: If the patient (or representative) chooses to make a change in the attending physician, then the patient (or representative) would need to file a signed statement with the hospice that identifies the new attending physician in enough detail so that it is clear which physician or NP was designated as the new attending physician. For example, “Dr. Smith” is likely not specific enough, as there could be more than one physician named “Dr. Smith” in the area. The hospice should include information such as the physician’s full name, office address, or NPI number on the election form when needed to correctly identify the attending physician chosen by the beneficiary. The statement should include the date the change is to be effective, the date that the statement is signed, and the patient’s (or representative’s) signature, along with an acknowledgement that this change in the attending physician is the patient’s (or representative’s) choice. The effective date of the change in attending physician cannot be earlier than the date the statement is signed. The patient (or representative) does not need to complete a new election form. At this time, the hospice does not need to update the claims processing system with changes in the attending physician.

When a change in attending physician occurs, Medicare could be billed for services provided by more than one attending physician during any given month. Hospices should follow the statutory definition of “attending physician” given in the final rule when recording attending physicians or billing for attending physicians on hospice claims. That definition is already included in the hospice claims processing manual (IOM 100–04, chapter 11, sections 40.1.2 and 40.1.3), and takes precedence in an audit.

Response: The hospice CoPs at 418.56(e) require that the hospice be responsible for coordinating provision of the
patient’s care and services in all settings. When a hospice patient resides in a nursing facility, the CoPs at 418.112 require that the hospice assume responsibility for professional management of the resident’s hospice services provided, in accordance with the hospice plan of care. There must be a written agreement in place between the hospice and the facility which addresses care coordination with the facility staff. The CoPs at § 418.112(e) requires the hospice IDG to designate one of its members to coordinate the patient’s hospice care with representatives of the SNF/NF or ICF/MR. The designated IDG member must also communicate with representatives of the SNF/NF or ICF/MR and any other health care providers to ensure quality care for the patient. Additionally, the designated IDG member must ensure that the hospice IDG communicates with the SNF/NF or ICF/MR medical director, the patient’s attending physician, and any other physicians caring for the patient as needed to coordinate the patient’s hospice care with the care provided by other entities. Through these mechanisms, the hospice maintains responsibility for all of its care and services for all of its patients and ensures that the care that it is providing complements the care being provided by others. In addition, the establishment of the written agreements and communication systems with SNFs, NFs, and ICFs/MR when hospices are furnishing hospice care to residents of those facilities promotes clear communication between the hospice and the SNF/NF or ICF/MR and will help hospices ensure that they are meeting their responsibility to furnish the care necessary to meet the needs of its patients. We believe that this coordinated process actively involves and engages all members of the patient’s care team, both within the hospice and the facility, in care planning, and delivery.

Comment: A commenter suggested that the attending physician be responsible for communicating with the beneficiary’s pharmacy regarding which of a hospice beneficiary’s drugs should be discontinued.

Response: We appreciate this comment related to Part D coordination with pharmacies. We will consider this comment in the overall development of a coordination process which we solicited comments on in Section III.I and will address this comment in future rulemaking.

Final action: We are implementing all the proposals related to the attending physician as proposed.

G. FY 2015 Hospice Wage Index and Rates Update

1. FY 2015 Hospice Wage Index

The hospice wage index is used to adjust payment rates for hospice agencies under the Medicare program to reflect local differences in area wage levels based on the location where services are furnished. The hospice wage index utilizes the wage adjustment factors used by the Secretary for purposes of section 1886(d)(3)(E) of the Act for hospital wage adjustments, and our regulations at § 418.306(c) require each labor market to be established using the most current hospital wage data available, including any changes by the Office of Management and Budget (OMB) to the Metropolitan Statistical Areas (MSAs) definitions. We have consistently used the pre-floor, pre-reclassified hospital wage index when deriving the hospice wage index. In our August 31, 2007 FY 2008 Hospice Wage Index final rule (70 FR 45130), we began adopting the revised labor market area definitions as discussed in the OMB Bulletin No. 03–04 (June 6, 2003). This bulletin announced revised definitions for MSAs and the creation of Core-Based Statistical Areas (CBSAs). The bulletin is available online at http://www.whitehouse.gov/omb/bulletins/b03-04.html.

In the FY 2006 Hospice Wage Index final rule, we implemented a 1-year transition policy using a 50/50 blend of the CBSA-based wage index values and the MSA-based wage index values for FY 2006. The one-year transition policy ended on September 30, 2006. For FY 2007 and beyond, we have used CBSAs exclusively to calculate wage index values. OMB has published subsequent bulletins regarding CBSA changes. The most recent CBSA changes used for the FY 2015 hospice wage index are found in OMB Bulletin 10–02, available at: http://www.whitehouse.gov/sites/default/files/omb/assets/bulletins/b10-02.pdf.

When adopting OMB’s new labor market designations in FY 2006, we identified some geographic areas where there were no hospitals, and thus, no hospital wage index data on which to base the calculation of the hospice wage index. We also adopted the policy that for urban labor markets without a hospital from which hospital wage index data could be derived, all of the CBSAs within the state would be used to calculate a statewide urban average pre-floor, pre-reclassified hospital wage index value to use as a reasonable proxy for those areas in our August 6, 2009 FY 2010 Hospice Wage Index final rule (74 FR 39386). In FY 2015, the only CBSA without a hospital from which hospital wage data could be derived is 25980, Hinesville-Fort Stewart, Georgia.

In our August 31, 2007 FY 2008 Hospice Wage Index final rule (72 FR 50214), we implemented a new methodology to update the hospice wage index for rural areas without a hospital, and thus no hospital wage data. In cases where there was a rural area without rural hospital wage data, we used the average pre-floor, pre-reclassified hospital wage index data from all contiguous CBSAs to represent a reasonable proxy for the rural area. In our August 31, 2007 FY 2008 Hospice Wage Index final rule, we noted that we interpret the term “contiguous” to mean sharing a border (72 FR 50217). Currently, the only rural area without a hospital from which hospital wage data could be derived is Puerto Rico. However, our policy of imputing a rural pre-floor, pre-reclassified hospital wage index based on the pre-floor, pre-reclassified hospital wage index (or indices) of CBSAs contiguous to a rural area without a hospital from which hospital wage data could be derived does not recognize the unique circumstances of Puerto Rico. While we have not identified an alternative methodology for imputing a pre-floor, pre-reclassified hospital wage index for rural Puerto Rico, we will continue to evaluate the feasibility of using existing hospital wage data and, possibly, wage data from other sources. For FY 2008 through FY 2013, we have used the most recent pre-floor, pre-reclassified hospital wage index for rural Puerto Rico, which is 0.4047. In this final rule, for FY 2015, we continue to use the most recent pre-floor, pre-reclassified hospital wage index value available for Puerto Rico, which is 0.4047.

For FY 2015, we used the 2014 pre-floor, pre-reclassified hospital wage index to derive the applicable wage index values for the FY 2015 hospice wage index. We continue to use the pre-floor, pre-reclassified hospital wage data as a basis to determine the hospice wage index values because hospitals and hospices both compete in the same labor markets, and therefore, experience similar wage-related costs. We believe the use of the pre-floor, pre-reclassified hospital wage index data, as a basis for the hospice wage index, results in the appropriate adjustment to the labor portion of the costs. The FY 2015 hospice wage index values presented in this final rule were computed consistent with our pre-floor, pre-reclassified hospital IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining
payments for hospice). The FY 2015 pre-floor, pre-reclassified hospital wage index does not reflect OMB’s new area delineations, based on the 2010 Census, as outlined in OMB Bulletin 13–01, released on February 28, 2013. Moreover, the final FY 2015 pre-floor, pre-reclassified hospital wage index does not contain OMB’s new area delineations. CMS proposed changes to the FY 2015 hospital wage index based on the newest CBSA changes in the FY 2015 IPPS proposed rule. Therefore, if CMS incorporates OMB’s new area delineations, based on the 2010 Census, in the FY 2015 hospital wage index, those changes would also be reflected in the FY 2016 hospice wage index.

We received 3 comments regarding the wage index proposals.

Comment: A commenter suggests that CMS implement a policy whereby the area wage index applicable to a hospice that is located in an urban area of a State may not be less than the area wage index applicable to hospices located in that State.

Response: The wage index is based on hospital wage data from each urban CBSA and rural area. Therefore, the wage index for each geographic area (whether urban or rural) should be an accurate reflection of hospital wages in that area. We will continue to monitor the effects of the wage index, look into whether or not we would have the authority to implement such a policy, and determine the appropriateness of such a policy before possibly considering this recommendation in future rulemaking.

Comment: A commenter suggests placing Montgomery County, Maryland into CBSA 47894 “Washington-Arlington-Alexandria, DC-VA-MD-WV”. Montgomery County, along with Frederick County, Maryland, is in CBSA 13644 “Bethesda-Rockville-Frederick, MD”. The commenter states that the cost of living in Montgomery County is no lower than the cost of living in the counties which comprise CBSA 47894.

Response: The geographic area delineations are based on labor market definitions established by OMB. We proposed and finalized the adoption of the revised labor market area definitions as discussed in the OMB Bulletin No. 03–04 (June 6, 2003) in our August 4, 2005 FY 2006 Hospice Wage Index final rule (70 FR 45130). Any revisions to the labor market area definitions will reflect updates to the geographic area delineations established by OMB.

Comment: One commenter requests that the new OMB delineations be considered in computing the FY 2015 wage index for hospices, just as they are for other provider types such as inpatient hospital, SNF and home health.

Response: As in previous years, the hospice wage index will be based on the previous year’s IPPS hospital pre-floor, pre-reclassified wage index. For FY 2015, the hospice wage index will use the FY 2014 IPPS hospital pre-floor, pre-reclassified wage index subject to either a budget neutrality adjustment or application of the hospice floor. The FY 2014 IPPS hospital wage index did not utilize the new OMB delineations. Therefore, the FY 2015 hospice wage index will not incorporate them in this rule. The new OMB delineations will be incorporated into the FY 2015 IPPS hospital wage index. We expect to propose to adopt those changes to the hospice wage index in future rulemaking.

Final action: We are implementing the hospice wage index as discussed in the proposed rule.

2. FY 2015 Hospice Wage Index With an Additional 15 Percent Reduced Budget Neutrality Adjustment Factor (BNAF)

In the FY 2015 Hospice Wage Index proposed rule, we proposed to update the hospice wage index values for FY 2015 using the FY 2014 pre-floor, pre-reclassified hospital wage index. As described in the August 8, 1997 Hospice Wage Index final rule (62 FR 42860), the pre-floor and pre-reclassified hospital wage index is used as the raw wage index for the hospice benefit. These raw wage index values are then subject to either a budget neutrality adjustment or application of the hospice floor to compute the hospice wage index used to determine payments to hospices. Pre-floor, pre-reclassified hospital wage index values below 0.8 are adjusted by either: (1) the hospice budget neutrality adjustment factor (BNAF); or (2) the hospice floor subject to a maximum wage index value of 0.8; whichever results in the greater value.

The BNAF is calculated by computing estimated payments using the most recent, completed year of hospice claims data. The units (days or hours) from those claims are multiplied by the updated hospice payment rates to calculate estimated payments. For the FY 2015 Hospice Wage Index final rule, that means estimating payments for FY 2015 using units (days or hours) from FY 2013 hospice claims data, and applying the final FY 2015 hospice payment rates. The FY 2015 hospice wage index values are then applied to the labor portion of the payments. The procedure is repeated using the same units from the claims data and the same payment rates, but using the 1983 Bureau of Labor Statistics (BLS)-based wage index instead of the updated raw pre-floor, pre-reclassified hospital wage index (note that both wage indices include their respective floor adjustments). The total payments are then compared, and the adjustment required to make total payments equal is computed; that adjustment factor is the BNAF.

The August 6, 2009 FY 2010 Hospice Wage Index final rule finalized a provision to phase out the BNAF over 7 years, with a 10 percent reduction in the BNAF in FY 2010, and an additional 15 percent reduction in each of the next 6 years, with complete phase out in FY 2016 (74 FR 39384). Once the BNAF is completely phased out, the hospice floor adjustment would simply consist of increasing any wage index value less than 0.8 by 15 percent, subject to a maximum wage index value of 0.8. Therefore, in accordance with the FY 2010 Hospice Wage Index final rule, the BNAF for FY 2015 will be reduced by an additional 15 percent for a total BNAF reduction of 85 percent (10 percent from FY 2010, an additional 15 percent from FY 2011, an additional 15 percent for FY 2012, an additional 15 percent for FY 2013, an additional 15 percent in FY 2014, and an additional 15 percent in FY 2015).

The unreduced BNAF for FY 2015 is 0.062084 (or 6.2084 percent). An 85 percent reduction to the BNAF is computed to be 0.009313 (or 0.9313 percent). For FY 2015, this is mathematically equivalent to taking 15 percent of the unreduced BNAF value, or multiplying 0.062084 by 0.15, which equals 0.009313 (0.9313 percent). The BNAF of 0.9313 percent reflects an 85 percent reduction in the BNAF. The 85 percent reduced BNAF (0.9313 percent) was applied to the pre-floor, pre-reclassified hospital wage index values of 0.8 or greater. The 10 percent reduced BNAF for FY 2010 was 0.055598, based on a full BNAF of 0.061775; the additional 15 percent reduced BNAF FY 2011 (for a cumulative reduction of 25 percent) was 0.045422, based on a full BNAF of 0.060562; the additional 15 percent reduced BNAF for FY 2012 (for a cumulative reduction of 40 percent) was 0.035156, based on a full BNAF of 0.058593; the additional 15 percent reduced BNAF for FY 2013 (for a cumulative reduction of 55 percent) was 0.027197, based on a full BNAF of 0.060438; the additional 15 percent reduced BNAF for FY 2014 (for a cumulative reduction of 70 percent) was 0.018461, based on a full BNAF of 0.060438; and the additional 15 percent reduced BNAF for FY 2015 (for a cumulative reduction of 85 percent) is
3. Hospice Payment Update Percentage

Section 4441(a) of the Balanced Budget Act of 1997 (BBA) amended section 1814(i)(1)(C)(ii)(VI) of the Act to establish updates to hospice rates for FYs 1998 through 2002. Hospice rates were to be updated by a factor equal to the market basket index, minus 1 percentage point. Payment rates for FYs 2002 have been updated according to section 1814(i)(1)(C)(ii)(VI) of the Act, which states that the update to the payment rates for subsequent FYs must be the market basket percentage for that FY. The Act requires us to use the inpatient hospital market basket to determine the hospice payment rate update. In addition, section 3401(g) of the Affordable Care Act mandates that, starting with FY 2013 (and in subsequent FYs), the hospice payment update percentage will be annually reduced by changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. In addition, section 3401(g) of the Affordable Care Act also mandates that in FY 2013 through FY 2019, the hospice payment update percentage will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions specified in section 1814(i)(1)(C)(v) of the Act). The final hospice payment update percentage for FY 2015 will be the inpatient hospital market basket update of 2.9 percent (based on IHS Global Insight, Inc.’s second quarter 2014 forecast with historical data through the first quarter of 2014), less any mandated adjustments. Due to the requirements of 1886(b)(3)(B)(xi)(III) and 1814(i)(1)(C)(v) of the Act, the inpatient hospital market basket update for FY 2015 of 2.9 percent must be reduced by a productivity adjustment as mandated by Affordable Care Act (currently estimated to be 0.5 percentage point for FY 2015). The inpatient hospital market basket for FY 2015 is reduced further by a 0.3 percentage point, as mandated by the Affordable Care Act. In effect, the final hospice payment update percentage for FY 2015 is 2.1 percent. We used the most recent data available (for example, the most recent inpatient hospital market basket and productivity adjustment), to determine the FY 2015 market basket update and the multi-factor productivity MFP adjustment in this FY 2015 Hospice PPS final rule.

Currently, the labor portion of the hospice payment rates is as follows: for Routine Home Care, 68.71 percent; for Continuous Home Care, 68.71 percent; for General Inpatient Care, 64.01 percent; and for Respite Care, 54.13 percent. The non-labor portion is equal to 100 percent minus the labor portion for each level of care. Therefore, the non-labor portion of the payment rates is as follows: for Routine Home Care, 31.29 percent; for Continuous Home Care, 31.29 percent; for General Inpatient Care, 35.99 percent; and for Respite Care, 45.87 percent.

We received 3 comments regarding the proposed payment update. Comment: The commenters stated that the proposed update is misleading and inaccurate due to cuts through the BNAF phase-out and sequestration. Commenters claim that hospices are incurring significant, additional regulatory costs and are forced to take dollars for these costs out of patient care. Some examples of additional regulatory burdens cited by the commenters include: the costs of CR 8358 “Additional Data Reporting Requirements for Hospice Claims”, the Experience of Care Survey which will be required in 2015, the burden of Part D prior authorization or appeal, and the proposed new cost report requiring new financial reporting systems and additional staff.

Response: The comments on sequestration are outside the scope of this rule. We note that the impact analysis does reflect estimated reductions in FY 2015 payments to hospice as a result of the 6th year of the 7-year BNAF phase-out.

Final action: We are implementing the hospice payment update as discussed in the proposed rule and consistent with the updated data to the market basket market update and multi-factor productivity (MFP) adjustment.

4. FY 2015 Hospice Payment Rates

Historically, the hospice rate update has been published through a separate administrative instruction issued annually in the summer to provide adequate time to implement system change requirements; however, beginning in FY 2014 and for subsequent fiscal years, we are using rulemaking as the means to update payment rates. This change was proposed in the FY 2014 Hospice Wage Index and Payment Rate Update proposed rule and finalized in the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48270). It is consistent with the rate update process in other Medicare benefits, and provides rate information to hospices as quickly as, or earlier than, when rates are published in an administrative instruction.

There are four payment categories that are distinguished by the location and intensity of the services provided. The base payments are adjusted for geographic differences in wages by multiplying the labor share, which varies by category, of each base rate by the applicable hospice wage index. A hospice is paid the routine home care rate for each day the beneficiary is enrolled in hospice, unless the hospice provides continuous home care, inpatient respite care, or general inpatient care. Continuous home care is provided during a period of patient crisis to maintain the patient at home; inpatient respite care is short-term care to allow the usual caregiver to rest; and general inpatient care is to treat symptoms that cannot be managed in another setting.

The final FY 2015 payment rates will be the FY 2014 payment rates, increased by 2.1 percent, which is the final hospice payment update percentage for FY 2015 as discussed in section III.G.3. The final FY 2015 hospice payment rates will be effective for care and services furnished on or after October 1, 2014, through September 30, 2015 (see Table 6 below).

The Congress required in sections 1814(i)(5)(A) through (C) of the Act that hospices begin submitting quality data, based on measures to be specified by the Secretary. In the FY 2012 Hospice Wage Index final rule (76 FR 47320 through 47324), we implemented a Hospice Quality Reporting Program (HQRP) as required by section 3004 of the Affordable Care Act. Hospices were required to begin collecting quality data in October 2012, and submit that quality data in 2013. Section 1814(i)(5)(A)(i) of the Act requires that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY. We remind hospices that this applies to payments in FY 2015 (See Table 7 below). For more information on the HQRP requirements please see section III.H in this final rule.

To assist the hospice industry in planning and budgeting, CMS is informing the hospice industry of the aggregate cap amount for the 2014 cap year in advance of the formal CMS administrative notice, which will be issued this summer. Additionally, we have included information about how we calculate the aggregate cap amount so that hospices can compute the amount themselves in the future if they so desire. This information is also in CMS’ Internet-Only Manual 100–2, chapter 9, section 90.2.6. The manual can be accessed from the “Manuals and Transmittals” section of CMS’ hospice Web site at http://www.cms.gov/Center/Provider-Type/Hospice-Center.html.

The hospice aggregate cap amount for the 2014 cap year will be $26,725.79. The cap amount is calculated according to § 1814(i)(2)(B) of the Act. The cap amount for a given year is $6,500 multiplied by the change in the Consumer Price Index for All Urban Consumers (CPI–U) Medical Care expenditure category, from the fifth month of the 1984 accounting year (March 1984) to the fifth month of the current accounting year (in this case March 2014). The CPI–U for Medical Care expenditures (BLS series code CUUR0000SAM) for 1984 to present is available from the Bureau of Labor Statistics (BLS) Web site at: http://www.bls.gov/cpi/home.htm.

The hospice aggregate cap amount for the 2014 cap year will be $26,725.79. The cap amount is calculated according to § 1814(i)(2)(B) of the Act. The cap amount for a given year is $6,500 multiplied by the change in the Consumer Price Index for All Urban Consumers (CPI–U) Medical Care expenditure category, from the fifth month of the 1984 accounting year (March 1984) to the fifth month of the current accounting year (in this case March 2014). The CPI–U for Medical Care expenditures (BLS series code CUUR0000SAM) for 1984 to present is available from the Bureau of Labor Statistics (BLS) Web site at: http://www.bls.gov/cpi/home.htm.

H. Updates to the Hospice Quality Reporting Program

1. Background and Statutory Authority

Section 3004 of the Affordable Care Act amended the Act to authorize a quality reporting program for hospices. Section 1814(i)(5)(A)(i) of the Act requires that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY. Depending on the amount of the annual update for a particular year, a reduction of 2 percentage points could result in the annual market basket update being less than 0.0 percent for a FY and may result in payment rates that are less than payment rates for the preceding FY. Any reduction based on failure to comply with the reporting requirements, as required by section 1814(i)(5)(B) of the
Act, would apply only for the particular FY involved. Any such reduction would not be cumulative or be taken into account in computing the payment amount for subsequent FYs.

Section 1814(i)(5)(C) of the Act requires that each hospice submit data to the Secretary on quality measures specified by the Secretary. The data must be submitted in a form, manner, and at a time specified by the Secretary. Any measures selected by the Secretary must have been endorsed by the consensus-based entity which holds a contract regarding performance measurement with the Secretary under section 1890(a) of the Act. This contract is currently held by the National Quality Forum (NQF). However, section 1814(i)(5)(D)(ii) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the consensus-based entity, the Secretary may specify measures that are not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus-based organization identified by the Secretary.

The successful development of a Hospice Quality Reporting Program (HQRP) that promotes the delivery of high quality healthcare services is our paramount concern. We seek to adopt measures for the HQRP that promote more efficient and safer care. Our measure selection activities for the HQRP take into consideration input we receive from the Measure Applications Partnership (MAP), convened by the National Quality Forum (NQF), as part of a pre-rulemaking process that we have established and are required to follow under section 1890A of the Act. The MAP is a public-private partnership comprised of multi-stakeholder groups convened by the NQF for the primary purpose of providing input to CMS on the selection of certain categories of quality and efficiency measures, as required by section 1890A(a)(3) of the Act. By February 1st of each year, the NQF must provide that input to CMS. Input from the MAP is located at: (http://www.qualityforum.org/Setting_Priorities/Partnership/MeasureApplications_Partnership.aspx). For more details about the pre-rulemaking process, see the FY 2013 IPPS/LTCPPS final rule (77 FR 53376).

We also take into account national priorities, such as those established by the National Priorities Partnership at (http://www.qualityforum.org/npp/), the HHS Strategic Plan (http://www.hhs.gov/secretary/about/priorities.html), the National Strategy for Quality Improvement in Healthcare located at (http://www.ahrq.gov/workingforquality/nqs/nqs2013annrpt.html) and the CMS Quality Strategy at http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html.

To the extent practicable, we have sought to adopt measures that have been endorsed by the national consensus organization, recommended by multi-stakeholder organizations, and developed with the input of providers, purchasers/payers, and other stakeholders.

1. Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Years FY 2014 and FY 2015.

As stated in the FY 2012 Hospice Wage Index final rule (76 FR 47302, 47320), to meet the quality reporting requirements for hospices for the FY 2014 payment determination and in the FY 2013 Home Health Prospective Payment System (HH PPS) final rule (77 FR 67068, 67133), the quality reporting requirements for hospices for the FY 2015 payment determination, as set forth in section 1814(i)(5) of the Act, we finalized the requirement that hospices report two measures:

- An NQF-endorsed measure related to pain management, NQF #0209. The data for this measure are collected at the patient level, but are reported in the aggregate for all patients cared for within the reporting period, regardless of payer.
- A structural measure that is not endorsed by NQF: Participation in a Quality Assessment and Performance Improvement (QAPI) program that includes at least three quality indicators related to patient care.

2. Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Years FY 2016 and Beyond.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48234, 48256), we finalized that the structural measure related to QAPI indicators and the NQF #0209 pain measure would not be required for the HQRP beyond data submission for the FY 2015 payment determination. The data submission period for the FY2015 payment determination closed on April 1, 2014.

As stated in the FY 2013 HH PPS final rule (77 FR 67068, 67133), we considered an expansion of the required measures to include additional measures endorsed by NQF. We also stated that to support the standardized collection and calculation of quality measures by CMS, collection of the needed data elements would require a standardized data collection instrument. We developed and tested a hospice patient-level item set, the Hospice Item Set (HIS) to be used by all hospices to collect and submit standardized data items about each patient admitted to hospice.

In developing the standardized HIS, we considered comments offered in response to the CY 2013 HH PPS proposed rule (77 FR 41548, 41573). In the FY 2014 Hospice Wage Index final rule (78 FR 48257), and in compliance with section 1814(i)(5)(C) of the Act, we finalized the specific collection of data items that support the following six NQF endorsed measures and one modified measure for hospice:

- NQF #1617 Patients Treated with an Opioid who are Given a Bowel Regimen
- NQF #1634 Pain Screening
- NQF #1637 Pain Assessment
- NQF #1638 Dyspnea Treatment
- NQF #1639 Dyspnea Screening
- NQF #1641 Treatment Preferences
- NQF #1647 Beliefs/Values Addressed (if desired by the patient) (modified)

To achieve a comprehensive set of hospice quality measures available for widespread use for quality improvement and informed decision making, and to carry out our commitment to develop a quality reporting program for hospices that uses standardized methods to collect data needed to calculate quality measures, we finalized the HIS effective July 2014 (78 FR 48257). To meet the quality reporting requirements for hospices for the FY 2016 payment determination and each subsequent year, we will require regular and ongoing electronic submission of the HIS data for each patient admission to hospice on or after July 1, 2014, regardless of payer or patient age (78 FR 48234, 48258). Collecting data on all patients will provide CMS with the most robust, accurate reflection of the quality of care delivered to Medicare beneficiaries as compared with non-Medicare patients. Therefore, to measure the quality of care that is delivered to Medicare beneficiaries in the hospice setting, we will collect quality data necessary to calculate the adopted measures on all patients. We are requiring in our regulation that hospices collect data on all patients in hospice in order to ensure that all patients, regardless of payer, are receiving the same care and that provider metrics measure performance...
across the spectrum of patients (78 FR 48258).

Hospices are required to complete and submit an admission HIS and a discharge HIS for each patient admission. Hospices failing to report quality data via the HIS in 2014 will have their market basket update reduced by 2 percentage points in FY 2016. Although this has been implemented thus far pursuant to instructions set out in our preamble statements, we proposed to codify the HIS submission requirements at § 418.312 in this final rule. The System of Record (SOR) Notice for the HIS, SOR number 09–07–0548, was published in the Federal Register on April 8, 2014 (79 FR 19341).

Comment: Several commenters believed that hospices should not be subject to a reduction in the annual market basket update if they are unable to achieve 100 percent timely data submission during the FY 2015 submission period.

Response: We thank the commenters for their concern; however, we did not make any proposals regarding timely data submission. We also recognize that new hospices that receive their CCN after the yearly submission deadline are still required to submit the HIS for each patient, but those HIS submissions would fall after the submission deadline. If a hospice realizes that it will not meet the timeliness criteria for any given record, for whatever reason, it should still complete and submit that record. Late completion and submission of HIS records will result in a non-fatal warning error in the Quality Improvement and Evaluation System. However, the records can still be accepted by the system.

Comment: Several commenters asserted that the Quality Reporting Program should be restricted to Medicare patients and stated that requiring data reporting on patients covered by other payers is outside CMS’s regulatory authority.

Response: We respectfully disagree with the commenters’ assertions. We have proposed to codify the HIS submission requirements at § 418.312. Section 3004 of the ACA requires quality reporting, and CMS has required all facilities subject to quality reporting requirements to submit data on its entire patient population, including hospitals and inpatient rehabilitation facilities. The delivery of high quality care in hospice is imperative, regardless of payer. We believe that collecting quality data on all patients in the hospice setting supports CMS’ mission to ensure quality care beneficiaries and ensures that all patients, regardless of payer, are receiving the same care.

Comment: Several commenters noted that the cost of the mandated quality program must be reflected in hospice reimbursement rates.

Response: We thank the commenters for their concern; however, the cost of quality improvement programs should be reported on the cost reports. Cost report data may be considered in future payment reform.

Comment: One commenter reported that more time is required to assure the quality of HIS Information than the time it takes to collect it. While this situation may be the result of the newness of the tool and the learning curve required for implementation, the production of reliable and meaningful quality measures depends on the quality of the data collected.

Response: We thank the commenters for taking the time to express their concerns regarding the HIS collection. Collection began on July 1st, 2014 and we understand the commenter’s perception that the newness of the process may make the process feel more burdensome. We appreciate the commenters’ diligence ensuring quality and accuracy of the data submitted.

Comment: A few commenters expressed disagreement with our estimate of the amount of regulatory burden on hospice agencies to carry out the HIS admission and discharge submissions.

Response: We thank the commenters for taking the time to express these views and suggestions. CMS attempts to reduce the regulatory burden of our quality reporting programs to the greatest extent possible. As required by OMB, the burden to complete the HIS is included in the actual HIS (http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Downloads/HIS_Admission_Final_4-8-2014.pdf). Specifically, CMS estimates 19 minutes per response for the Admission HIS and 10 minutes per response for the Discharge HIS. Details regarding the estimate can be found at: http://www.cms.gov/Regulations-and-Guidance/Legislation/Paperwork/ReductionActof1995/PRA-Listing-Items/CMS1252151.html?DLPage=1&DLSort=1&DLSortDir=descending. Comments concerning the accuracy of the time estimate(s) or suggestions for improving the HIS can be directed to: CMS, 7500 Security Boulevard, Attn: PRA Reports Clearance Officer, Mail Stop C4–26–05, Baltimore, Maryland 21244–1850.

Final action: After consideration of the comments, we are finalizing our proposal to codify the HIS submission requirements at § 418.312 in this final rule as proposed without change.

Hospice programs will be evaluated for purposes of the quality reporting program based on whether or not they submit data, not on their substantive performance level with respect to the required measures. We have provided hospices with information and details about use of the HIS through postings on the Hospice Quality Reporting Program Web page, Open Door Forums, announcements in the CMS MLN Connects Provider e-News (E-News), and provider training. Electronic data submission is required for HIS submission in CY 2014 and beyond; there are no other data submission methods available. CMS will make available submission software for the HIS to hospices at no cost. We intend to report to providers on the seven finalized measures on a schedule to be determined.

Submission of the HIS on all patient admissions to hospice, regardless of payer or patient age, is required. The data submission system provides reports upon successful submission and successful processing of the HIS records. The final validation report may serve as evidence of submission. This is the same data submission system used by nursing homes, inpatient rehabilitation facilities and long-term care hospitals for the submission of Minimum Data Set Version 3.0 (MDS 3.0), Inpatient Rehabilitation Facility—Patient Assessment Instrument (IRF–PAI), and Long-Term Care Hospital Continuity Assessment Record & Evaluation Data Set (LTCH CARE), respectively.

We also proposed that newly certified hospices that receive notice of their CMS certification number on or after November 1, 2014 for payments to be made in FY 2016 be excluded from the quality reporting requirements for the FY 2016 payment determination, as data submission and analysis would not be possible for a hospice receiving notification of their certification this late in the reporting time period.

We proposed that in future years, hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY. We proposed to codify this requirement at § 418.312.

Comment: Several commenters support the proposal that hospices that
receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY and to codify this requirement at § 418.312.

Response: We thank commenters for taking the time to support our proposal.

Final action: We are finalizing our proposal that hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY and to codify this requirement at § 418.312.

As is common in other quality reporting programs, we proposed to make accommodations in the case of natural disaster or other extenuating circumstances. Our experience with other quality reporting programs has shown that there are times when providers are unable to submit quality data due to extraordinary circumstances beyond their control (for example, natural or man-made disasters). A disaster may be widespread or impact multiple structures or be isolated and impact a single site only. We do not wish to penalize providers in these circumstances or to unduly increase their burden during these times.

Therefore, we proposed a process, for the FY 2016 payment determination and subsequent payment determinations, for hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider. When an extension/exception is granted, a hospice will not incur payment reduction penalties for failure to comply with the requirements of the HQRP.

Under the proposed process for the FY 2016 payment determination and subsequent payment determinations, a hospice may request an extension/exception of the requirement to submit quality data for a specified time period. We proposed a process that, in the event that a hospice requested an extension/exception for quality reporting purposes for the FY 2016 payment determination and subsequent payment determinations, the hospice would submit a written request to CMS. Requirements for requesting an extension/exception will be available on the Hospice Quality Reporting Web site at http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/index.html.

This proposal does not preclude us from granting extensions/exceptions to hospices that have not requested them when we determine that an extraordinary circumstance, such as an act of nature, affects an entire region or locale. We also proposed that we could grant an extension/exception to a hospice if we determine that a systemic problem with our data collection systems directly affected the ability of the hospice to submit data. If we make the determination to grant an extension/exception to hospices in a region or locale, we proposed to communicate this decision through routine communication channels to hospices and vendors, including, but not limited to, Open Door Forums, E-News and notices on https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/.

Public comments and our response to comments are summarized below. All comments received were supportive of the proposed extension/exception policy.

Comment: Several commenters supported the proposal to allow hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider.

Response: We thank the commenters for taking the time to express their support for this proposal.

Final action: After consideration of the public comments, we are finalizing our proposal without change to allow hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider.

4. Future Measure Development

We did not propose any new measures for the HQRP in the FY 2015 Hospice Wage Index and Payment Rate Update proposed rule. However, we believe future development of the HQRP should address existing measure gaps by focusing on two primary opportunities: to expand measures already in use in other quality reporting programs that could apply to the HQRP and to develop new measures if no suitable measures are ready for implementation or expansion. We are particularly interested in outcome measures for symptom management, particularly pain. We are also interested in measures of patient reported outcomes. In the proposed rule, we solicited comments and input on future measure development.

Comment: Many comments were generally supportive of the Hospice Quality Reporting Program (HQR), and quality measurement in general. Commenters indicated they were pleased that CMS was not proposing additional new measures for implementation at this time, and cautioned against implementing additional measures before the end of at least one full year of data collection using the current Hospice Item Set (HIS), allowing hospices time to focus on HIS implementation and the proposed CAHPS® Hospice Survey implementation. Commenters supported the addition of measures in the future, and agreed that pain outcome and patient reported measures are an important area of focus for measure development. Several commenters highlighted the need for additional measures to capture a more comprehensive picture of hospice quality of care.

One commenter underscored the importance of developing and implementing quality measures that address the biopsychosocial model of distress, addressing depression, anxiety, personality and behavioral symptoms. In prioritizing future measure development areas, commenters recommended that CMS consider measure recommendations made by the NQF-convened Measures Application Partnership and developments in other initiatives including the “Measuring What Matters” consensus project. In addition, commenters emphasized that measures should address matters that are important to patients and caregivers and meet the information needs of Medicare beneficiaries.

Commenters specifically recommended measures that captured the following aspects of quality hospice care for patients with a variety of symptoms and diagnoses including: dementia; symptom management to comfortable or acceptable level; medication reconciliation; shared decision making and person and family-centered care; use of the interdisciplinary team; avoidance of unwanted CPR; avoidance of hospitalization and Emergency Department use; access and availability of hospice services, particularly time between initial referral and start of hospice care; appropriate staff training, degrees, or certifications; assessment of behavioral symptoms; assessment and management of caregiver burden; and assessment and management of caregiver and patient quality of life.
Another commenter suggested that CMS, along with other stakeholders, develop outcome measures to address areas such as pain, dyspnea, bowel management, and/or caregiver satisfaction. A few commenters indicated concerns that quality measures based on symptoms (for example, measures related to pain, and dyspnea) only represent a subset of hospice patients (those with that particular symptom) and due to this smaller sample size may limit usefulness of the measures, particularly for public reporting.

In addition, one commenter suggested that CMS reconsider the removal of the NQF #0209 measure from the HQRP, stating that it should be retained while CMS works with the measure steward to revise the measure to address the concerns CMS raised in last year’s rule. Other commenters reiterated their support of CMS’s decision to remove the NQF #0209 from the HQRP. Another commenter encouraged CMS to implement a patient assessment instrument in the future to collect quality measure data at defined time points.

Finally, one commenter indicated that quality of care should be measured across settings.

Response: CMS appreciates commenters’ input and recommendations for future measure development areas for the HQRP. We plan to continue developing the HQRP to respond to the measure gaps identified by the Measures Application Partnership and others, and align measure development with the National Quality Strategy and the CMS Quality Strategy. We will take these comments into consideration in developing and implementing measures for future inclusion in the HQRP.

We are also interested in understanding the current state of electronic health record adoption and use of HIE in hospices, we solicited comments on the need to develop and the benefits and limitations of implementing electronic clinical quality measures for hospice providers.

The Department of Health and Human Services (HHS) believes all patients, their families, and their healthcare providers should have consistent and timely access to their health information in a standardized format that can be securely exchanged between the patient, providers, and others involved in the patient’s care. (HHS August 2013 Statement, Principles and Strategies for Accelerating Health Information Exchange.) HHS is committed to accelerating health information exchange (HIE) through the use of electronic health records (EHRs) and other types of health information technology (HIT) across the broader care continuum through a number of initiatives including: (1) alignment of incentives and payment adjustments to encourage provider adoption and optimization of HIT and HIE services through Medicare and Medicaid payment policies; (2) adoption of common standards and certification requirements for interoperable HIT; (3) support for privacy and security of patient information across all HIE-focused initiatives; and (4) governance of health information networks. These initiatives are designed to encourage HIE among all health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for the EHR Incentive Programs, and are designed to improve care delivery and coordination across the entire care continuum. To increase flexibility in the Office of the National Coordinator for Health Information Technology’s (ONC) HIT Certification Program and expand HIT certification, ONC has issued a proposed rule concerning a voluntary 2015 Edition HIT certification criteria which would more easily accommodate certification of HIT used in other types of health care settings whether or institutional health care providers are not typically eligible for incentive payments under the Medicare and Medicaid EHR Incentive Programs, such as long-term and post-acute care and behavioral health settings.

We believe that HIE and the use of certified EHRs by Hospice and other types of providers that are ineligible for the Medicare and Medicaid EHR Incentive Programs can effectively and efficiently help providers improve internal care delivery practices, support management of patient care across the continuum, and enable the reporting of electronically specified clinical quality measures (eCQMs). More information on the identification of EHR certification criteria and development of standards applicable to Hospice can be found at: http://healthit.gov/policy-researchers-implementers/standards-and-certification-regulations http://www.healthit.gov/facas/FACAS/health-it-policy-committee/https-workgroups/certificationadoption http://wiki.siframework.org/LCC+LTTPAC+C+Transition+SWG http://wiki.siframework.org/Longitudinal+Coordination+of+C+Care

Summaries of the public comments and our responses to comments on the current state of electronic health record (EHR) adoption and usage and Health Information Exchange (HIE) in the hospice community are provided below: Comment: Commenters expressed support of the adoption and use of EHRs in the hospice setting, noting that it may lead to more consistent care and better symptom management.

Response: We thank the commenters for their support.

Comment Summary: CMS received several comments in response to its solicitation for input related to Electronic Health Record (EHR) adoption and usage and Health Information Exchange (HIE) in the hospice community. Most commenters noted that EHRs are important to aid in quality outcomes, and in general supported the use of certified EHRs if given sufficient time and resources for implementation. A commenter expressed that EHR adoption exists among hospices, however they lack standardization. Some commenters conveyed the importance of EHR and HIE adoption and use for patient coordination, and that information exchange should be required and available across providers; noting that it may lead to more consistent care and better symptom management. A commenter noted continued use of fax and mail services for the delivery of patient information. Several commenters supported EHR use, but suggested that there are current limitations related to the lack of decision support software and adequate health information exchange amongst the providers. In addition, they expressed concerns related to barriers to EHR and HIE adoption, as well as electronic quality measures.

Commenters suggested that specific barriers and limitations pertained to funding, feasibility, and adequate interoperability. Commenters suggested that a major barrier to the adoption of EHR technology in the hospice setting is
that hospice EHRs are not always interoperable with the technology used by hospitals and/or physicians. The commenters recommended that government officials review and adjust regulations that inhibit the exchange of electronic health information and that CMS mandate the development and use of uniform standards to govern the Health Information Exchange. All commenters suggested that funding incentives/levers could enable adoption of EHR technology. Some commenters recommended that CMS consider the establishment of financial incentives, (for example, funding tied to quality improvement/cost savings for hospices to implement EHR technology), noting that small and/or rural hospices have lower financial margins and lack of capital to implement EHR technology. One commenter suggested low-interest loans programs to aid in the funding of EHR technology. Additional commenters expressed that all EHR/HIE systems should include adequate education and system testing to ensure data integrity and the protection of confidential information, and that CMS should facilitate health information technology that includes tele-health technology. One commenter stated that CMS should not develop electronic clinical quality measures for the hospice setting until a framework is developed that includes the certification of electronic medical records for post-acute care providers and the financial assistance to support system implementation.

Response: We thank the commenters for their support of EHR and HIE utilization and for their recommendations. We are encouraged to learn about hospice adoption of EHRs and their efforts related to interoperability. We believe that the recommendations provided (for example, testing, education, use of uniform standards, exchange of appropriate information across providers), as well as the concerns that were conveyed related to barriers in EHR and HIE adoption (for example, adequate interchange and interoperability, feasibility, testing and financial barriers), are important considerations related to EHR adoption and HIE usage in the hospice setting.

5. Public Availability of Data Submitted

Under section 1814(i)(5)(E) of the Act, the Secretary is required to establish procedures for making any quality data submitted by hospices available to the public. Measures reported publicly will not display patient identifiable information. The procedures ensure that a hospice would have the opportunity to review the data regarding the hospice’s respective program before it is made public. In addition, under section 1814(i)(5)(E) of the Act, the Secretary is authorized to report quality measures that relate to services furnished by a hospice on the CMS Web site. We recognize that public reporting of quality data is a vital component of a robust quality reporting program and are fully committed to developing the necessary systems for public reporting of hospice quality data. We also recognize that it is essential that the data made available to the public be meaningful and that comparing performance between hospices requires that measures be constructed from data collected in a standardized and uniform manner. Therefore, implementation and implementation of a standardized data set for hospices must precede public reporting of hospice quality measures. Once hospices have implemented the standardized data collection approach, we will have the data needed to establish the scientific soundness of the quality measures that can be calculated using the standardized data collection. It is critical to establish the reliability and validity of the measures prior to public reporting in order to demonstrate the ability of the measures to distinguish between the quality of services provided. To establish reliability and validity of the quality measures, at least four quarters of data will need to be analyzed. Typically the first two quarters of data reflect the learning curve of the providers as they adopt a standardized data collection; these data are not used to establish reliability and validity. This means that, since we will begin data collection in CY 2014 (Q3), the data from CY 2014 (Q3, Q4) will not be used for assessing validity and reliability of the quality measures. Data collected by hospices during Q1–3 CY 2015 will be analyzed starting in CY 2015. Decisions about whether to report some or all of the quality measures publicly will be based on the findings of analysis of the CY 2015 data. In addition, the Affordable Care Act requires that reporting be made public on a CMS Web site and that providers have an opportunity to review their data prior to public reporting. CMS will develop the infrastructure for public reporting, and provide hospices an opportunity to review their data. In light of all the steps required prior to data being publicly reported, public reporting will not be implemented in FY 2016. Public reporting may occur during FY 2017.

Response: We thank the commenters for their support of EHR and HIE utilization and for their recommendations. We are encouraged to learn about hospice adoption of EHRs and their efforts related to interoperability. We believe that the recommendations provided (for example, testing, education, use of uniform standards, exchange of appropriate information across providers), as well as the concerns that were conveyed related to barriers in EHR and HIE adoption (for example, adequate interchange and interoperability, feasibility, testing and financial barriers), are important considerations related to EHR adoption and HIE usage in the hospice setting.

5. Public Availability of Data Submitted

Under section 1814(i)(5)(E) of the Act, the Secretary is required to establish procedures for making any quality data submitted by hospices available to the public. Measures reported publicly will not display patient identifiable information. The procedures ensure that a hospice would have the opportunity to review the data regarding the hospice’s respective program before it is made public. In addition, under section 1814(i)(5)(E) of the Act, the Secretary is authorized to report quality measures that relate to services furnished by a hospice on the CMS Web site. We recognize that public reporting of quality data is a vital component of a robust quality reporting program and are fully committed to developing the necessary systems for public reporting of hospice quality data. We also recognize that it is essential that the data made available to the public be meaningful and that comparing performance between hospices requires that measures be constructed from data collected in a standardized and uniform manner. Therefore, implementation and implementation of a standardized data set for hospices must precede public reporting of hospice quality measures. Once hospices have implemented the standardized data collection approach, we will have the data needed to establish the scientific soundness of the quality measures that can be calculated using the standardized data collection. It is critical to establish the reliability and validity of the measures prior to public reporting in order to demonstrate the ability of the measures to distinguish between the quality of services provided. To establish reliability and validity of the quality measures, at least four quarters of data will need to be analyzed. Typically the first two quarters of data reflect the learning curve of the providers as they adopt a standardized data collection; these data are not used to establish reliability and validity. This means that, since we will begin data collection in CY 2014 (Q3), the data from CY 2014 (Q3, Q4) will not be used for assessing validity and reliability of the quality measures. Data collected by hospices during Q1–3 CY 2015 will be analyzed starting in CY 2015. Decisions about whether to report some or all of the quality measures publicly will be based on the findings of analysis of the CY 2015 data. In addition, the Affordable Care Act requires that reporting be made public on a CMS Web site and that providers have an opportunity to review their data prior to public reporting. CMS will develop the infrastructure for public reporting, and provide hospices an opportunity to review their data. In light of all the steps required prior to data being publicly reported, public reporting will not be implemented in FY 2016. Public reporting may occur during FY 2017.
benchmarking to ensure data are collected in a standardized way to be more meaningful to the public.

Response: We thank the commenter for this suggestion and will consider these comments as we begin planning for public reporting.

6. Adoption of the CAHPS® Hospice Survey for the FY 2017 Payment Determination

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48234), we stated that CMS would start national implementation of the CAHPS® Hospice Survey as of January 1, 2015. (Previously, known as the Hospice Experience of Care Survey, HECS) We are maintaining our existing policy and are moving forward with national implementation of this survey. The CAHPS® Hospice Survey is a component of CMS’ quality reporting program that emphasizes the experiences of hospice patients and their primary caregivers listed in the hospice patients’ records. Measures from the survey will be submitted to the National Quality Forum (NQF) for approval as hospice quality measures. We refer readers to our extensive discussion of the Hospice Experience of Care Survey in the Hospice Wage Index FY 2014 final rule for a description of the measurements involved and their relationship to the statutory requirement for hospice quality reporting (78 FR 48261–48266).

a. Background and Description of the Survey

Before the development of the CAHPS® Hospice Survey, there was no official national standard hospice experience of care survey that included standard survey administration protocols. The CAHPS® Hospice Survey includes detailed survey administration protocols which will allow for fair comparisons across hospices. CMS developed the CAHPS® Hospice Survey with input from many stakeholders, including other government agencies, industry stakeholders, consumer groups and other key individuals and organizations involved in hospice care. The Survey was designed to measure and assess the experiences of patients who died while receiving hospice care as well as the experiences of their informal caregivers. The goals of the survey are to—

• Produce comparable data on patients’ and caregivers’ perspectives of care that allow objective and meaningful comparisons between hospices on domains that are important to consumers;

• Create incentives for hospices to improve their quality of care through public reporting of survey results; and

• Hold hospice care providers accountable by informing the public about the providers’ quality of care.

The development process for the survey began in 2012 and included a public request for information about publically available measures and important topics to measure (78 FR 5458); a review of the existing literature on tools that measure experiences with end-of-life care; exploratory interviews with caregivers of hospice patients; a technical expert panel attended by survey development and hospice care quality experts; cognitive interviews to test draft survey content; incorporation of public responses to Federal Register notices (78 FR 48234) and a field test conducted by CMS in November and December 2013.

The CAHPS® Hospice Survey treats the dying patient and his or her informal caregiver (family members or friends) as the unit of care. The Survey seeks information from the informal caregivers of patients who died while enrolled in hospices. Caregivers will be identified using hospice records. Fielding timelines give the respondent some recovery time (2 to 3 months), while simultaneously not delaying so long that the respondent is likely to forget details of the hospice experience. The survey focuses on topics that are important to hospice users and for which informal caregivers are the best source for gathering this information. Caregivers will be presented with a set of standardized questions about their own experiences and the experiences of the patient in hospice care. During national implementation of this survey, hospices are required to conduct the survey to meet the hospice quality reporting requirements, but individual caregivers will respond only if they voluntarily choose to do so. We have launched a Web site as part of national implementation which is intended as the primary information resource for hospices and vendors (www.hospicecahpsurvey.org). The CAHPS® Hospice Survey will initially be available in English and Spanish. CMS will provide additional translations of the survey over time in response to suggestions for any additional language translations. Requests for additional language translations should be made to the CMS Hospice CAHPS® Project Team at hospicesurvey@cms.hhs.gov.

In general, hospice patients and their caregivers of hospice patients who died within 18 at the time of death; primary caregivers of patients who died within 48 hours of admission to hospice care; patients for whom no caregiver is listed or available, or for whom caregiver contact information is not known; patients whose primary caregiver is a legal guardian unlikely to be familiar with care experiences; patients for whom the primary caregiver has a foreign (Non-US or US Territory address) home address; patients or caregivers of patients who request that they not be contacted (those who sign “no publicity” requests while under the care of hospice or otherwise directly request not to be contacted).

Identification of patients and caregivers for exclusion will be based on hospice administrative data.

Hospices with fewer than 50 survey-eligible decedents/caregivers during the prior calendar year are exempt from the CAHPS® Hospice Survey data collection and reporting requirements for payment determination. Hospices with 50 to 699 survey-eligible decedents/caregivers in the prior year will be required to survey all cases. For hospices with 700 or more survey-eligible decedents/caregivers in the prior year, a sample of 700 will be drawn under an equal-probability design.

Survey-eligible decedents/caregivers are defined as that group of decedent and caregiver pairs that meet all the criteria for inclusion in the survey sample.

For national implementation, we have assumed an eligibility rate of 85 percent and a response rate of 50 percent based on experience in the 2013 field test of the CAHPS® Hospice Survey instrument. These rates will result in an estimated 300 completed questionnaires for each hospice with 700 or more survey-eligible decedents/caregivers in the calendar year and between 21 and 300 completed questionnaires for hospices with between 50 and 699 survey-eligible decedents/caregivers during the calendar year. Assuming a total of 300 completes within each hospice and an intraclass correlation coefficient (ICC) of 0.01, which measures the amount of variability between hospices, we would achieve an interunit reliability of 0.75. Note that in Medicare CAHPS® a reliability of 0.75 is regarded as a minimal acceptable standard.

We will move forward with a model of national survey implementation which is similar to that of other CMS patient experience of care surveys. Medicare-certified hospices will contract with a third-party vendor that is CMS-trained and approved to
administer the survey on their behalf. Hospices are required to contract with independent survey vendors to ensure that the data are unbiased and collected by an organization that is trained to collect this type of data. It is important that survey respondents feel comfortable sharing their experiences with an interviewer not directly involved in providing the care. We have successfully used this mode of data collection in other settings, including for Medicare-certified home health agencies. The goal is to ensure that we have comparable data across all hospices.

Hospices will be required to provide their vendor with the sampling frame on a monthly basis. Participation requirements for the survey begin January 1, 2015 for the FY 2017 Annual Payment Update. For hospices, this means they will have to start conducting the survey as of January 1, 2015 and will incur the costs of hiring a survey vendor. The survey vendor would be the business associate of the hospice.

A list of approved vendors will be provided on http://www.hospicecahpsurvey.org closer to the launch of national implementation.

Beginning summer 2014, interested vendors may apply to become approved CAHPS® Hospice Survey vendors. The application process will be online at http://www.hospicecahpsurvey.org. Vendors conducting the survey are required to offer a toll free assistance line which respondents can call for help. This help could include reading the survey to a respondent. The toll free line must have staff that can respond to questions in any language in which the vendor is offering the survey. Vendors must accommodate alternate telephone communications, including TTY.

In the FY 2015 Hospice Wage Index proposed rule we proposed to codify the requirements for being an approved CAHPS® Hospice Survey vendor for the FY 2017 APU.

Consistent with many other CMS CAHPS® surveys that are publicly reported on CMS Web sites, CMS will publicly report hospice data when at least 12 months of data are available, so that valid comparisons can be made across hospice providers in the United States, to help patients, family and friends choose a hospice program for themselves or their loved ones.

b. Participation Requirements To Meet Quality Reporting Requirements for the FY 2017 APU

In section 3004 of the Affordable Care Act, the Secretary is directed to establish quality reporting requirements for Hospice Programs. The CAHPS® Hospice Survey is a component of the CMS Quality Reporting Requirements for the FY 2017 APU and subsequent years.

The CAHPS® Hospice Survey is the only nationally implemented survey of civilian patient and caregiver experiences with hospice that includes both a standard questionnaire and standard survey administration protocols. Such standardization is needed in order to establish that the resulting survey data is comparable across hospices and is suitable for public reporting. The CAHPS® Hospice Survey includes the measures detailed in Table 8. The measures map directly to the CAHPS® Hospice Survey. The individual survey questions that comprise each measure are listed under the measure. These measures are in the process of being submitted to the National Quality Forum (NQF).

To comply with CMS’s quality reporting requirements, hospices will be required to collect data using the Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey. Hospices would be able to comply by utilizing only CMS-approved third party vendors that are in compliance with the provisions at §418.312(e).

In the FY 2014 Hospice Wage Index and Rate Update final rule (78 FR 48234), we stated that national implementation of the CAHPS® Hospice Survey will begin with a “dry run” in the first quarter of CY 2015. Hospices are required to contract with an approved survey vendor to conduct a dry run of the survey for at least one month during January 2015, February 2015, or March 2015. During this period the survey vendor will follow all the national implementation procedures, but the data will not be publicly reported. The dry run will provide hospices and their vendors with the opportunity to work together under test circumstances.

Beginning April 1, 2015, all hospices are required to participate in the survey on an ongoing monthly basis. This means hospices need to contract with a survey vendor to conduct the survey monthly on their behalf. Participation for at least 1 month during the dry run, plus monthly participation for the 9 months between April 2015 and December 2015 (inclusive) is required to meet the pay for reporting requirement of the Hospice Quality Reporting Program (HQRDP) for the FY 2017 APU.

Approved CAHPS® Hospice Survey vendors will submit data on the hospice’s behalf to the CAHPS® Hospice Survey Data Center. The deadlines for data submission occur quarterly and are shown in Table 9 below. Deadlines are final; no late submissions will be accepted. However in the event of extraordinary circumstances beyond the control of the provider, the provider will be able to request an exemption as previously noted in the quality Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Year FY 2016 and Beyond section. Hospice providers are responsible for making sure that their vendors are submitting data in a timely manner.

In the FY 2014 Hospice Wage Index and Rate Update final rule, we stated that we would exempt very small hospices from CAHPS® Hospice Survey requirements. Hospices that have fewer than 50 survey-eligible decedents/caregivers in the period from January 1, 2014 through December 31, 2014 are exempt from CAHPS® Hospice Survey data collection and reporting requirements for the 2017 APU. To qualify for the survey exemption for FY 2017, hospices must submit an exemption request form. This form will be available on the CAHPS® Hospice Survey Web site http://www.hospicecahpsurvey.org. Hospices are required to submit to CMS their total unique patient count for the period of January 1, 2014 through December 31, 2014. The due date for submitting the exemption request form for the FY 2017 APU is August 12, 2015.

c. Participation Requirements To Meet Quality Reporting Requirements for the FY 2018 APU

To meet participation requirements for the FY 2018 APU, we proposed that hospices collect data on an ongoing monthly basis from January 2016 through December 2016 (inclusive). Data submission deadlines for the 2018 APU will be announced in future rulemaking.

Hospices that have fewer than 50 survey-eligible decedents/caregivers in the period from January 1, 2015 through December 31, 2015 are exempt from CAHPS® Hospice Survey data collection and reporting requirements for the FY 2018 payment determination. To qualify, hospices must submit an exemption request form. This form will be available in first quarter 2016 on the CAHPS® Hospice Survey Web site http://www.hospicecahpsurvey.org.

Hospices are required to submit to CMS their total unique patient count for the period of January 1, 2015 through December 31, 2015. The due date for submitting the exemption request form for the FY 2018 APU is August 10, 2016.

Summaries of the public comments and our responses to comments are summarized below:

Comment: For the CAHPS® Hospice Survey we received multiple comments concerning CMS’ proposed exclusion of respondents who were family caregivers of patients who died within 48 hours or less of their admission to hospice care. Commenters were concerned that we were excluding this group’s experience.

Response: We appreciate these comments because they show a concern for evaluating the hospice care experience for all patients, regardless of the time spent in hospice care. CMS used the 48 hours or less exclusion because of the history of the Family Evaluation of Care Survey (FEHC) which has been in use in the industry for several years. The FEHC also recommended exclusion of patients with less than two days of hospice care. We set similar timeframe exclusions for other CAHPS® surveys such as the Medicare CAHPS® Health Plans Survey, where respondents need to be in the plans for at least six months, and the ICH CAHPS® survey where the respondents need to have at least three months of dialysis experience at the facility before they are eligible. If caregiver respondents do not have enough experience with the hospice, they will not be able to easily or reliably answer the questions on the current survey. Our technical expert panel also stated that shorter-stay patients would have difficulty answering the current questions on the survey and recommended developing a shorter questionnaire for shorter-stay respondents. In national implementation, we will move forward with the 48-hour or less exclusion, but we will closely track the number of patients being excluded. We will consider developing and implementing an abbreviated CAHPS® Hospice Survey, depending upon the number of people affected.

Comment: One commenter stated that it is important that the CAHPS® Hospice Survey document the length of stay, and
its relationship to the profit/non-profit status of the hospice, in order to provide an accurate picture of the caregiver’s perception of the quality of care the hospice provided and to publicly report the data by length of stay.

Response: We have not determined how the survey results will be publicly reported for hospices. However, we are aware that both length of stay and profit/non-profit status may have an impact on patient/caregiver experiences. We would not control for profit or non-profit status when we publicly report the data since that is under the control of the facility. If length of stay is a function of profit or non-profit status, it also should not be controlled for. During national implementation we will document the length of stay for sampled patients as part of the administrative data we obtain for all sampled patients. CMS will conduct analyses of the impact of length of stay and profit/non-profit status on the survey results to see if any adjustments are needed for length of stay.

Comment: A small number of commenters said there should be no participation exemptions for hospices reporting fewer than 50 deaths per year.

Response: We proposed to exempt hospices with fewer than 50 survey-eligible decedents/caregivers annually because very small hospices will not have a sufficient number of survey responses to produce reliable measures. Survey data collected for very small samples tends to be unstable and can be influenced by relatively small changes in responses. This could result in the smallest hospices experiencing substantial variations in scores each year, not due to changes in care, but because only a small number of caregivers are answering the questions.

Comment: One commenter said that the CAHPS® Hospice Survey should include a method for finding the respondent who is the most knowledgeable about the patient experience and noted that this person may not be the patient’s closest relative.

Response: The family caregiver listed in hospice administrative records is the individual who will be contacted to respond to the CAHPS® Hospice Survey. We agree this person may or may not be the most knowledgeable about the patient’s care. However, for sampling purposes we must be able to objectively and clearly define our target population and we must have contact information to reach them by mail or telephone.

Comment: One commenter stated that very few hospices experience fewer than 50 deaths a year. Conversely, 700 deaths are not necessarily indicative of a large hospice requiring only a sample survey. The commenter also stated that CMS may wish to analyze the sampling ranges in the year following initial implementation to determine if these ranges are appropriate, particularly for sampling.

Response: We are excluding hospices with fewer than 50 survey-eligible decedents/caregivers annually because small samples will not produce reliable results. The choice of 700 survey-eligible decedents/caregivers annually is not intended to define a large hospice, but only to allow hospices with this many deaths (or more) to conduct a sample rather than require them to survey a census of all eligible caregivers. CMS will continuously monitor survey responses and vendor activities. We will revisit these ranges if we find evidence that we need to do so.

Comment: One commenter stated that the CAHPS® Hospice Survey includes 47 items, not all of which apply to all respondents. This does make the survey slightly longer than the Hospital CAHPS® Survey (32 items) and the Home Health CAHPS® Survey (34 items). However, the hospice survey had to ask demographic questions for both the patient and the family caregiver, which partially accounts for its longer length. In addition, some items are only for patients in particular settings (for example, home care). The CAHPS® Hospice Survey was cognitively tested to learn how well respondents understood the items. The questionnaire was revised based upon the results of the cognitive testing. The text of the current instrument and the final reports on the testing of the instrument can be found at: http://www.hospicecahpssurvey.org.

Comment: One commenter was concerned that the survey is missing specific references to mental/behavior health, psychosocial concerns and related occupations.

Response: The CAHPS® Hospice Survey does not seek to address experiences with specific professional occupations, but rather asks about the entire hospice team. Items on the survey concern communication with the hospice team, as well as the patients’ experience of anxiety and agitation. The survey also asks about spiritual and emotional support provided by the hospice. The survey was designed to capture topic areas that are most important from the perspective of family members/caregivers of the patients.

Comment: One commenter said they understood that the proposal required that three different CAHPS surveys be distributed, based on the patient’s location at the time of death. The commenter strongly disagreed with implementing the survey in this manner.

Response: The CAHPS® Hospice survey consists of a single survey instrument for all settings in which hospice care is provided. The questionnaire will include a few items applicable only to certain settings of care (for example, home-based hospice) along with clear directions for the respondent. We do not limit our questions only to the final setting of care.

Comment: One commenter said that for some questions in the survey, the use of choices such as never, sometimes, usually or always could affect the results. The commenter noted that some respondents may believe there is room for improvement and may be reluctant to choose “always” as an answer. The commenter stated that a five-point rating scale may be a better choice.

Response: The “never to always” scale has been tested extensively and used in CAHPS® surveys for many years. We are unaware of any evidence indicating respondents are reluctant to choose “always” as a response. In addition, we do not believe a 5-point rating scale would offer a significant improvement over the existing CAHPS® survey response methodology.

Comment: One commenter stated that the CAHPS® Hospice Survey should include patients as respondents rather than exclusively interview informal caregivers.

Response: CMS is aware of the value of collecting survey data on patients’ experiences. During the survey development process we carefully considered the logistics of conducting surveys with two different populations: hospice patients and their informal caregivers. CMS concluded that attempting to survey two populations would pose additional logistical problems and burdens because it was not clear the same questionnaire could be used for both groups. It is also not clear how the two groups should be publicly reported. Other considerations include —(1) the difficulty of determining which hospice patients are capable of participating in the survey and; (2) the risk of upsetting families if a survey addressed to a patient were to arrive soon after the patient died. In addition, hospice patients cannot provide information about the totality of the hospice care provided. For these reasons, CMS decided to survey only
Comment: One commenter said that
the hospice survey questionnaire should
not be sent more than two months after
the death of the patient, as the family
members may have difficulty recalling
the experience. The commenter also
noted that a prolonged delay in
completion of the survey questionnaire
could result in diminished recall by the
patient’s clinicians.

Response: CMS is aware that a
significant delay in the completion of
the survey questionnaire following the
death of a patient can diminish the
ability of survey respondents to
accurately recall events. However,
sending the survey shortly after a
patient’s death has the potential to
generate grief and pain for the
respondent. Based on discussions with
our technical expert panel and
stakeholders, CMS has chosen to
include what we believe is an
appropriate period of delay following the
death of the patient and survey
administration procedures to provide a
time for family members to grieve, but
still respond regarding the particulars of
hospice care. CMS has built in a two-
month lag after the death before any
contact is made with the potential
respondent. Currently, the CAHPS®
Hospice Survey does not consider
clinicians as survey respondents, thus
the commenter’s concerns regarding
their ability to recall patient care for the
survey is outside the scope of the
comment.

Comment: Approximately one-third of
commenters supported the CAHPS®
Hospice Survey.

Response: We thank the commenters
for their support.

Comment: One commenter
recommended that the definition of
criteria for exclusion be clarified for
consistent interpretation and
implementation.

Response: Details of the groups that
are ineligible for survey participation
can be found under subsection a.
Background and Description of the
Survey in this rule.

Final Action: As a result of these
comments, we are finalizing the
requirements as proposed. Hospices
must participate in and report data from
the Dry Run for at least 1 month in the
first quarter of CY 2015 (January 2015,
February 2015, or March 2015).
Continuous monthly data collection
begins in April 1, 2015, continues
through December 31, 2015, and
continues in subsequent years.

d. Vendor Participation Requirements
for the 2017 APU

CMS will train and approve vendors
to administer CAHPS® Hospice Survey
on behalf of hospices (78 FR 48233). In
addition we stated that hospices will be
required to contract with an approved
survey vendor and to provide the
sampling frame to the approved vendor
on a monthly basis.

We proposed that approved survey
vendors must meet all of the minimum
business requirements and follow the
detailed technical specifications for
survey administration as published in the
CAHPS® Hospice Survey
specifications manual, which will be
posted on the Survey Web site:
http://hospicecahpsurvey.org. In addition, to
the specifications manual, the Web site
will include information and updates
regarding survey implementation and
technical assistance, and a copy of the
questionnaire.

We proposed to codify the CAHPS®
Hospice Survey vendor requirements to
be effective with the FY 2017 APU (as
proposed in § 418.312). We proposed
that applicants wishing to become
approved CAHPS® Hospice Survey
vendors must have been in business for
a minimum of 4 years and have
conducted surveys for a minimum of 3
years using each the modes of survey
administration for which they are
applying. In addition the organization
must have been conducting “surveys
with patients” for at least 2 years
immediately preceding the application
to become a survey vendor for the
CAHPS® Hospice Survey. For purposes
of the approval process for CAHPS®
Hospice Survey vendors, a “survey of
individual patients” is defined as the
collection of data from at least 600
individual patients selected by
statistical sampling methods and the
data collected are used for statistical
purposes.

Vendors may not use home-based or
data collection methods; statistical
sampling methods; and

• Focus groups, cognitive interviews,
or any other qualitative data collection
activities;
• Surveys of fewer than 600
individuals;
• Surveys conducted that did not
involve using statistical sampling methods;
• Internet or Web-based surveys; and
• Interactive Voice Recognition
Surveys.

We also proposed that no
organization, firm, or business that
owns, operates, or provides staffing for
a hospice is permitted to administer its
own Hospice CAHPS® survey or
administer the survey on behalf of any
other hospice in the capacity as a
Hospice CAHPS® survey vendor. Such
organizations will not be approved by
CMS as CAHPS® Hospice Survey
vendors.

Summaries of the public comments
and our responses to those comments
are summarized below:

Comment: CMS received no
comments regarding Vendor
Participation Requirements for the 2014
APU.

Final Action: We are finalizing the
requirements as proposed without
change.

e. Annual Payment Update

The Affordable Care Act requires that
beginning with FY 2014 and each
subsequent fiscal year, the Secretary
shall reduce the market basket update
by 2 percentage points for any hospice
that does not comply with the quality
data submission requirements with
respect to the fiscal year, unless covered
by specific exemptions. Any such
reduction will not be cumulative and
will not be taken into account in
computing the payment amount for
subsequent fiscal years. In the FY 2015
Hospice Wage Index proposed rule, we
proposed to add the CAHPS® Hospice
Survey to the Hospice Quality Reporting
Program requirements for the FY 2017
payment determination and
determinations for subsequent years.

• To meet the FY 2017 requirements,
hospices will participate in the Dry Run
for at least 1 month of the first quarter
of CY 2015 (January 2015, February
2015, March 2015). Hospices must
collect the survey data on a monthly
basis for the months of April 1, 2015
through December 31, 2015 in order to
qualify for the full APU.
• To meet the HQRPs requirements for
the FY 2018 payment determination,
hospices would collect survey data on a
monthly basis for the months of January
1, 2016 through December 31, 2016 to
qualify for the full APU.

Summaries of the public comments
and our responses to comments are
summarized below:
Comment: A few commenters stated that the timeframe for implementing the CAHPS® Hospice Survey may not be sufficient to adequately finalize the survey questions, approve, train, and hire vendors, complete the Dry Run and correct any concerns that may arise from the Dry Run.

Response: We are aware that the timeframe for implementing the CAHPS® Hospice Survey is shorter than for other CAHPS® surveys. However, we have taken steps to mitigate the impact on hospices. The survey can be found on the CAHPS® Hospice Survey Web site, www.hospicecahpsurvey.org. We will post the Quality Assurance Guidelines technical manual in August 2014. We will also open the vendor application and approval process on the Web site in August 2014. This should provide hospices with ample time to contact and select a vendor. Hospices may contact vendors prior to this time if they wish to do so. The Dry Run will occur over the first quarter of 2015 (January–March 2015). We encourage hospices to participate in the Dry Run as early as possible and collaborate with their vendors to resolve any potential issues.

Comment: A few commenters noted the cost of conducting the CAHPS® Hospice Survey imposes regulatory burden on hospice providers requiring the allocation of resources from patient care and potentially result in higher costs to the Medicare program due to care and potentially result in higher burden on hospice providers requiring Hospice Survey imposes regulatory with the commenter's assertions.

Response: We agree that public reporting of data obtained from surveys should meet the needs of Medicare beneficiaries and their families. Prior to publicly reporting the data, the displays will be tested with potential users of the information. We thank the commenter for the reminder of the importance of public reporting to beneficiaries and their families.

Comment: One commenter said that CMS should delay public reporting until the HIS is more fully developed and the data from the Hospice CAHPS is available.

Response: CMS has not stated when public reporting of hospice survey results will commence. We will provide details on the schedule for public reporting in subsequent rulemaking.

Comment: CMS should also consider instituting a hospice star rating system where hospice providers will be measured based on these quality metrics so family members/care givers are able to shop for hospice benefits based on quality rating.

Response: We appreciate the comment and will take it under consideration as public displays are developed.

Final Action: We are finalizing the requirements as proposed without change.

f. CAHPS® Hospice Survey Oversight Activities

We proposed a requirement that vendors and hospice providers participate in CAHPS® Hospice Survey oversight activities to ensure compliance with Hospice CAHPS® technical specifications and survey requirements. The purpose of the oversight activities is to ensure that hospices and approved survey vendors follow the CAHPS® Hospice Survey technical specifications and thereby ensure the comparability of CAHPS® Hospice Survey data across hospices.

We proposed that the reconsiderations and appeals process for hospices failing to meet the Hospice CAHPS® data collection requirements will be part of the Reconsideration and Appeals process already developed for the Hospice Quality Reporting program.

We encourage hospices interested in learning more about the CAHPS® Hospice Survey to visit the CAHPS® Hospice Survey Web site: http://www.hospicecahpssurvey.org.

Summaries of the public comments and responses to comments regarding the reconsiderations and appeals process for hospices that fail to meet the Hospice CAHPS® data collection requirements regarding are summarized below:

Comment: CMS received no comments regarding CAHPS® Hospice Survey Oversight Activities

Final Action: We are finalizing the requirements as proposed without change.

7. Procedures for Payment Year 2016 and Subsequent Years

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48267), we notified hospice providers of the opportunity to seek reconsideration of our initial non-compliance decision for the FY 2014 and FY 2015 payment determinations. We stated that we will notify hospices found to be non-compliant with the HQRP reporting requirements that they may be subject to the 2 percentage point reduction in their annual payment update. The process for filing a request for reconsideration is described on the CMS Web site at: http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Reconsideration-Requests.html. We proposed to codify this process at § 418.312.

Finally, we proposed to codify at § 418.306 that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY and solicited comments on all of the proposals in this section and the associated regulations text at § 418.312 and in § 418.306 in section VI.

Summaries of the public comments and our responses to comments are summarized below:

Comment: CMS received no comments regarding Procedures for Payment Year 2016 and Subsequent Years.

Final Action: We are finalizing the requirements as proposed without change.

1. Solicitation of Comments on Coordination of Benefits Process and Appeals for Part D Payment for Drugs While Beneficiaries are Under a Hospice Election

The statutory definition of the term “covered Part D drug”, as specified in section 1860D–2(e)(2)(B) of the Social
Security Act, excludes a drug if payment for such a drug, as so prescribed and dispensed or administered with respect to a Part D eligible individual, is available (or would be available but for the application of a deductible) under Part A or B for that individual. Therefore, drugs and biologicals for which coverage is available under the Medicare Part A per-diem payment to a hospice program are excluded from coverage under Part D. Our previous understanding was that hospice coverage of drugs was very broad and very inclusive. Therefore, Part D payment for drugs furnished to hospice beneficiaries would be rare and the need for controls was not critical.

Section 1861(dd) of the Act states the hospice is responsible for covering all drugs or biologicals for the palliation and management of the terminal illness and related conditions. Our stated intention in the 1983 Hospice final rule (48 FR 56010) was that the hospice benefit provides virtually all care for the terminally ill individual. Despite our intention for a comprehensive and holistic benefit, gross covered drug costs in 2012 under Part D for beneficiaries during a hospice election totaled $417.9 million. Of this total, Medicare reimbursed approximately $334.9 million, and beneficiaries contributed $48.2 million in possibly unnecessary cost-sharing.

1. Part D Sponsor Coordination of Payment with Hospice Providers

In the proposed rule, we described various requirements we were considering to facilitate the coordination of payment between Part D sponsors and hospices and solicited comments on them. We refer you to the proposed rule (79 FR 26570 through 26575) for the discussion of the requirements we were considering and sought comment on. Prior to the proposed rule, we had issued interim guidance on March 10, 2014 (http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Part-D-Payment-Hospice-Final-2014-Guidance.pdf) and, as a result of feedback from stakeholders, we amended the guidance on July 18, 2014. In the interim guidance, we encourage Part D sponsors and Medicare hospices to take several of the actions that we stated in the proposed rule we are considering requiring. Our July 18, 2014 guidance can be accessed at (http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Hospice-Guidance-Revised-Memo.pdf); we plan that this guidance will remain in effect until requirements are finalized. The revised guidance expects Part D sponsors to use hospice prior authorization only on the four categories of drugs that the Office of Inspector General (http://oig.hhs.gov/oas/reports/region6/61000059.pdf), in consultation with hospice providers, identified as nearly always covered under the hospice benefit. These categories of drugs will require hospice prior authorizations analgesics, antinauseants, laxatives, and anti-infectivity drugs. Hospices may use the "Hospice Information for Medicare Part D" (http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Hospice-Info-PartD.pdf) form to provide the necessary information generally requested by Medicare Part D sponsors.

We appreciate the comments we received on the processes we were considering to facilitate the coordination of payment between Part D sponsors and hospices and will consider those comments in future rulemaking. In formulating the changes we were considering, we became aware that the regulatory requirement for a Part D sponsor to coordinate with other health benefit plans or programs that provide coverage or financial assistance for the purchase or provision of prescription drug coverage on behalf of Part D eligible individuals. However, in codifying this requirement in the regulations at § 423.464(f)(1)(ix) is narrower than the requirement specified in statute. Section 1860D–24 of the Act requires Part D sponsors to coordinate with other drug plans, including, as specified in paragraph § 423.464(b)(5), with other health benefit plans or programs that provide coverage or financial assistance for the purchase of or provision of prescription drug coverage on behalf of Part D eligible individuals. However, in codifying this requirement in the regulations at § 423.464(f)(1)(ix), we specified that the other plans or programs are those that provide coverage or financial assistance for the purchase of or provision of Part D (emphasis added) prescription drugs. The regulation does not include the requirement for Part D sponsors to coordinate with providers of drugs covered under Part A, such as hospices, since those drugs prescribed, dispensed, or administered under Part A are excluded from the definition of a covered Part D drug. Because coordination between Part D sponsors and the Medicare hospices is essential to ensure Part D statutory coverage requirements are met, to reduce the potential for erroneous payment under Part D, and to facilitate the recovery of erroneous payments when they do occur, we also were considering amendments to the Part D regulations at § 423.464(f) to align the definition of other prescription drug coverage in paragraph § 423.464(f)(1)(ix) with the statute by removing the phrase “Part D.”

We did not propose to amend the Part D regulations at § 423.464(f), but rather solicited comments on this change. We appreciate the comments received in response to our solicitation and will consider those comments in future rulemaking.

2. Solicitation of Comments on Hospice Coordination of Payment with Part D Sponsors and Other Payers

As specified in section 1861(dd) of the Act, and in regulation at 42 CFR Part 418, the hospice is responsible for covering all drugs and biologicals for the palliation and management of the terminal illness and related conditions. As noted in 418.202(f), drugs and biologicals for palliation of pain and symptom management are included in the Medicare Part A per-diem payment to a hospice. Therefore, such drugs and biologicals are excluded from coverage under Part D (see section III.I.1). Our payment regulations at § 418.200 require that, to be covered, hospice services must be consistent with the plan of care, which must include the drugs and treatment necessary to meet the needs of the patient (§ 418.56(c)(2)). Additionally, the CoPs at § 418.56(e)(5) require hospices to share information with other non-hospice healthcare providers furnishing services unrelated to the terminal illness and related conditions. As described in § 418.100(c)(2), hospices must be available 24 hours a day and 7 days a week to address beneficiary and family needs.

We have received anecdotal reports from Medicare hospice beneficiaries that they are not receiving medications related to their terminal illness and related conditions from their hospice because, among other stated reasons, those medications are not on the hospice’s formulary. These reports also have stated that hospice beneficiaries were advised to obtain drugs related to the terminal illness and related conditions from the Part D prescription drug plans. Per the regulations at § 418.202(f), hospices must provide all drugs which are reasonable and necessary to meet the needs of the patient in order to provide palliation and symptom management of the terminal illness and related conditions. If the drugs on the hospice formulary are not providing the relief needed, then the hospice must provide alternatives in order to relieve pain and symptoms, even if it means providing drugs that are not on their formulary. Treatment decisions should not be driven by costs, as opposed to clinical
appropriateness. Hospices should use thoughtful clinical judgment, with a patient-centered focus, when developing the hospice plan of care, including the recommendations for medication management.

We did not propose any requirements, but we described various requirements we are considering to facilitate coordination of payment responsibility between hospices and other payers and operational considerations. We refer you to the May 8, 2014 FY 2015 Hospice proposed rule (79 FR 26570–26575) for the discussion of the requirements we sought comments on. As articulated above in section I.1, the July 18, 2014 interim guidance (http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/2014-PartD-Hospice-Guidance-Revised-Memo.pdf) has been issued, and we plan that this guidance will remain in effect until requirements are finalized. We appreciate the comments on these issues and will consider the comments in future rulemaking.

3. Beneficiary Rights and Appeals

Sometimes a beneficiary requests a certain medication that a hospice cannot or will not provide because the hospice has deemed that the specific medication is not reasonable and necessary for the palliation and management of the terminal illness and related conditions. Coverage of such medication would not be permissible under Part D coverage since the medication is not for any condition completely separate and distinct from the terminal illness and related conditions, nor is it covered under Part A, since it is not reasonable and necessary for the palliation and management of the terminal illness and related conditions. If the hospice does not provide the medication, the hospice is not obligated to provide any notice of non-coverage (including the Advance Beneficiary Notice of Non-coverage or ABN). If the hospice provides medication it believes is not reasonable and necessary for the palliation and management of the terminal illness and related conditions, the hospice must first issue an ABN in order to charge the beneficiary for the cost of such medication. Regardless of whether or not the hospice furnishes the drug, if the beneficiary independently obtains the drug, but believes that the Medicare hospice should have furnished or covered the cost of the drug as part of the hospice benefit, the beneficiary may submit a claim for the medication directly to Medicare on Form CMS–14902 available at http://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/CMS-Forms-Items/CMS012949.html. If the claim is denied, the beneficiary may file an appeal of that determination under the appeals process set forth in part 405, subpart I. There may also be instances where a beneficiary prefers a non-formulary drug because, for example, he or she believes it to be more efficacious than the formulary drug prescribed by the hospice. In such instances, the hospice may have determined that the formulary drug prescribed is reasonable and necessary for the palliation and management of the terminal illness and related conditions; however, the beneficiary may prefer another brand of such drug that is off formulary, which the hospice believes is not reasonable and necessary, or more expensive but no more effective than the drug in the formulary. In those cases, the beneficiary may submit quality care complaints to a Quality Improvement Organization. We plan to increase our beneficiary outreach efforts to advise beneficiaries and their families/caregivers of their rights and the available appeals process described in this section.

J. Update on the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and Coding Guidelines for Hospice Claims Reporting

3. International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM)

On April 1, 2014, the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93), was enacted. Section 212 of PAMA, titled “Delay in Transition from ICD–9 to ICD–10 Code Sets,” provides that “[t]he Secretary of Health and Human Services may not, prior to October 1, 2015, adopt ICD–10 code sets as the standard for code sets under section 1173(c) of the Social Security Act (42 U.S.C. 1320d–2(c)) and section 162.1002 of title 45, Code of Federal Regulations.” On May 1, 2014, the Secretary announced plans to release an interim final rule in the near future that will include a new compliance date to require the use of ICD–10–CM beginning October 1, 2015. The interim final rule will also require HIPAA covered entities to continue to use ICD–9–CM through September 30, 2015. Although the Department has not yet published the rule, we are proceeding in accordance with the announcement. This means that ICD–9–CM diagnosis codes will continue to be used for hospice claims reporting until October 1, 2015, the new implementation date for ICD–10–CM. Diagnosis reporting on hospice claims must adhere to ICD–9–CM coding conventions and guidelines regarding the selection of principal diagnosis and the reporting of additional diagnoses. Additionally, the CMS’ Hospice Claims Processing manual (Pub 100–04, chapter 11) requires that hospice claims include the reporting of additional/other diagnoses as required by ICD–9–CM coding guidelines.

4. Coding Guidelines for Hospice Claims Reporting

In the FY 2014 Hospice Wage Index and Payment Rate Update, we reiterated that diagnosis reporting on hospice claims should include the appropriate selection of principal diagnoses as well as the other, additional and coexisting diagnoses related to the terminal illness and related conditions (78 FR 48254). Additionally, in the July 27, 2012, FY 2013 Hospice Wage Index notice (77 FR 44247), we provided in-depth information regarding longstanding, existing ICD–9–CM Coding Guidelines. We also discussed related versus unrelated diagnosis reporting on claims and clarified that “all of a patient’s coexisting or additional diagnoses” related to the terminal illness and related conditions should be reported on the hospice claim. The expectation was that hospices would report all diagnoses related to the terminal illness and related conditions on hospice claims to provide accurate information regarding the hospice beneficiaries for which they are providing hospice services.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we stated that beginning on October 1, 2014, any claims with “debility” or “adult failure to thrive” in the principal diagnosis field will be returned to the provider for more definitive coding (78 FR48252). “Debility” and “adult failure to thrive” do not provide enough information to accurately describe Medicare hospice beneficiaries and the conditions that hospices are managing. Once these claims are resubmitted with more appropriate diagnosis codes.
following the ICD–9–CM Coding Guidelines, these claims will be processed accordingly. This is a reminder that claims with “debility” and “adult failure to thrive” coded in the principal diagnosis field will be returned to providers for more definitive coding effective October 1, 2014 (for those claims submitted on and after October 1, 2014).

Also in the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we advised hospice providers to pay particular attention to dementia diagnoses which are found under two separate ICD–9–CM classifications: “Mental, Behavioral, and Neurodevelopmental Disorders” and “Diseases of the Nervous System and Sense Organs” (78 FR 48252–48253). Many of the codes relating to dementia manifestations found under the ICD–9–CM classification, “Mental, Behavioral, and Neurodevelopmental Disorders”, are not appropriate as principal diagnoses because of etiology/manifestation guidelines or sequencing conventions under the ICD–9–CM Coding Guidelines. ICD–9–CM Coding Guidelines for this classification state that dementia is most commonly a secondary manifestation of an underlying causal condition. Codes found under this classification identify the common behavioral disturbances of dementia manifestations. Many of the dementia codes under the ICD–9–CM classification, “Mental, Behavioral and Neurodevelopmental Disorders” have coding conventions that require to code first the associated neurological condition. Many of the associated neurological conditions can be found under the classification, “Diseases of the Nervous System”, including such conditions as “Alzheimer’s disease” and “Senile Degeneration of the Brain”. We advise hospices to pay close attention to the various coding and sequencing conventions found within The Official ICD–9–CM Guidelines for Coding and Reporting when reporting diagnoses on hospice claims.

To ensure additional compliance with ICD–9–CM Coding Guidelines we will implement certain edits from Medicare Code Editor (MCE), which detect and report errors in the coding of claims data, for all hospice claims effective October 1, 2014 (for those claims submitted on or after October 1, 2014). Hospice claims containing inappropriate principal or secondary diagnosis codes, per ICD–9–CM coding conventions and guidelines, will be returned to the provider and will have to be corrected and resubmitted to be processed and paid.

We will implement edits related to etiology/manifestation code pairs from the MCE; therefore, it is important for hospice providers to follow the ICD–9–CM Coding Guidelines regarding codes that fall under this coding convention. The etiology/manifestation coding convention states that there are certain conditions which have both an underlying cause (etiology) and subsequent multiple body system manifestations. For such conditions, ICD–9–CM coding convention requires the underlying condition be sequenced first, followed by the manifestation. Whenever such a combination exists, there is a “use additional code” note at the etiology code and a “code first” note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes. In most cases, the manifestation codes will have in the code title, “in diseases classified elsewhere.” “In diseases classified elsewhere” codes are never permitted to be used as first-listed or principal diagnosis codes. They must be used in conjunction with an underlying condition code and they must be listed following the underlying condition. An example of this can be found under the category 294. “Persistent mental disorders due to conditions classified elsewhere.” However, there are manifestation codes that do not have “in diseases classified elsewhere” in the title. For such codes, there is “use an additional code” note at the etiology code and a “code first” note at the manifestation code and the rules for sequencing apply.

There are sequencing conventions under ICD–9–CM coding guidelines that are not accounted for in the MCE edits. There are several dementia codes under the classification, “Mental Behavioral and Neurodevelopmental Disorders” that have a sequencing convention that require the underlying physiological condition to be coded first, but for which there is no edit in the MCE. We will be issuing technical guidance through a Change Request to include these codes for edits in the MCE to be consistent for claims processing under ICD–9–CM Coding Guidelines. We are reminding providers to utilize the ICD–9–CM coding guidelines when submitting hospice claims to ensure they are following the appropriate guidelines for coding so that claims are not returned to providers as a result of MCE edits. Following the ICD–9–CM coding guidelines will help hospice providers with appropriate code selection for hospice claims processing. This is not to say that hospice beneficiaries with various dementia conditions are not appropriate for hospice services, rather, this is merely a clarification regarding the ICD–9–CM coding guidelines for claims processing. We expect hospice providers to follow ICD–9–CM coding guidelines to ensure that the most accurate information is provided regarding the patients for whom hospices are providing services.

Additional details describing the specific MCE edits that will be applied will be announced through a change request, an accompanying Medicare Learning Network article, and other CMS communication channels, such as the Home Health, Hospice, and DME Open Door Forum.

We have clarified in previous rules that hospice providers are expected to report on hospice claims all ICD–9–CM codes to provide an accurate description of the patients’ conditions. In the Hospice Wage Index for Fiscal Year 2013 (77 FR 44247) and again in the Hospice Wage Index for Fiscal Year 2014 (78 FR 48240), we reminded providers to follow ICD–9–CM Coding Guidelines for reporting diagnoses on hospice claims. HIPAA, federal regulations, and the Medicare claims processing manual all require that ICD–9–CM Coding Guidelines be applied to the coding and reporting of diagnoses on hospice claims. In the FY 2013 hospice notice, we reported that our analyses showed that 77.2 percent of hospice claims from 2010 only reported a single, principal diagnosis. We provided in-depth information regarding longstanding, existing ICD–9–CM Coding Guidelines that require the reporting of all additional or co-existing diagnoses on hospice claims. We went on to state that coexisting or additional diagnoses could be related or unrelated to the hospice patient’s terminal illness. As the Medicare hospice benefit covers hospice services for the palliation and management of the terminal illness and related conditions, we stated that that, hospice providers “should report on hospice claims all coexisting or additional diagnoses that are related to the terminal illness; they should not report coexisting or additional diagnoses that are unrelated to the terminal illness” (77FR 44248). We also stated that we do not believe that requiring reporting of coexisting or additional diagnoses that are related to the terminal illness would create a burden for hospice and that some providers already report these diagnoses on their claims.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we reported that the quarter of FY 2013 (October 1, 2012 through December 31, 2012) 72 percent of
hospice claims only reported a single, principal diagnosis (78 FR 48240). We also discussed related versus unrelated diagnosis reporting on claims and clarified that “all of a patient’s coexisting or additional diagnoses” related to the terminal illness or related conditions should be reported on the hospice claim. Information on a patient’s related and unrelated diagnoses should already be included as part of the hospice comprehensive assessment and appropriate interventions should be incorporated into the patient’s plan of care, as determined by the hospice IDG.

Analysis conducted on FY 2013 hospice claims shows that 67 percent of hospice claims still only report a single, principal hospice diagnosis.41 Though this is a trend in the right direction, there still appears to be some confusion by the majority of hospice providers as to the requirements for diagnosis reporting on hospice claims. We are reminding providers to follow the ICD–9–CM Coding Guidelines, per longstanding policy, in regard to diagnosis reporting on claims.

The ICD–9–CM Official Guidelines for Coding and Reporting state that for accurate reporting of ICD–9–CM code diagnosis codes, “The documentation should describe the patient’s condition, using terminology which includes specific diagnoses, as well as symptoms, problems, and reasons for the encounter. List first the ICD–9–CM code for the diagnosis, condition, problem, or other reason for the encounter/visit shown in the medical record to be chiefly responsible for services provided.” The coding guidelines also state to code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care treatment or management. Therefore, this is a reminder that all diagnoses should be reported on the hospice claim for the terminal illness and related conditions, including those that can affect the care and management of the beneficiary. We will condition to monitor hospice claims to see if all conditions are being reported as required by ICD–9–CM Coding Guidelines. While we did not make any proposals regarding ICD–9–CM Coding Guidelines in the proposed rule, we received two comments requesting rapid dissemination of the ICD–9–CM diagnostic codes that will prompt an edit to return to the provider for more definitive coding. As mentioned above, more specific information will be provided, including the diagnostic codes, in sub-regulatory guidance after the publication of this final rule. We will also issue provider education describing the specific MCE edits.

K. Technical Regulatory Text Change

In the FY 2015 Hospice Wage Index proposed rule, we proposed to make a technical correction in § 418.3 to delete the definition for a “social worker.” This definition is no longer accurate, and we intended to remove it as part of the June 5, 2008 final rule that amended the conditions of participation (CoPs) for hospices (73 FR 32088). The 2008 final rule established new requirements for social workers at § 418.114(b)(3), making the definition of “social worker” at § 418.3 obsolete. However, the technical amendatory language included in the 2008 final rule did not instruct the Federal Register to delete the “social worker” definition.

Public comments and our response to comments regarding the technical correction to delete the definition of social worker from § 418.3 are summarized below.

Comment: Three commenters acknowledged and agreed with this technical correction.
Response: We appreciate the commenters support.
Final action: We will implement the technical correction as proposed.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the Federal Register and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for this section of this document that contains information collection requirements (ICRs). This section includes ICR information on data collection (A) related to hospice payment policy, including changes to the election statement and changes to aggregate cap determination reporting; and (B) related to the CAHPS® Hospice Survey.

A. Changes Related to Hospice Payment Policy

Sections A.1 and A.2 are associated with the information collection request (ICR) previously approved under OMB control number as 0938–1067. We are currently seeking to have the ICR reinstated under notice and comment periods separate from those associated with the FY 2015 Hospice Wage Index proposed rule. The following assumptions were used in estimating the burden for the proposed changes related to hospice payment policy:

<table>
<thead>
<tr>
<th>TABLE 10—HOSPICE PAYMENT POLICY BURDEN ESTIMATE ASSUMPTIONS</th>
</tr>
</thead>
<tbody>
<tr>
<td>Number of Medicare-participating hospices nationwide, CY 2012</td>
</tr>
<tr>
<td>Number of Medicare-participating hospices, from CY 2012 claims</td>
</tr>
<tr>
<td>Number of Part D prescriptions per hospice, from CY 2012 claims</td>
</tr>
<tr>
<td>Hourly rate of registered nurse</td>
</tr>
<tr>
<td>Hourly rate of accountant</td>
</tr>
<tr>
<td>Hourly rate of office employee</td>
</tr>
<tr>
<td>Hourly rate of administrator</td>
</tr>
</tbody>
</table>

Note: CY = Calendar year.

All salary information is from the Bureau of Labor Statistics (BLS) Web site at http://www.bls.gov/oes/current/naics4_621600.htm and includes a fringe benefits package worth 30 percent of the base salary. Hourly rates are based on May 2012 BLS data for each discipline, for those providing “home health care services.”

1. Changes to the Election Statement (§ 418.24)

Section 1812(d) of the Act requires that patients elect hospice care in order for Medicare to cover and pay for hospice services. Section 1861(dd)(3)(B) of the Act defines an attending physician and requires that the patient, not the hospice, designate an attending physician at the time of election. Our regulations at § 418.24 outline current requirements for completion of a hospice election statement, but do not require that the attending physician designated by the patient be identified. To safeguard the patient’s right to choose his or her attending physician, we proposed and have now finalized a change to our regulations at § 418.24(b) to require that the election statement be modified to identify the attending physician chosen by the patient and to include language that the patient acknowledges that the attending physician is chosen by the patient.
physician was his or her choice. All Medicare and Medicaid hospice patients are required to elect the benefit. Since election requirement is particular to the Medicare and Medicaid hospice benefits, hospices are free to establish a similar starting point for non-Medicare and Medicaid patients in their own policies, based on the needs of the hospice, its community, and any applicable State and local laws and regulations.

We estimated that the burden for this requirement is the one-time burden to modify the election statement to include a place for identifying the attending physician and acknowledging that he or she was chosen by the patient or representative. Hospices are currently required to explain these processes to patients, so we do not believe there is any additional burden for discussing that part of the election statement with patients or their representatives. We estimate that it will take a hospice clerical staff person 20 minutes (20/60 = 0.33333 hours) to modify the election form, and the hospice administrator 15 minutes (15/60 = 0.25 hours) to review the revised form. The clerical time plus administrator time equals a one-time burden of 35 minutes or (35/60) = 0.58333 hours per hospice; for all 3,897 hospices, the total time required is (0.58333 × 3,897) = 2,273 hours. At $17 per hour for an office employee, the cost per hospice is (0.33333 × $17) = $5.66. At $63 per hour for the administrator’s time, the cost per hospice is (0.25 × $63) = $15.75.

We estimated the burden for this requirement is the one-time burden to modify the election statement to include a place for identifying the attending physician and acknowledging that he or she was chosen by the patient or representative. Hospices are currently required to explain these processes to patients, so we do not believe there is any additional burden for discussing that part of the election statement with patients or their representatives. We estimate that it will take a hospice clerical staff person 20 minutes (20/60 = 0.33333 hours) to modify the election form, and the hospice administrator 15 minutes (15/60 = 0.25 hours) to review the revised form. The clerical time plus administrator time equals a one-time burden of 35 minutes or (35/60) = 0.58333 hours per hospice; for all 3,897 hospices, the total time required is (0.58333 × 3,897) = 2,273 hours. At $17 per hour for an office employee, the cost per hospice is (0.33333 × $17) = $5.66. At $63 per hour for the administrator’s time, the cost per hospice is (0.25 × $63) = $15.75.

Therefore, the total one-time cost per hospice to develop this new form for changing attending physicians is $21.41, and the total one-time cost for all hospices is ($21.41 × 3,897) = $83,435.

Comment: Two commenters asked CMS to clarify the sentence from the proposed rule which read, “Note that all hospices, including those that are not Medicare-participating, are required by the Conditions of Participation to have patients elect hospice care.”

Response: All Medicare and Medicaid hospice patients are required to elect the benefit. Since the election requirement is particular to the Medicare and Medicaid hospice benefits, hospices are free to establish a similar starting point for non-Medicare and Medicaid patients in their own policies, based on the needs of the hospice, its community, and any applicable State and local laws and regulations.

We rephrased the sentence in this final rule to read as written in this response.

2. Changes to Aggregate Cap Determination Reporting (§ 418.308)

Congress mandated two caps on hospice payments: an inpatient cap and an aggregate cap. The hospice cap year is November 1 through October 31. Medicare contractors complete the hospice cap determination approximately twelve to eighteen months after the cap year in order to demand any overpayments from the hospices. A cap determination consists in determining whether a hospice exceeds the inpatient cap and the aggregate hospice cap. Medicare hospice inpatient stays in excess of twenty percent of total Medicare hospice days are to be reimbursed at the routine homecare rate; the hospice must be reprimed any excess due to receiving payments at the higher inpatient rates for the excess inpatient stays.

Additionally, Medicare hospice payments are limited by an aggregate cap, which is computed by multiplying the “cap amount” by the number of beneficiaries. If the actual Medicare payments exceed the aggregate cap, the hospice must repay the difference. We proposed to change our regulations at §418.308(c) to require hospices to calculate their inpatient and aggregate caps five months after the cap year and remit any overpayment. We finalized a policy that only requires hospices to calculate their aggregate cap is eight months after the cap year and remit any overpayment (please see section III.D of this final rule for more specifics). This is similar to the process in §413.24(f), which requires other provider types that file a Medicare cost report to remit their cost reports five months after the end of their cost reporting year. The regulation at §413.24(f) also requires other provider types that file a Medicare cost report to remit any amount due the program at the time of the cost report filing. Although hospices file cost reports, the cap determination is not based on the cost report; the hospice caps serve to limit total Medicare payments similar to the way cost reports limit those payments for other provider types that file a Medicare cost report. Requiring hospices to complete a cap determination and remit any overpayment is consistent with what is currently required of all other provider types that file a Medicare cost report.

We expect that it will take a hospice about 1.5 hours to complete its cap determination. All information needed to file the cap determination is available in the Provider Statistical and Reimbursement (PSRB) system. For all 3,727 hospices that bill Medicare, this is (1.5 × 3,727) = 5,591 hours. We estimate that it will take one hour for an accountant to complete the cap determination worksheet provided by CMS for the cap year. At $40 per hour for an accountant, the cost is (1 × $40) = $40 per hospice, and (3,727 × $40) = $149,080 for all hospices. We estimate that it will take a half hour for the administrator to review the worksheet prepared by the accountant. At $63 per hour for the administrator’s time, the cost per hospice is (0.5 × $63) = $31.50, and for all hospices is (3,727 × $31.50) = $117,401. Therefore the total estimated cost per hospice is ($40 + $31.50) = $71.50, and the total cost for all hospices is (3,727 × $71.50) = $266,481.

B. CAHPS® Hospice Survey

This section is associated with a new information collection request that is required to start in January 2015. The Hospice Survey data collected in 2015 is required for the FY 2017 HQRP quality reporting requirements along with the submission of the clinical structural measures for the same payment period. This is a new information collection request seeking approval to assess experiences of care with hospice reported by primary caregivers (that is, bereaved family members of friends) of patients who died while receiving hospice care. This information data collection request is required to (1) assess experience of care at the respondent (caregiver) level, and (2) provide sufficient response to...
generate hospice experience reports. Here are the estimates for the approximate annual cost of the CAHPS® Survey (Table 11).

TABLE 11—ASSUMPTIONS AND ESTIMATES FOR CAHPS® HOSPICE SURVEY

| Approximate Number of hospices required to do the CAHPS® Survey annually. | 2,600 |
| Approximate Cost to each hospice annually for the CAHPS® Survey. | $3,300 |
| Approximate Cost for all CAHPS® Hospices annually for the CAHPS® Survey. | $8.58 million |
| Respondent Cost burden. | $2.19 million |
| Approximate Total Cost of CAHPS® Hospice Survey annually. | $10.77 million |

In implementing the HQRP, we seek to collect measure information with as little burden to the providers as possible, but which reflects the full spectrum of quality performance. As such, we are moving forward toward the implementation of the CAHPS® Hospice Survey to provide data to the public about the patients’ families’ and friends’ perspectives of care of their loved ones who passed away in hospices.

The CAHPS® Hospice Survey data will provide the peoples’ voices to hospice care in the United States. Based on the criteria outlined in the Preamble, some hospices that are too new and very small will be exempt from the HQRP. We estimate that 2,600 hospices will qualify to participate in the survey. From CMS experiences with surveys, we estimate an annual cost of $3,300 per hospice to participate in the CAHPS® Hospice Survey. The cost of $3,300 includes the preparation of a monthly sampling frame for their approved vendor, as well as estimated vendor costs to conduct the data collection. The estimated annual cost for all hospices to do the survey is $8.58 million. As part of the survey requirement, all participating hospices will contract with an approved hospice survey vendor, and each hospice will be required to submit a monthly list of deceased patients’ caregivers contact information, for patients that passed away in the hospice care two months prior to the date of the list. This list (essentially the sampling frame) for most hospices can be generated from existing databases with minimal effort. For some small hospices, preparation of a monthly sample frame may require more time. However, data elements needed on the sample frame will be kept at a minimum to reduce the burden on the hospices.

The survey contains 47 items and is estimated to require an average administration time of 10.4 minutes in English, and 12.5 minutes in Spanish, for an average response time of 10.505 minutes or 0.175 hours, assuming that 5 percent of the survey respondents complete the survey in Spanish. These burden estimates are based on CMS’ experiences with surveys of similar lengths that were fielded with Medicare beneficiaries. We estimate that approximately six surveys can be done an hour, at an hourly wage of $22.77. (We used the mean hourly wage from the “National Compensation Survey: All United States December 2009—January 2011,” U.S. Department of Labor, Bureau of Labor Statistics. This was the most recent survey available at the time of OMB submission). With a total estimate of 550,000 respondents, we estimate a total respondent burden by multiplying 550,000 respondents by an estimated hourly burden per respondent of 0.175 hours to produce the total estimated number of burden hours (96,250). We then multiplied the number of hours (96,250) by $22.77 which equals at $2.19 million. The respondent burden does not represent an additional cost to the hospices, but instead refers to the time burden borne by respondents; the cost to the participating hospices is $8.58 million.

The CAHPS® Hospice Survey data will provide the peoples’ voices to hospice care in the United States. Based on the criteria outlined in the Preamble, some hospices that are too new and very small will be exempt from the HQRP. We estimate that 2,600 hospices will qualify to participate in the survey. From CMS experiences with surveys, we estimate an annual cost of $3,300 per hospice to participate in the CAHPS® Hospice Survey. This was the most recent survey available at the time of OMB submission). With a total estimate of 550,000 respondents, we estimate a total respondent burden by multiplying 550,000 respondents by an estimated hourly burden per respondent of 0.175 hours to produce the total estimated number of burden hours (96,250). We then multiplied the number of hours (96,250) by $22.77 which equals at $2.19 million. The respondent burden does not represent an additional cost to the hospices, but instead refers to the time burden borne by respondents; the cost to the participating hospices is $8.58 million.

There are no capital/maintenance costs associated with the information collection requirements contained in this rule; therefore, we have removed the associated column from Table 12.

If you comment on these information collection and recordkeeping requirements, please submit your comments electronically as specified in the ADDRESSES section of this final rule.

Please identify which Collection of Information requirement you are commenting on by indicating whether it is from subsection:

- A.1. Changes to the Election Statement (§ 418.24);
- A.2. Changes to Aggregate Cap Determination Reporting (§ 418.308); or
- B. CAHPS® Hospice Survey (§ 418.312).

Comment: A commenter said the rates used in Table 10 do not reflect salary information in all regional areas, and therefore underestimate the administrative burden. This commenter felt that the time estimates were underestimated but did not suggest specific changes to the estimates.

Response: We use salary data from the Bureau of Labor Statistics that is a national average, which reflects the variation in wages across the country. Our time estimates are based on the time an efficient hospice would require to complete a particular activity.

V. Regulatory Impact Analysis

A. Statement of Need

This final rule follows § 418.306(c) which requires annual issuance, in the Federal Register, of the hospice wage...
liable days when they file an NOE late, though we will allow for a waiver of these provider-liable days when late-filing is due to certain circumstances beyond the control of the hospice.

Furthermore, in accordance with section 1860D–24 of the Act, drugs and biologicals that may be covered under the Medicare Part A per-diem payment to a hospice program are excluded from coverage under Part D. Section 1861(dd) of the Act states the hospice is responsible for covering all drugs or biologicals for the palliation and management of the terminal illness and related conditions. The FY 2015 Hospice Wage Index proposed rule, in accordance with sections 1860D–24 and 1861(dd) of the Act, solicited comments on a coordination of benefits process and appeals for Part D payment for drugs and biologicals while beneficiaries are under a hospice election. We did not make any proposals on the coordination of benefits process and appeals for Part D payment for drugs and biologicals while beneficiaries are under a hospice election. Finally, section 3004 of the Affordable Care Act amended the Act to authorize a quality reporting program for hospices, and this rule discusses changes in the requirements for the hospice quality reporting program in accordance with section 1814(i)(5) of the Act.

B. Introduction

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA, March 22, 1995; Pub. L. 104–4), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects ($100 million or more in any 1 year). This final rule has been designated as economically significant under section 3(f)(1) of Executive Order 12866 and thus a major rule under the Congressional Review Act. Accordingly, we have prepared a regulatory impact analysis (RIA) that to the best of our ability, presents the costs and benefits of the rulemaking. Finally, this rule has been reviewed by OMB.

C. Overall Impact

The overall impact of this final rule is an estimated net increase in Federal payments to hospices of $230 million, or 1.4 percent for FY 2015. This estimated impact on hospices is a result of the final hospice payment update percentage for FY 2015 of 2.1 percent and changes to the FY 2015 hospice wage index, including a reduction to the BNAF by an additional 15 percent, for a total BNAF reduction of 85 percent (10 percent in FY 2010, and 15 percent per year for FY 2011 through FY 2015). An 85 percent reduced BNAF is computed to be 0.009313 (or 0.9313 percent). The BNAF reduction is part of a 7-year BNAF phase-out that was finalized in the FY 2010 Hospice Wage Index final rule (74 FR 39384), and is not a policy change.

1. Detailed Economic Analysis

Column 4 of Table 13 shows the combined effects of the updated wage data (the 2013 pre-floor, pre-reclassified hospital wage index) and of the additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent), comparing estimated payments for FY 2014 to estimated payments for FY 2015. The FY 2014 payments used for comparison have a 70 percent reduced BNAF applied. We estimate that the total hospice payments for FY 2015 will decrease by 0.7 percent. This 0.7 percent is the result of a 0.1 percent reduction due to the use of updated wage data (−$20 million), and a 0.6 percent reduction due to the additional 15 percent reduction in the BNAF (−$100 million). This estimate does not take into account the final hospice payment update percentage of 2.1 percent (+$350 million) for FY 2015.

Column 5 of Table 13 shows the combined effects of the updated wage data (the 2013 pre-floor, pre-reclassified hospital wage index), the additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent), and the final hospice payment update percentage of 2.1 percent. The final 2.1 percent hospice payment update percentage is based on a 2.9 percent inpatient hospital market basket update for FY 2015 reduced by 0.5 percentage
point productivity adjustment and by 0.3 percentage point as mandated by the Affordable Care Act. The estimated effect of the 2.1 percent final hospice payment update percentage is an increase in payments to hospices of approximately $350 million. Taking into account the 2.1 percent final hospice payment update percentage (+$350 million), the use of updated wage data (−$20 million), and the additional 15 percent reduction in the BNAF (−$100 million), it is estimated that hospice payments will increase by $230 million in FY 2015 ($350 million − $20 million − $100 million = $230 million) or 1.4 percent in FY 2015.

a. Effects on Hospices

This section discusses the impact of the projected effects of the hospice wage index and the effects of a final 2.1 percent hospice payment update percentage for FY 2015. This final rule continues to use the CBSA-based pre-floor, pre-reclassified hospital wage index as a basis for the hospice wage index and continues to use the same policies for treatment of areas (rural and urban) without hospital wage data. The final FY 2015 hospice wage index is based upon the FY 2013 pre-floor, pre-reclassified hospital wage index and the most complete hospice claims data available (FY 2013 hospice claims submitted as of March 31, 2014) with an additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent).

For the purposes of our impacts, our baseline is estimated FY 2014 payments with a 70 percent BNAF reduction, using the FY 2012 pre-floor, pre-reclassified hospital wage index. Our first comparison (column 3 of Table 13) compares our baseline to estimated FY 2015 payments (holding payment rates constant) using the updated wage data (FY 2013 pre-floor, pre-reclassified hospital wage index). Consequently, the estimated effects illustrated in column 3 of Table 13 show the distributional effects of the updated wage data only. The effects of using the updated wage data combined with the additional 15 percent reduction in the BNAF are illustrated in column 4 of Table 13.

We have included a comparison of the combined effects of the additional 15 percent BNAF reduction, the updated wage data, and the final 2.1 percent hospice payment update percentage for FY 2015 (Table 13, column 5).

Presenting these data gives the hospice industry a more complete picture of the effects on their total revenue based on changes to the hospice wage index and the BNAF phase-out as discussed in this final rule and the final FY 2015 hospice payment update percentage. Certain events may limit the scope or accuracy of our impact analysis, because such an analysis is susceptible to forecasting errors due to other changes in the forecasted impact time period. The nature of the Medicare program is such that the changes may interact, and the complexity of the interaction of these changes could make it difficult to predict accurately the full scope of the impact upon hospices.

**Table 13—Anticipated Impact on Medicare Hospice Payments of Updating the Pre-floor, Pre-reclassified Hospital Wage Index Data, Reducing the Budget Neutrality Adjustment Factor (BNAF) by an Additional 15 Percent (for a Total BNAF Reduction of 85 Percent) and Applying a 2.1 Percent Hospice Payment Update Percentage, Compared to the FY 2014 Hospice Wage Index With a 70 Percent BNAF Reduction**

Source: FY 2013 Hospice claims data from the Standard Analytic Files for CY 2012 (as of June 30, 2013) and CY 2013 (as of March 31, 2014) and the Provider of Service (POS) file (as of March 2014).

Note: The final 2.1 percent hospice payment update percentage for FY 2015 is based on a 2.9 percent inpatient hospital market basket update, reduced by a 0.5 percentage point productivity adjustment and by 0.3 percentage point. Starting with FY 2015 (and in subsequent fiscal years), the market basket percentage update under the hospice payment system as described in section 1814(i)(1)(C)(i)(VII) or section 1814(i)(1)(C)(iii) of the Act will be annually reduced by changes in economy-wide productivity as set out at section 1866(b)(3)(B)(x)(ii) of the Act.

Region Key:

- **New England**—Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont;
- **Middle Atlantic**—Pennsylvania, New Jersey, New York;
- **South Atlantic**—Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia;
- **East North Central**—Illinois, Indiana, Michigan, Ohio, Wisconsin;
- **East South Central**—Alabama, Kentucky, Mississippi, Tennessee;

- **West South Central**—Arkansas, Louisiana, Oklahoma, Texas;
- **Mountain**—Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming;
- **Pacific**—Alaska, California, Hawaii, Oregon, Washington;
- **Outlying**—Guam, Puerto Rico, Virgin Islands

Table 13 shows the results of our analysis. In column 1, we indicate the number of hospices included in our analysis as of March 31, 2014, which had also filed claims in FY 2013. In column 2, we indicate the number of routine home care days that were included in our analysis, although the analysis was performed on all types of hospice care. Columns 3, 4, and 5 compare FY 2014 estimated payments with those estimated for FY 2015. The estimated FY 2014 payments incorporate a BNAF, which has been reduced by 70 percent. Column 3 shows the percentage change in estimated Medicare payments for FY 2015 due to the effects of the updated wage data only, compared with estimated FY 2014 payments. The effect of the updated wage data can vary from region to region depending on the fluctuations in the wage index values of the pre-floor, pre-reclassified hospital wage index. Column 4 shows the percentage change in estimated hospice payments from FY 2014 to FY 2015 due to the combined effects of using the updated wage data and reducing the BNAF by an additional 15 percent. Column 5 shows the percentage change in estimated hospice payments from FY 2014 to FY 2015 due to the combined effects of using updated wage data, an additional 15 percent BNAF reduction, and the final 2.1 percent hospice payment update percentage.

The impact of changes in this final rule has been analyzed according to the type of hospice, geographic location, type of ownership, hospice base, and size. Table 13 categorizes hospices by various geographic and hospice characteristics. The first row of data displays the aggregate result of the impact for all Medicare-certified hospices. The second and third rows of the table categorize hospices according to their geographic location (urban and rural). Our analysis indicated that there are 2,779 hospices located in urban areas and 973 hospices located in rural areas. The next two row groupings in the table indicate the number of hospices by census region, also broken down by urban and rural hospices. The next grouping shows the impact of hospices based on the size of the hospice’s program. We determined that the majority of hospice payments are made at the routine home care rate. Therefore, we based the size of each individual hospice’s program on the
number of routine home care days provided in FY 2013. The next grouping shows the impact on hospices by type of ownership. The final grouping shows the impact on hospices defined by whether they are provider-based or freestanding.

As indicated in column 1 of Table 13, there are 3,752 hospices included in the regulatory impact analysis (the number of hospices in Table 13 differs from the number of hospices shown in Table 10 because the data were obtained from different sources). Approximately 41.5 percent of Medicare-certified hospices are identified as voluntary (non-profit) or government agencies; a majority (58.5 percent) are proprietary (for-profit), with 1,557 designated as non-profit or government hospices, and 2,195 as proprietary. In addition, our analysis shows that most hospices are in urban areas and provide the vast majority of routine home care days, most hospices are medium-sized, and the vast majority of hospices are freestanding.

b. Hospice Size

Under the Medicare hospice benefit, hospices can provide four different levels of care. The majority of the days provided by a hospice are routine home care (RHC) days, representing about 97 percent of the services provided by a hospice. Therefore, the number of RHC days can be used as a proxy for the size of the hospice, that is, the more days of care provided, the larger the hospice. We currently use three size designations to present the impact analyses. The three categories are—(1) small agencies having 0 to 3,499 RHC days; (2) medium agencies having 3,500 to 19,999 RHC days; and (3) large agencies having 20,000 or more RHC days. The FY 2015 updated wage data before any BNAF reduction are anticipated to decrease payments to large hospices by 0.1 percent, and increase 0.1 percent for small hospices. Medium hospices’ payments are anticipated to stay stable (column 3).

The updated wage data and the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent) are anticipated to decrease estimated payments to small hospices by 0.4 percent, to medium hospices by 0.5 percent, and to large hospices by 0.7 percent (column 4). Finally, the updated wage data, the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent), and the final 2.1 percent hospice payment update percentage are projected to increase estimated payments by 1.7 percent for small hospices, by 1.6 percent for medium hospices, and by 1.4 percent for large hospices (column 5).

c. Geographic Location

Column 3 of Table 13 shows the estimated impact of using updated wage data without the BNAF reduction. Urban hospices are anticipated to experience a decrease of 0.1 percent and rural hospices are anticipated to experience a decrease of 0.2 percent in payments. Urban hospices can anticipate an increase in payments in Middle Atlantic of 0.5 percent, in the Pacific of 0.9 percent, and in the Outlying area of 0.7 percent. Urban hospices can anticipate a decrease in payments ranging from 0.8 percent in the West North Central region to 0.1 percent in the East North Central region. Urban hospices in New England are not anticipated to be affected by the updated wage data.

Rural hospices are estimated to see a decrease in payments in four regions, ranging from 0.7 percent in the East North Central region to 0.1 percent in the New England region. Rural hospices can anticipate an increase in payments in four regions ranging from 0.3 percent in the Middle Atlantic region to 0.8 percent in the Pacific region. There is no anticipated change in payments for the East South Central and Outlying regions due to the use of updated wage data.

Column 4 shows the combined effect of the updated wage data and the additional 15 percent BNAF reduction on estimated payments, as compared to the FY 2014 estimated payments using a BNAF with a 70 percent reduction. Overall, hospices are anticipated to experience a 0.7 percent decrease in payments, with urban hospices experiencing an estimated decrease of 0.7 percent and rural hospices experiencing an estimated decrease of 0.5 percent. All urban areas other than Outlying and Pacific are estimated to see decreases in payments, ranging from 1.4 percent in the West North Central region to 0.7 percent in the New England and East South Central regions. The urban Pacific and Outlying regions are anticipated to see increases in payments of 0.2 percent and 0.7 percent, respectively.

Rural hospices are estimated to experience a decrease in payments in six regions, ranging from 1.3 percent in the East North Central region to 0.1 percent in the West North Central region. Payments in the rural Mountain and Pacific regions are anticipated to increase by 0.1 percent, while payments in the rural Outlying and East South Central regions are anticipated to stay relatively stable.

Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction, and the final 2.1 percent hospice payment update percentage on estimated FY 2015 payments as compared to estimated FY 2014 payments. Overall, hospices are anticipated to experience a 1.4 percent increase in payments, with urban hospices anticipated to experience a 1.4 percent increase in payments, and rural hospices anticipated to experience a 1.6 percent increase in payments. Urban hospices are anticipated to experience an increase in estimated payments in every region, ranging from 0.7 percent in the West North Central region to 2.8 percent in Outlying area. Rural hospices in every region are estimated to see an increase in payments ranging from 0.8 percent in East North Central to 2.2 percent in the Mountain and Pacific regions.

d. Type of Ownership

Column 3 demonstrates the effect of the updated wage data on FY 2015 estimated payments, versus FY 2014 estimated payments. We anticipate that using the updated wage data will decrease estimated payments to proprietary (for-profit), voluntary (non-profit), and Government hospices by 0.1 percent. Column 4 demonstrates the combined effects of the updated wage data and of the additional 15 percent BNAF reduction. Estimated payments to voluntary (non-profit), proprietary (for-profit), and government hospices are anticipated to decrease by 0.6 percent, 0.7 percent and 0.7 percent, respectively. Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent), and the final 2.1 percent hospice payment update percentage on estimated payments, comparing FY 2015 to FY 2014. Estimated FY 2015 payments are anticipated to increase for voluntary (non-profit) hospices by 1.5 percent, for proprietary (for-profit) hospices by 1.4 percent, and government hospices by 1.4 percent.

e. Hospice Base

Column 3 demonstrates the effect of using the updated wage data, comparing estimated payments for FY 2015 to FY 2014. Estimated payments are anticipated to decrease for freestanding hospices by 0.1 percent. Estimated payments are anticipated to increase for home health agency, hospital, and skilled nursing facility based hospices by 0.1 percent, 0.2 percent, and by 0.2 percent, respectively. Column 4 shows the combined effects of the updated wage data and reducing the BNAF by an additional 15 percent, comparing estimated payments for FY 2015 to FY 2014. All hospice facilities are
anticipated to experience decrease in payments ranging from 0.7 percent for freestanding hospices to 0.4 percent for hospital and skilled nursing facility based hospices. Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction, and the final 2.1 percent hospice payment update percentage on estimated payments, comparing FY 2015 to FY 2014. Estimated payments are anticipated to increase for all hospices, ranging from 1.4 percent for freestanding hospices to 1.7 percent for hospital and skilled nursing facility based hospices.

f. Effects on Other Providers

This final rule will only affect Medicare hospices, and therefore has no effect on other provider types. We note that our suggested approaches with respect to Part D coordination with hospice payments may ultimately have an effect on Part D spending, if subsequently proposed and adopted.

g. Effects on the Medicare and Medicaid Programs

This final rule only affects Medicare hospices, and therefore has no effect on Medicaid programs. As described previously, estimated Medicare payments to hospices in FY 2015 are anticipated to decrease by $20 million due to the update in the wage index data, and to decrease by $100 million due to the additional 15 percent reduction in the BNAF (for a total 85 percent reduction in the BNAF). However, the final hospice payment update percentage of 2.1 percent is anticipated to increase Medicare payments by $350 million. Therefore, the total effect on Medicare hospice payments is estimated to be a $230 million increase (1.4 percent).

h. Alternatives Considered

In continuing the reduction to the BNAF by an additional 15 percent, for a total BNAF reduction of 85 percent (10 percent in FY 2010, and 15 percent per year for FY 2011 through FY 2015), and implementing the hospice payment update percentage and the updated wage index, the aggregate impact will be a net increase of $230 million in payments to hospices. In the proposed rule for FY 2015, we did not consider discontinuing the additional 15 percent reduction to the BNAF as the 7-year phase-out of the BNAF was finalized in the FY 2010 Hospice Wage Index final rule (74 FR 39364). However, if we were to discontinue the reduction to the BNAF by an additional 15 percent, Medicare will pay an estimated $100 million more to hospices in FY 2015.

Since the hospice payment update percentage is determined based on statutory requirements, we did not consider updating the hospice payment rates by a percentage less than the payment update percentage. The final 2.1 percent hospice payment update percentage for FY 2015 is based on a final 2.9 percent inpatient hospital market basket update for FY 2015, reduced by a 0.5 percentage point productivity adjustment and by an additional 0.3 percentage point. Payment rates for FYs since 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYs must be the market basket percentage for that FY. The Act requires us to use the inpatient hospital market basket to determine the hospice payment rate update. In addition, section 3401(g) of the Affordable Care Act mandates that, starting with FY 2013 (and in subsequent FYs), the hospice payment update percentage will be annually reduced by changes in economy-wide productivity as specified in section 1866(b)(3)(B)(xi)(II) of the Act. In addition, section 3401(g) of the Affordable Care Act also mandates that in FY 2013 through FY 2019, the hospice payment update percentage will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions specified in section 1814(i)(1)(C)(v) of the Act).

Regarding alternative timeframes for timely-filing of the Notice of Election (NOE) and of the Notice of Termination/Revocation (NOTR), we considered using 4 days after the effective date of election or of discharge/revocation, but decided to allow 5 days. We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking. To ensure the attending physician of record is properly documented in the patient’s medical record, we finalized, in section III.F, changes to the regulations at § 418.24(b)(1) requiring the election statement to include the patient’s choice of attending physician. We considered limiting the number of times that a beneficiary can change his/her attending to once per election period (similar to the current regulations at § 418.30(a) that only allows a beneficiary to change a hospice provider once during an election period). However, we first want to conduct additional analyses of hospice Part A billing for physician services provided by nurse practitioners and Part B attending physician billing to determine how frequently beneficiaries change attending physicians.

i. Accounting Statement

As required by OMB Circular A–4 (available at http://www.whitehouse.gov/omb/circulars/ a004/a-4.pdf), in Table 14 below, we have prepared an accounting statement showing the classification of the expenditures associated with this final rule. Table 14 provides our best estimate of the increase in Medicare payments under the hospice benefit as a result of the changes presented in this final rule for 3,752 hospices in our impact analysis file constructed using FY 2013 claims as of March 31, 2014. Table 14 also includes the costs associated with (1) a hospice accountant to complete the cap determination worksheet, and for a hospice administrator to review the final worksheet, for a total annual burden of $266,481 as noted in section IV.A; and (2) the cost to hospices to participate in the CAHPS® survey, including the preparation of a monthly sampling frame for their approved vendor, as well as estimated survey vendor costs, for an estimated total annual cost of $8.58 million all hospices in the survey. Table 14 below does not reflect a one-time cost of modifying the current hospice election statement to record the patient’s choice of attending physician ($83,435) and the one-time cost of creating a new hospice form for changing the attending physician ($83,435), for a total one-time burden of $166,870 as noted in section IV.B.

1 Costs associated with hospice aggregate cap reporting and with the CAHPS® Hospice Survey.
j. Conclusion

In conclusion, the overall effect of this final rule is an estimated $230 million increase in Medicare payments to hospices due to the wage index changes (including the additional 15 percent reduction in the BNAF) and the final hospice payment update percentage of 2.1 percent. Also, starting in FY 2015, hospices are estimated to incur annual burden costs of $266,481 for a hospice accountant to complete the cap determination worksheet, and for a hospice administrator to review the final worksheet. Finally, starting in FY 2015 hospices are estimated to incur annual burden costs of $8.58 million for participation in the CAHPS® hospice survey.

2. Regulatory Flexibility Act Analysis

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that almost all hospices are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities by meeting the Small Business Administration (SBA) definition of a small business (in the service sector, having revenues of less than $7.0 million to $35.5 million in any 1 year), or being nonprofit organizations. While the SBA does not define a size threshold in terms of annual revenues for hospices, it does define one for home health agencies ($14 million; see http://www.sba.gov/sites/default/files/files/Size_Standards_Table(1).pdf). For the purposes of this final rule, because the hospice benefit is a home-based benefit, we are applying the SBA definition of "small" for home health agencies to hospices; we will use this definition of "small" in determining if this final rule has a significant impact on a substantial number of small entities (for example, hospices). We estimate that 95 percent of hospices have Medicare revenues below $14 million or are nonprofit organizations and therefore are considered small entities.

HHS’s practice in interpreting the RFA is to consider effects economically “significant” only if they reach a threshold of 3 to 5 percent or more of total revenue or total costs. As noted above, the combined effect of the updated wage data, the additional 15 percent BNAF reduction, and the final FY 2015 hospice payment update percentage of 2.1 percent results in an increase in estimated hospice payments of 1.4 percent for FY 2015. For small and medium hospices (as defined by routine home care days), the estimated effects on revenue when accounting for the updated wage data, the additional 15 percent BNAF reduction, and the final FY 2015 hospice payment update percentage reflect increases in payments of 1.7 percent and 1.6 percent, respectively. Therefore, the Secretary has determined that this final rule will not create a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. This final rule only affects hospices. Therefore, the Secretary has determined that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

3. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of $100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately $141 million. This final rule is not anticipated to have an effect on State, local, or tribal governments, in the aggregate, or on the private sector of $141 million or more.

VI. Federalism Analysis

Executive Order 13132 on Federalism (August 4, 1999) establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have reviewed this final rule under the threshold criteria of Executive Order 13132, Federalism, and have determined that it will not have substantial direct effects on the rights, roles, and responsibilities of States, local or tribal governments.

VII. Waiver of 60-Day Delay in the Effective Date

We ordinarily provide a 60-day delay in the effective date of the provisions of a rule in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553(d), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in the effective date if the Secretary finds, for good cause, that the delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued. 5 U.S.C. 553(d)(3); 5 U.S.C. 808(2).

The hospice payment system is a fiscal year payment system, and we typically issue the final rule by August 1 of each year to both comply with the requirement to annually review and update these payment systems and ensure that the payment policies for these systems are effective, following the required 60-day delay in the effective date, on October 1, the first day of the fiscal year to which the policies are intended to apply. If the agency finds, for good cause, that a 60-day delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued, the agency may specify an earlier effective date. The timeframes for developing annual rules are extremely compressed and processing issues complicated this year’s rule. We believe it would be contrary to the public interest to delay the effective date of the hospice payment system. We therefore specify that those portions of the rule will be effective October 1.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

Subpart C—Suspension of Payment, Recovery of Overpayments, and Repayment of Scholarships and Loans

1. The authority citation for part 405, subpart C continues to read:
Authority: Secs. 1102, 1815, 1833, 1842, 1862, 1866, 1870, 1871, 1879 and 1892 of the Social Security Act (42 U.S.C. 1302, 1395g, 1395l, 1395u, 1395y, 1395cc, 1395gg, 1395hh, 1395pp and 1395ccc) and 31 U.S.C. 3711.

2. Section 405.371 is amended by revising paragraph (c)(1) and adding paragraph (e) to read as follows:

§ 405.371 Suspension, offset, and recoupment of Medicare payments to providers and suppliers of services.

(c) * * * * *  
(1) Except as provided in paragraphs (d) and (e) of this section, CMS or the Medicare contractor suspends payments only after it has complied with the procedural requirements set forth at § 405.372. * * * * *

(e) Suspension of payment in the case of unfiled hospice cap determination reports. (1) If a provider has failed to timely file an acceptable hospice cap determination report, payment to the provider is immediately suspended in whole or in part until a cap determination report is filed and determined by the Medicare contractor to be acceptable.

(2) In the case of an unfiled hospice cap determination report, the provisions of § 405.372 do not apply. (See § 405.372(a)(2) concerning failure to furnish other information.)

PART 418—HOSPICE CARE

3. The authority citation for part 418 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 418.3 [Amended]

4. Section 418.3 is amended by removing the definition of “Social worker”.

5. Section 418.24 is amended by revising paragraphs (a) and (b)(1) and adding paragraph (f) to read as follows:

§ 418.24 Election of hospice care.

(a) Filing an election statement. (1) General. An individual who meets the eligibility requirement of § 418.20 may file an election statement with a particular hospice. If the individual is physically or mentally incapacitated, his or her representative (as defined in § 418.3) may file the election statement.

(2) Notice of election. The hospice chosen by the eligible individual (or his or her representative) must file the Notice of Election (NOE) with its Medicare contractor within 5 calendar days after the effective date of the election statement.

(b) * * * * *

(1) Identification of the particular hospice and of the attending physician that will provide care to the individual. The individual or representative must acknowledge that the identified attending physician was his or her choice.

(f) Changing the attending physician. To change the designated attending physician, the individual (or representative) must file a signed statement with the hospice that states that he or she is changing his or her attending physician.

(1) The statement must identify the new attending physician, and include the date the change is to be effective and the date signed by the individual (or representative).

(2) The individual (or representative) must acknowledge that the change in the attending physician is due to his or her choice.

(3) Consequences of failure to submit a timely notice of election. When a hospice does not file the required Notice of Election for its Medicare patients within 5 calendar days after the effective date of election, Medicare will not cover and pay for days of hospice care from the effective date of election to the date of filing of the notice of election. These days are a provider liability, and the provider may not bill the beneficiary for them.

(4) Exception to the consequences for filing the NOE late. CMS may waive the consequences of failure to submit a timely-filed NOE specified in paragraph (a)(2) of this section. CMS will determine if a circumstance encountered by a hospice is exceptional and qualifies for waiver of the consequence specified in paragraph (a)(3) of this section. A hospice must fully document and furnish any requested documentation to CMS for a determination of exception. An exceptional circumstance may be due to, but is not limited to the following:

(i) Fires, floods, earthquakes, or similar unusual events that inflict extensive damage to the hospice’s ability to operate.

(ii) A CMS or Medicare contractor systems issue that is beyond the control of the hospice.

(iii) A newly Medicare-certified hospice that is notified of that certification after the Medicare certification date, or which is awaiting its user ID from its Medicare contractor.

(iv) Other situations determined by CMS to be beyond the control of the hospice.

(2) In the case of an exception to a consequence for filing the NOE late, CMS shall file the aggregate cap using data no earlier than 3 months after the end of the fiscal year.

9. Section 418.308 is amended by revising paragraph (c) to read as follows:

§ 418.308 Limitation on the amount of hospice payments.

(c) The hospice must file its aggregate cap determination notice with its Medicare contractor no later than 5 months after the end of the cap year (that is, by March 31st) and remit any overpayment due at that time. Hospices shall file the aggregate cap using data no earlier than 3 months after the end of fiscal year.
the cap period. The Medicare contractor will notify the hospice of the final determination of program reimbursement in accordance with procedures similar to those described in § 405.1803 of this chapter. If a provider fails to file its self-determined cap determination with its Medicare contractor within 5 months after the cap year, payments to the hospice will be suspended in whole or in part, until a self-determined cap determination is filed with the Medicare contractor, in accordance with § 405.371(e) of this chapter.

* * * * *

10. Subpart G is amended by adding a new § 418.312 to read as follows:

§ 418.312 Data submission requirements under the hospice quality reporting program.

(a) General rule. Except as provided in paragraph (g) of this section, Medicare-certified hospices must submit to CMS data on measures selected under section 1814(i)(5)(C) of the Act in a form and manner, and at a time, specified by the Secretary.

(b) Submission of Hospice Quality Reporting Program data. Hospices are required to complete and submit an admission Hospice Item Set (HIS) and a discharge HIS for each patient admission to hospice, regardless of payer or patient age. The HIS is a standardized set of items intended to capture patient-level data.

(c) A hospice that receives notice of its CMS certification number before November 1 of the calendar year before the fiscal year for which a payment determination will be made must submit data for the calendar year.

(d) Medicare-certified hospices must contract with CMS-approved vendors to collect the CAHPS® Hospice Survey data on their behalf and submit the data to the Hospice CAHPS® Data Center.

(e) If the hospice’s total, annual, unique, survey-eligible, deceased patient count for the prior calendar year is less than 50 patients, the hospice is eligible to be exempt from the CAHPS® Hospice Survey reporting requirements in the current calendar year. In order to qualify for this exemption the hospice must submit to CMS its total, annual, unique, survey-eligible, deceased patient count for the prior calendar year.

(f) Vendors that want to become CMS-approved CAHPS® Hospice Survey vendors must meet the minimum business requirements. Survey vendors must have been in business for a minimum of 4 years, have conducted surveys in the approved survey mode for a minimum of 3 years, and have conducted surveys of individual patients for a minimum of 2 years. For Hospice CAHPS®, a “survey of individual patients” is defined as the collection of data from at least 600 individual patients selected by statistical sampling methods, and the data collected are used for statistical purposes. Vendors may not use home-based or virtual interviewers to conduct the CAHPS® Hospice Survey, nor may they conduct any survey administration processes (for example, mailings) from a residence.

(g) No organization, firm, or business that owns, operates, or provides staffing for a hospice is permitted to administer its own Hospice CAHPS® survey or administer the survey on behalf of any other hospice in the capacity as a Hospice CAHPS® survey vendor. Such organizations will not be approved by CMS as CAHPS® Hospice Survey vendors.

(h) Reconsiderations and appeals of Hospice Quality Reporting Program decisions. (1) A hospice may request reconsideration of a decision by CMS that the hospice has not met the requirements of the Hospice Quality Reporting Program for a particular reporting period. A hospice must submit a reconsideration request to CMS no later than 30 days from the date identified on the annual payment update notification provided to the hospice.

2 Reconsideration request submission requirements are available on the CMS Hospice Quality Reporting Web site on CMS.gov.

3 A hospice that is dissatisfied with a decision made by CMS on its reconsideration request may file an appeal with the Provider Reimbursement Review Board under part 405, subpart R of this chapter.

Dated: July 24, 2014.

Marilyn Tavenner,
Administrator, Centers for Medicare & Medicaid Services.

Approved: July 30, 2014.

Sylvia M. Burwell
Secretary, Department of Health and Human Services.

50 CFR Part 20
Migratory Bird Hunting; Proposed Frameworks for Late-Season Migratory Bird Hunting Regulations; Proposed Rule
DEPARTMENT OF THE INTERIOR
Fish and Wildlife Service

50 CFR Part 20

RIN 1018–AZ80

Migratory Bird Hunting; Proposed Frameworks for Late-Season Migratory Bird Hunting Regulations

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; Supplemental.

SUMMARY: The Fish and Wildlife Service (hereinafter Service or we) is proposing to establish the 2014–15 late-season hunting regulations for certain migratory game birds. We annually prescribe frameworks, or outer limits, for dates and times when hunting may occur and the number of birds that may be taken and possessed in late seasons. These frameworks are necessary to allow State selections of seasons and limits and to allow recreational harvest at levels compatible with population and habitat conditions.

DATES: You must submit comments on the proposed migratory bird hunting late-season frameworks by September 2, 2014.

ADDRESSES: Comments: You may submit comments on the proposals by one of the following methods:

We will post all comments on http://www.regulations.gov. This generally means that we will post any personal information you provide us (see the Review of Public Comments and Flyway Council Recommendations section, below, for more information).

SUPPLEMENTARY INFORMATION:

Regulations Schedule for 2014

On April 30, 2014, we published in the Federal Register (79 FR 24512) a proposal to amend 50 CFR part 20. The proposal provided a background and overview of the migratory bird hunting regulations process, and addressed the establishment of seasons, limits, and other regulations for hunting migratory game birds under §§ 20.101 through 20.107, 20.109, and 20.110 of subpart K. Major steps in the 2014–15 regulatory cycle relating to open public meetings and Federal Register notifications were also identified in the April 30 proposed rule.

Further, we explained that all sections of subsequent documents outlining hunting frameworks and guidelines were organized under numbered headings. Those headings are:

1. Ducks
   A. General Harvest Strategy
   B. Regulatory Alternatives
   C. Zones and Split Seasons

D. Special Seasons/Species Management
   i. September Teal Seasons
   ii. September Teal/Wood Duck Seasons
   iii. Black Ducks
   iv. Canvasbacks
   v. Pintails
   vi. Scaup
   vii. Mottled ducks
   viii. Wood ducks
   ix. Youth Hunt
   x. Mallard Management Units
   xi. Other

2. Sea Ducks
3. Mergansers
4. Canada Geese
5. White-fronted Geese
6. Brant
7. Snow and Ross’s (Light) Geese
8. Swans
9. Sandhill Cranes
10. Coots
11. Moorhens and Gallinules
12. Rails
13. Snipe
14. Woodcock
15. Band-tailed Pigeons
16. Mourning Doves
17. White-winged and White-tipped Doves
18. Alaska
19. Hawaii
20. Puerto Rico
21. Virgin Islands
22. Falconry
23. Other

Subsequent documents will refer only to numbered items requiring attention. Therefore, it is important to note that we will omit those items requiring no attention, and remaining numbered items will be discontinuous and appear incomplete.

On June 4, 2014, we published in the Federal Register (79 FR 32418) a second document specifically dealing with the proposed frameworks for early-season regulations. In late August 2014, we will publish a rulemaking establishing final frameworks for early-season migratory bird hunting regulations for the 2014–15 season.

On July 30–31, 2014, we held open meetings with the Flyway Council Consultants, at which the participants reviewed the status of waterfowl and developed recommendations for the 2014–15 regulations for these species. This document deals specifically with proposed frameworks for the late-season migratory bird hunting regulations. It will lead to final frameworks from which States may select season dates, shooting hours, areas, and limits. We have considered all pertinent comments received through August 1, 2014, on the April 30 and June 4, 2014, rulemaking documents in developing this document. In addition, new proposals for certain late-season regulations are provided for public comment. The comment period is specified above under ADDRESSES. We will publish final regulatory frameworks for late-season migratory game bird hunting in the Federal Register on or around September 20, 2014.

Population Status and Harvest

The following paragraphs provide preliminary information on the status and harvest of waterfowl excerpted from various reports. For more detailed information on methodologies and results, you may obtain complete copies of the various reports at the address indicated under FOR FURTHER INFORMATION CONTACT.

Waterfowl Breeding and Habitat Survey

Federal, provincial, and State agencies conduct surveys each spring to estimate the size of breeding populations and to evaluate the conditions of the habitats. These surveys are conducted using fixed-wing aircraft, helicopters, and ground crews and encompass principal breeding areas of North America, covering an area over 2.0 million square miles. The traditional survey area comprises Alaska, Canada, and the northcentral United States, and includes approximately 1.3 million square miles. The eastern survey area includes parts of Ontario, Quebec, Labrador, Newfoundland, Nova Scotia, Prince Edward Island, New Brunswick, New York, and Maine, an area of approximately 0.7 million square miles.

Overall, spring weather was delayed even later than last year across most of the survey area. Habitat conditions during the survey were mostly improved or similar to last year, due to average to above-average annual precipitation. The exceptions were west-central Alberta and east of James Bay in Quebec. Alaska was the only region that experienced an early spring. The total pond estimate (Prairie Canada and United States combined) was 7.2 ± 0.2 million, which was similar to the 2013 estimate of 6.9 ± 0.2 million and 40 percent above the long-term average of 5.1 ± 0.03 million. The 2014 estimate of ponds in Prairie Canada was 4.6 ± 0.2 million. This estimate was similar to the 2013 estimate (4.6 ± 0.2 million) and 33 percent above the 1961–2013 average (3.5 ± 0.03 million). The 2014 pond estimate for the northcentral United States was 2.6 ± 0.1 million, which was similar to the 2013 estimate (2.3 ± 0.1 million) and 53 percent above the 1974–2013 average (1.7 ± 0.02 million). Additional details of the 2013 Survey and are available from our Web site at http://www.fws.gov/migratorybirds/

Breeding Population Status

In the traditional survey area, which includes strata 1–18, 20–50, and 75–77, the total duck population estimate (excluding scoters [Melanitta spp.], eiders [Somateria spp. and Polysticta stelleri], long-tailed ducks [Clangula hyemalis], mergansers [Mergus spp. and Lophodytes], and wood ducks [Aix sponsa]) was 49.2 ± 0.8 [SE] million birds. This was a record-high count, represents an 8 percent increase from last year’s estimate of 45.6 ± 0.7 million, and is 43 percent higher than the long-term average (1955–2013). Estimated mallard (Anas platyrhynchos) abundance was 10.9 ± 0.3 million, which was similar to the 2013 estimate, and 42 percent above the long-term average of 7.7 ± 0.04 million. Estimated abundance of gadwall (A. strepera; 3.8 ± 0.2 million) was similar to the 2013 estimate and 102 percent above the long-term average (1.9 ± 0.02 million). The estimate for American wigeon (A. americana; 3.1 ± 0.2 million) was 18 percent above the 2013 estimate of 2.6 ± 0.2 million and 20 percent above the long-term average of 2.6 ± 0.02 million. The estimated abundance of green-winged teal (A. crecca) was 3.4 ± 0.2 million, which was similar to the 2013 estimate and 75 percent above the long-term average of 4.9 ± 0.04 million. The estimate for northern pintail (A. acuta; 3.2 ± 0.2 million) was similar to the 2013 estimate and 20 percent below the long-term average of 4.0 ± 0.04 million.

Abundance estimates for redheads (Aythya americana; 1.3 ± 0.1 million) and canvasbacks (A. valisineria; 0.7 ± 0.05 million) were similar to their 2013 estimates and were 85 percent and 18 percent above their long-term averages of 0.7 ± 0.01 million and 0.6 ± 0.01 million, respectively. Estimated abundance of scaup (A. affinis and A. marila combined; 4.6 ± 0.3 million) was similar to the 2013 estimate and the long-term average of 5.0 ± 0.05 million.

The eastern survey area was restratified in 2005, and is now composed of strata 51–72. In the eastern survey area, estimated abundance of American black ducks (Anas rubripes) was 0.6 ± 0.04 million, which was similar to the 2013 estimate and the 1990–2013 average. The estimated abundance of mallards was 0.4 ± 0.1 million, which was similar to the 2013 estimate and the 1990–2013 average. Abundance estimates of green-winged teal (0.2 ± 0.04 million) and ring-necked ducks (Aythya collaris; 0.5 ± 0.1 million) were 19 percent and 22 percent below their 2013 estimates, and similar to their 1990–2013 average, respectively.

Abundance estimates for goldeneye species (common [Bucephala clangula] and Barrow’s [B. islandica] combined) and mergansers were similar to last year’s estimates and their 1990–2013 averages.

Fall Flight Estimate

The midcontinent mallard population is composed of mallards from the traditional survey area (revised in 2008 to exclude mallards in Alaska and the Old Crow Flats area of the Yukon Territory), Michigan, Minnesota, and Wisconsin, and is estimated to be 13.4 ± 1.3 million birds in 2014. This is similar to the 2013 estimate of 13.1 ± 1.2 million. See section 1.A. General Harvest Strategy for further discussion of the implications of this information for this year’s selection of the appropriate hunting regulations.

Status of Geese and Swans

We provide information on the population status and productivity of North American Canada geese (Branta canadensis), brant (B. bernicla), snow geese (Chen caerulescens), Ross’s geese (C. rossii), emperor geese (C. canagica), white-fronted geese (Anser albirostris), and tundra swans (Cygnus columbianus). Production of arctic-nesting geese depends heavily upon the timing of snow and ice melt, and spring and early summer temperatures.

In 2014, conditions in the arctic and boreal areas important for geese were variable. Conditions in the north-central Arctic were very poor for nesting as spring was very late, with snow cover persisting into July. By contrast, spring was early in many of the more southern regions in the Central Arctic. At Karrak Lake on the Queen Maude Gulf, ice break-up was 14 days earlier than average, so biologists expected above-average production by the snow and Ross’s geese, and Mid-continent white-fronted geese that nest there. Conditions in many areas of the eastern Arctic were favorable for breeding waterfowl. Spring phenology was early on Southampton and Bylot Islands, and excellent production by the greater snow geese that nest on Bylot was expected. Spring was slightly early on the Ungava Peninsula, and biologists predicted slightly above-average production of the Atlantic Population Canada geese that nest there. Spring was cold and wet in Newfoundland and Labrador, but the timing of nesting was normal, and the outlook for production of North Atlantic Population Canada geese was good.

Alaska experienced a very early, warm spring, with little or no flooding, so the outlook for the many goose and swan populations nesting there was excellent. Favorable conditions on Alaska’s Yukon-Kuskokwim Delta (YKD) were a welcome contrast to 2013, when a late
ice break-up and a storm-surge flood made for very poor production. Predicted production of Emperor geese, cackling Canada geese, and white-fronted geese should be much improved in 2014. On the Copper River Delta, the early phenology and the highest dusky Canada goose index in 20 years suggests an excellent year for this population. Of the Canada goose populations that migrate to the Mississippi Flyway, predicted production was above-average for the Eastern Prairie Population, but below-average for the Mississippi Valley and the Southern James Bay populations, the latter for the second year in a row. Indices of wetland abundance in the Canadian and U.S. prairies in 2014 continued to improve, with the exception of the eastern two-thirds of South Dakota and the Red River Valley in North Dakota. Although early spring was cold and wet in many goose nesting areas of the United States, the outlook for production was generally good. Breeding populations of most temperate-nesting geese remained high in 2014, despite efforts to reduce or stabilize them. Production and fall flights of temperate-nesting Canada geese over most of North America should be average in 2014. Primary abundance indices increased for 9 goose populations and decreased for 11 goose populations in 2014 compared to 2013. Primary abundance indices for both populations of tundra swans (Eastern and Western) decreased in 2014 from 2013 levels. The following populations displayed significant positive trends during the most recent 10-year period (P < 0.05): Central Flyway Arctic Nesting—West Tier (formerly Short Grass Prairie), North Atlantic, and Aleutian Canada geese; Mid-continent, Western Central Flyway, and Western Arctic/Wrangell Island light geese; Eastern Population tundra swans; and the Pacific population of white-fronted geese. Only Atlantic Flyway Resident (AFRP) and Central Flyway Arctic Nesting—West Tier (formerly Tall Grass Prairie) Canada geese showed significantly negative 10-year trends. The production of geese and swans in North America is variable, depending on the population and its breeding area.

Waterfowl Harvest and Hunter Activity

National surveys of migratory bird hunters were conducted during the 2012–13 and 2013–14 hunting seasons. Over 1.1 million waterfowl hunters harvested 15,704,500 (±6 percent) ducks and 5,191,200 (±6 percent) geese in 2012. Over 1.1 million waterfowl hunters harvested 13,716,400 (±6 percent) ducks and 3,360,400 (±6 percent) geese during the 2013–14 season. Mallard, green-winged teal, gadwall, blue-winged, and wood duck (Aix sponsa) were the 5 most-harvested duck species in the United States, and Canada goose was the predominant species in the goose harvest.

Review of Public Comments and Flyway Council Recommendations

The preliminary proposed rulemaking, which appeared in the April 30, 2014, Federal Register, opened the public comment period for migratory game bird hunting regulations. The supplemental proposed rule, which appeared in the June 4, 2014, Federal Register, discussed the regulatory alternatives for the 2014–15 duck hunting season. Late-season comments are summarized below and numbered in the order used in the June 4 Federal Register. We have included only the numbered items pertaining to late-season issues for which we received written comments. Consequently, the issues do not follow in successive numerical order.

We received recommendations from all four Flyway Councils. Some recommendations supported continuation of last year’s frameworks. Due to the comprehensive nature of the annual review of the frameworks performed by the Councils, support for continuation of last year’s frameworks is assumed for items for which no recommendations were received. Council recommendations for changes in the frameworks are summarized below.

We seek additional information and comments on the recommendations in this supplemental proposed rule. New proposals and modifications to previously described proposals are discussed below. Wherever possible, they are discussed under headings corresponding to the numbered items in the April 30 and June 4, 2014, Federal Register documents.

General

Written Comments: A commenter protested the entire migratory bird hunting regulations process, the killing of all migratory birds, and status and habitat data on which the migratory bird hunting regulations are based.

Service Response: Our long-term objectives continue to include providing opportunities to harvest portions of certain migratory game bird populations and to limit harvests to levels compatible with each population’s ability to maintain healthy, viable numbers. Having taken into account the zones of temperature and the distribution, abundance, economic value, breeding habits, and times and lines of flight of migratory birds, we believe that the hunting seasons provided for herein are compatible with the current status of migratory bird populations and long-term population goals.

Additionally, we are obligated to, and do, give serious consideration to all information received as public comment. While there are problems inherent with any type of representative management of public-trust resources, we believe that the Flyway-Council system of migratory game bird management has been a longstanding example of State-Federal cooperative management since its establishment in 1952. However, as always, we continue to seek new ways to streamline and improve the process.

1. Ducks

Categories used to discuss issues related to duck harvest management are: (A) General Harvest Strategy, (B) Regulatory Alternatives, (C) Zones and Split Seasons, and (D) Special Seasons/Species Management. The categories correspond to previously published issues/discussion, and only those containing substantial recommendations are discussed below.

A. General Harvest Strategy

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended the adoption of the “liberal” regulatory alternative.

Service Response: We continue to use adaptive harvest management (AHM) protocols that allow hunting regulations to vary among Flyways in a manner that recognizes each Flyway’s breeding-ground derivation of mallards. In 2008, we described and adopted a protocol for regulatory decision-making for the newly defined stock of western mallards (73 FR 43290; July 24, 2008). For the 2014 hunting season, we continue to believe that the prescribed regulatory choice for the Pacific Flyway should be based on the status of this western mallard breeding stock, while the regulatory choice for the Mississippi and Central Flyways should depend on the status of the redefined mid-continent mallard stock. We also recommend that the regulatory choice for the Atlantic Flyway continue to depend on the status of eastern mallards.

For the 2014 hunting season, we are continuing to consider the same regulatory alternatives as those used last year. The nature of the “restrictive,” “moderate,” and “liberal” alternatives has remained essentially unchanged.
since 1997, except that extended framework dates have been offered in the “moderate” and “liberal” regulatory alternatives since 2002 (67 FR 47224; July 17, 2002). Also, in 2003, we agreed to place a constraint on closed seasons in the Mississippi and Central Flyways whenever the midcontinent mallard breeding-population size (as defined prior to 2008; traditional survey area plus Minnesota, Michigan, and Wisconsin) was ≥ 5.5 million (68 FR 37362; June 23, 2003). This constraint subsequently was revised in 2008 to ≥ 4.75 million to account for the change in the definition of midcontinent mallards to exclude birds from Alaska and the Old Crow Flats area of the Yukon Territory (73 FR 43293; July 24, 2008).

The optimal AHM strategies for midcontinent and western mallards for the 2014–15 hunting season were calculated using: (1) Harvest-management objectives specific to each mallard stock; (2) the 2014 regulatory alternatives; and (3) current population models and associated weights for midcontinent and western mallards. Based on this year’s survey results of 11.04 million midcontinent mallards (traditional survey area minus Alaska and the Old Crow Flats area of the Yukon Territory, plus Minnesota, Wisconsin, and Michigan) and 4.63 million ponds in Prairie Canada, the prescribed regulatory choice for the Mississippi and Central Flyways is the “liberal” alternative. Similarly, based on an estimated 0.82 million western mallards (0.32 in California-Oregon and 0.50 in Alaska) the prescribed regulatory alternative in the Pacific Flyway is also “liberal.”

In 2013, mechanical problems and corresponding safety concerns with Service aircraft limited survey coverage, which precluded our ability to estimate breeding population sizes for the eastern strata of the Waterfowl Breeding and Population Habitat Survey (WBPHS). As a result, we were unable to update eastern mallard AHM model weights and derive an optimal harvest policy for 2014. Therefore, the 2014 eastern mallard AHM decision will be based on the 2014 eastern mallard population estimate and the optimal regulatory strategy derived for the Atlantic Flyway in 2012. Based on an estimated eastern mallard population of 0.86 million (0.22 and 0.63 million respectively in northeast Canada and the northeastern United States), the prescribed regulatory choice for the Atlantic Flyway is the “liberal” alternative. We note that in 2012, the eastern mallard observed breeding population was 0.84 million.

Therefore, we concur with the recommendations of the Atlantic, Mississippi, Central, and Pacific Flyway Councils regarding selection of the “liberal” regulatory alternative and propose to adopt the “liberal” regulatory alternative, as described in the June 4, 2014, Federal Register.

D. Special Seasons/Species Management

iii. Black Ducks

**Council Recommendations:** The Atlantic and Mississippi Flyway Councils recommended that the Service follow the International Black Duck AHM Strategy for 2014–15.

**Service Response:** In 2012, we adopted the International Black Duck AHM Strategy (77 FR 49868; August 17, 2012). The formal strategy is the result of 14 years of technical and policy decisions developed and agreed upon by both Canadian and U.S. agencies and waterfowl managers. The strategy clarifies what harvest levels each country will manage for and reduces conflicts over country-specific regulatory policies. Further, the strategy allows for attainment of fundamental objectives of black duck management: resource conservation, perpetuation of hunting tradition, and equitable access to the black duck resource between Canada and the United States while accommodating the fundamental sources of uncertainty, partial controllability and observability, structural uncertainty, and environmental variation. The underlying model performance is assessed annually, with a comprehensive evaluation of the entire strategy (objectives and model set) planned after 6 years. A copy of the strategy is available at the address indicated under FOR FURTHER INFORMATION CONTACT, or from our Web site at http://www.fws.gov/migratorybirds/NewsPublicationsReports.html.

For the 2014–15 season, the optimal country-specific regulatory strategies were calculated in September 2013 using: (1) The black duck harvest objective (98 percent of long-term cumulative harvest); (2) 2014–15 country specific regulatory alternatives; (3) parameter estimates for mallard competition and additive mortality; and (4) 2013 estimates of 0.62 million breeding black ducks and 0.50 million breeding mallards in the core survey area. The optimal regulatory choices are the moderate package in Canada and the restrictive package in the United States.

iv. Canvassbacks

**Council Recommendations:** The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended a full season for canvassbacks with a 1-bird daily bag limit. Season lengths would be 60 days in the Atlantic and Mississippi Flyways, 74 days in the Central Flyway, and 107 days in the Pacific Flyway.

**Service Response:** Since 1994, we have followed a canvassback harvest strategy whereby if canvassback population status and production are sufficient to permit a harvest of one canvassback per day nationwide for the entire length of the regular duck season, while still attaining an objective of 500,000 birds the following spring, the season on canvassbacks should be opened. A partial season would be permitted if the estimated allowable harvest was below that associated with a 1-bird daily bag limit for the entire season. If neither of these conditions can be met, the harvest strategy calls for a closed season on canvassbacks nationwide. In 2008 (73 FR 43290; July 24, 2008), we announced our decision to modify the canvassback harvest strategy to incorporate the option for a 2-bird daily bag limit for canvassbacks when the predicted breeding population the subsequent year exceeds 725,000 birds.

This year’s spring survey resulted in an estimate of 685,000 canvassbacks. This was similar to the 2013 estimate of 787,000 canvassbacks and 18 percent above the 1955–2013 average. The estimate of ponds in Prairie Canada was 4.6 million, which was also similar to last year’s estimate of 4.6 million and 33 percent above the long-term average. Based on harvest predictions using data through 2009, the canvassback harvest strategy predicts a 2015 canvassback population of 730,600 birds under a liberal duck season with a 1-bird daily bag limit and 671,000 with a 2-bird daily bag limit. Because the predicted 2015 spring canvassback population under a “liberal” 1-bird bag season is greater than 500,000, and the predicted population under a “liberal” 2-bird bag is less than 725,000; and since the recommended duck season under AHM is “liberal,” the harvest strategy stipulates that there should be a full canvassback season with a 1-bird daily bag limit.

v. Pintails

**Council Recommendations:** The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended a full season for pintails consisting of a 2-bird daily bag limit and a 60-day season in the Atlantic and Mississippi
Flyways, a 74-day season in the Central Flyway, and a 107-day season in the Pacific Flyway.

Service Response: The current derived pintail harvest strategy was adopted by the Service and Flyway Councils in 2010 (75 FR 44856; July 29, 2010). For this year, an optimal regulatory strategy for pintails was calculated with: (1) An objective of maximizing long-term cumulative harvest, including a closed-season constraint of 1.75 million birds; (2) the regulatory alternatives and associated predicted harvest; and (3) current population models and their relative weights. Based on this year’s survey results of 3.22 million pintails observed at a mean latitude of 53.9 degrees and a latitude-adjusted breeding population of 3.79 million birds, the optimal regulatory choice for all four Flyways is the “liberal” alternative with a 2-bird daily bag limit.

vi. Scaup

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended use of the “moderate” regulation package, consisting of a 60-day season with a 2-bird daily bag in the Atlantic Flyway, and an 86-day season with a 3-bird daily bag limit in the Pacific Flyway.

Service Response: In 2008, we adopted and implemented a new scaup harvest strategy (73 FR 43290 on July 24, 2008, and 73 FR 51124 on August 29, 2008) with initial “restrictive,” “moderate,” and “liberal” regulatory packages adopted for each Flyway. The 2014 breeding population estimate for scaup is 4.61 million, which is similar to the 2013 estimate of 4.17 million. Total estimated U.S. scaup harvest for the 2013–14 season was 0.33 million birds. An optimal regulatory strategy for scaup was calculated with an objective of achieving 95 percent of maximum long-term cumulative harvest and updated model parameters and their relative weights. Based on this year’s breeding population estimate of 4.61 million, the optimal regulatory choice for scaup is the “moderate” package in all four Flyways.

xi. Other

Council Recommendations: The Central Flyway Council recommended that two additional (bonus) blue-winged teal be allowed in the daily duck bag for the first 16 days of the regular duck season in the production States of Montana, North Dakota, South Dakota, and Wyoming.

The Mississippi Flyway Council recommended that two additional teal (blue-winged, green-winged, and cinnamon teal collectively) be allowed in the daily duck bag for the first 16 days of the regular duck season in the production States of Iowa, Michigan, Minnesota, and Wisconsin. Impacts of both of these changes would be evaluated over the first 3 years, beginning with the 2014–15 hunting season.

Service Response: In the April 30 Federal Register, we stated that “any proposal to increase teal harvest, in order to be consistent with the intent of special regulations, should direct harvest primarily at blue-winged teal . . . .” The recent assessment of teal harvest potential indicated additional harvest for this species can be supported in most years, and we believe the proposal for bonus blue-winged teal will provide hunters increased opportunities with a very low likelihood of negative impacts to the blue-winged teal population. Further, we believe impacts to species other than blue-winged teal also are likely to be low. Thus, we support the Central Flyway Council’s recommendation to include bonus blue-winged teal in the regular season daily duck bag limit. We will work with the Flyway to develop appropriate evaluation techniques to monitor any potential effects.

We do not support the Mississippi Flyway Council’s recommendation to include all teal in the bonus bag limit. We have clearly stated that the focus of additional teal harvest should be directed at blue-winged teal, and do not support new special regulations that would target other species of waterfowl, including the other teal species.

Although the teal harvest potential assessment indicated some additional harvest opportunity exists for both blue-winged and green-winged teal, the amount of additional opportunity for green-winged teal appears to be much lower than for blue-winged teal. For blue-winged teal, the optimal harvest rates predicted for the additive model were about 2–2.5 times higher than observed harvest rates, but the optimal harvest rate for green-winged teal was only 1.3–1.5 times higher than observed rates, suggesting less room for additional harvest opportunity for green-winged teal. Furthermore, the models used to assess the impacts of harvest on green-winged teal population size did not perform as well as the models used for blue-winged teal. Thus, we have less confidence in the results for green-winged teal. Improving the predictive ability of the green-winged teal models would require improvements to monitoring programs (e.g., banding, harvest, and/or abundance monitoring) beyond those that currently exist. Data were insufficient to assess the harvest potential for cinnamon teal.

Thus, beginning in the 2014–15 regular duck seasons, we propose that two bonus blue-winged teal be included for the first 16 days of the regular duck season of the Central and Mississippi Flyways when the blue-winged teal population estimate from the traditional survey area (i.e., strata 1–18, 20–50, and 75–77) is >4.7 million birds, and for the first 9 days when the blue-winged teal estimate is between 3.3 and 4.7 million. Bonus blue-winged teal will not be allowed when the blue-winged teal estimate is less than 3.3 million. In the Central Flyway, this regulation would be available only to the States of Montana, North Dakota, South Dakota, and Wyoming. In the Mississippi Flyway, this regulation would be available only to the States of Iowa, Michigan, Minnesota, and Wisconsin.

During the next 3 years, no additional expansion of teal hunting opportunity will be allowed. This will ensure that an evaluation of recently enacted additional teal hunting opportunities can proceed immediately and a comprehensive teal harvest strategy can be developed. The evaluation plan must be reviewed and supported by the Service’s Division of Migratory Bird Management, and the strategy vetted by the Harvest Management Working Group and approved by the Service.

Bonus birds of other species will only be considered after a rigorous assessment of the harvest potential of the species, adequate evaluations of the effects of the additional harvest associated with the bonus bag limit on the status of the species, and integration of the regulations into the applicable duck harvest management strategy(ies) in place at the time. Flyway(s) proposing such changes would be responsible for providing the resources for all necessary work.

We prepared an environmental assessment (EA) on the new teal hunting opportunities. Specifics of the five alternatives we analyzed and a copy of the EA can be found on our Web site at http://www.fws.gov/migratorybirds, or at http://www.regulations.gov.

4. Canada Geese

B. Regular Seasons

Council Recommendations: The Atlantic Flyway Council recommended that regulations for the North Atlantic Population of Canada geese (NAP) be liberalized per the NAP Canada Goose Management Plan and Hunt Strategy. The “liberal” season option would consist of a 70-day season with a 3-bird
daily bag limit and a framework between October 1 and February 15 for the high- and low-harvest NAP areas. The Council also recommended that the size of the closed area surrounding Santee National Wildlife Refuge and lands in close proximity to the refuge be reduced beginning with the 2014–15 hunting season. The area removed from the closed area would be managed as an Atlantic Flyway Resident Population harvest area with an 80-day season and 5-bird daily bag limit.

The Pacific Flyway Council recommended several changes to dark goose season frameworks:

1. Simplify goose frameworks in the Pacific Flyway by combining interior and coastal States frameworks into single frameworks for Canada geese and brant, white-fronted goose, and light geese. This would include:
   a. Increasing the season length for Canada geese in California, Oregon, and Washington from 100 to 107 days; and
   b. Changing the framework opening date for geese in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24.
2. In California, increase the bag limit for Canada geese from 4 to 10 per day, and in those zones where exceptions exist, increase the Canada goose bag limit from 6 to 10 per day.
3. In Oregon, increase the bag limit for Canada geese in the South Coast Zone on hunt days on or before the last Sunday in January from 4 to 6 per day.
4. In Oregon, remove bag limit restrictions for cackling and Aleutian geese (Southwest Permit Zone) of not more than 3 per day within the overall Canada goose daily bag limit.
5. In Washington, remove the bag limit restriction for cackling geese in Area 2A and 2B (Southwest Washington Permit Zone) of not more than 3 per day within the overall Canada goose daily bag limit.
6. In Oregon and Washington, increase dusk Canada goose quotas from 90 to 165 geese in the Northwest Special Permit Zone of Oregon, and from 45 to 85 geese in Area 2A and 2B of Washington (Southwest Washington Permit Zone).
7. In Utah, Nevada, and Arizona, increase the daily bag limit from 3 to 4 Canada geese and brant, singly or in the aggregate.
8. In Utah, modify the Northern Utah Zone to include the Loomis State Wildlife Area and adjacent areas which were previously in the Remainder of State Zone. The Remainder of State Zone so that the Wasatch Front Zone is described by roads instead of county boundaries.

Service Response: We agree with the Atlantic Flyway Council’s recommendation concerning liberalization of the frameworks for NAP geese. The 3-year NAP breeding population mean (65,344) is above the 2001–05 level of 59,994 needed for liberalization. Further, the NAP breeding population has been slowly increasing for the past 3 years, and NAP harvest in the United States is buffered to a large extent by the Atlantic Flyway Resident Population (AFRP). We also support the Council’s recommendation to reduce the closed area in South Carolina. The proposed reduction in the size of the closed area should continue to provide adequate protection for migrant Canada goose stocks associated with this area. Further, opening up some new areas to goose hunting will provide additional harvest opportunity to control abundant AFRP Canada geese.

We support the Pacific Flyway Council’s recommendations to increase the basic season length in California, Oregon, and Washington from 100 to 107 days, and to change the framework opening date in California, Oregon, and Washington. These recommendations are intended to simplify frameworks by establishing consistency in season lengths and opening dates for Canada goose, light goose, and white-fronted goose seasons throughout the Pacific Flyway south of Alaska. We do not expect the increased season length to significantly increase harvest as many areas in these States already have exceptions for a 107-day season length, or have combinations of youth hunting days, September seasons, and regular seasons which total 107 days.

We also support the Pacific Flyway Council’s recommendation to increase the daily bag limit in California from 4 to 6, depending on the zone, to 10 per day. Aleutian, cackling, and western Canada goose represent the primary Canada goose populations inhabiting California, and are currently over population objectives identified in management plans. The current 3-year (2012–2014) average estimated number of Aleutian Canada geese is 145,780, well above the population objective of 60,000 geese. The current 3-year (2012–2014) average population estimate for cackling Canada geese is 265,281, and exceeds the population objective of 250,000 geese. Also, the 3-year (2012–2014) average population estimate for the Pacific population of western Canada geese (398,890) and is nearly double the objective of 126,650 geese. However, the Flyway management plan indicates that the western Canada goose population segment (flock) objective for the California reference area is between 1,000 and 1,250 nesting pairs. The traditional survey area in the northeast portion of the California reference area indicates only 588 nesting pairs, but a broader survey over the California reference area indicates a current 3-year average breeding population estimate of 47,128 geese. We note that California has maintained more restrictive regulations in their Northeast Zone to protect the breeding population of the Canada goose there. While we support the recommendation, we also believe the Flyway management plan for the Pacific population of western Canada geese should be revised by 2016 to update the population objective if necessary and clarify the metric used to index the status of this population and prescribe harvest management regulations.

With regard to the Pacific Flyway Council’s recommendation to increase the daily bag limit in Oregon’s South Coast Zone on hunt days on or before the last Sunday in January from 4 to 6 per day, we concur. We note that Oregon’s South Coast Zone daily bag limit is already 6 Canada geese after the last Sunday in January. Increased bag limits in Oregon’s South Coast Zone are intended to increase harvest rates of Aleutian Canada geese, which exceed the Flyway population objective by more than two times.

We also support the Pacific Flyway Council’s recommendations to remove the daily bag limit restrictions specific to cackling and Aleutian Canada geese in Oregon’s Northwest and Northwest Special Permit Zones of not more than 3 per day, and to remove the daily bag limit restriction specific to cackling Canada geese in Washington’s Area 2A and 2B (Southwest Permit Zone) of not more than 3 per day within the basic daily bag limit of 4 Canada geese per day in these areas. As previously noted, the Aleutian Canada goose population is currently more than 2 times over the Flyway population objective, and the cackling Canada goose population also exceeds the Flyway population objective. The bag limit increases are intended to increase harvest rates of cackling Canada geese and address agricultural damage issues in Oregon and Washington. However, we note that long-term solutions to agricultural depredation issues will not be completely addressed through harvest regulations. Thus, we encourage the States in the Pacific Flyway to continue to work toward implementing other approaches for reducing agricultural
depredation as detailed in the Flyway’s Canada goose depredation plan.

We also support the Pacific Flyway Council’s recommendation to increase the dusky Canada goose quotas from 90 to 165 in Oregon’s Northwest Special Permit Zone, and 45 to 85 in Washington’s Area 2A and 2B (Southwest Permit Zone). The Flyway’s dusky Canada goose management plan specifies that Oregon’s and Washington’s harvest quotas will increase from 90 and 45 to 165 and 85, respectively, when the 3-year average population of dusky Canada goose exceeds 12,500 (Action level 1). The most current 3-year average population (2011–2014, no estimate was available in 2013) is 13,678. We do not expect change in the quotas to result in increased goose harvest. Oregon and Washington rarely exceed sub-area dusky quotas and do not exceed the current lower quotas. The status of dusky Canada geese continues to be a matter of concern and harvest restrictions have been in place to protect these geese throughout their range since the 1970’s. We continue to support the harvest strategy described in the Flyway management plan for this population.

We also support the Pacific Flyway Council’s recommendation to increase the daily Canada goose and brant bag limit from 3 to 4 singly or in the aggregate in Arizona, Nevada, and Utah. State restrictions have been imposed in those 3 States to help establish and build breeding population segments (flocks) identified by State reference areas in the Flyway management plan. However, the current 3-year average population estimate (2012–14) for the Rocky Mountain population of western Canada geese is 144,255, which is substantially above the Flyway population objective of 117,000 geese. The management plan for this population indicates that when the most recent 3-year average breeding population index is between 87,825 and 117,000 goose, minor harvest adjustments may be made for individual flocks and reference areas. Removal of the daily bag limit restrictions in Arizona, Nevada, and Utah will make their Canada goose bag limits the same as those in other interior Pacific Flyway States (Colorado, Idaho, and Montana), resulting in greater consistency throughout the Flyway.

Lastly, we support the Pacific Flyway Council’s recommendations to modify Utah’s Wasatch Front Zone and the Remainer of State Zone. The proposed modifications would result in consistent regulations on other nearby wildlife management areas in the Northern Utah Zone, and we do not expect that this change would have any impact on goose harvest. Also, some hunters have had difficulty determining the boundary for the Wasatch Front Zone because the zone was defined based on county lines, which do not necessarily follow visible landmarks. This change in boundary description is more easily identifiable based on visible landmarks and should reduce uncertainty by sportsmen when afield.

5. White-Fronted Geese

Council Recommendations: The Pacific Flyway Council recommended increasing the daily bag limit from 6 to 10 per day in the Pacific Flyway except in Alaska, and expanding the framework opening outside dates in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24.

Service Response: We support the Pacific Flyway Council’s recommendations. The current 3-year average population estimate (2012–14) for Pacific white-fronted geese is 627,108, which is substantially above the Flyway population objective of 300,000 geese. Further, the population has shown an upward trend for nearly the last 30 years. As the number of Pacific white-fronted geese has increased, so have complaints of agricultural damage on wintering and staging areas. The bag limit increase should allow additional harvest of Pacific white-fronted geese while maintaining traditional Canada goose hunting opportunities. We do not expect a significant increase in Tule white-fronted goose harvest with the proposed bag limit increase as more restrictive frameworks remain in place in the Pacific Flyway to restrict harvest of Tule white-fronted geese (for example, California’s Sacramento Valley Special Management Area). Population estimates for Tule white-fronted geese indicate a stable population, and the current 3-year average population estimate (2012–14) is approximately 10,000 geese. While the Special Management Area is in place to restrict the harvest of Tule geese, the absolute number of Tule geese harvested remains very low (ranging from 40–173 per year). With regard to framework dates, moving the framework opening date ahead by 1 week is intended to simplify frameworks by aligning outside dates for white-fronted goose, Canada goose, and light goose seasons to allow consistency throughout the Pacific Flyway south of Alaska.

6. Brant

Service Response: The 2014 mid-winter index (MWI) for Atlantic brant was 132,936. While the brant management plan allows for a 50-day season with a 2-bird daily bag limit when the MWI estimate falls between 125,000 and 150,000 brant, the hunt plan provides for consideration of factors other than population size in decisions about season length. The Council noted that the percentage of young in the brant fall flight in the previous 2 years was extremely low (6.5 percent and 3.7 percent) compared to the previous 10-year average of 17.6 percent, and preliminary information for 2014 suggests a third consecutive year of poor production. We concur with the Council’s conservative approach.

7. Snow and Ross’s (Light) Geese

Council Recommendations: The Pacific Flyway Council recommended several changes to light goose season frameworks:

1. Changing the framework opening date for light geese in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24;

2. Increasing the basic bag limit for light geese in California, Oregon, and Washington from 6 or 10 per day to 20 per day; and

3. Implementing a bag limit restriction for light geese in Oregon of 6 per day during all hunts occurring on or before the last Sunday in January.

Service Response: We support the Pacific Flyway Council’s recommendation to expand the framework opening outside dates for light geese in California, Oregon, and Washington. Moving the framework opening date ahead by 1 week is intended to simplify frameworks by aligning outside dates for white-fronted goose, Canada goose, and light goose seasons to allow consistency throughout the Pacific Flyway south of Alaska.

We also support the Pacific Flyway Council’s recommendations to increase the basic bag limit for light geese in California, Oregon, and Washington from 6 or 10 per day to 20 per day. Increasing the basic light goose bag limit in California, Oregon, and Washington will simplify frameworks by aligning bag limits for light geese to allow consistency throughout the Pacific Flyway south of Alaska. Additionally, three populations of light geese occur in
the Pacific Flyway and are above Flyway population objectives based on the most recent breeding population indices. The population estimate for the Western Arctic Population (WAP) of lesser snow geese was 451,000 in 2013, which is above the objective of 200,000 geese. Ross’s geese were estimated at 766,000 in 2012, and are above the objective of 100,000 geese. The population estimate for Wrangel Island snow geese was 160,000 in 2013, which is above the objective of 120,000 geese. The Council notes that the Canadian Wildlife Service (CWS) designated the WAP lesser snow goose and Ross’s geese as overabundant in 2014 based on the population’s long-term population growth, evidence of localized habitat degradation on the breeding grounds, low harvest rate, and high adult survival rate. Further, management prescriptions recommended in the WAP lesser snow goose and Ross’s goose management plans are meant to keep the populations within objective levels and prevent habitat degradation problems. The increase in daily bag limit is intended to slow the growth rate of WAP lesser snow goose and Ross’s geese.

Increasing bag limits on light geese has the potential for additional impacts to Wrangel Island snow geese. Wrangel Island snow goose winter primarily in British Columbia-Washington (60 percent) and California (40 percent), but some winter in Oregon. California is the winter terminus for all three populations of light geese. The number of light geese estimated to winter in California is approximately 1,000,000. Only about 5 percent of the wintering population is composed of Wrangel Island snow geese. We agree with the Council that the large portion of WAP lesser snow goose and Ross’s geese wintering in California serve as a buffer to the small portion of Wrangel Island snow goose wintering in California. Further, restrictive frameworks remain in place in Washington and Oregon to restrict harvest of Wrangel Island snow goose including a 4-bird daily bag limit for light geese in Washington’s and Oregon’s Permit zones. Also the Pacific Flyway Council recommended retaining the current daily bag limit of 6 light geese in Oregon on or before the last Sunday in January when light geese in the State are likely to be Wrangel Island snow geese.

With regard to implementing a bag limit restriction for light geese in Oregon of 6 per day on or before the last Sunday in January, we concur. Current evidence suggests most light geese in Oregon during late winter are primarily Wrangel Island snow geese, but an influx of WAP lesser snow and Ross’s geese occurs during late winter as birds begin to move north toward breeding areas. A bag limit for light geese in Oregon of 6 per day on or before the last Sunday in January is similar to the 6-bird bag limit currently allowed for light geese in Oregon, and should retain protective measures for Wrangel Island snow geese at a time of the year when they make up the majority of light geese inhabiting Oregon.

Public Comments

The Department of the Interior’s policy is, whenever possible, to afford the public an opportunity to participate in the rulemaking process. Accordingly, we invite interested persons to submit written comments, suggestions, or recommendations regarding the proposed regulations. Before promulgating final migratory game bird hunting regulations, we will consider all comments we receive. These comments, and any additional information we receive, may lead to final regulations that differ from these proposals. You may submit your comments and materials concerning this proposed rule by one of the methods listed in the ADDRESSES section. We will not accept comments sent by email or fax. We will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in the DATES section. We will post all comments in their entirety—including your personal identifying information—on http://www.regulations.gov. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on http://www.regulations.gov, or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Migratory Bird Management, 5275 Leesburg Pike, Falls Church, Virginia. For each series of proposed rulemakings, we will establish specific comment periods. We will consider, but possibly may not respond in detail to, each comment. As in the past, we will summarize all comments we receive during the comment period and respond to them after the closing date in the preambles of any final rules.

Paperwork Reduction Act

This final rule does not contain any new information collection that requires approval under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. OMB has reviewed and approved the information collection requirements associated with migratory bird surveys and assigned the following OMB control numbers:

Other Required Determinations

Based on our most current data, we are affirming our required determinations made in the April 30, June 4, and July 31 proposed rules; for descriptions of our actions to ensure compliance with the following statutes and Executive Orders, see our April 30, 2014, proposed rule (79 FR 24512):

- National Environmental Policy Act (NEPA) Consideration;
- Endangered Species Act Consideration;
- Regulatory Flexibility Act;
- Small Business Regulatory Enforcement Fairness Act;
- Unfunded Mandates Reform Act;

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks.

Proposed Regulations Frameworks for 2014–15 Late Hunting Seasons on Certain Migratory Game Birds

Pursuant to the Migratory Bird Treaty Act and delegated authorities, the
Department of the Interior approved the following proposals for season lengths, shooting hours, bag and possession limits, and outside dates within which States may select seasons for hunting waterfowl and coots between the dates of September 1, 2014, and March 10, 2015. These frameworks are summarized below.

General

Dates: All outside dates noted below are inclusive.

Shooting and Hawking (taking by falconry) Hours: Unless otherwise specified, from one-half hour before sunrise to sunset daily.

Possession Limits: Unless otherwise specified, possession limits are three times the daily bag limit.

Permits: For some species of migratory birds, the Service authorizes the use of permits to regulate harvest or monitor their take by sport hunters, or both. In many cases (e.g., tundra swans, some sandhill crane populations), the Service determines the amount of harvest that may be taken during hunting seasons during its formal regulations-setting process, and the States then issue permits to hunters at levels predicted to result in the amount of take authorized by the Service. Thus, although issued by States, the permits would not be valid unless the Service approved such take in its regulations. These Federally authorized, State-issued permits are issued to individuals, and only the individual whose name and address appears on the permit at the time of issuance is authorized to take migratory birds at levels specified in the permit, in accordance with provisions of both Federal and State regulations governing the hunting season. The permit will be revoked by the permitting authority if the person using the permits has not had a hunting license, and the permit becomes invalid.

Flyways and Management Units

Waterfowl seasons, limits, and area restrictions as those allowed in the regular duck season. In all other areas, sea ducks may be taken only during the regular open season on migratory birds. The daily bag limit for sea ducks is 6 ducks, including no more than 4 mallards (no more that 2 of which can be females), 1 black duck, 2 pintails, 1 mottled duck, 1 fulvous whistling duck, 3 wood ducks, 2 redheads, 2 scaup, 1 canavasback, and 4 scoters.

Closures: The season on harlequin ducks is closed.

Sea Ducks: Within the special sea duck areas, during the regular duck season in the Atlantic Flyway, States may choose to allow the above sea duck limits in addition to the limits applying to other ducks during the regular duck season. In all other areas, sea ducks may be taken only during the regular open season.

Merganser Limits: The daily bag limit for sea ducks is 6 ducks, including no more than 4 mallards (no more that 2 of which can be females), 1 black duck, 2 pintails, 1 mottled duck, 1 fulvous whistling duck, 3 wood ducks, 2 redheads, 2 scaup, 1 canavasback, and 4 scoters.

Special Youth Waterfowl Hunting Days

Outside Dates: States may select 2 days per duck-hunting zone, designated as “Youth Waterfowl Hunting Days,” in addition to their regular duck seasons.

The days must be held outside any regular duck season on a weekend, holidays, or other non-school days when youth hunters would have the maximum opportunity to participate. The days may be held up to 14 days before or after any regular duck-season frameworks or within any split of a regular duck season, or within any other open season on migratory birds.

Daily Bag Limits: The daily bag limits may include ducks, geese, tundra swans, mergansers, coots, moorhens, and gallinules and would be the same as those allowed in the regular season. Waterfowl species and area restrictions would remain in effect.

Shooting Hours: One-half hour before sunrise to sunset.

Participation Restrictions: Youth hunters must be 15 years of age or younger. In addition, an adult at least 18 years of age must accompany the youth hunter into the field. This adult may not duck hunt but may participate in other seasons that are open on the special youth day. Tundra swans may only be taken by participants possessing applicable tundra swan permits.
those selected for the Inland Zone of New Hampshire.

Zoning and Split Seasons: Delaware, Florida, Georgia, Maryland, North Carolina, Rhode Island, South Carolina, Virginia, and West Virginia may split their seasons into three segments; Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, and Vermont may select hunting seasons by zones and may split their seasons into two segments in each zone.

Canada Geese

Season Lengths, Outside Dates, and Limits: Specific regulations for Canada geese are shown below by State. These seasons also include white-fronted geese. Unless specified otherwise, seasons may be split into two segments.

In areas within States where the framework closing date for Atlantic Population (AP) goose seasons overlaps with special late-season frameworks for resident geese, the framework closing date for AP goose seasons is January 14.

Connecticut

North Atlantic Population (NAP) Zone: Between October 1 and February 15, a 70-day season may be held with a 3-bird daily bag limit.

Atlantic Population (AP) Zone: A 50-day season may be held between October 10 and February 5, with a 3-bird daily bag limit.

South Zone: A special season may be held between January 15 and February 15, with a 5-bird daily bag limit.

Resident Population (RP) Zone: An 80-day season may be held between October 1 and February 15, with a 5-bird daily bag limit.

Florida: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Georgia: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Maine: A 70-day season may be held Statewide between October 1 and February 15, with a 3-bird daily bag limit.

Maryland:

RP Zone: An 80-day season may be held between November 15 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

AP Zone: A 50-day season may be held between November 15 and February 5, with a 2-bird daily bag limit.

Massachusetts:

NAP Zone: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Additionally, a special season may be held from January 15 to February 15, with a 5-bird daily bag limit.

AP Zone: A 50-day season may be held between October 10 and February 5, with a 3-bird daily bag limit.

New Hampshire: A 70-day season may be held Statewide between October 1 and February 15, with a 3-bird daily bag limit.

New Jersey

Statewide: A 50-day season may be held between the fourth Saturday in October (October 25) and February 5, with a 3-bird daily bag limit.

Special Late Goose Season Area: A special season may be held in designated areas of North and South New Jersey from January 15 to February 15, with a 5-bird daily bag limit.

New York

NAP Zone: Between October 1 and February 15, a 70-day season may be held, with a 3-bird daily bag limit in both the High Harvest and Low Harvest areas.

Special Late Goose Season Area: A special season may be held between January 15 and February 15, with a 5-bird daily bag limit in designated areas of Suffolk County.

AP Zone: A 50-day season may be held between the fourth Saturday in October (October 25), except in the Lake Champlain Area where the opening date is October 10, and February 5, with a 3-bird daily bag limit.

Western Long Island RP Zone: A 107-day season may be held between the Saturday nearest September 24 (September 27) and March 10, with an 8-bird daily bag limit. The season may be split into 3 segments.

Rest of State RP Zone: An 80-day season may be held between the fourth Saturday in October (October 25) and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

North Carolina

SJBP Zone: A 70-day season may be held between October 1 and December 31, with a 5-bird daily bag limit.

RP Zone: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Northeast Hunt Unit: A 14-day season may be held between the Saturday prior to December 25 (December 20) and January 31, with a 1-bird daily bag limit.

Pennsylvania

SJBP Zone: A 78-day season may be held between the first Saturday in October (October 4) and February 15, with a 3-bird daily bag limit.

AP Zone: An 80-day season may be held between the fourth Saturday in October (October 25) and March 10, with a 5-bird daily bag limit.

Rhode Island: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Ray Island: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Connecticut River Zone: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Virginia

SJBP Zone: A 40-day season may be held between November 15 and January 14, with a 3-bird daily bag limit.

Additional, a special late season may be held between January 15 and February 15, with a 5-bird daily bag limit.

South Carolina: In designated areas, an 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Vermont

Lake Champlain Zone and Interior Zone: A 50-day season may be held between October 10 and February 5 with a 3-bird daily bag limit.

Connecticut River Zone: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Light Geese

Season Lengths, Outside Dates, and Limits: States may select a 107-day season between October 1 and March 10, with a 25-bird daily bag limit and no possession limit. States may split their seasons into three segments.

Brant

Season Lengths, Outside Dates, and Limits: States may select a 30-day
season between the Saturday nearest September 24 (September 27) and January 31, with a 2-bird daily bag limit. States may split their seasons into two segments.

**Mississippi Flyway**

_Ducks, Mergansers, and Coots_

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Hunting Seasons and Duck Limits: The season may not exceed 60 days, with a daily bag limit of 6 ducks, including no more than 4 mallards (no more than 2 of which may be females), 1 mottled duck, 1 black duck, 2 pintails, 3 wood ducks, 1 canvasback, 3 scaup, and 2 redheads. In addition to the daily limits listed above, the States of Iowa, Michigan, Minnesota, and Wisconsin may include an additional 2 blue-winged teal in the daily bag limit in lieu of selecting an experimental September teal season during the first 16 days of the regular duck season in each respective duck hunting zone.

Merganser Limits: The daily bag limit is 5, only 2 of which may be hooded mergansers. In States that include mergansers in the duck bag limit, the daily limit is the same as the duck bag limit, only 2 of which may be hooded mergansers.

Coot Limits: The daily bag limit is 15 coots.

Zoning and Split Seasons: Alabama, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, Missouri, Ohio, Tennessee, and Wisconsin may select hunting seasons by zones. In Alabama, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, Missouri, Ohio, Tennessee, and Wisconsin, the season may be split into two segments in each zone.

In Arkansas and Mississippi, the season may be split into three segments.

_Goose_ Split Seasons: Seasons for goose may be split into three segments.

Season Lengths, Outside Dates, and Limits: States may select seasons for light goose not to exceed 107 days, with 20 goose daily between the Saturday nearest September 24 (September 27) and March 10; for white-fronted goose not to exceed 74 days with 2 goose daily or 88 days with 1 goose daily between the Saturday nearest September 24 (September 27) and the Sunday nearest February 15 (February 15); and for brant not to exceed 78 days, with 2 brant daily or 107 days with 1 brant daily between the Saturday nearest September 24 (September 27) and January 31. There is no possession limit for light geese.

States may select seasons for Canada goose not to exceed 92 days with 2 geese daily or 78 days with 3 geese daily between the Saturday nearest September 24 (September 27) and January 31 with the following exceptions listed by State:

- **Arkansas:** The season may extend to February 15.
- **Indiana:**
  - Late Canada Goose Season Area: A special Canada goose season of up to 15 days may be held during February 1–15 in the Late Canada Goose Season Zone. During this special season, the daily bag limit cannot exceed 5 Canada geese.
  - Iowa: The season for Canada goose may extend for 107 days. The daily bag limit is 3 Canada geese.
  - **Michigan:** The framework opening date for all goose is September 11 in the Upper Peninsula of Michigan and September 16 in the Lower Peninsula of Michigan.
  - **Southern Michigan Late Canada Goose Season Zone:** A 30-day special Canada goose season may be held between December 31 and February 15. The daily bag limit is 5 Canada geese.
  - **Minnesota:** The season for Canada goose may extend for 107 days. The daily bag limit is 3 Canada geese.
  - **Missouri:** The season for Canada goose may extend for 85 days. The daily bag limit is 3 Canada geese.
  - **Tennessee:** Northwest Zone—The season for Canada goose may extend to February 15.
  - **Wisconsin:**
    - Horicon Zone—The framework opening date for all goose is September 16.
    - Exterior Zone—The framework opening date for all goose is September 16.

Additional Limits: In addition to the harvest limits stated for the respective zones above, an additional 4,500 Canada goose may be taken in the Horicon Zone under special agricultural permits.

_**Central Flyway**_

_Ducks, Mergansers, and Coots_

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25). For light geese, outside dates for seasons may be selected between the Saturday nearest September 24 (September 27) and March 10. In the Rainwater Basin Light Goose Area (East and West) of Nebraska, temporal and spatial restrictions that are consistent with the late-winter snow goose hunting strategy cooperatively developed by the Central Flyway Council and the Service are required.

_Goose_ Split Seasons: Seasons for goose may be split into three segments. Three-way split seasons for Canada goose require Central Flyway Council and U.S. Fish and Wildlife Service approval, and a 3-year evaluation by each participating State.

Outside Dates: For dark geese, seasons may be selected between the outside dates of the Saturday nearest September 24 (September 27) and the Sunday nearest February 15 (February 15). For light geese, outside dates for seasons may be selected between the Saturday nearest September 24 (September 27) and March 10. In the Rainwater Basin Light Goose Area (East and West) of Nebraska, temporal and spatial restrictions that are consistent with the late-winter snow goose hunting strategy cooperatively developed by the Central Flyway Council and the Service are required.
Light Geese: States may select a light goose season not to exceed 107 days. The daily bag limit for light geese is 50 with no possession limit.

Dark Geese: In Kansas, Nebraska, North Dakota, Oklahoma, South Dakota, and the Eastern Goose Zone of Texas, States may select a season for Canada geese (or any other dark goose species except white-fronted geese) not to exceed 107 days with a daily bag limit of 8. For white-fronted geese, these States may select either a season of 74 days with a bag limit of 2 or an 88-day season with a bag limit of 1.

In Colorado, Montana, New Mexico, and Wyoming, States may select seasons not to exceed 107 days. The daily bag limit for dark geese is 5 in the aggregate.

For white-fronted geese, the season may not exceed 95 days. The daily bag limit for Canada geese (or any other dark goose species except white-fronted geese) is 5. The daily bag limit for white-fronted geese is 1.

### Pacific Flyway

**Ducks, Mergansers, Coots, Common Moorhen, and Purple Gallinules**

- **Outside Dates:** Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

- **Hunting Seasons and Duck and Merganser Limits:** Concurrent 107 days. The daily bag limit is 7 ducks and mergansers, including no more than 2 female mallards, 2 pintails, 1 canvasback, 3 scaup, and 2 redheads. For scaup, the season length is 86 days, which may be split according to applicable zones/split duck hunting configurations approved for each State.

  - The season on coots, common moorhens, and purple gallinules may be between the outside dates for the season on ducks, but not to exceed 107 days.

- **Coot, Common Moorhen, and Purple Gallinule Limits:** The daily bag limit of coots, common moorhens, and purple gallinules is 25, singly or in the aggregate.

- **Zoning and Split Seasons:** Arizona, California, Idaho, Nevada, Oregon, Utah, Washington, and Wyoming may select hunting seasons by zones. Arizona, California, Idaho, Nevada, Oregon, Utah, Washington, and Wyoming may split their seasons into two segments.

  - Colorado, Montana, and New Mexico may split their seasons into three segments.

  - **Colorado River Zone, California:** Seasons and limits should be the same as seasons and limits selected in the adjacent portion of Arizona (South Zone).

  - **Zone 2:** Idaho will continue to monitor the snow goose hunt that occurs after the last Sunday in January in the American Falls Reservoir/Fort Hall Bottoms and surrounding areas at 3-year intervals.

### Geese

**Season Lengths, Outside Dates, and Limits:**

- **Canada geese and brant:** Season lengths are specified by the Pacific Flyway Council with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 10.

- **Light geese:** As subsequently noted, 107-day seasons may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 10.

- **White-fronted geese:** As subsequently noted, 107-day seasons may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 10.

- **split seasons:** Unless otherwise specified, seasons for geese may be split into 3 segments. Three-way split seasons for Canada geese and white-fronted geese require Pacific Flyway Council and U.S. Fish and Wildlife Service approval and a 3-year evaluation by each participating State.

- **California:** The daily bag limit for Canada geese is 10.

- **Balance-of-State Zone:** A Canada goose season may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. In the Sacramento Valley Special Management Area, the season on white-fronted geese must end on or before December 28, and the daily bag limit is 3 white-fronted geese. In the North Coast Special Management Area, hunting days that occur after the last Sunday in January should be concurrent with Oregon’s South Coast Zone.

- **Idaho:**

  - **Zone 1:** Outside dates are between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

  - **Areas 2A and 2B (Southwest Permit Zone):** Regular goose seasons may be split into 3 segments. A special late goose season may be held between the Saturday following the close of the general goose season and March 10. In the Southwest Permit Zone Area 2B (Pacific County), the daily bag limit may include 1 Aleutian goose.

- **Zone 4:** The season may be split into 3 segments.

- **Wyoming:** The daily bag limit for Canada geese and brant is 3 in the aggregate.

- **New Mexico:** The daily bag limit for Canada geese and brant is 3 in the aggregate.

- **Oregon:** The daily bag limit for light geese is 6 on or before the last Sunday in January.

- **Harney and Lake County Zone:** For Lake County only, the daily white-fronted goose bag limit is 1.

- **Northwest Special Permit Zone:** For geese, outside dates are between the Saturday nearest September 24 (September 27) and March 10. The season may be split into 3 segments.

- **South Coast Zone:** A Canada goose season may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 1.

- **Hunting days that occur after the last Sunday in January should be concurrent with California’s North Coast Special Management Area.** The season may be split into 3 segments.

- **Utah:** A Canada goose and brant season may be selected in the Wasatch Front and Washington County Zones with outside dates between the Saturday nearest September 24 (September 27) and the first Sunday in February (February 1).

- **Washington:** The daily bag limit is 4 geese.

  - **Area 1:** Outside dates are between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

  - **Areas 2A and 2B (Southwest Permit Zone):** Regular goose seasons may be split into 3 segments. A special late goose season may be held between the Saturday following the close of the general goose season and March 10. In the Southwest Permit Zone Area 2B (Pacific County), the daily bag limit may include 1 Aleutian goose.

  - **Area 4:** The season may be split into 3 segments.

- **Permit Zones:**

  - In Oregon and Washington permit zones, goose seasons must end upon attainment of individual quotas of dusky Canada geese allotted to the designated areas of Oregon (165) and Washington (85). The September Canada goose season, regular goose season, any special late Canada goose season, and any extended falconry season, combined, must not exceed 107
days, and the established quota of dusky Canada geese must not be exceeded. Hunting of geese in those designated areas will be only by hunters possessing a State-issued permit authorizing them to do so. In a Service-approved investigation, the State must obtain quantitative information on hunter compliance with those regulations aimed at reducing the take of dusky geese. If the monitoring program cannot be conducted, for any reason, the season must immediately close.

**Swans**

In portions of the Pacific Flyway (Montana, Nevada, and Utah), an open season for taking a limited number of swans may be selected. Permits will be issued by the State and will authorize each permittee to take no more than 1 swan per season with each permit. Nevada may issue up to 2 permits per hunter. Montana and Utah may only issue 1 permit per hunter. Each State’s season may open no earlier than the Saturday nearest October 1 (October 4). These seasons are also subject to the following conditions:

- Montana: No more than 500 permits may be issued. The season must end no later than December 1. The State must implement a harvest-monitoring program to measure the species composition of the swan harvest and should use appropriate measures to maximize hunter compliance in reporting bill measurement and color information.
- Utah: No more than 2,000 permits may be issued. During the swan season, no more than 10 trumpeter swans may be taken. The season must end no later than the second Sunday in December (December 14) or upon attainment of 10 trumpeter swans in the harvest, whichever occurs earliest. The Utah season remains subject to the terms of the Memorandum of Agreement entered into with the Service in August 2001, regarding harvest monitoring, season closure procedures, and education requirements to minimize the take of trumpeter swans during the swan season.
- Nevada: No more than 650 permits may be issued. During the swan season, no more than 5 trumpeter swans may be taken. The season must end no later than the Sunday following January 1 (January 4) or upon attainment of 5 trumpeter swans in the harvest, whichever occurs earliest.

In addition, the States of Utah and Nevada must implement a harvest-monitoring program to measure the species composition of the swan harvest. The harvest-monitoring program must require that all harvested swans or their species-determinant parts be examined by either State or Federal biologists for the purpose of species classification. The States should use appropriate measures to maximize hunter compliance in providing bagged swans for examination. Further, the States of Montana, Nevada, and Utah must achieve at least an 80-percent compliance rate, or subsequent permits will be reduced by 10 percent. All three States must provide to the Service by June 30, 2015, a report detailing harvest, hunter participation, reporting compliance, and monitoring of swan populations in the designated hunt areas.

**Tundra Swans**

In portions of the Atlantic Flyway (North Carolina and Virginia) and the Central Flyway (North Dakota, South Dakota [east of the Missouri River], and that portion of Montana in the Central Flyway), an open season for taking a limited number of tundra swans may be selected. Permits will be issued by the States that authorize the take of no more than 1 tundra swan per permit. A second permit may be issued to hunters from unused permits remaining after the first drawing. The States must obtain harvest and hunter participation data. These seasons are also subject to the following conditions:

**In the Atlantic Flyway**

- The season may be 90 days, between October 1 and January 31.
- In North Carolina, no more than 5,000 permits may be issued.
- In Virginia, no more than 600 permits may be issued.

**In the Central Flyway**

- The season may be 107 days, between the Saturday nearest October 1 (October 4) and January 31.
- In the Central Flyway portion of Montana, no more than 500 permits may be issued.
- In North Dakota, no more than 2,200 permits may be issued.
- In South Dakota, no more than 1,300 permits may be issued.

**Area, Unit, and Zone Descriptions**

**Ducks (Including Mergansers) and Coots**

**Atlantic Flyway**

Connecticut

North Zone: That portion of the State north of I–95.
South Zone: Remainder of the State.

Maine

North Zone: That portion north of the line extending east along Maine State Highway 110 from the New Hampshire-Maine State line to the intersection of Maine State Highway 11 in Newfield; then north and east along Route 11 to the intersection of U.S. Route 202 in Auburn; then north and east on Route 202 to the intersection of I–95 in Augusta; then north and east along I–95 to Route 15 in Bangor; then east along Route 15 to Route 9; then east along Route 9 to Stony Brook in Baileyville; then east along Stony Brook to the United States border.
Coastal Zone: That portion south of a line extending east from the Maine-New Brunswick border in Calais at the Route 1 bridge; then south along Route 1 to the Maine-New Hampshire border in Kittery.
South Zone: Remainder of the State.

Massachusetts

Western Zone: That portion of the State west of a line extending south from the Vermont State line on I–91 to MA 9, west on MA 9 to MA 10, south on MA 10 to U.S. 202, south on U.S. 202 to the Connecticut State line.
Central Zone: That portion of the State east of the Berkshire Zone and west of a line extending south from the New Hampshire State line on I–95 to U.S. 1, south on U.S. 1 to I–93, south on I–93 to MA 3, south on MA 3 to U.S. 6, west on U.S. 6 to MA 28, west on MA 28 to I–195, west to the Rhode Island State line; except the waters, and the lands 150 yards inland from the high-water mark, of the Assonet River upstream to the MA 24 bridge, and the Tantum River upstream to the Center St.-Elm St. bridge shall be in the Coastal Zone.
Coastal Zone: That portion of Massachusetts east and south of the Central Zone.

New Hampshire

Northern Zone: That portion of the State east and north of the Inland Zone beginning at the Jct. of Rte. 10 and Rte. 25A in Orford, east on Rte. 25A to Rte. 25 in Wentworth, southeast on Rte. 25 to Exit 26 of Rte. I–93 in Plymouth, south on Rte. I–93 to Rte. 3 at Exit 24 of Rte. I–93 in Ashland, northeast on Rte. 3 to Rte. 113 in Holderness, north on Rte. 113 to Rte. 113–A in Sandwich, north on Rte. 113–A to Rte. 113 in Tamworth, east on Rte. 113 to Rte. 16 in Chocorua, north on Rte. 16 to Rte. 302 in Conway, east on Rte. 302 to the Maine-New Hampshire border.
Inland Zone: That portion of the State south and west of the Northern Zone, west of the Coastal Zone, and includes the area of Vermont and New Hampshire as described for hunting reciprocity. A person holding a New Hampshire-
Hampshire hunting license which allows the taking of migratory waterfowl or a person holding a Vermont resident hunting license which allows the taking of migratory waterfowl may take migratory waterfowl and coots from the following designated area of the Inland Zone: the State of Vermont east of Rte. I–91 at the Massachusetts border, north on Rte. I–91 to Rte. 2, north on Rte. 2 to Rte. 102, north on Rte. 102 to Rte. 253, and north on Rte. 253 to the border with Canada and the area of NH west of Rte. 63 at the MA border, north on Rte. 63 to Rte. 12, north on Rte. 12 to Rte. 12–A, north on Rte. 12A to Rte. 16, north on Rte. 16 to Rte. 135, north on Rte. 135 to Rte. 3, north on Rte. 3 to the intersection with the Connecticut River.

Coastal Zone: That portion of the State east of a line beginning at the Maine-New Hampshire border in Rollinsford, then extending to Rte. 4 west to the city of Dover, south to the intersection of Rte. 108, south along Rte. 108 through Madbury, Durham, and Newmarket to the junction of Rte. 85 in Newfields, south to Rte. 101 in Exeter, east to Interstate 95 (New Hampshire Turnpike) in Hampton, and south to the Massachusetts border.

New Jersey

Coastal Zone: That portion of the State seaward of a line beginning at the New York State line in Raritan Bay and extending west along the New York State line to NJ 440 at Perth Amboy; west on NJ 440 to the Garden State Parkway; south on the Garden State Parkway to the shoreline at Cape May and continuing to the Delaware State line in Delaware Bay.

North Zone: That portion of the State west of the Coastal Zone and north of a line extending west from the Garden State Parkway on NJ 70 to the New Jersey Turnpike, north on the turnpike to U.S. 206, north on U.S. 206 to U.S. 1 at Trenton, west on U.S. 1 to the Pennsylvania State line in the Delaware River.

South Zone: That portion of the State not within the North Zone or the Coastal Zone.

New York

Lake Champlain Zone: That area east and north of a continuous line extending along U.S. 11 from the New York-Canada International boundary south to NY 9B, south along NY 9B to U.S. 9, south along U.S. 9 to NY 22 south of Keeseville; south along NY 22 to the west shore of South Bay, along and around the shoreline of South Bay to NY 22 on the east shore of South Bay; southeast along NY 22 to U.S. 4, northeast along U.S. 4 to the Vermont State line.

Long Island Zone: That area consisting of Nassau County, Suffolk County, that area of Westchester County southeast of I–95, and their tidal waters.

Western Zone: That area west of a line extending from Lake Ontario east along the north shore of the Salmon River to I–81, and south along I–81 to the Pennsylvania State line.

Northeastern Zone: That area north of a continuous line extending from Lake Ontario east along the north shore of the Salmon River to I–81, south along I–81 to NY 31, east along NY 31 to NY 13, north along NY 13 to NY 49, east along NY 49 to NY 365, east along NY 365 to NY 28, east along NY 28 to NY 29, east along NY 29 to NY 22, north along NY 22 to Washington County Route 153, east along CR 153 to the New York-Vermont boundary, exclusive of the Lake Champlain Zone.

Southeastern Zone: The remaining portion of New York.

Pennsylvania

Lake Erie Zone: The area extending along Lake Erie and the shoreline of Presque Isle Peninsula.

Northeastern Zone: That area north of the Lake Erie Zone and including all of Erie and Crawford Counties and those portions of Mercer and Venango Counties north of I–80.

South Zone: The remaining portion of Pennsylvania.

Vermont

Lake Champlain Zone: The U.S. portion of Lake Champlain and that area north and west of the line extending from the New York border along U.S. 4 to VT 22A at Fair Haven; VT 22A to U.S. 7 at Vergennes; U.S. 7 to VT 78 at Swanton; VT 78 to VT 36; VT 36 to Maquam Bay on Lake Champlain; along and around the shoreline of Maquam Bay and Hog Island to VT 78 at the West Swanton Bridge; VT 78 to VT 2 in Alburg; VT 2 to the Richelieu River in Alburg; along the east shore of the Richelieu River to the Canadian border.

Interior Zone: That portion of Vermont east of the Lake Champlain Zone and west of a line extending from the Massachusetts border at Interstate 91; north along Interstate 91 to US 2; east along US 2 to VT 102; north along VT 102 to VT 253; north along VT 253 to the Canadian border.

Connecticut River Zone: The remaining portion of Vermont east of the Interior Zone.

Mississippi Flyway

Alabama

South Zone: Mobile and Baldwin Counties.

North Zone: The remainder of Alabama.

Illinois

North Zone: That portion of the State north of a line extending west from the Indiana border along Peotone-Beecher Road to Illinois Route 50, south along Illinois Route 50 to Wilmington-Peotone Road, west along Wilmington-Peotone Road to Illinois Route 53, north along Illinois Route 53 to New River Road, northwest along New River Road to Interstate Highway 55, south along I–55 to Pine Bluff-Lorenzo Road, west along Pine Bluff-Lorenzo Road to Illinois Route 47, north along Illinois Route 47 to I–80, west along I–80 to I–39, south along I–39 to Illinois Route 18, west along Illinois Route 18 to Illinois Route 29, south along Illinois Route 29 to Illinois Route 17, west along Illinois Route 17 to the Mississippi River, and due south across the Mississippi River to the Iowa border.

Central Zone: That portion of the State south of the North Duck Zone line to a line extending west from the Indiana border along I–70 to Illinois Route 4, south along Illinois Route 4 to Illinois Route 161, west along Illinois Route 161 to Illinois Route 158, south and west along Illinois Route 158 to Illinois Route 159, south along Illinois Route 159 to Illinois Route 3, south along Illinois Route 3 to St. Leo’s Road, south along St. Leo’s Road to Modoc Road, west along Modoc Road to Modoc Ferry Road, southwest along Modoc Ferry Road to Levee Road, southeast along Levee Road to County Route 12 (Modoc Ferry entrance Road), south along County Route 12 to the Modoc Ferry route and southwest on the Modoc Ferry route across the Mississippi River to the Missouri border.

South Zone: That portion of the State south and east of a line extending west from the Indiana border along Interstate 70, south along U.S. Highway 45, to Illinois Route 13, west along Illinois Route 13 to Greenbriar Road, north on Greenbriar Road to Sycamore Road, west on Sycamore Road to N. Reed Station Road, south on N. Reed Station Road to Illinois Route 13, west along Illinois Route 13 to Illinois Route 127, south along Illinois Route 127 to State...
Forest Road (1025 N), west along State Forest Road to Illinois Route 3, north along Illinois Route 3 to the south bank of the Big Muddy River, west along the south bank of the Big Muddy River to the Mississippi River, west across the Mississippi River to the Missouri border.

South Central Zone: The remainder of the State between the south border of the Central Zone and the North border of the South Zone.

Indiana

North Zone—That part of Indiana north of a line extending east from the Illinois border along State Road 18 to U.S. 31; north along U.S. 31 to U.S. 24; east along U.S. 24 to Huntington; southeast along U.S. 224; south along State Road 5; and east along State Road 124 to the Ohio border.

Central Zone—That part of Indiana south of the North Zone boundary and north of the South Zone boundary.

South Zone—That part of Indiana south of a line extending east from the Illinois border along U.S. 40; south along U.S. 41; east along State Road 58; south along State Road 37 to Bedford; and east along U.S. 50 to the Ohio border.

Iowa

North Zone—That portion of Iowa north of a line beginning on the South Dakota-Iowa border at Interstate 29, southeast along Interstate 29 to State Highway 175, east along State Highway 175 to State Highway 37, southeast along State Highway 37 to State Highway 183, northeast along State Highway 183 to State Highway 141, east along State Highway 141 to U.S. Highway 30, and along U.S. Highway 30 to the Illinois border.

Missouri River Zone—That portion of Iowa west of a line beginning on the South Dakota-Iowa border at Interstate 29, southeast along Interstate 29 to State Highway 175, and west along State Highway 175 to the Iowa-Nebraska border.

South Zone—The remainder of Iowa.

Kentucky

West Zone: All counties west of and including Butler, Daviess, Ohio, Simpson, and Warren Counties.

East Zone: The remainder of Kentucky.

Louisiana

West: That portion of the State west and north of a line beginning at the Arkansas-Louisiana border on LA 3; south on LA 3 to Bossier City; then east along I-20 to Minden; then south along LA 7 to Ringgold; then east along LA 4 to Jonesboro; then south along U.S. Hwy 167 to its junction with LA 106; west on LA 106 to Oakdale; then south on U.S. Hwy 165 to junction with U.S. Hwy 190 at Kinder; then west on U.S. Hwy 190/ LA 12 to the Texas State border.

East: That portion of the State east and north of a line beginning at the Arkansas-Louisiana border on LA 3; south on LA 3 to Bossier City; then east along I-20 to Minden; then south along LA 7 to Ringgold; then east along LA 4 to Jonesboro; then south along U.S. Hwy 167 to Lafayette; then southeast along U.S. Hwy 90 to the Mississippi State line.

Coastal: Remainder of the State.

Michigan

North Zone: The Upper Peninsula.

Middle Zone: That portion of the Lower Peninsula north of a line beginning at the Wisconsin State line in Lake Michigan due west of the mouth of Stony Creek in Oceana County; then due east to, and easterly and southerly along the south shore of Stony Creek to Scenic Drive, easterly and southerly along Scenic Drive to Stony Lake Road, easterly along Stony Lake and Garfield Roads to Michigan Highway 20, east along Michigan 20 to U.S. Highway 10 Business Route (BR) in the city of Midland, easterly along U.S. 10 BR to U.S. 10, easterly along U.S. 10 to Interstate Highway 75/U.S. Highway 23, northerly along I-75/U.S. 23 to the U.S. 23 exit at Standish, easterly along U.S. 23 to the centerline of the Au Gres River, then southerly along the centerline of the Au Gres River to Saginaw Bay, then on a line directly east 10 miles into Saginaw Bay, and from that point on a line directly northeast to the Canadian border.

South Zone: The remainder of Michigan.

Minnesota

North Duck Zone: That portion of the State north of a line extending east from the North Dakota State line along State Highway 210 to State Highway 23 and east to State Highway 39 and east to the Wisconsin State line at the Oliver Bridge.

South Duck Zone: The portion of the State south of a line extending east from the South Dakota State line along U.S. Highway 212 to Interstate 494 and east to Interstate 94 and east to the Wisconsin State line.

Central Duck Zone: The remainder of the State.

Missouri

North Zone: That portion of Missouri north of a line running west from the Illinois border at Lock and Dam 25; west on Lincoln County Hwy. N to Mo. Hwy. 79; south on Mo. Hwy. 79 to Mo. Hwy. 47; west on Mo. Hwy. 47 to I-70; west on I-70 to the Kansas border.

Middle Zone: The remainder of Missouri not included in other zones.

South Zone: That portion of Missouri south of a line running west from the Illinois border on Mo. Hwy. 74 to Mo. Hwy. 25; south on Mo. Hwy. 25 to U.S. Hwy. 62; west on U.S. Hwy. 62 to Mo. Hwy. 53; north on Mo. Hwy. 53 to Mo. Hwy. 51; north on Mo. Hwy. 51 to U.S. Hwy. 60; west on U.S. Hwy. 60 to Mo. Hwy. 21; north on Mo. Hwy. 21 to Mo. Hwy. 72; west on Mo. Hwy. 72 to Mo. Hwy. 32; west on Mo. Hwy. 32 to U.S. Hwy. 65; north on U.S. Hwy. 65 to U.S. Hwy. 54; west on U.S. Hwy. 54 to U.S. Hwy. 71; south on U.S. Hwy. 71 to Jasper County Hwy. M (Base Line Blvd.); west on Jasper County Hwy. M (Base Line Blvd.) to CR 40 (Base Line Blvd.); west on CR 40 (Base Line Blvd.) to the Kansas border.

Ohio

Lake Erie Marsh Zone: Includes all land and water within the boundaries of the area bordered by Interstate 75 from the Ohio-Michigan line to Interstate 80 to the Erie-Lorain County line extending to a line measuring two hundred (200) yards from the shoreline into the waters of Lake Erie and including the waters of Sandusky Bay and Maumee Bay.

North Zone: That portion of the State north of a line beginning at the Ohio-Indiana border and extending east along Interstate 70 to the Ohio-West Virginia border.

South Zone: The remainder of Ohio.

Tennessee

Reelfoot Zone: All or portions of Lake and Obion Counties.

State Zone: The remainder of Tennessee.

Wisconsin

North Zone: That portion of the State north of a line extending east from the Minnesota State line along U.S. Highway 10 into Portage County to County Highway HH, east on County Highway HH to State Highway 66 and then east on State Highway 66 to U.S. Highway 10, continuing east on U.S. Highway 10 to U.S. Highway 41, then north on U.S. Highway 41 to the Michigan State line.

Mississippi River Zone: That area encompassed by a line beginning at the intersection of the Burlington Northern & Santa Fe Railway and the Illinois State line in Grant County and extending northerly along the Burlington Northern & Santa Fe Railway.
to the city limit of Prescott in Pierce County, then west along the Prescott city limit to the Minnesota State line.

South Zone: The remainder of Wisconsin.

Central Flyway

Colorado (Central Flyway Portion)

Northeast Zone: All areas east of Interstate 25 and north of Interstate 70.

Southeast Zone: All areas east of Interstate 25 and south of Interstate 70, and all of El Paso, Pueblo, Huerfano, and Las Animas Counties.

Mountain/Foothills Zone: All areas west of Interstate 25 and east of the Continental Divide, except El Paso, Pueblo, Huerfano, and Las Animas Counties.

Kansas

High Plains Zone: That portion of the State west of U.S. 283.

Early Zone: That part of Kansas bounded by a line from the Nebraska-Kansas State line south on K–128 to its junction with U.S.–36, then east on U.S.–36 to its junction with K–199, then south on K–199 to its junction with Republic County 30 Rd, then south on Republic County 30 Rd to its junction with K–148, then east on K–148 to its junction with Republic County 50 Rd, then south on Republic County 50 Rd to its junction with Cloud County 40th Rd, then south on Cloud County 40th Rd to its junction with K–9, then west on K–9 to its junction with U.S.–24, then west on U.S.–24 to its junction with U.S.–281, then north on U.S.–281 to its junction with U.S.–36, then west on U.S.–36 to its junction with U.S.–183, then south on U.S.–183 to its junction with U.S.–54, then west on U.S.–54 to its junction with With K–18, then southeast on K–18 to its junction with U.S.–183, then south on U.S.–183 to its junction with U.S.–56, then southwest on U.S.–56 to its junction with K–19, then east on K–19 to its junction with U.S.–283, then south on U.S.–283 to its junction with U.S.–183, then south on U.S.–183 to its junction with K–68, then east on K–68 to the Kansas-Missouri State line, then north along the Kansas-Missouri State line to its junction with U.S.–36, then west on U.S.–36 to its junction with U.S.–283, then north on U.S.–283 to its junction with U.S.–183, then south on U.S.–183 to its junction with U.S.–135, then south on U.S.–135 to its junction with K–57, then southwest on K–57 to its junction with U.S.–400, then northwest on U.S.–400 to its junction with U.S.–283, then north on U.S.–283 to its junction with the Nebraska-Kansas State line, then east along the Nebraska-Kansas State line to its junction with K–128.

Late Zone: That part of Kansas bounded by a line from the Nebraska-Kansas State line south on K–128 to its junction with U.S.–36, then east on U.S.–36 to its junction with K–199, then south on K–199 to its junction with Republic County 30 Rd, then south on Republic County 30 Rd to its junction with K–148, then east on K–148 to its junction with Republic County 50 Rd, then south on Republic County 50 Rd to its junction with Cloud County 40th Rd, then south on Cloud County 40th Rd to its junction with K–9, then west on K–9 to its junction with U.S.–24, then west on U.S.–24 to its junction with U.S.–281, then north on U.S.–281 to its junction with U.S.–36, then west on U.S.–36 to its junction with U.S.–183, then south on U.S.–183 to its junction with U.S.–54, then west on U.S.–54 to its junction with With K–18, then southeast on K–18 to its junction with U.S.–183, then south on U.S.–183 to its junction with U.S.–56, then southwest on U.S.–56 to its junction with K–19, then east on K–19 to its junction with U.S.–283, then south on U.S.–283 to its junction with U.S.–183, then south on U.S.–183 to its junction with K–68, then east on K–68 to the Kansas-Missouri State line, then north along the Kansas-Missouri State line to its junction with U.S.–36, then west on U.S.–36 to its junction with U.S.–283, then north on U.S.–283 to its junction with Butler County, NE 150th Street, then west on NE 150th Street until its junction with K–77, then south on K–77 to the Oklahoma-Kansas State line, then east along the Kansas-Okahoma State line to its junction with the Missouri State line, then north along the Kansas-Missouri State line to its junction with K–68.

Montana (Central Flyway Portion)

Zone 2: The remainder of Montana.

Nebraska

High Plains—That portion of Nebraska lying west of a line beginning at the South Dakota-Nebraska border on U.S. Hwy. 183; south on U.S. Hwy. 183 to U.S. Hwy. 20; west on U.S. Hwy. 20 to NE Hwy. 7; south on NE Hwy. 7 to NE Hwy. 91; southwest on NE Hwy. 91 to NE Hwy. 2; southeast on NE Hwy. 2 to NE Hwy. 92; west on NE Hwy. 92 to NE Hwy. 40; south on NE Hwy. 40 to NE Hwy. 47; south on NE Hwy. 47 to NE Hwy. 23; east on NE Hwy. 23 to U.S. Hwy. 283; and south on U.S. Hwy. 283 to the Kansas-Nebraska border.

Zone 1—Area bounded by designated Federal and State highways and political boundaries beginning at the South Dakota-Nebraska border west of NE Hwy. 26E Spur and north of NE Hwy. 12; those portions of Dixon, Cedar and Knox Counties north of NE Hwy. 12; that portion of Keya Paha County east of U.S. Hwy. 183; and all of Boyd County. Both banks of the Niobrara River in Keya Paha and Boyd counties east of U.S. Hwy. 183 shall be included in Zone 1.

Zone 2—The area south of Zone 1 and north of Zone 3.

Zone 3—Area bounded by designated Federal and State highways, County Roads, and political boundaries beginning at the Wyoming-Nebraska border at the intersection of the Interstate Canal; east along northern borders of Scotts Bluff and Morrill Counties to Broadwater Road; south to Morrill County Rd 94; east to County Rd 135; south to County Rd 88; southeast to County Rd 151; south to County Rd 80; east to County Rd 161; south to County Rd 76; east to County Rd 165; south to County Rd 176; south to U.S. Hwy. 26; east to County Rd 171; north to County Rd 68; east to County Rd 183;
south to County Rd 64; east to County Rd 189; north to County Rd 70; east to County Rd 201; south to County Rd 60A; east to County Rd 203; south to County Rd 52; east to Keith County Line; east along the northern boundaries of Keith and Lincoln Counties to NE Hwy. 97; south to U.S. Hwy 83; south to E Hall School Rd; east to N Airport Road; south to U.S. Hwy. 30; east to Merrick County Rd 13; north to County Rd O; east to NE Hwy. 14; north to NE Hwy. 52; west and north to NE Hwy. 91; west to U.S. Hwy. 281; south to NE Hwy. 22; west to NE Hwy. 11; northwest to NE Hwy. 91; west to U.S. Hwy. 183; north to Round Valley Rd; west to Sargent River Rd; west to Sargent Rd; west to Milburn Rd; north to Blaine County Line; east to Loup County Line; north to NE Hwy. 91; west to North Loup Spur Rd; north to North Loup River Rd; east to Pleasant Valley/Worth Rd; east to Loup County Line; north to Loup-Brown county line; east along northern boundaries of Loup and Garfield Counties to Cedar River Road; south to NE Hwy. 70; east to U.S. Hwy. 281; north to NE Hwy. 70; east to NE Hwy. 14; south to NE Hwy. 39; southeast to NE Hwy. 22; east to U.S. Hwy. 81; southeast to U.S. Hwy. 30; east to U.S. Hwy. 75; north to the Washington County line; east to the Iowa-Nebraska border; south to the Missouri-Nebraska border; south to Kansas-Nebraska border; west along Kansas-Nebraska border to Colorado-Nebraska border; north and west to Wyoming-Nebraska border; north to intersection of Interstate Canal; and excluding that area in Zone 4.

Zone 4—Area encompassed by designated Federal and State highways and County Roads beginning at the intersection of NE Hwy. 8 and U.S. Hwy. 75; north to U.S. Hwy. 136; south to the intersection of U.S. Hwy. 136 and the Steamboat Trace (Trace); north along the Trace to the intersection with Federal Levee R–562; north along Federal Levee R–562 to the intersection with the Trace; north along the Trace/Burlington Northern Railroad right-of-way to NE Hwy. 2; west to U.S. Hwy. 75; north to NE Hwy. 2; west to NE Hwy. 43; north to U.S. Hwy. 34; south to NE Hwy. 63; north to NE Hwy. 66; north and west to U.S. Hwy. 77; north to NE Hwy. 92; west to NE Hwy. Spur 12F; south to Butler County Rd 30; east to County Rd X; south to County Rd 27; west to County Rd W; south to County Rd 26; east to County Rd X; south to County Rd 21 (Seward County Line); west to NE Hwy. 75; 15; north to County Rd 34; west to County Rd J; south to NE Hwy. 92; west to U.S. Hwy. 81; south to NE Hwy. 66; west to Polk County Rd C; north to NE Hwy. 92; west to U.S. Hwy. 30; west to Merrick County Rd 17; south to Hordlake Road; southeast to Prairie Island Road; southeast to Hamilton County Rd T; south to NE Hwy. 66; west to NE Hwy. 14; south to County Rd 22; west to County Rd M; south to County Rd 21; west to County Rd K; south to U.S. Hwy. 34; west to NE Hwy. 2; south to U.S. Hwy. 1–80; west to Gunbarrel Rd (Hall/Hamilton county line); south to Giltner Rd; west to U.S. Hwy. 281; south to U.S. Hwy. 34; west to NE Hwy. 10; north to Kearney County Rd R and Phelps County Rd 742; west to U.S. Hwy. 283; south to U.S. Hwy 34; east to U.S. Hwy. 136; east to U.S. Hwy. 183; north to NE Hwy. 4; east to NE Hwy. 10; south to U.S. Hwy. 136; east to NE Hwy. 14; south to NE Hwy. 8; east to U.S. Hwy. 81; north to NE Hwy. 4; east to NE Hwy. 15; south to U.S. Hwy. 136; east to NE Hwy. 103; south to NE Hwy. 8; east to U.S. Hwy. 75.

New Mexico (Central Flyway Portion)

North Zone: That portion of the State north of I–40 and U.S. 54.

South Zone: The remainder of New Mexico.

North Dakota

High Plains Unit: That portion of the State south and west of a line from the South Dakota State line along U.S. 83 and I–94 to ND 41, north to U.S. 2, west to the Williams/Divide County line, then north along the County line to the Canadian border.

Low Plains Unit: The remainder of North Dakota.

Oklahoma

High Plains Zone: The Counties of Beaver, Cimarron, and Texas.

Low Plains Zone 1: That portion of the State east of the High Plains Zone and north of a line extending east from the Texas State line along OK 33 to OK 47, east along OK 47 to U.S. 183, south along U.S. 183 to I–40, east along I–40 to U.S. 177, north along U.S. 177 to OK 33, east along OK 33 to OK 18, north along OK 18 to OK 51, west along OK 51 to I–35, north along I–35 to U.S. 412, west along U.S. 412 to OK 132, then north along OK 132 to the Kansas State line.

Low Plains Zone 2: The remainder of Oklahoma.

South Dakota

High Plains Zone: That portion of the State west of a line beginning at the North Dakota State line and extending south along U.S. 83 to U.S. 14, east on U.S. 14 to Blunt, south on the Blunt-Canning Rd to SD 34, east and south on SD 34 to SD 50 at Lee's Corner, south on SD 50 to I–90, east on I–90 to SD 50, south on SD 50 to SD 44, west on SD 44 across the Platte-Winner bridge to SD 47, south on SD 47 to U.S. 18, east on U.S. 18 to SD 47, south on SD 47 to the Nebraska State line.

North Zone: That portion of northeastern South Dakota east of the High Plains Unit and north of a line extending east along U.S. 212 to the Minnesota State line.

South Zone: That portion of Gregory County east of SD 47 and south of SD 44; Charles Mix County south of SD 44 to the Douglas County line; south on SD 50 to Geddes; east on the Geddes Highway to U.S. 281; south on U.S. 281 and U.S. 18 to SD 50; south and east on SD 50 to the Bon Homme County line; the Counties of Bon Homme, Yankton, and Clay south of SD 50; and Union County south and west of SD 50 and I–29.

Middle Zone: The remainder of South Dakota.

Texas

High Plains Zone: That portion of the State west of a line extending south from the Oklahoma State line along U.S. 183 to Vernon, south along U.S. 283 to Albany, south along TX 6 to TX 351 to Abilene, south along U.S. 277 to Del Rio, then south along the Del Rio International Toll Bridge access road to the Mexico border.

Low Plains North Zone: That portion of northeastern Texas east of the High Plains Zone and north of a line beginning at the International Toll Bridge south of Del Rio, then extending east on U.S. 90 to San Antonio, then continuing east on I–10 to the Louisiana State line at Orange, Texas.

Low Plains South Zone: The remainder of Texas.

Wyoming (Central Flyway portion)

Zone C1: Big Horn, Converse, Goshen, Hot Springs, Natrona, Park, Platte, and Washakie Counties; and Fremont County excluding the portions west or south of the Continental Divide.

Zone C2: Campbell, Crook, Johnson, Niobrara, Sheridan, and Weston Counties.

Zone C3: Albany and Laramie Counties; and that portion of Carbon County east of the Continental Divide.

Pacific Flyway

Arizona

Game Management Units (GMU) as follows:

South Zone: Those portions of GMUs 6 and 8 in Yavapai County, and GMUs 10 and 12B–45.
North Zone: GMUs 1–5, those portions of GMUs 6 and 8 within Coconino County, and GMUs 7, 9, 12A.

California

Northeastern Zone: In that portion of California lying east and north of a line beginning at the intersection of Interstate 5 with the California-Oregon line; south along Interstate 5 to its junction with Wawlers Lane south of the town of Yreka; west along Wawlers Lane to its junction with Easy Street; south along Easy Street to the junction with Old Highway 99; south along Old Highway 99 to the point of intersection with Interstate 5 south of the town of Weed; south along Interstate 5 to its junction with Highway 89; east and south along Highway 89 to Main Street Greenville; north and east to its junction with North Valley Road; south to its junction of Diamond Mountain Road; north and east to its junction with North Arm Road; south and west to the junction of North Valley Road; south to the junction with Arlington Road (A22); west to the junction of Highway 89; south and west to the junction of Highway 70; east on Highway 70 to Highway 395; south and east on Highway 395 to the point of intersection with the California-Nevada State line; north along the California-Nevada State line to the junction of the California-Nevada-Oregon State lines; west along the California-Oregon State line to the point of origin.

Colorado River Zone: Those portions of San Bernardino, Riverside, and Imperial Counties east of a line extending from the Nevada State line south along U.S. 95 to Vidal Junction; south on a road known as “Aqueduct Road” in San Bernardino County through the town of Rice to the San Bernardino-Riverside County line; south on a road known in Riverside County as the “Desert Center to Rice Road” to the town of Desert Center; east 31 miles on I–10 to the Wiley Well Road; south on this road to Wiley Well; southeast along the Army-Milpas Road to the Blythe, Brawley, Davis Lake intersections; south on the Blythe-Brawley paved road to the Oglby and Tumco Mine Road; south on this road to U.S. 80; east 7 miles on U.S. 80 to the Andrade-Algodones Road; south on this paved road to the Mexican border at Algodones, Mexico.

Southern Zone: That portion of southern California (but excluding the Colorado River Zone) south and east of a line extending from the Pacific Ocean east along the Santa Maria River to CA 166 near the City of Santa Maria; east on CA 166 to CA 99; south on CA 99 to the crest of the Tehachapi Mountains at Tejon Pass; east and north along the crest of the Tehachapi Mountains to CA 178 at Walker Pass; east on CA 178 to U.S. 395 at the town of Inyokern; south on U.S. 395 to CA 58; east on CA 58 to I–15; east on I–15 to CA 127; north on CA 127 to the Nevada State line.

Southern San Joaquin Valley

Temporary Zone: All of Kings and Tulare Counties and that portion of Kern County north of the Southern Zone.

Balance-of-State Zone: The remainder of California not included in the Northeastern, Southern, and Colorado River Zones, and the Southern San Joaquin Valley Temporary Zone.

Idaho

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power County east of State Highway 37 and State Highway 39.

Zone 2: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Bingham County within the Blackfoot Reservoir drainage; Caribou County, except the Fort Hall Indian Reservation; and Power County west of State Highway 37 and State Highway 39.

Nevada

Northeastern Zone: All of Elko and White Pine Counties.

South Zone: All of Clark and Lincoln County.

Oregon

Zone 1: Clatsop, Tillamook, Lincoln, Lane, Douglas, Coos, Curry, Josephine, Jackson, Linn, Benton, Polk, Marion, Yamhill, Washington, Columbia, Multnomah, Clackamas, Hood River, Wasco, Sherman, Gilliam, Morrow and Umatilla Counties.

Columbia Basin Mallard Management Unit: Gilliam, Morrow, and Umatilla Counties.

Zone 2: The remainder of the State.

Utah

Zone 1: All of Box Elder, Cache, Daggett, Davis, Duchesne, Morgan, Rich, Salt Lake, Summit, Uintah, Utah, Wasatch, and Weber Counties, and that part of Tooele County north of I–80.

Zone 2: The remainder of Utah.

Washington

East Zone: All areas east of the Pacific Crest Trail and east of the Big White Salmon River in Klickitat County.

Columbia Basin Mallard Management Unit: Same as East Zone.

West Zone: All areas to the west of the East Zone.

Wyoming

Snake River Zone: Beginning at the south boundary of Yellowstone National Park and the Continental Divide; south along the Continental Divide to Union Pass and the Union Pass Road (U.S.F.S. Road 600); west and south along the Union Pass Road to U.S.F.S. Road 605; south along U.S.F.S. Road 605 to the Bridger-Teton National Forest boundary; along the national forest boundary to the Idaho State line; north along the Idaho State line to the south boundary of Yellowstone National Park; east along the Yellowstone National Park boundary to the Continental Divide.

Balance of State Zone: Balance of the Pacific Flyway in Wyoming outside the Snake River Zone.

Geese

Atlantic Flyway

Connecticut

AP Unit: Litchfield County and the portion of Hartford County west of a line beginning at the Massachusetts border in Suffield and extending south along Route 159 to its intersection with Route 91 in Hartford, and then extending south along Route 91 to its intersection with the Hartford/ Middlesex County line.

AFRP Unit: Starting at the intersection of I–95 and the Quinnipiac River, north on the Quinnipiac River to its intersection with I–91, north on I–91 to I–691, west on I–691 to the Hartford County line, and encompassing the rest of New Haven County and Fairfield County in its entirety.

NAP H-Unit: All of the rest of the State not included in the AP or AFRP descriptions above.

South Zone: Same as for ducks.

North Zone: Same as for ducks.

Maine

Same zones as for ducks.

Maryland

Resident Population (RP) Zone: Garrett, Allegany, Washington, Frederick, and Montgomery Counties; that portion of Prince George’s County...
west of Route 3 and Route 301; that portion of Charles County west of Route 301 to the Virginia State line; and that portion of Carroll County west of Route 31 to the intersection of Route 97, and west of Route 97 to the Pennsylvania line.

AP Zone: Remainder of the State.

Massachusetts

NAP Zone: Central and Coastal Zones (see duck zones).

AP Zone: The Western Zone (see duck zones).

Special Late Season Area: The Central Zone and that portion of the Coastal Zone (see duck zones) that lies north of the Cape Cod Canal, north to the New Hampshire line.

New Hampshire

Same zones as for ducks.

New Jersey

North: That portion of the State within a continuous line that runs east along the New York State boundary line to the Hudson River; then south along the New York State boundary to its intersection with Route 440 at Perth Amboy; then west on Route 440 to its intersection with Route 287; then west along Route 287 to its intersection with Route 206 in Bedminster (Exit 18); then north along Route 206 to its intersection with Route 94; then west along Route 94 to the tollbridge in Columbia; then north along the Pennsylvania State boundary in the Delaware River to the beginning point.

South: That portion of the State within a continuous line that runs west from the Atlantic Ocean at Ship Bottom along Route 72 to Route 70; then west along Route 70 to Route 206; then south along Route 206 to Route 536; then west along Route 536 to Route 322; then west along Route 322 to Route 55; then south along Route 55 to Route 533 (Buck Road); then south along Route 533 to Route 40; then east along Route 40 to Route 55; then south along Route 55 to Route 552 (Sherman Avenue); then west along Route 552 to Carmel Road; then south along Carmel Road to Route 49; then east along Route 49 to Route 555; then south along Route 555 to Route 553; then east along Route 553 to Route 649; then north along Route 649 to Route 670; then east along Route 670 to Route 47; then north along Route 47 to Route 548; then east along Route 548 to Route 49; then east along Route 49 to Route 50; then south along Route 50 to Route 9; then south along Route 9 to Route 625 (Sea Isle City Boulevard); then east along Route 625 to the Atlantic Ocean; then north to the beginning point.

New York

Lake Champlain Goose Area: The same as the Lake Champlain Waterfowl Hunting Zone, which is that area of New York State lying east and north of a continuous line extending along Route 11 from the New York-Canada International boundary south to Route 9B, south along Route 9B to Route 9, south along Route 9 to Route 22 south of Keeseville, south along Route 22 to the west shore of South Bay and along and around the shoreline of South Bay to Route 22 on the east shore of South Bay, southeast along Route 22 to Route 4, northeast along Route 4 to the New York-Vermont boundary.

Northeast Goose Area: The same as the Northeastern Waterfowl Hunting Zone, which is that area of New York State lying north of a continuous line extending from Lake Ontario east along the north shore of the Salmon River to Interstate 81, south along Interstate Route 81 to Route 31, east along Route 31 to Route 13, north along Route 13 to Route 49, east along Route 49 to Route 365, east along Route 365 to Route 28, east along Route 28 to Route 29, east along Route 29 to Route 22 at Greenwich Junction, north along Route 22 to Washington County Route 153, east along CR 153 to the New York-Vermont boundary, exclusive of the Lake Champlain Zone.

East Central Goose Area: That area of New York State lying inside of a continuous line extending from Interstate Route 81 in Cicero, east along Route 31 to Route 13, north along Route 13 to Route 49, east along Route 49 to Route 365, east along Route 365 to Route 28, east along Route 28 to Route 29, east along Route 29 to Route 22 at Greenwich Junction, north along Route 22 to Washington County Route 153, east along CR 153 to the New York-Vermont boundary, exclusive of the Lake Champlain Zone.

Lake Champlain Goose Area: The same as the Lake Champlain Waterfowl Hunting Zone, which is that area of New York State lying east and north of a continuous line extending along Route 11 from the New York-Canada International boundary south to Route 9B, south along Route 9B to Route 9, south along Route 9 to Route 22 south of Keeseville, south along Route 22 to the west shore of South Bay and along and around the shoreline of South Bay to Route 22 on the east shore of South Bay, southeast along Route 22 to Route 4, northeast along Route 4 to the New York-Vermont boundary.

West Central Goose Area: That area of New York State lying within a continuous line beginning at the point where the northerly extension of Route 269 (County Line Road on the Niagara-Orleans County boundary) meets the International boundary with Canada, south to the shore of Lake Ontario at the eastern boundary of Golden Hill State Park, south along the extension of Route 269 and Route 269 to Route 104 at Jeddo, west along Route 104 to Niagara County Route 271, south along Route 271 to Route 31E at Middleport, south along Route 31E to Route 31, west along Route 31 to Griswold Street, south along Griswold Street to Ditch Road, south along Ditch Road to Foot Road, south along Foot Road to the north bank of Tonawanda Creek, west along the north bank of Tonawanda Creek to Route 93, south along Route 93 to Route 5, east along Route 5 to Cirttenden-Murays Corners Road, south on Cirttenden-Murays Corners Road to the NYS Thruway, east along the NYS Thruway to Route 98 (at Thruway Exit 48) in Batavia, south along Route 98 to Route 20, east along Route 20 to Route 19 in Pavilion Center, south along Route 19 to Route 63, southeast along Route 63 to Route 246, south along Route 246 to Route 39 in Perry, northeast along Route 39 to Route 20, northeast along Route 20A to Route 20, east along Route 20 to Route 364 (near Canandaigua), south and east along Route 364 to Yates County Route 18 (Italy Valley Road), southwest along Route 18 to Yates County Route 34, east along Route 34 to Yates County Route 32, south along Route 32 to Steuben County Route 122, south along Route 122 to Route 53, south along Route 53 to Steuben County Route 74, east along Route 74 to Route 54A (near Pulteney), south along Route 54A to Steuben County Route 87, east along Route 87 to Steuben County Route 96, east along Route 96 to Steuben County Route 114, east along Route 114 to Schuyler County Route 23, east and southeast along Route 23 to Schuyler County Route 28, southeast along Route 28 to Route 409 at Watkins Glen, south along Route 409 to Route 14, south along Route 14 to Route 224 at Montour Falls, east along Route 224 to Route 228 in Odessa, north along Route 228 to Route 79 in Mecklenburg, east along
Route 79 to Route 366 in Ithaca, northeast along Route 366 to Route 13, northeast along Route 13 to Interstate Route 81 in Cortland, north along Route 81 to the north shore of the Salmon River to shore of Lake Ontario, extending generally northwest in a straight line to the nearest point of the International boundary with Canada, south and west along the International boundary to the point of beginning.

Hudson Valley Goose Area: That area of New York State lying within a continuous line extending from Route 4 at the New York-Vermont boundary, west and south along Route 4 to Route 149 at Fort Ann, west on Route 149 to Route 9, south along Route 9 to Interstate Route 87 (at Exit 24 in Glens Falls), south along Route 87 to Route 29, west along Route 29 to Route 147 at Kimball Corners, south along Route 147 to Schenectady County Route 40 (West Glenville Road), west along Route 40 to Touareuna Road, south along Touareuna Road to Schenectady County Route 59, south along Route 59 to State Route 5, east along Route 5 to the Lock 9 bridge, southwest along the Lock 9 bridge to Route 5S, southeast along Route 5S to Schenectady County Route 58, southwest along Route 58 to the NYS Thruway, south along the Thruway to Route 7, southwest along Route 7 to Schenectady County Route 103, south along Route 103 to Route 406, east along Route 406 to Schenectady County Route 99 (Windy Hill Road), south along Route 99 to Dunnsville Road, south along Dunnsville Road to Route 397, southwest along Route 397 to Route 146 at Altamont, southeast along Route 146 to Main Street in Altamont, west along Main Street to Route 156, southeast along Route 156 to Albany County Route 307, southeast along Route 307 to Route 85A, southwest along Route 85A to Route 85, south along Route 85 to Route 443, southeast along Route 443 to Albany County Route 301 at Clarksville, southeast along Route 301 to Route 32, south along Route 32 to Route 23 at Cairo, west along Route 23 to Joseph Chadderdon Road, southeast along Joseph Chadderdon Road to Hearts Content Road (Greene County Route 31), southeast along Route 31 to Route 32, south along Route 32 to Greene County Route 23A, east along Route 23A to Interstate Route 87 (the NYS Thruway), south along Route 87 to Route 28 (Exit 19) near Kingston, northwest on Route 28 to Route 209, southwest on Route 209 to the New York-Pennsylvania boundary, southeast along the New York-Pennsylvania boundary to the New York-New Jersey boundary, southeast along the New York-New Jersey boundary, boundary to Route 210 near Greenwood Lake, northeast along Route 210 to Orange County Route 5, northeast along Orange County Route 5 to Route 105 in the Village of Monroeville, east and north along Route 105 to Route 32, northeast along Route 32 to Orange County Route 107 (Quaker Avenue), east along Route 107 to Route 9W, north along Route 9W to the south bank of Moodna Creek, southeast along the south bank of Moodna Creek to the New Windsor-Cornwall town boundary, northeast along the New Windsor-Cornwall town boundary to the Orange-Dutchess County boundary (middle of the Hudson River), north along the county boundary to Interstate Route 84, east along Route 84 to the Dutchess-Putnam County boundary, east along the county boundary to the New York-Connecticut boundary, north along the New York-Connecticut boundary to the New York-Massachusetts boundary, north along the New York-Massachusetts boundary to the New York-Vermont boundary, north to the point of beginning.

Eastern Long Island Goose Area (NAP High Harvest Area): That area of Suffolk County lying east of a continuous line extending due south from the New York-Connecticut boundary to the northernmost end of Roanoke Avenue in the Town of Riverhead; then south on Roanoke Avenue (which becomes County Route 73) to State Route 25; then west on Route 25 to Peconic Avenue; then south on Peconic Avenue to County Route (CR) 104 (Riverleigh Avenue); then south on CR 104 to CR 31 (Old Riverhead Road); then south on CR 31 to Oak Street; then south on Oak Street to Potunk Lane; then west on Stevens Lane; then south on Jessup Avenue (in Westhampton Beach) to Dune Road (CR 89); then due south to international waters.

Western Long Island Goose Area (RP Area): That area of Westchester County and its tidal waters southeast of Interstate Route 95 and that area of Nassau and Suffolk Counties lying west of a continuous line extending due south from the New York-Connecticut boundary to the northernmost part of the Senken Meadow State Parkway; then south on the Senken Meadow Parkway to the Sagikos State Park; then south on the Sagikos Parkway to the Robert Moses State Parkway; then south on the Robert Moses Parkway to its southernmost end; then due south to international waters.

Central Long Island Goose Area (NAP Low Harvest Area): That area of Suffolk County lying between the Western and Eastern Long Island Goose Areas, as defined above.

South Goose Area: The remainder of New York State, excluding New York City.

Special Late Canada Goose Area: That area of the Central Long Island Goose Area lying north of State Route 25A and west of a continuous line extending northward from State Route 25A along Randall Road (near Shoreham) to North Country Road, then east to Sound Road and then north to Long Island Sound and then due north to the New York-Connecticut boundary.

North Carolina

SJB Hunt Zone: Includes the following Counties or portions of Counties: Anson, Cabarrus, Chatham, Davidson, Durham, Halifax, Hertford, Hyde, Jones, Halifax (portion west of NC 100), Northampton, Rockingham (portion south of NC 73 and west of U.S. 220 and north of U.S. 74), Rowan, Stanly, Union, and Wake.

RP Hunt Zone: Includes the following Counties or portions of Counties: Alamance, Alleghany, Alexander, Ashe, Avery, Beaufort, Bertie (that portion south and west of a line formed by NC 45 at the Washington Co. line to U.S. 17 in Midway, U.S. 17 in Midway to U.S. 13 in Windsor, U.S. 13 in Windsor to the Hertford Co. line), Bladen, Brunswick, Buncombe, Burke, Caldwell, Carteret, Caswell, Catawba, Cherokee, Clay, Cleveland, Columbus, Craven, Cumberland, Davie, Duplin, Edgecombe, Forsyth, Franklin, Gaston, Gates, Graham, Granville, Greene, Guilford, Halifax, (portion west of NC 903), Harnett, Haywood, Henderson, Hertford, Hoke, Iredell, Jackson, Johnston, Jones, Lee, Lenoir, Lincoln, McDowell, Macon, Madison, Martin, Mecklenburg, Mitchell, Montgomery (that portion that is east of NC 109), Moore, Nash, New Hanover, Onslow, Orange, Pamlico, Pender, Person, Pitt, Polk, Randolph, Richmond (all of the county with exception of that portion that is south of NC 73 and west of U.S. 220 and north of U.S. 74), Robeson, Rockingham, Rutherford, Sampson, Scotland, Stokes, Surry, Swain, Transylvania, Vance, Warren, Watauga, Wayne, Wilkes, Wilson, Yadkin, and Yancey.

Northeast Hunt Unit: Includes the following Counties or portions of Counties: Bertie (that portion north and east of a line formed by NC 45 at the Washington County line to U.S. 17 in Midway, U.S. 17 in Midway to U.S. 13 in Windsor, U.S. 13 in Windsor to the Hertford Co. line), Camden, Chowan, Currituck, Dare, Hyde, Pasquotank, Perquimans, Tyrrell, and Washington.
Pennsylvania

Resident Canada Goose Zone: All of Pennsylvania except for SJBP Zone and the area east of route SR 97 from the Maryland State Line to the intersection of SR 194, east of SR 194 to intersection of U.S. Route 30, south of U.S. Route 30 to SR 441, east of SR 441 to SR 743, east of SR 743 to intersection of I–81, east of I–81 to intersection of I–80, and south of I–80 to the New Jersey State line.

SJBP Zone: The area north of I–80 and west of I–79 including in the city of Erie west of Bay Front Parkway to and including the Lake Erie Duck zone (Lake Erie, Presque Isle, and the area within 150 yards of the Lake Erie Shoreline).

AP Zone: The area east of route SR 97 from Maryland State Line to the intersection of SR 194, east of SR 194 to intersection of U.S. Route 30, south of U.S. Route 30 to SR 441, east of SR 441 to SR 743, east of SR 743 to intersection of I–81, east of I–81 to intersection of I–80, south of I–80 to New Jersey State line.

Rhode Island

Special Area for Canada Geese: Kent and Providence Counties and portions of the towns of Exeter and North Kingston within Washington County (see State regulations for detailed descriptions).

South Carolina

Canada Goose Area: Statewide except for the following area:

East of U.S. 301: That portion of Clarendon County bounded to the North by S–14–25, to the East by Hwy 260, and to the South by the markers delineating the channel of the Santee River.

West of U.S. 301: That portion of Clarendon County bounded on the North by S–14–26 extending southward to that portion of Orangeburg County bordered by Hwy 6.

Vermont

Same zones as for ducks.

Virginia

AP Zone: The area east and south of the following line—the Stafford County line from the Potomac River west to Interstate 95 at Fredericksburg, then south along Interstate 95 to Petersburg, then Route 460 (SE) to City of Suffolk, then south along Route 32 to the North Carolina line.

SJBP Zone: The area to the west of the AP Zone boundary and east of the following line: the “Blue Ridge” (mountain spine) at the West Virginia-Virginia Border (Loudoun County—Clarke County line) south to Interstate 64 (the Blue Ridge line follows county borders along the western edge of Loudoun-Fauquier-Rappahannock-Madison-Greene-Albemarle and into Nelson Counties), then east along Interstate Rt. 64 to Route 15, then south along Rt. 15 to the North Carolina line.

RP Zone: The remainder of the State west of the SJBP Zone.

Mississippi Flyway

Alabama

Same zones as for ducks, but in addition:

SJBP Zone: That portion of Morgan County east of U.S. Highway 31, north of State Highway 36, and west of U.S. 231; that portion of Limestone County south of U.S. 72; and that portion of Madison County south of Swancott Road and west of Triana Road.

Arkansas

Illinois

North Zone: That portion of the State north of a line extending west from the Indiana border along Interstate 80 to I–39, south along I–39 to Illinois Route 18, west along Illinois Route 18 to Illinois Route 29, south along Illinois Route 29 to Illinois Route 17, west along Illinois Route 17 to the Mississippi River, and due south across the Mississippi River to the Iowa border.

Central Zone: That portion of the State south of the North Goose Zone line to a line extending west from the Indiana border along I–70 to Illinois Route 4, south along Illinois Route 4 to Illinois Route 161, west along Illinois Route 161 to Illinois Route 158, south and west along Illinois Route 158 to Illinois Route 159, south along Illinois Route 159 to Illinois Route 3, south along Illinois Route 3 to St. Leo’s Road, south along St. Leo’s road to Modoc Road, west along Modoc Road to Modoc Ferry Road, southwest along Modoc Ferry Road to Levee Road, southeast along Levee Road to County Route 12 (Modoc Ferry entrance Road), south along County Route 12 to the Modoc Ferry route and southwest on the Modoc Ferry route across the Mississippi River to the Missouri border.

South Zone: Same zones as for ducks.

Indiana

Same zones as for ducks but in addition:

Special Canada Goose Seasons

Late Canada Goose Season Zone: That part of the State encompassed by the following Counties: Steuben, Lagrange, Elkhart, St. Joseph, La Porte, Starke, Marshall, Kosciusko, Noble, De Kalb, Allen, White, Huntington, Wells, Adams, Boone, Hamilton, Madison, Hendricks, Marion, Hancock, Morgan, Johnson, Shelby, Vermillion, Parke, Vigo, Clay, Sullivan, and Greene.

Iowa

Same zones as for ducks.

Kentucky

Western Zone: That portion of the State west of a line beginning at the Tennessee State line at Fulton and extending north along the Purchase Parkway to Interstate Highway 24, east along I–24 to U.S. Highway 641, north along U.S. 641 to U.S. 60, northeast along U.S. 60 to the Henderson County line, then south, east, and northerly along the Henderson County line to the Indiana State line.

Pennyroyal/Coallfield Zone: Butler, Daviess, Ohio, Simpson, and Warren Counties and all counties lying west to the boundary of the Western Goose Zone.

Louisiana

Same zones as for ducks.

Michigan

North Zone—Same as North duck zone.

Middle Zone—Same as Middle duck zone.

South Zone—Same as South duck zone.

Tuscola/Huron Goose Management Unit (GMU): Those portions of Tuscola and Huron Counties bounded on the south by Michigan Highway 138 and Bay City Road, on the east by Colwood and Bay Port Roads, on the north by Kilmanagh Road and a line extending due west off the end of Kilmanagh Road into Saginaw Bay to the west boundary, and on the west by the Tuscola-Bay County line and a line extending directly north off the end of the Tuscola-Bay County line into Saginaw Bay to the north boundary.

Allegan County GMU: That area encompassed by a line beginning at the junction of 136th Avenue and Interstate Highway 196 in Lake Town Township and extending easterly along 136th Avenue to Michigan Highway 40, southerly along Michigan 40 through the city of Allegan to 108th Avenue in Trowbridge Township, westerly along 108th Avenue to 46th Street, northerly along 46th Street to 109th Avenue, westerly along 109th Avenue to I–196 in
Casco Township, then northerly along I-196 to the point of beginning.

Saginaw County GMU: That portion of Saginaw County bounded by Michigan Highway 46 on the north; Michigan 52 on the west; Michigan 57 on the south; and Michigan 13 on the east.

Muskegon Wastewater GMU: That portion of Muskegon County within the boundaries of the Muskegon County wastewater system, east of the Muskegon State Game Area, in sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 32, T10N R14W, and sections 1, 2, 10, 11, 12, 13, 14, 24, and 25, T10N R15W, as posted.

Special Canada Goose Seasons

Southern Michigan Late Season Canada Goose Zone: Same as the South Duck Zone excluding Tuscola/Huron Goose Management Unit (GMU), Allegan County GMU, Saginaw County GMU, and Muskegon Wastewater GMU.

Minnesota

Same zones as for ducks but in addition:

Rochester Goose Zone: That part of the State within the following described boundary: Beginning at the intersection of State Trunk Highway (STH) 247 and County State Aid Highway (CSA) 4, Wahasha County; thence along CSA 4 to CSAH 10, Olmsted County; thence along CSAH 10 to CSAH 9, Olmsted County; thence along CSAH 9 to CSAH 22, Winona County; thence along CSAH 22 to STH 74; thence along STH 74 to STH 30; thence along STH 30 to CSAH 13, Dodge County; thence along CSAH 13 to U.S. Highway 14; thence along U.S. Highway 14 to STH 57; thence along STH 57 to CSAH 24, Dodge County; thence along CSAH 24 to CSAH 13, Olmsted County; thence along CSAH 13 to U.S. Highway 52; thence along U.S. Highway 52 to CSAH 12, Olmsted County; thence along CSAH 12 to STH 247; thence along STH 247 to the point of beginning.

Missouri

Same zones as for ducks.

Ohio

Lake Erie Goose Zone: That portion of Ohio north of a line beginning at the Michigan border and extending south along Interstate 75 to Interstate 280, south on Interstate 280 to Interstate 80, and east on Interstate 80 to the Pennsylvania border.

North Zone: That portion of Ohio north of a line beginning at the Indiana border and extending east along Interstate 70 to the West Virginia border excluding the portion of Ohio within the Lake Erie Goose Zone.

South Zone: The remainder of Ohio.

Tennessee

Southwest Zone: That portion of the State south of State Highways 20 and 104, and west of U.S. Highways 45 and 45W.

Northwest Zone: Lake, Obion, and Weakley Counties and those portions of Gibson and Dyer Counties not included in the Southwest Tennessee Zone.

Kentucky/Barkley Lakes Zone: That portion of the State bounded on the west by the eastern boundaries of the Northwest and Southwest Zones and on the east by State Highway 13 from the Alabama State line to Clarksville and U.S. Highway 79 from Clarksville to the Kentucky State line.

Wisconsin

Same zones as for ducks but in addition:

Horicon Zone: That portion of the State encompassed by a boundary beginning at the intersection of State 23 and State 73 and moves south along State 73 until the intersection of State 73 and State 60, then moves east along State 60 until the intersection of State 60 and State 83, and then moves north along State 83 until the intersection of State 83 and State 33 at which point it moves east until the intersection of State 33 and U.S. 45, then moves north along U.S. 45 until the intersection of U.S. 45 and State 23, at which point it moves west along State 23 until the intersection of State 23 and State 73.

Exterior Zone: That portion of the State not included in the Horicon Zone.

Mississippi River Subzone: That area encompassed by a line beginning at the intersection of the Burlington Northern & Santa Fe Railway and the Illinois State line in Grant County and extending northerly along the Burlington Northern & Santa Fe Railway to the city limit of Prescott in Pierce County, then west along the Prescott city limit to the Minnesota State line.

Central Flyway

Colorado (Central Flyway Portion)

Northern Front Range Area: All areas in Boulder, Larimer and Weld Counties from the Continental Divide east along the Wyoming border to U.S. 85, south on U.S. 85 to the Adams County line, and all lands in Adams, Arapahoe, Broomfield, Clear Creek, Denver, Douglas, Gilpin, and Jefferson Counties.

North Park Area: Jackson County.

South Park and San Luis Valley Area: All of Alamosa, Chaffee, Conejos, Costilla, Custer, Fremont, Lake, Park, Rio Grande and Telluride Counties, and those portions of Saguache, Mineral and Hinsdale Counties east of the Continental Divide.

Remainder: Remainder of the Central Flyway portion of Colorado.

Eastern Colorado Late Light Goose Area: That portion of the State east of Interstate Highway 25.

Nebraska

Dark Geese

Niobrara Unit: That area contained within and bounded by the intersection of the South Dakota State line and the eastern Cherry County line, south along the Cherry County line to the Niobrara River, east to the Norden Road, south on the Norden Road to U.S. Hwy 20, east along U.S. Hwy 20 to NE Hwy 14, north along NE Hwy 14 to NE Hwy 59 and County Road 872, west along County Road 872 to the Knox County Line, north along the Knox County Line to the South Dakota State line. Where the Niobrara River forms the boundary, both banks of the river are included in the Niobrara Unit.

East Unit: That area north and east of U.S. 81 at the Kansas-Nebraska State line, north to NE Hwy 91, east to U.S. 275, south to U.S. 77, south to NE 91, east to U.S. 30, east to Nebraska-Iowa State line.

Platte River Unit: That area north and west of U.S. 81 at the Kansas-Nebraska State line, north to NE Hwy 91, west along NE 91 to NE 11, north to the Holt County line, west along the northern border of Garfield, Loup, Blaine and Thomas Counties to the Hooker County line, south along the Thomas-Hooker County lines to the McPherson County line, east along the south border of Thomas County to the western line of Custer County, south along the Custer-Logan County line to NE 92, west to U.S. 83, north to NE 92, west to NE 61, south along NE 61 to NE 92, west along NE 92 to U.S. Hwy 26, south along U.S. Hwy 26 to Keith County Line, south along Keith County Line to the Colorado State line.

Panhandle Unit: That area north and west of Keith-Deuel County Line at the Nebraska-Colorado State line, north along the Keith County Line to U.S. Hwy 26, west to NE Hwy 92, east to NE Hwy 61, north along NE Hwy 61 to NE Hwy 2, west along NE 2 to the corner formed by Garden-Grant-Sheridan Counties, west along the north border of Garden, Morrill, and Scotts Bluff Counties to the intersection of the Interstate Canal, west to the Wyoming State line.

North-Central Unit: The remainder of the State.
Light Geese
Rainwater Basin Light Goose Area: The area bounded by the junction of NE Hwy. 92 and NE Hwy. 15, south along NE Hwy. 15 to NE Hwy. 4, west along NE Hwy. 4 to U.S. Hwy. 34, west along U.S. Hwy. 34 to U.S. Hwy. 283, north along U.S. Hwy. 283 to U.S. Hwy. 30, east along U.S. Hwy. 30 to NE Hwy. 92, east along NE Hwy. 92 to the beginning. Remainder of State: The remainder portion of Nebraska.

New Mexico (Central Flyway Portion)
Dark Geese
Middle Rio Grande Valley Unit: Sierra, Socorro, and Valencia Counties. Remainder: The remainder of the Central Flyway portion of New Mexico.

North Dakota
Missouri River Canada Goose Zone: The area within and bounded by a line starting where ND Hwy 6 crosses the South Dakota border; thence north on ND Hwy 6 to I–94; thence west on I–94 to ND Hwy 49; thence north on ND Hwy 49 to ND Hwy 200; thence north on Mercer County Rd. 21 to the section line between sections 8 and 9 (T146N–R87W); thence north on that section line to the southern shoreline to Lake Sakakawea; thence east along the southern shoreline (including Mallard Island) of Lake Sakakawea to U.S. Hwy 83; thence south on U.S. Hwy 83 to ND Hwy 200; thence east on ND Hwy 200 to ND Hwy 41; thence south on ND Hwy 41 to U.S. Hwy 83; thence south on U.S. Hwy 83 to I–94; thence east on I–94 to U.S. Hwy 83; thence south on U.S. Hwy 83 to the South Dakota border; thence west along the South Dakota border to ND Hwy 6.

Rest of State: Remainder of North Dakota.

South Dakota
Canada Geese
Unit 1: the Counties of Campbell, Marshall, Roberts, Day, Clark, Codington, Grant, Hamlin, Deuel, Walworth, that portion of Dewey County north of Bureau of Indian Affairs Road 8, Bureau of Indian Affairs Road 9, and the section of U.S. Highway 212 east of the Bureau of Indian Affairs Road 8 junction, that portion of Potter County east of U.S. Highway 83, that portion of Sully County east of U.S. Highway 83, portions of Hyde, Buffalo, Brule, and Charles Mix Counties north and east of a line beginning at the Hughes-Hyde County line on State Highway 34, east to Lees Boulevard, southeast to the State Highway 34, east 7 miles to 350th Avenue, south to Interstate 90 on 350th Avenue, south and east on State Highway 50 to Geddes, east on 285th Street to U.S. Highway 281, north on U.S. Highway 281 to the Charles Mix-Douglas County boundary, that portion of Bon Homme County north of State Highway 50, that portion of Fall River County west of State Highway 71 and U.S. Highway 385, that portion of Custer County west of State Highway 79 and north of French Creek, McPherson, Edmunds, Kingsbury, Brookings, Lake, Moody, Miner, Faulk, Hand, Jerauld, Douglas, Hutchinson, Turner, Lincoln, Union, Clay, Yankton, Aurora, Beadle, Davison, Hanson, Sanborn, Spink, Brown, Harding, Butte, Lawrence, Meade, Pennington, Shannon, Jackson, Mellette, Todd, Jones, Haakon, Corson, Ziebach, McCook, and Minnehaha Counties.

Unit 2: Remainder of South Dakota.

Unit 3: Bennett County.

Texas
Northeast Goose Zone: That portion of Texas lying east and north of a line beginning at the Texas-Oklahoma border at U.S. 81, then continuing south to Bowie and then southeasterly along U.S. 81 and U.S. 287 to I–35W and I–35 to the juncture with I–10 in San Antonio, then east on I–10 to the Texas-Louisiana border.

Southeast Goose Zone: That portion of Texas lying east and south of a line beginning at the International Toll Bridge at Laredo, then continuing north following I–35 to the juncture with I–10 in San Antonio, then easterly along I–10 to the Texas-Louisiana border.

West Goose Zone: The remainder of the State.

Wyoming (Central Flyway Portion)
Dark Geese
Zone G1: Big Horn, Converse, Hot Springs, Natrona, Park, and Washakie Counties; and Fremont County excluding those portions south or west of the Continental Divide.

Zone G1A: Goshen and Platte Counties.

Zone G2: Campbell, Crook, Johnson, Niobrara, Sheridan, and Weston Counties.

Zone G3: Albany and Laramie Counties; and that portion of Carbon County east of the Continental Divide.

Pacific Flyway
Arizona
North Zone: Game Management Units 1–5, those portions of Game Management Units 6 and 8 within Coconino County, and Game Management Units 7, 9, and 12A.

South Zone: Those portions of Game Management Units 6 and 8 in Yavapai County, and Game Management Units 10 and 12B–45.

California
Northeastern Zone: In that portion of California lying east and north of a line beginning at the intersection of Interstate 5 with the California-Oregon line; south along Interstate 5 to its junction with Walters Lane south of the town of Yreka; west along Walters Lane to its junction with Easy Street; south along Easy Street to its junction with Old Highway 99; south along Old Highway 99 to the point of intersection with Interstate 5 north of the town of Weed; south along Interstate 5 to its junction with Highway 89; east and south along Highway 89 to main street Greenville; north and east to its junction with North Valley Road; south to its junction of Diamond Mountain Road; north and east to its junction with North Arm Road; south and west to the junction of North Valley Road; south to the junction with Arlington Road (A22); west to the junction of Highway 89; south and west to the junction of Highway 70; east on Highway 70 to Highway 395; south and east on Highway 395 to the point of intersection with the California-Nevada State line; north along the California-Nevada State line to the junction of the California-Nevada-Oregon State lines west along the California-Oregon State line to the point of origin.

Colorado River Zone: Those portions of San Bernardino, Riverside, and Imperial Counties east of a line extending from the Nevada border south along U.S. 95 to Vidal Junction; south on a road known as “Aqueduct Road” in San Bernardino County through the town of Rice to the San Bernardino-Riverside County line; south on a road known in Riverside County as the “Desert Center to Rice Road” to the town of Desert Center; east 31 miles on I–10 to the Wiley Well Road; south on this road to Wiley Well; southeast along the Army-Milpitas Road to the Blythe, Brawley, Davis Lake intersections; south on the Blythe-Brawley paved road to the Oglby and Tumco Mine Road; south on this road to U.S. 80; east 7 miles on U.S. 80 to the Andrade-Algodones Road; south on this paved road to the Mexican border at Algodones, Mexico.

Southern Zone: That portion of southern California (but excluding the Colorado River Zone) south and east of a line extending from the Pacific Ocean east along the Santa Maria River to CA 166 near the City of Santa Maria; east on CA 166 to CA 99; south on CA 99 to the crest of the Tehachapi Mountains; east on Tejon Pass; east and north along the crest of the Tehachapi Mountains to CA
forty-eight thousand, one hundred and seventy-eight at Walker Pass; east on CA 178 to U.S. 395 at the town of Inyokern; south on U.S. 395 to CA 58; east on CA 58 to I–15; east on I–15 to CA 127; north on CA 127 to the Nevada border.

Imperial County Special Management Area: The area bounded by a line beginning at Highway 86 and the Navy Test Base Road; south on Highway 86 to the town of Westmoreland; continue through the town of Westmoreland to Route S26; east on Route S26 to Highway 115; north on Highway 115 to Weist Rd.; north on Weist Rd. to Flowing Wells Rd.; northeast on Flowing Wells Rd. to the Coachella Canal; northwest on the Coachella Canal to Drop 18; a straight line from Drop 18 to Frink Rd.; south on Frink Rd. to Highway 111; north on Highway 111 to Niland Marina Rd.; southwest on Niland Marina Rd. to the old Imperial County boat ramp and the water line of the Salton Sea; from the water line of the Salton Sea, a straight line across the Salton Sea to the Salinity Control Research Facility and the Navy Test Base Road; southwest on the Navy Test Base Road to the point of beginning.

Balance-of-State Zone: The remainder of California not included in the Northeastern, Southern, and Colorado River Zones.

North Coast Special Management Area: The Counties of Del Norte and Humboldt.

Sacramento Valley Special Management Area: That area bounded by a line beginning at Willows south on I–5 to Hahn Road; easterly on Hahn Road and the Grimes-Ar buckle Road to Grimes; northerly on CA 45 to the junction with CA 162; northerly on CA 45/162 to Glenn; and westerly on CA 162 to the point of beginning in Willows.

Colorado (Pacific Flyway Portion)

West Central Area: Archuleta, Delta, Dolores, Gunnison, LaPlata, Montezuma, Montrose, Ouray, San Juan, and San Miguel Counties and those portions of Hinsdale, Mineral, and Saguache Counties west of the Continental Divide.

State Area: The remainder of the Pacific-Flyway Portion of Colorado.

Idaho

Canada Geese, White-fronted Geese, and Brant

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power County east of State Highway 37 and State Highway 39.

Zone 2: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Bingham County within the Blackfoot Reservoir drainage; Caribou County, except the Fort Hall Indian Reservation; and Power County west of State Highway 37 and State Highway 39.

Light Geese

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County east of the west bank of the Snake River, west of the McTucker boat ramp access road, and east of the American Falls Reservoir bluff, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power County below the American Falls Reservoir bluff, and within the Fort Hall Indian Reservation.

Zone 2: Bingham County west of the west bank of the Snake River, east of the McTucker boat ramp access road, and west of the American Falls Reservoir bluff; Power County except below the American Falls Reservoir bluff, and those lands and waters within the Fort Hall Indian Reservation.

Zone 4: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Caribou County, except the Fort Hall Indian Reservation; Bingham County within the Blackfoot Reservoir drainage.

Montana (Pacific Flyway Portion)

East of the Divide Zone: The Pacific Flyway portion of the State located east of the Continental Divide.

West of the Divide Zone: The remainder of the Pacific Flyway portion of Montana.

Nevada

Northeast Zone: All of Elko and White Pine Counties.

South Zone: All of Clark and Lincoln County.

New Mexico (Pacific Flyway Portion)

North Zone: The Pacific Flyway portion of New Mexico located north of I–40.

South Zone: The Pacific Flyway portion of New Mexico located south of I–40.

Oregon

Southwest Zone: Those portions of Douglas, Coos, and Curry Counties east of Highway 101, and Josephine and Jackson Counties.

South Coast Zone: Those portions of Douglas, Coos, and Curry Counties west of Highway 101.

Northwest Special Permit Zone: That portion of western Oregon west and north of a line running south from the Columbia River in Portland along I–5 to OR 22 at Salem; then east on OR 22 to the Stayton Cutoff; then south on the Stayton Cutoff to Stayton and due south to the Santiam River; then west along the north shore of the Santiam River to I–5; then south on I–5 to OR 126 at Eugene; then west on OR 126 to Greenhill Road; then south on Greenhill Road to Crow Road; then west on Crow Road to Territorial Hwy; then west on Territorial Hwy to OR 126; then west on OR 126 to Milepost 19; then north to the intersection of the Benton and Lincoln County line; then north along the western boundary of Benton and Polk Counties to the southern boundary of Tillamook County; then west along the Tillamook County boundary to the Pacific Coast.

Lower Columbia/N. Willamette Valley Management Area: Those portions of Clatsop, Columbia, Multnomah, and Washington Counties within the Northwest Special Permit Zone.

Tillamook County Management Area: All of Tillamook County. The following portion of the Tillamook County Management Area is closed to goose hunting beginning at the point where Old Woods Rd crosses the south shores of Horn Creek, north on Old Woods Rd to Sand Lake Rd at Woods, north on Sand Lake Rd to the intersection with McPhillips Dr., due west (~200 yards) from the intersection to the Pacific coastline, south on the Pacific coastline to Nesikwin Creek, east along the north shores of Nesikwin Creek and then Hawk Creek to Salem Ave, east on Salem Ave in Nesikwin to Hawk Ave, east on Hawk Ave to Hwy 101, north on Hwy 101 to Resort Dr., north on Resort Dr. to a point due west of the south shores of Horn Creek at its confluence.
with the Nestucca River, due east (~80 yards) across the Nestucca River to the south shores of Horn Creek, east along the south shores of Horn Creek to the point of beginning.

Northwest Zone: Those portions of Clackamas, Lane, Linn, Marion, Multnomah, and Washington Counties outside of the Northwest Special Permit Zone and all of Lincoln County.

Harney and Lake County Zone: All of Harney and Lake Counties.

Klamath County Zone: All of Klamath County.

Malheur County Zone: All of Malheur County.

Utah

Northern Utah Zone: That portion of Box Elder County beginning the Weber-Box Elder county line, north along the Box Elder county line to the Utah-Idaho State line; west on this line to Stone, Idaho-Snowville, Utah road; southwest on this road to the Locomotive Springs Wildlife Management Area boundary; west, south, east, and then north along this boundary to the county road; east on the county road, past Monument Point and across Salt Wells Flat, to the intersection with Promontory Road; south on Promontory Road to a point directly west of the northwest corner of the Bear River Migratory Bird Refuge boundary; east along a line to the northwest corner of the Refuge boundary; south and east along the Refuge boundary to the southeast corner of the boundary; northeast along the boundary to the Perry access road; east on the Perry access road to I–15; south on I–15 to the Weber-Box Elder county line.

Wasatch Front Zone: Boundary begins at the Weber-Box Elder county line at I–15; east along Weber county line to US–89; south on US–89 to I–84; east and south and along I–84 to I–80; south along I–80 to US–189; south and west along US–189 to the Utah County line; southeast and then west along this line to I–15; north on I–15 to US–6; west on US–6 to SR–36; north on SR–36 to I–80; north along a line from this intersection to the southern tip of Promontory Point and Promontory Road; east and north along this road to the causeway separating Bear River Bay from Ogden Bay; east on this causeway to the southwestern corner of Great Salt Lake Mineral Corporations (GSLMC) west impoundment; north and east along GSLMC’s west impoundment to the northwest corner of the impoundment; directly north from this point along an imaginary line to the southern boundary of Bear River Migratory Bird Refuge; east along this southern boundary to the Perry access road; northeast along this road to I–15; south along I–15 to the Weber-Box Elder county line.

Washington County Zone: All of Washington County.

Remainder-of-the-State Zone: The remainder of Utah.

Washington

Area 1: Skagit, Island, and Snohomish Counties.

Area 2A (Southwest Permit Zone): Clark County, except portions south of the Washougal River; Cowlitz County; and Wahkiakum County.

Area 2B (Southwest Permit Zone): Pacific County.

Area 3: All areas west of the Pacific Crest Trail and west of the Big White Salmon River that are not included in Areas 1, 2A, and 2B.

Area 5: All areas east of the Pacific Crest Trail and east of the Big White Salmon River that are not included in Area 4.

Brant

Pacific Flyway

California

North Coast Zone: Del Norte, Humboldt and Mendocino Counties.

South Coast Zone: Balance of the State.

Washington

Puget Sound Zone: Skagit County.

Coastal Zone: Pacific County.

Swans

Central Flyway

South Dakota: Aurora, Beadle, Brookings, Brown, Brule, Buffalo, Campbell, Clark, Codington, Davison, Deuel, Day, Edmunds, Faulk, Grant, Hamlin, Hand, Hanson, Hughes, Hyde, Jerauld, Kingsbury, Lake, Marshall, McCook, McPherson, Miner, Minnehaha, Moody, Potter, Roberts, Sanborn, Spink, Sully, and Walworth Counties.

Pacific Flyway

Montana (Pacific Flyway Portion)

Open Area: Cascade, Chouteau, Hill, Liberty, and Toole Counties and those portions of Pondera and Teton Counties lying east of U.S. 287–89.

Nevada

Open Area: Churchill, Lyon, and Pershing Counties.

Utah

Open Area: Those portions of Box Elder, Weber, Davis, Salt Lake, and Toole Counties lying west of I–15, north of I–80, and south of a line beginning from the Forest Street exit to the Bear River National Wildlife Refuge boundary; then north and west along the Bear River National Wildlife Refuge boundary to the farthest west boundary of the Refuge; then west along a line to Promontory Road; then north on Promontory Road to the intersection of SR 83; then north on SR 83 to I–84; then north and west on I–84 to State Hwy 30; then west on State Hwy 30 to the Nevada-Utah State line; then south on the Nevada-Utah State line to I–80.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion in today's List of Public Laws.

Last List August 13, 2014

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly enacted public laws. To subscribe, go to http://listserv.gsa.gov/archives/publaws-l.html

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. PENS cannot respond to specific inquiries sent to this address.
