h. Electronic Clinical Quality Measures
(1) Data Submission Requirements for Quality Measures That May Be Voluntarily Electronically Reported for the FY 2017 Payment Determination

We believe that collection and reporting of data through health information technology will greatly simplify and streamline reporting for many CMS quality reporting programs. Through electronic reporting, hospitals will be able to leverage EHRs to capture, calculate, and electronically submit quality data that is currently manually chart-abstracted and submitted to CMS for the Hospital IQR Program. As we noted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51614), we recognize the need to align and harmonize measures across CMS quality reporting programs to minimize the reporting burden imposed on hospitals. In the Medicare EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087), we finalized a total of 29 clinical quality measures from which hospitals must select at least 16 measures covering three National Quality Strategy (NQS) domains to

report beginning in FY 2014. We anticipate that, as health information technology evolves and infrastructure is expanded, we will have the capacity to accept electronic reporting of many of the chart-abstracted measures that are currently part of the Hospital IQR Program.

In the FY 2014 IPPS/LTCH PPS final rule, for the STK (with the exception of STK-1), VTE, ED, and PC measure sets, we allowed hospitals to either: (1) electronically report at least one quarter of CY 2014 (Q1, Q2, or Q3) quality measure data for each measure in one or more of those four measure sets; or (2) continue reporting all measures in those four measure sets using chart-abstracted data for all four quarters of CY 2014 (78 FR 50818).

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28242 through 28243) for the FY 2017 payment determination, we proposed to expand this policy, such that providers may select to voluntarily report any 16 of the 28 Hospital IQR Program electronic clinical quality measures that align with the Medicare EHR Incentive Program as long as those 16 measures span three

different NQS domains. The 28 measures are listed in the table below. Only 28 of the 29 measures adopted in the Medicare EHR Incentive Program are applicable for the Hospital IQR Program, because the measure ED-3 Median time from ED arrival to ED departure for discharged ED patients (NQF #0496) is an outpatient quality measure. We expect eligible hospitals to select measures that best apply to their patient mix.

For the FY 2017 payment determination, we also proposed to expand the reporting requirement of electronic clinical quality measures to require a full year's data collection and submission instead of a minimum of one quarter. In addition, for the FY 2017 payment determination, we proposed to require data submission within approximately 60 days after the end of a calendar year quarter. We have listed the proposed submission deadlines in the table below. We also refer readers to section IX.D.2. of the preamble of this final rule for a description of the electronic clinical quality measures data reporting periods and proposed submission deadlines.

CY 2015/FY 2017 ELECTRONIC CLINICAL QUALITY MEASURES DATA REPORTING PERIODS AND PROPOSED SUBMISSION DEADLINES

CY 2015 quarter	Reporting period (2015)	Proposed submission deadlines
1	January 1–March 31	May 30, 2015.
2	April 1–June 30	Aug 30, 2015.
3	July 1–September 30	Nov 30, 2015.
4	October 1–December 31	Feb 28, 2016.

As an incentive for hospitals to voluntarily submit electronically-specified clinical quality measures, we

proposed that for the FY 2017 payment determination, hospitals successfully submitting electronic clinical quality

measures according to our procedures will not have to validate those electronic clinical quality measures by

submitting chart-abstracted data to validate the accuracy of the measure data submitted electronically.

By proposing these changes, we believe we would further align the Hospital IQR Program and the Medicare EHR Incentive Program and promote greater electronic clinical quality measure data reporting for hospitals. In addition, we believe that these changes would ease hospitals' administrative burden, as they will be able to report the same clinical quality measures once to partially satisfy both the Hospital IQR and Medicare EHR Incentive Programs' requirements.

We welcomed public comments on these proposals.

Commenters' opinions on these proposals focused on timing, substantive and nonsubstantive quality measure updates, our collaboration with hospitals and EHR vendors, certification requirements, and general concerns about electronic clinical quality measure reporting.

Comment: Some commenters were concerned that we were not allowing hospitals and EHR vendors enough time to transition to the new data submission deadlines. Some commenters supported the long-term goal of transitioning to EHR-enabled measurement and the general progression toward electronic clinical quality measures, noting that it will improve communication and documentation while reducing hospital resources now used for chart-abstracted measures. A commenter strongly supported CMS using electronic clinical quality measures and strongly objected to the implementation of chart-abstracted measures. The commenter stated that the current methodology of manual chart abstraction is resource intensive and inefficient for hospitals. By focusing on electronic clinical quality measures, hospitals can focus on performance improvement and target resources to implementing EHRs and processes to improve patient care.

Response: We thank commenters for their support. We plan to move away from chart-abstracted measures and move towards electronic clinical quality measures, as appropriate.

This voluntary option also simplifies alignment with the Medicare EHR Incentive Program and allows hospitals to partially satisfy requirements in both programs using a common set of measures. Since hospitals have a choice whether to submit voluntary electronic clinical quality measure data or chart-abstracted data, we recommend hospitals that are not yet prepared to submit electronically instead submit via chart-abstraction. We encourage

hospitals to submit test data when they are ready.

We are actively working to reduce hospitals' reporting burden by offering the option to submit electronic clinical quality measures.

We received a number of comments regarding the timing of this proposal in relation to hospitals' readiness to submit electronic clinical quality measures.

Comment: Some commenters stated that healthcare providers and electronic health records systems are not yet ready to adopt electronic clinical quality measures, expressing concern about vendor problems related to meaningful use, including problems associated with submitting data to CMS, and about the accuracy and feasibility of electronically specified measures.

Other commenters suggested that CMS not specify a date for mandatory electronic reporting until significant levels of CEHRT adoption are achieved, and a validation process for electronic clinical quality measures is operational and yields evidence of measure reliability.

Response: We recently published a proposed rule (79 FR 29732 through 29738) proposing changes to the meaningful use stage timeline and changes to the requirements for the reporting of clinical quality measures for 2014. The comment period closed July 21, 2014. We hope the commenter was able to share their concerns regarding vendor problems related to meaningful use by responding to the proposed rule. We would like to clarify that this rule provides flexibility to hospitals and CAHs needing to update their EHR systems only for the most recent version of the CQMs, which is not a criteria for 2014 CEHRT. No changes to 2014 CEHRT criteria or timelines are being finalized in this rule. As we have previously mentioned, we are finalizing voluntary electronic clinical quality measure submission in order to give hospitals flexibility. Hospitals that are not yet ready to submit electronically can satisfy requirements for applicable measures as previously finalized and finalized in this rule at section IX.A.2.g.(2) of the preamble of this final rule, that is submit via chart-abstraction. We encourage hospitals to work with vendors and encourage vendors to work with the various EHR-related and electronic clinical quality measure HHS working groups to become more informed about policies and standards. As participants in these groups, the hospitals and vendors can share their concerns with CMS, ONC, and other measure stakeholders and help to improve processes. In addition, we

suggest hospitals participate in our pilot electronic validation test to get free feedback on the accuracy of their data and have an opportunity to provide direct input regarding concerns. We refer readers to section IX.A.11.e. of the preamble of this final rule where this policy is discussed.

Comment: A commenter opposed the creation of voluntary electronic reported clinical quality measures.

Response: We respectfully disagree with the commenter that did not support voluntary electronic clinical quality measure reporting. This voluntary reporting provides hospitals the opportunity to test their submissions to prepare before electronic clinical quality measure reporting is required for this program.

Comment: Commenters urged CMS to begin a more robust dialogue with hospitals, EHR vendors, and other stakeholders regarding submitting electronic clinical quality measures so that there is a shared understanding of the opportunities and challenges that lay ahead—both from the hospital operational perspective as well as from our perspective.

Response: We have begun our education and outreach efforts with hospitals and vendors by holding educational webinars/sessions, uploading a number of resources to QualityNet,¹¹⁵ and creating a listserv for updates and announcements. Further, we have past recorded sessions discussing electronic clinical quality measures issues on our Web site at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pageName=QnetPublic%2FPage%2FQnetTier3&cid=1228773852046>. We also note that hospitals may submit test files or practice submissions at any time and encourage hospitals and vendors to begin submitting test files as soon as feasible.

Comment: One commenter recommended that CMS consider that certain measures currently improve quality of care for patients, but may not immediately lend themselves to e-specification.

Response: We will take the comment into consideration for future measures, and note that we have expanded our measures under consideration process in order to find measures from a greater number of sources.

Comment: Some commenters requested that CMS allow more time for implementing certification requirements and adopting measure specification

¹¹⁵ <https://www.qualitynet.org/dcs/ContentServer?c=Page&pageName=QnetPublic%2FPage%2FQnetTier2&cid=1228773849716>.

updates. A commenter specifically suggested that CMS allow 18 months between the time of an updated specification adoption and the federal fiscal year to which the specification updates should apply. Another commenter recommended that CMS refrain from requiring certification of the revised measures and provide flexibility on the date by which the revisions must be fully implemented on provider sites. The commenter expressed concern that the current time frame of just prior to the October 1, 2014 start of the measure reporting year is inadequate to accommodate the development, testing, certification of the software by health IT vendors and subsequent delivery and implementation of software for every customer site. This time constraint could lead providers to continue to attest to their electronic clinical quality measures in FY 2015, rather than submit their electronic clinical quality measures as CMS would prefer.

One commenter noted that there is insufficient time for vendors and certification test labs to obtain certification and subsequently deliver the certified product in time for hospitals to submit electronic clinical quality measures electronically in CY 2015. The commenter therefore anticipated that hospitals will continue to attest their clinical quality measure data in FY 2015. The commenter suggested that CMS allow hospitals who elect to attest their clinical quality measure for the Medicare EHR Incentive Program in CY 2015 to submit data electronically for the Hospital IQR Program during CY 2015.

Response: We believe when discussing the “revised measures,” the commenter is referring to the annual April updates to the electronic clinical quality measures. For submission of CY 2015 data, we will only accept data consistent with the April 2014 measure specifications. Electronic clinical quality measure specifications are available in the CMS eCQM Library at: <http://cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQMLibrary.html>. The October 1, 2014 date is the beginning of the reporting period for the Medicare EHR Incentive Program only. However, we proposed, that in order to align the two programs’ electronic clinical quality measure reporting and submission periods, both programs’ reporting periods and submission deadlines would begin with Q1 CY 2015 discharges (79 FR 28245 through 28246).

However, after consideration of these comments regarding timing and

hospitals’ readiness, we are modifying our proposal so that hospitals that wish to participate in the voluntary reporting need only submit one CY 2015 quarter (Q1, Q2, or Q3) of electronic clinical quality measure data with a submission deadline of November 30, 2015. We hope that this modification will encourage more hospitals to submit electronic clinical quality measures rather than attest. The commenter is reminded that attesting is a Medicare EHR Incentive Program option only and would not apply to Hospital IQR Program requirements. In addition, if a hospital chooses not to voluntarily submit one quarter of electronic clinical quality measure data for the Hospital IQR Program, it must submit all four quarters of chart-abstracted data in CY 2015.

We believe that by modifying our proposal and reducing the data requirement to one quarter’s worth of data and by adopting the November 30th submission deadline, hospitals will have adequate time to update their EHR’s ability to capture and report data.

In addition, measure certification falls under the ONC. ONC published a proposed rule February 26, 2014 describing voluntary 2015 Edition Electronic Health Record (EHR) Certification Criteria; Interoperability Updates and Regulatory Improvements (79 FR 10880 through 10946). The proposed rule offered a potential “gap certification” solution which may help the commenter with their concerns about the current timelines for development, testing, certification of the software by health IT vendors. The final rule is expected to be published in the summer of 2014. With respect to CEHRT requirements, though 2014 CEHRT is required, eligible hospitals are not required to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the clinical quality measures.

A hospital may submit electronic clinical quality measures for the Hospital IQR Program during CY 2015 even if they attest their aggregate measure numerators and denominators through the Medicare EHR Incentive Program. The hospital could submit as test data or production data. Test data submissions are submissions that do not count as submissions; they are practice submissions. Production data submissions are considered final submissions meant to fulfill Program submission requirements. With respect to CEHRT requirements, although 2014 CEHRT is required, eligible hospitals are not required to ensure that their CEHRT products are recertified to the most

recent version of the electronic specifications for the clinical quality measures.

Comment: One commenter noted that the proposed subregulatory process for annual updates is to incorporate “nonsubstantive” changes to measure specifications. However, the commenter believed that the annual updates include substantive changes. The commenter looks forward to working with CMS to further refine the definition of nonsubstantive changes and recommended that the annual updates be limited to changes that do not have a significant impact on clinicians, software, or recertification.

Response: We interpret the commenter’s use of the term “annual updates” to be in reference to our publication of the measure specifications in the electronic clinical quality measure Library at: <http://cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQMLibrary.html>. We will work with stakeholders to help define substantive and nonsubstantive changes related specifically to electronic measure specifications, and will take suggestions regarding any recommended changes into consideration for future rulemaking.

Comment: A commenter explained that there is confusion as to whether vendors need to certify to the updated measures and whether hospitals must start their measure reporting year with the annual updates and request clear and consistent guidance. The commenter also noted that the Cypress tool is not yet available for testing of the new measures, and no information has been provided as to when Cypress may be available.

Response: Although 2014 CEHRT is required, eligible hospitals are not required to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the clinical quality measures. Hospitals that choose to voluntarily submit electronic clinical quality measures in Q1, Q2, or Q3 of CY 2015 for FY 2017 payment determination must use the 2014 version of the measure specifications.

Cypress version 2.5 is expected to be available with the eligible hospital and eligible provider measure packages in September 2014. Cypress version 2.5 is expected to align with the CMS Implementation Guide released for publication in July 2014.

Comment: A commenter expressed concerns about electronic clinical quality measure specifications in regards to the “Medication, Order not done: Medical Reason” related to the

STK, VTE, and future AMI, PN, and SCIP measures. The commenter pointed out that the Hospital IQR Program requires providers to document a medical reason for not prescribing a medication/device and the MU/ electronic clinical quality measure requires providers to document “what medication of choice would you have prescribed if not for a medical reason.” The commenter disagreed with the requirement to answer these questions and suggested that providers may view the questions as inefficient “administrative only questions” and may avoid them entirely. The commenter also suggested that the questions may force the institution to intentionally fail a measure due to lack of a contraindication and that it is improper to use data related to medication orders for public reporting of quality of care and financial incentives because not all medication orders that count for the Hospital IQR Program also count for electronic clinical quality measures since they are not all included in the qualifying RxNorm document.

Response: We acknowledge that this is a known issue that is being addressed through HL7 and expected to be implemented in FY 2015. ONC has consolidated several JIRA comments into one issue. The commenter can follow the progress of the issue at <http://jira.oncprojecttracking.org/browse/CQM-970>. We note that to date there are no consequences for measure failure and encourage the commenter to review our zero denominator clarification in section IX.D.5. of the preamble of this final rule.

Comment: A commenter expressed concern with the increasing number of measures for electronic clinical quality measure submission. The commenter advised that since electronic health records allow documentation to be placed in multiple places, chart review is required. The commenter stated that current medical record technology has not matured to restrict documentation input into only the field or fields designated for electronic data retrieval.

Potential technological solutions contribute to alert fatigue. Further, the commenter believed that because there is not a common electronic medical record system for all staff to use regardless of the care setting, multiple inefficient documentation systems are created and customized to suit the needs of the individual hospital and facility. The commenter stated that resolving these problems will require a significant financial investment while reimbursement for services declines.

Response: We recognize that many hospitals struggle with proper data capture in the EHR. We encourage these hospitals to work with their vendors to reduce burden and human intervention through chart abstraction. The electronically-specified clinical quality measures remain voluntary at this time to provide an opportunity for hospitals to improve upon accurate data capture.

Comment: A commenter specifically disagrees with CMS’ statement that electronic clinical quality measures are more easily reported than chart-abstracted measures.

Response: We disagree that electronic clinical quality measures are not more easily reported than chart-abstracted measures; once capture is possible within EHR, the time and resources compared to manual abstraction should be significantly less. As data becomes more standardized, it is expected that reporting burden will decrease over time. For example, electronic clinical quality measure collection does not require hospital staff time to find and pull paper medical records, and manually review medical records to abstract data elements used in measure calculation. We acknowledge there are costs, but also benefits to moving to electronic data capture. EHR user training is a cost that will ultimately result in consistency coming from a common understanding and capture of common data definitions.

Comment: A commenter recommended that CMS develop and share a five-year roadmap for the future regarding the transition of all clinical quality measurement programs to

electronic reporting so hospitals can strategically plan for workflows that support electronic reporting. The commenter further recommended that this guidance, as well as all electronic quality reporting sub regulatory guidance and eMeasure specifications should be located on a central Web site.

Response: We are working on a roadmap for both the Hospital IQR and Hospital VBP Programs, as well as a consolidated location for electronic clinical quality measure resources.

After consideration of the public comments we received, we are modifying our proposal to finalize that hospitals that choose to voluntarily report electronic measures should submit one quarter of electronic clinical quality measure data from Q1, Q2, or Q3 of CY 2015 for FY 2017 payment determination. Hospitals that choose to voluntarily submit electronic clinical quality measures must use the 2014 version of the measure specifications and submit 16 measures covering three NQS domains from the 28 available electronically specified measures. However, hospitals may voluntarily submit more than one quarter of data. We will not accept Q4 2015 data for CY 2015 as this would likely delay EHR Incentive Program payments. Policies for CY 2016/FY 2018 payment determination electronic clinical quality measure reporting and submission will be made in future rulemaking.

Because we are modifying our proposal to now only require 1 quarter’s worth of data from hospitals that wish to voluntarily submit electronically specified measures. We are subsequently also modifying the submission deadline to November 30, 2015 regardless of which quarter of data is submitted. We also refer readers to section X.2.h.1 for further discussion of submission of electronically specified measures.

The chart below provides a summary of the finalized reporting periods and electronic submission deadlines for the FY 2017 Hospital IQR Program:

FY 2017 HOSPITAL IQR PROGRAM ELECTRONIC REPORTING PERIODS AND SUBMISSION DEADLINES FOR ELIGIBLE HOSPITALS

CY 2015 Quarter	Discharge reporting periods	Submission deadlines
Q1	January 1, 2015–March 31, 2015	November 30, 2015.
Q2	April 1, 2015–June 30, 2015	November 30, 2015.
Q3	July 1, 2015–September 30, 2015	November 30, 2015.
Q4	October 1, 2015–December 31, 2015	Not Applicable.

(2) Public Reporting of Electronic Clinical Quality Measures

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50813 through 50818), we adopted a policy under which we would only publicly report electronic clinical quality measure data under the Hospital IQR Program if we determined that the data are accurate enough to be reported. However, we noted that the majority of public commenters had opposed our proposal to withhold the electronically reported data from publication on *Hospital Compare*, and instead urged us to publicly display it (78 FR 50815). Therefore, for electronic clinical quality measure data submitted for the FY 2016 payment determination, we will publically report the data as previously finalized. However, for the FY 2017 payment determination, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28243) we proposed to provide hospitals that voluntarily report one year of electronic clinical quality measure data (as proposed above) an option to have their data reported on *Hospital Compare* with a *preview period prior to public reporting*. We also proposed to add a footnote next to that publically reported data indicating that it is a result of electronically-specified measures.

We welcomed public comments on these proposals.

Comment: Commenters suggested that when reporting electronic clinical quality measure data, hospitals should be provided a preview period for the FY 2016 payment determination. One commenter believed that public display of electronic measures for the FY 2016 payment determination should not occur because accuracy of data has not been validated, there would be inconsistencies in reporting time periods and that display of the data may not provide accurate or valuable data to the public for decision making.

Commenters noted that display of the data may not provide accurate or valuable data to the public for decision making, and specifically stated that there are no validity and reliability studies demonstrating the capture of equivalent data between chart-abstracted measures and electronically captured measures and urging us to develop a data validation strategy before publicly posting this information. Commenters stated that measures submitted as electronic clinical quality measures should not be publicly reported until validation of electronic clinical quality measures demonstrates that they are comparable to values reached through chart-abstraction. A commenter expressed concern that

opportunity for a preview period before posting electronic clinical quality data on *Hospital Compare* will not offset the risks associated with reporting clinical quality measures electronically. One commenter asked that CMS wait until more research is conducted and there is an understanding of the limitations and opportunities of the electronic clinical quality measures. The commenter also asked that CMS wait until the preponderance of hospitals can do so and a data validation system for electronic measures is established.

However, other commenters stated that not reporting electronic clinical quality measures on *Hospital Compare* fails to provide the public with reliable data and requested that CMS communicate the criteria it will use to determine if the electronic clinical quality measure data are accurate enough to be publicly displayed.

Response: Regarding public reporting for electronically reported data submitted for the FY 2016 payment determination, we note that this policy is not subject to change in this rulemaking as it was previously finalized. However, consistent with our finalized policy, we will not post data that we determine are not deemed to be accurate. We intend to use the results of our validation pilot to assist in determining criteria for identifying electronic clinical quality measure data accuracy. These criteria will be proposed in future rulemaking.

With respect to inconsistencies in reporting periods, historically we publicly reports data on *Hospital Compare* as it becomes available. Therefore, it is not unusual for there to be inconsistencies in reporting periods. The current data collection periods for each measure are posted on *Hospital Compare*.

We appreciate the commenter's concerns about validation. As finalized in section IX.A.11.e. of the preamble of this final rule, we intend to conduct a validation strategy pilot test in FY 2015. We also intend to develop mandatory requirements for validation in the FY 2016 IPPS/LTCH PPS proposed rule, which will make assessment of validity possible prior to posting of data collected for the FY 2018 payment determination.

However, based on public comments received opposing public reporting for FY 2017, we are modifying our proposal to finalize that we will only publish the names of hospitals who successfully submit CY Q1, Q2, or Q3 electronic clinical quality measure data by November 30, 2015. We will not: (1) report actual data or performance rates for measures submitted as electronic

clinical quality measures on *Hospital Compare*, (2) include a preview period, or (3) provide hospitals an option to suppress their participation.

Comment: One commenter encouraged CMS to use a strategy similar to the Star Ratings program with "topped-out" measures. The commenter suggested we allow voluntary submission of "topped-out" measures through all reporting mechanisms and publically report on *Hospital Compare* as "display measures." This would allow for continued monitoring of performance and increase alignment with the Medicare Advantage and Part D plans. This concept of display measures could be used for introducing and testing new measures by first introducing the new measures on the display page.

Response: We thank the commenter for the suggestion and will consider the idea in the future.

After consideration of the public comments we received and as a logical outgrowth of our existing public reporting policy, we are finalizing our policy that we will only publicly report the names of those hospitals who successfully submit CY 1, CY 2, or CY 3 electronic clinical quality measure data by the November 30, 2015 submission deadline. Hospitals will not have a preview period nor will we allow hospitals to opt out of this public reporting. We will indicate these hospitals with a symbol on *Hospital Compare* to recognize their advanced ability to submit data electronically. We will not publicly report actual data or performance rates of electronic clinical quality measures at this time.

8. Possible New Quality Measures and Measure Topics for Future Years

a. Mandatory Electronic Clinical Quality Measure Reporting for FY 2018 Payment Determination

We anticipate that, as EHR technology changes and improves, hospitals will electronically report all clinical process-of-care and HAI measures that are currently part of the Hospital IQR Program or that have been proposed for adoption into the Program. As stated above, we intend for the future direction of electronic quality measure reporting to reduce significantly administrative burden on hospitals under the Hospital IQR Program. We will continue to work with measure stewards and developers to develop new measure concepts, and conduct pilot, reliability, and validity testing. We believe that this voluntary reporting option will provide hospitals and us with the ability to test systems in CY 2015 for future quality program

proposals that, if finalized, will make electronic reporting a requirement instead of voluntary. We believe this will simplify measure collection and submission for the Hospital IQR Program, and will reduce the burden on hospitals to report chart-abstracted measures.

We intend to propose to require reporting of electronic clinical quality measures for the Hospital IQR Program beginning for the CY 2016 reporting period or FY 2018 payment determination. We considered proposing to require hospitals to electronically report some Hospital IQR Program quality measures in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27695). After considering public comments, we made electronic reporting voluntary in CY 2014 in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50813 through 50814). However, after two years, we believe that hospitals are more prepared and should be required to report Hospital IQR Program measures as electronic clinical quality measures beginning in CY 2016. We intend to propose this policy in future rulemaking, but requested comments on this intention here.

Comment: A commenter asked for clarification on the proposal to electronically report all clinical process of care and HAI measures beginning in CY 2016, which are currently part of the Hospital IQR Program or which have been proposed for adoption for the FY 2018 payment determination and subsequent years. The commenter believed that CMS is moving away from the critical work of the Infection Preventionist and into a realm that is without professional judgment for identifying an HAI.

Response: We clarify that we did not propose electronic reporting of all clinical process of care and HAI measures in CY 2016. We do not intend to take away the professional judgment of the Infection Preventionist professionals.

Comment: One commenter was very concerned about the amount of resources that would be needed to analyze, validate, and ensure compliance with the electronically specified clinical quality measure specifications as well as the actual submission process. The commenter asked that CMS require the use of electronic submissions gradually instead of for all Hospital IQR Program measures in CY 2016. The commenter recommended a proposal that encourages voluntary submission of one or two measures that are not “topped-out” for CY 2016 with future gradual expansion of required electronic

measures over a period of several years. The commenter stated that this would allow hospitals to become proficient in reporting measures electronically while curtailing the administrative burden that hospitals experience when implementing new electronic measures.

The commenter also urged CMS to allow hospitals to have flexibility in how measures are transmitted until all measure developers confirm that the measures can be e-specified within the timeframe. A commenter noted that any decisions to add electronic clinical quality measures should be dependent on the final decisions for Stage 2 and Stage 3 of meaningful use, given the current difficulties providers and vendors are experiencing with Stage 2 EHR implementation. In addition, the commenter recommended that CMS consider that certain measures currently improve quality of care for patients, but may not immediately lend themselves to e-specification.

Response: We believe we are providing a gradual approach to electronic clinical quality measure adoption and submission. This will be the second year that the Hospital IQR Program has provided a voluntary electronic reporting option. With respect to the commenter’s request that we allow flexibility in how measures are submitted, we will strive to include a variety of measures in the Hospital IQR Program, such as claims-based, chart-abstracted, electronically specified, and structural aggregate measures. We recognize that many hospitals struggle with proper data capture in the EHR and we encourage these hospitals to work with their vendors to reduce burden associated with human intervention through chart abstraction. The electronic clinical quality measures remain voluntary at this time to provide an opportunity to improve upon accurate data capture. We continue to work with the Medicare EHR Incentive Program team to ensure measure alignment moving forward.

We agree that not all measures are appropriate for electronic specification.

Comment: A commenter stated that while ONC and others are working to ensure common data standards, it is unwise to dismiss inclusion of a measure that is currently not electronically specified, but which may improve the quality of care for patients.

Response: We will not remove a measure merely because it lacks an electronic specification. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50185), we outlined seven criteria for removing measures from the Hospital IQR Program. In section IX.A.2.a. of the preamble of this final rule, we are also

finalizing updated criteria for determining “topped-out” status. Conversely, we will consider adopting a measure that does not have electronic specifications if the measure meets a critical need and measurement gap.

Comment: A commenter urged CMS to reconsider the proposal to begin requiring electronic clinical quality measures in CY 2016. The commenter stated that there is a lack of clear e-specifications and certification requirements, and that mandatory reporting should only begin when EHR systems are able to reliably generate this data.

Response: We will consider these suggestions as we develop policies on electronic reporting. Please note that we did not propose to require electronic clinical quality measures in CY 2016, but rather, we signaled an intent. We thank the commenters for providing this feedback, and will take it into account in the future.

b. Possible Future Electronic Clinical Quality Measures

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28244) we stated that we intend to continue to support the following measure domains in the Hospital IQR Program measure set: effective clinical care (for example, the AMI, PN, STK, and VTE measures), communication and care coordination (for example, the readmission measures), patient safety (for example, the HAI measures), person and caregiver-centered experience (for example, the HCAHPS measure), community/population health (for example, the global immunization measure), and efficiency and cost reduction (for example, the Medicare Spending per Beneficiary measure). This approach will enhance better patient care while aligning the Hospital IQR Program with our other established quality reporting and pay-for-performance programs, such as the Hospital VBP Program.

Based on the above approach, we stated our intent to propose to adopt the following electronic clinical quality measures with data collection beginning with October 1, 2016 discharges (or, as described further above, January 1, 2017, if the proposal to align reporting under the Hospital IQR Program and Medicare EHR Incentive Program is finalized) to coincide with Medicare EHR Incentive Program Stage 3 collection:

- Hepatitis B Vaccine Coverage Among All Live Newborn Infants Prior to Hospital or Birthing Facility Discharge (NQF #0475)

The Hepatitis B Vaccine Coverage Among All Live Newborn Infants Prior to Hospital or Birthing Facility Discharge (NQF #0475) measure is NQF-endorsed, supported by the MAP, and conditionally supported by the MAP as an electronic clinical quality measure for the EHR Incentive Program by the MAP in its 2014 Recommendations on Measures for More Than 20 Federal Programs final report available at: http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx. However, the MAP recommends a review of the electronic specifications of this measure through the NQF endorsement process.

This measure requires each hospital/birthing facility to measure its administration of a dose of hepatitis B vaccine to all infants born in their hospital/birthing facility prior to discharge for a specific time period (for example, one calendar year). Hospitals are required to assess infants whose parents refused vaccination for exclusion from the coverage estimate.

- PC-02 Cesarean Section (NQF #0471)

The PC-02 Cesarean Section (NQF #0471) is NQF-endorsed and supported by the MAP in its 2014 Recommendations on Measures for More Than 20 Federal Programs final report available at: http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx. The MAP noted that there is an important public education piece to the reporting of PC-02 and recommended that we work with others to ensure consumers understand what the results mean and why the measure is important.

This measure assesses the number of nulliparous women with a term, singleton baby in a vertex position delivered by cesarean section.

- Adverse Drug Events—Hyperglycemia

Adverse Drug Events—Hyperglycemia is conditionally supported by the MAP in its 2014 Recommendations on Measures for More Than 20 Federal Programs final report available at: http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for

[More_than_20_Federal_Programs.aspx](http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx). Use of this measure would address a very common condition. The MAP expressed concerns over the feasibility of using this measure in the Hospital IQR Program as it has been tested using electronic data and stated that the NQF endorsement process should resolve this issue.

This measure assesses the average percentage of hyperglycemic hospital days for individuals with a diagnosis of diabetes mellitus, anti-diabetic drugs (except metformin) administered, or at least one elevated glucose level during the hospital stay. The measure's numerator is the sum of the percentage of hospital days in hyperglycemia for all admissions in the denominator. The measure's denominator is the total number of admissions with a diagnosis of diabetes mellitus, at least one administration of insulin or any oral anti-diabetic medication except metformin, or at least one elevated blood glucose value (≤ 200 mg/dL [11.1 mmol/L]) at any time during the entire hospital stay.

Exclusions include: (1) Admissions with a diagnosis of diabetic ketoacidosis (DKA) or hyperglycemic hyperosmolar syndrome (HHS); (2) admissions without any hospital days included in the analysis; (3) admissions with lengths of stay greater than 120 days.

- Adverse Drug Events—Hypoglycemia

Adverse Drug Events—Hypoglycemia is conditionally supported by the MAP in its 2014 Recommendations on Measures for More Than 20 Federal Programs final report, which is available at: http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx. Use of this measure would address a common condition that is very dangerous to patients. The MAP expressed concerns over the feasibility of using this measure in the Hospital IQR Program as it has been tested using electronic data and that the NQF endorsement process should resolve this issue.

This measure assesses the rate of hypoglycemic events following the administration of an anti-diabetic agent. The measure's numerator is the total number of hypoglycemic events (< 40 mg/dL) that were preceded by administration of a short/rapid-acting insulin within 12 hours or an anti-diabetic agent other than a short/rapid-acting insulin within 24 hours, were not followed by another glucose value greater than 80 mg/dL within 5 minutes, and were at least 20 hours apart. The

measure's denominator is total number of hospital days with at least one anti-diabetic agent administered. Exclusions include admissions with length of stay greater than 120 days.

We requested comments on these possible future measures.

Comment: One commenter strongly supported the proposed measure Adverse Drug Events—Hypoglycemia.

Response: We thank the commenter for their support.

Comment: One commenter strongly supported adding Adverse Drug Events—Hyperglycemia. Another commenter advised that measurement of Adverse Drug Events—Hyperglycemia via chart abstraction requires searching for discrete, out-of-range blood glucose lab values, which is resource intensive. The commenter stated that collection of this measure as an electronic clinical quality measure is the most efficient data collection mechanism and supports Meaningful Use of an electronic health record. The commenter believed that glucose testing results can be captured at the point-of-care or from the laboratory system and stored in the EHR as discrete data fields.

Response: We thank the commenters for their support and will address this measure in future policy making.

Comment: A commenter noted that that electronically submitted data on Adverse Drug Events-Hyperglycemia would be highly unreliable. Further, that commenter stated that recommendations regarding levels of glucose control are variable among patient populations and there is limited information within CMS' proposal regarding what patient populations would be included in the sample.

Response: Adverse Drug Events—Hyperglycemia is conditionally supported by the MAP. The MAP expressed concerns over the feasibility of using this measure in the Hospital IQR Program as it has been tested using data from the EHR. Some hospitals and health systems are able to use the results of these electronic measures to address adverse events at the point of care and to track improvement over time. The data elements are still under development.

Comment: Several commenters supported the adoption of the Hepatitis B Vaccine measure. A commenter recommended that further attention is given to high volume conditions and/or procedures, the goals of the three-part aim, and alignment between the Hospital IQR Program and other HHS programs.

Response: We thank the commenters for their support.

Comment: Several commenters supported the adoption of the Cesarean Section measure. One commenter believed that exclusive electronic reporting of this measure could ultimately reduce the burden of collection and increase the potential for timely feedback to all stakeholders on the ever important area of maternity care. Commenters also noted that the two leading obstetric professional societies, American College of Obstetricians and Gynecologists and Society for Maternal-Fetal Medicine, recently released a detailed set of consensus recommendations for safely reducing the rate of initial or primary cesarean sections, stating that this procedure is overused and that there are many safe ways to reduce the rate.

Response: We thank the commenters for their support.

We note that we received many public comments regarding other suggested future measures and policies addressing different operational aspects of the Hospital IQR Program such as public reporting and working with other stakeholders. We thank the commenters for their comments. Because we believe these comments are not within the scope of this current rulemaking, we are not addressing them in this final rule. However, we intend to consider all of these views for future rulemaking and Hospital IQR Program development.

9. Form, Manner, and Timing of Quality Data Submission

a. Background

Sections 1886(b)(3)(B)(viii)(I) and (II) of the Act state that the applicable percentage increase for FY 2007 and each subsequent fiscal year shall be reduced by 2.0 percentage points (or beginning with FY 2015, by one-quarter of such applicable percentage increase (determined without regard to sections 1886(b)(3)(B)(ix), (xi), or (xii) of the Act)) for any subsection (d) hospital that does not submit, to the Secretary in accordance with this clause and in a form and manner, and at a time, specified by the Secretary, data required to be submitted on measures selected under this clause with respect to such a fiscal year. We note that, in accordance with this section, the FY 2015 payment determination begins the first year that the Hospital IQR Program will reduce the applicable percentage increase by one-quarter of such applicable percentage increase. In order to participate in the Hospital IQR Program, hospitals must meet specific procedural requirements.

Hospitals choosing to participate in the Hospital IQR Program must also

meet specific data collection, submission, and validation requirements. For each Hospital IQR Program year, we require that hospitals submit data on each measure in accordance with the measure's specifications for a particular period of time. The data submission requirements, Specifications Manual, and submission deadlines are posted on the QualityNet Web site at: <http://www.QualityNet.org/>. Hospitals submit quality data through the secure portion of the QualityNet Web site. There are safeguards in place in accordance with the HIPAA Security Rule to protect patient information submitted through this Web site.

In order to participate in the Hospital IQR Program, hospitals must meet specific procedural requirements. Hospitals choosing to participate in the Hospital IQR Program must also meet specific data collection, submission, and validation requirements.

b. Procedural Requirements for the FY 2017 Payment Determination and Subsequent Years

The Hospital IQR Program procedural requirements are codified in regulation at 42 CFR 412.140. We refer readers to the codified regulations for participation requirements, as further explained by the FY 2014 IPPS/LTCH PPS final rule (78 FR 50810 through 50811).

c. Data Submission Requirements for Chart-Abstracted Measures

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51640 through 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53536 through 53537), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50811) for details on the Hospital IQR Program data submission requirements for chart-abstracted measures.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28245) we did not propose any changes to data submission requirements for chart-abstracted measures.

d. Alignment of the Medicare EHR Incentive Program Reporting and Submission Timelines for Clinical Quality Measures with Hospital IQR Program Reporting and Submission Timelines

The Hospital IQR Program and the Medicare EHR Incentive Program have different reporting and submission periods for electronic clinical quality measures, with hospitals reporting data to the Hospital IQR Program based on calendar year deadlines while the Medicare EHR Incentive Program is based on fiscal year deadlines. In

addition, the Hospital IQR Program generally requires quarterly reporting and submission of data for chart-abstracted measures while the Medicare EHR Incentive Program requires annual submission of clinical process of care measure data.

As a result of the different and incongruent Hospital IQR and Medicare EHR Incentive Programs' schedules, hospitals reporting and submitting measure data to both programs would have to do so multiple times in a calendar year. This discrepancy may create confusion and additional burden for hospitals attempting to report data to both programs. To alleviate this possible confusion and reduce provider burden, beginning with the CY 2015 reporting period/FY 2017 payment determination, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28245 through 28246) we proposed to align incrementally the data reporting and submission periods for clinical quality measures for the Medicare EHR Incentive Program and the Hospital IQR Program on a calendar year basis.

This proposed change also would also move us closer to meeting our commitment to align quality measurement and reporting among our programs, as we described in the Electronic Health Record Incentive Program—Stage 2 final rule (77 FR 54049 through 54051), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53502 and 53534), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50811 through 50819 and 78 FR 50903 through 50904).

In order to ease the transition and prevent the delay of Medicare EHR Incentive Program payments, we proposed to shift incrementally the Medicare EHR Incentive Program reporting and submission periods for clinical quality measures to align with that of the Hospital IQR Program. We refer readers to section IX.D.2. of the preamble of this final rule for a detailed discussion of this proposal in the Medicare EHR Incentive Program. Specifically, for the CYs 2015 and 2016, we proposed in the Medicare EHR Incentive Program to require CY reporting, but only for the first three calendar quarters (that is, January through September). This proposal will allow us to align data reporting and submission periods without shifting the Medicare EHR incentive payments.

We note that for the Hospital IQR Program, for the FY 2017 payment determination, we proposed to change the November 30th submission deadline to require data submission within approximately 60 days of the close of a quarter. We refer readers to section

IX.A.7.h.(1) of the preamble of this final rule where this proposal is discussed. We also proposed this change in the Medicare EHR Incentive Program in order to align the two programs. We

refer readers to section IX.D.2. of the preamble of this final rule where this proposal is discussed. In summary, we proposed to align the reporting and submission periods of the Medicare

EHR Incentive Program clinical quality measures with that of the Hospital IQR Program for CYs 2015 and 2016.

PROPOSED REPORTING TIMELINE TO ALIGN THE MEDICARE EHR INCENTIVE PROGRAM WITH PROPOSED HOSPITAL IQR PROGRAM SUBMISSION PERIODS

	CY	Medicare EHR incentive program reporting requirements*	Hospital IQR program reporting requirements	Submission period**
2015 Reporting Period	Q1 ...	January 1–March 31, 2015	January 1–March 31, 2015	Data must be submitted by May 30, 2015.
	Q2 ...	April 1–June 30, 2015	April 1–June 30, 2015	Data must be submitted by August 30, 2015.
	Q3 ...	July 1–September 30, 2015.	July 1–September 30, 2015.	Data must be submitted by November 30, 2015.
	Q4 ...	N/A for Medicare EHR Incentive Program.	October 1–December 31, 2015.	For Hospital IQR Program, Data must be submitted by February 28, 2016.
2016 Reporting Period	Q1 ...	January 1–March 31, 2016	January 1–March 31, 2016	Data must be submitted by May 30, 2016.
	Q2 ...	April 1–June 30, 2016	April 1–June 30, 2016	Data must be submitted by August 30, 2016.
	Q3 ...	July 1–September 30, 2016.	July 1–September 30, 2016.	Data must be submitted by November 30, 2016.
	Q4 ...	N/A for Medicare EHR Incentive Program.	October 1–December 31, 2016.	For Hospital IQR Program, Data must be submitted by February 28, 2017.

* Calendar year alignment and quarterly reporting for 2015 and 2016 would apply for electronically reported CQM data only.

** Proposed Medicare EHR Incentive Program and Hospital IQR submission period would allow data submission on an ongoing basis starting January 2 of the reporting year, and ending approximately 60 days after the end of the quarter.

We invited public comments on these proposals.

Comment: Many commenters supported CMS’ proposal to align the Hospital IQR Program and the Medicare EHR Incentive Program. One commenter supported efforts aligning the Hospital IQR Program and the EHR Incentive Program and supported using the Hospital IQR Program as the foundation of the alignment.

Response: We thank these commenters for their support.

Comment: One commenter recommended that additional steps be taken to fully align the Hospital IQR and Medicare EHR Incentive Programs, and stated that it is currently not possible for a hospital to satisfy the meaningful use requirements with mandatory Hospital IQR Program measures only. This commenter observed that the Stage 2 list of electronic clinical measures includes some that have not been adopted for the Hospital IQR Program, and also some Hospital IQR Program measures that have been found to be “topped-out.” Two measures that previously were removed from the Hospital IQR Program remain as electronic clinical quality measures for demonstrating meaningful use of EHRs. The commenter recommended that CMS work to ensure hospitals could meet the meaningful use requirements by electronically reporting

some mandatory Hospital IQR Program measures, without having to report additional measures that have not been determined to have value for public reporting or quality improvement purposes under the Hospital IQR Program.

Response: We are actively taking steps to align the list of available measures between the Hospital IQR and Medicare EHR Incentive Programs by proposing to adopt six new and retain 10 topped-out measures as electronic clinical quality measures (79 FR 28220 through 28242) so that 28 of the 29 Stage 2 measures are adopted by the Hospital IQR Program. As previously noted, ED–3—Median time from ED arrival to ED departure for discharged ED patients, is an outpatient quality measure. While 12 of the Stage 2 measures are required Hospital IQR Program measures, we believe that allowing hospitals the flexibility to select other measures that best fit their patient population is a benefit to the hospitals. This flexibility was requested by commenters in response to our restriction to 16 specific measures in CY 2014 (78 FR 50814–50815). As proposed and as finalized in this rule, hospitals can meet some meaningful use requirements by electronically reporting some mandatory Hospital IQR Program measures. We intend to continue working with hospitals to ensure that

they are able to meet meaningful use requirements by reporting Hospital IQR Program measures electronically. We respectfully disagree with the commenter’s implication that only the mandatory Hospital IQR Program measures have value. We believe that allowing hospitals the flexibility to choose which additional measures to report is a benefit to the hospital and their patient population. We refer readers to our response in section IX.A.2.a. of the preamble of this final rule regarding why we are retaining “topped-out” measures.

Comment: Some commenters opposed or expressed concerns with CMS’ alignment proposal. One commenter stated that it is premature to require quarterly reporting of electronic clinical quality measures because of the implementation delays with 2014 CEHRT for meaningful use and the anticipated changes in the attestation requirements for meaningful use in 2014.

Response: We understand the commenters’ concerns. We are not finalizing quarterly reporting of electronic clinical quality measures at this time. We refer readers to section IX.A.2.h.(1) of the preamble of this final rule where this is discussed in more detail.

Comment: One commenter appreciated CMS' goal to align the Hospital IQR Program and the Medicare EHR Incentive Program, but noted several concerns. Specifically, the commenter is concerned about the validity of the electronic clinical quality measures, noting that hospitals that are performing well under the chart-abstracted versions of measures are not the same hospitals that achieve high performance levels under the electronic clinical quality measure versions. Because of this concern, the commenter urged CMS to develop a methodology for validation and argues that chart-abstracted versions of measures should never be compared to electronic clinical quality measure versions.

Response: We are unaware of data showing that hospitals that are performing well under the chart-abstracted versions of measures are not the same hospitals that achieve high performance levels under the electronic clinical quality measure versions. To date, we have only heard anecdotal comments about actual performance level differences between the two modes of collection. We do not have sufficient data to be able to confirm these comments. We are conducting a small validation pilot and have proposed to conduct a larger pilot in CY 2015. More discussion of the electronic clinical quality measure validation pilot can be found in section IX.A.11.e. of the preamble of this final rule.

Comment: One commenter is concerned that CMS' data systems may not be prepared to routinely accept EHR-based measures.

Response: We would like to reassure the commenter that our data systems are prepared to accept EHR-based measures. The CMS database has been open to accept electronic clinical quality measure submissions since January 2, 2014.

Comment: One commenter was concerned that different deadlines (that is, for chart-abstracted measures versus electronic clinical quality measures) may lead to confusion and requested that CMS undertake a strong educational initiative using current educational resources for both programs and ensure that technical assistance is available for hospitals opting to submit data for both programs electronically.

Response: We routinely provide educational sessions and resources on the QualityNet Web site. After publication of the final rule, we will update the resources and offer additional educational sessions to assist reporting hospitals. We urge the commenter to sign up for our electronic mail distribution list available for

pertinent updates and announcements of upcoming educational sessions. Further, we have recorded sessions available on electronic clinical quality measures on our Web site at: <https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228773852046>. We also refer readers to our response in section IX.A.2.h.(1) of the preamble of this final rule regarding education and outreach to hospitals and vendors.

Comment: Another commenter expressed concern that the methods to encourage participation in the voluntary electronic reporting option and to align critical quality measure reporting in the Hospital IQR Program and the Medicare EHR Incentive Program undermine the goals of the Hospital IQR Program—namely, continuous hospital quality improvement. Rather than consider exceptions to Hospital IQR Program requirements, the commenters suggested that CMS leverage the data from the Medicare EHR Incentive Program for insight and development of a report on lessons learned to date from hospitals' experience with certified electronic health record technology (CEHRT), and their use for electronic clinical quality measures.

Response: We respectfully disagree with the commenter that our efforts to align reporting of electronic clinical quality measures between the Hospital IQR and Medicare EHR Incentive Programs undermine the goals of the Hospital IQR Program. We believe that clinical quality measure reporting, regardless of the mode of submission, will lead to continuous quality improvement.

We interpret the commenter's statement "consider exceptions to Hospital IQR Program requirements" and "CMS leverage the data from the Medicare EHR Incentive Program" to request that we not introduce an electronic voluntary reporting option for Hospital IQR. By allowing one submission to partially fulfill requirements for two programs, we believe we are alleviating the burden of reporting data to two programs. We disagree that leveraging data from the Medicare EHR Incentive Program would promote continuous quality improvement, since many hospitals have elected to attest results of their electronic clinical quality measures.

Comment: One commenter cautioned that its EHR vendor prioritizes complying with federal government requirements over fixing critical errors in its system that could affect patient safety.

Response: Patient safety is the top priority and we urge hospitals to work closely with their vendors to ensure patient safety as the highest priority.

Comment: One commenter encouraged CMS to more clearly state that references to submission timelines in its proposal to align the Hospital IQR Program and the Medicare EHR Incentive Program do not impact chart-abstracted measures. Another commenter asked CMS to clarify whether the submission deadline for the first quarter of CY 2015 is May 30 or May 31.

Response: Our proposal to align the Hospital IQR Program and the Medicare EHR Incentive Program does not affect chart-abstracted measures' submission deadlines. The alignment applies to electronic clinical quality measures only.

In addition, as stated in section IX.A.2.h.(1) of the preamble of this final rule above, we are finalizing a modified version of our proposal. We will not require quarterly reporting at this time for the electronic clinical quality measures. As a result, we also modified the submission deadline for electronic clinical quality measures, which instead will be November 30, 2015. Policies for electronic clinical quality measure reporting in CY 2016/FY 2018 payment determination and subsequent years will be made in future rulemaking.

Comment: One commenter recommended that CMS finalize the zero denominator and case threshold changes as proposed.

Response: We refer readers to sections IX.D.5. and IX.D.6. of the preamble of this final rule for the discussion of zero denominators and the case threshold exemption in the EHR Incentive Program. We note that while this policy was clarified in the EHR Incentive Program, it also applies to electronic reporting for the Hospital IQR Program.

After consideration of the public comments we received, we are finalizing our proposal to align the EHR Incentive Program with the Hospital IQR Program, with modifications. We proposed to align the reporting period and submission deadlines of the Medicare EHR Incentive Program clinical quality measures with that of the Hospital IQR Program for CY 2015. While we are finalizing our proposal to align the reporting period and submission deadline of the Medicare EHR Incentive Program with those of the Hospital IQR Program on the calendar year for clinical quality measures that are reported electronically, we are not finalizing our proposal to require quarterly submission

of clinical quality measure data in CY 2015.

Since we are also modifying our proposal in the Hospital IQR Program to finalize that hospitals can voluntarily submit one calendar year (CY) quarter's data for CY Q1 (January 1–March 31, 2015), CY 2 (April 1–June 30, 2015), or CY 3 (July 1–September 30) by November 30, 2015, we are also applying these modifications to the alignment with the Medicare EHR Incentive Program. As a result, we are not incrementally shifting the Medicare EHR Incentive Program reporting period and submission deadlines for clinical quality measures as proposed. We plan to continue to align reporting periods and submission deadlines in CY 2016 and subsequent years in future policy years. We refer readers to section IX.E.2. of the preamble of this final rule for a detailed discussion of the final policy in the Medicare EHR Incentive Program.

ED–1, ED–2, Stroke–4, Stroke–6, Stroke–8, VTE–1, VTE–2, VTE–3, VTE–5, VTE–6, AMI–7a, and PC–01 are measures required under the Hospital IQR Program and may be submitted as chart-abstracted or as electronic clinical quality measures. If a hospital chooses to submit one calendar quarter (CY 2015 Q1, Q2, or Q3) as an electronic clinical quality measure by November 30, 2015, a hospital does not need to also submit chart-abstracted data for that measure.

The chart below provides a summary of the finalized reporting periods and electronic submission deadlines for the FY 2017 Hospital IQR Program:

**FY 2017 HOSPITAL IQR PROGRAM
ELECTRONIC REPORTING PERIODS
AND SUBMISSION DEADLINES FOR
ELIGIBLE HOSPITALS**

Discharge reporting periods	Submission deadline
January 1, 2015– March 31, 2015.	November 30, 2015.
April 1, 2015–June 30, 2015.	November 30, 2015.
July 1, 2015–Sep- tember 30, 2015.	November 30, 2015.
October 1, 2015–De- cember 31, 2015.	Not Applicable.

e. Sampling and Case Thresholds for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (75 FR 50230), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50819) for details on our sampling and case thresholds for the FY 2016

payment determination and subsequent years.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28246) we did not propose any changes to sampling or case thresholds.

f. HCAHPS Requirements for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50220), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51641 through 51643), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53537 through 53538), the FY 2014 IPPS/LTCH PPS final rule and (78 FR 50819 through 50820) for details on HCAHPS requirements.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28246) we did not propose any changes to HCAHPS requirements.

Hospitals and HCAHPS survey vendors should, however, regularly check the official HCAHPS Web site at <http://www.hcahpsonline.org> for new information and program updates regarding the HCAHPS Survey, its administration, oversight and data adjustments.

g. Data Submission Requirements for Structural Measures for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51643 through 51644), and the FY 2013 IPPS/LTCH PPS final rule (77 FR 53538 through 53539) for details on the data submission requirements for structural measures.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28246) we did not propose any changes to data submission requirements for structural measures.

h. Data Submission and Reporting Requirements for Healthcare-Associated Infection (HAI) Measures Reported via NHSN

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51631 through 51633; 51644 through 51645), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50820 through 50822) for details on the data submission and reporting requirements for healthcare-associated infection (HAI) measures reported via the CDC's National Healthcare Support Network (NHSN) Web site. The data submission deadlines are posted on the QualityNet Web site at: <http://www.QualityNet.org/>.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28246) we did not

propose any changes to data submission and reporting requirements for healthcare-associated infection measures reported via the NHSN.

10. Submission and Access of HAI Measures Data Through the CDC's NHSN Web Site

As finalized in the FY 2014 Hospital IPPS/LTCH PPS final rule (78 FR 50805 through 50807), the Hospital IQR Program requires hospitals to report data via the CDC's NHSN Web site for the following HAI measures: (1) CLABSI (NQF #0139); (2) CAUTI (NQF #0138); (3) SSI following colon surgery; (4) SSI following abdominal hysterectomy; (5) laboratory-identified MRSA bacteremia infection (NQF #1716); (6) laboratory-identified *Clostridium difficile* infection (NQF #1717); and, (7) healthcare personnel vaccination (NQF #0413). In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51644 through 51645), we adopted the data submission and reporting standard procedures that have been set forth by CDC for NHSN participation in general and for submission of specific HAI measures to NHSN.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28246 through 28247) for the FY 2016 payment determination and subsequent years, for the Hospital IQR Program, we clarified our data reporting and submission requirements for the above stated HAI measures. By adopting the data reporting and submission procedures set forth by the CDC, we intended that hospitals report, through the existing NHSN process, any and all data elements at the patient-level that are designated as "required" on NHSN forms (such as, the "primary bloodstream infection" or "annual facility survey" forms). Some examples of these "required" patient-level data elements include: patient identifier, date of birth, and gender; detailed event data, such as specific symptoms identified to meet case definitions and laboratory results; and risk factor data used to calculate the hospital-level measures. Hospitals may find a comprehensive list of required forms and data elements on the NHSN Web site (<http://www.cdc.gov/nhsn/acute-care-hospital/index.html>).

We further clarified that the NHSN required data collected by the CDC will be shared with CMS for Hospital IQR Program and Hospital VBP Program administration, monitoring and evaluation activities, including validation, appeals review, program impact evaluation, and development of quality measure specifications. We routinely use submitted quality measure

data for these types of program administration, monitoring and evaluation activities.

In addition, we proposed that we will also receive access from the CDC to voluntarily submitted name and race identifying information with respect to Hospital IQR Program required measures. These data will also be used for Hospital IQR Program and Hospital VBP Program administration, monitoring and evaluation activities, including validation, appeals review, program impact evaluation, and development of quality measure specifications. More specifically, for Hospital IQR Program validation, we proposed to use these data to ensure accurate matching between patient charts submitted for HAI validation that cannot be matched to NHSN using Medicare beneficiary identification numbers. We also proposed to use these data as appropriate for program evaluation.

We invited public comment on this proposal.

Comment: Several commenters strongly supported the proposal for CMS to access NHSN patient-, system-, and aggregate-level data. Commenters stated that this access is necessary to evaluate the impact of the Hospital VBP and Hospital IQR Programs as required by the Affordable Care Act, as well as the HAC Reduction Program. Commenters stated that this information is also critical to inform quality improvement efforts and to ensure accurate data collection and will also increase the sampling power of the Hospital IQR Program validation process. A commenter also noted its trust that CMS will ensure data privacy and abide by all security and privacy requirements, as CMS has historically been an excellent steward to ensure data privacy and security in its quality programs.

Response: We thank the commenters for the support.

Comment: Many commenters opposed the proposed NHSN data access policy for validation purposes. Many of these commenters expressed the opinion that access to patient-level data was not needed for validation because CMS already has a validation process.

Response: We would like to clarify why we need access to these NHSN data for validation. Although commenters correctly point out that we already have an HAI validation process, the current validation process is inefficient, does not provide timely information for the validation-related appeals process, and does not give hospitals all the information that would be useful to them.

One example of how validation could improve in efficiency is by providing the CMS' clinical data abstraction center (CDAC) contractor with access to data regarding which symptoms a patient experienced in order to meet the requirements for reporting a particular type of HAI event. In validating a single quarter of 2013 HAI data, CDAC encountered more than 30 episodes-of-care in which the hospital reported an event to NHSN and for which CDAC did not find a reportable infection during its medical record review. In these situations, CDAC employs quality controls to ensure that its staff have not overlooked or misinterpreted important documentation. However, HAI records selected for validation are on average more than 1,000 pages in length, with maximum page length above 60,000 pages. Having information about which symptoms CDAC should be looking for and on what dates catheters were inserted would greatly assist the CDAC in ensuring that a properly documented and reported HAI was not overlooked, and that the hospital was credited appropriately. Without this data access, we rely on hospitals to request an educational review or appeal cases to identify any potential CDAC errors, thereby increasing inefficiencies and burden for hospitals.

Another reason we need direct access to patient-level NHSN data for Hospital IQR Program administration is to support the processing of validation-related appeals. A hospital may request from CMS at any time an educational review to better understand whether or not CDAC reached a correct conclusion during validation. However, a hospital which fails to meet Hospital IQR Program validation requirements has 30 days to appeal after this determination. Hospitals that fail to meet any Hospital IQR Program requirement, including validation, are ineligible for the Hospital VBP Program, and therefore, would not contribute to Hospital VBP Program performance standards. Because of the tight timeframe between the Hospital IQR Program payment determination and when Hospital VBP Program benchmarks must be posted, we must process Hospital IQR Program appeals very quickly, sometimes in 48 hours or less. Taking time at precisely this juncture to verify with CDC what was submitted to NHSN as the basis for the appeal is inefficient, and threatens timely payment determinations.

Lastly, under our current validation process, we are unable to provide patient-level data element information of hospital reported HAI data for mismatched validation cases. We believe that our proposal is in part

responsive to the commenters in previous rules; those comments indicated that we needed to provide hospitals with more detailed HAI validation educational feedback (78 FR 50826 through 50827). We believe that this patient-level information is necessary to provide specific and actionable feedback to hospitals to report more accurate HAI data for CMS programs. For example, if CDAC can explain to a hospital that a patient did have the infection symptoms that the hospital reported to NHSN, but that the symptoms (and therefore, the infection) first occurred too long after a catheter was removed, the hospital would have a clearer explanation of why an infection was reported incorrectly. Moreover, by accessing NHSN data at the patient-level for every required reporting element, CDAC can review the accuracy of data reporting to NHSN at the data-element level and provide all of this feedback to hospitals. When CDAC validates clinical process-of-care measures, CDAC reviews and provides feedback to hospitals for every data element submitted to the Hospital IQR Program. CDAC is unable to provide a comparable level of feedback to hospitals for HAI measures, because it does not have access to patient-level data at the element-level.

Comment: Many commenters stated that the proposal to access patient name and race submitted on a voluntary basis as particularly objectionable. Some commenters questioned why patient name and race were needed for validation. A few commenters noted that this patient identifiable information would not be particularly useful because it is not available for every patient. A few commenters wanted to know why CMS needed data on non-Medicare beneficiaries. A few commenters stated that CMS should observe whether the new requirement to link data using Medicare Beneficiary ID for validation is helpful before instituting new policies. One commenter asked how frequently CMS failed to match validation cases on Medicare Beneficiary ID number.

Response: Our past validation experience indicates that accessing patient race and name data for validation will allow CDAC to match validation cases that lack Medicare beneficiary numbers with a higher level of confidence. If we cannot access these data, a hospital might have to request an educational review or appeal to determine that we made an inappropriate mismatch. We believe that this approach is much less efficient and more burdensome to hospitals than using the patient name and race data

from NHSN where available to confirm the match. The policy requiring hospitals to report Medicare beneficiary identification numbers to NHSN is first effective for HAIs occurring in patients discharged in quarter 3, 2014 (78 FR 50822). We do not agree with commenters who indicated that we should wait until we implement this policy because of the number of patients with HAIs who are not receiving Medicare who will be impacted. We anticipate that there will be many cases that lack Medicare beneficiary identification numbers, because a large percentage of the 5 HAIs reportable to NHSN as part of the Hospital IQR Program occur among patients under 65 years of age. For infections reported in 2013, the percentage of events reported for patients under 65 years of age ranged from a low of 44 percent for laboratory-identified *Clostridium difficile* (CDI) events to a high of 64 percent for surgical site infections (SSI). In these instances without Medicare beneficiary numbers, it would be helpful to have other data, such as name and race where available, in order to more effectively match validation cases.

We agree that patient race and name data is not available for every patient. We believe that this information would be more useful if it were required and not voluntary. We will discuss this with CDC and take the suggestion under consideration for future rulemaking, considering both the burden of added requirements as well as the potential benefits. For the present, we believe that the available patient race and name data will greatly assist in identification of medical records required for CMS validation submission, and CMS' matching of validation medical records to NHSN reported infection events. Regarding data for non-Medicare beneficiaries, we remind commenters that the Hospital IQR Program requires quality data that encompasses all-payer patients (both Medicare beneficiaries and those not participating in Medicare). Therefore, data from all patients must be validated.

Comment: Some commenters asked CMS to clarify: (1) how it intends to use patient-level data for program evaluation, and (2) why aggregate-level data cannot be used for this purpose. Some commenters stated that CMS should only use aggregate-level data for program evaluation. Several commenters observed that patient name and race would have limited usefulness because these data are submitted voluntarily and are not available for all submitted cases. One commenter wanted to know what CMS meant by the

phrase "as appropriate for program evaluation."

Response: We are collecting data from NHSN using our authority to collect these data for validation purposes. For purposes of Hospital IQR Program data program administration, including validation and appeals, like all data we collect for that purpose, we intend to use that data more broadly to meet goals of the Hospital IQR and VBP Programs including measure and program evaluation. Measure and program evaluation are two key components of administering a public reporting program. We intend to use patient-level data for program evaluation to assess the impact of quality measures used in the Hospital IQR and Hospital VBP Programs and determine whether either program may have unintended consequences as we already do with other non-NHSN measures data.

Aggregate-level data have limited effectiveness for program evaluation, because they do not have a strong predictive power nor allow for multivariate statistical modeling. On the other hand, patient-level data provides us with much greater predictive power and the capability to perform multivariate statistical modeling through matching this data across all quality measures, including HAI measures. Such analyses provide additional information about the validity and impact of individual measures included in the Hospital IQR Program. For example, information from the same group of patients must be matched at the individual patient-level for the SCIP process-of-care antibiotic administration, PSI-90 component claims, and HAI measures to assess correlation among measure results. Such analyses provide additional information about the validity of individual measures included in the Hospital IQR Program, and also assist with assessing the relative impact of different types of measures on the distribution of Hospital VBP Program performance scores. These types of analyses provide actionable data to determine whether either program may have unintended consequences, including disproportionately penalizing hospitals serving the poor and vulnerable.

Patient level data on race and Hispanic ethnicity are particularly important for evaluating any potential unintended consequences related to poor and vulnerable populations. Aggregate level analyses have limited predictive power and lack the level of detail needed to evaluate whether program initiatives have had unintended consequences in contributing to disparities both within

and across hospitals as well as disparities associated with specific populations. We intend to use patient-level information, as well as race and Hispanic origin information where available, to improve the accuracy of categorizing safety net hospitals in our impact analysis. However, we agree with the concerns of some of the commenters that the patient race and ethnicity data may be of limited usefulness because it may be reported by too few hospitals. This is why we described the use of these voluntarily reported data "as appropriate". In the routine course of analysis, we intend to evaluate the level of completeness of the voluntarily submitted patient race and Hispanic ethnicity data, and its appropriateness for the specific analyses designed to evaluate the impact of the HVBP Program on safety net hospitals.

Comment: Several commenters expressed concern about specific uses for patient-level access to NHSN data. A few indicated that CMS should not access patient-level NHSN data to produce standardized infection ratios (SIRs) to post on *Hospital Compare*. CDC currently performs this role and these commenters believe that CDC should continue to do so. One commenter expressed concern that CMS would misuse or misinterpret data to reduce hospital payment rates.

Response: We agree with commenters that CDC effectively produces SIRs and should continue to provide these data to us to post on the *Hospital Compare* Web site, and that it would be duplicative for us to perform this work. We do not intend to perform these analyses and will not use the data in ways that reduce an individual hospital's payment rates.

Comment: Several commenters viewed CDC as housing the only "credible" experts on NHSN data collection and analysis, such that if CMS used these data to produce trends, evaluate and update NHSN measure specifications, or conduct data mining activities, the results might be incorrect, misleading, or not scientifically valid.

Response: We recognize that CDC is the measure steward for NHSN data, and uniquely understands the intricacies of NHSN data collection. We do not intend to independently update NHSN measure specifications and would only make changes in response to CDC updates. Such changes would be subject to our substantive and nonsubstantive changes policy (see 77 FR 53504). We also would not conduct data mining activities. The measure steward, CDC, is responsible for updating measure specifications. We would invite CDC to provide feedback on any NHSN quality trend data we

produce for Hospital IQR or Hospital VBP Program evaluation purposes.

Comment: Several commenters viewed any analyses that CMS might conduct as potentially duplicative with CDC efforts and therefore, wasteful of resources. One commenter asserted that CDC should conduct validation instead of CMS.

Response: Our intention to access and use NHSN data does not constitute redundant or duplicative efforts with the CDC. CDC produces national and hospital level HAI SIRs for NHSN, and also provides CMS with hospital-specific data for reporting on *Hospital Compare*. We intend to continue using CDC reported HAI SIRs.

Further, the CDC does not validate these measures for purposes of the Hospital IQR Program. CMS has both the authority and the responsibility to conduct validation activities under section 1886(b)(3)(B)(viii)(XI) of the Act. We are statutorily responsible with auditing a number of hospitals to ensure the validity of the reporting program. Our validation process provides hospitals with a single standardized national process and provides hospitals in the validation sample with actionable and specific patient-level, confidential feedback on mismatched patient-level validation results in order to improve accuracy.

We might consider contracting with CDC to conduct such validation in future years if we determine that CDC is interested in conducting validation for the Hospital IQR Program and could do so more efficiently than CMS. However, any validation process that CMS would undertake would have to be standardized nationally and employ quality assurance standards such as assessing inter-abstractor reliability. CDC's current validation strategy, which involves providing technical assistance to states conducting validation, is not nationally standardized.¹¹⁶ It therefore does not meet CMS' needs to ensure accuracy of HAI measure data using a standardized and nationwide process.

Comment: Many commenters questioned whether CMS had rights to the data, and stated that CMS access would violate the confidentiality agreement between hospitals and NHSN, or indicated that the data being required and accessed exceeded those needed to measure performance as posted on *Hospital Compare*. Several commenters indicated that CMS should justify its need for specific data

elements, arguing that CMS should require and access the minimum data needed to meet its goals.

Response: We believe that our responsibility encompasses more than merely measuring quality performance. As described above in this section, we have both the authority and the responsibility to conduct validation of the data for the Hospital IQR Program. Furthermore, we wish to clarify that this policy does not constitute an expansion of reporting requirements, because we would access data that hospitals are already required to submit to meet Hospital IQR Program requirements.

In addition, our policy to access data required by the Hospital IQR Program also does not violate the confidentiality agreement between facilities and the CDC. The confidentiality agreement signed by facilities specifically indicates that one purpose for the data submitted to NHSN is to "enable healthcare facilities to report HAI and prevention practice adherence data via NHSN to the U.S. Centers for Medicare and Medicaid Services (CMS) in fulfillment of CMS's quality measurement reporting requirements for those data." We would only be accessing data reported to fulfill Hospital IQR Program requirements, and therefore, would not violate the confidentiality agreement.

We agree with commenters that data collection requirements should be kept to the minimum necessary to meet quality measurement goals, and that each data element collected should be justified.

Using our authority and responsibility to access data needed to administer the Hospital IQR Program including by performing validation and appeals, we intend to access and store only the minimum data for any of the particular analysis of the types described above. However, given the varied analytical requirements for validation and appeals, and the frequency with which CDC makes small changes are made to NHSN specifications, we believe it would be impractical to provide a data element by data element rationale in a regulation.

Comment: Many commenters expressed concerns about security for this highly sensitive and confidential data. Many commenters wanted to know whether CMS or its contractors would access the data, and how CMS would prevent inadvertent disclosures or privacy breaches. One commenter specifically wanted to know how the data would be transferred and how long it would be stored.

Response: It is our intention that our staff as well as contractors would request access to data submitted via the NHSN for the purposes of administering

the Hospital IQR Program. In accessing data submitted via the NHSN, we would uphold the same privacy and security standards we use for other quality measures data submitted directly to us. For example, we would comply with all applicable requirements of the Health Insurance Portability and Accountability Act of 1996 (HIPAA) Privacy and Security Rules to safeguard and limit the use and disclosure of the information we access and obtain through the NHSN, as well as require through HIPAA business associate agreements that our contractors do the same.

We have several options for securely transferring data. For example, the Secure Transfer Protocol on QualityNet has secure transfer capabilities that ensure encryption of both the data and the transmission process. We will collaborate closely with CDC to ensure that we minimize the number of requests made for data. We will store data according to the CMS Center for Clinical Standards and Quality standard operating procedure for retention of records, which calls for retention of data for 10 years.

Comment: A few of the commenters opposing CMS' proposed data access policy urged CMS to work with CDC to support activities that increase accuracy through education, validation, and widespread adoption of electronic health records with "infection decision and support software."

Response: As described above and further below, we conduct data validation and would like to do more to educate hospitals about data accuracy. This would require better access to NHSN data as proposed in this policy. We will consider the recommendation regarding infection decision and support software for future policy development in concert with our other efforts and incentives to promote EHR adoption.

After considering public comments we received, we are finalizing the policy to access NHSN data as proposed.

11. Modifications to the Existing Processes for Validation of Chart-abstracted Hospital IQR Program Data

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539 through 53553), we finalized the processes and procedures for validation of chart-abstracted measures in the Hospital IQR Program for the FY 2015 payment determination and subsequent years; this rule also contained a comprehensive summary of all procedures finalized in previous years and still in effect. Several modifications to these processes were finalized for the FY 2016 and FY 2017

¹¹⁶ National Healthcare Safety Network (NHSN) Validation Guidance and Toolkit 2012. Validation for Central Line-Associated Bloodstream Infection (CLABSI) in ICUS. <http://www.cdc.gov/nhsn/toolkit/validation-clabsi/>, last accessed 7/29/2014.

payment determinations in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50835). In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28219) for the FY 2017 payment determination and subsequent years, we proposed additional modifications to these processes. Proposed changes fall into the following categories: (a) Eligibility criteria for hospitals selected for validation; (b) number of charts to be submitted per hospital for validation; (c) combining scores for HAI and clinical process-of-care measures; (d) processes to submit medical records for chart-abstracted measures; and (e) plans to validate electronic clinical quality measure data.

a. Eligibility Criteria for Hospitals Selected for Validation

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50833 through 50834), for the FY 2016 payment determination and subsequent years, we finalized our process to draw a random sample of 400 hospitals and an additional sample of up to 200 hospitals meeting specific targeting criteria for purposes of validation. For the FY 2017 payment determination and subsequent years, we proposed one minor change to this process. In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50227), we defined hospitals eligible for validation as the subset of subsection (d) hospitals that successfully submitted “at least one case for the third calendar quarter of the year two years prior to the year to which validation applies.”

For the FY 2017 payment determination and subsequent years, we proposed to change the definition of validation-eligible hospitals to be the subset of subsection (d) hospitals that successfully submitted at least one case to the Hospital IQR Clinical Data Warehouse during the quarter containing the most recently available data. The quarter containing the most recently available data will be defined based on when the random sample is drawn. For example, for the FY 2017 payment determination, we intend to draw this sample in November or December of 2014. The second quarter (Q2) of 2014 ends in June 2014, but hospitals participating in the Hospital IQR Program may submit quality data from this quarter until November 15, 2014 (see www.qualitynet.org for submission deadlines). If CMS draws its sample early in November 2014, before all the second quarter hospital data are submitted and processed by the Clinical Data Warehouse, the “quarter containing the most recently available data” will be first quarter (Q1) of 2014. On the other hand, if CMS draws its

sample late November or early December 2014 after the second quarter 2014 hospital data are processed, the second quarter of 2014 will contain the most recently available data.

We proposed this change because, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50825), for the FY 2017 annual payment determination and subsequent years, we changed the timing of quarters for validation of HAI measures, as illustrated in the three graphs (78 FR 50824). To align with this change for HAI measures and to give hospitals more time to complete HAI validation template requirements once selected, we intend to draw the validation sample several months sooner than we have historically drawn it. Historically, we drew the sample early in each calendar year. This proposal provides us with greater flexibility for when we can sample hospital data and allows CMS to use the most recent data available to select hospitals.

We invited public comment on this proposal.

Comment: Several commenters supported CMS’ proposal to change the definition of validation-eligible hospitals because it allows more flexibility in the timing to draw the sample, allows alignment of the HAI and chart-abstracted validation timeframes, and provides hospitals with more time to submit HAI validation templates.

Response: We appreciate the commenters’ support.

After consideration of the public comments we received, we are finalizing this policy as proposed.

b. Number of Charts To Be Submitted per Hospital for Validation

(1) Background

In the sections that follow, we discuss our proposals to: (1) Change the number of charts hospitals must submit for validation; (2) change the measure-specific sample sizes for HAI validation; and (3) change the topic areas and sample design for clinical process of care measures. We proposed these changes because section 1886(o) of the Act requires the Hospital VBP Program to use a subset of Hospital IQR Program measures and there is a declining number of measures and chart-abstracted measure topic areas available to the Hospital VBP Program. Our proposals also will direct more resources to measures and topic areas that also overlap with the Hospital VBP Program. Finally, our proposals will ensure that all chart-abstracted measure topic areas containing required

measures within the Hospital IQR Program are included in validation. A more detailed rationale accompanies each proposal.

As described in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53539 through 53553), the Hospital IQR Program validates chart-abstracted data submitted to two different systems: clinical process-of-care data submitted to the Hospital IQR Program Clinical Data Warehouse and HAI data submitted to the NHSN. Different validation approaches are used for the data submitted to each of the systems. The process for selecting and validating HAI data was first introduced in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51646 through 51648) and has evolved annually in each successive IPPS/LTCH PPS rule. In contrast, validation of the clinical process of care measures, which involves separate samples for each topic area, has not substantively changed since it was first finalized for the FY 2012 payment determination in the FY 2010 IPPS/LTCH PPS final rule (74 FR 43884 through 43889).

(2) Number of Charts To Be Submitted for Validation

(A) Total Number of Charts Required for Validation

Our current policy requires hospitals to submit 96 charts for validation (60 charts for clinical process-of-care measures and 36 charts for HAIs) (78 FR 50825 through 50834). In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28248) for the FY 2017 payment determination and subsequent years, we proposed to require hospitals selected for Hospital IQR Program validation to submit 18 patient charts per quarter for a total of 72 charts per year. A sample size of 72 charts is statistically estimated to be the number of charts needed to determine whether an individual hospital clearly passed validation and to assess hospital performance across both types of measures (HAIs and clinical process-of-care) combined. As finalized in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53551), hospitals may fall into three validation categories: (1) Hospitals pass validation with a lower bound of the confidence interval greater than or equal to 75 percent; (2) hospitals fail validation with an upper bound for a hospital’s confidence interval lower than 75 percent; and (3) hospitals neither pass nor fail validation with a 90 percent confidence interval that includes values above and below 75 percent. Hospitals in the third category that neither pass nor fail validation receive their annual payment update,

but may be randomly sampled for inclusion in the targeted validation in the following year.

We estimate that a sample of 72 charts will be sufficient to estimate a reliability of 75 percent \pm 10 percent with 90 percent confidence, assuming a design effect no greater than 1.4. Historical data suggests that most hospitals in the Hospital IQR Program pass validation and validated data have a high level of accuracy. For example, for the FY 2013 payment determination, approximately 95 percent of hospitals validated had data reliability of 85 percent or higher. With a sample of 72 charts and an expected mean data reliability well above 85 percent, we should be able to identify most hospitals that pass validation. Of the remaining hospitals, we will use the same conservative approach to identify hospitals failing validation that we have used since the inception of the Hospital IQR Program.

Comment: Many commenters supported the decrease in the number of charts required for validation.

Response: We thank the commenters for their support.

Comment: Several commenters opposed CMS' proposed changes to the chart-abstracted data validation process. The commenters were concerned that hospitals were more likely to fail as a consequence of the policy. One commenter suggested a two-stage process, under which the initial sample size for clinical process of care charts would be small, but a hospital failing validation would be invited to submit additional charts. The validation score for the combined larger pool of charts then would be used for determining whether the hospital has failed validation. Since only a small number of hospitals fail validation, this would be an efficient strategy. Some commenters also said that hospitals needed more feedback on these chart-abstracted measures.

Response: We disagree that the proposed policy to decrease sample size will increase the likelihood that one or more individual hospitals will fail validation. As explained in the proposal above, a hospital fails validation when the upper bound for its two-tailed 90 percent confidence interval is less than 75 percent. For any hospital that submits data at a given level of reliability, the only two factors that would affect how likely the upper bound of the confidence interval is to be less than that reliability standard are (1) the level of reliability selected for the standard, and (2) the confidence level. We did not propose to change either the standard level of reliability (currently 75 percent) or the confidence level of the

upper bound (currently 90 percent) (77 FR 53551). Therefore, the likelihood that hospitals fail validation will not increase by decreasing sample size.

Currently, a high percentage of hospitals pass, and we anticipate that the same percentages of hospitals would continue to pass, but acknowledge that the width of the confidence interval would increase due to decreased sample size. As stated in our proposal, we anticipate that additional hospitals would be eligible for targeted selection for validation in the following year. This targeting process is quite similar to the recommendation made by the commenter. We will take into consideration for future rulemaking the remainder of the commenter's recommendations to combine scores across the first and second samples to produce a final passing or failing score.

We also appreciate that the commenters would like more data on these chart-abstracted, clinical process-of-care cases. However, our proposal reflects our best efforts to balance the cost and burden against the desire for more detailed feedback. Moreover, some of the measures that have been in the program for a long time are reported very accurately. For these measures, only minimal feedback is needed. We intend to summarize national validation results and provide educational training for hospitals to incorporate the lessons learned to address the most frequently occurring validation mismatches. We believe it would be wasteful to increase resources simply to verify the accuracy of the measures that are already being reported well.

After consideration of the public comments we received, we are finalizing our proposal to require hospitals selected for Hospital IQR Program validation to submit 18 patient charts per quarter for a total of 72 charts per year as proposed.

(B) Number of Charts Required for HAI and Clinical Process-of-Care Measures

As finalized in the FY 2014 IPPS/LTCH PPS final rule for the FY 2017 payment determination and future years, we require hospitals to submit 9 charts for HAI measures per quarter (78 FR 50831) and for the FY 2016 payment determination and future years, we require hospitals to submit 15 charts for clinical process-of-care measures per quarter for validation (78 FR 50830). In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28248) for the FY 2017 payment determination and subsequent years, we proposed that of the 18 charts proposed to be submitted per quarter (above), 10 charts would be submitted to validate HAI measures and 8 charts

would be submitted to validate clinical process-of-care measures. This would equal 72 charts per year with a mix of 40 HAI and 32 clinical process-of-care measure charts. We proposed to require more HAI charts than clinical process-of-care measure charts because HAI measures now, as proposed, have a greater impact on the Hospital VBP and the HAC Reduction Programs. Considering only the relative importance of HAIs and clinical process-of-care charts to the Hospital VBP Program, which is about 4 times as great, CMS might choose a ratio larger than 10 HAI charts for every 8 clinical process-of-care charts. However, we estimate that we spend about 4 times as much money per chart to validate HAIs as clinical process-of-care measures. Moreover, the clinical process-of-care measures are still a critical part of the Hospital IQR Program.

Therefore, we proposed this mix of 40 HAI and 32 clinical process of care charts per year because we believe it to be optimal after considering both the relative importance of the two types of charts to the Hospital IQR Program and related payment incentive programs and the relative cost of validation for the two types of charts.

We invited public comment on these proposals.

Comment: Many commenters supported this proposal. Most commenters supported the proposed mix of HAI and clinical process of care cases.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing our proposal that of the 18 charts proposed to be submitted per quarter, 10 charts would be submitted to validate HAI measures and 8 charts would be submitted to validate clinical process-of-care measures as proposed.

(3) HAI Validation: Measures and Measure-Specific Sample Sizes

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50828 through 50832) for the FY 2016 payment determination and subsequent years, we finalized the HAI measures to be included in validation, the processes for completing validation, and the specific sample sizes for each. To validate HAI data, hospitals must use Validation Templates to provide supplemental data to CMS. These supplemental data provide CMS with a set of candidate infections for each HAI. As finalized previously, hospitals sampled for validation will be randomly assigned to provide two Validation Templates, either: (1) CLABSI and CAUTI, or (2) MRSA and CDI.

Consequently, up to 300 hospitals will provide data on each of these 4 measures. We also previously finalized a decision to validate a smaller number of patient charts for SSI from twice as many hospitals because of the smaller number of candidate SSIs expected per hospital per quarter. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28248) we did not propose to change the process for validating individual measures.

However, as described above in this section, we proposed to increase the total HAI sample size by 1 chart per quarter for a total of 4 more charts per year. As explained below in this section, HAI measures have greater relative scoring weights in the Hospital VBP and HAC Reduction Programs than clinical process-of-care measures. Therefore, in order to align the Hospital IQR Program with the Hospital VBP and HAC Reduction Programs, we proposed to increase measure-specific sample size

targets to support this 1 chart per quarter increase in the Hospital IQR Program for the FY 2017 payment determination and subsequent years. Specifically, the total number of charts for CLABSI, CAUTI, MRSA, and CDI would increase by 1 from 15 to 16; and the total number of charts for SSI would increase by 2 from 6 to 8. The previously finalized and proposed specific sample-size charts are detailed in the tables below.

PREVIOUSLY FINALIZED NUMBER OF CHARTS REQUIRED FOR HAI VALIDATION FOR THE FY 2017 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

HAI	Number of hospitals	Number of quarters	Charts/quarter/hospital	Number of charts per hospital
Previously Finalized:				
Central line associated bloodstream infections (CLABSI)	Up to 300	4	3.75*	15
Catheter-associated urinary tract infections (CAUTI)	Up to 300	4	3.75*	15
MRSA	Up to 300	4	3.75*	15
CDI	Up to 300	4	3.75*	15
SSI	Up to 600	4	1.5*	6

*As previously finalized, within each hospital, quarterly targets are 3, 3, and 1 respectively for CLABSI, CAUTI, and SSI, and 3, 3, and 1 respectively for MRSA, CDI, and SSI. As finalized, 2 additional charts per quarter per hospital were to be randomized to meet the fractional case targets on average.

PROPOSED NUMBER OF CHARTS TO BE SUBMITTED FOR HAI VALIDATION FOR THE FY 2017 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

HAI	Number of hospitals	Number of quarters	Charts/quarter/hospital	Number of charts per hospital
Proposed:				
Central line associated bloodstream infections (CLABSI)	Up to 300	4	4	16
Catheter-associated urinary tract infections (CAUTI)	Up to 300	4	4	16
MRSA	Up to 300	4	4	16
CDI	Up to 300	4	4	16
SSI	Up to 600	4	2	8

We invited public comment on this proposal.

Comment: Many commenters expressed general support for validation provisions.

Response: We thank commenters for their support.

Comment: One commenter asked CMS to provide a rationale as to why CDAC assesses over-reporting of CLABSI and CAUTI events to NHSN. The commenter further wanted to know whether the purpose of validation is “to determine if the hospital knows how to read and understand the measure specifications and report accordingly or to assist the hospitals in identifying processes and procedures needed to reduce the rates and improve quality of care.”

Response: We have both the authority and the responsibility to conduct validation activities under section 1886(b)(3)(B)(viii)(XI) of the Act. We are

statutorily responsible with auditing a number of hospitals to ensure the accuracy of the reported data. This includes verifying the accuracy of data reported to NHSN. We look to confirm that all events that should have been reported were reported and all events that should not have been reported were not.

An important factor for increasing accuracy is ensuring that hospitals know how to read and understand measure specifications and report them accordingly. Because hospitals have a financial disincentive to erroneously report more infections than actually occurred in their hospitals, education and feedback about these types of errors can benefit hospitals.

After consideration of the public comments we received, we are finalizing our proposal to increase measure-specific sample size targets by 1 chart per quarter for the FY 2017

payment determination and subsequent years as proposed.

(4) Clinical Process of Care Measures: Topic Areas and Sample Design

As discussed above in this section, we proposed to sample 8 total patient charts for clinical process-of-care measures per quarter per hospital included in validation for the Hospital IQR Program for the FY 2017 payment determination and subsequent years. Those 8 charts are discussed in greater detail below.

As shown in the table below, two other (than immunization) Hospital IQR Program clinical process-of-care topic areas overlap with measures proposed for inclusion in the FY 2017 Hospital VBP Program. Regardless, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28249 through 28250) we did not propose to target those topic areas for the following reasons. One of these

measures, PC-01, Elective delivery prior to 39 completed weeks of gestation, is reported in aggregate. We cannot use the same mechanism to validate PC-01 as we use for measures reported at the patient level, but we hope to include it in our validation program in the future should reporting PC-01 as an electronic

clinical quality measure becomes a requirement. The second measure is AMI-7a. AMI-7a describes a process of care only performed in small rural hospitals. Of the approximately 3,300 hospitals participating in the Hospital IQR Program for the FY 2015 payment determination, only 113 submitted cases

for this measure in the first two quarters of CY 2013. Therefore, targeting hospitals that report the AMI-7a measure would unduly single out small rural hospitals that disproportionately report relatively high AMI-7a measure denominator counts for validation, and would be inequitable.

NUMBER OF CHART-ABSTRACTED CLINICAL PROCESS-OF-CARE MEASURES PER TOPIC AREA PROPOSED TO BE REPORTED IN THE HOSPITAL IQR PROGRAM IN THE CY 2014 AND CY 2015 DISCHARGE PERIODS*

Topic area	Number of required measures reported in CY 2014 for FY 2016 hospital IQR program	Number of required measures proposed for CY 2015 for FY 2017 hospital IQR program	Proposed to include in the hospital VBP program for FY 2017
Acute Myocardial Infarction (AMI)	2	1	Yes
Heart Failure (HF)	1	0	No
Pneumonia (PN)	1	0	No
Surgical Care Improvement Project (SCIP)	7	0	No
Venous thromboembolism (VTE)	6	5	No
Stroke (STK)	8	4	No
Emergency department throughput (ED)	2	2	No
Prevention—global immunization (IMM)	1	1	Yes
Sepsis	0	1	No
Perinatal Care (PC) **	1	1	Yes

* Data validated for the FY 2017 payment determination are Quarter 3, CY 2014, Quarter 4, CY 2014 Quarter 1, CY 2015 and Quarter 2, CY 2015 (78 FR 50824).

** Not reported at the patient level and not proposed for inclusion in validation.

For the FY 2017 payment determination and subsequent years, we proposed that the remaining 5 of the 8 clinical process-of-care charts be drawn from a systematic random sample of charts across all topic areas containing required measures other aside from those in the immunization and perinatal care topic areas. Across all hospitals included in validation, we believe this approach will ensure adequate numbers of patient charts are sampled for each topic area. Under this proposal, the pool of clinical process-of-care topic areas sampled for validation will include: STK, VTE, ED, and sepsis, as well as all other Hospital IQR Program-required topic areas such as AMI. We received many comments in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50807 through 50810; 78 FR 50825) regarding the importance of validating VTE, STK, and ED measures not included in validation for the FY 2016 payment determination. With this proposal, STK, VTE, ED, and sepsis measures would be included in the pool of clinical process-of-care measures for validation. The systematic random sample of topic areas from this pool would ensure that charts are sampled proportionate to the number of charts submitted for each topic. Thus, a sample of 20 charts per year would not be limited to only one topic area by random occurrence. In addition, across all hospitals included in validation, we believe this approach

will ensure adequate numbers of patient charts are sampled for each topic area.¹¹⁷

This proposal simultaneously simplifies the sampling plan for clinical process-of-care measures and gives us the flexibility of introducing or removing new topic areas into validation each year without having to redesign and propose a new sampling strategy. Using a random sample ensures that new topic areas are not excluded from the validation sample and we can more easily adjust as the topic areas change over the years. If this proposal is finalized, every time a new required topic area is added to the Hospital IQR Program, it will automatically be added to validation, and every time a topic is removed from the Hospital IQR Program, it will automatically be excluded from validation.

We invited public comment on these proposals.

Because of the close relationship between this proposal and the one immediately below, we provide one consolidated set of comments and final policy for the two sections together at the end of the next proposal.

¹¹⁷ We used data submitted to the Clinical Data Warehouse for the Hospital IQR Program from quarters 1 and 2 of 2013 to estimate that at least 400 cases per topic area would be validated per year (across all hospitals).

(5) Immunization Measure Validation

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28250) we proposed for the Hospital IQR Program for the FY 2017 payment determination and subsequent years, that 3 of the 8 total patient charts each quarter be targeted from the Immunization topic area. Currently, this topic area only includes the Immunization for Influenza (NQF #1659) measure, which overlaps with the Hospital VBP Program. We want to ensure that every hospital included in validation is validated for this topic area because of the overlap.

Comment: Many commenters supported the proposed policies to drop the measures that are topped-out from the validation process, and to divide the quarterly clinical process-of-care sample of 8 charts per hospital into a systematic random sample of 5 charts of all required topic areas other than immunization and perinatal care and a second sample of 3 immunization charts because of the importance of immunization to the Hospital VBP Program.

Response: We thank these commenters for their support.

Comment: A few commenters opposed the proposed policy to have 3 charts dedicated to immunization each quarter. These commenters observed that the IMM-2 measure only has meaning in the months of October through March, when hospitals are

expected to immunize patients. Therefore, in 2 of the 4 quarters, the only data element available to validate would be the patient's discharge date. Because discharge date is not a measure of care quality, validating this element alone would not yield meaningful results. These commenters requested further clarification on the proposed methodology. For example, the commenters asked if ED Throughput (EDT) would be validated on those charts instead. A commenter asked if CMS will validate EDT on every IMM chart, since hospitals use the same population to sample cases for both measures.

Response: We had not considered the seasonal nature of this measure when we proposed this policy, and that very limited data would be available for 2 of the 4 quarters included in validation for this measure. We agree that it would be wasteful to validate 6 cases per year (or 3 cases per quarter for 2 quarters) per hospital during a time period which we know will not contain any meaningful data.

We will address this concern by finalizing a modified version of our proposal as follows. We will not sample any records for the IMM topic area in the quarters when the IMM–2 measure does not yield meaningful data and increase the number of IMM records sampled in the quarters during which this measure does yield meaningful data. In other words, for quarters 4 and 1 for each hospital included in validation, we will draw a quarterly random sample of 5 charts for validation for the IMM topic area and a quarterly systematic random sample of 3 charts in the “other” category. In quarters 2 and 3, when the IMM–2 measure does not apply, we will draw a systematic random sample of 8 charts from the “other” category. As established in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50822 through 50825), the quarters to be included in validation for the FY 2017 payment determination are quarters 3 and 4, 2014 and quarters 1 and 2, 2015. In quarters 3 and 4, 2014, the topic areas that will be in the “other” stratum are: AMI, ED, HF, PN, SCIP, STK, and VTE. In quarters 1 and 2, 2015, the topic areas that will be in the “other” category are: AMI, ED, SCIP, STK, VTE, and sepsis.

We did not propose to validate the same cases for EDT and IMM, because EDT measures are not also finalized for the Hospital VBP Program. We disagree that making a one-for-one substitution of EDT for IMM cases would be an appropriate substitution, because unlike the IMM measure set, which contains a measure finalized in the Hospital VBP

Program, the EDT topic area is not inherently more important than any other required topic area in the Hospital IQR Program.

Comment: A few commenters expressed concern that CMS intended to drop some required measure sets from validation in its “other” systematic random sample, and/or suggested that CMS continue validating chart-abstracted data for all measures sets that are part of the Hospital IQR and Hospital VBP Programs. In addition, several commenters noted that the “other” sample would include the ED, STK, VTE, and sepsis measures in validation.

Response: We agree that all required measure sets should be included in validation to the extent that this is operationally feasible. In our weighting proposal below in this section, we identified the topic areas containing required measures other than Immunization and Perinatal Care only for quarters 1 and 2, in CY 2015 and inadvertently omitted HF, PN, and SCIP. However, we explicitly proposed to include a generic category so that we would not be required to revise our validation strategy every time a new topic area was added or deleted from the Hospital IQR Program measure set. Further, we included all CY 2014 Hospital IQR Program measures, including HF, PN, and SCIP, in our table above in this section, “Number of Chart-Abstracted Clinical Process-of-Care Measures per Topic Area Proposed to Be Reported in the Hospital IQR Program in the CY 2014 and CY 2015 discharge periods.” We thank the commenter for the opportunity to clarify this ambiguity that we had no intention of dropping these measures from validation, and that in fact, as reflected in the Table above in quarters 3 and 4, 2014, these topic areas would meet the definition of the “other” category because they contain Hospital IQR Program required measures other than immunization and perinatal care.

We appreciate the commenter's concern and wish to reiterate that we proposed to draw a systematic random sample of records from “topic areas containing required measures aside from those in the immunization and perinatal care topic areas.” For example, the HF, PN, and SCIP topic areas include measures that are required for the Hospital IQR Program in quarters 3 and 4, 2014, which are part of validation for the FY 2017 payment determination. Therefore, the HF, PN, and SCIP measure sets would fall into the “other” category in these quarters. However, these topics are not included in the Hospital IQR Program in 2015 because

they met “topped-out” criteria and therefore, they would not fall into the “other” category in quarters 1 and 2, 2015.

Comment: A few other commenters opposed validation of the VTE, STK, or sepsis measures. These commenters opposed validation of the VTE or STK measures because they believed that the measure specifications were of poor quality. These commenters wanted to know how CMS would ensure the clarity of TJC-developed specifications. Those commenters opposing validation of the sepsis measure observed that because it was new, hospitals were inexperienced with reporting it.

Response: Although we appreciate that the measure specifications could be clearer for the VTE and STK measures and that the sepsis measure is new, all of these measures are NQF-endorsed and are finalized in the Hospital IQR Program. Any lack of clarity regarding the meaning of VTE and STK measure specifications and the inexperience of hospitals with the sepsis measures appear to be good reasons to provide hospitals with education and feedback on the data quality of these measures.

We believe that the potential adverse impact to any individual hospital of validating measures in the VTE, STK, and Sepsis topic areas to be very small. In contrast, we believe that combining the validation data in these topic areas across all hospitals will provide the Hospital IQR Program and hospitals with rich information about the quality of data and needs for education and improved specifications.

After consideration of public comments we received, we are modifying both our proposals that the remaining 5 of the 8 clinical process-of-care charts be drawn from a systematic random sample of charts across all topic areas containing required measures aside from those in the immunization and perinatal care topic areas, and our proposal that 3 of the 8 total patient charts each quarter are to be targeted from the Immunization topic area. The modification takes into consideration the seasonal nature of the IMM measure set and is otherwise consistent with our proposals to sample 8 clinical process of care charts per quarter and to validate the IMM topic area separately from other topic areas because of its importance to the Hospital VBP Program.

We are finalizing a modified policy as follows. In quarters 4 and 1, for each hospital included in validation, we will draw a quarterly random sample of 5 charts for validation of the IMM topic area and a quarterly systematic random sample of 3 charts in the “other”

category. In quarters 2 and 3, for each hospital included in validation, we will draw a quarterly systematic random sample of 8 charts from all topic areas containing required measures other than immunization and perinatal care.

c. Combining Scores for HAI and Clinical Process of Care Topic Areas

We refer readers to the FY 2010 IPPS/LTCH PPS final rule (74 FR 43885) for the process of scoring clinical process-of-care measures, the FY 2014 IPPS/LTCH PPS final rule (78 FR 50832 through 50833) for the process of scoring HAI measures, and FY 2014 IPPS/LTCH PPS final rule (78 FR 50833) for the process to be used to compute the confidence interval. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28250) we did not propose any changes to those established policies.

However, for the FY 2017 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28250 through 28251) we proposed to modify our approach to weighting the scores for each of the HAI, IMM and “other topic areas” with two proposals.

In the FY 2011 IPPS/LTCH PPS final rule (75 FR 50226) and the FY 2013 IPPS/LTCH PPS final rule (77 FR 53548 through 53553), we established a process to combine the HAI and clinical process-of-care measure scores by weighting them proportionate to the number of measures included in validation. For example, in section IX.A.11.b.(4) of the preamble of this final rule, our proposal to validate all clinical process-of-care measures required by the Hospital IQR Program for the FY 2017 payment determination would yield 14 clinical process-of-care measures in validation in CY 2015 and only 5 HAI measures in validation.

Using the previously finalized weights, the clinical process of care measures score would contribute 14/19 and the HAI score would contribute only 5/19 to the combined score. This weighting does not reflect either the relative importance of HAIs to clinical process of care measures in the Hospital VBP Program nor the resources proposed to devote to their validation.

In sections IV.I. and IV.J. of the preamble of this final rule (the Hospital VBP Program and the HAC Reduction Program, respectively), we discuss our proposals to weight the patient safety domain (of which the HAI measures are part) more heavily in the Hospital VBP Program (20 percent for the patient safety domain versus 5 percent for the clinical process of care measures) and to use the HAI measures for the HAC Reduction Program.

In this section, we discuss our proposal to weight the HAI measures more heavily than the clinical process of care scores to align with these proposals in sections IV.I and IV.J. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28250 through 28251) for the FY 2017 payment determination and subsequent years, we proposed to weight the HAI score 66.7 percent (or 2/3) of the total score and the clinical process-of-care measures to weight 33.3 percent (or 1/3) of the total score. Further justification is provided after the second proposal.

In addition, we proposed to weight the IMM measures more heavily than other chart-abstracted clinical process-of-care measures validated in the Hospital IQR Program to align with the Hospital VBP Program. We are changing the process currently established to calculate the clinical process-of-care score, which is based on application of the formulas for the variance of a stratified single-stage cluster sample

with unequal cluster sizes and the variance of a proportion in a stratified random sample (see reference to Cochran’s “Sampling Techniques” at 75 FR 50226 and 78 FR 53550). We have previously applied this formula without consideration for the relative importance of different measures. When so applied, each topic area is weighted proportionate to the amount of data submitted to the warehouse for that topic area.

However, we proposed to modify the formulas as previously applied to weight the IMM topic area more heavily because of the overlap with the Hospital VBP Program. For the FY 2017 payment determination and subsequent years, we proposed to weight the “IMM” clinical topic area as 66.7 percent (2/3) and all other topic areas combined 33.3 percent (1/3) of the clinical process-of-care score. The weights reflect our policy preference to place greater relative weight on Hospital VBP Program included measures to better ensure accurate scores and payment. Emphasizing chart-abstracted clinical process of care measures validated in the Hospital IQR Program to align with the Hospital VBP Program will address the need to validate Hospital IQR Program data not currently included in Hospital VBP Program for public reporting and validation feedback to hospitals.

The table below shows the effect of the two proposals combined (the first to weight the HAI score more heavily than the clinical process-of-care score and the second to weight IMM data more heavily than other clinical process-of-care topic areas). The HAI topic area will count 3 times as much as the IMM topic area and 6 times as much as all other topic areas combined.

PROPOSED WEIGHTING TO COMBINE SCORES ACROSS CHART-ABSTRACTED TOPIC AREAS INCLUDED IN VALIDATION FOR THE FY 2017 PAYMENT DETERMINATION AND SUBSEQUENT YEARS

Topic Area	Weight percent
Healthcare-associated infection (HAI)	66.7
Immunization (IMM)	22.2
Other (all clinical process of care topic areas containing required measures other than IMM and Perinatal Care)	11.1
Total	100

Previously, the clinical process-of-care measures accounted for 20 percent of the Hospital VBP Program score, whereas the HAI measures, a subset of the outcome measures, weighted 30 percent (FR 53605 through 53606). The proposed relative weights for the HAI (66 percent) and IMM (22 percent) topic

areas better reflect the strong emphasis we have proposed for the HAI measures.

These proposals will require adjustments to the formulas applied to compute the confidence intervals. As we have done in the past, we intend to post the specific formulas used to compute the confidence interval on the

QualityNet Web site at least one year prior to final computation (<https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPPage%2FQnetTier2&cid=1138115987129>). These formulas will continue to account appropriately for the manner in which

patient charts were sampled and data were abstracted.

We invited public comment on these proposals.

Comment: Many commenters supported the proposals to increase the weight of HAI measures, to decrease the weight of process of care measures, and to weight the immunization measure more heavily than other clinical process of care measures when computing a hospital's validation score.

Response: We thank the commenters for their support.

Comment: A few commenters opposed the proposal to weight the IMM measure more heavily than other clinical process-of-care measures because of the seasonal nature of the measure. These commenters suggested that weighting the EDT measure more heavily might be appropriate.

Response: We have addressed the commenters' concern by finalizing a policy to validate IMM data only in-season (we refer readers to section IX.A.11.b.(5) of the preamble of this final rule, above). Having made this policy adjustment above in this section, we believe that weighting IMM more heavily than other clinical process of care measures because of its importance to the Hospital VBP Program is still appropriate. The EDT measure is not included in the Hospital VBP Program; so it should not count more than any other process-of-care measures.

After consideration of the public comments we received, we are finalizing our policy to weight the "IMM" clinical topic area twice as heavily and all other topic areas combined of the clinical process-of-care score as proposed with final weights of 66.7% for HAI, 22.2% for IMM, and 11.1% for all topic areas containing required clinical process of care measures other than IMM and perinatal care.

d. Processes To Submit Patient Medical Records for Chart-Abstracted Measures

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50834 through 50835), we finalized a process for the FY 2016 payment determination and subsequent years that allows hospitals to submit patient charts for validation via: (1) paper patient medical records; or (2) secure transmission of electronic versions of patient information. The process previously finalized restricts electronic submission of patient information to digital images of patient medical records submitted using encrypted CD-ROMs, DVDs, or flash drives.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28251) we

proposed for the FY 2017 payment determination and subsequent years to expand the options for secure transmission of electronic versions of patient medical records. Specifically, we proposed to allow hospitals to submit digital images (PDFs) of patient charts using a Secure File Transfer Portal on the QualityNet Web site. This portal would allow hospitals to transfer files through either a Web-based portal or directly from a client application using a secure file transfer protocol. The system provides a mechanism for securely exchanging documents containing sensitive information such as Protected Health Information (PHI) or Personally Identifiable Information (PII). Detailed instructions on how to use this system are available in the Secure File Transfer 1.0 User Manual available on QualityNet at: http://www.qualitynet.org/dcs/ContentServer?c=Page&page_name=QnetPublic%2FPPage%2FQnetBasic&cid=1228773343598. After July 2014, hospitals can submit all Hospital IQR Program validation data using this portal. This proposal responds to many commenters from the FY 2014 IPPS/LTCH PPS rulemaking that were concerned that encrypted CD-ROMs were cumbersome and requested viable alternatives. We believe that the burden associated with using this portal will be similar to or less than that involved with submitting patient medical records via portable electronic media (that is, encrypted CD-ROMs, DVDs, or flash drives). Therefore, we intend to reimburse hospitals according to the rate established for submitting patient medical records via portable electronic media (78 FR 50956).

We invited public comment on this proposal.

Comment: A few commenters strongly supported the proposal to expand the transmission options for patient medical records, specifically the option to submit pdfs via the QualityNet Web site. The commenters believed this action will streamline the validation process and reduce the burden on hospitals.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing our policy to allow hospitals to submit digital images (PDFs) of patient charts using a Secure File Transfer Portal on the QualityNet Web site as proposed.

e. Plans To Validate Electronic Clinical Quality Measure Data

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50807 through 50810), we finalized a voluntary process allowing hospitals to partially meet Hospital IQR

Program requirements for the FY 2014 payment determination by submitting electronic clinical quality measure data via certified electronic health record technology. Many commenters expressed concern that we did not have an adequate methodology to validate these data.

To respond to these concerns as well as to ensure that Hospital IQR Program data are accurate and reliable, we conducted an environmental scan, including review of prior public comments to CMS proposed rules and requests for information, review of the technical and academic literatures, numerous listening sessions, and interviews with nine hospitals. From these activities, we identified three key categories of threats to data accuracy: (1) the design of the EHR product, including both the manufacturer-provided EHR product and the hospital's customizations of that EHR product to support the hospital's specific workflows and processes, (2) hospital and provider documentation practice, and (3) EHR and electronic clinical quality measure standards and specifications. We understand the potential threats to validity in each of these categories. To respond to these concerns, we are currently conducting a small scale test of a remote real-time validation strategy for electronic clinical quality measures in approximately 9 hospitals.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28251 through 28253) we did not propose any requirements for validation of electronic clinical quality measures for the FY 2017 payment determination. However, we stated that we intend to conduct a larger scale pilot test of validation activities in FY 2015. The pilot test will engage up to 100 volunteer hospitals in a highly interactive test abstraction of their EHR systems using a secure remote access, real-time abstraction technology. Hospitals that volunteer to participate must meet the Medicare EHR Incentive Program Stage 2 criteria (77 FR 53968 through 54162) and be able to produce QRDA Category 1 Revision 2 extracted data (individual patient data) for at least 6 of the 16 measures in the STK, VTE, ED, and PC topic areas. The Office of the National Coordinator for Health Information Technology (ONC) adopted QRDA as the standard to support both QRDA Category I (individual patient) and QRDA Category III (aggregate) data submission approaches for meaningful use Stage 2 in the Health Information Technology: Standards, Implementation Specifications, and Certification Criteria for Electronic Health Record Technology, 2014 Edition; Revisions to

the Permanent Certification Program for Health Information Technology rule (77 FR 54163 through 54292). Interested hospitals will be invited to attend a 30-minute pre-briefing session where they will be provided with detailed instructions about the process and a demonstration explaining how to install needed software and have any concerns about security or systems requirements addressed. The software to be installed, Bomgar, is approved by CMS and meets our security requirements allowing CDAC to remotely view isolated records in real-time under hospital supervision, comparing all abstracted data with QRDA Category 1 file data and summarizing the results after the real-time session.

We implemented Bomgar software, a commercial product, in a CMS data center to allow for the review of medical records securely over the Internet. The product will allow the CDAC staff and Hospital medical record staff to easily set up remote support sessions for reviewing Hospital IQR Program-related EHR records under hospital supervision. The software was tested and passed our strict security standards. The electronic sessions do not require changes to a hospital's firewall or network because both the CDAC computer and the hospital computer connect to the product through secure outbound

connections. The product will log and record every session and all session data will be safe-guarded by federal government approved encryption.

While CDAC has limited, remote viewing access, hospitals will be asked to:

- Generate separate lists of patients eligible for measures in each of the four topic areas (STK, VTE, ED, and PC);
- Generate QRDA Category 1 files extracted automatically from an EHR for all applicable measures for up to 3 records within each of the 4 topic areas (for a total of 12 records) as selected by CDAC; and
- Show selected records, such as laboratory records, and patient medical history, navigating through the EHR system as directed by CDAC.

During this remote real-time session, CDAC will:

- Follow the specifications for the electronic measure to abstract relevant information related to each data element from up to 10 different sources, for example, medication administration records, laboratory reports, and patient history, (including structured and unstructured fields) within each patient medical record.

After concluding the real-time session with a hospital, CDAC will:

- Compare all abstracted data with QRDA Category 1 file data; and

- Summarize results identifying patterns of concern.

Based on these results, we will, with our contractors:

- Work with measure stewards to refine measure specifications based on conflicting findings;
- Share conflicting findings with individual hospitals to support improvement;
- Publicize de-identified patterns of conflicting findings that allow vendors to develop automated checks;
- Determine reliability (agreement) between QRDA Category 1 extracted and abstracted data; and
- Produce descriptive statistics to estimate sample size requirements for future validation.

To address the burden associated with this test, we intend to reimburse hospitals for the burden associated with their participation. Details about reimbursement are included in section XIII.B.6. of the preamble of this final rule. We posted on QualityNet a detailed draft of the operational procedures that volunteer hospitals will be expected to follow during the public comment period at <https://www.qualitynet.org> under "Data Validation Resources." We developed this process to attempt to meet all of our goals for validity, as further explained in the table below.

ELECTRONIC CLINICAL QUALITY MEASURE VALIDATION STRATEGY SUMMARY FOR THE HOSPITAL IQR PROGRAM

Desired Attributes of Validation Strategy

- Assesses accuracy including reliability and population representativeness.
- Employs a standardized process conducted by an objective third party.
- Minimizes burden to hospitals.
- Minimizes costs to CMS by being performed at a central location.
- Leverages the dynamic qualities of an EHR, including query functions.
- May ultimately integrate with validation of other IQR measures.

Goals of Test

- Assess the accuracy and completeness of electronic clinical quality measure data.
- Assess Hospital IQR Program readiness for electronic clinical quality measure reporting requirements.
- Identify the needs for and implement updates to measure specifications and standards.
- Plan future validation requirements, including detailed operational instructions and sample size.

Planned Process Overview

Hospitals will:

- Allow CMS' Clinical Data Abstraction Contractor (CDAC) to remotely view records in real-time.
- Generate separate lists of patients eligible for measures to be validated.
- Generate QRDA Category 1 extract files for all applicable measures for up to 12 records selected by CDAC.
- Show selected records, navigating through the EHR system as directed by CDAC.

CDAC will:

- Abstract data following the specifications for the electronic measure and relevant information related to each data element from up to 10 different sources (including structured and unstructured fields) within each medical record.
- Compare all abstracted data with QRDA Category 1 file data.
- Assess and refine operational processes.

CMS and its contractors will:

- Determine reliability (agreement) between extracted and abstracted measures.
- Work with measure stewards to refine measure specifications based on conflicting findings.
- Share conflicting findings with individual hospitals to support improvement.
- Publicize de-identified common patterns of conflicting findings that allow vendors to develop automated checks.
- Produce descriptive statistics to estimate sample size requirements for future validation.
- Reimburse hospitals for burden associated with participation in test.

We invited public comment on this voluntary pilot test for validation.

Because of the close relationship of comments for this policy and the request for information that follows, we respond to comments for both after the next paragraph.

We also considered other validation approaches including one that supplements the current procedures and compares quality data manually abstracted by the hospitals with QRDA Category 1 extracts from their EHRs. Although we are making no specific proposals related to these alternatives at this time, we invited comments on whether we should develop or identify existing computerized applications to assist hospitals in self-validation and on the specific functionalities that may be useful for self-validation. For example, as part of the validation process, should we develop or identify an existing application that would use natural language processing, to identify potential threats to validity that human abstractors might then review more closely. An example of such an application might be one that searches the unstructured fields for contraindications to VTE prophylaxis, even if such contraindications were not noted in a structured field within an EHR. We also invited comments any other types of applications that would be useful for self-validation.

Comment: Many commenters expressed concern that there is no proposed validation process for the electronic clinical quality measures, or that the validation strategy that CMS proposed is still in its initial stages. These commenters opposed CMS' use of electronic clinical quality measure data that has not been validated and proven to be reliable for public reporting or pay-for-performance. Some commenters are pleased that CMS has taken steps to validate electronic clinical quality measures data, but believed that all measures used in public reporting and pay-for-performance programs should be subject to data validation, and noted that failure to do so will eliminate any benefit of electronic clinical quality measures.

Response: We understand commenters' concerns regarding use of electronic clinical quality measure data that is not validated and proven reliable for public reporting or pay-for-performance. We note that although we have signaled target dates for requiring hospitals to report electronic clinical quality measure validation requirements in the Hospital IQR Program, we have not proposed, nor are we finalizing any formal requirements to report electronically specified measures at this

time. We recognize that validation is a major concern for many stakeholders interested in electronic clinical quality measure reporting and will take these comments into consideration for future rulemaking.

Comment: Many commenters expressed general support for CMS' efforts towards a voluntary pilot test for EHR validation. Some commenters encouraged CMS to complete this process quickly. Several of these commenters encouraged CMS to publicly report the results of the pilot to allow hospitals and vendors to implement processes to support electronic clinical quality measure validation.

Response: We intend to complete pilot activities in CY 2015. We also intend to publicly report aggregated results from the pilot, while protecting the confidentiality of individual providers and patients.

Comment: Many commenters advocated for greater collaboration in the electronic clinical quality measure validation process. Several commenters suggested that CMS work with other federal agencies and private sector experts to develop the protocols and testing environments needed to begin validation of electronic clinical quality measures. Other commenters emphasized the important role of the vendor in the validation pilot. A few commenters specifically observed that the validation plan does not "reflect the significant role of EHR vendors in this effort," and/or that vendors need to be engaged so that hospitals are prepared to participate in the pilot, including being prepared to produce QRDA-1 files on demand in real-time. One commenter specifically recommended that the pilot should only include functional requirements that are required in Stage 2, 2014 Edition certification.

Response: We recognize the importance of engaging vendors, federal partners, and other private sector experts in the validation process, and we intend to do so going forward. We intend to reach out to vendors prior to implementation of the pilot to compare current product capabilities relative to pilot requirements. As described in our proposed policy, the only requirements for participation are that hospitals must meet the Medicare EHR Incentive Program Stage 2 criteria (77 FR 53968 through 54162) and be able to produce QRDA Category 1 Release 2 extracted data (individual patient data) for at least 6 of the 16 measures in the STK, VTE, ED, and PC topic areas. We realize that this may limit participation of hospitals who qualify for meaningful use based on reporting of other measures. Our

proposed policy does not require that hospitals are able to produce QRDA-1 files in real time, only that hospitals are able to produce these files.

We have instructed the CDAC contractor to be very flexible so that if a hospital cannot produce QRDA-1 files or the measures of interest in real-time, but can provide them later, our contractor will accept them later during the pilot project data collection period. Similarly, we have directed CDAC to work out a flexible process if some hospitals are not able to generate patient lists for the ED, STK, VTE, or PC measure sets in real time. We intend to revise our pilot data collection materials to reflect that flexibility. We are not aware of any other specific functional requirements in the pilot materials proposed that are not part of stage 2, 2014 edition certification. We believe that we can complete outreach and collaborative activities before and after the validation pilot within the framework of the policy we have proposed.

During the pilot itself, we will allow CDAC to engage with the vendor with the hospital's permission, and can do so within the confines of the policy as proposed. However, we will not reimburse vendors. As we describe in the burden section XIII.B.6. of the preamble of this final rule, we will limit reimbursement to hospitals for the costs associated with one staff person participating for up to 16 hours and costs associated with providing medical records. We believe this is reasonable as it is in the business interests of vendors to support hospitals that need QRDA Category-1 files.

Comment: Most commenters believe that the validation pilot should accommodate a comparison of chart-abstracted and electronic clinical quality measure outcomes for the same measures, and/or that CMS should clarify whether it will evaluate whether the intent of the chart-abstracted and electronic clinical quality measures are the same.

In contrast, several commenters specifically noted that one should not expect the same result from a manual process (which allows for differences in documentation practices, judgment, and error and accommodates data from multiple sources) as from an electronic process which extracts data from a "defined specific data element location," or that the processes for electronic clinical quality measure validation should be "independent" from validation of chart-abstracted measures. One of these commenters also advised that CMS acknowledge the role of customization in creating variability

in records and that data can be unstructured in the EHR and that provider documentation can vary and still support the intent of the measure.

Response: We understand that although the purpose of validation for chart-abstracted and electronic clinical quality measures are the same, the outcomes of validation may be different for many reasons, including what was described by the commenter above. We agree with commenters that our validation process should also include a comparison of chart-abstracted and electronic clinical quality measure outcomes for the same measures and will add this to our electronic clinical quality measures validation pilot as finalized below.

We also are aware that hospitals may customize software in ways that create reporting errors and that individual providers may create errors by using the software in a manner other than that intended by the manufacturer. We understand, from a scoring perspective, that we can only hold vendors and hospitals accountable for achieving an outcome that should be generated based on existing standards and specifications. In addition to problems that may arise because of misalignment or errors in standards or specifications, we also are aware that hospitals may customize software in ways that create errors and that individual providers may create errors by using the software in a manner other than intended. We did not include a proposal for scoring individual hospitals, because we are aware that vendors have no choice but to code to existing specifications and standards. We intend to partner with stakeholders to assist in interpreting results and help develop a validation strategy that addresses these issues.

We also understand that provider documentation may vary, be located in unstructured fields, and still support the measure. We intend that our validation pilot will be able to distinguish among these many different threats to accuracy as well as identify times when variability in documentation does not threaten accuracy. We further believe that the pilot will be a rich source of information about all of these scenarios.

Comment: A few commenters raised issues related to the questions included in the detailed participation pilot materials posted on QualityNet describing the EHR walkthrough process. One commenter recommended that CMS include vendors as a source of information for many of the questions in the interview document that CMS posted on the QualityNet Web site to document the methodology we proposed to use for the validation pilot

as noted in CMS' proposal. This commenter also requested additional guidance on the purpose of these questions and their relation to the outcome of the pilot and encouraged us to develop a final process that minimized burden to providers and the health system. One commenter recommended that the electronic clinical quality measure data validation pilot exclude assessment of EHR features, focusing instead on the health data of the EHR.

Response: We assume that when the first commenter was requesting guidance on the Electronically Specified Clinical Quality Measures Program Walk-through and Interview Document, the commenter was referring to questions related to "acceptability of remote technology for validation" as the other questions have a very clear relationship to the range of technical issues that this commenter raised in relation to electronic clinical quality measure validation generally. This section on "acceptability of remote technology for validation" includes the questions assessing EHR features that one commenter suggested we remove. We agree that vendors may be a better source of information for these questions, and therefore, intend to remove questions 9–12 based on the comments received. The purpose of the remaining questions in this section is to gauge the general level of acceptability of the approach that we are piloting, and to judge how many hours of staff time hospitals would be willing and capable of dedicating to validation activities to support to ensure reliable electronic clinical quality measure data. We intend to retain questions 6–8 and 13–15, because we would value hospitals' opinions about these ideas.

Comment: Several commenters urged CMS to implement the recommendations of a March 2014 GAO report to "develop a comprehensive strategy for ensuring that data collected and reported using certified EHR technology are reliable, including testing for and mitigation of reliability issues arising from variance in certified EHR systems tested to different CQM specifications."¹¹⁸

Response: We agree that reliability of data collected and reported using certified EHR technology is critical. As proposed, our validation pilot is intended to develop a methodology that

achieves that goal. We intend to address problems arising from the fact that certified EHR systems may have been tested to specifications issued in different years, by only including in the pilot only those data certified to 2014 specifications. We will take the recommendations of the GAO report as a whole into consideration in future policy-making.

Comment: One commenter specifically wanted to know how the validation pilot would align with Meaningful Use specifications when the QRDA does not take into account any information from scanned documents, text, and documentation added at a later time.

Response: We understand that Meaningful Use specifications require that QRDA files extract data only from structured fields and therefore, the QRDA does not take into account data from scanned documents, text, and documentation added at a later time. Our proposed validation strategy was developed to acknowledge that because the QRDA does not take into account data from scanned documents, text, and documentation added at a later time, even the perfect EHR system could produce clinically meaningless validation results in contrast to chart-abstracted validation. In addition, as described above in this section, many commenters have observed errors in standards and specifications. By employing CDAC to look at the entire content of the record during our validation process, as we have described in our proposal, we hope to be able to identify those situations in which the calculated measure does not produce results consistent with the intent of the measure. We recognize that our validation pilot test may uncover problems that are not the fault of the provider, hospital, or developer, which is one of the goals of this pilot. We note that we have not proposed a process for scoring hospitals based on validation findings.

Comment: One commenter requested further details regarding what controls will be put into place to allow CDAC to remotely view records in real-time.

Response: The process that we intend to use to access medical records remotely contains several important controls to prevent unauthorized access to hospital systems. We clarify that access would be pursuant to a request by CDAC for the minimum necessary access to such records that includes an assertion of CDAC's legal authority (including the applicable basis(-es) under HIPAA) for such access. The Bomgar software that we intend to use is installed on a secure CMS-owned

¹¹⁸ *Electronic Health Record Programs: Participation Has Increased, but Action Needed to Achieve Goals, Including Improved Quality of Care: Report to Congressional Committees.* (GAO Publication No. GAO-14-207). Retrieved from U.S. Government Accountability Office: <http://www.gao.gov/assets/670/661399.pdf>.

system that has safeguards in place in accordance with the HIPAA Security Rule to protect sensitive patient data. The Bomgar software is configured to transmit all information exchanged during the medical record review through CMS-owned hardware at a secure facility. All information needed to access hospital systems remotely is guarded by strong HTTPS secure socket layer (SSL) encryption, which protects the information as it is transmitted from the hospital to the CDAC. This hardware and software, which CDAC will use to access medical records remotely, will not store any information about the medical records themselves. Only a limited number of CDAC personnel, authorized by CMS, will have access to the Bomgar device. For more information, see: video <http://www.bomgar.com/products/security>.

In addition, CDAC contractors employ security controls to protect medical record information as follows: (1) all screen captures saved and QRDA files received by CDAC contractors are controlled and monitored according to security standards established by the National Institute of Standards and Technology (NIST);¹¹⁹ (2) all Protected Health Information (PHI) is encrypted on all CDAC servers; and (3) firewalls and servers are monitored by CMS security contractors. Only a limited number of CDAC personnel have been granted access to view any PHI. These CDAC personnel undergo background checks and undergo privacy and security training prior to being issued passwords to view records containing PHI. All of these security controls are audited in compliance with CMS Security Standards.¹²⁰

Comment: One commenter who supported CMS' validation plan for electronic clinical quality measures also agreed "that the development or identification of existing computerized applications that can assist hospitals in self-validation and functionalities will be useful in self-validation of eCQMs." The commenter believed this process could take the place of the current internal inter-rater reliability (IRR) efforts (on abstracted data) and ensure accurate data capture practices.

Response: We will consider this suggestion to develop tools to replace more labor-intensive quality control efforts such as inter-rater reliability efforts (that is, comparing chart-abstracted results from two different abstractors) in development of future policies.

We thank the commenters for their comments. We will consider them as we develop plans to validate electronic clinical quality measure data.

After consideration of public comments on our proposal to conduct a validation pilot test for electronically specified measures in FY 2015, we are finalizing the policy as proposed with a few minor modifications.

We will compare results generated from QRDA-1 files with data from up to 10 sources identified through chart-abstraction as proposed. In addition, we will compare measure outcomes abstracted from electronic clinical quality measure specifications to those abstracted according to chart-abstracted specifications. Also, we plan to remove the questions related to "acceptability of remote technology for validation" and to EHR functionality from the "Electronically Specified Clinical Quality Measures Program Walk-through and Interview" document and reflect our intended flexible approach to accommodate hospitals that cannot produce patient lists or QRDA-1 files in real time as long as submissions can occur during the data collection period for the pilot project. We also intend to reach out to stakeholders to collaborate in preparing for the pilot and interpreting results after the pilot.

f. Data Submission Requirements for Quality Measures That May Be Voluntarily Electronically Reported for the FY 2017 Payment Determination

We believe that collection and reporting of data through health information technology will greatly simplify and streamline reporting for many CMS quality reporting programs. Through electronic reporting, hospitals will be able to leverage EHRs to capture, calculate, and electronically submit quality data that is currently manually chart-abstracted and submitted to CMS

for the Hospital IQR Program. As we noted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51614), we recognize the need to align and harmonize measures across CMS quality reporting programs to minimize the reporting burden imposed on hospitals. In the Medicare EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087), we finalized a total of 29 clinical quality measures from which hospitals must select at least 16 measures covering three National Quality Strategy (NQS) domains to report beginning in FY 2014. We anticipate that, as health information technology evolves and infrastructure is expanded, we will have the capacity to accept electronic reporting of many of the chart-abstracted measures that are currently part of the Hospital IQR Program.

In the FY 2014 IPPS/LTCH PPS final rule, for the STK (with the exception of STK-1), VTE, ED, and PC measure sets, we allowed hospitals to either: (1) electronically report at least one quarter of CY 2014 (Q1, Q2, or Q3) quality measure data for each measure in one or more of those four measure sets; or (2) continue reporting all measures in those four measure sets using chart-abstracted data for all four quarters of CY 2014 (78 FR 50818).

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28242 through 28243) for the FY 2017 payment determination, we proposed to expand this policy, such that providers may select to voluntarily report any 16 of the 28 Hospital IQR Program electronic clinical quality measures that align with the Medicare EHR Incentive Program as long as those 16 measures span three different NQS domains. The 28 measures are listed in the table below. Only 28 of the 29 measures adopted in the Medicare EHR Incentive Program are applicable for the Hospital IQR Program, because the measure ED-3 Median time from ED arrival to ED departure for discharged ED patients (NQF #0496) is an outpatient setting measure. We expect eligible hospitals to select measures that best apply to their patient mix.

Short name	Measure name	NQF number	NQS domain ¹²¹	Available data submission modes
ED-1	Median time from ED arrival to ED departure for admitted ED patients.	NQF #0495	Patient and Family Engagement.	Electronic clinical quality measure or chart-abstracted.
ED-2	Admit Decision Time to ED Departure Time for Admitted Patients.	NQF #0497	Patient and Family Engagement.	Electronic clinical quality measure or chart-abstracted.

InformationSecurity/index.html?redirect=/informationsecurity, last accessed 7/17/2014.

Short name	Measure name	NQF number	NQS domain ¹²¹	Available data submission modes
PC-01	Elective delivery (Collected in aggregate, submitted via Web-based tool or electronic clinical quality measure).	NQF #0469	Clinical Process/Effectiveness.	Electronic clinical quality measure or chart-abstracted aggregated with Web-based submission.
Stroke-2	Discharged on antithrombotic therapy	NQF #0435	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
Stroke-3	Anticoagulation therapy for atrial fibrillation/flutter.	NQF #0436	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
Stroke-4	Thrombolytic therapy	NQF #0437	Clinical Process/Effectiveness.	Electronic clinical quality measure or chart-abstracted.
Stroke-5	Antithrombotic therapy by the end of hospital day two.	NQF #0438	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
Stroke-6	Discharged on statin medication	NQF #0439	Clinical Process/Effectiveness.	Electronic clinical quality measure or chart-abstracted.
Stroke-8	Stroke education	N/A	Patient and Family Engagement.	Electronic clinical quality measure or chart-abstracted.
Stroke-10	Assessed for rehabilitation	NQF #0441	Care Coordination	Voluntary electronic clinical quality measure.
VTE-1	Venous thromboembolism prophylaxis	NQF #0371	Patient Safety	Electronic clinical quality measure or chart-abstracted.
VTE-2	Intensive care unit venous thromboembolism prophylaxis.	NQF #0372	Patient Safety	Electronic clinical quality measure or chart-abstracted.
VTE-3	Venous thromboembolism patients with anticoagulation overlap therapy.	NQF #0373	Clinical Process/Effectiveness.	Electronic clinical quality measure or chart-abstracted.
VTE-4	Patients receiving un-fractionated Heparin with doses/labs monitored by protocol.	N/A	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
VTE-5	VTE discharge instructions	N/A	Patient and Family Engagement.	Electronic clinical quality measure or chart-abstracted.
VTE-6	Incidence of potentially preventable VTE	N/A	Patient Safety	Electronic clinical quality measure or chart-abstracted.
AMI-2	Aspirin Prescribed at Discharge for AMI ..	NQF #0142	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
AMI-7a	Fibrinolytic Therapy Received Within 30 minutes of Hospital Arrival.	NQF #0164	Clinical Process/Effectiveness.	Electronic clinical quality measure or chart-abstracted.
AMI-8a	Primary PCI Received Within 90 Minutes of Hospital Arrival.	NQF #0163	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
AMI-10	Statin Prescribed at Discharge	NQF #0639	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
PN-6	Initial Antibiotic Selection for community-acquired pneumonia (CAP) in Immunocompetent Patients.	NQF #0147	Efficient Use of Healthcare Resources.	Voluntary electronic clinical quality measure.
SCIP-Inf-1a	Prophylactic Antibiotic Received Within One Hour Prior to Surgical Incision.	NQF #0527	Patient Safety	Voluntary electronic clinical quality measure.
SCIP-Inf-2a	Prophylactic Antibiotic Selection for Surgical Patients.	NQF #0528	Efficient Use of Healthcare Resources.	Voluntary electronic clinical quality measure.
SCIP-Inf-9	Urinary catheter removed on Post-operative Day 1 (POD 1) or Post-operative Day 2 (POD 2) with day of surgery being day zero.	NQF #0453	Patient Safety	Voluntary electronic clinical quality measure.
PC-05	Exclusive Breast Milk Feeding and the subset measure PC-05a Exclusive Breast Milk Feeding Considering Mother's Choice.	NQF #0480	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
EHDI-1a	Hearing Screening Prior to Hospital Discharge.	NQF #1354	Clinical Process/Effectiveness.	Voluntary electronic clinical quality measure.
CAC-3	Home Management Plan of Care (HMPC) Document Given to Patient/Caregiver.	N/A	Patient and Family Engagement.	Voluntary electronic clinical quality measure.
HTN	Healthy Term Newborn	NQF #0716	Patient Safety	Voluntary electronic clinical quality measure.

¹²¹ Medicare EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087).

Comment: A commenter requested clarification regarding whether hospitals are required to report on the ED-1 and ED-2 measures for FY 2015. If hospitals are required to report on these measures, the commenter would like clarification regarding whether the data must be submitted electronically as opposed to chart-abstracted.

Response: ED-1 and ED-2 are shown as voluntary electronic clinical quality measures in the table on 79 FR 28242, but are not identified as voluntary measures in the table on 79 FR 28241. We would like to clarify that both ED-1 and ED-2 are required measures that can be submitted either as chart-abstracted measures or as electronic

clinical quality measures under the voluntary reporting option.

For the FY 2017 payment determination, we also proposed to expand the reporting requirement of electronic clinical quality measures to require a full year's data collection and submission instead of a minimum of one quarter. In addition, for the FY 2017 payment determination, we proposed to

require data submission within approximately 60 days after the end of a calendar year quarter. We have listed the proposed submission deadlines in

the table below. We also refer readers to section IX.D.2. of the preamble of this final rule for a description of the electronic clinical quality measures data

reporting periods and proposed submission deadlines.

CY 2015/FY 2017 ELECTRONIC CLINICAL QUALITY MEASURES DATA REPORTING PERIODS AND PROPOSED SUBMISSION DEADLINES

CY 2015 quarter	Reporting period (2015)	Proposed submission deadline
1	January 1–March 31	May 30, 2015.
2	April 1–June 30	Aug 30, 2015.
3	July 1–September 30	Nov 30, 2015.
4	October 1–December 31	Feb 28, 2016.

As an incentive for hospitals to voluntarily submit electronic clinical quality measures, we proposed that for the FY 2017 payment determination, hospitals successfully submitting electronic clinical quality measures according to our procedures will not have to validate those measures by submitting chart-abstracted data.

By proposing these changes, we would further align the Hospital IQR Program and the Medicare EHR Incentive Program and promote greater electronic clinical quality measure data reporting for hospitals. In addition, we believe that these changes would ease hospitals' administrative burden, as they will be able to report the same clinical quality measures once to partially satisfy both the Hospital IQR and Medicare EHR Incentive Programs' requirements.

We invited public comment on this proposal.

Comment: One commenter requested that CMS allow hospitals to electronically report data for one calendar quarter instead of an entire CY.

Response: We refer readers to section IX.A.2.h.(1) of the preamble of this final rule where we are finalizing a modification of our proposal, which will only require one CY quarter of electronic clinical quality measure data for those hospitals that elect to participate in the voluntary electronic clinical quality measures reporting option.

Comment: A commenter supported the inclusion of voluntary reporting for certain electronic clinical quality measures for the Hospital IQR Program, and noted that voluntary reporting allows hospitals to be better prepared for submitting new quality measures from EHRs and to correct any operational issues that arise. Another commenter supported the long-term goal of using EHRs to streamline and reduce the burden of quality reporting while increasing access to real-time information to improve care and patient outcomes. One commenter supported

the proposal that hospitals electronically report a full year of data on the 12 Hospital IQR Program measures that overlap with the 2014 Medicare EHR Incentive Program measures.

Response: We thank the commenters for their support and, as noted in the response above, we have modified in our finalized policy the number of quarters of data to be reported by those hospitals that elect to participate in the voluntary electronic clinical quality measures reporting option.

Comment: One commenter requested clarification on whether the deadlines for submitting chart-abstracted measures remain the same given the proposal for requiring data submission within 60 days after the calendar year quarter ends for electronic clinical quality measures. Commenters also stated that the shortened time frame for reporting measure data poses a burden on facilities and increases the possibility of errors, which could affect measure scores and, therefore, payment.

Response: We would like to clarify that we did not propose any changes to the submission requirements for chart-abstracted measures (79 FR 28245). We retained the 4½ months quarterly submission deadline (78 FR 50811). In addition, we are not finalizing the 60 day quarterly submission deadline for electronic clinical quality measures. We refer readers to section IX.A.2.h.(1) of the preamble of this final rule where this is discussed in more detail.

Comment: Some commenters supported the alignment of measures and reporting requirements and timelines across quality reporting and incentive programs, specifically noting that this alignment would reduce hospital's administrative burden and confusion, uses the later Hospital IQR Program deadlines, reduce the number of quarters required until the transition is complete, and does not delay incentive payments. Some commenters argued that CMS' timeline for alignment is aggressive and requested CMS give

hospitals time to comply with this requirement. Commenters noted that EHRs are not ready for year two of Stage 1 meaningful use criteria or Stage 2 meaningful use criteria.

Other commenters opposed CMS' proposal to require Q4 2014 and Q1 2015 data submission by May 15, 2015, stating that it does not provide enough time for data submission, particularly for hospitals that conduct manual chart abstraction.

Response: We thank the commenters for supporting our proposal to align reporting between the Hospital IQR Program and the Medicare EHR Incentive Program. We proposed to begin aligning the reporting periods between the two programs beginning with the CY 2015 reporting period. We believe some commenters may have confused the proposed electronic clinical quality measure requirements of the Medicare EHR Incentive Program with the proposed electronic clinical quality measure submission requirements for the Hospital IQR Program.

We proposed for the Hospital IQR Program, that hospitals choosing to submit electronic clinical quality measures would need to submit all four quarters of CY 2015, whereas the Medicare EHR Incentive Program proposed to require only the first three quarters of CY 2015 (79 FR 28245 through 28246). However, we are not finalizing our proposal for hospitals to submit electronic clinical quality measures for all four quarters for the Hospital IQR Program and are instead finalizing a modified policy. We refer readers to section IX.A.2.h.(1) of the preamble of this final rule where this is discussed in more detail. We recognize that many hospitals have faced challenges moving to the latest CQM versions, which is why electronic clinical quality measure reporting remains voluntary at this time.

Comment: One commenter noted that they appreciated the opportunity to gain experience with voluntary electronic

reporting for the Hospital IQR Program before such reporting is made mandatory. The commenter also asked that CMS provide further explanation on the set of voluntary electronic clinical quality measures within the Hospital IQR Program.

Response: We refer the commenter to the table above listing the 28 possible electronic clinical quality measures. If a hospital chooses to submit electronic clinical quality measures, the hospital must submit 16 of the 28 possible measures covering three NQS domains. Please note that 12 of the 28 measures are measures required in the Hospital IQR Program. These 12 measures do cover three NQS domains. We would like to clarify that if a hospital chooses to submit electronic clinical quality measures, chart-abstraction of those submitted measures is not necessary.

Comment: One commenter urged CMS to be mindful of safety net hospitals' limited resources when proposing new requirements for reporting measure data electronically. The commenter advised that electronic reporting of quality data requires significant work to obtain, validate, and report and that it also requires information technology and quality management resources. The commenter stated that many hospitals are struggling to meet the current electronic data reporting requirements and that additional requirements will increase hospital expenses for labor, data analysis, and validation.

Response: We note that reporting electronic clinical quality measure data remains voluntary for CY 2015 reporting/FY 2017 payment determination. We believe that our electronic clinical quality measure reporting voluntary reporting option is not unduly burdensome to hospitals, and will allow hospital an opportunity to prepare for electronic reporting of quality measure data. As data becomes more standardized, it is expected that provider burden will decrease over time. In addition, we have modified our proposal for CY 2015 so that for those hospitals choosing to submit electronic clinical quality measures, only one quarter of data submission is necessary to meet the Hospital IQR Program requirement. We want to clarify that we have not made proposals for CY 2016 electronic clinical quality measure reporting/FY 2018 payment determination. These will be addressed in future rulemaking.

Comment: One commenter raised concern that participation in the voluntary electronic clinical quality measure program under the Hospital IQR Program would be low and would

therefore, not provide the data to inform future policy direction. In order to make the voluntary electronic clinical quality measure program more attractive to hospitals, the commenter recommended that CMS work with payers and quality assurance organizations to further align measure sets, provide electronic clinical quality measure specifications at least nine months before each relevant reporting period, allow providers to post or omit electronically-generated electronic clinical quality measure data to *Hospital Compare*, and either require only one-quarter of electronic clinical quality measure data in order to fulfill EHR MU and Hospital IQR Program requirements, or incorporate a robust logic model to monitor and evaluate the burdens and benefits associated with more frequent reporting.

Response: We are actively working with measure developers/stewards to align measure sets and revise measure specifications, as needed. Issues identified by measure stakeholders should be reported to ONC's JIRA tool at: <http://jira.oncprojecttracking.org/browse/CQM> where all stakeholders can comment and follow the progress of the issue. Electronic clinical quality measure specifications are published/updated annually at: <http://cms.gov/Regulations-and-Guidance/Legislation/EHRIncentivePrograms/eCQMLibrary.html>. Also, we are modifying our proposal so that for those hospitals choosing to submit electronic clinical quality measures, only one quarter of data submission is necessary to meet the Hospital IQR Program requirements. We refer readers to section IX.A.2.h.(1) of the preamble of this final rule where this is discussed in more detail.

After consideration of the public comments we received, we are finalizing our proposals with some modifications. We are finalizing our policy for hospitals that chose to participate in the voluntary electronic reporting option in CY 2015 must report any 16 of the 28 measures across 3 NQS domains as proposed. We are also finalizing that we will only accept the April 2014 version of the measure specifications for CY 2015 reporting/FY 2017 payment determination. Policies for electronic clinical quality measure reporting in CY 2016 and subsequent years will be made in future rulemaking. We are finalizing a modified version of our proposal to expand the reporting requirement of electronic clinical quality measures to require a full year's data collection to only requiring one quarter's worth of data. In addition, we are finalizing a modified version of our proposal to require data submission within approximately 60 days after the

end of a calendar year quarter to require submission of CY Q1, Q2, or Q3 data by November 30, 2015. We refer readers to section IX.A.2.h.(1) of the preamble of this final rule for a more detailed discussion.

We note that hospitals choosing to report at least one quarter of quality measure data electronically are not required, but are encouraged, to also submit the same data via chart-abstraction. We understand that many hospitals may be submitting chart-abstraction quality measure data to TJC so the reporting burden would not be increased. Hospitals will gain experience in understanding the differences in the submission methods.

Hospitals voluntarily submitting electronically specified clinical quality measures will utilize their existing QualityNet account to submit electronic quality measure data.

12. Data Accuracy and Completeness Acknowledgement Requirements for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554) for information for details on DACA requirements for the FY 2017 payment determination and subsequent years.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28253) we did not propose any changes to DACA form requirements.

We did not invite public comment regarding DACA requirements, but received one comment that we are addressing below.

Comment: One commenter expressed concerns that the Data Accuracy and Completeness Acknowledgement statement for hospitals does not provide a means for hospitals to indicate to CMS any errors they have discovered in their quality reporting throughout the year. The commenter observed that a hospital may discover in the fourth quarter an error in the data that was submitted in the first quarter of the year, but the DACA only permits a 'Yes' or 'No' response regarding whether all of the data was complete and accurate to the best of their knowledge at the time of submission, which does not provide a means for fixing any errors. The commenter observed that there also should be a process for fixing such errors from prior years.

Response: We currently provide a review and correction process for Hospital IQR Program process of care, HAI, and HCAHPS data during the submission period. Hospitals can review their measure rate before the submission deadline, and can review patient-level data to correct any identified errors on

previously submitted data. We strongly encourage hospitals to closely review their Hospital IQR Program measure and patient feedback reports to detect these errors before the submission deadline. We do not allow patient-level data correction after the submission deadline or for previous years. We must set a deadline to ensure timely computation of measure rates, Hospital VBP performance scores and payment adjustment factors.

13. Public Display Requirements for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2008 IPPS final rule (72 FR 47360), the FY 2011 IPPS/LTCH PPS final rule (75 FR 50230), the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53554), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836) for details on public display requirements for the FY 2017 payment determination and subsequent years.

The Hospital IQR Program quality measures are typically reported on the *Hospital Compare* Web site at: <http://www.medicare.gov/hospitalcompare>, but on occasion are reported on other CMS Web sites such as <http://www.cms.gov> and/or <https://data.medicare.gov>.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28253) we did not propose any changes to public display requirements.

14. Reconsideration and Appeal Procedures for the FY 2017 Payment Determination and Subsequent Years

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51650 through 51651), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836), and at 42 CFR 412.140(e) for details on reconsideration and appeal procedures for the FY 2017 payment determination and subsequent years.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28253) we did not propose any changes to the reconsideration and appeals procedures.

15. Hospital IQR Program Extraordinary Circumstances Extensions or Exemptions

We refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51651 through 51652), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50836 through 50837), and 42 CFR 412.140(c)(2) for details on the Hospital IQR Program extraordinary circumstances extensions or waivers. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28253) we did not propose any substantive changes to

these policies or the processes. However, in the future, we will refer to the process as the Extraordinary Circumstances Extensions or Exemptions process. We are currently in the process of revising the Extraordinary Circumstances/Disaster Extension or Waiver Request form, previously approved under OMB control number 0938-1171.

In addition, we proposed to make a conforming change from the phrase “extension or waiver” to the phrase “extension or exemption” in 42 CFR 412.140(c)(2). Section 412.140(c)(2) currently states that upon request by a hospital, CMS may grant an extension or waiver of one or more data submission deadlines in the event of extraordinary circumstances beyond the control of the hospital. Specific requirements for submission of a request for an extension or waiver are available on QualityNet.org. We proposed to revise this language to state that upon request by a hospital, CMS may grant an extension or exemption of one or more data submission deadlines in the event of extraordinary circumstances beyond the control of the hospital. Specific requirements for submission of a request for an extension or exemption are available on QualityNet.org.

We did not receive any public comments on this proposal and we are finalizing this policy as proposed.

B. PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

1. Statutory Authority

Section 3005 of the Affordable Care Act added new sections 1866(a)(1)(W) and (k) to the Act. Section 1866(k) of the Act establishes a quality reporting program for hospitals described in section 1886(d)(1)(B)(v) of the Act (referred to as “PPS-Exempt Cancer Hospitals” or “PCHs”). Section 1866(k)(1) of the Act states that, for FY 2014 and each subsequent fiscal year, a PCH must submit data to the Secretary in accordance with section 1866(k)(2) of the Act with respect to such a fiscal year. Section 1866(k)(2) of the Act provides that, for FY 2014 and each subsequent fiscal year, each hospital described in section 1886(d)(1)(B)(v) of the Act must submit data to the Secretary on quality measures specified under section 1866(k)(3) of the Act in a form and manner, and at a time, specified by the Secretary.

Section 1866(k)(3)(A) of the Act requires that any measure specified by the Secretary must have been endorsed by the entity with a contract under section 1890(a) of the Act, unless an exception under section 1866(k)(3)(B) of

the Act applies. The National Quality Forum (NQF) currently holds this contract. The NQF is a voluntary, consensus-based, standard-setting organization with a diverse representation of consumer, purchaser, provider, academic, clinical, and other health care stakeholder organizations. The NQF was established to standardize health care quality measurement and reporting through its consensus development processes. We have generally adopted NQF-endorsed measures in our reporting programs.

However, section 1866(k)(3)(B) of the Act provides an exception. Specifically, it provides that, in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

Under section 1866(k)(3)(C) of the Act, the Secretary was required to publish the measures select for PCHs no later than October 1, 2012, with respect to FY 2014.

Section 1866(k)(4) of the Act requires the Secretary to establish procedures for making public the data submitted by PCHs under the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. Such procedures must ensure that a PCH has had the opportunity to review the data that are to be made public with respect to the PCH prior to such data being made public. The Secretary must report measures of processes, structural measures, measures of outcomes, patients’ perspective on care, efficiency, and costs of care that relate to services furnished by PCHs on the CMS Web site.

2. Covered Entities

Section 1886(d)(1)(B)(v) of the Act excludes particular cancer hospitals from payment under the IPPS. This final rule covers only those PPS-excluded cancer hospitals meeting eligibility criteria specified in 42 CFR 412.23(f).

3. Previously Finalized PCHQR Program Quality Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556 through 53561), we finalized five quality measures for the FY 2014 program and subsequent years. Specifically, we finalized two of the CDC NHSN-based HAI quality measures (outcome measures): (1) CLABSI; and (2) CAUTI. We also finalized three cancer-

specific process of care measures: (1) Adjuvant chemotherapy is considered or administered within 4 months (120 days) of diagnosis to patients under the age of 80 with the American Joint Committee on Cancer (AJCC) III (lymph node positive) colon cancer; (2) Combination chemotherapy is considered or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1c, or Stage II or III hormone receptor negative breast cancer; and (3) Adjuvant hormonal therapy. We also discussed the collection requirements and submission timeframes for these measures in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53563 through 53566).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50838 through 50840), we finalized one new quality measure for the FY 2015 program and subsequent years. Specifically, we finalized the CDC's NHSN HAI measure of Surgical Site Infection (SSI). We did not remove or replace any of the previously finalized measures from the PCHQR Program for the FY 2015 program and subsequent years.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50840 through 50846), we finalized 12 new quality measures for the FY 2016 program and subsequent years. Specifically, we finalized six new SCIP measures, five new clinical process/oncology care measures, and the HCAHPS Survey for reporting beginning with the FY 2016 program and subsequent years. We did not remove or replace any of the previously finalized measures from the PCHQR Program for the FY 2016 program and subsequent years. We also discussed the collection requirements and submission timeframes for these measures in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50850 through 50853).

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28254), we did not propose to remove or replace any of the previously finalized measures from the PCHQR Program for the FY 2017 program and subsequent years.

4. Update to the Clinical Process/Oncology Care Measures Beginning With the FY 2016 Program

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28254), beginning with the FY 2016 program, we proposed to update the specifications for each of the five clinical process/oncology care measures so that, for each measure, PCHs must report all-patient data. We believe that the delivery of high quality care in the PCH setting is critically important and that collecting data on all patients will enable us to ensure that

high quality care is delivered to Medicare beneficiaries in this setting. In addition, all-patient data increase transparency in the health care system and align with State and Federal initiatives.¹²² Our proposal to require PCHs to collect all-patient data provides us with the data necessary to inform the public accurately about the quality of care and patient outcomes in the PCH setting. In addition, this proposal will align the specifications of the clinical process/oncology care measures with those of the SCIP PCHQR measures, for which all-patient data are required for submission.

We welcomed public comments on this proposal for the clinical process/oncology care measures for the FY 2016 program and subsequent years.

Comment: One commenter supported the proposal to require PCHs to report all-patient data for the five clinical process/oncology care measures, noting that it is consistent with reporting requirements in other CMS quality reporting programs.

Response: We thank the commenter for its support.

After consideration of the public comments we received, we are finalizing our proposal requiring PCHs to submit all-patient data for the five clinical process/oncology care measures beginning with the FY 2016 program.

5. New Quality Measure Beginning With the FY 2017 Program

a. Considerations in the Selection of Quality Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53556) and in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50837 through 50838), we indicated that we have taken a number of principles into consideration when developing and selecting measures for the PCHQR Program, and that many of these principles are modeled on those we use for measure development and selection under the Hospital IQR Program:

- Public reporting should rely on a mix of standards, outcomes, process of care measures, and patient experience of care measures, including measures of care transitions and changes in patient functional status.

- The measure set should evolve so that it includes a focused core set of measures appropriate to cancer hospitals that reflects the level of care and the most important areas of service furnished by those hospitals. The measures should address gaps in the quality of cancer care.

- We also consider input solicited from the public through rulemaking and public listening sessions.

- We consider suggestions and input from a PCH Technical Expert Panel (TEP), convened by a CMS measure development contractor, which rated potential PCH quality measures for importance, scientific soundness, usability, and feasibility. The TEP membership includes health care providers specializing in the treatment of cancer, cancer researchers, consumer and patient advocates, disparities experts, and representatives from payer organizations.

Like the Hospital IQR Program, the PCHQR Program supports the National Quality Strategy (NQS), national priorities, HHS Strategic Plans and Initiatives, the CMS Quality Strategy, and strives to reduce the burden on participating PCHs whenever possible. The PCHQR Program also takes into consideration the recommendations of the Measure Applications Partnership (MAP). The MAP is a multi-stakeholder body convened by the NQF for the purpose of providing input to HHS on the selection of measures.

b. New Quality Measure Beginning With the FY 2017 Program

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28254 through 28456), we proposed to adopt one new clinical effectiveness measure for the FY 2017 program and subsequent years: External Beam Radiotherapy for Bone Metastases (NQF #1822). The proposed clinical effectiveness measure was included on a publicly available document entitled "List of Measures under Consideration for December 1, 2013," a list of quality and efficiency measures being considered for use in various Medicare programs. The proposed measure was submitted to the MAP Hospital Workgroup for review. The MAP supported the inclusion of this measure in the PCHQR Program. The MAP's conclusions may be found in the "MAP Pre-Rulemaking Report: 2014 Recommendations on Measures Under Consideration by HHS," which is available at: https://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx. We considered the MAP's input and recommendations for this proposed measure for the PCHQR Program, and specifically, we note that the proposed measure addresses the MAP priority of palliative care for cancer patients. In addition, the proposed measure addresses the NQS domain of effective clinical care.

¹²² All-Payer Claims Database (APCD) Fact Sheet; available at: <http://www.apcdouncil.org/issue-briefs-and-fact-sheets>.

We believe that this NQF-endorsed measure, developed by the American Society for Radiation Oncology (ASTRO), meets the requirement under section 1866(k)(3)(A) of the Act that measures specified for the PCHQR generally be endorsed by the entity with a contract under section 1890(a) of the Act (currently the NQF). This measure assesses the percentage of patients (both Medicare and non-Medicare) with painful bone metastases and no history of previous radiation who receive EBRT with an acceptable dosing schedule. The measure numerator includes all patients with painful bone metastases and no previous radiation to the same site who receive EBRT with any of the following recommended fractionation schemes: 30Gy/10fxns; 24Gy/6fxns; 20Gy/5fxns; or 8Gy/1fxn. The measure denominator includes all patients with painful bone metastases and no previous radiation to the same site who receive EBRT. The following patients are excluded from the denominator: patients who have had previous radiation to the same site; patients with femoral axis cortical involvement greater than 3 cm in length; patients who have undergone a surgical stabilization procedure; and patients with spinal cord compression, cauda equina compression, or radicular pain. For the reasons explained more fully below, we believe that this measure will reduce the rate of EBRT services overuse, support our commitment to promoting patient safety, and support the NQS domains.

Bone metastases are a common manifestation of malignancy. Some cancer types have a bone metastasis prevalence as high as 70 to 95 percent.¹²³ EBRT can provide significant pain relief in 50 to 80 percent of patients with painful bone metastases.¹²⁴

In October 2009, ASTRO organized a Task Force to perform an assessment of existing recommendations in order to address a lack of palliative radiotherapy guidelines. Based on a review of the literature, the Task Force recommended the following EBRT dosing schedules for patients with previously unirradiated painful bone metastases: 30 Gy over the course of 10 fractions; 24 Gy over the course of 6 fractions; 20 Gy

over the course of 5 fractions; and a single 8 Gy fraction.¹²⁵ Despite the recommendations, the actual doses applied for EBRT continue to include dosing schedules as high as 25 fractions.¹²⁶ Other studies support the conclusion that shorter EBRT schedules produce similar pain relief outcomes when compared to longer EBRT schedules, and that patients prefer shorter EBRT schedules because of their convenience, increased tolerability, and reduced side effects.¹²⁷

In addition, the ASTRO Task Force found that the frequency and severity of side effects associated with a single fraction were the same or less than those associated with multiple fraction regimens, indicating that shorter treatment schedules may be preferable.¹²⁸ The proposed External Beam Radiotherapy for Bone Metastases measure seeks to address the performance gap in treatment variation, ensure appropriate use of EBRT, and prevent the overuse of radiation therapy. We believe that this measure is necessary to support patient preferences for shorter EBRT schedules as well as to ensure patient safety, given that shorter treatment courses show similar or fewer side effects while producing similar clinical outcomes.

We believe the proposed measure is applicable to the PCH setting because it addresses cancer care associated with radiation therapy. The adoption of measures that apply to multiple health care settings is one of our objectives in promoting quality care consistently across all health care settings. Detailed specifications for this proposed measure may be found at: <http://www.Fqualityforum.Forg/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=70374>.

In summary, in addition to the 18 measures that we have previously finalized for the PCHQR Program, we proposed one new measure for reporting beginning with the FY 2017 program. The proposed policies regarding the form, manner, and timing of data collection for this measure are discussed in later sections. We welcomed public comment on this proposal.

¹²⁵ Ibid.

¹²⁶ Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdentifier=id&ItemID=70374>.

¹²⁸ Lutz S, Berk L, Chang E, et al. Palliative radiotherapy for bone metastases: An ASTRO evidence-based guideline. *Int J Radiat Oncol Biol Phys.* 2011;79(4):965–976.

Comment: Several commenters supported the proposed EBRT for bone metastases measure, noting that it aims to address the variation in practice patterns for using radiation therapy for palliative care and promotes improved quality of inpatient care provided to Medicare beneficiaries. However, the commenters encouraged CMS to conduct a performance gap analysis of radiation therapy practice that is specific to the PCH setting.

Response: We thank the commenters for their support. Radiation therapy is a common treatment modality for some cancers, and the ASTRO Task Force (2009) found that the literature demonstrates widespread variation in palliative radiation dose fractionation schedules. Because of this variation, we believe it is important to protect patient safety in the PCH setting by addressing potentially unnecessary and harmful radiation doses. We understand that PCHs, specifically, provide EBRT services, and we believe that the ASTRO Task Force findings demonstrate that the EBRT for bone metastases measure is relevant and appropriate for the PCH setting.

We agree with the commenters' suggestions that we conduct a "performance gap analysis" to assess the appropriateness of the EBRT measure in the PCH setting. We intend to conduct that analysis when we have collected data beginning with the FY 2017 PCHQR Program.

Comment: One commenter supported the adoption of the EBRT for bone metastases measure but recommended that CMS revise the measure to include a broader population of patients receiving radiation therapy.

Response: We appreciate the commenter's feedback. The measure is NQF-endorsed for the population described in the specifications. We will continue to work closely with ASTRO to assess the current clinical evidence base for the broader PCH population. We will consider incorporating any future measure updates supported by clinical evidence.

After consideration of the public comments we received, we are finalizing the EBRT for bone metastases measure for the FY 2017 program and subsequent years.

The table below lists all previously adopted measures as well as the finalized measure for the PCHQR Program for the FY 2017 program and subsequent years.

PCHQR PROGRAM MEASURES FOR THE FY 2017 PROGRAM AND SUBSEQUENT YEARS

[Including measure finalized in this final rule]

Topic

Safety and Healthcare-Associated Infection—HAI:

- (NQF #0139) NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure*
- (NQF #0138) NHSN Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure*
- (NQF #0753) Harmonized Procedure Specific Surgical Site Infection (SSI) Outcome Measure* (currently includes SSIs following Colon Surgery and Abdominal Hysterectomy Surgery)

Clinical Process/Cancer-Specific Treatments:

- (NQF #0223) Adjuvant Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis to Patients Under the Age of 80 with AJCC III (lymph node positive) Colon Cancer*
- (NQF #0559) Combination Chemotherapy is Considered or Administered Within 4 Months (120 days) of Diagnosis for Women Under 70 with AJCC T1c, or Stage II or III Hormone Receptor Negative Breast Cancer*
- (NQF #0220) Adjuvant Hormonal Therapy*

SCIP:

- (NQF #0218) Surgery Patients who Received Appropriate VTE Prophylaxis within 24 Hrs Prior to Surgery to 24 Hrs After Surgery End Time*
- (NQF #0453) Urinary Catheter Removed on Post-Operative Day 1 or Post-Operative Day 2 with Day of Surgery Being Day Zero*
- (NQF #0527) Prophylactic Antibiotic Received Within 1 Hr Prior to Surgical Incision*
- (NQF #0528) Prophylactic Antibiotic Selection for Surgical Patients*
- (NQF #0529) Prophylactic Antibiotic Discontinued Within 24 Hrs After Surgery End Time*
- (NQF #0284) Surgery Patients on Beta Blocker Therapy Prior to Admission who Received a Beta Blocker During the Perioperative Period*

Clinical Process/Oncology Care Measures:

- (NQF #0382) Oncology-Radiation Dose Limits to Normal Tissues*
- (NQF #0383) Oncology: Plan of Care for Pain*
- (NQF #0384) Oncology: Pain Intensity Quantified*
- (NQF #0390) Prostate Cancer-Adjuvant Hormonal Therapy for High-Risk Patients*
- (NQF #0389) Prostate Cancer-Avoidance of Overuse Measure-Bone Scan for Staging Low-Risk Patients*

Patient Engagement/Experience of Care:

- (NQF #0166) HCAHPS*

Clinical Effectiveness Measure:

- (NQF #1822) External Beam Radiotherapy for Bone Metastases**

*Previously finalized measures.

**Finalized for the FY 2017 program and subsequent years in this final rule.

6. Possible New Quality Measure Topics for Future Years

We seek to develop a comprehensive set of quality measures for widespread use for informed decision-making and quality improvement in the PCH setting. Therefore, in future rulemaking, we intend to propose to adopt new or updated measures, such as measures that assess the safety and efficiency of the diagnosis and treatment of cancer, measures that take into account novel diagnostic and treatment modalities, measures that assess symptoms and functional status, and measures of appropriate disease management. Additional measure topics we intend to consider include patient-centered care planning and care coordination, shared decision-making, measures of quality of life outcomes, and measures of admissions for complications of cancer and treatment for cancer. We believe that such measures will help us further our goal of achieving better health care and improved health for Medicare beneficiaries who obtain cancer services through the widespread dissemination and use of quality of care information.

We welcomed public comments and specific suggestions for measure topics for the following measure domains:

outcomes; quality of life; clinical quality of care; care coordination; patient safety; patient and caregiver experience of care; population/community health; and efficiency. These domains align with those of the NQS, and we believe that selecting measures to address these domains will promote better cancer care while aligning the PCHQR Program with other established quality reporting and pay-for-performance programs such as the Hospital IQR Program, the Hospital OQR Program, and the Hospital VBP Program.

Comment: Several commenters supported the types of measures that CMS stated its intent to adopt for the PCHQR Program, specifically measures that take into account the use of novel treatments and diagnostic tests, noting that CMS' approach will ensure that cancer patients have appropriate access to new treatments.

Response: We thank the commenters for their support and will consider this feedback for future rulemaking.

Comment: Several commenters suggested measure topics that CMS should consider for future years. They recommended that CMS: (1) develop and adopt measures on topics including benign and malignant hematology; (2)

consider measures that address non-small cell lung cancer (NSCLC) treatment; (3) develop measures of risk-adjusted, stage-specific survival rates for various types of cancer; (4) adopt validated outcomes measures over process-based measures; (5) emphasize the importance of the HCAHPS survey; and (6) consider palliative care measures.

Response: We appreciate the commenters' suggestions and will consider this feedback for future rulemaking. We note that, in the FY 2014 IPPS/LTCH PPS final rule, we adopted the HCAHPS survey for use in the PCHQR Program measure set beginning with the FY 2016 program (78 FR 50844 through 50845).

Comment: One commenter supported the measure topics proposed for consideration for the PCHQR Program in future years. Several commenters also described the importance of ensuring that measures adopted for the PCHQR Program be supported by the MAP, tested for their applicability, and assessed for potential unintended consequences that may result from their use in specific patient populations. Another commenter recommended that CMS continue to align measures

adopted for the PCHQR Program with those in other IPPS quality reporting programs.

Response: We thank the commenters for their support and comments. We will consider this feedback in future rulemaking.

Comment: One commenter commended CMS for focusing attention on addressing high priority measure gaps such as outcomes, quality of life measures, safety, and overuse of care to be considered for future use in the PCHQR Program. The commenter encouraged CMS to coordinate with partners in addressing the following challenges: measures that require multiple data sources; research that demonstrates gaps in care; and the need to develop a “core” set of measures for a population with varied diagnoses.

Response: We thank the commenter for its support and will strive continually to collaborate with external stakeholders.

Generally, we retain measures from the previous years’ PCHQR Program measure sets for subsequent years. However, in future years, we will consider developing criteria to determine whether or not to remove or replace measures from the PCHQR Program measure set. In developing removal criteria, we will consider those criteria used by other CMS quality reporting programs in order to align the PCHQR Program with those programs.

We also welcomed public comments on the criteria for removal or replacement of measures from the PCHQR Program.

Comment: Several commenters noted that, in the FY 2015 IPPS/LTCH PPS proposed rule, CMS proposed to remove nearly all of the SCIP measures from the Hospital IQR Program and recommended that CMS consider removing the six SCIP measures from the PCHQR Program. Commenters also recommended that CMS adopt criteria for determining “topped out” measures and measure removal in future years.

Response: At this time, we do not have sufficient data to determine whether these SCIP measures are “topped-out” in the PCH setting. We recognize that the PCHQR patient population is exclusively comprised of cancer patients, unlike the patient population at acute care hospitals that are included in the Hospital IQR Program.

As a result, we will retain the PCH SCIP measures until we have adopted “topped out” policy and until we have sufficient data to conduct “topped-out” analyses in future years and we will continue to monitor and evaluate the PCHQR SCIP measures. As noted above,

we will consider adopting “topped out” and other measure removal criteria similar to those adopted by other quality reporting programs, including the Hospital IQR Program, in future rulemaking.

In an effort to reduce the reporting burden for PCHs, in future years, we will consider proposing to require PCHs to report electronically-specified clinical quality measures for the PCHQR Program. We believe that the collection and reporting of data through health information technology would greatly simplify and streamline reporting for many CMS quality reporting programs, including the PCHQR Program. Through electronic reporting, PCHs would be able to leverage EHRs to capture, calculate, and electronically submit quality data that are currently manually chart-abstracted and submitted to CMS for the PCHQR Program. In developing future proposals for electronic clinical quality measures adoption, we will consider the need to align and harmonize measures across various quality reporting programs to minimize the reporting burden imposed on PCHs.

We welcomed public comments on the development of electronic clinical quality measure reporting criteria for future years.

Comment: Several commenters supported CMS’ proposal to develop electronic clinical quality measure reporting criteria for future years and recommended that CMS consider the content validity and clinical appropriateness of any measures adopted for the PCHQR Program.

Response: We thank the commenters for their support and will consider this feedback in future rulemaking.

7. Maintenance of Technical Specifications for Quality Measures

We maintain technical specifications for the PCHQR Program measures, and we periodically update those specifications. The specifications may be found on the QualityNet Web site at: <https://qualitynet.org/dcs/ContentServer?cid=1228772356060&pagename=QnetPublic%2FPPage%2FQnetTier2&c=Page>.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53504 through 53505), we finalized a policy under which we use a subregulatory process to make nonsubstantive updates to measures used for the Hospital IQR Program. We also adopted this process for all measures adopted for the PCHQR Program. With respect to what constitutes substantive versus nonsubstantive changes, we expect to make this determination on a case-by-case basis. Examples of nonsubstantive

changes to measures might include updated diagnosis or procedure codes, medication updates for categories of medications, broadening of age ranges, and exclusions for a measure. We believe that nonsubstantive changes may include updates to measures based upon changes to guidelines on which the measures are based.

We will continue to use rulemaking to adopt substantive updates to the measures we have adopted for the PCHQR Program. Examples of changes that we might consider to be substantive would be those in which the changes are so significant that the measure is no longer the same measure, or when a standard of performance assessed by a measure becomes more stringent (for example, changes in acceptable timing of medication, procedure/process, or test administration). Another example of a substantive change would be where the NQF has extended its endorsement of a previously endorsed measure to a new setting, such as extending a measure from the inpatient setting to hospice. We also note that, to the extent a PCHQR measure is endorsed by the NQF, the NQF measure maintenance process incorporates an opportunity for public comment and engagement.

We believe the endorsement processes, as well as our treatment of substantive versus nonsubstantive measure changes, adequately balances our need to incorporate updates to PCHQR Program measures in the most expeditious manner possible while preserving the public’s ability to comment on updates that so fundamentally change an endorsed measure that it is no longer the same measure that we originally adopted.

8. Public Display Requirements Beginning with the FY 2014 Program

Section 1866(k)(4) of the Act requires the Secretary to establish procedures for making the data submitted under the PCHQR Program available to the public. Such procedures must ensure that a PCH has the opportunity to review the data that are to be made public with respect to the PCH prior to such data being made public. Section 1866(k)(4) of the Act also provides that the Secretary must report quality measures of process, structure, outcome, patients’ perspective on care, efficiency, and costs of care that relate to services furnished in such hospital on the CMS Web site.

In order to meet these requirements, in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53562 through 53563), we finalized our policy to display publicly PCHQR Program data on the *Hospital Compare* Web site (<http://www.hospitalcompare.hhs.gov/>) and

established a preview period of 30 days prior to making such data public.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50847 through 50848), we finalized our proposal to display publicly in 2014 and subsequent years the data for the measures listed below:

- Adjuvant Chemotherapy is considered or administered within 4 months (120 days) of diagnosis to patients under the age of 80 with AJCC III (lymph node positive) colon cancer (NQF #0223); and
- Combination Chemotherapy is considered or administered within 4 months (120 days) of diagnosis for women under 70 with AJCC T1c, or Stage II or III hormone receptor negative breast cancer (NQF #0559).

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28257), we proposed to display publicly in 2015 and subsequent years the data for the Adjuvant Hormonal Therapy measure (NQF #0220).

We also proposed to display publicly no later than 2017 and for subsequent years the data for the measures listed below:

- NHSN Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138); and
- NHSN Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139).

At present, all PCHs are reporting CLABSI and CAUTI data to the NHSN under the PCHQR Program. However, due to the low volume of data produced and reported by the small number of facilities (in fewer than 2 years), the CDC is unable to calculate reasonable and reliable baseline estimates, or expected rates, which are needed for the purpose of calculating these measure rates. Therefore, we estimate that the first public posting of the CLABSI and CAUTI PCHQR Program data reported to the NHSN from the PCHs will occur no later than 2017.

We invited public comment on these proposals.

Comment: Commenters recommended that CMS revise the CLABSI, CAUTI, and SSI measures to account for cancer-specific risks and consider the variation in the cancer patient population case-mix, especially regarding the percentage of patients discharged to palliative or hospice care, when assessing performance on these measures for public display, and recommended that CMS display publicly ICU versus non-ICU rates for the CLABSI and CAUTI data.

Response: We appreciate the commenters' feedback and will consider it for future years. We note that the CDC is the measure steward and is

responsible for maintaining the measure specifications for the CLABSI, CAUTI, and SSI measures. CDC works closely with external partners and subject-matter experts to develop and maintain NHSN definitions and criteria that are both standardized and clinically relevant. A concerted effort is made to take into account the heterogeneous patient populations that are monitored and tracked using NHSN, cancer patients being one of many such populations. However, CDC recognizes that the HAI definitions may not account for all heterogeneity and variation among the patient populations and will continue to work with subject-matter experts to gain input and insight on additional criteria that are needed to better represent specific populations where possible. In addition, now that we have received data specifically from PCHs, those data can be reviewed, along with all other NHSN data, when the SIRs are to be recalculated to determine baselines based on the FY 2014 program year. If strong variations are found, we will consider revising the calculation for PCHs.

Comment: One commenter supported CMS' proposal to delay the display of both NHSN CAUTI and CLABSI until no later than 2017 in order to ensure that reliable expected rates can be calculated, and recommended that CMS evaluate the NHSN SSI data under the same standard.

Response: We thank the commenter for its support. The main purposes of the PCHQR Program are to report publicly quality of care information that consumers can use to make decisions about their health care and to encourage PCHs to improve their quality of care. Accordingly, we will delay public reporting of CLABSI and CAUTI data until no later than 2017 so that reliable baseline estimates and expected rates can be determined. We believe this delay is necessary in order to provide meaningful and reliable data available for consumers to make informed health care decisions. After considering the comment, we agree that this same standard should apply to the SSI measure.

After consideration of the public comments we received, we are finalizing the proposal to display publicly beginning in 2015 the data for the Adjuvant Hormonal Therapy measure (NQF #0220), and to display publicly the CLABSI and CAUTI data no later than 2017.

9. Form, Manner, and Timing of Data Submission Beginning With the FY 2017 Program

a. Background

Section 1866(k)(2) of the Act requires that, beginning with the FY 2014 PCHQR Program, each PCH must submit to the Secretary data on quality measures specified under section 1866(k)(3) of the Act in a form and manner, and at a time, as specified by the Secretary.

Data submission requirements and deadlines for the PCHQR Program are generally posted on the QualityNet Web site at: <http://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPPage%2FQnetTier3&cid=1228772864228>.

b. Reporting Requirements for the New Measure: External Beam Radiotherapy for Bone Metastases (NQF #1822) Beginning With the FY 2017 Program

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28257 through 28258), we proposed that PCHs report the External Beam Radiotherapy for Bone Metastases (NQF #1822) measure beginning with January 1, 2015 discharges and for subsequent years. We proposed that PCHs would report this measure to us via a CMS Web-based Measures Tool on an annual basis (July 1 through August 15 of each respective year). This approach is consistent with the data submission deadlines finalized for the clinical process/oncology care measures (78 FR 50850 through 50851) and PCHs are already preparing to begin submitting PCHQR data using this timeline. We also believe that annual data submission of once per year (as opposed to quarterly data submission of four times per year) will reduce PCHs' costs and burden. We believe that these proposed dates will provide enough advance notice for PCHs to prepare to report the measure.

We proposed to collect the EBRT for Bone Metastases measure rates for the FY 2017 program and subsequent years using all-patient (both Medicare and non-Medicare) data from the four quarters (Q1, Q2, Q3, and Q4) of CY 2015, and that PCHs must submit aggregate data for the measure for each of these quarters during a data submission window that would be open from July 1 through August 15, 2016. For the FY 2017 program and subsequent years, we refer readers to the reporting periods and data submission window outlined in the table below in this section.

For data collection, we proposed that PCHs submit aggregate-level data through the CMS Web-based Measures

Tool or submit an aggregate data file through a vendor (via QualityNet infrastructure). We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50850 through 50851) for more information on the CMS Web-based Measures tool.

We welcomed public comment on the proposed reporting periods, data submission timeframes, and data collection methods/modes for the proposed measure for the FY 2017 program and subsequent years.

Comment: One commenter requested that CMS provide clarification on whether a sampling methodology (including population and sampling guidelines) will be permitted for the EBRT for bone metastases measure because this approach will lessen the burden on PCHs.

Response: We agree that an all-patient EBRT sampling methodology would provide the public with quality measure data that represents the entire patient population of PCHs. We believe that this

approach would facilitate PCH education through a consistent sampling methodology across PCHQR measures. Accordingly, we are finalizing a sampling methodology for the EBRT measure in this final rule that is consistent with the sampling methodology standards finalized for the clinical process/oncology care and SCIP measures. We will incorporate this EBRT sampling methodology in the next feasible regularly scheduled PCHQR specifications manual semiannual update.

Comment: One commenter recommended that CMS adopt the same reporting requirements proposed for the clinical process/oncology care, clinical process/cancer specific treatment, and SCIP measures for the new EBRT for bone metastases measure.

Response: The EBRT for bone metastases reporting proposals (79 FR 28257) are consistent with the clinical process/oncology care proposals (79 FR 28258). These proposals allow two data

submission options to submit aggregate data: via a CMS Web-based Measures Tool or an aggregate data file.

After consideration of the public comments we received, we are finalizing the sampling methodology by allowing PCHs to use the same sampling approach that we are finalizing for the clinical process/oncology care measures (we refer readers to the sampling table found in section IX.B.9.d. of the preamble of this final rule (New Sampling Methodology for the Clinical Process/Oncology Care Measures Beginning with the FY 2016 Program)) for the EBRT measure sampling purposes. In addition, we are finalizing our proposed reporting requirements for the EBRT measure, beginning with the FY 2017 PCHQR Program. The table below outlines the finalized reporting periods and submission timeframes for FY 2017, FY 2018, and subsequent years for the EBRT for bone metastases measure.

FINALIZED EXTERNAL BEAM RADIOTHERAPY FOR BONE METASTASES (NQF #1822) MEASURE-REPORTING PERIODS AND SUBMISSION TIMEFRAMES FOR THE FY 2017 PROGRAM AND SUBSEQUENT YEARS

Program year (FY)	Reporting periods (CY)	Data submission deadlines
2017	Q1 2015 discharges (January 1, 2015–March 31, 2015) Q2 2015 discharges (April 1, 2015–June 30, 2015). Q3 2015 discharges (July 1, 2015–September 30, 2015). Q4 2015 discharges (October 1, 2015–December 31, 2015).	July 1, 2016–August 15, 2016.
2018	Q1 2016 discharges (January 1, 2016–March 31, 2016) Q2 2016 discharges (April 1, 2016–June 30, 2016). Q3 2016 discharges (July 1, 2016–September 30, 2016). Q4 2016 discharges (October 1, 2016–December 31, 2016).	July 1, 2017–August 15, 2017.
Subsequent Years	Q1 discharges (January 1–March 31 of each year 2 years before the program year) Q2 discharges (April 1–June 30 of each year 2 years before the program year). Q3 discharges (July 1–September 30 of each year 2 years before the program year). Q4 discharges (October 1–December 31 of each year 2 years before the program year).	July 1–August 15 of each year before the program year.

c. Reporting Options for the Clinical Process/Cancer Specific Treatment Measures Beginning With the FY 2015 Program and the SCIP and Clinical Process/Oncology Care Measures Beginning With the FY 2016 Program

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28258 through 28259), we proposed to modify the data submission requirements for the three clinical process/cancer specific

treatment measures that we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53564), and the six SCIP measures and five clinical process/oncology care measures that we adopted in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50846). Under those requirements, PCHs submit aggregate-level clinical process/cancer specific treatment measure data to a CMS contractor, aggregate-level clinical process/oncology care measure data

through the CMS Web-based Measures Tool, and patient-level SCIP measure data through the QualityNet infrastructure. We proposed to allow PCHs to report the clinical process/cancer specific treatment, SCIP, and clinical process/oncology care data to CMS using one of two mechanisms. Under the first option, which was newly proposed for the SCIP and clinical process/oncology care measure sets, PCHs or their authorized vendors may

enter aggregate numerator and denominator data into a CMS Web page located on the secure part of the CMS QualityNet infrastructure. Under the second option, which was newly proposed for the clinical process/cancer specific treatment, SCIP, and clinical process/oncology care measures, PCHs or their authorized vendors may submit an aggregate data file through a CMS secure QualityNet file exchange process. We proposed these options in order to decrease the reporting burden for PCHs.

We believe that the newly proposed submission option, which is described further below for the SCIP measures, will result in a considerable burden reduction for PCHs, as it includes once annually, rather than once quarterly, submission deadlines and submission of aggregate data as opposed to patient-level data for the SCIP measures.

In addition, we proposed a second option, allowing PCHs to submit an annual aggregate data file stratified by four quarters for each of the SCIP measures. We stated that we believed this additional option would provide the public with sufficiently reliable quality measure information while reducing PCH burden through providing two data collection options. We also stated that we would provide detailed technical file format specifications on the public QualityNet Web site (www.qualitynet.org) following publication of this final rule. We outlined the new submission deadlines for the SCIP measures in the table below.

We stated that these requirements would replace, for the purposes of the PCHQR Program, the update to the SCIP timeline and IT infrastructure that we finalized for the PCHQR Program in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50851 through 50852).

We invited public comment on the proposed new reporting mechanism that would apply to the three clinical process/cancer specific treatment measures, five clinical process/oncology care treatment measures, and six SCIP measures.

Comment: One commenter supported the proposal to allow two reporting options for the clinical process/cancer specific treatment, clinical process/oncology care, and SCIP measures. One commenter supported the proposal to update the reporting periods and submission timelines for the six SCIP measures, noting that the proposal simplifies the PCHQR Program's data reporting process.

Response: We appreciate the commenters' support of this proposal. Our intent is to reduce burden and effort and align CMS infrastructure where

appropriate by offering alternative options for PCHs to submit measure data. We are finalizing the two reporting options for the clinical process/cancer specific treatment and clinical process/oncology care measures as proposed. However, the six PCHQR SCIP measures, we are only finalizing the second proposed option, under which PCHs or their vendors may submit an annual aggregate data file stratified by four quarters data via the CMS QualityNet portal.

We are not finalizing the first proposed option that would have allowed PCHs to submit aggregate numerator and denominator data into a CMS Web-Based Measures Tool for the SCIP measures because we were recently informed by our IT developers that the proposed CMS Web page would not be modified to collect aggregate SCIP data by the previously finalized January 2015 initial discharge date. As a result, we are retaining as a second option for these measures the data submission that is currently in place, under which PCHs may submit patient-level data to CMS through the QualityNet infrastructure.

Comment: One commenter expressed concern that the proposed submission options for the clinical process/cancer specific treatment measures, which allow for a data submission other than through the CMS contractor (77 FR 53564) which uses the Commission on Cancer Rapid Quality Reporting System (RQRS), could result in declining patient outcomes and less PCH accountability.

Response: We appreciate the commenter's feedback. We strongly believe that the vendor submission approach, allowing for vendors to submit aggregate data files is consistent across all PCHQR measures and other CMS quality reporting programs to submit data on behalf of the respective hospital facilities. In addition, we believe this approach will greatly reduce reporting burden, minimize duplication of effort, and increase efficiency because vendors commonly submit more than one measure set at the same time (for example, annually or quarterly) on behalf of the facilities.

Comment: One commenter recommended that CMS update NQF #0383 (Oncology: Plan of Care for Pain) to include a minimum threshold for pain in the denominator and to provide a more specific definition for "visit" that includes oncology visits (for example, for palliative care). The commenter also recommended all changes to the measure specifications of the clinical process/oncology care

measures be communicated to NQF and PCHs.

Response: We appreciate the commenter's feedback and will consider it in future rulemaking.

Comment: Several commenters asked CMS to consider whether the SCIP measures have been adequately tested in the PCH patient population, noting that the measures may inadvertently encourage care that is not applicable to the PCH setting. For example, one commenter noted that SCIP-Inf-3 requires that prophylactic antibiotics be discontinued within 24 hours after surgery end time, but that this approach may not be well-suited for oncologic patient populations.

Response: We note that we have considered the appropriateness of these measures for the PCH settings, as the inclusion and exclusion criteria for the SCIP measures adopted for the PCHQR Program exclude patients from the measure denominator when the care does not apply. For example, the SCIP-Inf-3 measure specifications include an exclusion criterion for patients with a Reason to Extend Antibiotics. We believe it is important to note that the SCIP measures include all cancer surgeries (and not limited to orthopedic surgeries) performed by both PCHs and many acute care hospitals. We will continue to collaborate with PCHs that have questions about the SCIP measures, and to incorporate nonsubstantive updates into the PCHQR specifications manual.

After consideration of the public comments we received, we are finalizing the proposed reporting requirements for the clinical process/cancer specific treatment and clinical process/oncology care measures beginning with the FY 2015 and FY 2016 program years respectively with one modification. We are not finalizing the CMS Web-Based Measures Tool (aggregate-level data) for the SCIP measures because we are able to leverage the existing patient-level CMS SCIP IT collection infrastructure. PCHs may submit the SCIP measures using two options: (1) Authorized vendor submission of an aggregate data file into the secure CMS QualityNet portal to CMS; or (2) submission of data via the secure CMS QualityNet portal. This finalized policy aligns our existing reporting infrastructure across the PCHQR Program and other CMS quality improvement programs and provides an additional vendor option to report SCIP data to CMS.

The reporting periods and submission timeframes for the clinical process/cancer specific treatment and clinical process/oncology care measures are

outlined in the FY 2013 and FY 2014 IPPS/LTCH PPS final rules (77 FR 53564 and 78 FR 50851, respectively). The table below outlines the finalized aggregate data file reporting periods and

submission timeframes for FY 2016, FY 2017, and subsequent years for the SCIP measures. Patient-level SCIP reporting period and data submission timeframes are available on the QualityNet Web site

(<https://www.qualitynet.org/dcs/ContentServer?c=Page&pagename=QnetPublic%2FPage%2FQnetTier3&cid=1228773716091>).

FINALIZED SIX SCIP MEASURES-AGGREGATE DATA FILE REPORTING PERIODS AND SUBMISSION TIMEFRAMES FOR THE FY 2016 PROGRAM AND SUBSEQUENT YEARS

Program year (FY)	Reporting periods (CY)	Data submission deadlines
2016	Q1 2015 discharges (January 1, 2015–March 31, 2015)	July 1, 2015–August 15, 2015.
2017	Q2 2015 discharges (April 1, 2015–June 30, 2015) Q3 2015 discharges (July 1, 2015–September 30, 2015). Q4 2015 discharges (October 1, 2015–December 31, 2015).	July 1, 2016–August 15, 2016.
Subsequent Years	Q1 discharges (January 1–March 31 of each year 2 years before the program year) Q2 discharges (April 1–June 30 of each year 2 years before the program year). Q3 discharges (July 1–September 30 of each year 2 years before the program year). Q4 discharges (October 1–December 31 of each year 2 years before the program year).	July 1–August 15 of each year before the program year.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28259), we did not propose any changes to the previously finalized procedural requirements, Notice of Participation (NOP) requirements, or Data Accuracy and Completeness Acknowledgement (DACA) requirements. We refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53563 through 53567) for more information on these requirements.

d. New Sampling Methodology for the Clinical Process/Oncology Care Measures Beginning With the FY 2016 Program

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50842), we adopted a policy under which PCHs could report the five clinical process/oncology care measures finalized for the FY 2016 program and subsequent years using the same sampling methodology that we allow for the reporting of those measures under the PQRS. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28259), we proposed to replace the previously adopted sampling methodology with a sampling methodology similar to the one we have allowed hospitals to use to report the SCIP measures under the Hospital IQR Program. The sampling methodology specified in the PQRS Specifications Manual is specific to the physician office setting. We believe that the methodology we proposed is more applicable to PCHs because it was developed for hospital-level reporting.

The proposed methodology will allow for different numbers of cases to be reported based on each PCH’s cancer patient population size. This is necessary for the PCHQR Program because bed size varies among PCHs from 20 to >250 beds.¹²⁹ The sampling methodology for the clinical process/oncology care measures is shown below, and we believe it will decrease the reporting burden on PCHs while producing reliable measure rates.

Average quarterly initial population size “N”	Minimum required sample size “N”
>125	25.
51–125	20 percent of the initial patient population.
10–50	10.
<10	No sampling; 100 percent of the initial patient population.

We also proposed that PCHs report population and sample size counts (by measure) for Medicare and non-Medicare discharges by quarter for the five clinical process/oncology care measures for the FY 2016 program and subsequent years.

We proposed these requirements in order to support our effort to align with existing reporting requirements used in other CMS quality reporting programs, such as the Hospital IQR Program, which requires participating hospitals to

submit population and sample size counts for certain measures in addition to the all-payer data needed to calculate measure rates. We view it as vital for PCHs to determine accurately their aggregate population and appropriate sample size data in order for us to assess PCHs’ data reporting accuracy and completeness for their total population of cases, including both Medicare and non-Medicare patients.

We welcomed public comments on the proposed sampling guidelines and proposed population and sample size reporting requirements for the clinical process/oncology care measures for the FY 2016 program and subsequent years.

Comment: Several commenters supported the proposal to replace the PQRS physician-level sampling methodology with the proposed new sampling methodology. However, one commenter requested clarification on whether the proposal to collect all-patient data for the clinical process/oncology care measures conflicts with the proposed sampling methodology and also on whether the sampling methodology is based on the number of patients applicable for each measure, or on bed size (that is, hospital-level sample size determination).

Response: We thank the commenters for their support. The term “all-patient data” refers to data regarding both Medicare and non-Medicare patients. Consistent with the sampling methodology standards that we adopted for these measures under the Hospital IQR Program, when PCHs identify the

¹²⁹ American Hospital Directory: <http://www.ahd.com/freesearch.php>.

initial patient population, they will use “all-patient data” to determine the population of patients meeting the measure criteria prior to individual measure denominator exclusions. Thus, the sample will include both patients included and excluded from the measure denominator. We believe that this sampling methodology reduces potential bias in measure rates from sampling all patients included in the measure’s initial patient population. This initial patient population is usually defined by groups of ICD–9–CM principal procedure or diagnosis codes, which may be readily identified by PCHs by using computer billing records common to Medicare and non-Medicare health insurance payers. The PCHs will subsequently identify the sample size based on the patient population (“all-patient data”). This sampling process is applicable for each clinical process/oncology care measure.

Comment: One commenter requested that CMS provide the specifications for the clinical process/oncology care measures and their new sampling method.

Response: We appreciate the commenter’s feedback. We have partnered closely with all 11 PCHs and will provide training and education materials on all measures, including the clinical process/oncology care measures and the applicable proposed sampling methodology. These materials will be available on our QualityNet Web site (<http://www.qualitynet.org>).

Comment: One commenter recommended that CMS revise the proposed reporting requirements for the clinical process/oncology care measures in order to require that reporting of population and sample size counts be based on electronically available data only.

Response: We appreciate the commenter’s feedback. We interpret the comment to recommend that data be submitted via the CMS Web-based Measures Tool only. However, we believe it is most appropriate and feasible at this time to provide PCHs with data submission options. We also understand from past discussions with PCHs that the 11 PCHs vary in their implementation of EHRs. We will consider future available data collection options for PCHs, including electronic Clinical Quality Measures (eCQMs). We also believe that requiring population and sample size count reporting based on electronic data might adversely burden PCHs that do not yet have the means to collect electronic data.

Comment: One commenter recommended that benchmarks for the clinical process/oncology care measures

be based on statistically significant aggregate calculations only.

Response: We thank the commenter for its feedback. Currently, we do not have a policy to develop benchmarks. In our effort to monitor and evaluate program growth and sustainability, we will be observing the clinical process/oncology care measures baselines and expected rates.

10. Exceptions From Program Requirements

In our experience with other quality reporting and performance programs, we have noted occasions when providers have been unable to submit required quality data due to extraordinary circumstances that are not within their control (for example, natural disasters). We do not wish to unduly increase their burden during these times. Therefore, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50848), we finalized our policy that, for the FY 2014 program and subsequent years, PCHs may request and we may grant exceptions (formerly referred to as waivers) with respect to the reporting of required quality data when extraordinary circumstances beyond the control of the PCH warrant. When exceptions are granted, we will notify the respective PCH. We are in the process of revising the Extraordinary Circumstances/Disaster Extension or Waiver Request form (CMS–10432), approved under OMB control number 0938–1171.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28259), we did not propose any substantive changes to this PCHQR exception process.

C. Long-Term Care Hospital Quality Reporting (LTCHQR) Program

1. Background

In accordance with section 1886(m)(5) of the Act, as added by section 3004(a) of the Affordable Care Act, the Secretary established the Long-Term Care Hospital Quality Reporting (LTCHQR) Program. Under section 1886(m)(5)(A)(i) of the Act, for the rate year 2014 and each subsequent rate year, in the case of an LTCH that does not submit data to the Secretary in accordance with section 1886(m)(5)(C) of the Act with respect to such a rate year, any annual update (which we also refer to as a “payment determination”) to a standard Federal rate for discharges for the hospital during the rate year, and after application of section 1886(m)(3) of the Act, shall be reduced by two percentage points. As we discussed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51743 through 51744), for the purposes of the

LTCH PPS, the term “rate year” and the term “fiscal year” both refer to the time period beginning October 1 and ending September 30. In order to avoid any possible confusion, we will use the term “fiscal year” rather than “rate year” in our discussion of the LTCHQR Program.

Under section 1886(m)(5)(D)(i) of the Act, the quality measures for the LTCHQR Program are measures selected by the Secretary that have been endorsed by an entity that holds a contract with the Secretary under section 1890(a) of the Act, unless section 1886(m)(5)(D)(ii) of the Act applies. This contract is currently held by the National Quality Forum (NQF). Additional information regarding the NQF and its measure review processes is available at: http://www.qualityforum.org/Measuring_Performance/Measuring_Performance.aspx.

While as a general matter the Secretary must select endorsed measures for the LTCHQR Program, section 1886(m)(5)(D)(ii) of the Act provides that an exception may be made in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity that holds a contract with the Secretary under section 1890(a) of the Act. In such a case, section 1886(m)(5)(D)(ii) of the Act authorizes the Secretary to specify a measure that is not so endorsed, as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.

The LTCHQR Program was implemented in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51743 through 51756).

2. General Considerations Used for Selection of Quality Measures for the LTCHQR Program

We seek to promote higher quality and more efficient health care for the beneficiaries we serve. Quality reporting programs, including public reporting of quality information, advance such quality improvement efforts. Quality measurement remains the key tool to the success of these programs. Therefore, the selection of only the highest caliber of measures is a priority for CMS.

We seek to adopt measures for the LTCHQR Program that promote better, safer, and more efficient care. Our measure development and selection activities for the LTCHQR Program take into account national priorities, such as those established by the National Priorities Partnership (http://www.qualityforum.org/Setting_

Priorities/NPP/National Priorities Partnership.aspx), the HHS Strategic Plan (<http://www.hhs.gov/secretary/about/priorities/priorities.html>), the National Quality Strategy (NQS) (<http://www.ahrq.gov/workingforquality/nqs/nqs2011annlrpt.htm>), and the CMS Quality Strategy (<http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html>).

We also must consider input from the NQF Measures Application Partnership (MAP) when selecting measures under the LTCHQR Program. The MAP is composed of multi-stakeholder groups convened by the NQF, our current contractor under section 1890 of the Act. The NQF must convene these stakeholders and provide us with the stakeholders' input on the selection of certain categories of quality and efficiency measures as part of a pre-rulemaking process described in section 1890A of the Act. We, in turn, must take this input into consideration in selecting those categories of measures. The NQF MAP met in December 2013 and January 2014 and provided input to CMS as required under section 1890A(a)(3) of the Act. This input appears in the MAP's January 2014 Pre-Rulemaking Report available for download at: http://www.qualityforum.org/Publications/2014/01/MAP_Pre-Rulemaking_Report_2014_Recommendations_on_Measures_for_More_than_20_Federal_Programs.aspx.

Measures proposed for the LTCHQR Program in this final rule are measures CMS included under the List of Measures under Consideration (MUC List) for December 1, 2013,¹³⁰ a list that the Secretary must make available to the public by December 1 of each year, as part of the pre-rulemaking process, as described in section 1890A(a)(2) of the Act. The measures we proposed in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28263 through 28268) for the LTCHQR Program are discussed in the MAP Pre-Rulemaking Report (pp. 192–193). The MAP reviewed each measure proposed in this rule. We refer readers to the following sections of the preamble of this final rule for more information on the MAP's recommendations:

IX.C.7.a.(1), Functional Status Quality Measure: Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; IX.C.7.a.(2), Functional Status

Quality Measure: Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support; and IX.C.7.b., Quality Measure: National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.

After due consideration to any measures that may have been endorsed or adopted by a consensus organization, including the NQF, for the LTCH setting, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28259 through 28278) we proposed measures that are either supported by the MAP for the LTCHQR Program, or that we believe most closely align with the national priorities discussed in this section of the proposed rule. In the absence of the MAP's support, in some cases we proposed measures for which the MAP expressed conditional support and that meet the exception criteria in section 1886(m)(5)(D)(ii) of the Act. Further discussion of why each measure is a high priority in the LTCH setting is included below.

3. Policy for Retention of LTCHQR Program Measures Adopted for Previous Payment Determinations

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53614 through 53615), for the LTCHQR Program, we adopted a policy that once a quality measure is adopted, it will be retained for use in subsequent years, unless otherwise stated. For the purpose of streamlining the rulemaking process, when we initially adopt a measure for the LTCHQR Program for a payment determination, this measure will be automatically adopted for all subsequent years or until we propose to remove, suspend, or replace the measure. For further information on how measures are considered for removal, suspension, or replacement, we refer readers to the FY 2013 IPPS/LTCH PPS final rule.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28260), we did not propose any changes to this policy for retaining LTCHQR Program measures adopted for previous payment determinations.

4. Policy for Adopting Changes to LTCHQR Program Measures

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53615 through 53616), we adopted our policy that if the NQF updates an endorsed measure that we have adopted for the LTCHQR Program in a manner that we consider to not substantively change the nature of the measure, we will use a subregulatory process to incorporate those updates to

the measure specifications that apply to the LTCHQR Program. With respect to what constitutes a substantive versus a nonsubstantive change, we expect to make this determination on a measure-by-measure basis. Examples of such nonsubstantive changes might include updated diagnosis or procedure codes, medication updates for categories of medications, broadening of age ranges, and changes to exclusions for a measure. The subregulatory process for nonsubstantive changes will include revision of the LTCHQR Program Manual and posting of updates on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html>. Examples of changes that we might consider to be substantive would be those in which the changes are so significant that the measure is no longer the same measure, or when a standard of performance assessed by a measure becomes more stringent, such as changes in acceptable timing of medication, procedure/process, test administration, or expansion of the measure to a new setting.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28260 through 28261), we did not propose any changes to this policy for adopting changes to LTCHQR Program measures.

5. Previously Adopted Quality Measures

a. Previously Adopted Quality Measures for the FY 2015 and FY 2016 Payment Determinations and Subsequent Years

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53624 through 53636), we retained the application of Percent of Residents with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678) to the LTCH setting (initially adopted in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51745 through 51750)) for the FY 2015 payment determination and subsequent years, and adopted updated versions of National Health Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138) and NHSN Central Line-Associated Blood Stream Infection (CLABSI) Outcome Measure (NQF #0139), for the FY 2014 payment determination and subsequent years. We also adopted two new quality measures for the LTCHQR Program for the FY 2016 payment determination and subsequent years, in addition to the three previously adopted measures (the CAUTI measure, CLABSI measure, and Pressure Ulcer measure): (1) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-

¹³⁰ Available at: <http://www.qualityforum.org/WorkArea/linkit.aspx?LinkIdIdentifier=id&ItemID=74245>.

Stay) (NQF #0680); and (2) Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431) (77 FR 53624 through 53636).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50861 through 50863), we adopted the NQF-endorsed version of the Pressure Ulcer measure, Percent of

Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678), for the LTCHQR Program for the FY 2015 payment determination and subsequent years.

Set out below are the quality measures, both previously adopted

measures retained in the LTCHQR Program and measures adopted in FY 2013 and FY 2014 IPPS/LTCH PPS final rules, for the FY 2015 and FY 2016 payment determinations and subsequent years.

LTCHQR PROGRAM QUALITY MEASURES ADOPTED FOR THE FY 2015 AND FY 2016 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS

NQF Measure ID	Measure title	Payment determination
NQF #0138	National Health Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure.	FY 2015 and Subsequent FYs.
NQF #0139	National Health Safety Network (NHSN) Central Line-Associated Blood Stream Infection (CLABSI) Outcome Measure.	FY 2015 and Subsequent FYs.
NQF #0678	Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay).	FY 2015 and Subsequent FYs.
NQF #0680	Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay).	FY 2016 and Subsequent FYs.
NQF #0431	Influenza Vaccination Coverage among Healthcare Personnel	FY 2016 and Subsequent FYs.

While we did not propose any changes in the FY 2015 IPPS/LTCH PPS proposed rule to measure specifications for NQF #0678, Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay), we received input from several commenters on this measure.

Comment: A few commenters suggested CMS consider adding a “present on admission” (POA) indicator in the LTCH Continuity Assessment Record and Evaluation (CARE) Data Set. These commenters noted that a POA indicator is critical to aid in the determination of whether a pressure ulcer was developed as a result of care provided by an LTCH.

Response: We recognize the importance of determining pressure ulcers that are “present on admission” and taking this into account when assessing new or worsened pressure ulcers in the LTCH setting. The quality measure Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678), is designed to identify pressure ulcers that are present on admission. Items M0800A, M0800B, and M0800C on the LTCH CARE Data Set discharge assessment capture patient-specific data

to identify Stage 2, Stage 3, and Stage 4 pressure ulcers that are “new” or “worsened” since the time of admission assessment, thus identifying only those Stage 2, Stage 3 and Stage 4 pressure ulcers that were not present on the admission assessment and/or only those Stage 2, Stage 3 and Stage 4 pressure ulcers that were present at a lower stage on the admission assessment. We refer readers to the measure specifications for the Pressure Ulcer measure, which are available for download at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/> and at www.qualityforum.org/QPS/0678.

Comment: A commenter recommended that “behavioral patients” be excluded from the Pressure Ulcer measure. The commenter noted that the inclusion of all inpatients regardless of age and any other criteria has a significant impact on the reporting burden for LTCHs and that the exclusion of behavioral patients would lessen burden on LTCHs because these patients do not significantly contributing to the Pressure Ulcer measure.

Response: We appreciate the commenter’s input on this previously

finalized measure. Pressure ulcers are serious medical conditions that can lead to serious life threatening infections, can substantially increase the cost of care, and are an important measure of quality. As a result, we believe that all patients, regardless of their cognitive or behavioral health status, should be assessed for pressure ulcer risk, and appropriate pressure ulcer monitoring, prevention, and management should be implemented for all patients in an LTCH. We refer the commenter to the current measure specifications for NQF #0678, including patient exclusions and inclusions, available at www.qualityforum.org/QPS/0678.

b. Previously Adopted Quality Measures for the FY 2017 and FY 2018 Payment Determinations and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule, we adopted three additional measures for the FY 2017 payment determination and subsequent years (78 FR 50863 through 50874) and one additional measure for the FY 2018 payment determination and subsequent years (78 FR 50874 through 50877). These measures are set out in the table below.

LTCHQR PROGRAM QUALITY MEASURES PREVIOUSLY ADOPTED FOR THE FY 2017 AND FY 2018 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS

NQF Measure ID	Measure title	Payment determination
NQF #1716	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure.	FY 2017 and Subsequent Years

LTCHQR PROGRAM QUALITY MEASURES PREVIOUSLY ADOPTED FOR THE FY 2017 AND FY 2018 PAYMENT DETERMINATIONS AND SUBSEQUENT YEARS—Continued

NQF Measure ID	Measure title	Payment determination
NQF #1717	National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure.	FY 2017 and Subsequent Years
NQF #2512 (Under Review at NQF*)	All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals.	FY 2017 and Subsequent Years
Application of NQF #0674	Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay).	FY 2018 and Subsequent Years

* Not NQF endorsed, currently under review at NQF, please see: http://www.qualityforum.org/All-Cause_Admissions_and_Readmissions_Measures.aspx

While we did not propose any changes in the FY 2015 IPPS/LTCH PPS proposed rule to measures previously adopted for the FY 2017 payment determination and subsequent years, we received input from a few commenters regarding three previously finalized measures: NHSN Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716), NHSN Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717), and All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals (NQF #2512, under review at NQF). While we greatly appreciate the commenters' views on these previously finalized measures, we did not make any proposals relating to them in the FY 2015 IPPS/LTCH PPS proposed rule. Therefore, we will not summarize and address all of these comments in detail in this final rule. However, we will consider all of these comments in future rulemaking and program development.

Comment: A commenter supported the inclusion of the MRSA and CDI measures in the LTCHQR Program noting that the LTCH patients arrive after receiving several weeks of therapy for infections that are difficult to treat and therefore have high levels of exposure to antibiotics. Another commenter also supported these two measures and indicated support for the readmission measure. This commenter urged CMS to adopt outcome measures more quickly and suggested that the three aforementioned measures finalized for FY 2017 be implemented for FY 2016.

Response: We appreciate the commenter's recommendation to adopt the measures more quickly than the previously finalized timeline. However, in order to ensure adequate time to support successful measure

implementation across the LTCHs, we believe the previously finalized data collection period and submission deadlines are appropriate. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50880 through 50882) for more information.

Comment: A commenter urged CMS to share, on a monthly basis, claims data with LTCHs for any patients readmitted within 30 days of the LTCH discharge. The commenter noted that providing these data would (1) notify LTCHs of readmissions that will affect their quality reporting data, and (2) enable LTCHs to identify potential systemic problems and implement corrective action plans focused on improving quality of care and reducing preventable readmissions.

Response: We appreciate the commenter's support for this previously finalized quality measure. This commenter recommended a quality improvement process that is separate from the purpose of the readmissions measure. The readmissions measure is intended to report statistically robust estimates of standardized readmission rates over a particular time, while the commenter recommends an intensive quality control process with real time data on specific patients. We will consider these quality improvement process recommendations as we move forward with the LTCHQR Program and future measure development and reporting efforts. To facilitate reduction in readmissions, we encourage all LTCHs to conduct appropriate discharge planning and follow up with their patients to monitor and ensure high-quality care and improved outcomes.

6. Revisions to Data Collection Period and Submission Deadlines for Previously Adopted Quality Measures

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28262 through 28263) we proposed, for the FY 2016 payment determination and subsequent

years, to revise data collection period and submission deadlines for a measure that we previously adopted for the LTCHQR Program: Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680). We also proposed, for the FY 2018 payment determination only, revised data collection period and submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (application of NQF #0674) measure. For the FY 2019 payment determination and subsequent years, data collection for this measure would begin on January 1 and continue through December 31.

a. Revisions to Data Collection Period and Submission Deadlines for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680)

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50858 through 50861), we revised the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure for the FY 2016 payment determination and subsequent years. Specifically, we finalized that for the FY 2016 payment determination, LTCHs must collect data for any patient admitted or discharged during the influenza vaccination season, from October 1, 2014, through April 30, 2015, and submit data for these patients by May 15, 2015.

We sought to better align the data collection period and submission deadlines of the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure with the data collection period and submission deadlines of the Percent of Residents or Patients with

Pressure Ulcers That Are New or Worsened (Short Stay) (NQF #0678) measure because both measures are reported using the same data collection instrument, the LTCH CARE Data Set. Therefore, for the FY 2016 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28262), we proposed to revise the data collection period and submission deadlines for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the

Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure. Specifically, we proposed that the first data collection period would take place during the fourth quarter of the CY preceding the applicable FY (for example, October 2014 through December 2014 for the FY 2016 payment determination), with data submission by February 15, 2015, and the second data collection period would take place during the first quarter of the subsequent CY (for example, January 2015 through March 2015 for the FY

2016 payment determination), with data submission by May 15, 2015. The changes are illustrated below for the FY 2016 and FY 2017 payment determinations only, but similar collection period and submission deadlines would also apply to subsequent years. By taking into account the influenza vaccination season, these changes would align data collection and submission for this measure (NQF #0680) with the rest of the LTCH CARE Data Set.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES FOR LTCHQR PROGRAM QUALITY DATA FOR THE FY 2016 AND FY 2017 PAYMENT DETERMINATIONS: PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period	Submission deadlines	Payment determination
October 1, 2014—December 31, 2014	February 15, 2015	FY 2016.
January 1, 2015—March 31, 2015	May 15, 2015.	
October 1, 2015—December 31, 2015	February 15, 2016	FY 2017.
January 1, 2016—March 31, 2016	May 15, 2016.	

We noted that these changes would only apply to the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) for the LTCHQR Program, and would not be applicable to any other LTCHQR Program measures, proposed or adopted, unless explicitly stated.

We invited public comments on our proposal to revise the data collection period and submission deadlines for this patient influenza vaccination measure (NQF #0680) for the FY 2016 payment determination and subsequent years. We refer readers to section IX.9.c. of the preamble of this final rule for our responses to comments on this proposal, as well as our final policy on this proposal.

b. Revisions to Data Collection Period and Submission Deadlines for the Application of Percent of Residents Experiencing One or More Falls With Major Injury (Long-Stay) (NQF #0674)

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50874 through 50877), we adopted the Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674) for the FY 2018 payment determination. We further finalized that LTCHs should begin to collect and submit data on this measure using the LTCH CARE Data Set starting January 1, 2016.

To ensure the successful implementation of new and updated versions of LTCH CARE Data Set, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28262 through 28263), we noted that we will be following an implementation cycle beginning April 1, 2016, which will allow for a predictable future release schedule. We believe that adherence to a predictable future release schedule that takes into account both

the changes that must be made to the LTCH CARE Data Set, as well as requirements that are managed by LTCHs for such changes, will help ensure successful implementation. Therefore, we will be adhering to a date of April 1 of any given year when releasing future iterations of the LTCH CARE Data Set. This change will effectively delay the implementation of the January 1, 2016, release by three months, allowing LTCHs additional time to become familiar with and to participate in trainings related to the revised LTCH CARE Data Set, as well as time to incorporate given changes into their existing IT infrastructure.

Therefore, we proposed that for the FY 2018 payment determination, data collection for this measure would begin on April 1, 2016. For all subsequent years, data collection for this measure would begin on January 1 and continue through December 31. The changes are illustrated below for the FY 2018 and FY 2019 payment determinations.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES FOR LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 AND FY 2019 PAYMENT DETERMINATIONS: APPLICATION OF PERCENT OF RESIDENTS EXPERIENCING ONE OR MORE FALLS WITH MAJOR INJURY (LONG-STAY) (NQF #0674)

Data collection period	Submission deadlines	Payment determination
April 1, 2016—June 30, 2016	August 15, 2016	FY 2018.
July 1, 2016—September 30, 2016	November 15, 2016.

October 1, 2017—December 31, 2017	February 15, 2018.	

We noted that these proposed changes would be applicable only to the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674) measure, and not applicable to any other LTCHQR Program measures, proposed or adopted, unless specifically proposed for such measures.

We invited public comments on these proposals. We refer readers to section IX.9.f. of the preamble of this final rule for our responses to comments on these proposals, as well as our final policy on this proposal.

7. New LTCHQR Program Quality Measures for the FY 2018 Payment Determination and Subsequent Years

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28263 through 28268), we proposed three new quality measures for the FY 2018 payment determination and subsequent years. Two of these are related to functional status, and one measure is related to ventilator-associated events (VAE). One of the proposed functional status quality measures is Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. The second proposed functional status quality measure is Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support. The quality measures are described in more detail below.

a. New LTCHQR Program Functional Status Quality Measures for the FY 2018 Payment Determination and Subsequent Years

Patients in LTCHs present with clinically complex conditions. In addition to having complex medical care needs for an extended period of time, LTCH patients often have functional limitations due to the nature of their conditions, as well as deconditioning due to prolonged bed rest and treatment requirements (for example, ventilator use). These patients are therefore at high risk for functional decline during the LTCH stay that is both condition-related and iatrogenic.

The National Committee on Vital and Health Statistics, Subcommittee on Health,¹³¹ noted: “[i]nformation on functional status is becoming increasingly essential for fostering healthy people and a healthy population. Achieving optimal health and well-being for Americans requires

an understanding across the life span of the effects of people’s health conditions on their ability to do basic activities and participate in life situations, in other words, their functional status.”

The functional assessment items included in the two functional status quality measures were originally developed and tested as part of the Post-Acute Care Payment Reform Demonstration version of the CARE Tool,¹³² which was designed to standardize assessment of patients’ status across acute and post-acute settings, including LTCHs, inpatient rehabilitation facilities (IRFs), skilled nursing facilities (SNFs), and home health agencies (HHAs). The functional status items on the CARE Tool are daily activities that clinicians typically assess at the time of admission and/or discharge in order to determine patients’ needs, evaluate patient progress and prepare patients and families for a transition to home or to another setting.

The development of the CARE Tool and a description and rationale for each item is described in a report entitled “The Development and Testing of the Continuity Assessment Record and Evaluation (CARE) Item Set: Final Report on the Development of the CARE Item Set: Volume 1 of 3.”¹³³ Reliability and validity testing were conducted as part of CMS’ Post-Acute Care Payment Reform Demonstration, and we concluded that the functional status items have acceptable reliability and validity. A description of the testing methodology and results are available in several reports, including the report entitled “The Development and Testing of the Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report On Reliability Testing: Volume 2 of 3”¹³⁴ and the report entitled “The Development and Testing of The Continuity Assessment Record And Evaluation (CARE) Item Set: Final Report on Care Item Set and Current Assessment Comparisons: Volume 3 of 3.”¹³⁵ These reports are available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality->

¹³² In the FY 2015 IPPS/LTCH PPS proposed rule, we used the terms “CARE Item Set” and “CARE Tool” interchangeably. For the purpose of consistency and standardization of terminology, we have revised the language to “CARE Tool” throughout this FY 2015 IPPS/LTCH PPS final rule. However, we have retained the term “CARE Item Set” when citing existing reports.

(1) Functional Status Quality Measure: Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function

The first functional status quality measure we proposed for the FY 2018 payment determination and subsequent years is a process quality measure entitled Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. This quality measure reports the percent of LTCH patients with both an admission and a discharge functional assessment and a care plan that addresses function.

This process measure requires the collection of admission and discharge functional status data by trained clinicians using standardized clinical assessment items, or data elements, that assess specific functional activities (that is, self-care, mobility, cognition, communication, and bladder continence). The self-care and mobility function items are coded using a 6-level rating scale that indicates the patient’s level of independence with the activity; higher scores indicate more independence. The number of available response options for coding the cognition, communication, and bladder items ranges from 2 to 7. For this quality measure, inclusion of function in the patient’s care plan is determined based on whether a functional goal is recorded at admission for at least one of the standardized self-care or mobility function items using the 6-level rating scale.

An increasing body of reported evidence has supported the safety and feasibility of early mobilization and rehabilitation of critically ill but stable patients, with minimal adverse events and risk to the patient.^{136 137 138 139 140 141}

¹³¹ Subcommittee on Health National Committee on Vital and Health Statistics, “Classifying and Reporting Functional Status” (2001).

Early mobility and rehabilitation in these settings have been associated with improved patient outcomes. Therefore, this quality measure addresses the importance of: (1) Conducting a functional assessment at the time of admission addressing self-care, mobility, cognition, communication, and bladder continence; (2) incorporating the functional assessment findings made at the time of admission into the patients' care plan and setting at least one discharge self-care or mobility functional status goal; and (3) conducting a functional assessment at the time of discharge addressing self-care, mobility, cognition, communication, and bladder continence.

Functional limitations following critical illness are becoming increasingly prevalent as a result of improving critical care medicine and survival rates.¹⁴² Short-term and long-term adverse consequences among critically ill and chronically, critically ill patients in LTCH and Intensive Care Unit (ICU) settings include severe weakness,^{143 144 145 146} muscle atrophy,¹⁴⁷ connective-tissue shortening,¹⁴⁸ loss of bone mass,¹⁴⁹ increased risk for blood clots,¹⁵⁰ increased risk for pressure ulcers,¹⁵¹ deconditioning,^{152 153} deficits in self-care and ambulation,¹⁵⁴ and functional impairment,¹⁵⁵ fatigue,¹⁵⁶ as well as cognitive impairment, including

increase ambulation in the intensive and intermediate care settings," *Phys Ther* 93, no. 2 (2013).

profound and persistent deficits in memory, attention/concentration, and executive function,^{157 158 159} and the inability to return to work one year after hospital discharge.^{160 161} Cognitive impairment in survivors of critical illness has been associated with anxiety and depression, inability to return to work, and inability of older persons to return home.¹⁶² To mitigate these adverse consequences, traditional practices of bed rest and immobility have been challenged in recent years, and early mobility and rehabilitation have been increasingly recognized as important to improve patients' long-term functional outcomes,^{163 164 165} with recovery of function being described as both desirable and possible.¹⁶⁶ The lack of early mobility initiation in ICU settings has also been described as a strong predictor of patient outcomes.¹⁶⁷

The clinical practice guideline *Rehabilitation after Critical Illness*¹⁶⁸ from the National Institute for Health and Clinical Excellence (NICE) recommends performing clinical assessment to determine the patient's risk of developing physical and nonphysical morbidity during the critical care stay as early as clinically possible, identifying current rehabilitation needs for patients at risk of morbidity, establishing short-term and medium-term rehabilitation goals based on the clinical assessment, starting an individualized structured rehabilitation program as early as possible, and performing clinical reassessment before discharge.

The importance of standardized functional assessment in LTCH settings is also supported by the high prevalence of therapy services provided in this setting, as well as the need for care coordination for patients returning home and receiving follow-up care in the community and patients receiving additional institutional healthcare services after discharge from an LTCH. A study¹⁶⁹ of 1,419 ventilator-dependent patients from 23 LTCHs reported that physical, occupational, and speech therapy were the most commonly provided services among a comprehensive list of 34 procedures, services, and treatments provided during the LTCH stay. The high frequency of physical (84.8 percent), occupational (81.5 percent), and speech (79.7 percent) therapy reflects use of the rehabilitative model of care adopted by many post-ICU ventilator weaning programs, which is important in restoration of function.¹⁷⁰ This high utilization of therapy services supports the need for standardized functional assessment at admission to document functional status, identify the need for therapy, set functional status goals and assist with discharge planning and care coordination.

Whether an LTCH patient is discharged home or to another care setting for continuing health care, functional status is an important aspect of a person's health status to document at the time of transition. The study¹⁷¹ also reported that 28.8 percent of patients were discharged directly home or to assisted living, further supporting the importance of functional assessment and early rehabilitation to facilitate discharge planning and home discharge, when possible.

Reported benefits of early mobility and rehabilitation include: (1) Improved strength^{172 173 174} and functional status;^{175 176 177} (2) earlier achievement

mobilization;^{198 199} and reduced hospital readmission or death in the year following hospitalization.^{200 201}

Short-term and long-term cognitive impairment are very frequent complications of critical illness, and negatively influence survivors' abilities to function independently.^{202 203 204} Delirium during hospitalization is highly prevalent in critically ill patients and has been associated with longer lengths of stay, increased duration of mechanical ventilation, and higher risk of death.²⁰⁵ A longer duration of delirium has been associated with worse short- and long-term cognition and executive function.^{206 207} Given these adverse consequences, the importance of early assessment of cognitive function, including possible delirium, and early initiation of cognitive rehabilitation in critical care settings, is being increasingly recognized.^{208 209} Also, given the positive effects of physical exercise on cognitive function in other populations, the potential positive influence of exercise on cognitive function in the critically ill population is being examined by researchers.²¹⁰

A technical expert panel (TEP) convened by our measure development contractor provided input on the technical specifications of this quality measure, including the items included

in the quality measure, inclusion and exclusion criteria. We also solicited public comment on the draft specifications of this quality measure on the CMS Quality Measures Public Comment Page (<http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/CallforPublicComment.html>) between February 21, 2014, and March 14, 2014, and received 22 responses from stakeholders with comments and suggestions. Additional information regarding these comments may be found on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

Based on the evidence discussed above, we proposed to adopt for the LTCHQR Program for the FY 2018 payment determination and subsequent years the quality measure entitled Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. This quality measure was developed by CMS, and we plan to submit the quality measure to the NQF for review. The MAP met in December 2013 and January 2014, and provided input to CMS as required under section 1890A(a)(3) of the Act. In its January 2014 Pre-Rulemaking Report, the MAP conditionally supported this measure and stated that the measure concept is promising, but requires modification or further development, and that functional status is a critical area of measurement.

Since the time of the MAP meeting, we have continued further development of the measure with input from technical experts, including empirical data analysis. Subsequently, we released draft specifications for the functional status quality measures, and requested public comment between February 21, 2014 and March 14, 2014. We received 22 responses from stakeholders with comments and suggestions during the public comment period, and have updated the quality measures specifications based on these comments and suggestions. The updated specifications are available for review at the LTCHQR Program Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html?redirect=/LTCH-Quality-Reporting/>. We refer readers to section IX.C.2. of the preamble of this final rule for more information on the MAP.

In section 1886(m)(5)(D)(ii) of the Act, the exception authority provides that "[i]n the case of a specified area or medical topic determined appropriate

by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.” We reviewed the NQF’s consensus endorsed measures and were unable to identify any NQF-endorsed quality measures focused on assessment of function for patients in the LTCH setting. We are unaware of any other quality measures for functional assessment that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, we proposed to adopt this functional assessment measure for use in the LTCHQR Program for the FY 2018 payment determination and subsequent years under the Secretary’s authority to select non-NQF-endorsed measures.

Additional information regarding the quality measure may be found on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

We proposed that data for the quality measure be collected through the LTCH CARE Data Set, with the submission through the Quality Improvement and Evaluation System (QIES) Assessment Submission and Processing (ASAP) system. For more information on LTCHQR Program reporting using the QIES ASAP system, we refer readers to our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html>. We noted our intention to revise the LTCH CARE Data Set to include new items that assess functional status, should this measure be adopted. These items, which assess specific functional activities (that is, self-care, mobility, cognition, communication, and bladder continence), would be based on functional items included in the Post-Acute Care Payment Reform Demonstration version of the CARE Tool. The items have been carefully developed and tested for reliability and validity.

We invited public comments on our proposal to adopt the quality measure entitled Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function for the LTCHQR Program, with data collection starting on April 1, 2016, for the FY 2018 payment determination and subsequent years. We refer readers

to section IX.C.9.c. of the preamble of this final rule for more information on the data collection period and submission deadline for this quality measure. Our responses to public comments on these quality measures are discussed below in this section of the final rule.

Comment: Several commenters expressed support for the quality measure entitled Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function because functional improvement is an important patient-centered outcome. A few commenters noted that such improvements reduce the likelihood of infection, morbidity, mortality, and cost and significantly improve quality of life in this vulnerable population. A commenter emphasized the importance of improved functional status and improved, earlier mobility for patients who are ventilated. Commenters agreed that functional status is an important measurement gap for LTCHs and support CMS for proposing measures that address this measurement gap area. A commenter noted support for the use of the CARE Tool to streamline reporting across acute and post-acute care settings.

Response: We appreciate the support for functional status quality measures in the LTCH setting and the support for the use of cross-setting standardized assessment items.

Comment: A commenter supported a measure of function in patient care, but suggested that an outcome measure examining progress toward a functional goal would be preferable to a process measure. The commenter also suggested that CMS consider having a process measure that would address having a plan in place that addresses functional deficits at discharge.

Response: We thank the commenter for their support. We interpret the commenter’s comment to suggest that we should include an outcome measure pertaining to the attainment of functional goals. We believe that patient attainment of functional goals is important and appreciate the commenter’s suggested inclusion of such an outcome measure. We will consider this measurement concept as we further develop the LTCHQR Program. We further interpret the commenter’s comment to suggest that we consider adopting a process measure related to functional deficits at discharge so as to ensure care coordination. We agree that such a measure concept is important in that the domain of “care coordination” is a priority to CMS. Therefore, we will

consider this concept in future measure development for the LTCHQR Program.

Comment: Many commenters expressed concern that the measure is not NQF-endorsed. Commenters underscored the importance of the NQF review process, emphasizing that NQF endorsement provides assurance that the measure has been tested, can reliably and accurately collect data, is feasible to implement and is usable. For these reasons, commenters encouraged CMS to refrain from adopting measures into the LTCHQR Program until they have been endorsed by NQF for use in the LTCH setting.

Response: We agree that the NQF-endorsement process is an important part of measure development, and we have generally adopted NQF-endorsed measures whenever feasible. However, as discussed above, where such measures do not exist for the LTCH setting, we may adopt measures that are not NQF-endorsed under the Secretary’s exception authority set out in section 1886(m)(5)(D)(ii) of the Act.

Comment: A commenter indicated that the quality measure uses the FIM® rating scale.

Response: We interpret this commenter to assert that we are using the FIM® rating scale. We would like to clarify that we are not using the FIM® rating scale, rather we are using a 6-level rating scale developed and tested as part of the Post-Acute Care Payment Reform Demonstration (PAC-PRD).

We reviewed the NQF’s consensus endorsed measures and were unable to identify any NQF-endorsed quality measures that focused on assessment of function for patients in the LTCH setting. We are unaware of any other quality measures for functional assessment that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, we proposed to adopt this functional assessment measure for use in the LTCHQR Program under the Secretary’s authority to select non-NQF-endorsed measures. Further, CMS and its measure development contractor are planning to submit this measure for NQF review in the fall of 2014.

Comment: Several commenters agreed with the MAP’s recommendation to adopt functional status measures as part of the LTCHQR Program. While most commenters agreed this was an important measure area for the LTCH population and some commenters noted that it addresses a measure area gap identified by the MAP, many commenters expressed concern that the measure is not yet fully developed and received only conditional support from the MAP. The commenters noted the

MAP's conclusions that while the measure concept is promising, the measure is not ready for implementation and requires further modification and development. Commenters encouraged CMS to refrain from adopting any measures not fully supported by the MAP.

Response: We note that this quality measure has been under development for more than 3 years. The steps we undertook as part of the measure development process have included an environmental scan, technical expert panel review, and posting of specifications to solicit public input. As part of the environmental scan, we reviewed the NQF's consensus-endorsed measures and were unable to identify any NQF-endorsed quality measures that focused on assessment of function for patients in the LTCH setting. A TEP focused on functional status quality measures was convened by our measure development contractor and met in person and by phone in the fall of 2013. A report summarizing these TEP meetings titled "Summary of Feedback from TEP on the Development of Cross-Setting Functional Status Quality Measures" is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

Since the MAP meeting, we have continued further development of this measure, including posting of the TEP report. As discussed above, we also released draft specifications for the functional status quality measures and solicited public comment between February 21, 2014, and March 14, 2014. We received 22 responses from stakeholders with comments and suggestions during this public comment period and, based on these comments and suggestions, updated the quality measure specifications, which are available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html?redirect=/LTCH-Quality-Reporting/>.

Comment: A commenter was concerned that CMS did not convene a TEP for any of the new proposed quality measures and noted that TEPs, "which evaluate . . . quality measures for importance, scientific soundness, usability, and feasibility," are integral to developing health care setting-appropriate quality measures.

Response: Our measure contractor convened a cross-setting functional status quality measures TEP after a public call for TEP nominations. The TEP met in person on September 9, 2013, and then met via Webinar on October 21, 2013, October 28, 2013, and

November 6, 2013. TEP members included experts from LTCHs, as well as IRFs and SNFs. A report summarizing recent TEP meetings focused on functional status quality measures titled "Summary of Feedback from TEP on the Development of Cross-Setting Functional Status Quality Measures" is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>. The functional status quality measure development built on work conducted as part of a project funded by the Assistant Secretary for Planning and Evaluation, and that project also included a cross-setting function quality measure TEP, which was held on August 15, 2012. A report summarizing that meeting is available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/ASPE-Report-Analysis-of-Crosscutting-Medicare-Functional-Status-Quality-Metrics-Using-the-Continuity-and-Assessment-Record-and-Evaluation-CARE-Item-Set-Final-Report.pdf>.

Comment: Some commenters indicated that the measure was inappropriate for the LTCH patient population. These commenters noted that many or most LTCH patients are not mobile or functional on admission, a significant percent are not mobile for the duration of their stay, and the majority of the functional status assessment items such as walking, picking up items and car transfers, would not be applicable to these patients. The commenters also noted that for many LTCH patients, a transfer from the bed to a chair is not possible.

Response: The development of this quality measure included a review of published literature, a review of the findings from the PAC-PRD, discussions with an LTCH expert panel and an opportunity for a public comment period. As evidenced in the literature review, the PAC-PRD findings, and through the technical expert panel input we obtained during the measure development process, we concluded that this measure is important and appropriate for the LTCH setting, and items selected during the measure's development were considered applicable.

With respect to comments about the items selected, during their use in the PAC-PRD, the LTCH staff stated that these items and their associated response scale are able to capture small changes in patient improvement, such as the progression from total dependence for task completion to completing a task with much assistance

(that is, more than half the task was completed by the helper). The ability to capture this level of change was found to be significant, particularly as it pertains to the most impaired populations. Further, we made refinements to the items selected based on input from the expert panels convened by our measure development contractor and the public comment process, including those activities, for example, walking, picking up items and car transfers, which the commenter suggested were not applicable to this setting.

Comment: Several commenters conveyed their concern regarding the use of the CARE Tool as the data source for the functional status quality measures due to limited testing in LTCHs and reliability testing results. These commenters noted that several self-care and mobility items have Kappa statistics categorizing inter-rater reliability as "fair" or "moderate," and were based on a small sample of 46 LTCH patients. These commenters stated that "fair" or "moderate" reliability, while acceptable for exploratory studies or internal quality improvement efforts, is insufficient for national use in the LTCHQR Program. Commenters recommended CMS explain the low Kappa statistics and/or re-test these items in significantly more LTCHs to address reliability issues. These commenters noted that measure testing should be oriented towards the intended setting of use of the measure and suggested additional testing in the LTCH setting be conducted.

Response: The reliability results mentioned by these commenters were only one of several reliability analyses conducted to support the development of this measure as part of the PAC-PRD. In addition to the inter-rater reliability study mentioned by these commenters, we also examined: (1) Inter-rater reliability of the CARE items using videotaped case studies, which included 114 LTCH assessments from 3 LTCHs; (2) internal consistency of the function data, which included more than 7,700 assessments from 28 LTCHs; and (3) Rasch analyses of the function data, which included more than 7,700 assessments from 28 LTCHs. The report describing these additional analyses and an interpretation of the Kappa statistics results is available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/The-Development-and-Testing-of-the-Continuity-Assessment-Record-and-Evaluation-CARE-Item-Set-Final-Report-on-Reliability-Testing-Volume-2-of->

3.pdf. Therefore, given the totality of the reliability analysis involved, we believe that the development of this measure included a sufficient level of analysis, and at a scientifically acceptable level, such that a quality measure could be derived from these items.

We note that as part of the LTCHQR Program we intend to evaluate the national-level data for this quality measure submitted by LTCHs to CMS. These data will inform ongoing measure development and maintenance efforts, including further analysis of reliability and validity of the data elements and the quality measure.

Comment: Several commenters expressed concern related to undue burden associated with data documentation for the functional status quality measure. Some commenters suggested that several of the functional status assessment items had low or non-response rates when used as part of PAC-PRD. These commenters requested that CMS provide additional information on how the measure has been updated to address these low response rates. Further, in the event no updates have been made, the commenters encouraged CMS to further investigate its use of items having low or high non-response rates and reconsider if all of these items remain necessary and appropriate for LTCHs.

Response: We appreciate the concerns related to any undue burden, including documentation, and take such concerns under consideration when selecting measures for the LTCHQR Program. In the specifications for the measure, we have included several gateway questions that allow the clinician to skip questions that are not pertinent, which we believe helps to reduce undue burden. For example, one item asks if the patient is or is not walking. If the patient is not walking, then the items “Walk 10 feet,” “Walk 50 feet with two turns” and “Walk 150 feet” do not require responses and are therefore skipped.

With respect to the comments that some items had low response rates, we interpreted these comments to refer to the coding responses for when a patient does not or cannot attempt a daily activity, hence the activity did not occur, and the assessor reports a code indicating the reason that the activity was not attempted (for example, “Medical Condition” or “Patient Refusal”). We interpret the comments pertaining to non-response as referring to missing data.

In the development of this measure, despite the low or high non-response rates, inclusion of these items was the result of public input and expert

opinion. However, we agree with the commenters that some of the self-care and mobility items may not be activities that many LTCH patients perform, particularly at the time of admission. An analysis of the PAC-PRD data showed that LTCHs had the highest percentage of codes for these items indicating the “Activity Did Not Occur” as compared to IRFs, SNFs and HHAs. We also agree that car transfers and picking up an object are challenging activities for LTCH patients. Due to prior public input we received via public posting and technical expert panels, we had included these particular items because these items were intended to aid in the further development of this measure utilizing national data. However, if these items are removed, the use of the measure can be retained without impacting the measure outcome in any significant manner.

Because commenters expressed concern regarding burden and because commenters expressed concerns about “Activity Did Not Occur” for data elements that pertain to specific physical activities or functions that would be assessed and addressed by a care plan, we believe that we should consider removing assessment items where possible from this measure’s specifications, particularly when the items are duplicative to items already included, or would often be coded as “Activity Did Not Occur” (that is, when due to medical condition) and would not specifically be meaningful in a care plan. We have therefore reviewed our measure and the assessment items needed for addressing all the key domains of function we proposed (for example, self-care, mobility, cognition, communication and bladder function). We believe there are items that could be removed from the self-care and mobility domains because they potentially overlap with items that we would retain and also because these items had high “Activity Did Not Occur” rates. Further, these items can be removed from the quality measure without affecting the measure substantively.

We followed specific rationale in our consideration for the removal of these items: (1) That these particular items had high “Activity Did Not Occur” or high non-response rates; and/or (2) that the data elements to be removed were duplicative of the remaining data elements in the quality measure for the LTCH population. We determined this, for each item, based on data analysis and public comment, our review of the item definitions, as well our review of the distribution of scores of LTCH patients from the PAC-PRD. Lastly, we evaluated our ability to finalize a

modified measure, and we reviewed the modifications to the measure, through the removal of these items, to ensure that the modification was not substantive in nature.

The data elements specifically analyzed for removal were: “Dressing upper body,” “Dressing lower body,” “Putting on/taking off footwear,” “Shower/bathe self,” “Car transfer,” “1 step,” “4 steps,” “12 steps,” “Walk 10 feet on uneven surfaces” and “Pick up object,” all of which we would remove from the measure specifications for Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. Following our analysis, the following items have been finalized for removal, with the associated rationale:

- The item “Dressing Upper Body” had high “Activity Did Not Occur” response rates and overlaps with the item “Wash Upper Body,” which we are retaining, in that both items pertain to upper body movement and the data captured for “Wash Upper Body” would represent the activity. The item “Dressing Lower Body” had high “Activity Did Not Occur” response rates and overlaps with “Toileting Hygiene,” which we are retaining, in that both items include managing lower body clothing.

- The item “Putting on/taking off footwear” had high “Activity Did Not Occur” response rates and also overlaps with “Toileting Hygiene,” an item which we are retaining, although we are aware that it had moderately high “Activity Did Not Occur” response rates. We note that, although we are aware that the item “Toileting Hygiene” is associated with moderate “Activity Did Not Occur” response rates, we have decided to retain the item “Toileting Hygiene” based on feedback from technical expert panels convened by the measure contractor, the public comments from stakeholders, and the relevance of the item for every patient.

- The item “Shower/bathe self” had high “Activity Did Not Occur” response rates and overlaps with the tasks involved with the item “Wash Upper Body,” which we are retaining.

- The mobility items we are removing, “Walking 10 Feet on Uneven Surfaces,” “Car transfer,” “1 step,” “4 steps,” “12 steps” and “Pick up object,” had high non-response rates and overlap with items “Walk 150 Feet” and “Walk 50 feet with 2 turns,” which we are retaining.

As stated in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28263) and the December 1, 2013, MUC List (pp. 39–40, 194–95), this measure provides

the percentage of all LTCH patients that receive a functional assessment on admission and discharge and a care plan that addresses function. We believe that this measure, as modified in response to public comment, is consistent with the description of the measure reviewed by the MAP, which did not specify the various functions assessed or addressed by a care plan. Moreover, we believe that modification of the quality measure through the removal of duplicative assessment items with low or high non-response rates does not substantively alter this measure's application or its calculation. We have previously explained that substantive measure changes would include "those in which the changes are so significant that the measure is no longer the same measure, or when a standard of performance assessed by a measure becomes more stringent (for example: Changes in acceptable timing of medication, procedure/process, or test administration)" or "where the NQF has extended its endorsement of a previously endorsed measure to a new setting, such as extending a measure from the inpatient setting to the LTCH setting." (77 FR 53258, 53615 through 53616).

We believe that in this case, the standard of performance assessed by this measure would become less, not more, stringent due to the modifications, and the measure is not being extended to a new patient setting. Moreover, we believe that the modifications to the measure are not "so significant that the measure [would no longer be] the same measure," as the measure numerator, denominator, and exclusions are unchanged. Therefore, we believe that the modified version of Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function would not be inconsistent with the descriptions of the measure reviewed by the MAP and that the modifications to the measure are not substantive in nature.

Thus, in response to public comments, we are modifying the proposed quality measure, Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, through removal of the data items noted above. Specifically, the data elements we are removing for the reasons discussed above are the following: "Dressing upper body," "Dressing lower body," "Putting on/taking off footwear," "Shower/bathe self," "Car transfer," "1 step," "4 steps,"

"12 steps," "Walk 10 feet on uneven surfaces," and "Pick up object."

Comment: Several commenters expressed concerns about the need for standardized training to ensure inter-rater reliability for the CARE Tool function items, and noted that this training would add additional burden to facilities. Several commenters also suggested CMS identify the types of LTCH personnel who would collect and report measure data.

Response: We have addressed similar concerns in the past with public outreach including training sessions, training manuals, Webinars, open door forums, help desk support and a Web site that hosts training information <http://www.youtube.com/user/CMSHHSgov>, and we conduct such activities for the new items. All training materials are available on the Web site free of charge. Procedures for data collection, including who may complete functional assessments, are to follow facility policies, and patient assessments are to be completed in compliance with facility and applicable State and Federal requirements. We do not provide guidance on which disciplines may complete patient assessments.

Comment: Several commenters suggested that patients with program interruptions (that is, periods of time during which the patient is transferred from the LTCH to another care setting and subsequently returned to the same LTCH; see the LTCHQR Program Manual 2.0 for current definition—Chapter 3—A <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>) be excluded from the quality measure, because it would be burdensome to collect data when the patient was transferred and then returned to the LTCH. A commenter explained that an interrupted stay patient is "discharged" from the LTCH and then "readmitted" to the LTCH within a certain fixed period under the 3-day or less interrupted stay policy and the greater than 3-day interrupted stay policy. Thus, the commenter felt it would be unnecessary to assess the patient's functional status at both points of admission and discharge since doing so may result in an inaccurate assessment of the patient's condition. The commenter also suggested that if interrupted stay patients are not excluded, then only the initial admission and the last discharge should be assessed for measure data collection purposes.

Response: For LTCH patients who experience one or more program interruptions (3 calendar days or less),

completion of the function items would not be required during the program interruption, that is, at the time of the transfer to the acute care setting and the return. Patients with program interruptions are included in the quality measure, but, as the commenter suggested, assessments would be only be required for the initial admission assessment and at the time of the discharge from the LTCH stay.

Comment: A commenter expressed general concern about the difficulty of assessing cognitive function in the LTCH patient population, including circumstances such as when any mind-altering medication was given to the patient. The commenter stated that cognitive assessment items have no provisions for accounting for such circumstances, nor could they, since any such mandate would interfere with clinical practice. Due to such considerations, the commenter questioned whether it was possible to accurately capture cognitive status via observational assessment, within two days of admission. The commenter noted that timely completion of the cognitive assessment items necessitates a clinician who is familiar with the patient, which in turn affects whether these items get completed on the admission assessment.

Another commenter stated that the cognitive function assessment tool does not adequately measure baseline cognition because of the variation in LTCH patients' clinical conditions and mental status. LTCH patients are extremely fragile, and their cognition is affected by small changes, such as the time of day and the clinical condition of the patient. The commenter also expressed the opinion that the cognitive function assessment tool provides a snapshot of a patient at a given time on a given day, and is not a true reflection of the patient's cognitive functioning. The commenter added that the expertise of a clinical psychologist would be required to complete this tool.

Thus, these two commenters felt assessing the patient to collect data to complete each of the data elements for the measure would require LTCHs to expend significant time and resources reporting data whose value in measuring quality of care in the LTCH setting is questionable.

Response: We acknowledge the complexity of the LTCH patient population, and potential challenges that can limit certain assessments, for example, the inability to perform a cognitive assessment with a ventilator-dependent patient on sedation. We interpret the commenter to indicate that under such circumstances, it will not be

feasible to accurately assess a patient's cognition at the beginning of the LTCH stay and that it would be an interruption in clinical care to perform such an assessment. We also interpret the commenter to indicate that in the assessment there would be no capacity to reflect recent administration of medications that impact cognitive status, although assessment of cognition is required for this measure. We agree that at the time of assessment there is information that cannot be obtained from certain patients, such as patients who are ventilator-dependent and on sedation, or in the event the patient is comatose. We agree that there are circumstances that an assessment cannot be performed, and it would be inappropriate to do so, and hence, the assessment should allow for LTCHs to indicate these circumstances when the data could not be collected.

We will address these circumstances by providing instructions on when select items can be skipped due to patient conditions and gateway questions in the LTCH CARE Data Set Version 3.00. In the specifications for the measure, we have included several gateway questions that allow the clinician to skip questions that are not pertinent. For example, one item asks if the patient is or is not walking. If the patient is not walking, then the items "Walk 10 feet," "Walk 50 feet with two turns" and "Walk 150 feet" do not require responses and are therefore skipped. We agree with the commenter that a clinician familiar with the patient would provide the most accurate assessment of the patients' status.

Consistent with the clinical standard of practice, timely admission assessments are conducted on all patient admissions by a clinician, typically by a registered nurse who obtains assessment information to inform care planning so that the care team can become familiar with the patient and develop and implement sound clinical care and interventions. Thus, from the time of admission to an LTCH, we believe that clinical staff should collect health assessment information about the patient to inform their care. Further, we believe that such assessment data would be captured by a clinician familiar with the LTCH patient.

We interpret the second commenter to indicate that the variability in the LTCH patient cognitive status would make it difficult to obtain a baseline for use in this measure. We also interpret the commenter's concern to be related to the importance of capturing causation in mental status change. Causative factors in cognitive change do not impact the

calculation of the quality measure. The measure requires the collection of the Confusion Assessment Method (CAM[®]) in order to capture fluctuations of cognitive function. We selected the CAM[®] Instrument after TEP review, and following receipt of several comments from our initial public comment opportunity in March 2014.

We disagree with the commenter's statement that the expertise of a clinical psychologist would be needed to collect the cognitive status assessment, because the CAM[®] was collected during the PAC-PRD by varying levels of staff, with strong inter-rater reliability without it being performed by a clinical psychologist, and there was no evidence found during this demonstration to support this concern. Furthermore, the CAM[®] was tested for use by bedside staff for use in the Minimum Data Set Version 3.0 and was implemented on October 1, 2010.

Both commenters suggest that capturing the assessment data would necessitate LTCHs to expend significant time and resources to collect this measure, which they further suggest may not be valuable for this setting. We disagree with these commenters in that the data collected for use in these measures is consistent with general clinical care and the CAM[®] itself is a specific assessment that is already utilized in the healthcare setting.

Comment: Commenters suggested that CMS take into consideration the addition of a POA indicator in selected portions of the LTCH CARE Data Set. These commenters noted that a POA indicator would be important for performing any risk adjustment of functional status measures to allow for the distinction between complications associated with care at the LTCH and a patient's preexisting conditions.

Response: The admission functional assessment data collected for this quality measure would be based on the patient's functional status at the time of admission, and we would consider the initial assessment to be "present on admission."

In addition to soliciting comments about our proposal to adopt the functional status measure for the LTCHQR Program, we also invited public comment on our proposal to use the LTCH CARE Data Set and QIES ASAP systems for data collection and submission of the functional status measure. We received no public comments on this proposal.

After consideration of the public comments we received, we are finalizing the adoption of the measure entitled Percent of Long-Term Care Hospital Patients with an Admission

and Discharge Functional Assessment and a Care Plan That Addresses Function for use in the LTCHQR Program, with the modifications noted in our responses to public comments above.

(2) Functional Status Quality Measure: Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support

Section 1206(c) of Division B of Public Law 113-67, the Pathway to SGR Reform Act of 2013, amended section 1886(m)(5)(D) of the Act to add a new clause (iv) requiring the Secretary to establish by no later than October 1, 2015, "a functional status quality measure for change in mobility among inpatients requiring ventilator support." Accordingly, the second functional status quality measure that we proposed was an outcome quality measure entitled the Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support. This measure estimates the risk-adjusted change in mobility score between the time of admission and the time of discharge among LTCH patients requiring ventilator support at the time of admission. As noted above, LTCH patients often have functional limitations and receive rehabilitation therapy services so that they can become more independent when performing functional activities. Functional improvement is particularly relevant for patients who require ventilator support because these patients have traditionally had limited mobility due to cardiovascular and pulmonary instability, delirium, sedation, lack of rehabilitation therapy staff, and lack of physician referral.²¹¹

Several studies have examined functional improvement among patients in the long-term care hospitals. In a sample of 101 patients in LTCHs (three-quarters were ventilator-dependent), median functional status scores using the Functional Status Score (FSS)-ICU (rolling, supine-to-sit transfers, unsupported sitting, sit-to-stand transfers, and ambulation) improved significantly from admission to discharge, with significant change in all five functional items.²¹² A separate study of 103 patients with respiratory

²¹¹ Zanni et al., "Rehabilitation therapy and outcomes in acute respiratory failure: An observational pilot project."

²¹² A. Thrush, M. Rozek, and J.L. Deklerlegand, "The clinical utility of the functional status score for the intensive care unit (FSS-ICU) at a long-term acute care hospital: A prospective cohort study," *Phys Ther* 92, no. 12 (2012).

failure examined functional improvement and found that by the end of the respiratory ICU stay, 69.4 percent of survivors ambulated more than 100 feet, 8.2 percent ambulated less than 100 feet, 15.3 percent could sit in a chair, 4.7 percent could sit on the edge of the bed, and 2.4 percent did not accomplish any of these activities.²¹³

The importance of monitoring improvement in mobility skills among LTCH patients who require ventilator support at the time of admission is also supported by the high prevalence of therapy service provision as part of the treatment plan and the percent of patients discharged home after an LTCH stay. In a study of 1,419 ventilator-dependent patients from 23 LTCHs with weaning programs,²¹⁴ physical therapy, occupational therapy, and speech therapy were the three most commonly provided services among 34 procedures, services, and treatments provided during the LTCH admission. The very high frequency of physical (84.8 percent), occupational (81.5 percent), and speech (79.7 percent) therapy reflects use of the rehabilitative model of care adopted by many post-ICU weaning programs, which is important in the restoration of function.²¹⁵ Improvement in functional status, including mobility and self-care was noted from admission to discharge. Nearly 30 percent of all patients discharged alive returned directly home or to assisted living.²¹⁶

A TEP convened by our measure development contractor provided input on the technical specifications of this quality measure. We also solicited public comment on the draft specifications of this quality measure, on the CMS Quality Measures Public Comment Page (<http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/MMS/CallforPublicComment.html>) between February 21 and March 14, 2014, and received 22 responses from stakeholder with comments and suggestions.

Additional information regard the quality measure may be found on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

We proposed that data for the proposed quality measure be collected through the LTCH CARE Data Set, with

the submission through the QIES ASAP system. For more information on LTCHQR Program reporting using the QIES ASAP system, we refer readers to our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html>. We intend to revise the LTCH CARE Data Set to include new items that assess the functional status and the risk adjusters, should this proposed measure be adopted. These items, which assess specific functional activities (that is, self-care, mobility, cognition, communication, and bladder continence), would be based on functional status items included in the Post-Acute Care Payment Reform demonstration version of the CARE Tool. The items have been carefully developed and tested for reliability and validity.

Based on the evidence discussed above, we proposed to adopt for the LTCHQR Program for the FY 2018 payment determination and subsequent years the quality measure entitled Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support. This quality measure is developed by CMS, and we plan to submit the quality measure to the NQF for review. The MAP met in December 2013 and January 2014, and the NQF provided the MAP's input to CMS as required under section 1890A(a)(3) of the Act. In its January 2014 Pre-Rulemaking Report, the MAP conditionally supported this proposed measure and stated that the measure concept is promising, but requires modification or further development, and that functional status is a critical area of measurement. Since the time of the MAP meeting, we have continued further development of the measure with input from technical experts, including empirical data analysis. Subsequently, we have released draft specifications for the function quality measures, and requested public comment between February 21 and March 14, 2014. We received 22 responses from stakeholders with comments and suggestions during the public comment period, and have updated the quality measures specifications based on these comments and suggestions. The updated specifications are available for review at the LTCHQR Program Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html?redirect=/LTCH-Quality->

Reporting/. We refer readers to section IX.C.2. of the preamble of this final rule for more information on the MAP.

In section 1886(m)(5)(D)(ii) of the Act, the exception authority provides that “[i]n the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the entity with a contract under section 1890(a) of the Act, the Secretary may specify a measure that is not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus organization identified by the Secretary.” We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed quality measures focused on improvement of function among patients in the LTCH setting. We are unaware of any other quality measures for functional improvement that have been endorsed or adopted by another consensus organization for the LTCH setting. Moreover, as discussed above, the Secretary is now required to establish such a measure by October 1, 2015. Therefore, we proposed to adopt this functional improvement measure for use in the LTCHQR Program for the FY 2018 payment determination and subsequent years under the Secretary's authority to select non-NQF-endorsed measures.

We invited public comments on our proposal to adopt the quality measure entitled Functional Outcome Measure: Change in Mobility among Patients Requiring Ventilator Support for the LTCHQR Program, with data collection starting on April 1, 2016, for the FY 2018 payment determination and subsequent years. We refer readers to section IX.C.9.c. of the preamble of this final rule for more information on the proposed data collection and submission timeline for this proposed quality measure.

Comment: Several commenters expressed support for the quality measure “Functional Outcome Measure: Change in Mobility Among Long-Term Care Hospital Patients Requiring Ventilator Support,” because functional improvement is an important patient-centered outcome. A few commenters noted that such improvements reduce the likelihood of infection, morbidity, mortality, and cost and significantly improve quality of life in this vulnerable population. A commenter emphasized the importance of improved functional status and improved, earlier mobility by those patients who are ventilated. Several commenters agreed with the MAP's recommendation to adopt functional status measures as part of the

²¹³ P. Bailey et al., “Early activity is feasible and safe in respiratory failure patients,” *Crit Care Med* 35, no. 1 (2007).

²¹⁴ Scheinhorn et al., “Post-ICU mechanical ventilation at 23 long-term care hospitals: A multicenter outcomes study.”

²¹⁵ *Ibid.*

²¹⁶ *Ibid.*

LTCHQR Program. Commenters agreed that functional status is an important measurement gap for LTCHs and supported CMS for proposing measures that address this measurement gap area. A commenter noted support for the use of common functional status items across acute and post-acute care settings. A commenter noted that this quality measure is required by public law.

Response: We appreciate the support for the quality measure entitled Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support in the LTCH setting, and for the support of use of standardized functional status items across acute and post-acute care settings.

Comment: Many commenters expressed concern that the measure is not yet fully developed and is not NQF-endorsed. Several commenters noted a number of issues that CMS should consider in the development of these functional status quality measures.

Response: We agree that the NQF endorsement process is an important part of measure development and we have generally adopted NQF-endorsed measures whenever feasible. However, where such measures do not exist for the LTCH setting, as stated in our proposal and noted above, we may adopt measures that are not NQF-endorsed for the LTCHQR Program under the Secretary's exception authority set out in section 1886(m)(5)(D)(ii) of the Act.

We reviewed the NQF's consensus endorsed measures and were unable to identify any NQF-endorsed quality measures that focused on assessment of function for patients in the LTCH setting. We are unaware of any other quality measures for functional assessment that have been endorsed or adopted by another consensus organization for the LTCH setting. Therefore, we proposed to adopt this functional assessment measure for use in the LTCHQR Program for the FY 2018 payment determination and subsequent years under the Secretary's authority to select non-NQF-endorsed measures. We plan to submit an application for NQF endorsement in the fall of 2014.

Comment: While most commenters agreed that functional improvement was an important measure area for the LTCH population and some commenters noted that it addresses a measure area gap identified by the MAP, many commenters expressed concern that the measure is not yet fully developed and had only conditional support from MAP. They noted the MAP's conclusions that while the measure

concept is promising, the measure is not ready for implementation and requires further modification and development. Commenters encouraged CMS to refrain from adopting any measures not fully supported by the MAP.

Response: We note that this function quality measure has been under development for more than 3 years. The steps we undertook as part of the measure development process have included an environmental scan, technical expert panel review, and public posting of specifications with public input. A report summarizing the TEP meetings titled "*Summary of Feedback from TEP on the Development of Cross-Setting Functional Status Quality Measures*" is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

Since the time of the MAP meeting, we have continued further development of the measure, and we posted draft specifications for the functional status quality measures for public comment between February 21, 2014, and March 14, 2014. As discussed above, we received 22 responses from stakeholders with comments and suggestions during the public comment period and, based on these comments and suggestions, have updated the quality measures specifications, which are available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html?redirect=/LTCH-Quality-Reporting/>.

Comment: A commenter expressed concern that CMS did not convene a TEP for any of the new proposed quality measures, and noted that TEPs, "which evaluate . . . quality measures for importance, scientific soundness, usability, and feasibility," are integral to developing healthcare setting appropriate quality measures.

Response: Our measure contractor convened a cross-setting function quality measures TEP after a public call for TEP nominations. The TEP met in person on September 9, 2013, and then by Webinar on October 21, 2013, October 28, 2013, and November 6, 2013. TEP members included experts from LTCHs as well as IRFs and SNFs. A report summarizing recent TEP meetings focused on functional status quality measures titled "*Summary of Feedback from TEP on the Development of Cross-Setting Functional Status Quality Measures*" is available at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/>.

The functional status quality measure development builds upon work

conducted as part of a project funded by the Assistant Secretary for Planning and Evaluation, and that project also included a cross-setting function TEP, which was held on August 15, 2012. A report summarizing that meeting is available at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Post-Acute-Care-Quality-Initiatives/Downloads/ASPE-Report-Analysis-of-Crosscutting-Medicare-Functional-Status-Quality-Metrics-Using-the-Continuity-and-Assessment-Record-and-Evaluation-CARE-Item-Set-Final-Report.pdf>.

Comment: Several commenters conveyed concerns related to undue burden associated with data documentation for the functional status quality measure.

Response: In the measure specifications, we included several gateway questions that allow the clinician to skip questions that are not pertinent, which we believe helps to reduce undue burden. For example, one item asks if the patient is or is not walking. If the patient is not walking, then the items "Walk 10 feet," "Walk 50 feet with two turns" and "Walk 150 feet" do not require responses and are therefore skipped.

Comment: A commenter questioned the value of this measure in the LTCH setting, given that many ventilator patients have no mobility at the time of admission. Another commenter noted that for some patients, the proposed measure may not be meaningful. The commenter added that in such cases, it may be appropriate to apply certain exclusions. Another commenter suggested the use of a process measure due to limited improvement in mobility for ventilator patients.

Response: Our analyses of the PAC-PRD data found that many patients admitted to LTCHs on a ventilator have very limited mobility skills on admission, but that many did show some improvement in mobility skills during the LTCH stay, including bed mobility skills. LTCH clinicians in the PAC-PRD appreciated that the items used in this measure could capture even small improvement. We also list exclusion criteria in the draft measure specifications document, including patients with tetraplegia complete and locked-in state as well as patients with incomplete LTCH stays. We appreciate the commenter's suggestion on the use of a process measure, and we note that we are finalizing such as process measure that includes this population.

Comment: A commenter stated that in the testing of the CARE Tool, no analysis was reported of differences in functional scores at admission and

discharge, thus calling into question whether there is adequate variability in change in function scores to result in a meaningful measure. This commenter stated that the Rasch analysis for assessing validity was not applied to the sensitivity of the measure for chronically and critically ill patients. The commenter concluded that if little difference in functional scores at admission and discharge is expected, then the meaningfulness of the measure is called into question.

Response: The change in self-care and mobility function for LTCH patients was reported in the Post-Acute Care Payment Reform Demonstration Final Report—Volume 4 available at: http://www.cms.gov/Research-Statistics-Data-and-Systems/Statistics-Trends-and-Reports/Reports/Downloads/PAC-PRD_FinalRpt_Vol4of4.pdf. Specifically, on page 57 of this Report, it is noted that the mean self-care change for all patients in the post-acute care setting was an improvement of 12.4 units of self-care function. Among patients with nervous system conditions, LTCH patients and SNF patients achieved very similar unadjusted change in self-care scores (10.4 and 10.1 units of self-care functional improvement, respectively). The mean mobility change for all post-acute care patients was 14.6 units of functional improvement. LTCH patients improved 11.2 units from admission to discharge, which is slightly more than the change in mobility observed among home health patients, which was 10.4 units of change. These results demonstrate that functional improvement was observed among LTCH patients using the function items from the CARE Tool. Our measure development analyses also showed improvement in mobility skills for patients requiring ventilator support.

Comment: In order to more fully evaluate the proposed functional outcome measure, a few commenters requested that CMS provide further details regarding the proposed methodology and expected utilization approach for the measure. Specifically, a commenter was interested in learning more about the risk adjustment procedures. A commenter expressed concern about the lack of a validated model to assess change in mobility among LTCH inpatients requiring ventilator support. Commenters suggested that any such tool would also need to include components for stratification based on comorbidities impacting a patient's ability to demonstrate functional improvement.

Response: The risk adjustment methodology is described in the draft quality measures specification

document titled "Draft Specifications for the Proposed Functional Status Quality Measures for Long-Term Care Hospitals" available at the LTCHQR Program Web site at: <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting>. The risk adjustment analyses are being conducted by the measure contractor and the regression coefficients (that is, weights) will be available as part of the NQF application. Risk adjustment for this measure includes variables that adjust for several comorbidities, including chronic kidney disease or dialysis; septicemia or other severe infections; metastatic lung, colorectal, bladder or other severe cancers; diabetes; paraplegia; and hemiplegia. We received several suggestions for risk adjusters as part of the March 2014 public comment process and have tested all suggested variables.

After consideration of the public comments we received, we are finalizing the adoption of the quality measure entitled Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support for use in the LTCHQR Program, as proposed.

b. Quality Measure: National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure

The third quality measure that we proposed was the CDC-developed National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome measure. The term "Ventilator-Associated Events" incorporates a range of ventilator-associated events, including ventilator-associated pneumonia (VAP), pulmonary edema, acute respiratory distress syndrome, sepsis, and atelectasis.²¹⁷ The NHSN VAE Outcome measure provides increased measure sensitivity, more objective definitions for ventilator-associated conditions, and the potential for automated outcome detection.²¹⁸ The NHSN VAE Outcome measure is designed for use across multiple inpatient care settings, including LTCHs. The measure specifications were created and tested in the acute care setting. During CY 2013,

²¹⁸ Magill, S. S., M. Klompas, et al. (2013). "Developing a new, national approach to surveillance for ventilator-associated events*." *Crit Care Med* 41(11): 2467–2475.

105 LTCHs submitted VAE data to CDC's NHSN.²¹⁹

According to the CDC, "more than 300,000 patients receive mechanical ventilation in the United States each year."²²⁰ These patients are at increased risk for infections, such as pneumonia and sepsis, as well as other serious complications including pulmonary edema, pulmonary embolism, and death.^{221 222 223} These complications can lead to longer stays in the ICU and hospital, increased health care costs and increased risk of disability (or death).²²⁴ The estimated mortality rate in patients aged 85 years and older with acute lung injury on mechanical ventilation is 60 percent.²²⁵

Ventilator-Associated Events represent a high-priority complication in the LTCH setting, given the older, medically complex population in LTCHs and the high prevalence of mechanical ventilation in this setting. A MedPAC analysis of MedPAR data found that 16 percent of LTCH patients used at least one ventilator-related service in 2012.²²⁶ In FY 2012, MS–LTC–DRG 207, a diagnosis-related group that refers to respiratory diagnosis with ventilator support for 96 or more hours, represented the most frequently occurring diagnosis among LTCH patients, at 11.3 percent of all LTCH discharges,²²⁷ and MS–LTC–DRG–4, a diagnosis-related group that refers to tracheostomy with ventilator support for 96 or more hours or primary diagnosis except face, mouth, and neck without major OR procedure, represented an additional 1.3 percent of all LTCH discharges. Together, the two diagnosis-related groups account for a total of nearly 18,000 discharges. Furthermore,

²²⁷ Ibid.

the number of ventilated patients in LTCHs is increasing—the number of discharged patients with respiratory diagnosis with ventilator support for 96 or more hours increased 7.4 percent between 2008 and 2011.²²⁸

Although there are no nationwide or LTCH-specific estimates of the prevalence of ventilator-associated conditions (VACs) and infection-related ventilator-associated complications (IVACs), a recent study of mechanically ventilated patients in ICUs found that approximately 10 percent developed a VAC and 5 percent developed an IVAC.²²⁹ Adherence to clinical practice guidelines for the prevention of VAP has been associated with decreased VAC rates in ICUs.²³⁰ Because VAP, one type of VAC, is considered preventable, surveillance and measurement of infection rates is important to improving quality of care and patient safety.

The importance of the NHSN VAE Outcome measure in LTCHs was underscored by the MAP, which stated in its January 2014 Pre-Rulemaking Report that the measure addresses a National Quality Strategy aim or priority that is currently not adequately addressed. The MAP supported the addition of this measure addressing VAEs in the LTCH setting and stated that “although this measure is not NQF-endorsed, it provides useful information for healthcare facilities to help them monitor ventilator use and identify improvements for preventing complications.”²³¹

We reviewed the NQF’s consensus endorsed measures and were unable to identify any NQF-endorsed measures for VAEs in the LTCH setting (or a related setting). We are unaware of any other measures for VAEs that have been endorsed or adopted by another consensus organization for the LTCH setting (or a related setting). Therefore, we proposed to adopt the NHSN VAE Outcome measure for use in the LTCHQR Program for the FY 2018 payment determination and subsequent years under the Secretary’s authority to select non-NQF-endorsed measures under section 1886(m)(5)(D)(ii) of the Act.

We proposed to use the CDC’s NHSN reporting and submission infrastructure

for reporting of the NHSN VAE Outcome measure. Details related to the procedures for using CDC’s NHSN for data submission and information on definitions, numerator data, denominator data, data analyses, and measure specifications for the NHSN VAE Outcome measure can be found at: http://www.cdc.gov/nhsn/PDFs/pscManual/10-VAE_FINAL.pdf.

CDC’s NHSN is the data collection and submission framework currently used for reporting the CAUTI (NQF #0138) and CLABSI (NQF #0139) measures for the LTCHQR Program. Further, CDC’s NHSN is the data collection and submission framework adopted for data collection and reporting for the Influenza Vaccination Coverage among Healthcare Personnel measure (NQF #0431) starting on October 1, 2014, and for the NHSN Facility-Wide Inpatient Hospital-Onset Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716) and NHSN Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717) starting on January 1, 2015. By building on the CDC’s NHSN reporting and submission infrastructure, we intend to reduce the administrative burden related to data collection and submission for this measure under the LTCHQR Program. We refer readers to section IX.C.9.d. of the preamble of this final rule for more information on the data collection and submission timeline for this quality measure.

We invited public comments on our proposal to adopt the NHSN VAE Outcome measure for the LTCHQR Program, with data collection beginning on January 1, 2016, for the FY 2018 payment determination and subsequent years. We also invited public comments on our proposal to use the CDC’s NHSN for data collection and submission for this measure.

Comment: Many commenters agreed that the NHSN VAE Outcome measure is an appropriate quality measurement area for the general LTCH patient population. Several commenters agreed with the NQF MAP’s recommendation to adopt HAI measures as part of the LTCHQR Program. Commenters agreed that HAI measures represent an important measurement gap for LTCHs and supported CMS’ proposal of a measure that addresses this measurement gap area. A commenter noted that the NHSN VAE Outcome measure is well aligned with the newly identified chronically critically ill (CCI) category of patients.

Response: We thank these commenters’ for their support of our

effort to implement HAI measures that address important measurement gap areas identified by the NQF MAP and other stakeholder groups.

Comment: Some commenters fully supported CMS’ proposal to implement the NHSN VAE Outcome measure for the FY 2018 payment year. These commenters agreed with CMS’ rationale that VAEs represent a high-priority complication in the LTCH setting and appreciated CMS’ consideration for the utility of this measure given that it can be used across multiple settings.

Some commenters specifically noted that the measure offers a mechanism for LTCHs of long-term mechanical ventilation to objectively measure the impact of care improvement initiatives. Furthermore, these commenters stated that reporting the NHSN VAE Outcome measure would raise awareness to the medical detriment of extended time on mechanical ventilation and would encourage facilities to implement strategies to reduce time on mechanical ventilation. Further, these commenters noted that the foundational elements for VAE definition (positive-end expiratory pressure (PEEP), fraction of inspired oxygen (FiO₂), temperature, and white blood cell count (WBC)) are readily available, objective, rational, and reportable. The commenters stated that measuring and reporting VAE along with tracking care improvement initiatives could help to quantify the extent to which VAEs are preventable.

Response: We appreciate these commenters’ support of our proposal and rationale to implement the NHSN VAE Outcome measure.

Comment: Many commenters expressed concern that the measure is not NQF-endorsed, though several commenters noted that the measure is supported by the MAP. Commenters underscored the importance of the NQF review processes, emphasizing that NQF-endorsement provides assurance that the measure has been tested, can reliably and accurately collect data, is feasible to implement, and is usable. For these reasons, commenters encouraged CMS to refrain from adopting measures into the LTCHQR Program until they have been endorsed by the NQF for use in the LTCH setting. Commenters also emphasized the importance of review by the NQF via the full consensus development process, stating that time-limited endorsement from the NQF is insufficient to consider a measure for adoption in the LTCHQR Program. In addition to securing NQF-endorsement, commenters encouraged CMS to refrain from adopting any measures not supported by the NQF MAP and a TEP.

²³⁰ Ibid.

²³¹ National Quality Forum. Measure Applications Partnership Pre-Rulemaking Report: Public Comment Draft: January 2014. Available: <http://www.qualityforum.org/map/>.

Response: We agree that the NQF-endorsement process is an important part of measure development and we have generally adopted NQF-endorsed measures whenever feasible. However, where such measures do not exist for the LTCH setting, as stated in our proposal, we may adopt measures that are not NQF-endorsed under the Secretary's exception authority set out in section 1886(m)(5)(D)(ii) of the Act. As also stated in our proposal, we reviewed the NQF's consensus endorsed measures for VAEs and were unable to identify an NQF-endorsed measure for the LTCH setting. We note that the CDC has conveyed to us that they received preliminary positive feedback from the NQF on the NHSN VAE Outcome measure and plans to submit the measure for NQF endorsement in 2015.

In addition, the NQF MAP supported the use of this measure in the LTCHQR Program and concluded that "although this measure is not NQF-endorsed, it provides useful information for healthcare facilities to help them monitor ventilator use and identify improvements for preventing complications."²³² Because the NHSN VAE Outcome measure was developed for use in multiple inpatient settings, including LTCHs, and because several stakeholder groups have agreed that the measure provides useful information that can prevent ventilator-associated events and impact patient outcomes, we believe the measure is appropriate for implementation in the LTCHQR Program.

Comment: A commenter questioned the appropriateness of the NHSN VAE Outcome measure for the LTCH patient population since the primary focus of care for the LTCH patient may include aggressive ventilator weaning. This commenter expressed concern that the definitions for VAE surveillance used in the NHSN VAE Outcome measure are different from the patient outcomes and clinical indicators of VAEs, such as the VAP, used in LTCHs. Further, this commenter noted that the surveillance monitoring approach used by the NHSN VAE Outcome measure does not align with LTCH patient goals (which often include aggressive ventilator weaning). Since LTCHs typically use identification of a symptomatic patient and laboratory culture results to identify VAEs, the commenter stated that implementing surveillance monitoring (in particular, ongoing monitoring of positive-end expiratory pressure and fraction of

inspired oxygen) to adhere to the NHSN algorithm would be difficult and taxing in the LTCH setting and would divert resources away from other, more valuable monitoring and prevention efforts in the LTCH setting.

Response: Although we recognize that the implementation of this measure adds burden for LTCHs, the NHSN VAE measure was developed to be more sensitive to VAEs than other VAE identification measures and is also more objective than other measures.²³³ The VAE algorithm avoids the use of chest radiograph and the reliance on specific clinical signs and symptoms to identify VAP due to their subjectivity and the fact that they may be poorly or inconsistently documented in the medical record.²³⁴ The VAE surveillance definition algorithm used in the NHSN VAE Outcome measure was developed by a workgroup based on objective, streamlined, and potentially automatable criteria that will intentionally identify a broad range of conditions and complications occurring in mechanically-ventilated adult patients.²³⁵ The measure was designed for use across several different healthcare settings, including LTCHs, and in 2013, 105 LTCHs successfully submitted VAE data to CDC's NHSN,²³⁶ indicating that LTCHs were able to implement and operationalize this measure in their facilities. The NHSN VAE Outcome measure was also developed to facilitate potential automated outcome detection, which will contribute to increased objectivity and decreased burden on LTCHs.

Comment: A commenter expressed concern about the validity of certain aspects of NHSN VAE Outcome measure. The commenter noted the NHSN VAE Outcome measure is used as a way to capture ventilator-associated pneumonia; however, the VAP portion of this measure is no longer valid or effective.

Response: The NHSN VAE algorithm was developed and carefully tested to be more sensitive to VAEs (including VAPs) than other VAE measures and to be more objective than other

measures.²³⁷ The algorithm was developed based on objective, streamlined, and potentially automatable criteria²³⁸ and was developed and tested for a range of healthcare settings, including LTCHs.

Research indicates the VAE algorithm detects clinical conditions such as pneumonia, ARDS, atelectasis and pulmonary edema, clinical conditions that may be preventable. In terms of what is most appropriate for making comparisons, benchmarking, etc., the overall VAE rate, which represents all events that met at least the VAC definition, and the "IVAC-plus" rate, which represents all events that met at least the IVAC definition, would be suitable for these purposes, and all facilities should be able to detect VACs and IVACs. Rates of individual events (for example, "VAC only," "IVAC only," and "especially possible and probable VAP") could be used by LTCHs as "internal quality improvement" measures. "Possible and probable VAP" definitions were developed for internal quality improvement purposes rather than inter-facility comparisons because practices within and among facilities with regard to diagnostic testing of respiratory tract samples vary widely and so are not ideal for inclusion in surveillance definitions that could potentially be used to make such comparisons in the future. Using the third tier of VAE ("possible or probable VAP") for public reporting and/or for benchmarking or comparison purposes would therefore not be recommended.

Comment: Several commenters expressed concerns regarding recent changes in the NHSN VAE Outcome measure algorithm and definitions, which were updated in January 2013 and July 2013, with additional modifications made in January 2014. A commenter noted that the updated algorithm has been in place for a relatively short period of time (implemented in the NHSN in 2013); thus, the commenter questioned whether data submitted under the new algorithm has been analyzed and validated, particularly in the LTCH setting. The commenter encouraged CMS to exercise caution in adopting the NHSN VAE Outcome measure as part of the LTCHQR Program since the measure was created and tested in the acute care

²³² Magill, S. S., M. Klompas, et al. (2013). "Developing a new, national approach to surveillance for ventilator-associated events*." *Crit Care Med* 41(11): 2467–2475.

²³² National Quality Forum. Measure Applications Partnership Pre-Rulemaking Report: Final Report January 2014. Available: <http://www.qualityforum.org/map/> (page 31).

hospital setting and the updated algorithm is still fairly new.

Another commenter expressed similar concerns, noting that the NHSN continues to modify the data collection algorithm based on assessment and user feedback. This commenter mentioned that the NHSN has not yet provided comparative data to enable facilities to set adequate benchmarks for targets. Another commenter noted that further experience is necessary with VAE surveillance in the LTCH setting before moving forward with the adoption of this as a quality measure. This commenter provided an example requiring clarification is whether the epidemiology of VAE differs in a LTCH setting where tracheostomies are largely predominant.

Another commenter stated the recent change in the NHSN algorithm no longer uses the Ventilator-Associated Pneumonia bundle. The commenter also stated that the previously used VAP bundle, referenced in the proposed rule, was applicable to Intensive Care Units, is outdated, and is not an appropriate measure for LTCHs.

Response: We agree that comprehensive measure testing is an important part of measure development. The CDC algorithm was developed for several healthcare settings and initial testing was conducted in acute care facilities prior to implementation. As one commenter pointed out, the CDC continues to test the algorithm and to modify it based on assessment and end-user feedback. CDC has implemented an ongoing process to continually improve this measure and ensure it is up to date and reflects the most recently available testing and user feedback results. Although more testing and validation is helpful to inform the use of a measure, based on evidence cited, measure testing conducted to date, and the fact that 105 LTCHs collected and reported data to the CDC's NHSN in CY 2013,²³⁹ we believe the impact this measure could have on the quality of care and patient outcomes supports our proposal to implement this measure starting January 1, 2016.

We will continue to work closely with CDC to review measure testing results and feedback on an ongoing basis and continue to assess the validity of this measure and its impact on the quality of care in LTCHs. Further, CMS and CDC will develop and provide guidance to LTCHs to support the implementation of this measure, including clarification on measure specifications. This guidance will be informed by the current and

ongoing CDC NHSN experience with VAE surveillance in the LTCH setting. Finally, we agree with the commenter who states that the former VAP bundle is out of date; hence, we have not adopted this bundle for implementation in the LTCHQR Program.

Comment: Commenters requested clarification regarding how CMS intends to define VAEs in the LTCH setting. These commenters encouraged CMS to report only the two standardized infection ratios (SIRs) listed in the NHSN specifications for the measure: VACs and IVACs. The commenters referred to the proposed rule, which states that VAE “incorporates a range of ventilator-associated events, including ventilator-associated pneumonia (VAP), pulmonary edema, acute respiratory distress syndrome, sepsis, and atelectasis” (79 FR 28267). The commenters clarified that according to the current specifications, VAE is defined not by the five aforementioned clinical conditions, but instead by quantitative changes in specific pathophysiologic parameters, including a decline in a patient's oxygenation level after a period of stability or improvement on the ventilator, evidence of infection or inflammation (for example, elevated body temperature), and laboratory evidence of respiratory infection. Commenters noted that the pathophysiologic changes which define VACs and IVACs could be due to a variety of clinical conditions including, but not limited to, those mentioned in the proposed rule. These commenters underscored that, as suggested by the current specifications, the use of quantitative parameters is appropriate at this time because available definitions of specific conditions leading to VAEs are fairly subjective, which could lead to unreliable or invalid data collection and reporting. Commenters noted that, as specified by the NHSN, the NHSN VAE Outcome measure reports two SIRs, VAC and IVAC, which are not intended to be a “roll-up” of the five clinical conditions listed in the proposed rule. The commenters encouraged CMS to report the measure in a manner consistent with those specifications.

Response: Our intent for the NHSN VAE Outcome measure as part of the LTCHQR Program is to collect and report data in alignment with NHSN measure specifications. Specifically, we will collect and report data on the two SIRs (VAC and IVAC) in alignment with the NHSN specifications. The measure would not be reported via a “roll-up,” or combined prevalence or incidence count of the five clinical conditions mentioned in the comment (ventilator-

associated pneumonia (VAP), pulmonary edema, acute respiratory distress syndrome (ARDS), sepsis, and atelectasis). In the event that the measure specifications are revised through ongoing measure development by the CDC, the measure steward, we will align the data collection and reporting for the measure with revised measure specifications.

Comment: A commenter expressed concerns about the NHSN VAE Outcome measure based on recent publications (Klouwensberg et al., 2014²⁴⁰ and Lilly et al., 2014²⁴¹) and noted that these studies demonstrate that the new definition of VAE has poor sensitivity for detecting clinically verified VAP. The commenter expressed concern about the appropriateness of developing a quality measure based upon a clinical definition that research has shown to have poor sensitivity. The commenter encouraged CMS to work with stakeholders to improve the VAE definition before implementing the NHSN VAE Outcome measure.

Response: We appreciate the commenter's concern regarding the sensitivity of the measure for detecting clinically verified VAP. Ultimately, it is a clinical diagnosis that is made by taking into account several pieces of information at the bedside. There is not a universally accepted standard approach that all LTCHs can agree on. With this in mind, the intent of VAE surveillance is not to provide a new surveillance VAP definition but instead to provide an objective measure—based on information that should be available for any patient on mechanical ventilation in any facility—that captures a broad range of conditions and complications in patients on mechanical ventilation understanding that infections are not the only potentially preventable complications of mechanical ventilation. Research indicates the VAE algorithm detects clinical conditions that may be preventable, including, but not limited to, pneumonia, ARDS, atelectasis, and pulmonary edema.

Comment: Several commenters recommended that CMS delay the January 1, 2016, implementation start

²⁴⁰ Klein Klouwensberg PM, van Mourik MS, Ong DS, Horn J, Schultz MJ, Cremer OL, Bonten MJ; MARS Consortium. Electronic Implementation of a Novel Surveillance Paradigm for Ventilator-associated Events. Feasibility and Validation. *Am J Respir Crit Care Med.* 2014 Apr 15;189(8):947–55

²⁴¹ Lilly CM, Landry KE, Sood RN, Dunnington CH, Ellison RT 3rd, Bagley PH, Baker SP, Cody S, Irwin RS; for the UMass Memorial Critical Care Operations Group. Prevalence and Test Characteristics of National Health Safety Network Ventilator-Associated Events. *Crit Care Med.* 2014 May 7. [Epub ahead of print].

²³⁹ Data from CMS–CDC correspondence on February 10, 2014.

date for this measure. A commenter recommended CMS delay implementation until data submitted under the new VAE algorithm is reviewed for reliability and in order to allow time to support adequate training and resources for VAE data collection. Several commenters expressed a need for the NHSN VAE Outcome measure to be further tested and refined for the LTCH setting before it is adopted for use in the LTCHQR Program.

A few commenters expressed a concern that the NHSN VAE Outcome measure was developed and tested in the acute care setting and recommended that CMS exercise caution in implementing the measure in the LTCH setting. A commenter stated there is need for better data on VAEs and responsiveness to quality improvement programs before the measure is considered suitable for inter-facility comparisons or pay-for-performance programs. This commenter asked that the implementation of NHSN VAE Outcome measure be delayed until the measure can be validated in the LTCH setting, more is known about what portion of VAE is preventable, and until risk adjustment strategies for the measure have been developed. Another commenter expressed similar concerns about lack of LTCH-specific data currently available under the new VAE algorithm and stated that implementation of the measure in the LTCHQR Program would be premature until further data is available and standards of care are developed for preventing VAEs.

Response: The CDC algorithm was developed for several health care settings, including LTCHs. While initial testing was conducted in acute care setting, the CDC continues to test the algorithm and to modify it based on assessment and end-user feedback. Further, LTCHs are acute care facilities and hence, while setting-specific testing is important, based on extensive evidence cited in our proposal, we believe that the impact this measure

could have on the quality of care and patient outcomes in the LTCH setting justifies the need to implement this measure beginning January 1, 2016. CMS will continue to work closely with the CDC to review measure testing results and feedback on an ongoing basis and continue to assess the validity and reliability of this measure and its impact on the quality of care in LTCHs.

Comment: A few commenters expressed concern about the resource-intensive nature for data collection for this measure. A commenter expressed concern about the limitations of existing resources in LTCHs and noted that implementation of the measure will divert resources to NHSN VAE Outcome measure data collection and reporting activities and away from other valuable prevention activities. A commenter noted that some LTCHs do not have EHRs to facilitate data collection for this measure. Another commenter noted the complexity of the measure algorithm and the variety of patient scenarios that could be implicated and stated that these represent additional burden in collecting data for the NHSN VAE Outcome measure.

Response: Based on evidence cited in our proposal, we believe the impact this measure could have on quality of care and patient outcomes justifies additional resources needed for measure data collection. We recognize that the implementation of this measure adds data collection and reporting burdens for facilities; however, we believe the initial burden to implement the measure and train staff is necessary to improve the quality of care for patients in the LTCHs. In addition, in 2013, approximately 25 percent (n=105) of all currently Medicare-certified LTCHs reported data on this measure to CDC's NHSN; this is evidence in support the feasibility of implementation of this measure in the LTCH setting.²⁴² In addition, this measure was developed to facilitate potential automated outcome detection, which could eventually lead to decreased burden for LTCH.

Further, CMS and CDC will undertake training and stakeholder communication and outreach efforts in CY 2015 and CY 2016 to support the implementation of this measure in the LTCHQR Program, similar to our ongoing efforts since 2012 to support the implementation of previously adopted measures, including the CLABSI, CAUTI, and Healthcare Professional Influenza Vaccination measures.

In addition to soliciting comments on our proposal to adopt the NHSN VAE Outcome measure for the LTCHQR Program, we also invited comments on our proposal to use the CDC's NHSN system for data collection and submission for this measure.

We received no comments on the use of the NHSN system for data collection and submission of the VAE Outcome measure. Therefore we are finalizing the National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure, as proposed, for FY 2018 payment update determination and subsequent years.

8. LTCHQR Program Quality Measures and Concepts Under Consideration for Future Years

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28268 through 28269), we stated that we are considering whether to propose one or more of the quality measures and quality measure topics listed in the table below for future years in the LTCHQR Program. We invited public comments on these measures and measure topics. We specifically invited public comments regarding the clinical importance of these measures and measure topics in the LTCH setting, feasibility of data collection and implementation, current use of these measures and measure topics in the LTCH setting, and the usability of data for these measures and measure topics to inform future quality improvements in the LTCH setting.

FUTURE MEASURES AND MEASURE TOPICS UNDER CONSIDERATION FOR PROPOSAL FOR THE LTCH QUALITY REPORTING PROGRAM

National Quality Strategy Priority: Patient Safety.

- Measures addressing Ventilator Bundle.
- Measures addressing avoidable injuries secondary to polypharmacy.
- Application of Hospital-Based Inpatient Psychiatric Services (HBIPS)-2 Hours of Physical Restraint Use (NQF #0640).
- Application of Percent of Residents Who Were Physically Restrained (Long Stay) (NQF #0687).

National Quality Strategy Priority: Effective Clinical Processes.

- Severe Sepsis and Septic Shock: Management Bundle.

²⁴²Data from CMS-CDC correspondence on February 10, 2014.

FUTURE MEASURES AND MEASURE TOPICS UNDER CONSIDERATION FOR PROPOSAL FOR THE LTCH QUALITY REPORTING PROGRAM—Continued

National Quality Strategy Priority: Patient- and Caregiver-Centered Care.	<ul style="list-style-type: none"> • Venous Thromboembolism Prophylaxis (NQF #0371). • Ventilator Weaning Rate. • Pain Management.
National Quality Strategy Priority: Communication and Coordination of Care.	<ul style="list-style-type: none"> • Depression Assessment and Management. • Application of Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) (NQF #0166). • Measures addressing patients' experience of care. • Measures addressing pain control—patients' preference. <ul style="list-style-type: none"> • Application of Medication Reconciliation (NQF #0097). • Application of Medication Reconciliation Post-Discharge (NQF #0554). • Reconciled Medication List Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0646). • Transition Record with Specified Elements Received by Discharged Patients (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0647). • Timely Transmission of Transition Record (Discharges from an Inpatient Facility to Home/Self Care or Any Other Site of Care) (NQF #0648). • Measures addressing care transitions.

Comment: Commenters supported the addition of patient experience of care measures for use in the LTCHQR Program. Specifically, a commenter supported an application of the HCAHPS survey for use in the LTCHQR Program. The commenter supported the collection of patient and caregiver experience through surveys that provide feedback that only a patient or their caregiver can provide. The commenter urged CMS to undertake the necessary testing to modify the HCAHPS survey to be appropriate for use within the LTCHQR Program. The commenter suggested some modifications to the HCAHPS that would be necessary prior to implementation. These include testing the HCAHPS questions in LTCHs and the addition of new questions about key topics relevant to the LTCH patient population. The commenter added that for many patients proxy respondents would be necessary to achieve a reliable response rate.

Response: We appreciate the commenters' support of the HCAHPS survey in the LTCHQR Program, and we will take their recommendations into consideration in our measure development and testing efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

Comment: Commenters noted the "Severe Sepsis and Septic Shock: Management Bundle" was not ready for use in the LTCHQR Program. A commenter noted that the bundle was endorsed for the acute care hospital setting and would need refinement and

testing for use in the LTCH setting. Another commenter recommended additional review of "Severe Sepsis and Septic Shock: Management Bundle" before proposing the bundle as a formal measure. The commenter noted that although sepsis is one of the leading causes of hospitalization and readmissions and results in significant morbidity, mortality, and increased cost in health care, the current bundle definition, including central line placement and central hemodynamic monitoring, may have other unintended consequences. The commenter underscored the NQF Patient Safety Standing Committee's recent recommendation that the item requiring measurement of central venous pressure be removed from this bundle. The commenter added that this recommendation is based on recent literature published on sepsis protocols, which found no significant benefit of the mandated use of central venous catheterization and central hemodynamic monitoring in all patients.

Response: We appreciate the commenters' acknowledgement of the significant burden sepsis can cause on health care outcomes and costs. We will take their comments regarding this measure into consideration in our measure development efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

Comment: A commenter did not support the inclusion of the "Institute for Healthcare Improvement Ventilator

Bundle," as several components of the bundle (daily sedation reduction and daily weaning of ventilator settings) may not be applicable to patients who are on a long-term ventilator and may never be weaned. Another commenter supported the development of palliative care measures for the LTCHQR Program. Another commenter recommended CMS consider development and pilot testing of measure(s) related to antimicrobial stewardship, citing this measurement area as an important one given the fact that LTCHs are often at the epicenter of clusters and outbreaks of multidrug-resistant organisms. Another commenter recommended CMS consider including The Joint Commission tobacco performance measure set in the LTCHQR Program since identifying and treating tobacco use is a cost-effective and medically effective clinical intervention demonstrated to improve health and reduce costs. Another commenter supported the addition of care coordination measures in the LTCHQR Program and noted that since patients in the LTCH setting often receive services from multiple providers, a care coordination measure would represent an important opportunity to ensure holistic, high-quality care for the LTCH population. Finally, a commenter indicated support and a recommendation to include new quality measures, after the measures have been fully developed, tested, and endorsed by a multi-stakeholder consensus organization. The commenter supported quality of life, functional

status, and other patient-reported outcomes performance measures.

Response: We appreciate the commenters' recommendations, and we will take the commenters' suggestions into consideration in our measure development efforts, as well as in our ongoing efforts to identify and propose appropriate measures for the LTCHQR Program in the future.

9. Form, Manner, and Timing of Quality Data Submission for the FY 2016 Payment Determination and Subsequent Years

a. Background

Section 1886(m)(5)(C) of the Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit to the Secretary data on quality measures specified by the Secretary and that such data shall be submitted in a form and manner, and at a time, specified by the Secretary. As required by section 1886(m)(5)(A)(i) of the Act, for any LTCH that does not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to a given rate year, any annual update to the standard Federal rate for discharges for the hospital during the rate year must be reduced by two percentage points.

b. Finalized Timeline for Data Submission Under the LTCHQR Program for the FY 2016 and FY 2017 Payment Determinations (Except NQF #0680 and NQF #0431)

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50857 through 50861 and 50878 through 50881), we finalized the data submission timelines and submission deadlines for measures for the FY 2016 and FY 2017 payment determinations. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for a more detailed discussion of these timelines and deadlines. Specifically, we refer readers to the table at 78 FR 50878 of the FY 2014 IPPS/LTCH PPS final rule for the data collection period and submission deadlines for the FY 2016 payment determination and the tables at 78 FR 50881 of that final rule for the data collection timelines and submission deadlines for the FY 2017 payment determination.

c. Revision to the Previously Adopted Data Collection Period and Submission Deadlines for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 Payment Determination and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50858 through 50861), we revised the Percent of Residents or

Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short Stay) (NQF #0680) measure for the FY 2016 payment determination and subsequent years. In that rule (78 FR 50861, 50880 through 50882), we also revised the data collection period and submission deadlines for the FY 2016 through FY 2018 payment determinations for this measure.

For the reasons discussed in section IX.C.6.a. of the preamble of the proposed rule (79 FR 28262), we proposed to change to the data collection timeframes and submission deadlines for the FY 2016 payment determination and subsequent years. Specifically, as discussed in section IX.C.6.a. of the preamble of the proposed rule, for the FY 2016 payment determination, we proposed submission deadlines of February 15, 2015, and May 15, 2015, for this measure for data collection periods October 1-December 31, 2014, and January 1-March 31, 2015, respectively, instead of the previously finalized submission deadline of May 15, 2015, for the data collection period of October 1, 2014-April 30, 2015. The changes applicable to this measure (NQF #0680) are illustrated below for the FY 2016 payment determination. Please refer to section IX.C.6 of the preamble of this final rule for further information regarding this revision.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2016 PAYMENT DETERMINATION FOR PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period (CY):	Final submission deadlines for the LTCHQR program FY 2016 payment determination
Q4 (October 1—December 31, 2014)	February 15, 2015.
Q1 (January 1—March 31, 2015)	May 15, 2015.

Further, as discussed in section IX.C.6.a. of the preamble of the proposed rule (79 FR 28262), we

proposed similar deadlines for the FY 2017 payment determination and subsequent years for the LTCHQR

Program. The changes applicable to this measure (NQF #0680) are illustrated below.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2017 PAYMENT DETERMINATION AND SUBSEQUENT YEARS FOR PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period (CY):	Final submission deadlines for the LTCHQR program payment determination (FY)
Q4 of the CY two years before the payment determination year (for example, October 1—December 31, 2015 for the FY 2017 payment determination).	February 15 of the FY preceding the payment determination year (for example, February 15, 2016 for the FY 2017 payment determination).
Q1 of the CY one year before the payment determination year (for example, January 1—March 31, 2016 for the FY 2017 payment determination).	May 15 of the FY preceding the payment determination year (for example, May 15, 2016 for the FY 2017 payment determination).

We invited public comment on our proposal to revise the data collection

timeline for Percent of Residents or Patients Who Were Assessed and

Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF

#0680) for the FY 2016 payment determination and subsequent years.

Comment: A few commenters supported CMS' proposal to revise the data collection period and submission deadlines for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 payment determination and subsequent years. A commenter also noted this alignment reflects the influenza season and will reduce data entry time for LTCH staff.

Response: We greatly appreciate commenters' support of our proposal to revise the data collection period and submission deadlines for NQF #0680 to better align with the influenza vaccination season.

Comment: A commenter recommended that the NQF #0680 measure not apply to patients transferred from acute care hospitals since this would represent a duplicative compliance requirement between the two care settings.

Response: We did not propose any changes to measure specifications for NQF #0680. As we stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50860), the specifications for NQF #0680 are written to ensure that "LTCHs follow current clinical guidelines to assess whether a patient should receive an influenza vaccine and to ensure that, when clinically indicated, each patient only receives one influenza vaccine." For patients who did not receive the influenza vaccine in the LTCH, item O0250 on the LTCH CARE Data Set allows the LTCH to indicate why the vaccine was not received in the facility, including selecting an option indicating that the patient received the vaccine outside of the facility.

In addition, because this measure reports on patients who received the influenza vaccine either inside or outside the facility/hospital, for a patient who received the vaccine at another facility prior to arriving at the LTCH, there is no incentive for the LTCH to over-vaccinate or provide duplicative vaccination. Facilities will need to adhere to the principles of proper care coordination and documentation to avoid over-immunization as well as under-immunization. However, the measure specifications are designed to encourage facilities to vaccinate only when the patient has not already received the vaccination in another setting and only when clinically indicated. We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50860) for more information on this topic.

After consideration of the public comments we received, we are finalizing the revision to the data collection period and submission timeline for Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) for the FY 2016 payment determination and subsequent years.

d. Data Submission Mechanisms for the FY 2018 Payment Determination and Subsequent Years for New LTCHQR Program Quality Measures and for Revisions to Previously Adopted Quality Measures

For the two functional status measures and the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28270), we proposed that all LTCHs would be required to collect data using the LTCH CARE Data Set.²⁴³ We will release the technical data submission specifications and update LTCHQR Program Manual for the LTCH CARE Data Set (Version 3.00) to include items related to the functional status measures and the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674) measure in CY 2015. The QIES ASAP system would remain the data submission mechanism for the LTCH CARE Data Set. Further information on data submission of the LTCH CARE Data Set for the LTCHQR Program Reporting using the QIES ASAP system is available at: <https://www.qtso.com/www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html>.

For the NHSN VAE Outcome measure, we proposed that LTCHs would be required to use the CDC's NHSN reporting and submission infrastructure. Details related to the procedures for using CDC's NHSN for data submission and information on definitions, numerator data, denominator data, data analyses, and measure specifications for the NHSN

²⁴³ The LTCH CARE Data Set (Version 2.01) was approved on June 10, 2013, by OMB in accordance with the PRA. The OMB Control Number is 0938-1163. Expiration Date June 30, 2016. Available on the CMS Web site at: <http://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing-Items/CMS1252160.html>. CMS will revise the LTCH CARE Data Set and submit for OMB review for PRA approval to support data collection for the two functional status measures and the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).

VAE Outcome Measure can be found at: http://www.cdc.gov/nhsn/PDFs/pscManual/10-VAE_FINAL.pdf.

We invited public comments on these proposals.

Comment: A commenter supported the use of the LTCH CARE Data Set for the two functional status measures. The commenter appreciated CMS' use of the LTCH CARE Data Set to streamline reporting across acute and post-acute settings.

Response: We appreciate the commenter's feedback and support of the use of the LTCH CARE Data Set for collection of the functional status measures.

We received no comments on our proposed data submission mechanisms for the NHSN VAE Outcome measure.

After consideration of the public comments we received, we are finalizing that all LTCHs would use the LTCH CARE Data Set (Version 3.00) to collect data for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674) and the two functional status measures. We are also finalizing that the QIES ASAP system will remain the data submission mechanism for the LTCH CARE Data Set. Further, we are finalizing that for the NHSN VAE Outcome measure, LTCHs would use the CDC's NHSN reporting and submission infrastructure for the LTCHQR Program.

e. Data Collection Period and Submission Deadlines Under the LTCHQR Program for the FY 2018 Payment Determination

In sections IX.C.9.c. and f. of the preamble of this final rule, we discuss our proposal, for the FY 2016 payment determination and subsequent years, to revise the data collection period and submission deadlines for the Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680) measure and, for the FY 2018 payment determination and subsequent years, to revise the data collection period and submission deadlines for the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674) measure. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50882), we adopted the data collection period and submission deadlines for the remaining quality measures applicable to the FY 2018 payment determination as listed in the following tables.

TIMEFRAMES FOR DATA COLLECTION OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION

NQF measure ID	Data collection period
NQF #0138	January 1, 2016–December 31, 2016.
NQF #0139	January 1, 2016–December 31, 2016.
NQF #0678	January 1, 2016–December 31, 2016.
NQF #0431	October 1, 2016 (or when vaccine becomes available)–March 31, 2017.
NQF #1716	January 1, 2016–December 31, 2016.
NQF #1717	January 1, 2016–December 31, 2016.

TIMELINE FOR SUBMISSION OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION FOR ALL MEASURES EXCEPT INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431) AND PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period: CY 2016	Final submission deadlines for the LTCHQR program FY 2018 payment determination
Q1 (January–March 2016)	May 15, 2016.
Q2 (April–June 2016)	August 15, 2016.

TIMELINE FOR SUBMISSION OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION FOR ALL MEASURES EXCEPT INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431) AND PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)—Continued

Data collection period: CY 2016	Final submission deadlines for the LTCHQR program FY 2018 payment determination
Q3 (July–September 2016) ...	November 15, 2016.
Q4 (October–December 2016).	February 15, 2017.

TIMELINE FOR SUBMISSION OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION: INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431)

Data collection period	Final submission deadlines for the LTCHQR Program FY 2018 payment determination
October 1, 2016 (or when vaccine becomes available)–March 31, 2017	May 15, 2017.

For the new measures that we proposed to adopt for the FY 2018 payment determination and subsequent years, we proposed the following data collection period and submission deadlines.

DATA COLLECTION PERIOD FOR NEW LTCHQR PROGRAM MEASURES FOR THE FY 2018 PAYMENT DETERMINATION

NQF measure ID or measure name (when NQF measure ID not available)	Data collection period
National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.	January 1, 2016–December 31, 2016.
Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support.	April 1, 2016–December 31, 2016.
Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function.	April 1, 2016–December 31, 2016.

SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION: NATIONAL HEALTHCARE SAFETY NETWORK (NHSN) VENTILATOR-ASSOCIATED EVENT (VAE) OUTCOME MEASURE

Data collection period	Final submission deadlines for the LTCHQR program FY 2018 payment determination
Q1 (January–March 2016)	May 15, 2016.
Q2 (April–June 2016)	August 15, 2016.
Q3 (July–September 2016)	November 15, 2016.
Q4 (October–December 2016)	February 15, 2017.

SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION: FUNCTIONAL OUTCOME MEASURE: CHANGE IN MOBILITY AMONG LONG-TERM CARE HOSPITAL PATIENTS REQUIRING VENTILATOR SUPPORT AND PERCENT OF LONG-TERM CARE HOSPITAL PATIENTS WITH AN ADMISSION AND DISCHARGE FUNCTIONAL ASSESSMENT AND A CARE PLAN THAT ADDRESSES FUNCTION

Data collection period	Final submission deadlines for the LTCHQR program FY 2018 payment determination
Q2 (April–June 2016) *	August 15, 2016.
Q3 (July–September 2016) ...	November 15, 2016.
Q4 (October–December 2016).	February 15, 2017.

*Note that data collection implementation begins Q2.

We invited public comments on these data collection timelines and submission deadlines for the three new quality measures for FY 2018 payment determination.

We received no comments on these proposals. Therefore, we are finalizing the data collection period and submission deadlines for the three measures (the two functional measures and the NHSN VAE Outcome measure), as proposed.

f. Data Collection Timelines and Submission Deadlines for the Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 Payment Determination and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule, we revised the application of the Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure for the FY 2018 payment determination and subsequent years (78 FR 50874 through 50877). In the FY 2015 IPPS/LTCH PPS

proposed rule (79 FR 28272), we proposed, for the FY 2018 payment determination only, to move the start date for data collection of this measure to April 1, 2016, instead of the previously finalized start date of January 1, 2016. Data collection and submission of this measure will continue through December 31, 2016, as previously finalized for the FY 2018 payment determination. This change in the data collection start date will only affect CY 2016 data collection and submission for the LTCHQR Program for the FY 2018 payment determination. For all subsequent years, data collection for this measure will begin on January 1 and continue through December 31. We note that these proposed changes will be applicable only to the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) measure, and not applicable to any other LTCHQR Program measures, proposed or adopted, unless explicitly stated. We refer readers to section IX.C.6. of the preamble of this final rule for further information and rationale.

DATA COLLECTION TIMELINES AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2018 PAYMENT DETERMINATION FOR THE APPLICATION OF PERCENT OF RESIDENTS EXPERIENCING ONE OR MORE FALLS WITH MAJOR INJURY (LONG STAY) (NQF #0674)

Data collection period: CY 2016	Final submission deadlines for the LTCHQR program FY 2018 payment determination
Q2 (April–June 2016) *	August 15, 2016.
Q3 (July–September 2016) ...	November 15, 2016.
Q4 (October–December 2016).	February 15, 2017.

*Note that data collection implementation begins Q2.

We invited public comment on the proposed data collection timeline and quarterly submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 payment determination.

Comment: Commenters supported CMS' proposal to delay the start of data collection for the NQF #0674 measure until April 1, 2016, for the FY 2018 payment determination.

Response: We appreciate commenters' support of our proposal to revise the data collection period and quarterly submission deadlines for the application of NQF #0674 and are finalizing the proposed revision to the data collection period and quarterly submission deadlines for this measure for the FY 2018 payment determination. We reiterate that this change in data collection of this measure would only apply to the FY 2018 payment determination year only; for all subsequent years, data collection for this measure would begin on January 1 and continue through December 31.

After consideration of the public comments we received, we are finalizing the data collection period and quarterly submission deadlines for the application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674) for the FY 2018 payment determination, as proposed. For all subsequent years, data collection for this measure would begin on January 1 and continue through December 31.

g. Data Collection Timelines and Submission Deadlines Under the LTCHQR Program for the FY 2019 Payment Determination and Subsequent Years

For the quality measures applicable to the FY 2019 payment determination and subsequent years, including those that we proposed in section IX.C.7. of the preamble of the proposed rule, we proposed the following data collection timelines and submission deadlines.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION

NQF measure ID or measure name (when NQF measure ID not available)	Data collection period
National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infection (CAUTI) Outcome Measure (NQF #0138).	January 1, 2017–December 31, 2017.
National Healthcare Safety Network (NHSN) Central Line-Associated Bloodstream Infection (CLABSI) Outcome Measure (NQF #0139).	January 1, 2017–December 31, 2017.
Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678).	January 1, 2017–December 31, 2017.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION—Continued

NQF measure ID or measure name (when NQF measure ID not available)	Data collection period
Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680).	October 1, 2017–March 31, 2018.
Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431).	October 1, 2017–March 31, 2018.
National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-resistant <i>Staphylococcus aureus</i> (MRSA) Bacteremia Outcome Measure (NQF #1716).	January 1, 2017–December 31, 2017.
National Healthcare Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset <i>Clostridium difficile</i> Infection (CDI) Outcome Measure (NQF #1717).	January 1, 2017–December 31, 2017.
Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long-Stay) (NQF #0674).	January 1, 2017–December 31, 2017.
National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.	January 1, 2017–December 31, 2017.
Functional Outcome Measure: Change in Mobility among Patients Requiring Ventilator Support.	January 1, 2017–December 31, 2017.
Percent of LTCH Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function.	January 1, 2017–December 31, 2017.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION FOR ALL MEASURES EXCEPT INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431) AND PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period: CY 2017	Final submission deadlines for the LTCHQR program FY 2019 payment determination
Q1 (January–March 2017)	May 15, 2017.
Q2 (April–June 2017)	August 15, 2017.
Q3 (July–September 2017)	November 15, 2017.
Q4 (October–December 2017)	February 15, 2018.

DATA COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION: PERCENT OF RESIDENTS OR PATIENTS WHO WERE ASSESSED AND APPROPRIATELY GIVEN THE SEASONAL INFLUENZA VACCINE (SHORT-STAY) (NQF #0680)

Data collection period	Final submission deadlines for the LTCHQR Program FY 2019 payment determination
October 1, 2017–December 31, 2017	February 15, 2018.
January 1, 2018–March 31, 2018	May 15, 2018.

COLLECTION PERIOD AND SUBMISSION DEADLINES OF LTCHQR PROGRAM QUALITY DATA FOR THE FY 2019 PAYMENT DETERMINATION: INFLUENZA VACCINATION COVERAGE AMONG HEALTHCARE PERSONNEL (NQF #0431)

Data collection period	Final submission deadlines for the LTCHQR Program FY 2019 payment determination
October 1, 2017–March 31, 2018	May 15, 2018.

We invited public comment on these proposals. We received no comments on these proposals. Therefore, we are finalizing the data collection period and submission deadlines for the FY 2019 payment determination and subsequent years, as proposed.

10. LTCHQR Program Data Completion Thresholds for the FY 2016 Payment Determination and Subsequent Years
a. Overview

Section 1886(m)(5)(C) of the Act requires that, for the FY 2014 payment determination and subsequent years, each LTCH submit to the Secretary data on quality measures specified by the Secretary in a form and manner, and at a time, specified by the Secretary. As

required by section 1886(m)(5)(A)(i) of the Act, for any LTCH that does not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to a given fiscal year, any annual update to the standard Federal rate for discharges for the hospital during the rate fiscal year must be reduced by two percentage points. To date, we have not established a standard for compliance other than that LTCHs submit all applicable

required data for all finalized measures, by the previously finalized quarterly deadlines. In response to input from our stakeholders seeking additional specificity related to the LTCHQR Program compliance affecting FY payment update determinations and, due to the importance of ensuring the integrity of quality data submitted to CMS, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28273 through 28275), we proposed to set specific LTCHQR Program thresholds for completeness of LTCH quality data beginning with data affecting the FY 2016 payment determination and subsequent years.

The LTCHQR Program, through the FY 2012, FY 2013, and FY 2014 IPPS/LTCH PPS final rules, requires LTCHs to submit quality data using two separate data collection/submission mechanisms: Measures collected using the LTCH CARE Data Set (LCDS) are submitted through the CMS Quality Improvement Evaluation System (QIES); and measures stewarded by the CDC (such as Healthcare-Acquired Infection (HAI) and vaccination measures), are submitted using the CDC's National Healthcare Safety Network (NHSN). We have also previously finalized a claims-based measure (All-Cause Unplanned Readmission Measure for 30 Days Post Discharge from Long Term Care Hospitals); however, claims-based measures do not require LTCHs to actually submit quality data to CMS, as they are calculated using claims data submitted to CMS for payment purposes. Thus, for claims-based measures, there is no submitted quality data to which we could apply data completion thresholds.

To ensure that LTCHs are meeting an acceptable standard for completeness of submitted data, we proposed that for the FY 2016 payment determination and subsequent years, LTCHs meet or exceed two separate program thresholds: One threshold for completion of quality measures data collected using the LCDS and submitted through QIES; and a second threshold for quality measures data collected and submitted using the CDC's NHSN. We proposed that LTCHs must meet or exceed both thresholds discussed below, in order to avoid receiving a 2 percentage point reduction to their annual payment update for a given FY, beginning with FY 2016.

We proposed to hold LTCHs accountable for different data completion thresholds for each of the two data submission mechanisms; an 80 percent data completion threshold for data collected using the LCDS and submitted through the QIES mechanism;

and a 100 percent data completion threshold for data submitted through the CDC's NHSN. We proposed to hold LTCHs to the higher data completion threshold for the CDC's NHSN initially, because many LTCHs have been mandated by States to report infection data using the CDC's NHSN system for surveillance purposes, prior to the start of the LTCHQR Program on October 1, 2012, and, therefore, we believe LTCHs are more familiar with the NHSN collection and submission process.

In contrast, LTCHs had never submitted quality data using a standardized data collection instrument before October 1, 2012, such as the LCDS submitted through the QIES mechanism. In addition, we require the submission of LCDS admission and discharge data through QIES, in order for LTCHs to meet the proposed data accuracy compliance standard, which with regard to discharge data, may be more difficult to collect on patients that are discharged emergently or against medical advice, in effect making it more difficult to meet a higher level of compliance initially. Lastly, through the FY 2014 IPPS/LTCH PPS final rule, we finalized accelerated quarterly deadlines for submission of quality data, beginning January 2014, of 45 days beyond the end of each CY quarter, as opposed to the 135 day post-quarterly deadline LTCHs were previously required to meet. We feel that this is an additional challenge that LTCHs may face. We invited comment on other obstacles LTCHs may face in meeting a higher level of compliance with regard to submission of quality data using the LCDS.

Comment: A few commenters noted that individual LTCHs may have a higher than average percentage of incomplete data due to emergent discharges, as well as patients with fecal management systems. Commenters stated that emergent discharges do not allow for the collection of complete data, and that CMS guides LTCHs to enter a dash (-) for item H0400 (Bowel Continence) for those patients that have fecal management systems in place, rendering any associated admission assessment incomplete. These commenters suggested that 10 percent to 15 percent of any LTCH's patients may fall under one of the two above categories, making it difficult to comply with proposed data completion thresholds. Finally, the commenters suggested that completeness in the LTCH CARE Data Set Planned Discharge assessments may be a better metric of a facility's compliance with quality reporting completion thresholds.

Response: The proposed data completion threshold for data submitted using the LTCH CARE Data set is 80 percent. We have considered emergent discharges as one reason that LTCHs may not meet data completion thresholds approaching 100 percent. While we understand that LTCHs may not have the opportunity to complete data item H0400 (Bowel Continence) for those patients with fecal management systems in place, we believe that LTCHs should be able to meet our currently proposed threshold of 80 percent and can confirm that the majority of LTCHs are meeting this threshold presently. With respect to the future expansion of our data completion threshold policy, we will monitor LTCH performance on each required item and take steps to account for any such low response rate. If we find that the majority of LTCHs are failing to consistently respond to any one of our required items, we will either take action to modify that item on the LTCH CARE Data Set, or we will address the problem as it relates to data completion threshold compliance in future rulemaking.

With regard to the commenters' suggestion that we base completion thresholds on only planned discharge assessment, we respectfully disagree. We believe that the LTCH CARE Data Set admission assessment is an important factor in collecting data with regard to risk adjustment items. However, we will consider the effect of the inclusion of unplanned discharge data elements in our compliance determinations based on data completion thresholds, as we monitor this program.

b. LTCHQR Program Data Completion Threshold for the Required LTCH CARE Data Set (LCDS) Data Items

The LCDS is composed of data collection items designed to inform quality measure calculations, including risk-adjustment calculations, as well as internal consistency checks for logical inaccuracies. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28274), we proposed that beginning with quality data affecting the FY 2016 payment determination and subsequent years, LTCHs must meet or exceed a proposed LCDS data completion threshold of 80 percent. We proposed to assess the completeness of submitted data by verifying that for all LCDS assessments submitted by any given LTCH, at least 80 percent of those LCDS Assessments must have 100 percent of the required quality data items completed, where, for the purposes of this rule, "completed" is defined as having provided actual patient data, as opposed to a non-

informative response, such as a dash (-), that indicates the LTCH was unable to provide patient data. The proposed threshold of 80 percent is based on the need for substantially complete records, which allows appropriate analysis of quality measure data for the purposes of updating quality measure specifications as they undergo yearly and triennial measure maintenance reviews with the NQF. In addition, complete data is needed to understand the validity and reliability of quality data items, including risk-adjustment models. Finally, we want to ensure complete quality data from LTCHs, which will ultimately be reported to the public, allowing our beneficiaries to gain an understanding of LTCH performance related to these quality metrics, and helping them to make informed health care choices.

Our data suggest that the majority of current LTCHs are in compliance with, or exceeding, this proposed threshold already. Our decision to set this proposed data completion threshold at a lower level initially, with the intent to raise the proposed 80 percent threshold in subsequent program years, is based on our understanding that LTCHs are still new to quality reporting, and that their experience and understanding, with respect to reporting quality data using a standardized data collection instrument, and thus their compliance, will increase over time. However, we invited public comment on circumstances that might prevent LTCHs from meeting this level of compliance. All items that we proposed to require under the LTCHQR Program are identified in Appendix D of the LTCHQR Program Manual version 2.01, which is available for download on the CMS Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html>.

We also proposed that any LTCH that does not meet the proposed requirement that 80 percent of all LCDS assessments submitted contain 100 percent of all required quality data items, will be subject to a reduction of 2 percentage points to the applicable FY annual payment update beginning with FY 2016. In order to establish this program threshold, we analyzed all LCDS submissions from January 2013 through September 2013, and we believe that the majority of LTCHs will be able to meet the proposed 80 percent data completion threshold. It is our intent to raise this threshold over the next 2 years, through the formal notice-and-comment rulemaking process. As stated above, we feel that as LTCHs continue

to submit data using a standardized data collection instrument, such as the LCDS, and as they continue to take advantage of the resources we provide to guide LTCHs in their submission of this data (national trainings, CMS Special Open Door Forums, LTCHQR Program Manual, and technical trainings available on our Web site), we feel LTCH performance with respect to data completion will improve over time. We proposed that this threshold will have to be met by LTCHs, in addition to the CDC NHSN threshold discussed below, in order to avoid receiving a 2 percentage point reduction to the applicable FY annual payment update.

c. LTCHQR Program Data Completion Threshold For Measures Submitted Using the Centers for Disease Control and Prevention (CDC) National Healthcare Safety Network (NHSN)

The LTCHQR Program through the FY 2012, FY 2013, and FY 2014 IPPS/LTCH PPS final rules, requires that LTCHs submit CDC-stewarded quality measure data using the CDC's NHSN, including data for the previously finalized CAUTI, CLABSI, and Influenza Vaccination Coverage among Healthcare Personnel (HCP) quality measures. More specifically, we require LTCHs follow CDC quality measure protocols, which require the LTCHs to complete all data fields required for both numerator and denominator data within NHSN, including the "no events" field for any month during which no infection events were identified. LTCHs are required to submit this data on a monthly basis (except for the HCP measure, which is only required to be reported once per year). However, LTCHs have until the associated quarterly deadline (45 calendar days beyond the end of each CY quarter) by which to report infection data to the CDC for each of the three months within any given quarter. For more information on the LTCHQR Program quarterly deadlines, we refer readers to section IX.C.9.b. of the preamble of this final rule.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275), we proposed that beginning with FY 2016 payment determination and subsequent years, this previously finalized requirement for monthly reporting must be met in addition to the proposed LCDS data completion threshold discussed above in order to avoid a 2 percentage point reduction to the applicable FY annual payment update. That is, we proposed that LTCHs must meet a threshold of 100 percent for measures submitted via the NHSN, achieved by submitting relevant infection, vaccination, or other required

quality measure data for each month of any given CY, in addition to meeting the above-proposed data item completion threshold for required quality data items on the LCDS. As the LTCHQR Program expands, and LTCHs begin reporting measures that were previously finalized, but not yet implemented, or newly proposed and finalized measures, we proposed to apply this same threshold.

d. Application of the 2 Percentage Point Reduction for LTCHs That Fail To Meet the Data Completion Thresholds

As we discussed above, we have proposed that LTCHs must meet two separate data completion thresholds in order to avoid a 2 percentage point reduction to their applicable FY annual payment update; a data completion threshold of 80 percent for those required data elements collected using the LCDS and submitted through QIES; and a second data completion threshold of 100 percent for quality measure data submitted through the CDC's NHSN. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275), we proposed that these data completion thresholds must be met in addition to the data validation threshold of 75 percent we discuss below, in order to avoid a 2 percentage point reduction to their applicable FY annual payment update. While we proposed that LTCHs must meet both the proposed data completion and data validation thresholds, LTCHs cannot have their applicable annual payment update reduced twice. That is, should an LTCH fail to meet either one or both of the proposed thresholds, it will only receive one reduction of 2 percentage points to its applicable fiscal year annual payment update.

We invited public comment on these proposals.

Comment: A few commenters supported CMS' proposal to establish data completion thresholds, noting that it is a fundamental step to ensure the accuracy of the LTCH quality reporting data. A few commenters stated that CMS' proposed policy will facilitate more accurate public reporting in the future and agreed with our proposed numeric standards.

Response: We thank the commenters for their support.

Comment: Commenters recommended that CMS apply the data completion standards no earlier than the FY 2017 payment determination, instead of FY 2016. These commenters further stated that a significant amount of data for FY 2016 has already been collected and submitted and that it would be inappropriate and unfair to apply the data completion standards to data submitted before the standards were

even proposed and therefore known to LTCHs.

Response: Currently, the compliance standard applicable to each LTCH is to timely submit all required quality data, and LTCHs should already be ensuring that the data that they submit is complete and accurate. Thus, applying the data completion standards to CY 2014 data merely ensures that LTCHs are complying with applicable standards and that payments made to LTCHs are based on complete and accurate quality data.

Comment: A commenter suggests that LTCHs should not be penalized by a 2 percentage point reduction to the annual payment update based on completion thresholds, citing that emergency discharges make it difficult to complete assessments.

Response: We believe that the number of unplanned discharges in LTCHs is not so substantial that it will prevent LTCHs from meeting or exceeding the proposed data completion threshold of 80 percent for data submitting using the LTCH CARE Data Set. We will continue to monitor submission patterns and completion thresholds for all data items and appropriately investigate and address any submission patterns that lead us to believe that a systematic issue is preventing LTCHs from complying with our data completion thresholds.

After consideration of the public comments we received, we are finalizing the LTCHQR Program data completion threshold for the FY 2016 payment determination and subsequent years, as proposed.

11. Data Validation Process for the FY 2016 Payment Determination and Subsequent Years

a. Data Validation Process

Historically, we have built consistency and internal validation checks into our data submission specifications to ensure that the basic elements of the LCDS assessments conform to requirements such as proper format and facility information. These internal consistency checks are automated and occur during the LTCH submission process, and help ensure the integrity of the data submitted by LTCHs by rejecting submissions or issuing warnings when LTCH data contain logical inconsistencies. These internal consistency checks are referred to as “system edits” and are further outlined in the LTCH Data Submission Specifications version 1.01, which are available for download on the LTCH Quality Reporting Technical Information Web page at: <http://www.cms.gov/Medicare/Quality->

Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCHTechnicalInformation.html.

Validation is intended to provide added assurance of the accuracy of the data that will be reported to the public as required by section 1886(m)(5)(E) of the Act. In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28275 through 28276) we proposed, for the FY 2016 payment determination and subsequent years, to validate the data elements submitted to CMS for quality purposes. Initially, for the FY 2016 payment determination, this data accuracy validation will apply only to the LCDS items that inform the measures Percent of Patients or Residents with Pressure Ulcers That are New or Worsened (Short-Stay) (NQF #0678). We intend to expand this validation process for quality measures affecting the FY 2017 payment determination and subsequent years through future notice-and-comment rulemaking.

We proposed to validate the data elements submitted to CMS for Percent of Residents or Patients with Pressure Ulcers That are New or Have Worsened (Short-Stay) (NQF #0678) under the LTCHQR Program by requesting the minimum chart data necessary to confirm a statistically valid random sample of 260 LTCHs. From the random sample of 260 LTCHs, 5 LCDS assessments submitted through the National Assessment Collection Database would be randomly selected by the CMS validation contractor. In accordance with § 164.512 (d)(1)(iii) of the HIPAA Privacy Rule, we would request from these LTCHs the specified portions of the 5 Medicare patient charts that correspond to the randomly selected assessments, which would need to be copied and submitted via traceable mail to a CMS contractor for validation. We proposed that the specific portions of the 5 beneficiary charts would be identified in the written request, but may include: Admission and discharge assessments, relevant nursing notes following the admission, relevant nursing notes preceding the discharge, physician admission summary and discharge summary, and any Assessment of Pressure Ulcer Form the facility may utilize. We proposed that the CMS contractor would utilize the portions of the patient charts to compare that information with the quality data submitted to CMS. Differences that would affect measure outcomes or measure rates would be identified and reported to CMS. These differences could include but are not limited to unreported worsened pressure ulcers.

We proposed that all data that has been submitted to the National Assessment Collection Database under the LTCHQR Program would be subject to the data validation process. Specifically, we proposed that the contractor would request copies of the randomly selected medical charts from each LTCH via certified mail (or other traceable methods that require an LTCH representative to sign for CMS correspondence), and the LTCH would have 45 days from the date of the request (as documented on the request letter) to submit the requested records to the contractor. If the LTCH does not comply within 30 days, the contractor would send a second certified letter to them, reminding the LTCH that it must return copies of the requested medical records within 45 calendar days following the date of the initial contractor medical record request. If the LTCH still does not comply, then the contractor would assign a “zero” score to each measure in each missing record. If, however, the LTCH does comply, the contractor would review the data submitted by the LTCH on the LCDS assessments for the required data elements associated with the Pressure Ulcer measure, until such time that LTCHs begin to submit additional quality measures that are collected using the LCDS. Initially, this review would consist solely of those required data elements that inform the Pressure Ulcer measure calculation and checks for logical inconsistencies. As LTCHs begin to report additional finalized measures, we intend to expand this validation process to quality measures affecting the FY 2017 payment determination and subsequent years, through future notice-and-comment rulemaking. The contractor would then calculate the percentage of matching data elements, which would constitute a validation score. Because we would not be validating all records, we would need to calculate a confidence interval that incorporates a potential sampling error.

To receive the full FY 2016 annual payment update, we proposed that LTCHs in the random sample must attain at least a 75 percent validation score, based upon our validation process, which would use charts requested from patient assessments submitted for CY 2013. We would calculate a 95 percent confidence interval associated with the observed validation score. If the upper bound of this confidence interval is below the 75 percent cutoff point, we would not consider a hospital’s data to be “validated” for payment purposes. We

proposed that LTCHs failing the validation requirements would be subject to the 2 percent annual payment update reduction, beginning with their fiscal year annual payment update. In addition, all LTCHs validated would receive educational feedback, including specific case details.

Comment: Several commenters believed that the proposed validation is a fundamental step to ensure the accuracy of the LTCH quality reporting data.

Response: We thank the commenters for their support for this proposal.

Comment: Several commenters suggested that CMS begin the validation standards no earlier than FY 2017. Although the commenters believed that validation is an important step to ensuring that hospitals are collecting measure data appropriately, they believed it would be inappropriate to validate data submitted for FY 2016 payment determination, as much of those data will be submitted prior to the effective date of CMS' finalized data accuracy validation policy on October 1, 2014.

Response: We agree that validation is important not only to ensure hospitals are collecting data appropriately, but also in providing feedback to LTCHs regarding possible differences in the findings of our validation effort. We believe the feedback a facility will receive, even if they are well above the validation minimum, could be valuable to both the LTCHs and to CMS. We are confident that most LTCHs have been submitting data accurately. Although much of the data for FY 2016 has been submitted, the FY 2013 IPPS/LTCH PPS final rule (77 FR 53620) states that LTCHs are required to submit the subset of data elements necessary to enable CMS to validate that the pressure ulcer measure data elements were accurately reported. We believe that we are operating within our authority to validate quality data. Currently, the compliance standard applicable to each LTCH is to timely submit all required quality data, and LTCHs should already be ensuring that the data that they submit is complete and accurate. Thus, validating CY 2014 data ensures that LTCHs are complying with applicable standards and that payments made to LTCHs are based on complete and accurate quality data.

Comment: Several commenters recommended that the CMS make the validation process as transparent as possible, particularly since it is new to the LTCHQR Program.

Response: We will use the requested charts to validate the following data elements: Functional mobility: "Lying

to Sitting on Side of Bed;" "Bowel continence;" "Active Diagnosis;" "PVD;" "Active Diagnosis;" "Diabetes Mellitus;" "Height;" "Weight;" "Worsening stage 2 Pressure Ulcer;" "Worsening stage 3 Pressure Ulcer;" and, "Worsening stage 4 Pressure Ulcer." We intend to share our data accuracy validation findings with the randomly selected LTCHs, so that they may gain an understanding of any discrepancies between the medical record and the LTCH CARE Data Assessment to which the medical record is being compared. We will also incorporate examples of our findings into LTCH training, special open door forums, and LTCH manuals, ensuring that the greater LTCH community benefits from this validation effort as well.

b. Application of the 2 Percentage Point Reduction for LTCHs That Fail To Meet the Data Accuracy Threshold

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28276) we proposed that LTCHs must meet a data accuracy threshold of 75 percent in order to avoid receiving a 2 percentage point reduction to their applicable fiscal year annual payment update. We proposed that this proposed data accuracy threshold of 75 percent must be met in addition to the proposed data completion thresholds (80 percent for data collected using the LTCH CARE Data Set and submitted using QIES, and 100 percent for data submitted using the CDC's NHSN), in order to avoid receiving a 2 percentage point reduction to their applicable FY annual payment update. While we proposed that LTCHs must meet both the proposed data accuracy and data completion thresholds, LTCHs cannot have their applicable annual payment update reduced twice. That is, should an LTCH fail to meet either one or both of the proposed thresholds (data completion and/or data accuracy), it will only receive one reduction of 2 percentage points to its applicable FY annual payment update.

We invited public comment on these proposals and suggestions to improve the utility of the approach or to reduce the burden on LTCHs.

Comment: A commenter noted that 260 LTCHs would represent approximately 60 percent of the entire industry, which they believed was excessive.

Response: We thank the commenter for voicing this concern and will take the proportion into consideration in future rulemaking.

Comment: A commenter asked whether "IPPS comparable" cases will

be required to meet LTCHQR Program requirements or those that fall under ACH reporting requirements.

Response: We presume that the commenter is referring to current short stay outlier policy, but they could be referencing future regulation under the SGR Reform Act, where the IPPS comparable amount is one of the payment options for a "site neutral" case. Regardless, the facility/unit would be subject to the LTCHQR Program, as it is still an LTCH when it is paid an IPPS comparable amount, and the payment is a form of LTCH PPS payment.

Comment: A commenter recommended that CMS annually announce which LTCHs will be subject to validation and disseminate information about when these LTCHs should expect to begin receiving requests for medical records.

Response: We recognize the need to communicate with LTCHs whether or not they will be selected for validation. We will use the LTCHQR Program Web site, as well as direct communication with LTCHs selected for validation, to communicate time frames and deadlines regarding the data accuracy validation effort. In addition, we will use the LTCHQR Program Web site to announce, and offer access to, a new listserv specifically for the LTCHQR Program, which we will use to communicate with the provider community in the near future.

Comment: Commenters expressed concern that the threshold compliance of 75 percent agreement was too high for this first attempt to validate the Pressure Ulcer data. Commenters suggested that there would be a great deal of variability in the reporting of the Pressure Ulcer measure and that this should be an opportunity for CMS to educate LTCHs on appropriate documentation and reporting to improve the process. Commenters suggested that a 60 percent compliance threshold would be more appropriate validation.

Response: We note that the 75 percent agreement is the single point estimate of the proportion in agreement; we proposed that the upper bound of a 95 percent confidence interval be the value that must exceed the 75 percent compliance threshold. We believe this takes into account the inherent variability to be found in the pressure ulcer data. In addition, the 75 percent proportion agreement is consistent with the other data quality programs currently underway, for example, the Hospital IQR Program, 42 CFR 412.140(d)(2), and the Hospital OQR Program, 42 CFR 419.46(e)(2). We feel it is important to promulgate consistent

standards when we deal with the various quality data we are collecting.

Comment: A commenter requested CMS promulgate regulations for the validation process and provide the credentials, inter-rater reliability and detail the training provided to the contractor performing the validation.

Response: We will make any future data accuracy validation regulations known to the LTCH community through future notice-and-comment rulemaking. All chart reviews will be performed by a licensed registered nurse trained in medical record review and comparison, utilizing the quality measure data specifications in the LTCH Quality Reporting Program Manual. Specified training will be provided before the actual reviews, which will include ensuring that there is inter-rater reliability among the reviewers prior to implementation of the data validation process.

Comment: A few commenters suggested that CMS adopt a two-level data validation process similar to the process used by the MACs for the IRF Compliance Percentage Threshold. An initial small sample of charts would be requested from the facilities randomly selected for validation. If the facility did not meet the initial threshold for compliance, a larger, second sample of charts would be requested. The commenters believed that 5 charts is too small of a sample size and that if two of the five charts selected for review are perceived to contain errors the facility would not meet the 75 percent validation score. Lastly, the commenters suggested that CMS select the LTCHs for validation from all LTCHs participating in the Medicare program.

Response: We will consider this approach for future years. We understand the concern regarding a relatively low sample of charts, but wish to explain that the overall validation score will be determined based on the aggregate percentage of reported elements (out of all reportable elements) in all of the sampled charts, not on the percentage of reported elements in each individual chart. Each chart will be evaluated on the 9 required data elements. Finally, we would like to confirm that the sample of randomly selected LTCHs will be drawn from the universe of all Medicare-certified LTCHs, as suggested by the commenter.

After consideration of the public comments we received, we have decided to further explore suggestions from commenters before finalizing the LTCH data validation process that we proposed. Therefore, we are not finalizing our LTCH data validation proposal at this time.

12. Public Display of Quality Measure Data for the LTCHQR Program

Under section 1886(m)(5)(E) of the Act, the Secretary is required to establish procedures for making data submitted under section 1886(m)(5)(C) of the Act available to the public. Section 1886(m)(5)(E) of the Act requires that such procedures shall ensure that an LTCH has the opportunity to review the data that is to be made public with respect to the LTCH prior to such data being made public. The statute also requires that the Secretary report quality measures that relate to services furnished in inpatient settings in LTCHs on our Web site. In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53637), we received and responded to public comments regarding the public reporting of quality data under the LTCHQR Program.

Currently, we are developing plans regarding the implementation of these provisions. We appreciate the need for transparency into the processes and procedures that will be implemented to allow for public reporting of the LTCHQR Program data and to afford LTCHs the opportunity to review that data before it is made public. At this time, we have not established procedures or timelines for public reporting of data, but we intend to include related proposals in future rulemaking.

We welcomed public comment on what we should consider when developing future proposals related to public reporting of quality measures for the LTCHQR Program.

Comment: Several commenters encouraged CMS to work with LTCHs to ensure an opportunity to review potential displays of quality data and to provide feedback prior to public reporting.

Response: We thank the commenters for taking the time to express these views and suggestions regarding public reporting and will take it into consideration for future public reporting development.

Comment: A commenter noted CMS should develop reports in the CASPER Reporting Application to indicate patients included in the Pressure Ulcer measure.

Response: We plan to begin designing and making CASPER reports accessible for LTCHs in the near future.

We thank the commenters for the responses, and we will consider them as we develop future proposals related to public reporting of quality measures for the LTCHQR Program.

13. LTCHQR Program Submission Exception and Extension Requirements for the FY 2017 Payment Determination and Subsequent Years

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50883 through 50885), we referred to these requirements as submission “waiver” requirements. We proposed to instead use the phrase “exception and extension” requirements for purposes of clarity. For the FY 2017 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28276 through 28277), we proposed to continue using the LTCHQR Program’s requirements that we adopted in the FY 2014 IPPS/LTCH PPS final rule for the FY 2015 payment determination and subsequent years, although the term “waiver” is replaced by “exception and extension.”

In the FY 2014 IPPS/LTCH PPS final rule, we finalized a process for LTCHs to request and for us to grant waivers with respect to the quality data reporting requirements of the LTCHQR Program for one or more quarters, beginning with the FY 2015 payment determination, when there are certain extraordinary circumstances beyond the control of the LTCH. We proposed to continue to use this previously finalized process.

In the event that an LTCH seeks to request a submission exception or extension for quality reporting purposes, the LTCH must request an exception or extension within 30 days of the date that the extraordinary circumstances occurred by submitting a written request to CMS via email to the LTCH mailbox at LTCHQRPreconsiderations@cms.hhs.gov. Exception or extension requests sent to CMS through any other channel will not be considered as a valid request for an exception or extension from the LTCHQR Program’s reporting requirements for any payment determination. The written request must contain all of the finalized requirements in the FY 2014 IPPS/LTCH PPS final rule, and on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html>.

When an exception or extension is granted, an LTCH will not incur payment reduction penalties for failure to comply with the requirements of the LTCHQR Program, for the timeframe specified by CMS. If an LTCH is granted an exception, we will not require that the LTCH submit any quality data for a given period of time. If we grant an

extension to an LTCH, the LTCH will still remain responsible for submitting quality data collected during the time frame in question, although we will specify a revised deadline by which the LTCH must submit this quality data.

In addition, in the FY 2014 IPPS/LTCH PPS final rule, we finalized a policy that allowed CMS to grant exceptions or extensions to LTCHs that have not requested them if it is determined that extraordinary circumstances affects an entire region or locale. We stated that if this determination was made, we will communicate this decision through routine communication channels to LTCHs and vendors, including, but not limited to, issuing memos, emails, and notices at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html>. More information on the LTCHQR Program exception and extension requirements and processes, and all related announcements may be found at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html>.

For the FY 2017 payment determination and subsequent years, we proposed that we may grant an exception or extension to LTCHs if we determine that a systemic problem with one of our data collection systems directly affected the ability of the LTCH to submit data. Because we do not anticipate that these types of systemic problems will happen often, we do not anticipate granting a waiver or extension on this proposed basis frequently. We proposed that if we make the determination to grant an exception or extension, we would communicate this decision through routine communication channels to LTCHs and vendors, including, but not limited to, issuing memos, emails, and notices on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/index.html>.

We invited public comment on these proposals.

Comment: A few commenters supported the proposed Exception/Exemption proposal.

Response: We thank the commenters for their support.

After consideration of the public comments we received, we are finalizing the LTCHQR Program submission exception and extension requirements for the FY 2017 payment determination and subsequent years, as proposed.

14. LTCHQR Program Reconsideration and Appeals Procedures for the FY 2016 Payment Determination and Subsequent Years

a. Previously Finalized LTCHQR Program Reconsideration and Appeals Procedures for the FY 2014 and FY 2015 Payment Determinations

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50885 through 50887), we finalized a voluntary process that allowed LTCHs the opportunity to seek reconsideration of our initial noncompliance decision for the FY 2014 and FY 2015 payment determinations. We refer readers to that rule for a discussion of this process.

b. LTCHQR Program Reconsideration and Appeals Procedures for the FY 2016 Payment Determination and Subsequent Years

For the FY 2016 payment determination and subsequent years, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28277 through 28278), we proposed to adopt an updated process, as described below, that will enable an LTCH to request a reconsideration of our initial noncompliance decision in the event that an LTCH believes that it was incorrectly identified as being subject to the 2-percentage point reduction to its annual payment due to noncompliance with the LTCHQR Program reporting requirements for a given reporting period.

For the FY 2016 payment determination, and subsequent years, we proposed that an LTCH would receive a notification of noncompliance if we determine that the LTCH did not submit data in accordance with section 1886(m)(5)(C) of the Act with respect to the applicable fiscal year and that the LTCH is therefore subject to a 2-percentage point reduction in the applicable payment determination as required by section 1886(m)(5)(A)(i) of the Act. We would only consider requests for reconsideration after an LTCH has been found to be noncompliant and not before.

An LTCH would have 30 days from the date of the initial notification of noncompliance to review its payment determination and submit to us a request for reconsideration. This proposed time frame would allow us to balance our desire to ensure that LTCHs have the opportunity to request reconsideration with our need to complete the process and provide LTCHs with our reconsideration decision in a timely manner.

Notifications of noncompliance and any subsequent notifications from CMS would be sent via a traceable delivery

method, such as certified U.S. mail or registered U.S. mail. We proposed that an LTCH may withdraw its request at any time and may file an updated request within the proposed 30-day deadline. We also proposed that, in very limited circumstances, we may grant a request by an LTCH to extend the proposed deadline for reconsideration requests. It would be the responsibility of an LTCH to request an extension and demonstrate that extenuating circumstances existed that prevented the filing of the reconsideration request by the proposed deadline.

We also proposed that as part of the LTCH's request for reconsideration, the LTCH would be required to submit all supporting documentation and evidence demonstrating: (1) Full compliance with all LTCHQR Program reporting requirements during the reporting period; or (2) extenuating circumstances that affected noncompliance if the LTCH was not able to comply with the requirements during the reporting period. We would not review any reconsideration request that fails to provide the necessary documentation and evidence along with the request. The documentation and evidence may include copies of any communications that demonstrate its compliance with the program's requirements, as well as any other records that support the LTCH's rationale for seeking reconsideration. A sample list of acceptable supporting documentation and evidence, as well as instructions for LTCHs to retrieve copies of the data submitted to CMS for the appropriate program year can be found on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html>.

We proposed that an LTCH wishing to request a reconsideration of our initial noncompliance determination would be required to do so by submitting an email to the following email address: LTCHQRPreconsiderations@cms.hhs.gov. Any request for reconsideration submitted to us by an LTCH would be required to follow the guidelines outlined on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html>.

Following receipt of a request for reconsideration, we will provide—

- An email acknowledgment, using the contact information provided in the reconsideration request, to the CEO or

CEO-designated representative that the request has been received; and

- Once we have reached a decision regarding the reconsideration request, an email to the LTCH CEO or CEO-designated representative, using the contact information provided in the reconsideration request, regarding our decision.

We proposed to require an LTCH that believes it was incorrectly identified as being subject to the 2-percentage point reduction to its annual payment update to submit a timely request for reconsideration and receive a decision on that request before the LTCH can file an appeal with the Provider Reimbursement Review Board (PRRB). If the LTCH is dissatisfied with the decision rendered at the reconsideration level, the LTCH could appeal the decision with the PRRB under 42 CFR 405.1835. We believe this proposed process is more efficient and less costly for CMS and for LTCHs because it decreases the number of PRRB appeals by resolving issues earlier in the process. Additional information about the reconsideration process including requirements for submitting a reconsideration request is posted on our Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/LTCH-Quality-Reporting/LTCH-Quality-Reporting-Reconsideration-and-Disaster-Waiver-Requests.html>.

We invited public comment on the proposed procedures for reconsideration and appeals.

Comment: Several commenters supported the proposal to continue the reconsideration process for FY 2016.

Response: We thank the commenters for their support.

Comment: A commenter supported the reconsideration process, but believed that it should be expanded to include data validation.

Response: We believe the current reconsideration process could be utilized for reconsideration of the validation findings, as long as all of the documentation used for the request for reconsideration was submitted at the time of validation. As noted above, we are finalizing our data completeness proposal, but we are not finalizing our data validation proposal at this time.

Comment: A commenter stated that CMS should set the reconsideration process in regulation as has been done in other administrative appeals processes. In addition, the commenter did not believe that CMS has demonstrated the ability to manage this level of additional administrative complexity in a prompt manner. The commenter believed that CMS should

allow LTCHs to appeal to the PRRB without having to go through CMS first.

Response: We plan to propose regulations for reconsideration in future rulemaking. We note that while some CMS programs have codified their reconsideration processes in regulations, not all CMS reconsideration processes have been codified. We disagree that we have not demonstrated the ability to manage this level of additional administrative complexity. The LTCHQR Program completed all reconsiderations and notified all LTCHs of those reviews within 60 days in FY 2013. We believe that requiring LTCHs to first submit to the CMS reconsideration process prior to requesting a hearing at the PRRB will allow us the opportunity to overturn an erroneous decision when we have a systematic process and resources in place to do so, and ultimately decrease any unnecessary burden on the PRRB process.

After consideration of the public comments we received, we are finalizing the LTCHQR Program reconsideration and appeals procedures for the FY 2016 payment determination and subsequent years, as proposed.

15. Electronic Health Records (EHR) and Health Information Exchange (HIE)

We are also interested in understanding the current state of electronic health record (EHR) adoption and use of Health Information Exchange (HIE) in the LTCH community. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28278) we solicited feedback and input from LTCHs and the public on EHR adoption and HIE usage. We noted that are especially interested in LTCH feedback and input on the following questions:

- Have you adopted an EHR in your LTCH setting?
- If your LTCH setting uses EHRs, what functional aspects of EHRs do you find most important (for example, the ability to send or receive transfer of care information; the ability to support medication orders/medication reconciliation)?
- Does the EHR system used in your LTCH setting support interoperable document exchange with other healthcare providers (for example, acute care hospitals, physician practices, skilled nursing facilities, etc.)?

In addition to seeking public feedback and input on the feasibility and desirability of EHR adoption and use of HIE in LTCHs, we stated that we are also interested in public comment on the need to develop electronic clinical quality measures, and the benefits and

limitations of implementing these measures for LTCHs.

Comment: Commenters expressed support of the adoption and use of EHRs, HIEs and electronic prescribing in the LTCH setting. The commenters suggested that it is a critical step to achieving efficiencies and improving the quality of care provided by LTCHs, and that it is important to allow LTCHs to exchange information with other types of providers to improve care coordination and to participate in Accountable Care Organizations and other reform efforts.

Response: We thank the commenters for their support.

Comment: Some commenters urged CMS to consider a funding incentive program for the adoption of EHR technology by LTCHs that includes the same opportunities afforded to eligible physicians, CAHs, and acute care hospitals under the HITECH provisions of Public Law 111-5, the American Recovery and Reinvestment Act of 2009. The commenters noted that the lack of funding is a significant challenge to EHR adoption in the LTCH setting and calls into question the feasibility of requiring EHR use. Another commenter suggested that it is premature to consider the further development of electronic clinical quality measures for the LTCH setting until compensation is offered for implementing EHRs.

Response: We believe that these recommendations and concerns are important considerations related to EHR adoption and HIE usage in the LTCH setting and help to inform our understanding of these issues.

Comment: Several commenters indicated that their LTCHs have adopted EHR technology and indicated challenges they have been facing. First, the amount of information generated by the EHRs can be overwhelming, and there is a significant challenge associated with utilizing the information in a timely and meaningful way. Second, the lack of interoperability between acute care hospitals' and LTCH EHRs make information exchange difficult. Third, the information currently being collected by HIEs are rudimentary and does not necessarily meet the information needs to LTCHs.

A commenter indicated that not all proposed and new LTCH quality measures utilize EHR information and, therefore, suggested that LTCHs face the burden of manually reviewing each patient's entire medical record regardless of whether EHR technology has been adopted.

Response: We thank the commenters for their observations. We believe that these concerns are important

considerations related to EHR adoption and HIE usage in the LTCH setting and help to inform our understanding of these issues.

D. Electronic Health Record (EHR) Incentive Program and Meaningful Use (MU)

1. Background

The HITECH Act (Title IV of Division B of the ARRA, together with Title XIII of Division A of the ARRA) authorizes incentive payments under Medicare and Medicaid for the adoption and meaningful use of certified electronic health record (EHR) technology (CEHRT). We refer to this program as the EHR Incentive Program. Eligible hospitals (EHs) and critical access hospitals (CAHs) may qualify for these incentive payments under Medicare (as authorized under sections 1886(n) and 1814(l) of the Act, respectively) if they successfully demonstrate meaningful use of CEHRT, which includes reporting on clinical quality measures (CQMs) using CEHRT. Sections 1886(b)(3)(B) and 1814(l) of the Act also establish downward payment adjustments under Medicare, beginning with fiscal year 2015, for eligible hospitals and CAHs that are not meaningful users of CEHRT for certain associated reporting periods. We refer to this part of the EHR Incentive Program as the Medicare EHR Incentive Program. Sections 1903(a)(3)(F) and 1903(t) of the Act provide the statutory basis for Medicaid incentive payments.

The set of CQMs from which eligible hospitals and CAHs will report under the EHR Incentive Program beginning in FY 2014 is listed in Table 10 of the EHR Incentive Program Stage 2 final rule (77 FR 54083 through 54087). We continue to believe there are important synergies with respect to the Medicare EHR Incentive Program and the Hospital IQR Program. We believe the financial incentives under the Medicare EHR Incentive Program for the adoption and meaningful use of CEHRT by EHs and CAHs will encourage the adoption and use of CEHRT for the electronic reporting of CQMs under the Hospital IQR Program. We expect that the electronic submission of quality data from EHRs under the Medicare EHR Incentive Program will provide a foundation for establishing the capacity of hospitals to send, and for CMS to receive, CQMs via CEHRT for certain Hospital IQR Program measures.

2. Alignment of the Medicare EHR Incentive Program Reporting and Submission Timelines for Clinical Quality Measures With Hospital IQR Program Reporting and Submission Timelines

We believe it is important to continue our goal of aligning the Medicare EHR Incentive Program with the Hospital IQR Program because alignment of these programs will serve to reduce hospital reporting burden and encourage the adoption and meaningful use of CEHRT by eligible hospitals and CAHs. Section 1886(n)(3)(B)(iii) of the Act requires that, in selecting measures and establishing the form and manner for reporting measures under the Medicare EHR Incentive Program, the Secretary shall seek to avoid redundant or duplicative reporting with reporting otherwise required, including reporting under section 1886(b)(3)(B)(viii) of the Act (the Hospital IQR Program). The reporting and submission timelines for the Medicare EHR Incentive Program for eligible hospitals and CAHs currently operate on a Federal fiscal year basis, while the reporting and submission timelines for the Hospital IQR Program currently operate on a calendar year basis. This difference may create confusion and additional burden for hospitals attempting to report data to both programs. To alleviate this possible confusion, reduce provider burden, and strengthen our commitment to aligning programs, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28278 through 28279) we proposed to align the reporting and submission periods for clinical quality measures for the Medicare EHR Incentive Program with that of the Hospital IQR Program on a calendar year basis in 2015 and 2016.

We realize that aligning the Medicare EHR Incentive Program to the calendar year would mean shifting the timeline for reporting and submission of CQMs such that the submission period would continue through February of the subsequent calendar year rather than ending in November as it is currently done, and therefore would delay the incentive eligibility assessment, and subsequently delay the Medicare EHR incentive payments under Medicare made to eligible hospitals and CAHs. In order to ease the transition of the reporting period to the calendar year, and to prevent the delay of Medicare EHR incentive payments, we proposed to incrementally shift the Medicare EHR Incentive Program reporting periods for CQMs. Specifically, for 2015 and 2016, we proposed for the Medicare EHR Incentive Program to require calendar

year reporting for CQM data that are submitted electronically, but require that the data be reported only for the first three calendar quarters (that is, January through March, April through June and July through September) allowing the reporting period, incentive eligibility assessment, and incentive payments to remain on their current schedule.

We noted that this proposal would only apply for eligible hospitals and CAHs submitting CQMs electronically for 2015 and 2016, and that hospitals demonstrating meaningful use for the first time in 2015 or 2016 would still be required to report CQMs by attestation for a continuous 90-day period in FY 2015 or 2016, or report CQMs electronically, by July 1 of the given year to avoid the Medicare penalty in the subsequent year as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905). Medicaid-only providers would continue to report according to State requirements. The proposal would not change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System. This proposal would allow us to align the CQM reporting periods for the Medicare EHR Incentive Program with that of the Hospital IQR Program without delaying payment of the Medicare EHR incentive payments for 2015 and 2016.

To further align CQM reporting for the two programs, we proposed to require quarterly reporting of electronically reported CQMs for the Medicare EHR Incentive Program to align with the currently established quarterly electronic CQM reporting periods for the Hospital IQR Program. Additionally, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28242 through 28243) the Hospital IQR Program proposed to change its submission period for electronic CQMs from annual to quarterly submission. We refer readers to the Hospital IQR Program discussion in section IX.A.7.h. of the preamble of that proposed rule for more information about this proposal. Therefore, for the CY 2015 and 2016 reporting periods, we also proposed to align the Medicare EHR Incentive Program submission period with that being proposed for the Hospital IQR Program. The table below illustrates the current reporting periods, and the following table further illustrates our proposals.

CURRENT (2014) TIMELINES FOR EHR INCENTIVE PROGRAM AND HOSPITAL IQR PROGRAM REPORTING AND SUBMISSION

	EHR incentive program CQM reporting requirements		Hospital IQR program reporting requirements for FY 2016 payment determination	
2014 Reporting Period	FY 2014 October 1, 2013–September 30, 2014.	Report one full year OR ...	Q4 CY 2013	October 1, 2013–December 31, 2013. N/A for 2014 Hospital IQR Program reporting.
		Report one three-month quarter OR. Report any continuous 90-day period.	Q1 CY 2014 Q2 CY 2014 Q3 CY 2014	January 1–March 31, 2014. April 1–June 30, 2014. July 1–September 30, 2014.
Submission Period	Jan 2, 2014–Nov 30, 2014		October 1, 2013–November 30, 2014.	

PROPOSED TIMELINES TO ALIGN THE MEDICARE EHR INCENTIVE PROGRAM WITH PROPOSED HOSPITAL IQR PROGRAM REPORTING AND SUBMISSION

	CY	EHR incentive program reporting requirements*	Hospital IQR program reporting requirements	Submission period**
2015 Reporting Period ..	Q1	January 1–March 31, 2015	January 1–March 31, 2015	Data must be submitted by May 30, 2015.
	Q2	April 1–June 30, 2015	April 1–June 30, 2015	Data must be submitted by August 30, 2015.
	Q3	July 1–September 30, 2015	July 1–September 30, 2015	Data must be submitted by November 30, 2015.
	Q4	N/A for EHR Incentive Program	October 1–December 31, 2015	For Hospital IQR Program, data must be submitted by February 28, 2016.
2016 Reporting Period	Q1	January 1–March 31, 2016	January 1–March 31, 2016	Data must be submitted by May 30, 2016.
	Q2	April 1–June 30, 2016	April 1–June 30, 2016	Data must be submitted by August 30, 2016.
	Q3	July 1–September 30, 2016	July 1–September 30, 2016	Data must be submitted by November 30, 2016.
	Q4	N/A for EHR Incentive Program	October 1–December 31, 2016	For Hospital IQR Program, data must be submitted by February 28, 2017.

* Calendar year alignment and quarterly reporting for 2015 and 2016 would apply for electronically reported CQM data only.

** Proposed EHR Incentive Program and Hospital IQR Program submission period would allow data submission on an ongoing basis starting January 2 of the reporting year, and ending approximately 60 days after the end of the quarter.

We invited public comment on these proposals.

Comment: Many commenters supported CMS’ proposed alignment between the Medicare EHR Incentive Program and Hospital IQR Program. Commenters appreciated CMS’ efforts to align these programs and felt alignment would reduce overall quality reporting burden. Several commenters specifically expressed their support of the proposal to align the reporting and submission timelines of CQMs for the Medicare EHR Incentive Program with reporting and submission timelines for the Hospital IQR Program stating that this alignment would reduce confusion among the programs and reduce reporting burden. A few commenters noted that the proposal did not address the reporting and submission timeline for reporting CQMs via attestation, or the reporting and submission timelines of the meaningful use objectives. Some of these commenters requested that

CMS clarify whether those timelines would also be affected by this proposal.

Response: We appreciate the comments in support of our alignment efforts with the Hospital IQR Program, and agree that our proposal to align timelines for the programs would reduce confusion and reporting burden. For this reason, we are finalizing our proposal, with the modifications discussed below, to align the reporting and submission timelines for CQMs that are reported electronically for the Medicare EHR Incentive Program with the reporting and submission timelines of the Hospital IQR Program on the calendar year for 2015. Although it is still our general goal to continue this alignment on a calendar year basis for 2016, we are not finalizing the proposals for 2016 at this time and will address the policy for 2016 in future rulemaking. We will continue to evaluate our policies for 2016, and

maintain our goal of alignment with the Hospital IQR Program.

We note that we did not propose to change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System, and thus, the policy will remain the same. We also note that we will consider these comments and possible alignment of CQMs reported by attestation in future rule making.

Comment: Many commenters expressed their views regarding CMS’ proposal to require quarterly submission of CQMs reported electronically for the Medicare EHR Incentive Program. In general, commenters felt it was premature to require quarterly submission of CQMs in 2015 for the Medicare EHR Incentive Program given the delays with certification of EHR technology in 2014 and anticipated

changes in attestation requirements. Commenters also expressed concerns over whether EHRs would be ready for quarterly reporting by the first quarter of 2015, and suggested that CMS consider a pilot program for quarterly reporting instead of requiring it for 2015.

Response: We refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to quarterly reporting.

We appreciate and understand the commenters' concerns regarding quarterly reporting, and understand the feedback we have received from stakeholders concerning delays in certification of EHR technology. We additionally acknowledge that our requirement to report the most recent version of the CQMs as finalized below poses a challenge to eligible hospitals and CAHs in implementing quarterly reporting as EHR vendors can be certified to 2014 CEHRT without updating to the most recent version of CQMs. We note that at this time, we do not plan to offer quarterly reporting on a pilot basis in 2015.

Based on commenters' concerns, and the additional challenges posed by requiring the most recent version of the CQMs for 2015 reporting, we have decided not to finalize our proposal to require quarterly submission of electronically reported CQMs for the Medicare EHR Incentive Program in 2015, and instead maintain in 2015 our policy of one annual submission period to align with the submission period for CQMs reported electronically under the Hospital IQR Program. This annual submission period begins on January 2 and ends on November 30 (for example, for the reporting periods in 2015, the submission period is January 2, 2015 through November 30, 2015).

In addition, and to align with the Hospital IQR Program in 2015, we are not finalizing our proposal to require three quarters of CQM data for calendar year 2015. Instead, for CQM data submitted electronically, we will require one calendar quarter of data for 2015 from either Q1 (January 1, 2015–March 31, 2015), Q2 (April 1, 2015–June 30, 2015), or Q3 (July 1, 2015–September 30, 2015). As noted above, at this time, we are not finalizing any proposals related to our reporting and submission requirements for 2016. We refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to quarterly reporting.

We also note that this policy only applies for eligible hospitals and CAHs submitting CQMs electronically for

2015. Therefore, as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905), hospitals demonstrating meaningful use for the first time in 2015 are still required to report CQMs by attestation for a continuous 90-day period in FY 2015, or to report CQMs electronically, by July 1 of the given year to avoid the Medicare penalty in the subsequent year. Medicaid-only providers will continue to report according to State requirements. In addition, as stated above, this policy does not change the reporting periods or requirements for the meaningful use objectives and associated measures under 42 CFR 495.6 or for CQMs that are reported by attestation via the Registration and Attestation System.

In summary, after consideration of the public comments we received, we are finalizing our proposal, with the modifications described above, to align the reporting and submission timelines of the Medicare EHR Incentive Program with those of the Hospital IQR Program on the calendar year for CQMs that are reported electronically in 2015.

We are not finalizing our proposal to require quarterly submission of CQM data for 2015; instead, we will maintain one annual submission period. We are also not finalizing our proposal to require three calendar quarters of CQM data for 2015, but instead, for data submitted electronically, we will require one calendar quarter of data from Q1, Q2, or Q3 of 2015. We are not finalizing our proposals for 2016 in this final rule, and will address the policy for 2016 in future rule making.

3. Quality Reporting Data Architecture Category III (QRDA–III) Option in 2015

In the EHR Incentive Program Stage 2 final rule (77 FR 54088), we finalized two options for eligible hospitals and CAHs to electronically submit CQMs beginning in FY 2014 under the Medicare EHR Incentive Program. Option 1 was to electronically submit aggregate-level CQM data using QRDA–III. Option 2 was to electronically submit data using a method similar to the 2012 and 2013 EHR Incentive Program electronic reporting pilot for EHs and CAHs, which used QRDA–I (patient-level data). We also stated in that final rule that, consistent with section 1886(n)(3)(B)(ii) of the Act, in the event the Secretary does not have the capacity to receive CQM data electronically, eligible hospitals and CAHs that are beyond their first year of meaningful use may continue to report aggregate CQM results through attestation.

We noted in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50904 through 50905) that we had determined that the electronic submission of aggregate-level data using QRDA–III would not be feasible in 2014 for eligible hospitals and CAHs under the Medicare EHR Incentive Program. Therefore, for the 2014 reporting period under the Medicare EHR Incentive Program, eligible hospitals and CAHs would have the option to continue to report aggregate CQM results through attestation. We stated that we would reassess this policy for the 2015 and future reporting periods.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28279 through 28280), we stated that we have determined that the electronic submission of aggregate-level data using QRDA–III will not be feasible in 2015 for eligible hospitals and CAHs under the Medicare EHR Incentive Program. Therefore, for the 2015 reporting period under the Medicare EHR Incentive Program, eligible hospitals and CAHs would have the option to continue to report aggregate CQM results through attestation. We noted that submissions of aggregate CQM data via attestation would not satisfy the reporting requirements for the Hospital IQR Program, and consistent with our proposal above regarding alignment of these programs, attested CQM data would need to be submitted for one full fiscal year in 2015 via the Registration and Attestation System, and would not require quarterly submissions. Hospitals in their first year of demonstrating meaningful use in 2015 would still be required to report CQMs by attestation for a continuous 90-day period in FY 2015, or report CQMs electronically, by July 1, 2015 to avoid the Medicare penalty in FY 2016 as finalized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50903 through 50905). We also noted that this policy does not apply to the Medicaid EHR Incentive Program. Therefore, States may still require the submission of QRDA–III files to fulfill the CQM reporting requirements for hospitals that participate in the Medicaid EHR Incentive Program.

In order to remain aligned with the Hospital IQR Program, and because over 66 percent of hospitals that participate in the Hospital IQR Program are already meaningful users, we strongly recommended that hospitals that are eligible to participate in both programs electronically submit up to 16 electronic clinical quality measures of the 28 inpatient measures identified by the Hospital IQR Program. We believe that keeping the two programs aligned will ultimately reduce reporting burden for

hospitals. We note again that reporting via attestation would not count towards the reporting requirements for the Hospital IQR Program.

Comment: Several commenters expressed views related to CMS' proposal not to accept aggregate-level data using QRDA-III for reporting in 2015. Most commenters were disappointed to learn that it was not feasible for CMS' systems to accept QRDA-III files in 2015 and urged CMS to continue to improve systems such that we would be able to accept QRDA-III data in the future. Some commenters requested further discussion of CMS' plan to accept QRDA-III data in the future.

Response: We understand the concerns raised by commenters, and we expect to continue to review and improve our systems for future years to be able to accept aggregate level QRDA-III files. We note that our plans regarding the acceptance of QRDA-III files will be addressed in future rule making.

Comment: A few commenters suggested that CMS and ONC remove the requirement for EHR technology designed for the inpatient setting to be certified to produce QRDA-III formatted files if CMS would not be able to receive QRDA-III data in the future in order to prevent unnecessary work related to the development of these files.

Response: We appreciate the commenters' concerns and suggestion. As we continue to review and improve our systems, we will continue to evaluate whether QRDA-III is a feasible option for future years and whether changes to existing policies would be appropriate.

Comment: A few commenters requested additional information about the storage and maintenance of QRDA-I files.

Response: We note that the storage and maintenance of QRDA-I files is outside the scope of this final rule.

After consideration of the public comments we received, and for the reasons set forth above, we are finalizing the policy as proposed. For the Medicare EHR Incentive Program, eligible hospitals and CAHs may report their CQMs electronically using QRDA-I (patient-level data) or via attestation (aggregate-level data). We note again that reporting via attestation would not count towards the reporting requirements for the Hospital IQR Program.

4. Electronically Specified Clinical Quality Measures (CQMs) Reporting for 2015

In the EHR Incentive Program Stage 2 final rule, we finalized the CQMs that eligible hospitals and CAHs would be required to report for purposes of meeting the CQM component of meaningful use under the EHR Incentive Program starting in 2014 (77 FR 54083 through 54087 Table 10). These CQMs are updated routinely to account for changes, including but not limited to changes in billing and diagnosis codes and changes in medical practices. The requirements specified in the EHR Incentive Program Stage 2 final rule allow for the reporting of different versions of the CQMs. For 2015, it is not technically feasible for CMS to accept data that is electronically reported according to the specifications of the older versions of the CQMs, including versions that may be allowed for reporting under the EHR Incentive Program. We stated in the EHR Incentive Program Stage 2 final rule that, consistent with section 1886(n)(3)(B)(ii) of the Act, in the event that the Secretary does not have the capacity to receive CQM data electronically, eligible hospitals and CAHs may continue to report aggregate CQM results through attestation (77 FR 54088). In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280) we proposed that eligible hospitals and CAHs that seek to report CQMs electronically under the Medicare EHR Incentive Program must use the most recent version of the electronic specifications for the CQMs and have CEHRT that is tested and certified to the most recent version of the electronic specifications for the CQMs.

Eligible hospitals and CAHs that do not wish to report CQMs electronically using the most recent version of the electronic specifications (for example, if their CEHRT has not been certified for that particular version) would be allowed to report CQM data by attestation for the Medicare EHR Incentive Program.

We invited public comment on these proposals. We have addressed several of the public comments received in this section of this final rule, and we also refer readers to the Hospital IQR Program discussion in section IX.A.9.d. of the preamble of this final rule for further discussion of the comments related to CQM versions.

Comment: Commenters expressed concern and requested clarification regarding the timeframe between publication of the revised specifications and the quarter in which hospitals must

being using the new version. Commenters stated that the timeline was too short for adequate development and implementation of the new specifications.

Response: CQMs are updated routinely to account for changes including, but not limited to, changes in billing and diagnosis codes and changes in medical practices. In order for CQMs to remain current and clinically valid, the specifications must be updated on a regular basis. We note that specifications are posted at least 6 months prior to the reporting period, and as we align the reporting and submission timelines of the Medicare EHR Incentive Program with those of the Hospital IQR Program, we provide an even greater window of time between the posting of the specifications and the start of the reporting period.

Comment: Commenters specifically requested clarification regarding the timing and reporting of the updated specifications with respect to CMS' proposal to require quarterly reporting of electronically reported CQMs. Commenters stated that the two proposals would require hospitals to use an EHR that is certified to one set of specifications and then re-certified to a different set of specifications within a given reporting year in order to satisfy the quarterly reporting requirement.

Response: As we discussed above, and in section IX.D.2. of the preamble of this final rule, we are not finalizing our proposal to require quarterly submission of electronically reported CQMs for 2015. For electronic reporting of CQM data for 2015, we will require one calendar quarter of data from Q1, Q2 or Q3 of 2015 submitted during the period January 2, 2015–November 30, 2015. We believe this revised policy will allow additional time for eligible hospitals and CAHs to implement the updates required to submit the most recent version of the CQMs in 2015.

Comment: One commenter suggested that CMS accept multiple versions of CQMs during the reporting year to account for the period of transition between CQM versions.

Response: We appreciate the commenter's suggestion, but unfortunately, as noted above, for 2015, it is not technically feasible for us to accept data that is electronically reported according to the specifications of the older versions of the CQMs, including versions that may be allowed for reporting under the EHR Incentive Program. We note that eligible hospitals and CAHs that do not wish to report CQMs electronically using the most recent version of the electronic specifications would be allowed to

report CQM data by attestation for the Medicare EHR Incentive Program.

Comment: One commenter supported the proposal to require that eligible hospitals and CAHs ensure that their CEHRT products are tested and certified to the most recent version of the electronic specifications for the CQMs, and many others opposed the recertification requirement citing the additional burden and cost recertification would impose.

Response: We have received feedback from stakeholders regarding the difficulty and expense of having to test and recertify CEHRT products to the most recent version of the electronic specifications for the CQMs. While we still believe eligible hospitals and CAHs should test and certify their products to the most recent version of the electronic specifications for the CQMs when feasible, we understand the burdens associated with this requirement. Therefore, to avoid this added burden, we are not finalizing our proposal to require eligible hospitals and CAHs to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the CQMs. Please note that, although we are not requiring recertification, eligible hospitals and CAHs must still report the most recent version of the electronic specifications for the CQMs.

After consideration of the public comments we received, and for the reasons set forth above, we are finalizing the policy that eligible hospitals and CAHs that seek to report CQMs electronically under the Medicare EHR Incentive Program must use the most recent version of the electronic specifications for the CQMs, however, we will not require eligible hospitals and CAHs to ensure that their CEHRT products are recertified to the most recent version of the electronic specifications for the CQMs.

5. Clarification Regarding Reporting Zero Denominators

As we stated in the EHR Incentive Program Stage 2 final rule (77 FR 54079) we expect eligible hospitals and CAHs to adopt EHR technology that includes CQMs relevant to each eligible hospital's or CAH's patient mix. We understand, however, that there are situations in which an eligible hospital or CAH does not have data to report on a particular CQM, and its EHR is not certified to additional CQMs that can be used to replace that CQM with another for which it has data. For example, a health system with multiple eligible hospitals or CAHs may have an EHR certified for 16 CQMs, which is the minimum number of required CQMs for

reporting, but not all of the eligible hospitals or CAHs in the health system may have cases to report on those particular 16 CQMs. We have received questions on how eligible hospitals and CAHs should meet their reporting requirements in this situation; therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280) we clarified our policy as set forth below regarding the reporting of a zero denominator for the purposes of the Medicare EHR Incentive Program and the Hospital IQR Program.

If the eligible hospital's or CAH's EHR is certified to a CQM, but the eligible hospital or CAH does not have patients that meet the denominator criteria of that CQM, the eligible hospital or CAH can submit a zero in the denominator for that CQM. Submission of a zero in the denominator for a CQM counts as a successful submission for that CQM for both the Medicare EHR Incentive Program and the Hospital IQR Program. For example, if the eligible hospital or CAH within the previously mentioned health system does not provide maternity services, but one of the 16 CQMs the health system's EHR is certified to is a maternity measure, that eligible hospital's or CAH's EHR may render a zero in the denominator for that CQM. The eligible hospital or CAH would therefore report a zero denominator for that maternity care CQM, and this would count toward the 16 required CQMs for the Medicare EHR Incentive Program and the Hospital IQR Program. Eligible hospitals or CAHs within that health system for which that maternity CQM does apply would provide data on that measure.

Comment: Commenters supported and appreciated the clarification regarding zero denominators. Some commenters requested clarification as to whether the above stated zero denominator policy would be effective in CY 2015 or upon publication of this final rule.

Response: The clarification set forth in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280) and stated above represents our current policy. The additional information and examples provided in the proposed rule were intended for clarification only and do not represent a change to our existing policy.

Comment: One commenter requested clarification as to whether this policy extends to issues resulting from the maintenance of value sets specifically related to medications codified in RxNorm required by the CQM specifications. The commenter stated that these issues often result in a zero denominator being produced by the

Medicare EHR, and went on to suggest that these issues may be resolved by modifying CQM specifications to be more in line with how medications are evaluated in the Hospital IQR Program chart-abstracted measures.

Response: While we cannot explore all the possible explanations and reasons why an EHR would produce a zero denominator in this final rule, we hope that the above clarification regarding zero denominators will provide guidance in these instances.

6. Case Threshold Exemption Policy; Clarification for 2014 and Change for 2015

In the EHR Incentive Program—Stage 2 final rule (77 FR 54080), we finalized the policy that eligible hospitals and CAHs that have 5 or fewer discharges per quarter in the same quarter as their reporting period in FY 2014, or 20 or fewer discharges per full FY reporting period beginning in FY 2015, for which data are being electronically submitted (Medicare and non-Medicare combined) as defined by the clinical quality measure's denominator population are exempted from reporting the CQM. To be eligible for the exemption, eligible hospitals and CAHs must submit their aggregate population and sample size counts for Medicare and non-Medicare discharges for the CQM for the reporting period.

In the Health Information Technology: Revisions to the 2014 Edition Electronic Health Record Certification Criteria; and Medicare and Medicaid Programs; Revisions to the Electronic Health Record Incentive Program interim final rule, we revised the case threshold exemption policy to make it applicable for eligible hospitals and CAHs in all stages of meaningful use beginning with FY 2013, including those that are demonstrating meaningful use for the first time and submitting CQMs by attestation (77 FR 72988 through 72989). Eligible hospitals and CAHs with 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period) as defined by the CQM's denominator population would be exempted from reporting on that CQM.

We stated in the interim final rule (77 FR 72989) that beginning in FY 2014, the reporting requirement is to report 16 CQMs covering at least 3 domains from a list of 29 CQMs. We stated further that in order to be exempted from reporting fewer than 16 CQMs, the eligible hospital or CAH would need to qualify for the case threshold exemption for more than 13 of the 29 CQMs. If the

eligible hospital or CAH does not meet the criteria for a case threshold exemption for 13 or more CQMs, the eligible hospital or CAH would be able to report at least 16 CQMs. Likewise, we stated that if the CQMs for which the eligible hospital or CAH can meet the case threshold of discharges do not cover at least 3 domains, the eligible hospital or CAH would be exempt from the requirement to cover the remaining domains. For example, if the eligible hospital or CAH does not meet the case threshold of discharges for 13 clinical quality measures, and thus could report 16 clinical quality measures, but the 16 clinical quality measures cover only 2 of the 3 domains, the eligible hospital or CAH would be exempt from covering the third domain.

For the reporting periods in 2014, our policy requires that an eligible hospital or CAH that claims a case threshold exemption for one CQM must choose another CQM on which to submit data, or continue to invoke the case threshold exemption until it exceeds 13 case threshold exemptions and may therefore report fewer than the 16 required CQMs. This policy assumes that the eligible hospital or CAH has an EHR that is certified to more than the minimum of 16 CQMs, and the eligible hospital or CAH has other CQMs in its EHR to choose from for reporting. We realize, however, that there could be many EHRs that are certified to only the minimum of 16 CQMs required by ONC's regulations at 45 CFR 170.102 (the definition of "Base EHR"), and for eligible hospitals and CAHs using those EHRs, this policy may result in the eligible hospital or CAH needing to submit data on a CQM for which the EHR is not certified. It was not our intent to have eligible hospitals or CAHs report on measures for which their EHRs are not certified.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28280 through 28281), beginning with the reporting periods in 2015, we proposed to change the case threshold exemption policy so that if an eligible hospital or CAH qualifies for an exemption from reporting on a particular CQM, the exemption would count toward the 16 required CQMs. For example, if the eligible hospital's or CAH's EHR is certified to report 16 CQMs, and for one of those CQMs the eligible hospital or CAH has 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period) as defined by the CQM's denominator population, the eligible hospital or CAH would report

data for the 15 CQMs for which the case threshold exemption does not apply, and invoke a case threshold exemption for the one CQM for which the exemption does apply for a total of 16 CQMs.

We expect eligible hospitals and CAHs to adopt EHR technology that includes CQMs relevant to the eligible hospital's or CAH's case mix, though we understand that in some cases, the eligible hospital or CAH may not meet the case threshold of discharges for a particular CQM. We believe this proposed policy better reflects our intent for eligible hospitals and CAHs to report on only those measures for which their EHRs are certified while meeting the reporting requirements for the Medicare EHR Incentive Program and Hospital IQR Program.

We invited public comment on this proposal.

Comment: Several comments supported the proposed change to CMS' case threshold exemption policy. Commenters felt that this change in policy acknowledged that an eligible hospital or CAH should receive credit for meeting the CQM even though the eligible hospital or CAH may not meet the case threshold of discharges for that particular CQM.

Response: We appreciate the comments in support of our proposal.

After consideration of the public comments we received, we are finalizing the policy as proposed. We note that for CQM data reported by attestation, this policy applies to eligible hospitals or CAHs that have 5 or fewer discharges during the relevant EHR reporting period (if attesting to a 90-day EHR reporting period), or 20 or fewer discharges during the year (if attesting to a full year EHR reporting period), as defined by the CQM's denominator population. For CQM data submitted electronically in 2015, this policy applies to eligible hospitals or CAHs that have 5 or fewer discharges during their chosen reporting period of one calendar quarter, as defined by the CQM's denominator population. We note that because there is no option for a full year reporting period for data submitted electronically in 2015, the exemption based on 20 or fewer discharges for a full year EHR reporting period would not apply.

X. Revision of Regulations Governing Use and Release of Medicare Advantage Risk Adjustment Data

A. Background

Section 1853 of the Act requires the Secretary to make payments to Medicare Advantage (MA) organizations offering

local and regional MA plans with respect to coverage of individuals enrolled under Medicare Part C. Section 1853(a)(1)(C) of the Act requires the Secretary to adjust such payments for such risk factors as age, disability status, gender, institutional status, and such other factors as the Secretary determines appropriate, including health status. To support these risk adjustments, section 1853(a)(3)(B) of the Act requires submission of data by MA organizations regarding the services provided to enrollees and other information the Secretary deems necessary but does not limit the Secretary's use of such data or information. Section 1106 of the Act authorizes the Secretary to adopt regulations governing release of information gathered in the course of administering programs under the Act.

Implementing regulations at 42 CFR 422.310 set forth the requirements for the submission of risk adjustment data that CMS uses to risk-adjust payments. MA organizations must submit data, in accordance with CMS instructions, to characterize the context and purposes of items and services provided to their enrollees by a provider, supplier, physician, or other practitioner. Section 422.310(d)(1) provides that MA organizations submit risk adjustment data to CMS as specified by CMS. Risk adjustment data refers to data submitted in two formats: comprehensive data equivalent to Medicare fee-for-service claims data (often referred to as encounter data); and data in abbreviated formats (often referred to as RAPS data). Section 422.310(f) currently specifies CMS' uses of the risk adjustment data.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to revise the existing regulation at § 422.310(f) to broaden the specified uses and disclosures of risk adjustment data in order to strengthen program management and increase transparency in the MA program, and to specify the conditions for release of risk adjustment data to entities outside of CMS.

We received approximately 28 pieces of correspondence from MA organizations and trade associations, beneficiary advocacy organizations, hospital systems and trade associations, a government agency, a research firm, and individuals. Summaries of and our responses to the public comments on the uses and bases for disclosure of risk adjustment data (§ 422.310(f)(1)) are presented in section X.B.1 of the preamble of this final rule. Summaries of and responses to the public comments on the conditions for release of risk adjustment data outside of CMS

(§ 422.310(f)(2)) are presented in section X.B.2. of the preamble of this final rule.

B. Proposed and Finalized Regulatory Changes

1. Expansion of Uses and Reasons for Disclosure of Risk Adjustment Data

In the FY 2015 IPPS/LTCHG PPS proposed rule, we first proposed to revise a reference in existing § 422.310(f) from “data obtained under this section” to “data described in paragraphs (a) through (d) of this section” in both paragraphs (f)(1) and (f)(2); this new text would indicate that the data used or released under proposed paragraph (f) would not include the medical records and other data collected separately under paragraph (e) for the purpose of risk adjustment data validation (RADV) audits. We stated that we did not intend for the proposed § 422.310(f) to authorize any additional use or release of the data described in paragraph (e). We proposed that the data described in paragraphs (a) through (d) would include those elements that constitute an encounter data record, including contract, plan, and provider identifiers, with the exception of disaggregated payment data as discussed below. In addition, we noted that paragraph (d)(1) also authorizes the collection of abbreviated data and that the proposed regulation would apply to both the abbreviated data as well as more detailed (encounter-level) data collected from MA organizations pursuant to § 422.310(a) through (d).

Comment: A few commenters stated that, without a specific exclusion, the data that CMS proposed to release would seem to include audit data and additional data collected as part of these audits, which could include price and charge information. These commenters urged CMS to restrict the inclusion of additional data collected as part of audits from the data eligible for release.

Response: We did propose a specific exclusion: That medical records and other data that MA organizations submit to CMS as part of a Risk Adjustment Data Validation (RADV) audit at § 422.311 are excluded from the data release provisions of this rulemaking, through the references at § 422.310(f) to the data described in § 422.310(a) through (d) as the data that would be available under this rule. This text excludes data collected pursuant to § 422.310(e) for RADV.

We did not receive any public comments challenging our proposed exclusion of audit data under paragraph (e) of § 422.310, nor did we receive any public comments on the application of

this rule to abbreviated data under paragraph (d)(1) of § 422.310. Comments about additional or fewer protections for encounter data under the final rule are addressed below. Therefore, we are finalizing the use of this language limiting the scope of paragraph (f) to data described in paragraphs (a) through (d) as proposed.

The existing regulation at § 422.310(f) specifies five purposes for which CMS may use risk adjustment data obtained from MA organizations. In the proposed rule, we clarified that CMS' uses of these data may include disclosure to CMS contractors or other agents that perform activities or analyses on CMS' behalf in connection with authorized use of the data. The existing specified purposes are: (1) To determine the risk adjustment factors used to adjust payments, as required under §§ 422.304(a) and (c); (2) to update risk adjustment models; (3) to calculate Medicare DSH percentages; (4) to conduct quality review and improvement activities; and (5) for Medicare coverage purposes. We proposed to restructure paragraph (f) to identify the purposes for which CMS may use and release risk adjustment data and to impose certain conditions on any release of that data.

We proposed to revise paragraph (f) to add four purposes, as paragraphs (f)(1)(vi) through (ix), for which CMS may use risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes permitted by other laws. We stated our expectation that, in general, comprehensive risk adjustment data submitted by MA organizations, which MA organizations began submitting to CMS effective CY 2012, will enable CMS to generate improved data analyses that could support Medicare program evaluations, demonstration designs, and CMS' effective and efficient operational management of the Medicare program. Risk adjustment data also could be useful to support public health initiatives by governmental entities and to advance health care-related research by universities and other research organizations. We stated that we also believe that risk adjustment data can support CMS' program integrity activities in the Medicare program and other Federal health care and related programs. This general term

encompasses audits, investigations, efforts to combat waste, fraud, and abuse, and any other actions designed to ensure that the program operates within its authority including audits, evaluations, and investigations by the Office of the Inspector General (OIG) as well as CMS' own efforts. In addition, we stated that risk adjustment data may be useful in supporting Medicare administrative activities, such as the review of the validity of bid and medical loss ratio data submitted by MA organizations. Finally, we proposed to acknowledge that other laws may permit other uses of risk adjustment data and that this regulation is not intended to supersede such other laws.

Regarding the use of risk adjustment data outside of CMS, we proposed at § 422.310(f)(2) that other HHS agencies, other Federal executive branch agencies, States, and external entities would only be able to obtain from CMS and use risk adjustment data for one or more of the purposes listed in proposed paragraph (f)(1). An external entity may be an individual, group, or organization. In the proposed rule, we acknowledged our expectation that other HHS agencies and other Federal executive branch agencies may request these data for the same purposes CMS proposed to use the data and that we believe such use is appropriate. Under our proposal, other agencies that evaluate and analyze the Medicare program, perform health care-related research, support public health initiatives, perform activities in the administration of the Medicare program, or conduct activities to support program integrity in the Medicare program and other Federal health care and related programs would be able to access and use risk adjustment data for these purposes. States, while conducting program integrity activities for Medicaid programs or in the administration of Medicare-Medicaid demonstrations (for example, refer to the Web site at: <http://www.cms.gov/Medicare-Medicaid-Coordination/Medicare-and-Medicaid-Coordination/Medicare-Medicaid-Coordination-Office/FinancialAlignmentInitiative/FinancialModelstoSupportStatesEffortsInCareCoordination.html>), may access and use risk adjustment data under the proposal. We stated that we anticipate that nongovernmental external entities would generally only gain access to risk adjustment data under this proposal in connection with public health initiatives and health care-related research, as such external entities appear to have limited, if any, roles in the other purposes identified in our proposal.

Regarding the use of risk adjustment data for purposes permitted by other laws, we noted that, to the extent that a requestor has separate statutory authority for requiring CMS disclosure of data, our proposed provisions would not limit or supersede such authority. For example, some Congressional support agencies may compel release of data under separate statutory authority, such as 31 U.S.C. 716, 2 U.S.C. 166(d)(1) and 601(d), and section 1805 of the Act (42 U.S.C. 1395b-6), for the purposes of conducting Congressional oversight, monitoring, making recommendations and analysis of the Medicare program. In addition, the OIG has separate statutory authority under section 1128J of the Act (42 U.S.C. 1320a-7k), coupled with section 6(a) of the Inspector General Act of 1978 (5 U.S.C. App. 3) authorizing the OIG to access data as necessary to perform its responsibilities. This regulation will not limit that authority.

Finally, in the proposed rule, we stated that we are seeking to balance protection of confidential beneficiary information and the proprietary interests of MA organizations with the need to effectively administer Federal health care programs and to encourage research into better ways to provide health care. We also noted a goal of the proposal to increase transparency in the administration of the Medicare program. We sought public comments on the proposed uses and release of data and how else to achieve the necessary balance. In particular, we solicited public comment on the extent to which a commercial purpose underlying a request for risk adjustment data should be a factor in evaluating whether the request is for one of the purposes that permit a disclosure under this regulation or if one of the purposes in paragraph (f)(1) of § 422.310, for which CMS would disclose data under this section, should address commercial uses of the data. The topic of commercial purposes is discussed later in section X.B.2. of the preamble of this final rule as a condition of data release.

Comment: Several commenters supported CMS' proposal for expanding the use and distribution of MA risk adjustment data to support and strengthen the Medicare program, as well as supporting public health initiatives and health care-related research. Commenters stated that risk adjustment data are valuable to researchers for analyzing health care trends, public health research initiatives, and improving management of the Medicare program. These commenters expressed support of CMS' efforts to move toward greater

transparency through the release of risk adjustment data. One commenter believed that greater data transparency would not only further public health research but also might serve to further educate consumer organizations, patient advocates, and ultimately beneficiaries about the Medicare program. Generally, commenters supporting the proposals in the proposed rule simultaneously recognized the importance of balancing these goals with the importance of protecting the confidentiality of beneficiary information, and one commenter agreed with CMS' proposal to aggregate data on negotiated rates paid to providers.

Response: We appreciate the commenters' support.

Comment: A number of commenters generally addressed the proposed uses of risk adjustment data, characterizing the listed purposes as too broad and asking CMS to more specifically and narrowly define them. One commenter stated that the purposes, as stated in the proposed rule, are so broad as to justify release of these sensitive data for almost any research activity. Several commenters were concerned that having permitted uses of risk adjustment data for such broad-based purposes leaves a large gap in the protection of potentially proprietary information, especially given the concern about usage of these data by agencies with limited knowledge or understanding of the data and how to make accurate interpretations.

Response: Section 1853 of the Act does not limit the uses of risk adjustment data, and section 1106 of the Act authorizes the adoption of regulations governing how CMS will disclose data obtained in the course of CMS' duties. We have reviewed the proposed uses of risk adjustment data (which are for analytical purposes), and we do not believe that they are too broad. We reiterate that the list of permissible bases under this regulation for use and disclosure is exhaustive and that uses of the risk adjustment data that are outside of the scope of these nine categories will not be authorized. Accordingly, we see no compelling reason to further limit uses of this data by eliminating or narrowing any of the proposed purposes.

Comment: Several commenters expressed concern about CMS' use of risk adjustment data, under the purpose stated under § 422.310(f)(1)(vii), "for activities to support the administration of the Medicare program." In particular, commenters requested clarification and specificity regarding how these data would be used in the example provided in the preamble, which was to validate

the MA organizations' bid and Medical Loss Ratio (MLR) data. They argued that the risk adjustment data could not be used to inform bid review or MLR analyses: The data MA organizations submit to CMS cannot provide a complete picture of MA organizations' costs because many organizations have payment arrangements with providers that are not fee-for-service based, for example, capitation arrangements, bundled pricing, incentive payments, and multi-year contracting.

Response: In the preamble of the proposed rule, we identified two examples of using risk adjustment data in support of Medicare administrative activities: Review of the validity of bid and MLR data submitted by MA organizations. We anticipate that there will be other uses in support of Medicare administrative activities, such as the development of quality measures. Regarding the two examples we provided in the proposed rule, while we recognize that many MA organizations have alternative arrangements other than fee-for-service payments, we believe that encounter data will be useful for understanding patterns of beneficiary utilization and aspects of MA organizations' expenditures, as reported in bid and MLR submissions.

Comment: One commenter asked how CMS could use risk adjustment data, under § 422.310(f)(1)(viii), "for activities conducted to support program integrity," particularly when the data are incomplete due to payment arrangements with providers that are not fee-for-service based.

Response: We believe that risk adjustment data are valuable for program integrity purposes. For example, encounter data could be used to compare MA and FFS billing to identify aberrant patterns, which may inform efforts to combat fraud, waste, and abuse.

Comment: Several commenters expressed concern about CMS' use of risk adjustment data, under § 422.310(f)(1)(ix), "for purposes permitted by other laws." Commenters requested CMS to further clarify this purpose in regulation, for example, to distinguish Federal laws from State laws and to specify that this provision only applies to health care laws. Another commenter asked how CMS intends to evaluate the other laws that permit use or release of these data; for example, would CMS allow risk adjustment data to be used to evaluate risk adjustments for insurance exchanges created under the Affordable Care Act, and, if so, the commenter expressed concern that the data would not provide a valid or

accurate comparison, given the unique patient population.

Response: As we noted in the preamble of the proposed rule, we believe it is important to acknowledge that this regulation is not intended to supersede other laws that permit other uses of risk adjustment data. For example, this regulation cannot override separate statutory authorities that require CMS disclosure of data to other Federal agencies. We refer readers, for example, to 31 U.S.C. 716; 2 U.S.C. 166(d)(1) and 601(d); and section 1805 of the Act (42 U.S.C. 1395b–6).

Regarding the commenters' request that we further specify in regulation text the types of laws to which paragraph (f)(1)(ix) applies (such as Federal laws versus State laws), we do not believe that detailed specification of laws is necessary because we believe it is clear that only laws that apply to CMS or to data held by CMS are within the scope of the provision. However, in response to these comments, we are finalizing the regulation text at § 422.310(f)(1)(ix) to state "for purposes authorized by other applicable laws" to emphasize that the provisions in other laws must be applicable to CMS and to MA risk adjustment data.

Finally, we are not sure what the commenter means by evaluating other laws other than as a request for clarification that this provision encompasses laws that are applicable to CMS or to data held by CMS. If the question is about how we would determine the appropriateness of a research topic and study design that involves both Medicare and another program enacted under other laws, we do not believe we can comment on the appropriateness of specific designs in this preamble. The approval of any research study requesting use of MA risk adjustment data would be handled through the existing process CMS uses for data sharing, as described elsewhere in this preamble in the discussion of paragraph (f)(2)(ii) of § 422.310.

Comment: One commenter stated that it is not appropriate for external entities to receive the data for uses that are exclusively within CMS' authority—specifically, that CMS should not release data to entities outside of CMS for the determination of risk adjustment factors, updating risk adjustment models, the calculation of Medicare DHS percentages, or Medicare coverage purposes (§ 422.310(f)(1)(i) and (f)(1)(ii) or (f)(1)(v)). Another commenter asked CMS to expressly limit, in regulatory text, the bases upon which nongovernmental external entities receive the data to one purpose: Support of public health initiatives and other

health care-related research. Furthermore, one commenter stated that neither States nor external entities should receive the data to conduct quality review and improvement activities, for activities to support the administration of the Medicare program, or for activities conducted to support program integrity (§ 422.310(f)(1)(iv), (f)(1)(vii), or (f)(1)(viii)) because these are purposes exclusive to the Federal Medicare program. Another commenter stated that it is unclear what uses States would have for these data, given the Federal administration of the MA program and the difference in populations enrolled in MA plans and commercial health insurance coverage, for which States may be administering risk adjustment or other programs, or Medicaid coverage, for which a State Medicaid agency would administer benefits, concluding that States should not receive the MA risk adjustment data.

Response: We have reviewed our proposed purposes and believe that there may be cases in which researchers, whether external entities or other governmental agencies, might have well-designed research projects that meet CMS' stringent requirements, under our longstanding data sharing procedures, thus warranting use of the data for an approved project. For example, other Federal governmental agencies may want to use the data to conduct research on new developments in risk adjustment models or an external entity may want to propose research on the design of quality measures that could apply to beneficiaries in both the MA and FFS programs. Both of these examples illustrate the point that greater data transparency could improve administration of the Medicare program and improve public health. As noted in the preamble of the proposed rule, we also believe that risk adjustment data can support program integrity activities in the Medicare program and in other Federal health care and related programs funded in whole or in part by Federal funds.

Furthermore, we believe that our approach to determining whether to disclose risk adjustment data, which incorporates the Medicare Part A/B and Part D minimum necessary data policy, with additional restrictions to protect beneficiary privacy and commercially sensitive information of MA organizations, strikes an appropriate balance between the significant benefits of furthering knowledge through health care research and concerns regarding the release of risk adjustment data. Finally, we believe this process has sufficient protections to ensure compliance with the applicable laws

and guard against the potential misuse of data. External entities requesting access to risk adjustment data will have to enter into a Data Use Agreement with us that includes provisions protecting the data from improper release.

Comment: One commenter asked CMS to further define what CMS means by external entities in paragraphs (f)(1) and (f)(2) of § 422.310.

Response: An external entity may be an individual, group, or organization that is not a Federal executive-branch agency or a State.

After consideration of the public comments we received, we are finalizing, as proposed, the four additional permitted uses of risk adjustment data at § 422.310(f)(1)(vi) through (f)(1)(ix), with the exception that we are changing the language for the purpose under paragraph (f)(1)(ix) to read: "For purposes authorized by other applicable laws."

2. Conditions for CMS Release of Data

The existing regulations at § 422.310 do not specify conditions for release by CMS of risk adjustment data that are submitted by MA organizations to CMS. In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to add a paragraph (2) to § 422.310(f) to address CMS' release of such data to non-CMS entities. First, as discussed above in connection with proposed paragraph (f)(1), our proposal was limited to the risk adjustment data described in § 422.310(a) through (d) and did not include the medical records and other data collected separately under paragraph (e) for the purpose of risk adjustment data validation (RADV) audits. We stated that we did not intend for the proposed revision to § 422.310(f) to authorize any additional use or release of the data described in paragraph (e).

Second, we proposed that CMS would release only the minimum data that CMS determines is necessary to fulfill the analytical or operational goal for a particular project. In other words, our proposal provided that CMS could determine that the appropriate data release for an approved research project is a subset of encounter data records requested to conduct the proposed inquiry (instead of all encounter data in CMS' systems for all years and provider types) or is a subset of the abbreviated data requested.

Third, we proposed that CMS may release data under this authority to other HHS agencies, other Federal executive branch agencies, States, and external entities, only for purposes identified in paragraph (f)(1) (discussed above) and subject to a number of

additional limitations: (i) Applicable Federal laws; (ii) CMS data sharing procedures; (iii) protection of beneficiary identifier elements and beneficiary confidentiality, including: (A) a prohibition against public disclosure of beneficiary identifying information; (B) release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, Congressional support agencies, and States only when such information is needed to accomplish the purpose(s) of the disclosure; and (C) release of beneficiary identifying information to external entities only to the extent needed to link datasets; and (iv) the aggregation of payment data to protect commercially sensitive data.

These limitations were included at proposed paragraphs (f)(2)(i) through (f)(2)(iv), respectively, of § 422.310. We solicited public comment on other conditions or limitations on the release of this data that will help maintain a balance between protecting confidential and proprietary information with the need to effectively administer Federal health care programs and to encourage research into better ways to provide health care. We also solicited public comments on the extent to which a commercial purpose underlying a request for risk adjustment data should be a factor in evaluating whether the request is for one of the purposes that permit a disclosure under this regulation or if one of the purposes in paragraph (f)(1) of § 422.310, for which CMS would disclose data under this section, should address commercial uses of the data.

Under the provisions at proposed § 422.310(f)(2)(iv), we would aggregate payment data to protect commercially sensitive information. We stated our belief that release of payment data at the level of the encounter record might reveal proprietary negotiated payment rates between MA plans and providers. Given the commercially sensitive nature of this information, we did not propose to release payment data at the level of the encounter record without taking steps to protect the commercially sensitive information. In the interest of providing as much transparency as possible, while at the same time protecting proprietary information related to the payments made by MA organizations to health care providers, we proposed to authorize release of aggregate payment information. For example, we could aggregate the payment data by service category, by plan, by contract, or across contracts. We sought public comments on these or other approaches to aggregating payment data for release and whether

the specified options are sufficiently aggregated to protect commercially sensitive information. In addition, we sought public comment on our conclusion that releasing payment rates at the level of the encounter data record would reveal proprietary negotiated payment rates. Specifically, we requested public comment on what strategies might be used under which payment data could be released while protecting commercially sensitive information.

Comment: A number of commenters argued that no risk adjustment data should be released to protect the proprietary nature of encounter data, including data on payments, diagnoses, National Provider Identifiers (NPIs), among other data fields. A few commenters used “payment data” when referring to terms such as “service categories” and “diagnoses.”

Response: In reviewing the comments, we observed that several commenters distinguished payment data from other elements of encounter data, while other commenters did not make this distinction and instead used the term “risk adjustment data” or “encounter data” when arguing that all data should be aggregated. Therefore, our response here is intended make clearer the distinction between payment data and other data elements.

In the proposed rule, we stated at § 422.310(f)(2)(iii) that beneficiary identifier elements would not be disclosed to protect beneficiary confidentiality, and we stated at § 422.310(f)(2)(iv) that payment data would be aggregated as necessary to protect commercially sensitive data. Our proposed rule thus implied that data outside of these two protected categories would be released without redaction or aggregation. In light of some comments we received, we are concerned that the regulation text should be more detailed in describing the risk adjustment data that does not fall into the two protected categories at § 422.310 (f)(2)(iii) and (f)(2)(iv). Therefore, we are finalizing this rule with two changes to the regulation text. First, to clarify that the term “payment data” means the dollar amounts reported on an associated encounter data record, we are finalizing § 422.310(f)(2)(iv) to use the more specific phrase “dollar amounts reported for the associated encounter” instead of “payment data.” Therefore, in this final rule, we have revised § 422.310(f)(2)(iv) to specify risk adjustment data subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data. (We note that dollar amounts are only reported in

encounter data records and not in the other type of risk adjustment data referred to as abbreviated (RAPS) data.)

This rule does not address the release of data that relates to how much CMS pays MA organizations. In the final rule, CMS-4144-F, published in the **Federal Register** on April 15, 2011 (76 FR 21432), we adopted regulations on that topic.

Second, we are clarifying that risk adjustment data elements that do not fall into either of the two protected categories (beneficiary identifiers and dollar amounts) are subject to release without redaction or aggregation, respectively. Specifically, we are adding paragraph (f)(2)(v) to clarify that risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv), respectively. (We note that we use the term “redaction” to include deletion, encryption, and obscuring or changing the form of something for legal or security purposes.) We discuss in more detail below our analysis of this new language.

Comment: A number of commenters responded to the request for public comments on the release of payment data and possible ways they could be aggregated in order to protect commercially sensitive information. Many commenters thanked CMS for the opportunity to comment on this issue and expressed gratitude for CMS’ concern to protect proprietary information on prices negotiated between MA organizations and health care providers.

Response: We appreciate the commenters’ support.

Comment: A number of commenters addressed the aggregation of risk adjustment payment data for release under this rule. Several commenters asked that CMS only release payment data that have been aggregated to the national or regional level. Some commenters were concerned that the release of such data, even in an aggregated form, has the potential to provide detailed insight about aspects of MA plan experience under the MA program (for example, utilization and cost experience) that are fundamental to bidding and benefit design decisions and, as a result, release of these data would undermine the integrity of the bidding process and the competitive structure of the MA marketplace, both in terms of plan competition for enrollees and competitive negotiations with providers regarding payments rates. One commenter stated that public transparency of negotiated rates could

actually inflate prices by discouraging private negotiations that can result in lower prices for some buyers. One commenter who requested regional aggregation expressed concern that if CMS discloses payment data at a lower level of aggregation, it may be easy for competitors to identify sensitive business information on smaller plans and on plans serving targeted populations or providing specific services, such as SNP plans, which would undermine their market position. Another commenter requested that CMS not release payment data at all (at the encounter level or aggregated). Several other commenters asked that aggregated payment data only be released to government agencies and not to external entities. One commenter made the general request that CMS aggregate the data in a manner and at a level that protect the confidentiality of information and that take into account that an organization in some instances may be the principal MA plan in a particular geographic region. Some commenters argued that using encounter data fields such as contract, plan, and provider identifiers as categories by which to aggregate payment data could still lead to exposure of sensitive business strategies (including details about exclusive contracts, pricing, incentive programs, and other information that would disadvantage identifiable plans).

A number of commenters provided suggestions for approaches to aggregation of payment data. One commenter suggested releasing national per member per month averages, which would protect negotiated rates while still allowing comparison with other areas of Medicare spending. Another commenter suggested aggregating risk adjustment payment data at a county level in areas where there are three or more MA plans, but in areas with two or less MA plans aggregation should be done across counties. In addition, this commenter suggested that CMS identify when area-specific aggregation approaches are needed, such as where a single MA plan dominates a market and could be identifiable even where there are multiple plans within one or across several counties. Several commenters suggested releasing only aggregated data at either service level categories in the MA bid or at the level of HCCs in the Part C risk adjustment model. Finally, one commenter suggested that CMS make available average pricing per relative value unit (RVU) for given geographies or patient demographic categories, which could provide helpful information regarding payment levels

without exposing commercially sensitive negotiated rates.

Response: We appreciate all the responses to our request for comment on ways to aggregate risk adjustment payment data, and we will take these ideas and concerns into consideration when determining the appropriate level of aggregation of the dollar amounts associated with each encounter. We understand the commenters' concerns about the proprietary nature of the payment data and believe that this rule, as finalized, provides the flexibility to protect commercially sensitive data as necessary. It is important to note that, in some instances, the payment data may not require aggregation to protect commercial sensitivity; for example, a request could be made for data that are over 15 years old that is not relevant to current payment amounts. In this case, we would need to assess the unique circumstance of the request and determine if the data were or were not commercially sensitive, and we may decide after consideration to release the data at the encounter level because the need to protect commercially sensitive data is not implicated.

We note that we do not agree that only payment data aggregated at the national level should ever be disclosed for any approved research project because such a narrow approach would eliminate too many research questions appropriate to the permitted uses of the data under § 422.310(f)(1) and would not account for situations where less than a national level of aggregation is sufficient to protect the commercial interests of the applicable MA organization(s). In addition, we are not convinced that the release of aggregated payment data would have the negative impact on competition and the integrity of the MA bidding process that is described by a number of commenters. CMS expects to aggregate the dollar amounts on encounter data records as necessary to prevent researchers from determining payment amounts to individual providers, and in this way we would protect competition. As we noted in the April 15, 2011 final rule, CMS-4144-F (76 FR 21516), the MA program is not competitive in the way that term is normally understood. Although MA organizations do compete for members, primarily through the plan benefits offered and the cost (member cost sharing and premium) of those benefits, they do not directly compete for the payments that CMS makes. Rather, we approve all sustainable bids that are otherwise qualified without preference for the lowest bidder. The fact that MA-eligible Medicare beneficiaries can, generally, select from

a number of plans offered in their county of residence is evidence that competition is robust.

Comment: Several commenters were concerned with the release and use of the payment data included in risk adjustment data, especially to external entities, even if the data are aggregated for release. These commenters argued that the MA encounter data are incomplete due to the nature of MA organizations' financial arrangements with providers and it is inappropriate to use this data to draw conclusions that may inform policy or program management. Specifically, these commenters noted that encounter data cannot provide a complete picture of MA organizations' costs because many MA organizations have payment arrangements with providers that are not fee-for-service based and are instead based on capitation arrangements (for which \$0 is reported on an encounter record), bundled pricing, incentive payments, and multi-year contracting. One commenter noted that, for some MA plans, most outpatient services are capitated, except for some referrals and emergency services, and nonbenefit costs are not reflected in encounter data, rendering financial analysis and comparisons for these plans inappropriate and impractical. Another commenter also recommended that information about the limitations of the data should accompany any release of risk adjustment data, to reduce misinterpretations of the data by the end users and to prevent policy development based on inaccurate analyses of risk adjustment data.

Response: We understand the commenters' concerns that risk adjustment data may not provide a complete picture of the costs associated with care of MA plan enrollees due to the alternative payment arrangements. However, we believe that broader release of risk adjustment data to external entities can increase the positive contributions researchers make to the evaluation and function of the MA program and improve the efficiency of the program and the clinical care of its beneficiaries, which is in the interest of public health. Specifically, it is in the interest of the public health to share this information with entities outside of CMS, as the work of these entities will assist CMS in evaluating the MA program and assessing related policies to improve the clinical care of beneficiaries. In addition, broader release of the data also has the potential to assist in addressing public health issues of the population in general beyond just Medicare beneficiaries. Regarding the suggestion to provide

approved requestors with information on the limitations of encounter data, we believe this is a good suggestion and will consider what disclaimers are appropriate to accomplish this.

Comment: A number of commenters also expressed concern about the proprietary nature of other data elements in the encounter record in addition to payment data, stating that releasing plan-specific and provider-specific data such as diagnoses, service categories, Current Procedural Terminology codes (CPTs), and NPIs has the potential to provide detailed insight about aspects of MA plan experience under the MA program that are fundamental to bidding and benefit design decisions and could undermine the competitive structure of the health care market in many areas. In contrast, one commenter agreed that proprietary payment data should be aggregated to protect proprietary information on negotiated prices, but further emphasized that all other encounter claims data should be widely available to commercial entities—including providers, medical societies, ERISA plans and insurers—for the purposes of improving the value of health care to the consumer (subject to privacy protections under HIPAA and other statutes).

Response: In the proposed rule, we only raised the issue of commercial sensitivity with regard to payment data. As noted in an earlier response, we are clarifying that the term “payment data” means the dollar amounts reported on an associated encounter data record, and that risk adjustment data elements that do not fall into either of the two protected categories of beneficiary identifiers and dollar amounts are subject to release without redaction or aggregation, respectively. We are not persuaded by the argument that data elements aside from beneficiary identifiers and dollar amounts require protection because they are relevant to competition that MA organizations face. We are mirroring the effort within CMS to increase transparency through broadened release of Parts A and B data. We routinely make Medicare FFS claim data available to interested parties for research, and these data include information on procedure codes and diagnosis codes. Furthermore, on April 9, 2014, CMS released detailed service use data on nearly 1 million physicians and health care providers. Thus, as clarified in § 422.310(f)(2)(v), CMS will release risk adjustment data—other than beneficiary identifier data described in § 422.310(f)(2)(iii) and dollar amounts reported for associated encounter described in § 422.310(f)(2)(iv)—without the redaction or aggregation described

in paragraphs (f)(2)(iii) and (f)(2)(iv), respectively.

Comment: One commenter was concerned that encounter data from Medicare-Medicaid Plan (MMP) demonstrations would be used for analyses, such as OIG studies and validation of bids and medical loss ratios, and believed this would be a mistake because these are new plans and there remain many operational questions about submission of this encounter data, including coordinating with States and processing and submitting claims in a manner seamless to both the member and provider.

Response: Our policy on the use and release of risk adjustment data in this final rule will apply the same way to the Medicare risk adjustment data of MMP demonstrations as it does to the risk adjustment data of MA organizations. We appreciate the comment on the important distinctions in the encounter data collection process for MMP data compared to MA data, and we will consider the unique aspects of MMP data in their ultimate application.

Comment: Several commenters asked CMS to provide a definition of commercially sensitive.

Response: There is extensive case law under the Trade Secrets Act (18 U.S.C. 1905) and FOIA Exemption 4 (5 U.S.C. 552(b)(4)) that addresses the concept of commercially sensitive, and we do not believe this is an appropriate venue for summarizing the case law. We also discuss the relationship of this regulation to the Trade Secrets Act and FOIA below.

We add that two commenters appeared to blur the concepts of commercially sensitive and commercial purpose; therefore, we are clarifying here that these are unrelated concepts for the purpose of this rulemaking. Issues around releasing data for a commercial purpose pertain to CMS’ data sharing procedures and are discussed in a separate comment and response below.

Comment: Several commenters asserted that even risk adjustment data aggregated up to the level of contract or parent organization (for example, service category and diagnosis data) could be considered to meet the elements required for application of the exemption under FOIA Exemption 4 (5 U.S.C. 552(b)(4)). The commenters stated that risk adjustment data submitted by an MA organization are protected by 45 CFR 5.65(b)(1) because: (1) It is supplied by someone outside the government having a financial interest in the information, namely the MA organization providing the data; (2) it is “confidential commercial or financial

information” and proprietary and confidential; and (3) disclosure of each MA organization’s service category and/or diagnosis data could result in competitive harm for the MA organization.

Response: In response to comments arguing that the Trade Secrets Act (18 U.S.C. 1905) or FOIA exemptions prohibit release of this information on the basis that the information is the confidential commercial information of the MA organization, we do not believe that the release of the risk adjustment data under our final rule will violate either the Trade Secrets Act or FOIA. With respect to the risk adjustment data described in paragraph § 422.310(f)(2)(iv), the regulation explicitly provides for aggregation at the level necessary to protect commercially sensitive data. Under this regulation, when CMS aggregates, as necessary, the dollar amounts associated with the risk adjustment data—whether at a regional, contract or other level—any detailed (encounter-level) data protected by the Trade Secret Act or FOIA Exemption 4 will be withheld from disclosure. With respect to the risk adjustment data described at § 422.310(f)(2)(v), we are not persuaded that data elements aside from beneficiary identifiers and dollar amounts require protection and, therefore, are adopting a regulation that directs disclosure of such information (assuming all other conditions in this rule are met to obtain such a release) without redaction or aggregation. Section 1106(a) of the Act (42 U.S.C. 1306(a)) provides authority to enact regulations that would enable the agency to release information filed with this agency. (*See Parkridge Hospital, Inc. v. Califano*, 625 F.2d 719, 724–25 (6th Cir. 1980).) We have engaged in notice-and-comment rulemaking to promulgate regulations to enable the disclosure of the data described at § 422.310(f)(2)(v). The Trade Secrets Act permits government officials to release otherwise confidential information when authorized by law. A substantive regulation issued following notice-and-comment rulemaking, such as this one, provides the authorization of law required by the Trade Secrets Act. Because the Trade Secrets Act would allow disclosure, Exemption 4 (5 U.S.C. 552(b)(4)), which is as coextensive with the Trade Secrets Act, would also not preclude disclosure with respect to the information that would be released under this final rule. We recognize that this conclusion would not apply to the dollar amounts data described in paragraph § 422.310(f)(2)(iv).

Comment: Several commenters stated that releasing payment data may trigger

antitrust concerns within both the health plan and provider communities, and cited the August 1996 “Statements of Antitrust Enforcement Policy” (<http://www.ftc.gov/sites/default/files/documents/reports/revised-federal-trade-commission-justice-department-policy-statements-health-care-anitrust/hlth3s.pdf>), where the Federal Trade Commission and the Department of Justice laid out several conditions for an antitrust safety zone (pages 44 and 45) related to the collective release of negotiated provider payment rates, noting that there would be instances where negotiated rates possibly could be discerned, such as areas with a dominant private payer.

Response: We are not clear what the “collective release of negotiated provider payment rates” has to do with this rulemaking. We understand the term “collective” in this context to mean more than one actor releasing its own specific rates. When CMS approves a release of aggregated payment data under this rule, that release is performed by one actor and not a collective of some sort. Further, our proposed policy of aggregating payment data as necessary will protect the proprietary nature of the payment data. In cases where there is a dominant private payer in a certain geographic area, we will take this into account when determining the appropriate level of aggregation. We understand the Federal Trade Commission and the Department of Justice guidance to address when health care providers act in concert to share or release their payment terms and what circumstances those enforcement agencies believe would ameliorate any collusive intent in such actions. However, this rulemaking pertains to a single actor (CMS), not to a collective action; specifically, CMS may release risk adjustment data for approved research projects, and these are data that were submitted to CMS by MA organizations on the basis of requirements in statute and regulation regarding risk adjustment data collection in the MA program. The underlying negotiation of the payment terms, such as whether the health care providers collectively negotiated them and the respective negotiating position of the MA organizations and the parties, are not part of the information submitted to CMS or disclosed by CMS under § 422.310.

Comment: A few commenters stated that payment data should not be collected by CMS as part of encounter data and should not be used by CMS or released outside of CMS because such data are not relevant to risk adjustment.

Response: We believe that payment data are useful for all of the purposes set forth in this regulation, including, but not limited to, the purpose of risk-adjusting payments to MA organizations. Therefore, we are finalizing in this rule the release of aggregated payment data as necessary to protect commercially sensitive data, subject to all the conditions established in this rule.

Comment: A number of commenters raised issues about the timing for release of risk adjustment data under the rule. Some commenters supported release of risk adjustment data to improve transparency; one commenter stated that there is an urgent need for more reliable consumer comparison shopping tools due to extreme provider price variations in local healthcare markets, and Medicare data could be valuable for this purpose. A few commenters requested that CMS delay release of encounter data to any governmental agency outside of CMS and/or delay release to external entities.

A number of other commenters presented requests for two different types of delay in release of encounter data: (1) A routine delay for all data releases; and (2) a delay applicable only to the first few years of encounter data collected by CMS. First, commenters requested that CMS implement a routine lag in release of encounter data. Some commenters argued that, before release of the data for any given year, CMS should ensure that the data are complete and accurate, for example by validating and identifying any limitations in the data. Other commenters suggested timeframes of between 4 and 6 years for such routine lags, arguing that CMS should allow an established number of years pass before release because utilization, pricing, and similar data elements remain sensitive for a number of years (and could be used for trending competitor’s patterns), and many MA organizations have multi-year contracts with their providers (5 or more years), making data even a few years old still commercially sensitive in a marketplace.

Second, a few commenters requested that CMS never release encounter data that was submitted in the initial years of required submission (in particular, that data for 2012 dates of service—the first year of submission—never be released). Alternatively, other commenters suggested that CMS lag release of data from the initial years of submission because: (1) Implementation of encounter data collection via CMS’ encounter Data System (EDS) has required frequent and ongoing systems development and modifications on the

part of the agency and MA organizations since the initiative began in January 2012, which has resulted in challenges in submission and acceptance of encounter data; and (2) the ICD–10 code set transition likely will result in some instances in which encounter data are incomplete or inaccurate for the 2015 data year, as providers adjust to the coding differences.

Response: Regarding commenters’ requests that CMS implement both routine multi-year lags in release of encounter data and targeted delays in the release of encounter data from the initial years of submission, we believe that such delays in release to any agencies and entities described in this rule would defeat the goals of improving transparency in the Medicare program and allowing researchers to use data in a timely manner to improve the administration of and advance policy research on the Medicare program. Also, we refer readers to our response elsewhere in this preamble regarding the impact of such releases on MA bidding.

However, CMS recognizes that there are circumstances unique to the process for collecting risk adjustment data that should be addressed in the timing of releases of such data. CMS allows 13 months after the end of a risk adjustment data collection year for MA organizations to update the risk adjustment data submitted under § 422.310; this period provides MA organizations an opportunity to identify and correct errors in data they have submitted for that data collection year, and ensures that the risk adjustment data is complete and accurate. We do not plan to regularly release risk adjustment data for a data collection year prior to the completion of this period because of the possibility that the data may contain errors or be incomplete for the applicable year. Therefore, to clarify our processes for the purposes of this rule, we have added paragraph (f)(3) to § 422.310, which states that risk adjustment data will not be available for release under paragraph (f) unless:

- The risk adjustment reconciliation for the applicable payment year has been completed;
- CMS determines that the data release is necessary under paragraph (f)(1)(vi) for emergency preparedness purposes before reconciliation; or
- CMS determines that extraordinary circumstances exist to release the data before reconciliation.

An example of an extraordinary circumstance would be a request by the Department of Justice for data for a qui tam case under the False Claims Act.

We believe these restrictions on the timing of data releases will address some of the commenters' concerns.

Comment: A few commenters suggested that CMS not release encounter data until CMS uses it for risk-adjusted payment purposes in place of RAPS data. One commenter stated that no data should be released until MA organizations are provided with the MAO-004 encounter data reports because these reports will allow the MA organizations to validate that encounter data are complete for risk adjustment purposes.

Response: First, we do not agree with the commenters that CMS' transition from the use of RAPS data to encounter data for risk-adjusted payment should be a prerequisite for releasing encounter data for the purposes under this final rule. The data are valuable for other purposes besides calibration of the risk adjustment model, as listed in paragraph (f)(1) of § 422.310, and the release of the data is important for transparency. Second, the MAO-004 report, also known as a filtering report, will contain detailed information on which diagnoses are eligible for risk adjustment purposes and will be part of the process that CMS will undertake for risk score calculation. The intent of this report is to assist MA organizations and other encounter data submitters to understand risk score calculation; it is not intended to support validation by MA organizations of the encounters that they have submitted to CMS. Therefore, we do not believe that these filtering reports should be a prerequisite to releasing encounter data associated with any payment year.

Comment: A number of commenters responded to our request for public comment on releasing risk adjustment data for commercial purposes. Many commenters asked CMS not to release data to external entities for commercial purposes. Commenters also noted that CMS does not currently release Part A, Part B, or Part D data for commercial purposes, and argued that CMS should have a consistent policy for release of data for commercial purposes across all Medicare programs, including the Part C Medicare Advantage program; these commenters cited CMS' discussion about such a consistent policy in a final rule, CMS-4159-F, published on May 23, 2014 (79 FR 29844).

In contrast, one commenter supported the use of risk adjustment data by commercial entities to conduct research when the research is focused on legislative, regulatory, or policy development aimed at improving the Medicare program, including projects focused on patterns of care of MA

enrollees. This commenter suggested that if CMS moves to define commercial purpose, it should do so narrowly so that, for example, firms requesting data releases under the rule for research on regulatory or policy issues for their clients would not have this type of work construed as commercial. Another commenter stated that encounter data should be widely available to commercial entities, including providers, medical societies, ERISA plans, and insurers, for purposes of improving the value of health care to the consumer. This commenter encouraged CMS to put providers and insurers on an equal footing with each other, with respect to sharing of public data on safety, quality, volume, and intensity of care. Finally, a number of commenters requested that CMS define the term "commercial purposes."

Response: We appreciate all of the responses to our request for public comments on releasing risk adjustment data for commercial purposes. We recognize that some commenters would like risk adjustment data to be available for commercial purposes, while others are concerned about external entities having risk adjustment data releases approved for projects that have commercial purposes and/or for researchers employed by commercial entities. We consider the issue of whether or not a request for data has a commercial purpose to be an issue that would be addressed under CMS' data sharing policies, which are referenced in § 422.310(f)(2)(ii) of this rule. Regarding commercial purpose, we refer commenters to page 30674 of the preamble of the final rule, CMS-4119-F, published on May 28, 2008 (73 FR 30664), where, for example, there is discussion of research whose primary purpose is to contribute to general knowledge in the public domain.

We agree with commenters that it is appropriate to have consistent policies for the release of data across the original Medicare (Parts A and B) program, the Part D prescription drug program, and the Part C Medicare Advantage program. Although we are not changing CMS' existing policy against releasing data for commercial purposes at this time, we note that, in the event the policy regarding the release of Parts A, B, and D data for commercial purposes were to change, we also would revise our Part C risk adjustment data sharing policies to be consistent with that change. Therefore, if a request for the data under the current policy is for one of the purposes outlined in paragraph (f)(1)(i) through (ix) and also for a commercial purpose, we would consider the commercial purpose as a barrier to the

release in the same way here as in the other Medicare programs.

Comment: A few commenters expressed concern about how CMS will evaluate requests for risk adjustment data release. One commenter asked CMS to keep in mind that broad disclosures of data could lead to creation of non-Federal databases, which could negatively affect the privacy and security of beneficiary-specific data. Another commenter cautioned that, in determining what is a minimum dataset necessary for a particular data request, CMS must not approve release of a subset of data or variables that omits critical data, resulting in an analysis with false assumptions about MA encounters. In addition, other commenters were particularly concerned about requests by external entities. One commenter stated that, in evaluating requests from commercial entities, CMS should consider relationships between the corporate and research arms of the commercial entity, and CMS should not assume that data released for research purposes will not be made available to related commercial entities unless specific prohibitions are put in place, or that published research findings will not be used for commercial purposes. Another commenter also expressed concern that external entities may use data released to them for a CMS-approved research project for purposes that go beyond the initial intent of the request.

Response: We will release only the minimum data necessary for a particular study design that CMS has determined meets a use (analytical purpose) finalized in this final rule and if the research project also complies with all other conditions established in this final rule. We believe that CMS' longstanding data sharing procedures (a condition for data release referenced at § 422.310(f)(2)(ii)) will allow CMS to determine the appropriateness of a requested data set and will limit inappropriate use of encounter data. CMS considers all data requests to ensure that the use of the data will not exploit or negatively impact Medicare beneficiaries.

In order for a researcher to gain access to CMS data, the researcher must complete an application process, including submission of a research protocol. The researcher must receive approval of the protocol from CMS. In addition, all requestors are required to sign a Data Use Agreement with the agency that limits the use of the data to only the approved purposes. The Data Use Agreements that CMS uses have and will continue to have enforcement mechanisms. For example, one of CMS'

Data Use Agreement forms states: “The User acknowledges that penalties under § 1106(a) of the Social Security Act [42 U.S.C. 1306(a)], including possible imprisonment, may apply with respect to any disclosure of information in the file(s) that is inconsistent with the terms of the Agreement. The User further acknowledges that criminal penalties under the Privacy Act [5 U.S.C. 552a(i)(3)] apply if it is determined that the User, or any individual employed or affiliated therewith, knowingly and willfully obtained the file(s) under false pretenses. The User also acknowledges that criminal penalties may be imposed under 18 U.S.C. 641.”

We believe these restrictions are necessary in order to ensure that data are only requested in compliance with the requirements of the regulations and CMS data sharing procedures, and that data shared by CMS are appropriately protected and are not reused or redisclosed without the necessary approval. Under our data sharing policies, we generally require the requester not to disclose the data to third parties without specific written authorization from us. CMS expects that researchers who receive a CMS-approved release of risk adjustment data will abide by the law, policies, and procedures surrounding use of that data, particularly where the regulation conditions release of the data on CMS data procedures being followed.

Comment: A few commenters requested that, when CMS is making a determination about whether to release risk adjustment data to a requestor, CMS reach out to MA organizations to consult on whether to approve the request. One commenter stated that plans would appreciate the opportunity to advise the agency of any specific concerns they have with respect to release of data for certain purposes and to certain entities, while another commenter asked CMS to allow plans to deny certain requests for data. Finally, a few commenters stated that whenever a stakeholder’s data is part of an approved release, that stakeholder should have access to the entire data release for purposes of verification, equity, and accuracy.

Response: Under this rulemaking, we will use CMS existing data sharing procedures (in accordance with § 422.310(f)(2)(ii)) for responding to requests for risk adjustment data. It is not part of CMS’ data sharing procedures to contact a submitter of data (for example, a FFS provider, supplier, a Part D sponsor, or an MA organization) whenever a researcher requests or receives approval for access

to a data set for a study that includes some of that particular submitter’s data (unless the request is made under FOIA). Nor, is it part of the CMS’ data sharing procedures to allow an MA organization or another entity to have approval rights in regards to the release of data. In addition, this rule itself sets the standards under which data will be released. Therefore, CMS will not be notifying MA organizations or their contracted providers when data requests that may include their risk adjustment data are received or approved.

Finally, CMS could not simply release a risk adjustment data set to a stakeholder that had not received approval through CMS data sharing procedures simply on the grounds that the stakeholder’s risk adjustment data submissions to CMS comprise one part of a data file released to a researcher for an approved study.

One of the best ways MA organizations can address their concerns about the accuracy of risk adjustment data available for release is to continue working with CMS to improve the quality of risk adjustment data they submit to CMS.

Comment: One commenter opposed the release of beneficiary identifying information to external entities, including other HHS agencies, other Federal Executive Branch agencies, Congressional support agencies, and States. Another commenter encouraged CMS to establish and impose appropriate penalties for any breach of privacy related to beneficiary identifiable information by external entities.

Response: We understand the need to protect beneficiary identifying information. As finalized in § 422.310(f)(2)(iii) of the regulation, CMS release of risk adjustment data is subject to the protection of beneficiary identifier elements and beneficiary confidentiality, including—

- A prohibition against public disclosure of beneficiary identifying information;
- Release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, and States only when such information is needed; and
- Release of beneficiary identifying information to external entities only to the extent needed to link datasets.

Any release of beneficiary-identifiable data must follow the policies in CMS’ data sharing procedures. We intend to protect the beneficiary data through, for example, encryption, or removal of the confidential fields when risk adjustment data is released. As we discussed above and in the final rule, CMS–4159–F,

published on May 23, 2014 (79 FR 29844), all users accessing beneficiary identifiable data are required to sign CMS’ Data Use Agreement, which addresses privacy and security for the data CMS discloses. The Data Use Agreement also contains provisions regarding access to and storage of CMS data to ensure that beneficiary identifiable information is stored in a secure system and handled according to CMS’ security policies. CMS has an established process to evaluate requests for data to ensure that there are appropriate safeguards in place to protect beneficiary privacy. We believe this process contains the necessary checks to ensure that the risks of the disclosure are minimal.

Comment: One commenter requested CMS to release risk adjustment data by creating an MA encounter data Standard Analytic File (SAF) in limited data set form (LDS) to extend research that can currently be done by users of LDS SAFs across sites using fee-for-service Medicare claims data. A few other commenters argued that these data should be routinely available through public use files, not just through the project-specific process set forth in this rule.

Response: We appreciate the suggestions and will take them into consideration for future additional guidance. With regard to the issue of Public Use Files, we believe that the nature of data—see the discussion above—make it appropriate to include the protections imposed by this rule, including the limits on the purpose of the disclosure, release of only the minimum necessary data, the incorporation of CMS data sharing policies and procedures, and additional protections for certain data elements.

After consideration of the public comments we received, we are finalizing, as proposed, the policies regarding CMS release of data in § 422.310(f)(2), with the exception of five changes to the regulation text. First, we clarify that the paragraph (f)(1)(ix) purpose permitted by other laws is for “purposes authorized by other applicable laws.” Second, we have deleted the term “congressional support agencies” from paragraph (f)(2)(B) in order to be consistent with the introductory language at paragraph (f)(2) of this regulation. Third, to clarify that data aggregation will be of the dollar amounts reported on an associated encounter data record, we are finalizing paragraph (f)(2)(iv) to state that subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data. Fourth, in order to explicitly address the

risk adjustment data elements that do not fall into either of the two protected categories (beneficiary identifiers and dollar amounts) and to clarify that such data are subject to release without redaction or aggregation, we are finalizing an additional paragraph (f)(2)(v) to state that risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv) of the section, respectively. Finally, we are adding paragraph (f)(3) to § 422.310 to clarify when risk adjustment data will be available for release, to state that risk adjustment data will not be available for release under paragraph (f) unless—

- The risk adjustment reconciliation for the applicable payment year has been completed;
- CMS determines that the data release is necessary under paragraph (f)(1)(vi) of the section for emergency preparedness purposes before reconciliation; or
- CMS determines that extraordinary circumstances exist to release the data before reconciliation.

3. Technical Change

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to amend § 422.300, which identifies the basis and scope of the regulations for payments to MA organizations, to add a reference to section 1106 of the Social Security Act, which governs the release of information gathered in the course of administering our programs under the Act.

We did not receive any public comments on this technical change, and we are finalizing without modification our proposed amendment to § 422.300, to add a reference to section 1106 of the Social Security Act, which governs the release of information gathered in the course of administering our programs under the Act.

XI. Changes to Enforcement Provisions for Organ Transplant Centers

A. Background

In February 2004, the Office of the Inspector General (OIG) published a report entitled “Medicare-Approved Heart Transplant Centers” (OEI-01-02-00520), in which the OIG outlined three recommendations for CMS’ oversight of heart transplant centers: (1) that CMS expedite the development of continuing criteria for volume and survival-rate performance and for periodic recertification; (2) that CMS develop guidelines and procedures for taking

actions against centers that do not meet Medicare criteria for volume and survival-rate performance requirements; and (3) that CMS take immediate steps to improve its ability to maintain accurate and timely data regarding the performance of transplant centers.

As part of CMS’ efforts to strengthen oversight of organ transplant centers, we published the final rule “Medicare Program: Hospital Conditions of Participation, Requirements for Approval and Re-approval of Transplant Centers to Perform Organ Transplants” on March 30, 2007 in the **Federal Register** (72 FR 15198) that established conditions of participation (CoPs) for organ transplant centers and applied the survey and certification enforcement process (that is used for all other providers and suppliers of Medicare services) to Medicare-approved transplant centers. In the preamble of that final rule, we discussed our efforts to improve organ donation and transplantation services and our goals to: (1) Protect patients who are awaiting organs for transplantation; (2) establish key quality and procedural standards; and (3) improve outcomes for patients (such as patient survival) and reduce Medicare expenses by decreasing the likelihood that a transplant would fail.

In the March 30, 2007 final rule, we codified the CoPs for transplant centers at 42 CFR Part 482, Subpart E (§§ 482.68 through 482.104) and the special procedures for approval and re-approval of organ transplant centers at 42 CFR 488.61. The CoPs set forth explicit expectations for outcomes, patient safety, informed choice, and quality of transplantation services. In particular, §§ 482.80 and 482.82 specify that a transplant center’s outcomes are not acceptable if, among other factors, the number of observed patient deaths or graft failures 1 year after receipt of a transplant exceeds the risk-adjusted expected number by 1.5 times, based on the most recent program-specific report from the Scientific Registry of Transplant Recipients (SRTR).

Failure to meet the transplant center requirements will lead CMS to deny approval or re-approval of a center’s Medicare participation under § 488.61. However, §§ 488.61(a)(4) and (c)(4) authorize CMS to consider mitigating factors when determining approval and re-approval, respectively, for a transplant center that has not met the data submission, clinical experience, or outcome requirements, or other CoPs, if the center submits a formal, written request for such a review. The existing regulations do not limit the factors that CMS may consider, but enumerate, at a minimum, the following factors to be

considered: (1) The extent to which outcome measures are met or exceeded; (2) the availability of Medicare-approved transplant centers in the area; and (3) extenuating circumstances that may have a temporary effect on a transplant center meeting the requirements under the CoPs, such as a natural disaster. CMS approval or re-approval based on mitigating factors permits a transplant center to operate as a Medicare-approved transplant center under certain circumstances despite a finding of noncompliance. Under existing regulations at §§ 488.61(b)(4)(iv) and (c)(4)(iv), CMS will not approve a center with condition-level deficiencies but may re-approve a center with standard-level deficiencies.

B. Basis for Proposed and Final Policies

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27977), we proposed to strengthen, clarify, and provide additional transparency for the survey, certification, and enforcement procedures under § 488.61 for transplant centers that are requesting initial approval or re-approval for participation in the Medicare program when the centers have not met one or more of the CoPs but wish to have certain mitigating factors taken into consideration.

1. Expansion of Mitigating Factors Based on CMS’ Experience

The existing organ transplant enforcement regulation at § 488.61 does not provide detailed information on the factors generally needed for approval or re-approval of a request based on mitigating factors that a transplant center may make in order to participate, or continue to participate, in Medicare. However, since the adoption of the organ transplant CoPs and corresponding enforcement regulations, we have expanded our knowledge regarding: (a) The factors and processes that promote improvement in transplant center outcomes; and (b) other mitigating factors that merit explicit recognition under CMS regulations.

Most of the requests that we have approved based on mitigating factors have been for transplant centers that were out of compliance with CMS outcomes requirements, but were then able to (a) effect substantial program improvements and (b) based on meaningful post-transplant survival data, demonstrate recent and much improved patient and graft survival subsequent to those program reforms. These performance improvements occurred after the program was cited for substandard performance by CMS and was at risk of losing Medicare

participation, usually while the program was operating during the mitigating factors review process or under a binding Systems Improvement Agreement (SIA) with CMS. Under an SIA, CMS agrees to extend the effective date of a prospectively scheduled termination from Medicare participation (that is, denial of re-approval) and holds in temporary abeyance a final review of the transplant center's mitigating factors request, if the transplant center agrees to engage in a structured regimen of quality improvement to improve performance during a specified period of time. At the end of the SIA period (typically 12 months), we review the transplant center's performance and make a final decision as to whether: (a) The transplant center's patient and graft survival is within the acceptable limits set forth in the regulations; or (b) the transplant center qualifies for approval or re-approval based on mitigating factors.

As of August 2013, CMS had rendered a final determination for 129 requests for approval to operate as a Medicare-approved transplant center based on mitigating factors. Of those determinations, 48 of the requests (37.8 percent) were approved based on information provided by the transplant center on its mitigating factors alone (that is, without entering into an SIA) because the transplant program had implemented substantial program improvements during the extended CMS review period, and CMS concluded that the most recent patient and graft survival data (taking into consideration the lag time in data inherent in the SRTR reports) demonstrated current compliance with outcome requirements. Another 33 requests (25.6 percent) were eventually approved on the basis of each transplant program's successful SIA completion and much improved outcome data for the affected program. A total of 24 requests (18.6 percent) involved transplant programs that were approved (and the transplant centers were permitted to continue Medicare participation) because CMS determined that the transplant centers met the outcome requirements during the time period it took for CMS to review the mitigating factors request, based on a new SRTR report that became available during the 210-day mitigating factors review period. Requests from another 2 programs (1.6 percent) were approved in which the programs had not enter into an SIA but had made extensive use of innovative practices involving key factors that were not included in the SRTR risk-adjustment methodology. An additional 2 requests (1.6 percent) were

approved because natural disasters temporarily impacted the transplant centers. Finally, 20 requests (15.5 percent) were denied approval based on mitigating factors because the programs failed to meet the outcome or clinical experience requirements and were not able to demonstrate improvements and recent outcomes or experience that would warrant approval based on mitigating factors. These 20 programs voluntarily withdrew their participation from the Medicare program.

Comment: Commenters supported CMS' efforts to add clarity and increase transparency, and most commenters conveyed specific suggestions for further clarity or revision.

Response: We appreciate the thoughtful nature of all comments we received and the specificity of the suggestions that were made. We address those specific suggestions below in the context of each relevant section of our proposed language.

2. Coordination With Efforts of the Organ Procurement and Transplantation Network (OPTN) and Health Resources and Services Administration

When we adopted the outcome standards for transplant programs in 2007, we sought to harmonize CMS' outcome standards with standards of the Organ Procurement and Transplantation Network (OPTN) so that transplant centers would have a single, consistent set of outcome expectations on which to focus. We also sought to organize CMS activities in a manner that would reinforce and continue the OPTN as the first line of external review and quality improvement for transplant centers. The OPTN is the unified transplant network established under the National Organ Transplant Act (NOTA) of 1984. The NOTA called for the network to be operated by a private, nonprofit organization under Federal contract. The OPTN is a public-private partnership that links all of the professionals involved in the donation and transplantation system. The primary goals of the OPTN are to: (a) Increase the effectiveness and efficiency of organ-sharing and equity in the national system of organ allocation; and (b) increase the supply of donated organs available for transplantation. For more details about the OPTN, we refer readers to the Web site at: <http://optn.transplant.hrsa.gov/optn/profile.asp>.

The OPTN and the Health Resources and Services Administration (HRSA) have been considering adoption of an alternative methodology for calculating expected transplant outcomes, known as the "Bayesian" methodology, and for

setting a threshold that would "flag" a transplant center for OPTN review of performance. At its June 2014 meeting, the OPTN determined to adopt the new methodology and begin using the new methodology in CY 2015. HRSA and the SRTR will continue to provide the information needed by CMS, and we will work together to track how transplant programs are rated under the "Bayesian" methodology and the CMS outcomes standards. At the present time, CMS has insufficient experience with the new "Bayesian" methodology, and insufficient data, to determine an appropriate threshold for a Medicare outcomes deficiency under a "Bayesian" methodology. Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule, we did not propose any changes in our CoPs regarding this new methodology. However, we wish to continue to coordinate with the OPTN's efforts. Therefore, we proposed that if a program has been cited for an outcomes deficiency by CMS, but has not been flagged for review by the OPTN, CMS would take these facts into consideration if the transplant program has requested approval based on mitigating factors. For a perspective on the "Bayesian" methodology, we refer readers to the Web site at: <http://www.srtr.org/faqs/16.aspx>.

Comment: One commenter stated that an important lesson learned over the past several years is the need to further coordinate and reconcile differences between the requirements and processes used by CMS and the OPTN in regulating the quality of services provided by transplant centers throughout the country.

Response: We concur with the value of coordinating requirements and processes to the extent permitted by the different roles played by the OPTN and CMS. Our desire to coordinate with HRSA and OPTN gave rise to many of the proposals discussed here. Further, staff from the United Network for Organ Sharing (UNOS, that is under contract with HRSA) and CMS developed a cross-walk of the OPTN and CMS requirements, updated the cross-walk in July 2014, and published it online at: http://www.optn.transplant.hrsa.gov/content/policiesAndBylaws/evaluation_plan.asp. While CMS and OPTN have many mutually-reinforcing requirements, the two organizations largely cover different aspects of the transplant universe. The OPTN, for example, excels at the data reporting and management that CMS does not address, but CMS reinforces OPTN through a CMS requirement that transplant centers timely and adequately report data in accordance

with OPTN requirements. Similarly, there are other areas not covered by OPTN that CMS addresses (such as the CMS requirement that every transplant program have an effectively functioning, internal quality assessment and performance improvement (QAPI) system). CMS, HRSA, and the OPTN observed both CMS' and OPTN's onsite surveys in the past year, with the intent to identify areas to reduce the burden on transplant programs, as well as improve the efficiency of the survey process. Although the surveys are conducted very differently based on the distinct roles of the two agencies, the OPTN has now combined the living donor survey with its regular survey to eliminate the need for an additional survey. HRSA and CMS also maintain monthly meetings and, as the need arises, more frequent meetings of workgroups. Another recent development was the CMS final rule ("Medicare and Medicaid Programs; Regulatory Provisions to Promote Program Efficiency, Transparency, and Burden Reduction; Part II; Final Rule") published in the **Federal Register** on May 12, 2014 (79 FR 27106) designed to reduce regulatory burden and increase efficiency. Among other features, the rule permits CMS to vary the frequency of onsite transplant center surveys compared to the earlier and standard CMS 3-year cycle that applied to all transplant programs. CMS maintains continuous review of transplant outcomes, responds to complaints at any time, and is notified by transplant centers when there is a major change in a center. With these continuous activities, and the added flexibility of the May 12, 2014 final rule, we expect to extend the average onsite survey frequency to a range of approximately 3 to 5 years. We expect some centers will be surveyed more frequently than the average and other centers less frequently, depending on CMS' assessment of the need for a survey of a particular program. We expect that this change will help reduce the extent to which any particular transplant program will have two different surveys (OPTN and CMS) that occur within a proximate time of each other. We look forward to continuing to work with HRSA, UNOS, OPTN, and the transplant community on these and other coordination issues.

C. Provisions of the Proposed and Final Regulations

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27978), we proposed to revise the regulations at § 488.61 to include specific additional provisions describing and expanding

the mitigating factors that CMS may consider when evaluating requests and explain the conditions under which each factor would apply.

Comment: One commenter recommended that CMS modify § 482.82 of the regulations to state that a transplant center that does not meet the data submission, clinical experience, or outcomes requirements would be considered to be out of compliance at the Condition level only if CMS determines that a mitigating factors request would not be approved. In other words, a mitigating factors request would be processed before citing a center for a deficiency at a Condition level.

Response: We are not adopting this recommendation for a number of important reasons. First, the mitigating factors provision is intended to enable CMS to recognize special situations so that we may calibrate enforcement actions appropriately. The provision is not intended to remove the possibility of enforcement or the likelihood of enforcement if appropriate corrections are not made.

Second, we believe the mitigating factors and SIA processes have been quite successful in promoting improved patient outcomes as a direct result of the full hospital alignment in support of each involved transplant center. Based on the past 7 years of experience with programs that have had substandard outcomes, we believe that strong whole-institution support has been generated directly in response to the deficiency citation and accompanied by clear potential for enforcement action against a program that has had substandard performance.

We note that most transplant programs maintain excellent outcomes continuously and are not cited for noncompliance with CMS outcome expectations. Another group of transplant programs temporarily exceed the outcomes thresholds based on a single SRTR report, but soon manifest outcomes within the acceptable tolerance limits in the next report. Such programs may be cited by CMS at a Standard level, rather than the Condition level, because the results are evident in only a single SRTR report. A Standard level citation requires corrective action but does not require mitigating factors approval because a Standard level citation by itself does not put the program on a schedule for termination of Medicare participation. A smaller third group of transplant programs experience long-term problems and may be cited by CMS at the Condition level, but engage with the OPTN and soon recover. These

programs may apply for approval based on mitigating factors, but are more likely than other applicants to be approved without greater involvement with CMS. An even smaller group of programs are cited by CMS at the Condition level and are eventually approved based on mitigating factors, but only after an extended period of time and a more involved regimen of quality improvement through an SIA. CMS' policy has been to cite at the Condition level only if the tolerance limits are exceeded in the most recent SRTR report *and* in at least one other SRTR report within the past five SRTR reports. Although the number and percentages vary depending on the particular SRTR reports involved, we generally find that approximately 9 to 11 percent of the programs do not meet the CMS outcome thresholds in any one particular SRTR report. However, only approximately 3 to 4 percent of the programs tend to fail to meet the outcomes requirement in the most recent SRTR report and in at least one other report of the most recent 5 reports. This number is further reduced during the 210-day period that we permit for consideration of a mitigating factors request by CMS. The 210-day period allows sufficient time for a sixth SRTR report to appear and perhaps show evidence of outcomes that would remove the deficiency and remove the need for mitigating factors approval.

As a result of the way we implemented the citation and mitigating factors processes, those programs cited by CMS at the Condition level tend to be programs that generally have more extensive issues for which full hospital alignment and support are most needed, or programs that, for a variety of reasons, have been immune to prior efforts to improve outcomes. We believe we have structured CMS enforcement actions in a manner that permits considerable time for a transplant program to take action on its own, and allows many programs to engage successfully with the OPTN for timely resolution. However, for the residual, smaller number of programs that have not been so successful, our experience indicates that it is questionable whether the hospital alignment and other actions needed to achieve substantial and sustainable improvement would have occurred without the clear prospect that Medicare participation might soon end. The fact that many of the transplant programs cited at the Condition level had already been engaged with the OPTN in a peer review process without timely improvement in outcomes, lends credence to the belief that the clear, and potentially imminent, ending of

Medicare participation has been the stimulant that eventually brought the various departments of the hospital together to finally achieve the results that had eluded the many dedicated individuals who had previously labored to achieve better outcomes.

Third, only two situations involved mitigating factors where approval was based on natural disasters, two situations involved extensive use of innovative practices, and a small number of situations involved clinical experience. The remainder, constituting the vast preponderance of mitigating factors requests we have received, involved transplant programs whose patient or graft survival outcomes exceeded the tolerance limits in the CMS regulation for programmatic reasons. When such cases have been approved, the approval has been based on recovery and improvement in outcomes during the extended time period (210 days) that CMS permits for mitigating factors consideration or the even longer time period that CMS permits under an SIA. We believe that eventual approval of a mitigating factors request should not be construed to imply that the substandard outcomes never occurred, or to obscure the history or facts that led to the recovery efforts. We regard such history as important matters of public record.

Transplant programs that may be approved based on mitigating factors due to confirmed innovative practice may be an area for which the commenter's suggestion has merit, and we will give further consideration to this area for potential future action. Unlike mitigating factors approval that is made pursuant to recovery from a period of substandard outcomes or even natural disaster, approval of mitigating factors due to innovative practice may indicate the absence of a deficiency in the first place.

We will be pleased to continue a dialogue with the transplant community regarding these issues and to consider other approaches to ensure that a strenuous improvement effort, such as that which is required in an SIA, is not misinterpreted.

1. Expansion of Mitigating Factors List, Content, and Timeframe

In the FY 2015 IPPS/LTCH PPS proposed rule, we noted that the regulations at §§ 488.61(a)(4) and (c)(4) provide three specific mitigating factors for review by CMS when determining whether a transplant center can be approved or re-approved, respectively, based on mitigating factors. These mitigating factors are: (1) The extent to which outcome measures are met or

exceeded; (2) the availability of Medicare-approved transplant centers in the area; and (3) extenuating circumstances that may have a temporary effect on meeting the CoPs. In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed to move the listing of mitigating factors from paragraphs (a)(4)(i) through (a)(4)(iii) and (c)(4)(i) through (c)(4)(iii) to new proposed paragraphs (f), (g), and (h) under § 488.61, and to include additional factors under these three new proposed paragraphs that may be reviewed in addition to the existing three factors. We proposed to move existing paragraphs (a)(4)(iv) and (c)(4)(iv) to the proposed new paragraph (g)(2). We also proposed to provide clarification of the existing three mitigating factors and the conditions under which they would apply. Finally, we proposed to revise the preexisting paragraphs (a)(4) and (c)(4) of § 488.61 to include cross-references to the new proposed paragraphs (f), (g), and (h).

We note that an administrative rule we published as a final rule in the **Federal Register** on May 12, 2014 (79 FR 27106) within days of publication of the FY 2015 IPPS/LTCH PPS proposed rule renumbered the elements of § 488.61(c) and added § 488.61(c)(3)(v) and made other amendments to this section. Specifically, the May 12, 2014 administrative rule removed § 488.61(a)(7), revised the introductory text of paragraphs (c) and (c)(1), and revised paragraph (c)(1)(ii). In addition, the final administrative rule removed paragraph (c)(2) and redesignated paragraphs (c)(3), (c)(4), and (c)(5) as paragraphs (c)(2), (c)(3), and (c)(4), respectively. Finally, the final administrative rule revised the text of newly designated paragraphs (c)(2), (c)(3)(i), and (c)(3)(ii), added a new paragraph (c)(3)(v), and revised paragraph (e). As a result of these changes, in this final rule, we are replacing the renumbered paragraphs of § 488.61(c)(3)(i) through (c)(3)(iii) of the administrative final rule as § 488.61(f)(1)(i), (f)(1)(ii), and (f)(1)(iii), respectively. The renumbered paragraph § 488.61(c)(3)(iv) is moved to the new § 488.61(g)(2). We also are incorporating the new paragraph that was added in the final administrative rule (§ 488.61(c)(3)(v)) as the new paragraph § 488.61(f)(1)(iv).

We note that in all subsequent references involving § 488.61(c), we use the regulatory citations as revised by the May 12, 2014 final rule (79 FR 217060) and described above. Under proposed new paragraph § 488.61(f)(1), we proposed to move and relist the three mitigating factors currently under both

paragraphs (a)(4)(i) through (a)(4)(iii) and paragraphs (c)(3)(i) through (c)(3)(iii). We further proposed to expand the mitigating factors that CMS may consider by adding more description to those factors, as well as by adding new factors that may be reviewed. We also proposed to specify the procedures and timeframes for transplant centers to request consideration for approval based on mitigating factors.

Specifically, in proposed new paragraph (f)(1), we proposed to specify the mitigating factors, except for situations of immediate jeopardy, as described below.

- The extent to which outcome measures are not met or exceeded (existing paragraphs (a)(4)(i) and (c)(3)(i); proposed paragraph (f)(1)(i)).
- Availability of Medicare-approved transplant centers in the area (existing paragraphs (a)(4)(ii) and (c)(3)(ii); proposed paragraph (f)(1)(ii)).
- Extenuating circumstances (for example, natural disaster) that may have a temporary effect on meeting the CoPs (existing paragraphs (a)(4)(iii) and (c)(3)(iii); proposed paragraph (f)(1)(iii)).
- Program improvements that substantially address root causes of graft failures or patient deaths and that have been implemented and institutionalized on a sustainable basis (proposed new paragraph (f)(1)(iv)).
- Recent patient and graft survival data to determine if there is sufficient clinical experience and survival for CMS to conclude that the program is in compliance with CMS requirements, except for the data lag inherent in the reports from the SRTR (proposed new paragraph (f)(1)(v)).
- Extensive use of innovative transplantation practices relative to other transplant programs, such as a high rate of transplantation of individuals who are highly sensitized or children who have undergone the Fontan procedure, where CMS finds that the innovative practices are supported by evidence-based, published research or nationally recognized standards or Institutional Review Board (IRB) approvals, and the SRTR risk-adjustment methodology does not take the relevant key factors into consideration (proposed new paragraph (f)(1)(vi)).
- The program's performance, based on the OPTN method of calculating patient and graft survival, is within the OPTN's thresholds for acceptable performance and does not flag OPTN performance review under the applicable OPTN policy (proposed new paragraph (f)(1)(vii)).

Under proposed new paragraph (f)(2), we proposed to include details for the content of the request for consideration of mitigating factors, based on examples that have proven to be most useful in considering successful mitigating factors requests. Specifically, we proposed that a request for consideration of mitigating factors include sufficient information to permit an adequate review and understanding of the transplant program, the factors that have contributed to outcomes, program improvements or innovations that have been implemented or planned, and, in the case of natural disasters, the recovery actions planned. Examples of information to be submitted with each request could include, but are not limited to, the following:

(i) The name and contact information for the transplant hospital and the names and roles of key personnel of the transplant program;

(ii) The type of organ transplant program(s) for which approval is requested;

(iii) The CoPs that the program failed to meet, and with respect to which the transplant center is requesting CMS' review of mitigating factors;

(iv) The rationale and relevant supporting evidence for CMS' review must include, but not be limited to—

- Root Cause Analysis of patient deaths and graft failures, including factors the program has identified as likely causal or contributing factors for patient deaths and graft failures;

- Program improvements or innovations (where applicable) that have been implemented and improvements that are planned;

- Patient and donor/organ selection criteria and evaluation protocols, including methods for pre-transplant patient evaluation by cardiologists, hematologists, nephrologists, and psychiatrists or psychologists, to the extent applicable;

- Organizational chart with full-time equivalent levels, roles, and structure for reporting to hospital leadership;

- Waitlist management protocols and practices relevant to outcomes;

- Pre-operative management protocols and practices;

- Immunosuppression/infection prophylaxis protocols;

- Post-transplant monitoring and management protocols and practices;

- Quality Assessment and Performance Improvement (QAPI)

Program meeting minutes from the most recent four meetings and attendance rosters from the most recent 12 months;

- Quality dashboard and other performance indicators;

- Recent outcomes data for both patient survival and graft survival; and

- Documentation of whether the program has engaged with the OPTN to review program outcomes, the status of any such review, and any steps taken to address program outcomes in accordance with the OPTN review.

Under proposed new paragraph (f)(3), we proposed to specify a timeline for the transplant program to submit a request for mitigating factors and to make clear that, for requests related to clinical experience or outcomes, the program has additional time within which to submit supporting information. Specifically, we proposed that within 10 days after CMS has issued formal written notice of a Condition-level deficiency to the program, CMS must receive notice of the program's request to seek consideration of mitigating factors. CMS would require that all information necessary for consideration be received within 30 days of CMS' initial notification for any deficiency, except a deficiency based on insufficient clinical experience or outcomes; and within 120 days of CMS' written notification for a deficiency based on insufficient clinical experience or outcomes. Failure of a transplant program to meet these timeframes may be the basis for denial of requests for consideration based on mitigating factors.

Comment: One commenter stated that mitigating factors consideration should not be available for either initial applications or for deficiencies that involve process requirements (as opposed to clinical experience or outcomes). Examples of process requirements include the requirement to match donor and recipient blood types, ensure informed consent, or engage in multi-disciplinary planning. The commenter suggested that if the mitigating factors provision applied to process CoPs, CMS should clarify the circumstances under which a program ought to apply for mitigating factors rather than submit a plan of correction. The commenter suggested that process CoPs be handled through plans of correction rather than through mitigating factors.

Response: We agree that all process CoPs should be handled through the plan of correction process and that only a deficiency involving data submission, clinical experience, or outcomes should involve both the required plan of correction and an optional mitigating factors request. A transplant program cited for a process CoP deficiency (or any deficiency) would not risk termination of its Medicare participation without a prior

opportunity to submit a plan of correction and demonstrate that the deficiency has been removed in a timely manner. Since the time the CMS transplant regulation became effective in 2007, every instance in which a program was cited for a process CoP has been successfully remedied by timely action on the part of the transplant program. As a result, no transplant program has had its Medicare participation terminated as a result of failure to comply with a process CoP. We agree that the use of mitigating factors in the case of process deficiencies is not only unnecessary, but is also confusing to transplant centers and may interfere with the prompt remediation of those process deficiencies. In the final regulation, at § 488.(61)(f)(1) and elsewhere, we therefore limit the mitigating factors provision to deficiencies cited for noncompliance with the data submission, clinical experience, or outcomes requirements specified at § 488.80 and § 488.82.

We also agree with the commenter that, in the case of an initial application for Medicare certification, every transplant program should be in full compliance with all process CoPs without needing to rely on mitigating factors consideration. However, we are retaining the ability of an initial applicant to request mitigating factors consideration with respect to the data submission, clinical experience, or outcomes requirements. We retain such ability because there may be situations where a transplant program has gone inactive beyond the time period allowed by CMS and is seeking Medicare reinstatement, or has withdrawn or lost Medicare participation due to substandard outcomes or lack of sufficient clinical experience, and is seeking reinstatement. In such situations, the latest available SRTR report may still show the program to have substandard outcomes or insufficient clinical experience for the 2.5 year retrospective period covered in the report, despite the fact that subsequent program improvements may have enabled greater clinical experience, or much better patient and graft survival with more recent data that meets the criteria for CMS approval based on mitigating factors. With the refinements discussed previously (wherein the mitigating factors provision will not apply to process CoPs), we believe that the retention of the mitigating factors provision for initial applicants is warranted.

Comment: With regard to the expanded list of factors at § 488.61(f)(1) that CMS may consider, one commenter

suggested that not every request should necessarily be required to cover all of the factors listed. Instead, the factors covered should be tailored to the particular circumstances in question.

Response: We agree with the commenter. The intent of § 488.61(f)(1) was not to require every application to address every possible factor, but to recognize CMS' obligation to consider all of the listed factors, as applicable. We acknowledge the potential for confusion on this matter, and therefore, at § 488.61(f)(1) in this final rule, we have clarified that CMS will consider such mitigating factors as may be appropriate in light of the nature of the deficiency and circumstances involved. We would not necessarily expect a program that requests consideration on the basis of innovative practice, for example, to detail all the improvements that have been implemented. We would instead expect such a program to explain its innovative practice, the extent of such practice, the evidentiary basis that established it as an innovative practice, the particular cases in the applicable SRTR report that involved innovative practices, and similar factors applicable to the use and outcomes of innovative approaches.

Comment: One commenter noted that a final rule published in the **Federal Register** on May 12, 2014 (79 FR 21706) made changes to § 488.61(c)(4), renumbering it as § 488.61(c)(3) and adding a factor at § 488.61(c)(3)(v), and specifying that CMS would consider program improvements that address root causes of patient deaths or graft failures if the improvements are supported by recent outcomes data that permit CMS to conclude that the program is in compliance with CMS outcomes expectations. In other words, in the May 12, 2014 final rule, CMS sought to clarify that both program improvements and recent data showing acceptable outcomes, together, comprise a single critical factor in our determination as to whether mitigating factors approval should be granted. CMS also sought to make clear that CMS will examine data that are more recent than the data in the latest available SRTR report that covers a retrospective 2.5 year period. The commenter observed that the subsequent regulation proposed in the FY 2015 IPPS/LTCH PPS proposed rule would move this provision to the new § 488.61(f)(1)(iv) and (f)(1)(v) as two separate considerations, making it unclear whether both improved data and substantial improvements are needed. The commenter asked that CMS clarify whether a program must demonstrate both substantial improvements and recent improved

outcomes data, or whether program improvements without better outcomes data would suffice. The commenter expressed the opinion that it should be sufficient for a program to demonstrate that it had implemented substantial program improvements on a sustainable basis, without having to provide recent outcomes data that allow CMS to conclude that the improvements have resulted in recent observed deaths or graft failures that are less than 150 percent of the risk-adjusted expected number 1 year after transplant. Several other commenters simply stated that these parts of the proposed regulation were not entirely clear and should be clarified.

Response: We believe that program improvements and data showing improved outcomes subsequent to the program improvements are both needed and should be considered as a single two-sided but integrated consideration. We do not agree that mitigating factors should be approved without recent data that demonstrate actual improvements in outcomes in the manner described above. In our considerable experience with more than 129 mitigating factor applications, we have encountered many situations where program improvements were implemented on a sustainable basis, but outcomes either did not improve or did not improve sufficiently to bring the program into compliance within a reasonable period of time. Often the problem was that the improvements were well-warranted, but insufficient. Often the improvements did not address root causes, and the root causes did not become apparent until a multidisciplinary peer review team (organized under an SIA) conducted an onsite review and, together with the transplant program staff, gained new insights into systemic factors that contributed to substandard outcomes. In other cases, the program implemented improvements that were within the transplant program's purview, but the hospital did not alter other aspects of hospital operations that were instrumental in affecting patient or graft survival. The transplant programs often were aware of other hospital-wide factors that were important, but were unable to effect change in those hospital-wide factors until the hospital agreed to enter into an SIA with CMS. Examples of hospital-wide factors include, but are not limited to, the working relationships between the transplant center and the intensive care unit (ICU), availability of transplant-trained specialty physicians (such as in cardiology, hepatology, anesthesiology, or nephrology), adequacy of staffing

levels, and information technology support, among others.

With regard to the requested clarification for the new section § 488.61(f)(1)(iv) of the regulations, we note that the SRTR data, upon which the CMS outcomes expectations rely, cover a retrospective 2.5 year period. The data are further dependent on a 1-year post-transplant period during which patient and graft survival are tracked. We appreciate that a transplant program may implement improvements and it will take time for the results of the improvements to become manifest in the SRTR data. This new section is intended to make clear that CMS will examine data that are more recent than the data in the latest available SRTR report. We will make a judgment as to the usability of those data depending on the number of transplants and the amount of post-transplant survival time available to be analyzed after major program improvements have been implemented. For example, a kidney transplant center may conduct 80 transplants per year, but have only 35 transplants that both occurred after the major program improvements were implemented and also have a sufficient post-transplant survival period (1-year post-transplant survival period) to constitute data that are reasonable to use in evaluating outcomes. It is not likely that the 35 transplant cases would be included in the latest available SRTR report. Nonetheless, this number of cases with such a post-transplant tracking period may be sufficient and would be considered by CMS. We acknowledge that, by looking at a time period shorter than the 2.5 year period of the SRTR reports and looking only at the observed/expected ratio, we may approve programs that seem to have improved outcomes by chance. However, if there is a combined demonstration of implemented program changes and an improved survival ratio based on adequate numbers, we believe the risk is warranted. We also do not mean to imply that 35 cases is a magic number, but is illustrative for purposes of clarifying CMS' intention.

Therefore, we are finalizing these provisions at § 488.61(f)(1)(iv) as a combined factor (program improvements plus improved outcomes data). The final paragraph is consistent with the final regulation published as § 488.61(c)(3)(v) on May 12, 2014 (79 FR 27106), but now is moved to the new § 488.61(f)(1)(iv). Paragraph (f)(1)(iv) of § 488.61 in this new final rule now combines the two factors that were proposed in the FY 2015 IPPS/LTCH PPS proposed rule as § 488.61(f)(1)(iv) and (f)(1)(v).

Comment: With regard to the content of mitigating factors requests described in proposed § 488.61(f)(2), one commenter suggested that instructions related to specific information that must be included as part of a mitigating factors request should not be included in regulations but, instead, in CMS instructions that can be more easily modified as transplant centers and CMS gain additional experience with the types of information that may be useful. The commenter also expressed concern that it appeared that all the information was required of every request even if certain items were not relevant.

Response: We appreciate the commenter's concern. On the basis of 7 years of experience and review of 129 mitigating factors requests, we are confident that there are certain items of information that are almost always important in a mitigating factors request. We agree that not every item is needed in every request. Therefore, in this final rule, we reorganized into various categories the informational items for a mitigating factors request that were originally proposed in the new § 488.61(f)(2). In this final rule, the first category is comprised of items required for all requests (new paragraphs (f)(2)(i) through (f)(2)(iv)). Additional information required for requests pertaining to data submission, clinical experience, or outcomes is then described in new paragraph (f)(2)(v), versus additional material required of requests pertaining to innovative practice (new paragraph (f)(2)(vi)), versus requests based on natural disasters or emergencies (new paragraph (f)(2)(vii)). We believe that this reorganization makes it clear that information not pertinent to the request is not needed, while continuing to provide additional transparency and continuing to communicate (in advance of a request) the type of information that a transplant center should be prepared to provide if it wishes to request consideration of mitigating factors.

Comment: With regard to the proposed content at § 488.61(f)(2), one commenter stated that it did not believe CMS has the authority to require a root cause analysis of patient deaths or graft failures that is specified by the program as a patient safety work product (PSWP) and submitted to (or received from) a Patient Safety Organization (PSO). Further, the commenter stated that to require such disclosure may place a transplant center in a situation in which it must choose between foregoing a mitigating factors review, which could keep the center open, or face fines under the Patient Safety and Quality Improvement Act of 2005 (PSQIA).

Response: By way of background, the PSQIA amended Title IX of the Public Health Service Act (PHSA) (42 U.S.C 299 et seq.). Section 921(7)(A) of the PSQIA defines "patient safety work product" (PSWP) as including "any data, reports, records, memoranda, analyses (such as root cause analyses) . . . which are assembled or developed by a provider for reporting to a patient safety organization and are reported to a patient safety organization." Section 921(7)(B) of the PSQIA clarifies that PSWP does not include certain information, such as a patient's medical record (section 921(7)(B)(i) of the PSQIA) or "information that is collected, maintained, or developed separately, or exists separately, from a patient safety evaluation system . . ." (section 921(7)(B)(ii) of the PSQIA). Section 921(7)(B)(iii) of the PSQIA further specifies that "nothing in this part shall be construed to limit . . . the reporting of information to a Federal, State, or local governmental agency for public health surveillance, investigation, or other public health purposes or health oversight purposes." In addition, section 922(c)(1)(C) of the PSQIA provides for an exception to the privilege and confidentiality restrictions for "disclosure of identifiable patient safety work product if authorized by each provider identified in such work product."

We appreciate the commenter's concerns. However, after 7 years and 129 mitigating factors reviews, we have not experienced this problem in relation to organ transplant centers. This may be because adequate root cause analyses of peri- and post-transplant deaths or graft failures require such specialized expertise that the more generalized patient safety expertise of PSOs is less likely than in other areas to be the resource to which transplant centers turn.

We also note that, in certain other types of providers where the PSQIA has arisen as an issue, the providers have often taken advantage of the exceptions in the PSQIA noted previously (such as the exceptions at section 921(7)(B)(ii) or section 921(7)(B)(iii) of the PSQIA).

CMS does not require submission of a PSWP, and hospitals have choices with regard to what to place in a patient safety evaluation system as a PSWP, to what extent the hospital will use any of the exceptions provided in the PSQIA as noted above, and to what extent the hospital will seek to demonstrate compliance with the CoPs through the provision of other information. With regard to root cause analyses, rather than being a cause of Medicare termination, we have found root cause

analyses to have been among the most important considerations in CMS decisions to grant mitigating factors approval that allowed continued Medicare participation for most of the requests we have received. In many cases, the analyses demonstrated the program's definite capability to identify root causes. In other cases, the analyses demonstrated the program's clear inability to conduct adequate root cause analyses, but CMS review of the analyses (by clinical and quality improvement personnel, both in-house and contracted) allowed us to gain sufficient insights, particularly with respect to areas that might be further investigated, that we determined an SIA and more time would be warranted for the transplant program to make improvements. Rather than constituting an expectation that leads to closure of a transplant program, our experience of the root cause analyses has been that they prevented many programs from termination of Medicare participation and from experiencing risk that such termination might have led to closure.

Finally, the regulations at § 482.21 and § 482.96 oblige each hospital and transplant program to maintain an effectively functioning quality assessment and performance improvement system. A key expectation is that every adverse event be identified and investigated and the results of the investigation used to prevent recurrence. In the case of patient deaths and graft survival, this means root cause analyses to identify systemic factors that may have caused or contributed to the adverse events. The ability of a transplant program to demonstrate that it has adequately conducted such analyses, used the results to prevent recurrence, and has the capability to continue to do so is fundamental to the program's demonstration of compliance required by CMS regulations.

Therefore, we are retaining in this final regulation the language we originally proposed.

Comment: One commenter objected to the provision at proposed § 488.61(f)(2)(iv)(L) that each program must describe whether it has engaged with the OPTN to review program outcomes, the status of any such review, and any steps taken to address program outcomes pursuant to the OPTN review. The commenter believed that this provision would unnecessarily mandate disclosure of the institution's involvement with the peer review function of the OPTN under 42 CFR 121.10(b). The commenter stated that assurances of confidentiality and protection from disclosure are the foundations of effective medical peer

review processes. The commenter suggested that the proposed paragraph be modified to specify only submission of the steps taken by the program to address program outcomes. Another commenter suggested that the proposed language at § 488.61(f)(1) be expanded to include consideration of whether the Membership and Professional Standards Committee (MPSC) of the OPTN has reviewed the program's performance and found it acceptable.

Response: We appreciate the tremendous value of the OPTN peer review process and its statutory responsibilities under the National Organ Transplant Act (Pub. L. 98–507). We believe that the MPSC process of the OPTN may often result in improved outcomes, thereby rendering a CMS Condition-level deficiency citation unnecessary, or at least setting the stage for approval of a mitigating factors request during the extended period of time CMS allows for consideration of such requests. While we had proposed the regulatory language in order to further strengthen CMS coordination with the OPTN, we also appreciate the nature of the peer review process itself, as described by the commenter. Therefore, in this final rule, we have removed reference to the OPTN peer review process that was originally proposed at § 488.61(f)(2)(iv)(L). We note that programs may still voluntarily disclose any engagement with the MPSC of the OPTN. If the program is entering into an SIA with CMS, the program may also wish to disclose whether the OPTN has already conducted a recent onsite peer review of the program so that CMS may consider if an adjustment to the SIA peer review is warranted, or it may choose to describe any recent onsite peer review without reference to whether the onsite review was conducted under OPTN auspices or not.

Comment: With regard to the timelines for submitting information that we proposed at § 488.61(f)(3), several commenters suggested that more than the proposed 10 days be permitted for a program to notify CMS of an intent to apply for mitigating factors consideration, and 30 days to submit written documentation when the pertinent deficiencies do not involve citation for clinical experience or outcomes. These commenters suggested that 20 days and 45 days, respectively, should be permitted.

Response: With respect to mitigating factors, the 10-day timeline only obliges programs to notify CMS of the program's intent to request such consideration, and no information is required beyond a simple statement of intent. We regard the 10-day timeframe for submission of

a simple notice of intent to be a reasonable expectation. With the modification in this final discussed above (in which the mitigating factors provision is limited to deficiencies of data submission, clinical experience, or outcomes), the 30-day time period is no longer necessary. We already proposed to permit a longer period of time (120 days) for submission of the application when the deficiency is for data submission, clinical experience, and outcomes. Therefore, we are finalizing the rule with the proposed 10-day and 120-day timelines. We have removed the reference to the 30-day time period. In response to comments that suggested more time might be needed in some cases, we also added a provision in this final rule that permits CMS to extend the timelines for good cause. An example of a good cause would be a natural disaster, such as the 2013 Hurricane Sandy event, that may intervene in the middle of the applicable period.

After consideration of the public comments we received, we are retaining the 10-day timeframe to notify CMS of an intent to apply for mitigating factors, reorganizing § 488.61(f)(1) and making it clear that not all factors pertain to every application, retaining the proposed § 488.61(f)(1)(iv) as a combined factor (program improvements plus improved outcomes data, consistent with the May 12, 2014 final regulation (79 FR 27106)) but with the paragraph moved to the new and clarified § 488.61(f)(1)(iv), and retaining the reorganized content of § 488.61(f)(2) except for the removal of references to a transplant program's engagement with the OPTN.

2. Results of Mitigating Factors Review

Under proposed new § 488.61(g), we proposed to clarify and expand on the description of the mitigating factors review process and results. Under existing regulations, a transplant center seeking initial approval or re-approval of Medicare participation based on the presence of mitigating factors is required to submit a formal written request to the CMS Central Office, as described earlier. If there are no deficiencies that constitute immediate jeopardy to a patient's health and safety, in limited circumstances, CMS may approve continued Medicare participation based on mitigating factors. However, where a transplant program demonstrates that it is making significant progress toward correction and program improvement, but does not yet qualify for approval based on mitigating factors, we believe there may be merit, in many cases, in temporarily extending the effective date of the

program's Medicare participation termination in exchange for a hospital's agreement to engage in a significant and directed regimen of further quality improvement under a Systems Improvement Agreement (SIA). As we noted above, programs that have entered into SIAs have demonstrated significant improvements. Therefore, we proposed to provide an explicit procedure in the regulations at proposed new § 488.61(g)(1)(iii) for CMS to offer an SIA and hold in abeyance a final decision on the mitigating factors request until the SIA period has ended. Proposed new paragraphs (g)(1)(i), (g)(1)(ii), and (g)(1)(iii) outline the three outcomes of CMS mitigating factors decisions: (i) Initial approval or re-approval of a program's Medicare participation based upon consideration of mitigating factors; (ii) denial of the program's request; or (iii) offer of a time-limited SIA when a transplant program has waived its appeal rights, has committed to substantial program improvements that address root causes and are institutionally supported by the hospital's governing body on a sustainable basis, and has requested more time to design or implement additional improvements or demonstrate compliance with CMS outcome requirements. Under the proposed new paragraph (g)(1)(iii), we would clarify that, during the SIA, CMS holds the mitigating factors request in abeyance and makes a final decision to approve or deny Medicare participation when the SIA is ended, based on the results of the program's performance of the SIA.

Existing regulations state that CMS will not approve any program with a Condition-level deficiency. However, CMS could approve a program with a Standard-level deficiency upon receipt of an acceptable plan of correction. A Condition-level deficiency represents a serious classification and, unless the deficiency is remedied, precludes a provider from participating in Medicare. A Standard-level deficiency represents a less serious deficiency, such as one in which just a small part of a CoP is found to be out of compliance. We proposed to move this to the proposed new paragraph § 488.61(g)(2).

We did not receive any public comments on this proposal and, therefore, are finalizing it as proposed.

3. System Improvement Agreements (SIAs)

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 27977), we proposed to add proposed new paragraph (h) to § 488.61 to set forth the purpose, intent, and contents of an SIA

and the timeframes for an approved SIA with CMS.

a. Purpose and Intent of an SIA

Based on information and documentation provided by the transplant program at the time of its request, CMS may determine that, despite a deficiency or deficiencies, the transplant center has made substantial progress, has full support of the hospital governing body, and is on a quality improvement path that promises to improve prospects for patient survival. In such cases, we exercise our limited discretion to offer the transplant program the opportunity to enter into an SIA. In the absence of a written request for consideration on the basis of mitigating factors, CMS would otherwise proceed with the proposed date of termination based on noncompliance with one or more of the CoPs. In the proposed regulation, we clarified and specified the terms for such SIAs.

CMS may offer an SIA to a transplant program if the transplant center can show that it has identified, or is actively improving its identification of, the root causes of its noncompliance and if the transplant center has initiated actions to correct those root causes. However, if we conclude that a transplant center does not qualify for initial approval or re-approval based on mitigating factors, the proposed rule would explicitly provide CMS with the option of offering a time-limited SIA to those transplant centers that have demonstrated progress in making substantive program improvements to address root causes of deficient outcomes, agree to undertake a structured regimen of further quality improvement, and agree to waive their appeal rights. In some instances, a voluntary period of inactivity of the transplant center is warranted, or a period of inactivity may be required by CMS as a condition of an SIA approval, as a requirement of initiating an SIA for a specified period, or until certain milestones are achieved.

During the SIA period, CMS' oversight and enforcement authority continue and CMS may conduct routine unannounced surveys, complaint investigations, and/or terminate the transplant center's participation in the Medicare program if there is not substantial compliance with Federal requirements under 42 CFR Part 482 or if the program fails to follow the terms of the SIA. In consideration for the opportunity to continue to participate in the Medicare program under an SIA during the time that structured improvements and corrections are made, despite having been found to be

in noncompliance with the requirements, a transplant center would be required to waive any appeal rights that it may have, either administratively or judicially, if CMS ultimately terminates Medicare participation or denies initial approval of the transplant center. We proposed that such a waiver applies, regardless of whether revocation or termination of approval/re-approval occurs due to a finding that the hospital failed to fulfill the terms of the SIA or due to the deficiency findings that the SIA was designed to address, pursuant to CMS' enforcement authority under the regulations.

A transplant center's approval to operate as a Medicare-approved transplant center does not guarantee any subsequent re-approvals and may be time-limited. The transplant center must submit a separate request for consideration of mitigating factors, including updated supporting documentation each time a CMS review (generally on a 3 to 5 year cycle) or complaint investigation determines that the transplant center does not meet one or more of the data submission, clinical experience, and outcomes requirements, or other CoPs. At such time, we would review any prior mitigating factors approval to determine if the circumstances that originally warranted approval would still apply. However, in the case of past mitigating factors approval based on innovative practice, CMS may seek information in advance of a recertification survey to determine if the reasons for past approval still prevail and, in such a case, CMS may consider mitigating factors concomitantly with the recertification survey.

We did not receive any public comments in this policy and, therefore, finalizing it as proposed.

b. Description and Contents of an SIA

The SIA is a binding agreement between CMS and the hospital within which a transplant center operates. A transplant center, in turn, may have one or more organ-specific programs, such as a heart, kidney, pancreas, liver, or lung transplant program. Each SIA is focused on a particular organ transplant program. The SIA is a plan for a series of actions, activities, and goals that provide opportunities for the hospital and transplant center to conduct internal improvement analysis and action, and engage external experts to ensure that the transplant center is in compliance with evidence-based standards and advances in the field that would optimize the care provided to patients.

Through an SIA, CMS is able to offer transplant centers additional time to achieve compliance with the CoPs through a structured and monitored process. In particular, the use of the formal SIA process reflects CMS' recognition that it may sometimes require more than the usual time to correct the 1-year post-transplant patient or graft survival and have the results of such improvement become manifest in the tracking data, or to develop and implement a plan to correct low-volume performance rates. We generally do not expect to use an SIA in cases of noncompliance with other CoPs, although we do not preclude such a possibility if highly unusual circumstances are present.

The SIA process (discussed in more detail below) has demonstrated effectiveness in improving patient and graft survival. An important measure of outcome is the extent to which observed patient deaths 1 year after transplant compare with the risk-adjusted expected number of deaths or graft failure for a particular transplant program. The SRTR risk adjustment methodology (used to calculate the expected numbers) takes into consideration the organs transplanted and the characteristics of the donors and recipients (for example, factors that have a bearing on the risk to patient or graft survival, such as diabetes, hypertension, advanced age, or cold ischemic time of the organ to be transplanted, among others). For example, the national number of expected deaths 1 year after transplant for all transplant centers in the United States is 1.0. A transplant center that had twice the expected number of deaths would have a standardized mortality ratio (SMR) of 2.0. As of August 2013, adult kidney transplant programs cited by CMS for substandard outcomes and placed on a Medicare enforcement track, for which there was a 2-year post-CMS survey tracking period (N=15), improved their average SMR for 1-year post-transplant patient survival performance rate from 2.05 to 1.17 (close to the 1.0 national average). The transplant centers under an approved SIA improved their outcomes from an average SMR ranging from 2.41 before the SIA to 0.76 after the SIA (much better than the national average). Transplant centers not cited for substandard kidney transplant outcomes improved outcomes slightly from 0.89 to 0.84.²⁴⁴

²⁴⁴ Hamilton, Thomas E., *Regulatory Oversight in Transplantation: Are Patients Really Better Off*, *Curr Opin Organ Transplant* 2013, 18:203-209. Available at: <http://www.co-transplantation.com>.

In proposed new § 488.61(h), we proposed to explicitly incorporate and specify elements that have been important to the successful use of the SIA structure. We proposed to define an SIA as a binding agreement, entered into voluntarily by the hospital and CMS, through which CMS extends the effective date of a prospectively scheduled termination of the center's Medicare participation (thereby permitting the program additional time to achieve compliance with the CoPs), contingent on the hospital's agreement to participate in a structured regimen of quality improvement activities and subsequent demonstration of improved outcomes. In some cases, transplant programs have entered a period of inactivity—voluntarily, or imposed as a condition of the SIA.

Under proposed new § 488.61(h)(1)(i) through (h)(1)(x), we proposed that in the SIA, in exchange for additional time to initiate or continue activities to achieve compliance with the CoPs, the transplant center must agree to a regimen of specified activities, including (but not limited to) all of the following:

- Patient notification about the degree and type of noncompliance by the program, an explanation of what the program improvement efforts mean for patients, and financial assistance to defray the out-of-pocket costs of copayments and testing expenses for any wait-listed individual who wishes to be listed with another program (proposed paragraph (h)(1)(i)).

- An external independent peer review team that conducts an onsite assessment of program policies, staffing, operations, relationship to hospital services, and factors that contribute to program outcomes; that suggests quality improvements the hospital should consider; that provides both verbal and written feedback to the hospital; and that provides a verbal debriefing to CMS. Neither the hospital nor the peer review team is required to provide a written report to CMS. The peer review team would include a transplant surgeon with expertise in the relevant organ type(s), a transplant administrator, an individual with expertise in transplant QAPI systems, a social worker or psychologist or psychiatrist, and a specialist physician with expertise in conditions particularly relevant to the applicable organ types(s) such as a cardiologist, nephrologist, or hepatologist. Except for the transplant surgeon, CMS may permit substitution of an individual with one type of expertise for another individual who has expertise particularly needed for the type of challenges experienced by the

program, such as substitution of an infection control specialist in lieu of, or in addition to, a social worker (proposed paragraph (h)(1)(ii)).

- An action plan that addresses systemic quality improvements and is updated after the onsite peer review (proposed paragraph (h)(1)(iii)).

- An onsite consultant whose qualifications are approved by CMS, and who provides services for 8 days per month on average for the duration of the agreement, except that CMS may permit a portion of the time to be spent offsite and may agree to fewer consultant days each month after the first 3 months of the SIA (proposed paragraph (h)(1)(iv)).

- A comparative effectiveness analysis that compares policies, procedures, and protocols of the transplant program with those of other programs in areas of endeavor that are relevant to the transplant center's current quality improvement needs (proposed paragraph (h)(1)(v)).

- Development of increased proficiency, or demonstration of current proficiency, with patient-level data from the SRTR and the use of registry data to analyze outcomes and inform quality improvement efforts (proposed paragraph (h)(1)(vi)).

- A staffing analysis that examines the level, type, training, and skill of staff in order to inform transplant center efforts to ensure the engagement and appropriate training and credentialing of staff (proposed paragraph (h)(1)(vii)).

- Activities to strengthen performance of the Quality Assessment and Performance Improvement (QAPI) Program to ensure full compliance with the requirements at § 482.96 (proposed paragraph (h)(1)(viii)).

- Monthly (unless otherwise specified) reporting and conference calls with CMS regarding the status of programmatic improvements, the results of the actions, data, reports, or other deliverables specified in the SIA, and regarding the number of transplants, and the death and graft failures that occur within 1 year post-transplant (proposed paragraph (h)(1)(ix)).

- Additional or alternative requirements specified by CMS, tailored to the transplant program type and circumstances (proposed paragraph (h)(1)(x)).

Comment: One commenter suggested that less detail be provided with regard to the content of an SIA in favor of more flexibility for CMS and transplant centers. Another commenter observed that the SIA content was robust and could conceivably constitute a best practice for transplant centers. The commenter also noted that, despite the

high specificity of the required activities, proposed language at § 488.61(h)(1)(x) allowing CMS to specify alternate requirements, provides the flexibility needed if there are elements a transplant program cannot meet due to circumstances beyond its control.

Response: We agree that the requirements are reasonably robust and specific. The SIA content was developed after early experiences in 2007–2010 with lesser requirements that failed to generate the results needed for a number of programs to generate and sustain improvement outcomes. We then entered into a number of SIAs that had additional requirements which we did not include here, either because they proved unnecessary in many cases or caused excessive risk avoidance on the part of some transplant centers. The remaining requirements we proposed have now been well-tested in 35 SIAs so far, with exceptional success. We agree with the commenter who observed that the language proposed at § 488.61(h)(1)(x) allows CMS with advisable flexibility to tailor alternate requirements when necessary. In response to the concern of the first commenter, however, in this final rule, we expanded § 488.61(h)(1)(x) to allow CMS the ability to waive certain enumerated elements of the SIA (rather than requiring alternates) if the agency finds that the program has already adequately fulfilled the task.

Comment: Several commenters stated that transplant programs should not be obliged to waive their appeal rights in order to engage in an SIA with CMS.

Response: We do not agree. Prior to any SIA, each transplant program will already have had full opportunity to appeal a prospectively scheduled termination of Medicare participation. Further, while a prospective termination deriving from all other CoP deficiencies must be resolved within 90 days, in the case of clinical experience or outcomes, CMS sets the prospective Medicare termination at 210 days and allows for consideration of mitigating factors. We provide for an SIA for certain programs when a program is making substantial progress but is not able to demonstrate compliance or qualify for outright approval of its mitigating factors request within the 210-day period. Under an SIA, CMS agrees to extend the prospectively scheduled Medicare termination date for up to another 12 months. Given these considerations, we do not agree that a program should be able to reach the end of an SIA, fail to demonstrate the improved outcomes necessary, and then appeal. We believe such an arrangement would only serve

to prolong the termination date and reduce incentives to correct deficiencies and achieve compliance promptly. Further, in our experience to date, only one transplant program has chosen to appeal a Medicare termination for any reason. The affected hospital involved expended considerable legal effort, over the course of a year, and did not prevail. In the succeeding year, the program applied for reinstatement and was eventually recertified for Medicare participation after making further improvements and demonstrating compliance with the CMS clinical experience and outcomes requirements. In short, in the case of an SIA, we provide for an exceptional extension of time and believe it is preferable for the available resources of all parties to be invested in the process of improving patient care rather than in a legal contest. If a program wishes to appeal, we suggest the appeal be made within the 60-day post-notification period permitted by regulation rather than pursue an SIA (because the SIA would require waiver of appeal rights).

After consideration of the public comments we received, we are making a minor change at § 488.61(h)(1)(x) to allow some added flexibility to the SIA content, and are otherwise finalizing § 488.61(h)(1)(i) through (h)(1)(ix) as proposed.

c. Effective Period for an SIA

Under proposed new § 488.61(h)(2), we proposed to specify that an SIA will be established for a 12-month period, subject to CMS' discretion to determine if a shorter time period would suffice. At the hospital's request and at CMS' discretion, CMS may extend an SIA for up to one additional 6-month period.

Comment: A number of commenters supported these time periods.

Response: We appreciate the commenters' support.

After consideration of the public comments we received, we are finalizing § 488.61(h)(2) as proposed.

XII. MedPAC Recommendations

Under section 1886(e)(4)(B) of the Act, the Secretary must consider MedPAC's recommendations regarding hospital inpatient payments. Under section 1886(e)(5) of the Act, the Secretary must publish in the annual proposed and final IPPS rules the Secretary's recommendations regarding MedPAC's recommendations. We have reviewed MedPAC's March 2014 "Report to the Congress: Medicare Payment Policy" and have given the recommendations in the report consideration in conjunction with the policies set forth in this final rule.

MedPAC recommendations for the IPPS for FY 2015 are addressed in Appendix B to this final rule.

For further information relating specifically to the MedPAC reports or to obtain a copy of the reports, contact MedPAC at (202) 653-7226, or visit MedPAC's Web site at: <http://www.medpac.gov>.

XIII. Other Required Information

A. Requests for Data From the Public

In order to respond promptly to public requests for data related to the prospective payment system, we have established a process under which commenters can gain access to raw data on an expedited basis. Generally, the data are now available on compact disc (CD) format. However, many of the files are available on the Internet at: <http://www.cms.hhs.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. We listed the data files and the cost for each file, if applicable, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28288 through 28289).

Commenters interested in discussing any data used in constructing the proposed rule and this final rule should contact Nisha Bhat at (410) 786-5320.

B. Collection of Information Requirements

1. Statutory Requirement for Solicitation of Comments

Under the Paperwork Reduction Act of 1995, we are required to provide 60-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28289 through 28294), we solicited public comment on each of these issues for the following sections of this document that contain information collection requirements (ICRs). We discuss and respond to any

public comments we received in the relevant sections.

2. ICRs for Add-On Payments for New Services and Technologies

Section II.I.1. of the preamble of the proposed rule and of this final rule discuss add-on payments for new services and technologies. Specifically, this section states that applicants for add-on payments for new medical services or technologies for FY 2016 must submit a formal request. A formal request includes a full description of the clinical applications of the medical service or technology and the results of any clinical evaluations demonstrating that the new medical service or technology represents a substantial clinical improvement. In addition, the request must contain a significant sample of the data to demonstrate that the medical service or technology meets the high-cost threshold.

We believe the burden associated with this requirement is exempt from the PRA under 5 CFR 1320.3(c), which defines the agency collection of information subject to the requirements of the PRA as information collection imposed on 10 or more persons within any 12-month period. This information collection does not impact 10 or more entities in a 12-month period. In FYs 2008, 2009, 2010, 2011, 2012, 2013, FY 2014, and FY 2015, we received 1, 4, 5, 3, 3, 5, 5, and 7 applications, respectively.

We did not receive any public comments regarding this information collection.

3. ICRs for the Occupational Mix Adjustment to the FY 2015 Index (Hospital Wage Index Occupational Mix Survey)

Section III.F. of the preamble of the proposed rule (79 FR 28066 through 28067) and this final rule discusses the occupational mix adjustment to the proposed and final FY 2015 wage index, respectively. While the preamble of these rules does not contain any new ICRs, we note that there is an OMB approved information collection request associated with the hospital wage index.

Section 304(c) of Public Law 106-554 amended section 1886(d)(3)(E) of the Act to require CMS to collect data at least once every 3 years on the occupational mix of employees for each short-term, acute care hospital participating in the Medicare program in order to construct an occupational mix adjustment to the wage index. We collect the data via the occupational mix survey.

The burden associated with this information collection requirement is

the time and effort required to collect and submit the data in the Hospital Wage Index Occupational Mix Survey to CMS. The aforementioned burden is subject to the PRA; it is currently approved under OCN 0938–0907.

We did not receive any public comments regarding this information collection.

4. Hospital Applications for Geographic Reclassifications by the MGCRB

Section III.H.2. of the preambles of the proposed rule (79 FR 28070 through 28075) and of this final rule discuss proposed and final changes to the wage index based on hospital reclassifications. As stated in that section, under section 1886(d)(10) of the Act, the MGCRB has the authority to accept short-term IPPS hospital applications requesting geographic reclassification for wage index and to issue decisions on these requests by hospitals for geographic reclassification for purposes of payment under the IPPS.

The burden associated with this application process is the time and effort necessary for an IPPS hospital to complete and submit an application for reclassification to the MGCRB. The burden associated with this requirement is subject to the PRA. It is currently approved under OCN 0938–0573.

We did not receive any public comments regarding this information collection.

5. ICRs for Application for GME Resident Slots

The information collection requirements associated with the preservation of resident cap positions from closed hospitals, addressed under section IV.J.3. of the preamble of this final rule, are not subject to the Paperwork Reduction Act, as stated in section 5506 of the Affordable Care Act.

6. ICRs for the Hospital Inpatient Quality Reporting (IQR) Program

The Hospital IQR Program (formerly referred to as the Reporting Hospital Quality Data for Annual Payment (RHQDAPU) Program) was originally established to implement section 501(b) of the MMA, Public Law 108–173. This program expanded our voluntary Hospital Quality Initiative. The Hospital IQR Program originally consisted of a “starter set” of 10 quality measures. The collection of information associated with the original starter set of quality measures was previously approved under OMB control number 0938–0918. All of the information collection requirements previously approved under OMB control number 0938–0918 have been combined with the

information collection request previously approved under OMB control number 0938–1022. We no longer use OMB control number 0938–0918.

We added additional quality measures to the Hospital IQR Program and submitted the information collection request to OMB for approval. This expansion of the Hospital IQR measures was part of our implementation of section 5001(a) of the DRA. Section 1886(b)(3)(B)(viii)(III) of the Act, added by section 5001(a) of the DRA, requires that the Secretary expand the “starter set” of 10 quality measures that were established by the Secretary as of November 1, 2003, to include measures “that the Secretary determines to be appropriate for the measurement of the quality of care furnished by hospitals in inpatient settings.” The burden associated with these reporting requirements was previously approved under OMB control number 0938–1022.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53666), we stated that, for the FY 2016 payment determinations and subsequent years updates, we sought OMB approval for a revised information collection request using the same OMB control number (0938–1022). The FY 2014 IPPS/LTCH PPS final rule (78 FR 50955) does not change the method for information collection requests. In a revised request for the FY 2017 payment determination, we will add the four claims-based measures and one chart-abstracted measure that we are finalizing in this final rule as proposed. The claims-based measures are: (1) Hospital 30-day, all-cause, unplanned, risk-standardized readmission rate (RSRR) following coronary artery bypass graft (CABG) surgery; (2) Hospital 30-day, all-cause, risk-standardized mortality rate (RSMR) following coronary artery bypass graft (CABG) surgery; (3) Hospital-level, risk-standardized 30-day episode-of-care payment measure for pneumonia; and (4) Hospital-level, risk-standardized 30-day episode-of-care payment measure for heart failure. The chart-abstracted measure we are finalizing in this final rule is: Severe sepsis and septic shock: management bundle (NQF #0500).

Because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe no additional information collection will be required from the hospitals for the four finalized claims based measures. However, we believe that the chart-abstracted measure will cause some additional burden.

In addition, we believe there will be a reduction in the burden as a result of

removing 19 total measures in this rule.²⁴⁵ We note that we are not removing SCIP-Inf-4 Cardiac Surgery Patients with Controlled 6 a.m. Postoperative Blood Glucose as proposed. The measures we are removing are: (1) AMI–1 Aspirin at Arrival; (2) AMI–3 ACEI/ARB for left ventricular systolic dysfunction; (3) AMI–5 Beta-blocker prescribed at discharge; (4) AMI–8a Timing of Receipt of Primary Percutaneous Coronary Intervention (PCI); (5) HF–2 Evaluation of left ventricular systolic function; (6) SCIP-Inf-1 Prophylactic antibiotic received within 1 hour prior to surgical incision; (7) SCIP-Inf-2 Prophylactic antibiotic selection for surgical patients; (8) SCIP Inf-3 Prophylactic antibiotics discontinued within 24 hours after surgery end time (48 hours for cardiac surgery); (9) SCIP Inf-6 Appropriate hair removal; (10) SCIP-Inf-9 Postoperative urinary catheter removal on post-operative day 1 or 2 with day of surgery being day zero; (11) SCIP–VTE–2: Surgery patients who received appropriate VTE prophylaxis within 24 hours pre/post-surgery; (12) SCIP Cardiovascular-2: Surgery Patients on a Beta Blocker prior to arrival who received a Beta Blocker during the perioperative period; (13) PN–6 Appropriate initial antibiotic selection; (14) STK–2 Antithrombotic therapy for ischemic stroke; (15) STK–3 Anticoagulation therapy for Afib/flutter; (16) STK–5 Antithrombotic therapy by the end of hospital day 2; (17) STK–10 Assessed for rehab; and (18) VTE–4 Patients receiving un-fractionated Heparin with doses/labs monitored by protocol, and (19) one structural measure: Participation in a systematic database for cardiac surgery.

The numbers included in our finalized policy more accurately reflect the burden associated with the Hospital IQR Program than the estimates provided in our proposal. In the FY 2014 IPPS/LTCH PPS final rule, we estimated that the burden for the FY 2016 payment determination was 1,775 hours annually per hospital and 5.86 million hours across approximately 3,300 hospitals participating in the Hospital IQR Program (78 FR 50956). These estimates (at 78 FR 50956 for chart-abstracted measures) were based on the projected numbers of records to be abstracted for VTE and stroke. Using actual data from the Hospital IQR Program’s clinical data warehouse, we

²⁴⁵ We note that some of these measures are being removed as chart-abstracted measures, but are being retained as electronic clinical quality measures. We refer readers to section IX.A.2.b. of the preamble of this final rule for further discussion.

have since revised these estimates downward to 1,309 hours per hospital and 4.3 million hours across all hospitals.

We believe that there will be a reduction in burden for hospitals due to 14 of the 19 chart-abstracted measures that we are removing: (1) AMI–8a Timing of Receipt of Primary Percutaneous Coronary Intervention (PCI); (2) HF–2 Evaluation of left ventricular systolic function; (3) SCIP-Inf-1 Prophylactic antibiotic received within 1 hour prior to surgical incision; (4) SCIP-Inf-2 Prophylactic antibiotic selection for surgical patients; (5) SCIP Inf-3 Prophylactic antibiotics discontinued within 24 hours after surgery end time (48 hours for cardiac surgery); (6) SCIP-Inf-9 Postoperative urinary catheter removal on postoperative day 1 or 2 with day of surgery being day zero; (7) SCIP–VTE–2: Surgery patients who received appropriate VTE prophylaxis within 24 hours pre/post-surgery; (8) SCIP Cardiovascular-2: Surgery Patients on a Beta Blocker prior to arrival who received a Beta Blocker during the perioperative period; (9) PN–6 Appropriate initial antibiotic selection; (10) STK–2 Antithrombotic therapy for ischemic stroke; (11) STK–3 Anticoagulation therapy for Afib/flutter; (12) STK–5 Antithrombotic therapy by the end of hospital day 2; (13) STK–10 Assessed for rehab; and (14) VTE–4 Patients receiving un-fractionated Heparin with doses/labs monitored by protocol.

The remaining four chart-abstracted measures that we are removing have been previously suspended from the program; therefore, their removal will not impact the reporting burden. The structural measure we are removing, Participation in a Systematic Database for Cardiac Surgery (NQF #0113), has an estimated burden of nearly zero hours; therefore, its removal will not result in a significant burden reduction.

Therefore, for the FY 2017 payment determination, we estimate a net reduction in burden accounting for both the addition of one chart-abstracted measure, severe sepsis and septic shock: Management bundle (NQF #0500), as well as our removal of 19 measures (both chart-abstracted and structural) to be 160 hours annually per hospital. We estimate the total reduction in burden for chart abstraction and structural measures for the approximately 3,300 Hospital IQR Program-participating hospitals to be 0.5 million hours (please note the stated number appears to be off by 0.1 due to rounding).

In addition, we intend to enroll up to 100 hospitals in a voluntary large scale

test of validation for electronic clinical quality measures for the Hospital IQR Program. We estimate a total burden of 16 hours for each participating hospital. We intend to reimburse hospitals \$26 per hour for up to 16 hours for their participation in this test. Details regarding this reimbursement rate are as follows:

- The labor performed can be accomplished by medical records and health information technology staff, with a mean hourly wage in general medical and surgical hospitals of \$19.24.²⁴⁶
- Applying OMB Circular A–76, we assumed full fringe benefits of 36.25 percent, for a fully burdened labor rate of \$26.25 per hour, rounding to \$26 per hour, that accounts for the full cost of labor. The circular is available at http://www.whitehouse.gov/sites/default/files/omb/assets/omb/circulars/a076/a76_incl_tech_correction.pdf.

For the FY 2017 payment determination, we also are encouraging hospitals to voluntarily submit up to 16 measures electronically for the Hospital IQR Program in a manner that would permit eligible hospitals to partially align Hospital IQR Program requirements with some requirements under the Medicare EHR Incentive Program. We estimate that the total burden associated with the electronic clinical quality measure reporting option will be similar to the burden outlined for hospitals in the EHR Incentive Program Stage 2 final rule (77 FR 53968 through 54162). As described above for participation in the test of validation for electronic clinical quality metrics in the Hospital IQR Program, we believe an individual with commensurate skills will submit electronic clinical quality measures on behalf of the hospital at a rate of approximately \$26.00 per hour. Therefore, we believe it will cost a hospital approximately \$277.33 (\$26.00 x 10 hours and 40 minutes) to report 16 electronic clinical quality measures. Additional information about the chart abstraction burden is detailed in section II.K. of Appendix A to this final rule.

Previously, we required hospitals to provide 96 patient charts for validation per hospital per year, including 36 charts for HAI validation (with an average page length of 1,500) and 60

²⁴⁶ In May 2012, the hourly wage was \$18.68. Occupational employment and wages, May 2012, 29–2071 Medical records and health information technicians. Bureau of Labor Statistics, <http://www.bls.gov/oes/2012/may/oes292071.htm>, last accessed 3/31/2014. We increased this wage by 3.0 percent to account for inflation in the past 24 months. U.S. Inflation Calculator. <http://www.usinflationcalculator.com/inflation/current-inflation-rates/>, last accessed 3/31/2014.

charts for clinical process of care measure validation (with an average page length of 300) for a total of 72,000 pages per hospital per year. For the FY 2017 payment determination and subsequent years, we are reducing this requirement to 72 charts per hospital per year, including 40 charts for HAI validation and 36 charts for clinical process of care validation, for a total of 70,800 pages per hospital per year—a decrease of 1,200 pages per hospital per year. We reimburse hospitals at 12 cents per photocopied page (68 FR 67956 and 70 FR 23667). Therefore, the reduced burden is \$144 per hospital for up to 600 hospitals.

To support validation of four HAI measures for the FY 2017 payment determination and subsequent years, we estimate an annual burden of 43,200 hours. This estimate is based on up to 600 hospitals completing HAI Templates averaging 18 hours per quarter over 4 quarters. This burden is 10,800 hours more than that for the FY 2016 payment determination as finalized in the FY 2014 IPPPS/LTCH PPS final rule (78 FR 50822 through 50825) of 32,400 hours, because the HAI measures are to be validated for 4 quarters instead of 3 quarters. However, this change for the FY 2017 payment determination was previously finalized (78 FR 50822 through 50825).

Using the estimates above, we estimate an overall reduction in burden from the FY 2016 estimate. We anticipate the reduction in total burden for hospitals to be 160 hours per hospital or 0.5 million hours for the FY 2017 payment determination, as compared to FY 2016, for reporting chart-abstracted and structural measures, completing forms, reviewing reports, and submitting validation templates across all hospitals. This burden estimate includes new, readopted, and previously finalized measures. The estimate excludes the burden associated with the NHSN and HCAHPS measures, both of which are submitted under separate information collection requests and are approved under separate OMB control numbers.

The table below describes the hospital burden associated with the previously finalized Hospital IQR Program requirements, and shows how they changed based upon the policies finalized for the FY 2017 payment determination. The numbers included in our finalized policy more accurately reflect the burden associated with the Hospital IQR Program over the estimates provided in our proposal. The burden estimates in this final rule are the estimates for which we are requesting OMB approval.

BURDEN IMPACT OF HOSPITAL IQR PROGRAM REQUIREMENTS

Hospital IQR program requirement	Number of hospitals impacted	Burden per hospital for previously finalized requirements	Burden per hospital for all requirements finalized in this rule (continuing, removed, added)	Net change in burden per hospital
Chart-abstracted and structural measures, forms	3,300	1,291 hours	1,131 hours	- 160 hours
Review reports for claims-based measures	3,300	4 hours	4 hours	0
Reporting of voluntary electronic clinical quality measures in place of chart-abstracted measures.	Unknown*	- 385 hours	- 425 hours	- 40 hours
Validation templates	Up to 600**	72 hours	72 hours	0
Electronic clinical quality measure validation test	Up to 100**	0	16 hours	16 hours
Validation charts photocopying	Up to 600	\$8,640	\$8,496	- \$144

* This number is unknown at the time this table was prepared because final submission deadlines have not passed. Because the burden associated with participation is negative, we conservatively assumed the number of participating hospitals to be 0 in summary calculations included in the narrative.

** Maximum numbers were used in summary calculations included in the narrative.

7. ICRs for PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program

As discussed in section IX.B. of the preamble of the proposed rule and this final rule, section 1866(k)(1) of the Act requires, for purposes of FY 2014 and each subsequent fiscal year, that a hospital described in section 1886(d)(1)(B)(v) of the Act (a PPS-exempt cancer hospital, or a PCH) submit data in accordance with section 1866(k)(2) of the Act with respect to such fiscal year.

In this final rule, we are finalizing our proposal to adopt one new clinical effectiveness measure (External Beam Radiotherapy for Bone Metastases) for the FY 2017 program and subsequent years, which will increase the total number of measures for the FY 2017 PCHQR measure set to 19 measures.

We also are finalizing an update to the specifications for the five previously finalized clinical process/oncology care measures to require PCHs to report all-patient data for each of these measures, and adopting a new sampling methodology that PCHs can use to report these measures, as well as the External Beam Radiotherapy measure.

We believe that requiring PCHs to report the new External Beam Radiotherapy for Bone Metastases measure, as well as to use the sampling methodology, will not be burdensome. At least seven PCHs are currently reporting quality measure data (including population and sampling data for HCAHPS measures) on a voluntary basis to CMS. PCHs may also have experience submitting quality and population/sample size data to other entities, such as State survey agencies and The Joint Commission. As a result, we believe that the new reporting requirements we are adopting will not significantly impact PCHs.

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), we

included burden estimates for the FY 2015 and FY 2016 programs. We noted in that final rule that those estimates represented a worst case scenario of estimated burden. We are providing a revised burden estimate for FY 2016 and a burden estimate for FY 2017 that take into account our finalized sampling methodologies for all applicable measures. The anticipated revised burden on PCHs for the FY 2016 program and the anticipated new burden on PCHs for the FY 2017 program consist of the following: New measure training and measure maintenance, and the time required for collection, aggregation, and submission of data for all measures.

We estimate that 11 PCHs will submit quality measure data on approximately 37,596 cancer cases annually beginning with FY 2016 and FY 2017.²⁴⁷ In addition, we estimate that PCHs will spend 0.5 hours on chart abstraction and data submission per case/event, 0.5 hours on training per each new measure, 0.25 hours on measure maintenance per each existing measure, and a maximum of 5 hours summarizing and reporting population and sample size counts for the six SCIP measures and five oncology care measures.

We are reducing the burden estimates for the HCAHPS Survey, the six SCIP measures, and the five clinical process/oncology care measures in this final rule to take into consideration the sampling that PCHs may use for these measures. As a result, we estimate that the reporting burden on each PCH for the FY 2016 program will be 18,758 hours. We estimate that the reporting burden on each PCH for FY 2017 would increase by 50 hours because PCHs will be required to report an additional quality measure (External Beam Radiotherapy for Bone Metastases).

²⁴⁷ FY 2011 CMS MedPAR file based on Medicare data alone.

Therefore, we estimate the overall burden for all of the FY 2017 PCHQR Program requirements to be 18,808 hours per PCH. This FY 2017 estimate, which includes an additional finalized measure, represents a decrease of 33,122 hours²⁴⁸ per PCH from the FY 2016 burden estimate of 51,930 hours that we published in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50957 through 50959), or an overall decrease of 64 percent in the number of hours for each PCH. Coupled with our estimated salary costs,²⁴⁹ this revised estimate results in a net reduction in estimated cost of \$472,362 per PCH. We believe that this burden estimate more accurately captures the hour and cost impact on PCHs participating in the PCHQR Program and reflects our efforts to minimize the burden impact through the proposed adoption of a new sampling methodology that PCHs can use to report the clinical process/oncology care measures.

However, we note that these estimates are based on PCH reporting of Medicare data only. We intend to update the burden estimate to more accurately reflect the burden on PCHs for reporting all-patient data in future years.

Comment: One commenter supported CMS' efforts to reduce the reporting burden of the PCHQR Program but raised concern about the variation in estimated burden between the Hospital IQR Program and PCHQR Program, and the possibility that the large variation in PCH patient volume may leave some PCHs with a greater burden than is estimated on average. The commenter

²⁴⁸ This figure represents the difference between previous burden estimate (51,930 hours) in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50958) and current burden estimate (18,808 hours).

²⁴⁹ We are now estimating an hourly salary of \$33 (<http://swz.salary.com/salarywizard/Staff-Nurse-RN-Hourly-Salary-Details.aspxper>). After accounting for employee benefits and overhead, this results in a total cost of \$66 per labor hour.

also noted that the burden estimates provided in the FY 2015 IPPS/LTCH PPS proposed rule do not consider the need for PCHs to build a reporting infrastructure, report non-Medicare data, or make efforts to ensure consistent application of measure specifications across PCHs.

Response: We thank the commenter for their support and will consider this feedback for future years. We incorporated a sampling approach for non-Medicare patients, abstraction, training, computer edits, and labor hours in our burden estimates. We also note that we will revise our estimates to account for the burden associated with reporting patient level data for the six SCIP measures in future years, once we have data on which submission option PCHs select for SCIP data submission. Finally, in response to the commenter's concern that our burden estimates do not account for ensuring consistent application of measure specifications across PCHs, we note that it is our role to ensure that PCHs report each measure consistent with the measure specifications and, therefore, this task does not affect PCH burden.

We will submit a revision of the information collection request currently approved under OMB 0938-1175 to account for the aforementioned changes to the PCHQR Program.

8. ICRs for the Hospital Value-Based Purchasing (VBP) Program

In section IV.I. of the preamble of the proposed rule and of this final rule, we discuss requirements for the Hospital VBP Program. Specifically, in this final rule, we are adopting three new measures for the FY 2017 Hospital VBP Program: (1) Methicillin-Resistant *Staphylococcus aureus* (MRSA) Bacteremia; (2) *Clostridium difficile*; and (3) PC-01: Elective Delivery Prior to 39 Completed Weeks Gestation. The first two measures are measures of healthcare-associated infections reported via the CDC's National Healthcare Safety Network, while the last measure is a chart-abstracted measure.

We also are adopting Hospital-level Risk-Standardized Complication Rate (RSCR) Following Elective Primary Total Hip Arthroplasty (THA) and Total Knee Arthroplasty (TKA) for the FY 2019 Hospital VBP Program.

As provided for in section 1886(o)(2)(A) of the Act, all of these additional measures are required for the Hospital IQR Program. Therefore, their inclusion in the Hospital VBP Program does not result in any additional burden because the Hospital VBP Program uses

data that are required for the Hospital IQR Program.

9. ICRs for the Long-Term Care Hospital Quality Reporting (LTCHQR) Program

As discussed in sections IX.C.3. through IX.C.5. of the preamble of the proposed rule and of this final rule, for the LTCHQR Program, for the FY 2015 payment determination and subsequent years, we are retaining the following three quality measures: (1) National Healthcare Safety Network (NHSN) Catheter-Associated Urinary Tract Infections (CAUTI) Outcome Measure (NQF #0138); (2) National Healthcare Safety Network (NHSN) Central Line Catheter-Associated Blood Stream Infection Event (CLABSI) Outcome Measure (NQF #0139); and (3) and Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (Short-Stay) (NQF #0678). For the FY 2016 payment determination and subsequent years, we are retaining the following two measures in addition to the measures finalized for previous years: (1) Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (Short-Stay) (NQF #0680); and (2) Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431). For the FY 2017 payment determination and subsequent years, we are retaining the following three measures in addition to the measures finalized for previous years: (1) National Health Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset Methicillin-resistant *Staphylococcus aureus* (MRSA) Bacteremia Outcome Measure (NQF #1716); (2) National Health Safety Network (NHSN) Facility-Wide Inpatient Hospital-Onset *Clostridium difficile* Infection (CDI) Outcome Measure (NQF #1717); and (3) All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals. For the FY 2018 payment determination and subsequent years, we are retaining the following measure in addition to the measures finalized for previous years: Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).

As discussed in section IX.C.7. of the preamble of the proposed rule and this final rule, we are finalizing three new quality measures for inclusion in the LTCHQR Program for the FY 2018 payment determination and subsequent years: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; (2) Functional Outcome Measure: Change in Mobility among

Long-Term Care Hospital Patients Requiring Ventilator Support; and (3) National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.

Six of the previously adopted and newly finalized measures will be collected via the NHSN. The NHSN is a secure, Internet-based healthcare-associated infection (HAI) tracking system maintained and managed by the CDC. The NHSN enables health care facilities to collect and use data about HAIs, adherence to clinical practices known to prevent HAIs, and other adverse events within their organizations. NHSN data collection occurs via a Web-based tool hosted by the CDC and provided free of charge to facilities. We believe that any burden increase related to complying with the submission of the proposed NHSN VAE Outcome measure would be minimal because LTCHs have already completed the initial setup of the NHSN submission process and have become familiar with reporting data in the NHSN system due to the requirement to report CAUTI and CLABSI measures. While this requirement is subject to the PRA, we believe that the associated burden is approved under OMB control number 0920-0666, for those measures previously finalized, with an expiration date of November, 31, 2016.

The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals is a Medicare claims-based measure. Because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe that this measure will not add any additional reporting burden for LTCHs.

The remaining five previously adopted and newly finalized measures will be collected utilizing the LTCH CARE Data Set. The LTCH CARE Data Set, in its current form, has been approved under OMB control number 0938-1163. Additions will need to be made to the LTCH CARE Data Set in order to allow for collection of the two functional status measures we are finalizing in section IX.C.7.a. of the preamble of this final rule: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; and (2) Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support. The revised data collection will be resubmitted to OMB for approval. While this requirement is subject to the PRA, we believe the

associated burden is either approved under OMB control number 0938–1163, for those measures previously finalized, with an expiration date of June 30, 2016, or is contained in this updated information collection request section.

Assuring data accuracy is vital to public reporting programs. However, as discussed in section IX.C.11. of the preamble of this final rule, we are not finalizing our proposal, for the FY 2016 payment determination and subsequent years, to validate data submitted to CMS on the LTCH CARE Data Set at this time.

We discuss and respond to public comments we received on these information collection requirements in the section IX.C. of the preamble of this final rule.

10. Electronic Health Record (EHR) Incentive Program and Meaningful Use (MU)

In section IX.D. of the preamble of the proposed rule and of this final rule, we discuss our proposal to align the Medicare EHR Incentive Program reporting and submission timelines for clinical quality measures for eligible hospitals and CAHs with the Hospital IQR Program's reporting and submission timelines. In addition, we provide guidance and clarification of certain policies for reporting zero denominators on clinical quality measures and our policy on case threshold exemptions. Because these proposals for data collection would align with the reporting requirements in place for the Hospital IQR Program, we do not believe there is any additional burden for this collection of information.

11. ICR Regarding Revision of Regulations Governing Use and Release of Medicare Advantage (MA) Risk Adjustment Data (§ 422.310(f))

Medicare Advantage (MA) organizations are required to submit risk adjustment data to CMS organizations under current authority at § 422.310(b) through (d). The changes we are finalizing regarding the use and release of MA risk adjustment data under section X. of the preamble of this final rule do not change the requirements on MA organizations for submission of information to CMS, which have been in place for several years. Therefore, these finalized changes do not impose new information collection requirements on MA organizations. Consequently, because there are no new information collection requirements in our proposal, the proposal does not require a review by OMB under the authority of the Paperwork Reduction Act of 1995.

C. Waiver of 60-Day Delay in the Effective Date

We ordinarily provide a 60-day delay in the effective date of the provisions of a rule in accordance with the Administrative Procedure Act (APA) (5 U.S.C. 553(d), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in the effective date if the Secretary finds, for good cause, that the delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued. 5 U.S.C. 553(d)(3); 5 U.S.C. 808(2).

The Hospital Inpatient Prospective Payment Systems for Acute Care Hospitals and the Long Term Care Hospital Prospective Payment System are fiscal year payment systems, and we typically issue the final rule by August 1 of each year to both comply with the requirement to annually review and update these payment systems and ensure that the payment policies for these systems are effective, following the required 60-day delay in the effective date, on October 1, the first day of the fiscal year to which the policies are intended to apply. If the agency finds, for good cause, that a 60-day delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued, the agency may specify an earlier effective date. The timeframes for developing annual rules are extremely compressed and processing issues complicated this year's rule. We believe it would be contrary to the public interest to delay the effective date of the payment system portions of this rule. We therefore specify that those portions of the rule will be effective October 1.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Health professions, Kidney diseases, Medicare, Reporting and recordkeeping, rural areas, X-rays.

42 CFR Part 412

Administrative practice and procedure, Health facilities, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 413

Health facilities, Kidney diseases, Medicare, Puerto Rico, Reporting and recordkeeping requirements.

42 CFR Part 415

Health facilities, Health professions, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 422

Administrative practice and procedure, Health facilities, Health maintenance, organizations (HMO), Medicare, Penalties, Privacy, Reporting and recordkeeping requirements.

42 CFR Part 424

Emergency medical services, Health facilities, Health professions, Medicare.

42 CFR Part 485

Grant programs—health, Health facilities, Medicaid, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 488

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

For the reasons stated in the preamble of this final rule, the Centers for Medicare & Medicaid Services is confirming, as final, interim rules published on October 3, 2013 (78 FR 61191) and March 18, 2014 (79 FR 15022) and is further amending 42 CFR Chapter IV as set forth below:

Title 42—Public Health

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

Subpart R—Provider Reimbursement Determinations and Appeals

- 1. The authority citation for Subpart R continues to read as follows:

Authority: Secs. 205, 1102, 1814(b), 1815(a), 1833, 1861(v), 1871, 1872, 1878, and 1886 of the Social Security Act (42 U.S.C. 405, 1302, 1395f(b), 1395g(a), 1395l, 1395hh, 1395ii, 1395oo, and 1395ww).

- 2. Section 405.1811 is amended by—
 - a. Revising paragraphs (a) introductory text and (a)(3).
 - b. Revising paragraph (b) introductory text.
 - c. Redesignating paragraph (c) as paragraph (e).
 - d. Adding new paragraphs (c) and (d).
 - e. Revising newly redesignated paragraph (e).

The revisions and additions read as follows:

§ 405.1811 Right to contractor hearing; contents of, and adding issues to, hearing request.

(a) *Right to hearing on final contractor determination.* A provider (but no other

individual, entity, or party) has a right to a contractor hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

* * * * *

(3) Unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider's hearing request is no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination.

(b) *Contents of request for a contractor hearing on final contractor determination.* The provider's request for a contractor hearing under paragraph (a) of this section must be submitted in writing to the contractor, and the request must include the elements described in paragraphs (b)(1) through (b)(3) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (b)(1), (b)(2), or (b)(3) of this section, the contractor hearing officer may dismiss with prejudice the appeal or take any other remedial action he or she considers appropriate.

* * * * *

(c) *Right to hearing based on untimely contractor determination.* Notwithstanding the provisions of paragraph (a) of this section, a provider (but no other individual, entity, or party) has a right to a contractor hearing, as a single provider appeal, for a cost reporting period if—

(1) A final contractor determination for the provider's cost reporting period is not issued (through no fault of the provider) within 12 months after the date of receipt by the contractor of the provider's perfected cost report or amended cost report (as specified in § 413.24(f) of this chapter). The date of receipt by the contractor of the provider's perfected cost report or amended cost report is presumed to be the date the contractor stamped "Received" on such cost report unless it is shown by a preponderance of the evidence that the contractor received the cost report on an earlier date.

(2) Unless the provider qualifies for a good cause extension under § 405.1813, the date of receipt by the contractor of the provider's hearing request is no later than 180 days after the expiration of the 12 month period for issuance of the final contractor determination (as determined in accordance with paragraph (c)(1) of this section); and

(3) The amount in controversy (as determined in accordance with § 405.1839) is at least \$1,000 but less than \$10,000.

(d) *Contents of request for a contractor hearing based on untimely contractor determination.* The provider's request for a contractor hearing under paragraph (c) of this section must be submitted in writing to the contractor, and the request must include the elements described in paragraphs (d)(1) through (d)(3) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (d)(1), (d)(2), or (d)(3) of this section, the contractor hearing officer may dismiss with prejudice the appeal or take any other remedial action he or she considers appropriate.

(1) A demonstration that the provider satisfies the requirements for a contractor hearing as specified in paragraph (c) of this section.

(2) An explanation (for each specific item at issue) of the following:

(i) Why the provider believes Medicare payment is incorrect for each disputed item (or, where applicable, why the provider is unable to determine whether Medicare payment is correct because it does not have access to underlying information concerning the calculation of Medicare payment).

(ii) How and why the provider believes Medicare payment must be determined differently for each disputed item.

(iii) If the provider self-disallows a specific item, a description of the nature and amount of each self-disallowed item and the reimbursement or payment sought for the item.

(3) A copy of any documentary evidence the provider considers necessary to satisfy the hearing request requirements of paragraphs (d)(1) and (d)(2) of this section.

(e) *Adding issues to the hearing request.* After filing a hearing request in accordance with paragraphs (a) and (b), or paragraphs (c) and (d), of this section, a provider may add specific Medicare payment issues to the original hearing request by submitting a written request to the contractor hearing officer, only if—

(1) The request to add issues complies with the requirements of paragraphs (a) and (b), or paragraphs (c) and (d), of this section as to each new issue.

(2) The specific matters at issue raised in the initial hearing request and the matters identified in subsequent requests to add issues, when combined, satisfy the amount in controversy requirements of paragraph (a)(2) or paragraph (c)(3) of this section.

(3) The contractor hearing officer receives the provider's request to add issues no later than 60 days after the expiration of the applicable 180-day

period prescribed in paragraph (a)(3) or paragraph (c)(2) of this section.

- 3. Section 405.1835 is amended by—
- a. Revising paragraphs (a) introductory text and (a)(3).
- b. Revising paragraph (b) introductory text.
- c. Redesignating paragraph (c) as paragraph (e).
- d. Adding new paragraphs (c) and (d).
- e. Revising newly redesignated paragraph (e).

The revisions and additions read as follows:

§ 405.1835 Right to Board hearing; contents of, and adding issues to, hearing request.

(a) *Right to hearing on final contractor determination.* A provider (but no other individual, entity, or party) has a right to a Board hearing, as a single provider appeal, for specific items claimed for a cost reporting period covered by a final contractor or Secretary determination if—

* * * * *

(3) Unless the provider qualifies for a good cause extension under § 405.1836, the date of receipt by the Board of the provider's hearing request is no later than 180 days after the date of receipt by the provider of the final contractor or Secretary determination.

(b) *Contents of request for a Board hearing on final contractor determination.* The provider's request for a Board hearing under paragraph (a) of this section must be submitted in writing to the Board, and the request must include the elements described in paragraphs (b)(1) through (b)(4) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (b)(1), (b)(2), or (b)(3) of this section, the Board may dismiss with prejudice the appeal or take any other remedial action it considers appropriate.

* * * * *

(c) *Right to hearing based on untimely contractor determination.*

Notwithstanding the provisions of paragraph (a) of this section, a provider (but no other individual, entity, or party) has a right to a Board hearing, as a single provider appeal, for specific items claimed for a cost reporting period if—

(1) A final contractor determination for the provider's cost reporting period is not issued (through no fault of the provider) within 12 months after the date of receipt by the contractor of the provider's perfected cost report or amended cost report (as specified in § 413.24(f) of this chapter). The date of receipt by the contractor of the

provider's perfected cost report or amended cost report is presumed to be the date the contractor stamped "Received" on such cost report unless it is shown by a preponderance of the evidence that the contractor received the cost report on an earlier date.

(2) Unless the provider qualifies for a good cause extension under § 405.1836, the date of receipt by the Board of the provider's hearing request is no later than 180 days after the expiration of the 12 month period for issuance of the final contractor determination (as determined in accordance with paragraph (c)(1) of this section); and

(3) The amount in controversy (as determined in accordance with § 405.1839) is \$10,000 or more.

(d) *Contents of request for a Board hearing based on untimely contractor determination.* The provider's request for a Board hearing under paragraph (c) of this section must be submitted in writing to the Board, and the request must include the elements described in paragraphs (d)(1) through (d)(4) of this section. If the provider submits a hearing request that does not meet the requirements of paragraph (d)(1), (d)(2), or (d)(3) of this section, the Board may dismiss with prejudice the appeal or take any other remedial action it considers appropriate.

(1) A demonstration that the provider satisfies the requirements for a Board hearing as specified in paragraph (c) of this section.

(2) An explanation (for each specific item at issue) of the following:

(i) Why the provider believes Medicare payment is incorrect for each disputed item (or, where applicable, why the provider is unable to determine whether Medicare payment is correct because it does not have access to underlying information concerning the calculation of Medicare payment).

(ii) How and why the provider believes Medicare payment must be determined differently for each disputed item.

(iii) If the provider self-disallows a specific item, a description of the nature and amount of each self-disallowed item and the reimbursement or payment sought for the item.

(3) A copy of any documentary evidence the provider considers necessary to satisfy the hearing request requirements of paragraphs (d)(1) and (d)(2) of this section.

(4) With respect to a provider under common ownership or control, the name and address of its parent corporation, and a statement that meets all of the requirements of paragraphs (b)(4)(i) and (b)(4)(ii) of this section.

(e) *Adding issues to the hearing request.* After filing a hearing request in accordance with paragraphs (a) and (b), or paragraphs (c) and (d), of this section, a provider may add specific Medicare payment issues to the original hearing request by submitting a written request to the Board only if—

(1) The request to add issues complies with the requirements of paragraphs (a) and (b), or paragraphs (c) and (d), of this section as to each new issue.

(2) The specific matters at issue raised in the initial hearing request and the matters identified in subsequent requests to add issues, when combined, satisfy the amount in controversy requirements of paragraph (a)(2) or paragraph (c)(3) of this section.

(3) The Board receives the provider's request to add issues no later than 60 days after the expiration of the applicable 180-day period prescribed in paragraph (a)(3) or paragraph (c)(2), of this section.

Nomenclature Changes

Subpart R [Amended]

■ 4. Amend Subpart R by removing the term or phrase in the first column and replace it with the term or phrase in the second column:

<i>Remove</i>	<i>Add</i>
an intermediary	a contractor
intermediary	contractor
intermediaries'	contractors'
intermediary's	contractor's

Subpart X—Rural Health Clinic and Federally Qualified Health Center Services

■ 5. The authority citation for Subpart X continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 6. Section 405.2468 is amended by revising paragraph (f)(1) to read as follows:

§ 405.2468 Allowable costs.

* * * * *

(f) * * *

(1) Effective for portions of cost reporting periods occurring on or after January 1, 1999, if an RHC or an FQHC incurs "all or substantially all" of the costs for the training program in the nonhospital setting as defined in § 413.75(b) of this chapter, the RHC or FQHC may receive direct graduate medical education payment for those residents. However, in connection with cost reporting periods for which "all or substantially all of the costs for the

training program in the nonhospital setting" is not defined in § 413.75(b) of this chapter, if an RHC or an FQHC incurs the salaries and fringe benefits (including travel and lodging where applicable) of residents training at the RHC or FQHC, the RHC or FQHC may receive direct graduate medical education payments for those residents.

* * * * *

PART 412—PROSPECTIVE PAYMENT SYSTEMS FOR INPATIENT HOSPITAL SERVICES

■ 7. The authority citation for Part 412 is revised to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332), sec. 1206 of Pub. L. 113–67, and sec. 112 of Pub. L. 113–93.

■ 8. Section 412.23 is amended by—

- a. Revising paragraphs (e)(6)(i), (e)(6)(ii) introductory text, and (e)(6)(ii)(B)(2).
- b. Revising paragraphs (e)(7)(i) and (e)(7)(ii) introductory text.
- c. Adding new paragraph (e)(7)(iii).

The revisions and additions read as follows:

§ 412.23 Excluded hospitals: Classifications.

* * * * *

(e) * * *

(6) * * *

(i) *General rule.* Except as specified in paragraphs (e)(6)(ii) and (e)(6)(iii) of this section for the period beginning December 29, 2007 and ending December 28, 2012, and the period beginning April 1, 2014 and ending September 30, 2017, a moratorium applies to the establishment and classification of a long-term care hospital as described in paragraphs (e) and (e)(1) through (e)(5) of this section or a long-term care hospital satellite facility as described in § 412.22(h).

(ii) *Exception.* The moratorium specified in paragraph (e)(6)(i) of this section is not applicable to the establishment and classification of a long-term care hospital that meets the requirements of paragraphs (e) and (e)(1) through (e)(5) of this section, or a long-term care hospital satellite facility that meets the requirements of § 412.22(h), if the long-term care hospital or long-term care satellite facility meets the following criteria on or before December 29, 2007, or prior to April 1, 2014, as applicable:

* * * * *

(B) * * *

(2)(i) Has expended prior to December 29, 2007, at least 10 percent (or, if less, \$2.5 million) of the estimated cost of the

project specified in paragraph (e)(6)(ii)(B)(1) of his section; or

(ii) Has expended, before April 1, 2014, at least 10 percent (or, if less, \$2.5 million) of the estimated cost of the project specified in paragraph (e)(6)(ii)(B)(1) of this section.

* * * * *

(7) * * *

(i) For purposes of this paragraph, an existing long-term care hospital or long-term care hospital satellite facility means a long-term care hospital that meets the requirements of paragraph (e) of this section or a long-term care hospital satellite facility that meets the requirements of § 412.22(h) that received payment under the provisions of subpart O of this part prior to the dates noted in the following moratorium clauses.

(ii) December 29, 2007, through December 28, 2007—

* * * * *

(iii) April 1, 2014 through September 30, 2017—The number of Medicare-certified beds in an existing long-term care hospital or an existing long-term care hospital satellite facility must not be increased beyond the number of Medicare-certified beds prior to April 1, 2014.

* * * * *

■ 9. Section 412.64 is amended by—

■ a. Removing paragraph (b)(1)(ii)(D).

■ b. Revising paragraph (b)(3)(i).

■ c. Revising paragraphs (d)(1), (d)(2)(i) introductory text, (d)(2)(ii), and (d)(3) introductory text.

■ d. In paragraphs (h)(4) introductory text and (h)(4)(vi), removing the date “October 1, 2014” and adding in its place the date “October 1, 2015”.

The revisions read as follows:

§ 412.64 Federal rates for inpatient operating costs for Federal fiscal year 2005 and subsequent fiscal years.

* * * * *

(b) * * *

(3)(i) For discharges occurring on or after October 1, 2004, a hospital that is located in a rural county adjacent to one or more urban areas is deemed to be located in an urban area and receives the Federal payment amount for the urban area to which the greater number of workers in the county commute if the rural county would otherwise be considered part of an urban area, under the standards for designating MSAs if the commuting rates used in determining outlying counties were determined on the basis of the aggregate number of resident workers who commute to (and, if applicable under the standards, from) the central county or central counties of all adjacent MSAs.

Qualifying counties are determined based upon OMB standards, using the most recent OMB standards for delineating statistical areas adopted by CMS.

* * * * *

(d) * * *

(1) The applicable percentage change for updating the standardized amount for all hospitals in all areas is—

(i) For fiscal year 2005 through fiscal year 2009, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section.

(ii) For fiscal year 2010, for discharges—

(A) On or after October 1, 2009 and before April 1, 2010, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section; and

(B) On or after April 1, 2010 and before October 1, 2010, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less 0.25 percentage point.

(iii) For fiscal year 2011, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this subchapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less 0.25 percentage point.

(iv) For fiscal years 2012 and 2013, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.1 percentage point.

(v) For fiscal year 2014, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraph (d)(2) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.3 percentage point.

(vi) For fiscal year 2015, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals, subject to the provisions of paragraphs (d)(2) and (d)(3) of this section, less a multifactor productivity adjustment (as determined by CMS) and less 0.2 percentage point.

(2)(i) In the case of a “subsection (d) hospital,” as defined under section 1886(d)(1)(B) of the Act, that does not submit quality data on a quarterly basis to CMS, in the form and manner specified by CMS, the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals is reduced—

* * * * *

(ii) Any reduction pursuant to this paragraph (d)(2) will apply only to the fiscal year involved and will not be taken into account in computing the applicable percentage change for a subsequent fiscal year.

(3) Beginning fiscal year 2015, in the case of a “subsection (d) hospital,” as defined under section 1886(d)(1)(B) of the Act, that is not a meaningful electronic health record (EHR) user as defined in Part 495 of this chapter for the applicable EHR reporting period and does not receive an exception, three-fourths of the percentage increase in the market basket index (as defined in § 413.40(a)(3) of this chapter) for prospective payment hospitals is reduced—

* * * * *

■ 10. Section 412.101 is amended by revising paragraphs (b)(2)(i), (b)(2)(ii), (c)(1), (c)(2) introductory text, and (d) to read as follows:

§ 412.101 Special treatment: Inpatient hospital payment adjustment for low-volume hospitals.

* * * * *

(b) * * *

(2) * * *

(i) For FY 2005 through FY 2010 and the portion of FY 2015 beginning on April 1, 2015, and subsequent fiscal years, a hospital must have fewer than 200 total discharges, which includes Medicare and non-Medicare discharges, during the fiscal year, based on the hospital’s most recently submitted cost report, and be located more than 25 road miles (as defined in paragraph (a) of this section) from the nearest “subsection (d)” (section 1886(d) of the Act) hospital.

(ii) For FY 2011 through FY 2014, and the portion of FY 2015 before April 1, 2015, a hospital must have fewer than 1,600 Medicare discharges, as defined in paragraph (a) of this section, during the fiscal year, based on the hospital’s Medicare discharges from the most recently available MedPAR data as determined by CMS, and be located more than 15 road miles, as defined in paragraph (a) of this section, from the nearest “subsection (d)” (section 1886(d) of the Act) hospital.

* * * * *

(c) * * *

(1) For FY 2005 through FY 2010 and the portion of FY 2015 beginning on April 1, 2015 and subsequent fiscal years, the adjustment is an additional 25 percent for each Medicare discharge.

(2) For FY 2011 through FY 2014 and the portion of FY 2015 before April 1, 2015, the adjustment is as follows:

* * * * *

(d) *Eligibility of new hospitals for the adjustment.* For FYs 2005 through 2010 and the portion of FY 2015 beginning on April 1, 2015, and subsequent fiscal years, a new hospital will be eligible for a low-volume adjustment under this section once it has submitted a cost report for a cost reporting period that indicates that it meets discharge requirements during the applicable fiscal year and has provided its fiscal intermediary or Medicare administrative contractor with sufficient evidence that it meets the distance requirement, as specified under paragraph (b)(2) of this section.

■ 11. Section 412.102 is revised to read as follows:

§ 412.102 Special treatment: Hospitals located in areas that are changing from urban to rural as a result of a geographic redesignation.

An urban hospital that was part of an MSA, but was redesignated as rural as a result of the most recent OMB standards for delineating statistical areas adopted by CMS, may receive an adjustment to its rural Federal payment amount for operating costs for 2 successive fiscal years as provided in paragraphs (a) and (b) of this section.

(a) *First year adjustment.* (1) Effective on or after October 1, 1983 and before October 1, 2014, the hospital's rural average standardized amount and disproportionate share payments as described in § 412.106 are adjusted on the basis of an additional amount that equals two-thirds of the difference between the urban standardized amount and disproportionate share payments applicable to the hospital before its geographic redesignation and the rural standardized amount and disproportionate share payments otherwise applicable to the Federal fiscal year for which the adjustment is made.

(2) Effective on or after October 1, 2014, the hospital's rural disproportionate share payments as described in § 412.106 are adjusted on the basis of an additional amount that equals two-thirds of the difference between the disproportionate share payments as an urban hospital applicable to the hospital before its geographic redesignation to a rural area

as a result of implementation of the most recent OMB standards for delineating statistical areas adopted by CMS and the rural disproportionate share payment otherwise applicable to the Federal fiscal year for which the adjustment is made.

(b) *Second year adjustment.* (1) Effective on or after October 1, 1983 and before October 1, 2014, if a hospital's status continues to be rural as a result of geographic redesignation, its rural average standardized amount and disproportionate share payments are adjusted on the basis of an additional amount that equals one-third of the difference between the urban standardized amount and disproportionate share payments applicable to the hospital before its redesignation and the rural standardized amounts and disproportionate share payments otherwise applicable to the Federal fiscal year for which the adjustment is made.

(2) Effective on or after October 1, 2014, if a hospital's status continues to be rural as a result of geographic redesignation, its disproportionate share payments are adjusted on the basis of an additional amount that equals one-third of the difference between the disproportionate share payments applicable to the hospital before its geographic redesignation to a rural area as a result of implementation of the most recent OMB standards for delineating statistical areas adopted by CMS and the rural disproportionate share payments otherwise applicable to the Federal fiscal year for which the adjustment is made.

■ 12. Section 412.103 is amended by adding a new paragraph (a)(6) to read as follows:

§ 412.103 Special treatment: Hospitals located in urban areas and that apply for reclassification as rural.

(a) * * *

(6) For any period on or after October 1, 2014, a CAH in a county that was not in an urban area as defined by the Office of Management and Budget (OMB), but was included in an urban area as a result of the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, may be reclassified as being located in a rural area for purposes of meeting the rural location requirement at § 485.610(b) of this chapter for a period of 2 years, beginning with the date of the implementation of the new labor market area delineations, if it meets any of the requirements under paragraph (a)(1), (a)(2), or (a)(3) of this section.

* * * * *

■ 13. Section 412.105 is amended by revising paragraphs (a)(1)(ii), (f)(1)(iv)(D), and (f)(1)(v), to read as follows:

§ 412.105 Special treatment: Hospitals that incur indirect costs for graduate medical education programs.

* * * * *

(a) * * *

(1) * * *

(ii)(A) For new programs started prior to October 1, 2012, the exception for new programs described in paragraph (f)(1)(vii) of this section applies to each new program individually for which the full-time equivalent cap may be adjusted based on the period of years equal to the minimum accredited length of each new program.

(B) For new programs started on or after October 1, 2012, the exception for new programs described in paragraph (f)(1)(vii) of this section applies to each new program individually during the cost reporting periods prior to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(1) of this chapter, and prior to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(3) of this chapter.

* * * * *

(f) * * *

(1) * * *

(iv) * * *

(D) A rural hospital redesignated as urban after September 30, 2004, as a result of the most recent census data and implementation of the new labor market area definitions announced by OMB on June 6, 2003, may retain the increases to its full-time equivalent resident cap that it received under paragraphs (f)(1)(iv)(A) and (f)(1)(vii) of this section while it was located in a rural area. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital may retain any existing increases to its FTE resident cap that it had received prior to when the redesignation became effective. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital

may receive an increase to its FTE resident cap for a new program, in accordance with paragraph (e) of this section, if it received a letter of accreditation for the new program and/or started training residents in the new program prior to the redesignation becoming effective.

(v)(A) For a hospital's cost reporting periods beginning on or after October 1, 1997, and before October 1, 1998, the total number of full-time equivalent residents for payment purposes is equal to the average of the actual full-time equivalent resident counts (subject to the requirements listed in paragraphs (f)(1)(ii)(C) and (f)(1)(iv) of this section) for that cost reporting period and the preceding cost reporting period.

(B) For a hospital's cost reporting periods beginning on or after October 1, 1998, the total number of full-time equivalent residents for payment purposes is equal to the average of the actual full-time equivalent resident count (subject to the requirements set forth in paragraphs (f)(1)(ii)(C) and (f)(1)(iv) of this section) for that cost reporting period and the preceding two cost reporting periods.

(C) For new programs started prior to October 1, 2012, if a hospital qualified for an adjustment to the limit established under paragraph (f)(1)(iv) of this section for new medical residency programs created under paragraph (f)(1)(vii) of this section, the count of residents participating in new medical residency training programs above the number included in the hospital's full-time equivalent count for the cost reporting period ending during calendar year 1996 is added after applying the averaging rules in paragraph (f)(1)(v)(B) of this section for a period of years. Residents participating in new medical residency training programs are included in the hospital's full-time equivalent count before applying the averaging rules after the period of years has expired. For purposes of this paragraph, for each new program started, the period of years equals the minimum accredited length for each new program. The period of years for each new program begins when the first resident begins training in each new program.

(D) For new programs started on or after October 1, 2012, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e) of this chapter, full-time equivalent residents participating in new medical residency training programs are excluded from the hospital's full-time equivalent count before applying the averaging rules during the cost reporting periods prior

to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(1) of this chapter, and prior to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started, for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(3) of this chapter. Beginning with the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new program started for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(1) of this chapter, and beginning with the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of each individual new program started for hospitals for which the full-time equivalent cap may be adjusted in accordance with § 413.79(e)(3) of this chapter, full-time equivalent residents participating in new medical residency training programs are included in the hospital's full-time equivalent count before applying the averaging rules in paragraph (f)(1)(v)(B) of this section.

(E) Subject to the provisions of paragraph (f)(1)(ix) of this section, full-time equivalent residents that are displaced by the closure of either another hospital or another hospital's program are added to the full-time equivalent count after applying the averaging rules in paragraph (f)(1)(v)(B) of this section for the receiving hospital for the duration of time that the displaced residents are training at the receiving hospital.

(F) Subject to the provisions of paragraph (f)(1)(x) of this section, effective for cost reporting periods beginning on or after April 1, 2000, full-time equivalent residents at an urban hospital in a rural track program are included in the urban hospital's rolling average calculation described in this paragraph (f)(1)(v)(B).

* * * * *

■ 14. Section 412.106 is amended by revising paragraph (g)(1)(iii)(C) to read as follows:

§ 412.106 Special treatment: Hospitals that serve a disproportionate share of low-income patients.

* * * * *
(g) * * *

(1) * * *
(iii) * * *

(C) For fiscal year 2014 and for fiscal year 2015, CMS will base its estimates of the amount of hospital uncompensated care on the most recent available data on utilization for Medicaid and Medicare SSI patients, as determined by CMS in accordance with paragraphs (b)(2)(i) and (b)(4) of this section.

* * * * *

§ 412.108 [Amended]

■ 15. In § 412.108, paragraph (a)(1) introductory text and paragraph (c)(2)(iii) introductory text, remove the date "April 1, 2014" and add in its place the date "April 1, 2015".

■ 16. Section 412.140 is amended by revising paragraph (c)(2) to read as follows:

§ 412.140 Participation, data submission, and validation requirements under the Hospital Inpatient Quality Reporting (IQR) Program.

* * * * *

(c) * * *

(2) *Exception.* Upon request by a hospital, CMS may grant an extension or exemption of one or more data submission deadlines in the event of extraordinary circumstances beyond the control of the hospital. Specific requirements for submission of a request for an extension or exemption are available on QualityNet.org.

* * * * *

■ 17. Section 412.152 is amended by revising the definition of "Applicable hospital" to read as follows:

§ 412.152 Definitions for the Hospital Readmissions Reduction Program.

* * * * *

Applicable hospital is a hospital described in section 1886(d)(1)(B) of the Act.

* * * * *

§ 412.154 [Amended]

■ 18. Section 412.154 is amended by removing and reserving paragraph (d).

■ 19. Section 412.160 is amended by revising the definitions of "Base operating DRG payment amount" and "Performance standards" to read as follows:

§ 412.160 Definitions for the Hospital Value-Based Purchasing (VBP) Program.

* * * * *

Base operating DRG payment amount means the following:

(1) With respect to a subsection (d) hospital (as defined in section 1886(d)(1)(B) of the Act), the wage-adjusted DRG operating payment plus

any applicable new technology add-on payments under subpart F of this part. This amount is determined without regard to any payment adjustments under the Hospital Readmissions Reduction Program, as specified under § 412.154. This amount does not include any additional payments for indirect medical education under § 412.105, the treatment of a disproportionate share of low-income patients under § 412.106, outliers under subpart F of this part, or a low volume of discharges under § 412.101.

(2) With respect to a Medicare-dependent, small rural hospital that receives payments under § 412.108(c) or a sole community hospital that receives payments under § 412.92(d), the wage-adjusted DRG operating payment plus any applicable new technology add-on payments under subpart F of this part. This amount does not include any additional payments for indirect medical education under § 412.105, the treatment of a disproportionate share of low-income patients under § 412.106, outliers under subpart F of this part, or a low volume of discharges under § 412.101. With respect to a Medicare-dependent, small rural hospital that receives payments under § 412.108(c) (for discharges occurring in FY 2013) or a sole community hospital that receives payments under § 412.92(d), this amount also does not include the difference between the hospital-specific payment rate and the Federal payment rate determined under subpart D of this part.

Performance standards are the levels of performance that hospitals must meet or exceed in order to earn points under the Hospital VBP Program, and are calculated with respect to a measure for a fiscal year no later than 60 days prior to the start of the performance period for that measure for that fiscal year. The performance standards for a measure may be updated as follows:

(1) To make a single correction to correct a calculation error, data issue, or other problem that would significantly change the performance standards; or

(2) To incorporate nonsubstantive technical updates made to the measure between the time that CMS first displays the performance standards for that measure for a fiscal year and the time that CMS calculates hospital performance on that measure at the conclusion of the performance period for that measure for a fiscal year.

* * * * *

■ 20. Section 412.161 is revised to read as follows:

§ 412.161 Applicability of the Hospital Value-Based Purchasing (VBP) Program

The Hospital VBP Program applies to hospitals, as that term is defined in § 412.160.

§ 412.172 [Amended]

■ 21. Section 412.172 is amended by removing and reserving paragraph (c).

■ 22. Section 412.232 is amended by revising paragraph (b)(2) to read as follows:

§ 412.232 Criteria for all hospitals in a rural county seeking urban redesignation.

* * * * *

(b) * * *

(2) For fiscal years beginning with FY 2005, the group of hospitals must demonstrate that the county in which the hospitals are located meets the standards for redesignation to an MSA as an outlying county using the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data.

* * * * *

■ 23. Section 412.234 is amended by revising paragraph (a)(3)(iv) to read as follows:

§ 412.234 Criteria for all hospitals in an urban county seeking redesignation to another urban area.

(a) * * *

(3) * * *

(iv) For Federal fiscal year 2008 and thereafter, hospitals located in counties that are in the same Combined Statistical Area (CSA) or Core-Based Statistical Area (CBSA) (under the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data) as the urban area to which they seek redesignation qualify as meeting the proximity requirement for reclassification to the urban area to which they seek redesignation.

* * * * *

■ 24. Section 412.500 is amended by adding paragraphs (a)(4), (a)(5), and (a)(6) to read as follows:

§ 412.500 Basis and scope of subpart.

(a) * * *

(4) Section 4302(a) of Public Law 111–5, which amended sections 114(c) and (d) of Public Law 110–173 relating to several moratoria on the establishment of new long-term care hospitals and satellite facilities and on the increase in the number of beds in existing long-term care hospitals and satellite facilities under the long-term care hospital prospective payment system.

(5) Sections 3106(a) and 10312(a) of Public Law 111–148, which extended

certain payment rules and moratoria under the long-term care hospital prospective payment system by further amending sections 114(c) and (d) of Public Law 110–173.

(6) Section 1206 of Public Law 113–67, which further extended certain payment rules and moratoria under the long-term care hospital prospective payment system by amending sections 114(c) and (d) of Public Law 110–173, and which:

(i) Added a new section 1886(m)(6) to the Act to establish a site neutral payment amount for long-term care hospital discharges that fail to meet the applicable criteria in cost reporting periods beginning on or after October 1, 2015; and

(ii) Requires the Secretary’s review of the payment rates and regulations governing long-term care hospitals established under section 1886(d)(1)(B)(iv)(II) of the Act and application of payment adjustments based on that review.

* * * * *

■ 25. Section 412.521 is amended by revising paragraph (a)(2) to read as follows:

§ 412.521 Basis for payment.

(a) * * *

(2) Except as provided for in § 412.526, the amount of payment under the prospective payment system is based on the Federal payment rate established in accordance with § 412.523, including adjustments described in § 412.525, and, if applicable during a transition period, on a blend of the Federal payment rate and the cost-based reimbursement rate described in § 412.533.

* * * * *

■ 26. Section 412.523 is amended by adding a new paragraph (c)(3)(xi) to read as follows:

§ 412.523 Methodology for calculating the Federal prospective payment rates.

* * * * *

(c) * * *

(3) * * *

(xi) For long-term care hospital prospective payment system fiscal year beginning October 1, 2014, and ending September 30, 2015. The standard Federal rate for the long-term care hospital prospective payment system beginning October 1, 2014, and ending September 30, 2015, is the standard Federal rate for the previous long-term care hospital prospective payment system fiscal year updated by 2.2 percent, and further adjusted, as appropriate, as described in paragraph (d) of this section.

* * * * *

§ 412.525 [Amended]

■ 27. Section 412.525 is amended by removing and reserving paragraph (d)(3).

■ 28. A new § 412.526 is added to read as follows:

§ 412.526 Payment provisions for a “subclause (II)” long-term care hospital.

(a) *Definition.* A “subclause (II)” long-term care hospital is a hospital that qualifies as an LTCH under section 1886(d)(1)(B)(iv)(II) of the Act.

(b) *Method of payment.* (1) For cost reporting periods beginning on or after October 1, 2003 and before September 30, 2014, payment to a “subclause (II)” long-term care hospital is made under the prospective payment system specified in § 412.1(a)(4) and Subpart O of this part.

(2) For cost reporting periods beginning on or after October 1, 2014, payment to a “subclause (II)” long-term care hospital is made under the prospective payment system specified in § 412.1(a)(4) and under Subpart O of this part, as adjusted. The adjusted payment amount is determined based on reasonable cost, as described at § 412.526(c).

(c) *Determining the adjusted payment for Medicare inpatient operating and capital-related costs under the reasonable cost-based reimbursement rules.* Medicare inpatient operating costs are paid based on reasonable cost, subject to a ceiling. The ceiling is the aggregate upper limit on the amount of a hospital’s net Medicare inpatient operating costs that the program will recognize for payment purposes, as determined under paragraph (c)(1) of this section.

(1) *Ceiling.* For each cost reporting period, the ceiling is determined by multiplying the updated target amount, as defined in paragraph (c)(2) of this section, for that period by the number of Medicare discharges paid under this subpart during that period.

(2) *Target amounts.* (i) For cost reporting periods beginning during Federal fiscal year 2015, the target amount equals the hospital’s target amount determined under § 413.40(c)(4) for its cost reporting period beginning during Federal fiscal year 2000, updated by the applicable annual rate-of-increase percentages specified in § 413.40(c)(3) to the subject period.

(ii) For subsequent cost reporting periods, the target amount equals the hospital’s target amount for the previous cost reporting period updated by the applicable annual rate-of-increase percentage specified in § 413.40(c)(3) for the subject cost reporting period.

(3) *Payment for inpatient operating costs.* For cost reporting periods subject to this section, the hospital’s Medicare allowable net inpatient operating costs for that period (as defined at § 413.40(a)(3)) are paid on a reasonable cost basis, subject to that hospital’s ceiling (as determined under paragraph (c)(1) of this section) for that period.

(4) *Payment for inpatient capital-related costs.* Medicare allowable net inpatient capital costs are paid on a reasonable cost basis, in accordance with the regulations under Part 413 of this chapter.

(5) *Adjustments for extraordinary circumstances—(i) General rules.* (A) CMS may adjust the ceiling determined under paragraph (c)(1) of this section for one or more cost reporting periods when unusual inpatient operating costs have resulted in the hospital exceeding its ceiling imposed under this section due to extraordinary circumstances beyond the hospital’s control. These circumstances include, but are not limited to, strikes, fire, earthquakes, floods, or similar unusual occurrences with substantial cost effects.

(B) When the hospital requests an adjustment, CMS makes an adjustment only to the extent that the hospital’s operating costs are reasonable, attributable to the circumstances specified separately, identified by the hospital, and verified by the Medicare administrative contractor.

(ii) *Process for adjustment requests.* The provisions of §§ 413.40(e)(1) through (e)(5) of this subchapter are applicable to extraordinary circumstances adjustment requests under this section.

§ 412.532 [Removed]

■ 29. Section 412.532 is removed.

■ 30. Section 412.534 is amended by—

■ a. Revising paragraphs (c)(1) introductory text and (c)(1)(i).

■ b. Removing the year “2013” and adding in its place the year “2016” in paragraph (c)(1) and (c)(2) paragraph heading.

■ c. Revising paragraph (c)(3).

■ d. Removing the year “2013” and adding in its place the year “2016” in paragraphs (d)(1) paragraph heading, (d)(1)(i), and (d)(2) paragraph heading.

■ e. Revising paragraph (d)(3).

■ f. Removing the year “2013” and adding in its place the year “2016” in paragraphs (e)(1) paragraph heading, (e)(1)(i), and (e)(2) paragraph heading.

■ g. Revising paragraph (e)(3).

■ h. Revising paragraphs (h) introductory text, (h)(4), and (h)(5).

■ i. Removing paragraph (h)(6).

The revisions read as follows:

§ 412.534 Special payment provisions for long-term care hospitals within hospitals and satellites of long-term care hospitals.

* * * * *

(c) * * *

(1) *For cost reporting periods beginning on or after October 1, 2004 and before October 1, 2007 and for cost reporting periods beginning on or after October 1, 2016.* (i) Except as provided in paragraphs (c)(3), (g), and (h) of this section, for any cost reporting period beginning on or after October 1, 2004 and before October 1, 2007, and for cost reporting periods beginning on or after October 1, 2016 in which the long-term care hospital or its satellite facility has a discharged Medicare inpatient population of whom no more than 25 percent were admitted to the hospital or its satellite facility from the co-located hospital, payments are made under the rules at §§ 412.500 through 412.541 with no adjustment under this section.

* * * * *

(3) For a long-term care hospital satellite facility described in § 412.22(h)(3)(i), for cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 50 percent.

(d) * * *

(3) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payment for a long-term care hospital satellite facility described in § 412.22(h)(3)(i) will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 75 percent.

(e) * * *

(3) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, payments for a long-term care hospital satellite facility described in § 412.22(h)(3)(i) will be determined using the methodology specified in paragraph (c)(1) of this section, except that the applicable percentage threshold for Medicare discharges is 75 percent.

* * * * *

(h) *Effective date of policies in this section for certain co-located long-term care hospitals and satellite facilities of long-term care hospitals.* Except as specified in paragraph (h)(4) of this section, the policies set forth in this paragraph (h) apply to Medicare patient discharges that were admitted from a hospital located in the same building or on the same campus as a long-term care

hospital described in § 412.23(e)(2)(i) that meets the criteria in § 412.22(f) and a satellite facility of a long-term care hospital as described under § 412.22(h)(3)(i) for discharges occurring in cost reporting periods beginning on or after July 1, 2007.

* * * * *

(4) For a long-term care hospital described in § 412.23(e)(2)(i) that meets the criteria in § 412.22(f), the policies set forth in this paragraph (h) and in § 412.536 do not apply for discharges occurring in cost reporting periods beginning on or after July 1, 2007.

(5) For a long-term care hospital or a satellite facility that, as of December 29, 2007, was co-located with an entity that is a provider-based, off-campus location of a subsection (d) hospital which did not provide services payable under section 1886(d) of the Act at the off-campus location, the policies set forth in this paragraph (h) and in § 412.536 do not apply for discharges occurring in cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016.

- 31. Section 412.536 is amended by—
 - a. Removing and reserving paragraph (a)(1)(iii).
 - b. Revising paragraph (a)(2) introductory text.
 - c. Removing and reserving paragraph (a)(2)(ii).
 - d. Removing paragraph (a)(3).
- The revisions read as follows:

§ 412.536 Special payment provisions for long-term care hospitals and satellites of long-term care hospitals that discharged Medicare patients admitted from a hospital not located in the same building or on the same campus as the long-term care hospital or satellite of the long-term care hospital.

- (a) * * *
- (1) * * *
- (iii) [Reserved].

* * * * *

(2) For cost reporting periods beginning on or after July 1, 2007 and before July 1, 2016, the policies set forth in this section are not applicable to discharges from:

- (i) * * * * *
- (ii) [Reserved].

* * * * *

PART 413—PRINCIPLES OF REASONABLE COST REIMBURSEMENT; PAYMENT FOR END-STAGE RENAL DISEASE SERVICES; OPTIONAL PROSPECTIVELY DETERMINED PAYMENT RATES FOR SKILLED NURSING FACILITIES

■ 32. The authority for Part 413 continues to read as follows:

Authority: Secs. 1102, 1861(v)(1)(A), and 1871 of the Social Security Act (42 U.S.C. 1302, 1395x(v)(1)(A), and 1395hh).

Nomenclature Changes

PART 413—[AMENDED]

■ 33. Amend Part 413 by removing the term or phrase in the first column and replace it with the term or phrase in the second column:

Remove	Add
an intermediary's	a contractor's
fiscal intermediary	contractor
fiscal intermediary's	contractor's
intermediary	contractor
intermediaries	contractors
intermediary's	contractor's

■ 34. Section 413.75(b)(5) is amended by revising the definition of "Rural track FTE limitation" to read as follows:

§ 413.75 Direct GME payments: General requirements.

- * * * * *
- (b) * * *
- (5) * * *

Rural track FTE limitation means the maximum number of residents (as specified in § 413.79(k)) training in a rural track residency program that an urban hospital may include in its FTE count and that is in addition to the number of FTE residents already included in the hospital's FTE cap.

* * * * *

■ 35. Section 413.78 is amended by revising paragraph (g)(6) to read as follows:

§ 413.78 Direct GME payment: Determination of the total number of FTE residents.

- * * * * *
- (g) * * *

(6) The provisions of paragraphs (g)(1)(ii), (g)(2), (g)(3), and (g)(5) of this section shall not be applied in a manner that requires reopening of any settled cost reports as to which there is not a jurisdictionally proper appeal pending as of March 23, 2010, on direct GME or IME payments. Cost reporting periods beginning before July 1, 2010 are not governed by paragraph (g) of this section.

* * * * *

■ 36. Section 413.79 is amended by revising paragraphs (c)(6), (d)(5), and (k)(7), to read as follows:

§ 413.79 Direct GME payments: Determination of the weighted number of FTE residents.

- * * * * *
- (c) * * *

(6) *FTE resident caps for rural hospitals that are redesignated as*

urban. A rural hospital redesignated as urban after September 30, 2004, as a result of the most recent census data and implementation of the new MSA definitions announced by OMB on June 6, 2003, may retain the increases to its FTE resident cap that it received under paragraphs (c)(2)(i), (e)(1)(iii), and (e)(3) of this section while it was located in a rural area. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital may retain any existing increases to its FTE resident cap that it had received prior to when the redesignation became effective. Effective October 1, 2014, if a rural hospital is redesignated as urban due to the most recent OMB standards for delineating statistical areas adopted by CMS, the redesignated urban hospital may receive an increase to its FTE resident cap for a new program, in accordance with paragraph (e) of this section, if it received a letter of accreditation for the new program and/or started training residents in the new program prior to the redesignation becoming effective.

(d) * * *

(5) (i) For new programs started prior to October 1, 2012, if a hospital qualifies for an adjustment to the limit established under paragraph (c)(2) of this section for new medical residency programs created under paragraph (e) of this section, the count of the residents participating in new medical residency training programs above the number included in the hospital's FTE count for the cost reporting period ending during calendar year 1996 is added after applying the averaging rules in this paragraph (d), for a period of years. Residents participating in new medical residency training programs are included in the hospital's FTE count before applying the averaging rules after the period of years has expired. For purposes of this paragraph (d), for each new program started, the period of years equals the minimum accredited length for each new program. The period of years begins when the first resident begins training in each new program.

(ii) For new programs started on or after October 1, 2012, for hospitals for which the FTE cap may be adjusted in accordance with § 413.79(e), FTE residents participating in new medical residency training programs are excluded from the hospital's FTE count before applying the averaging rules during the cost reporting periods prior to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new

program started, for hospitals for which the FTE may be adjusted in accordance with § 413.79(e)(1), and prior to the beginning of the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started, for hospitals for which the FTE cap may be adjusted in accordance with § 413.79(e)(3). Beginning with the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new program started for hospitals for which the FTE cap may be adjusted in accordance with § 413.79(e)(1), and beginning with the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the each individual new program started for hospitals for which the FTE cap may be adjusted in accordance with § 413.79(e)(3), FTE residents participating in new medical residency training programs are included in the hospital's FTE count before applying the averaging rules.

* * * * *
(k) * * *

(7)(i) Effective prior to October 1, 2014, if an urban hospital had established a rural track training program under the provisions of this paragraph (k) with a hospital located in a rural area and that rural area subsequently becomes an urban area due to the most recent census data and implementation of the new labor market area definitions announced by OMB on June 6, 2003, the urban hospital may continue to adjust its FTE resident limit in accordance with this paragraph (k) for the rural track programs established prior to the adoption of such new labor market area definitions. In order to receive an adjustment to its FTE resident cap for a new rural track residency program, the urban hospital must establish a rural track program with hospitals that are designated rural based on the most recent geographical location delineations adopted by CMS.

(ii) Effective October 1, 2014, if an urban hospital started a rural track training program under the provisions of this paragraph (k) with a hospital located in a rural area and, during the 3-year period that is used to calculate the urban hospital's rural track FTE limit, that rural area subsequently becomes an urban area due to the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, the urban hospital may continue to adjust its FTE resident limit in accordance with this paragraph (k) and subject to

paragraph (k)(7)(iii) of this section for the rural track programs started prior to the adoption of such new OMB standards for delineating statistical areas.

(iii) Effective October 1, 2014, if an urban hospital started a rural track training program under the provisions of this paragraph (k) with a hospital located in a rural area and that rural area subsequently becomes an urban area due to the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, regardless of whether the redesignation of the rural hospital occurs during the 3-year period that is used to calculate the urban hospital's rural track FTE limit, or after the 3-year period used to calculate the urban hospital's rural track FTE limit, the urban hospital may continue to adjust its FTE resident limit in accordance with this paragraph (k) based on the rural track programs started prior to the change in the hospital's geographic designation. In order for the urban hospital to receive or use the adjustment to its FTE resident cap for training FTE residents in the rural track residency program that was started prior to the most recent OMB standards for delineating statistical areas adopted by CMS, one of the following two conditions must be met by the end of a period that begins when the most recent OMB standards for delineating statistical areas are adopted by CMS and continues through the end of the second residency training year following the date the most recent OMB delineations are adopted by CMS: the hospital that has been redesignated from rural to urban must reclassify as rural under § 412.103 of this chapter, for purposes of IME only; or the urban hospital must find a new site that is geographically rural consistent with the most recent geographical location delineations adopted by CMS. In order to receive an adjustment to its FTE resident cap for an additional new rural track residency program, the urban hospital must participate in a rural track program with sites that are geographically rural based on the most recent geographical location delineations adopted by CMS.

* * * * *

PART 415—SERVICES FURNISHED BY PHYSICIANS IN PROVIDERS, SUPERVISING PHYSICIANS IN TEACHING SETTINGS, AND RESIDENTS IN CERTAIN SETTINGS

■ 37. The authority citation for Part 415 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh), and sec. 124 of Pub. L. 106–113 (113 Stat. 1501A–332).

■ 38. Section 415.70 is amended by revising paragraph (b) to read as follows:

§ 415.70 Limits on compensation for physician services in providers.

* * * * *

(b) *Methodology for establishing limits.* (1) *For cost reporting periods beginning before January 1, 2015.* CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty and type of location using the best available data.

(2) *For cost reporting periods beginning on or after January 1, 2015.* CMS establishes a methodology for determining annual reasonable compensation equivalency limits and, to the extent possible, considers average physician incomes by specialty using the best available data.

* * * * *

PART 422—MEDICARE ADVANTAGE PROGRAM

■ 39. The authority citation for Part 422 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

■ 40. Section 422.300 is revised to read as follows:

§ 422.300 Basis and scope.

This subpart is based on sections 1106, 1128](d), 1853, 1854, and 1858 of the Act. It sets forth the rules for making payments to Medicare Advantage (MA) organizations offering local and regional MA plans, including calculation of MA capitation rates and benchmarks, conditions under which payment is based on plan bids, adjustments to capitation rates (including risk adjustment), collection of risk adjustment data, conditions for use and disclosure of risk adjustment data, and other payment rules. See § 422.458 in subpart J for rules on risk sharing payments to MA regional organizations.

■ 41. Section 422.310 is amended by revising paragraph (f) to read as follows:

§ 422.310 Risk adjustment data.

* * * * *

(f) *Use and release of data.*

(1) *CMS use of data.* CMS may use the data described in paragraphs (a) through (d) of this section for the following purposes:

- (i) To determine the risk adjustment factors used to adjust payments, as required under §§ 422.304(a) and (c);
- (ii) To update risk adjustment models;
- (iii) To calculate Medicare DSH percentages;
- (iv) To conduct quality review and improvement activities;
- (v) For Medicare coverage purposes;
- (vi) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related research;
- (vii) For activities to support the administration of the Medicare program;
- (viii) For activities conducted to support program integrity; and
- (ix) For purposes authorized by other applicable laws.

(2) *CMS release of data.* Regarding data described in paragraphs (a) through (d) of this section, CMS may release the minimum data it determines is necessary for one or more of the purposes listed in paragraph (f)(1) of this section to other HHS agencies, other Federal executive branch agencies, States, and external entities in accordance with the following:

- (i) Applicable Federal laws;
- (ii) CMS data sharing procedures;
- (iii) Subject to the protection of beneficiary identifier elements and beneficiary confidentiality, including—
(A) A prohibition against public disclosure of beneficiary identifying information;

(B) Release of beneficiary identifying information to other HHS agencies, other Federal executive branch agencies, and States only when such information is needed; and

(C) Release of beneficiary identifying information to external entities only to the extent needed to link datasets.

(iv) Subject to the aggregation of dollar amounts reported for the associated encounter to protect commercially sensitive data.

(v) Risk adjustment data other than data described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section will be released without the redaction or aggregation described in paragraphs (f)(2)(iii) and (f)(2)(iv) of this section, respectively.

(3) Risk adjustment data will not become available for release under this paragraph (f) unless—

(i) The risk adjustment reconciliation for the applicable payment year has been completed;

(ii) CMS determines that data release is necessary under paragraph (f)(1)(vi) of this section for emergency preparedness purposes before reconciliation; or

(iii) CMS determines that extraordinary circumstances exist to release the data before reconciliation.

PART 424—CONDITIONS FOR MEDICARE PAYMENT

■ 42. The authority citation for Part 424 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

■ 43. Section 424.11 is amended by revising paragraph (d)(5) to read as follows:

§ 424.11 General procedures.

(d) * * *
(5) For all inpatient hospital services, including inpatient psychiatric facility services, a delayed certification may not extend past discharge.

■ 44. Section 424.15 is amended by revising paragraph (b) to read as follows:

§ 424.15 Requirements for inpatient CAH services.

(b) Certification begins with the order for inpatient admission. All certification requirements must be completed, signed, and documented in the medical record no later than 1 day before the date on which the claim for payment for the inpatient CAH service is submitted.

PART 485—CONDITIONS OF PARTICIPATION: SPECIALIZED PROVIDERS

■ 45. The authority citation for Part 485 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395(hh)).

■ 46. Section 485.610 is amended by revising paragraph (b) introductory text and adding a new paragraph (b)(5) to read as follows:

§ 485.610 Conditions of participation: Status and location.

(b) *Standard: Location in a rural area or treatment as rural.* The CAH meets the requirements of either paragraph (b)(1) or (b)(2) of this section or the requirements of paragraph (b)(3), (b)(4), or (b)(5) of this section.

(5) Effective on or after October 1, 2014, for a period of 2 years beginning with the effective date of the most recent Office of Management and

Budget (OMB) standards for delineating statistical areas adopted by CMS, the CAH no longer meets the location requirements in either paragraph (b)(1) or (b)(2) of this section and is located in a county that, prior to the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, was located in a rural area as defined by OMB, but under the most recent OMB standards for delineating statistical areas adopted by CMS and the most recent Census Bureau data, is located in an urban area.

PART 488—SURVEY, CERTIFICATION, AND ENFORCEMENT PROCEDURES

■ 47. The authority citation for Part 488 continues to read as follows:

Authority: Secs. 1102, 1128I, and 1871 of the Social Security Act (42 U.S.C. 1302, 1320a-7j, and 1395(hh)); Pub. L. 110-149, 121 Stat. 1819.

■ 48. Section 488.61 is amended by—
■ a. Revising paragraphs (a)(4) and (c)(3).
■ b. Adding new paragraphs (f), (g), and (h).

The revisions and additions read as follows:

§ 488.61 Special procedures for approval and re-approval of organ transplant centers.

(4) CMS will consider mitigating factors in accordance with paragraphs (f), (g), and (h) of this section.

(3) CMS will consider mitigating factors in accordance with paragraphs (f), (g), and (h) of this section.

(f) *Consideration of mitigating factors in initial approval and re-approval survey, certification, and enforcement actions for transplant centers.*

(1) *Factors.* Except for situations of immediate jeopardy or deficiencies other than failure to meet requirements of § 488.80 or § 488.82, CMS will consider such mitigating factors as may be appropriate in light of the nature of the deficiency and circumstances, including (but not limited to) the following, in making a decision of initial and re-approval of a transplant center that does not meet the data submission, clinical experience, or outcome requirements:

- (i) The extent to which outcome measures are not met or exceeded;
- (ii) Availability of Medicare-approved transplant centers in the area;

(iii) Extenuating circumstances (for example, natural disaster) that have a temporary effect on meeting the conditions of participation;

(iv) Program improvements that substantially address root causes of graft failures or patient deaths, that have been implemented and institutionalized on a sustainable basis, and that are supported by outcomes more recent than the latest available SRTR report, for which there is a sufficient post-transplant patient and graft survival period and a sufficient number of transplants such that CMS finds that the program demonstrates present-day compliance with the requirements at § 482.80(c)(2)(ii)(C) or § 482.82(c)(2)(ii)(C) of this chapter;

(v) Whether the program has made extensive use of innovative transplantation practices relative to other transplant programs, such as a high rate of transplantation of individuals who are highly sensitized or children who have undergone a Fontan procedure compared to most other transplant programs, where CMS finds that the innovative practices are supported by evidence-based published research literature or nationally recognized standards or Institution Review Board (IRB) approvals, and the SRTR risk-adjustment methodology does not take the relevant key factors into consideration; and

(vi) Whether the program's performance, based on the OPTN method of calculating patient and graft survival, is within the OPTN's thresholds for acceptable performance and does not flag OPTN performance review under the applicable OPTN policy.

(2) *Content.* A request for consideration of mitigating factors must include sufficient information to permit an adequate review and understanding of the transplant program, the factors that have contributed to outcomes, program improvements or innovations that have been implemented or planned, and in the case of natural disasters, the recovery actions planned. Examples of information to be submitted with each request include (but are not limited to) the following:

(i) The name and contact information for the transplant hospital and the names and roles of key personnel of the transplant program;

(ii) The type of organ transplant program(s) for which approval is requested;

(iii) The conditions of participation that the program does not meet for which the transplant center is requesting CMS' review for mitigating factors;

(iv) The program's organizational chart with full-time equivalent levels, roles, and structure for reporting to hospital leadership;

(v) For applications involving substandard patient or graft survival, the rationale and supporting evidence for CMS' review includes, but is not limited to—

(A) Root Cause Analysis for patient deaths and graft failures, including factors the program has identified as likely causal or contributing factors for patient deaths and graft failures;

(B) Program improvements that have been implemented and improvements that are planned;

(C) Patient and donor/organ selection criteria and evaluation protocols, including methods for pre-transplant patient evaluation by cardiologists, hematologists, nephrologists, and psychiatrists or psychologists to the extent applicable;

(D) Waitlist management protocols and practices relevant to outcomes;

(E) Pre-operative management protocols and practices;

(F) Immunosuppression/infection prophylaxis protocols;

(G) Post-transplant monitoring and management protocols and practices;

(H) Quality Assessment and Performance Improvement (QAPI) Program meeting minutes from the most recent four meetings and attendance rosters for the most recent 12 months;

(I) Quality dashboard and other performance indicators; and

(J) The most recent data regarding transplants that have been made and for outcomes in terms of both patient survival and graft survival;

(vi) For mitigating factors requests based on innovative practice:

(A) A description of the innovations that have been implemented and identification of the specific cases for which the innovative practices are relevant so as to enable the patient and graft survival data for such cases to be compared with all other transplants for at least the period covered by the latest available SRTR report.

(B) The literature, research, or other evidentiary basis that supports consideration of the practice(s) as innovative.

(vii) For requests based on natural disasters or public health emergency:

(A) A description of the disaster or emergency, the specific impact on the program, the time periods of the event(s) and of its immediate recovery aftermath;

(B) Identification of the transplants that occurred during the period for which the request is being made; and

(C) The approximate date when the program believes it substantially

recovered from the event(s), or believes it will recover if substantial recovery has not been accomplished at the time of the request.

(3) *Timing.* Within 10 days after CMS has issued formal written notice of a condition-level deficiency to the program, CMS must receive notification of the program's intent to seek mitigating factors approval or re-approval, and receive all information for consideration of mitigating factors within 120 days of the CMS written notification for a deficiency due to data submission, clinical experience or outcomes at § 482.80 or § 482.82 of this chapter. Failure to meet these timeframes may be the basis for denial of mitigating factors. However, CMS may permit an extension of the timeline for good cause, such as a declared public health emergency.

(g) *Results of mitigating factors review.*

(1) *Actions.* Upon review of the request to consider mitigating factors, CMS may take the following actions:

(i) Approve initial approval or re-approval of a program's Medicare participation based upon approval of mitigating factors;

(ii) Deny the program's request for Medicare approval or re-approval based on mitigating factors.

(iii) Offer a time-limited Systems Improvement Agreement, in accordance with paragraph (h) of this section, when a transplant program has waived its appeal rights, has implemented substantial program improvements that address root causes and are institutionally supported by the hospital's governing body on a sustainable basis, and has requested more time to design or implement additional improvements or demonstrate compliance with CMS outcome requirements. Upon completion of the Systems Improvement Agreement or a CMS finding that the hospital has failed to meet the terms of the Agreement, CMS makes a final determination of whether to approve or deny a program's request for Medicare approval or re-approval based on mitigating factors. A Systems Improvement Agreement follows the process specified in paragraph (h) of this section.

(2) *Limitation.* CMS will not approve any program with a condition-level deficiency. However, CMS may approve a program with a standard-level deficiency upon receipt of an acceptable plan of correction.

(h) *Transplant Systems Improvement Agreement.* A Systems Improvement Agreement is a binding agreement, entered into voluntarily by the hospital

and CMS, through which CMS extends a prospective Medicare termination date and offers the program additional time to achieve compliance with the conditions of participation, contingent on the hospital's agreement to participate in a structured regimen of quality improvement activities, demonstrate improved outcomes, and waive the right to appeal termination based on the identified deficiency or deficiencies (that led to the Agreement) in consideration for more time to demonstrate compliance. In some cases, transplant programs may enter a period of inactivity—voluntarily, or imposed as a condition of the Systems Improvement Agreement.

(1) *Content.* In exchange for the additional time to initiate or continue activities to achieve compliance with the conditions of participation, the hospital must agree to a regimen of specified activities, including (but not limited to) all of the following:

(i) Patient notification about the degree and type of noncompliance by the program, an explanation of what the program improvement efforts mean for patients, and financial assistance to defray the out-of-pocket costs of copayments and testing expenses for any wait-listed individual who wishes to be listed with another program;

(ii) An external independent peer review team that conducts an onsite assessment of the program. The peer review must include—

(A) Review of policies, staffing, operations, relationship to hospital services, and factors that contribute to program outcomes;

(B) Suggestions for quality improvements the hospital should consider;

(C) Both verbal and written feedback provided directly to the hospital;

(D) Verbal debriefing provided directly to CMS; neither the hospital nor the peer review team is required to provide a written report to CMS; and

(E) Onsite review by a multidisciplinary team that includes a transplant surgeon with expertise in the relevant organ type(s), a transplant administrator, an individual with expertise in transplant QAPI systems, a social worker or psychologist or psychiatrist, and a specialty physician with expertise in conditions particularly relevant to the applicable organ type(s) such as a cardiologist, nephrologist, or hepatologist. Except for the transplant surgeon, CMS may permit substitution of one type of expertise for another individual who has expertise particularly needed for the type of challenges experienced by the program, such as substitution of an infection

control specialist in lieu of, or in addition to, a social worker;

(iii) An action plan that addresses systemic quality improvements and is updated after the onsite peer review;

(iv) An onsite consultant whose qualifications are approved by CMS, and who provides services for 8 days per month on average for the duration of the agreement, except that CMS may permit a portion of the time to be spent offsite and may agree to fewer consultant days each month after the first 3 months of the Systems Improvement Agreement;

(v) A comparative effectiveness analysis that compares policies, procedures, and protocols of the transplant program with those of other programs in areas of endeavor that are relevant to the center's current quality improvement needs;

(vi) Development of increased proficiency, or demonstration of current proficiency, with patient-level data from the Scientific Registry of Transplant Recipients and the use of registry data to analyze outcomes and inform quality improvement efforts;

(vii) A staffing analysis that examines the level, type, training, and skill of staff in order to inform transplant center efforts to ensure the engagement and appropriate training and credentialing of staff;

(viii) Activities to strengthen performance of the Quality Assessment and Performance Improvement Program to ensure full compliance with the requirements of § 482.96 and § 482.21 of this chapter;

(ix) Monthly (unless otherwise specified) reporting and conference calls with CMS regarding the status of programmatic improvements, results of the deliverables in the Systems Improvement Agreement, and the number of transplants, deaths, and graft failures that occur within 1 year post-transplant; and

(x) Additional or alternative requirements specified by CMS, tailored to the transplant program type and circumstances. CMS may waive the content elements at paragraphs (h)(1)(v), (h)(1)(vi), (h)(1)(vii), or (h)(1)(viii) of this section if it finds that the program has already adequately conducted the activity, the program is already proficient in the function, or the activity is clearly inapplicable to the deficiencies that led to the Agreement.

(2) *Timeframe.* A Systems Improvement Agreement will be established for up to a 12-month period, subject to CMS' discretion to determine if a shorter timeframe may suffice. At the hospital's request, CMS may extend

the agreement for up to an additional 6-month period.

Dated: July 24, 2014.

Marilyn Tavenner,

Administrator, Centers for Medicare & Medicaid Services.

Dated: July 29, 2014.

Sylvia M. Burwell,

Secretary, Department of Health and Human Services.

Note: The following Addendum and Appendixes will not appear in the Code of Federal Regulations.

Addendum—Schedule of Standardized Amounts, Update Factors, Rate-of-Increase Percentages Effective with Cost Reporting Periods Beginning on or after October 1, 2014, and Payment Rates for LTCHs Effective for Discharges Occurring on or after October 1, 2014

I. Summary and Background

In this Addendum, we are setting forth a description of the methods and data we used to determine the prospective payment rates for Medicare hospital inpatient operating costs and Medicare hospital inpatient capital-related costs for FY 2015 for acute care hospitals. We also are setting forth the rate-of-increase percentages for updating the target amounts for certain hospitals excluded from the IPPS for FY 2015. We note that, because certain hospitals excluded from the IPPS are paid on a reasonable cost basis subject to a rate-of-increase ceiling (and not by the IPPS), these hospitals are not affected by the figures for the standardized amounts, offsets, and budget neutrality factors. Therefore, in this final rule, we are establishing the rate-of-increase percentages for updating the target amounts for certain hospitals excluded from the IPPS that are effective for cost reporting periods beginning on or after October 1, 2014.

In addition, we are setting forth a description of the methods and data we used to determine the standard Federal rate that will be applicable to Medicare LTCHs for FY 2015.

In general, except for SCHs, MDHs and hospitals located in Puerto Rico, for FY 2015, each hospital's payment per discharge under the IPPS is based on 100 percent of the Federal national rate, also known as the national adjusted standardized amount. This amount reflects the national average hospital cost per case from a base year, updated for inflation.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: the Federal national rate (including, as discussed in section IV.F. of the preamble of this final rule,

uncompensated care payments under section 1886(r)(2) of the Act); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge.

We note that, as discussed in section IV.G. of the preamble of this final rule, section 1106 of Public Law 113–67, enacted on December 26, 2013, extended the MDH program from the end of FY 2013 (that is, for discharges occurring after September 30, 2013) through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of Public Law 113–93, enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Prior to the enactment of Public Law 113–67, the MDH program was only to be in effect through the end of FY 2013. Under current law, the MDH program will expire for discharges on or after April 1, 2015.

Under section 1886(d)(5)(G) of the Act, MDHs historically have been paid based on the Federal national rate or, if higher, the Federal national rate plus 50 percent of the difference between the Federal national rate and the updated hospital-specific rate based on FY 1982, FY 1987, or FY 2002 costs per discharge, whichever was higher. Section 5003(c) of Public Law 109–171 further required that MDHs be paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the updated

hospital-specific rate. Further, based on the provisions of section 5003(d) of Public Law 109–171, MDHs are no longer subject to the 12-percent cap on their DSH payment adjustment factor.

For hospitals located in Puerto Rico, the payment per discharge is based on the sum of 25 percent of an updated Puerto Rico-specific rate based on average costs per case of Puerto Rico hospitals for the base year and 75 percent of the Federal national rate. (We refer readers to section II.D.2. of this Addendum for a complete description.)

As discussed below in section II. of this Addendum, we are making changes in the determination of the prospective payment rates for Medicare inpatient operating costs for acute care hospitals for FY 2015. In section III. of this Addendum, we discuss our policy changes for determining the prospective payment rates for Medicare inpatient capital-related costs for FY 2015. In section IV. of this Addendum, we are setting forth our changes for determining the rate-of-increase limits for certain hospitals excluded from the IPPS for FY 2015. In section V. of this Addendum, we discuss policy changes for determining the standard Federal rate for LTCHs paid under the LTCH PPS for FY 2015. The tables to which we refer in the preamble of this final rule are listed in section VI. of this Addendum and are available via the Internet on the CMS Web site.

II. Changes to Prospective Payment Rates for Hospital Inpatient Operating Costs for Acute Care Hospitals for FY 2015

The basic methodology for determining prospective payment rates for hospital inpatient operating costs for acute care hospitals for FY 2005 and

subsequent fiscal years is set forth under § 412.64. The basic methodology for determining the prospective payment rates for hospital inpatient operating costs for hospitals located in Puerto Rico for FY 2005 and subsequent fiscal years is set forth under §§ 412.211 and 412.212. Below we discuss the factors we are using for determining the prospective payment rates for FY 2015.

In summary, the standardized amounts set forth in Tables 1A, 1B, and 1C that are listed and published in section VI. of this Addendum (and available via the Internet) reflect—

- Equalization of the standardized amounts for urban and other areas at the level computed for large urban hospitals during FY 2004 and onward, as provided for under section 1886(d)(3)(A)(iv)(II) of the Act.

- The labor-related share that is applied to the standardized amounts and Puerto Rico-specific standardized amounts to give the hospital the highest payment, as provided for under sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act. For FY 2015, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), there are four possible applicable percentage increases that can be applied to the national standardized amount. We refer readers to section IV.B. of the preamble of this final rule for a complete discussion on the FY 2015 inpatient hospital update. Below is a table with these four options:

FY 2015	Hospital submitted quality data and is a meaningful EHR User	Hospital submitted quality data and is NOT a meaningful EHR User	Hospital did NOT submit quality data and is a meaningful EHR User	Hospital did NOT submit quality data and is NOT a meaningful EHR User
Market Basket Rate-of-Increase	2.9	2.9	2.9	2.9
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	–0.725	–0.725
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	–0.725	0.0	–0.725
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	–0.5	–0.5	–0.5	–0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	–0.2	–0.2	–0.2	–0.2
Applicable Percentage Increase Applied to Standardized Amount	2.2	1.475	1.475	0.75

- An update of 2.2 percent to the Puerto Rico-specific standardized amount (that is, the FY 2015 estimate of the market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point), in accordance with

section 1886(d)(9)(C)(i) of the Act, as amended by section 401(c) of Public Law 108–173, which sets the update to the Puerto Rico-specific standardized amount equal to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act.

- An adjustment to the standardized amount to ensure budget neutrality for DRG recalibration and reclassification, as provided for under section 1886(d)(4)(C)(iii) of the Act.

- An adjustment to ensure the wage index changes are budget neutral, as

provided for under section 1886(d)(3)(E)(i) of the Act. We note that section 1886(d)(3)(E)(i) of the Act requires that when we compute such budget neutrality, we assume that the provisions of section 1886(d)(3)(E)(ii) of the Act (requiring a 62 percent labor-related share in certain circumstances) had not been enacted.

- An adjustment to ensure the effects of geographic reclassification are budget neutral, as provided for under section 1886(d)(8)(D) of the Act, by removing the FY 2014 budget neutrality factor and applying a revised factor.

- As discussed below and in section III. of the preamble of this final rule, an adjustment to offset the cost of the transitional wage index provisions provided by CMS as a result of the adoption of the new OMB labor market area delineations.

- An adjustment to ensure the effects of the rural community hospital demonstration program required under section 410A of Public Law 108–173, as amended by sections 3123 and 10313 of Public Law 111–148, which extended the demonstration program for an additional 5 years, are budget neutral as required under section 410A(c)(2) of Public Law 108–173.

- An adjustment to remove the FY 2014 outlier offset and apply an offset for FY 2015, as provided for under section 1886(d)(3)(B) of the Act.

- As discussed below and in section II.D. of the preamble of this final rule, a recoupment to meet the requirements of section 631 of ATRA to adjust the standardized amount to offset the estimated amount of the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110–90 until FY 2013.

Beginning in FY 2008, we applied the budget neutrality adjustment for the rural floor to the hospital wage indexes rather than the standardized amount. As we did for FY 2014, for FY 2015, consistent with current law, we are continuing to apply the rural floor budget neutrality adjustment to hospital wage indexes rather than the standardized amount. Also, consistent with section 3141 of the Affordable Care Act, instead of applying a State level rural floor budget neutrality adjustment to the wage index, we are applying a uniform, national budget neutrality adjustment to the FY 2015 wage index for the rural floor. We note that, in section III.G.2.b. of the preamble to this final rule, we are extending the imputed floor policy (both the original methodology and alternative methodology) for another year, through September 30, 2015.

Therefore, for FY 2015, in this final rule, we are continuing to include the imputed floor (calculated under the original and alternative methodologies) in calculating the uniform, national rural floor budget neutrality adjustment, which will be reflected in the FY 2015 wage index.

A. Calculation of the Adjusted Standardized Amount

1. Standardization of Base-Year Costs or Target Amounts

In general, the national standardized amount is based on per discharge averages of adjusted hospital costs from a base period (section 1886(d)(2)(A) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d) of the Act. For Puerto Rico hospitals, the Puerto Rico-specific standardized amount is based on per discharge averages of adjusted target amounts from a base period (section 1886(d)(9)(B)(i) of the Act), updated and otherwise adjusted in accordance with the provisions of section 1886(d)(9) of the Act. The September 1, 1983 interim final rule (48 FR 39763) contained a detailed explanation of how base-year cost data (from cost reporting periods ending during FY 1981) were established for urban and rural hospitals in the initial development of standardized amounts for the IPPS. The September 1, 1987 final rule (52 FR 33043 and 33066) contains a detailed explanation of how the target amounts were determined and how they are used in computing the Puerto Rico rates.

Sections 1886(d)(2)(B) and 1886(d)(2)(C) of the Act require us to update base-year per discharge costs for FY 1984 and then standardize the cost data in order to remove the effects of certain sources of cost variations among hospitals. These effects include case-mix, differences in area wage levels, cost-of-living adjustments for Alaska and Hawaii, IME costs, and costs to hospitals serving a disproportionate share of low-income patients.

In accordance with section 1886(d)(3)(E) of the Act, the Secretary estimates, from time-to-time, the proportion of hospitals' costs that are attributable to wages and wage-related costs. In general, the standardized amount is divided into labor-related and nonlabor-related amounts; only the proportion considered to be the labor-related amount is adjusted by the wage index. Section 1886(d)(3)(E) of the Act requires that 62 percent of the standardized amount be adjusted by the wage index, unless doing so would result in lower payments to a hospital

than would otherwise be made. (Section 1886(d)(9)(C)(iv)(II) of the Act extends this provision to the labor-related share for hospitals located in Puerto Rico.)

For FY 2015, we are using the national and Puerto Rico-specific labor-related and nonlabor-related shares established for FY 2014, using the FY 2010-based hospital market basket. Specifically, under section 1886(d)(3)(E) of the Act, the Secretary estimates, from time to time, the proportion of payments that are labor-related: “[T]he Secretary shall adjust the proportion, (as estimated by the Secretary from time to time) of hospitals' costs which are attributable to wages and wage-related costs, of the DRG prospective payment rates” We refer to the proportion of hospitals' costs that are attributable to wages and wage-related costs as the “labor-related share.” For FY 2015, as discussed in section III. of the preamble of this final rule, we are continuing to use a labor-related share of 69.6 percent for the national standardized amounts, and 63.2 percent for the Puerto Rico-specific standardized amount, if the hospital has a wage index value that is greater than 1.0000. Consistent with section 1886(d)(3)(E) of the Act, we are applying the wage index to a labor-related share of 62 percent of the national standardized amount for all IPPS hospitals whose wage index values are less than or equal to 1.0000. For all IPPS hospitals whose wage indexes are greater than 1.0000, we are applying the wage index to a labor-related share of 69.6 percent of the national standardized amount.

For FY 2015, all Puerto Rico hospitals have a wage index value that is less than 1.0000 because the average hourly rate of every hospital in Puerto Rico divided by the national average hourly rate (the sum of all salaries and hours for all hospitals in the 50 United States and Puerto Rico) results in a wage index that is below 1.0000. However, when we divide the average hourly rate of every hospital located in Puerto Rico by the Puerto Rico-specific national average hourly rate (the sum of all salaries and hours for all hospitals located only in Puerto Rico), we determine a Puerto Rico-specific wage index value for some hospitals that is either above, or below 1.0000, depending on the hospital's location within Puerto Rico. Therefore, for hospitals located in Puerto Rico, we are applying a labor-related share of 63.2 percent if its Puerto Rico-specific wage index is greater than 1.0000. For hospitals located in Puerto Rico whose Puerto Rico-specific wage index values are less than or equal to 1.0000, we are applying a labor share of 62 percent.

The standardized amounts for operating costs appear in Tables 1A, 1B, and 1C that are listed and published in section VI. of the Addendum to this final rule and are available via the Internet on the CMS Web site.

2. Computing the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(d)(3)(A)(iv)(II) of the Act requires that, beginning with FY 2004 and thereafter, an equal standardized amount be computed for all hospitals at the level computed for large urban hospitals during FY 2003, updated by the applicable percentage update. Section 1886(d)(9)(A)(ii)(II) of the Act equalizes the Puerto Rico-specific urban and rural area rates. Accordingly, we are calculating the FY 2015 national average standardized amount and Puerto Rico-specific standardized amount irrespective of whether a hospital is located in an urban or rural location.

3. Updating the National Average Standardized Amount and Puerto Rico-Specific Standardized Amount

Section 1886(b)(3)(B) of the Act specifies the applicable percentage increase used to update the standardized amount for payment for inpatient hospital operating costs. We note that, in compliance with section 404 of the MMA, in this final rule, we are using the revised and rebased FY 2010-based IPPS operating and capital market baskets for FY 2015 (which replaced the FY 2006-based IPPS operating and capital market baskets in FY 2014). As discussed in section IV.B. of the preamble of this final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, we are reducing the FY 2015 applicable percentage increase (which is based on IHS Global Insight, Inc.'s (IGI's) second quarter 2014 forecast of the FY 2010-based IPPS market basket) by the MFP adjustment (the 10-year moving average of MFP for the period ending FY 2015) of 0.5 percentage point, which is calculated based on IGI's second quarter 2014 forecast.

In addition, in accordance with section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are further updating the standardized amount for FY 2015 by the estimated market basket percentage increase less 0.2 percentage point for hospitals in all areas. Sections 1886(b)(3)(B)(xi) and (xii) of the Act, as added and amended by sections 3401(a) and 10319(a) of the Affordable Care Act, further state that these adjustments may result in the

applicable percentage increase being less than zero. The percentage increase in the market basket reflects the average change in the price of goods and services comprising routine, ancillary, and special care unit hospital inpatient services.

Based on IGI's 2014 second quarter forecast of the hospital market basket increase (as discussed in Appendix B of this final rule), the most recent forecast of the hospital market basket increase for FY 2015 is 2.9 percent. As discussed above, for FY 2015, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, there are four possible applicable percentage increases that could be applied to the standardized amount. We refer readers to section IV. of the preamble of this final rule for a complete discussion on the FY 2015 inpatient hospital update to the standardized amount. We also refer readers to the table above for the four possible applicable percentage increases that would be applied to update the national standardized amount. The standardized amounts shown in Tables 1A through 1C that are published in section VI. of this Addendum and that are available via the Internet on the CMS Web site reflect these differential amounts.

Section 401(c) of Public Law 108–173 amended section 1886(d)(9)(C)(i) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth under section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject to the IPPS). Accordingly, we are establishing an applicable percentage increase to the Puerto Rico-specific standardized amount of 2.2 percent for FY 2015.

Although the update factors for FY 2015 are set by law, we are required by section 1886(e)(4) of the Act to

recommend, taking into account MedPAC's recommendations, appropriate update factors for FY 2015 for both IPPS hospitals and hospitals and hospital units excluded from the IPPS. Section 1886(e)(5)(A) of the Act requires that we publish our proposed recommendations in the **Federal Register** for public comment. Our recommendation on the update factors is set forth in Appendix B of this final rule.

4. Other Adjustments to the Average Standardized Amount

As in the past, we are adjusting the FY 2015 standardized amount to remove the effects of the FY 2014 geographic reclassifications and outlier payments before applying the FY 2015 updates. We then apply budget neutrality offsets for outliers and geographic reclassifications to the standardized amount based on FY 2015 payment policies.

We do not remove the prior year's budget neutrality adjustments for reclassification and recalibration of the DRG relative weights and for updated wage data because, in accordance with sections 1886(d)(4)(C)(iii) and 1886(d)(3)(E) of the Act, estimated aggregate payments after updates in the DRG relative weights and wage index should equal estimated aggregate payments prior to the changes. If we removed the prior year's adjustment, we would not satisfy these conditions.

Budget neutrality is determined by comparing aggregate IPPS payments before and after making changes that are required to be budget neutral (for example, changes to MS–DRG classifications, recalibration of the MS–DRG relative weights, updates to the wage index, and different geographic reclassifications). We include outlier payments in the simulations because they may be affected by changes in these parameters.

In order to appropriately estimate aggregate payments in our modeling, we make several inclusions and exclusions so that the appropriate universe of claims and charges are included. We discuss IME Medicare Advantage payment amounts, fee-for-service only claims, and charges for anti-hemophilic blood factor and organ acquisition below.

Consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50433), because IME Medicare Advantage payments are made to IPPS hospitals under section 1886(d) of the Act, we believe these payments must be part of these budget neutrality calculations. However, we note that it is

not necessary to include Medicare Advantage IME payments in the outlier threshold calculation or the outlier offset to the standardized amount because the statute requires that outlier payments be not less than 5 percent nor more than 6 percent of total “operating DRG payments,” which does not include IME and DSH payments. We refer readers to the FY 2011 IPPS/LTCH PPS final rule for a complete discussion on our methodology of identifying and adding the total Medicare Advantage IME payment amount to the budget neutrality adjustments.

In addition, consistent with the methodology in the FY 2012 IPPS/LTCH PPS final rule, in order to ensure that we capture only fee-for-service claims, we are only including claims with a “Claim Type” of 60 (which is a field on the MedPAR file that indicates a claim is a fee-for-service claim).

Finally, consistent with our methodology established in the FY 2011 IPPS/LTCH PPS final rule (75 FR 50422 through 50423), we examined the MedPAR file and removed pharmacy charges for anti-hemophilic blood factor (which are paid separately under the IPPS) with an indicator of “3” for blood clotting with a revenue code of “0636” from the covered charge field for the budget neutrality adjustments. We also removed organ acquisition charges from the covered charge field for the budget neutrality adjustments because organ acquisition is a pass-through payment not paid under the IPPS.

The Bundled Payments for Care Improvement (BPCI) initiative, developed under the authority of section 3021 of the Affordable Care Act (codified at section 1115A of the Act), is comprised of four broadly defined models of care, which link payments for multiple services beneficiaries receive during an episode of care. Under the BPCI initiative, organizations enter into payment arrangements that include financial and performance accountability for episodes of care. On January 31, 2013, CMS announced the health care organizations selected to participate in the BPCI initiative. For additional information on the BPCI initiative, we refer readers to the CMS Center for Medicare and Medicaid Innovation’s Web site at: <http://innovation.cms.gov/initiatives/Bundled-Payments/index.html>.

In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53341 through 53343), for FY 2013 and subsequent fiscal years, we finalized a methodology to treat hospitals that participate in the BPCI initiative the same as prior fiscal years for the IPPS payment modeling and ratesetting process (which includes

recalibration of the MS-DRG relative weights, ratesetting, calculation of the budget neutrality factors, and the impact analysis) without regard to a hospital’s participation within these bundled payment models (that is, as if they are not participating in those models under the BPCI initiative). Therefore, for FY 2015, as discussed in section II.H.4. of the preamble to this final rule, as we proposed, we are continuing to include all applicable data from subsection (d) hospitals participating in BPCI Models 1, 2, and 4 in our IPPS payment modeling and ratesetting calculations. We refer readers to the FY 2013 IPPS/LTCH PPS final rule for a complete discussion on our final policy for the treatment of hospitals in the BPCI initiative in our ratesetting process.

The Affordable Care Act established the Hospital Readmissions Reduction Program and the Hospital VBP Program which adjust payments to certain IPPS hospitals beginning with discharges on or after October 1, 2012. Because the adjustments made under these programs affect the estimation of aggregate IPPS payments, in this final rule, consistent with our methodology established in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688), we believe that it is appropriate to include adjustments for these programs within our budget neutrality calculations. We discuss the treatment of these two programs in the context of budget neutrality adjustments below.

Section 1886(q) of the Act establishes the “Hospital Readmissions Reduction Program” effective for discharges from an “applicable hospital” beginning on or after October 1, 2012, under which payments to those hospitals under section 1886(d) of the Act are reduced to account for certain excess readmissions. Under the Hospital Readmissions Reduction Program, for discharges beginning on October 1, 2012 discharges from an “applicable hospital” are paid at an amount equal to the product of the “base operating DRG payment amount” and an “adjustment factor” that accounts for excess readmissions for the hospital for the fiscal year plus any applicable add-on payments. We refer readers to section IV.H. of the preamble of this final rule for full details of our implementation of and FY 2015 policy changes to the Hospital Readmissions Reduction Program. We also note that the Hospital Readmissions Reduction Program provided for under section 1886(q) of the Act is not budget neutral.

Section 1886(o) of the Act requires the Secretary to establish a Hospital VBP Program under which, for discharges beginning on October 1, 2012, value-

based incentive payments are made in a fiscal year to eligible subsection (d) hospitals that meet performance standards established for a performance period for that fiscal year. As specified under section 1886(o)(7)(B)(i) of the Act, these value-based incentive payments are funded by a reduction applied to each eligible hospital’s base-operating DRG payment amount, for each discharge occurring in the fiscal year. As required by section 1886(o)(7)(A) of the Act, the total amount of allocated funds available for value-based incentive payments with respect to a fiscal year is equal to the total amount of base-operating DRG payment reductions, as estimated by the Secretary. In a given fiscal year, hospitals may earn a value-based incentive payment amount for a fiscal year that is greater than, equal to, or less than the reduction amount, based on their performance on quality measures under the Hospital VBP Program. Thus, the Hospital VBP Program is estimated to have no net effect on overall payments. We refer readers to section IV.I. of the preamble of this final rule for full details regarding the Hospital VBP Program.

Both the hospital readmissions payment adjustment (reduction) and the hospital VBP payment adjustment (redistribution) are applied on a claim-by-claim basis by adjusting, as applicable, the base-operating DRG payment amount for individual subsection (d) hospitals, which affects the overall sum of aggregate payments on each side of the comparison within the budget neutrality calculations. For example, when we calculate the budget neutrality factor for MS-DRG reclassification and recalibration of the relative weights, we compare aggregate payments estimated using the prior year’s GROUPER and relative weights to estimated payments using the new GROUPER and relative weights. (We refer readers to section II.A.4.a. of this Addendum for full details.) Other factors, such as the DSH and IME payment adjustments, are the same on both sides of the comparison because we are only seeking to ensure that aggregate payments do not increase or decrease as a result of the changes of MS-DRG reclassification and recalibration.

In order to properly determine aggregate payments on each side of the comparison, as we did for FY 2014, for FY 2015 and subsequent years, we are continuing to apply the hospital readmissions payment adjustment and the hospital VBP payment adjustment on each side of the comparison, consistent with the methodology that

we adopted in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53687 through 53688). That is, we are applying the readmissions payment adjustment factor and the hospital VBP payment adjustment factor on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

For the purpose of calculating the FY 2015 readmissions payment adjustment factors, we are using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the prior fiscal year's applicable period because hospitals have had the opportunity to review and correct these data before the data were made public under the policy we adopted regarding the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act. For FY 2015, in this final rule, we are calculating the readmissions payment adjustment factors using excess readmission ratios and aggregate payments for excess readmissions based on admissions from the finalized applicable period for FY 2015 as hospitals have had the opportunity to review and correct these data under our policy regarding the reporting of hospital-specific readmission rates consistent with section 1886(q)(6) of the Act. We discuss our policy regarding the reporting of hospital-specific readmission rates for FY 2015 in section IV.H.3.f. of the preamble of this final rule. (For additional information on our general policy for the reporting of hospital-specific readmission rates, consistent with section 1886(q)(6) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53399 through 53400).)

In addition, for FY 2015, in this final rule, for the purpose of modeling aggregate payments when determining all budget neutrality factors, we are using proxy hospital VBP payment adjustment factors for FY 2015 that are based on data from a historical period because hospitals have not yet had an opportunity to review and submit corrections for their data from the FY 2015 performance period. (For additional information on our policy regarding the review and correction of hospital-specific measure rates under the Hospital VBP Program, consistent with section 1886(o)(10)(A)(ii) of the Act, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53578 through 53581), the CY 2012 OPSS/ASC final rule with comment period (76 FR 74544 through 74547), and the Hospital Inpatient VBP final rule (76 FR 26534 through 26536).)

The Affordable Care Act also established section 1886(r) of the Act, which modifies the methodology for computing the Medicare DSH payment adjustment beginning in FY 2014. Beginning in FY 2014, IPPS hospitals receiving Medicare DSH payment adjustments will receive an empirically justified Medicare DSH payment equal to 25 percent of the amount that would previously have been received under the current statutory formula set forth under section 1886(d)(5)(F) of the Act governing the Medicare DSH payment adjustment. In accordance with section 1886(r)(2) of the Act, the remaining amount, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured, will be available to make additional payments to Medicare DSH hospitals based on their share of the total amount of uncompensated care reported by Medicare DSH hospitals for a given time period. In order to properly determine aggregate payments on each side of the comparison for budget neutrality, prior to FY 2014, we included estimated Medicare DSH payments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

To do this for FY 2015 and subsequent years (as we did for FY 2014), we are including estimated empirically justified Medicare DSH payments that will be paid in accordance with section 1886(r)(1) of the Act and estimates of the additional uncompensated care payments made to hospitals receiving Medicare DSH payment adjustments as described by section 1886(r)(2) of the Act. That is, we are considering estimated empirically justified Medicare DSH payments at 25 percent of what would otherwise have been paid, and also the estimated additional uncompensated care payments for hospitals receiving Medicare DSH payment adjustments on both sides of our comparison of aggregate payments when determining all budget neutrality factors described in section II.A.4. of this Addendum.

We note that, when calculating total payments for budget neutrality, to determine total payments for SCHs we model total hospital-specific rate payments and total Federal rate payments and then include whichever one of the total payments is greater. As discussed in section IV.F. of the preamble to this final rule and below, we are continuing the FY 2014 finalized methodology under which we will take

into consideration uncompensated care payments in the comparison of payments under the Federal rate and the hospital-specific rate for SCHs. Therefore, we are including estimated uncompensated care payments in this comparison.

Similarly, for MDHs, as discussed in section IV. of the preamble to this final rule, when computing payments under the Federal national rate plus 75 percent of the difference between the payments under the Federal national rate and the payments under the updated hospital-specific rate, we are continuing to take into consideration uncompensated care payments in the computation of payments under the Federal rate and the hospital-specific rate for MDHs.

Also, for FY 2015, as of the time of development of this final rule, CMS has yet to finalize a list of hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act. Therefore, we are not including this adjustment to the standardized amount (for those hospitals that are not meaningful EHR users) in our modeling of aggregate payments for budget neutrality for FY 2015. CMS intends to release a final list of hospitals that are not meaningful EHR users in September 2014. Hospitals identified on this list will be paid based on the applicable standardized amount in Tables 1A and 1B for discharges occurring in FY 2015.

We finally note that the wage index value is calculated and assigned to a hospital based on the hospital's labor market area. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core-Based Statistical Areas (CBSAs) established by the Office of Management and Budget (OMB). The current statistical areas used in FY 2014 are based on OMB standards published on December 27, 2000 (65 FR 82228) and Census 2000 data and Census Bureau population estimates for 2007 and 2008 (OMB Bulletin No. 10-02). For purposes of determining all of the FY 2014 budget neutrality factors, we determined aggregate payments on each side of the comparison for our budget neutrality calculations using wage indexes based on the current CBSAs.

As stated in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27552) and final rule (78 FR 50586), on February 28, 2013, OMB issued OMB Bulletin No. 13-01, which established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. In order to implement these changes for the IPPS, it was necessary to identify the

new OMB labor market area delineation for each county and hospital in the country. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50586), we stated that we intended to propose changes to the wage index policy based on the new OMB delineations in the FY 2015 IPPS/LTCH PPS proposed rule. As discussed in section III. of the preamble of this final rule, as we proposed, we are adopting the new OMB labor market area delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index.

Consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality calculations, we are using wage indexes based on the new OMB delineations in the determination of all of the budget neutrality factors discussed below (with the exception of the transitional budget neutrality factor and outlier threshold as explained below). We also note that, consistent with past practice as finalized in the FY 2005 IPPS final rule (69 FR 49034), we are not adopting the new OMB delineations themselves in a budget neutral manner. We continue to believe that the revision to the labor market areas in and of itself does not constitute an “adjustment or update” to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act.

a. Recalibration of MS–DRG Relative Weights and Updated Wage Index—Budget Neutrality Adjustment

Section 1886(d)(4)(C)(iii) of the Act specifies that, beginning in FY 1991, the annual DRG reclassification and recalibration of the relative weights must be made in a manner that ensures that aggregate payments to hospitals are not affected. As discussed in section II.H. of the preamble of this final rule, we normalized the recalibrated MS–DRG relative weights by an adjustment factor so that the average case relative weight after recalibration is equal to the average case relative weight prior to recalibration. However, equating the average case relative weight after recalibration to the average case relative weight before recalibration does not necessarily achieve budget neutrality with respect to aggregate payments to hospitals because payments to hospitals are affected by factors other than average case relative weight. Therefore, as we have done in past years, we are making a budget neutrality adjustment to ensure that the requirement of section 1886(d)(4)(C)(iii) of the Act is met.

Section 1886(d)(3)(E)(i) of the Act requires us to update the hospital wage index on an annual basis beginning October 1, 1993. This provision also requires us to make any updates or adjustments to the wage index in a manner that ensures that aggregate payments to hospitals are not affected by the change in the wage index. Section 1886(d)(3)(E)(i) of the Act requires that we implement the wage index adjustment in a budget neutral manner. However, section 1886(d)(3)(E)(ii) of the Act sets the labor-related share at 62 percent for hospitals with a wage index less than or equal to 1.0000, and section 1886(d)(3)(E)(i) of the Act provides that the Secretary shall calculate the budget neutrality adjustment for the adjustments or updates made under that provision as if section 1886(d)(3)(E)(ii) of the Act had not been enacted. In other words, this section of the statute requires that we implement the updates to the wage index in a budget neutral manner, but that our budget neutrality adjustment should not take into account the requirement that we set the labor-related share for hospitals with wage indexes less than or equal to 1.0000 at the more advantageous level of 62 percent. Therefore, for purposes of this budget neutrality adjustment, section 1886(d)(3)(E)(i) of the Act prohibits us from taking into account the fact that hospitals with a wage index less than or equal to 1.0000 are paid using a labor-related share of 62 percent. Consistent with current policy, for FY 2015, we are adjusting 100 percent of the wage index factor for occupational mix. We describe the occupational mix adjustment in section III.F. of the preamble of this final rule.

For FY 2015, to comply with the requirement that MS–DRG reclassification and recalibration of the relative weights be budget neutral for the Puerto Rico standardized amount and the hospital-specific rates, we used FY 2013 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, the FY 2014 relative weights, and the FY 2014 pre-reclassified wage data, and applied the FY 2015 hospital readmissions payment adjustments and estimated FY 2015 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, the FY 2015 relative weights, and the FY 2014 pre-reclassified wage data, and applied the same hospital readmissions payment

adjustments and estimated hospital VBP payment adjustments applied above.

Based on this comparison, we computed a budget neutrality adjustment factor equal to 0.997543. As discussed in section IV. of this Addendum, we also are applying the MS–DRG reclassification and recalibration budget neutrality factor of 0.997543 to the hospital-specific rates that are effective for cost reporting periods beginning on or after October 1, 2014.

Comment: Several commenters stated that CMS miscalculated the MS–DRG reclassification and recalibration budget neutrality adjustment factor presented in the proposed rule. The commenters noted that the budget neutrality adjustment factor of 0.992938 presented in the proposed rule was much lower than historical levels. The commenters also noted that, for the last 5 years, the budget neutrality adjustment factor has been between 0.996731 (FY 2011) and 0.998431 (FY 2013). In addition, the commenters informed CMS that they attempted to replicate the calculation of this budget neutrality adjustment factor, but were unable to do so. The commenters added that in May of 2014, CMS posted a revised set of MS–DRG relative weights on the CMS Web site via the Internet because a number of postacute care transfer-adjusted cases for certain MS–DRGs presented in the FY 2015 IPPS/LTCH PPS proposed rule were inadvertently miscalculated. However, the commenters stated that they were still not able to verify the budget neutrality adjustment factor using the updated MS–DRG relative weights. The commenters stated that, by using the revised MS–DRGs, they calculated a revised budget neutrality adjustment factor of 1.000301. The commenters recommended that CMS examine the calculation of the budget neutrality adjustment factor and, if necessary, revise the budget neutrality adjustment factor for the FY 2015 IPPS/LTCH PPS final rule.

One commenter recommended that CMS perform an analysis to confirm whether the proposed MS–DRG reclassification and recalibration budget neutrality adjustment factor is accurate and correct. The commenter also recommended that CMS discuss the results of its analysis in the final rule and afford interested parties a further opportunity to review and comment on the final budget neutrality adjustment factor before it becomes effective on October 1, 2014.

Response: We appreciate the commenters’ input. As the commenters requested, we examined the calculation of the budget neutrality adjustment

factor presented in the proposed rule. We agree with the commenters that the MS-DRG reclassification and recalibration budget neutrality adjustment factor was calculated incorrectly during the development of the proposed rule due to the inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS-DRGs. Using the updated MS-DRG relative weights, we calculated a revised proposed budget neutrality adjustment factor similar to the factor calculated by the commenters. For FY 2015, in this final rule, using accurate postacute care transfer-adjusted cases for these MS-DRGs, we have calculated a MS-DRG reclassification and recalibration budget neutrality factor of 0.997543, which is consistent with historical levels.

In response to the commenters' concerns regarding verifying the accuracy of the budget neutrality adjustment factor, we announced through information posted via the Internet on the CMS Web site at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY2015-IPPS-Proposed-Rule-Home-Page-Items/FY2015-IPPS-Proposed-Rule-Data-Files.html> that there was an inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS-DRGs. Therefore, after the publication of the FY 2015 IPPS/LTCH PPS proposed rule, we also posted via the Internet on the CMS Web site a revised table of the proposed MS-DRG relative weights for FY 2015. It is our goal to strive for accuracy in regard to our adjustment factor calculations, and we appreciate the commenters' recognition of the mistake and for pointing out the effects of the miscalculation during the comment period. However, we believe that the 60-day comment period affords the public an appropriate opportunity to review and comment on all of the proposals presented throughout the entire FY 2015 IPPS/LTCH PPS proposed rule. We are not changing our proposed policy in calculating this budget neutrality adjustment, but rather are using corrected information. Therefore, we do not believe that an additional opportunity for comment necessary.

Comment: The commenter also noted that CMS did not explicitly state which labor-related share percentages were used in the calculation of the MS-DRG reclassification and recalibration budget neutrality adjustment factor. In addition, the commenter did not believe that it was appropriate to use the new OMB delineations in the calculation of the MS-DRG reclassification and recalibration budget neutrality

adjustment factor. The commenter requested that CMS address why it is appropriate to apply the new OMB delineations in the MS-DRG reclassification and recalibration budget neutrality adjustment factor and how and whether the new OMB delineations impact the calculation of the final budget neutrality adjustment factor. The commenter also requested that CMS identify which labor-related share percentages were in each component of the payment simulation model used to calculate the final budget neutrality adjustment factor.

Response: As discussed in section III.B.(2)(e)(6) of the preamble of this final rule and consistent with past practice (69 FR 49034), we are not adopting the new OMB delineations, in and of themselves, in a budget neutral manner. However, we are adopting the transitional policies we have effectuated in a budget neutral manner as we describe below. We do not believe that the revision to the labor market areas in and of itself constitutes an "adjustment or update" to the adjustment for area wage differences, as provided under section 1886(d)(3)(E) of the Act. Therefore, the new OMB delineations did not impact the calculation of the final budget neutrality adjustment factor. Also, as stated in the FY 2015 IPPS/LTCH PPS proposed rule and above, consistent with our policy to adopt the new OMB delineations, in order to properly determine aggregate payments on each side of the comparison for our budget neutrality adjustment factor calculations, we are using wage indexes based on the new OMB delineations in the determination of all of the budget neutrality adjustment factors discussed below (with the exception of the transitional budget neutrality factor and outlier fixed-loss threshold as explained below).

We also did not include the labor-related share percentages used in the calculation of the proposed MS-DRG reclassification and recalibration budget neutrality adjustment factor presented in the proposed rule. For FY 2015, in this final rule, as requested by the commenters, we present the labor-related share percentages used in the calculation of the budget neutrality adjustment factor in response to public comments we received in the discussion above, which are the same labor-related share percentages used for the proposed rule.

In order to meet the statutory requirements that we do not take into account the labor-related share of 62 percent when computing wage index budget neutrality adjustment factor, it

was necessary to use a three-step process to comply with the requirements that MS-DRG reclassification and recalibration of the relative weights and the updated wage index and labor-related share have no effect on aggregate payments for IPPS hospitals. Under the first step, we determined an MS-DRG reclassification and recalibration budget neutrality adjustment factor of 0.997543 (by using the same methodology described above to determine the MS-DRG reclassification and recalibration budget neutrality factor for the Puerto Rico standardized amount and hospital-specific rates). Under the second step, to compute a budget neutrality adjustment factor for wage index and labor-related share percentage changes we used FY 2013 discharge data to simulate payments and compared the following:

- Aggregate payments using the new OMB labor market area delineations for FY 2015, FY 2015 relative weights and the FY 2014 pre-reclassified wage indexes, applied the FY 2014 labor-related share of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the FY 2015 hospital readmissions payment adjustment and the FY 2015 estimated hospital VBP payment adjustment; and
- Aggregate payments using the new OMB labor market area delineations for FY 2015, FY 2015 relative weights and the FY 2015 pre-reclassified wage indexes, applied the labor-related share for FY 2015 of 69.6 percent to all hospitals (regardless of whether the hospital's wage index was above or below 1.0000), and applied the same FY 2015 hospital readmissions payment adjustments and estimated FY 2015 hospital VBP payment adjustments applied above.

In addition, we applied the MS-DRG reclassification and recalibration budget neutrality adjustment factor (derived in the first step) to the payment rates that were used to simulate payments for this comparison of aggregate payments from FY 2014 to FY 2015. By applying this methodology, we determined a budget neutrality adjustment factor of 1.001443 for changes to the wage index. Finally, we multiplied the MS-DRG reclassification and recalibration budget neutrality adjustment factor of 0.997543 (derived in the first step) by the budget neutrality adjustment factor of 1.001443 for changes to the wage index (derived in the second step) to determine the MS-DRG reclassification and recalibration and updated wage index budget neutrality adjustment factor of 0.998982.

b. Reclassified Hospitals—Budget Neutrality Adjustment

Section 1886(d)(8)(B) of the Act provides that certain rural hospitals are deemed urban. In addition, section 1886(d)(10) of the Act provides for the reclassification of hospitals based on determinations by the MGCRB. Under section 1886(d)(10) of the Act, a hospital may be reclassified for purposes of the wage index.

Under section 1886(d)(8)(D) of the Act, the Secretary is required to adjust the standardized amount to ensure that aggregate payments under the IPPS after implementation of the provisions of sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are equal to the aggregate prospective payments that would have been made absent these provisions. We note that the wage index adjustments provided for under section 1886(d)(13) of the Act are not budget neutral. Section 1886(d)(13)(H) of the Act provides that any increase in a wage index under section 1886(d)(13) shall not be taken into account in “applying any budget neutrality adjustment with respect to such index” under section 1886(d)(8)(D) of the Act. To calculate the budget neutrality adjustment factor for FY 2015, we used FY 2013 discharge data to simulate payments and compared the following:

- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, FY 2015 relative weights, and FY 2015 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act, and applied the FY 2015 hospital readmissions payment adjustments and the estimated FY 2015 hospital VBP payment adjustments; and
- Aggregate payments using the FY 2014 labor-related share percentages, the new OMB labor market area delineations for FY 2015, FY 2015 relative weights, and FY 2015 wage data after such reclassifications, and applied the same hospital readmissions payment adjustments and the estimated hospital VBP payment adjustments applied above.

We note that the reclassifications applied under the second simulation and comparison are those listed in Tables 9A2 and 9C2, which are posted on the CMS Web site. These tables reflect reclassification crosswalks based on the new OMB labor market area delineations for FY 2015, and apply the policies explained in section III. of the preamble to this final rule. Based on these simulations, we calculated a budget neutrality adjustment factor of 0.990406 to ensure that the effects of

these provisions are budget neutral, consistent with the statute.

The FY 2015 budget neutrality adjustment factor was applied to the standardized amount after removing the effects of the FY 2014 budget neutrality adjustment factor. We note that the FY 2015 budget neutrality adjustment reflects FY 2015 wage index reclassifications approved by the MGCRB or the Administrator.

c. Rural Floor Budget Neutrality Adjustment

Under § 412.64(e)(4), we make an adjustment to the wage index to ensure that aggregate payments after implementation of the rural floor under section 4410 of the BBA (Pub. L. 105–33) and the imputed floor under § 412.64(h)(4) are equal to the aggregate prospective payments that would have been made in the absence of such provisions. Consistent with section 3141 of the Affordable Care Act and as discussed in section III.G. of the preamble of this final rule and codified at § 412.64(e)(4)(ii), the budget neutrality adjustment for the rural and imputed floor is a national adjustment to the wage index.

As noted above and as discussed in section III.G.2.b. of the preamble of this final rule, in the FY 2012 IPPS/LTCH PPS final rule, we extended the imputed floor calculated under the original methodology through FY 2013 (76 FR 51594). In the FY 2013 IPPS/LTCH PPS final rule, we established an alternative methodology for calculating the imputed floor and established a policy that the minimum wage index value for an all-urban state would be the higher of the value determined under the original methodology or the value computed using the alternative methodology (77 FR 53368 through 53369). Consistent with the methodology for treating the imputed floor, similar to the methodology we used in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53368 through 53369), we included this alternative methodology for computing the imputed floor index in the calculation of the uniform, national rural floor budget neutrality adjustment for FY 2014. For FY 2015, as discussed in section III.G.2.b. of the preamble of this final rule, we are extending the imputed floor using the higher of the value determined under the original methodology or the alternative methodology for FY 2015. Therefore, in order to ensure that aggregate payments to hospitals are not affected, similar to prior years, we will follow our policy of including the imputed floor in the rural floor budget neutrality adjustment to the wage index.

As discussed above, for FY 2015, we are implementing the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13–01, effective for the FY 2015 IPPS wage index. Therefore, the budget neutrality adjustment for the rural floor and imputed floor will be calculated using the new OMB delineations.

Under the OMB delineations used for FY 2014, the imputed floor (both the original methodology and alternative methodology) was applied to New Jersey and Rhode Island because these were the only two all-urban States. Under OMB’s 2010 revised delineations based on Census 2010 data, in addition to New Jersey and Rhode Island, Delaware will become an all-urban state. Therefore, for FY 2015, the imputed floor will be applied to the wage index for hospitals located in New Jersey, Rhode Island, and Delaware.

Similar to our calculation in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593 and 51788), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53689), and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50975 through 50976), for FY 2015, we are calculating a national rural Puerto Rico wage index (used to adjust the labor-related share of the national standardized amount for hospitals located in Puerto Rico which receive 75 percent of the national standardized amount) and a rural Puerto Rico-specific wage index (which is used to adjust the labor-related share of the Puerto Rico-specific standardized amount for hospitals located in Puerto Rico that receive 25 percent of the Puerto Rico-specific standardized amount). Because there are no rural Puerto Rico hospitals with established wage data, our calculation of the FY 2015 rural Puerto Rico wage index is based on the policy adopted in the FY 2008 IPPS final rule with comment period (72 FR 47323). That is, we will use the unweighted average of the wage indexes from all CBSAs (urban areas) that are contiguous (share a border with) to the rural counties to compute the rural floor (72 FR 47323; 76 FR 51594). Under the new OMB labor market area delineations, except for Arecibo, Puerto Rico (CBSA 11640), all other Puerto Rico urban areas are contiguous to a rural area. Therefore, based on our existing policy, the FY 2015 rural Puerto Rico wage index is calculated based on the average of the FY 2015 wage indexes for the following urban areas: Aguadilla-Isabela, PR (CBSA 10380); Guayama, PR (CBSA 25020); Mayaguez, PR (CBSA 32420); Ponce, PR (CBSA 38660), San German, PR (CBSA 41900) and San Juan-Carolina-Caguas, PR (CBSA 41980).

To calculate the national rural floor and imputed floor budget neutrality adjustment factors and the Puerto Rico-specific rural floor budget neutrality adjustment factor, we used FY 2013 discharge data to simulate payments, the FY 2015 new OMB labor market area delineations, and post-reclassified national and Puerto Rico-specific wage indexes and compared the following:

- The national and Puerto Rico-specific simulated payments without the national rural floor and imputed floor and Puerto Rico-specific rural floor applied; and
- The national and Puerto Rico-specific simulated payments with the national rural floor and imputed floor and Puerto Rico-specific rural floor applied.

Based on this comparison, we determined a national rural budget neutrality adjustment factor of 0.989507 and the Puerto Rico-specific budget neutrality adjustment factor of 0.991291. The national adjustment was applied to the national wage indexes to produce a national rural floor budget neutral wage index and the Puerto Rico-specific adjustment was applied to the Puerto Rico-specific wage indexes to produce a Puerto Rico-specific rural floor budget neutral wage index.

Comment: Many commenters opposed the continued application of a nationwide rural floor budget neutrality adjustment. Some commenters noted that under the current rural floor policy, all hospitals located in Massachusetts are eligible for the rural floor wage index as a result of one rural hospital, which resulted in an approximate 4.9 percent increase in payments for hospitals located in Massachusetts and creates a disparity when considering the wage index of other hospitals around the country. The commenters also noted that under the rural floor policy, hospitals located in California will also receive an increase in payments of approximately \$196 million as a result of the application of the rural floor policy. The commenters stated that the adverse consequences of applying a nationwide rural floor budget neutrality adjustment have been recognized by CMS, MedPAC, and many others over the past several years. The commenters believed that the Medicare wage index system cannot accomplish its objective of ensuring that payments for the wage component of labor accurately reflect actual wage costs until this policy is corrected. Other commenters recommended that CMS consider applying the rural floor budget neutrality adjustment through a State-specific budget neutrality adjustment factor, as CMS has previously applied.

Response: We appreciate the commenters' input and for informing us of their concerns. Section 3141 of Public Law 111-148 requires that a national budget neutrality adjustment be applied in implementing the rural floor policy. Therefore, absent a legislative change enacted by Congress, we are unable to change the rural floor budget neutrality adjustment from a national to a State-specific adjustment.

Comment: Some commenters recommended that CMS consider implementing a policy under the IPPS and the OPSS that would result in only hospitals located in rural areas being included in the statewide rural floor wage index used for urban hospitals located in areas with wage indexes that are lower than the statewide rural wage index. The commenters believed that such a policy would prevent urban hospitals from reclassifying to rural status simply to improve the rural wage index, which might be used as a floor for urban hospitals located in areas of a State that have lower wage index values. The commenters added that they believed that CMS has the regulatory authority to make such a policy change without the enactment of Congressional legislation.

Another commenter recommended that, for FY 2015, CMS require States to have at least 5 percent of their PPS hospitals physically located in rural areas as a prerequisite for establishing a rural floor wage index for each State. The commenter believed that this would ensure the original intent of the rural floor policy, which is to serve as an equalizer, and would protect the policy from being used as a manipulation tool that allows a handful of hospitals in one isolated area of the State to dictate the wage index for a major Metropolitan area.

In addition, the same commenter urged CMS to create a national hospital wage index floor of 0.91. The commenter explained that this would reduce current disparities between hospitals. The commenter also stated that the purpose of the hospital area wage index is to fairly account for labor costs incurred by providers, and not to reward "winners" or punish "losers" as a result of reclassifications and a proliferation of other modifications. The commenter further noted that it recognized that there is growing interest from MedPAC and others regarding revising the hospital area wage index system, but acknowledged that such revisions take time. Therefore, the commenter believed that a hospital rural floor wage index is appropriate until CMS creates a system that better reflects the realities of today's healthcare system

and levels the playing field for all Medicare providers.

Response: We appreciate the commenters' input. We did not make any proposals to change the rural floor wage index policy. Any changes to this policy would first need to be proposed through rulemaking. Consequently, we are not making any changes to address the commenters' concerns at this time. With respect to the commenter who recommended that CMS establish a national hospital wage index floor of 0.91, we do not believe that there is any statistical basis to support this calculation. In addition, we are unclear how such a wage index floor policy could be implemented nor do we believe that this suggestion meets the requirement of the statute. With respect to the other commenters' suggestions, we first need to determine if the revised policy that the commenters suggested would be inconsistent with any longstanding policy or statutory requirement. We will consider the commenters' suggestions in future rulemaking.

Comment: One commenter requested that CMS provide an updated, detailed, State-specific analysis of the effect of a nationwide rural floor budget neutrality adjustment. The commenter specifically noted the estimated "windfall" expected to be received by hospitals located in Massachusetts as a result of the rural floor policy, and requested that CMS provide data and additional analysis of the impacts of a national rural floor budget neutrality adjustment. In addition, commenters questioned whether the addition of one rural hospital located in Franklin County, Massachusetts reduced the impact of the Massachusetts rural floor wage index from FY 2014 to FY 2015.

Response: We have provided an updated State-specific analysis of the effect of the rural floor budget neutrality adjustment in Appendix A of the Addendum to this final rule. We also discuss in Appendix A to this final rule the increase in payments the hospitals in Massachusetts are expected to receive as a result of the rural floor wage index policy.

We discuss below the reduced impact of the rural floor wage index policy for hospitals located in Massachusetts from FY 2014 to FY 2015. In FY 2014, CMS calculated that 60 hospitals would benefit from the Massachusetts rural floor wage index, resulting in an estimated \$167.6 million being received by hospitals located in Massachusetts as a result of the national rural floor budget neutrality adjustment. In FY 2015, fewer hospitals located in Massachusetts (51) have been identified as benefitting from

the rural floor wage index, and the fiscal impact of rural floor budget neutrality adjustment has been reduced. Below we explain why nine providers (60 minus 51) received the Massachusetts rural floor wage index in FY 2014, but not in FY 2015.

The commenters are correct that the addition of one rural hospital located in Franklin County, Massachusetts reduced the impact of the rural floor wage index in FY 2015, as compared to the impact of the rural floor wage index in FY 2014. To further clarify, in FY 2014, there was only one geographically located rural hospital in Massachusetts (located in Nantucket County). Therefore, the Massachusetts pre- and post-reclassified rural wage index in the calculation of the reclassification budget neutrality adjustment, and the application of the rural floor budget neutrality adjustment, was established based on wage data from that one hospital located in Nantucket County, Massachusetts. For FY 2015, another hospital, which is defined as “urban” under the current delineations, is now considered to be “rural” under the new OMB delineations. Specifically, this hospital is located in Franklin County, Massachusetts, which is no longer considered to be part of CBSA 44140 (Springfield, MA) under the new OMB delineations, and is now considered to be geographically located in a rural area. However, under the new OMB delineations, Franklin County meets the requirements under section 1886(d)(8)(B) of the Act for reclassification. Therefore, in FY 2015, any hospital located within Franklin County is deemed an “urban” labor market (that is, the hospitals are considered “Lugar” hospitals). The calculation of the FY 2015 Massachusetts pre-reclassified rural wage index, which is used in the calculation of reclassification budget neutrality adjustment, is calculated based on the two geographically located rural hospitals (one from Franklin County and one from Nantucket County). The average hourly wage of the Franklin County hospital is lower than the average hourly wage of the Nantucket County hospital, lowering the pre-reclassified rural wage index for FY 2015 relative to FY 2014.

With respect to budget neutrality, as described earlier in this Addendum, we first calculate and apply the MS-DRG and wage index budget neutrality adjustment, then the reclassification budget neutrality adjustment, and then the rural floor budget neutrality adjustment. This analysis focuses on the reclassification and rural floor budget neutrality adjustments and applies the

requirement of section 1886(d)(8)(C)(iii) of the Act, which specifies that an area’s post-reclassified wage index (without application of the rural floor budget neutrality adjustment) may not be reduced below the State’s post-reclassified rural wage index value (without application of the rural floor budget neutrality adjustment), as a result of reclassification. As stated in the FY 1992 IPPS final rule (56 FR 43220 through 43221), if reclassification (either to or from an area) would lower an area’s post-reclassified wage index (without application of the rural floor budget neutrality adjustment) below the State’s post-reclassified rural wage index (without application of the rural floor budget neutrality adjustment), CMS assigns those areas the post-reclassified rural wage index value for that State (without application of the rural floor budget neutrality adjustment). For this to occur, the area’s pre-reclassified wage index value must be greater than or equal to the State’s pre-reclassified rural wage index value prior to calculating the effects of the reclassification budget neutrality adjustment.

As discussed above in section II.A.4.b. of this Addendum regarding the reclassification budget neutrality adjustment, to ensure that the effects of applying sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act are budget neutral, we compare FY 2015 wage data prior to any reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act (that is, pre-reclassified wage data) to FY 2015 wage data after such reclassifications (that is, the post-reclassified wage data). Specifically, we compared the Massachusetts pre-reclassified rural wage index (Column C in the table below) to the pre-reclassified area wage index (Column B in the table below). (We note that the Massachusetts pre-reclassified rural wage index is comprised from the wage data of two rural hospitals, one located in Franklin County, Massachusetts and one located in Nantucket County, Massachusetts.) If a hospital’s pre-reclassified area wage index (Column B in the table below) is greater than or equal to the Massachusetts pre-reclassified rural wage index (Column C in the table below), then we compare the Massachusetts post-reclassified rural wage index (Column F in the table below, which is based only on the wage data from one rural hospital in Nantucket County, and does not include the hospital located in Franklin County because it has been reclassified as an urban Lugar hospital) to the post-

reclassified area wage index (Column E in the table below). For hospitals that receive reclassification in FY 2015, if the hospital’s post-reclassified area wage index (Column E in the table below) is less than the Massachusetts post-reclassified rural wage index (Column F in the table below, which is based on the wage data from one rural hospital located in Nantucket County), then we assign the hospital the Massachusetts post-reclassified rural wage index (Column F in the table below) prior to application of the rural floor budget neutrality adjustment. The nine hospitals were reclassified for FY 2015, and their post-reclassified area wage index (Column E in the table below) is less than the Massachusetts post-reclassified rural wage index (Column F in the table below). Therefore, although there are other hospitals located in Massachusetts that also have been reclassified, only the nine hospitals meet both conditions and are being assigned the Massachusetts post-reclassified rural wage index (without application of the rural floor budget neutrality adjustment).

Specifically, when we compared the Massachusetts pre-reclassified wage index to Massachusetts post-reclassified wage index in the calculation of the reclassification budget neutrality adjustment, the area’s pre-reclassified wage index value for the nine hospitals is greater than or equal to the Massachusetts pre-reclassified rural wage index value of 1.1447 (which is calculated based on the wage data from the two rural hospitals). After application of the reclassifications, the area’s post-reclassified wage index value for these nine hospitals is lower than the Massachusetts post-reclassified rural wage index value of 1.3477 (which only includes wage data from one rural hospital located in Nantucket County, Massachusetts). Therefore, in accordance with our reclassification hold-harmless methodology, these nine hospitals are assigned the Massachusetts post-reclassified rural wage index value of 1.3477 within the calculation of the reclassification budget neutrality adjustment, prior to the calculation and application of the rural floor budget neutrality adjustment. The impact of this increase in payments (Column B compared to Column F for the nine hospitals) is factored into the reclassification budget neutrality adjustment factor, which is applied to standardized amount. The table below illustrates the various wage indexes in each step of the process described above and why these nine hospitals were assigned the Massachusetts post-

reclassified rural wage index prior to the application of the rural floor budget neutrality adjustment.

Provider	(A) Pre-reclassified CBSA	(B) Area pre-reclassified wage index	(C) Massachusetts pre-reclassified rural wage index	(D) Post-reclassified CBSA	(E) Area post-reclassified wage index	(F) Massachusetts post-reclassified rural wage index
220001	49340	1.1728	1.1447	14454	1.2318	1.3477
220016	22	1.1447	1.1447	44140	1.0379	1.3477
220019	49340	1.1728	1.1447	14454	1.2318	1.3477
220058	49340	1.1728	1.1447	14454	1.2318	1.3477
220062	49340	1.1728	1.1447	14454	1.2318	1.3477
220090	49340	1.1728	1.1447	14454	1.2318	1.3477
220095	49340	1.1728	1.1447	14454	1.2318	1.3477
220163	49340	1.1728	1.1447	14454	1.2318	1.3477
220176	49340	1.1728	1.1447	14454	1.2318	1.3477

Note: All wage indexes in this table do not include application of the rural floor budget neutrality adjustment.

The next step in the sequence of our calculation of the budget neutrality adjustment factor is to calculate the rural floor budget neutrality adjustment, which is applied to the wage index. For the 51 hospitals located in Massachusetts, their post-reclassified area wage index is compared to the Massachusetts rural floor wage index (consisting of the one rural hospital located in Nantucket County). Because their post-reclassified area wage index value is lower than the Massachusetts rural floor wage index value, the hospitals are assigned the Massachusetts rural floor wage index value of 1.3477. Therefore, a rural floor budget neutrality adjustment factor is applied to the wage indexes of the 51 hospitals to account for the increase in payments as a result of the application of the rural floor wage index policy. However, with regard to the nine reclassified hospitals, they have already been assigned a post-reclassified wage index value of 1.3477, which is equal to the Massachusetts rural wage index. Accordingly, there is no need to make any further adjustments to ensure budget neutrality. As a result, the nine hospitals are excluded from and have no effect on the rural floor budget neutrality adjustment for FY 2015, and the impact of the FY 2015 rural floor budget neutrality adjustment for Massachusetts is lower than that of the FY 2014 rural floor budget neutrality adjustment. While the overall impact of the rural floor budget neutrality adjustment has decreased for hospitals located in Massachusetts in FY 2015, this explains why the same number of hospitals (60) will still receive the Massachusetts rural wage index in FY 2015 (determined by using the wage data from one rural hospital located in Nantucket County, Massachusetts) based on two different policies.

d. Wage Index Transition Budget Neutrality

As discussed in section III. of the preamble of this final rule, in the past, we have provided for transition periods when adopting changes that have significant payment implications, particularly large negative impacts.

Similar to FY 2005, for FY 2015, we have determined that the transition to using the new OMB delineations will have the largest impact on hospitals that are currently located in an urban county that became rural under the new OMB delineations. To alleviate the decreased payments associated with having a rural wage index, in calculating the area wage index, similar to the transition provided in the FY 2005 IPPS final rule, we are finalizing, as we proposed, a policy to generally assign these counties the urban wage index value of the CBSA to which they are physically located in for FY 2014 for FYs 2015, 2016, and 2017.

In addition to the 3-year transition period for hospitals being transitioned from urban to rural status as discussed above, we are finalizing, as we proposed, a 1-year blended wage index transitional policy for all hospitals that will experience any decrease in their wage index value (that is, a hospital's actual wage index value used for payment, which accounts for all applicable effects of reclassification and redesignation) exclusively as a result of the implementation of the new OMB delineations. Similar to the policy adopted in the FY 2005 IPPS final rule (69 FR 49033), a post-reclassified wage index with the rural and imputed floor applied is computed based on the hospital's FY 2014 CBSA (that is, using all of its FY 2014 constituent county/ies), and another post-reclassified wage index with the rural and imputed floor applied will be computed based on the hospital's new FY 2015 CBSA (that is, the FY 2015 constituent county/ies). We compared these two wage indexes. If the

FY 2015 wage index using the FY 2015 CBSAs is lower than the FY 2015 wage index using the FY 2014 CBSAs, we are computing a blended wage index consisting of 50 percent of each of the two wage indexes added together. This blended wage index is the hospital's wage index for FY 2015. Hospitals that benefit from the adoption of the new OMB delineations are assigned their new wage index based on the new OMB delineations. We refer readers to section III. of the preamble of this final rule for a complete discussion on the transitional wage index policy.

In the past, CMS has budget neutralized transitional wage indexes. Because we are establishing a policy that allows for the application of a transitional wage index only when it benefits the hospital, we believe that it would be appropriate to ensure that such a transitional policy does not increase aggregate Medicare payments beyond the payments that would be made had we simply adopted the new OMB delineations without any transitional provisions. Therefore, for FY 2015, we proposed to use our exceptions and adjustments authority under section 1886(d)(5)(I)(i) of the Act to make an adjustment to the national and Puerto Rico-specific standardized amounts to ensure that total payments, including the effect of the transitional wage index provisions, will equal what payments would have been if we had fully adopted the new OMB delineations without any transitional provisions. We did not receive any public comments on this proposal and are finalizing our proposal to make this adjustment under section 1886(d)(5)(I)(i) of the Act.

Also, because we did not receive any public comments on this proposal we are finalizing our proposal to use the same methodology presented in the proposed rule in this final rule to calculate the transitional wage index

budget neutrality adjustment factor. We discuss the calculation of this adjustment factor below.

As stated above, the 50/50 blended wage indexes use post-reclassified wage index data with the rural and imputed floor applied computed based on FY 2014 CBSAs. Because the 50/50 blended methodology uses data based on FY 2014 CBSAs, in order to properly calculate the transitional budget neutrality factor, it was first necessary to calculate the following budget neutrality factors based on the FY 2014 CBSAs: An MS-DRG and wage index budget neutrality, a reclassification budget neutrality, and a rural floor budget neutrality. It was necessary to compute the first three budget neutrality factors of MS-DRG, wage index, and reclassification budget neutrality (which are applied to the standardized amount) to ensure that the calculation of the rural and imputed floor budget neutrality factor applied to the wage index based on FY 2014 CBSAs is accurate. We calculated these four budget neutrality factors using the same methodology stated above, but used the FY 2014 CBSAs instead of the FY 2015 CBSAs on both sides of the comparison.

After calculating all of the budget neutrality factors using FY 2014 and FY 2015 CBSAs, to calculate the transitional wage index budget neutrality factor for FY 2015, we used FY 2013 discharge data to simulate payments and compared the following:

- Aggregate payments using new OMB delineations for FY 2015, the FY 2015 relative weights, FY 2015 wage data after such reclassifications under sections 1886(d)(8)(B) and (C) and 1886(d)(10) of the Act (using the new OMB delineations), applied the rural floor budget neutrality adjustment factor to the wage index (using the new OMB delineations), and applied the FY 2015 hospital readmissions payment adjustments and the estimated FY 2015 hospital VBP payment adjustments; and
- Aggregate payments using FY 2015 relative weights, FY 2015 wage data after applying the transitional wage indexes, and applied the same hospital readmissions payment adjustments and the estimated hospital VBP payment adjustments applied above. We note that hospitals that did not receive the transitional 50/50 blended wage index were assigned the post-reclassified wage index values with the rural floor budget neutrality adjustment based on the FY 2015 new OMB delineations.

Based on these simulations, we calculated a budget neutrality adjustment factor of 0.998859. Therefore, for FY 2015, we are applying a transitional wage index budget

neutrality adjustment factor of 0.998859 to the national average and Puerto Rico-specific standardized amounts to ensure that the effects of these transitional wage indexes are budget neutral.

We note that the budget neutrality adjustment factor calculated above is based on the increase in payments in FY 2015 that would result from the transitional wage indexes. Therefore, we are applying this budget neutrality adjustment factor as a one-time adjustment to the FY 2015 national and Puerto Rico-specific standardized amounts in order to offset the increase in payments in FY 2015 as a result of these transitional wage indexes. For subsequent fiscal years, we will not take into consideration the adjustment factor applied to the national and Puerto Rico-specific standardized amounts in the previous fiscal year's update when calculating the current fiscal year transitional wage index budget neutrality adjustment factor (that is, this adjustment will not be applied cumulatively). Because we are establishing a 3-year transitional wage index policy for urban hospitals that became rural as a result of the adoption of the new OMB delineations, we intend to establish transitional wage index budget neutrality adjustment factors to apply to the FY 2016 and FY 2017 national and Puerto Rico-specific standardized amounts during those respective rulemaking cycles. Similar to the policy for FY 2015, we intend to propose that the FYs 2016 and 2017 adjustments would be applied as "one-time" adjustments and not cumulative adjustments applied each fiscal year.

e. Case-Mix Budget Neutrality Adjustment

(1) Background

Below we summarize the recoupment adjustment to the FY 2015 payment rates, as required by section 631 of ATRA, to account for the increase in aggregate payments as a result of not completing the prospective adjustment authorized under section 7(b)(1)(A) of Public Law 110-90 until FY 2013. We refer readers to section II.D. of the preamble of this final rule for a complete discussion regarding our policies for FY 2015 in this final rule and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

(2) Recoupment or Repayment Adjustment Authorized by Section 631 of the American Taxpayer Relief Act of 2012 (ATRA) to the National Standardized Amount

Section 631 of the ATRA amended section 7(b)(1)(B) of Public Law 110-90 to require the Secretary to make a recoupment adjustment totaling \$11 billion by FY 2017. Our actuaries estimated that if CMS were to fully account for the \$11 billion recoupment required by section 631 of ATRA in FY 2014, a one-time -9.3 percent adjustment to the standardized amount would be necessary. It is often our practice to delay or phase-in payment rate adjustments over more than 1 year, in order to moderate the effect on payment rates in any 1 year. Therefore, consistent with the policies that we have adopted in many similar cases, for FY 2014, we applied a -0.8 percent adjustment to the standardized amount. In this final rule, as we proposed, we are applying an additional -0.8 percent adjustment to the standardized amount for FY 2015. We note that, as section 631 of the ATRA instructs the Secretary to make a recoupment adjustment only to the standardized amount, this adjustment would not apply to the Puerto Rico-specific standardized amount and hospital-specific payment rates.

f. Rural Community Hospital Demonstration Program Adjustment

As discussed in section IV.L. of the preamble of this final rule, section 410A of Public Law 108-173 originally required the Secretary to establish a demonstration program that modifies reimbursement for inpatient services for up to 15 small rural hospitals. Section 410A(c)(2) of Public Law 108-173 requires that "[i]n conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented."

Sections 3123 and 10313 of the Affordable Care Act extended the demonstration program for an additional 5-year period, and allowed up to 30 hospitals to participate in 20 States with low population densities determined by the Secretary. (In determining which States to include in the expansion, the Secretary is required to use the same criteria and data that the Secretary used to determine the States for purposes of the initial 5-year period.) In the FY 2013 IPPS/LTCH PPS final rule (77 FR 53449 through 53453), in

order to achieve budget neutrality, we adjusted the national IPPS payment rates by an amount sufficient to account for the added costs of this demonstration program as described in section IV.K. of that final rule. In other words, we applied budget neutrality across the payment system as a whole rather than merely across the participants of this demonstration program, consistent with past practice. We stated that we believe the language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that “aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration . . . was not implemented,” but does not identify the range across which aggregate payments must be held equal.

As we did for FY 2014, for FY 2015, we are adjusting the national IPPS payment rates according to the same methodology that we used for FY 2013, as set forth in section IV.L. of the preamble of this final rule, to account for the estimated additional costs of the demonstration program for FY 2015. For FY 2015, in this final rule, the estimated amount of this budget neutrality adjustment factor applied to the national IPPS payment rates for FY 2015 is \$54,177,144. In addition, similar to previous years, we are including in the budget neutrality offset amount the amount by which the actual demonstration costs corresponding to an earlier given year (which would be determined once we have finalized cost reports for that year) exceeded the budget neutrality offset amount finalized in the corresponding year’s IPPS final rule. For this FY 2015 IPPS/LTCH PPS final rule, we have calculated the amount by which the actual costs of the demonstration in FY 2008 (that is, the costs of the demonstration for the 10 hospitals that participated in FY 2008, as shown in these hospitals’ finalized cost reports for the cost report period beginning in that calendar year), exceeded the amount that was finalized in the FY 2008 IPPS final rule. For FY 2015, in this final rule, we are establishing a budget neutrality offset amount of \$10,389,771 for FY 2008.

We also are currently working with the MACs that service the hospitals participating in the demonstration to obtain finalized cost reports for FYs 2009, 2010, 2011, and 2012). These data were unavailable for this final rule. However, depending on our progress in obtaining these cost reports, we may include in the FY 2016 IPPS final rule the difference between the

demonstration costs for one or more of these years and the amounts that were finalized in the respective fiscal years’ final rules.

Therefore, the final total budget neutrality offset amount that we are applying to the FY 2015 IPPS payment rates is \$64,566,915. This amount is the sum of two separate components: (1) the difference between the total estimated FY 2014 reasonable cost amount to be paid under the demonstration to the 22 participating hospitals participating in the demonstration program for covered inpatient services, and the total estimated amount that would otherwise be paid to the participating hospitals in FY 2014 without the demonstration (\$54,177,144); and (2) the amount by which the actual costs of the demonstration for FY 2008, which are calculated in accordance with the finalized cost reports for the hospitals that participated in the demonstration during FY 2008, exceed the budget neutrality offset amount that was finalized in the FY 2008 IPPS final rule (\$10,389,771).

Accordingly, using the most recent data available to account for the estimated costs of the demonstration program, for FY 2015, we computed a factor of 0.99931 for the rural community hospital demonstration program budget neutrality adjustment that will be applied to the IPPS standard Federal payment rate.

g. Outlier Payments

Section 1886(d)(5)(A) of the Act provides for payments in addition to the basic prospective payments for “outlier” cases involving extraordinarily high costs. To qualify for outlier payments, a case must have costs greater than the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the “outlier threshold” or “fixed-loss” amount (a dollar amount by which the costs of a case must exceed payments in order to qualify for an outlier payment). We refer to the sum of the prospective payment rate for the DRG, any IME and DSH payments, any new technology add-on payments, and the outlier threshold as the outlier “fixed-loss cost threshold.” To determine whether the costs of a case exceed the fixed-loss cost threshold, a hospital’s CCR is applied to the total covered charges for the case to convert the charges to estimated costs. Payments for eligible cases are then made based on a marginal cost factor, which is a percentage of the estimated costs above the fixed-loss cost threshold. The marginal cost factor for FY 2015 is 80 percent, the same marginal cost factor

we have used since FY 1995 (59 FR 45367).

In accordance with section 1886(d)(5)(A)(iv) of the Act, outlier payments for any year are projected to be not less than 5 percent nor more than 6 percent of total operating DRG payments (which does not include IME and DSH payments) plus outlier payments. When setting the outlier threshold, we compute the 5.1 percent target by dividing the total operating DRG payments plus outlier payments. We do not include any other payments such as IME and DSH within the outlier target amount. Therefore, it is not necessary to include Medicare Advantage IME payments in the outlier threshold calculation. Section 1886(d)(3)(B) of the Act requires the Secretary to reduce the average standardized amount by a factor to account for the estimated proportion of total DRG payments made to outlier cases. Similarly, section 1886(d)(9)(B)(iv) of the Act requires the Secretary to reduce the average standardized amount applicable to hospitals located in Puerto Rico to account for the estimated proportion of total DRG payments made to outlier cases. More information on outlier payments may be found on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/outlier.htm>.

(1) FY 2015 Outlier Fixed-Loss Cost Threshold

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50977–50983), in response to public comments on the FY 2013 IPPS/LTCH PPS proposed rule, we made changes to our methodology for projecting the outlier fixed-loss cost threshold for FY 2014. We refer readers to the FY 2014 IPPS/LTCH PPS final rule for detailed discussion of the changes.

For FY 2015, we proposed to continue to use the same methodology that we used in FY 2014. As we have done in the past, to calculate the proposed FY 2015 outlier threshold, we simulated payments by applying proposed FY 2015 payment rates and policies using cases from the FY 2013 MedPAR file. Therefore, in order to determine the proposed FY 2015 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2013 to FY 2015. As discussed in the FY 2014 IPPS/LTCH PPS final rule, we believe a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case because our prior methodology

used a 6-month measure, which inherently uses fewer claims than a 1-year measure and makes it more susceptible to fluctuations in the average charge per case as a result of any significant charge increases or decreases by hospitals. Under this new methodology, to compute the 1-year average annualized rate-of-change in charges per case for FY 2015, we proposed to compare the second quarter of FY 2012 through the first quarter of FY 2013 (January 1, 2012, through December 31, 2012) to the second quarter of FY 2013 through the first quarter of FY 2014 (January 1, 2013, through December 31, 2013). This rate-of-change is 5.6 percent (1.055736) or 11.5 percent (1.114579) over 2 years.

Comment: Commenters were concerned that they were unable to replicate the calculation of the charge inflation factor that CMS used in the proposed rule. The commenters stated that the first quarter of the FY 2014 MedPAR claims were not released to the public. The commenters requested that CMS release the claims data used to calculate the charge inflation factor used in the proposed rule. One commenter, a provider, requested that CMS reevaluate the calculation of the inflation factor because it far exceeds the inflation factors used in labor markets that the provider operates within.

Response: In the FY 2014 IPPS/LTCH PPS proposed rule, we proposed to adopt a new methodology to compare periods of 1-year of the most recent charge data in order to inflate charges. Commenters supported this proposal and it was adopted for FY 2014 and future years in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50978). We note that we did not provide additional data for the first quarter of FY 2013, which was used to inflate charges in the FY 2014 IPPS/LTCH PPS proposed rule, nor was it requested during the comment period for the FY 2014 IPPS/LTCH PPS proposed rule. We further note that our charge inflation policy from FY 2005 through FY 2013 also compared the most recent period of charge data using a 6-month comparison instead of a 1 year comparison. Similar to above, we did not provide additional data for the first quarter of the applicable fiscal year, nor was it requested during the comment period for those years.

Consistent with this policy, for FY 2015, we proposed to compare the most recent charge data from the second quarter of FY 2012 through the first quarter of FY 2013 (January 1, 2012, through December 31, 2012) to the second quarter of FY 2013 through the first quarter of FY 2014 (January 1, 2013, through December 31, 2013).

In response to the commenters who requested a restructuring of the limited data set files for the FY 2015 IPPS/LTCH PPS proposed and final rule to provide an additional quarter of MedPAR claims data, we did not have sufficient time to restructure the files as the commenters requested prior to the publication of the proposed and this final rule. Consistent with our longstanding policy since FY 2005, we continue to believe that it is optimal to use the most recent period of charge data available to measure charge inflation. We will consider how best to provide additional information on the charge inflation factor for future years.

With respect to the commenter requesting that CMS reevaluate the calculation of the inflation factor, we believe that our measure of charge inflation accurately reflects the national charge inflation. Our charge inflation factor represents the average percentage increase in charge inflation for all hospitals. We recognize that charge inflation may vary geographically, and we do not believe that it is appropriate to base the charge inflation factor on selective labor markets because we apply this charge inflation factor to all claims for all hospitals.

As we have done in the past, in the FY 2015 IPPS/LTCH PPS proposed rule we proposed to establish the FY 2015 outlier threshold using hospital CCRs from the December 2013 update to the Provider-Specific File (PSF)—the most recent available data at the time of the proposed rule. We also proposed that if more recent data became available would we use that data to calculate the final FY 2015 outlier threshold. For FY 2015, we also proposed to continue to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we did for FY 2014, for FY 2015, we proposed to adjust the CCRs from the December 2013 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the December 2012 update of the PSF to the national average case-weighted operating CCR and capital CCR from the December 2013 update of the PSF. We note that in the proposed rule we used total transfer-adjusted cases from FY 2013 to determine the

national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison because this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the proposed methodology above, for the proposed rule we calculated a December 2012 operating national average case-weighted CCR of 0.295101 and a December 2013 operating national average case-weighted CCR of 0.289587. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the December 2012 operating national average case-weighted CCR from the December 2013 operating national average case-weighted CCR and then dividing the result by the December 2012 national operating average case-weighted CCR. This resulted in a proposed national operating CCR adjustment factor of 0.981315.

We used the same methodology proposed above to adjust the capital CCRs. Specifically, for the proposed rule we calculated a December 2012 capital national average case-weighted CCR of 0.025079 and a December 2013 capital national average case-weighted CCR of 0.024868. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the December 2012 capital national average case-weighted CCR from the December 2013 capital national average case-weighted CCR and then dividing the result by the December 2012 capital national average case-weighted CCR. This resulted in a proposed national capital CCR adjustment factor of 0.991587.

Consistent with our methodology used in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCRs. On average, it takes approximately 9 months for a fiscal intermediary or MAC to tentatively settle a cost report from the fiscal year end of a hospital's cost reporting period. The average "age" of hospitals' CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2015 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.

Comment: One commenter matched the CCRs used for the proposed rule impact file to the December 2013 PSF and found that 126 providers' CCRs did not match. The commenter noted that although an extremely high percentage of providers' CCRs matched the data in the December 2013 update, the average percent difference for those CCRs that did not match is much higher than any other comparison from prior years. The commenter stated that this difference could lead to differences in the calculated fixed-loss threshold. The commenter further stated that the data demonstrated that CMS used significantly outdated CCRs to make projections for the FY 2015 fixed-loss threshold. The commenter recommended that this error be rectified in the final rule, which would result in a substantially reduced threshold. In addition, the commenter recommended that CMS use the most recently updated PSF file for the final rule.

Response: With regard to the commenter's finding of 126 providers with CCRs from the proposed rule impact file that did not match the data in the December 2013 PSF, as stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we apply the following edits to providers' CCRs in the PSF. We believe these edits are appropriate in order to accurately model the outlier threshold. We first search for Indian Health Service providers and those providers assigned the statewide average CCR from the current fiscal year. We then replace these CCRs with the statewide average CCR for the upcoming fiscal year. We also assign the statewide average CCR (for the upcoming fiscal year) to those providers that have no value in the CCR field in the PSF. We believe that the edits above are the reason why the commenter found that 126 providers had CCRs in the impact file that did not match the CCRs in the December 2013 PSF, and contributed to the average percentage difference for those CCRs that did not match. We also believe that we have accurately calculated and applied these statewide average CCRs and will continue to monitor any large variances in the future. With regard to using the most recently updated PSF file for the final rule, we responded to a similar comment below.

As stated above, for FY 2015, we applied the proposed FY 2015 payment rates and policies using cases from the FY 2013 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2015, we are applying transitional wage indexes because of the adoption of the new OMB labor market area delineations. Also, as

discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.G.3. of the preamble of this final rule, in accordance with section 10324(a) of the Affordable Care Act, beginning in FY 2011, we created a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We noted that the frontier State floor adjustments will be calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State will receive a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment will not be subject to budget neutrality, and will only be extended to hospitals geographically located within a frontier State. However, for purposes of estimating the proposed outlier threshold for FY 2015, it was necessary to apply the transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2015. If we did not take the above into account, our estimate of total FY 2015 payments would be too low, and, as a result, our proposed outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), in our projection of FY 2015 outlier payments, we proposed not to make any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement. We stated that we continue to believe that, due to the policy implemented in the June 9, 2003 Outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our reconciliation criteria, reconciliation occurs in instances where a hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our simulations assume that CCRs accurately measure hospital costs based on information available to us at

the time we set the outlier threshold. For these reasons, we proposed not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Comment: One commenter expressed concern that CMS did not consider outlier reconciliation in the development of the outlier threshold. The commenter stated that CMS did not provide any objective data concerning the number of hospitals that have been subject to outlier reconciliation and the amounts recovered. The commenter further stated that, in February 2003, the Secretary signed what the commenter described as an emergency interim final rule that would have corrected the outlier threshold and included outlier reconciliation payments (in the calculation of the outlier threshold), but that rule was not issued because of objections from the Office of Management and Budget. The commenter asserted that if it was possible to account for outlier reconciliation payments at the initial implementation of the outlier reconciliation policy in the calculation of the threshold, it should be possible to do so 10 years later. The commenter also searched cost reports from the HCRIS database for the years 2003 through 2010 (Form CMS-2552-96 and CMS-2552-10) and, based on these data, provided its estimate that the annual amounts recovered by CMS through reconciliation totaled \$108,934,425. The commenter believed that these data can be used to provide a baseline and trend information to assess whether outlier reconciliation is a significant factor to be considered in the development of the outlier threshold. The commenter noted that it was unable to extract outlier reconciliation payment information from cost reports filed under Form CMS-2552-10. The commenter was unsure why this data was not being captured. Therefore, the commenter requested that CMS disclose in the final rule and future rulemaking the amount CMS has recovered through reconciliation by year.

Another commenter cited a report issued by the Office of Inspector General (OIG) on June 28, 2012, entitled "The Centers for Medicare & Medicaid Services Did Not Reconcile Medicare Outlier Payments in Accordance With Federal Regulations and Guidance" (A-07-10-02764), which reviewed the reconciliation process for outlier payments under the IPPS. The commenter stated that the 2012 OIG Report identified approximately \$664 million in unreconciled outlier payments, which is a material amount

in relation to total outlier payments. Moreover, the commenter further stated that CMS now has approximately 10 full fiscal years of experience with reconciliation from which to project the impact of its reconciliation in the upcoming fiscal year. As such, the commenter asserted that CMS' policy of refusing to account for the impact of reconciliation in setting the FY 2015 outlier fixed-loss cost threshold is neither reasonable nor consistent with the outlier provisions of the statute.

The same commenter cited the OIG report issued on November 13, 2013, entitled "Medicare Hospital Outlier Payments Warrant Increased Scrutiny" (OEI-06-10-00520). The commenter stated that the proposed outlier fixed-loss cost threshold appears improperly inflated and, therefore, overstated because CMS does not report, and has not taken any actions to report, any steps to account for "high-outlier" payments identified in the report. The commenter further stated that it is neither consistent with the outlier provisions of the statute nor reasonable for CMS, in modeling outlier payments for the upcoming fiscal year, to include outlier payments that were based on excessively high charges for particular MS-DRGs and not based on truly unusually high costs. The commenter concluded that such payments will presumably be recouped by CMS following audit and reconciliation. However, CMS has not disclosed or discussed what, if anything, it has done to address this issue in setting the outlier fixed-loss cost threshold for FY 2015.

Response: A similar comment was received in response to the policies presented in last year's rule. We appreciate the commenter's input and for informing us of its concern regarding our policy of not including outlier reconciliation within the development of the outlier fixed-loss cost threshold. The commenter provided data from HCRIS that demonstrated total outlier reconciliation payments from 2003 through 2010 were \$108,934,425, which equates to approximately \$13,616,803 annually. Assuming that the totals provided by the commenter are correct, we do not believe that this relatively small annual amount would have an impact on the outlier threshold because total outlier payments are approximately \$4.3 billion. Further, with regard to the draft final rule referenced by the commenter, that draft document was never finalized or published in the **Federal Register** (neither on a proposed or interim basis), or implemented in any way. We also disagree with the commenter's

characterization of the draft interim final rule. That draft rule would not have adjusted the outlier threshold by accounting for payment changes as a result of outlier reconciliation, as the commenter suggested. Rather, the draft interim final rule merely would have calculated a new fixed-loss threshold to be applied for the remainder of Federal fiscal year 2003 using the same data that originally had been used for that purpose, but excluding data from 123 hospitals whose percentage of outlier payments relative to total DRG payments increased by at least 5 percentage points between FY 1999 and FY 2001, and whose case-mix (the average DRG relative weight value for all of a hospital's Medicare cases) adjusted charges increased at a rate at or above the 95th percentile rate of charge increase for all hospitals (46.63 percent) over the same period. As previously stated, this draft rule was never finalized or published in the **Federal Register**. Therefore, that document has little, if any, relevance to the current discussion. With respect to the commenter citing the 2012 OIG Report which identified approximately \$664 million in unreconciled outlier payments, we cannot substantiate this amount until all of the outlier reconciliations are performed. As the MACs continue to perform these outlier reconciliations, they record these amounts on the cost report, which are then publicly available through the HCRIS database. Also, CMS has requested that the MACs submit to CMS the reconciled outlier amounts. We will continue to track these outlier reconciliations as stated in our response to the OIG report.

As stated in prior final rules, we continue to believe that, as a result of the policy implemented in the June 9, 2003 outlier final rule (68 FR 34494), CCRs will no longer fluctuate significantly and, therefore, few hospitals will actually have these ratios reconciled upon cost report settlement as demonstrated by the total outlier payments provided by the commenter. In addition, it is difficult to predict the specific hospitals that will have CCRs and outlier payments reconciled in any given year. We also note that, in accordance with our outlier reconciliation criteria, reconciliation occurs in instances where a hospital's actual CCR for the cost reporting period fluctuates plus or minus 10 percentage points compared to the interim CCR used to calculate outlier payments when a bill is processed. Our simulations assume that CCRs accurately measure hospital costs based on information

available to us at the time we set the outlier threshold. For these reasons, as we proposed, we are finalizing our proposal not to make any assumptions regarding the effects of reconciliation on the outlier threshold calculation.

Also, outlier reconciliation is a function of the cost report and MACs record the outlier reconciliation amount on each provider's cost report (and are not required to report these data to CMS outside of the cost report settlement process). Therefore, the outlier reconciliation data that the commenter requested should be publicly available through the cost report. With regard to the commenter not being able to retrieve the data for outlier reconciliation payments from cost reports filed under Form CMS-2552-10, we received a similar comment in response to last year's proposed rule, as summarized in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50980). We will continue to follow up with our information systems team to ensure this information is readily available to the public. Since the effective date of Change Request 7192 on April 1, 2011, we have approved the reconciliation of outlier payments for some hospitals. Other hospitals that were flagged for outlier reconciliation are still under review for approval. In addition, some hospitals flagged for outlier reconciliation may experience a delay in reconciling their outlier payments due to circumstances that prevent the MACs from finalizing the hospital's cost report (such as other payments that may need to be reconciled aside from outlier payments).

We disagree with the commenter that stated that we should not include outlier payments that were based on excessively high charges for particular MS-DRGs and not based on truly unusually high costs because such payments will presumably be recouped by CMS following audit and reconciliation. The purpose of the CCR is to measure a hospital's costs and charges. We believe that the CCRs will reflect these low costs and high charges that the commenter referred to, and when applied to the charges on the claim will result in less outlier payments for such cases because the costs of the case will be lower when compared to the total MS-DRG payments excluding outlier payments. Also, the commenter appears to assume that providers with high charges will be eligible for outlier reconciliation and CMS will recoup these funds at a later time. We disagree with the commenter. If a hospital's interim CCR is consistent with its charges on the claim then no matter how high or low a hospital's

charges, the hospital probably will not meet the outlier reconciliation criteria.

As described in sections IV.H. and IV.I., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we proposed to exclude the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We noted that, to the extent section 1886(r) of the Act modifies the existing DSH payment methodology under section 1886(d)(5)(F), the new uncompensated care payment under section 1886(r)(2), like the empirically justified Medicare DSH payment under section 1886(r)(1), may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A). As we did for FY 2014, for FY 2015, we stated that we also are proposing to allocate an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. We stated that we continue to believe that allocating an eligible hospital's estimated uncompensated care payment to all cases equally in the calculation of the outlier fixed-loss cost threshold would best approximate the amount we would pay in uncompensated care payments during the year because, when we make claim payments to a hospital eligible for such payments, we would be making estimated per-discharge uncompensated care payments to all cases equally.

Furthermore, we stated that we continue to believe that using the estimated per-claim uncompensated care payment amount to determine outlier estimates provides predictability as to the amount of uncompensated care payments included in the calculation of outlier payments. Therefore, consistent with the methodology used in FY 2014 to calculate the outlier fixed-loss cost threshold, for FY 2015, we stated that we are proposing to include estimated FY 2015 uncompensated care payments in the computation of the proposed outlier fixed-loss cost threshold. Specifically, we stated we are proposing to use the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we proposed an outlier fixed-loss cost threshold for FY 2015 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$25,799.

In the proposed rule we noted that the proposed FY 2015 fixed-loss cost threshold is higher than the FY 2014 final outlier fixed-loss cost threshold of \$21,748. We stated that we believe that the increase in the charge inflation factor (compared to the FY 2014 charge inflation factor) contributed to a higher proposed outlier fixed-loss threshold for FY 2015. As charges increase, so do outlier payments. As a result, it was necessary for us to raise the proposed outlier fixed-loss cost threshold to decrease the amount of outlier payments expended in order to reach the 5.1 percent target.

Comment: Some commenters were surprised by the magnitude of the increase of the outlier threshold in the proposed rule compared to the threshold of \$21,748 for FY 2014. The commenters explained that, for FY 2013, CMS currently estimates that outliers are 4.81 percent of total MS-DRG payments. The commenters asserted that, given that the threshold for FY 2013 of \$21,821 was similar to the outlier threshold for FY 2014, they find little justification for a dramatic increase in the threshold for FY 2015.

The commenters also stated that it is important that CMS is aware of the magnitude of inaccuracies when estimating the actual outlier payout for prior years or calculating the current outlier threshold. The commenters noted that, in prior years, CMS has estimated outlier payments for a FY in

one year and then the next year revises the estimate at a much lower number than the initial estimate. The commenters cited the FY 2013 outlier estimate as an example where CMS estimated total outlier payments for FY 2013 in the FY 2014 IPPS/LTCH PPS proposed rule as 5.17 percent and then revised this number in the FY 2015 IPPS/LTCH PPS proposed rule to 4.81 percent.

The commenters also noted that with each rulemaking the final outlier threshold established by CMS is always lower than the threshold set forth in the proposed rule. One commenter speculated that this is most likely as result of the use of updated CCRs or other data in calculating the final outlier threshold. As a result, the commenter emphasized the need for CMS to use the most recent data available when calculating the outlier threshold. The commenter stated that, with regard to the current rulemaking, CMS used data from the December 2013 PSF in the proposed rule, when the March 2014 PSF was available at the time the proposed rule was issued. Using the March 2014 PSF, the commenter calculated an outlier threshold of \$25,375 (compared to the threshold presented in the proposed rule of \$25,799, which used the December 2013 PSF).

Response: When we conduct our modeling to determine the outlier threshold, we factor in all payments and policies that would affect actual payments for the current year in order to estimate that outlier payments are 5.1 percent of total MS-DRG payments. While we recognize that outlier payments have been below the 5.1 percent target in prior fiscal years, we do not believe that these lower payouts are relevant to the current fiscal year because they do not lend greater accuracy to the estimate of payments that are 5.1 percent of total MS-DRG payments for FY 2015. We also note that in response to commenters' concerns, last year we modified our outlier threshold calculation by changing the way we adjust the CCRs. We also changed the measure of inflation from using 6 months of claims data to 1 year of claims data. CMS shares the commenters' belief that outlier payments in every fiscal year meet the 5.1 percent target, and we made these changes to improve our methodology for calculating the outlier threshold. As in prior years, CMS will continue to consider any suggestions made by the commenters to improve the accuracy of the calculation of the outlier threshold.

CMS' historical policy is to use the best available data when setting the

payment rates and factors in both the proposed and final rules. Sometimes there are variables that change between the proposed and final rule as result of the availability of more recent data, such as the charge inflation factor and the CCR adjustment factors that can cause fluctuations in the threshold amount. Other factors such as changes to the wage indexes and market basket increase can also cause the outlier fixed-loss cost threshold to fluctuate between the proposed rule and the final rule each year. We use the latest data that is available at the time of the development of the proposed and final rules, such as the most recent update of MedPAR claims data and CCRs from the most recent update of the PSF. With regard to the commenter noting the availability of the March 2014 PSF at the time the proposed rule was issued, this file was not available when we calculated the proposed outlier fixed-loss cost threshold as part of the development of the proposed rule. Therefore, for the proposed rule, we used the latest update available, which was the December 2013 PSF. If we were to wait for the March 2014 PSF to become available, this would cause further delay of publication of the proposed rule, leading to a possible further delay of issuance of the final rule in a timely fashion.

Comment: One commenter stated that as a result of the large increase in the proposed outlier threshold it suspected that CMS is duplicating its charge increases through the use of the charge inflation factor. The commenter believed that this duplication is compounded by the fact that the CCRs would also reflect high charges. The commenter believed that these two issues are artificially inflating the threshold while hospitals have lower costs. The commenter offered an alternative threshold of \$24,340, by measuring the change in outlier percentage payments of 5.1 percent for FY 2015 compared to the FY 2014 outlier estimate of 5.79 percent (5.1 percent minus 5.79 percent = -0.69 percent divided by 5.79 percent = 11.92 percent). The commenter recommended using a forecast correction of 100 plus 11.92 percent based on their calculation above.

Response: We disagree with the commenter. We believe that our measure and application of the charge inflation factor is accurate and appropriate as explained in the proposed rule. As discussed, we apply a 2-year charge inflation factor because we use claims from FY 2013 for FY 2015. Also, the CCRs we use come directly from the PSF, which comes

directly from hospitals' cost reports. We believe that these CCRs are accurate. We also are unsure what "high charges" to which the commenter referred. Further, as noted above, section 1886(d)(5)(A)(iv) of the Act requires outlier payments to be not less than 5 percent nor more than 6 percent of total estimated or projected payments in that year. Therefore, we cannot adopt the commenter's suggestion to use a forecast correction to compute the outlier threshold. When we calculate the threshold, we use the latest data that are available at the time of the proposed and final rules in order to estimate that outlier payments are 5.1 percent of total payments.

Comment: One commenter noted that CMS did not indicate if it has made any additional changes to its methodology to exclude the charges for hemophilia clotting factors from the calculation of the fixed-loss outlier threshold. The commenter noted that CMS provides a methodology for excluding such charges from MedPAR data for the budget neutrality calculation. The commenter wanted to ensure that such efforts also resulted in the exclusion of such charges from MedPAR data used for the calculation of the fixed-loss threshold as well.

Response: We appreciate the commenter's input and for seeking clarification on the calculation of the fixed-loss outlier threshold. Similar to what is done in the budget neutrality calculation, CMS excludes the charges for hemophilia clotting factors from the calculation of the fixed-loss outlier threshold.

Comment: One commenter stated that in its public comment submitted in response to the FY 2014 IPPS/LTCH PPS proposed rule regarding outliers, it explained why uncompensated care payments should be included as part of the fixed-loss threshold calculation. The commenter noted that it is clear why CMS considered this in the FY 2015 IPPS/LTCH PPS proposed rule. The commenter wanted to ensure that updates to the uncompensated care payment calculation are also considered in the final rule.

Response: As discussed above, we included updates to the uncompensated care payment calculation as part of the fixed-loss outlier threshold calculation in this final rule.

After consideration of the public comments we received, we are not making any changes to our methodology in this final rule for FY 2015. Therefore, we are using the same methodology we proposed to calculate the final outlier threshold.

As we have done in the past, to calculate the final FY 2015 outlier

threshold, we simulated payments by applying FY 2015 payment rates and policies using cases from the FY 2013 MedPAR file. Therefore, in order to determine the final FY 2015 outlier threshold, we inflated the charges on the MedPAR claims by 2 years, from FY 2013 to FY 2015. As discussed in the FY 2014 IPPS/LTCH PPS final rule, we believe that a methodology that is based on 1-year of charge data will provide a more stable measure to project the average charge per case. To compute the 1-year average annualized rate-of-change in charges per case for FY 2015, we compared the third quarter of FY 2012 through the second quarter of FY 2013 (April 1, 2012, through March 31, 2013) to the third quarter of FY 2013 through the second quarter of FY 2014 (April 1, 2013, through March 31, 2014). This rate-of-change is 5.1 percent (1.050917) or 10.4 percent (1.104427) over 2 years.

As we have done in the past, we are establishing the FY 2015 outlier threshold using hospital CCRs from the March 2014 update to the Provider-Specific File (PSF)—the most recent available data at the time of development of this final rule. For FY 2015, we also are continuing to apply an adjustment factor to the CCRs to account for cost and charge inflation (as explained below). In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we adopted a new methodology to adjust the CCRs. Specifically, we finalized a policy to compare the national average case-weighted operating and capital CCR from the most recent update of the PSF to the national average case-weighted operating and capital CCR from the same period of the prior year.

Therefore, as we did for FY 2014, for FY 2015, we are adjusting the CCRs from the March 2014 update of the PSF by comparing the percentage change in the national average case-weighted operating CCR and capital CCR from the March 2013 update of the PSF to the national average case-weighted operating CCR and capital CCR from the March 2014 update of the PSF. We note that we used total transfer-adjusted cases from FY 2013 to determine the national average case-weighted CCRs for both sides of the comparison. As stated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50979), we believe that it is appropriate to use the same case count on both sides of the comparison as this will produce the true percentage change in the average case-weighted operating and capital CCR from one year to the next without any effect from a change in case count on different sides of the comparison.

Using the methodology above, we calculated a March 2013 operating national average case-weighted CCR of 0.292377 and a March 2014 operating national average case-weighted CCR of 0.28714. We then calculated the percentage change between the two national operating case-weighted CCRs by subtracting the March 2013 operating national average case-weighted CCR from the March 2014 operating national average case-weighted CCR and then dividing the result by the March 2013 national operating average case-weighted CCR. This resulted in a national operating CCR adjustment factor of 0.982088.

We also used the same methodology above to adjust the capital CCRs. Specifically, we calculated a March 2013 capital national average case-weighted CCR of 0.025143 and a March 2014 capital national average case-weighted CCR of 0.024849. We then calculated the percentage change between the two national capital case-weighted CCRs by subtracting the March 2013 capital national average case-weighted CCR from the March 2014 capital national average case-weighted CCR and then dividing the result by the March 2013 capital national average case-weighted CCR. This resulted in a national capital CCR adjustment factor of 0.988307.

Consistent with our methodology in the past and as stated in the FY 2009 IPPS final rule (73 FR 48763), we continue to believe that it is appropriate to apply only a 1-year adjustment factor to the CCRs. On average, it takes approximately 9 months for a fiscal intermediary or MAC to tentatively settle a cost report from the fiscal year end of a hospital's cost reporting period. The average "age" of hospitals' CCRs from the time the fiscal intermediary or the MAC inserts the CCR in the PSF until the beginning of FY 2015 is approximately 1 year. Therefore, as stated above, we believe a 1-year adjustment factor to the CCRs is appropriate.

As stated above, for FY 2015, we applied the FY 2015 payment rates and policies using cases from the FY 2013 MedPAR files in calculating the outlier threshold.

As discussed above, for FY 2015, we are applying transitional wage indexes because of the adoption of the new OMB labor market area delineations. Also, as discussed in section III.B.3. of the preamble to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50160 and 50161) and in section III.G.3. of the preamble of this final rule, in accordance with section 10324(a) of the Affordable Care Act, beginning in FY 2011, we created

a wage index floor of 1.0000 for all hospitals located in States determined to be frontier States. We note that the frontier State floor adjustments are calculated and applied after rural and imputed floor budget neutrality adjustments are calculated for all labor market areas, in order to ensure that no hospital in a frontier State receives a wage index less than 1.0000 due to the rural and imputed floor adjustment. In accordance with section 10324(a) of the Affordable Care Act, the frontier State adjustment is not subject to budget neutrality, and is only extended to hospitals geographically located within a frontier State. However, for purposes of estimating the outlier threshold for FY 2015, it was necessary to apply the transitional wage indexes and adjust the wage index of those eligible hospitals in a frontier State when calculating the outlier threshold that results in outlier payments being 5.1 percent of total payments for FY 2015. If we did not take the above into account, our estimate of total FY 2015 payments would be too low, and, as a result, our outlier threshold would be too high, such that estimated outlier payments would be less than our projected 5.1 percent of total payments.

As we did in establishing the FY 2009 outlier threshold (73 FR 57891), as we proposed and for the reasons discussed above, in our projection of FY 2015 outlier payments, we are not making any adjustments for the possibility that hospitals' CCRs and outlier payments may be reconciled upon cost report settlement.

As described in sections IV.H. and IV.I., respectively, of the preamble of this final rule, sections 1886(q) and 1886(o) of the Act establish the Hospital Readmissions Reduction Program and the Hospital VBP Program, respectively. We do not believe that it is appropriate to include the hospital VBP payment adjustments and the hospital readmissions payment adjustments in the outlier threshold calculation or the outlier offset to the standardized amount. Specifically, consistent with our definition of the base operating DRG payment amount for the Hospital Readmissions Reduction Program under § 412.152 and the Hospital VBP Program under § 412.160, outlier payments under section 1886(d)(5)(A) of the Act are not affected by these payment adjustments. Therefore, outlier payments will continue to be calculated based on the unadjusted base DRG payment amount (as opposed to using the base-operating DRG payment amount adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment). Consequently, we

are excluding the hospital VBP payment adjustments and the hospital readmissions payment adjustments from the calculation of the outlier fixed-loss cost threshold.

We note that, to the extent section 1886(r) of the Act modifies the existing DSH payment methodology under section 1886(d)(5)(F), the new uncompensated care payment under section 1886(r)(2), like the empirically justified Medicare DSH payment under section 1886(r)(1), may be considered an amount payable under section 1886(d)(5)(F) of the Act such that it would be reasonable to include the payment in the outlier determination under section 1886(d)(5)(A). As we did for FY 2014, for FY 2015, for the reasons discussed above, we also are allocating an estimated per-discharge uncompensated care payment amount to all cases for the hospitals eligible to receive the uncompensated care payment amount in the calculation of the outlier fixed-loss cost threshold methodology. Specifically, we are using the estimated per-discharge uncompensated care payments to hospitals eligible for the uncompensated care payment for all cases in the calculation of the outlier fixed-loss cost threshold methodology.

Using this methodology, we calculated a final outlier fixed-loss cost threshold for FY 2015 equal to the prospective payment rate for the MS-DRG, plus any IME, empirically justified Medicare DSH payments, estimated uncompensated care payment, and any add-on payments for new technology, plus \$24,758.

We note that the final FY 2015 fixed-loss cost threshold is higher than the FY 2014 final outlier fixed-loss cost threshold of \$21,748. We believe that the increase in the charge inflation factor (compared to the FY 2014 charge inflation factor) contributed to a higher outlier fixed-loss threshold for FY 2015. As charges increase, so do outlier payments. As a result, it was necessary for us to raise the outlier fixed-loss cost threshold to decrease the amount of outlier payments expended in order to reach the 5.1 percent target.

Also, the final FY 2015 fixed-loss cost threshold is lower than the FY 2015 proposed outlier fixed-loss cost threshold of \$25,799. As discussed above, the proposed MS-DRG reclassification and recalibration budget neutrality factor was calculated incorrectly in the proposed rule as a result of the inadvertent miscalculation of a number of postacute care transfer-adjusted cases for certain MS-DRGs. We believe that the corrected factor, which offsets less money from the

standardized amount, results in less outlier payments. Therefore, it was necessary to lower the outlier threshold from the proposed rule in the final rule in order to reach the 5.1 percent target.

(2) Other Changes Concerning Outliers

As stated in the FY 1994 IPPS final rule (58 FR 46348), we establish an outlier threshold that is applicable to both hospital inpatient operating costs and hospital inpatient capital-related costs. When we modeled the combined operating and capital outlier payments, we found that using a common threshold resulted in a lower percentage of outlier payments for capital-related costs than for operating costs. We project that the thresholds for FY 2015 will result in outlier payments that will equal 5.1 percent of operating DRG payments and 6.27 percent of capital payments based on the Federal rate.

In accordance with section 1886(d)(3)(B) of the Act, we are reducing the FY 2015 standardized amount by the same percentage to account for the projected proportion of payments paid as outliers.

The outlier adjustment factors that will be applied to the standardized amount based on the FY 2015 outlier threshold are as follows:

	Operating standardized amounts	Capital federal rate
National	0.948998	0.937327
Puerto Rico	0.926575	0.915412

We are applying the outlier adjustment factors to the FY 2015 payment rates after removing the effects of the FY 2014 outlier adjustment factors on the standardized amount.

To determine whether a case qualifies for outlier payments, we apply hospital-specific CCRs to the total covered charges for the case. Estimated operating and capital costs for the case are calculated separately by applying separate operating and capital CCRs. These costs are then combined and compared with the outlier fixed-loss cost threshold.

Under our current policy at § 412.84, we calculate operating and capital CCR ceilings and assign a statewide average CCR for hospitals whose CCRs exceed 3.0 standard deviations from the mean of the log distribution of CCRs for all hospitals. Based on this calculation, for hospitals for which the fiscal intermediary or MAC computes operating CCRs greater than 1.23 or capital CCRs greater than 0.172, or hospitals for which the fiscal intermediary or MAC is unable to

calculate a CCR (as described under § 412.84(i)(3) of our regulations), statewide average CCRs are used to determine whether a hospital qualifies for outlier payments. Table 8A listed in section VI. of this Addendum (and available only via the Internet on the CMS Web site) contains the statewide average operating CCRs for urban hospitals and for rural hospitals for which the fiscal intermediary or MAC is unable to compute a hospital-specific CCR within the above range. Effective for discharges occurring on or after October 1, 2014, these statewide average ratios will replace the ratios posted on our Web site at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/FY-2014-IPPS-Final-Rule-Home-Page-Items/FY-2014-IPPS-Final-Rule-CMS-1599-F-Tables.html>. Table 8B listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the comparable statewide average capital CCRs. As previously stated, the CCRs in Tables 8A and 8B will be used during FY 2015 when hospital-specific CCRs based on the latest settled cost report are either not available, or are outside the range noted above. Table 8C listed in section VI. of this Addendum (and available via the Internet on the CMS Web site) contains the statewide average total CCRs used under the LTCH PPS as discussed in section V. of this Addendum.

We finally note that we published a manual update (Change Request 3966) to our outlier policy on October 12, 2005, which updated Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update covered an array of topics, including CCRs, reconciliation, and the time value of money. We encourage hospitals that are assigned the statewide average operating and/or capital CCRs to work with their fiscal intermediary or MAC on a possible alternative operating and/or capital CCR as explained in Change Request 3966. Use of an alternative CCR developed by the hospital in conjunction with the fiscal intermediary or MAC can avoid possible overpayments or underpayments at cost report settlement, thereby ensuring better accuracy when making outlier payments and negating the need for outlier reconciliation. We also note that a hospital may request an alternative operating or capital CCR ratio at any time as long as the guidelines of Change Request 3966 are followed. In addition, as mentioned above, we published an additional manual update (Change Request 7192) to our outlier policy on December 3, 2010, which also updated

Chapter 3, Section 20.1.2 of the Medicare Claims Processing Manual. The manual update outlines the outlier reconciliation process for hospitals and Medicare contractors. To download and view the manual instructions on outlier reconciliation, we refer readers to the CMS Web site: <http://www.cms.hhs.gov/manuals/downloads/clm104c03.pdf>.

(3) FY 2013 and FY 2014 Outlier Payments

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50983 through 50984), we stated that, based on available data, we estimated that actual FY 2013 outlier payments would be approximately 4.77 percent of actual total MS-DRG payments. This estimate was computed based on simulations using the FY 2012 MedPAR file (discharge data for FY 2012 claims). That is, the estimate of actual outlier payments did not reflect actual FY 2013 claims, but instead reflected the application of FY 2013 payment rates and policies to available FY 2012 claims.

Our current estimate, using available FY 2013 claims data, is that actual outlier payments for FY 2013 were approximately 4.86 percent of actual total MS-DRG payments. Therefore, the data indicate that, for FY 2013, the percentage of actual outlier payments relative to actual total payments is lower than we projected for FY 2013. Consistent with the policy and statutory interpretation we have maintained since the inception of the IPPS, we do not make retroactive adjustments to outlier payments to ensure that total outlier payments for FY 2013 are equal to 5.1 percent of total MS-DRG payments.

We currently estimate that, using the latest CCRs from the March 2014 update of the PSF, actual outlier payments for FY 2014 will be approximately 5.71 percent of actual total MS-DRG payments, approximately 0.61 percentage point higher than the 5.1 percent we projected when setting the outlier policies for FY 2014. This estimate of 5.71 percent is based on simulations using the FY 2013 MedPAR file (discharge data for FY 2013 claims).

5. FY 2015 Standardized Amount

The adjusted standardized amount is divided into labor-related and nonlabor-related portions. Tables 1A and 1B listed and published in section VI. of this Addendum (and available via the Internet) contain the national standardized amounts that we are applying to all hospitals, except hospitals located in Puerto Rico, for FY 2015. The Puerto Rico-specific amounts are shown in Table 1C listed and published in section VI. of this

Addendum (and available via the Internet on the CMS Web site). The amounts shown in Tables 1A and 1B differ only in that the labor-related share applied to the standardized amounts in Table 1A is 69.6 percent, and the labor-related share applied to the standardized amounts in Table 1B is 62 percent. In accordance with sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act, we are applying a labor-related share of 62 percent, unless application of that percentage would result in lower payments to a hospital than would otherwise be made. In effect, the statutory provision means that we will apply a labor-related share of 62 percent for all hospitals whose wage indexes are less than or equal to 1.0000.

In addition, Tables 1A and 1B include the standardized amounts reflecting the applicable percentage increases for FY 2015.

Under section 1886(d)(9)(A)(ii) of the Act, the Federal portion of the Puerto

Rico payment rate is based on the discharge-weighted average of the national large urban standardized amount (this amount is set forth in Table 1A). The labor-related and nonlabor-related portions of the national average standardized amounts for Puerto Rico hospitals for FY 2015 are set forth in Table 1C listed and published in section VI. of this Addendum (and available via the Internet on the CMS Web site). This table also includes the Puerto Rico-specific standardized amounts. The labor-related share applied to the Puerto Rico-specific standardized amount is the labor-related share of 63.2 percent, or 62 percent, depending on which provides higher payments to the hospital. (Section 1886(d)(9)(C)(iv) of the Act, as amended by section 403(b) of Public Law 108–173, provides that the labor-related share for hospitals located in Puerto Rico be 62 percent, unless the application of that percentage would

result in lower payments to the hospital.)

The following table illustrates the changes from the FY 2014 national standardized amount. The second through fifth columns display the changes from the FY 2014 standardized amounts for each applicable FY 2015 standardized amount. The first row of the table shows the updated (through FY 2014) average standardized amount after restoring the FY 2014 offsets for outlier payments, demonstration budget neutrality, the geographic reclassification budget neutrality, and the retrospective documentation and coding adjustment under section 7(b)(1)(B) of Public Law 110–90. The MS-DRG reclassification and recalibration and wage index budget neutrality adjustment factors are cumulative. Therefore, those FY 2014 adjustment factors are not removed from this table.

COMPARISON OF FY 2014 STANDARDIZED AMOUNTS TO THE FY 2015 STANDARDIZED AMOUNTS

	Nonlabor: \$936.54	Nonlabor: \$967.07

B. Adjustments for Area Wage Levels and Cost-of-Living

Tables 1A through 1C, as published in section VI. of this Addendum (and available via the Internet), contain the labor-related and nonlabor-related shares that we used to calculate the prospective payment rates for hospitals located in the 50 States, the District of Columbia, and Puerto Rico for FY 2015. This section addresses two types of adjustments to the standardized amounts that are made in determining the prospective payment rates as described in this Addendum.

1. Adjustment for Area Wage Levels

Sections 1886(d)(3)(E) and 1886(d)(9)(C)(iv) of the Act require that we make an adjustment to the labor-related portion of the national and Puerto Rico prospective payment rates, respectively, to account for area differences in hospital wage levels. This adjustment is made by multiplying the labor-related portion of the adjusted standardized amounts by the appropriate wage index for the area in which the hospital is located. In section III. of the preamble of this final rule, we discuss the data and methodology for the FY 2015 wage index.

2. Adjustment for Cost-of-Living in Alaska and Hawaii

Section 1886(d)(5)(H) of the Act provides discretionary authority to the Secretary to make “such adjustments . . . as the Secretary deems appropriate to take into account the unique circumstances of hospitals located in Alaska and Hawaii.” Higher labor-related costs for these two States are taken into account in the adjustment for area wages described above. To account for higher nonlabor-related costs for these two States, we multiply the nonlabor-related portion of the standardized amount for hospitals

located in Alaska and Hawaii by an adjustment factor.

In the FY 2013 IPPS/LTCH PPS final rule, we established a methodology to update the COLA factors for Alaska and Hawaii that were published by the U.S. Office of Personnel Management (OPM) every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014. We refer readers to the FY 2013 IPPS/LTCH PPS proposed and final rules for additional background and a detailed description of this methodology (77 FR 28145 through 28146 and 77 FR 53700 through 53701, respectively).

For FY 2014, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50985 through 50987), we updated the COLA factors published by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule.

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, we are using the same COLA factors established in FY 2014 for FY 2015 to adjust the nonlabor-related portion of the standardized amount for hospitals located in Alaska and Hawaii. Below is a table listing the COLA factors for FY 2015.

FINAL FY 2015 COST-OF-LIVING ADJUSTMENT FACTORS: ALASKA AND HAWAII HOSPITALS

Area	Cost of living adjustment factor
Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23
City of Juneau and 80-kilometer (50-mile) radius by road	1.23
Rest of Alaska	1.25
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.19
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

Based on the policy finalized in the FY 2013 IPPS/LTCH PPS final rule, the next update to the COLA factors for Alaska and Hawaii would occur in FY 2018.

C. Calculation of the Prospective Payment Rates

General Formula for Calculation of the Prospective Payment Rates for FY 2015

In general, the operating prospective payment rate for all hospitals paid under the IPPS located outside of Puerto Rico, except SCHs and MDHs, for FY 2015 equals the Federal rate (which includes uncompensated care payments).

We note that, as discussed in section IV.G. of the preamble of this final rule, section 1106 of Public Law 113–67, enacted on December 26, 2013, extended the MDH program from the end of FY 2013 through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of Public Law 113–93, enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015). Prior to the enactment of Public Law 113–67, the MDH program was only to be in effect through the end of FY 2013. Under current law, the MDH program will expire for discharges beginning on April 1, 2015.

SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal national rate (which, as discussed in section IV.F. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

The prospective payment rate for SCHs for FY 2015 equals the higher of the applicable Federal rate, or the hospital-specific rate as described below.

The prospective payment rate for MDHs for FY 2015 discharges occurring before April 1, 2015 equals the higher of the Federal rate or the Federal rate plus 75 percent of the difference between the Federal rate and the hospital-specific rate as described below. For MDHs, the updated hospital-specific rate is based on FY 1982, FY 1987 or FY 2002 costs per discharge, whichever yields the greatest aggregate payment.

The prospective payment rate for hospitals located in Puerto Rico for FY 2015 equals 25 percent of the Puerto Rico-specific payment rate plus 75 percent of the applicable national rate.

1. Federal Rate

The Federal rate is determined as follows:

Step 1—Select the applicable average standardized amount depending on whether the hospital submitted qualifying quality data and is a meaningful EHR user, as described above.

Step 2—Multiply the labor-related portion of the standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—For hospitals located in Alaska and Hawaii, multiply the nonlabor-related portion of the standardized amount by the applicable cost-of-living adjustment factor.

Step 4—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount (adjusted, if applicable, under Step 3).

Step 5—Multiply the final amount from Step 4 by the relative weight corresponding to the applicable MS-DRG (Table 5 listed in section VI. of this Addendum and available via the Internet).

The Federal payment rate as determined in Step 5 may then be further adjusted if the hospital qualifies for either the IME or DSH adjustment. In addition, for hospitals that qualify for a low-volume payment adjustment under section 1886(d)(12) of the Act and 42 CFR 412.101(b), the payment in Step 5 would be increased by the formula described in section IV.D. of the preamble of this final rule. The base-operating DRG payment amount may be further adjusted by the hospital readmissions payment adjustment and the hospital VBP payment adjustment as described under sections 1886(q) and 1886(o) of the Act, respectively. Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

2. Hospital-Specific Rate (Applicable Only to SCHs and MDHs)

a. Calculation of Hospital-Specific Rate

Section 1886(b)(3)(C) of the Act provides that SCHs are paid based on whichever of the following rates yields the greatest aggregate payment: The Federal rate (which, as discussed in section IV.F. of the preamble of this final rule, includes uncompensated care payments); the updated hospital-specific rate based on FY 1982 costs per discharge; the updated hospital-specific rate based on FY 1987 costs per

discharge; the updated hospital-specific rate based on FY 1996 costs per discharge; or the updated hospital-specific rate based on FY 2006 costs per discharge to determine the rate that yields the greatest aggregate payment.

As discussed previously, currently MDHs are paid based on the Federal national rate or, if higher, the Federal national rate plus 75 percent of the difference between the Federal national rate and the greater of the updated hospital-specific rates based on either FY 1982, FY 1987, or FY 2002 costs per discharge.

For a more detailed discussion of the calculation of the hospital-specific rates,

we refer readers to the FY 1984 IPPS interim final rule (48 FR 39772); the April 20, 1990 final rule with comment period (55 FR 15150); the FY 1991 IPPS final rule (55 FR 35994); and the FY 2001 IPPS final rule (65 FR 47082). We also refer readers to section IV.F. of the preamble of this final rule for a complete discussion on empirically justified Medicare DSH and uncompensated care payments.

b. Updating the FY 1982, FY 1987, FY 1996 and FY 2006 Hospital-Specific Rate for FY 2015

Section 1886(b)(3)(B)(iv) of the Act provides that the applicable percentage increase applicable to the hospital-

specific rates for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS). Because the Act sets the update factor for SCHs and MDHs equal to the update factor for all other IPPS hospitals, the update to the hospital-specific rates for SCHs and MDHs is subject to the amendments to section 1886(b)(3)(B) of the Act made by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, the applicable percentage increases to the hospital-specific rates applicable to SCHs and MDHs are the following:

FY 2015	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is not a meaningful EHR user	Hospital did not submit quality data and is a meaningful EHR user	Hospital did not submit quality data and is not a meaningful EHR user
Market Basket Rate-of-Increase	2.9	2.9	2.9	2.9
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.725	-0.725
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-0.725	0.0	-0.725
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	-0.2	-0.2	-0.2	-0.2
Applicable Percentage Increase Applied to Hospital-Specific Rate	2.2	1.475	1.475	0.75

For a complete discussion of the applicable percentage increase applied to the hospital-specific rates for SCHs and MDHs, we refer readers to section IV.B. of the preamble of this final rule.

In addition, because SCHs and MDHs use the same MS-DRGs as other hospitals when they are paid based in whole or in part on the hospital-specific rate, the hospital-specific rate is adjusted by a budget neutrality factor to ensure that changes to the MS-DRG classifications and the recalibration of the MS-DRG relative weights are made in a manner so that aggregate IPPS payments are unaffected. Therefore, a SCH's and MDH's hospital-specific rate is adjusted by the MS-DRG reclassification and recalibration budget neutrality factor of 0.997543, as discussed in section III. of this Addendum. The resulting rate is used in determining the payment rate that an SCH will receive for its discharges beginning on or after October 1, 2014, and the payment rate that an MDH will receive for its discharges beginning on or after October 1, 2014, and before April 1, 2015. We note that, in this final rule, for FY 2015, we are not making a documentation and coding adjustment to the hospital-specific rate. We refer readers to section II.D. of the preamble

of this final rule for a complete discussion regarding our policies and previously finalized policies (including our historical adjustments to the payment rates) relating to the effect of changes in documentation and coding that do not reflect real changes in case-mix.

3. General Formula for Calculation of Prospective Payment Rates for Hospitals Located in Puerto Rico Beginning on or After October 1, 2014, and Before October 1, 2015

Section 1886(d)(9)(E)(iv) of the Act provides that, effective for discharges occurring on or after October 1, 2004, hospitals located in Puerto Rico are paid based on a blend of 75 percent of the national prospective payment rate and 25 percent of the Puerto Rico-specific rate.

a. Puerto Rico-Specific Rate

The Puerto Rico-specific prospective payment rate is determined as follows:
 Step 1—Select the applicable average standardized amount considering the applicable wage index (obtained from Table 1C published in section VI. of this Addendum and available via the Internet).
 Step 2—Multiply the labor-related portion of the standardized amount by

the applicable Puerto Rico-specific wage index.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS-DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet).

Step 5—Multiply the result in Step 4 by 25 percent.

b. National Prospective Payment Rate

The national prospective payment rate is determined as follows:

Step 1—Select the applicable national average standardized amount.

Step 2—Multiply the labor-related portion of the national average standardized amount by the applicable wage index for the geographic area in which the hospital is located or the area to which the hospital is reclassified.

Step 3—Add the amount from Step 2 and the nonlabor-related portion of the national average standardized amount.

Step 4—Multiply the amount from Step 3 by the applicable MS-DRG relative weight (obtained from Table 5 listed in section VI. of this Addendum and available via the Internet on the CMS Web site).

Step 5—Multiply the result in Step 4 by 75 percent.

The sum of the Puerto Rico-specific rate and the national prospective payment rate computed above equals the prospective payment rate for a given discharge for a hospital located in Puerto Rico. This payment rate is then further adjusted if the hospital qualifies for either the IME or DSH adjustment.

Finally, we add the uncompensated care payment to the total claim payment amount. We note that, as discussed above, we take uncompensated care payments into consideration when calculating outlier payments.

III. Changes to Payment Rates for Acute Care Hospital Inpatient Capital-Related Costs for FY 2015

The PPS for acute care hospital inpatient capital-related costs was implemented for cost reporting periods beginning on or after October 1, 1991. Effective with that cost reporting period, over a 10-year transition period (which extended through FY 2001) the payment methodology for Medicare acute care hospital inpatient capital-related costs changed from a reasonable cost-based methodology to a prospective methodology (based fully on the Federal rate).

The basic methodology for determining Federal capital prospective rates is set forth in the regulations at 42 CFR 412.308 through 412.352. Below we discuss the factors that we used to determine the capital Federal rate for FY 2015, which is effective for discharges occurring on or after October 1, 2014.

The 10-year transition period ended with hospital cost reporting periods beginning on or after October 1, 2001 (FY 2002). Therefore, for cost reporting periods beginning in FY 2002, all hospitals (except “new” hospitals under § 412.304(c)(2)) are paid based on the capital Federal rate. For FY 1992, we computed the standard Federal payment rate for capital-related costs under the IPPS by updating the FY 1989 Medicare inpatient capital cost per case by an actuarial estimate of the increase in Medicare inpatient capital costs per case. Each year after FY 1992, we update the capital standard Federal rate, as provided at § 412.308(c)(1), to account for capital input price increases and other factors. The regulations at § 412.308(c)(2) also provide that the capital Federal rate be adjusted annually by a factor equal to the estimated proportion of outlier payments under the capital Federal rate to total capital payments under the capital Federal rate. In addition, § 412.308(c)(3) requires that the capital Federal rate be reduced by an adjustment factor equal to the estimated

proportion of payments for exceptions under § 412.348. (We note that, as discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53705), there is generally no longer a need for an exceptions payment adjustment factor.) However, in limited circumstances, an additional payment exception for extraordinary circumstances is provided for under § 412.348(f) for qualifying hospitals. Therefore, in accordance with § 412.308(c)(3), an exceptions payment adjustment factor may need to be applied if such payments are made. Section 412.308(c)(4)(ii) requires that the capital standard Federal rate be adjusted so that the effects of the annual DRG reclassification and the recalibration of DRG weights and changes in the geographic adjustment factor (GAF) are budget neutral.

Section 412.374 provides for blended payments to hospitals located in Puerto Rico under the IPPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. In accordance with section 1886(d)(9)(A) of the Act, under the IPPS for acute care hospital operating costs, hospitals located in Puerto Rico are paid for operating costs under a special payment formula. Effective October 1, 2004, in accordance with section 504 of Public Law 108–173, the methodology for operating payments made to hospitals located in Puerto Rico under the IPPS was revised to make payments based on a blend of 25 percent of the applicable standardized amount specific to Puerto Rico hospitals and 75 percent of the applicable national average standardized amount. In conjunction with this change to the operating blend percentage, effective with discharges occurring on or after October 1, 2004, we also revised the methodology for computing capital payments made to hospitals located in Puerto Rico to be based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the national capital Federal rate (69 FR 49185).

A. Determination of the Federal Hospital Inpatient Capital-Related Prospective Payment Rate Update

In the discussion that follows, we explain the factors that we used to determine the capital Federal rate for FY 2015. In particular, we explain why the FY 2015 capital Federal rate increases approximately 1.2 percent, compared to the FY 2014 capital Federal rate. As discussed in the impact analysis in Appendix A to this final rule, we

estimate that capital payments per discharge will increase approximately 1.5 percent during that same period. Because capital payments constitute about 10 percent of hospital payments, a percent change in the capital Federal rate yields only about a 0.1 percent change in actual payments to hospitals.

1. Projected Capital Standard Federal Rate Update

a. Description of the Update Framework

Under § 412.308(c)(1), the capital standard Federal rate is updated on the basis of an analytical framework that takes into account changes in a capital input price index (CIPI) and several other policy adjustment factors. Specifically, we adjust the projected CIPI rate-of-increase as appropriate each year for case-mix index-related changes, for intensity, and for errors in previous CIPI forecasts. The update factor for FY 2015 under that framework is 1.5 percent based on the best data available at this time. The update factor under that framework is based on a projected 1.5 percent increase in the FY 2010-based CIPI, a 0.0 percentage point adjustment for intensity, a 0.0 percentage point adjustment for case-mix, a 0.0 percentage point adjustment for the FY 2013 DRG reclassification and recalibration, and a forecast error correction of 0.0 percentage point. As discussed below in section III.C. of this Addendum, we continue to believe that the CIPI is the most appropriate input price index for capital costs to measure capital price changes in a given year. We also explain the basis for the FY 2015 CIPI projection in that same section of this Addendum. Below we describe the policy adjustments that we are applying in the update framework for FY 2015.

The case-mix index is the measure of the average DRG weight for cases paid under the IPPS. Because the DRG weight determines the prospective payment for each case, any percentage increase in the case-mix index corresponds to an equal percentage increase in hospital payments.

The case-mix index can change for any of several reasons:

- The average resource use of Medicare patients changes (“real” case-mix change);
- Changes in hospital documentation and coding of patient records result in higher-weighted DRG assignments (“coding effects”); and
- The annual DRG reclassification and recalibration changes may not be budget neutral (“reclassification effect”).

We define real case-mix change as actual changes in the mix (and resource

requirements) of Medicare patients as opposed to changes in documentation and coding behavior that result in assignment of cases to higher-weighted DRGs, but do not reflect higher resource requirements. The capital update framework includes the same case-mix index adjustment used in the former operating IPPS update framework (as discussed in the May 18, 2004 IPPS proposed rule for FY 2005 (69 FR 28816)). (We no longer use an update framework to make a recommendation for updating the operating IPPS standardized amounts as discussed in section II. of Appendix B to the FY 2006 IPPS final rule (70 FR 47707).)

For FY 2015, we are projecting a 0.5 percent total increase in the case-mix index. We estimated that the real case-mix increase will also equal 0.5 percent for FY 2015. The net adjustment for change in case-mix is the difference between the projected real increase in case-mix and the projected total increase in case-mix. Therefore, as we proposed, the net adjustment for case-mix change in FY 2015 is 0.0 percentage point.

The capital update framework also contains an adjustment for the effects of DRG reclassification and recalibration. This adjustment is intended to remove the effect on total payments of prior year's changes to the DRG classifications and relative weights, in order to retain budget neutrality for all case-mix index-related changes other than those due to patient severity of illness. Due to the lag time in the availability of data, there is a 2-year lag in data used to determine the adjustment for the effects of DRG reclassification and recalibration. For example, we have data available to evaluate the effects of the FY 2013 DRG reclassification and recalibration as part of our update for FY 2015. We estimate that FY 2013 DRG reclassification and recalibration resulted in no change in the case-mix when compared with the case-mix index that would have resulted if we had not made the reclassification and recalibration changes to the DRGs. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for reclassification and recalibration in the update framework for FY 2015.

The capital update framework also contains an adjustment for forecast error. The input price index forecast is based on historical trends and relationships ascertainable at the time the update factor is established for the upcoming year. In any given year, there may be unanticipated price fluctuations that may result in differences between the actual increase in prices and the forecast used in calculating the update

factors. In setting a prospective payment rate under the framework, we make an adjustment for forecast error only if our estimate of the change in the capital input price index for any year is off by 0.25 percentage point or more. There is a 2-year lag between the forecast and the availability of data to develop a measurement of the forecast error. A forecast error of 0.0 percentage point was calculated for the FY 2015 update. Historically, when forecast error of the CIPI is greater than 0.25 percentage point in absolute terms, it is reflected in the update recommended under this framework. Current historical data indicate that the forecasted FY 2013 rate-of-increase of the FY 2006-based CIPI (1.2 percent) used in calculating the FY 2013 update factor slightly understated the actual realized FY 2013 price increases of the FY 2006-based CIPI (1.3 percent) by 0.1 percentage point because the prices associated with both the depreciation and other capital-related cost categories grew more quickly than anticipated. Because this forecast error does not exceed the 0.25 percentage point threshold, as we proposed, we are making a 0.0 percentage point adjustment for forecast error in the update for FY 2015.

Under the capital IPPS update framework, we also make an adjustment for changes in intensity. Historically, we calculated this adjustment using the same methodology and data that were used in the past under the framework for operating IPPS. The intensity factor for the operating update framework reflected how hospital services are utilized to produce the final product, that is, the discharge. This component accounts for changes in the use of quality-enhancing services, for changes within DRG severity, and for expected modification of practice patterns to remove noncost-effective services. Our intensity measure is based on a 5-year average.

We calculate case-mix constant intensity as the change in total cost per discharge, adjusted for price level changes (the CIPI for hospital and related services) and changes in real case-mix. Without reliable estimates of the proportions of the overall annual intensity increases that are due, respectively, to ineffective practice patterns and the combination of quality-enhancing new technologies and complexity within the DRG system, we assume that one-half of the annual increase is due to each of these factors. The capital update framework thus provides an add-on to the input price index rate of increase of one-half of the estimated annual increase in intensity, to allow for increases within DRG

severity and the adoption of quality-enhancing technology.

In this final rule, we are continuing to use a Medicare-specific intensity measure that is based on a 5-year adjusted average of cost per discharge for FY 2015 (we refer readers to the FY 2011 IPPS/LTCH PPS final rule (75 FR 50436) for a full description of our Medicare-specific intensity measure). Specifically, for FY 2015, we are using an intensity measure that is based on an average of cost per discharge data from the 5-year period beginning with FY 2007 and extending through FY 2012. Based on these data, we estimated that case-mix constant intensity declined during FYs 2007 through 2012. In the past, when we found intensity to be declining, we believed a zero (rather than a negative) intensity adjustment was appropriate. Consistent with this approach, because we estimate that intensity declined during that 5-year period, we believe it is appropriate to continue to apply a zero intensity adjustment for FY 2015. Therefore, as we proposed, we are making a 0.0 percentage point adjustment for intensity in the update for FY 2015.

Above, we described the basis of the components used to develop the 1.5 percent capital update factor under the capital update framework for FY 2015 as shown in the table below.

CMS FY 2015 UPDATE FACTOR TO THE CAPITAL FEDERAL RATE

Capital Input Price Index*	1.5
Intensity:	0.0
Case-Mix Adjustment Factors:	
Real Across DRG Change	-0.5
Projected Case-Mix Change	0.5
Subtotal	1.5
Effect of FY 2013 Reclassification and Recalibration	0.0
Forecast Error Correction	0.0
Total Update	1.5

*The capital input price index is based on the FY 2010-based CIPI.

b. Comparison of CMS and MedPAC Update Recommendation

In its March 2014 Report to Congress, MedPAC did not make a specific update recommendation for capital IPPS payments for FY 2015. (We refer readers to MedPAC's Report to the Congress: Medicare Payment Policy, March 2014, Chapter 3.)

2. Outlier Payment Adjustment Factor

Section 412.312(c) establishes a unified outlier payment methodology for inpatient operating and inpatient capital-related costs. A single set of thresholds is used to identify outlier cases for both inpatient operating and inpatient capital-related payments. Section 412.308(c)(2) provides that the standard Federal rate for inpatient capital-related costs be reduced by an adjustment factor equal to the estimated proportion of capital-related outlier payments to total inpatient capital-related PPS payments. The outlier thresholds are set so that operating outlier payments are projected to be 5.1 percent of total operating IPPS DRG payments.

For FY 2014, we estimated that outlier payments for capital will equal 6.07 percent of inpatient capital-related payments based on the capital Federal rate in FY 2014. Based on the thresholds as set forth in section II.A. of this Addendum, we estimate that outlier payments for capital-related costs will equal 6.27 percent for inpatient capital-related payments based on the capital Federal rate in FY 2015. Therefore, we are applying an outlier adjustment factor of 0.9373 in determining the capital Federal rate for FY 2015. Thus, we estimate that the percentage of capital outlier payments to total capital Federal rate payments for FY 2015 will be slightly higher than the percentage for FY 2014.

The outlier reduction factors are not built permanently into the capital rates; that is, they are not applied cumulatively in determining the capital Federal rate. The FY 2015 outlier adjustment of 0.9373 is a -0.21 percent change from the FY 2014 outlier adjustment of 0.9393. Therefore, the net change in the outlier adjustment to the capital Federal rate for FY 2015 is 0.9979 (0.9373/0.9393). Thus, the outlier adjustment will decrease the FY 2015 capital Federal rate by 0.21 percent compared to the FY 2014 outlier adjustment.

3. Budget Neutrality Adjustment Factor for Changes in DRG Classifications and Weights and the GAF

Section 412.308(c)(4)(ii) requires that the capital Federal rate be adjusted so that aggregate payments for the fiscal year based on the capital Federal rate after any changes resulting from the annual DRG reclassification and recalibration and changes in the GAF are projected to equal aggregate payments that would have been made on the basis of the capital Federal rate without such changes. Because we

implemented a separate GAF for Puerto Rico, we apply separate budget neutrality adjustments for the national GAF and the Puerto Rico GAF. We apply the same budget neutrality factor for DRG reclassifications and recalibration nationally and for Puerto Rico. Separate adjustments were unnecessary for FY 1998 and earlier because the GAF for Puerto Rico was implemented in FY 1998.

To determine the factors for FY 2015, we compared (separately for the national capital rate and the Puerto Rico capital rate) estimated aggregate capital Federal rate payments based on the FY 2014 MS-DRG classifications and relative weights and the FY 2014 GAF to estimated aggregate capital Federal rate payments based on the FY 2014 MS-DRG classifications and relative weights and the FY 2015 GAFs. To achieve budget neutrality for the changes in the national GAFs, based on calculations using updated data, we are applying an incremental budget neutrality adjustment factor of 0.9999 for FY 2015 to the previous cumulative FY 2014 adjustment factor of 0.9891, yielding an adjustment factor of 0.9890 through FY 2015. For the Puerto Rico GAFs, we are applying an incremental budget neutrality adjustment factor of 1.0012 for FY 2015 to the previous cumulative FY 2014 adjustment factor of 1.0076, yielding a cumulative adjustment factor of 1.0088 through FY 2015.

We then compared estimated aggregate capital Federal rate payments based on the FY 2014 MS-DRG relative weights and the FY 2015 GAFs to estimated aggregate capital Federal rate payments based on the cumulative effects of the FY 2015 MS-DRG classifications and relative weights and the FY 2015 GAFs. The incremental adjustment factor for DRG reclassifications and changes in relative weights is 0.9987 both nationally and for Puerto Rico. The cumulative adjustment factors for MS-DRG classifications and changes in relative weights and for changes in the GAFs through FY 2015 are 0.9877 nationally and 1.0075 for Puerto Rico. (We note that all the values are calculated with unrounded numbers.) The GAF/DRG budget neutrality adjustment factors are built permanently into the capital rates; that is, they are applied cumulatively in determining the capital Federal rate. This follows the requirement under § 412.308(c)(4)(ii) that estimated aggregate payments each year be no more or less than they would have been in the absence of the annual DRG reclassification and recalibration and changes in the GAFs.

The methodology used to determine the recalibration and geographic adjustment factor (GAF/DRG) budget neutrality adjustment is similar to the methodology used in establishing budget neutrality adjustments under the IPPS for operating costs. One difference is that, under the operating IPPS, the budget neutrality adjustments for the effect of geographic reclassifications are determined separately from the effects of other changes in the hospital wage index and the MS-DRG relative weights. Under the capital IPPS, there is a single GAF/DRG budget neutrality adjustment factor (the national capital rate and the Puerto Rico capital rate are determined separately) for changes in the GAF (including geographic reclassification) and the MS-DRG relative weights. In addition, there is no adjustment for the effects that geographic reclassification has on the other payment parameters, such as the payments for DSH or IME.

The cumulative adjustment factor accounts for the MS-DRG reclassifications and recalibration and for changes in the GAFs. It also incorporates the effects on the GAFs of FY 2015 geographic reclassification decisions made by the MGCRB compared to FY 2014 decisions. However, it does not account for changes in payments due to changes in the DSH and IME adjustment factors.

4. Capital Federal Rate for FY 2015

For FY 2014, we established a capital Federal rate of \$429.31 (78 FR 50990). We are establishing an update of 1.5 percent in determining the FY 2015 capital Federal rate for all hospitals. As a result of this update and the budget neutrality factors discussed above, we are establishing a national capital Federal rate of \$434.26 for FY 2015. The national capital Federal rate for FY 2015 was calculated as follows:

- The FY 2015 update factor is 1.015, that is, the update is 1.5 percent.
- The FY 2015 budget neutrality adjustment factor that is applied to the capital Federal rate for changes in the MS-DRG classifications and relative weights and changes in the GAFs is 0.9986.
- The FY 2015 outlier adjustment factor is 0.9373.

(We note that, as discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2015.)

Because the FY 2015 capital Federal rate has already been adjusted for differences in case-mix, wages, cost-of-living, indirect medical education costs, and payments to hospitals serving a

disproportionate share of low-income patients, we are not making additional adjustments in the capital Federal rate for these factors, other than the budget neutrality factor for changes in the MS-DRG classifications and relative weights and for changes in the GAFs.

We are providing the following chart that shows how each of the factors and adjustments for FY 2015 affects the

computation of the FY 2015 national capital Federal rate in comparison to the FY 2014 national capital Federal rate. The FY 2015 update factor has the effect of increasing the capital Federal rate by 1.5 percent compared to the FY 2014 capital Federal rate. The GAF/DRG budget neutrality adjustment factor has the effect of decreasing the capital

Federal rate by 0.14 percent. The FY 2015 outlier adjustment factor has the effect of decreasing the capital Federal rate by 0.21 percent compared to the FY 2014 capital Federal rate. The combined effect of all the changes will increase the national capital Federal rate by 1.15 percent compared to the FY 2014 national capital Federal rate.

COMPARISON OF FACTORS AND ADJUSTMENTS: FY 2014 CAPITAL FEDERAL RATE AND FY 2015 CAPITAL FEDERAL RATE

	FY 2014	FY 2015	Change	Percent change
Update Factor ¹	1.0090	1.0150	1.0150	1.50
GAF/DRG Adjustment Factor ¹	0.9987	0.9986	0.9986	-0.14
Outlier Adjustment Factor ²	0.9393	0.9373	0.9379	-0.21
Capital Federal Rate	429.31	434.26	1.0115	1.15

¹ The update factor and the GAF/DRG budget neutrality adjustment factors are built permanently into the capital Federal rates. Thus, for example, the incremental change from FY 2014 to FY 2015 resulting from the application of the 0.9986 GAF/DRG budget neutrality adjustment factor for FY 2015 is a net change of 0.9986 (or -0.14 percent).

² The outlier reduction factor is not built permanently into the capital Federal rate; that is, the factor is not applied cumulatively in determining the capital Federal rate. Thus, for example, the net change resulting from the application of the FY 2015 outlier adjustment factor is 0.9373/0.9393, or 0.9979 (or -0.21 percent).

In this final rule, we also are providing the following chart that shows how the final FY 2015 capital

Federal rate differs from the proposed FY 2015 capital Federal rate as

presented in the FY 2015 IPPS/LTCH PPS proposed rule.

COMPARISON OF FACTORS AND ADJUSTMENTS: PROPOSED FY 2015 CAPITAL FEDERAL RATE AND FINAL FY 2015 CAPITAL FEDERAL RATE

	Proposed	Final	Change	Percent change
Update Factor	1.0150	1.0150	1.0000	0.00
GAF/DRG Adjustment Factor	0.9957	0.9986	1.0030	0.30
Outlier Adjustment Factor	0.9374	0.9373	0.9999	-0.01
Capital Federal Rate	433.01	434.26	1.0029	1.29

5. Special Capital Rate for Puerto Rico Hospitals

Section 412.374 provides for the use of a blended payment system for payments made to hospitals located in Puerto Rico under the PPS for acute care hospital inpatient capital-related costs. Accordingly, under the capital PPS, we compute a separate payment rate specific to hospitals located in Puerto Rico using the same methodology used to compute the national Federal rate for capital-related costs. Under the broad authority of section 1886(g) of the Act, beginning with discharges occurring on or after October 1, 2004, capital payments made to hospitals located in Puerto Rico are based on a blend of 25 percent of the Puerto Rico capital rate and 75 percent of the capital Federal rate. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS (including Puerto Rico).

To adjust hospitals' capital payments for geographic variations in capital

costs, we apply a GAF to both portions of the blended capital rate. The GAF is calculated using the operating IPPS wage index, and varies depending on the labor market area or rural area in which the hospital is located. We use the Puerto Rico wage index to determine the GAF for the Puerto Rico part of the capital-blended rate and the national wage index to determine the GAF for the national part of the blended capital rate.

Because we implemented a separate GAF for Puerto Rico in FY 1998, we also apply separate budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF. However, we apply the same budget neutrality adjustment factor for MS-DRG reclassifications and recalibration nationally and for Puerto Rico. The budget neutrality adjustment factors for the national GAF and for the Puerto Rico GAF and the budget neutrality factor for MS-DRG reclassifications and recalibration (which is the same nationally and for Puerto Rico) are

discussed in section III.A.3. of this Addendum.

In computing the payment for a particular Puerto Rico hospital, the Puerto Rico portion of the capital rate (25 percent) is multiplied by the Puerto Rico-specific GAF for the labor market area in which the hospital is located, and the national portion of the capital rate (75 percent) is multiplied by the national GAF for the labor market area in which the hospital is located (which is computed from national data for all hospitals in the United States and Puerto Rico).

For FY 2014, the special capital rate for hospitals located in Puerto Rico was \$209.82 (78 FR 50991). With the changes we are making to the factors used to determine the capital Federal rate, the FY 2015 special capital rate for hospitals in Puerto Rico is \$209.10.

Comment: One commenter noted that the proposed capital standard Federal rate for Puerto Rico is approximately less than half of the proposed national capital standard Federal rate. The commenter asserted that this

“disparity” is “not consistent with the basic reality of Puerto Rico” because average capital costs in Puerto Rico are not that dissimilar from those in the United States.

Response: We appreciate the commenter’s attention to the proposed capital Federal rates for Puerto Rico hospitals. While it is not clear what the commenter was specifically requesting, we believe the commenter may have been suggesting that CMS increase the Puerto Rico specific capital Federal rate to reduce the difference between it and the national capital Federal rate. The commenter is correct that the proposed Puerto Rico capital standard Federal rate is approximately half of the proposed national capital standard Federal rate, which has consistently been the difference since those rates were established. The Puerto Rico capital rate is derived from the costs of Puerto Rico hospitals only, while the national capital Federal rate is derived from the costs of all acute care hospitals participating in the IPPS, including Puerto Rico. The commenter did not provide any empirical data to demonstrate that the capital-related costs in Puerto Rico are similar to those in the United States, nor that the blended payment methodology for capital-related costs to hospitals located in Puerto Rico at § 412.374 (that is, 25 percent of the Puerto Rico capital rate and 75 percent of the national capital Federal rate) does not result in appropriate capital IPPS payments for Puerto Rico hospitals. Consequently, we are unable to assess and directly respond to the statements included in the comment. Therefore, in this final rule, we have determined that the Puerto Rico capital Federal rate for FY 2015 is consistent with our current policy.

B. Calculation of the Inpatient Capital-Related Prospective Payments for FY 2015

For purposes of calculating payments for each discharge during FY 2015, the capital Federal rate is adjusted as follows: (Standard Federal Rate) × (DRG weight) × (GAF) × (COLA for hospitals located in Alaska and Hawaii) × (1 + DSH Adjustment Factor + IME Adjustment Factor, if applicable). The result is the adjusted capital Federal rate.

Hospitals also may receive outlier payments for those cases that qualify under the thresholds established for each fiscal year. Section 412.312(c) provides for a single set of thresholds to identify outlier cases for both inpatient operating and inpatient capital-related payments. The outlier thresholds for FY

2015 are in section II.A. of this Addendum. For FY 2015, a case would qualify as a cost outlier if the cost for the case plus the (operating) IME and DSH payments (including both the empirically justified Medicare DSH payment and the estimated uncompensated care payment, as discussed in section II.A.4.g.(1) of this Addendum) is greater than the prospective payment rate for the MS-DRG plus the fixed-loss amount of \$24,758.

Currently, as provided under § 412.304(c)(2), we pay a new hospital 85 percent of its reasonable costs during the first 2 years of operation unless it elects to receive payment based on 100 percent of the capital Federal rate. Effective with the third year of operation, we pay the hospital based on 100 percent of the capital Federal rate (that is, the same methodology used to pay all other hospitals subject to the capital PPS).

C. Capital Input Price Index

1. Background

Like the operating input price index, the capital input price index (CIPI) is a fixed-weight price index that measures the price changes associated with capital costs during a given year. The CIPI differs from the operating input price index in one important aspect—the CIPI reflects the vintage nature of capital, which is the acquisition and use of capital over time. Capital expenses in any given year are determined by the stock of capital in that year (that is, capital that remains on hand from all current and prior capital acquisitions). An index measuring capital price changes needs to reflect this vintage nature of capital. Therefore, the CIPI was developed to capture the vintage nature of capital by using a weighted-average of past capital purchase prices up to and including the current year.

We periodically update the base year for the operating and capital input price indexes to reflect the changing composition of inputs for operating and capital expenses. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50603 through 50607), we rebased and revised the CIPI to a FY 2010 base year to reflect the more current structure of capital costs in hospitals. For a complete discussion of this rebasing, we refer readers to the FY 2014 IPPS/LTCH PPS final rule.

2. Forecast of the CIPI for FY 2015

Based on the latest forecast by IHS Global Insight, Inc. (second quarter of 2014), we are forecasting the FY 2010-based CIPI to increase 1.5 percent in FY

2015. This reflects a projected 2.0 percent increase in vintage-weighted depreciation prices (building and fixed equipment, and movable equipment), and a projected 2.7 percent increase in other capital expense prices in FY 2015, partially offset by a projected 1.1 percent decline in vintage-weighted interest expenses in FY 2015. The weighted average of these three factors produces the forecasted 1.5 percent increase for the FY 2010-based CIPI as a whole in FY 2015.

IV. Changes to Payment Rates for Excluded Hospitals: Rate-of-Increase Percentages for FY 2015

Payments for services furnished in children’s hospitals, 11 cancer hospitals, and hospitals located outside the 50 States, the District of Columbia and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) that are excluded from the IPPS are made on the basis of reasonable costs based on the hospital’s own historical cost experience, subject to a rate-of-increase ceiling. A per discharge limit (the target amount as defined in § 413.40(a) of the regulations) is set for each hospital based on the hospital’s own cost experience in its base year, and updated annually by a rate-of-increase percentage. (We note that, in accordance with § 403.752(a), RNHCIs are also subject to the rate-of-increase limits established under § 413.40 of the regulations.)

In the FY 2015 IPPS/LTCH PPS proposed rule, we proposed that the FY 2015 rate-of-increase percentage for updating the target amounts for the 11 cancer hospitals, children’s hospitals, and the short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, as well as RNHCIs would be the estimated percentage increase in the FY 2015 IPPS operating market basket, in accordance with applicable regulations at § 413.40. As we did in FY 2014, we proposed to use the percentage increase in the FY 2010-based IPPS operating market basket to update these target amounts. Based on IHS Global Insight, Inc.’s 2014 first quarter forecast, we estimated that the FY 2010-based IPPS operating market basket update for FY 2015 was 2.7 percent (that is, the estimate of the market basket rate-of-increase). However, we proposed that if more recent data become available for the final rule, we would use them to calculate the IPPS operating market basket update for FY 2015.

We did not receive any public comments on our proposals.

Based on updated data from IHS Global Insight, Inc.'s 2014 second quarter forecast, we estimate that the final FY 2010-based IPPS operating market basket update for FY 2015 is 2.9 percent (that is, the estimate of the market basket rate-of-increase).

The IRF PPS, the IPF PPS, and the LTCH PPS are updated annually. We refer readers to section VII. of the preamble of this final rule and section V. of the Addendum to this final rule for the update changes to the Federal payment rates for LTCHs under the LTCH PPS for FY 2015. The annual updates for the IRF PPS and the IPF PPS are issued by the agency in separate **Federal Register** documents.

V. Updates to the Payment Rates for the LTCH PPS for FY 2015

A. LTCH PPS Standard Federal Rate for FY 2015

1. Background

In section VII. of the preamble of this final rule, we discuss our updates to the payment rates, factors, and specific policies under the LTCH PPS for FY 2015.

Under § 412.523(c)(3)(ii) of the regulations, for LTCH PPS rate years beginning RY 2004 through RY 2006, we updated the standard Federal rate annually by a factor to adjust for the most recent estimate of the increases in prices of an appropriate market basket of goods and services for LTCHs. We established this policy of annually updating the standard Federal rate because, at that time, we believed that was the most appropriate method for updating the LTCH PPS standard Federal rate for years after the initial implementation of the LTCH PPS in FY 2003. Therefore, under § 412.523(c)(3)(ii), for RYs 2004 through 2006, the annual update to the LTCH PPS standard Federal rate was equal to the previous rate year's Federal rate updated by the most recent estimate of increases in the appropriate market basket of goods and services included in covered inpatient LTCH services.

In determining the annual update to the standard Federal rate for RY 2007, based on our ongoing monitoring activity, we believed that, rather than solely using the most recent estimate of the LTCH PPS market basket update as the basis of the annual update factor, it was appropriate to adjust the standard Federal rate to account for the effect of documentation and coding in a prior period that was unrelated to patients' severity of illness (71 FR 27818). Accordingly, we established under

§ 412.523(c)(3)(iii) that the annual update to the standard Federal rate for RY 2007 was zero percent based on the most recent estimate of the LTCH PPS market basket at that time, offset by an adjustment to account for changes in case-mix in prior periods due to the effect of documentation and coding that were unrelated to patients' severity of illness. For RY 2008 through FY 2011, we also made an adjustment for the effect of documentation and coding that was unrelated to patients' severity of illness in establishing the annual update to the standard Federal rate as set forth in the regulations at §§ 412.523(c)(3)(iv) through (c)(3)(vii). For FYs 2012, 2013, and 2014, we updated the standard Federal rate by the most recent estimate of the LTCH PPS market basket at that time, including additional statutory adjustments required by section 1886(m)(3)(A) of the Act as set forth in the regulations at §§ 412.523(c)(3)(viii) through (c)(3)(ix).

Section 1886(m)(3)(A) of the Act, as added by section 3401(c) of the Affordable Care Act, specifies that, for rate year 2010 and each subsequent rate year, any annual update to the standard Federal rate shall be reduced:

- For rate year 2010 through 2019, by the other adjustment specified in section 1886(m)(3)(A)(ii) and (m)(4) of the Act; and
- For rate year 2012 and each subsequent year, by the productivity adjustment described in section 1886(b)(3)(B)(xi)(II) of the Act (which we refer to as "the multifactor productivity (MFP) adjustment") as discussed in section VII.C.2. of the preamble of this final rule.

Section 1886(m)(3)(B) of the Act provides that the application of paragraph (3) of section 1886(m) of the Act may result in the annual update being less than zero for a rate year, and may result in payment rates for a rate year being less than such payment rates for the preceding rate year. (As noted in section VII.C.2.a. of the preamble of this final rule, the annual update to the LTCH PPS occurs on October 1 and we have adopted the term "fiscal year" (FY) rather than "rate year" (RY) under the LTCH PPS beginning October 1, 2010. Therefore, for purposes of clarity, when discussing the annual update for the LTCH PPS, including the provisions of the Affordable Care Act, we use the term "fiscal year" rather than "rate year" for 2011 and subsequent years.)

For FY 2014, consistent with our historical practice, we established an update to the LTCH PPS standard Federal rate based on the full estimated LTCH PPS market basket increase of 2.5 percent and the 0.8 percentage point

reductions required by sections 1886(m)(3)(A)(i) and 1886(m)(3)(A)(ii) with 1886(m)(4)(C) of the Act. Accordingly, at § 412.523(c)(3)(x) of the regulations, we established an annual update of 1.7 percent to the standard Federal rate for FY 2014 (78 FR 50761 through 50763).

For FY 2015, as discussed in greater detail in section VII.C.2. of the preamble of this final rule, consistent with our proposal, we are establishing an annual update to the LTCH PPS standard Federal rate based on the full estimated increase in the LTCH PPS market basket, less the MFP adjustment consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. In addition, as discussed in greater detail in section VII.C.2. of the preamble of this final rule, beginning in FY 2014, the annual update will be further reduced by 2.0 percentage points for LTCHs that fail to submit quality reporting data in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act.

Specifically, in this final rule, based on the best available data, we are establishing an annual update to the standard Federal rate of 2.2 percent, which is based on the full estimated increase in the LTCH PPS market basket of 2.9 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. As discussed in greater detail in section VII.C.2.c. of the preamble of this final rule, for LTCHs that fail to submit the required quality reporting data for FY 2015 in accordance with the LTCHQR Program, the annual update is further reduced by 2.0 percentage points as required by section 1886(m)(5) of the Act. Accordingly, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.2 percent for LTCHs that fail to submit the required quality reporting data for FY 2015. This 0.2 percent update is calculated based on the full estimated increase in the LTCH PPS market basket of 2.9 percent, less a MFP adjustment of 0.5 percentage point, less an additional adjustment of 0.2 percentage point required by the statute, and less 2.0 percentage points for failure to submit quality reporting data as required by section 1886(m)(5) of the Act.

2. Development of the FY 2015 LTCH PPS Standard Federal Rate

We continue to believe that the annual update to the LTCH PPS standard Federal rate should be based

on the most recent estimate of the increase in the LTCH PPS market basket, including any statutory adjustments. Consistent with our historical practice and as we proposed, for FY 2015, we are applying the annual update to the LTCH PPS standard Federal rate from the previous year. Furthermore, in determining the standard Federal rate for FY 2015, consistent with our proposal, we also are making certain regulatory adjustments. Specifically, we are applying an adjustment factor for the final year of the 3-year phase-in of the one-time prospective adjustment to the standard Federal rate under § 412.523(d)(3), as discussed in greater detail in section VII.C.3. of the preamble of this final rule. In addition, in determining the FY 2015 standard Federal rate, we are applying a budget neutrality adjustment factor for the changes related to the area wage adjustment (that is, changes to the wage data, including the policy to adopt the new OMB delineations, and labor-related share) in accordance with § 412.523(d)(4).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50993 and 50993), we established an annual update to the LTCH PPS standard Federal rate of 1.7 percent for FY 2014 based on the full estimated LTCH PPS market basket increase of 2.5 percent, less the MFP adjustment of 0.5 percentage point consistent with section 1886(m)(3)(A)(i) of the Act and less the 0.3 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(C) of the Act. Accordingly, at § 412.523(c)(3)(x), we established an annual update to the standard Federal rate for FY 2014 of 1.7 percent. That is, we applied an update factor of 1.017 to the FY 2013 Federal rate of \$40,607.31 to determine the FY 2014 standard Federal rate. We also adjusted the standard Federal rate for FY 2014 by the one-time prospective adjustment factor for FY 2014 of 0.98734 under § 412.523(d)(3)(ii). Furthermore, for FY 2014, we applied an area wage level budget neutrality factor of 1.0010531 to the standard Federal rate to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Consequently, we established a standard Federal rate for FY 2014 of \$40,607.31 (calculated as \$40,397.96 × 1.017 × 0.98734 × 1.0010531).

In this final rule, we are establishing an annual update to the LTCH PPS standard Federal rate of 2.2 percent (that

is, an update factor of 1.022) for FY 2015, based on the full estimated increase in the LTCH PPS market basket of 2.9 percent, less the MFP adjustment of 0.5 percentage point, consistent with section 1886(m)(3)(A)(i) of the Act, and less the 0.2 percentage point required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. Therefore, consistent with our proposal, under § 412.523(c)(3)(xi), we are applying a factor of 1.022 to the FY 2014 standard Federal rate of \$40,607.31 to determine the FY 2015 standard Federal rate. These factors are based on IGI's second quarter 2014 forecast, which are the best available data at this time. For LTCHs that fail to submit quality reporting data for FY 2015 under the LTCHQR Program, consistent with our proposal, under § 412.523(c)(3)(xi) in conjunction with § 412.523(c)(4), we are reducing the annual update to the LTCH PPS standard Federal rate by an additional 2.0 percentage points consistent with section 1886(m)(5) of the Act. Therefore, we are establishing an annual update to the LTCH PPS standard Federal rate of 0.2 percent (that is, 2.2 percent minus 2.0 percentage points, or an update factor of 1.002) for FY 2015 for LTCHs that fail to submit the required quality reporting data for FY 2015 under the LTCHQR Program. We also are establishing that the standard Federal rate for FY 2015 will be further adjusted by an adjustment factor of 0.98734 for FY 2015 under the final year of the 3-year phase-in of the one-time prospective adjustment at § 412.523(d)(3)(ii). In addition, for FY 2015, we are applying an area wage level budget neutrality factor of 1.0016703 to the standard Federal rate to ensure that any changes to the area wage level adjustment (that is, the annual update of the wage index values and labor-related share) will not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, we are establishing a standard Federal rate of \$41,043.71 (calculated as \$40,607.31 × 1.022 × 0.98734 × 1.0016703) for FY 2015. The standard Federal rate of \$41,043.71 will apply in determining the payments for FY 2015 discharges from LTCHs that submit quality reporting data for FY 2015 in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act. For LTCHs that fail to submit quality reporting data for FY 2015 in accordance with the requirements of the LTCHQR Program under section 1886(m)(5) of the Act, we are establishing a standard Federal of \$40,240.51 (calculated as \$40,607.31 ×

1.002 × 0.98734 × 1.0016703) for FY 2015.

B. Adjustment for Area Wage Levels under the LTCH PPS for FY 2015

1. Background

Under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we established an adjustment to the LTCH PPS standard Federal rate to account for differences in LTCH area wage levels under § 412.525(c). The labor-related share of the LTCH PPS standard Federal rate is adjusted to account for geographic differences in area wage levels by applying the applicable LTCH PPS wage index. The applicable LTCH PPS wage index is computed using wage data from inpatient acute care hospitals without regard to reclassification under section 1886(d)(8) or section 1886(d)(10) of the Act.

When we implemented the LTCH PPS, we established a 5-year transition to the full area wage level adjustment. The area wage level adjustment was completely phased-in for cost reporting periods beginning in FY 2007. Therefore, for cost reporting periods beginning on or after October 1, 2006, the applicable LTCH area wage index values are the full LTCH PPS area wage index values calculated based on acute care hospital inpatient wage index data without taking into account geographic reclassification under section 1886(d)(8) and section 1886(d)(10) of the Act. For additional information on the phase-in of the area wage level adjustment under the LTCH PPS, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56015 through 56019) and the RY 2008 LTCH PPS final rule (72 FR 26891).

2. Geographic Classifications (Labor Market Areas) Based on the New OMB Delineations

In adjusting for the differences in area wage levels under the LTCH PPS, the labor-related portion of an LTCH's Federal prospective payment is adjusted by using an appropriate area wage index based on the geographic classification (labor market area) in which the LTCH is located. Specifically, the application of the LTCH PPS area wage level adjustment under existing § 412.525(c) is made based on the location of the LTCH—either in an “urban area,” or a “rural area,” as defined in § 412.503. Under § 412.503, an “urban area” is defined as a Metropolitan Statistical Area (MSAs) (which includes a Metropolitan division, where applicable), as defined by the Executive

OMB and a “rural area” is defined as any area outside of an urban area.

The CBSA-based geographic classification (labor market area) definitions currently used under the LTCH PPS, effective for discharges occurring on or after July 1, 2005, are based on the OMB’s CBSA definitions that were developed based on 2000 U.S. Census data. As discussed in greater detail in section VII.D. of the preamble of this final rule, OMB announced revisions to the statistical boundaries of its labor market areas for MSAs, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the uses of the delineations of these areas in OMB Bulletin No. 13–01, issued on February 28, 2013 (referred hereinafter as the “new OMB delineations”). As previously stated, at that time, the FY 2014 IPPS/LTCH PPS proposed rule was in the advanced stages of development, and the proposed FY 2014 LTCH PPS area wage indexes had already been developed based on the previous OMB CBSA-based labor market area definitions that are currently used to define CBSA-based labor market areas (referred hereinafter as “CBSA designations”) under the LTCH PPS. Therefore, we did not implement changes to the CBSA designations under the LTCH PPS for FY 2014 based on the new OMB labor market areas delineations that were developed based on 2010 Decennial Census data. Rather, to allow for sufficient time to assess the new changes and their ramifications, we stated that we intended to propose to adopt the new OMB delineations, and the corresponding changes to the area wage index values based on those delineations, under the LTCH PPS for FY 2015 through notice and comment rulemaking. This approach was consistent with the approach used under the IPPS. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50994 through 50995).)

As discussed in section VII.D. of the preamble of this final rule, under the authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, we are adopting the new OMB delineations beginning in FY 2015. We believe that these new OMB delineations are based on the best available data that reflect the local economies and area wage levels of the hospitals that are currently located in these geographic areas. We also believe that the new OMB delineations will ensure that the LTCH PPS area wage

level adjustment most appropriately accounts for and reflects the relative hospital wage levels in the geographic area of the hospital as compared to the national average hospital wage level. We note that this policy is consistent with the IPPS policy discussed in section III.B. of the preamble of this final rule. For additional details on our policy to adopt the new OMB delineations, we refer readers to section VII.D. of the preamble of this final rule.

3. LTCH PPS Labor-Related Share

Under the payment adjustment for the differences in area wage levels under § 412.525(c), the labor-related share of an LTCH’s PPS Federal prospective payment is adjusted by the applicable wage index for the labor market area in which the LTCH is located. The LTCH PPS labor-related share currently represents the sum of the labor-related portion of operating costs (Wages and Salaries; Employee Benefits; Professional Fees Labor-Related, Administrative and Business Support Services; and All-Other: Labor-Related Services) and a labor-related portion of capital costs using the applicable LTCH PPS market basket. Additional background information on the historical development of the labor-related share under the LTCH PPS and the development of the RPL market basket can be found in the RY 2007 LTCH PPS final rule (71 FR 27810 through 27817 and 27829 through 27830) and the FY 2012 IPPS/LTCH PPS final rule (76 FR 51766 through 51769 and 51808).

For FY 2013, we revised and rebased the market basket used under the LTCH PPS by adopting the newly created FY 2009-based LTCH-specific market basket. In addition, we determined the labor-related share for FY 2013 as the sum of the FY 2013 relative importance of each labor-related cost category of the FY 2009-based LTCH-specific market basket. For more details, we refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53477 through 53479).

Consistent with our historical practice, in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50995 through 50996), we determined the LTCH PPS labor-related share for FY 2014 based on the FY 2014 relative importance of each labor-related cost category, which reflected the different rates of price change for these cost categories between the base year (FY 2009) and FY 2014. Specifically, based on IGI’s second quarter 2013 forecast of the FY 2009-

based LTCH-specific market basket, we established a labor-related share under the LTCH PPS for FY 2014 of 62.537 percent.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28335), we proposed to establish a labor-related share under the LTCH PPS for FY 2015 of 62.571 percent based on IGI’s first quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. Consistent with our historical practice, we also proposed that if more recent data became available, we would use that data to determine the final FY 2015 labor-related share under the LTCH PPS. We did not receive any public comments on this proposal. Therefore, we are adopting the policy as final without modification.

For FY 2015, in this final rule, we are establishing a labor-related share under the LTCH PPS of 62.306 percent based on IGI’s second quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. The table below shows the FY 2015 labor-related share relative importance using IGI’s second quarter 2014 forecast of the FY 2009-based LTCH-specific market basket. The sum of the relative importance for FY 2015 for operating costs (Wages and Salaries; Employee Benefits; Professional Fees Labor-Related, Administrative and Business Support Services; and All Other: Labor-Related Services) is 58.116 percent. We are establishing that the portion of capital-related costs that is influenced by the local labor market will continue to be estimated to be 46 percent. Because the relative importance for capital-related costs will be 9.109 percent of the FY 2009-based LTCH-specific market basket in FY 2015, we are taking 46 percent of 9.109 percent to determine the labor-related share of capital-related costs for FY 2015, which will result in 4.190 percent (0.46×9.109). We then added that 4.190 percent for the capital-related cost amount to the 58.116 percent for the operating cost amount to determine the total labor-related share for FY 2015. Therefore, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are establishing a labor-related share under the LTCH PPS for FY 2015 of 62.306 percent. This labor-related share is determined using the same methodology as used in calculating all previous fiscal years LTCH labor-related shares.

FY 2015 LABOR-RELATED SHARE RELATIVE IMPORTANCE BASED ON THE FY 2009-BASED LTCH-SPECIFIC MARKET BASKET

	FY 2015 labor-related share relative importance
Wages and Salaries	44.865
Employee Benefits	8.072
Professional Fees: Labor-Related	2.198
Administrative and Business Support Services	0.500
All Other: Labor-Related Services	2.481
Subtotal	58.116
Proposed Labor-Related Portion of Capital Costs (46%)	4.190
Total Labor-Related Share	62.306

4. LTCH PPS Wage Index for FY 2015

Historically, we have established LTCH PPS area wage index values calculated from acute care IPPS hospital wage data without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act (67 FR 56019). The area wage level adjustment established under the LTCH PPS is based on an LTCH's actual location without regard to the "urban" or "rural" designation of any related or affiliated provider.

In the FY 2014 LTCH PPS final rule (78 FR 50996 through 50997), we calculated the FY 2014 LTCH PPS area wage index values using the same data used for the FY 2014 acute care hospital IPPS (that is, data from cost reporting periods beginning during FY 2010), without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act, as these were the most recent complete data available at that time. In that same final rule, we indicated that we computed the FY 2014 LTCH PPS area wage index values consistent with the urban and rural geographic classifications (labor market areas) that were in place at that time, and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining payments under the LTCH PPS). As with the IPPS wage index, wage data for multicampus hospitals with campuses located in different labor market areas (CBSAs) are apportioned to each CBSA where the campus (or campuses) are located. We also continued to use our existing policy for determining area wage index values for areas where there are no IPPS wage data.

Consistent with our historical methodology, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28336 through 28337), to determine the

applicable area wage index values under the LTCH PPS for FY 2015, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we proposed to use wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2011, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act. We proposed to use FY 2011 wage data because these data are the most recent complete data available. We also noted that these are the same data used to compute the proposed FY 2015 acute care hospital inpatient wage index, as discussed in section III. of the preamble of that proposed rule. We proposed to compute the FY 2015 LTCH PPS area wage index values consistent with the proposed "urban" and "rural" geographic classifications (that is, using the proposed new OMB labor market area delineations), and consistent with our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS. We also proposed to continue to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, consistent with the IPPS policy. Lastly, under our proposed methodology for determining the FY 2015 LTCH PPS area wage index values, we proposed to continue to use our existing policy for determining area wage index values for areas where there are no IPPS wage data. (We refer readers to section V.B.4. of the Addendum to the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28336 through 28337) for additional details regarding our proposals pertaining to the development

of the LTCH PPS wage index values for FY 2015, which we are adopting as final without modification in this final rule, as discussed below.)

Comment: One commenter provided information received from a procured contractor that attempted to replicate the proposed FY 2015 LTCH wage index values using the IPPS wage index data from the FY 2011 cost report data that CMS made available on its Web site. As part of that analysis, the contractor also explored the variance between the FY 2014 LTCH PPS wage index values and the proposed FY 2015 LTCH PPS wage index values for certain LTCHs that were projected to experience a relatively significant change in their wage index. In particular, the analysis prepared by the commenter's contractor focused on specific CBSAs (particularly CBSA 23540 and CBSA 34740) that were projected to experience "a significant decline" in their wage index values for FY 2015 when compared to FY 2014, although there has been no change in the constituent of hospitals used to compute the wage index values for these areas. The commenter requested that CMS reexamine the wage data used to calculate the FY 2015 LTCH PPS wage index values for CBSAs that would experience a decrease in their wage index values for FY 2015 when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, and to explain the cause for those decreases.

Response: As requested by the commenter, we reexamined the IPPS wage data used to calculate the FY 2015 LTCH PPS wage index values for CBSAs that were projected to experience a decrease in their wage index values for FY 2015 when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, focusing our attention on the CBSAs referenced by the commenter. We found no issues with the IPPS hospital wage data from the FY 2011 cost reports, or with the calculation of

the FY 2015 LTCH PPS wage index values. In exploring the cause for the decrease in the wage index values for CBSAs projected to experience “a significant decline” in their FY 2015 wage index values when compared to the FY 2014 LTCH PPS wage index values for these CBSAs, we found that many of these CBSAs were comprised of three or less hospitals. A labor market area’s wage index value is calculated as the ratio of the labor market area’s average hourly wage to the national average hourly wage. Labor market areas (CBSAs) with fewer providers are generally subject to less stability in year-to-year wage index values because there is less of an averaging effect, wherein even relatively minor changes in one provider’s wage data can produce a relatively “significant” effect on the wage index value for that area. This is because such a change in one provider’s wage data has a relatively greater effect on the CBSA’s average hourly wage (based solely on the limited number of hospitals in that area) when compared to the effect that such a change has on the national average hourly wage (which is based on wage data from all hospitals). We note that there also are CBSAs that were projected to experience a “significant increase” in their wage index values for the same reason. We believe that these wage index changes are appropriate because these values are based on the most recent data available that reflect the relative hospital wage level in a geographic area (CBSA) in comparison to the national average hospital wage level.

After consideration of the public comments we received, in this final rule, we are finalizing our proposals pertaining to the development of the LTCH PPS wage index values for FY 2015, without modification. Therefore, consistent with our historical methodology, to determine the applicable area wage index values under the LTCH PPS for FY 2015, under the broad authority of section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are using wage data collected from cost reports submitted by IPPS hospitals for cost reporting periods beginning during FY 2011, without taking into account geographic reclassification under sections 1886(d)(8) and 1886(d)(10) of the Act. We are using FY 2011 wage data because these data are the most recent complete data available. These are the same data used to compute the FY 2015 acute care hospital inpatient wage index

values, as discussed in section III. of the preamble of this final rule. (For our rationale for using IPPS hospital wage data as a proxy for determining the area wage index values used under the LTCH PPS, we refer readers to the FY 2010 IPPS/RY 2010 LTCH PPS final rule (74 FR 44024 through 44025).) The FY 2015 LTCH PPS area wage index values were computed consistent with the “urban” and “rural” geographic classifications (that is, using the new OMB labor market area delineations), as discussed in section VII.D. of the preamble of this final rule, and consistent with the pre-reclassified IPPS wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications under sections 1886(d)(8) and 1886(d)(10) of the Act in determining payments under the LTCH PPS). As with the IPPS wage index, we are continuing to apportion wage data for multicampus hospitals with campuses located in different labor market areas to each CBSA where the campus or campuses are located, as discussed in section III.G. of the preamble of this final rule. Furthermore, in determining the FY 2015 LTCH PPS area wage index values, we are continuing to use our existing policy for determining area wage index values for areas where there are no IPPS wage data using the methodology we established in the RY 2009 LTCH PPS final rule. For more information about this methodology, including an explanation of and rationale for our policy for determining LTCH PPS wage index values for areas that have no IPPS wage data, we refer readers to the RY 2009 LTCH PPS final rule (73 FR 26817 through 26818).

There are currently no LTCHs located in labor market areas without IPPS hospital wage data (or IPPS hospitals). However, as discussed in the proposed rule, if an LTCH were to open in one of these labor market areas, LTCH PPS wage index values for such an area would be calculated using our established methodology. Under our existing methodology, the LTCH PPS wage index value for urban CBSAs with no IPPS wage data is determined by using an average of all of the urban areas within the State, and the LTCH PPS wage index value for rural areas with no IPPS wage data is determined by using the unweighted average of the wage indices from all of the CBSAs that are contiguous to the rural counties of the State.

Based on the FY 2011 IPPS wage data that we are using to determine the FY 2015 LTCH PPS area wage index values in this final rule, there are no IPPS wage data for the urban area Hinesville, GA

(CBSA 25980). Consistent with the methodology discussed above, we calculated the FY 2015 wage index value for CBSA 25980 as the average of the wage index values for all of the other urban areas within the State of Georgia (that is, CBSAs 10500, 12020, 12060, 12260, 15260, 16860, 17980, 19140, 23580, 31420, 40660, 42340, 46660 and 47580), as shown in Table 12A, which is listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site). We note that, as IPPS wage data are dynamic, it is possible that urban areas without IPPS wage data will vary in the future.

Based on FY 2011 IPPS wage data that we are using to determine the FY 2015 LTCH PPS area wage index values in this final rule, there are no rural areas without IPPS hospital wage data. Therefore, as discussed in the proposed rule, it is not necessary to use our established methodology to calculate an LTCH PPS wage index value for proposed rural areas with no IPPS wage data for FY 2015. We note that, as IPPS wage data are dynamic, it is possible that rural areas without IPPS wage data will vary in the future.

For FY 2015, we are adopting the new OMB delineations under the LTCH PPS, as discussed in greater detail in section VII.D. of the preamble of this final rule. Under this policy, there will be some changes to the current CBSA compositions as a result of the new OMB delineations, which will result in the creation of new CBSAs, “urban” counties that are now “rural,” “rural” counties that are now “urban,” and existing CBSAs that are divided into separate boundaries. Under existing § 412.503, an “urban area” is defined as a Metropolitan Statistical Area as defined by the Executive OMB, and a “rural area” is defined as any area outside of an urban area. We are not making any changes to the current definitions of “urban area” and “rural area” because our policy to use the new OMB delineations under the LTCH PPS is consistent with the definitions in existing § 412.503.

As discussed in section VII.D.2.e. of the preamble of this final rule, overall we believe that using the new OMB delineations will result in LTCH PPS area wage index values being more representative of the actual costs of labor in a given area. However, we also recognize that, as a result of our policy to adopt the new OMB delineations, some LTCHs will experience decreases in area wage index values, while other LTCHs will experience increases in area wage index values. Therefore, to mitigate any short-term instability in

LTCH PPS payments that could result from our policy to adopt the new OMB delineations, in section VII.D.2.e. of the preamble of this final rule, we are finalizing our proposed transitional wage index policy. Under our transitional wage index policy, any LTCH that will experience a decrease in its area wage index solely as a result of the policy to adopt the new OMB delineations under the LTCH PPS will receive a blended area wage index for FY 2015. That is, for purposes of determining an LTCH's area wage index for FY 2015, we are computing LTCH PPS area wage index values using the area wage data discussed above under both the current (FY 2014) CBSA designations and the new OMB delineations. If the area wage index value under the new OMB delineations is lower than the area wage index value under the FY 2014 CBSA designations, the LTCH will be paid based on a blended area wage index for FY 2015, which will be computed as the sum of 50 percent of each wage index value (referred to as the 50/50 blended wage index), as described below.

Specifically, under the transitional wage index policy that we are establishing in this final rule, to determine the applicable area wage index value for each LTCH that will be effective for discharges occurring on or after October 1, 2014, through September 30, 2015, we computed the following two area wage index values: (1) the wage index values calculated using the new OMB delineations; and (2) the wage index values calculated using the current (FY 2014) CBSA designations. The FY 2015 LTCH area wage index values calculated using the new OMB delineations are presented in Table 12A (for urban areas) and Table 12B (for rural areas) associated with this final rule, which are available via the Internet on the CMS Web site. The FY 2015 LTCH area wage index values calculated using the current (FY 2014) CBSA designations are presented in Table 12C (for urban areas) and Table 12D (for rural areas) associated with this final rule, which are available via the Internet on the CMS Web site. Where applicable, the wage index values in Tables 12C and 12D will be used to calculate a LTCH's 50/50 blended wage index value under the transitional wage index policy. Under our transitional wage index policy, an LTCH will only receive the 50/50 blended area wage index value for FY 2015 if the LTCH's area wage index value under the new OMB delineations (shown in Table 12A or 12B) is lower than the area wage index value under the FY 2014 CBSA

designations (shown in Tables 12C or 12D). If an LTCH's area wage index under the new OMB delineations (shown in Tables 12A or 12B) is higher than the wage index under the FY 2014 CBSA designations (shown in Tables 12C or 12D), we will pay the LTCH based on 100 percent of the area wage index under the new OMB delineations shown in Tables 12A or 12B (as such the LTCH will not receive the 50/50 blended area wage index). Furthermore, as discussed below and in section VII.D.2.e. of the preamble of this final rule, we are applying this transitional wage index policy in a budget neutral manner. Each LTCH's labor market area under the new OMB delineations and the current (FY 2014) CBSA-based labor market area designation can be found in the LTCH PPS impact file for this final rule, which is available via the Internet on the CMS Web site.

5. Budget Neutrality Adjustment for Changes to the Area Wage Level Adjustment

Historically, the LTCH PPS wage index and labor-related share are updated annually based on the latest available data. Under § 412.525(c)(2), any changes to the area wage index values or labor-related share are to be made in a budget neutral manner such that estimated aggregate LTCH PPS payments are unaffected; that is, will be neither greater than nor less than estimated aggregate LTCH PPS payments without such changes to the area wage level adjustment. Under this policy, we determine an area wage-level adjustment budget neutrality factor that will be applied to the standard Federal rate to ensure that any changes to the area wage level adjustments are budget neutral such that any changes to the area wage index values or labor-related share would not result in any change (increase or decrease) in estimated aggregate LTCH PPS payments. Accordingly, under § 412.523(d)(4), we apply an area wage level adjustment budget neutrality factor in determining the standard Federal rate, and we also established a methodology for calculating an area wage level adjustment budget neutrality factor. (For additional information on the establishment of our budget neutrality policy for changes to the area wage level adjustment, we refer readers to the FY 2012 IPPS/LTCH PPS final rule (76 FR 51771 through 51773 and 51809).)

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28337 through 28338), in accordance with § 412.523(d)(4), we proposed to apply an area wage level adjustment budget neutrality factor to adjust the standard

Federal rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using our existing methodology. In determining the area wage level adjustment budget neutrality factor for FY 2015 under § 412.523(d)(4), we also proposed to include the proposed transitional wage index policy under the proposed adoption of the new OMB delineations (that is, the proposed 50/50 blended area wage index values for LTCHs that would experience a decrease in their wage index solely as a result of the proposed adoption of the new OMB delineations under the LTCH PPS) to ensure that the proposed changes to the area wage level adjustments would be budget neutral. We did not receive any public comments on our proposals pertaining to the FY 2015 budget neutrality adjustment for changes to the area wage level adjustment. Therefore, in this final rule, we are adopting our proposal as final without modification.

In this final rule, for FY 2015, in accordance with § 412.523(d)(4), we are applying an area wage level adjustment budget neutrality factor to adjust the standard Federal rate to account for the estimated effect of the adjustments or updates to the area wage level adjustment under § 412.525(c)(1) on estimated aggregate LTCH PPS payments using a methodology that is consistent with the methodology we established in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51773). In addition to the updates for FY 2015 to the area wage index data and labor-related share discussed above, as discussed above and in section VII.D.2.e. of the preamble of this final rule, we are establishing a transitional wage index policy to mitigate the impacts of adopting changes to the LTCH PPS labor market areas (CBSAs) based on the new OMB delineations. Because our transitional wage index policy for LTCHs that will experience a decrease in their area wage index solely as a result of the adoption of the new OMB delineations under the LTCH PPS will result in an increase in estimated aggregate LTCH PPS payments without such changes, we are including the 50/50 blended area wage index when determining the area wage level adjustment budget neutrality factor that we are applying to the standard Federal rate under § 412.523(d)(4) to ensure that any changes to the area wage-level adjustments are budget neutral.

For this final rule, using the steps in the methodology described in section VII.D.2.e. of this preamble, we determined a FY 2015 area wage level

adjustment budget neutrality factor of 1.0016703. Accordingly, in section V.A.2. of the Addendum to this final rule, to determine the FY 2015 LTCH PPS standard Federal rate, we are applying an area wage level adjustment budget neutrality factor of 1.0016703, in accordance with § 412.523(d)(4). The FY 2015 LTCH PPS standard Federal rate shown in Table 1E of the Addendum to this final rule reflects this adjustment factor.

C. LTCH PPS Cost-of-Living Adjustment (COLA) for LTCHs Located in Alaska and Hawaii

Under § 412.525(b), a cost-of-living adjustment (COLA) is provided for LTCHs located in Alaska and Hawaii to account for the higher costs incurred in those States. Specifically, we apply a COLA to payments to LTCHs located in Alaska and Hawaii by multiplying the nonlabor-related portion of the standard Federal payment rate by the applicable COLA factors established annually by CMS. Higher labor-related costs for LTCHs located in Alaska and Hawaii are taken into account in the adjustment for area wage levels described above.

Prior to FY 2014, we used the most recent updated COLA factors obtained from the U.S. Office of Personnel Management (OPM) Web site at <http://www.opm.gov/oca/cola/rates.asp> to adjust the LTCH PPS payments for LTCHs located in Alaska and Hawaii. Statutory changes have transitioned the Alaska and Hawaii COLAs to locality pay (phased in over a 3-year period beginning in January 2010, with COLA rates being frozen as of October 28, 2009, and then proportionately reduced to reflect the phase-in of locality pay). For FY 2013, we believed that it was appropriate to use “frozen” COLA factors to adjust payments, while we explored alternatives for updating the COLA factors in the future, and we continued to use the same “frozen” COLA factors used in FY 2012 to adjust the nonlabor-related portion of the

standard Federal rate for LTCHs located in Alaska and Hawaii in FY 2013 under § 412.525(b). We also established a methodology to update the COLA factors for Alaska and Hawaii every 4 years (at the same time as the update to the labor-related share of the IPPS market basket), beginning in FY 2014 (77 FR 53712 through 53713). The methodology we established to update the COLA factors is based on a comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as published by the Bureau of Labor Statistics (BLS). It also incorporates a 25-percent cap on the CPI-updated COLA factors, which is consistent with a statutorily mandated 25-percent cap that was applied to OPM’s published COLA factors. We believe that determining updated COLA factors using this methodology would appropriately adjust the nonlabor-related portion of the standard Federal rate for LTCHs located in Alaska and Hawaii. (For additional details on the methodology we established in the FY 2013 IPPS/LTCH PPS final rule to update the COLA factors for Alaska and Hawaii beginning in FY 2014, we refer readers to section VII.D.3. of the preamble of that final rule (77 FR 53481 through 53482).)

For FY 2014, we updated the COLA factors published for Alaska and Hawaii by OPM for 2009 (as these are the last COLA factors OPM published prior to transitioning from COLAs to locality pay) using the methodology that we finalized in the FY 2013 IPPS/LTCH PPS final rule. Under our finalized methodology, we used COLA factors for FY 2014 for the three specified urban areas of Alaska (Anchorage, Fairbanks and Juneau) of 1.23; for the City and County of Honolulu, the County of Kauai, the County of Maui, the County of Kalawao, and “All other” areas of Alaska of 1.25; and for the County of Hawaii of 1.19. For additional details on our policy, we refer readers to the FY

2014 IPPS/LTCH PPS final rule (78 FR 50997 through 50998).

Under our finalized policy, we update the COLA factors using the methodology described above every 4 years; the first year began in FY 2014 (77 FR 53482). Therefore, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28338), for FY 2015, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we proposed to continue to use the COLA factors based on the 2009 OPM COLA factors updated through 2012 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city as established in the FY 2014 IPPS/LTCH PPS final rule. We did not receive any public comments on this proposal. Therefore, in this final rule, we are adopting the policy as final without modification.

Accordingly, in this final rule, for FY 2015, under the broad authority conferred upon the Secretary by section 123 of the BBRA, as amended by section 307(b) of the BIPA, to determine appropriate payment adjustments under the LTCH PPS, we are continuing to use the COLA factors established in the FY 2014 IPPS/LTCH PPS final rule, which were based on the 2009 OPM COLA factors updated through 2012 by the comparison of the growth in the CPIs for Anchorage, Alaska, and Honolulu, Hawaii, relative to the growth in the CPI for the average U.S. city. (We refer readers to the FY 2014 IPPS/LTCH PPS final rule (78 FR 50998) for a discussion of the FY 2014 COLA factors.) Consistent with our historical practice, we are establishing that the COLA factors shown in the table below will be used to adjust the nonlabor-related portion of the standard Federal rate for LTCHs located in Alaska and Hawaii under § 412.525(b).

COST-OF-LIVING ADJUSTMENT FACTORS FOR ALASKA AND HAWAII HOSPITALS UNDER THE LTCH PPS FOR FY 2015

Alaska:	
City of Anchorage and 80-kilometer (50-mile) radius by road	1.23
City of Fairbanks and 80-kilometer (50-mile) radius by road	1.23
City of Juneau and 80-kilometer (50-mile) radius by road	1.23
All other areas of Alaska	1.25
Hawaii:	
City and County of Honolulu	1.25
County of Hawaii	1.19
County of Kauai	1.25
County of Maui and County of Kalawao	1.25

D. Adjustment for LTCH PPS High-Cost Outlier (HCO) Cases

1. Background

Under the broad authority conferred upon the Secretary by section 123 of the BBRA as amended by section 307(b) of the BIPA, in the regulations at § 412.525(a), we established an adjustment for additional payments for outlier cases that have extraordinarily high costs relative to the costs of most discharges. We refer to these cases as high cost outliers (HCOs). Providing additional payments for outliers strongly improves the accuracy of the LTCH PPS in determining resource costs at the patient and hospital level. These additional payments reduce the financial losses that would otherwise be incurred when treating patients who require more costly care and, therefore, reduce the incentives to underserve these patients. We set the outlier threshold before the beginning of the applicable rate year so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS.

Under § 412.525(a) in the regulations (in conjunction with § 412.503), we make outlier payments for any discharges if the estimated cost of a case exceeds the adjusted LTCH PPS payment for the MS–LTC–DRG plus a fixed-loss amount. Specifically, in accordance with § 412.525(a)(3) (in conjunction with § 412.503), we make an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the patient case and the outlier threshold, which is the sum of the adjusted Federal prospective payment for the MS–LTC–DRG and the fixed-loss amount. The fixed-loss amount is the amount used to limit the loss that a hospital will incur under the outlier policy for a case with unusually high costs. This results in Medicare and the LTCH sharing financial risk in the treatment of extraordinarily costly cases. Under the LTCH PPS HCO policy, the LTCH's loss is limited to the fixed-loss amount and a fixed percentage of costs above the outlier threshold (adjusted MS–LTC–DRG payment plus the fixed-loss amount). The fixed percentage of costs is called the marginal cost factor. We calculate the estimated cost of a case by multiplying the Medicare allowable covered charge by the hospital's overall hospital cost-to-charge ratio (CCR).

Under the LTCH PPS HCO policy at § 412.525(a), we determine a fixed-loss amount, that is, the maximum loss that an LTCH can incur under the LTCH PPS for a case with unusually high costs

before the LTCH will receive any additional payments. We calculate the fixed-loss amount by estimating aggregate payments with and without an outlier policy. The fixed-loss amount results in estimated total outlier payments being projected to be equal to 8 percent of projected total LTCH PPS payments. Currently, MedPAR claims data and CCRs based on data from the most recent Provider-Specific File (PSF) (or from the applicable statewide average CCR if an LTCH's CCR data are faulty or unavailable) are used to establish a fixed-loss threshold amount under the LTCH PPS.

2. Determining LTCH CCRs Under the LTCH PPS

a. Background

The following is a discussion of CCRs that are used in determining payments for HCO and SSO cases under the LTCH PPS, at § 412.525(a) and § 412.529, respectively. Although this section is specific to HCO cases, because CCRs and the policies and methodologies pertaining to them are used in determining payments for both HCO and SSO cases (to determine the estimated cost of the case at § 412.529(d)(2)), we are discussing the determination of CCRs under the LTCH PPS for both of these types of cases simultaneously.

In determining both HCO payments (at § 412.525(a)) and SSO payments (at § 412.529), we calculate the estimated cost of the case by multiplying the LTCH's overall CCR by the Medicare allowable charges for the case. In general, we use the LTCH's overall CCR, which is computed based on either the most recently settled cost report or the most recent tentatively settled cost report, whichever is from the latest cost reporting period, in accordance with § 412.525(a)(4)(iv)(B) and § 412.529(f)(4)(ii) for HCOs and SSOs, respectively. (We note that, in some instances, we use an alternative CCR, such as the statewide average CCR in accordance with the regulations at § 412.525(a)(4)(iv)(C) and § 412.529(f)(4)(iii), or a CCR that is specified by CMS or that is requested by the hospital under the provisions of the regulations at § 412.525(a)(4)(iv)(A) and § 412.529(f)(4)(i).) Under the LTCH PPS, a single prospective payment per discharge is made for both inpatient operating and capital-related costs. Therefore, we compute a single "overall" or "total" LTCH-specific CCR based on the sum of LTCH operating and capital costs (as described in Section 150.24, Chapter 3, of the Medicare Claims Processing Manual

(Pub. 100–4)) as compared to total charges. Specifically, an LTCH's CCR is calculated by dividing an LTCH's total Medicare costs (that is, the sum of its operating and capital inpatient routine and ancillary costs) by its total Medicare charges (that is, the sum of its operating and capital inpatient routine and ancillary charges).

b. LTCH Total CCR Ceiling

Generally, an LTCH is assigned the applicable statewide average CCR if, among other things, an LTCH's CCR is found to be in excess of the applicable maximum CCR threshold (that is, the LTCH CCR ceiling). This is because CCRs above this threshold are most likely due to faulty data reporting or entry, and CCRs based on erroneous data should not be used to identify and make payments for outlier cases. Therefore, under our established policy, generally, if an LTCH's calculated CCR is above the applicable ceiling, the applicable LTCH PPS statewide average CCR is assigned to the LTCH instead of the CCR computed from its most recent (settled or tentatively settled) cost report data.

In this final rule, using our established methodology for determining the LTCH total CCR ceiling (described above), based on IPPS total CCR data from the March 2014 update of the PSF, consistent with our proposal, we are establishing a total CCR ceiling of 1.346 under the LTCH PPS for FY 2015 in accordance with § 412.525(a)(4)(iv)(C)(2) for HCOs and § 412.529(f)(4)(iii)(B) for SSOs.

c. LTCH Statewide Average CCRs

Our general methodology established for determining the statewide average CCRs used under the LTCH PPS is similar to our established methodology for determining the LTCH total CCR ceiling (described above) because it is based on "total" IPPS CCR data. Under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(C) and the SSO policy at § 412.529(f)(4)(iii), the MAC may use a statewide average CCR, which is established annually by CMS, if it is unable to determine an accurate CCR for an LTCH in one of the following circumstances: (1) new LTCHs that have not yet submitted their first Medicare cost report (for this purpose, consistent with current policy, a new LTCH is defined as an entity that has not accepted assignment of an existing hospital's provider agreement in accordance with § 489.18); (2) LTCHs whose CCR is in excess of the LTCH CCR ceiling; and (3) other LTCHs for whom data with which to calculate a CCR are not available (for example,

missing or faulty data). (Other sources of data that the MAC may consider in determining an LTCH's CCR include data from a different cost reporting period for the LTCH, data from the cost reporting period preceding the period in which the hospital began to be paid as an LTCH (that is, the period of at least 6 months that it was paid as a short-term, acute care hospital), or data from other comparable LTCHs, such as LTCHs in the same chain or in the same region.)

Consistent with our historical practice of using the best available data, in this final rule, using our established methodology for determining the LTCH statewide average CCRs, based on the most recent complete IPPS "total CCR" data from the March 2014 update of the PSF, consistent with our proposal, we are establishing LTCH PPS statewide average total CCRs for urban and rural hospitals that would be effective for discharges occurring on or after October 1, 2014 through September 20, 2015, in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet).

Under the changes to the LTCH PPS labor market areas based on the new OMB delineations, all areas in Delaware, the District of Columbia, New Jersey, and Rhode Island would be classified as urban. Therefore, there are no rural statewide average total CCRs listed for those jurisdictions in Table 8C. This policy is consistent with the policy that we established when we revised our methodology for determining the applicable LTCH statewide average CCRs in the FY 2007 IPPS final rule (71 FR 48119 through 48121) and is the same as the policy applied under the IPPS. In addition, although Connecticut and Massachusetts have areas that are designated as rural, there are no short-term, acute care IPPS hospitals or LTCHs located in those areas as of March 2014. Therefore, consistent with our existing methodology, we are using the national average total CCR for rural IPPS hospitals for rural Connecticut and Massachusetts in Table 8C listed in section VI. of the Addendum to this final rule (and available via the Internet).

In addition, consistent with our existing methodology, in determining the urban and rural statewide average total CCRs for Maryland LTCHs paid under the LTCH PPS, consistent with our proposal, we are continuing to use, as a proxy, the national average total CCR for urban IPPS hospitals and the national average total CCR for rural IPPS hospitals, respectively. We are using this proxy because we believe that the

CCR data in the PSF for Maryland hospitals may not be entirely accurate (as discussed in greater detail in the FY 2007 IPPS final rule (71 FR 48120)).

d. Reconciliation of LTCH HCO and SSO Payments

We note that under the LTCH PPS HCO policy at § 412.525(a)(4)(iv)(D) and the LTCH PPS SSO policy at § 412.529(f)(4)(iv), the payments for HCO and SSO cases, respectively, are subject to reconciliation. Specifically, any reconciliation of outlier payments is based on the CCR that is calculated based on a ratio of cost-to-charge data computed from the relevant cost report determined at the time the cost report coinciding with the discharge is settled. For additional information, we refer readers to sections 150.26 through 150.28 of the Medicare Claims Processing Manual (Pub. 100-4) as added by Change Request 7192 (Transmittal 2111; December 3, 2010) and the FY 2009 LTCH PPS final rule (73 FR 26820 through 26821).

3. Establishment of the LTCH PPS Fixed-Loss Amount for FY 2015

When we implemented the LTCH PPS, as discussed in the August 30, 2002 LTCH PPS final rule (67 FR 56022 through 56026), under the broad authority of section 123 of the BBRA as amended by section 307(b) of BIPA, we established a fixed-loss amount so that total estimated outlier payments are projected to equal 8 percent of total estimated payments under the LTCH PPS. To determine the fixed-loss amount, we estimate outlier payments and total LTCH PPS payments for each case using claims data from the MedPAR files. Specifically, to determine the outlier payment for each case, we estimate the cost of the case by multiplying the Medicare covered charges from the claim by the LTCH's CCR. Under § 412.525(a)(3) (in conjunction with § 412.503), if the estimated cost of the case exceeds the outlier threshold, we make an outlier payment equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (that is, the sum of the adjusted Federal prospective payment for the MS-LTC-DRG and the fixed-loss amount).

In the FY 2014 IPPS/LTCH PPS final rule (78 FR 53715), we presented our policies regarding the methodology and data we used to establish the fixed-loss amount of \$13,314 for FY 2014, which was calculated using our existing methodology to calculate the fixed-loss amount for FY 2014 (based on the data and the rates and policies presented in that final rule) in order to maintain

estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments. Consistent with our historical practice of using the best data available, in determining the fixed-loss amount for FY 2014, we used the most recent available LTCH claims data and CCR data, that is, LTCH claims data from the March 2013 update of the FY 2012 MedPAR file and CCRs from the March 2013 update of the PSF, as these data were the most recent complete LTCH data available at that time.

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28321), we proposed to continue to use our existing methodology to calculate a fixed-loss amount for FY 2015 using the best available data that would maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (based on the rates and policies presented in this proposed rule). Specifically, based on the most recent complete LTCH data available at that time (that is, LTCH claims data from the March 2014 update of the FY 2013 MedPAR file and CCRs from the March 2014 update of the PSF), we proposed to determine a fixed-loss amount for FY 2015 that would result in estimated outlier payments projected to be equal to 8 percent of total estimated payments in FY 2015. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of the BIPA, we proposed a fixed-loss amount of \$15,730 for FY 2015, and also proposed to make an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted Federal LTCH payment for the MS-LTC-DRG and the proposed fixed-loss amount of \$15,730).

Comment: One commenter expressed support for the proposed fixed-loss amount, and stated that the proposed increase for FY 2015 is justified. That same commenter also requested that CMS provide its most recent estimate of the percentage payout of high-cost outlier payments for the current fiscal year. Another commenter expressed concern that the proposed increase in the fixed-loss amount would result in significant financial losses for hospitals that treat a comparatively high volume of outlier cases, and recommended that the increase be transitioned in over 2 years to reduce the impact of this increase in the fixed-loss amount.

Response: We appreciate the commenter's support for the proposed fixed-loss amount, and agree that the increase is necessary to maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (as explained in

the proposed rule). In section I.K. of the regulatory impact analysis in the Appendix to this final rule, we state that we currently estimate that HCO payments will be approximately 7.9 percent of the estimated total LTCH PPS payments in FY 2014 based on the most recent data available.

While we understand the commenter's concern regarding the financial impact an increase in the fixed-loss amount may have on the outlier payments to some LTCH's, we do not believe that the increase should be phased-in over 2 years. The intent of the HCO policy is to provide an additional payment to LTCH cases that have unusually high costs while at the same time balancing an incentive for LTCHs to treat expensive patients and provide cost efficient care. (We refer readers to the FY 2003 LTCH PPS final rule (67 FR 56025) for further details regarding the intent of this policy.) Under our historical HCO policy, this balance is achieved by making outlier payments that are intended to approximate the marginal cost of providing care above the fixed-loss threshold. We believe that phasing-in the increase to the fixed-loss amount would be inconsistent with the intent of the LTCH PPS HCO policy because such a policy would reduce the incentive to provide cost efficient care by resulting in estimated outlier payments that are in excess of 8 percent of total estimated payments in FY 2015. (For additional detail on the rationale for setting the HCO payment "target" at 8 percent of total estimated LTCH PPS payments, we refer readers to the FY 2003 LTCH PPS final rule (67 FR 56022 through 56024).) Furthermore, any auxiliary adjustment to the fixed-loss amount, such as a transition, would result in making outlier payments that would not be directly related to the cost of providing care to unusually costly cases in FY 2015. When we determine the annual fixed-loss amount, we include all payments and policies that would affect actual payments for the current fiscal year in order to ensure the most accurate determination of a fixed-loss amount that would result in estimated outlier payments equaling 8 percent of total estimated for the fiscal year. Including an auxiliary adjustment, such as a transition, that is not relative to the current fiscal year does not lend greater accuracy to the determination of a fixed-loss amount that would result in estimated outlier payments equaling 8 percent of total estimated payments in FY 2015. For these reasons, we continue to believe that our policies are consistent with the original intent of the HCO policy under the LTCH PPS and,

therefore, we are not adopting the commenter's suggestion to phase-in the increase to the fixed-loss amount for FY 2015.

In this final rule, after consideration of the public comments we received, we are adopting our proposals related to the calculation of the fixed-loss amount for FY 2015 as final without modification. For FY 2015, consistent with our proposal, we are continuing to use our existing methodology to calculate a fixed-loss amount for FY 2015 using the best available data that would maintain estimated HCO payments at the projected 8 percent of total estimated LTCH PPS payments (based on the rates and policies presented in this final rule). Specifically, for this final rule, we used LTCH claims data from the March 2014 update of the FY 2013 MedPAR file and CCRs from the March 2014 update of the PSF to determine a fixed-loss amount that will result in estimated outlier payments projected to be equal to 8 percent of total estimated payments in FY 2015 because these data are the most recent complete LTCH data available at this time. Under the broad authority of section 123(a)(1) of the BBRA and section 307(b)(1) of BIPA, we are establishing a fixed-loss amount of \$14,972 for FY 2015. Therefore, we are making an additional payment for an HCO case that is equal to 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the adjusted Federal LTCH payment for the MS-LTC-DRG and the fixed-loss amount of \$14,972).

We note that the fixed-loss amount of \$14,792 for FY 2015 is lower than the proposed FY 2015 fixed-loss amount of \$15,730. This decrease is primarily a result of updated data used to calculate the fixed-loss amount in this final rule, such as the most recent available LTCH claims data in the MedPAR file, CCRs in the PSF, and the estimate of the LTCH PPS market basket update factors. We also note that the fixed-loss amount of \$14,972 for FY 2015 is slightly higher than the FY 2014 fixed-loss amount of \$13,314. Based on our payment simulations using the most recent available data at this time, the final increase in the fixed-loss amount for FY 2015 is necessary to maintain the existing requirement that estimated outlier payments equal 8 percent of estimated total LTCH PPS payments. Maintaining the fixed-loss amount at the current level would result in HCO payments that are more than the current regulatory 8-percent requirement because a lower fixed-loss amount would result in more cases qualifying as outlier cases, as well as higher outlier payments for qualifying HCO cases

because the maximum loss that an LTCH must incur before receiving an HCO payment (that is, the fixed-loss amount) would be smaller. For these reasons, we believe that raising the fixed-loss amount is appropriate and necessary to maintain that estimated outlier payments would equal 8 percent of estimated total LTCH PPS payments as required under § 412.525(a). (As noted above, for further information on the existing 8 percent HCO "target" requirement, we refer readers to the August 30, 2002 LTCH PPS final rule (67 FR 56022 through 56024).)

4. Application of the Outlier Policy to SSO Cases

As we discussed in the August 30, 2002 final rule (67 FR 56026), under some rare circumstances, an LTCH discharge could qualify as an SSO case (as defined in the regulations at § 412.529 in conjunction with § 412.503) and also as an HCO case. In this scenario, a patient could be hospitalized for less than five-sixths of the geometric average length of stay for the specific MS-LTC-DRG, and yet incur extraordinarily high treatment costs. If the estimated costs exceeded the HCO threshold (that is, the SSO payment plus the fixed-loss amount), the discharge is eligible for payment as an HCO. Therefore, for an SSO case in FY 2015, the HCO payment would be 80 percent of the difference between the estimated cost of the case and the outlier threshold (the sum of the fixed-loss amount of \$14,972 and the amount paid under the SSO policy as specified in § 412.529).

E. Update to the IPPS Comparable/Equivalent Amounts To Reflect the Statutory Changes to the IPPS DSH Payment Adjustment Methodology

In the FY 2014 IPPS/LTCH PPS final rule, we established a policy for reflecting the changes to the Medicare IPPS DSH payment adjustment methodology provided for by section 3133 of the Affordable Care Act in the calculation of the "IPPS comparable amount" under the SSO policy at § 412.529 and the "IPPS equivalent amount" under the 25-percent threshold payment adjustment policy at § 412.534 and § 412.536. Historically, the determination of both the "IPPS comparable amount" and the "IPPS equivalent amount" includes an amount for inpatient operating costs "for the costs of serving a disproportionate share of low-income patients." Under the statutory changes to the Medicare DSH payment adjustment methodology that began in FY 2014, in general, eligible IPPS hospitals receive an empirically justified Medicare DSH payment equal

to 25 percent of the amount they otherwise would have received under the statutory formula for Medicare DSH payments prior to the amendments made by the Affordable Care Act. The remaining amount, equal to an estimate of 75 percent of the amount that otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under the age of 65 who are uninsured, is made available to make additional payments to each hospital that qualifies for Medicare DSH payments and that has uncompensated care. The additional uncompensated care payments are based on the hospital's amount of uncompensated care for a given time period relative to the total amount of uncompensated care for that same time period reported by all IPPS hospitals that receive Medicare DSH payments.

To reflect the statutory changes to the Medicare DSH payment adjustment methodology in the calculation of the "IPPS comparable amount" and the "IPPS equivalent amount" under the LTCH PPS, we stated that we will include a reduced Medicare DSH payment amount that reflects the projected percentage of the payment amount calculated based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act that will be paid to eligible IPPS hospitals as empirically justified Medicare DSH payments and uncompensated care payments in that year (that is, a percentage of the operating DSH payment amount that has historically been reflected in the LTCH PPS payments that is based on IPPS rates). We also stated that the projected percentage will be updated annually, consistent with the annual determination of the amount of uncompensated care payments that will be made to eligible IPPS hospitals. As explained in the FY 2014 IPPS/LTCH PPS final rule (79 FR 50766 through 50767), we believe that this approach results in appropriate payments under the LTCH PPS and is consistent with our intention that the "IPPS comparable amount" and the "IPPS equivalent amount" under the LTCH PPS closely resemble what an IPPS payment would have been for the same episode of care, while recognizing that some features of the IPPS cannot be translated directly into the LTCH PPS.

For FY 2014, aggregate Medicare IPPS operating DSH payments are projected to be reduced to 95.7 percent of the amount that would otherwise have been paid under the statutory Medicare DSH payment formula prior to the

amendments made by the Affordable Care Act. Accordingly, for FY 2014, the calculation of the "IPPS comparable amount" under § 412.529 and the "IPPS equivalent amount" under § 412.534 and § 412.536 includes an applicable operating Medicare DSH payment amount that is equal to 95.7 percent of the operating Medicare DSH payment amount based the current statutory Medicare DSH payment formula (that is, the operating Medicare DSH payment amount historically included in those calculations). (We refer readers the FY 2012 IPPS/LTCH PPS final rule (76 FR 50766).)

In the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28341 through 28342), we discussed that, for FY 2015, based on the latest data available, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the proposed payments for uncompensated care under section 1886(r)(2) of the Act, would result in overall Medicare DSH payments equaling 85.26 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of amendments made by the Affordable Care Act. Therefore, we proposed that the calculation of the "IPPS comparable amount" under § 412.529 and the "IPPS equivalent amount" under § 412.534 and § 412.536 for FY 2015 includes an applicable operating Medicare DSH payment amount that would be equal to 85.26 percent of the operating Medicare DSH payment amount based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act. We also proposed that, consistent with our historical practice of using the most recent data available, if more recent data became available for the final rule, we would use that data to determine the percentage of the operating Medicare DSH payment amount based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act used in the calculation of the "IPPS comparable amount" under § 412.529 and the "IPPS equivalent amount" under § 412.534 and § 412.536 for FY 2015.

As discussed in greater detail in section IV.F.3.d.(2) of the preamble of this final rule, based on the most recent data available, our estimate of 75 percent of the amount that would otherwise have been paid as Medicare DSH payments (under the methodology outlined in section 1886(r)(2) of the Act) will be adjusted to 76.19 percent of that amount to reflect the change in the percentage of individuals that are

uninsured. The resulting amount will then be used to determine the amount of uncompensated care payments that will be made to eligible IPPS hospitals in FY 2015. In other words, Medicare DSH payments prior to the amendments made by the Affordable Care Act are adjusted to 57.14 percent (the product of 75 percent and 76.19 percent) and the resulting amount will be used to calculate the uncompensated care payments to eligible hospitals. As a result, for FY 2015, we project that the reduction in the amount of Medicare DSH payments pursuant to section 1886(r)(1) of the Act, along with the payments for uncompensated care under section 1886(r)(2) of the Act, will result in overall Medicare DSH payments of 82.14 percent of the amount of Medicare DSH payments that would otherwise have been made in the absence of amendments made by the Affordable Care Act (that is, 25 percent + 57.14 percent = 82.14 percent).

We did not receive any public comments on this proposal and therefore we are adopting the policy as final without modification. In this final rule, for FY 2015, we are establishing that the calculation of the "IPPS comparable amount" under § 412.529 and the "IPPS equivalent amount" under § 412.534 and § 412.536 will include an applicable operating Medicare DSH payment amount that will be equal to 82.14 percent of the operating Medicare DSH payment amount based on the statutory Medicare DSH payment formula prior to the amendments made by the Affordable Care Act.

F. Computing the Adjusted LTCH PPS Federal Prospective Payments for FY 2015

Section 412.525 sets forth the adjustments to the LTCH PPS standard Federal rate. Under § 412.525(c), the standard Federal rate is adjusted to account for differences in area wages by multiplying the labor-related share of the standard Federal rate by the applicable LTCH PPS wage index (FY 2015 values are shown in Tables 12A through 12D listed in section VI. of the Addendum of this final rule and are available via the Internet). The standard Federal rate is also adjusted to account for the higher costs of LTCHs located in Alaska and Hawaii by the applicable COLA factors (the FY 2015 factors are shown in the chart in section V.C. of this Addendum) in accordance with § 412.525(b). In this final rule, we are establishing a standard Federal rate for FY 2015 of \$41,043.71 (applicable to discharges from LTCHs that submit the required quality reporting data for FY

2015 in accordance with the LTCHQR Program under section 1886(m)(5) of the Act), as discussed above in section V.A.2. of the Addendum to this final rule. We illustrate the methodology to adjust the LTCH PPS Federal standard rate for FY 2015 in the following example:

Example:

During FY 2015, a Medicare patient is in an LTCH located in Chicago, Illinois (CBSA 16974). The FY 2015 LTCH PPS wage index value for CBSA 16974 is 1.0419 (obtained from Table 12A listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The Medicare

patient is classified into MS–LTC–DRG 189 (Pulmonary Edema & Respiratory Failure), which has a relative weight for FY 2015 of 0.9098 (obtained from Table 11 listed in section VI. of the Addendum of this final rule and available via the Internet on the CMS Web site). The LTCH submitted quality reporting data for FY 2015 in accordance with the LTCHQR Program under section 1886(m)(5) of the Act.

To calculate the LTCH’s total adjusted Federal prospective payment for this Medicare patient in FY 2015, we computed the wage-adjusted Federal prospective payment amount by multiplying the unadjusted FY 2015

standard Federal rate (\$41,043.71) by the labor-related share (62.306 percent) and the wage index value (1.0419). This wage-adjusted amount was then added to the nonlabor-related portion of the unadjusted standard Federal rate (37.694 percent; adjusted for cost of living, if applicable) to determine the adjusted Federal rate, which is then multiplied by the MS–LTC–DRG relative weight (0.9098) to calculate the total adjusted Federal LTCH PPS prospective payment for FY 2015 (\$38,316.42). The table below illustrates the components of the calculations in this example.

Standard Federal Prospective Payment Rate *	\$41,043.71
Labor-Related Share	× 0.62306
Labor-Related Portion of the Federal Rate	= \$ 25,572.69
Wage Index (CBSA 16974)	× 1.0419
Wage-Adjusted Labor Share of Federal Rate	= \$ 26,644.19
Nonlabor-Related Portion of the Federal Rate (\$41,043.71 × 0.37694)	+ \$ 15,471.02
Adjusted Federal Rate Amount	= \$ 42,115.21
MS–LTC–DRG 189 Relative Weight	× 0.9098
Total Adjusted Federal Prospective Payment	= \$ 38,316.42

* LTCH PPS standard Federal rate applicable to discharges from LTCHs that submit the required quality data in accordance with the LTCHQR Program under section 1886(m)(5) of the Act).

VI. Tables Referenced in This Final Rule and Available Only Through the Internet on the CMS Web site

This section lists the tables referred to throughout the preamble of this final rule and in this Addendum. In the past, a majority of these tables were published in the **Federal Register** as part of the annual proposed and final rules. However, similar to FYs 2012 through 2014, for the FY 2015 rulemaking cycle, the IPPS and LTCH tables will not be published in the **Federal Register** in the annual IPPS/LTCH PPS proposed and final rules and will be available only through the Internet. Specifically, all IPPS Tables listed below with the exception of IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E will be available only through the Internet. IPPS Tables 1A, 1B, 1C, and 1D, and LTCH PPS Table 1E are displayed at the end of this section and will continue to be published in the **Federal Register** as part of the annual proposed and final rules.

As discussed in sections II.G.11. and 13. of the preamble of this final rule, Tables 6A through 6F will not be issued with this FY 2015 final rule because there are no new, revised, or deleted diagnosis or procedure codes for FY 2015. As discussed in section IV.D. of this final rule, section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113–93), enacted on April 1, 2014, extended, through the first half of FY 2015 (that is, for discharges

occurring before April 1, 2015), the temporary changes in the low-volume hospital definition and methodology for determining the payment adjustment originally made by the Affordable Care Act (and extended by subsequent legislation). We refer the reader to section IV.D. of the preamble of this final rule for complete details on the low-volume hospital payment adjustment. Therefore, Table 14 associated with this final rule lists the FY 2015 low-volume payment adjustments for potentially eligible hospitals that also meet the distance criterion for low-volume hospital status. As discussed in section IV.H.11. of the preamble of this final rule, we are providing proxy FY 2015 readmission payment adjustment factors in Table 15A issued with this final rule. After the completion of the review and corrections process, we will publish the final FY 2015 readmissions payment adjustment factors in Table 15B on the CMS IPPS Web site. In addition, under the HAC Reduction Program established by section 3008 of the Affordable Care Act, a hospital’s total payment may be reduced by 1 percent if it is in the lowest HAC performance quartile. However, as discussed in section IV.J. of the preamble of this final rule, we are not providing the hospital-level data (such as a proxy list of providers subject to the HAC Reduction Program in FY 2015 in Table 17) in conjunction with this final rule. Finally, a hospital’s

Factor 3 is the proportion of the uncompensated care amount that a DSH will receive under section 3133 of the Affordable Care Act. Factor 3 is the hospital’s estimated number of Medicaid days and Medicare SSI days relative to the estimate of all DSHs’ Medicaid days and Medicare SSI days. Therefore, Table 18 contains the FY 2015 Medicare DSH uncompensated care payment Factor 3 for all hospitals and identifies whether or not a hospital is projected to receive DSH and, therefore, eligible to receive the additional payment for uncompensated care for FY 2015.

Readers who experience any problems accessing any of the tables that are posted on the CMS Web sites identified below should contact Michael Treitel at (410) 786–4552.

The following IPPS tables for this FY 2015 final rule are available only through the Internet on the CMS Web site at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/AcuteInpatientPPS/index.html>. Click on the link on the left side of the screen titled, “FY 2015 IPPS Final Rule Home Page” or “Acute Inpatient—Files for Download”.

Table 2–1.—Hospital Average Hourly Wages for Federal Fiscal Years 2013 (2009 Wage Data), 2014 (2010 Wage Data), and 2015 (2011 Wage Data); and 3-Year Average of Hospital Average Hourly Wages; Based on CBSA Delineations used in FY 2014

Table 2–2.—Acute Care Hospitals Case-Mix Indexes for Discharges Occurring in Federal Fiscal Year 2012; Hospital Wage Indexes for Federal Fiscal Year 2015; Hospital Average Hourly Wages for Federal Fiscal Years 2013 (2009 Wage Data), 2014 (2010 Wage Data), and 2015 (2011 Wage Data; Based on FY 2015 CBSA Delineations); and 3-Year Average of Hospital Average Hourly Wages

Table 3A–1.—FY 2015 and 3-Year* Average Hourly Wage for Acute Care Hospitals in Urban Areas by CBSA; Based on CBSA Delineations Used in FY 2014

Appendix A: Economic Analyses

I. Regulatory Impact Analysis

A. Introduction

We have examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (February 2, 2011), the Regulatory Flexibility

Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995, Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory

approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. A regulatory impact analysis (RIA) must be prepared for major rules with economically

significant effects (\$100 million or more in any 1 year).

We have determined that this final rule is a major rule as defined in 5 U.S.C. 804(2). We estimate that the changes for FY 2015 acute care hospital operating and capital payments will redistribute amounts in excess of \$100 million to acute care hospitals. The applicable percentage increase to the IPPS rates required by the statute, in conjunction with other payment changes in this final rule, will result in an estimated \$654 million decrease in FY 2015 operating payments (or -0.6 percent change) and an estimated \$132 million increase in FY 2015 capital payments (or 1.6 percent change). These changes are relative to payments made in FY 2014. The impact analysis of the capital payments can be found in section I.J. of this Appendix. In addition, as described in section I.K. of this Appendix, LTCHs are expected to experience an increase in payments by \$62 million in FY 2015 relative to FY 2014.

Our operating impact estimate includes the -0.8 percent documentation and coding adjustment applied to the IPPS standardized amount, which represents part of the recoupment required under section 631 of the ATRA. In addition, our operating payment impact estimate includes the 2.2 percent hospital update to the standardized amount (which includes the estimated 2.9 percent market basket update less 0.5 percentage point for the multifactor productivity adjustment and less 0.2 percentage point required under the Affordable Care Act). The estimates of IPPS operating payments to acute care hospitals do not reflect any changes in hospital admissions or real case-mix intensity, which will also affect overall payment changes.

The analysis in this Appendix, in conjunction with the remainder of this document, demonstrates that this final rule is consistent with the regulatory philosophy and principles identified in Executive Orders 12866 and 13563, the RFA, and section 1102(b) of the Act. This final rule will affect payments to a substantial number of small rural hospitals, as well as other classes of hospitals, and the effects on some hospitals may be significant. Finally, in accordance with the provisions of Executive Order 12866, the Executive Office of Management and Budget has reviewed this final rule.

B. Statement of Need

This final rule is necessary in order to make payment and policy changes under the Medicare IPPS for Medicare acute care hospital inpatient services for operating and capital-related costs as well as for certain hospitals and hospital units excluded from the IPPS. This final rule also is necessary to make payment and policy changes for Medicare hospitals under the LTCH PPS payment system.

C. Objectives of the IPPS

The primary objective of the IPPS is to create incentives for hospitals to operate efficiently and minimize unnecessary costs while at the same time ensuring that payments are sufficient to adequately compensate hospitals for their legitimate costs in delivering necessary care to

Medicare beneficiaries. In addition, we share national goals of preserving the Medicare Hospital Insurance Trust Fund.

We believe that the changes in this final rule will further each of these goals while maintaining the financial viability of the hospital industry and ensuring access to high quality health care for Medicare beneficiaries. We expect that these changes will ensure that the outcomes of the prospective payment systems are reasonable and equitable while avoiding or minimizing unintended adverse consequences.

D. Limitations of Our Analysis

The following quantitative analysis presents the projected effects of our policy changes, as well as statutory changes effective for FY 2015, on various hospital groups. We estimate the effects of individual policy changes by estimating payments per case while holding all other payment policies constant. We use the best data available, but, generally, we do not attempt to make adjustments for future changes in such variables as admissions, lengths of stay, or case-mix.

E. Hospitals Included in and Excluded From the IPPS

The prospective payment systems for hospital inpatient operating and capital-related costs of acute care hospitals encompass most general short-term, acute care hospitals that participate in the Medicare program. There were 32 Indian Health Service hospitals in our database, which we excluded from the analysis due to the special characteristics of the prospective payment methodology for these hospitals. Among other short-term, acute care hospitals, hospitals in Maryland are paid in accordance with the Maryland All-Payer Model, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, 5 short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa) receive payment for inpatient hospital services they furnish on the basis of reasonable costs, subject to a rate-of-increase ceiling.

As of March 2014, there were 3,396 IPPS acute care hospitals included in our analysis. This represents approximately 56 percent of all Medicare-participating hospitals. The majority of this impact analysis focuses on this set of hospitals. There also are approximately 1,326 CAHs. These small, limited service hospitals are paid on the basis of reasonable costs rather than under the IPPS. IPPS-excluded hospitals and units include IPFs, IRFs, LTCHs, RNHCIs, children's hospitals, 11 cancer hospitals, and 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, which are paid under separate payment systems. Changes in the prospective payment systems for IPFs and IRFs are made through separate rulemaking. Payment impacts for these IPPS-excluded hospitals and units are not included in this final rule. The impact of the update and policy changes to the LTCH PPS for FY 2015 is discussed in section I.L. of this Appendix.

F. Effects on Hospitals and Hospital Units Excluded From the IPPS

As of March 2014, there were 98 children's hospitals, 11 cancer hospitals, 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands and American Samoa, and 18 RNHCIs being paid on a reasonable cost basis subject to the rate-of-increase ceiling under § 413.40. (In accordance with § 403.752(a) of the regulation, RNHCIs are paid under § 413.40.) Among the remaining providers, 245 rehabilitation hospitals and 897 rehabilitation units, and 431 LTCHs, are paid the Federal prospective per discharge rate under the IRF PPS and the LTCH PPS, respectively, and 490 psychiatric hospitals and 1,136 psychiatric units are paid the Federal per diem amount under the IPF PPS. As stated above, IRFs and IPFs are not affected by the rate updates discussed in this final rule. The impacts of the changes on LTCHs are discussed in section I.K. of this Appendix.

For children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs, the update of the rate-of-increase limit (or target amount) is the estimated FY 2015 percentage increase in the IPPS operating market basket, consistent with section 1886(b)(3)(B)(ii) of the Act, and §§ 403.752(a) and 413.40 of the regulations. As discussed in section IV. of the preamble of the FY 2014 IPPS/LTCH PPS final rule, we rebased the IPPS operating market basket to a FY 2010 base year. Therefore, we are using the percentage increase in the FY 2010-based IPPS operating market basket to update the target amounts for FY 2015 and subsequent fiscal years for children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that are paid based on reasonable costs subject to the rate-of-increase limits. Consistent with current law, based on IHS Global Insight, Inc.'s second quarter 2014 forecast of the FY 2010-based market basket increase, we are estimating that the FY 2015 update based on the IPPS operating market basket is 2.9 percent (that is, the current estimate of the market basket rate-of-increase). However, the Affordable Care Act requires an adjustment for multifactor productivity (currently estimated to be 0.5 percentage point for FY 2015) and a 0.2 percentage point reduction to the market basket update resulting in a 2.2 percent applicable percentage increase for IPPS hospitals that submit quality data and are meaningful EHR users, as discussed in section IV.B. of the preamble of this final rule. Children's hospitals, the 11 cancer hospitals, the 5 short-term acute care hospitals located in the Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa, and RNHCIs that continue to be paid based on reasonable costs subject to rate-of-increase limits under § 413.40 of the regulations are not subject to the reductions in the applicable percentage increase required under the Affordable Care Act. Therefore, for those hospitals paid under § 413.40 of the regulations, the update is the

percentage increase in the FY 2015 IPPS operating market basket, estimated at 2.9 percent, without the reductions required under the Affordable Care Act.

The impact of the update in the rate-of-increase limit on those excluded hospitals depends on the cumulative cost increases experienced by each excluded hospital since its applicable base period. For excluded hospitals that have maintained their cost increases at a level below the rate-of-increase limits since their base period, the major effect is on the level of incentive payments these excluded hospitals receive. Conversely, for excluded hospitals with cost increases above the cumulative update in their rate-of-increase limits, the major effect is the amount of excess costs that will not be paid.

We note that, under § 413.40(d)(3), an excluded hospital that continues to be paid under the TEFRA system and whose costs exceed 110 percent of its rate-of-increase limit receives its rate-of-increase limit plus the lesser of: (1) 50 percent of its reasonable costs in excess of 110 percent of the limit, or (2) 10 percent of its limit. In addition, under the various provisions set forth in § 413.40, hospitals can obtain payment adjustments for justifiable increases in operating costs that exceed the limit.

G. Quantitative Effects of the Policy Changes Under the IPPS for Operating Costs

1. Basis and Methodology of Estimates

In this final rule, we are announcing policy changes and payment rate updates for the IPPS for FY 2015 for operating costs of acute care hospitals. The FY 2015 updates to the capital payments to acute care hospitals are discussed in section I.J. of this Appendix.

Based on the overall percentage change in payments per case estimated using our payment simulation model, we estimate that total FY 2015 operating payments will decrease by 0.6 percent compared to FY 2014. In addition to the applicable percentage increase, this amount reflects the FY 2015 recoupment adjustment for documentation and coding described in section II.D. of the preamble of this final rule of -0.8 percent to the IPPS national standardized amounts. The impacts do not reflect changes in the number of hospital admissions or real case-mix intensity, which will also affect overall payment changes.

We have prepared separate impact analyses of the changes to each system. This section deals with the changes to the operating inpatient prospective payment system for acute care hospitals. Our payment simulation model relies on the most recent available data to enable us to estimate the impacts on payments per case of certain changes in this final rule. However, there are other changes for which we do not have data available that will allow us to estimate the payment impacts using this model. For those changes, we have attempted to predict the payment impacts based upon our experience and other more limited data.

The data used in developing the quantitative analyses of changes in payments per case presented below are taken from the FY 2013 MedPAR file and the most current Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of

the changes to the operating PPS do not incorporate cost data, data from the most recently available hospital cost reports were used to categorize hospitals. Our analysis has several qualifications. First, in this analysis, we do not make adjustments for future changes in such variables as admissions, lengths of stay, or underlying growth in real case-mix. Second, due to the interdependent nature of the IPPS payment components, it is very difficult to precisely quantify the impact associated with each change. Third, we use various data sources to categorize hospitals in the tables. In some cases, particularly the number of beds, there is a fair degree of variation in the data from the different sources. We have attempted to construct these variables with the best available source overall. However, for individual hospitals, some miscategorizations are possible.

Using cases from the FY 2013 MedPAR file, we simulated payments under the operating IPPS given various combinations of payment parameters. As described above, Indian Health Service hospitals and hospitals in Maryland were excluded from the simulations. The impact of payments under the capital IPPS, or the impact of payments for costs other than inpatient operating costs, are not analyzed in this section. Estimated payment impacts of the capital IPPS for FY 2015 are discussed in section I.J. of this Appendix.

We discuss the following changes below:

- The effects of the application of the documentation and coding adjustment and the applicable percentage increase (including the market basket update, the multifactor productivity adjustment and the applicable percentage reduction in accordance with the Affordable Care Act) to the standardized amount and hospital-specific rates.
- The effects of the changes to the relative weights and MS-DRG grouper.
- The effects of the changes in hospitals' wage index values reflecting updated wage data from hospitals' cost reporting periods beginning during FY 2011, compared to the FY 2010 wage data, and the adoption of the new OMB delineations to calculate the FY 2015 wage index.
- The combined effects of the recalibration of the MS-DRG relative weights as required by section 1886(d)(4)(C) of the Act and the wage index (including the updated wage data and the adoption of new OMB labor market area delineations), including the wage and recalibration budget neutrality factors.
- The effects of the geographic reclassifications by the MGCRB (as of publication of this final rule) and the effects of the adoption of new OMB labor market area delineations on these reclassifications, that will be effective for FY 2015.
- The effects of the rural floor and imputed floor with the application of the national budget neutrality factor applied to the wage index where the rural floor and imputed floor wage index are calculated based on the adoption of the new OMB labor market area delineations.
- The effects of the adoption of the new labor market area delineations announced by OMB in February 2013 on hospital redesignations.
- The effects of the 3-year transition for urban hospitals becoming rural under the

new OMB delineations and the 1-year transitional blended wage index for hospitals whose FY 2015 wage indexes decrease solely as a result of adopting the new OMB delineations.

- The effects of the frontier State wage index adjustment under the statutory provision that requires that hospitals located in States that qualify as frontier States to not have a wage index less than 1.0. This provision is not budget neutral.

- The effects of the implementation of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes.

- The effects of the policies for implementation of the Hospital Readmissions Reduction Program under section 1886(q) of the Act, as added by section 3025 of the Affordable Care Act, that adjusts a hospital's base operating DRG amount by an adjustment factor to account for a hospital's excess readmissions.

- The effects of the policies for continued implementation of section 3133 of the Affordable Care Act that reduces Medicare DSH payments to 25 percent of what hospitals had been previously paid under section 1886(d)(5)(F) of the Act and establishes an additional payment to be made to hospitals that receive DSH payments for their relative share of the total amount of uncompensated care.

- The total estimated change in payments based on the FY 2015 policies relative to payments based on FY 2014 policies that include the applicable percentage increase of 2.2 percent (or 2.9 percent market basket update with a reduction of 0.5 percentage point for the multifactor productivity adjustment, and a 0.2 percentage point reduction, as required under the Affordable Care Act). The total estimated change in payments for FY 2015 reflects the extension of MDH payment status for the first 6 months of FY 2015, in accordance with the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93) enacted on April 1, 2014.

We note that in the FY 2015 IPPS/LTCH PPS proposed rule we provided the effects of section 1886(o) of the Act, as added by section 3008 of the Affordable Care Act, which establishes payment reductions under the HAC Reduction Program. Hospitals ranked in the lowest 25 percent of performance on HACs are subject to a 1-percent reduction in total IPPS payments. We are finalizing policies related to the HAC Reduction Program in this final rule, but as described earlier in this final rule, because the HAC scores are currently undergoing 30-day review and correction by the hospitals, we are not providing hospital-level data or a hospital-level payment impact in conjunction with the FY 2015 IPPS Final Rule. We do provide an estimate of the overall payment impact in section I.H.8. of this Appendix A along with a discussion of the impact of these changes.

To illustrate the impact of the FY 2015 changes, our analysis begins with a FY 2014 baseline simulation model using: the FY

2015 applicable percentage increase of 2.2 percent and the documentation and coding recoupment adjustment of 0.8 percent to the Federal standardized amount; the FY 2014 MS-DRG GROUPE (Version 31.0); the current FY 2014 CBSA designations for hospitals based on the OMB definitions; the FY 2014 wage index; and no MGRB reclassifications. Outlier payments are set at 5.1 percent of total operating MS-DRG and outlier payments for modeling purposes.

Section 1886(b)(3)(B)(viii) of the Act, as added by section 5001(a) of Public Law 109-171, as amended by section 4102(b)(1)(A) of the ARRA (Pub. L. 111-5) and by section 3401(a)(2) of the Affordable Care Act (Pub. L. 111-148), provides that, for FY 2007 and each subsequent year through FY 2014, the update factor will include a reduction of 2.0 percentage points for any subsection (d) hospital that does not submit data on measures in a form and manner and at a time specified by the Secretary. Beginning in FY 2015, the reduction is one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2015, we are establishing that hospitals that do not submit quality information under rules established by the Secretary and that are meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act will receive an applicable percentage increase of 1.475 percent. At the time that this impact was prepared, 56 hospitals did not receive the full market basket rate-of-increase for FY 2014 because they failed the quality data submission process or did not choose to participate. For purposes of the simulations shown below, we modeled the payment changes for FY 2015 using a reduced update for these 56 hospitals. However, we do not have enough information at this time to determine which hospitals will not receive the full update factor for FY 2015.

Beginning in FY 2015, in accordance with section 1886(b)(3)(B)(ix) of the Act, a hospital that has been identified as not a meaningful EHR user will be subject to a reduction of one-quarter of such applicable percentage increase determined without regard to section 1886(b)(3)(B)(ix), (xi), or (xii) of the Act, or one-quarter of the market basket update. Therefore, for FY 2015, we are establishing that hospitals that are identified as not meaningful EHR users and do submit quality information under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of 1.475 percent. Hospitals that are identified as not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act and also do not submit quality data under section 1886(b)(3)(B)(viii) of the Act will receive an applicable percentage increase of 0.75 percent, which reflects a one-quarter reduction of the market basket update for failure to submit quality data and a one-quarter reduction of the market basket update for being identified as not a meaningful EHR user. For FY 2015, we have yet to finalize a list of hospitals that are not meaningful EHR users under section 1886(b)(3)(B)(ix) of the Act. Therefore, we are not including this adjustment to the standardized amount (for

those hospitals that are not meaningful EHR users) in our modeling of aggregate payments for FY 2015. We intend to release a final list of hospitals that are not meaningful EHR users in September 2014. Hospitals identified on this list will be paid based on the applicable standardized amount in Table 1A and Table 1B for discharges occurring in FY 2015.

Each policy change, statutory or otherwise, is then added incrementally to this baseline, finally arriving at an FY 2015 model incorporating all of the changes. This simulation allows us to isolate the effects of each change.

Our final comparison illustrates the percent change in payments per case from FY 2014 to FY 2015. Three factors not discussed separately have significant impacts here. The first factor is the update to the standardized amount. In accordance with section 1886(b)(3)(B)(i) of the Act, we are updating the standardized amounts for FY 2015 using an applicable percentage increase of 2.2 percent. This includes our forecasted IPPS operating hospital market basket increase of 2.9 percent with a reduction of 0.5 percentage point for the multifactor productivity adjustment and a 0.2 percentage point reduction as required under the Affordable Care Act. (Hospitals that fail to comply with the quality data submission requirements and are meaningful EHR users would receive an update of 1.475 percent. This update includes a reduction of one-quarter of the market basket update for failure to submit these data.) We note that hospitals that do comply with the quality data submission requirements but are not meaningful EHR users would receive an update of 1.475 percent, which includes a reduction of one-quarter of the market basket update. Furthermore, hospitals that do not comply with the quality data submission requirements and also are not meaningful EHR users would receive an update of 0.75 percent. However, as discussed earlier, we do not have a list of hospitals that are not meaningful EHR users and have not included this adjustment to the standardized amount (for those hospitals that are not meaningful EHR users) in our modeling of aggregate payments for FY 2015. Under section 1886(b)(3)(B)(iv) of the Act, the updates to the hospital-specific amounts for SCHs and MDHs also are equal to the applicable percentage increase, or 2.2 percent if the hospital submits quality data and is a meaningful EHR user. In addition, we are updating the Puerto Rico-specific amount by an applicable percentage increase of 2.2 percent.

A second significant factor that affects the changes in hospitals' payments per case from FY 2014 to FY 2015 is the change in hospitals' geographic reclassification status from one year to the next. That is, payments may be reduced for hospitals reclassified in FY 2014 that are no longer reclassified in FY 2015. Conversely, payments may increase for hospitals not reclassified in FY 2014 that are reclassified in FY 2015.

A third significant factor is that we currently estimate that actual outlier payments during FY 2014 will be 5.71 percent of total MS-DRG payments. When

the FY 2014 IPPS/LTCH PPS final rule was published, we projected FY 2014 outlier payments would be 5.1 percent of total MS-DRG plus outlier payments; the average standardized amounts were offset correspondingly. The effects of the higher than expected outlier payments during FY 2014 (as discussed in the Addendum to this final rule) are reflected in the analyses below comparing our current estimates of FY 2014 payments per case to estimated FY 2015 payments per case (with outlier payments projected to equal 5.1 percent of total MS-DRG payments).

2. Analysis of Table I

Table I displays the results of our analysis of the changes for FY 2015. The table categorizes hospitals by various geographic and special payment consideration groups to illustrate the varying impacts on different types of hospitals. The top row of the table shows the overall impact on the 3,396 acute care hospitals included in the analysis.

The next four rows of Table I contain hospitals categorized according to their geographic location: all urban, which is further divided into large urban and other urban; and rural. There are 2,549 hospitals located in urban areas included in our analysis. Among these, there are 1,401 hospitals located in large urban areas (populations over 1 million), and 1,148 hospitals in other urban areas (populations of 1 million or fewer). In addition, there are 847 hospitals in rural areas. The next two groupings are by bed-size categories, shown separately for urban and rural hospitals. The final groupings by geographic location are by census divisions, also shown separately for urban and rural hospitals.

The second part of Table I shows hospital groups based on hospitals' FY 2015 payment classifications, including any reclassifications under section 1886(d)(10) of the Act. For example, the rows labeled urban, large urban, other urban, and rural show that the numbers of hospitals paid based on these categorizations after consideration of geographic reclassifications (including reclassifications under sections 1886(d)(8)(B) and 1886(d)(8)(E) of the Act that have implications for capital payments) are 2,563; 1,413; 1,150; and 833, respectively.

The next three groupings examine the impacts of the changes on hospitals grouped by whether or not they have GME residency programs (teaching hospitals that receive an IME adjustment) or receive Medicare DSH payments, or some combination of these two adjustments. There are 2,357 nonteaching hospitals in our analysis, 795 teaching hospitals with fewer than 100 residents, and 244 teaching hospitals with 100 or more residents.

In the DSH categories, hospitals are grouped according to their DSH payment status, and whether they are considered urban or rural for DSH purposes. The next category groups together hospitals considered urban or rural, in terms of whether they receive the IME adjustment, the DSH adjustment, both, or neither.

The next five rows examine the impacts of the changes on rural hospitals by special payment groups (SCHs, RRCs, and MDHs). There were 193 RRCs, 325 SCHs, and 162

MDHs (MDH status is extended through March 31, 2015 only under Pub. L. 113–93), 124 hospitals that are both SCHs and RRCs, and 15 hospitals that are MDHs and RRCs (MDH status is extended through March 31, 2015 only under Pub. L. 113–93).

The next series of groupings are based on the type of ownership and the hospital's

Medicare utilization expressed as a percent of total patient days. These data were taken from the FY 2012 or FY 2011 Medicare cost reports.

The next two groupings concern the geographic reclassification status of hospitals. The first grouping displays all urban hospitals that were reclassified by the

MGCRB for FY 2015. The second grouping shows the MGCRB rural reclassifications. The final category shows the impact of the policy changes on the 15 cardiac hospitals.

¹ Because data necessary to classify some hospitals by category were missing, the total number of hospitals in each category may not equal the national total. Discharge data are from FY 2013, and hospital cost report data are from reporting periods beginning in FY 2012 and FY 2011.

² This column displays the payment impact of the hospital rate update and the documentation and coding adjustment including the 2.2 percent adjustment to the national standardized amount and hospital-specific rate (the estimated 2.9 percent market basket update reduced by the 0.5 percentage point for the multifactor productivity adjustment and the 0.2 percentage point reduction under the Affordable Care Act) and the 0.8 percent documentation and coding adjustment to the national standardized amount.

³ This column displays the payment impact of the changes to the Version 32.0 GROUPEER, the changes to the relative weights and the recalibration of the MS-DRG weights based on FY 2013 MedPAR data in accordance with section 1886(d)(4)(C)(iii) of the Act. This column displays the application of the recalibration budget neutrality factor of 0.997543 in accordance with section 1886(d)(4)(C)(iii) of the Act.

⁴ This column displays the payment impact of the update to wage index data using FY 2011 cost report data and the new OMB labor market area delineations. This column displays the payment impact of the application of the wage budget neutrality factor, which is calculated separately from the recalibration budget neutrality factor, and is calculated in accordance with section 1886(d)(3)(E)(i) of the Act. The wage budget neutrality factor is 1.001443.

⁵ This column displays the combined payment impact of the changes in Columns 3 through 4 and the cumulative budget neutrality factor for MS-DRG and wage changes in accordance with section 1886(d)(4)(C)(iii) of the Act and section 1886(d)(3)(E) of the Act. The cumulative wage and recalibration budget neutrality factor of 0.998982 is the product of the wage budget neutrality factor and the recalibration budget neutrality factor.

⁶ Shown here are the effects of geographic reclassifications by the Medicare Geographic Classification Review Board (MGRB) along with the effects of the adoption of the new OMB labor market area delineations on these reclassifications. The effects demonstrate the FY 2015 payment impact of going from no reclassifications to the reclassifications scheduled to be in effect for FY 2015. Reclassification for prior years has no bearing on the payment impacts shown here. This column reflects the geographic budget neutrality factor of 0.990406.

⁷ This column displays the effects of the rural floor and imputed floor based on the adoption of new OMB labor market area delineations. The Affordable Care Act requires the rural floor budget neutrality adjustment to be 100 percent national level adjustment. The rural floor budget neutrality factor (which includes the imputed floor) applied to the wage index is 0.989507.

⁸ This column displays the effects of the adoption of the new OMB labor market area delineations. It does not reflect the 3-year transition for hospitals that are currently located in urban counties that would become rural under the new OMB delineations and the one-year transition to the new OMB delineations where the wage indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB delineations, and 50 percent of their wage index based on their current labor market area. Rather, it shows the impact of the new OMB delineations fully implemented in FY 2015.

⁹ This column shows the effects of both the 3-year transition for hospitals that are currently located in urban counties that become rural under the new OMB delineations, and the 50/50 blended wage index adjustments in a budget neutral manner. For FY 2015, we are applying both the 3-year transition and 50/50 blended wage index adjustments in a budget neutral manner, with a budget neutrality factor of 0.998859 applied to the standardized amount.

¹⁰ This column shows the combined impact of the policy required under section 10324 of the Affordable Care Act that hospitals located in frontier States have a wage index no less than 1.0 and of section 1886(d)(13) of the Act, as added by section 505 of Pub. L. 108-173, which provides for an increase in a hospital's wage index if a threshold percentage of residents of the county where the hospital is located commute to work at hospitals in counties with higher wage indexes. These are nonbudget neutral policies.

¹¹ This column displays the impact of the implementation of the Hospital Readmissions Reduction Program, section 3025 of the Affordable Care Act, a nonbudget neutral provision that adjusts a hospital's payment for excess readmissions.

¹² This column displays the impact of the implementation of section 3133 of the Affordable Care Act that reduces Medicare DSH payments by 75 percent and establishes an additional uncompensated care payment.

¹³ This column shows the changes in payments from FY 2014 to FY 2015. It reflects the impact of the FY 2015 hospital update and the adjustment for documentation and coding. It also reflects changes in hospitals' reclassification status in FY 2015 compared to FY 2014, and the extension of MDH payment status for the first half of FY 2015, under Pub. L. 113-93 enacted on April 1, 2014. It incorporates all of the changes displayed in Columns 2, 5, 6, 7, 8, 9, 10, 11, and 12 (the changes displayed in Columns 3 and 4 are included in Column 5). The sum of these impacts may be different from the percentage changes shown here due to rounding and interactive effects.

a. Effects of the Hospital Update and Documentation and Coding Adjustment (Column 2)

As discussed in section II.D. of the preamble of this final rule, this column includes the hospital update, including the 2.9 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act. In addition, this column includes the FY 2015 documentation and coding recoupment adjustment of -0.8 percent on the national standardized amount as part of the recoupment required by section 631 of the ATRA. As a result, we are making a 1.4 percent update to the national standardized amount. This column also includes the 2.2 percent update to the hospital-specific rates which also includes the 2.9 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction in accordance with the Affordable Care Act.

Overall, hospitals will experience a 1.5 percent increase in payments primarily due to the combined effects of the hospital update and documentation and coding adjustment on the national standardized amount and the hospital update to the hospital-specific rate. Hospitals that are paid under the hospital-specific rate, namely SCHs, will experience a 2.2 percent increase in payments; therefore, hospital categories with SCHs paid under the hospital-specific rate will experience increases in payments of more than 1.4 percent.

b. Effects of the Changes to the MS-DRG Reclassifications and Relative Cost-Based Weights With Recalibration Budget Neutrality (Column 3)

Column 3 shows the effects of the changes to the MS-DRGs and relative weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. Consistent with section 1886(d)(4)(C)(iii) of the Act, we calculated a recalibration budget neutrality factor to account for the changes in MS-DRGs and relative weights to ensure that the overall payment impact is budget neutral.

As discussed in section II.E. of the preamble of this final rule, the FY 2015 MS-DRG relative weights will be 100 percent cost-based and 100 percent MS-DRGs. For FY 2015, the MS-DRGs are calculated using the FY 2013 MedPAR data grouped to the Version 32.0 (FY 2015) MS-DRGs. The methodology to calculate the relative weights and the reclassification changes to the Grouper are described in more detail in section II.H. of the preamble of this final rule.

The "All Hospitals" line in Column 3 indicates that changes due to the MS-DRGs and relative weights will result in a 0.0 percent change in payments with the application of the recalibration budget neutrality factor of 0.997543 on to the

standardized amount. Hospital categories that generally treat more surgical cases than medical cases will experience increases in their payments due to the changes to the relative weight methodology. Rural hospitals will experience a 0.3 percent decrease in payments because rural hospitals tend to treat fewer surgical cases than medical cases, while teaching hospitals with more than 100 residents will experience an increase in payments by 0.2 percent as those hospitals treat more surgical cases than medical cases.

c. Effects of the Wage Index Changes (Column 4)

Column 4 shows the impact of updated wage data using FY 2011 cost report data and the new OMB labor market area delineations, with the application of the wage budget neutrality factor. The wage index is calculated and assigned to hospitals on the basis of the labor market area in which the hospital is located. Under section 1886(d)(3)(E) of the Act, beginning with FY 2005, we delineate hospital labor market areas based on the Core Based Statistical Areas (CBSAs) established by OMB. The current statistical areas used in FY 2014 were based on OMB standards published on December 27, 2000 (65 FR 82228) and Census 2000 data and Census Bureau population estimates for 2007 and 2008 (OMB Bulletin No. 10-02).

As stated in the FY 2014 IPPS/LTCH PPS proposed rule (78 FR 27552) and final rule (78 FR 50586), on February 28, 2013, OMB issued OMB Bulletin No. 13-01, which established revised delineations for Metropolitan Statistical Areas, Micropolitan Statistical Areas, and Combined Statistical Areas, and provided guidance on the use of the delineations of these statistical areas. In order to implement these changes for the IPPS, it is necessary to identify the new labor market area delineation for each county and hospital in the country. However, because the bulletin was not issued until February 28, 2013, with supporting data not available until later, and because the changes made by the bulletin and their ramifications needed to be extensively reviewed and verified, we were unable to undertake such a lengthy process before publication of the FY 2014 IPPS/LTCH PPS proposed rule and, thus, did not implement changes to the wage index for FY 2014 based on these new OMB delineations. In the FY 2014 IPPS/LTCH PPS final rule (78 FR 50586), we stated that we intended to propose changes to the wage index based on the new OMB delineations in this FY 2015 proposed rule. As discussed below, in this final rule, we are implementing the new OMB delineations as described in the February 28, 2013 OMB Bulletin No. 13-01, effective beginning with the FY 2015 IPPS wage index.

Section 1886(d)(3)(E) of the Act requires that, beginning October 1, 1993, we annually update the wage data used to calculate the wage index. In accordance with this requirement, the wage index for acute care hospitals for FY 2015 is based on data submitted for hospital cost reporting periods beginning on or after October 1, 2010 and before October 1, 2011. The estimated impact of the updated wage data using the FY 2011 cost report data and the new OMB labor

market area delineations on hospital payments is isolated in Column 4 by holding the other payment parameters constant in this simulation. That is, Column 4 shows the percentage change in payments when going from a model using the FY 2014 wage index, based on FY 2010 wage data, the labor-related share of 69.6 percent, under the new OMB delineations and having a 100-percent occupational mix adjustment applied, to a model using the FY 2015 pre-reclassification wage index based on FY 2011 wage data with the labor-related share of 69.6 percent, under the new OMB delineations, also having a 100-percent occupational mix adjustment applied, while holding other payment parameters such as use of the Version 32.0 MS-DRG GROUPE constant). The FY 2015 occupational mix adjustment is based on the CY 2010 occupational mix survey.

In addition, the column shows the impact of the application of the wage budget neutrality to the national standardized amount. In FY 2010, we began calculating separate wage budget neutrality and recalibration budget neutrality factors, in accordance with section 1886(d)(3)(E) of the Act, which specifies that budget neutrality to account for wage index changes or updates made under that subparagraph must be made without regard to the 62 percent labor-related share guaranteed under section 1886(d)(3)(E)(ii) of the Act. Therefore, for FY 2015, we calculated the wage budget neutrality factor to ensure that payments under updated wage data and the labor-related share of 69.6 percent are budget neutral without regard to the lower labor-related share of 62 percent applied to hospitals with a wage index less than or equal to 1.0. In other words, the wage budget neutrality is calculated under the assumption that all hospitals receive the higher labor-related share of the standardized amount. The wage budget neutrality factor is 1.001443, and the overall payment change is zero percent.

Column 4 shows the impacts of updating the wage data using FY 2011 cost reports. Overall, the new wage data and the labor-related share, combined with the wage budget neutrality adjustment, will lead to a 0.0 percent change for all hospitals as shown in Column 4.

In looking at the wage data itself, the national average hourly wage increased 1.02 percent compared to FY 2014. Therefore, the only manner in which to maintain or exceed the previous year's wage index was to match or exceed the national 1.02 percent increase in average hourly wage. Of the 3,387 hospitals with wage data for both FYs 2014 and 2015, 1,572 or 46.4 percent will experience an average hourly wage increase of 1.02 percent or more.

The following chart compares the shifts in wage index values for hospitals due to changes in the average hourly wage data for FY 2015 relative to FY 2014. Among urban hospitals, 4 will experience a decrease of more than 10 percent, with 2 urban hospital experiencing an increase of more than 10 percent. Seventy-six urban hospitals will experience an increase or decrease of at least 5 percent or more but less than or equal to 10 percent. Among rural hospitals, none will

experience a decrease of more than 5 percent, but 5 rural hospitals will experience an increase of greater than 5 percent but less than or equal to 10 percent. However, 841 rural hospitals will experience increases or decreases of less than or equal to 5 percent, while 2,220 urban hospitals will experience increases or decreases of less than or equal to 5 percent. Two hundred thirty-nine urban and no rural hospitals will not experience a change in their wage index. These figures reflect changes in the “pre-reclassified, occupational mix-adjusted wage index,” that is, the wage index before the application of geographic reclassification, the rural and

imputed floors, the out-migration adjustment, and other wage index exceptions and adjustments. We note that this analysis was performed by applying the new OMB labor market area delineations to the FY 2015 wage data and also by recomputing the FY 2014 final wage data to reflect the new OMB delineations. (We refer readers to sections III.G.2. through III.I. of the preamble of this final rule for a complete discussion of the exceptions and adjustments to the wage index.) We note that the “post-reclassified wage index” or “payment wage index,” the wage index that includes all such exceptions and adjustments (as reflected in Tables 2, 4A,

4B, 4C, and 4F of the Addendum to this final rule, which are available via the Internet on the CMS Web site) is used to adjust the labor-related share of a hospital’s standardized amount, either 69.6 percent or 62 percent, depending upon whether a hospital’s wage index is greater than 1.0 or less than or equal to 1.0. Therefore, the pre-reclassified wage index figures in the chart below may illustrate a somewhat larger or smaller change than will occur in a hospital’s payment wage index and total payment.

The following chart shows the projected impact of changes in the area wage index values for urban and rural hospitals.

Percentage change in area wage index values	Number of hospitals	
	Urban	Rural
Increase more than 10 percent	2	0
Increase more than 5 percent and less than or equal to 10 percent	18	5
Increase or decrease less than or equal to 5 percent	2,220	841
Decrease more than 5 percent and less than or equal to 10 percent	58	0
Decrease more than 10 percent	4	0
Unchanged	239	0

d. Combined Effects of the MS–DRG and Wage Index Changes (Column 5)

Section 1886(d)(4)(C)(iii) of the Act requires that changes to MS–DRG reclassifications and the relative weights cannot increase or decrease aggregate payments. In addition, section 1886(d)(3)(E) of the Act specifies that any updates or adjustments to the wage index are to be budget neutral. We computed a wage budget neutrality factor of 1.001443 and a recalibration budget neutrality factor of 0.997543 (which is applied to the Puerto Rico-specific standardized amount and the hospital-specific rates). The product of the two budget neutrality factors is the cumulative wage and recalibration budget neutrality factor. The cumulative wage and recalibration budget neutrality adjustment is 0.998982, or approximately 0.10 percent, which is applied to the national standardized amounts. Because the wage budget neutrality and the recalibration budget neutrality are calculated under different methodologies according to the statute, when the two budget neutralities are combined and applied to the standardized amount, the overall payment impact is not necessarily budget neutral. However, in this final rule, we are estimating that the changes in the MS–DRG relative weights and updated wage data with wage and budget neutrality applied will result in a 0.0 percent change in payments.

e. Effects of MGCRB Reclassifications (Column 6)

Our impact analysis to this point has assumed acute care hospitals are paid on the basis of their actual geographic location (with the exception of ongoing policies that provide that certain hospitals receive payments on other bases than where they are geographically located). The changes in Column 6 reflect the per case payment impact of moving from this baseline to a simulation incorporating the MGCRB decisions for FY 2015 and the effects of the adoption of the new OMB labor market area

delineations on these reclassifications which affect hospitals’ wage index area assignments.

By spring of each year, the MGCRB makes reclassification determinations that will be effective for the next fiscal year, which begins on October 1. The MGCRB may approve a hospital’s reclassification request for the purpose of using another area’s wage index value. Hospitals may appeal denials of MGCRB decisions to the CMS Administrator. Further, hospitals had 45 days from publication of the IPPS proposed rule in the **Federal Register** to decide whether to withdraw or terminate an approved geographic reclassification for the following year.

The overall effect of geographic reclassification is required by section 1886(d)(8)(D) of the Act to be budget neutral. Therefore, for purposes of this impact analysis, we are applying an adjustment of 0.990406 to ensure that the effects of the reclassifications under section 1886(d)(10) of the Act are budget neutral (section II.A. of the Addendum to this final rule). Geographic reclassification generally benefits hospitals in rural areas. We estimate that the geographic reclassification will increase payments to rural hospitals by an average of 1.5 percent. By region, all the rural hospital categories will experience increases in payments due to MGCRB reclassifications.

Table 9A listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site reflects the reclassifications for FY 2015.

f. Effects of the Rural and Imputed Floor, Including Application of National Budget Neutrality (Column 7)

As discussed in section III.B. of the preamble of the FY 2009 IPPS final rule, the FY 2010 IPPS/RV 2010 LTCH PPS final rule, the FYs 2011, 2012, 2013 and 2014 IPPS/LTCH PPS final rules, and this final rule, section 4410 of Public Law 105–33 established the rural floor by requiring that

the wage index for a hospital in any urban area cannot be less than the wage index received by rural hospitals in the same State. We apply a uniform budget neutrality adjustment to the wage index. The imputed floor, which is also included in the calculation of the budget neutrality adjustment to the wage index, was extended in FY 2012 for 2 additional years. In the past, only urban hospitals in New Jersey received the imputed floor. As discussed in the FY 2013 IPPS/LTCH PPS final rule (77 FR 53369), we established an alternative temporary methodology for the imputed floor, which resulted in an imputed floor for Rhode Island for FY 2013. For FY 2014, we extended the imputed rural floor, as calculated under the original methodology and the alternative methodology. For FY 2015, we are extending the imputed rural floor for one year, as calculated under the original methodology and the alternative methodology. As a result, New Jersey, Rhode Island, and Delaware are able to receive an imputed floor. In New Jersey, 15 out of 64 hospitals will receive the imputed floor, and 4 out of 11 hospitals in Rhode Island will receive the imputed floor for FY 2015. In the FY 2015 IPPS/LTCH PPS proposed rule (78 FR 28356), we stated that one out of six hospitals in Delaware would benefit from the imputed floor. However, in this final rule, no hospitals are benefitting from the imputed floor in Delaware because the CBSA wage index for each CBSA in Delaware under the new OMB delineations is equal to or higher than the imputed rural floor.

The Affordable Care Act requires that we apply one rural floor budget neutrality factor to the wage index nationally, and the imputed floor is part of the rural floor budget neutrality factor applied to the wage index nationally. We have calculated an FY 2015 rural floor budget neutrality factor to be applied to the wage index of 0.989507, which reduces wage indexes by 1.0 percent.

Column 7 shows the projected impact of the rural floor and imputed floor with the

national rural floor budget neutrality factor applied to the wage index based on the new OMB labor market area delineations. The column compares the post-reclassification FY 2015 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2015 wage index of providers with the rural floor and imputed floor adjustment based on the new OMB labor market area delineations. Only urban hospitals can benefit from the rural and imputed floors. Because the provision is budget neutral, all other hospitals (that is, all rural hospitals and those urban hospitals to which the adjustment is not made) will experience a decrease in payments due to the budget neutrality adjustment that is applied nationally to their wage index.

We estimate that 422 hospitals will benefit from the rural and imputed floors in FY 2015, while the remaining 2,974 IPPS hospitals in our model have their wage index reduced by the rural floor budget neutrality adjustment of 0.989507 (or 1.0 percent). We project that, in aggregate, rural hospitals will experience a 0.3 percent decrease in payments as a result of the application of the rural floor budget neutrality because the rural hospitals do not benefit from the rural floor, but have their wage indexes downwardly adjusted to ensure that the application of the rural floor is budget neutral overall. We project hospitals located in urban areas will experience no change in payments because increases in payments by hospitals benefitting from the rural floor offset decreases in payments by nonrural floor urban hospitals whose wage index is downwardly adjusted by the rural floor budget neutrality factor. Urban hospitals in the New England region can expect a 2.8 percent increase in payments primarily due to the application of the rural floor in Massachusetts. Fifty-one urban providers in Massachusetts are expected to receive the rural floor wage index value, including the rural floor budget neutrality of 1.3336, increasing payments overall to Massachusetts by an estimated \$156 million. During most past years, there have been no IPPS hospitals located in rural areas in Massachusetts. There was one urban IPPS hospital that was reclassified to rural Massachusetts (under section 1886(d)(8)(E) of the Act) which established the Massachusetts rural floor, but the wage index resulting from that hospital's data was not high enough for any urban hospital to benefit from the rural floor policy. However, for the FY 2012 wage index, the rural floor for Massachusetts was established by a hospital that converted from a CAH to an IPPS hospital that is geographically located in rural Massachusetts. The rural floor in Massachusetts continues to be set by the wage index of the hospital in rural Massachusetts that converted from CAH to IPPS status. We estimate that Massachusetts hospitals will receive approximately a 4.9

percent increase in IPPS payments due to the application of the rural floor in FY 2015.

We wish to make note of a situation that occurred in the rural floor impact calculation for Massachusetts. In FY 2014, CMS calculated that 60 hospitals would benefit from the Massachusetts rural floor, resulting in an estimated \$167.6 million being received by Massachusetts hospitals via the national rural floor budget neutrality adjustment. In FY 2015, fewer Massachusetts hospitals, 51 hospitals, have been identified as benefitting from the rural floor, and the fiscal impact of national budget neutrality has been reduced. We have received inquiries from commenters regarding this reduction, speculating whether the addition of one rural hospital in Franklin County, MA reduced the impact of the Massachusetts rural floor. The commenters are correct that the addition of one rural hospital in Massachusetts reduced the impact of the rural floor in FY 2015 as compared to the impact of the rural floor in FY 2014. We refer readers to section II.A.4.(c) of the Addendum to this final rule for a complete discussion on this issue.

Urban Puerto Rico hospitals are expected to experience a 0.0 percent change in payments as a result of the application of a Puerto Rico rural floor with the application of the Puerto Rico rural floor budget neutrality adjustment. We are applying a rural floor budget neutrality factor to the Puerto Rico-specific wage index of 0.991291 or -0.87 percent. The Puerto Rico-specific wage index adjusts the Puerto Rico-specific standardized amount, which represents 25 percent of payments to Puerto Rico hospitals. The increases in payments experienced by the urban Puerto Rico hospitals that benefit from a rural floor are offset by the decreases in payments by the urban Puerto Rico hospitals that do not benefit from the rural floor that have their wage indexes downwardly adjusted by the rural floor budget neutrality adjustment. As a result, overall, urban Puerto Rico hospitals will experience a 0.0 percent change in payments due to the application of the rural floor with rural floor budget neutrality.

There are 15 hospitals out of the 64 hospitals in New Jersey that benefit from the extension of the imputed floor and will receive the imputed floor wage index value under the new OMB labor market area delineations, including the rural floor budget neutrality of 1.121 which we estimate will increase payments to those imputed floor hospitals by \$24 million (overall, the State will see an increase in payments of approximately \$2.7 million due to the other hospitals in the State experiencing decreases in payments due to the rural floor budget neutrality adjustment). Four Rhode Island hospitals will benefit from the imputed rural floor calculated under the alternative methodology and receive an additional \$3.7 million (overall, the State will receive an additional \$1.9 million). As mentioned

earlier, in the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28356), we stated that one hospital in Delaware would benefit from the imputed floor. However, in this final rule, no hospitals are benefitting from the imputed floor in Delaware because the CBSA wage index for each CBSA in Delaware under the new OMB delineations is equal to or higher than the imputed rural floor.

In response to a public comment addressed in the FY 2012 IPPS/LTCH PPS final rule (76 FR 51593), we are providing the payment impact of the rural floor and imputed floor with budget neutrality at the State level. Column 1 of the table below displays the number of IPPS hospitals located in each State. Column 2 displays the number of hospitals in each State that will receive the rural floor or imputed floor wage index for FY 2015 based on the new OMB labor market area delineations. Column 3 displays the percentage of total payments each State will receive or contribute to fund the rural floor and imputed floor with national budget neutrality based on the new OMB labor market area delineations. The column compares the post-reclassification FY 2015 wage index of providers before the rural floor and imputed floor adjustment and the post-reclassification FY 2015 wage index of providers with the rural floor and imputed floor adjustment with the wage indexes calculated based on the new OMB labor market area delineations. Column 4 displays the estimated payment amount that each State will gain or lose due to the application of the rural floor and imputed floor with national budget neutrality.

Comment: Some commenters requested that CMS include in the FY 2015 IPPS/LTCH PPS final rule an updated detailed State-specific analysis of the effects of nationwide rural floor budget neutrality. In addition, the commenters requested that CMS publish a table showing the cumulative State-specific and aggregate inpatient and outpatient payment impact of the nationwide rural floor with budget neutrality and project the estimated 10-year State-specific effects of continuing the current policy.

Response: We appreciate the commenters' request for additional analysis on the impact of the rural floor on inpatient and outpatient payments. Commenters may request to view the OPPI impacts of the rural floor policy through the public comment period for the CY 2015 OPPI/ASC proposed rule that closes on September 2, 2014. In addition, we are unable to provide a State-by-State impact with a 10-year projection of the rural floor because the rural floor is based on wage data that are updated annually. Therefore, we believe it would be difficult to accurately portray the rural floor in 10-year projections. We have updated our State-by-State rural floor budget neutrality impact analysis for this FY 2015 IPPS/LTCH PPS final rule.

FY 2015 IPPS ESTIMATED PAYMENTS DUE TO RURAL FLOOR AND IMPUTED FLOOR WITH NATIONAL BUDGET NEUTRALITY

State	Number of hospitals	Number of hospitals that will receive the rural floor or imputed floor	Percent change in payments due to application of rural floor and imputed floor with budget neutrality	Difference (in millions)
	(1)	(2)	(3)	(4)

g. Impact of the New OMB Delineations (Column 8)

Column 8 shows the effects of the adoption of the new OMB labor market area delineations. This column compares the payments under the rural and imputed floor wage index with rural floor budget neutrality calculated under the new OMB delineations and the payments under the rural and

imputed floor wage index with budget neutrality calculated under the current OMB delineations. It does not reflect the 3-year transition for hospitals that are currently located in urban counties that become rural under the new OMB delineations and the 1-year transition to the new OMB delineations where the wage indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB

delineations, and 50 percent of their wage index based on their current labor market area. Rather, it shows the impact of the new OMB delineations fully implemented for FY 2015. Approximately 609 hospitals have their wage index impacted due to the new OMB delineations. Urban New England and rural Middle Atlantic hospitals will experience the largest decreases in payments due to the new OMB delineations being fully implemented

for FY 2015, with payment decreases of 0.5 and 0.2 percent, respectively. Urban non-DSH hospitals, nonteaching and non-DSH hospitals, and Lugar hospitals will experience the largest increases in payments due to the new OMB delineations being fully implemented for FY 2015, each with payment increases of 0.2 percent.

h. Application of the CBSA Transition Wage Index With Budget Neutrality (Column 9)

As discussed earlier in this final rule, for FY 2015, we are using the most recent labor market area delineations issued by OMB but we established a transition period in certain circumstances. Specifically, we established a 3-year transition for hospitals that are currently located in an urban county that becomes rural under the new OMB labor market area delineations under which such hospitals will be assigned the urban wage index value of the CBSA in which they are physically located for FY 2014 for a period of 3 fiscal years (that is, for FYs 2015, 2016, and 2017). We also are establishing a 1-year blended wage index for all hospitals that experience any decrease in their actual payment wage index (that is, a hospital's actual wage index used for payment, which accounts for all applicable effects of reclassification and redesignation) exclusively due to the implementation of the new OMB labor market area delineations. We are providing that a post-reclassified wage index with the rural and imputed floor applied be computed based on the hospital's FY 2014 CBSA (that is, using all of its FY 2014 constituent county/ies), and another post-reclassified wage index with the rural and imputed floor applied be computed based on the hospital's new FY 2015 CBSA (that is, the FY 2015 constituent county/ies). We compared these two wage indexes. If the FY 2015 wage index with FY 2015 CBSAs was lower than the FY 2015 wage index with FY 2014 CBSAs, we computed a blended wage index, consisting of 50 percent of each of the two wage indexes added together. This blended wage index is the hospital's wage index for FY 2015. This adjustment only applies to hospitals that will experience a decrease in their actual payment wage index exclusively due to the implementation of the new OMB labor market area delineations. Hospitals that benefit from the new OMB labor market area delineations receive their new wage index based on the new OMB labor market area delineations. We refer readers to section III.B. of the preamble to this final rule for a complete discussion on the transition wage indexes. Lastly, we are applying both the 3-year transition and 50/50 blended wage index adjustments in a budget neutral manner. We are making an adjustment to the standardized amount to ensure that the total payments, including the effect of the transition provisions, equal what payments would have been if we had not provided for these transitional wage indexes.

Column 9 shows the effects of the adoption of the new OMB labor market area delineations, including the 3-year hold harmless provision for hospitals that are currently located in an urban county that becomes rural under the new OMB delineations and the 1-year transition to the new OMB delineations where the wage

indexes are blended such that hospitals receive 50 percent of their wage index based on the new OMB delineations and 50 percent of their wage index based on their current labor market area. For FY 2015, we are applying both the 3-year transition and 50/50 blended wage index adjustments in a budget neutral manner, with a budget neutrality factor of 0.998859 (or -0.1 percent) applied to the standardized amount to ensure that the total payments, including the effect of the transition provisions, equal what payments would have been if we had not provided for these transitional wage indexes. This column shows the payment impact of the transitional wage index. For columns 1 through 8, the payment impacts and budget neutrality factors have been calculated under the new OMB delineations. Under the 1-year transition to the new OMB delineations, hospitals that would have experienced a decrease in payments due to the new OMB delineations being fully implemented this year now have those decreases alleviated due to the transition. Urban New England hospitals and Middle Atlantic hospitals will experience a 0.2 percent and 0.3 percent increase respectively in payments due to the application of the transitional wage index with budget neutrality, while urban South Atlantic, East North Central, East South Central, West North Central, West South Central, Mountain and Pacific hospitals will experience a -0.1 percent change in payments due to the transitional budget neutrality adjustment of -0.1 percent applied to the standard Federal rate.

i. Effects of the Application of the Frontier State Wage Index and Out-Migration Adjustment (Column 10)

This column shows the combined effects of the application of section 10324(a) of the Affordable Care Act, which requires that we establish a minimum post-reclassified wage-index of 1.00 for all hospitals located in "frontier States," and the effects of section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, which provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. These two wage index provisions are not budget neutral and increase payments overall by 0.1 percent compared to the provisions not being in effect.

The term "frontier States" is defined in the statute as States in which at least 50 percent of counties have a population density less than 6 persons per square mile. Based on these criteria, four States (Montana, North Dakota, South Dakota, and Wyoming) are considered frontier States and 46 hospitals located in those States will receive a frontier wage index of 1.0000. Nevada is also, by definition, a frontier State and was assigned a frontier floor value of 1.0000 for FY 2012, but since then and including in this final rule, its rural floor value has been greater than 1.0000 so it has not been subject to the frontier wage index. Overall, this provision is not budget neutral and is estimated to increase IPPS operating payments by approximately \$67 million or approximately

0.1 percent. Rural hospitals located in the Mountain region and urban hospitals located in the West North Central region will experience an increase in payments by 0.6 and 0.8 percent, respectively, because many of the hospitals located in this region are frontier State hospitals.

In addition, section 1886(d)(13) of the Act, as added by section 505 of Public Law 108-173, provides for an increase in the wage index for hospitals located in certain counties that have a relatively high percentage of hospital employees who reside in the county, but work in a different area with a higher wage index. Hospitals located in counties that qualify for the payment adjustment are to receive an increase in the wage index that is equal to a weighted average of the difference between the wage index of the resident county, post-reclassification and the higher wage index work area(s), weighted by the overall percentage of workers who are employed in an area with a higher wage index. There are an estimated 273 providers that will receive the out-migration wage adjustment in FY 2015. Rural hospitals generally qualify for the adjustment, resulting in a 0.1 percent increase in payments. This provision appears to benefit Section 401 hospitals and RRCs in that they will experience a 2.0 percent and 0.6 percent increase in payments, respectively. This out-migration wage adjustment also is not budget neutral, and we estimate the impact of these providers receiving the out-migration increase to be approximately \$53 million.

j. Effects of the Reductions Under the Hospital Readmissions Reduction Program (Column 11)

Column 11 shows our estimates of the effects of the policies for reductions in payments under the Hospital Readmissions Reduction Program, which was established under section 3025 of the Affordable Care Act. The Hospital Readmissions Reduction Program requires a reduction to a hospital's base operating DRG payments to account for excess readmissions, which for FY 2015, is based on a hospital's risk-adjusted readmission rate during a 3-year period for five applicable conditions: acute myocardial infarction, heart failure, pneumonia, total hip and total knee arthroplasty and chronic obstructive pulmonary disease. This provision is not budget neutral. A hospital's readmission adjustment is the higher of a ratio of the hospital's aggregate payments for excess readmissions to their aggregate payments for all discharges, or a floor, which has been defined in the statute as 0.97 (or a 3.0 percent reduction) for FY 2015. A hospital's base operating DRG payment (that is, wage-adjusted DRG payment amount, as discussed in section IV.G. of the preamble of this final rule) is the portion of the IPPS payment subject to the readmissions payment adjustment (DSH, IME, outliers and low-volume add-on payments are not subject to the readmissions adjustment). For FY 2015, we have revised the definition of base operating DRG payment for MDHs to include the hospital-specific add-on amount, as discussed earlier in this final rule such that the this hospital-specific add-on amount is also subject to the readmissions payment

adjustment. In this final rule, we estimate that 2,638 hospitals will have their base operating DRG payments reduced by their hospital-specific readmissions adjustment, an increase from FY 2014, due to the addition of new readmissions measures in the program. As a result, we estimate that the Hospital Readmissions Reduction Program will result in a 0.2 percent decrease in payments relative to FY 2014. We estimate that the Hospital Readmissions Reduction Program will result in a 0.4 percent decrease in payments relative to no provision (or a decrease of \$424 million).

Teaching non-DSH hospitals experience a decrease in payments of 0.3 percent relative to last year, while teaching DSH hospitals experience a 0–1 percent decrease in payments relative to last year. Puerto Rico hospitals will show a 0.0 percent change in payments because they are exempt from the provision.

k. Effects of the Changes to Medicare DSH Payments (Column 12)

Column 12 shows the effects of the adjustments to Medicare DSH payments made under section 3133 of the Affordable Care Act. Under section 3133, hospitals that are eligible to receive Medicare DSH payments will receive 25 percent of the amount they previously would have received under the former statutory formula for Medicare DSH payments. The remainder, equal to an estimate of 75 percent of what otherwise formerly would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and additional statutory adjustments, is available to make additional payments to each hospital that qualifies for Medicare DSH payments. Each Medicare DSH hospital will receive an additional payment based on its estimated share of the total amount of uncompensated care for all Medicare DSH hospitals. The reduction to Medicare DSH payments is not budget neutral.

For FY 2015, we are establishing that the amount to be distributed on the basis of uncompensated care, which is 75 percent of our estimate of what otherwise would have been paid in Medicare DSH payments (that is, Factor 1), be adjusted to 76.19 percent of that amount to reflect changes in the percentage of individuals under age 65 who are uninsured and additional statutory adjustments (that is, Factor 1 multiplied by Factor 2). In the FY 2015 IPPS/LTCH PPS proposed rule the uncompensated care payment was 75 percent of what otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 80.36 percent and for FY 2014, the uncompensated care payment was 75 percent of what otherwise would have been paid for Medicare DSH payment adjustments adjusted by a Factor 2 of 94.3 percent. Assuming DSH payments are constant, the FY 2015 uncompensated care amount is approximately 14 percentage points less than the uncompensated care amount that we distributed for FY 2014. As a result, we project that, compared to the empirically justified DSH payments and the

uncompensated care payments made last year, payments for FY 2015 will be reduced overall by 1.3 percent as compared to Medicare DSH payments made last year under the first year of the implementation of section 3133 of the Affordable Care Act. The uncompensated care payment methodology has redistributive effects based on a Medicare DSH hospital's low income insured patient days (sum of Medicaid patient days and Medicare SSI patient days) relative to the Medicaid patient days and Medicare SSI patient days for Medicare DSH hospitals, and the final payment amount is not tied to a hospital's discharges.

Rural West South Central and Rural Pacific will experience a 0.3 percent change in DSH and uncompensated care payments. Hospitals with low Medicare utilization (Medicare days are less than 25 percent of total inpatient days) will experience the largest decreases in payments of 3.0 percent.

l. Effects of All FY 2015 Changes (Column 13)

Column 13 shows our estimate of the changes in payments per discharge for FY 2014 and FY 2015, resulting from all changes reflected in this final rule for FY 2015. It includes combined effects of the previous columns in the table.

The average decrease in payments under the IPPS for all hospitals is approximately 0.6 percent for FY 2015 relative to FY 2014. As discussed in section II.D. of the preamble of this final rule, this column includes the FY 2015 documentation and coding recoupment adjustment of -0.8 percent on the national standardized amount as part of the recoupment required under section 631 of the ATRA. In addition, this column includes the annual hospital update of 2.2 percent to the national standardized amount. This annual hospital update includes the 2.9 percent market basket update, the reduction of 0.5 percentage point for the multifactor productivity adjustment, and the 0.2 percentage point reduction under section 3401 of the Affordable Care Act. Hospitals paid under the hospital-specific rate will receive a 2.2 percent hospital update described above. As described in Column 2, the annual hospital update with the documentation and coding recoupment adjustment for hospitals paid under the national standardized amount combined with the annual hospital update for hospitals paid under the hospital-specific rate will result in a 1.5 percent increase in payments in FY 2015 relative to FY 2014. Column 11 shows the estimated 0.2 percent decrease in payments due to the reductions in payments under the Hospital Readmissions Reduction Program relative to FY 2014. Column 12 shows the estimated 1.3 percent decrease in Medicare DSH payments due to the changes made under section 3133 of the Affordable Care Act, which reduces Medicare DSH payments by 75 percent and redistributes the remainder, equal to an estimate of 75 percent of what otherwise would have been paid as Medicare DSH payments, reduced to reflect changes in the percentage of individuals under age 65 who are uninsured and an additional statutory adjustment, to each

hospital that qualifies for Medicare DSH payments as an uncompensated care payment based on the hospital's relative share of the total amount of uncompensated care. The impact of moving from our estimate of FY 2014 outlier payments, 5.71 percent, to the estimate of FY 2015 outlier payments, 5.1 percent, will result in a decrease of 0.6 percent in FY 2015 payments relative to FY 2014. Lastly, this column reflects the extension of MDH payment status for the first half of FY 2015, under Public Law 113–93, enacted on April 1, 2014. There also might be interactive effects among the various factors comprising the payment system that we are not able to isolate. For these reasons, the values in Column 13 may not equal the sum of the estimated percentage changes described above. (We note that in the FY 2015 IPPS/LTCH PPS proposed rule we provided the effects of section 1886(o) of the Act, as added by section 3008 of the Affordable Care Act, which establishes payment reductions under the HAC Reduction Program. Hospitals ranked in the lowest 25 percent of performance on HACs are subject to a 1-percent reduction in total IPPS payments. We are finalizing policies related to the HAC Reduction Program in this final rule, but as described earlier in this final rule, because the HAC scores are currently undergoing 30-day review and correction by the hospitals, we are not providing hospital-level data or a hospital-level payment impact in conjunction with the FY 2015 IPPS Final Rule. We do provide an estimate of the overall payment impact in section I.H.8. of this Appendix A along with a discussion of the impact of these changes.)

Overall payments to hospitals paid under the IPPS are estimated to decrease by 0.6 percent for FY 2015. Much of the payment changes among the hospital categories is attributed to the reduction in Medicare DSH payments and the redistribution of a portion of the Medicare DSH payments as an additional payment for hospitals' relative uncompensated care amounts. Hospitals in urban areas will experience a 0.6 percent decrease in payments per discharge in FY 2015 compared to FY 2014. Hospital payments per discharge in rural areas are estimated to decrease by 0.7 percent in FY 2015.

3. Impact Analysis of Table II

Table II presents the projected impact of the changes for FY 2015 for urban and rural hospitals and for the different categories of hospitals shown in Table I. It compares the estimated average payments per discharge for FY 2014 with the estimated average payments per discharge for FY 2015, as calculated under our models. Therefore, this table presents, in terms of the average dollar amounts paid per discharge, the combined effects of the changes presented in Table I. The estimated percentage changes shown in the last column of Table II equal the estimated percentage changes in average payments per discharge from Column 13 of Table I.

TABLE II—IMPACT ANALYSIS OF CHANGES FOR FY 2015 ACUTE CARE HOSPITAL OPERATING PROSPECTIVE PAYMENT SYSTEM

[Payments per discharge]

	Number of hospitals	Estimated average FY 2014 payment per discharge	Estimated average FY 2015 payment per discharge	All FY 2015 changes
	(1)	(2)	(3)	(4)
All Hospitals	3,396	11,197	11,129	-0.6

Specialty Hospitals:				
Cardiac Specialty Hospitals	15	12,303	12,567	2.1

H. Effects of Other Policy Changes

In addition to those policy changes discussed above that we are able to model using our IPPS payment simulation model, we are making various other changes in this final rule. Generally, we have limited or no specific data available with which to estimate the impacts of these changes. Our estimates of the likely impacts associated with these other changes are discussed below.

1. Effects of Policy on MS-DRGs for Preventable HACs, Including Infections

In section II.F. of the preamble of this final rule, we discuss our implementation of section 1886(d)(4)(D) of the Act, which requires the Secretary to identify conditions that are: (1) high cost, high volume, or both; (2) result in the assignment of a case to an MS-DRG that has a higher payment when present as a secondary diagnosis; and (3) could reasonably have been prevented through application of evidence-based guidelines. For discharges occurring on or after October 1, 2008, hospitals will not receive additional payment for cases in which one of the selected conditions was not present on admission, unless, based on data and clinical judgment, it cannot be determined at the time of admission whether a condition is present. That is, the case will be paid as though the secondary diagnosis were not present. However, the statute also requires the Secretary to continue counting the condition as a secondary diagnosis that results in a higher IPPS payment when doing

the budget neutrality calculations for MS-DRG reclassifications and recalibration. Therefore, we will perform our budget neutrality calculations as though the payment provision did not apply, but Medicare will make a lower payment to the hospital for the specific case that includes the secondary diagnosis. Thus, the provision results in cost savings to the Medicare program.

We note that the provision will only apply when one or more of the selected conditions are the only secondary diagnosis or diagnoses present on the claim that will lead to higher payment. Medicare beneficiaries will generally have multiple secondary diagnoses during a hospital stay, such that beneficiaries having one MCC or CC will frequently have additional conditions that also will generate higher payment. Only a small percentage of the cases will have only one secondary diagnosis that would lead to a higher payment. Therefore, if at least one nonselected secondary diagnosis that leads to higher payment is on the claim, the case will continue to be assigned to the higher paying MS-DRG and there will be no Medicare savings from that case. In addition, as discussed in section II.F.3. of the preamble of this final rule, it is possible to have two severity levels where the HAC does not affect the MS-DRG assignment or for an MS-DRG not to have severity levels. In either of these circumstances, the case will continue to be assigned to the higher paying MS-DRG and

there will be no Medicare savings from that case.

The HAC payment provision went into effect on October 1, 2008. Our savings estimates for the next 5 fiscal years are shown below:

Year	Savings (in millions)
FY 2015	\$27
FY 2016	29
FY 2017	31
FY 2018	34
FY 2019	36

In section IV.J. of the preamble of this final rule, we are making changes to the HAC Reduction Program for FY 2015. We refer readers to section I.H.6. of this Appendix A for a discussion of the impact of these changes.

2. Effects of Policy Relating to New Medical Service and Technology Add-On Payments

In section II.I. of the preamble to this final rule, we discuss five applications (Dalbavancin, Heli-FX™ EndoAnchor System, CardioMEMS™ HF (Heart Failure) Monitoring System, MitraClip® System, and Responsive Neurostimulator (RNS®) System) for add-on payments for new medical services and technologies for FY 2015, as well as the status of the new technologies that were approved to receive new technology add-on payments in FY 2014. We

note that one of the applications (for the Watchman® System) discussed in the proposed rule withdrew its application prior to the publication of this final rule.

As explained in the preamble to this final rule, add-on payments for new medical services and technologies under section 1886(d)(5)(K) of the Act are not required to be budget neutral. As discussed in section II.I.4. of the preamble of this final rule, we are approving three of the five applications (CardioMEMS™ HF Monitoring System, MitraClip® System, and RNS® System) for new technology add-on payments for FY 2015. As we proposed, in this final rule, we also are continuing to make new technology add-on payments in FY 2015 for Kcentra™, Argus® II Retinal Prosthesis System, the Zilver® PTX® Drug Eluting Peripheral Stent, Voraxaze®, and the Zenith® F. Graft (because all of these technologies are still within the 3-year anniversary of the product's entry onto the market). We note that new technology add-on payments per case are limited to the lesser of: (1) 50 percent of the costs of the new technology; or (2) 50 percent of the amount by which the costs of the case exceed the standard MS-DRG payment for the case. Because it is difficult to predict the actual new technology add-on payment for each case, our estimates below are based on the increase in add-on payments for FY 2015 as if every claim that would qualify for a new technology add-on payment would receive the maximum add-on payment. Based on the applicant's estimate for FY 2013, we currently estimate that new technology add-on payments for Voraxaze® will increase overall FY 2015 payments by \$6,300,000. Based on the applicant's estimate for FY 2013, we currently estimate that new technology add-on payments for the Zenith® F. Graft will increase overall FY 2015 payments by \$4,085,750. Based on the applicant's estimate for FY 2014, we currently estimate that new technology add-on payments for Kcentra™ will increase overall FY 2015 payments by \$5,449,888. Based on the applicant's estimate for FY 2014, we currently estimate that new technology add-on payments for the Argus® II Retinal Prosthesis System will increase overall FY 2015 payments by \$3,601,437. Based on the applicant's estimate for FY 2014, we currently estimate that new technology add-on payments for the Zilver® PTX® Drug Eluting Peripheral Stent will increase overall FY 2015 payments by \$20,463,000. Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the CardioMEMS™ HF Monitoring System will increase overall FY 2015 payments by \$11,315,625 (maximum add-on payment of \$8,875 * 1,275 patients). Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the MitraClip® System will increase overall FY 2015 payments by \$27,000,000 (maximum add-on payment of \$15,000 * 1,800 patients). Based on the applicant's estimate for FY 2015, we currently estimate that new technology add-on payments for the RNS® System will increase overall FY 2015 payments by \$12,932,500 (maximum add-on payment of \$18,475 * 700 patients).

3. Effects of Changes to List of MS-DRGs Subject to Postacute Care Transfer and DRG Special Pay Policy

In section IV.A. of the preamble of this final rule, we discuss changes to the list of MS-DRGs subject to the postacute care transfer and DRG special payment policies. As reflected in Table 5 listed in section VI. of the Addendum to this final rule and available via the Internet on the CMS Web site, using criteria set forth in regulation at § 412.4, we evaluated MS-DRG charge, discharge, and transfer data to determine which MS-DRGs qualify for the postacute care transfer and DRG special pay policies. We note that we are making no change to these payment policies in this FY 2015 final rule. We are changing the status of certain MS-DRGs as a result of revisions to the MS-DRGs for FY 2015. We are changing the status of five MS-DRGs to qualify for the postacute care transfer policy in FY 2015. One additional MS-DRG that qualified under the policy in FY 2014 does not qualify in FY 2015, and we are changing the status accordingly. Finally, five MS-DRGs now qualify for the MS-DRG special pay policy in FY 2015 after not qualifying in FY 2014, and we are adding them to the list of qualifying MS-DRGs. Column 4 of Table I in this Appendix A shows the effects of the changes to the MS-DRGs and relative payment weights with the application of the recalibration budget neutrality factor to the standardized amounts. Section 1886(d)(4)(C)(i) of the Act requires us annually to make appropriate classification changes in order to reflect changes in treatment patterns, technology, and any other factors that may change the relative use of hospital resources. The analysis and methods determining the changes due to the MS-DRGs and relative payment weights accounts for and includes changes in MS-DRG postacute care transfer and special pay policy statuses. We refer readers to section I.G. of this Appendix for a more detailed discussion of payment impacts due to MS-DRG reclassification policies.

4. Effects of the Payment Adjustment for Low-Volume Hospitals for FY 2015

In section V.D. of the preamble of this final rule, we discuss the provisions of the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93) that extend for an additional year, through March 31, 2015, the temporary changes to the low-volume hospital definition and the methodology for determining the payment adjustment made by the Affordable Care Act for FYs 2011 and 2012, and extended through FY 2013 by the ATRA, and the first half of FY 2014 by the Pathway for SGR Reform Act (Pub. L. 113-67). Therefore, to qualify for the low-volume hospital payment adjustment for FY 2015 discharges occurring before April 1, 2015, under section 1886(d)(12) of the Act, a hospital must have less than 1,600 Medicare discharges and be located more than 15 miles from other IPPS hospitals. The payment adjustment for eligible low-volume hospital FY 2015 discharges occurring before April 1, 2015, is a continuous, linear sliding scale adjustment ranging from an additional 25 percent payment adjustment to qualifying

hospitals with 200 or fewer Medicare discharges to no additional payment to hospitals with 1,600 or more Medicare discharges.

Beginning with FY 2015 discharges occurring on or after April 1, 2015, in accordance with section 1886(d)(12) of the Act, the low-volume hospital definition and payment adjustment methodology revert back to the statutory requirements that were in effect prior to the amendments made by the Affordable Care Act as amended by subsequent legislation. Therefore, effective for FY 2015 discharges occurring on or after April 1, 2015 and subsequent years, in order to qualify as a low-volume hospital, a subsection (d) hospital must be more than 25 road miles from another subsection (d) hospital and have less than 200 discharges (that is, less than 200 discharges total, including both Medicare and non-Medicare discharges) during the fiscal year.

Based on the latest available data, we estimate that approximately 593 hospitals will qualify as a low-volume hospital in FY 2014 and in FY 2015 for discharges occurring before April 1, 2015. With the statutory changes to the low-volume hospital payment adjustment, we estimate only approximately five hospitals will continue to qualify as a low-volume hospital for FY 2015 discharges occurring on or after April 1, 2015. We project that the expiration of the temporary changes to the low-volume hospital definition and the payment adjustment methodology originally made by the Affordable Care Act and extended by subsequent legislation will result in a decrease in payments of approximately \$152 million in FY 2015 as compared to the low-volume hospital payments in FY 2014. This estimate accounts for our projection of the five IPPS low-volume hospitals in FY 2014 that are expected to continue to receive a low-volume hospital payment adjustment of an additional 25 percent for FY 2015 discharges occurring on or after April 1, 2015.

5. Effects of Policies Related to IME Medicare Part C Add-On Payments to SCHs Paid According to Their Hospital-Specific Rates

In section IV.E.2. of the preamble of this final rule, we discuss our finalized policy related to IME add-on payments for Medicare Part C patients to SCHs that are paid according to their hospital-specific rates. Payments based on the Federal rate are based on the IPPS standardized amount and include all applicable IPPS add-on payments, such as outliers, DSH, and IME, while payments based on the hospital-specific rate include no add-on payments. The hospital-specific rate generally reflects the additional costs incurred by a teaching hospital for its Medicare Part A patients. However, the hospital-specific rate does not reflect the costs associated with Medicare Part C patients and there is currently no payment mechanism for SCHs paid based on their hospital-specific rate to receive the IME add-on payment for Medicare Part C patients. Accordingly, we are providing all SCHs that are subsection (d) teaching hospitals, IME add-on payments for applicable discharges of Medicare Part C patients in accordance with section 1886(d)(11) of the Act, regardless of

whether the SCH is paid based on the Federal rate or its hospital-specific rate. In addition, we also are establishing that for purposes of the comparison of payments based on the Federal rate and payments based on the hospital-specific rate, IME payments under section 1886(d)(11) of the Act for Medicare Part C patients will no longer be included as part of the Federal rate payment. Because the IPPS Federal rate used in the MDH payment methodology is the same IPPS Federal rate that is used in the SCH payment methodology, this change to the comparison of payments based on the Federal rate and payments based on the hospital-specific rate also applies to the Federal rate payment amount used to determine payment to MDHs that are teaching hospitals (that is, in the determination of the payment amount in addition to the Federal rate payment that is equal to 75 percent of the amount by which the hospital-specific rate payment exceeds the Federal rate payment), as discussed in section IV.E.2. of the preamble of this final rule.

We estimate that the policy at section IV.E.2. of the preamble of this final rule will result in an increase in payments to approximately 45 hospitals that are both SCHs or MDHs and teaching hospitals of approximately \$5.3 million in FY 2015.

6. Effects of the Extension of the MDH Program for the First Half of FY 2015

In section V.G. of the preamble of this final rule, we briefly discuss the statutory extension of the MDH program through March 31, 2015, that is, through the first half of FY 2015, by section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93). Hospitals that qualify as MDHs receive the higher of operating IPPS payments made under the Federal standardized amount or the payments made under the Federal standardized amount plus 75 percent of the amount by which the hospital-specific rate (a hospital-specific cost-based rate) exceeds the Federal standardized amount. Based on the latest available data we have for 177 MDHs, we project that 166 MDHs will receive the blended payment (that is, the Federal standardized amount plus 75 percent of the amount by which the hospital-specific rate exceeds the Federal standardized amount) for the first half of FY 2015 (that is, for

discharges occurring through March 31, 2015). We estimate that those hospitals will experience an overall increase in payments of approximately \$70.7 million as compared to our previous estimates of payments to these hospitals for FY 2015 prior to the extension of the MDH program through March 31, 2015, by section 106 of Public Law 113-93.

7. Effects of Changes Under the FY 2015 Hospital Value-Based Purchasing (VBP) Program

Section 1886(o)(1)(B) of the Act directs the Secretary to make value-based incentive payments under the Hospital VBP Program to hospitals that meet performance standards during the performance period for discharges occurring on or after October 1, 2012. These incentive payments will be funded for FY 2015 through a reduction to the FY 2015 base operating DRG payment for each discharge of 1.50 percent, as required by section 1886(o)(7)(B) of the Act. The applicable percentage for FY 2016 is 1.75 percent and for FY 2017 and subsequent years, it is 2 percent. We are required to ensure that the total amount available for value-based incentive payments is equal to the total amount of reduced payments for all hospitals for the fiscal year, as estimated by the Secretary.

We refer readers to the Hospital Inpatient VBP Program final rule (76 FR 26490 through 26547), the CY 2012 OPPS/ASC final rule with comment period (76 FR 74527 through 74547), the FY 2013 IPPS/LTCH PPS final rule (77 FR 53567 through 53614), the FY 2014 IPPS/LTCH PPS final rule (78 FR 50677 through 50707), and the CY 2014 OPPS/ASC final rule with comment period (78 FR 75120 through 75121) for further explanation of the details of the Hospital VBP Program.

We specifically refer readers to the FY 2013 IPPS/LTCH PPS final rule (77 FR 53582 through 53592) and the FY 2014 IPPS/LTCH PPS final rule (78 FR 50678 through 50679), for discussions of the measures and other policies that we adopted for the FY 2015 and FY 2016 Hospital VBP Programs.

In section IV.I. of the preamble of this final rule, we estimate the available pool of funds for value-based incentive payments in the FY 2015 Hospital VBP Program, which, in accordance with section 1886(o)(7)(C)(iii) of the Act, will be 1.50 percent of base

operating DRG payments, or a total of approximately \$1.4 billion. This estimated available pool for FY 2015 is based on the historical pool of hospitals that were eligible to participate in the FY 2014 Hospital VBP Program and the payment information from the March 2014 update to the FY 2013 MedPAR file.

The estimated impacts of the FY 2015 Hospital VBP Program by hospital characteristic, found in the table below, are based on historical TPSs. We used the FY 2014 Hospital VBP Program TPSs to calculate the proxy adjustment factors used for this impact analysis. These are the most recently available scores that hospitals were given an opportunity to review and correct. The proxy adjustment factors use estimated annual base operating DRG payment amounts derived from the March 2014 update to the FY 2013 MedPAR file. The proxy adjustment factors can be found in Table 16 associated with this final rule (available via the Internet on the CMS Web site).

The impact analysis shows that, for the FY 2015 Hospital VBP Program, the number of hospitals that will receive an increase in base operating DRG payment amount is slightly lower than the number of hospitals that will receive a decrease. Among urban hospitals, those in the New England, South Atlantic, East North Central, West North Central, and West South Central regions will have an increase, on average, in base operating DRG payment amount, and among rural hospitals, those in the New England and East North Central regions will have an increase, on average, in base operating DRG payment amounts.

Both urban and rural hospitals in the Middle Atlantic, East South Central, Mountain, and Pacific regions and rural hospitals in the South Atlantic, West North Central, and West South Central regions will receive an average decrease in base operating DRG payment amount. As the percent of DSH payments increases, we see a decrease in base operating DRG payment amount, while as the Medicare utilization (MCR) percent increases, we see an increase in base operating DRG payment amount.

Nonteaching and teaching hospitals will have an average decrease in base operating DRG payment amount.

IMPACT ANALYSIS OF BASE OPERATING DRG PAYMENT AMOUNT CHANGES RESULTING FROM THE FY 2015 HOSPITAL VBP PROGRAM

	Number of hospitals	Average (percent)
By Geographic Location:		
All Hospitals	2,728	-0.038
Large Urban	1,113	-0.021
Other Urban	910	-0.030
Rural Area	705	-0.074
Urban hospitals	2,023	-0.025
0-99 beds	307	0.025
100-199 beds	677	-0.043
200-299 beds	431	-0.032
300-499 beds	401	-0.033
500 or more beds	207	-0.010
Rural hospitals	705	-0.074
0-49 beds	161	-0.042
50-99 beds	296	-0.088

IMPACT ANALYSIS OF BASE OPERATING DRG PAYMENT AMOUNT CHANGES RESULTING FROM THE FY 2015 HOSPITAL
VBP PROGRAM—Continued

	Number of hospitals	Average (percent)
100–149 beds	148	–0.074
150–199 beds	55	–0.106

Over 65	114	–0.222
By Teaching Status:		
Teaching	933	–0.041
Non-Teaching	1,795	–0.036

Actual FY 2015 Hospital VBP Program TPSs will not be reviewed and corrected by hospitals until after this FY 2015 IPPS/LTCH PPS final rule has been published. Therefore, the same historical universe of eligible hospitals and corresponding TPSs from the FY 2014 Hospital VBP Program are used for this updated impact analysis.

8. Effects of Changes to the HAC Reduction Program for FY 2015

In section IV.J. of the preamble of this final rule, we are establishing measures, scoring, and a risk adjustment methodology to implement the FY 2015 payment reduction under the HAC Reduction Program. Section 1886(p) of the Act, as added under section 3008(a) of the Affordable Care Act, establishes an adjustment to hospital payments for HACs, or a HAC Reduction program, under which payments to applicable hospitals are adjusted to provide an incentive to reduce HACs, effective for discharges occurring on October 1, 2014 and for subsequent program years.

We note that hospitals will have a payment impact for the first time in FY 2015. For FY 2015, we are presenting the overall impact of the HAC Reduction Program provision along with other IPPS payment provision impacts

in section I.G. of this Appendix A. The table and analyses that we are presenting below show the distributional effect of the measures and scoring system for the HAC Reduction Program included in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50729).

For FY 2015, we note that we finalized a Total HAC Score methodology in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50707 through 50729) that assigns weights for Domain 1 and Domain 2 at 35 percent and 65 percent, respectively. Based on this methodology, the table below presents data on the proportion of hospitals, by structural characteristic, in the worst performing quartile based on the 35/65 weighting scheme.

The data for this simulation are derived from the AHRQ PSI results based on Medicare FFS discharges from July 2011 through June 2013, using version 4.5a of the AHRQ software, and CDC measure results were used based on Standard Infection Ratios (SIRs) calculated with data reported to the National Healthcare Safety Network for infections occurring between January 2012 and December 2013. To analyze the results by hospital characteristic, the FY 2015 proposed rule impact file were used. Of the 3,352 hospitals included in this analysis,

3,310 hospitals were included for geographic location, bed size, region, DSH percent, and teaching status; 3,270 for ownership; and 3,196 for MCR percent. These differences in denominator are due to the source of the hospital characteristic data. This analysis does not include Maryland hospitals as Maryland hospitals are exempt by waiver from the HAC Reduction Program in FY 2015.

The percentage of hospitals for each characteristic (column 3) indicates the percent of hospitals in each level of characteristic. For example, with regard to geographic region, 40.4 percent of hospitals (or 1,338 hospitals) are characterized as large urban; 33.8 percent of hospitals (or 1,119 hospitals) are characterized as other urban; and 25.8 percent of hospitals (or 853 hospitals) are characterized as rural. The percentage of hospitals in the worst performing quartile (column 5) indicates the proportion of hospitals for each characteristic that would be penalized. For example, in regards to geographic location, 26.6 percent of hospitals (or 356 hospitals) characterized as large urban will be subject to a payment adjustment; 23.0 percent of hospitals (or 257 hospitals) characterized as other urban will be subject to a payment adjustment; and 13.2

percent of hospitals (or 113 hospitals) characterized as rural will be subject to a payment adjustment.

With regard to geographic location of urban hospitals by bed size, 15.7 percent of hospitals (or 98 hospitals) characterized as urban hospitals with bed size of 0–99 beds will be subject to a payment adjustment; 20.7 percent of hospitals (or 155 hospitals) characterized as urban hospitals with bed size of 100–199 beds will be subject to a payment adjustment; 29.7 percent of hospitals (or 136 hospitals) characterized as urban hospitals with bed size of 200–299 beds will be subject to a payment adjustment; 27.7 percent of hospitals (or 72 hospitals) characterized as urban hospitals with bed size of 300–399 beds will be subject to a payment adjustment; 41.2 percent of hospitals (or 63 hospitals) characterized as urban hospitals with bed size of 400–499 beds will be subject to a payment adjustment; and 42.0 percent of hospitals (or 89 hospitals) characterized as urban hospitals with bed size of 500 or more beds will be subject to a payment adjustment.

With regard to geographical location of rural hospitals by bed size, 11.7 percent of hospitals (or 39 hospitals) characterized as rural hospitals with bed size of 0–49 beds will be subject to a payment adjustment; 12.5 percent of hospitals (or 37 hospitals) characterized as rural hospitals with bed size of 50–99 beds will be subject to a payment adjustment; 12.6 percent of hospitals (or 17 hospitals) characterized as rural hospitals with bed size of 100–149 beds will be subject to a payment adjustment; 18.0 percent of hospitals (or 9 hospitals) characterized as rural hospitals with bed size of 150–199 beds will be subject to a payment adjustment; and 29.7 percent of hospitals (or 11 hospitals) characterized as rural hospitals with bed size of 200 or more beds will be subject to a payment adjustment.

With regard to region of urban hospitals, 30.3 percent of hospitals (or 36 hospitals) characterized as urban in the New England region will be subject to a payment adjustment; 30.2 percent of hospitals (or 96 hospitals) characterized as urban in the Mid-Atlantic region will be subject to a payment adjustment; 24.3 percent of hospitals (or 98 hospitals) characterized as urban in the South Atlantic region will be subject to a payment adjustment; 22.5 percent of

hospitals (or 88 hospitals) characterized as urban in the East North Central region will be subject to a payment adjustment; 22.1 percent of hospitals (or 33 hospitals) characterized as urban in the West South Central region will be subject to a payment adjustment; 26.1 percent of hospitals (or 42 hospitals) characterized as urban in the East North Central region will be subject to a payment adjustment; 15.9 percent of hospitals (or 60 hospitals) characterized as urban in the West South Central region will be subject to a payment adjustment; 33.3 percent of hospitals (or 54 hospitals) characterized as urban in the Mountain region will be subject to a payment adjustment; and 28.2 percent of hospitals (or 106 hospitals) characterized as urban in the Pacific region will be subject to a payment adjustment.

With regard to region of rural hospitals, 18.2 percent of hospitals (or 4 hospitals) characterized as rural in the New England region will be subject to a payment adjustment; 12.5 percent of hospitals (or 7 hospitals) characterized as rural in the Mid-Atlantic region will be subject to a payment adjustment; 16.9 percent of hospitals (or 22 hospitals) characterized as rural in the South Atlantic region will be subject to a payment adjustment; 12.2 percent of hospitals (or 14 hospitals) characterized as rural in the East North Central region will be subject to a payment adjustment; 8.8 percent of hospitals (or 14 hospitals) characterized as rural in the West South Central region will be subject to a payment adjustment; 15.0 percent of hospitals (or 16 hospitals) in the East North Central region will be subject to a payment adjustment; 9.6 percent of hospitals (or 16 hospitals) in the West South Central region will be subject to a payment adjustment; 26.8 percent of hospitals (or 19 hospitals) in the Mountain region will be subject to a payment adjustment; and 3.8 percent of hospitals (or 1 hospital) in the Pacific region will be subject to a payment adjustment.

With regard to the DSH percent characteristic, 19.4 percent of hospitals (or 309 hospitals) characterized in the 0–24 DSH percent will be subject to a payment adjustment; 22.0 percent of hospitals (or 304 hospitals) characterized in the 25–49 DSH percent will be subject to a payment adjustment; 38.1 percent of hospitals (or 67 hospitals) characterized in the 50–64 DSH

percent will be subject to a payment adjustment; and 28.9 percent of hospitals (or 46 hospitals) characterized in the 65 and over DSH percent will be subject to a payment adjustment.

With regard to the teaching status characteristic, 17.0 percent of hospitals (or 391 hospitals) characterized as nonteaching will be subject to a payment adjustment; 25.7 percent of hospitals (or 198 hospitals) characterized as fewer than 100 residents will be subject to a payment adjustment; and 56.4 percent of hospitals (or 137 hospitals) characterized as 100 or more residents will be subject to a payment adjustment.

With regard to the urban teaching and DSH characteristic, 35.6 percent of hospitals (or 294 hospitals) characterized as teaching and DSH will be subject to a payment adjustment; 25.0 percent of hospitals (or 32 hospitals) characterized as teaching and no DSH will be subject to a payment adjustment; 19.5 percent of hospitals (or 207 hospitals) characterized as no teaching and DSH will be subject to a payment adjustment; 18.2 percent of hospitals (or 80 hospitals) characterized as no teaching and no DSH will be subject to a payment adjustment; and 13.2 percent of hospitals (or 113 hospitals) characterized as nonurban will be subject to a payment adjustment.

With regard to the type of ownership characteristic, 22.7 percent of hospitals (or 429 hospitals) characterized as voluntary will be subject to a payment adjustment; 18.7 percent of hospitals (or 160 hospitals) characterized as proprietary will be subject to a payment adjustment; and 25.0 percent of hospitals (or 131 hospitals) characterized as government will be subject to a payment adjustment.

With regard to the MCR percent characteristic, 37.4 percent of hospitals (or 145 hospitals) characterized in the 0–24 MCR percent will be subject to a payment adjustment; 22.6 percent of hospitals (or 447 hospitals) characterized in the 25–49 MCR percent will be subject to a payment adjustment; 14.4 percent of hospitals (or 101 hospitals) characterized in the 50–64 MCR percent will be subject to a payment adjustment; and 9.4 percent of hospitals (or 12 hospitals) characterized in the 65 and over MCR percent will be subject to a payment adjustment.

PROPORTION OF HOSPITALS IN THE WORST PERFORMING QUARTILE (>75TH PERCENTILE) OF THE TOTAL HAC SCORE BY HOSPITAL CHARACTERISTIC FOR THE FY 2015 HAC REDUCTION PROGRAM

Hospital characteristics	Hospitals in the worst performing quartile

Source: FY 2015 HAC Reduction Program Final Rule Results provided by R&A contract. Scores are based on AHRQ PSI 90 data from July 2011 through June 2013 and CLABSI and CAUTI results from January 2012 to December 2013. Hospital Characteristics are based on FY 2015 Proposed Rule Impact File released May 20, 2014.

^a The total number of hospitals with hospital characteristic data (3,310 for geographic location, bed size, region, DSH percent and teaching status; 3,270 for type of ownership; and 3,196 for MCR) do not add up to the total number of hospitals eligible for the HAC Reduction program (3,352) because 42 hospitals are not included in the FY 2015 impact file and not all hospitals have data for all characteristics.

^b This column is the percent of all hospitals with each characteristic that were eligible for the program and included in the FY 15 impact file. Percents may not sum to 100 due to rounding.

^c This column is the percent of hospitals within each characteristic that are in the worse performing quartile.

^d Total excludes the 46 Maryland hospitals.

^e Large Urban hospitals are hospitals located in large urban areas (populations over 1 million).

^f A hospital is considered a teaching hospital if it has an IME adjustment factor for Operation PPS (TCHOP) greater than zero and is considered a DSH hospital if it has a DSH patient percentage greater than zero.

9. Effects of Policy Changes Relating to Payments for Direct GME and IME

Under section IV.K.2. of the preamble of this final rule, we discuss our revisions to simplify and streamline the timing of CMS's policies related to when the FTE resident caps, the 3-year rolling average, and the IRB ratio cap would become effective for new teaching hospitals, by stating that the FTE resident caps, rolling average, and IRB ratio cap will be effective simultaneously, beginning with the applicable hospital's cost reporting period that coincides with or follows the start of the sixth program year of the first new program started. We are specifying that this policy regarding the effective dates of the FTE residency caps, rolling average, and IRB ratio cap for FTE residents in new programs is consistent with the methodology for calculation of the FTE resident caps as described in the FY 2013 IPPS/LTCH PPS final rule, and implemented at 42 CFR 413.79(e)(1) and (3). That is, this policy is effective for urban hospitals that have not yet had FTE resident caps established under § 413.79(e)(1), and for rural hospitals, on or after October 1, 2012. This policy will increase the amount of time that the new programs will be exempt from the FTE resident caps by several months, depending on the cost reporting period of the new teaching hospital. The estimate of possible cost of this policy is less than \$5 million a year and, therefore, is negligible.

In section IV.K.3.a. of the preamble of this final rule, we discuss our policies related to the effect of new OMB labor market area delineations on certain teaching hospitals training residents in rural areas. Under existing regulations a new teaching hospital has 5 years from when it first begins training residents in its first new program to grow its cap. If the teaching hospital is a rural teaching hospital, it can continue to receive permanent cap adjustments even after the initial 5-year cap-building period ends if it trains residents in a new program. As a result of the implementation of the new OMB delineations, some teaching hospitals may be redesignated from being located in a rural area to an urban area, thereby losing their ability to increase their caps again after their initial 5-year cap-building period. Effective October 1, 2014, if a rural hospital has received a letter of accreditation for a new program and/or started training residents in the new program prior to being redesignated as urban, it can continue growing that program for the remainder of the cap-building period and receive a permanent cap adjustment for that new program. Once the cap-building period for the new program that was started while the hospital was still rural expires, the teaching hospital that has been redesignated as urban will no longer be able to receive any additional permanent cap adjustments.

In section IV.K.3.b. of the preamble of this final rule, we discuss our policy change related to a redesignated hospital's participation in a rural track program. Under existing regulations, if an urban hospital rotates residents to a separately accredited rural track program at a rural site(s) for more than one-half of the duration of the program, the urban hospital may receive an adjustment

to its cap for training those FTE residents, referred to as the rural track FTE limitation. We are providing that, effective October 1, 2014, if a rural hospital participating in a rural track is in an area redesignated by OMB as urban after residents started training in the rural track and during the period that is used to calculate the urban hospital's rural track FTE limitation, the urban hospital may still receive a cap adjustment for that rural track. We also are providing that, effective October 1, 2014, if the rural hospital participating in the rural track is in an area redesignated as urban, the redesignated urban hospital can continue to be considered a rural hospital for purposes of the rural track for a transition period that would begin effective with the implementation date of the new OMB delineations and last through the end of the second residency training year following implementation of the new OMB delineations. However, during that transition period, either the rural hospital that has been redesignated as urban must reclassify as rural under § 412.103 for purposes of IME payment only, or the urban hospital must find a new geographically rural site to participate as the rural site for purposes of the rural track, in order for the urban hospital to receive payment under § 413.79(k)(1) or (k)(2) for the rural track program after the transition period ends.

We estimate that these policies discussed under IV.K.3.a. and b. of the preamble of this final rule will have a very minimal, if any, impact on Medicare expenditures. These policies will only be applied to, at the most, very few hospitals (if any at all) and will only apply once every 10 years as a result of OMB changes in labor market area delineations due to a recent Census.

In sections IV.K.5.a. and b. of the preamble of this final rule, we are making some changes to the current application process for and awarding of cap slots from closed hospitals under section 5506 of the Affordable Care Act that will be effective for hospital closures announced on or after October 1, 2014. We are providing an alternative interpretation of the statutory provision at section 5506(d) of the Affordable Care Act, which provides that the Secretary give consideration to the effect of the permanent awarding of slots under section 5506 of the Affordable Care Act to any temporary cap adjustments to a hospital received under § 413.79(h) of the regulations to ensure that there be no duplication of FTE cap slots. In this final rule, we are interpreting the statutory language at section 5506(d) in a manner that will permit us to apply the concept of ensuring no duplication of FTE resident slots on a hospital-by-hospital basis, such that if a hospital is both receiving a temporary cap adjustment under § 413.79(h) and is applying under section 5506 for permanent cap slots, it will not be able to receive a permanent cap adjustment until an equivalent amount of displaced residents graduate. However, if a hospital is applying under section 5506 for permanent cap slots and did not receive a temporary cap adjustment under § 413.79(h), that hospital will not have to wait until displaced residents that are training at another hospital graduate to be awarded any permanent cap

slots under section 5506. We estimate that this revised policy could result in a slight increase in Medicare expenditures in a rare event a section 5506 cap adjustment may be provided to one hospital before a temporary cap adjustment expires at another hospital. However, we are unable to estimate whether this will occur with any future hospital closures where section 5506 is applied because we do not know how many, if any, residents will be displaced. Furthermore, we believe that any temporary duplicate payment will be a rare occurrence as most hospitals that are receiving a temporary cap adjustment under § 413.79(h) will also receive a permanent cap adjustment under section 5506. In this instance the hospital will only be able to receive the permanent cap adjustment once the temporary cap adjustment for an equivalent number of FTE residents expires, in which case there would be no duplication of FTE resident slots.

In addition, under section IV.K.5.c. of the preamble of this final rule, we are revising the ranking criteria used to award slots under section 5506. First, we are no longer allowing hospitals to apply for cap relief, which is included under current Ranking Criterion Eight. This change means that hospitals will be awarded slots under section 5506 for taking over a closed hospital's residency training program, having participated with a closed hospital in a Medicare GME affiliated group, taking over part of a closed hospital's program, expanding or starting a new geriatrics program, expanding or starting a new primary care or general surgery program, and expanding or starting a new nonprimary care or nongeneral surgery program. Second, Ranking Criterion One currently applies to hospitals that are assuming (or have assumed) an entire program from the hospital that closed. We are revising this Ranking Criterion to provide priority to a hospital whose FTE resident caps were erroneously reduced by CMS under section 5503 of the Affordable Care Act, contrary to the specific statutory exception at section 1886(h)(8)(A)(ii)(I) of the Act, and the CMS Central Office was made aware of the error prior to the posting of the FY 2015 proposed rule. We do not believe there is any cost associated with these policies. We will continue assigning all of the closed hospital's slots; only the specific hospitals awarded the slots may change.

10. Effects of Implementation of Rural Community Hospital Demonstration Program

In section IV.L. of the preamble of this final rule, we discuss our implementation of section 410A of Public Law 108–173, as amended, which requires the Secretary to conduct a demonstration that would modify reimbursement for inpatient services for up to 30 rural community hospitals. Section 410A(c)(2) requires that “[i]n conducting the demonstration program under this section, the Secretary shall ensure that the aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration program under this section was not implemented.” As discussed in section IV.L. of the preamble of this final rule, in the IPPS final rules for each of the previous 10 fiscal years, we have estimated the additional

payments made by the program for each of the participating hospitals as a result of the demonstration. In order to achieve budget neutrality, we are adjusting the national IPPS rates by an amount sufficient to account for the added costs of this demonstration. In other words, we are applying budget neutrality across the payment system as a whole rather than across the participants of this demonstration. The language of the statutory budget neutrality requirement permits the agency to implement the budget neutrality provision in this manner. The statutory language requires that “aggregate payments made by the Secretary do not exceed the amount which the Secretary would have paid if the demonstration . . . was not implemented” but does not identify the range across which aggregate payments must be held equal.

We are adjusting the national IPPS rates according to the methodology set forth elsewhere in this final rule. The adjustment to the national IPPS rates to account for estimated demonstration cost for FY 2014 for the 7 “pre-expansion” participating hospitals that are currently participating in the demonstration and the 15 additional hospitals participating as a result of the expansion of the demonstration under the Affordable Care Act is \$54,177,144. In addition, in this final rule, we are adding to the adjustment of the national IPPS rates the amount by which the actual costs of the demonstration for FY 2008 (as shown in the finalized cost reports for cost reporting periods beginning in FY 2008 for the hospitals that participated in the demonstration during FY 2008) exceed the budget neutrality offset amount that was finalized in the FY 2008 IPPS final rule (\$10,389,771). Thus, the resulting total (\$64,566,915) is the amount for which an adjustment to inpatient rates for FY 2015 is calculated.

11. Effects of Changes Related to Reclassification as Rural for CAHs

In section VI.D.2. of the preamble of this final rule, we discuss our policies relating to reclassifications of CAHs as a result of the adoption of the new OMB labor market area delineations. A facility is eligible for designation as a CAH only if it is either physically located in a rural area or has been reclassified as rural under 42 CFR 412.103. CAHs can be affected by the recent OMB labor market area delineations because facilities that are currently participating as CAHs that were previously located in rural areas may now be located in urban areas as a result of the new delineations. Previously, in both in the FY 2005 IPPS final rule and the FY 2010 IPPS/LTCH PPS final rule, we revised the regulations to give currently participating CAHs 2 years, from the effective date of the earlier OMB designations, to reclassify as rural facilities. However, these regulation changes were specific to a particular timeframe. As we are implementing the latest OMB labor market area delineations in this final rule, we are providing that, effective October 1, 2014, currently participating CAHs that are located in an area that has been redesignated from rural to urban under the new delineations will again be treated as rural for 2 years from

the date the new OMB delineations are implemented. An affected CAH will have 2 years from the date the redesignation becomes effective to reclassify as rural and thereby retain its CAH status. If a CAH fails to reclassify within those 2 years, it can no longer participate in Medicare as a CAH. However, unlike in previous years when the regulation changes were specific to a particular timeframe, the change that we are making to the regulations is not specific to a particular timeframe but will also apply to future OMB labor market area delineations. We estimate that this policy will have little or no impact on Medicare expenditures because we expect that virtually all of the affected CAHs will be granted rural status by the State in which they are located and, therefore, will be able to apply for reclassification as rural under § 412.103 in order to retain their CAH status.

12. Effects of Revision of the Requirements for Physician Certification of CAH Inpatient Services

In section VI.D.3. of the preamble of this final rule, we discuss the statutory requirement for physician certification of CAH inpatient services. For inpatient CAH services to be payable under Medicare Part A, section 1814(a)(8) of the Act requires that a physician certify that the individual may reasonably be expected to be discharged or transferred to a hospital within 96 hours after admission to the CAH. These statutory requirements are addressed in the regulations at 42 CFR 424.15. In order to provide CAHs with additional flexibility in meeting certification requirements, we are amending the regulation text at § 424.11(d)(5) to remove the phrase “or critical access hospital inpatient”. In addition, we are revising the regulations at § 424.15(b) to read as follows: “Certification begins with the order for inpatient admission. All certification requirements must be completed, signed, and documented in the medical record no later than 1 day before the date on which the claim for the inpatient CAH service is submitted.” We do not believe there is any significant impact on Medicare expenditures associated with these changes because we are simply providing CAHs with additional flexibility in meeting the statutory requirement for physician certification of CAH inpatient services. The underlying statutory requirement itself is unchanged.

13. Effects of Changes Relating to Technical Correction to Administrative Appeals by Providers and Judicial Review

In section VIII. of the preamble to this final rule, we discuss the technical correction to the regulations to eliminate provider dissatisfaction as a requirement for PRRB jurisdiction over appeals based on untimely contractor determinations as well as the change in terminology in Part 405 and Part 413 from “intermediary” or “fiscal intermediary” to “contractor”. There is no impact to the provider resulting from these provisions.

I. Effects of Update to the Reasonable Compensation Equivalent (RCE) Limits for Compensation for Physician Services Provided in Providers

In section VI.B. of the preamble of this final rule, we discuss our finalized policy to update and revise the methodology used to calculate the reasonable compensation equivalent (RCE) limits for compensation for physician services provided in providers, in accordance with our regulations at 42 CFR 415.70(f)(2). For CY 2015, we estimate that 59 cancer and children’s hospitals and 46 IPPS teaching hospitals will be subject to the RCE limits. We estimate the costs associated with the updated RCE limits for CY 2015 to be approximately \$40 million. We do not expect this RCE limit update to impact a significant number of small, rural entities; therefore, a full impact analysis is not required.

J. Effects of Changes in the Capital IPPS

1. General Considerations

For the impact analysis presented below, we used data from the March 2014 update of the FY 2013 MedPAR file and the March 2014 update of the Provider-Specific File (PSF) that is used for payment purposes. Although the analyses of the changes to the capital prospective payment system do not incorporate cost data, we used the March 2014 update of the most recently available hospital cost report data (FYs 2011 and 2012) to categorize hospitals. Our analysis has several qualifications. We use the best data available and make assumptions about case-mix and beneficiary enrollment as described below.

Due to the interdependent nature of the IPPS, it is very difficult to precisely quantify the impact associated with each change. In addition, we draw upon various sources for the data used to categorize hospitals in the tables. In some cases (for instance, the number of beds), there is a fair degree of variation in the data from different sources. We have attempted to construct these variables with the best available sources overall. However, it is possible that some individual hospitals are placed in the wrong category.

Using cases from the March 2014 update of the FY 2013 MedPAR file, we simulated payments under the capital IPPS for FY 2014 and FY 2015 for a comparison of total payments per case. Any short-term, acute care hospitals not paid under the general IPPS (for example, Indian Health Service hospitals and hospitals in Maryland) are excluded from the simulations.

The methodology for determining a capital IPPS payment is set forth at § 412.312. The basic methodology for calculating capital IPPS payments in FY 2015 is as follows:

$$(\text{Standard Federal Rate}) \times (\text{DRG weight}) \times (\text{GAF}) \times (\text{COLA for hospitals located in Alaska and Hawaii}) \times (1 + \text{DSH Adjustment Factor} + \text{IME adjustment factor, if applicable}).$$

In addition to the other adjustments, hospitals may also receive outlier payments for those cases that qualify under the threshold established for each fiscal year. We modeled payments for each hospital by multiplying the capital Federal rate by the GAF and the hospital’s case-mix. We then

added estimated payments for indirect medical education, disproportionate share, and outliers, if applicable. For purposes of this impact analysis, the model includes the following assumptions:

- We estimate that the Medicare case-mix index will increase by 0.5 percent in both FYs 2014 and 2015.

- We estimate that Medicare discharges will be approximately 11.6 million in FY 2014 and 11.7 million in FY 2015.

- The capital Federal rate was updated beginning in FY 1996 by an analytical framework that considers changes in the prices associated with capital-related costs and adjustments to account for forecast error, changes in the case-mix index, allowable changes in intensity, and other factors. As discussed in section III.A.1.a. of the Addendum to this final rule, the update is 1.5 percent for FY 2015.

- In addition to the FY 2015 update factor, the FY 2015 capital Federal rate was calculated based on a GAF/DRG budget neutrality adjustment factor of 0.9986 and an outlier adjustment factor of 0.9373. As discussed in section VI.C. of the preamble of this final rule, we are not making an additional MS-DRG documentation and coding adjustment to the capital IPPS Federal rates for FY 2015.

2. Results

We used the actuarial model described above to estimate the potential impact of our changes for FY 2015 on total capital payments per case, using a universe of 3,396 hospitals. As described above, the individual hospital payment parameters are taken from the best available data, including the March 2014 update of the FY 2013 MedPAR file, the March 2014 update to the PSF, and the most recent cost report data from the March 2014 update of HCRIS. In Table III, we present a comparison of estimated total payments per case for FY 2014 and estimated total payments per case for FY 2015 based on the FY 2015 payment policies. Column 2 shows estimates of payments per case under our model for FY 2014. Column 3 shows estimates of payments per case under our model for FY 2015. Column 4 shows the total percentage change in payments from FY 2014 to FY 2015. The change represented in Column 4 includes the 1.5 percent update to the capital Federal rate and other changes in the adjustments to the capital Federal rate. The comparisons are provided by: (1) Geographic location; (2) region; and (3) payment classification.

The simulation results show that, on average, capital payments per case in FY 2015 are expected to increase as compared to capital payments per case in FY 2014. This

expected increase is due primarily to the approximately 1.2 percent increase in the capital Federal rate for FY 2015 as compared to the FY 2014 capital Federal rate. (For a discussion of the determination of the capital Federal rate, we refer readers to section III.A. of the Addendum to this final rule.) Overall, across all hospitals, the changes to the GAFs are expected to have no net effect on capital payments. However, regionally, the effects of the changes to the GAFs on capital payments are consistent with the projected changes in payments due to changes in the wage index (and policies affecting the wage index) as shown in Table I in section I.G. of this Appendix.

Overall, there is an increase in capital payments per case due to the effects of changes to the MS-DRG reclassifications and recalibrations, with more of this increase expected for urban hospitals. However, this increase is offset by projected changes in outlier payments for both urban and rural hospitals. Rural areas are expected to experience an offset to the projected increase in capital payments per case due to the effects of changes to the GAFs.

The net impact of these changes is an estimated 1.5 percent change in capital payments per case from FY 2014 to FY 2015 for all hospitals (as shown below in Table III).

The geographic comparison shows that, on average, all hospitals are expected to experience an increase in capital IPPS payments per case in FY 2015 as compared to FY 2014. As we stated above, these expected increases are primarily due to the increase in the capital Federal rate. Capital IPPS payments per case for hospitals in “large urban areas” are expected to have an estimated increase of 1.7 percent, while hospitals in rural areas, on average, are expected to experience a 1.0 percent increase in capital payments per case from FY 2014 to FY 2015. Capital IPPS payments per case for “other urban hospitals” are estimated to increase 1.4 percent. The primary factor contributing to the difference in the projected increase in capital IPPS payments per case for urban hospitals as compared to rural hospitals is the increase in capital payments to urban hospitals due to changes to the MS-DRG relative weights and the effect of changes in the GAFs. The increase in capital payments due to changes to the MS-DRG relative weights is slightly lower for rural hospitals than it is for urban hospitals. In addition, rural hospitals are expected to experience a slight decrease in capital payments due to the effect of changes in the GAFs, while urban hospitals are expected to experience a slight increase in capital

payments due to the effect of changes in the GAFs.

The comparisons by region show that the estimated increases in capital payments per case from FY 2014 to FY 2015 in urban areas range from a 2.4 percent increase for the Pacific urban region to a 0.9 percent increase for the West South Central urban region. For rural regions, the Pacific rural region is expected to experience the largest increase in capital IPPS payments per case of 2.4 percent, while the Mountain rural region is projected to have the smallest increase in capital payments per case of 0.5 percent, compared to FY 2014 payments per case. Unlike most other urban and rural regions where changes in the GAFs either contribute to a projected decrease in capital payments or only a small increase in capital payments, the changes in the GAFs are a primary contributor to the expected increase in capital IPPS payments per case for the Pacific urban and rural regions. A larger than average decrease in capital payments per case for the Mountain rural area due to the change in outliers offsets the projected increases to that area’s capital payments per case in FY 2015 compared to FY 2014.

Hospitals of all types of ownership (that is, voluntary hospitals, government hospitals, and proprietary hospitals) are estimated to experience an increase in capital payments per case from FY 2014 to FY 2015. The increase in capital payments for voluntary hospitals is estimated at 1.6 percent, and for proprietary and government hospitals the increase is estimated to be 1.4 percent.

Section 1886(d)(10) of the Act established the MGCRB. Hospitals may apply for reclassification for purposes of the wage index for FY 2015. Reclassification for wage index purposes also affects the GAFs because that factor is constructed from the hospital wage index. To present the effects of the hospitals being reclassified as of the publication of this final rule for FY 2015, we show the average capital payments per case for reclassified hospitals for FY 2015. Urban reclassified hospitals are expected to experience an increase in capital payments of 2.1 percent, whereas for urban nonreclassified hospitals, the expected increase is 1.4 percent. The estimated percentage increase for rural reclassified hospitals is 1.0 percent, and for rural nonreclassified hospitals, the estimated percentage increase is 0.7 percent. Other reclassified hospitals (that is, hospitals reclassified under section 1886(d)(8)(B) of the Act) are expected to experience the largest increase (2.2 percent) in capital payments from FY 2014 to FY 2015.

TABLE III—COMPARISON OF TOTAL PAYMENTS PER CASE
[FY 2014 payments compared to FY 2015 payments]

	Number of hospitals	Average FY 2014 payments/case	Average FY 2015 payments/case	Change
By Geographic Location:				
All hospitals	3,396	856	869	1.5
Large urban areas (populations over 1 million)	1,401	944	960	1.7
Other urban areas (populations of 1 million or fewer)	1,148	824	835	1.4

K. Effects of Payment Rate Changes and Policy Changes Under the LTCH PPS

1. Introduction and General Considerations

In section VII. of the preamble of this final rule and section V. of the Addendum to this final rule, we set forth the annual update to the payment rates for the LTCH PPS for FY 2015. In the preamble of this final rule, we specify the statutory authority for the provisions that are presented, identify those policies, and present rationales for our decisions as well as alternatives that were considered. In this section of Appendix A to this final rule, we discuss the impact of the changes to the payment rate, factors, and other payment rate policies related to the LTCH PPS that are presented in the preamble of this final rule in terms of their estimated fiscal impact on the Medicare budget and on LTCHs.

Currently, there are 422 LTCHs included in this impacts analysis, which includes data for 80 nonprofit (voluntary ownership control) LTCHs, 330 proprietary LTCHs, and 12 LTCHs that are government-owned and operated. (We note that, although there are currently approximately 430 LTCHs, for purposes of this impact analysis, we excluded the data of all inclusive rate providers and the LTCHs that are paid in accordance with demonstration projects, consistent with the development of the FY 2015 MS–LTC–DRG relative weights (discussed in section VII.B.3.c. of the preamble of this final rule)). In the impact analysis, we used the payment rate, factors, and policies presented in this final rule, including the 2.2 percent annual update for LTCHs that submit quality data in accordance with section 1886(m)(5)(C) of the Act, which is based on the full estimated increase of the LTCH PPS market basket and the reductions required by sections 1886(m)(3) and (m)(4) of the Act, the final year of the phase-in of a one-time prospective adjustment factor of 0.98734 (approximately –1.3 percent), the update to the MS–LTC–DRG classifications and relative weights, the update to the wage index values, including the implementation of the new OMB delineations, and labor-related share, and the best available claims and CCR data to estimate the change in payments for FY 2015. (As discussed in section VII.C. of the preamble of this final rule, in accordance with section 1886(m)(5)(C) of the Act, for

LTCHs that fail to submit quality data, the annual update to the LTCH PPS standard Federal rate is reduced by 2.0 percentage points in FY 2015.)

The standard Federal rate for FY 2014 is \$40,607.31 for LTCHs that submit quality data in accordance with the requirements of section 1886(m)(5)(C) of the Act. For FY 2015, we are establishing a standard Federal rate of \$41,043.71 (for LTCHs that submit quality data in accordance with the requirements of section 1886(m)(5)(C) of the Act, which reflects the 2.2 percent annual update to the standard Federal rate, and the area wage budget neutrality factor of 1.0016703 to ensure that the changes in the wage index, including the implementation of the new OMB delineations, and labor-related share do not influence aggregate payments, and the final year of the phase-in of a one-time prospective adjustment factor of 0.98734. For LTCHs that fail to submit data for the LTCHQR Program, in accordance with section 1886(m)(5)(C) of the Act, we are establishing a standard Federal rate of \$40,240.51. This reduced standard Federal rate reflects the updates described above as well as the required 2.0 percentage point reduction to the annual update for failure to submit data to the LTCHQR Program. We note that the factors described above to determine the FY 2015 standard Federal rate are applied to the FY 2014 Federal standard rate set forth under § 412.523(c)(3)(ix)(A) (that is, \$40,607.31).

Based on the best available data for the 422 LTCHs in our database, we estimate that the annual update to the standard Federal rate for FY 2015, the update to the MS–LTC–DRG classifications relative weights for FY 2015 (discussed in section VII.B. of the preamble to this final rule), and the changes to the area wage adjustment for FY 2015 (discussed in section V.B. of the Addendum to this final rule), in addition to an estimated increase in HCO payments will result in an increase in estimated payments from FY 2014 of approximately \$62 million. Based on the 422 LTCHs in our database, we estimate that the FY 2015 LTCH PPS payments would be approximately \$5.614 billion, as compared to estimated FY 2014 LTCH PPS payments of approximately \$5.552 billion. Because the combined distributional effects and estimated changes to the Medicare program payments are over approximately \$100

million, this final rule is considered a major economic rule, as defined in this section. We note that the approximate \$62 million for the projected increase in estimated aggregate LTCH PPS payments from FY 2014 to FY 2015 does not reflect changes in LTCH admissions or case-mix intensity in estimated LTCH PPS payments, which also will affect overall payment changes. In addition, it does not reflect the estimated change in aggregate LTCH PPS payments due the projected impact of certain other LTCH PPS policy changes, which are discussed below in section I.K.3.b. of this Appendix.

The projected 1.1 percent increase in estimated payments per discharge from FY 2014 to FY 2015 is attributable to several factors, including the 2.2 percent annual update to the standard Federal rate (or 0.2 percent annual update for LTCHs that failed to submit data under the requirements of the LTCHQR Program), a one-time prospective adjustment factor for FY 2015 of 0.98734 (approximately –1.3 percent), and projected increases in estimated HCO payments. Although the net effect of the 2.2 percent annual update and the approximate –1.3 percent one-time prospective adjustment factor is approximately 0.9 percent (that is, 2.2 percent – 1.3 percent = 0.9 percent), Table IV (column 6) shows the estimated change attributable solely to the annual update to the standard Federal rate (2.2 percent for LTCHs that submit quality data under the requirements of the LTCHQR Program and 0.2 percent for LTCHs that failed submit quality data under the requirements of the LTCHQR Program), including a one-time prospective adjustment factor for FY 2015 under the final year of the phase-in (approximately –1.3 percent), is projected to result in an increase of 0.8 percent in payments per discharge from FY 2014 to FY 2015, on average, for all LTCHs. In addition to the 2.2 percent annual update for FY 2015, and a –1.3 percent one-time prospective adjustment factor for FY 2015, this estimated increase in aggregate LTCH PPS payments of 0.8 percent shown in column 6 of Table IV also includes estimated payments for SSO cases that are paid using special methodologies that are not affected by the annual update to the standard Federal rate. Therefore, for all hospital categories, the projected increase in payments based on the standard Federal rate is slightly less than the

net effect of the 2.2 percent annual update and the approximate –1.3 percent one-time prospective adjustment factor (or 0.9 percent) for FY 2015. Because we are applying an area wage level budget neutrality factor to the standard Federal rate, the annual update to the wage data, including the implementation of the new OMB delineations, and labor-related share does not impact the increase in aggregate payments.

As discussed in section V.B. of the Addendum to this final rule, we are updating the wage index values for FY 2015 based on the most recent available data and the adoption of the new OMB labor market area delineations. Under our adoption of the new OMB delineations, we are establishing and applying a transitional blended wage index for FY 2015 for LTCHs that will have a lower wage index value under those delineations, as discussed in section VII.D.2. of the preamble of this final rule. Therefore, this column reflects the blended wage index that is calculated as a 50/50 blend of the wage index under the current CBSA designations and the wage index under the new OMB delineations under our transitional wage index policy. In addition, we are slightly lowering the labor-related share from 62.537 percent to 62.306 percent under the LTCH PPS for FY 2015, based on the most recent available data on the relative importance of the labor-related share of operating and capital costs based on the FY 2009-based LTCH-specific market basket. We also are applying an area wage level budget neutrality factor of 1.0016703, which increases the standard Federal rate by approximately 0.17 percent. Therefore, the changes to the wage data, including the adoption of the new OMB delineations, and labor-related share do not result in a change in estimated aggregate LTCH PPS payments.

Table IV below shows the impact of the payment rate and the policy changes on LTCH PPS payments for FY 2015 presented in this final rule by comparing estimated FY 2014 payments to estimated FY 2015 payments. The projected increase in payments from FY 2014 to FY 2015 of 1.1 percent is attributable to the impacts of the change to the standard Federal rate (0.9 percent in Column 6) and the effect of the estimated slight increase in payments for HCO cases (0.1 percent) and an estimated increase in payments for SSO cases (0.2 percent). We currently estimate total HCO payments are projected to increase slightly from FY 2014 to FY 2015 in order to ensure that the estimated HCO payments will be 8 percent of the total estimated LTCH PPS payments in FY 2015. An analysis of the most recent available LTCH PPS claims data (that is, FY 2013 claims data from the March 2014 update of the MedPAR file) indicates that the FY 2014 HCO threshold of \$13,314 (as established in the FY 2014 IPPS/LTCH PPS final rule) may result in HCO payments in FY 2015 that are slightly below the estimated 8 percent. Specifically, we currently estimate that HCO payments will be approximately 7.9 percent of the estimated total LTCH PPS payments in FY 2014. We estimate that the impact of the slight increase in HCO payments will result in approximately a 0.1 percent increase in

estimated payments from FY 2014 to FY 2015, on average, for all LTCHs. Furthermore, in calculating the estimated HCO payments for FYs 2014 and 2015, we increased estimated costs by the applicable market basket percentage increase as projected by our actuaries. This increase in estimated costs also results in a projected increase in SSO payments of approximately 0.2 percent relative to last year. The net result of these projected changes in HCO and SSO payments in FY 2015 is an estimated change in aggregate payments of 0.3 percent. We note that estimated payments for all SSO cases comprise approximately 12 percent of the estimated total LTCH PPS payments, and estimated payments for HCO cases comprise approximately 8 percent of the estimated total FY 2015 LTCH PPS payments. Payments for HCO cases are based on 80 percent of the estimated cost of the case above the HCO threshold, while the majority of the payments for SSO cases (approximately 60 percent) are based on the estimated cost of the case.

In addition to the projected increase in LTCH PPS payments per discharge of approximately \$62 million (1.1 percent) from FY 2014 to FY 2015, as shown in Table IV below, we also estimate that the net effect of the projected impact of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the “25-percent policy” payment adjustment; the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and additional LTCH beds; the revocation of onsite discharges and readmissions policy; and the payment adjustment for “subclause (II)” LTCHs) will result in a \$116 million increase in aggregate LTCH PPS payments in FY 2015. The individual impact of these policy changes are discussed in greater detail below in section I.K.3.b. of this Appendix.

As we discuss in detail throughout this final rule, based on the most recent available data, we believe that the provisions of this final rule relating to the LTCH PPS will result in an increase in estimated aggregate LTCH PPS payments and that the resulting LTCH PPS payment amounts will result in appropriate Medicare payments.

2. Impact on Rural Hospitals

For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. As shown in Table IV, we are projecting a 1.2 percent increase in estimated payments per discharge for FY 2015 as compared to FY 2014 for rural LTCHs that will result from the changes presented in this final rule, as well as the effect of estimated changes to HCO and SSO payments. This estimated impact is based on the data for the 22 rural LTCHs in our database (out of 422 LTCHs) for which complete data were available.

The estimated increase in LTCH PPS payments from FY 2014 to FY 2015 for rural LTCHs (1.2 percent) is slightly greater than the national average increase (1.1 percent). The estimated increase in LTCH PPS payments from FY 2014 to FY 2015 for rural LTCHs is primarily due to the increase to the standard Federal rate.

3. Anticipated Effects of LTCH PPS Payment Rate Changes and Policy Changes

a. Budgetary Impact

Section 123(a)(1) of the BBRA requires that the PPS developed for LTCHs “maintain budget neutrality.” We believe that the statute’s mandate for budget neutrality applies only to the first year of the implementation of the LTCH PPS (that is, FY 2003). Therefore, in calculating the FY 2003 standard Federal rate under § 412.523(d)(2), we set total estimated payments for FY 2003 under the LTCH PPS so that estimated aggregate payments under the LTCH PPS were estimated to equal the amount that would have been paid if the LTCH PPS had not been implemented.

As discussed above in section I.K.1. of this Appendix, we project an increase in aggregate LTCH PPS payments per discharge in FY 2015 relative to FY 2014 of approximately \$62 million based on the 422 LTCHs in our database. In addition, as discussed below in section I.K.3.b. of this Appendix, we also estimate that the net effect of the projected impact of certain other LTCH PPS policy changes will result in a \$116 million increase in aggregate LTCH PPS payments in FY 2015.

b. Impact of Certain LTCH PPS Policy Changes

(1) Reinstatement of the Moratorium on the Full Implementation of the “25-Percent Policy” Payment Adjustment (§ 412.534 and § 412.536) and Reinstatement of the Moratorium on the Development of New LTCHs and LTCH Satellites and Additional LTCH beds (§ 412.23(e) and §§ 412.23(e)(6) and (7))

Section 1206(b) of Public Law 113–67 provides for the retroactive reinstatement and extension, for an additional 4 years, of the moratorium on the full implementation of the 25-percent threshold payment adjustment (referred to as the “25-percent policy” payment adjustment) established under section 114(c) of the MMSEA, as amended by section 4302(a) of the ARRA and sections 3106(c) and 10312(a) of the Affordable Care Act. As discussed in section VII.E. of the preamble of this final rule, we are reinstating this payment adjustment retroactively for LTCH cost reporting periods beginning on or after July 1, 2013 or October 1, 2013, as applicable under the regulations at § 412.534 and § 412.536.

Section 1206(b)(2) of Public Law 113–67, as amended by section 112(b) of the Protecting Access to Medicare Act of 2–14 (Pub. L. 113–93), provides for moratoria on the establishment of new LTCHs and LTCH satellite facilities and on bed increases in LTCHs effective for the period beginning April 1, 2014, and ending September 30, 2017. This statutory provision also provides specific exceptions to the moratorium on the establishment of new LTCHs and LTCH satellites. We are implementing this policy under the regulations at § 412.23(e) and §§ 412.23(e)(6) and (7), respectively. For additional details, refer to section VII.G. of the preamble of this final rule.

Our Office of the Actuary projects that the reinstatement of “25-percent policy” adjustment policy will result in

approximately a \$120 million increase in aggregate LTCH PPS payments in FY 2015. In addition, our Office of the Actuary projects that the portion of the moratoria on the establishment of new LTCHs and LTCH satellite facilities and additional LTCH beds that will occur during FY 2015 is estimated to result in approximately a \$30 million reduction in aggregate LTCH PPS payments in FY 2015. Therefore, we project our implementation of both of these statutory provisions will result in approximately a \$90 million increase in aggregate LTCH PPS payments in FY 2015.

(2) Revocation of On-Site Discharges and Readmissions Policy (§ 412.532)

As discussed in section VII.F. of the preamble of this final rule, we are removing the discharge and readmission requirement specified in the regulations under § 412.532 (referred to as the “5-percent payment threshold”). Under the “5-percent payment threshold” policy, if an LTCH (or a LTCH satellite facility) directly readmits more than 5 percent of its total Medicare inpatients discharged from an “on-site facility” (for example, a co-located acute care hospital, an IRF, or a SNF, or in the case of a LTCH satellite facility, that is co-located with an LTCH), all such discharges to the co-located “on-site facility” and the readmissions to the LTCH are treated as one discharge for that cost reporting period, and, as such, one LTCH PPS payment is made on the basis of each patient’s initial principal diagnosis. We estimate that the discontinuation of the “5-percent payment threshold” policy will result in an increase of approximately \$20 million in aggregate LTCH PPS payments in FY 2015. (We note, as also discussed in section VII.F. of the preamble of this final rule, after consideration of public comments, we are not finalizing the proposed revision the fixed-day thresholds under the greater than 3-day interruption of stay policy under § 412.531.)

(3) Payment Adjustment for “Subclause (II)” LTCHs (§ 412.526)

Section 1206(d) of Public Law 113–67 requires the Secretary to evaluate payments and regulations governing “hospitals which are classified under subclause (II) of subsection (d)(1)(B)(iv)”. In addition, based on the result of such evaluations, the statute authorizes the Secretary to adjust the payment rates for this type of hospital and to adjust regulations governing a subclause (II) LTCH that otherwise apply to subclause (I) LTCHs. As discussed in section VII.H. of the preamble of this final rule, under new § 412.526, we are applying a payment adjustment under the LTCH PPS to a subclause (II) LTCH beginning in FY 2015 that will result in payments to this type of LTCH resembling those under the reasonable cost TEFRA payment system model. Our Office of the Actuary projects that the payment adjustment for “subclause (II)” LTCHs will increase aggregate LTCH PPS payments in FY 2015 by approximately \$6 million.

c. Impact on Providers

The basic methodology for determining a per discharge LTCH PPS payment is set forth

under § 412.515 through § 412.536. In addition to the basic MS–LTC–DRG payment (the standard Federal rate multiplied by the MS–LTC–DRG relative weight), we make adjustments for differences in area wage levels, a COLA for LTCHs located in Alaska and Hawaii, and SSOs. Furthermore, LTCHs may also receive HCO payments for those cases that qualify based on the threshold established each year.

To understand the impact of the changes to the LTCH PPS payments presented in this final rule on different categories of LTCHs for FY 2015, it is necessary to estimate payments per discharge for FY 2014 using the rates, factors (including the FY 2014 GROUPER (Version 31.0), and relative weights and the policies established in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50753 through 50760 and 51002). It is also necessary to estimate the payments per discharge that will be made under the LTCH PPS rates and factors, and GROUPER (Version 32.0) for FY 2015 (as discussed in section VII. of the preamble of this final rule and section V. of the Addendum to this final rule). These estimates of FY 2014 and FY 2015 LTCH PPS payments are based on the best available LTCH claims data and other factors, such as the application of inflation factors to estimate costs for SSO and HCO cases in each year. We also evaluated the change in estimated FY 2014 payments to estimated FY 2015 payments (on a per discharge basis) for each category of LTCHs. We are establishing a standard Federal rate for FY 2015 of \$41,043.71 (for LTCHs that submit quality data under the requirements of the LTCHQR Program), which includes the 2.2 percent annual update, the area wage budget neutrality factor of 1.0016703, and a one-time prospective adjustment to the standard Federal rate for FY 2015 of 0.98734 (approximately –1.3 percent). For LTCHs that fail to submit data to the LTCH Quality Reporting Program, we are establishing a standard Federal rate for FY 2015 of \$40,240.51 that includes a 2.0 percentage point reduction applied to the annual update under the requirements of section 1886(m)(5)(C) of the Act in addition to the other adjustments noted above.

Hospital groups were based on characteristics provided in the OSCAR data, FY 2010 through FY 2012 cost report data in HCRIS, and PSF data. Hospital groups included the following:

- Location: large urban/other urban/rural.
- Participation date.
- Ownership control.
- Census region.
- Bed size.

To estimate the impacts of the payment rates and policy changes among the various categories of existing providers, we used LTCH cases from the FY 2013 MedPAR file to estimate payments for FY 2014 and to estimate payments for FY 2015 for 422 LTCHs. We believe that the discharges based on the FY 2013 MedPAR data for the 422 LTCHs in our database, which includes 330 proprietary LTCHs, provide sufficient representation in the MS–LTC–DRGs containing discharges for patients who received LTCH care for the most commonly treated LTCH patients’ diagnoses.

d. Calculation of Prospective Payments

For purposes of this impact analysis, to estimate per discharge payments under the LTCH PPS, we simulated payments on a case-by-case basis using LTCH claims from the FY 2013 MedPAR files. For modeling estimated LTCH PPS payments for FY 2014, we used the FY 2014 standard Federal rate (that is, \$40,607.31 for LTCHs that submit quality data under the requirements of the LTCHQR Program and \$39,808.74 for LTCHs that failed to submit quality data under the requirements of the LTCHQR Program) used to make payments for LTCH discharges occurring on or after October 1, 2013 through September 30, 2014).

For modeling estimated LTCH PPS payments for FY 2015, we used the FY 2015 standard Federal rate of \$41,043.71 (for LTCHs that submit quality data under the requirements of the LTCHQR Program), which includes a one-time prospective adjustment of 0.98734 for FY 2015 for the final year of the 3-year phase-in. For LTCHs that we project to have failed to submit the requisite quality data for FY 2015 under the LTCH Quality Reporting Program, we used the FY 2015 standard Federal rate of \$40,240.51, which reflects the 2.0 percentage points reduction required by section 1886(m)(5)(C) of the Act. The FY 2015 standard Federal rates also include the application of an area wage level budget neutrality factor of 1.0016703 (as discussed in section V.B.5. of the Addendum to this final rule). Furthermore, in modeling estimated LTCH PPS payments for both FY 2014 and FY 2015 in this impact analysis, we applied the FY 2014 and the FY 2015 adjustments for area wage levels and the COLA for LTCHs located in Alaska and Hawaii. Specifically, we adjusted for differences in area wage levels in determining estimated FY 2014 payments using the current LTCH PPS labor-related share of 62.537 percent (78 FR 50995 through 50996) and the wage index values established in the Tables 12A and 12B listed in the Addendum to the FY 2014 IPPS/LTCH PPS final rule (which are available via the Internet on the CMS Web site. We also applied the FY 2014 COLA factors shown in the table in section V.C. of the Addendum to that final rule (78 FR 50997 through 50998) to adjust the FY 2014 nonlabor-related share (37.463 percent) for LTCHs located in Alaska and Hawaii. Similarly, we adjusted for differences in area wage levels in determining the estimated FY 2015 payments using the FY 2015 LTCH PPS labor-related share of 62.306 percent and the FY 2015 wage index values, including the 50/50 blended wage index, determined from the wage index values presented in Tables 12A through 12D listed in section VI. of the Addendum to this final rule (and available via the Internet). We also applied the FY 2015 COLA factors shown in the table in section V.C. of the Addendum to this final rule to the FY 2015 nonlabor-related share (37.694 percent) for LTCHs located in Alaska and Hawaii.

As discussed above, our impact analysis reflects an estimated change in payments for SSO cases, as well as an estimated increase in payments for HCO cases (as described in

section V.D. of the Addendum to this final rule). In modeling payments for SSO and HCO cases in FY 2015, we applied an inflation factor of 5.0 percent (determined by OACT) to estimate the costs of each case using the charges reported on the claims in the FY 2013 MedPAR files and the best available CCRs from the March 2014 update of the PSF. Furthermore, in modeling estimated LTCH PPS payments for FY 2015 in this impact analysis, we used the FY 2015 fixed-loss amount of \$14,972 (as discussed in section V.D. of the Addendum to this final rule).

These impacts reflect the estimated “losses” or “gains” among the various classifications of LTCHs from FY 2014 to FY 2015 based on the payment rates and policy changes presented in this final rule. Table IV illustrates the estimated aggregate impact of the LTCH PPS among various classifications of LTCHs.

- The first column, LTCH Classification, identifies the type of LTCH.
- The second column lists the number of LTCHs of each classification type.
- The third column identifies the number of LTCH cases.
- The fourth column shows the estimated payment per discharge for FY 2014 (as described above).
- The fifth column shows the estimated payment per discharge for FY 2015 (as described above).
- The sixth column shows the percentage change in estimated payments per discharge from FY 2014 to FY 2015 due to the annual update to the standard Federal rate (as discussed in section V.A.2. of the Addendum to this final rule, including the 2.0 percentage point reduction to the update to the standard Federal rate for LTCHs that fail to submit data to the LTCHQR Program) and the final year of the phase-in of a one-time prospective adjustment factor for FY 2015.

- The seventh column shows the percentage change in estimated payments per discharge from FY 2014 to FY 2015 for changes to the area wage level adjustment (that is, the wage indexes, including the implementation of the new OMB delineations, and the labor-related share), including the application of an area wage level budget neutrality factor (as discussed in section V.B. of the Addendum to this final rule. This column includes the wage index calculated as a 50/50 blend of the wage index under the current CBSA designations and the wage index under the new OMB delineations under our transitional wage index policy for the implementation of the new OMB delineations).

- The eighth column shows the percentage change in estimated payments per discharge from FY 2014 (Column 4) to FY 2015 (Column 5) for all changes (and includes the effect of estimated changes to HCO and SSO payments).

TABLE IV—IMPACT OF PAYMENT RATE AND POLICY CHANGES TO LTCH PPS PAYMENTS FOR FY 2015
[Estimated FY 2014 payments compared to estimated FY 2015 payments]

LTCH Classification	Number of LTCHs	Number of LTCH PPS cases	Average FY 2014 LTCH PPS payment per case	Average FY 2015 LTCH PPS payment per case ¹	Percent change in estimated payments per discharge from FY 2014 to FY 2015 for the annual update to the federal rate ²	Percent change in estimated payments per discharge from FY 2014 to FY 2015 for changes to the area wage level adjustment with budget neutrality ³	Percent change in payments per discharge from FY 2014 to FY 2015 for all changes ⁴

¹ Estimated FY 2015 LTCH PPS payments based on the payment rate and factor changes presented in the preamble of and the Addendum to this final rule.

² Percent change in estimated payments per discharge from FY 2014 to FY 2015 for the annual update to the standard Federal rate and the one-time prospective adjustment factor for FY 2015 as discussed in section V.A.2. of the Addendum to this final rule.

³ Percent change in estimated payments per discharge from FY 2014 to FY 2015 for changes to the area wage level adjustment under § 412.525(c) (as discussed in section V.B. of the Addendum to this final rule).

⁴ Percent change in estimated payments per discharge from FY 2014 LTCH PPS (shown in Column 4) to FY 2015 LTCH PPS (shown in Column 5), including all of the changes to the rates and factors presented in the preamble of and the Addendum to this final rule. Note, this column, which shows the percent change in estimated payments per discharge for all changes, does not equal the sum of the percent changes in estimated payments per discharge for the annual update to the standard Federal rate (column 6) and the changes to the area wage level adjustment with budget neutrality (Column 7) due to the effect of estimated changes in both estimated payments to SSO cases that are paid based on estimated costs and aggregate HCO payments (as discussed in this impact analysis), as well as other interactive effects that cannot be isolated.

e. Results

Based on the most recent available data for 422 LTCHs, we have prepared the following summary of the impact (as shown above in Table IV) of the LTCH PPS payment rate and policy changes presented in this final rule. The impact analysis in Table IV shows that estimated payments per discharge are expected to increase 1.1 percent, on average, for all LTCHs from FY 2014 to FY 2015 as a result of the payment rate and policy changes presented in this final rule, including an estimated slight increase in HCO payments. This estimated 1.1 percent increase in LTCH PPS payments per discharge from the FY 2014 to FY 2015 for all LTCHs (as shown in Table IV) was determined by comparing estimated FY 2015 LTCH PPS payments (using the payment rates and factors discussed in this final rule) to estimated FY 2014 LTCH PPS payments (as described in section I.K.3.d. of this Appendix).

We are establishing a standard Federal rate of \$41,043.71 (or a standard Federal rate of \$40,240.51 for LTCHs that failed to submit data under the requirements of the LTCHQR Program) for FY 2015. Specifically, we are updating the standard Federal rate for FY 2015 by 2.2 percent, which is based on the latest estimate of the LTCH PPS market basket increase (2.9 percent), the reduction of 0.5 percentage point for the MFP adjustment, and the 0.2 percentage point reduction consistent with sections 1886(m)(3) and

(m)(4) of the Act. For LTCHs that fail to submit quality data under the requirements of the LTCHQR Program, as required by section 1886(m)(5)(C) of the Act, a 2.0 percentage point reduction is applied to the annual update to the standard Federal rate. In addition, we are applying a one-time prospective adjustment factor for FY 2015 of 0.98734 (approximately –1.3 percent) to the standard Federal rate for the final year of the 3-year phase-in.

We noted earlier in this section that, for most categories of LTCHs, as shown in Table IV (Column 6), the payment increase due to the 2.2 percent annual update to the standard Federal rate and the application of a one-time prospective adjustment for FY 2015 of approximately –1.3 percent for the final year of the 3-year phase-in is projected to result in approximately a 0.8 percent increase in estimated payments per discharge for all LTCHs from FY 2014 to FY 2015.

In addition, our estimate of the changes in payments due to the update to the standard Federal rate also reflects estimated payments for SSO cases that are paid using special methodologies that are not affected by the update to the standard Federal rate. For these reasons, we estimate that payments may increase by less than 0.9 percent for certain hospital categories due to the annual update to the standard Federal rate and the application of the final phase of the one-time prospective adjustment for FY 2015.

(1) Location

Based on the most recent available data, the vast majority of LTCHs are located in urban areas. Only approximately 5 percent of the LTCHs are identified as being located in a rural area, and approximately 4 percent of all LTCH cases are treated in these rural hospitals. The impact analysis presented in Table IV shows that the average percent increase in estimated payments per discharge from FY 2014 to FY 2015 for all hospitals is 1.1 percent for all changes. For rural LTCHs, the percent change for all changes is estimated to be a 1.2 percent increase, while for urban LTCHs, we estimate the increase will be 1.1 percent. Large urban LTCHs are projected to experience an increase of 1.2 percent in estimated payments per discharge from FY 2014 to FY 2015, while other urban LTCHs are projected to experience an increase of 1.0 percent in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV.

(2) Participation Date

LTCHs are grouped by participation date into four categories: (1) Before October 1983; (2) between October 1983 and September 1993; (3) between October 1993 and September 2002; and (4) October 2002 and after. Based on the most recent available data, the categories of LTCHs with the largest percentage of LTCH cases (approximately 45 percent) are in hospitals that began participating in the Medicare program

between October 1993 and September 2002, and they are projected to experience a 1.0 percent increase in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV.

Approximately 4 percent of LTCHs began participating in the Medicare program before October 1983, and these LTCHs are projected to experience a higher than average percent increase (2.4 percent) in estimated payments per discharge from FY 2014 to FY 2015, as shown in Table IV. Approximately 10 percent of LTCHs began participating in the Medicare program between October 1983 and September 1993. These LTCHs are projected to experience a 1.1 percent increase in estimated payments from FY 2014 to FY 2015. LTCHs that began participating in the Medicare program after October 1, 2002, which treat approximately 39 percent of all LTCH cases, are projected to experience a 1.1 percent increase in estimated payments from FY 2014 to FY 2015.

(3) Ownership Control

LTCHs are grouped into three categories based on ownership control type: voluntary, proprietary, and government. Based on the most recent available data, approximately 19 percent of LTCHs are identified as voluntary (Table IV). The majority (nearly 78 percent) of LTCHs are identified as proprietary while government-owned and operated LTCHs represent about 3 percent of LTCHs. Based on ownership type, voluntary LTCHs are expected to experience an above average increase in payments of 1.4 percent; proprietary LTCHs are expected to experience an increase of 1.1 percent in payments, while government-owned and operating LTCHs are expected to experience an increase in payments that is less than the national average of 0.6 percent from FY 2014 to FY 2015.

(4) Census Region

Estimated payments per discharge for FY 2015 are projected to increase for LTCHs located in all regions in comparison to FY 2014. Of the 9 census regions, we project that the increase in estimated payments per discharge will have the largest positive impact on LTCHs in the New England and Middle Atlantic regions (2.4 percent and 1.8 percent, respectively as shown in Table IV). The estimated percent increase in payments per discharge from FY 2014 to FY 2015 for those regions is largely attributable to the changes in the area wage level adjustment.

In contrast, LTCHs located in the South Atlantic and West South Central regions are projected to experience the smallest increase in estimated payments per discharge from FY 2014 to FY 2015. The lower than national average estimated increase in payments of 0.8 percent is primarily due to estimated decreases in payments associated with the changes to the area wage level adjustment.

(5) Bed Size

LTCHs are grouped into six categories based on bed size: 0–24 beds; 25–49 beds; 50–74 beds; 75–124 beds; 125–199 beds; and greater than 200 beds. Most bed size categories are projected to receive either a slightly higher or slightly lower than average increase in estimated payments per discharge

from FY 2014 to FY 2015. We project that small LTCHs (0–24 beds) will experience a 0.8 percent increase in payments, which is less than the nation average mostly due to decreases in the area wage level adjustment, while large LTCHs (200+ beds) will experience a 1.0 percent increase in payments. LTCHs with between 75 and 124 beds are expected to experience an above average increase in payments per discharge from FY 2014 to FY 2015 (1.2 percent).

4. Effect on the Medicare Program

As noted previously, we project that the provisions of this final rule will result in an increase in estimated aggregate LTCH PPS payments in FY 2015 relative to FY 2014 of approximately \$62 million (or approximately 1.1 percent) for the 422 LTCHs in our database.

5. Effect on Medicare Beneficiaries

Under the LTCH PPS, hospitals receive payment based on the average resources consumed by patients for each diagnosis. We do not expect any changes in the quality of care or access to services for Medicare beneficiaries under the LTCH PPS, but we continue to expect that paying prospectively for LTCH services will enhance the efficiency of the Medicare program.

L. Effects of Requirements for the Hospital Inpatient Quality Reporting (IQR) Program

In section IX.A. of the preamble of this final rule, we discuss our requirements for hospitals to report quality data under the Hospital IQR Program in order to receive the full annual percentage increase for the FY 2017 payment determination. We are removing a total of 19 measures from the Hospital IQR Program for the FY 2017 payment determination and subsequent years, which begins in the CY 2015 reporting period. The first five measures are: (1) AMI–1 Aspirin at arrival (NQF #0132); (2) AMI–3 ACEI/ARB for left ventricular systolic dysfunction (NQF #0137); (3) AMI–5 Beta-blocker prescribed at discharge (NQF #0160); (4) SCIP INF–6 Appropriate Hair Removal; and (5) Participation in a systematic database for cardiac surgery (NQF #0113). Of these five measures, the first four are currently suspended. The fifth measure was recommended by the MAP for removal because it is “topped-out.” We believe that an additional 14 chart-abstracted measures are “topped-out,” based on the previously adopted criteria, and we are removing them from the FY 2017 payment determination and subsequent years measure set. However, we are retaining the electronic clinical quality measure version of 10 of these chart-abstracted measures for Hospital IQR Program reporting as discussed in section IX.A.7.f. of the preamble of this final rule.

We also are adding one chart-abstracted measure for the FY 2017 payment determination and subsequent years in this final rule: Severe sepsis and septic shock: management bundle (NQF #0500).

We are incorporating refinements for several measures for the FY 2017 payment determination and subsequent years that were previously adopted in the Hospital IQR Program. These refinements have either arisen out of the NQF endorsement

maintenance process, or during our internal efforts to harmonize measure approaches. The measure refinements include the following: (1) Refining the planned readmission algorithm for all seven readmission measures included in the Hospital IQR Program; (2) modifying the hip/knee readmission and complication measure cohorts to exclude index admissions with a secondary fracture diagnosis; and (3) modifying the hip/knee complication measure to not count as complications coded as “present on admission” (POA) during the index admission. We do not anticipate any hospital burden associated with these revisions, as each is based on claims submitted by hospitals for payment purposes.

Information is not available to determine the precise number of hospitals that would not meet the requirements to receive the full annual percentage increase for the FY 2017 payment determination. Historically, an average of 100 hospitals that participate in the Hospital IQR Program do not receive the full annual percentage increase in any fiscal year. We anticipate that because of the new requirements we are finalizing for reporting for the FY 2017 payment determination, the number of hospitals not receiving the full annual percentage increase may be higher than average. The highest number of hospitals failing to meet program requirements was approximately 200 after the introduction of new NHSN reporting requirements. If the number of hospitals failing does increase because of new requirements, we anticipate that over the long run, this number will decline as hospitals gain more experience with these requirements.

In the FY 2014 IPPS/LTCH PPS final rule, we estimated that the burden for the FY 2016 payment determination was 1,775 hours annually per hospital and 5.86 million hours across all 3,300 hospitals participating in the Hospital IQR Program (78 FR 50956). However, we have re-estimated the total number of hours associated with the requirements finalized for the FY 2016 payment determination to be 1,309 hours per hospital or a total of 4.3 million hours for all hospitals using more recent information from the clinical data warehouse than was available in August 2013.

As discussed in section XIII.B.6. of the preamble of this final rule, we estimate that our proposals for the adoption and removal of measures will result in an overall reduction in the total burden for hospitals for the FY 2017 payment determination for reporting chart-abstracted and structural measures, completing forms, reviewing reports, and submitting validation templates of 160 hours per hospital or 0.5 million hours across all hospitals compared to the total burden for participating hospitals in the Hospital IQR Program for the FY 2016 payment determination. The numbers included in our finalized policy more accurately reflect the burden associated with our program than the estimates provided in our proposal. As a result, the total burden for approximately 3,300 hospitals for the FY 2017 payment determination will be 1,149 hours per hospital or 3.8 million hours across all hospitals. This burden estimate includes

both the newly finalized measures and the measures we are continuing. The burden

estimates in this final rule are the estimates for which we are requesting OMB approval.

The table below describes the hospital burden associated with the Hospital IQR Program requirements.

BURDEN IMPACT OF HOSPITAL IQR PROGRAM REQUIREMENTS FOR FY 2017

Hospital IQR Program Requirement	Number of hospitals impacted	Burden per hospital for previously finalized requirements	Burden per hospital for all requirements as finalized (continuing, removed, added)	Net change in burden per hospital
Chart-abstracted and structural measures, forms	3,300	1,291 hours	1,131 hours	- 160 hours.
Review reports for claims-based measures	3,300	4 hours	4 hours	0.
Reporting of voluntary electronic clinical quality measures in place of chart-abstracted measures.	Unknown*	- 385 hours	- 425 hours	- 40 hours.
Validation templates	Up to 600**	72 hours	72 hours	0.
Electronic clinical quality measure validation test	Up to 100**	0	16 hours	16 hours.
Validation charts photocopying	Up to 600	\$8,640	\$8,496	\$ - 144.

* This number is unknown at the time this table was prepared because final submission deadlines have not passed. Because the burden associated with participation is negative, we assumed this number to be 0 in summary calculations included in the narrative.

** Maximum numbers were used in summary calculations included in the narrative.

We estimate that the total burden associated with the voluntary electronic clinical quality measure reporting option will be similar to the burden outlined for hospitals in the Medicare EHR Incentive Program Stage 2 final rule (77 FR 53968 through 54162). In this rule, we finalize a policy allowing hospitals to submit data for a maximum of 16 measures that can be used to satisfy partial requirements for both programs. We estimate that each hospital that participates in the voluntary electronic quality measure reporting option could realize a maximum reduction in burden of up to approximately 425 hours by submitting data for all 12 required chart-abstracted measures that are also electronically specified.

M. Effects of Requirements for the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program for FY 2017

In section IX.B. of the preamble of this final rule, we discuss our policies for the quality data reporting program for PPS-exempt cancer hospitals (PCHs), which we refer to as the PPS-Exempt Cancer Hospital Quality Reporting (PCHQR) Program. The PCHQR Program is authorized under section 1866(k) of the Act, which was added by section 3005 of the Affordable Care Act. In this final rule, we are requiring that PCHs submit data on one additional measure beginning with the FY 2017 program which will increase the total number of measures in the FY 2017 PCHQR measure set to 19 measures. We also are updating the specifications for the five previously finalized clinical process/oncology care measures to require PCHs to report all-patient data for each of these measures, and to adopt a new sampling methodology that PCHs can use to report these measures, as well as the newly finalized EBRT for bone metastases measure. We also are providing PCHs with two reporting options to report the clinical process/oncology care, SCIP, and clinical process/cancer specific treatment measures.

The impact of the new requirements for the PCHQR Program is expected to be minimal overall because some PCHs are already submitting previously adopted quality measure data to CMS. As a result, these PCHs

are familiar with our IT infrastructure and programmatic operations. In addition to fostering transparency and facilitating public reporting, we believe our requirements uphold our goals in improving quality of care and achieving better health outcomes, which outweighs burden.

One expected effect of the PCHQR Program is to keep the public informed of the quality of care provided by PCHs. We will publicly display quality measure data collected under the PCHQR Program as required under the Act. These data will be displayed on the *Hospital Compare* Web site. The goals of making these data available to the public in a user-friendly and relevant format, include, but are not limited to: (1) Allowing the public to compare PCHs in order to make informed health care decisions regarding care setting; and (2) providing information about current trends in health care. Furthermore, PCHs can use their own health care quality data for many purposes such as in risk management programs, healthcare associated infection prevention programs, and research and development activities, among others.

N. Effects of Requirements for the Long-Term Care Hospital Quality Reporting (LTCHQR) Program for FY 2015 Through FY 2018

In section IX.C. of the preamble of this final rule, we discuss the implementation of section 1886(m)(5) of the Act, which was added by section 3004(a) of the Affordable Care Act. Section 1886(m)(5) of the Act provides that, for rate year 2014 and each subsequent year, any LTCH that does not submit data to the Secretary in accordance with section 1886(m)(5)(C) of the Act shall receive a 2-percentage point reduction to the annual update to the standard Federal rate for discharges for the hospital during the applicable fiscal year. In the FY 2012 IPPS/LTCH PPS final rule (76 FR 51839 through 51840), we estimated that only a few LTCHs would not receive the full annual percentage increase in any fiscal year as a result of failure to submit data under the LTCHQR Program. Information is not available to determine the precise number of LTCHs that would not meet the requirements to receive the full annual percentage increase for the FY 2016 payment determination. At the time

that this analysis was prepared, 8 of the 442 active Medicare-certified LTCHs did not receive the full annual percentage increase for the FY 2014 payment determination. We believe that a majority of LTCHs will continue to collect and submit data for the FY 2015 payment determination and subsequent years because they will continue to view the LTCHQR Program as an important step in improving the quality of care patients receive in the LTCHs. We believe that the burden associated with the LTCHQR Program is the time and effort associated with data collection. There are approximately 442 LTCHs currently reporting quality data to CMS.

In this final rule, we are retaining seven previously finalized measures, revising two previously finalized measures, and are finalizing three additional quality measures for inclusion in the LTCHQR Program. In section IX.C.7. of the preamble of this final rule, we are finalizing three new quality measures for inclusion in the LTCHQR Program affecting the FY 2018 payment determination and subsequent years: (1) Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function; (2) Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support; and (3) National Healthcare Safety Network (NHSN) Ventilator-Associated Event (VAE) Outcome Measure.

Six of the previously adopted and newly finalized measures will be collected via the NHSN. In section IX.C.7.b. of the preamble of this final rule, we are finalizing our proposal to collect the NHSN VAE Outcome Measure. Normally, we would only discuss the burden associated with those measures that were proposed or finalized in any given rule. Because we have access to information that now indicates our previous calculations for the CAUTI, CLABSI, MRSA, and CDI were incorrect (we estimated in the FY 2014 IPPS/LTCH PPS final rule (78 FR 50959 through 50964) that LTCHs would submit six infection events per month for each of these measures), we offer below the recalculation of the associated burden. Based on submissions to the NHSN, we now estimate

that each LTCH will make approximately 7 NHSN submissions per month: 1 MRSA event; 1 CDI event; 2 CLABSI events; 3 CAUTI events (84 events per LTCH annually). This equates to a total of approximately 37,128 submissions of events to the NHSN from all LTCHs per year (includes CAUTI, CLABSI, MRSA, and CDI). The CDC estimated the public reporting burden of the collection of information for each measure to include the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. MRSA and CDI events are estimated to require an average of 15 minutes per response (10 minutes of clinical (RN) time, and 5 minutes of clerical (Medical Record or Healthcare Information Technician)). CAUTI is estimated to require an average of 29 minutes per response, and CLABSI events are estimated to require an average of 32 minutes per response. In addition, each LTCH must also complete a Patient Safety Monthly Reporting Plan estimated at 35 minutes per Plan and a Denominator for Specialty Care Area, which is estimated at 5 hours per month. Based on this estimate, we expect each LTCH will expend 8.6 hours per month for each LTCH, 103.2 hours annually for each LTCH or 45,614.4 hours annually for all LTCHs reporting to the NHSN.

In addition, each LTCH must submit the Influenza Vaccination Coverage among Healthcare Personnel (NQF #0431), which the CDC estimates will take 10 minutes annually per LTCH, or an additional 73.66 hours for all LTCHs annually. In total, the burden we have recalculated for all previously finalized measures (including CAUTI, CLABSI, MRSA, CDI, HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) will equal 103.4 hours annually per LTCH or 45,072.8 hours for all LTCHs annually.

For the newly finalized VAE measure, which will also be reported by LTCHs through the CDC's NHSN, the CDC estimates that each LTCH will submit 1 VAE per month, which will require approximately 22 minutes of clinical time per response. This equates to 22 minutes per LTCH monthly, 4.4 hours per LTCH annually, and 1,944.8 hours for all LTCHs annually. According to the US Bureau of Labor and Statistics, the mean hourly wage for a registered nurse (RN) is \$33.13²⁵⁰; the mean hourly wage for a medical records and health information technician is \$16.81. However, in order to account for overhead and fringe benefits, we have doubled the mean hourly wage, making it \$66.26 for an RN and \$33.62 for a Medical Record or Health Information Technician. We estimate that the annual cost per each LTCH for the previously finalized measures, for which we have recalculated burden (including CAUTI, CLABSI, MRSA, CDI,

HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) to be \$6,770.10 and that the total yearly cost to all LTCHs for the submission of data to NHSN will be \$2,992,384.20. We estimate that the total cost for the newly finalized VAE measure will be \$291.54 per LTCH annually, or \$128,860.68 for all LTCHs annually.

The All-Cause Unplanned Readmission Measure for 30 Days Post-Discharge from Long-Term Care Hospitals is a Medicare claims-based measure; because claims-based measures can be calculated based on data that are already reported to the Medicare program for payment purposes, we believe there will be no additional impact.

The remaining five measures will be collected utilizing the LTCH CARE Data Set. The burden estimates associated with OMB control number 0938–1163 estimate that each LTCH has an impact data collection burden of 243.24 hours or \$6,755.84 associated with collection of the LTCH CARE Data Set, which includes the following three measures: Percent of Residents or Patients with Pressure Ulcers That Are New or Worsened (NQF #0678); Percent of Residents or Patients Who Were Assessed and Appropriately Given the Seasonal Influenza Vaccine (NQF #0680); and the Application of Percent of Residents Experiencing One or More Falls with Major Injury (Long Stay) (NQF #0674).

We are also finalizing our proposal to use the LTCH CARE Data Set to report the two additional newly finalized measures—Functional Outcome Measure: Change in Mobility among Long-Term Care Hospital Patients Requiring Ventilator Support; and Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function—for the FY 2018 payment determination and subsequent years. In addition, the LTCH CARE Data Set will be used to report the previously finalized measure. We estimate the additional elements for two newly finalized measures will take 13.5 minutes of nursing/clinical staff time to report data for Admission assessment and 13 minutes of nursing/clinical staff time to report data for Discharge assessment, for a total of 26.5 minutes. In accordance with OMB control number 0920–0666, we estimate 202,050 discharges from all LTCHs annually, with an additional burden of 26.5 minutes. This would equate to 89,238.75 total hours or 201.9 hours per LTCH. We believe this work will be completed by RN staff. As previously noted, per the US Bureau of Labor and Statistics, the mean hourly wage for a registered nurse (RN) is \$33.13.²⁵¹ However, in order to account for overhead and fringe benefits, we have doubled the mean hourly wage, making it \$66.26 for an RN. The total cost related to the two newly finalized functional status measures referenced above is estimated at

\$13,377.89 per LTCH annually, or \$5,913,027.38 for all LTCHs annually.

As discussed in section IX.C.7.a.1 of the preamble of this final rule, in response to several public comments concerned that the proposed functional status measures are excessively burdensome and that some of the included data items used to collect the data for the measures had “low response rates” during demonstration testing, we have decided to reduce the number of LTCH CARE Data Set data items required for the measure Percent of Long-Term Care Hospital Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function. We have reduced the number of data items for this quality measure from the originally proposed 45 to 35. We estimate that this reduction effectively reduces the annual cost per LTCH from the originally estimated \$13,377.89 to \$10,348.82 annually, and reduces the annual cost for all LTCHs from the originally estimated \$5,913,027.38 to \$4,574,178.44. This equates to a reduction of \$3,029.07 per LTCH annually, and \$1,338,851.38 for all LTCHs annually.

Lastly, as discussed in section IX.C.11. of the preamble of this final rule, in response to public comments, we are not finalizing our proposal to validate the accuracy of LTCH data at this time.

In summary, the total cost for all previously finalized HAI and vaccination measures (CAUTI, CLABSI, MRSA, CDI, HCP, Patient Safety Monthly Reporting plan, and Denominator for Specialty Care Area) reported through the CDC's NHSN, that we have recalculated based on new information regarding the number of infection events reported by LTCHs per month, is \$6,770.10 per LTCH annually, or \$2,992,384.20 for all LTCHs annually. The total cost per LTCH for the three newly finalized measures in this final rule (Functional Outcome Measure: Change in Mobility among Inpatients requiring Ventilator Support, Percent of LTCH Inpatients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, and Ventilator-Associated Events) is \$10,640.36 per LTCH annually, or \$4,703,039.12 for all LTCHs annually.

Comment: Several commenters expressed concern over the burden associated with collection the two functional status measures we proposed.

Response: For a full discussion of the public comments, our responses, and our associated analysis of the reduction in required data items for the measure Patients with an Admission and Discharge Functional Assessment and a Care Plan That Addresses Function, we refer readers to the comment and response portion of section IX.C.7.a.1 of the preamble of this final rule. As we discuss above, as a result of our response, we have reduced our estimate of the burden for these measures, as we are finalizing them, by \$1,338,851.38.

Comment: One commenter expressed concern over the burden with which the LTCH program is growing year to year, noting that there has been a 300 percent increase in burden each year, and that hospitals cannot endure such increases. This commenter further noted that the total cost for the

²⁵⁰ According to the U.S. Bureau of Labor Statistics, the mean hourly wage for a Registered Nurse is \$31.48. See: <http://www.bls.gov/ooh/healthcare/registered-nurses.htm>. Fringe benefits are calculated at a rate of 36.25 percent in accordance with OMB Circular A–76, Attachment C, Table C.1. After adding the fringe benefits, the total hourly cost for an RN is \$42.89.

²⁵¹ According to the U.S. Bureau of Labor Statistics, the mean hourly wage for a Registered Nurse is \$31.48. See: <http://www.bls.gov/ooh/healthcare/registered-nurses.htm>. Fringe benefits are calculated at a rate of 36.25 percent in accordance with OMB Circular A–76, Attachment C, Table C.1. After adding the fringe benefits, the total hourly cost for an RN is \$42.89.

LTCHQR Program to all LTCHs, with the inclusion of the three additional finalized measures in this rule is close to \$12 million, while the initially estimated cost for the LTCHQR Program in the FY 2012 IPPS/LTCH PPS final rule was \$750,000.

Response: We believe that the commenter's reference to \$750,000 is a reference to our estimate in section IX.b.6 the FY 2012 IPPS/LTCH PPS final rule of the costs of submitting the CAUTI and CLABSI data to NHSN (76 FR 51780 through 51781). Our estimate of the effects of the LTCHQR Program in that final rule (76 FR 51839) was \$1,128,440. Our original estimate in the FY 2012 IPPS/LTCH PPS final rule was based on projected costs for the program, as we had no data related to the rate of submission of our proposed measures.

While the commenter is correct that the estimates in the proposed FY 2015 IPPS/LTCH PPS proposed rule, as well as this final rule, equal approximately \$12 million, we would like to take this opportunity to explain the increase. Our original estimate in the FY 2012 IPPS/LTCH PPS final rule was based on projected costs for the program, as we had no data related to the rate of submission of our proposed measures.

In subsequent years, as we added measures to the LTCHQR Program and as we have obtained a better understanding of the rate at which LTCHs would submit HAI data to the NHSN, we calculated and recalculated these costs in order to provide a more accurate representation of the program costs. As we have done in past rules, based on new information from the CDC, we have again recalculated the program costs related to previously finalized quality measures and required data submission. The estimates contained within this final rule resulted from actual CDC data regarding the rate of submission of all quality measures submitted via the CDC's NHSN, as well as from OMB-approved burden estimates for each of these measures. In addition, we accounted for actual burden, such as the Patient Safety Reporting Plan and Denominator for Specialty Care Area, which together, added an additional 64.2 hours per year per provider or 28,248 hours for all LTCHs. Finally, in the FY 2015 IPPS/LTCH PPS proposed rule, as well as this final rule, we accounted for overhead and fringe benefits, which effectively doubled many of our earlier cost estimates. Our inclusion of these costs (overhead and fringe), which we have not included in the past, is a substantial factor associated with the increase in burden.

We believe that this cost estimate cannot be compared to the cost estimate in the FY 2014 and previous IPPS/LTCH PPS final rules, without recognition of the factors discussed above. However, we are mindful of the burden of LTCHQR Program requirements and we have attempted to balance the need for a robust LTCHQR Program with this burden. For example, we have authorized sampling for certain measure reporting. In addition, as discussed in section IX.C.7.a.(1) of the preamble of this final rule, in response to commenters' specific concerns regarding burden, we are not adopting the reporting of several proposed new items in the LTCH CARE Tool, which overlap other

items we are retaining, had high "Activity Did Not Occur" rates, and can be removed from the quality measure without affecting the measure substantively. As noted above, these modifications reduce our burden estimate by \$1,333,851.38.

O. Effects of Regarding Electronic Health Record (EHR) Incentive Program and Hospital IQR Program

In sections IX.D. of the preamble of this final rule, we discuss requirements for the EHR Incentive Program. We are aligning the Medicare EHR Incentive Program reporting and submission timelines for clinical quality measures for eligible hospitals and CAHs with the Hospital IQR Program's reporting and submission timelines. However we are not finalizing our proposal to require quarterly submission of electronic clinical quality measure data.

We have determined that the electronic submission of aggregate-level data using QRDA-III will not be feasible in 2015 for eligible hospitals and CAHs under the Medicare EHR Incentive Program. We are finalizing our proposal to continue, for FY 2015, the policy we adopted for FY 2014 for eligible hospitals and CAHs submitting electronic clinical quality measures under the Medicare EHR Incentive Program. For FY 2015, eligible hospitals and CAHs will be able to electronically submit using a method similar to the 2012 and 2013 EHR Incentive Program electronic reporting pilot for eligible hospitals and CAHs, which used QRDA-I (patient-level data). Eligible hospitals and CAHs that are beyond their first year of meaningful use may continue to report aggregate electronic clinical quality measure results through attestation. We also are clarifying our policy on zero denominators and the case threshold exemption for clinical quality measures.

We do not believe that our newly finalized proposals to align the Medicare EHR Incentive program reporting and submission timelines for clinical quality measures with the Hospital IQR Program's reporting and submission timelines and to allow the electronic submission of QRDA-I (patient-level data) for eligible hospitals and CAHs to electronic submit electronic clinical quality measures under the Medicare EHR Incentive Program will have a significant impact.

P. Effects of Revision of Regulations Governing Use and Release of Medicare Advantage Risk Adjustment Data

Under section X. of the preamble of this final rule, we are revising the existing regulations at § 422.310(f) to broaden the specified uses of Medicare Advantage (MA) risk adjustment data in order to strengthen program management and increase transparency in the MA program and to specify the conditions for release of risk adjustment data to entities outside of CMS. We are revising the regulations to specify four additional purposes for which CMS may use or release risk adjustment data submitted by MA organizations: (1) To conduct evaluations and other analysis to support the Medicare program (including demonstrations) and to support public health initiatives and other health care-related

research; (2) for activities to support the administration of the Medicare program; (3) for activities conducted to support program integrity; and (4) for purposes authorized by other applicable laws. In addition, the existing regulations do not specify conditions for release by CMS of risk adjustment data submitted by MA organizations. Therefore, we are adding regulatory language to address CMS' release of such data to non-CMS entities.

We have determined that the regulatory amendments do not impose any mandatory costs on entities that may choose, under this newly finalized policy, to request data files from CMS for their research analyses or other purposes listed in the proposal. Requesting data from CMS is at the discretion of the requester. Therefore, we have determined that there are not any economically significant effects of the provisions. We also have determined that the regulatory amendments will not impose a burden on the entity requesting data files.

Q. Effects of Changes to Enforcement Provisions for Organ Transplant Centers

Under section XI. of the preamble of this final rule, we are finalizing our proposals to expand and clarify the current organ transplant regulation as it relates to a transplant program's ability to request approval for participation in Medicare based on mitigating factors, the timelines for such review, and potential System Improvement Agreements that may allow a transplant program to improve outcomes and avert Medicare termination when outcomes have not met CMS requirements. Our finalized policies also will allow for consideration of factors such as innovative practice in the field of organ transplantation, and for potential mitigating factors consideration of a transplant program's outcomes using Bayesian methodology for calculating outcomes for patient death and graft failure.

These finalized policies will not have a significant effect on Medicare and Medicaid programs as it will allow organ transplant programs to continue to participate in Medicare if approved based on mitigating factors or during the time established in the Systems Improvement Agreement. There is an added benefit to patients who receive transplants, and to the Medicare program, when a transplant program improves patient and graft survival through completion of a system Improvement Agreement. However, sufficient data are not currently available to quantify the added benefit of System Improvement Agreements or innovative practices. Therefore, we project only that the cost impact of the policies to the Medicare and Medicaid programs will be negligible.

Historical data reflect that between the date the transplant regulation was codified in 2007 and August 2013, CMS rendered a final determination for 129 organ transplant programs that applied for Medicare approval based on mitigating factors. Of the 129 transplant programs, 20 terminated Medicare participation. An additional 33 transplant programs averted Medicare termination by successful completion of a Systems Improvement Agreement and resulting substantial improvement in patient and graft

survival. The remaining programs were approved for mitigating factors based on improved outcomes (without needing a System Improvement Agreement), special circumstances, or came into compliance with CMS requirements during the mitigating factors review period. We estimate the cost associated with the application for mitigating factors at \$10,000. This is based on the salary for the transplant administrator to prepare the documents for the application during the 30-day timeframe allotted. The cost does not represent any increase from what is anticipated in the existing transplant regulation related to mitigating factors. For transplant programs that enter into a Systems Improvement Agreement, the estimated cost to the transplant program is \$200,000 to \$250,000 based on reports from programs that have completed such Agreements in the past. Both a mitigating factors review and completion of a System Improvement Agreement are voluntary acts on the part of a hospital that maintains a transplant program. Since the 2007 effective date of the CMS regulation, only one hospital has elected not to file a mitigating factors review after being cited by CMS for a condition-level deficiency for patient outcomes or clinical experience, and few hospitals have declined a CMS offer to complete a System Improvement Agreement. Therefore, we conclude that the costs involved in these activities are much lower for the hospital compared with other alternatives, such as filing an appeal and incurring the legal costs of that appeal.

Our finalized policies will not have a significant impact on a substantial number of small businesses or other small entities. Nor will they have a significant impact on small rural hospitals.

II. Alternatives Considered

This final rule contains a range of policies. It also provides descriptions of the statutory provisions that are addressed, identifies the finalized policies, and presents rationales for our decisions and, where relevant, alternatives that were considered.

III. Overall Conclusion

1. Acute Care Hospitals

Table I of section I.G. of this Appendix demonstrates the estimated distributional impact of the IPPS budget neutrality requirements for the MS-DRG and wage index changes, and for the wage index reclassifications under the MGCRB. Table I also shows an overall decrease of 0.6 percent in operating payments. As discussed in section I.G. of this Appendix, we estimate

that operating payments will decrease by approximately \$654 million in FY 2015 relative to FY 2014. However, when we account for the impact of the changes in Medicare DSH payments and the impact of the new additional payments based on uncompensated care in accordance with section 3133 of the Affordable Care Act, based on estimates provided by the CMS Office of the Actuary, consistent with our policy discussed in section IV.F. of the preamble of this final rule, we estimate that operating payments will decrease by approximately \$457 million relative to FY 2014. In addition, we estimate a savings of \$27 million associated with the HAC policies in FY 2015, which is an additional \$1 million in savings as compared to FY 2014. We estimate the implementation of the HAC Reduction Program, under section 3008 of the Affordable Care Act, will reduce payments by \$369 million in FY 2015. We estimate that the expiration of the expansion of low-volume hospital payments for discharges beginning on April 1, 2015, under the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93) will result in a decrease in payments of approximately \$152 million relative to FY 2014. We estimate that the new technology add-on payments for FY 2015 will increase spending by approximately \$91 million. Finally, we estimate that the policies related to validation, including submission of and payment for secure electronic versions of medical information for validation for the FY 2017 payment determination and subsequent years, as described in the ICRs for the Hospital IQR Program in section XII.B.6. of the preamble of this final rule, will result in no change in payments for CMS for FY 2015. These estimates, combined with our estimated decrease in FY 2015 operating payment of –\$457 million, result in an estimated decrease of approximately \$888 million for FY 2015. We estimate that hospitals will experience a 1.5 percent increase in capital payments per case, as shown in Table III of section I.I. of this Appendix. We project that there will be a \$132 million increase in capital payments in FY 2015 compared to FY 2014. The cumulative operating and capital payments would result in a net decrease of approximately \$756 million to IPPS providers. The discussions presented in the previous pages, in combination with the rest of this final rule, constitute a regulatory impact analysis.

2. LTCHs

Overall, LTCHs are projected to experience an increase in estimated payments per

discharge in FY 2015. In the impact analysis, we are using the rates, factors, and policies presented in this final rule, including updated wage index values and relative weights, and the best available claims and CCR data to estimate the change in payments under the LTCH PPS for FY 2015. Accordingly, based on the best available data for the 422 LTCHs in our database, we estimate that FY 2015 LTCH PPS payments will increase approximately \$62 million relative to FY 2014 as a result of the payment rates and factors presented in this final rule. In addition, we estimate that net effect of the projected impact of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the “25 percent threshold” payment adjustment as discussed in section VII.E. of the preamble of this final rule; the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and additional LTCH beds as discussed in section VII.G. of the preamble of this final rule; the revocation of onsite discharges and readmissions policy as discussed in section VII.F. of the preamble of this final rule; and the payment adjustment for “subclause (II)” LTCHs as discussed in section VII.H. of the preamble of this final rule) is estimated to result in an increase in LTCH PPS payments of approximately \$116 million. The impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, in conjunction with the estimated payment impacts of certain other LTCH PPS policy changes, will result in a net increase of \$178 million to LTCH providers. Additionally, costs to LTCHs associated with the completion of the data for the LTCHQR Program are increasing by \$4.7 million for FY 2015.

IV. Accounting Statements and Tables

A. Acute Care Hospitals

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table V below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they relate to acute care hospitals. This table provides our best estimate of the change in Medicare payments to providers as a result of the changes to the IPPS presented in this final rule. All expenditures are classified as transfers to Medicare providers.

The savings to the Federal Government associated with the policies in this final rule are estimated at \$756 million.

TABLE V—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES UNDER THE IPPS FROM FY 2014 TO FY 2015

Category	Transfers
Annualized Monetized Transfers	– \$756 million.
From Whom to Whom	Federal Government to IPPS Medicare Providers.

B. LTCHs

As discussed in section I.L. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, As discussed in section I.L. of this Appendix, the impact analysis of the payment rates and factors presented in this final rule under the LTCH PPS, in conjunction with the estimated payment impacts of certain other LTCH PPS policy changes (that is, the reinstatement of the moratorium on the full implementation of the “25-percent threshold” payment adjustment; the reinstatement of the moratorium on the development of new LTCHs and LTCH satellite facilities and

increase in the number of LTCH beds; the revocation of onsite discharges and readmissions policy; and the payment adjustment for “subclause (II)” LTCHs), is projected to result in an increase in estimated aggregate LTCH PPS payments in FY 2015 relative to FY 2014 of approximately \$178 million based on the data for 422 LTCHs in our database that are subject to payment under the LTCH PPS. Therefore, as required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table VI below, we have prepared an accounting statement showing the classification of the expenditures associated with the provisions of this final rule as they

relate to the changes to the LTCH PPS. Table VI provides our best estimate of the estimated increase in Medicare payments under the LTCH PPS as a result of the payment rates and factors and other provisions presented in this final rule based on the data for the 422 LTCHs in our database. All expenditures are classified as transfers to Medicare providers (that is, LTCHs). Lastly, we present the costs to LTCHs associated with the completion of the data for the LTCHQR Program at \$4.7 million than in FY 2014.

The cost to the Federal Government associated with the policies for LTCHs in this final rule is estimated at \$178 million.

TABLE VI—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED EXPENDITURES FROM THE FY 2014 LTCH PPS TO THE FY 2015 LTCH PPS

Category	Transfers
Annualized Monetized Transfers	\$178 million.
From Whom to Whom	Federal Government to LTCH Medicare Providers.
Category	Costs
Annualized Monetized Costs for LTCHs to Submit Quality Data	\$4.7 million.

V. Regulatory Flexibility Act (RFA) Analysis

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small government jurisdictions. We estimate that most hospitals and most other providers and suppliers are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities, either by being nonprofit organizations or by meeting the SBA definition of a small business (having revenues of less than \$7.0 million to \$35.5 million in any 1 year). (For details on the latest standards for health care providers, we refer readers to page 36 of the Table of Small Business Size Standards for NAIC 622 found on the SBA Web site at: http://www.sba.gov/sites/default/files/files/Size_Standards_Table.pdf.)

For purposes of the RFA, all hospitals and other providers and suppliers are considered to be small entities. Individuals and States are not included in the definition of a small entity. We believe that the provisions of this final rule relating to acute care hospitals would have a significant impact on small entities as explained in this Appendix. Because we lack data on individual hospital receipts, we cannot determine the number of small proprietary LTCHs. Therefore, we are assuming that all LTCHs are considered small entities for the purpose of the analysis in section I.L. of this Appendix. MACs are not considered to be small entities. Because we acknowledge that many of the affected entities are small entities, the analysis discussed throughout the preamble of this final rule constitutes our regulatory flexibility analysis. In FY 2015 IPPS/LTCH PPS proposed rule, we solicited public comments on our estimates and analysis of the impact of our proposals on those small

entities. Any public comments that we received and our responses are presented throughout this final rule.

VI. Impact on Small Rural Hospitals

Section 1102(b) of the Social Security Act requires us to prepare a regulatory impact analysis for any proposed or final rule that may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 603 of the RFA. With the exception of hospitals located in certain New England counties, for purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of an urban area and has fewer than 100 beds. Section 601(g) of the Social Security Amendments of 1983 (Pub. L. 98–21) designated hospitals in certain New England counties as belonging to the adjacent urban area. Thus, for purposes of the IPPS and the LTCH PPS, we continue to classify these hospitals as urban hospitals. (We refer readers to Table I in section I.G. of this Appendix for the quantitative effects of the policy changes under the IPPS for operating costs.)

VII. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4) also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold level is approximately \$141 million. This final rule will not mandate any requirements for State, local, or tribal governments, nor will it affect private sector costs.

VIII. Executive Order 12866

In accordance with the provisions of Executive Order 12866, the Executive Office

of Management and Budget reviewed this final rule.

Appendix B: Recommendation of Update Factors for Operating Cost Rates of Payment for Inpatient Hospital Services

I. Background

Section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Under section 1886(e)(5) of the Act, we are required to publish update factors recommended by the Secretary in the proposed and final IPPS rules, respectively. Accordingly, this Appendix provides the recommendations for the update factors for the IPPS national standardized amount, the Puerto Rico-specific standardized amount, the hospital-specific rate for SCHs and MDHs, and the rate-of-increase limits for certain hospitals excluded from the IPPS, as well as LTCHs. In prior years, we have made a recommendation in the IPPS proposed rule and final rule for the update factors for the payment rates for IRFs and IPFs. However, for FY 2015, we plan to include the Secretary’s recommendation for the update factors for IRFs and IPFs in separate **Federal Register** documents at the time that we announce the annual updates for IRFs and IPFs. We also discuss our response to MedPAC’s recommended update factors for inpatient hospital services.

II. Inpatient Hospital Update for FY 2015

A. FY 2015 Inpatient Hospital Update

As discussed in section IV.B. of the preamble to this final rule, for FY 2015,

consistent with section 1886(b)(3)(B) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act, we are setting the applicable percentage increase by applying the following adjustments in the following sequence. Specifically, the applicable percentage increase under the IPPS is equal to the rate-of-increase in the hospital market basket for IPPS hospitals in all areas, subject to a reduction of one-quarter of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals that fail to submit quality information under rules established by the Secretary in accordance with section 1886(b)(3)(B)(viii) of the Act and a 33 1/3 percent reduction to three-fourths of the applicable percentage increase (prior to the application of other statutory adjustments; also referred to as the market basket update or rate-of-increase (with no adjustments)) for hospitals not considered to be meaningful electronic health record (EHR) users in accordance with section 1886(b)(3)(B)(ix) of the Act, and then subject to an adjustment based on changes in economy-wide productivity (the multifactor productivity (MFP) adjustment), and an additional reduction of 0.2 percentage point as required by section 1886(b)(3)(B)(xii) of the Act. Sections 1886(b)(3)(B)(xi) and (b)(3)(B)(xii) of the Act, as added by section 3401(a) of the Affordable Care Act, state that application of

the MFP adjustment and the additional FY 2015 adjustment of 0.2 percentage point may result in the applicable percentage increase being less than zero.

In the FY 2015 IPPS/LTCH PPS proposed rule, based on the most recent data available at that time, in accordance with section 1886(b)(3)(B) of the Act, we proposed to establish the FY 2015 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.'s (IGI's) first quarter 2014 forecast of the FY 2010-based IPPS market basket rate-of-increase with historical data through fourth quarter 2013, which was estimated to be 2.7 percent. Based on the most recent data available for this FY 2015 final rule, in accordance with section 1886(b)(3)(B) of the Act, we are establishing the FY 2015 market basket update used to determine the applicable percentage increase for the IPPS based on IHS Global Insight, Inc.'s (IGI's) second quarter 2014 forecast of the FY 2010-based IPPS market basket rate-of-increase, which is estimated to be 2.9 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B.1. of the preamble of the FY 2015 IPPS/LTCH PPS proposed rule (79 FR 28087), we proposed a multifactor productivity (MFP) adjustment (the 10-year moving average of MFP for the period ending FY 2015) of 0.4 percent. Therefore, based on IGI's first quarter 2014

forecast of the FY 2010-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act (hereafter referred to as a hospital that submits quality data) and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act (hereafter referred to as a hospital that is a meaningful EHR user), we presented in the proposed rule four possible applicable percentage increases that could be applied to the standardized amount. Based on the most recent data available for this FY 2015 IPPS/LTCH PPS final rule, in accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, in section IV.B.1. of the preamble of this final rule, we are establishing a MFP adjustment (the 10-year moving average of MFP for the period ending FY 2015) of 0.5 percent.

In accordance with section 1886(b)(3)(B) of the Act, as amended by section 3401(a) of the Affordable Care Act, as discussed in section IV.B.1. of the preamble of this final rule, we are establishing the applicable percentages increases for the FY 2015 updates based on IGI's second quarter 2014 forecast of the FY 2010-based IPPS market basket, depending on whether a hospital submits quality data under the rules established in accordance with section 1886(b)(3)(B)(viii) of the Act and is a meaningful EHR user under section 1886(b)(3)(B)(ix) of the Act, as outlined in the table below.

FY 2015	Hospital submitted quality data and is a meaningful EHR user	Hospital submitted quality data and is NOT a meaningful EHR user	Hospital did NOT submit quality data and is a meaningful EHR user	Hospital did NOT submit quality data and is NOT a meaningful EHR user
Market Basket Rate-of-Increase	2.9	2.9	2.9	2.9
Adjustment for Failure to Submit Quality Data under Section 1886(b)(3)(B)(viii) of the Act	0.0	0.0	-0.725	-0.725
Adjustment for Failure to be a Meaningful EHR User under Section 1886(b)(3)(B)(ix) of the Act	0.0	-0.725	0.0	-0.725
MFP Adjustment under Section 1886(b)(3)(B)(xi) of the Act	-0.5	-0.5	-0.5	-0.5
Statutory Adjustment under Section 1886(b)(3)(B)(xii) of the Act	-0.2	-0.2	-0.2	-0.2
Applicable Percentage Increase Applied to Standardized Amount	2.2	1.475	1.475	0.75

B. Update for SCHs and MDHs for FY 2015

Section 1886(b)(3)(B)(iv) of the Act provides that the FY 2015 applicable percentage increase in the hospital-specific rate for SCHs and MDHs equals the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act (that is, the same update factor as for all other hospitals subject to the IPPS).

As discussed in section IV.G. of the preamble of this final rule, section 1106 of the Pathway for SGR Reform Act of 2013 (Pub. L. 113-67), enacted on December 26, 2013, extended the MDH program from the end of FY 2013 through the first half of FY 2014 (that is, for discharges occurring before April 1, 2014). Subsequently, section 106 of the Protecting Access to Medicare Act of 2014 (Pub. L. 113-93), enacted on April 1, 2014, further extended the MDH program through the first half of FY 2015 (that is, for discharges occurring before April 1, 2015).

Prior to the enactment of Public Law 113-67, the MDH program was to be in effect through the end of FY 2013 only. The MDH program expires for discharges beginning on April 1, 2015, under current law. Accordingly, the update of the hospital-specific rates for FY 2015 for MDHs will apply in determining payments for FY 2015 discharges occurring before April 1, 2015.

As mentioned above, the update to the hospital specific rate for SCHs and MDHs is subject to section 1886(b)(3)(B)(i) of the Act, as amended by sections 3401(a) and 10319(a) of the Affordable Care Act. Accordingly, depending on whether a hospital submits quality data and is a meaningful EHR user, we are establishing the same four applicable percentage increases in the table above for the hospital-specific rate applicable to SCHs and MDHs.

C. FY 2015 Puerto Rico Hospital Update

Section 401(c) of Public Law 108-173 amended section 1886(d)(9)(C)(i) of the Act and states that, for discharges occurring in a fiscal year (beginning with FY 2004), the Secretary shall compute an average standardized amount for hospitals located in any area of Puerto Rico that is equal to the average standardized amount computed under subclause (I) for FY 2003 for hospitals in a large urban area (or, beginning with FY 2005, for all hospitals in the previous fiscal year) increased by the applicable percentage increase under subsection (b)(3)(B) for the fiscal year involved. Therefore, the update to the Puerto Rico-specific operating standardized amount is subject to the applicable percentage increase set forth in section 1886(b)(3)(B)(i) of the Act as amended by sections 3401(a) and 10319(a) of the Affordable Care Act (that is, the same update factor as for all other hospitals subject

to the IPPS). Accordingly, we are making an applicable percentage increase to the Puerto Rico-specific standardized amount of 2.2 percent.

D. Update for Hospitals Excluded From the IPPS for FY 2015

Section 1886(b)(3)(B)(ii) of the Act is used for purposes of determining the percentage increase in the rate-of-increase limits for children's hospitals, cancer hospitals, and hospitals located outside the 50 States, the District of Columbia, and Puerto Rico (that is, short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa). Section 1886(b)(3)(B)(ii) of the Act sets the percentage increase in the rate-of-increase limits equal to the market basket percentage increase. In accordance with § 403.752(a) of the regulations, RNHCIs are paid under the provisions of § 413.40, which also use section 1886(b)(3)(B)(ii) of the Act to update the percentage increase in the rate-of-increase limits.

Currently, children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa are among the remaining types of hospitals still paid under the reasonable cost methodology, subject to the rate-of-increase limits. We are applying the FY 2015 percentage increase in the IPPS operating market basket to the target amount for children's hospitals, PPS-excluded cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa. For this final rule, the current estimate of the FY 2015 IPPS operating market basket percentage increase is 2.9 percent.

E. Update for LTCHs for FY 2015

Section 123 of Public Law 106–113, as amended by section 307(b) of Public Law 106–554 (and codified at section 1886(m)(1) of the Act), provides the statutory authority for updating payment rates under the LTCH PPS.

As discussed in section V.A. of the Addendum to this final rule, we are establishing an update to the LTCH PPS standard Federal rate for FY 2015 based on the full LTCH PPS market basket increase estimate (for this final rule, estimated to be 2.9 percent), subject to an adjustment based on changes in economy-wide productivity and an additional reduction required by sections 1886(m)(3)(A)(ii) and (m)(4)(E) of the Act. In accordance with the LTCHQR Program under section 1886(m)(5) of the Act, we are reducing the annual update to the LTCH PPS standard Federal rate by 2.0 percentage points for failure of a LTCH to

submit the required quality data. The MFP adjustment described in section 1886(b)(3)(B)(xi)(ii) of the Act is currently estimated to be 0.5 percent for FY 2015. In addition, section 1886(m)(3)(A)(ii) of the Act requires that any annual update for FY 2015 be reduced by the “other adjustment” at section 1886(m)(4)(E) of the Act, which is 0.2 percentage point. Therefore, based on IGI's second quarter 2014 forecast of the FY 2015 LTCH PPS market basket increase, we are establishing an annual update to the LTCH PPS standard Federal rate of 2.2 percent (that is, the current FY 2015 estimate of the market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point). Accordingly, we are applying an update factor of 1.022 in determining the LTCH PPS standard Federal rate for FY 2015. For LTCHs that fail to submit quality data for FY 2015, we are applying an annual update to the LTCH PPS standard Federal rate of 0.2 percent (that is, the final annual update for FY 2015 of 2.2 percent less 2.0 percentage points for failure to submit the required quality data in accordance with section 1886(m)(5)(C) of the Act and our rules) by applying an update factor of 1.002 in determining the LTCH PPS standard Federal rate for FY 2015. Furthermore, we are making an adjustment for the final year of the 3-year phase-in of the one-time prospective adjustment to the standard Federal rate under § 412.523(d)(3) by applying a factor of 0.97834 (or approximately –1.3 percent) in FY 2015, consistent with current law.

III. Secretary's Recommendations

MedPAC is recommending an inpatient hospital update equal to 3.25 percent for FY 2015. MedPAC's rationale for this update recommendation is described in more detail below. As mentioned above, section 1886(e)(4)(A) of the Act requires that the Secretary, taking into consideration the recommendations of MedPAC, recommend update factors for inpatient hospital services for each fiscal year that take into account the amounts necessary for the efficient and effective delivery of medically appropriate and necessary care of high quality. Consistent with current law, depending on whether a hospital submits quality data and is a meaningful EHR user, we are recommending the four applicable percentage increases to the standardized amount listed in the table under section II. of this Appendix B. We are recommending that the same applicable percentage increases apply to SCHs and MDHs. For the Puerto Rico-specific standardized amount, we are recommending an update of 2.2 percent.

In addition to making a recommendation for IPPS hospitals, in accordance with

section 1886(e)(4)(A) of the Act, we are recommending update factors for certain other types of hospitals excluded from the IPPS. Consistent with our policies for these facilities, we are recommending an update to the target amounts for children's hospitals, cancer hospitals, RNHCIs, and short-term acute care hospitals located in the U.S. Virgin Islands, Guam, the Northern Mariana Islands, and American Samoa of 2.9 percent.

For FY 2015, consistent with policy set forth in section VII. of the preamble of this final rule, we are recommending an update of 2.2 percent (that is, the current FY 2015 estimate of the LTCH PPS market basket rate-of-increase of 2.9 percent less an adjustment of 0.5 percentage point for MFP and less 0.2 percentage point) to the LTCH PPS standard Federal rate.

IV. MedPAC Recommendation for Assessing Payment Adequacy and Updating Payments in Traditional Medicare

In its March 2014 Report to Congress, MedPAC assessed the adequacy of current payments and costs, and the relationship between payments and an appropriate cost base. MedPAC recommended an update to the hospital inpatient rates equal to 3.25 percent concurrent with changes to the outpatient prospective payment system and with initiating change to the LTCH PPS. We refer the reader to the March 2014 MedPAC report, which is available for download at www.medpac.gov for a complete discussion on this recommendation. MedPAC expects Medicare margins to remain low in 2014. At the same time, MedPAC's analysis finds that efficient hospitals have been able to maintain positive Medicare margins while maintaining a relatively high quality of care.

Response: With regard to MedPAC's recommendation of an update to the hospital inpatient rates equal to 3.25 percent, for FY 2015, as discussed above, sections 3401(a) and 10319(a) of the Affordable Care Act amended section 1886(b)(3)(B) of the Act. Section 1886(b)(3)(B) of the Act, as amended by these sections, sets the requirements for the FY 2015 applicable percentage increase. Therefore, we are establishing an applicable percentage increase for FY 2015 of 2.2 percent, provided the hospital submits quality data and is a meaningful EHR user, consistent with these statutory requirements.

We note that, because the operating and capital prospective payment systems remain separate, we are continuing to use separate updates for operating and capital payments. The update to the capital rate is discussed in section III. of the Addendum to this final rule.

Medicare Program; FY 2015 Hospice Wage Index and Payment Rate Update; Hospice Quality Reporting Requirements and Process and Appeals for Part D Payment for Drugs for Beneficiaries Enrolled in Hospice

AGENCY: Centers for Medicare & Medicaid Services (CMS), HHS.

ACTION: Final rule.

SUMMARY: This final rule will update the hospice payment rates and the wage index for fiscal year (FY) 2015 and continue the phase-out of the wage index budget neutrality adjustment factor (BNAF). This rule provides an update on hospice payment reform analyses, potential definitions of “terminal illness” and “related conditions,” and information on potential processes and appeals for Part D payment for drugs while beneficiaries are under a hospice election. This rule will specify timeframes for filing the notice of election and the notice of termination/revocation; add the attending physician to the hospice election form, and require hospices to document changes to the attending physician; require hospices to complete their hospice aggregate cap determinations within 5 months after the cap year ends, and remit any overpayments; and update the hospice quality reporting program. In addition, this rule will provide guidance on determining hospice eligibility; information on the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM); and will further clarify how hospices are to report diagnoses on hospice claims. Finally, the rule will make a technical regulations text change.

DATES: *Effective Date:* These regulations are effective on October 1, 2014.

FOR FURTHER INFORMATION CONTACT:

Debra Dean-Whittaker, (410) 786–0848 for questions regarding the CAHPS® Hospice Survey.

Roxanne Dupert-Frank, (410) 786–9667 for questions regarding the hospice quality reporting program.

Deborah Larwood, (410) 786–9500 for questions regarding process and appeals

for Part D payment for drugs while beneficiaries are under a hospice election.

Owen Osaghae, (410) 786–7550 for questions regarding the hospice inpatient and aggregate cap determinations.

For general questions about hospice payment policy, please send your inquiry via email to: hospicepolicy@cms.hhs.gov.

SUPPLEMENTARY INFORMATION:

Wage index addenda will be available only through the internet on the CMS Web site at: (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/index.html>.) Readers who experience any problems accessing any of the wage index addenda related to the hospice payment rules that are posted on the CMS Web site identified above should contact Hillary Loeffler at 410–786–0456.

I. Executive Summary

A. Purpose

This final rule will update the payment rates for hospices for fiscal year (FY) 2015 as required under section 1814(i) of the Social Security Act (the Act), based on the hospital market basket update, less reductions mandated for hospices by the Patient Protection and Affordable Care Act (Pub. L. 111–148) as amended by the Health Care and Education Reconciliation Act (Pub. L. 111–152) (the Affordable Care Act). This final rule also will update the hospice wage index using updated hospital wage index data, and will apply the 6th year of the 7-year Budget Neutrality Adjustment Factor (BNAF) phase-out. In addition, section 3004(c) of the Affordable Care Act established a quality reporting program for hospices. Starting in FY 2014, hospices that failed to meet quality reporting requirements received a two percentage point reduction to their market basket update.

The Affordable Care Act also requires the Secretary to implement revisions to the hospice payment methodology no earlier than October 1, 2013; as such, this final rule updates the public on our hospice payment reform activities. This final rule also discusses potential definitions of “terminal illness” and “related conditions,” and information on potential processes and appeals for Part D payment for drugs while beneficiaries are under a hospice election. This rule will specify the timeframes for filing the hospice notice of election and the notice of termination/revocation; will require that the attending physician be identified on the hospice election form and will require changes in the attending physician be documented; will require expedited hospice self-reporting of their aggregate cap determinations; and will provide updates to the hospice quality reporting program. Additionally, this rule provides guidance on determining a patient’s eligibility for hospice; discusses the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM); clarifies how hospices will report diagnoses, in accordance with current ICD–9–CM guidelines, on hospice claims; and will make a technical regulations text change.

B. Summary of the Major Provisions

In section III.A of this final rule, we provide information on hospice behavior and trends that raises program integrity concerns, including reform analyses related to beneficiaries dying without skilled visits at the end of life; utilization of General Inpatient Care (GIP), Continuous Home Care (CHC), or Inpatient Respite Care (IRC); live discharges; and non-hospice spending for hospice beneficiaries during a hospice election. The findings discussed raise questions about whether some hospices are operating within the intent of the Medicare Hospice benefit established by the Congress. In 2010, section 3132(a) of the Affordable Care Act amended section 1814(i)(6) of the Act to authorize the Secretary of the Department of Health and Human Services (the Secretary) to collect additional data and information determined appropriate to revise payments for hospice care (no earlier than October 1, 2013) and for other purposes. An initial step of hospice payment reform is to clarify hospice payment policy, and when necessary, to enforce policies to safeguard beneficiaries and the Medicare hospice benefit.

In response to the concerning trends and comments received in response to prior rulemaking, in section III.B, we solicited comments on the definitions of “terminal illness” and “related conditions” to strengthen and clarify the current concepts of holistic and comprehensive hospice care under the Medicare hospice benefit. In addition, we solicited comments on processes that Part D plan sponsors could use to coordinate with Medicare hospices in determining coverage of drugs for hospice beneficiaries and resolving disagreements between the parties.

We provide guidance on determining the beneficiary’s eligibility for hospice in section III.C.

In section III.D, we will require that hospices complete their aggregate cap determination using a pro-forma spreadsheet and payment data not earlier than 3 months after the cap year end, to determine their cap overpayment no later than 5 months after the cap year, and remit any overpayments at that time. Given concerns about hospices’ increasingly exceeding their aggregate cap, along with the increases in the average overpayment per beneficiary, we believe that this procedural change is necessary to better safeguard the Medicare Trust Fund.

In section III.E, we will require hospices to file both the notice of election (NOE) and the notice of

termination/revocation (NOTR) on behalf of beneficiaries within 5 calendar days after the effective date of election or of discharge/revocation, respectively. If an NOE is not filed timely, the days from the effective date of election to the date of filing the NOE will be the financial responsibility of the hospice. We will allow a waiver of this consequence of late-filing an NOE in certain exceptional circumstances.

In section III.F, we will require the hospice to identify the attending physician on the election form and to document changes to the attending physician.

This final rule will update the hospice wage index with more current wage data, and the BNAF will be reduced by an additional 15 percent for a total cumulative BNAF reduction of 85 percent as described in section III.G.2. The total BNAF phase-out will be complete by FY 2016. This final rule will also update the hospice payment rates for FY 2015 by 2.1 percent as described in section III.G.3.

In section III.H of this final rule, we discuss updates to the hospice quality reporting program, including participation requirements for CY 2015 regarding the CAHPS® Hospice Survey, and remind the hospice industry that last year we set the July 1, 2014 implementation date for the Hospice Item Set and the January 1, 2015

implementation date for the CAHPS® Hospice Survey.

More than seven new quality measures will be derived from these tools; therefore, no new measures were proposed this year. Section III.H of this rule also will make changes related to the reconsideration process, extraordinary circumstance extensions or exemptions, and hospice quality reporting program (HQRP) eligibility requirements for newly certified hospices.

In section III.I, we solicit comments on processes that Part D plan sponsors could use to coordinate with Medicare hospices in determining coverage of drugs for hospice beneficiaries and resolving disagreements between the parties.

In section III.J, we discuss the delay in the implementation of the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and clarify appropriate diagnosis reporting on hospice claims per ICD–9–CM Coding Guidelines. Claims will be returned to the provider if the claim listed a non-specific symptom diagnosis as the principal hospice diagnosis.

Finally, we will make a technical regulations text change in section III.K pertaining to the definition of “social worker”.

C. Summary of Impacts

TABLE 1—IMPACT SUMMARY TABLE

Provision description	Transfers
FY 2015 Hospice Wage Index and Payment Rate Update	The overall economic impact of this final rule is estimated to be \$230 million in increased payments to hospices during FY 2015.
	Total costs
New Quality Reporting Requirements for Hospices (FY 2015) and Aggregate cap Filing Requirements.	\$8.85 million.

II. Background

A. Hospice Care

Hospice care is an approach to treatment that recognizes that the impending death of an individual warrants a change in the focus from curative care to palliative care for relief of pain and for symptom management. The goal of hospice care is to help terminally ill individuals continue life with minimal disruption to normal activities while remaining primarily in the home environment. A hospice uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through use of a broad spectrum of professionals and other caregivers, with

the goal of making the individual as physically and emotionally comfortable as possible. Hospice is compassionate patient and family-centered care for those who are terminally ill. It is a comprehensive, holistic approach to treatment that recognizes that the impending death of an individual necessitates a change from curative to palliative care.

Medicare regulations define palliative care as “patient and family-centered care that optimizes quality of life by anticipating, preventing, and treating suffering.” Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social, and spiritual needs and to facilitate patient autonomy,

access to information, and choice (42 CFR 418.3). Palliative care is at the core of hospice philosophy and care practices, and is a critical component of the Medicare hospice benefit. As stated in the June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32088), palliative care is an approach that “optimizes quality of life by anticipating, preventing, and treating suffering.” The goal of palliative care in hospice is to improve the quality of life of individuals, and their families, facing the issues associated with a life-threatening illness through the prevention and relief of suffering by means of early identification, assessment and treatment of pain and

other issues. This is achieved by the hospice interdisciplinary team working with the patient and family to develop a comprehensive care plan focused on coordinating care services, reducing unnecessary diagnostics or ineffective therapies, and offering ongoing conversations with individuals and their families about changes in the disease. It is expected that this comprehensive care plan will shift over time to meet the changing needs of the patient and family as the individual approaches the end-of-life.

Medicare hospice care is palliative care for individuals with a prognosis of living 6 months or less if the terminal illness runs its normal course. As generally accepted by the medical community, the term "terminal illness" refers to an advanced and progressively deteriorating illness, and that the illness is diagnosed as incurable (see section III.B for a discussion). When an individual is terminally ill, many health problems are brought on by underlying condition(s), as bodily systems are interdependent. In the June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32088), we stated that "the medical director must consider the primary terminal condition, related diagnoses, current subjective and objective medical findings, current medication and treatment orders, and information about unrelated conditions when considering the initial certification of the terminal illness." As referenced in our regulations at § 418.22(b)(1), to be eligible for Medicare hospice services, the patient's attending physician (if any) and the hospice medical director must certify that the individual is terminally ill, that is, the individual's prognosis is for a life expectancy of 6 months or less if the terminal illness runs its normal course as defined in section 1861(dd)(3)(A) of the Act and our regulations at § 418.3. The certification of terminal illness must include a brief narrative explanation of the clinical findings that supports a life expectancy of 6 months or less as part of the certification and recertification forms, as stated in § 418.22(b)(3).

The goal of hospice care is to make the hospice patient as physically and emotionally comfortable as possible, with minimal disruption to normal activities, while remaining primarily in the home environment. Hospice care uses an interdisciplinary approach to deliver medical, nursing, social, psychological, emotional, and spiritual services through the use of a broad spectrum of professional and other caregivers and volunteers. While the goal of hospice care is to allow for the

individual to remain in his or her home environment, circumstances during the end-of-life may necessitate short-term inpatient admission to a hospital, skilled nursing facility (SNF), or hospice facility for procedures necessary for pain control or acute or chronic symptom management that cannot be managed in any other setting. These acute hospice care services are to ensure that any new or worsening symptoms are intensively addressed so that the individual can return to his or her home environment under a home level of care. Short-term, intermittent, inpatient respite services are also available to the family of the hospice patient when needed to relieve the family or other caregivers. Additionally, an individual can receive continuous home care during a period of crisis in which an individual requires primarily continuous nursing care to achieve palliation or management of acute medical symptoms so that the individual can remain at home. Continuous home care may be covered on a continuous basis for as much as 24 hours a day, and these periods must be predominantly nursing care per our regulations at § 418.204. A minimum of 8 hours of nursing, or nursing and aide, care must be furnished on a particular day to qualify for the continuous home care rate (§ 418.302(e)(4)).

Hospices are expected to comply with all civil rights laws, including the provision of auxiliary aids and services to ensure effective communication with patients or patient care representatives with disabilities consistent with Section 504 of the Rehabilitation Act of 1973 and the Americans with Disabilities Act, and to provide language access for such persons who are limited in English proficiency, consistent with Title VI of the Civil Rights Act of 1964. Further information about these requirements may be found at <http://www.hhs.gov/ocr/civilrights>.

B. History of the Medicare Hospice Benefit

Before the creation of the Medicare hospice benefit, hospice was originally run by volunteers who cared for the dying. During the early development stages of the Medicare hospice benefit, hospice advocates were clear that they wanted a Medicare benefit available that provided all-inclusive care for terminally-ill individuals, provided pain relief and symptom management, and offered the opportunity to die with dignity in the comfort of one's home

rather than in an institutional setting.¹ As stated in the August 22, 1983 proposed rule entitled "Medicare Program; Hospice Care" (48 FR 38146), "the hospice experience in the United States has placed emphasis on home care. It offers physician services, specialized nursing services, and other forms of care in the home to enable the terminally ill individual to remain at home in the company of family and friends as long as possible." The concept of a patient "electing" the hospice benefit and being certified as terminally ill were two key components in the legislation responsible for the creation of the Medicare Hospice Benefit (section 122 of the Tax Equity and Fiscal Responsibility Act of 1982 (TEFRA), (Pub. L. 97-248)). Section 122 of TEFRA created the Medicare Hospice Benefit, which was implemented on November 1, 1983. Under sections 1812(d) and 1861(dd) of the Social Security Act (the Act), codified at 42 U.S.C. 1395d(d) and 1395x(dd), we provide coverage of hospice care for terminally ill Medicare beneficiaries who elect to receive care from a Medicare-certified hospice. Our regulations at § 418.54(c) stipulate that the comprehensive hospice assessment must identify the patient's physical, psychosocial, emotional, and spiritual needs related to the terminal illness and related conditions, and address those needs in order to promote the hospice patient's well-being, comfort, and dignity throughout the dying process. The comprehensive assessment must take into consideration the following factors: the nature and condition causing admission (including the presence or lack of objective data and subjective complaints); complications and risk factors that affect care planning; functional status; imminence of death; and severity of symptoms (§ 418.54(c)). The Medicare hospice benefit requires the hospice to cover all reasonable and necessary palliative care related to the terminal prognosis and related conditions, as described in the patient's plan of care. The December 16, 1983 Hospice final rule (48 FR 56008) requires hospices to cover care for interventions to manage pain and symptoms. Clinically, related conditions are any physical or mental conditions that are related to or caused by either the terminal illness or the medications used to manage the terminal illness.²

¹ Connor, Stephen. (2007) Development of Hospice and Palliative Care in the United States. OMEGA. 56(1), p89-99.

² Harder, PharmD, CGP, Julia. (2012). To Cover or Not To Cover: Guidelines for Covered Medications in Hospice Patients. The Clinician. 7(2), p1-3.

See section III.B of this final rule for a discussion on a possible Medicare hospice definition of “related conditions.” Additionally, the hospice Conditions of Participation at § 418.56(c) require that the hospice must provide all reasonable and necessary services for the palliation and management of the terminal illness, related conditions and interventions to manage pain and symptoms. Therapy and interventions must be assessed and managed in terms of providing palliation and comfort without undue symptom burden for the hospice patient or family.³ For example, a hospice patient with lung cancer (the principal terminal diagnosis) may receive inhalants for shortness of breath (related to the terminal condition). The patient may also suffer from metastatic bone pain (a related condition) and will be treated with opioid analgesics. As a result of the opioid therapy, the patient may suffer from constipation (a related condition) and require a laxative for symptom relief. It is often not a single diagnosis that represents the terminal prognosis of the patient, but the combined effect of several conditions, which could include not only the physical, but the emotional, psychosocial and spiritual, that makes the patient’s condition terminal. In the December 16, 1983 Hospice final rule (48 FR 56010 through 56011), regarding what is related versus unrelated to the terminal illness, we stated: “. . . we believe that the unique physical condition of each terminally ill individual makes it necessary for these decisions to be made on a case-by-case basis. It is our general view that hospices are required to provide virtually all the care that is needed by terminally ill patients.” Therefore, unless there is clear evidence that a condition is unrelated to the terminal prognosis, all services will be considered related. It is also the responsibility of the hospice physician to document why a patient’s medical needs will be unrelated to the terminal prognosis.

As stated in the December 16, 1983 Hospice final rule, the fundamental premise upon which the hospice benefit was designed was the “revocation” of traditional curative care and the “election” of hospice care for end-of-life symptom management and maximization of quality of life (48 FR 56008). After electing hospice care, the patient typically returns to the home from an institutionalized setting or

remains in the home, to be surrounded by family and friends, and to prepare emotionally and spiritually for death while receiving expert symptom management and other supportive services. Election of hospice care also includes waiving the right to Medicare payment for curative treatment for the terminal prognosis, and instead receiving palliative care to manage pain or symptoms.

The benefit was originally designed to cover hospice care for a finite period of time that roughly corresponded to a life expectancy of 6 months or less. Initially, beneficiaries could receive three election periods: two 90-day periods and one 30-day period. Currently, Medicare beneficiaries can elect hospice care for two 90-day periods and an unlimited number of subsequent 60-day periods; however, the expectation remains that beneficiaries have a life expectancy of 6 months or less if the terminal illness runs its normal course.

C. Services Covered by the Medicare Hospice Benefit

One requirement for coverage under the Medicare Hospice Benefit is that hospice services must be reasonable and necessary for the palliation and management of the terminal illness and related conditions. Section 1861(dd)(1) of the Act establishes the services that are to be rendered by a Medicare certified hospice program. These covered services include: nursing care; physical therapy; occupational therapy; speech-language pathology therapy; medical social services; home health aide services (now called hospice aide services); physician services; homemaker services; medical supplies (including drugs and biologics); medical appliances; counseling services (including dietary counseling); short-term inpatient care (including both respite care and procedures necessary for pain control and acute or chronic symptom management) in a hospital, nursing facility, or hospice inpatient facility; continuous home care during periods of crisis and only as necessary to maintain the terminally ill individual at home; and any other item or service which is specified in the plan of care and for which payment may otherwise be made under Medicare, in accordance with Title XVIII of the Act.

Section 1814(a)(7)(B) of the Act requires that a written plan for providing hospice care to a beneficiary who is a hospice patient be established before care is provided by, or under arrangements made by, that hospice program and that the written plan be periodically reviewed by the beneficiary’s attending physician (if

any), the hospice medical director, and an interdisciplinary group (described in section 1861(dd)(2)(B) of the Act). The services offered under the Medicare hospice benefit must be available, as needed, to beneficiaries 24 hours a day, 7 days a week (section 1861(dd)(2)(A)(i) of the Act). Upon the implementation of the hospice benefit, the Congress expected hospices to continue to use volunteer services, though these services are not reimbursed by Medicare (see Section 1861(dd)(2)(E) of the Act and (48 FR 38149)). As stated in the August 22, 1983 Hospice proposed rule, the hospice interdisciplinary group should be comprised of paid hospice employees as well as hospice volunteers (48 FR 38149). This expectation is in line with the history of hospice and philosophy of holistic, comprehensive, compassionate, end-of-life care.

Before the Medicare hospice benefit was established, the Congress requested a demonstration project to test the feasibility of covering hospice care under Medicare. The National Hospice Study was initiated in 1980 through a grant sponsored by the Robert Wood Johnson and John A. Hartford Foundations and CMS (then, the Health Care Financing Administration (HCFA)). The demonstration project was conducted between October 1980 and March 1983. The project summarized the hospice care philosophy as the following:

- Patient and family know of the terminal condition.
- Further medical treatment and intervention are indicated only on a supportive basis.
- Pain control should be available to patients as needed to prevent rather than to just ameliorate pain.
- Interdisciplinary teamwork is essential in caring for patient and family.
- Family members and friends should be active in providing support during the death and bereavement process.
- Trained volunteers should provide additional support as needed.

The cost data and the findings on what services hospices provided in the demonstration project were used to design the Medicare hospice benefit. The identified hospice services were incorporated into the service requirements under the Medicare hospice benefit. Importantly, in the August 22, 1983 hospice proposed rule, we stated “the hospice benefit and the resulting Medicare reimbursement is not intended to diminish the voluntary spirit of hospices” (48 FR 38149).

³Paolini, DO, Charlotte. (2001). Symptoms Management at End of Life. *JAOA*. 101(10). p609–615.

D. Medicare Payment for Hospice Care

Sections 1812(d), 1813(a)(4), 1814(a)(7), 1814(i), and 1861(dd) of the Act, and our regulations in part 418, establish eligibility requirements, payment standards and procedures, define covered services, and delineate the conditions a hospice must meet to be approved for participation in the Medicare program. Part 418, subpart G, provides for a per diem payment in one of four prospectively-determined rate categories of hospice care (routine home care, continuous home care, inpatient respite care, and general inpatient care), based on each day a qualified Medicare beneficiary is under hospice care (once the individual has elected). This per diem payment is to include all of the hospice services needed to manage the beneficiaries' care, as required by section 1861(dd)(1) of the Act. There has been little change in the hospice payment structure since the benefit's inception. The per diem rate based on level of care was established in 1983, and this payment structure remains today with some adjustments, as noted below:

1. Omnibus Budget Reconciliation Act of 1989

Section 6005(a) of the Omnibus Budget Reconciliation Act of 1989 (Pub. L. 101-239) amended section 1814(i)(1)(C) of the Act and provided for the following two changes in the methodology concerning updating the daily payment rates: (1) effective January 1, 1990, the daily payment rates for routine home care and other services included in hospice care were increased to equal 120 percent of the rates in effect on September 30, 1989; and (2) the daily payment rate for routine home care and other services included in hospice care for fiscal years beginning on or after October 1, 1990, were the payment rates in effect during the previous Federal fiscal year increased by the hospital market basket percentage increase.

2. Balanced Budget Act of 1997

Section 4441(a) of the Balanced Budget Act of 1997 (BBA) (Pub. L. 105-33) amended section 1814(i)(1)(C)(ii)(VI) of the Act to establish updates to hospice rates for FYs 1998 through 2002. Hospice rates were updated by a factor equal to the hospital market basket percentage increase, minus 1 percentage point. Payment rates for FYs from 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYs will be the hospital market basket percentage increase for the FY. The Act requires us

to use the inpatient hospital market basket to determine hospice payment rates.

3. FY 1998 Hospice Wage Index Final Rule

In the August 8, 1997 FY 1998 Hospice Wage Index final rule (62 FR 42860), we implemented a new methodology for calculating the hospice wage index based on the recommendations of a negotiated rulemaking committee. The original hospice wage index was based on 1981 Bureau of Labor Statistics hospital data and had not been updated since 1983. In 1994, because of disparity in wages from one geographical location to another, the Hospice Wage Index Negotiated Rulemaking Committee was formed to negotiate a new wage index methodology that could be accepted by the industry and the government. This Committee was comprised of representatives from national hospice associations; rural, urban, large and small hospices, and multi-site hospices; consumer groups; and a government representative. The Committee decided that in updating the hospice wage index, aggregate Medicare payments to hospices would remain budget neutral to payments calculated using the 1983 wage index, to cushion the impact of using a new wage index methodology. To implement this policy, a Budget Neutrality Adjustment Factor (BNAF) will be computed and applied annually to the pre-floor, pre-reclassified hospital wage index when deriving the hospice wage index, subject to a wage index floor.

4. FY 2010 Hospice Wage Index Final Rule

Inpatient hospital pre-floor and pre-reclassified wage index values, as described in the August 8, 1997 Hospice Wage Index final rule, are subject to either a budget neutrality adjustment or application of the wage index floor. Wage index values of 0.8 or greater are adjusted by the (BNAF). Starting in FY 2010, a 7-year phase-out of the BNAF began (August 6, 2009 FY 2010 Hospice Wage Index final rule, (74 FR 39384)), with a 10 percent reduction in FY 2010, an additional 15 percent reduction for a total of 25 percent in FY 2011, an additional 15 percent reduction for a total 40 percent reduction in FY 2012, an additional 15 percent reduction for a total of 55 percent in FY 2013, and an additional 15 percent reduction for a total 70 percent reduction in FY 2014. The phase-out will continue with an additional 15 percent reduction for a total reduction of 85 percent in FY 2015, and an additional 15 percent reduction

for complete elimination in FY 2016. We note that the BNAF is an adjustment which increases the hospice wage index value. Therefore, the BNAF reduction is a reduction in the amount of the BNAF increase applied to the hospice wage index value. It is not a reduction in the hospice wage index value or in the hospice payment rates.

5. The Affordable Care Act

Starting with FY 2013 (and in subsequent fiscal years), the market basket percentage update under the hospice payment system referenced in sections 1814(i)(1)(C)(ii)(VII) and 1814(i)(1)(C)(iii) of the Act will be annually reduced by changes in economy-wide productivity, as specified in section 1886(b)(3)(B)(xi)(II) of the Act, as amended by section 3132(a) of the Patient Protection and Affordable Care Act (Pub. L. 111-148) as amended by the Health Care and Education Reconciliation Act (Pub. L. 111-152) (the Affordable Care Act)). In FY 2013 through FY 2019, the market basket percentage update under the hospice payment system will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions as specified in section 1814(i)(1)(C)(v) of the Act).

In addition, sections 1814(i)(5)(A) through (C) of the Act, as amended by section 3132(a) of the Affordable Care Act, require hospices to begin submitting quality data, based on measures to be specified by the Secretary, for FY 2014 and subsequent fiscal years. Beginning in FY 2014, hospices which fail to report quality data will have their market basket update reduced by 2 percentage points.

Section 1814(a)(7)(D)(i) of the Act was amended by section 3132 (b)(2)(D)(i) of the Affordable Care Act, and requires, effective January 1, 2011, that a hospice physician or nurse practitioner have a face-to-face encounter with the beneficiary to determine continued eligibility of the beneficiary's hospice care prior to the 180th-day recertification and each subsequent recertification, and to attest that such visit took place. When implementing this provision, we decided that the 180th-day recertification and subsequent recertifications corresponded to the recertification for a beneficiary's third or subsequent benefit periods (CY 2011 Home Health Prospective Payment System final rule (75 FR 70435)). Further, section 1814(i)(6) of the Act, as amended by section 3132(a)(1)(B) of the Affordable Care Act, authorizes the Secretary to

collect additional data and information determined appropriate to revise payments for hospice care and other purposes. The types of data and information suggested in the Affordable Care Act would capture accurate resource utilization, which could be collected on claims, cost reports, and possibly other mechanisms, as the Secretary determines to be appropriate. The data collected may be used to revise the methodology for determining the payment rates for routine home care and other services included in hospice care, no earlier than October 1, 2013, as described in section 1814(i)(6)(D) of the Act. In addition, we are required to consult with hospice programs and the Medicare Payment Advisory Commission (MedPAC) regarding additional data collection and payment revision options.

6. FY 2012 Hospice Wage Index Final Rule

When the Medicare Hospice Benefit was implemented, the Congress included an aggregate cap on hospice payments, which limits the total aggregate payments any individual hospice can receive in a year. The Congress stipulated that a “cap amount” be computed each year. The cap amount was set at \$6,500 per beneficiary when first enacted in 1983 and is adjusted annually by the change in the medical care expenditure category of the consumer price index for urban consumers from March 1984 to March of the cap year (section 1814(i)(2)(B) of the Act). The cap year is defined as the

period from November 1st to October 31st. As we stated in the August 4, 2011 FY 2012 Hospice Wage Index final rule (76 FR 47308 through 47314), for the 2012 cap year and subsequent cap years, the hospice aggregate cap will be calculated using the patient-by-patient proportional methodology, within certain limits. We will allow existing hospices the option of having their cap calculated via the original streamlined methodology, also within certain limits. New hospices will have their cap determinations calculated using the patient-by-patient proportional methodology. The patient-by-patient proportional methodology and the streamlined methodology are two different methodologies for counting beneficiaries when calculating the hospice aggregate cap. A detailed explanation of these methods is found in the August 4, 2011 FY 2012 Hospice Wage Index final rule (76 FR 47308 through 47314). If a hospice’s total Medicare reimbursement for the cap year exceeded the hospice aggregate cap, then the hospice must repay the excess back to Medicare.

E. Trends in Medicare Hospice Utilization

Since the implementation of the hospice benefit in 1983, and especially within the last decade, there has been substantial growth in hospice utilization. The number of Medicare beneficiaries receiving hospice services has grown from 513,000 in FY 2000 to over 1.3 million in FY 2013. Similarly, Medicare hospice expenditures have

risen from \$2.9 billion in FY 2000 to an estimated \$15.1 billion in FY 2013. Our Office of the Actuary (OACT) projects that hospice expenditures are expected to continue to increase, by approximately 8 percent annually, reflecting an increase in the number of Medicare beneficiaries, more beneficiary awareness of the Medicare Hospice Benefit for end-of-life care, and a growing preference for care provided in home and community-based settings. However, this increased spending is partly due to an increased average lifetime length of stay for beneficiaries, from 54 days in 2000 to 86 days in 2011, an increase of 59 percent.

There have also been noted changes in the diagnosis patterns among Medicare hospice enrollees. Specifically, there were notable increases between 2002 and 2007 in neurologically-based diagnoses, including various dementia diagnoses. Additionally, there have been significant increases in the use of non-specific, symptom-classified diagnoses, such as “debility” and “adult failure to thrive.” In FY 2012, “debility” and “adult failure to thrive” were the first and third most common hospice diagnoses, respectively. “Debility” and “adult failure to thrive” continue to be among the most common hospice principal diagnoses (14 percent), and those, combined with “dementia” and Alzheimer’s disease constituted approximately 30 percent of all claims-reported principal diagnosis codes reported in FY 2013 (see Table 2 below).

TABLE 2—THE TOP TWENTY PRINCIPAL HOSPICE DIAGNOSES, FY 2002, FY 2007, FY 2012, FY 2013

Rank	ICD-9/Reported principal diagnosis	Count	Percentage
Year: FY 2002			
1	162.9 Lung Cancer	73,769	11
2	428.0 Congestive Heart Failure	45,951	7
3	799.3 Debility Unspecified	36,999	6
4	496 COPD	35,197	5
5	331.0 Alzheimer’s Disease	28,787	4
6	436 CVA/Stroke	26,897	4
7	185 Prostate Cancer	20,262	3
8	783.7 Adult Failure To Thrive	18,304	3
9	174.9 Breast Cancer	17,812	3
10	290.0 Senile Dementia, Uncomp	16,999	3
11	153.0 Colon Cancer	16,379	2

III. Provisions of the Proposed Regulations and Responses to Comments

On May 8, 2014, we published a proposed rule in the **Federal Register** (79 FR 26538–26587) entitled, FY 2015 Hospice Wage Index and Payment Rate Update; Hospice Quality Reporting Requirements and Process and Appeals for Part D Payment for Drugs for Beneficiaries Enrolled in Hospice (herein referred to as the FY 2015 Hospice Wage Index proposed rule). The FY 2015 Hospice Wage Index proposed rule updated the public on several issues and set forth the following proposals:

- We discussed recent payment reform analyses related to beneficiaries dying without skilled visits at the end of life; utilization of General Inpatient Care (GIP), Continuous Home Care (CHC), or Inpatient Respite Care (IRC); live discharges; and non-hospice spending for hospice beneficiaries during a hospice election.

- We solicited comments on the definition of “terminal illness” and “related conditions.”

- We provided guidance on determining eligibility for hospice care.

- We proposed to require that hospices determine their inpatient and/or aggregate cap overpayment within 5 months after the cap year, and proposed to further amend § 418.308 and § 405.371 to state that payments to a hospice would be suspended in whole or in part, for failure to file a self-determined inpatient and aggregate cap determination no later than 5 months after the end of the cap year (that is, by March 31st of each year).

- We proposed to amend § 418.24(a) to require that a hospice must file the Notice of Election (NOE) with its Medicare Administrative Contractor (MAC) within 3 calendar days after the hospice effective date of election. We also proposed that for those hospices that do not file the NOE timely (that is, within 3 calendar days after the effective date of election), Medicare would not cover and pay for days of hospice care from the effective date of election to the date of filing of the NOE. In addition, we proposed that these days be considered the financial responsibility of the hospice; the hospice could not bill the beneficiary for them.

- We proposed to revise the regulations at § 418.26 and § 418.28 to require hospices to file a Notice of Termination or Revocation (NOTR) within 3 calendar days after the effective date of a beneficiary's

discharge or revocation, if they have not already filed a final claim.

- We proposed to amend the regulations at § 418.24(b)(1) to require the election statement to identify the attending physician, and to include an acknowledgement that the attending physician was chosen by the patient. We also proposed that if a patient (or representative) wants to change his or her designated attending physician, he or she must file a statement with the hospice which identifies the new attending physician and includes the date the change is to be effective, the date that the statement is signed, and the patient's (or representative's) signature, along with an acknowledgement that this change in the attending physician is the patient's (or representative's) choice.

- We provided a preliminary update to the FY 2015 hospice wage index, continuing to use the hospital pre-floor, pre-reclassified wage index as the source data, and provided a preliminary update to the FY 2015 hospice payment rates.

- We proposed in § 418.312 that newly certified hospices that receive notice of their CMS certification number on or after November 1, 2014, for payments to be made in FY 2016, be excluded from the quality reporting requirements for the FY 2016 payment determination, as data submission and analysis would not be possible for a hospice receiving notification of their certification this late in the reporting time period. We also proposed that in future years, hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY.

- We proposed that approved survey vendors meet all of the minimum business requirements and follow the detailed technical specifications for survey administration as published in the CAHPS® Hospice Survey specifications manual. We proposed to codify the CAHPS® Hospice Survey vendor requirements to be effective with the FY 2017 Annual Payment Update (APU) (as proposed in § 418.312). We also proposed that no organization, firm, or business that owns, operates, or provides staffing for a hospice be permitted to administer its own Hospice CAHPS® survey or administer the survey on behalf of any other hospice in the capacity as a Hospice CAHPS® survey vendor.

- We described a potential coordination of benefits and appeals process for Part D payment for drugs while beneficiaries are under a hospice

election, and solicited comments to guide us in making a possible proposal in future rulemaking. We solicited comments on whether hospices need to determine, in a specific amount of time, a beneficiary's drug and biological needs and communicate with the Part D plan sponsor or to the other payer and/or provider, verbally or in writing, to ensure that there is no lapse of reasonable and necessary drugs and biologicals or other items or services for the palliation and management of the terminal illness and related conditions. We also solicited comments on steps a hospice could take to reconcile payment responsibility with Part D plans or with other payers or providers.

- We provided an update on the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and coding guidelines for hospice claims reporting.

- We proposed to make a technical correction in § 418.3 to delete an obsolete definition for a “social worker.”

We provided for a 60 day comment period on the FY 2015 Hospice Wage Index proposed rule. We received 114 public comments from the Medicare Payment Advisory Commission, Medicare beneficiary advocacy groups, hospice providers, state and national hospice associations, hospice and end-of-life care organizations and experts, hospice financial experts and consultants, attorneys, Part D sponsors, pharmacy associations, private insurance plans, and private individuals. In general, commenters provided thoughtful and diverse comments on the proposed policies. We also received comments that are outside the scope of this rule. We will take these comments under consideration when evaluating current hospice policies.

Summaries of the public comments received on the proposals and our responses to those comments are provided in the appropriate sections in the preamble of this final rule.

A. Hospice Payment Reform: Research and Analyses

Section 3132(a) of the Affordable Care Act amended section 1814(i)(6) of the Act to authorize the Secretary to collect additional data and information determined appropriate to revise payments for hospice care and for other purposes. The data collected may be used to revise the methodology for determining the payment rates for routine home care and other services included in hospice care, no earlier than October 1, 2013, as described in section 1814(i)(6)(D) of the Act. We are also required to consult with hospice

programs and the Medicare Payment Advisory Commission (MedPAC) regarding additional data collection and payment revision options. Since 2010, we have been working with our hospice reform contractor, Abt Associates, to review the most current peer-reviewed literature; conduct research and analyses; identify potential vulnerabilities in the current payment system; and research and develop hospice payment model options. We recently required additional information on hospice claims regarding drugs and certain durable medical equipment, effective April 1, 2014; and are in the process of finalizing changes to the hospice cost report to better collect data on the costs of providing hospice care. The additional information on hospice claims and the hospice cost report will be used in our hospice payment reform efforts, once the data are available for analysis.

The research and analyses conducted thus far on available Medicare claims and cost report data have highlighted hospice utilization trends that raise concerns regarding the viability of the Medicare hospice program and the impact of beneficiary access to quality end of life care. In March 2009, the Medicare Payment Advisory Commission (MedPAC) recommended that Medicare improve its payment system for hospice services to address a misalignment between Medicare's payments and hospice's costs that created incentives for providers to enroll patients who are more likely to have long stays because those stays are more profitable than short ones (http://www.medpac.gov/chapters/Mar09_Ch06.pdf). MedPAC's June 2013 Report to Congress on Medicare and the Health Care Delivery System reiterated concerns about utilization trends and suggested that such trends were driven by a misalignment in the payment

system (http://www.medpac.gov/chapters/Jun13_Ch05.pdf). MedPAC's June 2013 report added that, while payment reform would better align payments with costs, additional administrative controls were necessary to balance incentives and strengthen provider compliance. As such, we believe that a critical goal of the Medicare hospice payment system is to strengthen and safeguard the current scope of the Medicare hospice benefit. This will provide a solid foundation on which to reform the methodology used to pay for Medicare hospice services. Program integrity is being addressed immediately while we develop further data and research to address payment reform in the near future.

Abt Associates, with its subcontractor Brown University, has developed a technical report entitled, "Medicare Hospice Payment Reform: Analyses to Support Payment Reform," dated May 1, 2014 (hereafter, referred to as the May 2014 Technical Report) that thoroughly describes the analytic file and extensive work performed on analyzing current hospice utilization data, of which many of the results of the analyses are presented in this final rule. Both the May 2014 Technical Report and an updated literature review are available on our hospice center Web page at: <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html> in the "Research and Analyses" section. We further examined hospice utilization data and developed a provider-level file to identify aberrant hospice behavior. The provider-level file contains information on beneficiaries who were discharged (alive or deceased) in calendar year (CY) 2012 and includes claims data from January 1, 2010 through December 31, 2012. Some of the findings described in this section, are based on this provider-level file.

1. Beneficiaries Dying Without Skilled Visits in the Last Days of Life

Hospice clinicians are experts in recognizing changes as a patient is approaching the last few days of life and helping to prepare and support the patient and family. Most individuals approaching end-of-life have noted declines over the several days prior to death. As such, the expectation is that there would be an increased need for hospice services in the days leading up to the hospice beneficiary's death. Although we recognize that prognostication is not an exact science, there are hallmark physical, functional, nutritional, and cognitive changes that are typically present leading up to the hospice patient's death (see section III.C of this final rule).

When looking at skilled visits provided in the last days of life, as reported on the hospice claim, our analysis found that a relatively high percentage (28.9 percent) of hospice decedents who were receiving RHC on their last day of life did not receive a skilled visit on that day (see Table 3 below). This could be explained, in part, by sudden or unexpected death. Expanding this analysis to skilled visits provided in the last two to four days of life, we found that 14.4 percent of hospice decedents did not receive skilled visits in the last 2 days of life and 6.2 percent of hospice decedents did not receive skilled visits in the last 4 days of life. While this could also be explained, in part, by sudden or unexpected death, we are concerned with the possibility that those beneficiaries and their families are not receiving hospice care and support at the very end of life. If hospices are actively engaging with the beneficiary and the family throughout the election period, we would expect to see skilled visits during those last days of life.

TABLE 3—FREQUENCY AND PERCENTAGE OF DECEDENTS NOT RECEIVING SKILLED VISITS AT THE END OF LIFE, CALENDAR YEAR 2012

	Number of decedents	Percentage of decedents with no skilled visits
No skilled visits on last day (and last day was RHC)	656,355	28.9
No skilled visits on last two days (and last two days were RHC)	622,334	14.4
No skilled visits on last three days (and last three days were RHC)	585,648	9.1
No skilled visits on last four days (and last four days were RHC)	551,359	6.2

Note(s): Skilled visit was considered to be a visit from a social worker, therapist, or nurse. Source: Beneficiaries whose last days of hospice enrollment were billed to the RHC level of care using 100% of hospice days from the Hospice Standard Analytic File (SAF), Calendar Year (CY) 2012.

Further analysis of skilled visits during the last two days of life found that 10.3 percent of very short stay

decedents (5 days or less) did not receive skilled visits during the last two days of life. In contrast, 15.9 percent of

decedents with lengths of stay 181 days or longer did not receive visits in the last two days of life. Newer hospices (5

years or less since Medicare certification) were more likely to have decedents with no skilled visits during the last two days of life (17.8 percent) compared to older hospices (6 years or more since Medicare certification; 14.0 percent). We also found geographic differences in this analysis. The five states with the lowest percentage of decedents with no skilled visits on the last two days of life included: Wisconsin (5.7 percent), North Dakota (7.3 percent), Vermont (7.5 percent), Tennessee (7.5 percent), and Kansas (8.7 percent). The five states with the highest percentage of decedents with no skilled visits on the last two days of life included: New Jersey (23 percent), Massachusetts (22.9 percent), Oregon (21.2 percent), Washington (21 percent), and Minnesota (19.4 percent).

Using the provider-level file referenced above, we also found that, on average, hospices did not report any skilled visits in the last two days of life for 9.7 percent of their decedents who died receiving routine home care.⁴ Nearly 5 percent of hospices did not provide any skilled visits in the last two days of life to more than 50 percent of their decedents receiving routine home care on those last two days; the average lifetime length of stay among those decedents was 143 days. We note that the average lifetime length of stay in our provider-level file was 95.4 days (among beneficiaries who were discharged alive or deceased in CY 2012). Furthermore, we found that 34 hospices did not make any skilled visits in the last 48 hours of life to any of their decedents who died while receiving routine home care.

2. General Inpatient Care, Continuous Home Care, and Inpatient Respite Care Utilization

Medicare Conditions of Participation require hospices to demonstrate that they are able to provide all four levels of care—Routine Home Care (RHC), General Inpatient Care (GIP), Continuous Home Care (CHC) and Inpatient Respite Care (IRC) to be a certified Medicare hospice provider. As stated in our regulations at § 418.302(b)(4), a GIP day is a day in which an individual who has elected hospice care, receives general inpatient care in an inpatient facility for pain control or acute or chronic symptom management which cannot be managed in other settings. For FY 2014, the

payment rate for GIP was \$694.19 per day compared to \$156.06 for a day of RHC.

While the goal of hospice care is to allow for the individual to remain in his or her home environment, circumstances during the end-of-life may necessitate short-term inpatient admission to a hospital, skilled nursing facility (SNF), or hospice inpatient facility for procedures necessary for pain control or acute or chronic symptom management that cannot be managed in any other setting. These acute hospice care services are to ensure that any new or worsening symptoms are intensively addressed so that the individual can return to his or her home environment under a home level of care.

As part of our reform work, we analyzed CY 2012 data to better understand GIP utilization. We found that 77.3 percent of beneficiaries did not have any GIP care in 2012. Using provider-level data for beneficiaries discharged in 2012, we also found that 21.1 percent of hospices did not provide GIP care to any of their beneficiaries. While there are appropriate circumstances where a hospice provides no GIP (for example, when a provider only has a few patients, none of whom needs GIP), we are concerned that more than a fifth of hospices not providing any GIP may be an indication that hospice beneficiaries do not have adequate access to a necessary level of care for acute or chronic symptom management. We also found that there were site of service differences such that the longest GIP length of stay was in the inpatient hospice setting (6.1 days) and shortest at in the inpatient hospital setting (4.5 days). Over two-thirds of GIP days were provided in an inpatient hospice setting (68 percent), and about a quarter of GIP days were provided in an inpatient hospital (24.9 percent). Only 5.5 percent of GIP days were provided in a SNF.

As stated in our regulations at § 418.302(b)(2), a continuous home care day is a day on which an individual who has elected to receive hospice care, is not in an inpatient facility, and receives hospice care consisting predominantly of nursing care on a continuous basis at home. Home health aide (also known as a hospice aide) or homemaker services, or both, may also be provided on a continuous basis. Continuous home care is only furnished during brief periods of crisis as described in § 418.204(a), and only as necessary to maintain the terminally ill patient at home. Continuous home care may be covered on a continuous basis for as much as 24 hours a day, and these periods must be predominantly nursing

care per our regulations at § 418.204. A minimum of 8 hours of care must be furnished on a particular day to qualify for the continuous home care rate (§ 418.302(e)(4)).

As part of our reform work, we analyzed CY 2012 data to better understand CHC utilization. Overall, approximately 0.4 percent of all hospice days in 2012 were billed as CHC, but that percentage decreases to 0.2 when a large chain provider with a large percentage of its hospice days billed as CHC days was excluded. Although 42.7 percent of hospices billed at least 1 day of CHC, we found considerable variation in the share of CHC days among hospices that provided any CHC. Almost 90 percent of hospices that provided any CHC had less than 1 percent of their days billed as CHC, but four hospices billed more than 10 percent of their days as CHC. Forty hospices accounted for 46 percent of all CHC days and a single hospice accounted for over a quarter of all CHC days. Among hospices who billed for providing CHC, 9.4 percent provided over half of their CHC days to beneficiaries residing in a nursing home. For CHC, a hospice must provide a minimum of 8 hours of care during a 24-hour day, which begins and ends at midnight.

Finally, we analyzed inpatient respite care (IRC) utilization in CYs 2005 through 2012. IRC is provided in an approved facility, as needed, on an occasional basis to relieve the family caregivers for up to 5 consecutive days. Payment for IRC is subject to the requirement that it may not be provided consecutively for more than 5 days at a time. As stated in our regulations at § 418.302(e)(5), payment for the sixth and any subsequent day of respite care is made at the routine home care rate. Overall, while the percentage of beneficiaries receiving at least 1 day of IRC care increased from 1.44 percent in CY 2005 to 3.4 percent in CY 2012, only a small percentage of beneficiaries utilize IRC. We also found that 26 percent of hospices did not bill for any IRC days in CY 2012. IRC is a critical part of the Medicare hospice benefit, providing vital support and relief to the patient's caregiver and family. We will continue to monitor utilization of IRC level of care, over time, to ensure beneficiaries receiving hospice care have access to respite services for their caregivers.

The variation in the provision of GIP, CHC, and IRC could suggest that the level of hospice care that a beneficiary receives may not always be driven by patient factors. Medicare Conditions of Participation require hospices to

⁴ The provider-level analysis conducted on whether skilled visits were provided in the last two days of life only examined instances where the decedent was receiving routine home care in the last two days of life. We note that 21 providers did not have any decedents that died while on routine home care.

demonstrate that they are able to provide all four levels of care—RHC, GIP, CHC, and IRC—in order to be a certified Medicare hospice provider. We will continue to monitor GIP, CHC, and IRC use to identify hospices with aberrant utilization patterns, to identify hospices that may be in violation of the CoPs or of payment regulations, and to refer hospices identified through our analysis to Survey and Certification, to the Office of Financial Management, and to the Center for Program Integrity for further investigation.

3. Hospice Live Discharges

Currently, federal regulations allow a patient who has elected to receive Medicare hospice services to revoke that election at any time. That patient may re-elect hospice benefits at any time for any other election period that is still available. However, federal regulations provide limited opportunity for a Medicare hospice provider to discharge a patient from its care. In accordance with 418.26, discharge from hospice care is permissible when the patient moves out of the provider's service area, is determined to be no longer terminally ill, or for cause. Hospices may not automatically or routinely discharge the patient at its discretion, even if the care may be costly or inconvenient. Neither should the hospice request or demand that the patient revoke his/her election.

Our regulations also state that if the hospice patient (or his/her representative) revokes the hospice election, Medicare coverage of hospice care for the remainder of that period is forfeited. The patient may, at any time, re-elect to receive hospice coverage for any other hospice election period that he or she is eligible to receive (§ 418.28(c)(3) and § 418.24(e)). During the time period between revocation/discharge and the re-election of the hospice benefit, Medicare coverage would resume for those Medicare benefits previously waived.

Prior to 2012, claims data provided limited information about the reason a hospice patient was discharged from a hospice's care. Starting July 1, 2012, the discharge information collected on the Medicare claim was expanded to capture the reason for all types of discharge, that is, if the discharge was due to a death, revocation, transfer to another hospice, moving out of the hospice's service area, discharge for cause, or due to the patient no longer being considered terminally ill (that is, no longer qualifying for hospice services). Between 2000 and 2012, the overall rate of live discharges increased from 13.2 percent of hospice discharges to 18.1 percent in 2012. In 2010, the rate

of live discharges varied by state (from 12.8 percent in Connecticut to 40.5 percent in Mississippi) and by hospice provider (from a 25th percentile of 9.5 percent to 75th percentile of 26.4 percent). Furthermore, analysis of our provider-level file shows that of the 3,702 hospices in our file, 71 hospices had a live discharge on 100 percent of their beneficiaries. The average lifetime length of stay for these hospices was 193 days compared to the national average lifetime length of stay of 95.4 days (among beneficiaries who were discharged alive or deceased in CY 2012). We have shared this information with the Office of Financial Management and with the Center for Program Integrity for their review and follow-up.

One study of hospice live discharges in cancer patients noted that smaller hospices and for-profit hospices had a higher rate of hospice live discharges.⁵ Our subcontractors at Brown University studied 2010 hospice live discharges among all diagnoses, finding that not-for-profit hospice programs had a lower rate of hospice live discharges than for-profit hospice programs (14.6 percent vs. 22.4 percent, $p < .001$). Small for-profit hospices in operation 5 years or less had a higher rate of hospice live discharges compared to older, for-profit hospices (31.5 percent vs. 12.8 percent, $p < .001$). We are also concerned over patterns of revocations and elections of the Medicare hospice benefit for the purpose of potentially avoiding costly hospitalizations, expensive procedures, drugs, or services. In 2010, 13,770 out of the 182,172 live discharges had a pattern of hospice discharge, hospital admission, and hospice readmission. These cases accounted for \$126 million dollars in Medicare payments for the hospitalization between hospice election periods. Nearly half of these Medicare payments are accounted for in ten states with the highest rate of this pattern of discharges (that is, MS, OK, AL, SC, MD, VA, TX, NJ, GA, and LA accounted for \$56.0 million dollars of the hospitalization costs).

We understand that the rate of live discharges should not be zero, given the uncertainties of prognostication and the ability of patients and their families to revoke the hospice election at any time. However, Medicare hospice care is a comprehensive patient and family focused care model designed to optimize quality of life by anticipating, preventing, and treating pain and

⁵ Carlson MD, Herrin J, Du Q, et al. Hospice characteristics and the disenrollment of patients with cancer. *Health Serv Res.* Dec 2009;44(6):2004–2021.

symptoms. We are concerned that patterns of discharge, hospital admission, and hospice readmission do not provide a comprehensive, coordinated care experience for terminally ill patients.

4. Non-hospice Spending for Hospice Beneficiaries During an Election

When a beneficiary elects the Medicare hospice benefit, he or she waives the right to Medicare payment for services related to the terminal illness and related conditions, except for services provided by the designated hospice and the attending physician. However, Medicare payment is allowed for covered Medicare items or services which are unrelated to the terminal illness and related conditions. When a hospice beneficiary receives items or services unrelated to the terminal illness and related conditions from a non-hospice Part A or Part B provider, that provider can bill Medicare for the items or services, but must include on the claim a GW modifier (if billed on a professional claim) or condition code 07 (if billed on an institutional claim). When a hospice beneficiary with Part D coverage receives medications unrelated to the terminal illness and related conditions, Prescription Drug Events (PDEs) are billed to Part D and do not require a modifier or a condition code.

In follow up to our initial analysis of hospice drugs being paid through Part D (78 FR 48245–48246), we analyzed the magnitude of Medicare spending outside of the hospice benefit for items or services provided to hospice beneficiaries during a hospice election from Parts A, B, and D. In CY 2012, we found that Medicare paid \$710.1 million for Part A and Part B items or services while a beneficiary was receiving hospice care. We estimated that 76.5 percent of the \$710.1 million included either a GW modifier or a condition code 07 on the claim, which indicated that the services identified by the provider or supplier as unrelated to the terminal illness and related conditions. The remaining 23.5 percent of this \$710.1 million was for claims without a GW modifier or condition code 07, some of which may have been processed due to late filing of the notice of election (NOE).

The \$710.1 million paid for Part A and Part B items or services was for durable medical equipment (7.0 percent), inpatient care (care in long-term care hospitals, inpatient rehabilitation facilities, acute care hospitals; 28.6 percent), outpatient Part B services (16.9 percent), other Part B services (also known as physician, practitioner and supplier claims, such

as labs and diagnostic tests, ambulance transports, and physician office visits; 37.4 percent), skilled nursing facility care (5.7 percent), and home health care (4.5 percent). Part A and Part B non-hospice spending occurred mostly for hospice beneficiaries who were at home (43.3 percent). We also found that 28.3 percent of hospice beneficiaries were in a nursing facility, 14.1 percent were in an inpatient setting, 10.2 percent were in an assisted living facility, and 4.1 percent were in other settings. Although the average daily rate of expenditures outside the hospice benefit was \$7.91, we found differences amongst states where beneficiaries receive care. The highest rates per day occurred for hospice beneficiaries residing in West Virginia (\$13.91), or in the South (Florida (\$13.17), Texas (\$12.45), Mississippi (\$11.91), and South Carolina (\$10.16)).

Another area of concern in high non-hospice Medicare spending occurring during a hospice election is hospital emergency department (ED) visits and observation stays. Ninety-five percent of these ED visits and observation stays were billed and paid outside of the hospice benefit with condition code 07

on the claim. Using data on CY 2010 hospice admissions, followed through discharge or December 31, 2011 (whichever came first), we found that 8.8 percent of hospice beneficiaries had a total of 87,720 ED visits/observation stays billed to Medicare during their hospice election, at a cost of \$268.4 million. The majority of these beneficiaries (77.6 percent) only experienced a single ED visit/observation stay, but 20.9 percent had between 2 and 4 ED visits/observation stays during their election, and 1.4 percent had more than 5 ED visits/observation stays during their hospice election. Although some beneficiaries may go directly to the ED rather than contacting the hospice first, 22.3 percent had 2 or more ED visits; these results may indicate that the hospice is not aware of the beneficiary's condition, the hospice is not being responsive to beneficiary needs, or related conditions are being treated as if they were unrelated. Most ED visits/observation stays occurred in younger beneficiaries with non-cancer diagnoses, in beneficiaries in newer hospices, and in beneficiaries receiving care in the

South, with Mississippi and Oklahoma having the highest rates (21.1 and 20.5 ED visits/observation stays per 100 hospice admissions, respectively). The most frequently occurring Diagnosis Related Groups (DRGs) associated with these ED visits/observation stays were septicemia or severe sepsis, kidney and urinary tract infections, hip and femur procedures, simple pneumonia and pleurisy, and gastrointestinal hemorrhage. Some of these frequently occurring DRGs are conditions which are common at end-of-life, and could be attended to in the home or with a GIP level of care. This raises concerns about whether the ED visits/observation stays were actually related to the terminal illness and related conditions and should have been covered by the hospice.

In addition to analyzing data from Parts A and B of Medicare, we analyzed CY 2012 Part D data which showed \$417.9 million in total drug spending by Medicare, states, beneficiaries, and other payers, for hospice beneficiaries during a hospice election. Table 4 details the various components of Part D spending.

TABLE 4—DRUG COST SOURCES FOR HOSPICE BENEFICIARIES' 2012 DRUGS RECEIVED THROUGH PART D

Component	Description	\$ Total expenditures
Patient Pay Amount	The dollar amount the beneficiary paid that is not reimbursed by a third party	\$48,191,067
Low Income Cost-Sharing Subsidy	Medicare payments to plans to subsidize the cost-sharing liability of qualifying low-income beneficiaries at the point of sale.	117,558,814
Other True Out-of-Pocket Amount	Records all other third-party payments on behalf of beneficiary. Examples are state pharmacy assistance programs and charities.	2,366,896
Patient Liability Reduction due to Other Payer Amount.	Amount patient liability reduced due to other benefits. Examples are Veteran's Administration and TRICARE.	3,120,834
Covered Drug Plan Paid Amount	Contains the net amount the plan paid for standard benefits	217,370,068
Non-Covered Plan Paid Amount	Contains the net amount the plan paid beyond standard benefits. Examples include supplemental drugs, supplemental cost-sharing, and OTC drugs paid under plan administrative costs.	16,985,982
Components' Total	405,593,660
Unknown	Unreconciled/Unreported Difference between total Gross Drug Costs and Reported payer sources (includes sales taxes, drug dispensing fees, and drugs' ingredient costs).	12,307,603
Gross Total Drug Costs, Reported	417,901,263

Source: Abt Associates analysis of 100% 2012 Medicare Claim Files. For more information on the components above and on Part D data, go to the Research Data Assistance Center's (ResDAC's) Web site at <http://www.resdac.org/>.

The portion of the \$417.9 million total Part D spending which was paid by Medicare is the sum of the Low Income Cost-Sharing Subsidy and the Covered Drug Plan Paid Amount, or \$334.9 million.

Medicare Spending: In total, actual non-hospice Medicare expenditures occurring during a hospice election in CY 2012 were \$710.1 million for Parts A and B spending, plus \$334.9 million for Part D spending, or approximately

\$1 billion dollars. This figure is comparable to the estimated \$1 billion MedPAC reported during its December 2013 public meeting.⁶ Associated with this \$1 billion in Medicare spending were cost sharing liabilities such as co-payments and deductibles that beneficiaries incurred. Hospice

⁶ MedPAC, "Assessing payment adequacy and updating payments: hospice services", December 13 2013. Available at: http://www.medpac.gov/transcripts/hospice_December2013_Public.pdf.

beneficiaries had \$135.5 million in cost-sharing for items and services that were billed to Medicare Parts A and B, and \$48.2 million in cost-sharing for drugs that were billed to Medicare Part D, while they were in a hospice election. In total, this represents a 2012 beneficiary liability of \$183.7 million for Parts A, B, and D items or services provided to hospice beneficiaries during a hospice election. Therefore, the total non-hospice costs paid by Medicare or

due from beneficiaries for items or services provided to hospice beneficiaries during a hospice election were over \$1.2 billion in CY 2012.

All-Payer Spending: Under Part D, gross covered drug cost on a claim includes the amount paid by the Part D plan, the beneficiary's cost sharing, and any amounts paid by others on the beneficiary's behalf. These latter amounts include the low-income subsidy amount paid by Medicare for beneficiaries who are subsidy-eligible, amounts paid by other payers whose payments can be counted toward the beneficiary's true out-of-pocket (TrOOP) costs, and amounts paid by others whose payments, though not TrOOP-eligible, reduce the amount of the beneficiary's liability. Accumulated gross covered drug costs are used to establish the beneficiary's position in the benefit. That is, these costs determine when the beneficiary has met a plan's deductible, if any, and moves into the initial coverage period, and when his or her initial coverage period ends and the coverage gap begins. TrOOP, whether paid by the beneficiary or on the beneficiary's behalf by a TrOOP-eligible payer, determines when

the beneficiary has met the annual out-of-pocket threshold and moves into the catastrophic phase of the benefit. Thus, administration of the Medicare prescription drug benefit is dependent upon both gross covered drug costs and TrOOP. As such, we are also describing total non-hospice Part D spending, both Medicare and non-Medicare. Non-hospice Part D spending for hospice beneficiaries during a hospice election was incurred by Medicare, by States, by the Veterans Administration, by TRICARE, by charities, and by other payers, in addition to the cost-sharing liabilities incurred by beneficiaries.

Part D spending by all-payers that occurred for hospice beneficiaries during a hospice election, including beneficiary cost-sharing, totaled \$417.9 million in CY 2012. If this is added to the \$710.1 million in Medicare spending for Parts A and B, and \$135.5 million in cost sharing for Parts A and B, total non-hospice costs are \$1.3 billion. We do not have data on other payers' spending for Part A or Part B services. Of note, 51.6 percent of this \$1.3 billion is associated with 373 hospices, with an average total per

beneficiary of \$1,289 in non-hospice costs.

For the current guidance regarding the coordination between Part D sponsors and hospices, we refer readers to visit the Hospice Center Web page's Spotlight section or the Coordination of Benefit section at: <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html>.

The dollars spent by Part D and by beneficiaries for drugs covered outside of the hospice benefit for hospice beneficiaries during a hospice election raise concerns about whether some of these drugs should have been paid for by the hospice. We examined drug costs incurred by hospices from 2004 to 2012, using hospice cost report data adjusted to constant 2010 dollars. We saw a declining trend in the drug costs per patient day, with costs declining from a mean of \$20 per patient-day in 2004 to \$11 per patient-day in 2012 (see Table 5 below). We recognize that many hospices have become more efficient in their operations, but we are concerned that the decline in drug costs is of a magnitude that could suggest that some hospices are not providing, and thus are not incurring the costs for, all needed patient medications.

TABLE 5—COSTS PER PATIENT-DAY BY YEAR, 2010 DOLLARS

	2004	2005	2006	2007	2008	2009	2010	2011	2012

Source: Freestanding hospice cost reports with HCRIS release date of 1/23/2014. The costs are averaged at the provider-level and adjusted to constant 2010 dollars using the Producer Price Index for prescription pharmaceuticals.

Notes: We excluded cost reports with period less than 10 months or greater than 14 months, missing information or negative reported values for total costs or payments, were in the top and bottom 1% of cost per day, were in the top and bottom 5% of provider margins, and where the aggregate of cost centers does not equal total costs as reported.

We will continue to monitor non-hospice Medicare spending for beneficiaries during hospice elections.

B. Solicitation of Comments on Definitions of “Terminal Illness” and “Related Conditions”

1. The Development of the Medicare Hospice Benefit

Dame Cicely Saunders introduced the idea of hospice care in the United States during a lecture at Yale University in 1963. During the same decade, the international best-seller, *On Death and Dying*, published in 1969, by Dr.

Elisabeth Kubler-Ross, helped to bring death out of secrecy and brought new public awareness and discussion about dying to health care policymakers. Her interviews with over 500 dying patients shed new light on the dying process, as well as the needs and treatment wishes of those who were at the end-of-life. Her hallmark work argued for end-of-life care provided in the home, rather than in an institution, and stressed the importance of patients' being an integral part of their treatment decision-

making.⁷ In 1970, there were no formal hospice programs in the United States. However, healthcare providers started to recognize the need for a care delivery model to address the needs of those individuals who no longer wanted to seek out the aggressive, medical, curative model of healthcare for advancing illnesses and injuries. They also focused on a care delivery model that would provide pain and symptom relief that would offer an alternative to

⁷ Story, P., Knight, C. (2004). *The Hospice/Palliative Medicine Approach to End-of-Life Care*, 2nd ed. UNIPAC One.

hospitalization and would focus on the “total person,” as he or she approached the end-of-life. The hospice model of care, which had been previously introduced to the United States by Cicely Saunders, was viewed to be the type of care delivery model that could offer those services.

In 1972, Dr. Elisabeth Kubler-Ross testified at the first national hearings on the subject of death with dignity, conducted by the U.S. Senate Special Committee on Aging, and the first hospice legislation was introduced in the United States Senate, but was not enacted.⁸ Florence Wald, the Dean of the Yale School of Nursing, who attended the 1963 lecture given by Cicely Saunders, along with two pediatricians and a chaplain, founded the first United States hospice, Connecticut Hospice, in 1974. Ongoing meetings between hospice providers and hospice leaders evolved into the formation of the National Hospice Organization in 1978 (now called the National Hospice and Palliative Care Organization, or NHPCO). The first “Standards of a Hospice Program of Care” were published by National Hospice Organization in 1979. Even during the early stages of hospice development, hospice leaders were working with key legislative leaders to develop a system to reimburse hospice care in the United States.⁹ However, it was evident that before governmental reimbursement could occur, data had to be collected and analyzed to demonstrate what hospices actually provided and what costs were involved in rendering hospice care. The Health Care Finance Administration (HCFA)—now known as the Centers for Medicare & Medicaid Services (CMS)—conducted a national demonstration of 26 hospices throughout the country to study the effect of reimbursed hospice care. The results of this demonstration, as well as those sponsored by the private health insurance sector and private foundations, and along with the testimony of multiple hospice industry leaders, legislators and hospice families, helped to form the structure of the Medicare Hospice Benefit.

During Congressional committee hearings regarding the development of a Medicare hospice benefit, testimony by Paul Willging, deputy administrator of HCFA, expressed caution about embracing benefit expansions that could

lead to unexpected consequences and said that HCFA “must clearly define what we would pay for and to whom, in order to meet our responsibilities to patients, providers and the taxpayers.”¹⁰ Other stakeholders agreed that a Medicare hospice benefit needed to be structured to promote an optimum movement from a point of view of controlling costs and offering the most appropriate means of service without the development of a system that focused on just getting maximum reimbursement from Medicare. Stakeholders also agreed that unique characteristics of hospice care should be maintained. The goal was not to have the Federal government provide total support to hospice programs; rather, legislation would be enacted that would supplement the continued support of the local community, private sector and other resources which allow hospices to maintain their unique identity, spirit of volunteerism and altruistic focus.¹¹ The National Hospice Organization president, Dr. Edwin Olsen, testified at the March 25, 1982 Congressional hearing that, at that time, most American hospices were community charities by design and intent, and that hospice offered an integrated service. Hospices functioned not as an add-on, but as a comprehensive alternative to the typical ways of caring for the terminally ill and their families. The hospice industry, as discussed in Dr. Olsen’s testimony, was very clear that their goal was to maintain that alternative service for those who were approaching end-of-life.

Hospice industry leaders also expressed the importance of hospice program accountability. Hospices would be accountable for and be able to control the quality and delivery of patients admitted for hospice care, instead of having to “broker” the patients out to other providers for reimbursement and convenience.¹² Hospice advocates stressed the importance of maintaining continuous clinical control over all aspects of care to ensure a successful hospice program and framers of the benefit recognized this fact by requiring professional management

responsibility.¹³ Although there were ongoing concerns by HCFA, the Congress, and the hospice industry about the potential misuse of a new hospice benefit,¹⁴ Section 122 of the Tax Equity and Fiscal Responsibility Act (TEFRA) of 1982 (Pub. L. 97–248, enacted on September 3, 1982) expanded the scope of Medicare benefits by authorizing coverage for hospice care for terminally ill beneficiaries.

2. Legislative History of the Medicare Hospice Benefit

After Medicare coverage of hospice care was authorized by the Congress, the General Accounting Office (now Government Accountability Office, or GAO) summarized the legislative intent of the Medicare hospice benefit in a July 13, 1983 letter. In this letter, the GAO acknowledged that there was no standard definition of what a hospice was or what services an organization must provide to be considered a hospice. However, the GAO stated that it was generally agreed upon that the hospice concept in the United States is one program of care in which an organized interdisciplinary team systematically provides palliative care (relief of pain and other symptoms) and supportive services to patients with terminal illnesses.¹⁶ This letter further stated that the hospice objective is to make a patient’s remaining days as comfortable and meaningful as possible and to help the family cope with the stress by making the necessary adjustments to the changes in the patient’s illness and death. The GAO letter also reiterated that hospices must directly provide certain core services including nursing care, physician services and counseling services and must either directly, or through arrangements, provide physical therapy, occupational therapy, speech-language pathology, home hospice aides, homemaker services, drugs, medical supplies and appliances and short-term inpatient care. The letter concluded by stating that the Congress would continue to monitor the effectiveness of

the hospice demonstration program, which was ongoing at the time of enactment, the equity of the reimbursement system, method and benefit structure put into effect under the hospice provision, including the feasibility and advisability of a prospective reimbursement system for hospice care and other aspects of the hospice program.¹⁷

Further description of the Medicare hospice benefit design was provided in a report prepared by the Congressional staff for the Senate Committee on Finance on September 9, 1983. In this report, four basic principles were presented, which according to hospice advocates, distinguish hospice care from the traditional health care system:

1. The patient and his/her family are considered the unit of care.
2. A multidisciplinary team is used to assess the physical, psychological and spiritual needs of the patient and family to develop an overall plan of care and to provide coordinated care.
3. Pain and collateral symptoms associated with the terminal illness and previous treatments are controlled, but no heroic efforts are made to cure the patient.
4. Bereavement follow-up is provided to help the family cope with their emotional suffering.¹⁸

It was also noted that the statute provides that an individual, upon making an election to receive hospice coverage, would be deemed to have waived payments for certain other benefits in addition to choosing a palliative mode of treatment, except in "exceptional and unusual circumstances" as the Secretary may provide (section 1812(d)(2)(A) of the Act). Furthermore, the hospice plan of care must include assessment of the individual's needs and identification of the services to meet those needs including the management of discomfort and symptom relief.

Several Senators testified at a September 15, 1983 Hearing before the Subcommittee on Health of the Committee on Finance regarding ongoing concerns with the new Medicare hospice benefit. These Senators made it clear that the new healthcare delivery system—hospice—was to offer an alternative to institutionalized care for the terminally ill. Concerns were expressed over the

possibility that "store front" hospices would crop up as a result of Medicare reimbursement being made available for this service. The Senators stated that they wanted to maintain flexibility within the benefit without creating incentives for fraud and abuse.¹⁹ Similarly, industry advocates were also concerned that availability of Medicare reimbursement would attract interest from those simply interested in a new source of revenue. The hospice industry agreed that the Medicare hospice benefit was created, not as a new revenue source for providers, but as a benefit choice for patients and their families.²⁰ Terminally ill Medicare beneficiaries could decide not to elect hospice care, and they would continue to be able to receive all other Medicare services available, such as home health services that include skilled nursing and home health aide care, inpatient hospital services, supplies, medications, and DME. For example, in response to recent home health rulemaking, we received anecdotal comments that some home health agencies are providing palliative care to homebound terminally ill individuals who have not elected the hospice benefit. In those instances, the patient is receiving home health aide services, nursing care, and supplies needed under the home health benefit, and the DME and medications that the patient needs are still covered under Medicare Parts B and D. However, we note that, with the exception of home health, these services typically have associated co-payments and would be rendered through various different providers or suppliers, perhaps with a lack of continuity and coordination that would be provided under the Medicare hospice benefit. Under the Medicare hospice benefit, the hospice-eligible individual would receive all of those services, and more, with the hospice provider assuming the clinical and professional responsibility of coordinating all of the necessary care and services with minimal beneficiary cost sharing required outside of the hospice benefit.

3. Hospice Care Today

The Medicare hospice benefit was a unique addition to the U.S. health care system. Prior to the implementation of

the Medicare hospice benefit, the government reimbursed providers based on the cost of delivering care. Reimbursement under the Medicare hospice benefit is a fixed, per day, per level of care prospective payment structure. By creating a fixed payment for hospice care, the provider is at risk for costs that exceed the payment amount; and, if the fixed payment exceeds the cost of care, the hospice is allowed to keep the gain. Under the Medicare hospice benefit, the provider has clinical flexibility in how hospices can render care to best meet the needs of the individual patient and his or her family. This is viewed as a joint partnership between the providers of care and the federal government to provide services and the financial payment for those services for those who are dying. Hospice advocates, during the development of the benefit, welcomed this type of reimbursement structure for the flexibility it afforded in providing individualized hospice services.²¹ The hospice industry continues to recognize that the Medicare hospice benefit has always been a risk-based clinical and economic model of care stating that the fixed reimbursement model means "a fixed sum for all-inclusive end of life care."²² Similar to the more recent medical home model for primary care, hospice has always been patient-centered, comprehensive, team-based, coordinated, accessible, focused on quality and safety, and extends throughout the continuum of care.

Throughout the development of the Medicare hospice benefit, experts in the hospice field believed that the success or failure of hospice, under Medicare, would depend on the hospice plan of care, appropriate implementation of the plan of care, and the hospice team sharing the same philosophy of patient-centered, comprehensive, and holistic care.²³ A coordinated, collaborative approach to each and every hospice patient and his or her family was considered to be the most important component of the success of the Medicare hospice benefit.²⁴ During the

development of the Medicare hospice benefit, there were concerns by both the Congress and the hospice industry regarding the potential for fraud and abuse by some providers resulting from the enactment of a Medicare hospice benefit.²⁵ One drafter of the legislation expressed that he wanted to maintain benefit flexibility by allowing hospices to render individualized care, promoting access to needed services, and providing high quality care while maintaining fiscal integrity of the Medicare Trust Funds.²⁶ This was a benefit founded in trust—trust that hospices would provide the comprehensive care and services promised during the benefit development and trust that Medicare would be a partner in helping to share the costs.²⁷ It was very clear throughout the development, and years after the implementation of the Medicare hospice benefit, that hospices were expected to make good on their promise to do a better job than conventional Medicare services for those who were at end-of-life.²⁸ Deliberately, the law made no provision for discharging a hospice patient except under very limited circumstances and only after making attempts to rectify those circumstances.²⁹ This meant that once a beneficiary elected hospice and was under one of the three 60-day election periods, a hospice could not just discharge a patient for the sake of cost or convenience. Currently, there are two 90-day election periods and unlimited 60-day election periods, as long as the beneficiary continues to meet eligibility criteria. However, hospices are still limited in the reasons for discharge, and still cannot discharge a hospice

beneficiary for cost or convenience. Our regulations at § 418.26(a) state the reasons a hospice can discharge a beneficiary from hospice services.

Since the implementation of the Medicare hospice benefit, hospice utilization continues to grow. More Medicare beneficiaries are becoming aware and educated of the benefits of hospice care. In recent years, the percentage of Medicare deaths for patients under a hospice election has increased from 20 percent in 2000 to 44 percent in 2012. Total expenditures have increased from over \$9.2 billion in 2006 to over \$15.1 billion in 2013. This observed growth far outpaces the annual market basket increases and is not solely reflective of an increase in utilization. We note that average spending per beneficiary has increased substantially between 2006 and 2013 from approximately \$9,833 in 2006 to \$11,458 in 2013.³⁰

Section 3132(a) of the Affordable Care Act provides statutory authority for CMS to reform the hospice payment system no earlier than October 1, 2013. We presented data in the FY 2014 Hospice Wage Index and Payment Rate Update Final Rule, regarding diagnosis reporting on hospice claims and opioids paid under Part D for beneficiaries in a hospice election (78 FR 48234). Recent analysis of other Part A, Part B and Part D spending in 2012 (including beneficiary cost-sharing payments of \$135.5 million for Parts A and B and \$48.2 million for Part D) shows that there was an additional \$1 billion in total Medicare spending during a hospice election (see section III.A.4). This includes Part A payments for inpatient hospitalizations and SNF stays, as well as Part B payments for outpatient and physician services, diagnostic tests and imaging, and ambulance transports. There is concern that many of these services should have been provided under the Medicare hospice benefit as they very likely were for services related to the terminal illness and related conditions. This strongly suggests that hospice services are being “unbundled”, negating the hospice philosophy of comprehensive, holistic care and shifting the costs to other parts of Medicare, and creating additional cost-sharing burden to those vulnerable Medicare beneficiaries who are at end-of-life. Duplicative payments for hospice-covered services also threaten the program integrity and fiscal viability of the hospice benefit.

³⁰ Calendar year 2013 expenditures and average spending per beneficiary were calculated using hospice claims data from the Chronic Conditions Data Warehouse (CCW), accessed on February 27, 2014.

Reports by both the Medicare Payment Advisory Committee (MedPAC) and the Office of the Inspector General (OIG) expressed similar concerns regarding the unbundling of services meant to be covered under the hospice per diem, capitated payment system. Similar to the analysis presented above, MedPAC also analyzed non-hospice utilization and spending patterns through Parts A, B and D for Medicare hospice beneficiaries. MedPAC also concluded that over \$1 billion FFS spending was attributed to providing services reported as unrelated to the terminal conditions of hospice enrollees. MedPAC went on to state that 58 percent of Medicare hospice enrollees received a service or drug outside of the hospice benefit over the course of a hospice episode. The highest shares of spending were on drugs and inpatient services.³¹ In addition, the OIG reported in June of 2012 that Medicare could be paying twice for prescription drugs for beneficiaries receiving services under the Medicare hospice benefit and recommended that CMS increase its oversight to make sure that Part D is not paying for medications already included in the Medicare hospice per diem payment rates.³² As a result of the OIG report, the CMS' Center for Program Integrity (CPI) began recoupment efforts for analgesics from Part D plan sponsors.

Ongoing Part D memo guidance has also been issued to clarify existing coverage and payment policies. All Part D memo guidance can be found on the Hospice Center Web page under “Coordination of Benefits” at <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html>. In addition, the proposed rule solicited comments on processes that could be developed to address the inappropriate Part D reimbursement for medications that should be covered under the Medicare hospice per diem (see Section III.I). The purpose of these Part D guidance memos, in response to OIG reports of possible duplication of payment for drugs under the hospice per diem and Part D plans, was to outline the expectations regarding coordination of benefits and coverage responsibility between Part D plan sponsors and hospices. The ongoing concern is that

hospices are not providing the broad range of medications required by hospice beneficiaries during a hospice election, especially for those drugs classified as analgesics, antianxiolytic, antiemetics and laxatives (generally considered essential medications for palliation in a hospice population).³³ Comments received, regarding this memo guidance, highlighted that there are multiple interpretations as to the meaning of what are considered “related conditions.” Additionally, it was noted in these comments that the terms, “terminal illness”, “terminal diagnosis”, “qualifying terminal diagnosis”, and “terminal prognosis” were used interchangeably and with varying interpretations as to their meanings.

We believe the summary of the “Development of the Hospice Benefit” and the “Legislative history of the Medicare Hospice Benefit” clearly captures the expectation that hospices are to provide holistic and comprehensive services under the Medicare hospice benefit. As stated in the 1983 proposed and final rules, and reiterated in the FY 2014 Hospice Wage Index and Rate Update proposed and final rules: “It is our general view that the waiver required by law is a broad one and that hospices are required to provide virtually all of the care that is needed by terminally ill patients” (48 FR 56010). Our expectation continues to be that hospices offer and provide comprehensive, virtually all-inclusive care, and with a patient-centered approach. In order to preserve the Medicare hospice benefit and ensure that Medicare beneficiaries continue to have access to comprehensive, high-quality and appropriate end-of-life hospice care, we will continue to examine program vulnerabilities and implement appropriate safeguards in the Medicare hospice benefit, when appropriate.

4. Definition of “Terminal Illness”

Since the implementation of the Medicare hospice benefit, we have defined a “terminally ill” individual to mean “that the individual has a medical prognosis that his or her life expectancy is 6 months or less if the illness runs its normal course” (§ 418.3). We have always interpreted “terminally ill” to mean a time frame of life expectancy and expect that the individual’s whole condition plays a role in that prognosis. Comments received in response to prior years’ proposed rules state that longstanding, preexisting conditions

should not be considered related to a patient’s terminal illness or related conditions and that chronic, stable conditions play little to no role in a patient’s terminal illness or related conditions. Commenters have also stated that controlled pain and symptoms are not considered to be related to a patient’s terminal illness or related conditions, that not all pain is related to the terminal illness and related conditions, and that comorbidities and the maintenance of comorbidities are not related to a patient’s terminal illness or related conditions. These commenters believed these types of conditions should not be included in the bundle of services covered under the Medicare hospice benefit. As previously stated in response to those comments, we believe these conditions are included in the bundle of covered hospice services. The original implementing regulations of the Medicare hospice benefit, beginning with the 1983 Hospice proposed and final rules (48 FR 38146 and 48 FR 56008), articulate a set of requirements that do not delineate between pre-existing, chronic, or controlled conditions. To be eligible to receive hospice services under the Medicare hospice benefit, the individual must be entitled to Part A and must be certified as being terminally ill, meaning that his or her medical prognosis is a life expectancy of 6 months or less if the illness runs its normal course. We have recognized throughout the federal regulations at 42 CFR Part 418 that the total person is to be assessed, including acute and chronic conditions, as well as controlled and uncontrolled conditions, in determining an individual’s terminal prognosis. All body systems are interrelated; all conditions, active or not, have the potential to affect the total individual. The presence of comorbidities is recognized as potentially contributing to the overall status of an individual and should be considered when determining the terminal prognosis. The National Hospice and Palliative Care Organization (NHPCO) defines “comorbidity,” as: “known factors or pathological disease impacting on the primary health problem and generally attributed to increased risk for poor health status outcomes.”³⁴

We have defined “palliative care”—the nature of the care provided under the hospice benefit—in our regulations

at § 418.3 to mean patient and family-centered care that optimizes quality of life by anticipating, preventing and treating suffering. Palliative care throughout the continuum of illness involves addressing physical, intellectual, emotional, social and spiritual needs and to facilitate patient autonomy, access to information and choice. Note that, in this definition, palliative care is to anticipate and prevent, as well as treat, suffering. This indicates that hospices are to be proactive in their care approach and not just reactive to pain and symptoms after they arise.

Because hospice care is unique in its comprehensive, holistic, and palliative philosophy and practice, we want to ensure that the hospice services under the Medicare hospice benefit are preserved and not diluted, or unbundled in any way. For context, the definition of illness means “an abnormal process in which aspects of the social, physical, emotional, or intellectual condition and function of a person are diminished or impaired compared with that person’s previous condition”.³⁵ An intensive review of the history of hospice, hospice philosophy and legislative actions described above provided the basis for discussion among several CMS clinical leaders across several agency components as to the meaning of “terminal illness” within the context of the Medicare hospice benefit. After a review of all of the history listed above, the clinical collaborative effort across CMS solicited comments on the following definition of “terminal illness”: “Abnormal and advancing physical, emotional, social and/or intellectual processes which diminish and/or impair the individual’s condition such that there is an unfavorable prognosis and no reasonable expectation of a cure; not limited to any one diagnosis or multiple diagnoses, but rather it can be the collective state of diseases and/or injuries affecting multiple facets of the whole person, are causing progressive impairment of body systems, and there is a prognosis of a life expectancy of 6 months or less”. We did not propose any definitions but asked for public input on this definition for possible future rulemaking.

5. Definition of “Related Conditions”

Section 1812(d)(2) of the Act provides that an individual, upon making an election to receive hospice coverage, would be deemed to have waived payments for certain other benefits

³³ World Health Organization. (January, 2013). Essential Medications in Palliative Care.

³⁴ National Hospice and Palliative Care Organization: “Standards of Practices for Hospice Programs”, 2010. Retrieved on February 20, 2014 from: <http://www.nhpco.org/nhpco-standards-practice>.

³⁵ Mosby’s Medical Dictionary, 8th edition, 2009, Elsevier.

except in “exceptional and unusual circumstances as the Secretary may provide.” Comments received on the 1983 Hospice proposed rule specifically asked for further CMS clarification regarding the concept of “related conditions.” Specifically, the commenters suggested a more detailed definition of what constitutes care for a patient’s terminal illness or related conditions (which is the responsibility of the hospice) and what constitutes care for unrelated conditions (for which out-of-hospice Medicare payment may be made) (48 FR 56010). Our response was: “. . . we have not received any suggestions for identifying ‘exceptional or unusual’ circumstances that warranted the inclusion of a specific provision in the regulations to accommodate them. Most of the comments that were made attempted to suggest this exception as a means of routinely providing non-hospice Medicare financing for the expense of costly services needed by hospice patients, and we do not view this as an appropriate interpretation of the law” (48 FR 56011). The law allows for circumstances in which services needed by a hospice beneficiary would be completely unrelated to the terminal illness and related conditions, but we believe that this situation would be the rare exception rather than the norm. We reiterated this position in the FY 2014 Hospice Wage Index and Rate Update proposed rule (78 FR 27826) as a reminder of the expectation of the holistic nature of hospice services that shall be provided under the hospice benefit, as well as to remind hospices about diagnosis reporting on hospice claims.

Therefore, in keeping with the tenets of hospice philosophy described in this section, the intent of the Medicare hospice benefit, expectations of comprehensive care, and in response to previous and ongoing stakeholder comments, the CMS clinical collaborative effort solicited comments on the following definition of “related conditions”: “Those conditions that result directly from terminal illness; and/or result from the treatment or medication management of terminal illness; and/or which interact or potentially interact with terminal illness; and/or which are contributory to the symptom burden of the terminally ill individual; and/or are conditions which are contributory to the prognosis that the individual has a life expectancy of 6 months or less.” We did not propose any new regulations but asked for public input on this definition for possible future rulemaking.

We received a significant number of comments representing diverse stakeholder groups on the definitions of “terminal illness” and “related conditions” and the impact it may have on the stakeholder groups whom provided comments. We will consider these comments and the issues raised for possible future rulemaking.

We also received several comments from End Stage Renal Disease (ESRD) stakeholder groups, noting that the solicitation of comments on the definition of “terminal illness” and “related conditions” would impede access to hospice services for ESRD beneficiaries with non-renal terminal conditions. These commenters stated that many hospices do not admit patients with ESRD because they do not want to bear the financial liability for covering dialysis. These commenters went on to say that if CMS proposes these definitions, that there should be an exception to allow those patients receiving dialysis to continue to do so under Part B while receiving hospice care under Part A. We would like to clarify that the solicitation of comments regarding the definitions of “terminal illness” and “related conditions” was not intended to address ESRD beneficiary access to hospice services with non-renal terminal conditions. As such, the current policy at Chapter 11 of the Medicare Benefit Policy Manual (Pub. 100–02), which states: “If the patient’s terminal condition is not related to ESRD, the patient may receive covered services under both the ESRD benefit and the hospice benefit. Hospice agencies can provide hospice services to patients who wish to continue dialysis treatment”, remains in effect.

C. Guidance on Determining Beneficiaries’ Eligibility for Hospice

An individual must be certified by the hospice medical director and the individual’s attending physician (if designated by the individual) as being terminally ill, meaning that the individual has a medical prognosis of a life expectancy of 6 months or less in order to receive the Medicare hospice benefit. However, we also have recognized the challenges in prognostication. It has always been our expectation that the certifying physicians will use their best clinical judgment, based on the initial and updated comprehensive assessments and collaboration with the hospice interdisciplinary group (IDG) to determine if the individual has a life expectancy of six months or less with each certification and recertification. As stated in previous rules, in reaching a decision to certify that the patient is

terminally ill, the hospice medical director must consider at least the following information per our regulations at § 418.25(b):

- Diagnosis of the terminal condition of the patient.
- Other health conditions, whether related or unrelated to the terminal condition.
- Current clinically relevant information supporting all diagnoses.

We do recognize that making a prognosis is not an exact science. Section 322 of the Benefits Improvement and Protection Act of 2000 (BIPA) (Pub. L. 106–554) amended section 1814(a) of the Act by clarifying that the certification of an individual who elects hospice “shall be based on the physician’s or medical director’s clinical judgment regarding the normal course of the individual’s illness.” The amendment clarified that the certification is based on a clinical judgment regarding the usual course of a terminal illness, and recognizes the fact that making medical prognostications regarding life expectancy is not exact. However, the amendment regarding the physician’s clinical judgment does not negate the fact that there must be a clinical basis for a certification. A hospice is required to make certain that the physician’s clinical judgment can be supported by clinical information and other documentation that provide a basis for the certification of 6 months or less if the illness runs its normal course.

While the expectation remains that the hospice physician will determine a beneficiary’s eligibility for hospice, this is not to say that this decision cannot be reviewed if there is a question as to whether or not the clinical documentation supports a patient’s hospice eligibility as hospice services provided must be reasonable and necessary for the palliation and management of the terminal illness and related conditions. The goal of any review for eligibility is to ensure that hospices are thoughtful in their eligibility determinations so that hospice beneficiaries are able to access their benefits appropriately. CMS’ right to review clinical documentation that supports physician certifications has been established in federal court and by the agency in an administrative ruling. (See, for example, HCFA Ruling, 93–1 *Weight to be Given to a Treating Physician’s Opinion in Determining Medicare Coverage of Inpatient Care in a Hospital or Skilled Nursing Facility* (May 18, 1993); *Maximum Comfort, Inc. v. Leavitt* (512 F.3d 1081 (9th Cir. 2007)); *MacKenzie Medical Supply v. Leavitt* (506 F.3d 341 (4th Cir. 2007))). In order

to be covered under Medicare Part A, the care must also be reasonable and necessary. There has always been a statutory prohibition (section 1862 (a)(1)(C) of the Act) against payment under the Medicare program for services which are not reasonable and necessary for the palliation or management of terminal illness. Additionally, section 1869(a)(1) of the Act makes clear that the Secretary makes determinations concerning entitlement, coverage and payment of benefits under part A and part B of Medicare.

We are reminding providers that there are multiple public sources available to assist in determining whether a patient meets Medicare hospice eligibility criteria (that is, industry-specific clinical and functional assessment tools and information on MAC Web sites). Additionally, we expect that hospices will use their expert clinical judgment in determining eligibility for hospice services. We expect that documentation supporting a 6-month or less life expectancy is included in the beneficiary's medical record and available to the MACs when requested.

If a beneficiary improves and/or stabilizes sufficiently over time while in hospice such that he/she no longer has a prognosis of 6 months or less from the most recent recertification evaluation or definitive interim evaluation, that beneficiary should be considered for discharge from the Medicare hospice benefit. Such beneficiaries can be re-enrolled for a new benefit period when a decline in their clinical status is such that their life expectancy is again 6 months or less. On the other hand, beneficiaries in the terminal stage of their illness that originally qualified for the Medicare hospice benefit but stabilize or improve while receiving hospice care, yet have a reasonable expectation of continued decline for a life expectancy of less than 6 months, remain eligible for hospice care. The hospice medical director must assess and evaluate the full clinical picture of the Medicare hospice beneficiary to make the determination whether the beneficiary still has a medical prognosis of 6 months or less, regardless of whether the beneficiary has stabilized or improved. There are prognostication tools available for hospices to assist in thoughtful evaluation of Medicare beneficiaries for determining terminally ill eligibility for the Medicare hospice benefit. We expect hospice providers to use the full range of tools available, including guidelines, comprehensive assessments, and the complete medical record, as necessary, to make responsible and thoughtful

determinations regarding terminally ill eligibility.

We have always acknowledged the uniqueness of every Medicare beneficiary and support thorough and thoughtful evaluation in determining whether beneficiaries meet the eligibility criteria for being certified as terminally ill. We continue to support the concept of shared decision-making, patient choice and the right care at the right time to allow Medicare beneficiaries full and appropriate access to their Medicare benefits, including hospice care. Furthermore, Medicare hospice beneficiaries have certain guaranteed rights. If the hospice or designated attending physician believes that the hospice beneficiary is no longer eligible for hospice care because his or her condition has improved, and the beneficiary does not agree with that determination, the hospice beneficiary has the right to ask for a review of his or her case. The hospice should provide the hospice beneficiary with a notice that explains his or her right to an expedited review by a contracted independent reviewer hired by Medicare, called a Quality Improvement Organization (QIO). If the hospice beneficiary asks for this appeal, the QIO will determine if the beneficiary continues to meet eligibility requirements for hospice services. The provider is expected to continue to provide services for the patient following a favorable decision by a QIO. In the QIO decision, the QIO should advise the provider as to why it disagrees with the hospice, which should help the provider to re-evaluate the discharge decision. If at another point in time during a hospice election, the hospice believes that the patient is no longer hospice eligible, the provider should timely deliver a CMS-10123 to notify the patient of its decision to discharge. The patient could again appeal to the QIO. Medicare beneficiaries have the right to be included in decisions about their care, the right to a fair process to appeal decisions about payment of services, and the right to privacy and confidentiality. No proposals were made regarding hospice eligibility nor were comments solicited. This discussion only provides background information regarding current procedures for determining eligibility for hospice services under the Medicare hospice benefit and beneficiary appeal rights.

D. Timeframe for Hospice Cap Determinations and Overpayment Remittances

When the Medicare hospice benefit was implemented, the Congress

included 2 limits on payments to hospices: an inpatient cap and an aggregate cap, as described in sections 1861(dd)(2)(A)(iii) and 1814(i)(2)(A) through (C) of the Act. The hospice inpatient cap limits the total number of Medicare inpatient days to no more than 20 percent of a hospice's total Medicare hospice days. The intent of the inpatient cap was to ensure that hospice remained a home-based benefit. The hospice aggregate cap limits the total aggregate payment any individual hospice can receive in a year. The intent of the hospice aggregate cap was to protect Medicare from spending more for hospice care than it would for conventional care at the end of life.

The aggregate cap amount was set at \$6,500 per beneficiary when first enacted in 1983; this was an amount hospice advocates agreed was well above the average cost of caring for a hospice patient.³⁶ The \$6,500 amount is adjusted annually by the change in the medical care expenditure category of the consumer price index for urban consumers from March 1984 to March of the cap year. For the 2013 cap year, the cap amount was \$26,157.50 per beneficiary. The cap year is defined as the period from November 1st to October 31st, and was set in place in the December 16, 1983 hospice final rule (48 FR 56022).

The cap amount is multiplied by the number of Medicare beneficiaries who received hospice care from a particular hospice during the year, resulting in its hospice aggregate cap, which is the allowable amount of total Medicare payments that hospice can receive for that cap year. There are two different methods for counting a hospice's beneficiaries: the streamlined and the patient-by-patient proportional methods. Which method a hospice can use to count beneficiaries depends on a number of factors, as described in our regulations at § 418.309 and in section 90.2.3 of the hospice Benefit Policy Manual (IOM 100-02, chapter 9, available at <http://www.cms.gov/Regulations-and-Guidance/Guidance/Manuals/Downloads/bp102c09.pdf>). A hospice's total Medicare payments for the cap year cannot exceed the hospice's aggregate cap. If its aggregate cap is exceeded, then the hospice must repay the excess back to Medicare.

While hospices rarely exceed the inpatient cap, in its March 2012 Report to the Congress, MedPAC reported that

³⁶ National Hospice and Palliative Care Organization (NHPCO), "A Short History of the Medicare Hospice Cap on Total Expenditures." Retrieved on February 19, 2014 at: http://www.nhpco.org/sites/default/files/public/regulatory/History_of_Hospice_Cap.pdf

an increasing number of hospices are exceeding the aggregate cap. MedPAC also noted that above-cap hospices were almost all for-profit with very long lengths of stay, high live discharge rates, and very high profit margins before the return of cap overpayments.³⁷ The percentage of hospices exceeding the aggregate cap rose from 2.6 percent in 2002 to a peak of 12.5 percent in 2009. In 2010, the percentage of hospices exceeding the aggregate cap decreased to 10.1 percent.³⁸

Our hospice reform contractor also performed analysis on the number of hospices exceeding the aggregate cap with results similar to MedPAC's, where an increasing percentage of hospices exceeded their caps from 2006 (9.1 percent) to a peak in 2009 (12.8 percent), followed by a decline through 2011 (10.5 percent). However, the analysis shows an increase in 2012, with 11.6 percent of hospices exceeding their aggregate caps. Additionally, analysis of above-cap hospices showed that the average overpayment per beneficiary has increased over time, up 35.2 percent from 2006 (\$7,384) to 2012 (\$9,983). Using above-cap hospices, we also found that the average overpayment amount went from \$732,103 in 2006 to \$440,727 in 2011, but that this downward trend is estimated to change in 2012, when the average overpayment amount is estimated to increase to \$547,011.

We also compared hospices' year-end percentage of their aggregate cap total that they had received in Medicare payments over time. Specifically, we examined where hospices ended their cap year in terms of Medicare reimbursements received, relative to that year's aggregate cap limit, by comparing the 2006 cap year to the 2012 cap year. Analysis revealed that more hospices ended the 2012 cap year "just below" their aggregate cap than in 2006. The cap analyses which are referenced in this section are available in the May 2014 Technical Report was posted in May, 2014 on our Hospice Center Web page at: <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html>.

The results from these recent analyses on the hospice aggregate cap highlight the importance of hospices monitoring their aggregate cap and ensuring that the beneficiaries under their care are truly eligible for hospice services. In the FY 2010 hospice wage index proposed rule, we solicited comments on the aggregate hospice cap (74 FR 18920–18922). Many

commenters wanted more timely notification of cap overpayments. Many also requested that hospices be given access to beneficiaries' full hospice utilization history, as having this information would enable hospices to better manage their aggregate cap. In response to concerns from hospices, we redesigned the Provider Statistical and Reimbursement (PS&R) system in 2011, so that hospices can now easily manage their inpatient and aggregate caps. The redesigned PS&R enables hospices to calculate estimated caps to monitor their cap status at different points during the cap year, and also enables them to calculate their caps after the cap year ends.

Our current practice is for the Medicare Administrative Contractors (MACs) to complete the hospice cap determinations for both the inpatient and the aggregate caps 16 to 24 months after the cap year in order to demand any overpayment. We are concerned about this long timeframe, particularly given that the percentage of hospices exceeding the aggregate cap is increasing, along with the average overpayment per beneficiary. To better safeguard the Medicare Trust Funds, we believe that demands for cap overpayments should occur sooner. This is now possible due to the redesigned PS&R system.

Therefore, for the 2014 cap year and subsequent cap years, we proposed to amend § 418.308 and require that hospices complete their inpatient and aggregate caps determination within 5 months after the cap year ends (that is, by March 31) and remit any overpayments at that time. We proposed that the MACs would then reconcile all payments at the final cap determination. If a provider fails to file its inpatient and aggregate cap determination 5 months after the end of the cap year, we proposed that payments to the provider would be suspended in whole or in part until the self-determined cap is filed with the Medicare contractor. We proposed to further amend § 418.308 and § 405.371 to state that payments to a hospice would be suspended in whole or in part, for failure to file a self-determined inpatient and aggregate cap determination. This is similar to the current practice followed by all other provider types that file cost reports with MACs.

We proposed that hospices would be provided a pro-forma spreadsheet that they would use to calculate their caps to remit any overpayments. The redesigned PS&R system provides the inpatient days, total days, beneficiary counts, and Medicare payments that are needed to calculate any inpatient or

aggregate cap overpayments. The redesigned system can provide needed data whether a hospice uses the streamlined method or the patient-by-patient proportional method for its aggregate cap calculation. All hospices are required to register in Individuals Authorized Access to CMS Computer Services (IACS) and obtain their PS&R report from the PS&R system. Hospices experiencing difficulties can request a copy of their PS&R report from their MAC.

Twenty six public comments and our responses are summarized below.

Comment: Several commenters suggested that the Medicare Administrative Contractors (MACs) should complete the initial cap determination instead of the hospices. Some of the concerns are that the proposal would increase the hospices administrative costs, and this would be especially burdensome for small hospices. There were suggestions that CMS establish criteria to target providers that are more likely to exceed the cap if the concern was about the MACs workload.

Response: The reason for this proposal is for hospices to determine and remit any overpayment. We do not believe this proposal would be overly burdensome to the hospices; some hospices are already using the information needed to complete the self-determined cap to manage their cap. The net reimbursement and beneficiary count needed to calculate the cap overpayment are reported on the Provider Statistical & Reimbursement (PS&R) report. A pro-forma spreadsheet for calculating the cap will be provided. The MACs are still required to issue the final cap determination and reconcile any overpayments received.

Comment: Some commenters suggested that the cap calculation should be integrated with the cost report that hospices are currently required to file in order to minimize the administrative burden on the hospices.

Response: This suggestion is not practical at this time. The hospice cap period of November 1–October 31 is not aligned with the hospices' various cost reporting fiscal years, and the hospice cap calculation is not based on the Medicare cost report.

Comment: Commenters were concerned that the proposal for hospices to file a self-determined cap calculation and remit any overpayment within 5 months after the cap period would not achieve the stated goal of protecting the Medicare Trust Funds. Early calculation of the hospice cap liability will underestimate the amount owed by hospices that are over the cap. The 5

³⁷ MedPAC, "Report to Congress: Medicare Payment Policy", March 2012, pp. 293–295, 302.

³⁸ MedPAC, "Report to Congress: Medicare Payment Policy", March 2013, p. 276.

months proposed for hospices to file their self-determined cap is vulnerable to gaming because a hospice could choose to perform its cap calculation immediately after the close of the cap year when its cap liability will be lowest. Some commenters suggested that CMS should instruct providers not to request data to calculate their cap liability earlier than 90 days after the end of the cap period in order to allow for most of the hospice claims to be processed before the completion of the cap calculation.

Response: We agree that allowing up to 5 months to calculate the cap without a minimum time for allowing claims to process is vulnerable to “gaming” by hospices. The goal is to require the hospices to submit an accurate cap determination within 5 months of the end of the cap year. In order to increase the reliability of the determination, we will require that hospices use payment data not earlier than 3 months after the cap year to determine their cap overpayment due 5 months after the cap year. This will improve the accuracy of the calculation by ensuring that most claims have been processed, while still allowing a reasonable period of time for the hospice to complete the calculation.

For example, the cap year ending October 31, 2015 would result in the hospice providing its cap determination and any associated overpayment to their MAC by March 31, 2016. In order to allow a reasonable number of claims to be processed, the hospice shall wait at least 3 months after the end of the cap year, or January 31, 2016, before attempting to calculate the cap overpayment. Thus, the cap determination would be calculated after January 31, 2016 but before March 31, 2016 and the overpayment would be submitted at the same time as the cap determination.

We plan to continue to monitor hospices that may be “gaming” the system, and CMS has the option of performing a cap review at any time after the end of the cap year, if needed. In addition, MACs will review the hospices’ cap determinations at a later time in order to ensure that they are accurate and to reconcile them with updated claims data.

Comment: Several commenters suggested that CMS should not recoup any overpayment as a result of the self-determined cap calculation until the MACs issue the final cap determination.

Response: While completing the self-determined calculation as proposed will inform hospices about whether or not they are over the cap as early as possible, it will not protect the Medicare Trust Fund if the overpayments are not

recouped. Other provider types that file Medicare cost reports 5 months after the cost reporting year end are required to remit any overpayments at the time the cost reports are filed. Sometimes the final settlements of Medicare cost reports are issued 2 to 3 years after the cost reports were filed. The same process is proposed for hospice providers, since the cap calculations are not reconciled on the cost reports themselves. MACs will reconcile the final payments when it issues the final cap determination. The final cap determination includes the appeal rights for the hospice.

Comment: Several commenters were concerned that the proposal did not address the availability of the Extended Repayment Schedule (ERS) for providers that exceed the cap.

Response: This proposal is not changing the current ERS availability. Providers that have overpayments as a result of the self-determined cap calculation will follow the same overpayment processes that were in effect prior to this requirement.

Comment: A commenter suggested that CMS should consider eliminating the requirement that hospices determine the inpatient cap overpayment because the calculation involved is more complex than those required for determining the aggregate cap. Since most providers do not exceed the inpatient cap, they are not experienced in performing the calculation required.

Response: We agree with the commenter that most providers do not exceed the inpatient cap limitation, and that calculation of the inpatient cap is more complex than the aggregate cap calculation. We are eliminating the requirement that hospices complete a self-determined inpatient cap liability in order to address stakeholders concerns regarding the complexity of the calculation. The Medicare contractors will continue to calculate the inpatient cap limitation. We will continue to monitor the inpatient cap and consider implementing in the future if needed. However, the self-determined aggregate cap calculation proposal is being implemented in this final rule.

Comment: Some commenters suggested that the MACs be required to review the providers’ submitted self-determined cap amounts and alert hospices of any discrepancies in the calculation or provide notice of acceptance of the hospices calculations. Some commenters suggested that a formal adjudication process should be included in the proposal if there is discrepancy between the providers’ data and the Providers Statistical and Reimbursement (PS&R) system.

Response: The MACs will review the submitted self-determined cap calculation for errors but not necessarily recalculate the submitted cap in all cases for accuracy. The MACs will issue a final cap determination at a later date. Under the current process, providers have the option of using their data to file the cap report if they disagree with the PS&R report. Providers using their data to file their cap calculation will need to provide documentation to support the calculations. The MAC will subsequently issue a final cap determination, which will include appeal rights for the hospice.

Comment: A commenter suggested that the MACs should provide advance notification to the hospices regarding the requirement to file a cap determination and the due date.

Response: We are not requiring the MACs to send advance notification to the hospices at this time. We will work with the MACs in order to distribute educational material regarding the calculation of the cap, and access to the PS&R. While all providers have been instructed to obtain their own PS&R reports, some may not have used such reports. Hospices will be informed of their requirements through various educational materials.

Comment: A commenter that supported the proposal suggested that CMS delay this requirement to allow providers time to prepare for the changes, and allow those that currently do not have access to the PS&R system to register. Another suggested that CMS phase-in the proposal over a three year period.

Response: We do not believe phasing the requirement that hospices calculate their cap overpayment over a three year period will reduce the burden on hospices and will ensure hospices’ ability to calculate the cap accurately. We appreciate the commenter’s concern about providers who are not currently registered to obtain their PS&R report. Providers have received instructions regarding access to the PS&R system on numerous occasions, and we will work with the MACs to remind providers how to access the PS&R system, and explain how to access and utilize the hospice reports.

Comment: Some commenters raised concern about the ability of hospices that are not registered in CMS’ authentication and authorization system (IACS) to obtain a copy of their PS&R report. A commenter stated that since most providers only access the PS&R system once in a year, their accounts are deactivated after six months of inactivity and would be unable to obtain a copy of their PS&R report. The

commenter suggested that CMS change the deactivation of account after six months of inactivity.

Response: The security protocol of the CMS authentication and authorization system needed to access the PS&R system is beyond the scope of this proposal. It should be noted, however, that accounts are not deactivated after six months of inactivity. Accounts are only deactivated when a user fails to recertify its account, which is usually once a year. The system sends out several notification emails 45 days prior to the recertification date, and everyday 15 days prior to the due date. Providers that failed to change their password every 60 days need only to complete the specific password steps in order to reset their password. Since the PS&R reports will be a source of information for calculation of the caps, we do not expect problems with system inactivity subsequent to the issuance of this final rule.

Comment: A commenter suggested that the CMS employ electronic delivery of important notices, like overpayment determinations.

Response: This is outside the scope of this proposal.

Comment: A commenter was concerned that providers are not able to obtain the beneficiary count for patients served by more than one provider, and that this information is only available to the MACs.

Response: This statement is not accurate. The PS&R report provides summary beneficiary count for patients served by more than one hospice, and the summary report is available for providers to request.

Comment: Some commenters suggested that CMS should include in the proposal a time frame for the MACs to complete the final cap reviews

Response: We are not proposing a requirement at this time. We will continue to work with the MACs regarding this process.

Comment: A commenter noted that the proposed rulemaking under the Affordable Care Act required that Medicare providers and suppliers to report and return overpayments 60 days from the date the liability is identified. CMS should provide hospices 60 days from 150 days to refund any overpayment as a result of the self-cap determination.

Response: We agree that the Affordable Care Act requires that providers and suppliers report and refund overpayments within 60 days from when identified. The Overpayment rule resulting from the Affordable Care Act has not been finalized as of the date this rule was finalized; and therefore, is

outside of the scope of this proposal. As noted above, the requirement that hospices pay the overpayment when they file their cap determination is similar to the requirement for other provider types that final payment reconciliation are completed on the Medicare cost report.

Comment: Some commenters applauded the proposal stating that it allows hospices to better manage their cap, and they will be aware of their cap situation soon after the cap year in order to implement changes to better manage their cash flow in light of hospices' responsibility to reconcile their overpayments with amounts allowed by CMS.

Response: We agree with the commenters and thank them for their support.

Final action: We are finalizing the proposal to require hospices to submit the aggregate cap determination 5 months after the end of the cap year and refund any overpayment with the filed cap determination. We are eliminating the proposal that hospices complete the self-determined inpatient cap limitation as part of this proposal, but will continue to monitor the inpatient cap and consider implementing in the future if needed. In addition, we are requiring hospices to wait at least 3 months after the end of the cap year to calculate the self-determined aggregate cap, in order to include a reasonable number of claims. Finally, we are finalizing the proposal that hospices which fail to file their self-determined cap determination will have their payments suspended.

E. Timeframes for Filing the Notice of Election and Notice of Termination/Revocation

1. Timeframe for Filing the Notice of Election

A distinctive characteristic of the Medicare hospice benefit is that it requires patients (or their representative) to intentionally choose hospice care through an election. As part of that election, patients (or their representative) acknowledge that they fully understand the palliative, rather than curative, nature of hospice care. Another important aspect of the election is a waiver of beneficiary rights to Medicare payment for any Medicare services related to the terminal illness and related conditions during a hospice election except when provided by, or under arrangement by, the designated hospice, or by the individual's attending physician if he/she is not employed by the designated hospice (§ 418.24(d)).

Because of this waiver, providers other than the designated hospice or

attending physician cannot receive payment for services to a hospice beneficiary unless those services are unrelated to the terminal illness and related conditions. For our claims processing system to properly enforce this waiver, it is necessary for the hospice election to be recorded in the claims processing system as soon as possible after the election occurs. A survey of the four Medicare Administrative Contractors (MACs) revealed that 16.2 percent of NOEs are filed within 2 days of the effective date of election, 39.2 percent of NOEs are filed within 5 days of the effective date of election, and 62.1 percent of NOEs are filed within 10 days of the effective date of election. Prompt recording of the notice of election (NOE) prevents inappropriate payments, as claims filed by providers other than the hospice or the attending physician will be rejected by the system, unless those claims are for items or services unrelated to the terminal illness and related conditions. Prompt filing of the NOE also protects beneficiaries from financial liability from deductibles and cost sharing for items or services provided during a hospice election which are related to the terminal prognosis.

Once a NOE is filed, the hospice election and benefit period are established in the Common Working File (CWF) and in the Daily Transaction Reply Report (DTRR). The CWF is used by Part A and Part B providers, and the DTRR is used by Part D plan sponsors, to determine whether a beneficiary is a hospice patient. This information is necessary for providers and suppliers to properly handle claims for beneficiaries under a hospice election.

Our hospice reform contractor has performed analyses of Medicare expenditures for drugs and services provided to hospice beneficiaries during a hospice election. These analyses found that Medicare Part D was paying for many drugs that should have been provided by the hospice during a hospice election. We also found that Parts A and B were paying claims for items or services from non-hospice providers during a hospice election (See section III.A.4), though some of these claims may have been appropriate. Once a hospice election is established in the CWF, in order for claims from other providers to process, the claim must be from the attending physician and coded with a "GV" modifier, or for items or services unrelated to the terminal illness and related conditions and must be coded with either a condition code of "07" or a "GW" modifier. However, in calendar year 2012, 10,500 claims and 2.4 million line items, totaling \$159

million were processed without the condition code or modifier. Of this \$159 million, approximately \$100 million was from physician/supplier Part B claims that include claims from physicians, laboratories, and ambulance companies, and approximately \$46 million was billed as durable medical equipment. This suggests that these claims may have been processed in the time between when the beneficiary elected hospice and when the hospice filed its NOE. When Parts A, B, or D pay claims for items or services during a hospice election, there is typically an associated beneficiary liability (such as deductibles or copayments). For example, in 2012 the hospice beneficiary liability for items or services provided to hospice beneficiaries during a hospice election was \$135.5 million for Part A or B claims, and \$48.2 million for Part D claims. We want to safeguard hospice beneficiaries from inappropriate financial liability during a hospice election for items or services that should be provided by the hospice. Please see section III.A.4 of this final rule and the May 2014 Technical Report, which was posted on the CMS Hospice Center Web page in May 2014, for more details on Medicare payments made to non-hospice providers during a hospice election for hospice beneficiaries. The hospice center Web page can be accessed at <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html>.

In the April 1, 2013 CMS Part D Final Call Letter, it was noted that delays in the flow of hospice election information cause retroactive updates to the information sent to Part D plan sponsors on the DTRR, and plan sponsors requested that CMS improve the timeliness of the hospice data on the DTRR.³⁹ More recently, CMS issued a memorandum on December 6, 2013 entitled “Part D Payment for Drugs for Beneficiaries Enrolled in Hospice,” which sought to clarify the criteria for determining payment responsibility for drugs for hospice beneficiaries.⁴⁰ Industry commenters described the lag time in the notification of Part D plan sponsors that the beneficiary had elected hospice, revoked hospice, or

been discharged alive from hospice as a key problem in determining payment responsibility. Commenters suggested that CMS require that the NOE be filed within a short timeframe of election (for example, within 48 hours).

The CWF is also used by hospices to identify the current benefit period, which helps hospices determine when a face-to-face encounter is required. We have received requests for assistance from hospices where a beneficiary was previously admitted to and then discharged from another hospice, which had not yet filed the NOE, creating a problem for the current hospice in determining the correct benefit period. This can lead to the current hospice not meeting the face-to-face requirement. Additionally, because of sequential billing requirements, the current hospice would have to cancel its NOE and all of its billing for that beneficiary to allow the previous hospice to input its NOE and billing. Once the previous hospice had filed its claims and recorded the beneficiary's discharge, the current hospice could then resubmit its NOE and its claims. The failure of the first hospice to file its NOE promptly created an administrative burden for the second hospice.

In summary, prompt filing of the NOE avoids compliance problems with the statutorily mandated face-to-face requirement. It also avoids creating burdensome situations for hospices when sequential billing requirements are not met. Finally, because Medicare payments for services related to the terminal illness and related conditions are waived once a hospice election is in place, it is crucial that the NOE be filed promptly to safeguard the integrity of the Medicare Trust Fund and enable smooth and efficient operation of other Medicare benefits (like Part D), and to safeguard hospice beneficiaries from inappropriate financial liability due to cost sharing and deductibles for services related to the terminal prognosis. For all of these reasons, we proposed that a hospice must file the NOE with its Medicare contractor within 3 calendar days after the hospice effective date of election, regardless of how the NOE is filed (by direct data entry, or sent by mail or messenger). We believe that this proposed requirement would relieve hospices of the burden created when some minority of hospices do not file their NOEs promptly, would avoid inappropriate payments to other Part A, Part B, or Part D providers, and would safeguard beneficiaries from inappropriate liability for copayments or deductibles.

Currently, payment for hospice services begins on the effective date of

the hospice election, regardless of when the NOE was filed. A commenter on the December 6, 2013 CMS memorandum clarifying drug payment responsibility between Part D, hospice, and beneficiaries suggested that without enforcement actions, hospices would not file NOEs within a short timeframe. We agree that providing a consequence for failing to file NOEs timely would encourage compliance. Therefore, we proposed that for those hospices that do not file the NOE timely (that is, within 3 calendar days after the effective date of election), Medicare would not cover and pay for days of hospice care from the effective date of election to the date of filing of the NOE. We proposed that these days be considered the financial responsibility of the hospice; the hospice could not bill the beneficiary for them. We believe that this is a reasonable step, which would not be burdensome to hospices, would help us to safeguard the integrity of the Medicare Trust Fund, and help protect beneficiaries from inappropriate liability.

Once filed, the process of posting an NOE to the CWF after direct data entry (DDE) takes 1 to 5 days, depending on the host site. If an NOE is not submitted by DDE, the current policy requires hospices to send it to the Medicare contractor by mail or messenger. This policy remains in place; however, hospices may need to use overnight mail or an overnight messenger to ensure that paper NOEs are received by the Medicare contractor within the required timeframe after the effective date of election (On average, only 68 NOEs are filed by mail or messenger per year). Using a speedier form of delivery will ensure that a paper NOE's filing is not delayed by the transit time needed to get the document from the hospice to the Medicare contractor.

2. Timeframe for Filing the Notice of Termination/Revocation

In accordance with 42 CFR 418.26, hospices may discharge patients for only three reasons: (1) Due to cause; (2) due to the patient's no longer being terminally ill; or (3) due to the patient's moving outside the hospice's service area. In contrast, hospice patients are free to revoke their election to hospice care at any time. Upon discharge or revocation, a beneficiary resumes the Medicare coverage that had previously been waived by the hospice election. It is important for hospices to record the beneficiary's discharge or revocation in the claims processing system in a timely manner. As previously noted, a number of those commenting on the December 6, 2013 CMS memorandum clarifying

³⁹ CMS, “Calendar Year (CY) 2014 Medicare Advantage Capitation Rates and Medicare Advantage and Part D Payment Policies and Final Call Letter,” issued April 1, 2013; available at <http://www.cms.gov/Medicare/Health-Plans/MedicareAdvSpecRateStats/downloads/Announcement2014.pdf>.

⁴⁰ Tudor CG, Wilson L, and Majestic M. “Part D Payment for Drugs for Beneficiaries Enrolled in Hospice—Request for Comments,” memorandum issued December 6, 2013, available at <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Hospice-PartD-Payment.pdf>.

drug payment responsibility between Part D, hospices, and beneficiaries wrote that it was critical for beneficiary revocations and live discharges from hospice to be recorded as soon as possible within CMS claims processing systems. Commenters on this Part D memorandum wrote that prompt recording of revocations or discharges is necessary to ensure that the beneficiary is able to access needed items or services, and to ensure that payment for the item or service is from the appropriate source. Providers are allowed 12 months to file a claim, so if a hospice is not prepared to file a final claim quickly, it should instead file a termination/revocation of election notice, so that the claims processing systems are updated to no longer show the beneficiary as being under a hospice election. Hereafter, we will refer to this as a Notice of Termination or Revocation (NOTR).

We proposed to revise the regulations at § 418.26 and § 418.28 to require hospices to file a NOTR within 3 calendar days after the effective date of a beneficiary's discharge or revocation, if they had not already filed a final claim. This would safeguard beneficiaries from any delays or difficulties in accessing needed drugs, items, or services that could occur if the CWF or DTRR continued to show a hospice election in place when in fact it was revoked or a discharge occurred. It would also avoid costs and administrative burden to non-hospice providers and to the claims processing system that would occur for claims for items or services provided after discharge or revocation, which would be rejected if the claims processing systems continued to show the beneficiary as being under a hospice election.

Comments we received with regard to the proposals to file the NOE and NOTR within 3 calendar days and the consequence for filing the NOE late are summarized below.

Comment: Nearly all commenters supported placing timeframes around the NOE and NOTR for the reasons noted in the proposed rule, but hospices cited circumstances that would make it difficult for them to comply within the proposed timeframe and some requested we phase-in the proposal. Hospice commenters suggested using business days instead of calendar days, or timeframes of 5 to 10 calendar days. Primarily beneficiary advocacy groups, pharmacy groups, and Part D plan sponsors supported 3 calendar days, with one commenter supporting 2 calendar days for the NOE and the NOTR to be filed. These commenters

also identified administrative burden issues and beneficiary impact concerns if the NOE and NOTR are not filed as soon as possible. A few commenters asked us to clarify the timeframe for NOE filing and for when a revocation begins. Another suggested that the NOE filing statistics in the rule demonstrated that hospices could not file their NOEs within a short timeframe.

Response: In response to comments received, we are finalizing the requirement for hospices to file the NOE within 5 calendar days after the effective date of the election and to file the NOTR within 5 calendar days after the date of the discharge or revocation (unless the hospice has already submitted the final claim). A timely-filed NOE is one that is submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election. A timely-filed NOTR is one that is submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of discharge or revocation. While a timely-filed NOE or NOTR is one that is submitted to and accepted by the Medicare contractor within 5 calendar days after the hospice election or hospice discharge/revocation, posting to the CWF may not occur within that same time frame. The date of posting to the CWF is not a reflection of whether the NOE or NOTR is considered timely-filed. We believe these timeframes provide an appropriate balance of concerns expressed by the diverse comments received on the proposal, and eliminates the need to phase-in the required timeframe implemented in this final rule. Prompt filing of the NOE and NOTR is essential to protecting the Medicare Trust Fund; minimizing the effect on beneficiaries' cost-sharing; and preserving access to non-hospice services. We considered the feasibility of using business days versus calendar days; however, the Medicare claims processing system cannot distinguish between calendar days and business days. Therefore, we are not able to consider counting business days for this policy. The NOE filing timeframe statistics included in the proposed rule only indicate historical filing practices and do not indicate hospices' inability to file NOEs in a more timely fashion once a filing timeframe is implemented. As described in the existing CMS Claims Processing Manual (IOM 100-04, Chapter 11, Section 20.1.1), hospices are to submit the NOE "as soon as possible". This final policy imposes an upper limit as to when the NOE is to be submitted without the imposition of provider

liable days due to late filing of the NOE. We encourage hospices to submit the NOE and NOTR (if a final claim has not been submitted) as soon as possible and not wait until the 5th calendar day after the effective date of the election or discharge/revocation. For revocations, existing policy requires that the beneficiary must provide the hospice with a signed statement that he or she is revoking the benefit, including the effective date of the revocation, which cannot be a date earlier than the date the revocation is made, as described at 42 CFR 418.28.

Some hospice commenters identified various technical reasons as to why an NOE or NOTR may not be timely-filed. We encourage hospices to consider available electronic means of transmitting data that nurses in the field may utilize to send the election statement to their administrative office. For example, secure fax or secure email is an easily accessible means of secure data transmission. We believe that it is prudent for hospices, as a business, to establish contingency plans for situations where administrative staff who normally file the NOEs or NOTRs are on vacation, unavailable due to illness, or are unexpectedly unavailable.

We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking.

Comment: A few commenters opposed the proposed consequence for late NOEs. Some commenters felt it would be unfair for hospices to experience financial consequences due to exceptional circumstances that are beyond the control of the hospice, which cause the NOE to be filed untimely. Several commenters suggested that the provider liable days resulting from failing to meet the 3 calendar day timeframe for NOE filing could cause unintended consequences, including delaying admissions.

Response: We agree that there are some circumstances that may be beyond the control of the hospice where it may not be possible to timely-file the NOE within 5 calendar days after the effective date of election or timely-file the NOTR within 5 calendar days after the effective date of a beneficiary's discharge or revocation, and appreciate the variety of examples to illustrate such exceptional circumstances. Therefore, we are finalizing an exception policy for the timely filing of the NOE, which would waive the consequences for failure to timely-file a NOE. The four circumstances that may qualify the hospice for an exception to the consequences of filing the NOE more

than 5 calendar days after the effective date of election are as follows:

1. Fires, floods, earthquakes, or other unusual events that inflict extensive damage to the hospice's ability to operate;

2. an event that produces a data filing problem due to a CMS or Medicare contractor systems issue that is beyond the control of the hospice;

3. a newly Medicare-certified hospice that is notified of that certification after the Medicare certification date, or which is awaiting its user ID from its Medicare contractor; or,

4. other circumstances determined by CMS to be beyond the control of the hospice.

If one of the four circumstances described above prevents a hospice from timely-filing its NOE, the hospice must document the circumstance to support a request for an exception, which would waive the consequences of filing the NOE late. Using that documentation, the hospice's Medicare contractor will determine if a circumstance encountered by a hospice qualifies for an exception to the consequences for filing an NOE more than 5 calendar days after the effective date of election. If the request for an exception is denied, the Medicare contractor will retain the decision of the denial. Hospices retain their usual appeal rights on the claim for payment. The Medicare contractors will provide hospices with information on how to request an exceptional circumstance and a waiver of the consequence of filing the NOE late after the publication of this final rule. Sub-regulatory guidance will detail the procedures a hospice would follow.

Based on the exceptions described above, examples such as personnel issues; internal IT systems issues that the hospice may experience; the hospice not knowing the requirements; and failure of the hospice to have back-up staff to file the NOE are not acceptable circumstances that meet the exceptions. Therefore, late-filing consequences would be applied. For those hospices which do not timely-file the NOE (that is, the NOE is submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election), Medicare will not cover and pay for the days of hospice care from the effective date of election up to the date the NOE is submitted to, and accepted by, the Medicare contractor. The date the NOE is submitted to, and accepted by, the Medicare contractor would be a covered day.

Given the longer timeframe for timely-filing the NOE and the exceptional

circumstances that we are implementing, we do not believe that hospices would delay admitting beneficiaries to avoid provider liable days. We will monitor for any unintended consequences of the policy.

Under the Medicare hospice benefit, hospices are responsible for providing all care and services to the beneficiary for the palliation and management of the terminal illness and related conditions from the effective date of election to the date of death, or effective date of discharge/revocation, even if some of those days are a provider liability due to a late-filed NOE. The hospice remains responsible for covering all hospice medical, nursing, counseling, social work, and aide services, as well as all hospice drugs, DME, supplies, etc. as needed by the patient, in accordance with the plan of care, during provider liable days.

Comment: Multiple commenters suggested a consequence for NOTRs filed late because they considered the filing of the NOTR as more critical from a beneficiary access to care standpoint. Late-filing of the NOTR could create problems for beneficiaries in accessing Part D medications or critical Medicare services, with a few commenters recommending a shorter timeframe than that for the NOE.

Response: We appreciate the comments recommending a consequence for late-filing of NOTRs in order to protect the beneficiary's access to timely care and ensuring that the appropriate party is responsible for care and services. We are not implementing consequences for the late-filing of the NOTR at this time, but will consider doing so in future rulemaking.

Comment: Many commenters described systems issues which make filing NOEs and NOTRs cumbersome, or which lead to delays in posting NOE or NOTR data to CMS systems such as the CWF or Part D's DTRR. Some of these commenters noted concerns with the DDE filing system, the inability to batch and transmit data directly from electronic health records, the inability of FISS to accept electronic files, sequential billing requirements, and also offered other recommendations. Several commenters suggested that CMS address its systems issues, suggesting that CMS systems be required to post NOE information to CWF within 1 to 3 days. Several comments requested various technical clarifications and/or shared concerns with CMS's data systems to support the proposal to timely-file the NOE and NOTR. One commenter asked if NOTR filing procedures should be consistent with current instructions for reporting

occurrence codes in claims submissions so that the reason for the discharge would be clear.

Response: Before the implementation of the HIPAA transactions and code sets standards in 2003, CMS accepted hospice NOEs via Electronic Data Interchange (EDI) batch submission using the UB-92 flat file claim format. HIPAA implementation eliminated the UB-92 flat file format for claims processing, replacing it with the 837 Institutional (837I) claim transaction. The 837I format requires reporting at least one delivered service and other data elements that are not appropriate to an NOE, so an EDI claim transaction could no longer be used for this purpose. At that time, a great majority of hospice NOEs were already being processed via Direct Data Entry (DDE) into Medicare claims processing systems. CMS determined that DDE submission of NOEs met the business needs of Medicare and most hospices. While many hospices have now adopted electronic health record technology that could facilitate the creation and submission of electronic NOEs, no standard for such submission currently exists. There would be significant implementation challenges associated with creating an interface between any new non-claim format and Medicare claims processing systems. CMS plans to explore options to resume electronic batch submission of hospice NOEs in the future and welcomes input from the hospice industry regarding how electronic submission of NOEs could be feasible.

Commenters who stated that sequential billing requirements prevent timely filing of NOEs are in error. While sequential billing requirements continue to apply, if a previous hospice has not filed any or all of its claims for a beneficiary, the current hospice is not prevented by CMS's claims processing systems from timely-filing its NOE (bill type 8xA). Similarly, there is no restriction within CMS claims processing systems on a current hospice's ability to file its NOTR if a previous hospice has not filed any or all of its claims for that beneficiary. We are investigating possible improvements or process changes within CMS systems to increase the timeliness of updates. As part of that, we are open to discussions with the industry regarding sequential billing requirements or the Electronic Data Interchange (EDI). Finally, since the claims processing function of the NOTR is simply to post a revocation date for the beneficiary in the CWF, additional information identifying the reason for the discharge is not necessary. This information would

duplicate what is provided when the claim is filed.

Comment: One commenter asked if the proposals related to the NOE filing that we finalize would apply when Medicare is a secondary payer.

Response: The timely-filing NOE requirement applies whether Medicare is the primary or secondary payer.

Comment: We received comments in the context of coordinating Part D and hospice. These comments provided recommendations for various processes for information flow to be considered.

Response: We appreciate the comments received related to coordination between hospices and Part D sponsors. We will consider these in the overall development of a coordination process, which we solicited comments on in Section III.I.

Comments: A few hospice commenters stated that they may not know the principal diagnosis or the attending physician to include with the NOE within the proposed 3 calendar days after the effective date of election, and noted that the comprehensive assessment occurs over a 5 day period.

Response: As noted previously, we are finalizing a timely-filing NOE policy that requires the NOE to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of hospice election, which is 2 days longer than the proposed timeframe. Since beneficiaries must be certified as terminally ill by the hospice physician and the patient's attending physician (if any) within 2 calendar days after the effective date of election, the principal diagnosis and attending physician chosen by the beneficiary are known to the hospice prior to the end of the timely-filing NOE timeframe. In addition, coding guidelines are very clear as to how to determine a primary diagnosis when multiple potential principle diagnoses may exist. These coding guidelines can be found at: http://www.cdc.gov/nchs/data/icd/icd9cm_guidelines_2011.pdf. We also disagree that the comprehensive assessment must be completed for the hospice to know which diagnosis is the principal diagnosis. The initial assessment would determine the patient's immediate care and support needs within 48 hours after the election of hospice care, as described in 418.54, and would be completed within the timely-filing NOE timeframe. The initial assessment should support the information documented by hospice and/or attending physician (if any) during the patient certification of eligibility for hospice care. The hospice physician and/or attending physician should be

able to provide that information because they have had to review the beneficiary's medical documentation to determine whether or not to certify the patient as eligible for hospice care.

While the comprehensive assessment may determine the breadth of specific needs of the patient, it would not be the primary driver in determining the beneficiary's principal diagnosis to be included on the NOE.

Final action: We are finalizing a timely-filing NOE policy that requires the NOE to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of election, and a timely-filing NOTR policy that requires the NOTR to be submitted to, and accepted by, the Medicare contractor within 5 calendar days after the effective date of the discharge/revocation (unless the hospice has already filed a final claim). We are finalizing provider liable days for late filing of NOEs, as proposed. We are also finalizing specific exceptions that, if applicable, would allow for a waiver of the provider liable days for not filing NOEs within 5 days after the effective date of election. We emphasize that prompt filing of the NOE and the NOTR is essential to protecting the Medicare Trust Fund; minimizing the effect on beneficiaries' cost-sharing; and preserving access to non-hospice services. This finalized policy imposes an upper limit as to when the NOE is to be submitted without the imposition of provider liable days due to late filing of the NOE and an upper limit to when the NOTR is to be submitted after the discharge or revocation of the hospice beneficiary. As such, we strongly encourage hospices to submit the NOE and NOTR as soon as possible and not wait until the 5th calendar day after the date of the election or discharge/revocation. We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking. We have changed the regulatory text shown at the end of this final rule to reflect the policies described above.

F. Addition of the Attending Physician to the Hospice Election Form

The term "attending physician" is defined differently in different health care settings. For the Medicare hospice benefit, "attending physician" has a specific definition found in the Social Security Act at 1861(dd)(3)(B) that the term means, with respect to an individual, the physician (as defined in subsection (r)(1)) or nurse practitioner (as defined in subsection (aa)(5)), who may be employed by a hospice program,

whom the individual identifies as having the most significant role in the determination and delivery of medical care to the individual at the time the individual makes an election to receive hospice care.

Our regulations at § 418.3 include a definition for "attending physician," based on the above mentioned statutory language. We define it as either 1) a doctor of medicine or osteopathy legally authorized to practice medicine and surgery by the State in which he or she performs that function or action; or 2) a nurse practitioner who meets the training, education, and experience requirements described elsewhere in our regulations. The definition also sets out the requirement that the patient identify the attending physician at the time he or she elects to receive hospice care, as having the most significant role in the determination and delivery of the individual's medical care.

We require that the National Provider Identifier (NPI) of the attending physician be included on the NOE and on each claim. An attending physician can be a physician or a nurse practitioner, as long as he or she meets the requirements outlined in our regulations discussed above. The hospice patient (or his or her representative), not the hospice, chooses the attending physician. This differs from some non-hospice settings, where an attending may be a clinician assigned to provide care to the patient. This requirement is included as part of the CoPs at § 418.52(c)(4), which state that the patient has the right to choose his or her attending physician. The hospice CoPs at § 418.64(a)(3) further require that if the attending physician is unavailable, the hospice medical director, hospice contracted physician, and/or hospice physician employee is responsible for meeting the medical needs of the patient. Therefore, the patient should receive all needed care, whether that care is provided by hospice doctors, hospice nurse practitioners (NPs), or by the designated attending physician. Hospices can bill Part A for reasonable and necessary physician services provided to hospice beneficiaries by its doctors, regardless of whether those doctors are the designated attending. However, our regulations at § 418.304(e) do not permit Medicare to be billed for reasonable and necessary physician services provided by NPs unless the NP is the attending physician, as defined in § 418.3.

We have recently heard anecdotal reports of hospices changing a patient's attending physician when the patient moves to an inpatient setting for inpatient care, often to a nurse

practitioner. We have also heard reports of hospices assigning an attending physician based upon whoever is available. Medicare contractors noted that the NPI of the attending physician reported on claims was sometimes changing, and differed from that reported on the NOE. Additionally, using CY 2010 and CY 2011 data, we found that 35 percent of beneficiaries had Part B claims during their hospice election from more than one physician who claimed to be their designated attending physician. The reports of hospices changing a patient's attending physician are of great concern since the statute emphasizes that the attending physician must be chosen by the patient (or his or her representative). Finally, we have also received anecdotal reports that some hospices are not getting the signature of the attending physician on the initial certification. If a beneficiary has designated an attending physician, that physician must sign the initial certification for Medicare to cover and pay for hospice services, unless the attending is a NP.

To ensure the attending physician of record is properly documented in the patient's medical record, we proposed to amend the regulations at § 418.24(b)(1) and require the election statement to include the patient's choice of attending physician. The proposed information identifying the attending physician should be recorded on the election statement in enough detail so that it is clear which physician or NP was designated as the attending physician. Hospices have the flexibility to include this information on their election statement in whatever format works best for them, provided the content requirements in § 418.24(b) are met. The language on the election form should include an acknowledgement by the patient (or representative) that the designated attending physician was the patient's (or representative's) choice.

In addition, we further proposed that if a patient (or representative) wants to change his or her designated attending physician, he or she must follow a procedure similar to that which currently exists for changing the designated hospice. Specifically, the patient (or representative) must file a signed statement with the hospice that identifies the new attending physician in enough detail so that it is clear which physician or NP was designated as the new attending physician. Additionally, we proposed that the statement include the date the change is to be effective, the date that the statement is signed, and the patient's (or representative's) signature, along with an acknowledgement that this change in

the attending physician is the patient's (or representative's) choice. The effective date of the change in attending physician cannot be earlier than the date the statement is signed. We believe that such a change would help ensure that any changes in the identity of the attending physician would be the result of the patient's free choice.

Public comments and our response to comments regarding the changes to § 418.24(b)(1) and 418.24(f) requiring the election statement to include the patient's choice of attending physician and other requirements are summarized below.

Comments: Nearly all commenters wrote that they supported protecting beneficiary choice of the attending physician. The majority of commenters supported our proposal to identify the attending physician on the election form, with several affirming that they already follow this procedure. The main objection to identifying the attending physician on the election form was concern that the patient may not know whom he or she would like to serve as his or her attending physician at the time of election, and that this requirement could delay admission. One commenter asked that the hospice physician or NP be allowed to act as the attending until the patient's choice could be determined. One commenter suggested that we require the election form to state that the beneficiary (or representative) has the right to choose his or her attending physician, and that the chosen physician does not need to be employed by the hospice. Another commenter asked that we use "provider neutral" language, and refer to the "attending clinician" rather than the attending physician, as the attending could be a physician (MD or DO) or an advanced practice nurse. Two commenters suggested we determine patient and family satisfaction with the attending physician before implementing new requirements.

Some commenters felt that the proposal would not change existing behavior and that the proposed requirements increase administrative burden on the hospice. A few commenters encouraged Medicare contractor and/or hospice survey oversight rather than a regulation change.

Response: We appreciate the comments supporting our proposal and the protection of beneficiary choice, and are implementing the requirement to identify the attending physician on the election form as proposed. Regarding comments that the beneficiary might not know the attending at the time of election, the definition of "attending

physician" in the Medicare statute requires that the beneficiary identify the attending physician "at the time of election". Therefore, this timeframe for identifying the attending physician was not part of our proposal but is an existing statutory requirement at section 1861(dd)(3)(B) of the Act. Most beneficiaries have had encounters with physicians prior to their decision to elect hospice care and many typically have longstanding relationships with their healthcare providers. If a hospice beneficiary has had a physician actively involved in their care prior to a hospice election, it is reasonable to expect that the hospice beneficiary will not have difficulty identifying that physician who has the most significant role in the determination and delivery of medical care to them. And, for those individuals who do not have any established and/or longstanding relationships with a healthcare provider, he/she may choose not to identify an attending physician, or may choose to identify a hospice physician or NP as his or her attending physician. We do not prohibit a patient (or representative) from choosing a hospitalist as the attending physician, though we suggest that the hospice explain to the patient (or representative) that a hospitalist only follows patients who are hospitalized.

As indicated in our regulations at 42 CFR 418.20, in order to be eligible to elect hospice care, the beneficiary must be certified as terminally ill. That certification process occurs before election, and involves the patient's attending physician (if any). We did not receive any comments raising concerns about identifying the attending physician at the time of election when the definition of "attending physician" was first proposed in 1983 (48 FR 56009). The definition of "attending physician" was changed in section 408 of the Medicare Modernization Act of 2003, and the hospice regulations were updated in the August 4, 2005 FY 2006 Hospice Wage Index Final rule (70 FR 45139–45140). There were no comments received about this longstanding timeframe in the discussion of the changes to the definition of "attending physician" in this final rule. The June 5, 2008 Hospice Conditions of Participation final rule (73 FR 32089 through 32090) also discussed the definition of "attending physician", and again, there were no comments that raised concerns regarding this timeframe. Since identifying an attending physician at time of hospice election has been a requirement in place for over 30 years, and has not appeared to cause any delay in admission, we do

not believe that including the information that identifies the attending physician on the election form would now begin to create delays in admission to hospice care.

In the proposed rule, we gave hospices the flexibility to include this information identifying the attending physician on their election statement in whatever format works best for them, provided the content requirements in § 418.24(b) are met. We wrote that the language on the election form should include an acknowledgement by the patient (or representative) that the designated attending physician was the patient's (or representative's) choice. We believe that this language remains sufficient, and do not agree with the commenters that asked that the acknowledgement also include language indicating that the chosen attending physician need not be an employee of the hospice. The decision as to who is or is not the attending physician belongs solely to the patient (or representative) regardless of that attending physician's employment relationship (or lack thereof) with the hospice. We do not prohibit attending physicians from being hospice employees as long as it is the patient's choice to decide whether or not to have an attending physician and who that attending physician will be during the patient's hospice care.

Because "attending physician" is defined in the statute, we are also unable to use provider neutral language such as "attending clinician" to describe this position. As articulated in this section, the statutory definition of the "attending physician" at section 1861(dd)(3)(B) of the Act means either a physician or a nurse practitioner, and does not permit broadening the term to include other health care professionals.

We do not agree that we should wait to consider patient or family satisfaction data before implementing any new requirements related to the attending physician. While a few commenters suggested that we not make this regulatory change to the election statement, but instead allow Medicare contractors and survey enforcement to deal with any failure to comply with the regulations, we expect this policy to improve Medicare contractor enforcement and oversight activities as well as State survey activities. The hospice CoPs at § 418.52 include regulations related to the choice of attending physician and are enforced by State surveys.

Comment: While some commenters supported having changes in the attending physician documented by the hospice, many commenters felt that this would cause undue burden to the

hospice and to patients or their families during a period of crisis. A number of commenters asked that we clarify what constitutes a change in the attending physician, and mentioned scenarios when changes frequently occur, such as when the patient receives GIP care. A number of commenters wrote that most changes come about because the attending is unwilling or unavailable to continue following the patient, particularly as the patient's care becomes more complex and the hospice physician's role increases.

Some commenters asked that we allow verbal changes, or changes from representatives by email or by fax. One wrote that it would be unfair for an NP to provide physician services, and for the hospice not to be able to bill for those services because that NP is not the designated attending physician. One commenter was concerned that our proposal implied that changing the attending physician is not appropriate.

Response: We recognize that there are many legitimate reasons for a patient to change an attending physician. However, the choice of the new attending physician belongs solely to the patient (or representative), and the intent of this proposal is to further safeguard and protect that beneficiary choice. A patient cannot be required or coerced to change his or her attending physician.

The hospice should document, in the medical record, situations where the attending physician is no longer willing or available to follow the patient. The hospice can then inform the patient or representative that he or she may choose someone else to serve in that role. In making such a choice, the patient or representative should be informed that he or she can choose a physician or a nurse practitioner as the attending physician, and that this individual could be from the community or from the hospice. Because the attending physician is typically someone with whom the patient had a relationship before electing to receive hospice care, the role of the attending physician is to provide a long term perspective on the patient and family that takes into account their medical and personal history. Ideally, this conversation with the patient (or representative) would occur when the patient is stable, and the patient (or representative) is able to make a decision without the stress of a medical crisis or in the midst of a transition to inpatient care. The patient is not required to make a change, and if he or she chooses not to do so, then the hospice physician or NP would step in to provide all needed care.

We are concerned that many commenters appear to believe that it is necessary to change the attending physician when a patient transitions to GIP or other inpatient care, and that changing the attending physician would cause undue burden to the hospice and to patients or their families during a period of crisis. A hospice patient is not required to change his or her attending physician in order to receive inpatient care, regardless of the setting. If the attending physician does not have privileges at the hospital(s) the hospice contracts with for inpatient care, or does not wish to care for the patient in an inpatient setting, then according to our CoPs at § 418.64(a)(3), the hospice physician or NP must provide any needed physician's services. The patient does not need to designate the hospice physician or NP as his or her attending physician for this to occur. However, while the hospice can bill Medicare Part A for its employed or contracted physicians providing needed physician services to its patients, it can only do so for its NPs if the NP is the designated attending physician. This limitation on hospice NP billing is in the hospice regulations at § 418.304(e) and is based on the statutory language surrounding physician billing. The statutory definition of "physician services" at section 1861(q) of the Act requires that the individual performing the services be a physician. "Physicians" are defined at section 1861(r) of the Act, and do not include NPs. However the statute does permit attending physicians to bill for their services at section 1812(d)(2)(A) of the Act, and defines attending physicians to include NPs at section 1861(dd)(3)(B) of the Act.

We noted in the preamble of the proposed rule that "attending physician" is defined differently in different settings. If the patient is in a hospital, the hospital may assign a hospitalist to the patient, and the hospital may consider that hospitalist to be the "attending physician." However, that individual does not meet the hospice definition of "attending physician" unless the beneficiary chooses the hospital assigned attending physician to be their hospice attending physician. The clinician who meets the hospice definition of "attending physician" should provide needed care to the hospice patient in the hospital. If that hospice attending physician is unavailable, then the hospice physician or NP would need to do so. The hospice should coordinate the patient's care during the inpatient stay by communicating with the hospitalist. If the hospice attending physician is

involved in the patient's care during an inpatient stay, that hospice attending physician will need to coordinate with any hospitalists that the hospital may have assigned, and of course with the hospice.

We believe that commenters' concerns about stress on families during times of transition, and the burden of additional paperwork, resulted from hospices' erroneously believing that the attending physician must be changed for each GIP stay. With the clarification provided in this rule, we do not believe that the procedures we proposed for documenting a change in attending physician need to be revised, and are implementing the proposal without changes. When an attending physician is changed by the beneficiary (or representative), the required information documenting that change can be securely faxed or emailed to the hospice.

We reiterate that if the attending physician cannot provide needed physician services, then the hospice physician or NP is required by the hospice CoPs to do so.

Comment: Several commenters felt that the proposals surrounding changes in the attending physician would still not address situations where different non-hospice physicians are filing claims as the attending physician. A few suggested we educate community physicians as well as hospices about the attending physician. Some commenters stated, that given the hospices' role as the beneficiaries' care coordinators, hospices should have a role in addressing the issue of patients seeing multiple community physicians and others suggested notifying the patients' community physicians of the hospice election. However, one commenter expressed concern over whether this approach would complicate referral relationships with community physicians. Suggestions for billing edits for claims processing were also made.

Response: We agree that our proposals will not completely resolve the issues related to inappropriate physician billing. We expect that the hospice beneficiary receives all needed items and services for the palliation and management of the terminal illness and related conditions from the hospice or the attending physician. However, sometimes hospice beneficiaries decide to seek continued treatment without the knowledge of the hospice for their terminal illness and related conditions, utilizing items or services provided by or through entities other than the hospice or the designated attending physician. The hospice may need to remind beneficiaries of the waiver of

Medicare payment for services related to the terminal illness and related conditions provided by non-hospice providers (other than the attending physician), which is part of their election, and of their liability for those related services. Hospice beneficiaries also retain their right to use non-hospice providers for items or services unrelated to the terminal illness and related conditions, and Medicare will pay for those covered items or services.

The hospice CoPs at § 418.56(e) require that hospices "ensure that the interdisciplinary group maintains responsibility for directing, coordinating, and supervising the care and services provided" whether the care and services are provided directly or under arrangement and to "provide ongoing sharing of information with other non-hospice healthcare providers furnishing services unrelated to the terminal illness and related conditions." Therefore, the care coordination role of hospices is one that is to be collaborative with all providers of a beneficiary's care, including non-hospice providers. The expectation is that hospices would have established collaborative care coordination and communication relationships with other providers to ensure the best interests of its patients.

We also agree that more education is needed around this issue to hospices and to physicians, and will be issuing a MedLearn Matters article and possibly other Medicare education products on the topic. We also plan to address Part B billing by physicians inappropriately using the attending physician modifier on claims in the future. Finally, we will update informational materials on the hospice benefit that Medicare makes available to beneficiaries to increase awareness of the choices available to them related to the attending physician.

Comment: A commenter asked if a new election should be completed for each change in attending, or if the NOE should be updated in the claims processing system. One commenter was supportive that we are not limiting the number of times a change in attending physician occurs, but others noted that more than one attending could be in place during a billing period. Another commenter asked if CMS expected the same attending to sign off on all services provided for the date range of the claim, asked for clarification whether the attending physician shown on claims should be based on the statutory definition of attending physician or the 5010 TR3 manual definition of attending physician, and asked which definition would take precedence in an audit.

Response: If the patient (or representative) chooses to make a change in the attending physician, then the patient (or representative) would need to file a signed statement with the hospice that identifies the new attending physician in enough detail so that it is clear which physician or NP was designated as the new attending physician. For example, "Dr. Smith" is likely not specific enough, as there could be more than one physician named "Dr. Smith" in the area. The hospice should include information such as the physician's full name, office address, or NPI number on the election form when needed to correctly identify the attending physician chosen by the beneficiary. The statement should include the date the change is to be effective, the date that the statement is signed, and the patient's (or representative's) signature, along with an acknowledgement that this change in the attending physician is the patient's (or representative's) choice. The effective date of the change in attending physician cannot be earlier than the date the statement is signed. The patient (or representative) does not need to complete a new election form. At this time, the hospice does not need to update the claims processing system with changes in the attending physician.

When a change in attending physician occurs, Medicare could be billed for services provided by more than one attending physician during any given month. Hospices should follow the statutory definition of "attending physician" given in this final rule when recording attending physicians or billing for attending physicians on hospice claims. That definition is already included in the hospice claims processing manual (IOM 100-04, chapter 11, sections 40.1.2 and 40.1.3), and takes precedence in an audit.

Comment: A commenter was concerned by anecdotal reports indicating that when services are being provided in a skilled nursing facility or other long term care facility, the hospices bypass the nursing facility medical directors or attending physicians and write new medical orders. This commenter wrote that the long-term care facility's attending physician or medical director should retain primary responsibility for the patient except in unusual circumstances. This commenter asked that hospices not be permitted to change medical orders without the involvement or permission of the long term care facility's attending physician.

Response: The hospice CoPs at 418.56 require that the hospice be responsible for coordinating provision of the

patient's care and services in all settings. When a hospice patient resides in a nursing facility, the CoPs at 418.112 require that the hospice assume responsibility for professional management of the resident's hospice services provided, in accordance with the hospice plan of care. There must be a written agreement in place between the hospice and the facility which addresses care coordination with the facility staff. The CoPs at § 418.112(e) requires the hospice IDG to designate one of its members to coordinate the patient's hospice care with representatives of the SNF/NF or ICF/MR. The designated IDG member must also communicate with representatives of the SNF/NF or ICF/MR and any other health care providers to ensure quality care for the patient. Additionally, the designated IDG member must ensure that the hospice IDG communicates with the SNF/NF or ICF/MR medical director, the patient's attending physician, and any other physicians caring for the patient as needed to coordinate the patient's hospice care with the care provided by other entities. Through these mechanisms, the hospice maintains responsibility for all of its care and services for all of its patients and ensures that the care that it is providing complements the care being provided by others. In addition, the establishment of the written agreements and communication systems with SNFs, NFs, and ICFs/MR when hospices are furnishing hospice care to residents of those facilities promotes clear communication between the hospice and the SNF/NF or ICF/MR and will help hospices ensure that they are meeting their responsibility to furnish the care necessary to meet the needs of its patients. We believe that this coordinated process actively involves and engages all members of the patient's care team, both within the hospice and the facility, in care planning, and delivery.

Comment: A commenter suggested that the attending physician be responsible for communicating with the beneficiary's pharmacy regarding which of a hospice beneficiary's drugs should be discontinued.

Response: We appreciate this comment related to Part D coordination with pharmacies. We will consider this comment in the overall development of a coordination process which we solicited comments on in Section III.I and will address this comment in future rulemaking.

Final action: We are implementing all the proposals related to the attending physician as proposed.

G. FY 2015 Hospice Wage Index and Rates Update

1. FY 2015 Hospice Wage Index

The hospice wage index is used to adjust payment rates for hospice agencies under the Medicare program to reflect local differences in area wage levels based on the location where services are furnished. The hospice wage index utilizes the wage adjustment factors used by the Secretary for purposes of section 1886(d)(3)(E) of the Act for hospital wage adjustments, and our regulations at § 418.306(c) require each labor market to be established using the most current hospital wage data available, including any changes by the Office of Management and Budget (OMB) to the Metropolitan Statistical Areas (MSAs) definitions. We have consistently used the pre-floor, pre-reclassified hospital wage index when deriving the hospice wage index. In our August 4, 2005 FY 2006 Hospice Wage Index final rule (70 FR 45130), we began adopting the revised labor market area definitions as discussed in the OMB Bulletin No. 03-04 (June 6, 2003). This bulletin announced revised definitions for MSAs and the creation of Core-Based Statistical Areas (CBSAs). The bulletin is available online at <http://www.whitehouse.gov/omb/bulletins/b03-04.html>.

In the FY 2006 Hospice Wage Index final rule, we implemented a 1-year transition policy using a 50/50 blend of the CBSA-based wage index values and the MSA-based wage index values for FY 2006. The one-year transition policy ended on September 30, 2006. For FY 2007 and beyond, we have used CBSAs exclusively to calculate wage index values. OMB has published subsequent bulletins regarding CBSA changes. The most recent CBSA changes used for the FY 2015 hospice wage index are found in OMB Bulletin 10-02, available at: <http://www.whitehouse.gov/sites/default/files/omb/assets/bulletins/b10-02.pdf>.

When adopting OMB's new labor market designations in FY 2006, we identified some geographic areas where there were no hospitals, and thus, no hospital wage index data on which to base the calculation of the hospice wage index. We also adopted the policy that for urban labor markets without a hospital from which hospital wage index data could be derived, all of the CBSAs within the state would be used to calculate a statewide urban average pre-floor, pre-reclassified hospital wage index value to use as a reasonable proxy for these areas in our August 6, 2009 FY 2010 Hospice Wage Index final rule (74 FR 39386). In FY 2015, the only CBSA

without a hospital from which hospital wage data could be derived is 25980, Hinesville-Fort Stewart, Georgia.

In our August 31, 2007 FY 2008 Hospice Wage Index final rule (72 FR 50214), we implemented a new methodology to update the hospice wage index for rural areas without a hospital, and thus no hospital wage data. In cases where there was a rural area without rural hospital wage data, we used the average pre-floor, pre-reclassified hospital wage index data from all contiguous CBSAs to represent a reasonable proxy for the rural area. In our August 31, 2007 FY 2008 Hospice Wage Index final rule, we noted that we interpret the term "contiguous" to mean sharing a border (72 FR 50217). Currently, the only rural area without a hospital from which hospital wage data could be derived is Puerto Rico. However, our policy of imputing a rural pre-floor, pre-reclassified hospital wage index based on the pre-floor, pre-reclassified hospital wage index (or indices) of CBSAs contiguous to a rural area without a hospital from which hospital wage data could be derived does not recognize the unique circumstances of Puerto Rico. While we have not identified an alternative methodology for imputing a pre-floor, pre-reclassified hospital wage index for rural Puerto Rico, we will continue to evaluate the feasibility of using existing hospital wage data and, possibly, wage data from other sources. For FY 2008 through FY 2013, we have used the most recent pre-floor, pre-reclassified hospital wage index available for Puerto Rico, which is 0.4047. In this final rule, for FY 2015, we continue to use the most recent pre-floor, pre-reclassified hospital wage index value available for Puerto Rico, which is 0.4047.

For FY 2015, we used the 2014 pre-floor, pre-reclassified hospital wage index to derive the applicable wage index values for the FY 2015 hospice wage index. We continue to use the pre-floor, pre-reclassified hospital wage data as a basis to determine the hospice wage index values because hospitals and hospices both compete in the same labor markets, and therefore, experience similar wage-related costs. We believe the use of the pre-floor, pre-reclassified hospital wage index data, as a basis for the hospice wage index, results in the appropriate adjustment to the labor portion of the costs. The FY 2015 hospice wage index values presented in this final rule were computed consistent with our pre-floor, pre-reclassified hospital (IPPS) wage index policy (that is, our historical policy of not taking into account IPPS geographic reclassifications in determining

payments for hospice). The FY 2015 pre-floor, pre-reclassified hospital wage index does not reflect OMB's new area delineations, based on the 2010 Census, as outlined in OMB Bulletin 13-01, released on February 28, 2013. Moreover, the final FY 2015 pre-floor, pre-reclassified hospital wage index does not contain OMB's new area delineations. CMS proposed changes to the FY 2015 hospital wage index based on the newest CBSA changes in the FY 2015 IPPS proposed rule. Therefore, if CMS incorporates OMB's new area delineations, based on the 2010 Census, in the FY 2015 hospital wage index, those changes would also be reflected in the FY 2016 hospice wage index.

We received 3 comments regarding the wage index proposals.

Comment: A commenter suggests that CMS implement a policy whereby the area wage index applicable to any hospice that is located in an urban area of a State may not be less than the area wage index applicable to hospices located in rural areas in that State.

Response: The wage index is based on hospital wage data from each urban CBSA and rural area. Therefore, the wage index for each geographic area (whether urban or rural) should be an accurate reflection of hospital wages in that area. We will continue to monitor the effects of the wage index, look into whether or not we would have the authority to implement such a policy, and determine the appropriateness of such a policy before possibly considering this recommendation in future rulemaking.

Comment: A commenter suggests placing Montgomery County, Maryland into CBSA 47894 "Washington-Arlington-Alexandria, DC-VA-MD-WV". Montgomery County, along with Frederick County, Maryland, is in CBSA 13644 "Bethesda-Rockville-Frederick, MD". The commenter states that the cost of living in Montgomery County is no lower than the cost of living in the counties which comprise CBSA 47894.

Response: The geographic area delineations are based on labor market definitions established by OMB. We proposed and finalized the adoption of the revised labor market area definitions as discussed in the OMB Bulletin No. 03-04 (June 6, 2003) in our August 4, 2005 FY 2006 Hospice Wage Index final rule (70 FR 45130). Any revisions to the labor market area definitions will reflect updates to the geographic area delineations established by OMB.

Comment: One commenter requests that the new OMB delineations be considered when computing the FY 2015 wage index for hospices, just as they are for other provider types such as

inpatient hospital, SNF and home health.

Response: As in previous years, the hospice wage index will be based on the previous year's IPPS hospital pre-floor, pre-reclassified wage index. For FY 2015, the hospice wage index will use the FY 2014 IPPS hospital pre-floor, pre-reclassified wage index subject to either a budget neutrality adjustment or application of the hospice floor. The FY 2014 IPPS hospital wage index did not utilize the new OMB delineations. Therefore, the FY 2015 hospice wage index will not incorporate them in this rule. The new OMB delineations will be incorporated into the FY 2015 IPPS hospital wage index. We expect to propose to adopt those changes to the hospice wage index in future rulemaking.

Final action: We are implementing the hospice wage index as discussed in the proposed rule.

2. FY 2015 Hospice Wage Index With an Additional 15 Percent Reduced Budget Neutrality Adjustment Factor (BNAF)

In the FY 2015 Hospice Wage Index proposed rule, we proposed to update the hospice wage index values for FY 2015 using the FY 2014 pre-floor, pre-reclassified hospital wage index. As described in the August 8, 1997 Hospice Wage Index final rule (62 FR 42860), the pre-floor and pre-reclassified hospital wage index is used as the raw wage index for the hospice benefit. These raw wage index values are then subject to either a budget neutrality adjustment or application of the hospice floor to compute the hospice wage index used to determine payments to hospices. Pre-floor, pre-reclassified hospital wage index values below 0.8 are adjusted by either: (1) the hospice budget neutrality adjustment factor (BNAF); or (2) the hospice floor subject to a maximum wage index value of 0.8; whichever results in the greater value.

The BNAF is calculated by computing estimated payments using the most recent, completed year of hospice claims data. The units (days or hours) from those claims are multiplied by the updated hospice payment rates to calculate estimated payments. For the FY 2015 Hospice Wage Index final rule, that means estimating payments for FY 2015 using units (days or hours) from FY 2013 hospice claims data, and applying the final FY 2015 hospice payment rates. The FY 2015 hospice wage index values are then applied to the labor portion of the payments. The procedure is repeated using the same units from the claims data and the same payment rates, but using the 1983 Bureau of Labor Statistics (BLS)-based

wage index instead of the updated raw pre-floor, pre-reclassified hospital wage index (note that both wage indices include their respective floor adjustments). The total payments are then compared, and the adjustment required to make total payments equal is computed; that adjustment factor is the BNAF.

The August 6, 2009 FY 2010 Hospice Wage Index final rule finalized a provision to phase out the BNAF over 7 years, with a 10 percent reduction in the BNAF in FY 2010, and an additional 15 percent reduction in each of the next 6 years, with complete phase out in FY 2016 (74 FR 39384). Once the BNAF is completely phased out, the hospice floor adjustment would simply consist of increasing any wage index value less than 0.8 by 15 percent, subject to a maximum wage index value of 0.8. Therefore, in accordance with the FY 2010 Hospice Wage final rule, the BNAF for FY 2015 will be reduced by an additional 15 percent for a total BNAF reduction of 85 percent (10 percent from FY 2010, an additional 15 percent from FY 2011, an additional 15 percent for FY 2012, an additional 15 percent for FY 2013, an additional 15 percent in FY 2014, and an additional 15 percent in FY 2015).

The unreduced BNAF for FY 2015 is 0.062084 (or 6.2084 percent). An 85 percent reduction to the BNAF is computed to be 0.009313 (or 0.9313 percent). For FY 2015, this is mathematically equivalent to taking 15 percent of the unreduced BNAF value, or multiplying 0.062084 by 0.15, which equals 0.009313 (0.9313 percent). The BNAF of 0.9313 percent reflects an 85 percent reduction in the BNAF. The 85 percent reduced BNAF (0.9313 percent) was applied to the pre-floor, pre-reclassified hospital wage index values of 0.8 or greater. The 10 percent reduced BNAF for FY 2010 was 0.055598, based on a full BNAF of 0.061775; the additional 15 percent reduced BNAF FY 2011 (for a cumulative reduction of 25 percent) was 0.045422, based on a full BNAF of 0.060562; the additional 15 percent reduced BNAF for FY 2012 (for a cumulative reduction of 40 percent) was 0.035156, based on a full BNAF of 0.058593; the additional 15 percent reduced BNAF for FY 2013 (for a cumulative reduction of 55 percent) was 0.027197, based on a full BNAF of 0.060438; the additional 15 percent reduced BNAF for FY 2014 (for a cumulative reduction of 70 percent) was 0.018461, based on a full BNAF of 0.061538 and the additional 15 percent reduced BNAF for FY 2015 (for a cumulative reduction of 85 percent) is

0.009313, based on a full BNAF of 0.062084.

Hospital wage index values which are less than 0.8 are subject to the hospice floor calculation. For example, if in FY 2015, County A had a pre-floor, pre-reclassified hospital wage index (raw wage index) value of 0.3994, we would perform the following calculations using the budget-neutrality factor (which for this example is an unreduced BNAF of 0.062084, less 85 percent, or 0.009313) and the hospice floor to determine County A's hospice wage index: Pre-floor, pre-reclassified hospital wage index value below 0.8 multiplied by 1 + 85 percent reduced BNAF: $(0.3994 \times 1.009313 = 0.4031)$; Pre-floor, pre-reclassified hospital wage index value below 0.8 multiplied by 1 + hospice floor: $(0.3994 \times 1.15 = 0.4593)$. Based on these calculations, County A's hospice wage index would be 0.4593.

An Addendum A and Addendum B with the final FY 2015 wage index values for rural and urban areas will not be published in the **Federal Register**. The final FY 2015 wage index values for rural areas and urban areas are available via the internet at: <http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/index.html>. The hospice wage index for FY 2015 set forth in this final rule includes the BNAF reduction and would be effective October 1, 2014 through September 30, 2015.

3. Hospice Payment Update Percentage

Section 4441(a) of the Balanced Budget Act of 1997 (BBA) amended section 1814(i)(1)(C)(ii)(VI) of the Act to establish updates to hospice rates for FYs 1998 through 2002. Hospice rates were to be updated by a factor equal to the market basket index, minus 1 percentage point. Payment rates for FYs since 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYs must be the market basket percentage for that FY. The Act requires us to use the inpatient hospital market basket to determine the hospice payment rate update. In addition, section 3401(g) of the Affordable Care Act mandates that, starting with FY 2013 (and in subsequent FYs), the hospice payment update percentage will be annually reduced by changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. In addition, section 3401(g) of the Affordable Care Act also mandates that in FY 2013 through FY 2019, the hospice payment update percentage will be reduced by an additional 0.3 percentage point (although for FY 2014

to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions specified in section 1814(i)(1)(C)(v) of the Act). The final hospice payment update percentage for FY 2015 will be the inpatient hospital market basket update of 2.9 percent (based on IHS Global Insight, Inc.'s second quarter 2014 forecast with historical data through the first quarter of 2014), less any mandated adjustments. Due to the requirements at 1886(b)(3)(B)(xi)(II) and 1814(i)(1)(C)(v) of the Act, the inpatient hospital market basket update for FY 2015 of 2.9 percent must be reduced by a productivity adjustment as mandated by Affordable Care Act (currently estimated to be 0.5 percentage point for FY 2015). The inpatient hospital market basket for FY 2015 is reduced further by a 0.3 percentage point, as mandated by the Affordable Care Act. In effect, the final hospice payment update percentage for FY 2015 is 2.1 percent. We used the most recent data available (for example, the most recent inpatient hospital market basket and productivity adjustment), to determine the FY 2015 market basket update and the multi-factor productivity MFP adjustment in this FY 2015 Hospice PPS final rule.

Currently, the labor portion of the hospice payment rates is as follows: for Routine Home Care, 68.71 percent; for Continuous Home Care, 68.71 percent; for General Inpatient Care, 64.01 percent; and for Respite Care, 54.13 percent. The non-labor portion is equal to 100 percent minus the labor portion for each level of care. Therefore, the non-labor portion of the payment rates is as follows: for Routine Home Care, 31.29 percent; for Continuous Home Care, 31.29 percent; for General Inpatient Care, 35.99 percent; and for Respite Care, 45.87 percent.

We received 3 comments regarding the proposed payment update.

Comment: The commenters stated that the proposed update is misleading and inaccurate due to cuts through the BNAF phase-out and sequestration. Commenters claim that hospices are incurring significant, additional regulatory costs and are forced to take dollars for these costs out of patient care. Some examples of additional regulatory burdens cited by the commenters include: the costs of CR 8358 "Additional Data Reporting Requirements for Hospice Claims", the Experience of Care Survey which will be required in 2015, the burden of Part D prior authorization or appeal, and the proposed new cost report requiring new financial reporting systems and additional staff.

Response: The comments on sequestration are outside the scope of this rule. We note that the impact analysis does reflect estimated reductions in FY 2015 payments to hospice as a result of the 6th year of the 7-year BNAF phase-out.

Final action: We are implementing the hospice payment update as discussed in the proposed rule and consistent with the updated data to the hospital market basket update and multi-factor productivity (MFP) adjustment.

4. FY 2015 Hospice Payment Rates

Historically, the hospice rate update has been published through a separate administrative instruction issued annually in the summer to provide adequate time to implement system change requirements; however, beginning in FY 2014 and for subsequent fiscal years, we are using rulemaking as the means to update payment rates. This change was proposed in the FY 2014 Hospice Wage Index and Payment Rate Update proposed rule and finalized in the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48270). It is consistent with the rate update process in other Medicare benefits, and provides rate information to hospices as quickly as, or earlier than, when rates are published in an administrative instruction.

There are four payment categories that are distinguished by the location and intensity of the services provided. The base payments are adjusted for geographic differences in wages by multiplying the labor share, which varies by category, of each base rate by the applicable hospice wage index. A hospice is paid the routine home care rate for each day the beneficiary is enrolled in hospice, unless the hospice provides continuous home care, inpatient respite care, or general inpatient care. Continuous home care is provided during a period of patient crisis to maintain the patient at home; inpatient respite care is short-term care to allow the usual caregiver to rest; and general inpatient care is to treat symptoms that cannot be managed in another setting.

The final FY 2015 payment rates will be the FY 2014 payment rates, increased by 2.1 percent, which is the final hospice payment update percentage for FY 2015 as discussed in section III.G.3. The final FY 2015 hospice payment rates will be effective for care and services furnished on or after October 1, 2014, through September 30, 2015 (see Table 6 below).

TABLE 6—FY 2015 HOSPICE PAYMENT RATES UPDATED BY THE FINAL HOSPICE PAYMENT UPDATE PERCENTAGE

Code	Description	FY 2014 payment rates	Increase by the FY 2015 final hospice payment update of 2.1 percent	FY 2015 final payment rate
651	Routine Home Care	\$156.06	×1.021	\$159.34
652	Continuous Home Care	910.78	×1.021	929.91
	Full Rate applies to 24 hours of care			929.91
	Hourly rate = \$38.75			
655	Inpatient Respite Care	161.42	×1.021	164.81
656	General Inpatient Care	694.19	×1.021	708.77

The Congress required in sections 1814(i)(5)(A) through (C) of the Act that hospices begin submitting quality data, based on measures to be specified by the Secretary. In the FY 2012 Hospice Wage Index final rule (76 FR 47320 through 47324), we implemented a Hospice Quality Reporting Program (HQRP) as required by section 3004 of the

Affordable Care Act. Hospices were required to begin collecting quality data in October 2012, and submit that quality data in 2013. Section 1814(i)(5)(A)(i) of the Act requires that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the

quality data submission requirements with respect to that FY.). We remind hospices that this applies to payments in FY 2015 (See Table 7 below). For more information on the HQRP requirements please see section III.H in this final rule.

TABLE 7—FY 2015 HOSPICE PAYMENT RATES UPDATED BY THE FINAL HOSPICE PAYMENT UPDATE PERCENTAGE FOR HOSPICES THAT DO NOT SUBMIT THE REQUIRED QUALITY DATA

Code	Description	FY 2014 payment rates	Increase by the FY 2015 hospice payment update percentage of 2.1 percent minus 2 percentage points = 0.1	FY 2015 final payment rate
651	Routine Home care	\$156.06	×1.001	\$156.22
652	Continuous Home Care.	910.78	×1.001	911.69
	Full Rate applies to 24 hours of care			911.69
	Hourly rate = \$37.99.			
655	Inpatient Respite Care	161.42	×1.001	161.58
656	General Inpatient Care	694.19	×1.001	694.88

To assist the hospice industry in planning and budgeting, CMS is informing the hospice industry of the aggregate cap amount for the 2014 cap year in advance of the formal CMS administrative notice, which will be issued this summer. Additionally, we have included information about how we calculate the aggregate cap amount so that hospices can compute the amount themselves in the future if they so desire. This information is also in CMS' Internet-Only Manual 100–2, chapter 9, section 90.2.6. The manual can be accessed from the “Manuals and Transmittals” section of CMS' hospice Web site at <http://www.cms.gov/Center/Provider-Type/Hospice-Center.html>.

The hospice aggregate cap amount for the 2014 cap year will be \$26,725.79. The cap amount is calculated according to § 1814(i)(2)(B) of the Act. The cap amount for a given year is \$6,500 multiplied by the change in the Consumer Price Index for All Urban Consumers (CPI-U) Medical Care

expenditure category, from the fifth month of the 1984 accounting year (March 1984) to the fifth month of the current accounting year (in this case, March 2014). The CPI-U for Medical Care expenditures (BLS series code CUUR0000SAM) for 1984 to present is available from the Bureau of Labor Statistics (BLS) Web site at: <http://www.bls.gov/cpi/home.htm>.

(Step 1) From the BLS Web site given above, the March 2014 CPI-U for Medical Care expenditures is 433.369 and the 1984 CPI-U for Medical Care expenditures was 105.4.

(Step 2) Divide the March 2014 CPI-U for Medical Care expenditures by the 1984 CPI-U for medical care expenditures to compute the change.

$$433.369/105.4 = 4.111660$$

(Step 3) Multiply the original cap base amount (\$6,500) by the result from step 2) to get the updated aggregate cap amount for the 2014 cap year.

$$\$6,500 \times 4.111660 = \$26,725.79$$

H. Updates to the Hospice Quality Reporting Program

1. Background and Statutory Authority

Section 3004 of the Affordable Care Act amended the Act to authorize a quality reporting program for hospices. Section 1814(i)(5)(A)(i) of the Act requires that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY. Depending on the amount of the annual update for a particular year, a reduction of 2 percentage points could result in the annual market basket update being less than 0.0 percent for a FY and may result in payment rates that are less than payment rates for the preceding FY. Any reduction based on failure to comply with the reporting requirements, as required by section 1814(i)(5)(B) of the

Act, would apply only for the particular FY involved. Any such reduction would not be cumulative or be taken into account in computing the payment amount for subsequent FYs.

Section 1814(i)(5)(C) of the Act requires that each hospice submit data to the Secretary on quality measures specified by the Secretary. The data must be submitted in a form, manner, and at a time specified by the Secretary. Any measures selected by the Secretary must have been endorsed by the consensus-based entity which holds a contract regarding performance measurement with the Secretary under section 1890(a) of the Act. This contract is currently held by the National Quality Forum (NQF). However, section 1814(i)(5)(D)(ii) of the Act provides that in the case of a specified area or medical topic determined appropriate by the Secretary for which a feasible and practical measure has not been endorsed by the consensus-based entity, the Secretary may specify measures that are not so endorsed as long as due consideration is given to measures that have been endorsed or adopted by a consensus-based organization identified by the Secretary.

The successful development of a Hospice Quality Reporting Program (HQRP) that promotes the delivery of high quality healthcare services is our paramount concern. We seek to adopt measures for the HQRP that promote more efficient and safer care. Our measure selection activities for the HQRP take into consideration input we receive from the Measure Applications Partnership (MAP), convened by the National Quality Forum (NQF), as part of a pre-rulemaking process that we have established and are required to follow under section 1890A of the Act. The MAP is a public-private partnership comprised of multi-stakeholder groups convened by the NQF for the primary purpose of providing input to CMS on the selection of certain categories of quality and efficiency measures, as required by section 1890A(a)(3) of the Act. By February 1st of each year, the NQF must provide that input to CMS. Input from the MAP is located at: (http://www.qualityforum.org/Setting_Priorities/Partnership/Measure_Applications_Partnership.aspx). For more details about the pre-rulemaking process, see the FY 2013 IPPS/LTCH PPS final rule (77 FR 53376).

We also take into account national priorities, such as those established by the National Priorities Partnership at (<http://www.qualityforum.org/npp/>), the HHS Strategic Plan (<http://www.hhs.gov/secretary/about/priorities/priorities.html>), the National Strategy

for Quality Improvement in Healthcare located at (<http://www.ahrq.gov/workingforquality/nqs/nqs2013annlrpt.htm>) and the CMS Quality Strategy at (<http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/QualityInitiativesGenInfo/CMS-Quality-Strategy.html>).

To the extent practicable, we have sought to adopt measures that have been endorsed by the national consensus organization, recommended by multi-stakeholder organizations, and developed with the input of providers, purchasers/payers, and other stakeholders.

2. Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Years FY 2014 and FY 2015.

As stated in the FY 2012 Hospice Wage Index final rule (76 FR 47302, 47320), to meet the quality reporting requirements for hospices for the FY 2014 payment determination and in the CY 2013 Home Health Prospective Payment System (HH PPS) final rule (77 FR 67068, 67133), the quality reporting requirements for hospices for the FY 2015 payment determination, as set forth in section 1814(i)(5) of the Act, we finalized the requirement that hospices report two measures:

- An NQF-endorsed measure related to pain management, NQF #0209. The data for this measure are collected at the patient level, but are reported in the aggregate for all patients cared for within the reporting period, regardless of payer.
- A structural measure that is not endorsed by NQF: Participation in a Quality Assessment and Performance Improvement (QAPI) program that includes at least three quality indicators related to patient care.

3. Quality Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Year FY 2016 and Beyond

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48234, 48256), we finalized that the structural measure related to QAPI indicators and the NQF #0209 pain measure would not be required for the HQRP beyond data submission for the FY 2015 payment determination. The data submission period for the FY 2015 payment determination closed on April 1, 2014.

As stated in the CY 2013 HH PPS final rule (77 FR 67068, 67133), we considered an expansion of the required measures to include additional

measures endorsed by NQF. We also stated that to support the standardized collection and calculation of quality measures by CMS, collection of the needed data elements would require a standardized data collection instrument. We developed and tested a hospice patient-level item set, the Hospice Item Set (HIS) to be used by all hospices to collect and submit standardized data items about each patient admitted to hospice.

In developing the standardized HIS, we considered comments offered in response to the CY 2013 HH PPS proposed rule (77 FR 41548, 41573). In the FY 2014 Hospice Wage Index final rule (78 FR 48257), and in compliance with section 1814(i)(5)(C) of the Act, we finalized the specific collection of data items that support the following six NQF endorsed measures and one modified measure for hospice:

- NQF #1617 Patients Treated with an Opioid who are Given a Bowel Regimen
- NQF #1634 Pain Screening
- NQF #1637 Pain Assessment
- NQF #1638 Dyspnea Treatment
- NQF #1639 Dyspnea Screening
- NQF #1641 Treatment Preferences
- NQF #1647 Beliefs/Values Addressed (if desired by the patient) (modified)

To achieve a comprehensive set of hospice quality measures available for widespread use for quality improvement and informed decision making, and to carry out our commitment to develop a quality reporting program for hospices that uses standardized methods to collect data needed to calculate quality measures, we finalized the HIS effective July 2014 (78 FR 48257). To meet the quality reporting requirements for hospices for the FY 2016 payment determination and each subsequent year, we will require regular and ongoing electronic submission of the HIS data for each patient admission to hospice on or after July 1, 2014, regardless of payer or patient age (78 FR 48234, 48258). Collecting data on all patients will provide CMS with the most robust, accurate reflection of the quality of care delivered to Medicare beneficiaries as compared with non-Medicare patients. Therefore, to measure the quality of care that is delivered to Medicare beneficiaries in the hospice setting, we will collect quality data necessary to calculate the adopted measures on all patients. We are requiring in our regulation that hospices collect data on all patients in hospice in order to ensure that all patients, regardless of payer, are receiving the same care and that provider metrics measure performance

across the spectrum of patients (78 FR 48258).

Hospices are required to complete and submit an admission HIS and a discharge HIS for each patient admission. Hospices failing to report quality data via the HIS in 2014 will have their market basket update reduced by 2 percentage points in FY 2016.

Although this has been implemented thus far pursuant to instructions set out in our preamble statements, we proposed to codify the HIS submission requirements at § 418.312 in this final rule. The System of Record (SOR) Notice for the HIS, SOR number 09–07–0548, was published in the **Federal Register** on April 8, 2014 (79 FR 19341).

Comment: Several commenters believed that hospices should not be subject to a reduction in the annual market basket update if they are unable to achieve 100 percent timely data submission during the FY 2015 submission period.

Response: We thank the commenters for their concern; however, we did not make any proposals regarding timely data submission. We also recognize that new hospices that receive their CCN after the yearly submission deadline are still required to submit the HIS for each patient, but those HIS submissions would fall after the submission deadline. If a hospice realizes that it will not meet the timeliness criteria for any given record, for whatever reason, it should still complete and submit that record. Late completion and submission of HIS records will result in a non-fatal warning error in the Quality Improvement and Evaluation System. However, the records can still be accepted by the system.

Comment: Several commenters asserted that the Quality Reporting Program should be restricted to Medicare patients and stated that requiring data reporting on patients covered by other payers is outside CMS's regulatory authority.

Response: We respectfully disagree with the commenters' assertions. We have proposed to codify the HIS submission requirements at § 418.312. Section 3004 of the ACA requires quality reporting, and CMS has required all facilities subject to quality reporting requirements to submit data on its entire patient population, including hospitals and inpatient rehabilitation facilities.

The delivery of high quality care in hospice is imperative, regardless of payer. We believe that collecting quality data on all patients in the hospice setting supports CMS' mission to ensure quality care for Medicare beneficiaries and ensures that all patients, regardless of payer, are receiving the same care.

Comment: Several commenters noted that the cost of the mandated quality program must be reflected in hospice reimbursement rates.

Response: We thank the commenters for their concern; however, the cost of quality improvement programs should be reported on the cost reports. Cost report data may be considered in future payment reform.

Comment: One commenter reported that more time is required to assure the quality of HIS information than the time it takes to collect it. While this situation may be the result of the newness of the tool and the learning curve required for implementation, the production of reliable and meaningful quality measures depends on the quality of the data collected.

Response: We thank the commenters for taking the time to express their concerns regarding the HIS collection. Collection began on July 1st, 2014 and we understand the commenter's perception that the newness of the process may make the process feel more burdensome. We appreciate the commenters' diligence ensuring quality and accuracy of the data submitted.

Comment: A few commenters expressed disagreement with our estimate of the amount of regulatory burden on hospice agencies to carry out the HIS admission and discharge submissions.

Response: We thank the commenters for taking the time to express these views and suggestions. CMS attempts to reduce the regulatory burden of our quality reporting programs to the greatest extent possible. As required by OMB, the burden to complete the HIS is included in the actual HIS (http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Downloads/HIS_Admission_Final_4-8-2014.pdf). Specifically, CMS estimates 19 minutes per response for the Admission HIS and 10 minutes per response for the Discharge HIS. Details regarding the estimate can be found at: <http://www.cms.gov/Regulations-and-Guidance/Legislation/PaperworkReductionActof1995/PRA-Listing-Items/CMS1252151.html?DLPage=1&DLSort=1&DLSortDir=descending>. Comments concerning the accuracy of the time estimate(s) or suggestions for improving the HIS can be directed to: CMS, 7500 Security Boulevard, Attn: PRA Reports Clearance Officer, Mail Stop C4–26–05, Baltimore, Maryland 21244–1850.

Final action: After consideration of the comments, we are finalizing our proposal to codify the HIS submission requirements at § 418.312 in this final rule as proposed without change.

Hospice programs will be evaluated for purposes of the quality reporting program based on whether or not they submit data, not on their substantive performance level with respect to the required measures. We have provided hospices with information and details about use of the HIS through postings on the Hospice Quality Reporting Program Web page, Open Door Forums, announcements in the CMS MLN Connects Provider e-News (E-News), and provider training. Electronic data submission is required for HIS submission in CY 2014 and beyond; there are no other data submission methods available. CMS will make available submission software for the HIS to hospices at no cost. We intend to report to providers on the seven finalized measures on a schedule to be determined.

We provided details on data collection and submission timing at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Hospice-Item-Set-HIS.html>.

Submission of the HIS on all patient admissions to hospice, regardless of payer or patient age, is required. The data submission system provides reports upon successful submission and successful processing of the HIS records. The final validation report may serve as evidence of submission. This is the same data submission system used by nursing homes, inpatient rehabilitation facilities and long-term care hospitals for the submission of Minimum Data Set Version 3.0 (MDS 3.0), Inpatient Rehabilitation Facility—Patient Assessment Instrument (IRF—PAI), and Long-Term Care Hospital Continuity Assessment Record & Evaluation Data Set (LTCH CARE), respectively.

We also proposed that newly certified hospices that receive notice of their CMS certification number on or after November 1, 2014 for payments to be made in FY 2016 be excluded from the quality reporting requirements for the FY 2016 payment determination, as data submission and analysis would not be possible for a hospice receiving notification of their certification this late in the reporting time period.

We proposed that in future years, hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY. We proposed to codify this requirement at § 418.312.

Comment: Several commenters support the proposal that hospices that

receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY and to codify this requirement at § 418.312.

Response: We thank commenters for taking the time to support our proposal.

Final action: We are finalizing our proposal that hospices that receive notification of certification on or after November 1 of the preceding year involved would continue to be excluded from any payment penalty for quality reporting purposes for the following FY and to codify this requirement at § 418.312.

As is common in other quality reporting programs, we proposed to make accommodations in the case of natural disaster or other extenuating circumstances. Our experience with other quality reporting programs has shown that there are times when providers are unable to submit quality data due to extraordinary circumstances beyond their control (for example, natural or man-made disasters). A disaster may be widespread or impact multiple structures or be isolated and impact a single site only. We do not wish to penalize providers in these circumstances or to unduly increase their burden during these times. Therefore, we proposed a process, for the FY 2016 payment determination and subsequent payment determinations, for hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider. When an extension/exception is granted, a hospice will not incur payment reduction penalties for failure to comply with the requirements of the HQRP.

Under the proposed process for the FY 2016 payment determination and subsequent payment determinations, a hospice may request an extension/exception of the requirement to submit quality data for a specified time period. We proposed a process that, in the event that a hospice requested an extension/exception for quality reporting purposes for the FY 2016 payment determination and subsequent payment determinations, the hospice would submit a written request to CMS. Requirements for requesting an extension/exception will be available on the Hospice Quality Reporting Web site at <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/index.html>.

This proposal does not preclude us from granting extensions/exceptions to hospices that have not requested them when we determine that an extraordinary circumstance, such as an act of nature, affects an entire region or locale. We also proposed that we could grant an extension/exception to a hospice if we determine that a systemic problem with our data collection systems directly affected the ability of the hospice to submit data. If we make the determination to grant an extension/exception to hospices in a region or locale, we proposed to communicate this decision through routine communication channels to hospices and vendors, including, but not limited to, Open Door Forums, E-News and notices on <https://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/>.

Public comments and our response to comments are summarized below. All comments received were supportive of the proposed extension/exception policy.

Comment: Several commenters supported the proposal to allow hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider.

Response: We thank the commenters for taking the time to express their support for this proposal.

Final action: After consideration of the public comments, we are finalizing our proposal without change to allow hospices to request and for CMS to grant extensions/exceptions with respect to the reporting of required quality data when there are extraordinary circumstances beyond the control of the provider.

4. Future Measure Development

We did not propose any new measures for the HQRP in the FY 2015 Hospice Wage Index and Payment Rate Update proposed rule. However, we believe future development of the HQRP should address existing measure gaps by focusing on two primary opportunities: to expand measures already in use in other quality reporting programs that could apply to the HQRP and to develop new measures if no suitable measures are ready for implementation or expansion. We are particularly interested in outcome measures for symptom management, particularly pain. We are also interested in measures of patient reported outcomes. In the proposed rule, we solicited comments

and input on future measure development.

Comment: Many comments were generally supportive of the Hospice Quality Reporting Program (HQRP), and quality measurement in general. Commenters indicated they were pleased that CMS was not proposing additional new measures for implementation at this time, and cautioned against implementing additional measures before the end of at least one full year of data collection using the current Hospice Item Set (HIS), allowing hospices time to focus on HIS implementation and the proposed CAHPS® Hospice Survey implementation. Commenters supported the addition of measures in the future, and agreed that pain outcome and patient reported measures are an important area of focus for measure development. Several commenters highlighted the need for additional measures to capture a more comprehensive picture of hospice quality of care.

One commenter underscored the importance of developing and implementing quality measures that address the biopsychosocial model of distress, addressing depression, anxiety, personality and behavioral symptoms. In prioritizing future measure development areas, commenters recommended that CMS consider measure recommendations made by the NQF-convened Measures Application Partnership and developments in other initiatives including the “Measuring What Matters” consensus project. In addition, commenters emphasized that measures should address matters that are important to patients and caregivers and meet the information needs of Medicare beneficiaries.

Commenters specifically recommended measures that captured the following aspects of quality hospice care for patients with a variety of symptoms and diagnoses including: dementia; symptom management to comfortable or acceptable level; medication reconciliation; shared decision making and person and family-centered care; use of the interdisciplinary team; avoidance of unwanted CPR; avoidance of hospitalization and Emergency Department use; access and availability of hospice services, particularly time between initial referral and start of hospice care; appropriate staff training, degrees, or certifications; assessment of behavioral symptoms; assessment and management of caregiver burden; and assessment and management of caregiver and patient quality of life.

Another commenter suggested that CMS, along with other stakeholders, develop outcome measures to address areas such as pain, dyspnea, bowel management, and/or caregiver satisfaction. A few commenters indicated concerns that quality measures based on symptoms (for example, measures related to pain, and dyspnea) only represent a subset of hospice patients (those with that particular symptom) and due to this smaller sample size may limit usefulness of the measures, particularly for public reporting.

In addition, one commenter suggested that CMS reconsider the removal of the NQF #0209 measure from the HQRP, stating that it should be retained while CMS works with the measure steward to revise the measure to address the concerns CMS raised in last year's rule.

Other commenters reiterated their support of CMS's decision to remove the NQF #0209 from the HQRP. Another commenter encouraged CMS to implement a patient assessment instrument in the future to collect quality measure data at defined time points.

Finally, one commenter indicated that quality of care should be measured across settings.

Response: CMS appreciates commenters' input and recommendations for future measure development areas for the HQRP. We plan to continue developing the HQRP to respond to the measure gaps identified by the Measures Application Partnership and others, and align measure development with the National Quality Strategy and the CMS Quality Strategy. We will take these comments into consideration in developing and implementing measures for future inclusion in the HQRP.

We are also interested in understanding the current state of electronic health record (EHR) adoption and usage and Health Information Exchange (HIE) in the hospice community. Therefore, we solicited feedback and input from providers on topics such as decision support, whether hospices have adopted an EHR, if so, what functional aspects of the EHR do hospices find most important (for example, the ability to send or receive transfer of care information, ability to support medication orders/medication reconciliation); does the EHR used in the hospice setting support interoperable document exchange with other healthcare providers (for example, acute care hospitals, physician practices, and skilled nursing facilities)? In addition to seeking public input on the feasibility and desirability of

electronic health record adoption and use of HIE in hospices, we solicited comments on the need to develop and the benefits and limitations of implementing electronic clinical quality measures for hospice providers.

The Department of Health and Human Services (HHS) believes all patients, their families, and their healthcare providers should have consistent and timely access to their health information in a standardized format that can be securely exchanged between the patient, providers, and others involved in the patient's care. (HHS August 2013 Statement, Principles and Strategies for Accelerating Health Information Exchange.) HHS is committed to accelerating health information exchange (HIE) through the use of electronic health records (EHRs) and other types of health information technology (HIT) across the broader care continuum through a number of initiatives including: (1) alignment of incentives and payment adjustments to encourage provider adoption and optimization of HIT and HIE services through Medicare and Medicaid payment policies; (2) adoption of common standards and certification requirements for interoperable HIT; (3) support for privacy and security of patient information across all HIE-focused initiatives; and (4) governance of health information networks. These initiatives are designed to encourage HIE among all health care providers, including professionals and hospitals eligible for the Medicare and Medicaid EHR Incentive Programs and those who are not eligible for the EHR Incentive Programs, and are designed to improve care delivery and coordination across the entire care continuum. To increase flexibility in the Office of the National Coordinator for Health Information Technology's (ONC) HIT Certification Program and expand HIT certification, ONC has issued a proposed rule concerning a voluntary 2015 Edition EHR certification criteria which would more easily accommodate certification of HIT used in other types of health care settings where individual or institutional health care providers are not typically eligible for incentive payments under the Medicare and Medicaid EHR Incentive Programs, such as long-term and post-acute care and behavioral health settings.

We believe that HIE and the use of certified EHRs by Hospice (and other types of providers that are ineligible for the Medicare and Medicaid EHR Incentive Programs) can effectively and efficiently help providers improve internal care delivery practices, support management of patient care across the

continuum, and enable the reporting of electronically specified clinical quality measures (eCQMs). More information on the identification of EHR certification criteria and development of standards applicable to Hospice can be found at:

[http://healthit.gov/policy-researchers-implementers/standards-and-](http://healthit.gov/policy-researchers-implementers/standards-and-certification-regulations)

Summaries of the public comments and our responses to comments on the current state of electronic health record (EHR) adoption and usage and Health Information Exchange (HIE) in the hospice community are provided below:

Comment: Commenters expressed support of the adoption and use of EHRs in the hospice setting, noting that it may lead to more consistent care and better symptom management.

Response: We thank the commenters for their support.

Comment Summary: CMS received several comments in response to its solicitation for input related to Electronic Health Record (EHR) adoption and usage and Health Information Exchange (HIE) in the hospice community. Most commenters noted that EHRs are important to aid in quality outcomes, and in general supported the use of certified EHRs if given sufficient time and resources for implementation. A commenter expressed that EHR adoption exists among hospices, however they lack standardization. Some commenters conveyed the importance of EHR and HIE adoption and use for patient coordination, and that information exchange should be required and available across providers; noting that it may lead to more consistent care and better symptom management. A commenter noted continued use of fax and mail services for the delivery of patient information. Several commenters supported EHR use, but suggested that there are current limitations related to the lack of decision support software and adequate health information exchange amongst the providers. In addition, they expressed concerns related to barriers to EHR and HIE adoption, as well as electronic quality measures.

Commenters suggested that specific barriers and limitations pertained to funding, feasibility, and adequate interoperability. Commenters suggested that a major barrier to the adoption of EHR technology in the hospice setting is

that hospice EHRs are not always interoperable with the technology used by hospitals and/or physicians. The commenters recommended that government officials review and adjust regulations that inhibit the exchange of electronic health information and that CMS mandate the development and use of uniform standards to govern the Health Information Exchange. All commenters suggested that funding incentives/levers could enable adoption of EHR technology. Some commenters recommended that CMS consider the establishment of financial incentives, (for example, funding tied to quality improvement/cost savings for hospices to implement EHR technology), noting that small and/or rural hospices have lower financial margins and lack of capital to implement EHR technology. One commenter suggested low-interest loans programs to aid in the funding of EHR technology. Additional commenters expressed that all EHR/HIE systems should include adequate education and system testing to ensure data integrity and the protection of confidential information, and that CMS should facilitate health information technology that includes tele-health technology. One commenter stated that CMS should not develop electronic clinical quality measures for the hospice setting until a framework is developed that includes the certification of electronic medical records for post-acute care providers and the financial assistance to support system implementation.

Response: We thank the commenters for their support of EHR and HIE utilization and for their recommendations. We are encouraged to learn about hospice adoption of EHRs and their efforts related to interoperability. We believe that the recommendations provided (for example, testing, education, use of uniform standards, exchange of appropriate information across providers), as well as the concerns that were conveyed related to barriers in EHR and HIE adoption (for example, adequate information exchange and interoperability, feasibility, testing and financial barriers), are important considerations related to EHR adoption and HIE usage in the hospice setting.

5. Public Availability of Data Submitted

Under section 1814(i)(5)(E) of the Act, the Secretary is required to establish procedures for making any quality data submitted by hospices available to the public. Measures reported publicly will not display patient identifiable information. The procedures ensure that a hospice would have the opportunity to

review the data regarding the hospice's respective program before it is made public. In addition, under section 1814(i)(5)(E) of the Act, the Secretary is authorized to report quality measures that relate to services furnished by a hospice on the CMS Web site. We recognize that public reporting of quality data is a vital component of a robust quality reporting program and are fully committed to developing the necessary systems for public reporting of hospice quality data. We also recognize that it is essential that the data made available to the public be meaningful and that comparing performance between hospices requires that measures be constructed from data collected in a standardized and uniform manner. The development and implementation of a standardized data set for hospices must precede public reporting of hospice quality measures. Once hospices have implemented the standardized data collection approach, we will have the data needed to establish the scientific soundness of the quality measures that can be calculated using the standardized data collection. It is critical to establish the reliability and validity of the measures prior to public reporting in order to demonstrate the ability of the measures to distinguish between the quality of services provided. To establish reliability and validity of the quality measures, at least four quarters of data will need to be analyzed. Typically the first two quarters of data reflect the learning curve of the providers as they adopt a standardized data collection; these data are not used to establish reliability and validity. This means that, since we will begin data collection in CY 2014 (Q3), the data from CY 2014 (Q3, Q4) will not be used for assessing validity and reliability of the quality measures. Data collected by hospices during Q1–3 CY 2015 will be analyzed starting in CY 2015. Decisions about whether to report some or all of the quality measures publicly will be based on the findings of analysis of the CY 2015 data. In addition, the Affordable Care Act requires that reporting be made public on a CMS Web site and that providers have an opportunity to review their data prior to public reporting. CMS will develop the infrastructure for public reporting, and provide hospices an opportunity to review their data. In light of all the steps required prior to data being publicly reported, public reporting will not be implemented in FY 2016. Public reporting may occur during FY 2017, allowing ample time for data analysis, review of measures' appropriateness for use for public

reporting, and allowing hospices the required time to review their own data prior to public reporting. We will announce the timeline for public reporting of data in future rulemaking. We solicited comments on what we should consider when developing future proposals related to public reporting.

Summaries of the public comments and our responses to comments are provided below:

Comment: One commenter suggested that CMS delay public reporting until a full year of the HIS submission so that data can better reflect the totality of hospice, and another stated that reporting in 2017 may be too soon. They believe that the HIS needs to be more fully developed to include additional outcome measures in order to provide a more complete picture of the care provided by hospices. The data from the CAHPS® Hospice Survey should be included in public reporting.

Response: We recognize the importance of providing patients and families/caregivers and other stakeholders accurate, scientifically sound, usable, and relevant information to support their decision-making regarding hospice care.

Comment: Several commenters recommended that CMS continue to ask for stakeholder input concerning the reliability and validity of the measures and maintain frequent communication with the hospice provider community prior to public reporting.

Response: We thank the commenters for this recommendation. CMS encourages stakeholder involvement throughout the measure development process. CMS considers input from the NQF Measure Applications Partnership (MAP) as part of the measure selection and maintenance process. The MAP is composed of multi-stakeholder groups convened by NQF for the primary purpose of providing input to CMS on the selection of certain categories of quality and efficiency measures, as required by section 1890(a)(3) of the Act. The MAP was created to provide input to the Department of Health and Human Services (HHS) on the selection of performance measures for public reporting and performance-based payment programs, and will continue to provide input to CMS as the HQRP moves toward public reporting. Additional information about the MAP can be found at: http://www.qualityforum.org/Setting_Priorities/Partnership/Measure_Applications_Partnership.aspx

Comment: One commenter supported public reporting of hospice quality data, but strongly believes that public reporting must be preceded by valid

benchmarking to ensure data are collected in a standardized way to be more meaningful to the public.

Response: We thank the commenter for this suggestion and will consider these comments as we begin planning for public reporting.

6. Adoption of the CAHPS® Hospice Survey for the FY 2017 Payment Determination

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48234), we stated that CMS would start national implementation of the CAHPS® Hospice Survey as of January 1, 2015. (Previously, known as the Hospice Experience of Care Survey, HECS) We are maintaining our existing policy and are moving forward with national implementation of this survey. The CAHPS® Hospice Survey is a component of CMS' quality reporting program that emphasizes the experiences of hospice patients and their primary caregivers listed in the hospice patients' records. Measures from the survey will be submitted to the National Quality Forum (NQF) for approval as hospice quality measures. We refer readers to our extensive discussion of the Hospice Experience of Care Survey in the Hospice Wage Index FY 2014 final rule for a description of the measurements involved and their relationship to the statutory requirement for hospice quality reporting (78 FR 48261–48266).

a. Background and Description of the Survey

Before the development of the CAHPS® Hospice Survey, there was no official national standard hospice experience of care survey that included standard survey administration protocols. The CAHPS® Hospice Survey includes detailed survey administration protocols which will allow for fair comparisons across hospices.

CMS developed the CAHPS® Hospice Survey with input from many stakeholders, including other government agencies, industry stakeholders, consumer groups and other key individuals and organizations involved in hospice care. The Survey was designed to measure and assess the experiences of patients who died while receiving hospice care as well as the experiences of their informal caregivers. The goals of the survey are to—

- Produce comparable data on patients' and caregivers' perspectives of care that allow objective and meaningful comparisons between hospices on domains that are important to consumers;

- Create incentives for hospices to improve their quality of care through public reporting of survey results; and

- Hold hospice care providers accountable by informing the public about the providers' quality of care.

The development process for the survey began in 2012 and included a public request for information about publically available measures and important topics to measure (78 FR 5458); a review of the existing literature on tools that measure experiences with end-of-life care; exploratory interviews with caregivers of hospice patients; a technical expert panel attended by survey development and hospice care quality experts; cognitive interviews to test draft survey content; incorporation of public responses to **Federal Register** notices (78 FR 48234) and a field test conducted by CMS in November and December 2013.

The CAHPS® Hospice Survey treats the dying patient and his or her informal caregivers (family members or friends) as the unit of care. The Survey seeks information from the informal caregivers of patients who died while enrolled in hospices. Caregivers will be identified using hospice records. Fielding timelines give the respondent some recovery time (2 to 3 months), while simultaneously not delaying so long that the respondent is likely to forget details of the hospice experience. The survey focuses on topics that are important to hospice users and for which informal caregivers are the best source for gathering this information. Caregivers will be presented with a set of standardized questions about their own experiences and the experiences of the patient in hospice care. During national implementation of this survey, hospices are required to conduct the survey to meet the hospice quality reporting requirements, but individual caregivers will respond only if they voluntarily choose to do so. We have launched a Web site as part of national implementation which is intended as the primary information resource for hospices and vendors (www.hospicecahpsurvey.org). The CAHPS® Hospice Survey will initially be available in English and Spanish. CMS will provide additional translations of the survey over time in response to suggestions for any additional language translations. Requests for additional language translations should be made to the CMS Hospice CAHPS® Project Team at hospicesurvey@cms.hhs.gov.

In general, hospice patients and their caregivers are eligible for inclusion in the survey sample with the exception of the following ineligible groups: primary

caregivers of patients under the age of 18 at the time of death; primary caregivers of patients who died within 48 hours of admission to hospice care; patients for whom no caregiver is listed or available, or for whom caregiver contact information is not known; patients whose primary caregiver is a legal guardian unlikely to be familiar with care experiences; patients for whom the primary caregiver has a foreign (Non-US or US Territory address) home address; patients or caregivers of patients who request that they not be contacted (those who sign "no publicity" requests while under the care of hospice or otherwise directly request not to be contacted). Identification of patients and caregivers for exclusion will be based on hospice administrative data.

Hospices with fewer than 50 survey-eligible decedents/caregivers during the prior calendar year are exempt from the CAHPS® Hospice Survey data collection and reporting requirements for payment determination. Hospices with 50 to 699 survey-eligible decedents/caregivers in the prior year will be required to survey all cases. For hospices with 700 or more survey-eligible decedents/caregivers in the prior year, a sample of 700 will be drawn under an equal-probability design.

Survey-eligible decedents/caregivers are defined as that group of decedent and caregiver pairs that meet all the criteria for inclusion in the survey sample.

For national implementation, we have assumed an eligibility rate of 85 percent and a response rate of 50 percent based on experience in the 2013 field test of the CAHPS® Hospice Survey instrument. These rates will result in an estimated 300 completed questionnaires for each hospice with 700 or more survey-eligible decedents/caregivers in the calendar year and between 21 and 300 completed questionnaires for hospices with between 50 and 699 survey-eligible decedents/caregivers during the calendar year. Assuming a total of 300 completes within each hospice and an intraclass correlation coefficient (ICC) of 0.01, which measures the amount of variability between hospices, we would achieve an interunit reliability of 0.75. Note that in Medicare CAHPS® a reliability of 0.75 is regarded as a minimal acceptable standard.

We will move forward with a model of national survey implementation which is similar to that of other CMS patient experience of care surveys. Medicare-certified hospices will contract with a third-party vendor that is CMS-trained and approved to

administer the survey on their behalf. Hospices are required to contract with independent survey vendors to ensure that the data are unbiased and collected by an organization that is trained to collect this type of data. It is important that survey respondents feel comfortable sharing their experiences with an interviewer not directly involved in providing the care. We have successfully used this mode of data collection in other settings, including for Medicare-certified home health agencies. The goal is to ensure that we have comparable data across all hospices.

Hospices will be required to provide their vendor with the sampling frame on a monthly basis. Participation requirements for the survey begin January 1, 2015 for the FY 2017 Annual Payment Update. For hospices, this means they will have to start conducting the survey as of January 1, 2015 and will incur the costs of hiring a survey vendor. The survey vendor would be the business associate of the hospice.

A list of approved vendors will be provided on <http://www.hospicecahpsurvey.org> closer to the launch of national implementation.

Beginning summer 2014, interested vendors may apply to become approved CAHPS® Hospice Survey vendors. The application process will be online at <http://www.hospicecahpsurvey.org>. Vendors conducting the survey are required to offer a toll free assistance line which respondents can call for help. This help could include reading the survey to a respondent. The toll free line must have staff that can respond to questions in any language in which the vendor is offering the survey. Vendors must accommodate alternate telephone communications, including TTY.

In the FY 2015 Hospice Wage Index proposed rule we proposed to codify the requirements for being an approved CAHPS® Hospice Survey vendor for the FY 2017 APU.

Consistent with many other CMS CAHPS® surveys that are publicly reported on CMS Web sites, CMS will publicly report hospice data when at least 12 months of data are available, so that valid comparisons can be made across hospice providers in the United States, to help patients, family and friends choose a hospice program for themselves or their loved ones.

b. Participation Requirements To Meet Quality Reporting Requirements for the FY 2017 APU

In section 3004 of the Affordable Care Act, the Secretary is directed to establish quality reporting requirements for Hospice Programs. The CAHPS® Hospice Survey is a component of the CMS Quality Reporting Requirements for the FY 2017 APU and subsequent years.

The CAHPS® Hospice Survey is the only nationally implemented survey of civilian patient and caregiver experiences with hospice that includes both a standard questionnaire and standard survey administration protocols. Such standardization is needed in order to establish that the resulting survey data is comparable across hospices and is suitable for public reporting.

The CAHPS® Hospice Survey includes the measures detailed in *Table 8*. The measures map directly to the CAHPS® Hospice Survey. The individual survey questions that comprise each measure are listed under the measure. These measures are in the process of being submitted to the National Quality Forum (NQF).

TABLE 8—HOSPICE EXPERIENCE OF CARE SURVEY QUALITY MEASURES AND THEIR ITEMS

Hospice Team Communication

- How often did the hospice team listen carefully to you when you talked with them about problems with your family member's hospice care?
- While your family member was in hospice care, how often did the hospice team listen carefully to you?
- While your family member was in hospice care, how often did the hospice team explain things in a way that was easy to understand?
- While your family member was in hospice care, how often did the hospice team keep you informed about your family's condition?
- While your family member was in hospice care, how often did the hospice team keep you informed about when they would arrive to care for your family member?

Getting Timely Care

- While your family member was in hospice care, when you or your family member asked for help from the hospice team, how often did you get help as soon as you needed it?
- How often did you get the help you needed from the hospice team during evenings, weekends, or holidays?

Treating Family Member with Respect

- While your family member was in hospice care, how often did the hospice team treat your family member with dignity and respect?
- While your family member was in hospice care, how often did you feel that the hospice team really cared about your family member?

Providing Emotional Support

- In the weeks after your family member died, how much emotional support did you get from the hospice team?
- While your family member was in hospice care, how much emotional support did you get from the hospice team?

Getting Help for Symptoms

- How often did your family member receive the help he or she needed from the hospice team for feelings of anxiety or sadness?
- Did your family member get as much help with pain as he or she needed?
- How often did your family member get the help he or she needed for constipation?
- How often did your family member get the help he or she needed for trouble breathing?

Information Continuity

- While your family member was in hospice care, how often did anyone from the hospice team give you confusing or contradictory information about your family member's condition or care?

Understanding the Side Effects of Pain Medication

- Side effects of pain medicine include things like sleepiness. Did any member of the hospice team discuss side effects of pain medicine with you or your family member?

Getting Hospice Care Training (Home Setting of Care Only)

- Did the hospice team give you enough training about what to do if your family member became restless or agitated?
- Did the hospice team give you enough training about if and when to give more pain medicine to your family member?
- Did the hospice team give you enough training about how to help your family member if he or she had trouble breathing?
- Did the hospice team give you enough training about what side effects to watch for from pain medicine?

To comply with CMS's quality reporting requirements, hospices will be required to collect data using the Consumer Assessment of Healthcare Providers and Systems (CAHPS®) Hospice Survey. Hospices would be able to comply by utilizing only CMS-approved third party vendors that are in compliance with the provisions at § 418.312(e).

In the FY 2014 Hospice Wage Index and Rate Update final rule (78 FR 48234), we stated that national implementation of the CAHPS® Hospice Survey will begin with a "dry run" in the first quarter of CY 2015. Hospices are required to contract with an approved survey vendor to conduct a dry run of the survey for at least one month during January 2015, February 2015, or March 2015. During this period

the survey vendor will follow all the national implementation procedures, but the data will not be publicly reported. The dry run will provide hospices and their vendors with the opportunity to work together under test circumstances.

Beginning April 1, 2015, all hospices are required to participate in the survey on an ongoing monthly basis. This means hospices need to contract with a survey vendor to conduct the survey monthly on their behalf. Participation for at least 1 month during the dry run, plus monthly participation for the 9 months between April 2015 and December 2015 (inclusive) is required to meet the pay for reporting requirement of the Hospice Quality Reporting Program (HQRP) for the FY 2017 APU.

Approved CAHPS® Hospice Survey vendors will submit data on the hospice's behalf to the CAHPS® Hospice Survey Data Center. The deadlines for data submission occur quarterly and are shown in *Table 9* below. Deadlines are final; no late submissions will be accepted. However in the event of extraordinary circumstances beyond the control of the provider, the provider will be able to request an exemption as previously noted in the Quality Measures for Hospice Quality Reporting Program and Data Submission Requirements for Payment Year FY 2016 and Beyond section. Hospice providers are responsible for making sure that their vendors are submitting data in a timely manner.

TABLE 9—DATA SUBMISSION DATES 2015–2016 FOR CAHPS® HOSPICE SURVEY

Sample months	Quarterly data submission deadlines
Dry Run (January–March 2015)	August 12, 2015
Monthly data collection April–June 2015 (Q2)	November 1, 2015
Monthly data collection July–September 2015 (Q3)	February 10, 2016
Monthly data collection October–December 2015 (Q4)	May 11, 2016

In the FY 2014 Hospice Wage Index and Rate Update final rule, we stated that we would exempt very small hospices from CAHPS® Hospice Survey requirements. Hospices that have fewer than 50 survey-eligible decedents/caregivers in the period from January 1, 2014 through December 31, 2014 are exempt from CAHPS® Hospice Survey data collection and reporting requirements for the 2017 APU. To qualify for the survey exemption for FY 2017, hospices must submit an exemption request form. This form will be available on the CAHPS® Hospice Survey Web site <http://www.hospicecahpsurvey.org>. Hospices are required to submit to CMS their total unique patient count for the period of January 1, 2014 through December 31, 2014. The due date for submitting the exemption request form for the FY 2017 APU is August 12, 2015.

c. Participation Requirements To Meet Quality Reporting Requirements for the FY 2018 APU

To meet participation requirements for the FY 2018 APU, we proposed that hospices collect data on an ongoing monthly basis from January 2016 through December 2016 (inclusive). Data submission deadlines for the 2018 APU will be announced in future rulemaking.

Hospices that have fewer than 50 survey-eligible decedents/caregivers in the period from January 1, 2015 through December 31, 2015 are exempt from CAHPS® Hospice Survey data collection and reporting requirements for the FY 2018 payment determination. To qualify, hospices must submit an exemption request form. This form will be available in first quarter 2016 on the CAHPS® Hospice Survey Web site <http://www.hospicecahpsurvey.org>.

Hospices are required to submit to CMS their total unique patient count for the period of January 1, 2015 through December 31, 2015. The due date for submitting the exemption request form for the FY 2018 APU is August 10, 2016.

Summaries of the public comments and our responses to comments are summarized below:

Comment: For the CAHPS® Hospice Survey we received multiple comments concerning CMS' proposed exclusion of respondents who were family caregivers of patients who died within 48 hours or less of their admission to hospice care. Commenters were concerned that we were excluding this group's experience.

Response: We appreciate these comments because they show a concern for evaluating the hospice care experience for all patients, regardless of the time spent in hospice care. CMS used the 48 hours or less exclusion because of the history of the Family

Evaluation of Care Survey (FEHC) which has been in use in the industry for several years. The FEHC also recommended exclusion of patients with less than two days of hospice care. We set similar timeframe exclusions for other CAHPS® surveys such as the Medicare CAHPS® Health Plans Survey, where respondents need to be in the plans for at least six months, and the ICH CAHPS® survey where the respondents need to have at least three months of dialysis experience at the facility before they are eligible. If caregiver respondents do not have enough experience with the hospice, they will not be able to easily or reliably answer the questions on the current survey. Our technical expert panel also stated that shorter-stay patients would have difficulty answering the current questions on the survey and recommended developing a shorter questionnaire for shorter-stay respondents. In national implementation, we will move forward with the 48-hour or less exclusion, but we will closely track the number of patients being excluded. We will consider developing and implementing an abbreviated CAHPS® Hospice Survey, depending upon the number of people affected.

Comment: One commenter stated that it is important that the CAHPS® Hospice Survey document the length of stay, and

its relationship to the profit/non-profit status of the hospice, in order to provide an accurate picture of the caregiver's perception of the quality of care the hospice provided and to publicly report the data by length of stay.

Response: We have not determined how the survey results will be publicly reported for hospices. However, we are aware that both length of stay and for-profit/non-profit status may have an impact on patient/caregiver experiences. We would not control for for-profit or non-profit status when we publicly report the data since that is under the control of the facility. If length of stay is a function of for-profit or non-profit status, it also should not be controlled for. During national implementation we will document the length of stay for sampled patients as part of the administrative data we obtain for all sampled patients. CMS will conduct analyses of the impact of length of stay and profit/non-profit status on the survey results to see if any adjustments are needed for length of stay.

Comment: A small number of commenters said there should be no participation exemptions for hospices reporting fewer than 50 deaths per year.

Response: We proposed to exempt hospices with fewer than 50 survey-eligible decedents/caregivers annually because very small hospices will not have a sufficient number of survey responses to produce reliable measures. Survey data collected for very small samples tends to be unstable and can be influenced by relatively small changes in responses. This could result in the smallest hospices experiencing substantial variations in scores each year, not due to changes in care, but because only a small number of caregivers are answering the questions.

Comment: One commenter said that the CAHPS® Hospice Survey should include a method for finding the respondent who is the most knowledgeable about the patient experience and noted that this person may not be the patient's closest relative.

Response: The family caregiver listed in hospice administrative records is the individual who will be contacted to respond to the CAHPS® Hospice Survey. We agree this person may or may not be the most knowledgeable about the patient's care. However, for sampling purposes we must be able to objectively and clearly define our target population and we must have contact information to reach them by mail or telephone.

Comment: One commenter stated that very few hospices experience fewer than 50 deaths a year. Conversely, 700 deaths are not necessarily indicative of a large

hospice requiring only a sample survey. The commenter also stated that CMS may wish to analyze the sampling ranges in the year following initial implementation to determine if these ranges are appropriate, particularly for sampling.

Response: We are excluding hospices with fewer than 50 survey-eligible decedents/caregivers annually because small samples will not produce reliable results. The choice of 700 survey-eligible decedents/caregivers annually is not intended to define a large hospice, but only to allow hospices with this many deaths (or more) to conduct a sample rather than require them to survey a census of all eligible caregivers. CMS will continuously monitor survey responses and vendor activities. We will revisit these ranges if we find evidence that we need to do so.

Comment: One commenter stated that the CAHPS® Hospice Survey is too long and is not written in health literacy terms.

Response: The CAHPS® Hospice Survey includes 47 items, not all of which apply to all respondents. This does make the survey slightly longer than the Hospital CAHPS® Survey (32 items) and the Home Health CAHPS® Survey (34 items). However, the hospice survey had to ask demographic questions for both the patient and the family caregiver, which partially accounts for its longer length. In addition, some items are only for patients in particular settings (for example, home care). The CAHPS® Hospice Survey was cognitively tested to learn how well respondents understood the items. The questionnaire was revised based upon the results of the cognitive testing. The text of the current instrument and the final reports on the testing of the instrument can be found at: <http://www.hospicecahpsurvey.org>.

Comment: One commenter was concerned that the survey is missing specific references to mental/behavior health, psychosocial concerns and related occupations.

Response: The CAHPS® Hospice Survey does not seek to address experiences with specific professional occupations, but rather asks about the entire hospice team. Items on the survey concern communication with the hospice team, as well as the patients' experience of anxiety and agitation. The survey also asks about spiritual and emotional support provided by the hospice. The survey was designed to capture topic areas that are most important from the perspective of family members/caregivers of the patients.

Comment: One commenter said they understood that the proposal required that three different CAHPS surveys be distributed, based on the patient's location at the time of death. The commenter strongly disagreed with implementing the survey in this manner.

Response: The CAHPS® Hospice survey consists of a single survey instrument for all settings in which hospice care is provided. The questionnaire will include a few items applicable only to certain settings of care (for example, home-based hospice) along with clear directions for the respondent. We do not limit our questions only to the final setting of care.

Comment: One commenter said that for some questions in the survey, the use of choices such as never, sometimes, usually or always could affect the results. The commenter noted that some respondents may believe there is room for improvement and may be reluctant to choose "always" as an answer. The commenter stated that a five-point rating scale may be a better choice.

Response: The "never to always" scale has been tested extensively and used in CAHPS® surveys for many years. We are unaware of any evidence indicating respondents are reluctant to choose "always" as a response. In addition, we do not believe a 5-point rating scale would offer a significant improvement over the existing CAHPS® survey response methodology.

Comment: One commenter stated that the CAHPS® Hospice Survey should include patients as respondents rather than exclusively interview informal caregivers.

Response: CMS is aware of the value of collecting survey data on patients' experiences. During the survey development process we carefully considered the logistics of conducting surveys with two different populations: hospice patients and their informal caregivers. CMS concluded that attempting to survey two populations would pose additional logistical problems and burdens because it was not clear the same questionnaire could be used for both groups. It is also not clear how the two groups should be publicly reported. Other considerations include —(1) the difficulty of determining which hospice patients are capable of participating in the survey and; (2) the risk of upsetting families if a survey addressed to a patient were to arrive soon after the patient died. In addition, hospice patients cannot provide information about the totality of the hospice care provided. For these reasons, CMS decided to survey only

primary caregivers of deceased hospice patients.

Comment: One commenter said that the hospice survey questionnaire should not be sent more than two months after the death of the patient, as the family member(s) may have difficulty recalling the experience. The commenter also noted that a prolonged delay in completion of the survey questionnaire could result in diminished recall by the patient's clinicians.

Response: CMS is aware that a significant delay in the completion of the survey questionnaire following the death of a patient can diminish the ability of survey respondents to accurately recall events. However, sending the survey shortly after a patient's death has the potential to generate grief and pain for the respondent. Based on discussions with our technical expert panel and stakeholders, CMS has chosen to include what we believe is an appropriate period of delay following the death of the patient and survey administration procedures to provide a time for family members to grieve, but still respond regarding the particulars of hospice care. CMS has built in a two-month lag after the death before any contact is made with the potential respondent. Currently, the CAHPS® Hospice Survey does not consider clinicians as survey respondents, thus the commenter's concerns regarding their ability to recall patient care for the survey is outside the scope of the comment.

Comment: Approximately one-third of commenters supported the CAHPS® Hospice Survey.

Response: We thank the commenters for their support.

Comment: One commenter recommended that the definition of criteria for exclusion be clarified for consistent interpretation and implementation.

Response: Details of the groups that are ineligible for survey participation can be found under subsection a. Background and Description of the Survey in this rule.

Final Action: As a result of these comments, we are finalizing the requirements as proposed. Hospices must participate in and report data from the Dry Run for at least 1 month in the first quarter of CY 2015 (January 2015, February 2015, or March 2015). Continuous monthly data collection begins in April 1, 2015, continues through December 31, 2015, and continues in subsequent years.

d. Vendor Participation Requirements for the 2017 APU

CMS will train and approve vendors to administer CAHPS® Hospice Survey on behalf of hospices (78 FR 48233). In addition we stated that hospices will be required to contract with an approved survey vendor and to provide the sampling frame to the approved vendor on a monthly basis.

We proposed that approved survey vendors must meet all of the minimum business requirements and follow the detailed technical specifications for survey administration as published in the CAHPS® Hospice Survey specifications manual, which will be posted on the Survey Web site: <http://hospicecahpsurvey.org>. In addition, to the specifications manual, the Web site will include information and updates regarding survey implementation and technical assistance, and a copy of the questionnaire.

We proposed to codify the CAHPS® Hospice Survey vendor requirements to be effective with the FY 2017 APU (as proposed in § 418.312). We proposed that applicants wishing to become approved CAHPS® Hospice Survey vendors must have been in business for a minimum of 4 years and have conducted surveys for a minimum of 3 years using each the modes of survey administration for which they are applying. In addition the organization must have been conducting "surveys with patients" for at least 2 years immediately preceding the application to become a survey vendor for the CAHPS® Hospice Survey. For purposes of the approval process for CAHPS® Hospice Survey vendors, a "survey of individual patients" is defined as the collection of data from at least 600 individual patients selected by statistical sampling methods and the data collected are used for statistical purposes.

Vendors may not use home-based or virtual interviewers to conduct the CAHPS® Hospice Survey, nor may they conduct any survey administration processes (for example, mailings) from a residence to ensure the confidentiality of data.

The following are examples of data collection activities will not satisfy the requirement of valid survey experience for approved vendors as defined for the CAHPS® Hospice Survey, and these will not be considered as part of the experience required of an approved vendor for CAHPS® Hospice Survey.

- Focus groups, cognitive interviews, or any other qualitative data collection activities;

- Surveys of fewer than 600 individuals;

- Surveys conducted that did not involve using statistical sampling methods;

- Internet or Web-based surveys; and
- Interactive Voice Recognition Surveys.

We also proposed that no organization, firm, or business that owns, operates, or provides staffing for a hospice is permitted to administer its own Hospice CAHPS® survey or administer the survey on behalf of any other hospice in the capacity as a Hospice CAHPS® survey vendor. Such organizations will not be approved by CMS as CAHPS® Hospice Survey vendors.

Summaries of the public comments and our responses to those comments are summarized below:

Comment: CMS received no comments regarding Vendor Participation Requirements for the 2014 APU.

Final Action: We are finalizing the requirements as proposed without change.

e. Annual Payment Update

The Affordable Care Act requires that beginning with FY 2014 and each subsequent fiscal year, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to the fiscal year, unless covered by specific exemptions. Any such reduction will not be cumulative and will not be taken into account in computing the payment amount for subsequent fiscal years. In the FY 2015 Hospice Wage Index proposed rule, we proposed to add the CAHPS® Hospice Survey to the Hospice Quality Reporting Program requirements for the FY 2017 payment determination and determinations for subsequent years.

- To meet the FY 2017 requirements, hospices will participate in the Dry Run for at least 1 month of the first quarter of CY 2015 (January 2015, February 2015, March 2015). Hospices must collect the survey data on a monthly basis for the months of April 1, 2015 through December 31, 2015 in order to qualify for the full APU.

- To meet the HQR requirements for the FY 2018 payment determination, hospices would collect survey data on a monthly basis for the months of January 1, 2016 through December 31, 2016 to qualify for the full APU.

Summaries of the public comments and our responses to comments are summarized below:

Comment: A few commenters stated that the timeframe for implementing the CAHPS® Hospice Survey may not be sufficient to adequately finalize the survey questions, approve, train and hire vendors, complete the Dry Run and correct any concerns that may arise from the Dry Run.

Response: We are aware that the timeframe for implementing the CAHPS® Hospice Survey is shorter than for other CAHPS® surveys. However, we have taken steps to mitigate the impact on hospices. The survey can be found on the CAHPS® Hospice Survey Web site, www.hospicecahpsurvey.org. We will post the Quality Assurance Guidelines technical manual in August 2014. We will also open the vendor application and approval process on the Web site in August 2014. This should provide hospice programs with ample time to contact and select a vendor. Hospices may contact vendors prior to this time if they wish to do so. The Dry Run will occur over the first quarter of 2015 (January–March 2015). We encourage hospices to participate in the Dry Run as early as possible and collaborate with their vendors to resolve any potential issues.

Comment: A few commenters noted the cost of conducting the CAHPS® Hospice Survey imposes regulatory burden on hospice providers requiring the allocation of resources from patient care and potentially result in higher costs to the Medicare program due to patients being shifted to higher levels of care due to limited hospice staffing.

Response: We respectfully disagree with the commenter's assertions. Similar to other CAHPS® surveys, the CAHPS® Hospice Survey will allow three modes of data collection, with each mode of data collection varying in price. The modes are: mail-only, telephone-only, and mixed mode (mail with telephone follow-up). We urge hospices to call multiple vendors to discuss prices and services since the cost does vary by vendor and the extra services that they provide. It is unacceptable to change a patient's level of care due to staffing issues; such a change should be based on the patient's and family's needs, should meet the regulatory requirements for that level of care, and should be documented in the plan of care.

Comment: One commenter noted that CMS should refrain from using data for public reporting until 2016.

Response: We have not finalized plans for public reporting of CAHPS® Hospice Survey data. However, we will not publicly report data until we have accumulated a baseline data set of at least four quarters of data.

Comment: One commenter said that CMS should ensure that public reporting will meet the needs of Medicare beneficiaries and their family caregivers. Among other things, the information should be beneficiary friendly and address matters of particular concern to beneficiaries and their families.

Response: We agree that public reporting of data obtained from surveys should meet the needs of Medicare beneficiaries and their families. Prior to publicly reporting the data, the displays will be tested with potential users of the information. We thank the commenter for the reminder of the importance of public reporting to beneficiaries and their families.

Comment: One commenter said that CMS should delay public reporting until the HIS is more fully developed and the data from the Hospice CAHPS is available.

Response: CMS has not stated when public reporting of hospice survey results will commence. We will provide details on the schedule for public reporting in subsequent rulemaking.

Comment: CMS should also consider instituting a hospice star rating system where hospice providers will be measured based on these quality metrics so family members/care givers are able to shop for hospice benefits based on quality rating.

Response: We appreciate the comment and will take it under consideration as public displays are developed.

Final Action: We are finalizing the requirements as proposed without change.

f. CAHPS® Hospice Survey Oversight Activities

We proposed a requirement that vendors and hospice providers participate in CAHPS® Hospice Survey oversight activities to ensure compliance with Hospice CAHPS® technical specifications and survey requirements. The purpose of the oversight activities is to ensure that hospices and approved survey vendors follow the CAHPS® Hospice Survey technical specifications and thereby ensure the comparability of CAHPS® Hospice Survey data across hospices.

We proposed that the reconsiderations and appeals process for hospices failing to meet the Hospice CAHPS® data collection requirements will be part of the Reconsideration and Appeals process already developed for the Hospice Quality Reporting program. We encourage hospices interested in learning more about the CAHPS® Hospice Survey to visit the CAHPS®

Hospice Survey Web site: <http://www.hospicecahpsurvey.org>.

Summaries of the public comments and responses to comments regarding the reconsiderations and appeals process for hospices that fail to meet the Hospice CAHPS® data collection requirements regarding are summarized below:

Comment: CMS received no comments regarding CAHPS® Hospice Survey Oversight Activities

Final Action: We are finalizing the requirements as proposed without change.

7. Procedures for Payment Year 2016 and Subsequent Years

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule (78 FR 48267), we notified hospice providers of the opportunity to seek reconsideration of our initial non-compliance decision for the FY 2014 and FY 2015 payment determinations. We stated that we will notify hospices found to be non-compliant with the HQRP reporting requirements that they may be subject to the 2 percentage point reduction in their annual payment update. The process for filing a request for reconsideration is described on the CMS Web site at: <http://www.cms.gov/Medicare/Quality-Initiatives-Patient-Assessment-Instruments/Hospice-Quality-Reporting/Reconsideration-Requests.html>. We proposed to codify this process at § 418.312.

Finally, we proposed to codify at § 418.306 that beginning with FY 2014 and each subsequent FY, the Secretary shall reduce the market basket update by 2 percentage points for any hospice that does not comply with the quality data submission requirements with respect to that FY and solicited comments on all of the proposals in this section and the associated regulations text at § 418.312 and in § 418.306 in section VI.

Summaries of the public comments and our responses to comments are summarized below:

Comment: CMS received no comments regarding Procedures for Payment Year 2016 and Subsequent Years.

Final Action: We are finalizing the requirements as proposed without change.

I. Solicitation of Comments on Coordination of Benefits Process and Appeals for Part D Payment for Drugs While Beneficiaries are Under a Hospice Election

The statutory definition of the term “covered Part D drug”, as specified in section 1860D–2(e)(2)(B) of the Social

Security Act, excludes a drug if payment for such a drug, as so prescribed and dispensed or administered with respect to a Part D eligible individual, is available (or would be available but for the application of a deductible) under Part A or B for that individual. Therefore, drugs and biologicals for which coverage is available under the Medicare Part A per-diem payment to a hospice program are excluded from coverage under Part D. Our previous understanding was that hospice coverage of drugs was very broad and very inclusive. Therefore, Part D payment for drugs furnished to hospice beneficiaries would be rare and the need for controls was not critical.

Section 1861(dd) of the Act states the hospice is responsible for covering all drugs or biologicals for the palliation and management of the terminal illness and related conditions. Our stated intention in the 1983 Hospice final rule (48 FR 56010) was that the hospice benefit provides virtually all care for the terminally ill individual. Despite our intention for a comprehensive and holistic benefit, gross covered drug costs in 2012 under Part D for beneficiaries during a hospice election totaled \$417.9 million. Of this total, Medicare reimbursed approximately \$334.9 million, and beneficiaries contributed \$48.2 million in possibly unnecessary cost-sharing.

1. Part D Sponsor Coordination of Payment with Hospice Providers

In the proposed rule, we described various requirements we were considering to facilitate the coordination of payment between Part D sponsors and hospices and solicited comments on them. We refer you to the proposed rule (79 FR 26570 through 26575) for the discussion of the requirements we were considering and sought comment on. Prior to the proposed rule, we had issued interim guidance on March 10, 2014 (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Part-D-Payment-Hospice-Final-2014-Guidance.pdf>) and, as a result of feedback from stakeholders, we amended the guidance on July 18, 2014. In the interim guidance, we encourage Part D sponsors and Medicare hospices to take several of the actions that we stated in the proposed rule we are considering requiring. Our July 18, 2014 guidance can be accessed at (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/2014-PartD-Hospice-Guidance-Revised-Memo.pdf>); we plan that this guidance will remain in effect

until requirements are finalized. The revised guidance expects Part D sponsors to use hospice prior authorization only on the four categories of drugs that the Office of Inspector General (<http://oig.hhs.gov/oas/reports/region6/61000059.pdf>), in consultation with hospice providers, identified as nearly always covered under the hospice benefit. These categories of drugs will require hospice prior authorizations analgesics, anti-nauseants, laxatives, and anti-anxiety drugs. Hospices may use the "Hospice Information for Medicare Part D" (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/Hospice-Info-PartD.pdf>) form to provide the necessary information generally requested by Medicare Part D sponsors.

We appreciate the comments we received on the processes we were considering to facilitate the coordination of payment between Part D sponsors and hospices and will consider those comments in future rulemaking.

In formulating the changes we were considering, we became aware that the regulatory requirement for a Part D sponsor to coordinate with other health benefit plans or programs at § 423.464(f)(1)(ix) is narrower than the requirement specified in statute. Section 1860D–24 of the Act requires Part D sponsors to coordinate with other drug plans, including, as specified in paragraph § 423.464(b)(5), with other health benefit plans or programs that provide coverage or financial assistance for the purchase or provision of prescription drug coverage on behalf of Part D eligible individuals. However, in codifying this requirement in the regulations at § 423.464(f)(1)(ix), we specified that the other plans or programs are those that provide coverage or financial assistance for the purchase or provision of Part D (emphasis added) prescription drugs. The regulation does not include the requirement for Part D sponsors to coordinate with providers of drugs covered under Part A, such as hospices, since those drugs prescribed, dispensed, or administered under Part A are excluded from the definition of a covered Part D drug. Because coordination between Part D sponsors and the Medicare hospices is essential to ensure Part D statutory coverage requirements are met, to reduce the potential for erroneous payment under Part D, and to facilitate the recovery of erroneous payments when they do occur, we also were considering amending the Part D regulations at § 423.464(f) to align the definition of other prescription drug coverage in

paragraph § 423.464(f)(1)(ix) with the statute by removing the phrase "Part D." We did not propose to amend the Part D regulations at § 423.464(f), but rather solicited comments on this change. We appreciate the comments received in response to our solicitation and will consider those comments in future rulemaking.

2. Solicitation of Comments on Hospice Coordination of Payment with Part D Sponsors and Other Payers

As specified in section 1861(dd) of the Act, and in regulation at 42 CFR Part 418, the hospice is responsible for covering all drugs and biologicals for the palliation and management of the terminal illness and related conditions. As noted in 418.202(f), drugs and biologicals for palliation of pain and symptom management are included in the Medicare Part A per-diem payment to a hospice. Therefore, such drugs and biologicals are excluded from coverage under Part D (see section III.I.1). Our payment regulations at § 418.200 require that, to be covered, hospice services must be consistent with the plan of care, which must include the drugs and treatment necessary to meet the needs of the patient (§ 418.56(c)(2)). Additionally, the CoPs at § 418.56(e)(5) require hospices to share information with other non-hospice healthcare providers furnishing services unrelated to the terminal illness and related conditions. As described in § 418.100(c)(2), hospices must be available 24 hours a day and 7 days a week to address beneficiary and family needs.

We have received anecdotal reports from Medicare hospice beneficiaries that they are not receiving medications related to their terminal illness and related conditions from their hospice because, among other stated reasons, those medications are not on the hospice's formulary. These reports also have stated that hospice beneficiaries were advised to obtain drugs related to the terminal illness and related conditions from their Part D prescription drug plans. Per the regulations at § 418.202(f), hospices must provide all drugs which are reasonable and necessary to meet the needs of the patient in order to provide palliation and symptom management of the terminal illness and related conditions. If the drugs on the hospice formulary are not providing the relief needed, then the hospice must provide alternatives in order to relieve pain and symptoms, even if it means providing drugs that are not on their formularies. Treatment decisions should not be driven by costs, as opposed to clinical

appropriateness. Hospices should use thoughtful clinical judgment, with a patient-centered focus, when developing the hospice plan of care, including the recommendations for medication management.

We did not propose any requirements, but we described various requirements we are considering to facilitate coordination of payment responsibility between hospices and other payers and operational considerations. We refer you to the May 8, 2014 FY 2015 Hospice proposed rule (79 FR 26570–26575) for the discussion of the requirements we sought comments on. As articulated above in section I.1, the July 18, 2014 interim guidance (<http://www.cms.gov/Medicare/Medicare-Fee-for-Service-Payment/Hospice/Downloads/2014-PartD-Hospice-Guidance-Revised-Memo.pdf>) has been issued, and we plan that this guidance will remain in effect until requirements are finalized. We appreciate the comments on these issues and will consider the comments in future rulemaking.

3. Beneficiary Rights and Appeals

Sometimes a beneficiary requests a certain medication that a hospice cannot or will not provide because the hospice has deemed that the specific medication is not reasonable and necessary for the palliation and management of the terminal illness and related conditions. Coverage of such medication would not be permissible under Part D coverage since the medication is not for any condition completely separate and distinct from the terminal illness and related conditions, nor is it covered under Part A, since it is not reasonable and necessary for the palliation and management of the terminal illness and related conditions. If the hospice does not provide the medication, the hospice is not obligated to provide any notice of non-coverage (including the Advance Beneficiary Notice of Non-coverage or ABN). If the hospice provides medication it believes is not reasonable and necessary for the palliation and management of the terminal illness and related conditions, the hospice must first issue an ABN in order to charge the beneficiary for the cost of such medication. Regardless of whether or not the hospice furnishes the drug, if the beneficiary independently obtains the drug, but believes that the Medicare hospice should have furnished or covered the cost of the drug as part of the hospice benefit, the beneficiary may submit a claim for the medication directly to Medicare on Form CMS–1490S (<http://www.cms.gov/Medicare/CMS-Forms/CMS-Forms/CMS-Forms-Items/CMS012949.html>). If the claim is

denied, the beneficiary may file an appeal of that determination under the appeals process set forth in part 405, subpart I.

There may also be instances where a beneficiary prefers a non-formulary drug because, for example, he or she believes it to be more efficacious than the formulary drug prescribed by the hospice. In such instances, the hospice may have determined that the formulary drug prescribed is reasonable and necessary for the palliation and management of the terminal illness and related conditions; however, the beneficiary may prefer another brand of such drug that is off formulary, which the hospice believes is not reasonable and necessary, or more expensive but no more effective than the drug in the formulary. In those cases, the beneficiary may submit quality of care complaints to a Quality Improvement Organization. We plan to increase our beneficiary outreach efforts to advise beneficiaries and their families/caregivers of their rights and the available appeals process described in this section.

J. Update on the International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM) and Coding Guidelines for Hospice Claims Reporting

3. International Classification of Diseases, 10th Revision, Clinical Modification (ICD–10–CM)

On April 1, 2014, the Protecting Access to Medicare Act of 2014 (PAMA) (Pub. L. 113–93), was enacted. Section 212 of PAMA, titled “Delay in Transition from ICD–9 to ICD–10 Code Sets,” provides that “[t]he Secretary of Health and Human Services may not, prior to October 1, 2015, adopt ICD–10 code sets as the standard for code sets under section 1173(c) of the Social Security Act (42 U.S.C. 1320d–2(c)) and section 162.1002 of title 45, Code of Federal Regulations.” On May 1, 2014, the Secretary announced plans to release an interim final rule in the near future that will include a new compliance date to require the use of ICD–10–CM beginning October 1, 2015. The interim final rule will also require HIPAA covered entities to continue to use ICD–9–CM through September 30, 2015. Although the Department has not yet published the rule, we are proceeding in accordance with the announcement. This means that ICD–9–CM diagnosis codes will continue to be used for hospice claims reporting until October 1, 2015, the new implementation date for ICD–10–CM. Diagnosis reporting on hospice claims

must adhere to ICD–9–CM coding conventions and guidelines regarding the selection of principal diagnosis and the reporting of additional diagnoses. Additionally, the CMS’ Hospice Claims Processing manual (Pub 100–04, chapter 11) requires that hospice claims include the reporting of additional/other diagnoses as required by ICD–9–CM coding guidelines.

In the HIPAA regulations at 45 CFR 162.1002, the Secretary adopted the ICD–9–CM code set, including the Official ICD–9–CM Guidelines for Coding and Reporting. The current ICD–9–CM Coding Guidelines use the International Classification of Diseases, 9th Edition, Clinical Modification (ICD–9–CM) and are available through the CMS Web site at: <http://www.cms.gov/Medicare/Coding/ICD9ProviderDiagnosticCodes/index.html> or on the CDC’s Web site at <http://www.cdc.gov/nchs/icd/icd9cm.htm>.

4. Coding Guidelines for Hospice Claims Reporting

In the FY 2014 Hospice Wage Index and Payment Rate Update, we reiterated that diagnosis reporting on hospice claims should include the appropriate selection of principal diagnoses as well as the other, additional and coexisting diagnoses related to the terminal illness and related conditions (78 FR 48254). Additionally, in the July 27, 2012, FY 2013 Hospice Wage Index notice (77 FR 44247), we provided in-depth information regarding longstanding, existing ICD–9–CM Coding Guidelines. We also discussed related versus unrelated diagnosis reporting on claims and clarified that “all of a patient’s coexisting or additional diagnoses” related to the terminal illness and related conditions should be reported on the hospice claim. The expectation was that hospices would report all diagnoses related to the terminal illness and related conditions on hospice claims to provide accurate information regarding the hospice beneficiaries for which they are providing hospice services.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we stated that beginning on October 1, 2014, any claims with “debility” or “adult failure to thrive” in the principal diagnosis field will be returned to the provider for more definitive coding (78 FR 48252). “Debility” and “adult failure to thrive” do not provide enough information to accurately describe Medicare hospice beneficiaries and the conditions that hospices are managing. Once these claims are resubmitted with more appropriate diagnosis codes,

following the ICD–9–CM Coding Guidelines, these claims will be processed accordingly. This is a reminder that claims with “debility” and “adult failure to thrive” coded in the principal diagnosis field will be returned to providers for more definitive coding effective October 1, 2014 (for those claims submitted on and after October 1, 2014).

Also in the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we advised hospice providers to pay particular attention to dementia diagnoses which are found under two separate ICD–9–CM classifications: “Mental, Behavioral, and Neurodevelopmental Disorders” and “Diseases of the Nervous System and Sense Organs” (78 FR 48252–48253). Many of the codes relating to dementia manifestations found under the ICD–9–CM classification, “Mental, Behavioral, and Neurodevelopmental Disorders”, are not appropriate as principal diagnoses because of etiology/manifestation guidelines or sequencing conventions under the ICD–9–CM Coding Guidelines. ICD–9–CM Coding Guidelines for this classification state that dementia is most commonly a secondary manifestation of an underlying causal condition. Codes found under this classification identify the common behavioral disturbances of dementia manifestations. Many of the dementia codes under the ICD–9–CM classification, “Mental, Behavioral and Neurodevelopmental Disorders” have coding conventions that require to code first the associated neurological condition. Many of the associated neurological conditions can be found under the classification, “Diseases of the Nervous System”, including such conditions as “Alzheimer’s disease” and “Senile Degeneration of the Brain”. We advise hospices to pay close attention to the various coding and sequencing conventions found within The Official ICD–9–CM Guidelines for Coding and Reporting when reporting diagnoses on hospice claims.

To ensure additional compliance with ICD–9–CM Coding Guidelines we will implement certain edits from Medicare Code Editor (MCE), which detect and report errors in the coding of claims data, for all hospice claims effective October 1, 2014 (for those claims submitted on or after October 1, 2014). Hospice claims containing inappropriate principal or secondary diagnosis codes, per ICD–9–CM coding conventions and guidelines, will be returned to the provider and will have to be corrected and resubmitted to be processed and paid.

We will implement edits related to etiology/manifestation code pairs from the MCE; therefore, it is important for hospice providers to follow the ICD–9–CM Coding Guidelines regarding codes that fall under this coding convention. The etiology/manifestation coding convention states that there are certain conditions which have both an underlying cause (etiology) and subsequent multiple body system manifestations. For such conditions, ICD–9–CM coding convention requires the underlying condition be sequenced first, followed by the manifestation. Whenever such a combination exists, there is a “use additional code” note at the etiology code and a “code first” note at the manifestation code. These instructional notes indicate the proper sequencing order of the codes. In most cases, the manifestation codes will have in the code title, “in diseases classified elsewhere.” “In diseases classified elsewhere” codes are never permitted to be used as first-listed or principal diagnosis codes. They must be used in conjunction with an underlying condition code and they must be listed following the underlying condition. An example of this can be found under the category 294, “Persistent mental disorders due to conditions classified elsewhere.” However, there are manifestation codes that do not have “in diseases classified elsewhere” in the title. For such codes, there is “use an additional code” note at the etiology code and a “code first” note at the manifestation code and the rules for sequencing apply.

There are sequencing conventions under ICD–9–CM coding guidelines that are not accounted for in the MCE edits. There are several dementia codes under the classification, “Mental Behavioral and Neurodevelopmental Disorders” that have a sequencing convention that require the underlying physiological condition to be coded first, but for which there is no edit in the MCE. We will be issuing technical guidance through a Change Request to include these codes for edits in the MCE to be consistent for claims processing under ICD–9–CM Coding Guidelines. We are reminding providers to utilize the ICD–9–CM coding guidelines when submitting hospice claims to ensure they are following the appropriate guidelines for coding so that claims are not returned to providers as a result of MCE edits. Following the ICD–9–CM coding guidelines will help hospice providers with appropriate code selection for hospice claims processing. This is not to say that hospice beneficiaries with various dementia

conditions are not appropriate for hospice services, rather, this is merely a clarification regarding the ICD–9–CM coding guidelines for claims processing. We expect hospice providers to follow ICD–9–CM coding guidelines to ensure that the most accurate information is provided regarding the patients for whom hospices are providing services.

Additional details describing the specific MCE edits that will be applied will be announced through a change request, an accompanying Medicare Learning Network article, and other CMS communication channels, such as the Home Health, Hospice, and DME Open Door Forum.

We have clarified in previous rules that hospice providers are expected to report on hospice claims all ICD–9–CM codes to provide an accurate description of the patients’ conditions. In the Hospice Wage Index for Fiscal Year 2013 (77 FR 44247) and again in the Hospice Wage Index for Fiscal Year 2014 (78 FR 48240), we reminded providers to follow ICD–9–CM Coding Guidelines for reporting diagnoses on hospice claims. HIPAA, federal regulations, and the Medicare claims processing manual all require that ICD–9–CM Coding Guidelines be applied to the coding and reporting of diagnoses on hospice claims. In the FY 2013 hospice notice, we reported that our analyses showed that 77.2 percent of hospice claims from 2010 only reported a single, principal diagnosis. We provided in-depth information regarding longstanding, existing ICD–9–CM Coding Guidelines that require the reporting of all additional or co-existing diagnoses on hospice claims. We went on to state that coexisting or additional diagnoses could be related or unrelated to the hospice patient’s terminal illness. As the Medicare hospice benefit covers hospice services for the palliation and management of the terminal illness and related conditions, we said, at that time, that hospice providers “should report on hospice claims all coexisting or additional diagnoses that are related to the terminal illness; they should not report coexisting or additional diagnoses that are unrelated to the terminal illness” (77FR 44248). We also stated that we do not believe that requiring reporting of coexisting or additional diagnoses that are related to the terminal illness would create a burden for hospice and that some providers already report these diagnoses on their claims.

In the FY 2014 Hospice Wage Index and Payment Rate Update final rule, we reported that for the first quarter of FY 2013 (October 1, 2012 through December 31, 2012) 72 percent of

hospice claims only reported a single, principal diagnosis (78 FR 48240). We also discussed related versus unrelated diagnosis reporting on claims and clarified that “all of a patient’s coexisting or additional diagnoses” related to the terminal illness or related conditions should be reported on the hospice claim. Information on a patient’s related and unrelated diagnoses should already be included as part of the hospice comprehensive assessment and appropriate interventions should be incorporated into the patient’s plan of care, as determined by the hospice IDG.

Analysis conducted on FY 2013 hospice claims shows that 67 percent of hospice claims still only report a single, principal hospice diagnosis.⁴¹ Though this is a trend in the right direction, there still appears to be some confusion by the majority of hospice providers as to the requirements for diagnosis reporting on hospice claims. We are reminding providers to follow the ICD–9–CM Coding Guidelines, per longstanding policy, in regard to diagnosis reporting on claims.

The ICD–9–CM Official Guidelines for Coding and Reporting state that for accurate reporting of ICD–9–CM diagnosis codes, “The documentation should describe the patient’s condition, using terminology which includes specific diagnoses, as well as symptoms, problems, and reasons for the encounter. List first the ICD–9–CM code for the diagnosis, condition, problem, or other reason for the encounter/visit shown in the medical record to be chiefly responsible for services provided.” The coding guidelines also state to code all documented conditions that coexist at the time of the encounter/visit and require or affect patient care treatment or management. Therefore, this is a reminder that all diagnoses should be reported on the hospice claim for the terminal illness and related conditions, including those that can affect the care and management of the beneficiary. We will condition to monitor hospice claims to see if all conditions are being reported as required by ICD–9–CM Coding Guidelines. While we did not make any proposals regarding ICD–9–CM Coding Guidelines in the proposed rule, we received two comments requesting rapid dissemination of the ICD–9–CM diagnostic codes that will prompt an edit to return to the provider for more definitive coding. As mentioned above, more specific information will be

provided, including the diagnostic codes, in sub-regulatory guidance after the publication of this final rule. We will also issue provider education describing the specific MCE edits.

K. Technical Regulatory Text Change

In the FY 2015 Hospice Wage Index proposed rule, we proposed to make a technical correction in § 418.3 to delete the definition for a “social worker.” This definition is no longer accurate, and we intended to remove it as part of the June 5, 2008 final rule that amended the conditions of participation (CoPs) for hospices (73 FR 32088). The 2008 final rule established new requirements for social workers at § 418.114(b)(3), making the definition of “social worker” at § 418.3 obsolete. However, the technical amendatory language included in the 2008 final rule did not instruct the **Federal Register** to delete the “social worker” definition.

Public comments and our response to comments regarding the technical correction to delete the definition of social worker from § 418.3 are summarized below.

Comment: Three commenters acknowledged and agreed with this technical correction.

Response: We appreciate the commenters support.

Final action: We will implement the technical correction as proposed.

IV. Collection of Information Requirements

Under the Paperwork Reduction Act of 1995, we are required to provide 30-day notice in the **Federal Register** and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. In order to fairly evaluate whether an information collection should be approved by OMB, section 3506(c)(2)(A) of the Paperwork Reduction Act of 1995 requires that we solicit comment on the following issues:

- The need for the information collection and its usefulness in carrying out the proper functions of our agency.
- The accuracy of our estimate of the information collection burden.
- The quality, utility, and clarity of the information to be collected.
- Recommendations to minimize the information collection burden on the affected public, including automated collection techniques.

We are soliciting public comment on each of these issues for this section of this document that contains information collection requirements (ICRs). This section includes ICR information on data collection (A) related to hospice

payment policy, including changes to the election statement and changes to aggregate cap determination reporting; and (B) related to the CAHPS® Hospice Survey.

A. Changes Related to Hospice Payment Policy

Sections A.1 and A.2 are associated with the information collection request (ICR) previously approved under OMB control number as 0938–1067. We are currently seeking to have the ICR reinstated under notice and comment periods separate from those associated with the FY 2015 Hospice Wage Index proposed rule. The following assumptions were used in estimating the burden for the proposed changes related to hospice payment policy:

TABLE 10—HOSPICE PAYMENT POLICY BURDEN ESTIMATE ASSUMPTIONS

Number of Medicare-participating hospices nationwide, CY 2012	3,897
Number of Medicare-billing hospices, from CY 2012 claims	3,727
Number of Part D prescriptions per hospice, from CY 2012 claims	481
Hourly rate of registered nurse	\$41
Hourly rate of accountant	\$40
Hourly rate of office employee	\$17
Hourly rate of administrator	\$63

Note: CY = Calendar year.

All salary information is from the Bureau of Labor Statistics (BLS) Web site at http://www.bls.gov/oes/current/naics4_621600.htm and includes a fringe benefits package worth 30 percent of the base salary. Hourly rates are based on May 2012 BLS data for each discipline, for those providing “home health care services.”

1. Changes to the Election Statement (§ 418.24)

Section 1812(d) of the Act requires that patients elect hospice care in order for Medicare to cover and pay for hospice services. Section 1861(dd)(3)(B) of the Act defines an attending physician and requires that the patient, not the hospice, designate an attending physician at the time of election. Our regulations at § 418.24 outline current requirements for completion of a hospice election statement, but do not require that the attending physician designated by the patient be identified. To safeguard the patient’s right to choose his or her attending physician, we proposed and have now finalized a change to our regulations at § 418.24(b) to require that the election statement be modified to identify the attending physician chosen by the patient and to include language that the patient acknowledges that the attending

⁴¹ FY 2013 hospice claims data from the Chronic Conditions Data Warehouse (CCW) accessed on February 26, 2014.

physician was his or her choice. All Medicare and Medicaid hospice patients are required to elect the benefit. Since election requirement is particular to the Medicare and Medicaid hospice benefits, hospices are free to establish a similar starting point for non-Medicare and Medicaid patients in their own policies, based on the needs of the hospice, its community, and any applicable State and local laws and regulations.

We estimated that the burden for this requirement is the one-time burden to modify the election statement to include a place for identifying the attending physician and acknowledging that he or she was chosen by the patient or representative. Hospices are currently required to explain these processes to patients, so we do not believe there is any additional burden for discussing that part of the election statement with patients or their representatives. We estimate that it will take a hospice clerical staff person 20 minutes ($20/60 = 0.33333$ hours) to modify the election form, and the hospice administrator 15 minutes ($15/60 = 0.25$ hours) to review the revised form. The clerical time plus administrator time equals a one-time burden of 35 minutes or ($35/60 = 0.58333$ hours per hospice; for all 3,897 hospices, the total time required is $(0.58333 \times 3,897) = 2,273$ hours. At \$17 per hour for an office employee, the cost per hospice is $(0.33333 \times \$17) = \5.66 . At \$63 per hour for the administrator's time, the cost per hospice will be $(0.25 \times \$63) = \15.75 . Therefore, the total one-time cost per hospice is \$21.41, and the total one-time cost for all hospices is $(\$21.41 \times 3,897) = \$83,435$.

Because of concerns related to the potential inappropriate changing of attending physicians by hospices, we also proposed and have now finalized a policy to add paragraph (f) to our regulations at § 418.24, to require that the patient (or representative) provide a statement identifying the new attending physician and the date the change is to be effective, and that the patient (or representative) sign and date the form. The form should also include an acknowledgement that this change is the patient's choice. The one-time burden to hospices is the time to develop a form for the patient to use. We estimate that it will take a hospice clerical staff person 20 minutes ($20/60 = 0.33333$ hours) to develop this form, and the hospice administrator 15 minutes ($15/60 = 0.25$ hours) to review the new form. The clerical time plus administrator time equals a one-time burden of 35 minutes or ($35/60 = 0.58333$ hours per hospice; for all 3,897 hospices, the total time required is $(0.58333 \times 3,897) =$

2,273 hours. At \$17 per hour for an office employee, the cost per hospice is $(0.33333 \times \$17) = \5.66 . At \$63 per hour for the administrator's time, the cost per hospice is $(0.25 \times \$63) = \15.75 . Therefore, the total one-time cost per hospice to develop this new form for changing attending physicians is \$21.41, and the total one-time cost for all hospices is $(\$21.41 \times 3,897) = \$83,435$.

Comment: Two commenters asked CMS to clarify the sentence from the proposed rule which read, "Note that all hospices, including those that are not Medicare-participating, are required by the Conditions of Participation to have patients elect hospice care."

Response: All Medicare and Medicaid hospice patients are required to elect the benefit. Since the election requirement is particular to the Medicare and Medicaid hospice benefits, hospices are free to establish a similar starting point for non-Medicare and Medicaid patients in their own policies, based on the needs of the hospice, its community, and any applicable State and local laws and regulations. We have rephrased the sentence in this final rule to read as written in this response.

2. Changes to Aggregate Cap Determination Reporting (§ 418.308)

Congress mandated two caps on hospice payments: an inpatient cap and an aggregate cap. The hospice cap year is November 1 through October 31. Medicare contractors complete the hospice cap determination approximately twelve to eighteen months after the cap year in order to demand any overpayments from the hospices. A cap determination consists in determining whether a hospice exceeds the inpatient cap and the aggregate hospice cap. Medicare hospice inpatient stays in excess of twenty percent of total Medicare hospice days are to be reimbursed at the routine homecare rate; the hospice must be repay any excess due to receiving payments at the higher inpatient rates for the excess inpatient days. Additionally, Medicare hospice payments are limited by an aggregate cap, which is computed by multiplying the "cap amount" by the number of beneficiaries. If the actual Medicare payments exceed the aggregate cap, the hospice must repay the difference. We proposed to change our regulations at § 418.308(c) to require hospices to calculate their inpatient and aggregate caps five months after the cap year and remit any overpayment. We finalized a policy that only requires hospices to calculate their aggregate cap five months after the cap year and remit any overpayment (please see section III.D of

this final rule for more specifics). This is similar to the process in § 413.24(f), which requires other provider types that file a Medicare cost report to file their cost reports five months after the end of their cost reporting year. The regulation at § 413.24(f) also requires other provider types that file a Medicare cost report to remit any amount due the program at the time of the cost report filing. Although hospices file cost reports, the cap determination is not based on the cost report; the hospice caps serve to limit total Medicare payments similar to the way cost reports limit those payments for other provider types that file a Medicare cost report. Requiring hospices to complete a cap determination and remit any overpayment is consistent with what is currently required of all other provider types that file a Medicare cost report.

We expect that it will take a hospice about 1.5 hours to complete its cap determination. All information needed to file the cap determination is available in the Provider Statistical and Reimbursement (PS&R) system. For all 3,727 hospices that bill Medicare, this is $(1.5 \times 3,727) = 5,591$ hours. We estimate that it will take one hour for an accountant to complete the cap determination worksheet provided by CMS for the cap year. At \$40 per hour for an accountant, the cost is $(1 \times \$40) = \40 per hospice, and $(3,727 \times \$40) = \$149,080$ for all hospices. We estimate that it will take a half hour for the administrator to review the worksheet prepared by the accountant. At \$63 per hour for the administrator's time, the cost per hospice is $(0.5 \times \$63) = \31.50 , and for all hospices is $(3,727 \times \$31.50) = \$117,401$. Therefore the total estimated cost per hospice is $(\$40 + \$31.50) = \$71.50$, and the total cost for all hospices is $(3,727 \times \$71.50) = \$266,481$.

B. CAHPS® Hospice Survey

This section is associated with a new information collection request that is required to start in January 2015. The Hospice Survey data collected in 2015 is required for the FY 2017 HQR quality reporting requirements along with the submission of the clinical structural measures for the same payment period. This is a new information collection request seeking approval to assess experiences of care with hospice reported by primary caregivers (that is, bereaved family members of friends) of patients who died while receiving hospice care. This information data collection request is required to (1) assess experience of care at the respondent (caregiver) level, and (2) provide sufficient response to

generate hospice experience reports. Here are the estimates for the approximate annual cost of the CAHPS® Survey (Table 11).

TABLE 11—ASSUMPTIONS AND ESTIMATES FOR CAHPS® HOSPICE SURVEY

Approximate Number of hospices required to do the CAHPS® Survey annually.	2,600
Approximate Cost to each hospice annually for the CAHPS® Survey.	\$3,300
Approximate Cost for all CAHPS® Hospices annually for the CAHPS® Survey.	\$8.58 million
Respondent Cost burden	\$2.19 million
Approximate Total Cost of CAHPS® Survey annually.	\$10.77 million

In implementing the HQRP, we seek to collect measure information with as little burden to the providers as possible, but which reflects the full spectrum of quality performance. As such, we are moving forward toward the implementation of the CAHPS® Hospice Survey to provide data to the public about the patients' families' and friends' perspectives of care of their loved ones who passed way while in hospices.

The CAHPS® Hospice Survey data will provide the peoples' voices to hospice care in the United States. Based

on the criteria outlined in the Preamble, some hospices that are too new and very small will be exempt from the HQRP. We estimate that 2,600 hospices will qualify to participate in the survey. From CMS experiences with surveys, we estimate an annual cost of \$3,300 per hospice to participate in the CAHPS® Hospice Survey. The cost of \$3,300 includes the preparation of a monthly sampling frame for their approved vendor, as well as estimated vendor costs to conduct the data collection. The estimated annual cost for all hospices to do the survey is \$8.58 million. As part of the survey requirement, all participating hospices will contract with an approved hospice survey vendor, and each hospice will be required to submit a monthly list of deceased patients' caregivers contact information, for patients that passed away in the hospice care two months prior to the date of the list. This list (essentially the sampling frame) for most hospices can be generated from existing databases with minimal effort. For some small hospices, preparation of a monthly sample frame may require more time. However, data elements needed on the sample frame will be kept at a minimum to reduce the burden on the hospices.

The survey contains 47 items and is estimated to require an average administration time of 10.4 minutes in English, and 12.5 minutes in Spanish,

for an average response time of 10.505 minutes or 0.175 hours, assuming that 5 percent of the survey respondents complete the survey in Spanish. These burden estimates are based on CMS' experiences with surveys of similar lengths that were fielded with Medicare beneficiaries. We estimate that approximately six surveys can be done an hour, at an hourly wage of \$22.77. (We used the mean hourly wage from the "National Compensation Survey: All United States December 2009—January 2011," U.S. Department of Labor, Bureau of Labor Statistics. This was the most recent survey available at the time of OMB submission). With a total estimate of 550,000 respondents, we estimate a total respondent burden by multiplying 550,000 respondents by an estimated hourly burden per respondent of 0.175 hours to produce the total estimated number of burden hours (96,250). We then multiplied the number of hours (96,250) by \$22.77 which equals at \$2.19 million. The respondent burden does not represent an additional cost to the hospices, but instead refers to the time burden borne by respondents; the cost to the participating hospices is \$8.58 million. Table 12 below provides a summary of the burden and cost estimates associated with both the hospice payment policy changes and the CAHPS® Hospice Survey requirements.

TABLE 12—BURDEN AND COST ESTIMATES ASSOCIATED WITH ALL INFORMATION COLLECTION REQUIREMENTS

Regulation section(s)	OMB control No.	Number of respondents	Number of responses	Burden per response (hours)	Total annual burden (hours)	Hourly labor cost of reporting (\$)	Total labor cost of reporting (\$)	Total cost (\$)
418.24(b)	0938–1067.	3,897	3,897	0.583333	2,273	21.41	83,435	83,435
418.24(f) ..	0938–1067.	3,897	3,897	0.583333	2,273	21.41	83,435	83,435
418.308(c)	0938–1067.	3,727	3,727	1.500000	5,591	71.50	266,481	266,481
418.312 ...	0938–New	1,100,000	550,000	0.175	96,250	22.77	2,191,612	2,191,612
Totals	1,107,624	561,521	106,387	2,624,963

There are no capital/maintenance costs associated with the information collection requirements contained in this rule; therefore, we have removed the associated column from Table 12.

If you comment on these information collection and recordkeeping requirements, please submit your comments electronically as specified in the ADDRESSES section of this final rule.

Please identify which Collection of Information requirement you are commenting on by indicating whether it is from subsection:

- A.1. Changes to the Election Statement (§ 418.24);
- A.2. Changes to Aggregate Cap Determination Reporting (§ 418.308); or
- B. CAHPS® Hospice Survey (§ 418.312).

Comment: A commenter said the rates used in Table 10 do not reflect salary information in all regional areas, and therefore underestimate the administrative burden. This commenter felt that the time estimates were under-reported but did not suggest specific changes to the estimates.

Response: We use salary data from the Bureau of Labor Statistics that is a national average, which reflects the variation in wages across the country. Our time estimates are based on the time an efficient hospice would require to complete a particular activity.

V. Regulatory Impact Analysis

A. Statement of Need

This final rule follows § 418.306(c) which requires annual issuance, in the **Federal Register**, of the hospice wage

index based on the most current available CMS hospital wage data, including any changes to the definitions of Core-Based Statistical Areas (CBSAs), or previously used Metropolitan Statistical Areas (MSAs). This final rule also updates payment rates for each of the categories of hospice care described in § 418.302(b) for FY 2015 as required under section 1814(i)(1)(C)(ii)(VII) of the Act. The payment rate updates are subject to changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. In addition, the payment rate updates may be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions specified in section 1814(i)(1)(C)(v) of the Act). In 2010, the Congress amended section 1814(i)(6) of the Act with section 3132(a) of the Affordable Care Act. The amendment authorized the Secretary to collect additional data and information determined appropriate to revise payments for hospice care and for other purposes. The data collected may be used to revise the methodology for determining the payment rates for routine home care and other services included in hospice care, no earlier than October 1, 2013, as described in section 1814(i)(6)(D) of the Act. In accordance with section 1814(i)(6)(D) of the Act, this final rule provides an update on hospice payment reform analysis.

Section 1814(i)(2)(A) through (C) limits total Medicare payments a hospice can receive through the aggregate cap. This final rule also requires that providers submit their hospice aggregate cap determination to their Medicare Administrative Contractor (MAC) within 5 months after the cap year ends, but not sooner than 3 months after the cap year ends, and remit any overpayments at that time. Hospices that fail to comply will be subject to suspension of payments.

Section 1812(d) of the Act requires that hospice beneficiaries waive their right to Medicare payments for services related to the terminal illness and provided during a hospice election, except when provided by the hospice or by the attending physician. To properly enforce that requirement, it is necessary that a beneficiary's hospice status be up-to-date in the claims processing systems. Therefore, this final rule requires that hospice Notice of Elections (NOEs) and Notice of Terminations/ Revocations (NOTRs) be filed with the Medicare contractor within 5 days after the effective date of election or the effective date of discharge/revocation. Hospices will be subject to provider-

liable days when they file an NOE late, though we will allow for a waiver of these provider-liable days when late-filing is due to certain circumstances beyond the control of the hospice.

Furthermore, in accordance with section 1860D–24 of the Act, drugs and biologicals that may be covered under the Medicare Part A per-diem payment to a hospice program are excluded from coverage under Part D. Section 1861(dd) of the Act states the hospice is responsible for covering all drugs or biologicals for the palliation and management of the terminal illness and related conditions. The FY 2015 Hospice Wage Index proposed rule, in accordance with sections 1860D–24 and 1861(dd) of the Act, solicited comments on a coordination of benefits process and appeals for Part D payment for drugs and biologicals while beneficiaries are under a hospice election. We did not make any proposals on the coordination of benefits process and appeals for Part D payment for drugs and biologicals while beneficiaries are under a hospice election.

Finally, section 3004 of the Affordable Care Act amended the Act to authorize a quality reporting program for hospices, and this rule discusses changes in the requirements for the hospice quality reporting program in accordance with section 1814(i)(5) of the Act.

B. Introduction

We have examined the impacts of this rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), section 1102(b) of the Act, section 202 of the Unfunded Mandates Reform Act of 1995 (UMRA, March 22, 1995; Pub. L. 104–4), and the Congressional Review Act (5 U.S.C. 804(2)).

Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Executive Order 13563 emphasizes the importance of quantifying both costs and benefits, of reducing costs, of harmonizing rules, and of promoting flexibility. A regulatory impact analysis (RIA) must be prepared for major rules with economically significant effects (\$100

million or more in any 1 year). This final rule has been designated as economically significant under section 3(f)(1) of Executive Order 12866 and thus a major rule under the Congressional Review Act. Accordingly, we have prepared a regulatory impact analysis (RIA) that to the best of our ability, presents the costs and benefits of the rulemaking. Finally, this rule has been reviewed by OMB.

C. Overall Impact

The overall impact of this final rule is an estimated net increase in Federal payments to hospices of \$230 million, or 1.4 percent for FY 2015. This estimated impact on hospices is a result of the final hospice payment update percentage for FY 2015 of 2.1 percent and changes to the FY 2015 hospice wage index, including a reduction to the BNAF by an additional 15 percent, for a total BNAF reduction of 85 percent (10 percent in FY 2010, and 15 percent per year for FY 2011 through FY 2015). An 85 percent reduced BNAF is computed to be 0.009313 (or 0.9313 percent). The BNAF reduction is part of a 7-year BNAF phase-out that was finalized in the FY 2010 Hospice Wage Index final rule (74 FR 39384), and is not a policy change.

1. Detailed Economic Analysis

Column 4 of Table 13 shows the combined effects of the updated wage data (the 2013 pre-floor, pre-reclassified hospital wage index) and of the additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent), comparing estimated payments for FY 2014 to estimated payments for FY 2015. The FY 2014 payments used for comparison have a 70 percent reduced BNAF applied. We estimate that the total hospice payments for FY 2015 will decrease by 0.7 percent. This 0.7 percent is the result of a 0.1 percent reduction due to the use of updated wage data (–\$20 million), and a 0.6 percent reduction due to the additional 15 percent reduction in the BNAF (–\$100 million). This estimate does not take into account the final hospice payment update percentage of 2.1 percent (+\$350 million) for FY 2015.

Column 5 of Table 13 shows the combined effects of the updated wage data (the 2013 pre-floor, pre-reclassified hospital wage index), the additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent), and the final hospice payment update percentage of 2.1 percent. The final 2.1 percent hospice payment update percentage is based on a 2.9 percent inpatient hospital market basket update for FY 2015 reduced by a 0.5 percentage

point productivity adjustment and by 0.3 percentage point as mandated by the Affordable Care Act. The estimated effect of the 2.1 percent final hospice payment update percentage is an increase in payments to hospices of approximately \$350 million. Taking into account the 2.1 percent final hospice payment update percentage (+\$350 million), the use of updated wage data (– \$20 million), and the additional 15 percent reduction in the BNAF (– \$100 million), it is estimated that hospice payments will increase by \$230 million in FY 2015 (\$350 million – \$20 million – \$100 million = \$230 million) or 1.4 percent in FY 2015.

a. Effects on Hospices

This section discusses the impact of the projected effects of the hospice wage index and the effects of a final 2.1 percent hospice payment update percentage for FY 2015. This final rule continues to use the CBSA-based pre-floor, pre-reclassified hospital wage index as a basis for the hospice wage

index and continues to use the same policies for treatment of areas (rural and urban) without hospital wage data. The final FY 2015 hospice wage index is based upon the FY 2013 pre-floor, pre-reclassified hospital wage index and the most complete hospice claims data available (FY 2013 hospice claims submitted as of March 31, 2014) with an additional 15 percent reduction in the BNAF (for a total BNAF reduction of 85 percent).

For the purposes of our impacts, our baseline is estimated FY 2014 payments with a 70 percent BNAF reduction, using the FY 2012 pre-floor, pre-reclassified hospital wage index. Our first comparison (column 3 of Table 13) compares our baseline to estimated FY 2015 payments (holding payment rates constant) using the updated wage data (FY 2013 pre-floor, pre-reclassified hospital wage index). Consequently, the estimated effects illustrated in column 3 of Table 13 show the distributional effects of the updated wage data only. The effects of using the updated wage

data combined with the additional 15 percent reduction in the BNAF are illustrated in column 4 of Table 13.

We have included a comparison of the combined effects of the additional 15 percent BNAF reduction, the updated wage data, and the final 2.1 percent hospice payment update percentage for FY 2015 (Table 13, column 5). Presenting these data gives the hospice industry a more complete picture of the effects on their total revenue based on changes to the hospice wage index and the BNAF phase-out as discussed in this final rule and the final FY 2015 hospice payment update percentage. Certain events may limit the scope or accuracy of our impact analysis, because such an analysis is susceptible to forecasting errors due to other changes in the forecasted impact time period. The nature of the Medicare program is such that the changes may interact, and the complexity of the interaction of these changes could make it difficult to predict accurately the full scope of the impact upon hospices.

TABLE 13—ANTICIPATED IMPACT ON MEDICARE HOSPICE PAYMENTS OF UPDATING THE PRE-FLOOR, PRE-RECLASSIFIED HOSPITAL WAGE INDEX DATA, REDUCING THE BUDGET NEUTRALITY ADJUSTMENT FACTOR (BNAF) BY AN ADDITIONAL 15 PERCENT (FOR A TOTAL BNAF REDUCTION OF 85 PERCENT) AND APPLYING A 2.1 PERCENT HOSPICE PAYMENT UPDATE PERCENTAGE, COMPARED TO THE FY 2014 HOSPICE WAGE INDEX WITH A 70 PERCENT BNAF REDUCTION

	Number of hospices	Number of routine home care days in thousands	Percent change in hospice payments due to FY2014 wage index change	Percent change in hospice payments due to wage index change, additional 15% reduction in budget neutrality adjustment	Percent change in hospice payments due to wage index change, additional 15% reduction in budget neutrality adjustment and market basket update
	(1)	(2)	(3)	(4)	(5)
ALL HOSPICES	3,752	88,006	–0.1	–0.7	1.4

Source: FY 2013 Hospice claims data from the Standard Analytic Files for CY 2012 (as of June 30, 2013) and CY 2013 (as of March 31, 2014) and the Provider of Service (POS) file (as of March 2014).

Note: The final 2.1 percent hospice payment update percentage for FY 2015 is based on a 2.9 percent inpatient hospital market basket update, reduced by a 0.5 percentage point productivity adjustment and by 0.3 percentage point. Starting with FY 2013 (and in subsequent fiscal years), the market basket percentage update under the hospice payment system as described in section 1814(i)(1)(C)(ii)(VII) or section 1814(i)(1)(C)(iii) of the Act will be annually reduced by changes in economy-wide productivity as set out at section 1886(b)(3)(B)(xi)(II) of the Act. In FY 2013 through FY 2019, the market basket percentage update under the hospice payment system will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions set out under section 1814(i)(1)(C)(v) of the Act).

Region Key:

New England=Connecticut, Maine, Massachusetts, New Hampshire, Rhode Island, Vermont; **Middle Atlantic**=Pennsylvania, New Jersey, New York; **South Atlantic**=Delaware, District of Columbia, Florida, Georgia, Maryland, North Carolina, South Carolina, Virginia, West Virginia; **East North Central**=Illinois, Indiana, Michigan, Ohio, Wisconsin; **East South Central**=Alabama, Kentucky, Mississippi, Tennessee; **West North Central**=Iowa, Kansas, Minnesota, Missouri, Nebraska, North Dakota, South Dakota; **West South Central**=Arkansas, Louisiana, Oklahoma, Texas; **Mountain**=Arizona, Colorado, Idaho, Montana, Nevada, New Mexico, Utah, Wyoming; **Pacific**=Alaska, California, Hawaii, Oregon, Washington; **Outlying**=Guam, Puerto Rico, Virgin Islands

Table 13 shows the results of our analysis. In column 1, we indicate the number of hospices included in our analysis as of March 31, 2014, which had also filed claims in FY 2013. In column 2, we indicate the number of routine home care days that were included in our analysis, although the analysis was performed on all types of hospice care. Columns 3, 4, and 5 compare FY 2014 estimated payments with those estimated for FY 2015. The estimated FY 2014 payments incorporate a BNAF, which has been reduced by 70 percent. Column 3 shows the percentage change in estimated Medicare payments for FY 2015 due to the effects of the updated wage data only, compared with estimated FY 2014 payments. The effect of the updated wage data can vary from region to region

depending on the fluctuations in the wage index values of the pre-floor, pre-reclassified hospital wage index. Column 4 shows the percentage change in estimated hospice payments from FY 2014 to FY 2015 due to the combined effects of using the updated wage data and reducing the BNAF by an additional 15 percent. Column 5 shows the percentage change in estimated hospice payments from FY 2014 to FY 2015 due to the combined effects of using updated wage data, an additional 15 percent BNAF reduction, and the final 2.1 percent hospice payment update percentage.

The impact of changes in this final rule has been analyzed according to the type of hospice, geographic location, type of ownership, hospice base, and size. Table 13 categorizes hospices by

various geographic and hospice characteristics. The first row of data displays the aggregate result of the impact for all Medicare-certified hospices. The second and third rows of the table categorize hospices according to their geographic location (urban and rural). Our analysis indicated that there are 2,779 hospices located in urban areas and 973 hospices located in rural areas. The next two row groupings in the table indicate the number of hospices by census region, also broken down by urban and rural hospices. The next grouping shows the impact on hospices based on the size of the hospice's program. We determined that the majority of hospice payments are made at the routine home care rate. Therefore, we based the size of each individual hospice's program on the

number of routine home care days provided in FY 2013. The next grouping shows the impact on hospices by type of ownership. The final grouping shows the impact on hospices defined by whether they are provider-based or freestanding.

As indicated in column 1 of Table 13, there are 3,752 hospices included in the regulatory impact analysis (the number of hospices in Table 13 differs from the number of hospices shown in Table 10 because the data were obtained from different sources). Approximately 41.5 percent of Medicare-certified hospices are identified as voluntary (non-profit) or government agencies; a majority (58.5 percent) are proprietary (for-profit), with 1,557 designated as non-profit or government hospices, and 2,195 as proprietary. In addition, our analysis shows that most hospices are in urban areas and provide the vast majority of routine home care days, most hospices are medium-sized, and the vast majority of hospices are freestanding.

b. Hospice Size

Under the Medicare hospice benefit, hospices can provide four different levels of care. The majority of the days provided by a hospice are routine home care (RHC) days, representing about 97 percent of the services provided by a hospice. Therefore, the number of RHC days can be used as a proxy for the size of the hospice, that is, the more days of care provided, the larger the hospice. We currently use three size designations to present the impact analyses. The three categories are—(1) small agencies having 0 to 3,499 RHC days; (2) medium agencies having 3,500 to 19,999 RHC days; and (3) large agencies having 20,000 or more RHC days. The FY 2015 updated wage data before any BNAF reduction are anticipated to decrease payments to large hospices by 0.1 percent, and increase 0.1 for small hospices. Medium hospices' payments are anticipated to stay stable (column 3). The updated wage data and the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent) are anticipated to decrease estimated payments to small hospices by 0.4 percent, to medium hospices by 0.5 percent, and to large hospices by 0.7 percent (column 4). Finally, the updated wage data, the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent), and the final 2.1 percent hospice payment update percentage are projected to increase estimated payments by 1.7 percent for small hospices, by 1.6 percent for medium hospices, and by 1.4 percent for large hospices (column 5).

c. Geographic Location

Column 3 of Table 13 shows the estimated impact of using updated wage data without the BNAF reduction. Urban hospices are anticipated to experience a decrease of 0.1 percent and rural hospices are anticipated to experience a decrease of 0.2 percent in payments. Urban hospices can anticipate an increase in payments in Middle Atlantic of 0.5 percent, in the Pacific of 0.9 percent and in the Outlying area of 0.7 percent. Urban hospices can anticipate a decrease in payments ranging from 0.8 percent in the West North Central region to 0.1 percent in the East North Central region. Urban hospices in New England are not anticipated to be affected by the updated wage data.

Rural hospices are estimated to see a decrease in payments in four regions, ranging from 0.7 percent in the East North Central region to 0.1 percent in the New England region. Rural hospices can anticipate an increase in payments in four regions ranging from 0.3 percent in the Middle Atlantic region to 0.8 percent in the Pacific region. There is no anticipated change in payments for the East South Central and Outlying regions due to the use of updated wage data.

Column 4 shows the combined effect of the updated wage data and the additional 15 percent BNAF reduction on estimated payments, as compared to the FY 2014 estimated payments using a BNAF with a 70 percent reduction. Overall, hospices are anticipated to experience a 0.7 percent decrease in payments, with urban hospices experiencing an estimated decrease of 0.7 percent and rural hospices experiencing an estimated decrease of 0.5 percent. All urban areas other than Outlying and Pacific are estimated to see decreases in payments, ranging from 1.4 percent in the West North Central region to 0.7 percent in the New England and East South Central regions. The urban Pacific and Outlying regions are anticipated to see increases in payments of 0.2 percent and 0.7 percent, respectively.

Rural hospices are estimated to experience a decrease in payments in six regions, ranging from 1.3 percent in the East North Central region to 0.1 percent in the West North Central region. Payments in the rural Mountain and Pacific regions are anticipated to increase by 0.1 percent, while payments in the rural Outlying and East South Central regions are anticipated to stay relatively stable.

Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction, and the

final 2.1 percent hospice payment update percentage on estimated FY 2015 payments as compared to estimated FY 2014 payments. Overall, hospices are anticipated to experience a 1.4 percent increase in payments, with urban hospices anticipated to experience a 1.4 percent increase in payments, and rural hospices anticipated to experience a 1.6 percent increase in payments. Urban hospices are anticipated to experience an increase in estimated payments in every region, ranging from 0.7 percent in the West North Central region to 2.8 percent in Outlying area. Rural hospices in every region are estimated to see an increase in payments ranging from 0.8 percent in East North Central to 2.2 percent in the Mountain and Pacific regions.

d. Type of Ownership

Column 3 demonstrates the effect of the updated wage data on FY 2015 estimated payments, versus FY 2014 estimated payments. We anticipate that using the updated wage data will decrease estimated payments to proprietary (for-profit), voluntary (non-profit), and Government hospices by 0.1 percent. Column 4 demonstrates the combined effects of the updated wage data and of the additional 15 percent BNAF reduction. Estimated payments to voluntary (non-profit), proprietary (for-profit), and government hospices are anticipated to decrease by 0.6 percent, 0.7 percent and 0.7 percent, respectively. Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction (for a total BNAF reduction of 85 percent), and the final 2.1 percent hospice payment update percentage on estimated payments, comparing FY 2015 to FY 2014. Estimated FY 2015 payments are anticipated to increase for voluntary (non-profit) hospices by 1.5 percent, for proprietary (for-profit) hospices by 1.4 percent, and government hospices by 1.4 percent.

e. Hospice Base

Column 3 demonstrates the effect of using the updated wage data, comparing estimated payments for FY 2015 to FY 2014. Estimated payments are anticipated to decrease for freestanding hospices by 0.1 percent. Estimated payments are anticipated to increase for home health agency, hospital, and skilled nursing facility based hospices by 0.1 percent, 0.2 percent, and by 0.2 percent, respectively. Column 4 shows the combined effects of the updated wage data and reducing the BNAF by an additional 15 percent, comparing estimated payments for FY 2015 to FY 2014. All hospice facilities are

anticipated to experience decrease in payments ranging from 0.7 percent for freestanding hospices to 0.4 percent for hospital and skilled nursing facility based hospices. Column 5 shows the combined effects of the updated wage data, the additional 15 percent BNAF reduction, and the final 2.1 percent hospice payment update percentage on estimated payments, comparing FY 2015 to FY 2014. Estimated payments are anticipated to increase for all hospices, ranging from 1.4 percent for freestanding hospices to 1.7 percent for hospital and skilled nursing facility based hospices.

f. Effects on Other Providers

This final rule will only affect Medicare hospices, and therefore has no effect on other provider types. We note that our suggested approaches with respect to Part D coordination with hospice payments may ultimately have an effect on Part D spending, if subsequently proposed and adopted.

g. Effects on the Medicare and Medicaid Programs

This final rule only affects Medicare hospices, and therefore has no effect on Medicaid programs. As described previously, estimated Medicare payments to hospices in FY 2015 are anticipated to decrease by \$20 million due to the update in the wage index data, and to decrease by \$100 million due to the additional 15 percent reduction in the BNAF (for a total 85 percent reduction in the BNAF). However, the final hospice payment update percentage of 2.1 percent is anticipated to increase Medicare payments by \$350 million. Therefore, the total effect on Medicare hospice payments is estimated to be a \$230 million increase (1.4 percent).

h. Alternatives Considered

In continuing the reduction to the BNAF by an additional 15 percent, for a total BNAF reduction of 85 percent (10 percent in FY 2010, and 15 percent per year for FY 2011 through FY 2015), and implementing the hospice payment update percentage and the updated wage index, the aggregate impact will be a net increase of \$230 million in payments to hospices. In the proposed rule for FY 2015, we did not consider discontinuing the additional 15 percent reduction to the BNAF as the 7-year phase-out of the BNAF was finalized in the FY 2010 Hospice Wage Index final rule (74 FR 39384). However, if we were to discontinue the reduction to the BNAF by an additional 15 percent, Medicare will pay an estimated \$100 million more to hospices in FY 2015.

Since the hospice payment update percentage is determined based on statutory requirements, we did not consider updating the hospice payment rates by a percentage less than the payment update percentage. The final 2.1 percent hospice payment update percentage for FY 2015 is based on a final 2.9 percent inpatient hospital market basket update for FY 2015, reduced by a 0.5 percentage point productivity adjustment and by an additional 0.3 percentage point. Payment rates for FYs since 2002 have been updated according to section 1814(i)(1)(C)(ii)(VII) of the Act, which states that the update to the payment rates for subsequent FYs must be the market basket percentage for that FY. The Act requires us to use the inpatient hospital market basket to determine the hospice payment rate update. In addition, section 3401(g) of the Affordable Care Act mandates that, starting with FY 2013 (and in subsequent FYs), the hospice payment update percentage will be annually reduced by changes in economy-wide productivity as specified in section 1886(b)(3)(B)(xi)(II) of the Act. In addition, section 3401(g) of the Affordable Care Act also mandates that in FY 2013 through FY 2019, the hospice payment update percentage will be reduced by an additional 0.3 percentage point (although for FY 2014 to FY 2019, the potential 0.3 percentage point reduction is subject to suspension under conditions specified in section 1814(i)(1)(C)(v) of the Act).

Regarding alternative timeframes for timely-filing of the Notice of Election (NOE) and of the Notice of Termination/Revocation (NOTR), we considered using 4 days after the effective date of election or of discharge/revocation, but decided to allow 5 days. We will continue to monitor the filing of NOEs and NOTRs, and will consider shortening the timeframe for what would be considered a timely-filed NOE or NOTR in future rulemaking. To ensure the attending physician of record is properly documented in the patient's medical record, we finalized, in section III.F, changes to the regulations at § 418.24(b)(1) requiring the election statement to include the patient's choice of attending physician. We considered limiting the number of times that a beneficiary can change his/her attending to once per election period (similar to the current regulations at § 418.30(a) that only allows a beneficiary to change a hospice provider once during an election period). However, we first want to conduct additional analyses of hospice Part A billing for physician

services provided by nurse practitioners and Part B attending physician billing to determine how frequently beneficiaries change attending physicians.

i. Accounting Statement

As required by OMB Circular A-4 (available at <http://www.whitehouse.gov/omb/circulars/a004/a-4.pdf>), in Table 14 below, we have prepared an accounting statement showing the classification of the expenditures associated with this final rule. Table 14 provides our best estimate of the increase in Medicare payments under the hospice benefit as a result of the changes presented in this final rule for 3,752 hospices in our impact analysis file constructed using FY 2013 claims as of March 31, 2014. Table 14 also includes the costs associated with (1) a hospice accountant to complete the cap determination worksheet, and for a hospice administrator to review the final worksheet, for a total annual burden of \$266,481 as noted in section IV.A; and (2) the cost to hospices to participate in the CAHPS® survey, including the preparation of a monthly sampling frame for their approved vendor, as well as estimated survey vendor costs, for an estimated total annual cost of \$8.58 million to all hospices in the survey. Table 14 below does not reflect a one-time cost of modifying the current hospice election statement to record the patient's choice of attending physician (\$83,435) and the one-time cost of creating a new hospice form for changing the attending physician (\$83,435), for a total one-time burden of \$166,870 as noted in section IV.B.

TABLE 14—ACCOUNTING STATEMENT: CLASSIFICATION OF ESTIMATED TRANSFERS, FROM FY 2014 TO FY 2015

[in \$Millions]	
Category	Transfers
FY 2015 Final Rule Hospice Wage Index and Payment Rate Update	
Annualized Monetized Transfers.	\$230
From Whom to Whom?	Federal Government to Hospices
Category	Costs
Annualized Monetized Costs for Hospice Providers ¹ .	\$8.85

¹ Costs associated with hospice aggregate cap reporting and with the CAHPS® Hospice Survey.

j. Conclusion

In conclusion, the overall effect of this final rule is an estimated \$230 million increase in Medicare payments to hospices due to the wage index changes (including the additional 15 percent reduction in the BNAF) and the final hospice payment update percentage of 2.1 percent. Also, starting in FY 2015, hospices are estimated to incur annual burden costs of \$266,481 for a hospice accountant to complete the cap determination worksheet, and for a hospice administrator to review the final worksheet. Finally, starting in FY 2015 hospices are estimated to incur annual burden costs of \$8.58 million for participation in the CAHPS® hospice survey.

2. Regulatory Flexibility Act Analysis

The RFA requires agencies to analyze options for regulatory relief of small businesses if a rule has a significant impact on a substantial number of small entities. For purposes of the RFA, we estimate that almost all hospices are small entities as that term is used in the RFA. The great majority of hospitals and most other health care providers and suppliers are small entities by meeting the Small Business Administration (SBA) definition of a small business (in the service sector, having revenues of less than \$7.0 million to \$35.5 million in any 1 year), or being nonprofit organizations. While the SBA does not define a size threshold in terms of annual revenues for hospices, it does define one for home health agencies (\$14 million; see [http://www.sba.gov/sites/default/files/files/Size_Standards_Table\(1\).pdf](http://www.sba.gov/sites/default/files/files/Size_Standards_Table(1).pdf)). For the purposes of this final rule, because the hospice benefit is a home-based benefit, we are applying the SBA definition of “small” for home health agencies to hospices; we will use this definition of “small” in determining if this final rule has a significant impact on a substantial number of small entities (for example, hospices). We estimate that 95 percent of hospices have Medicare revenues below \$14 million or are nonprofit organizations and therefore are considered small entities.

HHS’s practice in interpreting the RFA is to consider effects economically “significant” only if they reach a threshold of 3 to 5 percent or more of total revenue or total costs. As noted above, the combined effect of the updated wage data, the additional 15 percent BNAF reduction, and the final FY 2015 hospice payment update percentage of 2.1 percent results in an increase in estimated hospice payments of 1.4 percent for FY 2015. For small

and medium hospices (as defined by routine home care days), the estimated effects on revenue when accounting for the updated wage data, the additional 15 percent BNAF reduction, and the final FY 2015 hospice payment update percentage reflect increases in payments of 1.7 percent and 1.6 percent, respectively. Therefore, the Secretary has determined that this final rule will not create a significant economic impact on a substantial number of small entities.

In addition, section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of section 604 of the RFA. For purposes of section 1102(b) of the Act, we define a small rural hospital as a hospital that is located outside of a metropolitan statistical area and has fewer than 100 beds. This final rule only affects hospices. Therefore, the Secretary has determined that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

3. Unfunded Mandates Reform Act Analysis

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any 1 year of \$100 million in 1995 dollars, updated annually for inflation. In 2014, that threshold is approximately \$141 million. This final rule is not anticipated to have an effect on State, local, or tribal governments, in the aggregate, or on the private sector of \$141 million or more.

VI. Federalism Analysis

Executive Order 13132 on Federalism (August 4, 1999) establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on State and local governments, preempts State law, or otherwise has Federalism implications. We have reviewed this final rule under the threshold criteria of Executive Order 13132, Federalism, and have determined that it will not have substantial direct effects on the rights, roles, and responsibilities of States, local or tribal governments.

VII. Waiver of 60-Day Delay in the Effective Date

We ordinarily provide a 60-day delay in the effective date of the provisions of a rule in accordance with the

Administrative Procedure Act (APA) (5 U.S.C. 553(d)), which requires a 30-day delayed effective date, and the Congressional Review Act (5 U.S.C. 801(a)(3)), which requires a 60-day delayed effective date for major rules. However, we can waive the delay in the effective date if the Secretary finds, for good cause, that the delay is impracticable, unnecessary, or contrary to the public interest, and incorporates a statement of the finding and the reasons in the rule issued. 5 U.S.C. 553(d)(3); 5 U.S.C. 808(2).

The hospice payment system is a fiscal year payment system, and we typically issue the final rule by August 1 of each year to both comply with the requirement to annually review and update these payment systems and ensure that the payment policies for these systems are effective, following the required 60-day delay in the effective date, on October 1, the first day of the fiscal year to which the policies are intended to apply. If the agency finds, for good cause, that a 60-day delay is impracticable, unnecessary, or contrary to the public interest, and the agency incorporates a statement of the findings and its reasons in the rule issued, the agency may specify an earlier effective date. The timeframes for developing annual rules are extremely compressed and processing issues complicated this year’s rule. We believe it would be contrary to the public interest to delay the effective date of the hospice payment system. We therefore specify that those portions of the rule will be effective October 1.

List of Subjects

42 CFR Part 405

Administrative practice and procedure, Health facilities, Medicare, Reporting and recordkeeping requirements.

42 CFR Part 418

Health facilities, Hospice care, Medicare, Reporting and recordkeeping requirements.

For the reasons set forth in the preamble, the Centers for Medicare and Medicaid Services amends 42 CFR chapter IV as set forth below:

PART 405—FEDERAL HEALTH INSURANCE FOR THE AGED AND DISABLED

Subpart C—Suspension of Payment, Recovery of Overpayments, and Repayment of Scholarships and Loans

- 1. The authority citation for part 405, subpart C continues to read:

Authority: Secs. 1102, 1815, 1833, 1842, 1862, 1866, 1870, 1871, 1879 and 1892 of the Social Security Act (42 U.S.C. 1302, 1395g, 1395l, 1395u, 1395y, 1395cc, 1395gg, 1395hh, 1395pp and 1395ccc) and 31 U.S.C. 3711.

■ 2. Section 405.371 is amended by revising paragraph (c)(1) and adding paragraph (e) to read as follows:

§ 405.371 Suspension, offset, and recoupment of Medicare payments to providers and suppliers of services.

* * * * *

(c) * * * (1) Except as provided in paragraphs (d) and (e) of this section, CMS or the Medicare contractor suspends payments only after it has complied with the procedural requirements set forth at § 405.372.

* * * * *

(e) *Suspension of payment in the case of unfiled hospice cap determination reports.* (1) If a provider has failed to timely file an acceptable hospice cap determination report, payment to the provider is immediately suspended in whole or in part until a cap determination report is filed and determined by the Medicare contractor to be acceptable.

(2) In the case of an unfiled hospice cap determination report, the provisions of § 405.372 do not apply. (See § 405.372(a)(2) concerning failure to furnish other information.)

PART 418—HOSPICE CARE

■ 3. The authority citation for part 418 continues to read as follows:

Authority: Secs. 1102 and 1871 of the Social Security Act (42 U.S.C. 1302 and 1395hh).

§ 418.3 [Amended]

■ 4. Section 418.3 is amended by removing the definition of “Social worker”.

■ 5. Section 418.24 is amended by revising paragraphs (a) and (b)(1) and adding paragraph (f) to read as follows:

§ 418.24 Election of hospice care.

(a) *Filing an election statement.* (1) *General.* An individual who meets the eligibility requirement of § 418.20 may file an election statement with a particular hospice. If the individual is physically or mentally incapacitated, his or her representative (as defined in § 418.3) may file the election statement.

(2) *Notice of election.* The hospice chosen by the eligible individual (or his or her representative) must file the Notice of Election (NOE) with its Medicare contractor within 5 calendar days after the effective date of the election statement.

(3) *Consequences of failure to submit a timely notice of election.* When a hospice does not file the required Notice of Election for its Medicare patients within 5 calendar days after the effective date of election, Medicare will not cover and pay for days of hospice care from the effective date of election to the date of filing of the notice of election. These days are a provider liability, and the provider may not bill the beneficiary for them.

(4) *Exception to the consequences for filing the NOE late.* CMS may waive the consequences of failure to submit a timely-filed NOE specified in paragraph (a)(2) of this section. CMS will determine if a circumstance encountered by a hospice is exceptional and qualifies for waiver of the consequence specified in paragraph (a)(3) of this section. A hospice must fully document and furnish any requested documentation to CMS for a determination of exception. An exceptional circumstance may be due to, but is not limited to the following:

(i) Fires, floods, earthquakes, or similar unusual events that inflict extensive damage to the hospice’s ability to operate.

(ii) A CMS or Medicare contractor systems issue that is beyond the control of the hospice.

(iii) A newly Medicare-certified hospice that is notified of that certification after the Medicare certification date, or which is awaiting its user ID from its Medicare contractor.

(iv) Other situations determined by CMS to be beyond the control of the hospice.

(b) * * *

(1) Identification of the particular hospice and of the attending physician that will provide care to the individual. The individual or representative must acknowledge that the identified attending physician was his or her choice.

* * * * *

(f) *Changing the attending physician.* To change the designated attending physician, the individual (or representative) must file a signed statement with the hospice that states that he or she is changing his or her attending physician.

(1) The statement must identify the new attending physician, and include the date the change is to be effective and the date signed by the individual (or representative).

(2) The individual (or representative) must acknowledge that the change in the attending physician is due to his or her choice.

(3) The effective date of the change in attending physician cannot be before the date the statement is signed.

■ 6. Section 418.26 is amended by adding a new paragraph (e) to read as follows:

§ 418.26 Discharge from hospice care.

* * * * *

(e) *Filing a notice of termination of election.* When the hospice election is ended due to discharge, the hospice must file a notice of termination/revocation of election with its Medicare contractor within 5 calendar days after the effective date of the discharge, unless it has already filed a final claim for that beneficiary.

■ 7. Section 418.28 is amended by adding a new paragraph (d) to read as follows:

§ 418.28 Revoking the election of hospice care.

* * * * *

(d) When the hospice election is ended due to revocation, the hospice must file a notice of termination/revocation of election with its Medicare contractor within 5 calendar days after the effective date of the revocation, unless it has already filed a final claim for that beneficiary.

■ 8. Section 418.306 is amended by adding paragraph (b)(6) to read as follows:

§ 418.306 Determination of payment rates.

* * * * *

(b) * * *

(6) For FY 2014 and subsequent fiscal years, in the case of a Medicare-certified hospice that does not submit hospice quality data, as specified by the Secretary, the payment rates are equal to the rates for the previous fiscal year increased by the applicable market basket percentage increase, minus 2 percentage points. Any reduction of the percentage change will apply only to the fiscal year involved and will not be taken into account in computing the payment amounts for a subsequent fiscal year.

* * * * *

■ 9. Section 418.308 is amended by revising paragraph (c) to read as follows:

§ 418.308 Limitation on the amount of hospice payments.

* * * * *

(c) The hospice must file its aggregate cap determination notice with its Medicare contractor no later than 5 months after the end of the cap year (that is, by March 31st) and remit any overpayment due at that time. Hospices shall file the aggregate cap using data no earlier than 3 months after the end of

the cap period. The Medicare contractor will notify the hospice of the final determination of program reimbursement in accordance with procedures similar to those described in § 405.1803 of this chapter. If a provider fails to file its self-determined cap determination with its Medicare contractor within 5 months after the cap year, payments to the hospice will be suspended in whole or in part, until a self-determined cap determination is filed with the Medicare contractor, in accordance with § 405.371(e) of this chapter.

* * * * *

■ 10. Subpart G is amended by adding a new § 418.312 to read as follows:

§ 418.312 Data submission requirements under the hospice quality reporting program.

(a) *General rule.* Except as provided in paragraph (g) of this section, Medicare-certified hospices must submit to CMS data on measures selected under section 1814(i)(5)(C) of the Act in a form and manner, and at a time, specified by the Secretary.

(b) *Submission of Hospice Quality Reporting Program data.* Hospices are required to complete and submit an admission Hospice Item Set (HIS) and a discharge HIS for each patient admission to hospice, regardless of payer or patient age. The HIS is a standardized set of items intended to capture patient-level data.

(c) A hospice that receives notice of its CMS certification number before November 1 of the calendar year before the fiscal year for which a payment

determination will be made must submit data for the calendar year.

(d) Medicare-certified hospices must contract with CMS-approved vendors to collect the CAHPS® Hospice Survey data on their behalf and submit the data to the Hospice CAHPS® Data Center.

(e) If the hospice's total, annual, unique, survey-eligible, deceased patient count for the prior calendar year is less than 50 patients, the hospice is eligible to be exempt from the CAHPS® Hospice Survey reporting requirements in the current calendar year. In order to qualify for this exemption the hospice must submit to CMS its total, annual, unique, survey-eligible, deceased patient count for the prior calendar year.

(f) Vendors that want to become CMS-approved CAHPS® Hospice Survey vendors must meet the minimum business requirements. Survey vendors must have been in business for a minimum of 4 years, have conducted surveys in the approved survey mode for a minimum of 3 years, and have conducted surveys of individual patients for a minimum of 2 years. For Hospice CAHPS®, a "survey of individual patients" is defined as the collection of data from at least 600 individual patients selected by statistical sampling methods, and the data collected are used for statistical purposes. Vendors may not use home-based or virtual interviewers to conduct the CAHPS® Hospice Survey, nor may they conduct any survey administration processes (for example, mailings) from a residence.

(g) No organization, firm, or business that owns, operates, or provides staffing

for a hospice is permitted to administer its own Hospice CAHPS® survey or administer the survey on behalf of any other hospice in the capacity as a Hospice CAHPS® survey vendor. Such organizations will not be approved by CMS as CAHPS® Hospice Survey vendors.

(h) *Reconsiderations and appeals of Hospice Quality Reporting Program decisions.* (1) A hospice may request reconsideration of a decision by CMS that the hospice has not met the requirements of the Hospice Quality Reporting Program for a particular reporting period. A hospice must submit a reconsideration request to CMS no later than 30 days from the date identified on the annual payment update notification provided to the hospice.

(2) Reconsideration request submission requirements are available on the CMS Hospice Quality Reporting Web site on CMS.gov.

(3) A hospice that is dissatisfied with a decision made by CMS on its reconsideration request may file an appeal with the Provider Reimbursement Review Board under part 405, subpart R of this chapter.

Dated: July 24, 2014.

Marilyn Tavenner,
Administrator, Centers for Medicare & Medicaid Services.

Approved: July 30, 2014.

Sylvia M. Burwell

RIN 1018-AZ80

Migratory Bird Hunting; Proposed Frameworks for Late-Season Migratory Bird Hunting Regulations

AGENCY: Fish and Wildlife Service, Interior.

ACTION: Proposed rule; Supplemental.

SUMMARY: The Fish and Wildlife Service (hereinafter Service or we) is proposing to establish the 2014–15 late-season hunting regulations for certain migratory game birds. We annually prescribe frameworks, or outer limits, for dates and times when hunting may occur and the number of birds that may be taken and possessed in late seasons. These frameworks are necessary to allow State selections of seasons and limits and to allow recreational harvest at levels compatible with population and habitat conditions.

DATES: You must submit comments on the proposed migratory bird hunting late-season frameworks by September 2, 2014.

ADDRESSES: *Comments:* You may submit comments on the proposals by one of the following methods:

- *Federal eRulemaking Portal:* <http://www.regulations.gov>. Follow the instructions for submitting comments on Docket No. FWS-HQ-MB-2014-0017.

- *U.S. Mail or Hand Delivery:* Public Comments Processing, Attn: FWS-HQ-MB-2014-0017; Division of Policy and Directives Management; U.S. Fish and Wildlife Service; U.S. Fish & Wildlife Headquarters, MS: BPHC, 5275 Leesburg Pike, Falls Church, VA 22041-3803.

We will post all comments on <http://www.regulations.gov>. This generally means that we will post any personal information you provide us (see the Review of Public Comments and Flyway Council Recommendations section, below, for more information).

FOR FURTHER INFORMATION CONTACT: Ron W. Kokel, U.S. Fish and Wildlife Service, Department of the Interior, MS: MB, 5275 Leesburg Pike, Falls Church, VA 22041-3803; (703) 358-1967.

SUPPLEMENTARY INFORMATION:

Regulations Schedule for 2014

On April 30, 2014, we published in the **Federal Register** (79 FR 24512) a

proposal to amend 50 CFR part 20. The proposal provided a background and overview of the migratory bird hunting regulations process, and addressed the establishment of seasons, limits, and other regulations for hunting migratory game birds under §§ 20.101 through 20.107, 20.109, and 20.110 of subpart K. Major steps in the 2014–15 regulatory cycle relating to open public meetings and **Federal Register** notifications were also identified in the April 30 proposed rule.

Further, we explained that all sections of subsequent documents outlining hunting frameworks and guidelines were organized under numbered headings. Those headings are:

1. Ducks
 - A. General Harvest Strategy
 - B. Regulatory Alternatives
 - C. Zones and Split Seasons
 - D. Special Seasons/Species Management
 - i. September Teal Seasons
 - ii. September Teal/Wood Duck Seasons
 - iii. Black ducks
 - iv. Canvasbacks
 - v. Pintails
 - vi. Scaup
 - vii. Mottled ducks
 - viii. Wood ducks
 - ix. Youth Hunt
 - x. Mallard Management Units
 - xi. Other
2. Sea Ducks
3. Mergansers
4. Canada Geese
 - A. Special Seasons
 - B. Regular Seasons
 - C. Special Late Seasons
5. White-fronted Geese
6. Brant
7. Snow and Ross's (Light) Geese
8. Swans
9. Sandhill Cranes
10. Coots
11. Moorhens and Gallinules
12. Rails
13. Snipe
14. Woodcock
15. Band-tailed Pigeons
16. Mourning Doves
17. White-winged and White-tipped Doves
18. Alaska
19. Hawaii
20. Puerto Rico
21. Virgin Islands
22. Falconry
23. Other

Subsequent documents will refer only to numbered items requiring attention. Therefore, it is important to note that we will omit those items requiring no attention, and remaining numbered items will be discontinuous and appear incomplete.

On June 4, 2014, we published in the **Federal Register** (79 FR 32418) a second document providing supplemental proposals for early- and late-season migratory bird hunting regulations. The June 4 supplement also provided

detailed information on the proposed 2014–15 regulatory schedule and announced the Service Regulations Committee (SRC) and Flyway Council meetings.

On June 25–26, 2014, we held open meetings with the Flyway Council Consultants, at which the participants reviewed information on the current status of migratory shore and upland game birds and developed recommendations for the 2014–15 regulations for these species plus regulations for migratory game birds in Alaska, Puerto Rico, and the Virgin Islands; special September waterfowl seasons in designated States; special sea duck seasons in the Atlantic Flyway; and extended falconry seasons. In addition, we reviewed and discussed preliminary information on the status of waterfowl as it relates to the development and selection of the regulatory packages for the 2014–15 regular waterfowl seasons.

On July 31, 2014, we published in the **Federal Register** (79 FR 44580) a third document specifically dealing with the proposed frameworks for early-season regulations. In late August 2014, we will publish a rulemaking establishing final frameworks for early-season migratory bird hunting regulations for the 2014–15 season.

On July 30–31, 2014, we held open meetings with the Flyway Council Consultants, at which the participants reviewed the status of waterfowl and developed recommendations for the 2014–15 regulations for these species.

This document deals specifically with proposed frameworks for the late-season migratory bird hunting regulations. It will lead to final frameworks from which States may select season dates, shooting hours, areas, and limits.

We have considered all pertinent comments received through August 1, 2014, on the April 30 and June 4, 2014, rulemaking documents in developing this document. In addition, new proposals for certain late-season regulations are provided for public comment. The comment period is specified above under **DATES**. We will publish final regulatory frameworks for late-season migratory game bird hunting in the **Federal Register** on or around September 20, 2014.

Population Status and Harvest

The following paragraphs provide preliminary information on the status and harvest of waterfowl excerpted from various reports. For more detailed information on methodologies and results, you may obtain complete copies of the various reports at the address indicated under **FOR FURTHER**

INFORMATION CONTACT or from our Web site at <http://www.fws.gov/migratorybirds/NewsPublicationsReports.html>.

Waterfowl Breeding and Habitat Survey

Federal, provincial, and State agencies conduct surveys each spring to estimate the size of breeding populations and to evaluate the conditions of the habitats. These surveys are conducted using fixed-wing aircraft, helicopters, and ground crews and encompass principal breeding areas of North America, covering an area over 2.0 million square miles. The traditional survey area comprises Alaska, Canada, and the northcentral United States, and includes approximately 1.3 million square miles. The eastern survey area includes parts of Ontario, Quebec, Labrador, Newfoundland, Nova Scotia, Prince Edward Island, New Brunswick, New York, and Maine, an area of approximately 0.7 million square miles.

Overall, spring was delayed even later than last year across most of the survey area. Habitat conditions during the survey were mostly improved or similar to last year, due to average to above-average annual precipitation. The exceptions were west-central Alberta and east of James Bay in Quebec. Alaska was the only region that experienced an early spring. The total pond estimate (Prairie Canada and United States combined) was 7.2 ± 0.2 million, which was similar to the 2013 estimate of 6.9 ± 0.2 million and 40 percent above the long-term average of 5.1 ± 0.03 million. The 2014 estimate of ponds in Prairie Canada was 4.6 ± 0.2 million. This estimate was similar to the 2013 estimate (4.6 ± 0.2 million) and 33 percent above the 1961–2013 average (3.5 ± 0.03 million). The 2014 pond estimate for the northcentral United States was 2.6 ± 0.1 million, which was similar to the 2013 estimate (2.3 ± 0.1 million) and 53 percent above the 1974–2013 average (1.7 ± 0.02 million). Additional details of the 2013 Survey were provided in the July 31 **Federal Register** and are available from our Web site at <http://www.fws.gov/migratorybirds/NewsPublicationsReports.html>.

Breeding Population Status

In the traditional survey area, which includes strata 1–18, 20–50, and 75–77, the total duck population estimate (excluding scoters [*Melanitta* spp.], eiders [*Somateria* spp. and *Polysticta stelleri*], long-tailed ducks [*Clangula hyemalis*], mergansers [*Mergus* spp. and *Lophodytes cucullatus*], and wood ducks [*Aix sponsa*]) was 49.2 ± 0.8 [SE] million birds. This was a record-high

count, represents an 8 percent increase from last year's estimate of 45.6 ± 0.7 million, and is 43 percent higher than the long-term average (1955–2013). Estimated mallard (*Anas platyrhynchos*) abundance was 10.9 ± 0.3 million, which was similar to the 2013 estimate, and 42 percent above the long-term average of 7.7 ± 0.04 million. Estimated abundance of gadwall (*A. strepera*; 3.8 ± 0.2 million) was similar to the 2013 estimate and 102 percent above the long-term average (1.9 ± 0.02 million). The estimate for American wigeon (*A. americana*; 3.1 ± 0.2 million) was 18 percent above the 2013 estimate of 2.6 ± 0.2 million and 20 percent above the long-term average of 2.6 ± 0.02 million. The estimated abundance of green-winged teal (*A. crecca*) was 3.4 ± 0.2 million, which was similar to the 2013 estimate and 69 percent above the long-term average (2.0 ± 0.02 million). The estimate for blue-winged teal (*A. discors*; 8.5 ± 0.5 million) was similar to the 2013 estimate and 75 percent above the long-term average of 4.9 ± 0.04 million. The estimate for northern shoveler (*A. clypeata*; 5.3 ± 0.3 million) was a record high, but statistically similar to the 2013 estimate and 114 percent above the long-term average of 2.5 ± 0.02 million. The northern pintail estimate (*A. acuta*; 3.2 ± 0.2 million) was similar to the 2013 estimate and was 20 percent below the long-term average of 4.0 ± 0.04 million. Abundance estimates of redheads (*Aythya americana*; 1.3 ± 0.1 million) and canvasbacks (*A. valisineria*; 0.7 ± 0.05 million) were similar to their 2013 estimates and were 85 percent and 18 percent above their long-term averages of 0.7 ± 0.01 million and 0.6 ± 0.01 million, respectively. Estimated abundance of scaup (*A. affinis* and *A. marila* combined; 4.6 ± 0.3 million) was similar to the 2013 estimate and the long-term average of 5.0 ± 0.05 million.

The eastern survey area was restratified in 2005, and is now composed of strata 51–72. In the eastern survey area, estimated abundance of American black ducks (*Anas rubripes*) was $0.6 \pm .04$ million, which was similar to the 2013 estimate and the 1990–2013 average. The estimated abundance of mallards was 0.4 ± 0.1 million, which was similar to the 2013 estimate and the 1990–2013 average. Abundance estimates of green-winged teal (0.2 ± 0.04 million) and ring-necked ducks (*Aythya collaris*; 0.5 ± 0.1 million) were 19 percent and 22 percent below their 2013 estimates, and similar to their 1990–2013 averages, respectively. Abundance estimates for goldeneyes (common [*Bucephala clangula*] and

Barrow's [*B. islandica*] combined) and mergansers were similar to last year's estimates and their 1990–2013 averages.

Fall Flight Estimate

The midcontinent mallard population is composed of mallards from the traditional survey area (revised in 2008 to exclude mallards in Alaska and the Old Crow Flats area of the Yukon Territory), Michigan, Minnesota, and Wisconsin, and is estimated to be 13.4 ± 1.3 million birds in 2014. This is similar to the 2013 estimate of 13.1 ± 1.2 million. See section 1.A. General Harvest Strategy for further discussion of the implications of this information for this year's selection of the appropriate hunting regulations.

Status of Geese and Swans

We provide information on the population status and productivity of North American Canada geese (*Branta canadensis*), brant (*B. bernicla*), snow geese (*Chen caerulescens*), Ross's geese (*C. rossii*), emperor geese (*C. canagica*), white-fronted geese (*Anser albifrons*), and tundra swans (*Cygnus columbianus*). Production of arctic-nesting geese depends heavily upon the timing of snow and ice melt, and spring and early summer temperatures.

In 2014, conditions in the arctic and boreal areas important for geese were variable. Conditions in the north-central Arctic were very poor for nesting as spring was very late, with snow cover persisting into July. By contrast, spring was early in many of the more southern regions in the Central Arctic. At Karrak Lake on the Queen Maude Gulf, ice break-up was 14 days earlier than average, so biologists expected above-average production by the snow and Ross's geese, and Mid-continent white-fronted geese that nest there. Conditions in many areas of the eastern Arctic were favorable for breeding waterfowl. Spring phenology was early on Southampton and Bylot Islands, and excellent production by the greater snow geese that nest on Bylot was expected. Spring was slightly early on the Ungava Peninsula, and biologists predicted slightly above-average production of the Atlantic Population Canada geese that nest there. Spring was cold and wet in Newfoundland and Labrador, but the timing of nesting was normal, and the outlook for production of North Atlantic Population Canada geese was good. Alaska experienced a very early, warm spring, with little or no flooding, so the outlook for the many goose and swan populations nesting there was excellent. The favorable conditions on Alaska's Yukon-Kuskokwim Delta (YKD) were a welcome contrast to 2013, when a late

ice break-up and a storm-surge flood made for very poor production. Predicted production of Emperor geese, cackling Canada geese, and white-fronted geese should be much improved in 2014. On the Copper River Delta, the early phenology and the highest dusky Canada goose index in 20 years suggests an excellent year for this population. Of the Canada goose populations that migrate to the Mississippi Flyway, predicted production was above-average for the Eastern Prairie Population, but below-average for the Mississippi Valley and the Southern James Bay populations, the latter for the second year in a row. Indices of wetland abundance in the Canadian and U.S. prairies in 2014 continued to improve, with the exception of the eastern two-thirds of South Dakota and the Red River Valley in North Dakota. Although early spring was cold and wet in many goose nesting areas of the United States, the outlook for production was generally good. Breeding populations of most temperate-nesting geese remained high in 2014, despite efforts to reduce or stabilize them. Production and fall flights of temperate-nesting Canada geese over most of North America should be average in 2014.

Primary abundance indices increased for 9 goose populations and decreased for 11 goose populations in 2014 compared to 2013. Primary abundance indices for both populations of tundra swans (Eastern and Western) decreased in 2014 from 2013 levels. The following populations displayed significant positive trends during the most recent 10-year period ($P < 0.05$): Central Flyway Arctic Nesting—West Tier (formerly Short Grass Prairie), North Atlantic, and Aleutian Canada geese; Mid-continent, Western Central Flyway, and Western Arctic/Wrangel Island light geese; Eastern Population tundra swans; and the Pacific population of white-fronted geese. Only Atlantic Flyway Resident (AFRP) and Central Flyway Arctic Nesting—West Tier (formerly Tall Grass Prairie) Canada geese showed significantly negative 10-year trends. The forecast for the production of geese and swans in North America is variable, depending on the population and its breeding area.

Waterfowl Harvest and Hunter Activity

National surveys of migratory bird hunters were conducted during the 2012–13 and 2013–14 hunting seasons. Over 1.1 million waterfowl hunters harvested 15,704,500 (± 6 percent) ducks and 3,191,200 (± 6 percent) geese in 2012, and about 1 million waterfowl hunters harvested 13,716,400 (± 6 percent) ducks and 3,360,400 (± 6

percent) geese during the 2013–14 season. Mallard, green-winged teal, gadwall, blue-winged, and wood duck (*Aix sponsa*) were the 5 most-harvested duck species in the United States, and Canada goose was the predominant species in the goose harvest.

Review of Public Comments and Flyway Council Recommendations

The preliminary proposed rulemaking, which appeared in the April 30, 2014, **Federal Register**, opened the public comment period for migratory game bird hunting regulations. The supplemental proposed rule, which appeared in the June 4, 2014, **Federal Register**, discussed the regulatory alternatives for the 2014–15 duck hunting season. Late-season comments are summarized below and numbered in the order used in the June 4 **Federal Register**. We have included only the numbered items pertaining to late-season issues for which we received written comments. Consequently, the issues do not follow in successive numerical order.

We received recommendations from all four Flyway Councils. Some recommendations supported continuation of last year's frameworks. Due to the comprehensive nature of the annual review of the frameworks performed by the Councils, support for continuation of last year's frameworks is assumed for items for which no recommendations were received. Council recommendations for changes in the frameworks are summarized below.

We seek additional information and comments on the recommendations in this supplemental proposed rule. New proposals and modifications to previously described proposals are discussed below. Wherever possible, they are discussed under headings corresponding to the numbered items in the April 30 and June 4, 2014, **Federal Register** documents.

General

Written Comments: A commenter protested the entire migratory bird hunting regulations process, the killing of all migratory birds, and status and habitat data on which the migratory bird hunting regulations are based.

Service Response: Our long-term objectives continue to include providing opportunities to harvest portions of certain migratory game bird populations and to limit harvests to levels compatible with each population's ability to maintain healthy, viable numbers. Having taken into account the zones of temperature and the distribution, abundance, economic

value, breeding habits, and times and lines of flight of migratory birds, we believe that the hunting seasons provided for herein are compatible with the current status of migratory bird populations and long-term population goals.

Additionally, we are obligated to, and do, give serious consideration to all information received as public comment. While there are problems inherent with any type of representative management of public-trust resources, we believe that the Flyway-Council system of migratory game bird management has been a longstanding example of State-Federal cooperative management since its establishment in 1952. However, as always, we continue to seek new ways to streamline and improve the process.

1. Ducks

Categories used to discuss issues related to duck harvest management are: (A) General Harvest Strategy, (B) Regulatory Alternatives, (C) Zones and Split Seasons, and (D) Special Seasons/Species Management. The categories correspond to previously published issues/discussion, and only those containing substantial recommendations are discussed below.

A. General Harvest Strategy

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended the adoption of the "liberal" regulatory alternative.

Service Response: We continue to use adaptive harvest management (AHM) protocols that allow hunting regulations to vary among Flyways in a manner that recognizes each Flyway's breeding-ground derivation of mallards. In 2008, we described and adopted a protocol for regulatory decision-making for the newly defined stock of western mallards (73 FR 43290; July 24, 2008). For the 2014 hunting season, we continue to believe that the prescribed regulatory choice for the Pacific Flyway should be based on the status of this western mallard breeding stock, while the regulatory choice for the Mississippi and Central Flyways should depend on the status of the redefined mid-continent mallard stock. We also recommend that the regulatory choice for the Atlantic Flyway continue to depend on the status of eastern mallards.

For the 2014 hunting season, we are continuing to consider the same regulatory alternatives as those used last year. The nature of the "restrictive," "moderate," and "liberal" alternatives has remained essentially unchanged

since 1997, except that extended framework dates have been offered in the “moderate” and “liberal” regulatory alternatives since 2002 (67 FR 47224; July 17, 2002). Also, in 2003, we agreed to place a constraint on closed seasons in the Mississippi and Central Flyways whenever the midcontinent mallard breeding-population size (as defined prior to 2008; traditional survey area plus Minnesota, Michigan, and Wisconsin) was ≥ 5.5 million (68 FR 37362; June 23, 2003). This constraint subsequently was revised in 2008 to ≥ 4.75 million to account for the change in the definition of midcontinent mallards to exclude birds from Alaska and the Old Crow Flats area of the Yukon Territory (73 FR 43293; July 24, 2008).

The optimal AHM strategies for midcontinent and western mallards for the 2014–15 hunting season were calculated using: (1) Harvest-management objectives specific to each mallard stock; (2) the 2014 regulatory alternatives; and (3) current population models and associated weights for midcontinent and western mallards. Based on this year’s survey results of 11.04 million midcontinent mallards (traditional survey area minus Alaska and the Old Crow Flats area of the Yukon Territory, plus Minnesota, Wisconsin, and Michigan) and 4.63 million ponds in Prairie Canada, the prescribed regulatory choice for the Mississippi and Central Flyways is the “liberal” alternative. Similarly, based on an estimated 0.82 million western mallards (0.32 in California-Oregon and 0.50 in Alaska) the prescribed regulatory alternative in the Pacific Flyway is also “liberal.”

In 2013, mechanical problems and corresponding safety concerns with Service aircraft limited survey coverage, which precluded our ability to estimate breeding population sizes for the eastern strata of the Waterfowl Breeding and Population Habitat Survey (WBPHS). As a result, we were unable to update eastern mallard AHM model weights and derive an optimal harvest policy for 2014. Therefore, the 2014 eastern mallard AHM decision will be based on the 2014 eastern mallard population estimate and the optimal regulatory strategy derived for the Atlantic Flyway in 2012. Based on an estimated eastern mallard population of 0.86 million (0.22 and 0.63 million respectively in northeast Canada and the northeastern United States), the prescribed regulatory choice for the Atlantic Flyway is the “liberal” alternative. We note that in 2012, the eastern mallard observed breeding population was 0.84 million.

Therefore, we concur with the recommendations of the Atlantic, Mississippi, Central, and Pacific Flyway Councils regarding selection of the “liberal” regulatory alternative and propose to adopt the “liberal” regulatory alternative, as described in the June 4, 2014, **Federal Register**.

D. Special Seasons/Species Management

iii. Black Ducks

Council Recommendations: The Atlantic and Mississippi Flyway Councils recommended that the Service follow the International Black Duck AHM Strategy for 2014–15.

Service Response: In 2012, we adopted the International Black Duck AHM Strategy (77 FR 49868; August 17, 2012). The formal strategy is the result of 14 years of technical and policy decisions developed and agreed upon by both Canadian and U.S. agencies and waterfowl managers. The strategy clarifies what harvest levels each country will manage for and reduces conflicts over country-specific regulatory policies. Further, the strategy allows for attainment of fundamental objectives of black duck management: resource conservation, perpetuation of hunting tradition, and equitable access to the black duck resource between Canada and the United States while accommodating the fundamental sources of uncertainty, partial controllability and observability, structural uncertainty, and environmental variation. The underlying model performance is assessed annually, with a comprehensive evaluation of the entire strategy (objectives and model set) planned after 6 years. A copy of the strategy is available at the address indicated under **FOR FURTHER INFORMATION CONTACT**, or from our Web site at <http://www.fws.gov/migratorybirds/NewsPublicationsReports.html>.

For the 2014–15 season, the optimal country-specific regulatory strategies were calculated in September 2013 using: (1) The black duck harvest objective (98 percent of long-term cumulative harvest); (2) 2014–15 country specific regulatory alternatives; (3) parameter estimates for mallard competition and additive mortality; and (4) 2013 estimates of 0.62 million breeding black ducks and 0.50 million breeding mallards in the core survey area. The optimal regulatory choices are the moderate package in Canada and the restrictive package in the United States.

iv. Canvasbacks

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended a full season for canvasbacks with a 1-bird daily bag limit. Season lengths would be 60 days in the Atlantic and Mississippi Flyways, 74 days in the Central Flyway, and 107 days in the Pacific Flyway.

Service Response: Since 1994, we have followed a canvasback harvest strategy whereby if canvasback population status and production are sufficient to permit a harvest of one canvasback per day nationwide for the entire length of the regular duck season, while still attaining an objective of 500,000 birds the following spring, the season on canvasbacks should be opened. A partial season would be permitted if the estimated allowable harvest was below that associated with a 1-bird daily bag limit for the entire season. If neither of these conditions can be met, the harvest strategy calls for a closed season on canvasbacks nationwide. In 2008 (73 FR 43290; July 24, 2008), we announced our decision to modify the canvasback harvest strategy to incorporate the option for a 2-bird daily bag limit for canvasbacks when the predicted breeding population the subsequent year exceeds 725,000 birds.

This year’s spring survey resulted in an estimate of 685,000 canvasbacks. This was similar to the 2013 estimate of 787,000 canvasbacks and 18 percent above the 1955–2013 average. The estimate of ponds in Prairie Canada was 4.6 million, which was also similar to last year’s estimate of 4.6 million and 33 percent above the long-term average. Based on harvest predictions using data through 2009, the canvasback harvest strategy predicts a 2015 canvasback population of 730,600 birds under a liberal duck season with a 1-bird daily bag limit and 671,000 with a 2-bird daily bag limit. Because the predicted 2015 spring canvasback population under a “liberal” 1-bird bag season is greater than 500,000, and the predicted population under a “liberal” 2-bird bag is less than 725,000, and since the recommended duck season under AHM is “liberal,” the harvest strategy stipulates that there should be a full canvasback season with a 1-bird daily bag limit.

v. Pintails

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended a full season for pintails, consisting of a 2-bird daily bag limit and a 60-day season in the Atlantic and Mississippi

Flyways, a 74-day season in the Central Flyway, and a 107-day season in the Pacific Flyway.

Service Response: The current derived pintail harvest strategy was adopted by the Service and Flyway Councils in 2010 (75 FR 44856; July 29, 2010). For this year, an optimal regulatory strategy for pintails was calculated with: (1) An objective of maximizing long-term cumulative harvest, including a closed-season constraint of 1.75 million birds; (2) the regulatory alternatives and associated predicted harvest; and (3) current population models and their relative weights. Based on this year's survey results of 3.22 million pintails observed at a mean latitude of 53.9 degrees and a latitude-adjusted breeding population of 3.79 million birds, the optimal regulatory choice for all four Flyways is the "liberal" alternative with a 2-bird daily bag limit.

vi. Scaup

Council Recommendations: The Atlantic, Mississippi, Central, and Pacific Flyway Councils recommended use of the "moderate" regulation package, consisting of a 60-day season with a 2-bird daily bag in the Atlantic Flyway, and an 86-day season with a 3-bird daily bag limit in the Pacific Flyway.

Service Response: In 2008, we adopted and implemented a new scaup harvest strategy (73 FR 43290 on July 24, 2008, and 73 FR 51124 on August 29, 2008) with initial "restrictive," "moderate," and "liberal" regulatory packages adopted for each Flyway.

The 2014 breeding population estimate for scaup is 4.61 million, which is similar to the 2013 estimate of 4.17 million. Total estimated U.S. scaup harvest for the 2013–14 season was 0.33 million birds. An optimal regulatory strategy for scaup was calculated with an objective of achieving 95 percent of maximum long-term cumulative harvest and updated model parameters and their relative weights. Based on this year's breeding population estimate of 4.61 million, the optimal regulatory choice for scaup is the "moderate" package in all four Flyways.

xi. Other

Council Recommendations: The Central Flyway Council recommended that two additional (bonus) blue-winged teal be allowed in the daily duck bag for the first 16 days of the regular duck season in the production States of Montana, North Dakota, South Dakota, and Wyoming.

The Mississippi Flyway Council recommended that two additional teal (blue-winged, green-winged, and

cinnamon teal collectively) be allowed in the daily duck bag for the first 16 days of the regular duck season in the production States of Iowa, Michigan, Minnesota, and Wisconsin. Impacts of both of these changes would be evaluated over the first 3 years, beginning with the 2014–15 hunting season.

Service Response: In the April 30 **Federal Register**, we stated that "any proposal to increase teal harvest, in order to be consistent with the intent of special regulations, should direct harvest primarily at blue-winged teal . . ." The recent assessment of teal harvest potential indicated additional harvest for this species can be supported in most years, and we believe the proposal for bonus blue-winged teal will provide hunters increased opportunities with a very low likelihood of negative impacts to the blue-winged teal population. Further, we believe impacts to species other than blue-winged teal also are likely to be low. Thus, we support the Central Flyway Council's recommendation to include bonus blue-winged teal in the regular season daily duck bag limit. We will work with the Flyway to develop appropriate evaluation techniques to monitor any potential effects.

We do not support the Mississippi Flyway Council's recommendation to include all teal in the bonus bag limit. We have clearly stated that the focus of additional teal harvest should be directed at blue-winged teal, and do not support new special regulations that would target other species of waterfowl, including the other teal species. Although the teal harvest potential assessment indicated some additional harvest opportunity exists for both blue-winged and green-winged teal, the amount of additional opportunity for green-winged teal appears to be much lower than for blue-winged teal. For blue-winged teal, the optimal harvest rates predicted for the additive model were about 2–2.5 times higher than observed harvest rates, but the optimal harvest rate for green-winged teal was only 1.3–1.5 times higher than observed rates, suggesting less room for additional harvest opportunity for green-winged teal. Furthermore, the models used to assess the impacts of harvest on green-winged teal population size did not perform as well as the models used for blue-winged teal. Thus, we have less confidence in the results for green-winged teal. Improving the predictive ability of the green-winged teal models would require improvements to monitoring programs (e.g., banding, harvest, and/or abundance monitoring) beyond those

that currently exist. Data were insufficient to assess the harvest potential for cinnamon teal.

Thus, beginning in the 2014–15 regular duck seasons, we propose that two bonus blue-winged teal be included for the first 16 days of the regular duck season of the Central and Mississippi Flyways when the blue-winged teal population estimate from the traditional survey area (i.e., strata 1–18, 20–50, and 75–77) is >4.7 million birds, and for the first 9 days when the blue-winged teal estimate is between 3.3 and 4.7 million. Bonus blue-winged teal will not be allowed when the blue-winged teal estimate is less than 3.3 million. In the Central Flyway, this regulation would be available only to the States of Montana, North Dakota, South Dakota, and Wyoming. In the Mississippi Flyway, this regulation would be available only to the States of Iowa, Michigan, Minnesota, and Wisconsin.

During the next 3 years, no additional expansion of teal hunting opportunity will be allowed. This will ensure that an evaluation of recently enacted additional teal hunting opportunities can proceed immediately and a comprehensive teal harvest strategy can be developed. The evaluation plan must be reviewed and supported by the Service's Division of Migratory Bird Management, and the strategy vetted by the Harvest Management Working Group and approved by the Service.

Bonus birds of other species will only be considered after a rigorous assessment of the harvest potential of the species, adequate evaluations of the effects of the additional harvest associated with the bonus bag limit on the status of the species, and integration of the regulations into the applicable duck harvest management strategy(ies) in place at the time. Flyway(s) proposing such changes would be responsible for providing the resources for all necessary work.

We prepared an environmental assessment (EA) on the new teal hunting opportunities. Specifics of the five alternatives we analyzed and a copy of the EA can be found on our Web site at <http://www.fws.gov/migratorybirds>, or at <http://www.regulations.gov>.

4. Canada Geese

B. Regular Seasons

Council Recommendations: The Atlantic Flyway Council recommended that regulations for the North Atlantic Population of Canada geese (NAP) be liberalized per the NAP Canada Goose Management Plan and Hunt Strategy. The "liberal" season option would consist of a 70-day season with a 3-bird

daily bag limit and a framework between October 1 and February 15 for the high- and low-harvest NAP areas. The Council also recommended that the size of the closed area surrounding Santee National Wildlife Refuge and lands in close proximity to the refuge be reduced beginning with the 2014–15 hunting season. The area removed from the closed area would be managed as an Atlantic Flyway Resident Population harvest area with an 80-day season and 5-bird daily bag limit.

The Pacific Flyway Council recommended several changes to dark goose season frameworks:

1. Simplify goose frameworks in the Pacific Flyway by combining interior and coastal States frameworks into single frameworks for Canada geese and brant, white-fronted geese, and light geese. This would include:

a. Increasing the season length for Canada geese in California, Oregon, and Washington from 100 to 107 days; and

b. Changing the framework opening date for geese in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24.

2. In California, increase the bag limit for Canada geese from 4 to 10 per day, and in those zones where exceptions exist, increase the Canada goose bag limit from 6 to 10 per day.

3. In Oregon, increase the bag limit for Canada geese in the South Coast Zone on hunt days on or before the last Sunday in January from 4 to 6 per day.

4. In Oregon, remove bag limit restrictions for cackling and Aleutian geese in the Northwest and Northwest Special Permit Zones of not more than 3 per day within the overall Canada goose daily bag limit.

5. In Washington, remove the bag limit restriction for cackling geese in Area 2A and 2B (Southwest Washington Permit Zone) of not more than 3 per day within the overall Canada goose daily bag limit.

6. In Oregon and Washington, increase dusky Canada goose quotas from 90 to 165 geese in the Northwest Special Permit Zone of Oregon, and from 45 to 85 geese in Area 2A and 2B of Washington (Southwest Washington Permit Zone).

7. In Utah, Nevada, and Arizona, increase the daily bag limit from 3 to 4 Canada geese and brant, singly or in the aggregate.

8. In Utah, modify the Northern Utah Zone to include the Locomotive State Wildlife Area and adjacent areas which were previously in the Remainder of State Zone.

9. In Utah, modify the descriptions of the Wasatch Front Zone and the

Remainder of State Zone so that the Wasatch Front Zone is described by roads instead of county boundaries.

Service Response: We agree with the Atlantic Flyway Council's recommendation concerning liberalization of the frameworks for NAP geese. The 3-year NAP breeding population mean (65,344) is above the 2001–05 level of 59,994 needed for liberalization. Further, the NAP breeding population has been slowly increasing for the past 5 years and NAP harvest in the United States is buffered to a large extent by the Atlantic Flyway Resident Population (AFRP). We also support the Council's recommendation to reduce the closed area in South Carolina. The proposed reduction in the size of the closed area should continue to provide adequate protection for migrant Canada goose stocks associated with this area. Further, opening up some new areas to goose hunting will provide additional harvest opportunity to control abundant AFRP Canada geese.

We support the Pacific Flyway Council's recommendations to increase the basic season length in California, Oregon, and Washington from 100 to 107 days, and to change the framework opening date in California, Oregon, and Washington. These recommendations are intended to simplify frameworks by establishing consistency in season lengths and opening dates for Canada goose, light goose, and white-fronted goose seasons throughout the Pacific Flyway south of Alaska. We do not expect the increased season length to significantly increase harvest as many areas in these States already have exceptions for a 107-day season length, or have combinations of youth hunting days, September seasons, and regular seasons which total 107 days.

We also support the Pacific Flyway Council's recommendation to increase the daily bag limit in California from 4 or 6, depending on the zone, to 10 per day. Aleutian, cackling, and western Canada geese represent the primary Canada goose populations inhabiting California, and are currently over population objectives identified in Flyway management plans. The current 3-year (2012–2014) average estimated number of Aleutian Canada geese is 145,780, well above the population objective of 60,000 geese. The current 3-year (2012–2014) average population estimate for cackling Canada geese is 265,281, and exceeds the population objective of 250,000 geese. Also, the 3-year (2012–2014) average population estimate for the Pacific population of western Canada geese is 249,890, and is nearly double the objective of 126,650 geese. However, the Flyway

management plan indicates that the western Canada goose population segment (flock) objective for the California reference area is between 1,000 and 1,250 nesting pairs. The traditional survey area in the northeast portion of the California reference area indicates only 588 nesting pairs, but a broader survey over the California reference area indicates a current 3-year average breeding population estimate of 47,128 geese. We note that California has maintained more restrictive regulations in their Northeast Zone to protect the breeding population of western Canada geese there. While we support the recommendation, we also believe the Flyway management plan for the Pacific population of western Canada geese should be revised by 2016 to update the population objective if necessary and clarify the metric used to index the status of this population and prescribe harvest management regulations.

With regard to the Pacific Flyway Council's recommendation to increase the daily bag limit in Oregon's South Coast Zone on hunt days on or before the last Sunday in January from 4 to 6 per day, we concur. We note that Oregon's South Coast Zone daily bag limit is already 6 Canada geese after the last Sunday in January. Increased bag limits in Oregon's South Coast Zone are intended to increase harvest rates of Aleutian Canada geese, which exceed the Flyway population objective by more than two times.

We also support the Pacific Flyway Council's recommendations to remove the daily bag limit restrictions specific to cackling and Aleutian Canada geese in Oregon's Northwest and Northwest Special Permit Zones of not more than 3 per day, and to remove the daily bag limit restriction specific to cackling Canada geese in Washington's Area 2A and 2B (Southwest Permit Zone) of not more than 3 per day within the basic daily bag limit of 4 Canada geese per day in these areas. As previously noted, the Aleutian Canada goose population is currently more than 2 times over the Flyway population objective, and the cackling Canada goose population also exceeds the Flyway population objective. The bag limit increases are intended to increase harvest rates of cackling Canada geese and address agricultural damage issues in Oregon and Washington. However, we note that long-term solutions to agricultural depredation issues will not be completely addressed through harvest regulations. Thus, we encourage the States in the Pacific Flyway to continue to work toward implementing other approaches for reducing agricultural

depredation as detailed in the Flyway's Canada goose depredation plan.

We also support the Pacific Flyway Council's recommendation to increase the dusky Canada goose quotas from 90 to 165 in Oregon's Northwest Special Permit Zone, and 45 to 85 in Washington's Area 2A and 2B (Southwest Permit Zone). The Flyway's dusky Canada goose management plan specifies that Oregon's and Washington's harvest quotas will increase from 90 and 45 to 165 and 85, respectively, when the 3-year average population of dusky Canada geese exceeds 12,500 (Action level 1). The most current 3-year average population (2011–2014, no estimate was available in 2013) is 13,678. We do not expect change in the quotas to result in increased goose harvest. Oregon and Washington rarely exceed sub-area dusky quotas and do not exceed the current lower quotas. The status of dusky Canada geese continues to be a matter of concern and harvest restrictions have been in place to protect these geese throughout their range since the 1970's. We continue to support the harvest strategy described in the Flyway management plan for this population.

We also support the Pacific Flyway Council's recommendation to increase the daily Canada goose and brant bag limit from 3 to 4 singly or in the aggregate in Arizona, Nevada, and Utah. State restrictions have been imposed in those 3 States to help establish and build breeding population segments (flocks) identified by State reference areas in the Flyway management plan. However, the current 3-year average population estimate (2012–14) for the Rocky Mountain population of western Canada geese is 144,255, which is substantially above the Flyway population objective of 117,000 geese. The management plan for this population indicates that when the most recent 3-year average breeding population index is between 87,825 and 117,000 geese, minor harvest adjustments may be made for individual flocks and reference areas. Removal of the daily bag limit restrictions in Arizona, Nevada, and Utah will make their Canada goose bag limits the same as those in other interior Pacific Flyway States (Colorado, Idaho, and Montana), resulting in greater consistency throughout the Flyway.

Lastly, we support the Pacific Flyway Council's recommendations to modify Utah's Northern Utah Zone and to modify the descriptions of Utah's Wasatch Front Zone and the Remainder of State Zone. The proposed modifications would result in consistent regulations on other nearby wildlife

management areas in the Northern Utah Zone, and we do not expect that this change would have any impact on goose harvest. Also, some hunters have had difficulty determining the boundary for the Wasatch Front Zone because the zone was defined based on county lines, which do not necessarily follow visible landmarks. This change in boundary description is more easily identifiable based on visible landmarks and should reduce uncertainty by sportsmen when afield.

5. White-Fronted Geese

Council Recommendations: The Pacific Flyway Council recommended increasing the daily bag limit from 6 to 10 per day in the Pacific Flyway except in Alaska, and expanding the framework opening outside dates in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24.

Service Response: We support the Pacific Flyway Council's recommendations. The current 3-year average population estimate (2012–14) for Pacific white-fronted geese is 627,108, which is substantially above the Flyway population objective of 300,000 geese. Further, the population has shown an upward trend for nearly the last 30 years. As the number of Pacific white-fronted geese has increased, so have complaints of agricultural damage on wintering and staging areas. The bag limit increase should allow additional harvest of Pacific white-fronted geese while maintaining traditional Canada goose hunting opportunities. We do not expect a significant increase in Tule white-fronted goose harvest with the proposed bag limit increase as more restrictive frameworks remain in place in the Pacific Flyway to restrict harvest of Tule white-fronted geese (for example, California's Sacramento Valley Special Management Area). Population estimates for Tule white-fronted geese indicate a stable population, and the current 3-year average population estimate (2012–14) is approximately 10,000 geese. While the Special Management Area is in place to restrict the harvest of Tule geese, the absolute number of Tule geese harvested remains very low (ranging from 40–173 per year). With regard to framework dates, moving the framework opening date ahead by 1 week is intended to simplify frameworks by aligning outside dates for white-fronted goose, Canada goose, and light goose seasons to allow consistency throughout the Pacific Flyway south of Alaska.

6. Brant

Council Recommendations: The Atlantic Flyway Council recommended a 30-day season with a 2-bird daily bag limit for the 2014–15 hunting season.

Service Response: The 2014 mid-winter index (MWI) for Atlantic brant was 132,936. While the brant management plan allows for a 50-day season with a 2-bird daily bag limit when the MWI estimate falls between 125,000 and 150,000 brant, the hunt plan provides for consideration of factors other than population size in decisions about season length. The Council noted that the percentage of young in the brant fall flight in the previous 2 years was extremely low (6.5 percent and 3.7 percent) compared to the previous 10-year average of 17.6 percent, and preliminary information for 2014 suggests a third consecutive year of poor production. We concur with the Council's conservative approach.

7. Snow and Ross's (Light) Geese

Council Recommendations: The Pacific Flyway Council recommended several changes to light goose season frameworks:

1. Changing the framework opening date for light geese in California, Oregon, and Washington from the Saturday closest to October 1 to the Saturday closest to September 24;
2. Increasing the basic bag limit for light geese in California, Oregon, and Washington from 6 or 10 per day to 20 per day; and
3. Implementing a bag limit restriction for light geese in Oregon of 6 per day during all hunts occurring on or before the last Sunday in January.

Service Response: We support the Pacific Flyway Council's recommendation to expand the framework opening outside dates for light geese in California, Oregon, and Washington. Moving the framework opening date ahead by 1 week is intended to simplify frameworks by aligning outside dates for white-fronted goose, Canada goose, and light goose seasons to allow consistency throughout the Pacific Flyway south of Alaska.

We also support the Pacific Flyway Council's recommendations to increase the basic bag limit for light geese in California, Oregon, and Washington from 6 or 10 per day to 20 per day. Increasing the basic light goose bag limit in California, Oregon, and Washington will simplify frameworks by aligning bag limits for light geese to allow consistency throughout the Pacific Flyway south of Alaska. Additionally, three populations of light geese occur in

the Pacific Flyway and are above Flyway population objectives based on the most recent breeding population indices. The population estimate for the Western Arctic Population (WAP) of lesser snow geese was 451,000 in 2013, which is above the objective of 200,000 geese. Ross's geese were estimated at 766,000 in 2012, and are above the objective of 100,000 geese. The population estimate for Wrangel Island snow geese was 160,000 in 2013, which is above the objective of 120,000 geese. The Council notes that the Canadian Wildlife Service (CWS) designated the WAP lesser snow goose and Ross's geese as overabundant in 2014 based on the population's long-term population growth, evidence of localized habitat degradation on the breeding grounds, low harvest rate, and high adult survival rate. Further, management prescriptions recommended in the WAP lesser snow goose and Ross's goose management plans are meant to keep the populations within objective levels and prevent habitat degradation problems. The increase in daily bag limit is intended to slow the growth rate of WAP lesser snow geese and Ross's geese.

Increasing bag limits on light geese has the potential for additional impacts to Wrangel Island snow geese. Wrangel Island snow geese winter primarily in British Columbia-Washington (60 percent) and California (40 percent), but some winter in Oregon. California is the winter terminus for all three populations of light geese. The number of light geese estimated to winter in California is approximately 1,000,000. Only about 5 percent of the wintering population is composed of Wrangel Island snow geese. We agree with the Council that the large portion of WAP lesser snow geese and Ross's geese wintering in California serve as a buffer to the small portion of Wrangel Island snow geese wintering in California. Further, restrictive frameworks remain in place in Washington and Oregon to restrict harvest of Wrangel Island snow geese including a 4-bird daily bag limit for light geese in Washington's and Oregon's Northwest Permit zones. Also the Pacific Flyway Council recommended retaining the current daily bag limit of 6 light geese in Oregon on or before the last Sunday in January when light geese in the State are likely to be Wrangel Island snow geese.

With regard to implementing a bag limit restriction for light geese in Oregon of 6 per day on or before the last Sunday in January, we concur. Current evidence suggests most light geese in Oregon during fall and early winter are primarily Wrangel Island snow geese, but an influx of WAP lesser snow and

Ross's geese occurs during late winter as birds begin to move north toward breeding areas. A bag limit for light geese in Oregon of 6 per day on or before the last Sunday in January is similar to the 6-bird bag limit currently allowed for light geese in Oregon, and should retain protective measures for Wrangel Island snow geese at a time of the year when they make up the majority of light geese inhabiting Oregon.

Public Comments

The Department of the Interior's policy is, whenever possible, to afford the public an opportunity to participate in the rulemaking process. Accordingly, we invite interested persons to submit written comments, suggestions, or recommendations regarding the proposed regulations. Before promulgating final migratory game bird hunting regulations, we will consider all comments we receive. These comments, and any additional information we receive, may lead to final regulations that differ from these proposals.

You may submit your comments and materials concerning this proposed rule by one of the methods listed in the **ADDRESSES** section. We will not accept comments sent by email or fax. We will not consider hand-delivered comments that we do not receive, or mailed comments that are not postmarked, by the date specified in the **DATES** section. We will post all comments in their entirety—including your personal identifying information—on <http://www.regulations.gov>. Before including your address, phone number, email address, or other personal identifying information in your comment, you should be aware that your entire comment—including your personal identifying information—may be made publicly available at any time. While you can ask us in your comment to withhold your personal identifying information from public review, we cannot guarantee that we will be able to do so.

Comments and materials we receive, as well as supporting documentation we used in preparing this proposed rule, will be available for public inspection on <http://www.regulations.gov>, or by appointment, during normal business hours, at the U.S. Fish and Wildlife Service, Division of Migratory Bird Management, 5275 Leesburg Pike, Falls Church, Virginia. For each series of proposed rulemakings, we will establish specific comment periods.

We will consider, but possibly may not respond in detail to, each comment. As in the past, we will summarize all comments we receive during the

comment period and respond to them after the closing date in the preambles of any final rules.

Paperwork Reduction Act

This final rule does not contain any new information collection that requires approval under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 *et seq.*). We may not conduct or sponsor and you are not required to respond to a collection of information unless it displays a currently valid Office of Management and Budget (OMB) control number. OMB has reviewed and approved the information collection requirements associated with migratory bird surveys and assigned the following OMB control numbers:

- 1018-0010—Mourning Dove Call Count Survey (discontinued 7/29/2014).
- 1018-0019—North American Woodcock Singing Ground Survey (expires 4/30/2015).
- 1018-0023—Migratory Bird Surveys (expires 6/30/2017). Includes Migratory Bird Harvest Information Program, Migratory Bird Hunter Surveys, Sandhill Crane Survey, and Parts Collection Survey.

Other Required Determinations

Based on our most current data, we are affirming our required determinations made in the April 30, June 4, and July 31 proposed rules; for descriptions of our actions to ensure compliance with the following statutes and Executive Orders, see our April 30, 2014, proposed rule (79 FR 24512):

- National Environmental Policy Act (NEPA) Consideration;
- Endangered Species Act Consideration;
- Regulatory Flexibility Act;
- Small Business Regulatory Enforcement Fairness Act;
- Unfunded Mandates Reform Act;
- Executive Orders 12630, 12866, 12988, 13132, 13175, and 13211.

List of Subjects in 50 CFR Part 20

Exports, Hunting, Imports, Reporting and recordkeeping requirements, Transportation, Wildlife.

The rules that eventually will be promulgated for the 2014–15 hunting season are authorized under 16 U.S.C. 703–712 and 16 U.S.C. 742 a–j.

Dated: August 14, 2014.

Michael J. Bean,

Principal Deputy Assistant Secretary for Fish and Wildlife and Parks.

Proposed Regulations Frameworks for 2014–15 Late Hunting Seasons on Certain Migratory Game Birds

Pursuant to the Migratory Bird Treaty Act and delegated authorities, the

Department of the Interior approved the following proposals for season lengths, shooting hours, bag and possession limits, and outside dates within which States may select seasons for hunting waterfowl and coots between the dates of September 1, 2014, and March 10, 2015. These frameworks are summarized below.

General

Dates: All outside dates noted below are inclusive.

Shooting and Hawking (taking by falconry) Hours: Unless otherwise specified, from one-half hour before sunrise to sunset daily.

Possession Limits: Unless otherwise specified, possession limits are three times the daily bag limit.

Permits: For some species of migratory birds, the Service authorizes the use of permits to regulate harvest or monitor their take by sport hunters, or both. In many cases (e.g., tundra swans, some sandhill crane populations), the Service determines the amount of harvest that may be taken during hunting seasons during its formal regulations-setting process, and the States then issue permits to hunters at levels predicted to result in the amount of take authorized by the Service. Thus, although issued by States, the permits would not be valid unless the Service approved such take in its regulations.

These Federally authorized, State-issued permits are issued to individuals, and only the individual whose name and address appears on the permit at the time of issuance is authorized to take migratory birds at levels specified in the permit, in accordance with provisions of both Federal and State regulations governing the hunting season. The permit must be carried by the permittee when exercising its provisions and must be presented to any law enforcement officer upon request. The permit is not transferrable or assignable to another individual, and may not be sold, bartered, traded, or otherwise provided to another person. If the permit is altered or defaced in any way, the permit becomes invalid.

Flyways and Management Units

Waterfowl Flyways

Atlantic Flyway—includes Connecticut, Delaware, Florida, Georgia, Maine, Maryland, Massachusetts, New Hampshire, New Jersey, New York, North Carolina, Pennsylvania, Rhode Island, South Carolina, Vermont, Virginia, and West Virginia.

Mississippi Flyway—includes Alabama, Arkansas, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan,

Minnesota, Mississippi, Missouri, Ohio, Tennessee, and Wisconsin.

Central Flyway—includes Colorado (east of the Continental Divide), Kansas, Montana (Counties of Blaine, Carbon, Fergus, Judith Basin, Stillwater, Sweetgrass, Wheatland, and all counties east thereof), Nebraska, New Mexico (east of the Continental Divide except the Jicarilla Apache Indian Reservation), North Dakota, Oklahoma, South Dakota, Texas, and Wyoming (east of the Continental Divide).

Pacific Flyway—includes Alaska, Arizona, California, Idaho, Nevada, Oregon, Utah, Washington, and those portions of Colorado, Montana, New Mexico, and Wyoming not included in the Central Flyway.

Management Units

High Plains Mallard Management Unit—roughly defined as that portion of the Central Flyway that lies west of the 100th meridian.

Definitions

For the purpose of hunting regulations listed below, the collective terms “dark” and “light” geese include the following species:

Dark geese: Canada geese, white-fronted geese, brant (except in California, Oregon, Washington, and the Atlantic Flyway), and all other goose species except light geese.

Light geese: Snow (including blue) geese and Ross's geese.

Area, Zone, and Unit Descriptions: Geographic descriptions related to late-season regulations are contained in a later portion of this document.

Area-Specific Provisions: Frameworks for open seasons, season lengths, bag and possession limits, and other special provisions are listed below by Flyway.

Waterfowl Seasons in the Atlantic Flyway

In the Atlantic Flyway States of Connecticut, Delaware, Maine, Maryland, Massachusetts, New Jersey, North Carolina, and Pennsylvania, where Sunday hunting is prohibited statewide by State law, all Sundays are closed to all take of migratory waterfowl (including mergansers and coots).

Special Youth Waterfowl Hunting Days

Outside Dates: States may select 2 days per duck-hunting zone, designated as “Youth Waterfowl Hunting Days,” in addition to their regular duck seasons. The days must be held outside any regular duck season on a weekend, holidays, or other non-school days when youth hunters would have the maximum opportunity to participate. The days may be held up to 14 days

before or after any regular duck-season frameworks or within any split of a regular duck season, or within any other open season on migratory birds.

Daily Bag Limits: The daily bag limits may include ducks, geese, tundra swans, mergansers, coots, moorhens, and gallinules and would be the same as those allowed in the regular season. Flyway species and area restrictions would remain in effect.

Shooting Hours: One-half hour before sunrise to sunset.

Participation Restrictions: Youth hunters must be 15 years of age or younger. In addition, an adult at least 18 years of age must accompany the youth hunter into the field. This adult may not duck hunt but may participate in other seasons that are open on the special youth day. Tundra swans may only be taken by participants possessing applicable tundra swan permits.

Atlantic Flyway

Ducks, Mergansers, and Coots

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Hunting Seasons and Duck Limits: 60 days. The daily bag limit is 6 ducks, including no more than 4 mallards (no more than 2 of which can be females), 1 black duck, 2 pintails, 1 mottled duck, 1 fulvous whistling duck, 3 wood ducks, 2 redheads, 2 scaup, 1 canvasback, and 4 scoters.

Closures: The season on harlequin ducks is closed.

Sea Ducks: Within the special sea duck areas, during the regular duck season in the Atlantic Flyway, States may choose to allow the above sea duck limits in addition to the limits applying to other ducks during the regular duck season. In all other areas, sea ducks may be taken only during the regular open season for ducks and are part of the regular duck season daily bag (not to exceed 4 scoters) and possession limits.

Merganser Limits: The daily bag limit of mergansers is 5, only 2 of which may be hooded mergansers. In States that include mergansers in the duck bag limit, the daily limit is the same as the duck bag limit, only two of which may be hooded mergansers.

Coot Limits: The daily bag limit is 15 coots.

Lake Champlain Zone, New York: The waterfowl seasons, limits, and shooting hours should be the same as those selected for the Lake Champlain Zone of Vermont.

Connecticut River Zone, Vermont: The waterfowl seasons, limits, and shooting hours should be the same as

those selected for the Inland Zone of New Hampshire.

Zoning and Split Seasons: Delaware, Florida, Georgia, Maryland, North Carolina, Rhode Island, South Carolina, Virginia, and West Virginia may split their seasons into three segments; Connecticut, Maine, Massachusetts, New Hampshire, New Jersey, New York, Pennsylvania, and Vermont may select hunting seasons by zones and may split their seasons into two segments in each zone.

Canada Geese

Season Lengths, Outside Dates, and Limits: Specific regulations for Canada geese are shown below by State. These seasons also include white-fronted geese. Unless specified otherwise, seasons may be split into two segments. In areas within States where the framework closing date for Atlantic Population (AP) goose seasons overlaps with special late-season frameworks for resident geese, the framework closing date for AP goose seasons is January 14.

Connecticut

North Atlantic Population (NAP) Zone: Between October 1 and February 15, a 70-day season may be held with a 3-bird daily bag limit.

Atlantic Population (AP) Zone: A 50-day season may be held between October 10 and February 5, with a 3-bird daily bag limit.

South Zone: A special season may be held between January 15 and February 15, with a 5-bird daily bag limit.

Resident Population (RP) Zone: An 80-day season may be held between October 1 and February 15, with a 5-bird daily bag limit. The season may be split into 3 segments.

Delaware: A 50-day season may be held between November 15 and February 5, with a 2-bird daily bag limit.

Florida: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Georgia: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Maine: A 70-day season may be held Statewide between October 1 and February 15, with a 3-bird daily bag limit.

Maryland:

RP Zone: An 80-day season may be held between November 15 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

AP Zone: A 50-day season may be held between November 15 and February 5, with a 2-bird daily bag limit.

Massachusetts:

NAP Zone: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit. Additionally, a special season may be held from January 15 to February 15, with a 5-bird daily bag limit.

AP Zone: A 50-day season may be held between October 10 and February 5, with a 3-bird daily bag limit.

New Hampshire: A 70-day season may be held Statewide between October 1 and February 15, with a 3-bird daily bag limit.

New Jersey

Statewide: A 50-day season may be held between the fourth Saturday in October (October 25) and February 5, with a 3-bird daily bag limit.

Special Late Goose Season Area: A special season may be held in designated areas of North and South New Jersey from January 15 to February 15, with a 5-bird daily bag limit.

New York

NAP Zone: Between October 1 and February 15, a 70-day season may be held, with a 3-bird daily bag limit in both the High Harvest and Low Harvest areas.

Special Late Goose Season Area: A special season may be held between January 15 and February 15, with a 5-bird daily bag limit in designated areas of Suffolk County.

AP Zone: A 50-day season may be held between the fourth Saturday in October (October 25), except in the Lake Champlain Area where the opening date is October 10, and February 5, with a 3-bird daily bag limit.

Western Long Island RP Zone: A 107-day season may be held between the Saturday nearest September 24 (September 27) and March 10, with an 8-bird daily bag limit. The season may be split into 3 segments.

Rest of State RP Zone: An 80-day season may be held between the fourth Saturday in October (October 25) and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

North Carolina

SJBP Zone: A 70-day season may be held between October 1 and December 31, with a 5-bird daily bag limit.

RP Zone: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Northeast Hunt Unit: A 14-day season may be held between the Saturday prior to December 25 (December 20) and January 31, with a 1-bird daily bag limit.

Pennsylvania

SJBP Zone: A 78-day season may be held between the first Saturday in October (October 4) and February 15, with a 3-bird daily bag limit.

RP Zone: An 80-day season may be held between the fourth Saturday in October (October 25) and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

AP Zone: A 50-day season may be held between the fourth Saturday in October (October 25) and February 5, with a 3-bird daily bag limit.

Rhode Island: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit. A special late season may be held in designated areas from January 15 to February 15, with a 5-bird daily bag limit.

South Carolina: In designated areas, an 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

Vermont

Lake Champlain Zone and Interior Zone: A 50-day season may be held between October 10 and February 5 with a 3-bird daily bag limit.

Connecticut River Zone: A 70-day season may be held between October 1 and February 15, with a 3-bird daily bag limit.

Virginia

SJBP Zone: A 40-day season may be held between November 15 and January 14, with a 3-bird daily bag limit.

Additionally, a special late season may be held between January 15 and February 15, with a 5-bird daily bag limit.

AP Zone: A 50-day season may be held between November 15 and February 5, with a 2-bird daily bag limit.

RP Zone: An 80-day season may be held between November 15 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments.

West Virginia: An 80-day season may be held between October 1 and March 10, with a 5-bird daily bag limit. The season may be split into 3 segments in each zone.

Light Geese

Season Lengths, Outside Dates, and Limits: States may select a 107-day season between October 1 and March 10, with a 25-bird daily bag limit and no possession limit. States may split their seasons into three segments.

Brant

Season Lengths, Outside Dates, and Limits: States may select a 30-day

season between the Saturday nearest September 24 (September 27) and January 31, with a 2-bird daily bag limit. States may split their seasons into two segments.

Mississippi Flyway

Ducks, Mergansers, and Coots

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Hunting Seasons and Duck Limits: The season may not exceed 60 days, with a daily bag limit of 6 ducks, including no more than 4 mallards (no more than 2 of which may be females), 1 mottled duck, 1 black duck, 2 pintails, 3 wood ducks, 1 canvasback, 3 scaup, and 2 redheads. In addition to the daily limits listed above, the States of Iowa, Michigan, Minnesota, and Wisconsin may include an additional 2 blue-winged teal in the daily bag limit in lieu of selecting an experimental September teal season during the first 16 days of the regular duck season in each respective duck hunting zone.

Merganser Limits: The daily bag limit is 5, only 2 of which may be hooded mergansers. In States that include mergansers in the duck bag limit, the daily limit is the same as the duck bag limit, only 2 of which may be hooded mergansers.

Coot Limits: The daily bag limit is 15 coots.

Zoning and Split Seasons: Alabama, Illinois, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, Missouri, Ohio, Tennessee, and Wisconsin may select hunting seasons by zones.

In Alabama, Indiana, Iowa, Kentucky, Louisiana, Michigan, Minnesota, Missouri, Ohio, Tennessee, and Wisconsin, the season may be split into two segments in each zone.

In Arkansas and Mississippi, the season may be split into three segments.

Geese

Split Seasons: Seasons for geese may be split into three segments.

Season Lengths, Outside Dates, and Limits: States may select seasons for light geese not to exceed 107 days, with 20 geese daily between the Saturday nearest September 24 (September 27) and March 10; for white-fronted geese not to exceed 74 days with 2 geese daily or 88 days with 1 goose daily between the Saturday nearest September 24 (September 27) and the Sunday nearest February 15 (February 15); and for brant not to exceed 70 days, with 2 brant daily or 107 days with 1 brant daily between the Saturday nearest September 24

(September 27) and January 31. There is no possession limit for light geese. States may select seasons for Canada geese not to exceed 92 days with 2 geese daily or 78 days with 3 geese daily between the Saturday nearest September 24 (September 27) and January 31 with the following exceptions listed by State:

Arkansas: The season may extend to February 15.

Indiana

Late Canada Goose Season Area: A special Canada goose season of up to 15 days may be held during February 1–15 in the Late Canada Goose Season Zone. During this special season, the daily bag limit cannot exceed 5 Canada geese.

Iowa: The season for Canada geese may extend for 107 days. The daily bag limit is 3 Canada geese.

Michigan

The framework opening date for all geese is September 11 in the Upper Peninsula of Michigan and September 16 in the Lower Peninsula of Michigan.

Southern Michigan Late Canada Goose Season Zone: A 30-day special Canada goose season may be held between December 31 and February 15. The daily bag limit is 5 Canada geese.

Minnesota: The season for Canada geese may extend for 107 days. The daily bag limit is 3 Canada geese.

Missouri: The season for Canada geese may extend for 85 days. The daily bag limit is 3 Canada geese.

Tennessee: Northwest Zone—The season for Canada geese may extend to February 15.

Wisconsin

Horicon Zone—The framework opening date for all geese is September 16.

Exterior Zone—The framework opening date for all geese is September 16.

Additional Limits: In addition to the harvest limits stated for the respective zones above, an additional 4,500 Canada geese may be taken in the Horicon Zone under special agricultural permits.

Central Flyway

Ducks, Mergansers, and Coots

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Hunting Seasons: High Plains Mallard Management Unit (roughly defined as that portion of the Central Flyway which lies west of the 100th meridian): 97 days. The last 23 days must run consecutively and may start no earlier than the Saturday nearest December 10 (December 13).

Remainder of the Central Flyway: 74 days.

Bag Limits: The daily bag limit is 6 ducks, with species and sex restrictions as follows: 5 mallards (no more than 2 of which may be females), 3 scaup, 2 redheads, 3 wood ducks, 2 pintails, and 1 canvasback. In Texas, the daily bag limit on mottled ducks is 1, except that no mottled ducks may be taken during the first 5 days of the season. In addition to the daily limits listed above, the States of Montana, North Dakota, South Dakota, and Wyoming, in lieu of selecting an experimental September teal season, may include an additional daily bag and possession limit of 2 and 6 blue-winged teal, respectively, during the first 16 days of the regular duck season in each respective duck hunting zone. These extra limits are in addition to the regular duck bag and possession limits.

Merganser Limits: The daily bag limit is 5 mergansers, only 2 of which may be hooded mergansers. In States that include mergansers in the duck daily bag limit, the daily limit may be the same as the duck bag limit, only two of which may be hooded mergansers.

Coot Limits: The daily bag limit is 15 coots.

Zoning and Split Seasons: Colorado, Kansas (Low Plains portion), Montana, Nebraska, New Mexico, Oklahoma (Low Plains portion), South Dakota (Low Plains portion), Texas (Low Plains portion), and Wyoming may select hunting seasons by zones.

In Colorado, Kansas, Montana, New Mexico, North Dakota, Oklahoma, South Dakota, Texas, and Wyoming, the regular season may be split into two segments.

Geese

Split Seasons: Seasons for geese may be split into three segments. Three-way split seasons for Canada geese require Central Flyway Council and U.S. Fish and Wildlife Service approval, and a 3-year evaluation by each participating State.

Outside Dates: For dark geese, seasons may be selected between the outside dates of the Saturday nearest September 24 (September 27) and the Sunday nearest February 15 (February 15). For light geese, outside dates for seasons may be selected between the Saturday nearest September 24 (September 27) and March 10. In the Rainwater Basin Light Goose Area (East and West) of Nebraska, temporal and spatial restrictions that are consistent with the late-winter snow goose hunting strategy cooperatively developed by the Central Flyway Council and the Service are required.

Season Lengths and Limits

Light Geese: States may select a light goose season not to exceed 107 days. The daily bag limit for light geese is 50 with no possession limit.

Dark Geese: In Kansas, Nebraska, North Dakota, Oklahoma, South Dakota, and the Eastern Goose Zone of Texas, States may select a season for Canada geese (or any other dark goose species except white-fronted geese) not to exceed 107 days with a daily bag limit of 8. For white-fronted geese, these States may select either a season of 74 days with a bag limit of 2 or an 88-day season with a bag limit of 1.

In Colorado, Montana, New Mexico, and Wyoming, States may select seasons not to exceed 107 days. The daily bag limit for dark geese is 5 in the aggregate.

In the Western Goose Zone of Texas, the season may not exceed 95 days. The daily bag limit for Canada geese (or any other dark goose species except white-fronted geese) is 5. The daily bag limit for white-fronted geese is 1.

Pacific Flyway

Ducks, Mergansers, Coots, Common Moorhens, and Purple Gallinules

Outside Dates: Between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Hunting Seasons and Duck and Merganser Limits: Concurrent 107 days. The daily bag limit is 7 ducks and mergansers, including no more than 2 female mallards, 2 pintails, 1 canvasback, 3 scaup, and 2 redheads. For scaup, the season length is 86 days, which may be split according to applicable zones/split duck hunting configurations approved for each State.

The season on coots, common moorhens, and purple gallinules may be between the outside dates for the season on ducks, but not to exceed 107 days.

Coot, Common Moorhen, and Purple Gallinule Limits: The daily bag limit of coots, common moorhens, and purple gallinules are 25, singly or in the aggregate.

Zoning and Split Seasons: Arizona, California, Idaho, Nevada, Oregon, Utah, Washington, and Wyoming may select hunting seasons by zones. Arizona, California, Idaho, Nevada, Oregon, Utah, Washington, and Wyoming may split their seasons into two segments.

Colorado, Montana, and New Mexico may split their seasons into three segments.

Colorado River Zone, California: Seasons and limits should be the same as seasons and limits selected in the adjacent portion of Arizona (South Zone).

Geese

Season Lengths, Outside Dates, and Limits:

Canada geese and brant: Except as subsequently noted, 107-day seasons may be selected with outside dates between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25). In Arizona, Colorado, Idaho, Montana, Nevada, and Utah, the daily bag limit is 4 Canada geese and brant in the aggregate. In California, Oregon, and Washington, the daily bag limit is 4 Canada geese. For brant, Oregon and Washington may select a 16-day season and California a 30-day season. Days must be consecutive. Washington and California may select hunting seasons for up to two zones. The daily bag limit is 2 brant and is in addition to other goose limits. In Oregon and California, the brant season must end no later than December 15.

White-fronted geese: Except as subsequently noted, 107-day seasons may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 10.

Light geese: Except as subsequently noted, 107-day seasons may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The basic daily bag limit is 20.

Split Seasons: Unless otherwise specified, seasons for geese may be split into up to 3 segments. Three-way split seasons for Canada geese and white-fronted geese require Pacific Flyway Council and U.S. Fish and Wildlife Service approval and a 3-year evaluation by each participating State.

California: The daily bag limit for Canada geese is 10.

Balance-of-State Zone: A Canada goose season may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. In the Sacramento Valley Special Management Area, the season on white-fronted geese must end on or before December 28, and the daily bag limit is 3 white-fronted geese. In the North Coast Special Management Area, hunting days that occur after the last Sunday in January should be concurrent with Oregon's South Coast Zone.

Idaho

Zone 2: Idaho will continue to monitor the snow goose hunt that occurs after the last Sunday in January in the American Falls Reservoir/Fort Hall Bottoms and surrounding areas at 3-year intervals.

New Mexico: The daily bag limit for Canada geese and brant is 3 in the aggregate.

Oregon: The daily bag limit for light geese is 6 on or before the last Sunday in January.

Harney and Lake County Zone: For Lake County only, the daily white-fronted goose bag limit is 1.

Northwest Zone: For geese, outside dates are between the Saturday nearest September 24 (September 27) and March 10. The season may be split into 3 segments.

Northwest Special Permit Zone: For geese, outside dates are between the Saturday nearest September 24 (September 27) and March 10. The season may be split into 3 segments. The daily bag limit of light geese is 4.

South Coast Zone: A Canada goose season may be selected with outside dates between the Saturday nearest September 24 (September 27) and March 10. The daily bag limit is 6. Hunting days that occur after the last Sunday in January should be concurrent with California's North Coast Special Management Area. The season may be split into 3 segments.

Utah: A Canada goose and brant season may be selected in the Wasatch Front and Washington County Zones with outside dates between the Saturday nearest September 24 (September 27) and the first Sunday in February (February 1).

Washington: The daily bag limit is 4 geese.

Area 1: Outside dates are between the Saturday nearest September 24 (September 27) and the last Sunday in January (January 25).

Areas 2A and 2B (Southwest Permit Zone): Regular goose seasons may be split into 3 segments. A special late goose season may be held between the Saturday following the close of the general goose season and March 10. In the Southwest Permit Zone Area 2B (Pacific County), the daily bag limit may include 1 Aleutian goose.

Area 4: The season may be split into 3 segments.

Wyoming: The daily bag limit for Canada geese and brant is 3 in the aggregate.

Permit Zones

In Oregon and Washington permit zones, goose seasons must end upon attainment of individual quotas of dusky Canada geese allotted to the designated areas of Oregon (165) and Washington (85). The September Canada goose season, regular goose season, any special late Canada goose season, and any extended falconry season, combined, must not exceed 107

days, and the established quota of dusky Canada geese must not be exceeded. Hunting of geese in those designated areas will be only by hunters possessing a State-issued permit authorizing them to do so. In a Service-approved investigation, the State must obtain quantitative information on hunter compliance with those regulations aimed at reducing the take of dusky geese. If the monitoring program cannot be conducted, for any reason, the season must immediately close.

Swans

In portions of the Pacific Flyway (Montana, Nevada, and Utah), an open season for taking a limited number of swans may be selected. Permits will be issued by the State and will authorize each permittee to take no more than 1 swan per season with each permit. Nevada may issue up to 2 permits per hunter. Montana and Utah may only issue 1 permit per hunter. Each State's season may open no earlier than the Saturday nearest October 1 (October 4). These seasons are also subject to the following conditions:

Montana: No more than 500 permits may be issued. The season must end no later than December 1. The State must implement a harvest-monitoring program to measure the species composition of the swan harvest and should use appropriate measures to maximize hunter compliance in reporting bill measurement and color information.

Utah: No more than 2,000 permits may be issued. During the swan season, no more than 10 trumpeter swans may be taken. The season must end no later than the second Sunday in December (December 14) or upon attainment of 10 trumpeter swans in the harvest, whichever occurs earliest. The Utah season remains subject to the terms of the Memorandum of Agreement entered into with the Service in August 2001, regarding harvest monitoring, season closure procedures, and education requirements to minimize the take of trumpeter swans during the swan season.

Nevada: No more than 650 permits may be issued. During the swan season, no more than 5 trumpeter swans may be taken. The season must end no later than the Sunday following January 1 (January 4) or upon attainment of 5 trumpeter swans in the harvest, whichever occurs earliest.

In addition, the States of Utah and Nevada must implement a harvest-monitoring program to measure the species composition of the swan harvest. The harvest-monitoring program must require that all harvested

swans or their species-determinant parts be examined by either State or Federal biologists for the purpose of species classification. The States should use appropriate measures to maximize hunter compliance in providing bagged swans for examination. Further, the States of Montana, Nevada, and Utah must achieve at least an 80-percent compliance rate, or subsequent permits will be reduced by 10 percent. All three States must provide to the Service by June 30, 2015, a report detailing harvest, hunter participation, reporting compliance, and monitoring of swan populations in the designated hunt areas.

Tundra Swans

In portions of the Atlantic Flyway (North Carolina and Virginia) and the Central Flyway (North Dakota, South Dakota [east of the Missouri River], and that portion of Montana in the Central Flyway), an open season for taking a limited number of tundra swans may be selected. Permits will be issued by the States that authorize the take of no more than 1 tundra swan per permit. A second permit may be issued to hunters from unused permits remaining after the first drawing. The States must obtain harvest and hunter participation data. These seasons are also subject to the following conditions:

In the Atlantic Flyway

- The season may be 90 days, between October 1 and January 31.
- In North Carolina, no more than 5,000 permits may be issued.
- In Virginia, no more than 600 permits may be issued.

In the Central Flyway

- The season may be 107 days, between the Saturday nearest October 1 (October 4) and January 31.
- In the Central Flyway portion of Montana, no more than 500 permits may be issued.
- In North Dakota, no more than 2,200 permits may be issued.
- In South Dakota, no more than 1,300 permits may be issued.

Area, Unit, and Zone Descriptions

Ducks (Including Mergansers) and Coots

Atlantic Flyway

Connecticut

North Zone: That portion of the State north of I-95.

South Zone: Remainder of the State.

Maine

North Zone: That portion north of the line extending east along Maine State Highway 110 from the New

Hampshire-Maine State line to the intersection of Maine State Highway 11 in Newfield; then north and east along Route 11 to the intersection of U.S. Route 202 in Auburn; then north and east on Route 202 to the intersection of I-95 in Augusta; then north and east along I-95 to Route 15 in Bangor; then east along Route 15 to Route 9; then east along Route 9 to Stony Brook in Baileyville; then east along Stony Brook to the United States border.

Coastal Zone: That portion south of a line extending east from the Maine-New Brunswick border in Calais at the Route 1 Bridge; then south along Route 1 to the Maine-New Hampshire border in Kittery.

South Zone: Remainder of the State.

Massachusetts

Western Zone: That portion of the State west of a line extending south from the Vermont State line on I-91 to MA 9, west on MA 9 to MA 10, south on MA 10 to U.S. 202, south on U.S. 202 to the Connecticut State line.

Central Zone: That portion of the State east of the Berkshire Zone and west of a line extending south from the New Hampshire State line on I-95 to U.S. 1, south on U.S. 1 to I-93, south on I-93 to MA 3, south on MA 3 to U.S. 6, west on U.S. 6 to MA 28, west on MA 28 to I-195, west to the Rhode Island State line; except the waters, and the lands 150 yards inland from the high-water mark, of the Assonet River upstream to the MA 24 bridge, and the Taunton River upstream to the Center St.-Elm St. bridge shall be in the Coastal Zone.

Coastal Zone: That portion of Massachusetts east and south of the Central Zone.

New Hampshire

Northern Zone: That portion of the State east and north of the Inland Zone beginning at the Jct. of Rte. 10 and Rte. 25A in Orford, east on Rte. 25A to Rte. 25 in Wentworth, southeast on Rte. 25 to Exit 26 of Rte. I-93 in Plymouth, south on Rte. I-93 to Rte. 3 at Exit 24 of Rte. I-93 in Ashland, northeast on Rte. 3 to Rte. 113 in Holderness, north on Rte. 113 to Rte. 113-A in Sandwich, north on Rte. 113-A to Rte. 113 in Tamworth, east on Rte. 113 to Rte. 16 in Chocorua, north on Rte. 16 to Rte. 302 in Conway, east on Rte. 302 to the Maine-New Hampshire border.

Inland Zone: That portion of the State south and west of the Northern Zone, west of the Coastal Zone, and includes the area of Vermont and New Hampshire as described for hunting reciprocity. A person holding a New

Hampshire hunting license which allows the taking of migratory waterfowl or a person holding a Vermont resident hunting license which allows the taking of migratory waterfowl may take migratory waterfowl and coots from the following designated area of the Inland Zone: the State of Vermont east of Rte. I-91 at the Massachusetts border, north on Rte. I-91 to Rte. 2, north on Rte. 2 to Rte. 102, north on Rte. 102 to Rte. 253, and north on Rte. 253 to the border with Canada and the area of NH west of Rte. 63 at the MA border, north on Rte. 63 to Rte. 12, north on Rte. 12 to Rte. 12-A, north on Rte. 12A to Rte 10, north on Rte. 10 to Rte. 135, north on Rte. 135 to Rte. 3, north on Rte. 3 to the intersection with the Connecticut River.

Coastal Zone: That portion of the State east of a line beginning at the Maine-New Hampshire border in Rollinsford, then extending to Rte. 4 west to the city of Dover, south to the intersection of Rte. 108, south along Rte. 108 through Madbury, Durham, and Newmarket to the junction of Rte. 85 in Newfields, south to Rte. 101 in Exeter, east to Interstate 95 (New Hampshire Turnpike) in Hampton, and south to the Massachusetts border.

New Jersey

Coastal Zone: That portion of the State seaward of a line beginning at the New York State line in Raritan Bay and extending west along the New York State line to NJ 440 at Perth Amboy; west on NJ 440 to the Garden State Parkway; south on the Garden State Parkway to the shoreline at Cape May and continuing to the Delaware State line in Delaware Bay.

North Zone: That portion of the State west of the Coastal Zone and north of a line extending west from the Garden State Parkway on NJ 70 to the New Jersey Turnpike, north on the turnpike to U.S. 206, north on U.S. 206 to U.S. 1 at Trenton, west on U.S. 1 to the Pennsylvania State line in the Delaware River.

South Zone: That portion of the State not within the North Zone or the Coastal Zone.

New York

Lake Champlain Zone: That area east and north of a continuous line extending along U.S. 11 from the New York-Canada International boundary south to NY 9B, south along NY 9B to U.S. 9, south along U.S. 9 to NY 22 south of Keesville; south along NY 22 to the west shore of South Bay, along and around the shoreline of South Bay to NY 22 on the east shore of South Bay; southeast along NY 22 to U.S. 4,

northeast along U.S. 4 to the Vermont State line.

Long Island Zone: That area consisting of Nassau County, Suffolk County, that area of Westchester County southeast of I-95, and their tidal waters.

Western Zone: That area west of a line extending from Lake Ontario east along the north shore of the Salmon River to I-81, and south along I-81 to the Pennsylvania State line.

Northeastern Zone: That area north of a continuous line extending from Lake Ontario east along the north shore of the Salmon River to I-81, south along I-81 to NY 31, east along NY 31 to NY 13, north along NY 13 to NY 49, east along NY 49 to NY 365, east along NY 365 to NY 28, east along NY 28 to NY 29, east along NY 29 to NY 22, north along NY 22 to Washington County Route 153, east along CR 153 to the New York-Vermont boundary, exclusive of the Lake Champlain Zone.

Southeastern Zone: The remaining portion of New York.

Pennsylvania

Lake Erie Zone: The Lake Erie waters of Pennsylvania and a shoreline margin along Lake Erie from New York on the east to Ohio on the west extending 150 yards inland, but including all of Presque Isle Peninsula.

Northwest Zone: The area bounded on the north by the Lake Erie Zone and including all of Erie and Crawford Counties and those portions of Mercer and Venango Counties north of I-80.

North Zone: That portion of the State east of the Northwest Zone and north of a line extending east on I-80 to U.S. 220, Route 220 to I-180, I-180 to I-80, and I-80 to the Delaware River.

South Zone: The remaining portion of Pennsylvania.

Vermont

Lake Champlain Zone: The U.S. portion of Lake Champlain and that area north and west of the line extending from the New York border along U.S. 4 to VT 22A at Fair Haven; VT 22A to U.S. 7 at Vergennes; U.S. 7 to VT 78 at Swanton; VT 78 to VT 36; VT 36 to Maquam Bay on Lake Champlain; along and around the shoreline of Maquam Bay and Hog Island to VT 78 at the West Swanton Bridge; VT 78 to VT 2 in Alburg; VT 2 to the Richelieu River in Alburg; along the east shore of the Richelieu River to the Canadian border.

Interior Zone: That portion of Vermont east of the Lake Champlain Zone and west of a line extending from the Massachusetts border at Interstate 91; north along Interstate 91 to US 2; east along US 2 to VT 102; north along

VT 102 to VT 253; north along VT 253 to the Canadian border.

Connecticut River Zone: The remaining portion of Vermont east of the Interior Zone.

Mississippi Flyway

Alabama

South Zone: Mobile and Baldwin Counties.

North Zone: The remainder of Alabama.

Illinois

North Zone: That portion of the State north of a line extending west from the Indiana border along Peotone-Beecher Road to Illinois Route 50, south along Illinois Route 50 to Wilmington-Peotone Road, west along Wilmington-Peotone Road to Illinois Route 53, north along Illinois Route 53 to New River Road, northwest along New River Road to Interstate Highway 55, south along I-55 to Pine Bluff-Lorenzo Road, west along Pine Bluff-Lorenzo Road to Illinois Route 47, north along Illinois Route 47 to I-80, west along I-80 to I-39, south along I-39 to Illinois Route 18, west along Illinois Route 18 to Illinois Route 29, south along Illinois Route 29 to Illinois Route 17, west along Illinois Route 17 to the Mississippi River, and due south across the Mississippi River to the Iowa border.

Central Zone: That portion of the State south of the North Duck Zone line to a line extending west from the Indiana border along I-70 to Illinois Route 4, south along Illinois Route 4 to Illinois Route 161, west along Illinois Route 161 to Illinois Route 158, south and west along Illinois Route 158 to Illinois Route 159, south along Illinois Route 159 to Illinois Route 3, south along Illinois Route 3 to St. Leo's Road, south along St. Leo's Road to Modoc Road, west along Modoc Road to Modoc Ferry Road, southwest along Modoc Ferry Road to Levee Road, southeast along Levee Road to County Route 12 (Modoc Ferry entrance Road), south along County Route 12 to the Modoc Ferry route and southwest on the Modoc Ferry route across the Mississippi River to the Missouri border.

South Zone: That portion of the State south and east of a line extending west from the Indiana border along Interstate 70, south along U.S. Highway 45, to Illinois Route 13, west along Illinois Route 13 to Greenbriar Road, north on Greenbriar Road to Sycamore Road, west on Sycamore Road to N. Reed Station Road, south on N. Reed Station Road to Illinois Route 13, west along Illinois Route 13 to Illinois Route 127, south along Illinois Route 127 to State

Forest Road (1025 N), west along State Forest Road to Illinois Route 3, north along Illinois Route 3 to the south bank of the Big Muddy River, west along the south bank of the Big Muddy River to the Mississippi River, west across the Mississippi River to the Missouri border.

South Central Zone: The remainder of the State between the south border of the Central Zone and the North border of the South Zone.

Indiana

North Zone—That part of Indiana north of a line extending east from the Illinois border along State Road 18 to U.S. 31; north along U.S. 31 to U.S. 24; east along U.S. 24 to Huntington; southeast along U.S. 224; south along State Road 5; and east along State Road 124 to the Ohio border.

Central Zone—That part of Indiana south of the North Zone boundary and north of the South Zone boundary.

South Zone—That part of Indiana south of a line extending east from the Illinois border along U.S. 40; south along U.S. 41; east along State Road 58; south along State Road 37 to Bedford; and east along U.S. 50 to the Ohio border.

Iowa

North Zone—That portion of Iowa north of a line beginning on the South Dakota-Iowa border at Interstate 29, southeast along Interstate 29 to State Highway 175, east along State Highway 175 to State Highway 37, southeast along State Highway 37 to State Highway 183, northeast along State Highway 183 to State Highway 141, east along State Highway 141 to U.S. Highway 30, and along U.S. Highway 30 to the Illinois border.

Missouri River Zone—That portion of Iowa west of a line beginning on the South Dakota-Iowa border at Interstate 29, southeast along Interstate 29 to State Highway 175, and west along State Highway 175 to the Iowa-Nebraska border.

South Zone—The remainder of Iowa.

Kentucky

West Zone: All counties west of and including Butler, Daviess, Ohio, Simpson, and Warren Counties.

East Zone: The remainder of Kentucky.

Louisiana

West: That portion of the State west and north of a line beginning at the Arkansas-Louisiana border on LA 3; south on LA 3 to Bossier City; then east along I-20 to Minden; then south along LA 7 to Ringgold; then east along LA 4

to Jonesboro; then south along U.S. Hwy 167 to its junction with LA 106; west on LA 106 to Oakdale; then south on U.S. Hwy 165 to junction with U.S. Hwy 190 at Kinder; then west on U.S. Hwy 190/LA 12 to the Texas State border.

East: That portion of the State east and north of a line beginning at the Arkansas-Louisiana border on LA 3; south on LA 3 to Bossier City; then east along I-20 to Minden; then south along LA 7 to Ringgold; then east along LA 4 to Jonesboro; then south along U.S. Hwy 167 to Lafayette; then southeast along U.S. Hwy 90 to the Mississippi State line.

Coastal: Remainder of the State.

Michigan

North Zone: The Upper Peninsula.

Middle Zone: That portion of the Lower Peninsula north of a line beginning at the Wisconsin State line in Lake Michigan due west of the mouth of Stony Creek in Oceana County; then due east to, and easterly and southerly along the south shore of Stony Creek to Scenic Drive, easterly and southerly along Scenic Drive to Stony Lake Road, easterly along Stony Lake and Garfield Roads to Michigan Highway 20, east along Michigan 20 to U.S. Highway 10 Business Route (BR) in the city of Midland, easterly along U.S. 10 BR to U.S. 10, easterly along U.S. 10 to Interstate Highway 75/U.S. Highway 23, northerly along I-75/U.S. 23 to the U.S. 23 exit at Standish, easterly along U.S. 23 to the centerline of the Au Gres River, then southerly along the centerline of the Au Gres River to Saginaw Bay, then on a line directly east 10 miles into Saginaw Bay, and from that point on a line directly northeast to the Canadian border.

South Zone: The remainder of Michigan.

Minnesota

North Duck Zone: That portion of the State north of a line extending east from the North Dakota State line along State Highway 210 to State Highway 23 and east to State Highway 39 and east to the Wisconsin State line at the Oliver Bridge.

South Duck Zone: The portion of the State south of a line extending east from the South Dakota State line along U.S. Highway 212 to Interstate 494 and east to Interstate 94 and east to the Wisconsin State line.

Central Duck Zone: The remainder of the State.

Missouri

North Zone: That portion of Missouri north of a line running west from the Illinois border at Lock and Dam 25; west

on Lincoln County Hwy. N to Mo. Hwy. 79; south on Mo. Hwy. 79 to Mo. Hwy. 47; west on Mo. Hwy. 47 to I-70; west on I-70 to the Kansas border.

Middle Zone: The remainder of Missouri not included in other zones.

South Zone: That portion of Missouri south of a line running west from the Illinois border on Mo. Hwy. 74 to Mo. Hwy. 25; south on Mo. Hwy. 25 to U.S. Hwy. 62; west on U.S. Hwy. 62 to Mo. Hwy. 53; north on Mo. Hwy. 53 to Mo. Hwy. 51; north on Mo. Hwy. 51 to U.S. Hwy. 60; west on U.S. Hwy. 60 to Mo. Hwy. 21; north on Mo. Hwy. 21 to Mo. Hwy. 72; west on Mo. Hwy. 72 to Mo. Hwy. 32; west on Mo. Hwy. 32 to U.S. Hwy. 65; north on U.S. Hwy. 65 to U.S. Hwy. 54; west on U.S. Hwy. 54 to U.S. Hwy. 71; south on U.S. Hwy. 71 to Jasper County Hwy. M (Base Line Blvd.); west on Jasper County Hwy. M (Base Line Blvd.) to CRD 40 (Base Line Blvd.); west on CRD 40 (Base Line Blvd.) to the Kansas border.

Ohio

Lake Erie Marsh Zone: Includes all land and water within the boundaries of the area bordered by Interstate 75 from the Ohio-Michigan line to Interstate 280 to Interstate 80 to the Erie-Lorain County line extending to a line measuring two hundred (200) yards from the shoreline into the waters of Lake Erie and including the waters of Sandusky Bay and Maumee Bay.

North Zone: That portion of the State north of a line beginning at the Ohio-Indiana border and extending east along Interstate 70 to the Ohio-West Virginia border.

South Zone: The remainder of Ohio.

Tennessee

Reelfoot Zone: All or portions of Lake and Obion Counties.

State Zone: The remainder of Tennessee.

Wisconsin

North Zone: That portion of the State north of a line extending east from the Minnesota State line along U.S. Highway 10 into Portage County to County Highway HH, east on County Highway HH to State Highway 66 and then east on State Highway 66 to U.S. Highway 10, continuing east on U.S. Highway 10 to U.S. Highway 41, then north on U.S. Highway 41 to the Michigan State line.

Mississippi River Zone: That area encompassed by a line beginning at the intersection of the Burlington Northern & Santa Fe Railway and the Illinois State line in Grant County and extending northerly along the Burlington Northern & Santa Fe Railway

to the city limit of Prescott in Pierce County, then west along the Prescott city limit to the Minnesota State line.

South Zone: The remainder of Wisconsin.

Central Flyway

Colorado (Central Flyway Portion)

Northeast Zone: All areas east of Interstate 25 and north of Interstate 70.

Southeast Zone: All areas east of Interstate 25 and south of Interstate 70, and all of El Paso, Pueblo, Huerfano, and Las Animas Counties.

Mountain/Foothills Zone: All areas west of Interstate 25 and east of the Continental Divide, except El Paso, Pueblo, Huerfano, and Las Animas Counties.

Kansas

High Plains Zone: That portion of the State west of U.S. 283.

Early Zone: That part of Kansas bounded by a line from the Nebraska-Kansas State line south on K-128 to its junction with U.S.-36, then east on U.S.-36 to its junction with K-199, then south on K-199 to its junction with Republic County 30 Rd, then south on Republic County 30 Rd to its junction with K-148, then east on K-148 to its junction with Republic County 50 Rd, then south on Republic County 50 Rd to its junction with Cloud County 40th Rd, then south on Cloud County 40th Rd to its junction with K-9, then west on K-9 to its junction with U.S.-24, then west on U.S.-24 to its junction with U.S.-281, then north on U.S.-281 to its junction with U.S.-36, then west on U.S.-36 to its junction with U.S.-183, then south on U.S.-183 to its junction with U.S.-24, then west on U.S.-24 to its junction with K-18, then southeast on K-18 to its junction with U.S.-183, then south on U.S.-183 to its junction with K-4, then east on K-4 to its junction with I-135, then south on I-135 to its junction with K-61, then southwest on K-61 to McPherson County 14th Avenue, then south on McPherson County 14th Avenue to its junction with Arapaho Rd, then west on Arapaho Rd to its junction with K-61, then southwest on K-61 to its junction with K-96, then northwest on K-96 to its junction with U.S.-56, then southwest on U.S.-56 to its junction with K-19, then east on K-19 to its junction with U.S.-281, then south on U.S.-281 to its junction with U.S.-54, then west on U.S.-54 to its junction with U.S.-183, then north on U.S.-183 to its junction with U.S.-56, then southwest on U.S.-56 to its junction with Ford County Rd 126, then south on Ford County Rd 126 to its junction with

U.S.-400, then northwest on U.S.-400 to its junction with U.S.-283, then north on U.S.-283 to its junction with the Nebraska-Kansas State line, then east along the Nebraska-Kansas State line to its junction with K-128.

Late Zone: That part of Kansas bounded by a line from the Nebraska-Kansas State line south on K-128 to its junction with U.S.-36, then east on U.S.-36 to its junction with K-199, then south on K-199 to its junction with Republic County 30 Rd, then south on Republic County 30 Rd to its junction with K-148, then east on K-148 to its junction with Republic County 50 Rd, then south on Republic County 50 Rd to its junction with Cloud County 40th Rd, then south on Cloud County 40th Rd to its junction with K-9, then west on K-9 to its junction with U.S.-24, then west on U.S.-24 to its junction with U.S.-281, then north on U.S.-281 to its junction with U.S.-36, then west on U.S.-36 to its junction with U.S.-183, then south on U.S.-183 to its junction with U.S.-24, then west on U.S.-24 to its junction with K-18, then southeast on K-18 to its junction with U.S.-183, then south on U.S.-183 to its junction with K-4, then east on K-4 to its junction with I-135, then south on I-135 to its junction with K-61, then southwest on K-61 to 14th Avenue, then south on 14th Avenue to its junction with Arapaho Rd, then west on Arapaho Rd to its junction with K-61, then southwest on K-61 to its junction with K-96, then northwest on K-96 to its junction with U.S.-56, then southwest on U.S.-56 to its junction with K-19, then east on K-19 to its junction with U.S.-281, then south on U.S.-281 to its junction with U.S.-54, then west on U.S.-54 to its junction with U.S.-183, then north on U.S.-183 to its junction with U.S.-56, then southwest on U.S.-56 to its junction with Ford County Rd 126, then south on Ford County Rd 126 to its junction with U.S.-400, then northwest on U.S.-400 to its junction with U.S.-283, then south on U.S.-283 to its junction with the Oklahoma-Kansas State line, then east along the Oklahoma-Kansas State line to its junction with U.S.-77, then north on U.S.-77 to its junction with Butler County, NE 150th Street, then east on Butler County, NE 150th Street to its junction with U.S.-35, then northeast on U.S.-35 to its junction with K-68, then east on K-68 to the Kansas-Missouri State line, then north along the Kansas-Missouri State line to its junction with the Nebraska State line, then west along the Kansas-Nebraska State line to its junction with K-128.

Southeast Zone: That part of Kansas bounded by a line from the Missouri-

Kansas State line west on K-68 to its junction with U.S.-35, then southwest on U.S.-35 to its junction with Butler County, NE 150th Street, then west on NE 150th Street until its junction with K-77, then south on K-77 to the Oklahoma-Kansas State line, then east along the Kansas-Oklahoma State line to its junction with the Missouri State line, then north along the Kansas-Missouri State line to its junction with K-68.

Montana (Central Flyway Portion)

Zone 1: The Counties of Blaine, Carbon, Carter, Daniels, Dawson, Fallon, Fergus, Garfield, Golden Valley, Judith Basin, McCone, Musselshell, Petroleum, Phillips, Powder River, Richland, Roosevelt, Sheridan, Stillwater, Sweet Grass, Valley, Wheatland, Wibaux, and Yellowstone.

Zone 2: The remainder of Montana.

Nebraska

High Plains—That portion of Nebraska lying west of a line beginning at the South Dakota-Nebraska border on U.S. Hwy. 183; south on U.S. Hwy. 183 to U.S. Hwy. 20; west on U.S. Hwy. 20 to NE Hwy. 7; south on NE Hwy. 7 to NE Hwy. 91; southwest on NE Hwy. 91 to NE Hwy. 2; southeast on NE Hwy. 2 to NE Hwy. 92; west on NE Hwy. 92 to NE Hwy. 40; south on NE Hwy. 40 to NE Hwy. 47; south on NE Hwy. 47 to NE Hwy. 23; east on NE Hwy. 23 to U.S. Hwy. 283; and south on U.S. Hwy. 283 to the Kansas-Nebraska border.

Zone 1—Area bounded by designated Federal and State highways and political boundaries beginning at the South Dakota-Nebraska border west of NE Hwy. 26E Spur and north of NE Hwy. 12; those portions of Dixon, Cedar and Knox Counties north of NE Hwy. 12; that portion of Keya Paha County east of U.S. Hwy. 183; and all of Boyd County. Both banks of the Niobrara River in Keya Paha and Boyd counties east of U.S. Hwy. 183 shall be included in Zone 1.

Zone 2—The area south of Zone 1 and north of Zone 3.

Zone 3—Area bounded by designated Federal and State highways, County Roads, and political boundaries beginning at the Wyoming-Nebraska border at the intersection of the Interstate Canal; east along northern borders of Scotts Bluff and Morrill Counties to Broadwater Road; south to Morrill County Rd 94; east to County Rd 135; south to County Rd 88; southeast to County Rd 151; south to County Rd 80; east to County Rd 161; south to County Rd 76; east to County Rd 165; south to County Rd 167; south to U.S. Hwy. 26; east to County Rd 171; north to County Rd 68; east to County Rd 183;

south to County Rd 64; east to County Rd 189; north to County Rd 70; east to County Rd 201; south to County Rd 60A; east to County Rd 203; south to County Rd 52; east to Keith County Line; east along the northern boundaries of Keith and Lincoln Counties to NE Hwy. 97; south to U.S. Hwy 83; south to E Hall School Rd; east to N Airport Road; south to U.S. Hwy. 30; east to Merrick County Rd 13; north to County Rd O; east to NE Hwy. 14; north to NE Hwy. 52; west and north to NE Hwy. 91; west to U.S. Hwy. 281; south to NE Hwy. 22; west to NE Hwy. 11; northwest to NE Hwy. 91; west to U.S. Hwy. 183; south to Round Valley Rd; west to Sargent River Rd; west to Sargent Rd; west to Milburn Rd; north to Blaine County Line; east to Loup County Line; north to NE Hwy. 91; west to North Loup Spur Rd; north to North Loup River Rd; east to Pleasant Valley/Worth Rd; east to Loup County Line; north to Loup-Brown county line; east along northern boundaries of Loup and Garfield Counties to Cedar River Road; south to NE Hwy. 70; east to U.S. Hwy. 281; north to NE Hwy. 70; east to NE Hwy. 14; south to NE Hwy. 39; southeast to NE Hwy. 22; east to U.S. Hwy. 81; southeast to U.S. Hwy. 30; east to U.S. Hwy. 75; north to the Washington County line; east to the Iowa-Nebraska border; south to the Missouri-Nebraska border; south to Kansas-Nebraska border; west along Kansas-Nebraska border to Colorado-Nebraska border; north and west to Wyoming-Nebraska border; north to intersection of Interstate Canal; and excluding that area in Zone 4.

Zone 4—Area encompassed by designated Federal and State highways and County Roads beginning at the intersection of NE Hwy. 8 and U.S. Hwy. 75; north to U.S. Hwy. 136; east to the intersection of U.S. Hwy. 136 and the Steamboat Trace (Trace); north along the Trace to the intersection with Federal Levee R-562; north along Federal Levee R-562 to the intersection with the Trace; north along the Trace/Burlington Northern Railroad right-of-way to NE Hwy. 2; west to U.S. Hwy. 75; north to NE Hwy. 2; west to NE Hwy. 43; north to U.S. Hwy. 34; east to NE Hwy. 63; north to NE Hwy. 66; north and west to U.S. Hwy. 77; north to NE Hwy. 92; west to NE Hwy. Spur 12F; south to Butler County Rd 30; east to County Rd X; south to County Rd 27; west to County Rd W; south to County Rd 26; east to County Rd X; south to County Rd 21 (Seward County Line); west to NE Hwy. 15; north to County Rd 34; west to County Rd J; south to NE Hwy. 92; west to U.S. Hwy. 81; south to

NE Hwy. 66; west to Polk County Rd C; north to NE Hwy. 92; west to U.S. Hwy. 30; west to Merrick County Rd 17; south to Hordlake Road; southeast to Prairie Island Road; southeast to Hamilton County Rd T; south to NE Hwy. 66; west to NE Hwy. 14; south to County Rd 22; west to County Rd M; south to County Rd 21; west to County Rd K; south to U.S. Hwy. 34; west to NE Hwy. 2; south to U.S. Hwy. I-80; west to Gunbarrel Rd (Hall/Hamilton county line); south to Giltner Rd; west to U.S. Hwy. 281; south to U.S. Hwy. 34; west to NE Hwy. 10; north to Kearney County Rd R and Phelps County Rd 742; west to U.S. Hwy. 283; south to U.S. Hwy 34; east to U.S. Hwy. 136; east to U.S. Hwy. 183; north to NE Hwy. 4; east to NE Hwy. 10; south to U.S. Hwy. 136; east to NE Hwy. 14; south to NE Hwy. 8; east to U.S. Hwy. 81; north to NE Hwy. 4; east to NE Hwy. 15; south to U.S. Hwy. 136; east to NE Hwy. 103; south to NE Hwy. 8; east to U.S. Hwy. 75.

New Mexico (Central Flyway Portion)

North Zone: That portion of the State north of I-40 and U.S. 54.

South Zone: The remainder of New Mexico.

North Dakota

High Plains Unit: That portion of the State south and west of a line from the South Dakota State line along U.S. 83 and I-94 to ND 41, north to U.S. 2, west to the Williams/Divide County line, then north along the County line to the Canadian border.

Low Plains Unit: The remainder of North Dakota.

Oklahoma

High Plains Zone: The Counties of Beaver, Cimarron, and Texas.

Low Plains Zone 1: That portion of the State east of the High Plains Zone and north of a line extending east from the Texas State line along OK 33 to OK 47, east along OK 47 to U.S. 183, south along U.S. 183 to I-40, east along I-40 to U.S. 177, north along U.S. 177 to OK 33, east along OK 33 to OK 18, north along OK 18 to OK 51, west along OK 51 to I-35, north along I-35 to U.S. 412, west along U.S. 412 to OK 132, then north along OK 132 to the Kansas State line.

Low Plains Zone 2: The remainder of Oklahoma.

South Dakota

High Plains Zone: That portion of the State west of a line beginning at the North Dakota State line and extending south along U.S. 83 to U.S. 14, east on U.S. 14 to Blunt, south on the Blunt-Canning Rd to SD 34, east and south on

SD 34 to SD 50 at Lee's Corner, south on SD 50 to I-90, east on I-90 to SD 50, south on SD 50 to SD 44, west on SD 44 across the Platte-Winner bridge to SD 47, south on SD 47 to U.S. 18, east on U.S. 18 to SD 47, south on SD 47 to the Nebraska State line.

North Zone: That portion of northeastern South Dakota east of the High Plains Unit and north of a line extending east along U.S. 212 to the Minnesota State line.

South Zone: That portion of Gregory County east of SD 47 and south of SD 44; Charles Mix County south of SD 44 to the Douglas County line; south on SD 50 to Geddes; east on the Geddes Highway to U.S. 281; south on U.S. 281 and U.S. 18 to SD 50; south and east on SD 50 to the Bon Homme County line; the Counties of Bon Homme, Yankton, and Clay south of SD 50; and Union County south and west of SD 50 and I-29.

Middle Zone: The remainder of South Dakota.

Texas

High Plains Zone: That portion of the State west of a line extending south from the Oklahoma State line along U.S. 183 to Vernon, south along U.S. 283 to Albany, south along TX 6 to TX 351 to Abilene, south along U.S. 277 to Del Rio, then south along the Del Rio International Toll Bridge access road to the Mexico border.

Low Plains North Zone: That portion of northeastern Texas east of the High Plains Zone and north of a line beginning at the International Toll Bridge south of Del Rio, then extending east on U.S. 90 to San Antonio, then continuing east on I-10 to the Louisiana State line at Orange, Texas.

Low Plains South Zone: The remainder of Texas.

Wyoming (Central Flyway portion)

Zone C1: Big Horn, Converse, Goshen, Hot Springs, Natrona, Park, Platte, and Washakie Counties; and Fremont County excluding the portions west or south of the Continental Divide.

Zone C2: Campbell, Crook, Johnson, Niobrara, Sheridan, and Weston Counties.

Zone C3: Albany and Laramie Counties; and that portion of Carbon County east of the Continental Divide.

Pacific Flyway

Arizona

Game Management Units (GMU) as follows:

South Zone: Those portions of GMUs 6 and 8 in Yavapai County, and GMUs 10 and 12B-45.

North Zone: GMUs 1–5, those portions of GMUs 6 and 8 within Coconino County, and GMUs 7, 9, 12A.

California

Northeastern Zone: In that portion of California lying east and north of a line beginning at the intersection of Interstate 5 with the California-Oregon line; south along Interstate 5 to its junction with Walters Lane south of the town of Yreka; west along Walters Lane to its junction with Easy Street; south along Easy Street to the junction with Old Highway 99; south along Old Highway 99 to the point of intersection with Interstate 5 north of the town of Weed; south along Interstate 5 to its junction with Highway 89; east and south along Highway 89 to Main Street Greenville; north and east to its junction with North Valley Road; south to its junction of Diamond Mountain Road; north and east to its junction with North Arm Road; south and west to the junction of North Valley Road; south to the junction with Arlington Road (A22); west to the junction of Highway 89; south and west to the junction of Highway 70; east on Highway 70 to Highway 395; south and east on Highway 395 to the point of intersection with the California-Nevada State line; north along the California-Nevada State line to the junction of the California-Nevada-Oregon State lines; west along the California-Oregon State line to the point of origin.

Colorado River Zone: Those portions of San Bernardino, Riverside, and Imperial Counties east of a line extending from the Nevada State line south along U.S. 95 to Vidal Junction; south on a road known as “Aqueduct Road” in San Bernardino County through the town of Rice to the San Bernardino-Riverside County line; south on a road known in Riverside County as the “Desert Center to Rice Road” to the town of Desert Center; east 31 miles on I–10 to the Wiley Well Road; south on this road to Wiley Well; southeast along the Army-Milpitas Road to the Blythe, Brawley, Davis Lake intersections; south on the Blythe-Brawley paved road to the Ogilby and Tumco Mine Road; south on this road to U.S. 80; east 7 miles on U.S. 80 to the Andrade-Algodones Road; south on this paved road to the Mexican border at Algodones, Mexico.

Southern Zone: That portion of southern California (but excluding the Colorado River Zone) south and east of a line extending from the Pacific Ocean east along the Santa Maria River to CA 166 near the City of Santa Maria; east on CA 166 to CA 99; south on CA 99 to the crest of the Tehachapi Mountains at Tejon Pass; east and north along the

crest of the Tehachapi Mountains to CA 178 at Walker Pass; east on CA 178 to U.S. 395 at the town of Inyokern; south on U.S. 395 to CA 58; east on CA 58 to I–15; east on I–15 to CA 127; north on CA 127 to the Nevada State line.

Southern San Joaquin Valley Temporary Zone: All of Kings and Tulare Counties and that portion of Kern County north of the Southern Zone.

Balance-of-State Zone: The remainder of California not included in the Northeastern, Southern, and Colorado River Zones, and the Southern San Joaquin Valley Temporary Zone.

Idaho

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power County east of State Highway 37 and State Highway 39.

Zone 2: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Bingham County within the Blackfoot Reservoir drainage; Caribou County, except the Fort Hall Indian Reservation; and Power County west of State Highway 37 and State Highway 39.

Zone 3: Ada, Boise, Canyon, Cassia, Elmore, Gem, Gooding, Jerome, Lincoln, Minidoka, Owyhee, Payette, Twin Falls, and Washington Counties.

Nevada

Northeast Zone: All of Elko and White Pine Counties.

Northwest Zone: All of Carson City, Churchill, Douglas, Esmeralda, Eureka, Humboldt, Lander, Lyon, Mineral, Nye, Pershing, Storey, and Washoe Counties.

South Zone: All of Clark and Lincoln County.

Oregon

Zone 1: Clatsop, Tillamook, Lincoln, Lane, Douglas, Coos, Curry, Josephine, Jackson, Linn, Benton, Polk, Marion, Yamhill, Washington, Columbia, Multnomah, Clackamas, Hood River, Wasco, Sherman, Gilliam, Morrow and Umatilla Counties.

Columbia Basin Mallard Management Unit: Gilliam, Morrow, and Umatilla Counties.

Zone 2: The remainder of the State.

Utah

Zone 1: All of Box Elder, Cache, Daggett, Davis, Duchesne, Morgan, Rich,

Salt Lake, Summit, Uintah, Utah, Wasatch, and Weber Counties, and that part of Toole County north of I–80.

Zone 2: The remainder of Utah.

Washington

East Zone: All areas east of the Pacific Crest Trail and east of the Big White Salmon River in Klickitat County.

Columbia Basin Mallard Management Unit: Same as East Zone.

West Zone: All areas to the west of the East Zone.

Wyoming

Snake River Zone: Beginning at the south boundary of Yellowstone National Park and the Continental Divide; south along the Continental Divide to Union Pass and the Union Pass Road (U.S.F.S. Road 600); west and south along the Union Pass Road to U.S.F.S. Road 605; south along U.S.F.S. Road 605 to the Bridger-Teton National Forest boundary; along the national forest boundary to the Idaho State line; north along the Idaho State line to the south boundary of Yellowstone National Park; east along the Yellowstone National Park boundary to the Continental Divide.

Balance of State Zone: Balance of the Pacific Flyway in Wyoming outside the Snake River Zone.

Geese

Atlantic Flyway

Connecticut

AP Unit: Litchfield County and the portion of Hartford County west of a line beginning at the Massachusetts border in Suffield and extending south along Route 159 to its intersection with Route 91 in Hartford, and then extending south along Route 91 to its intersection with the Hartford/Middlesex County line.

AFRP Unit: Starting at the intersection of I–95 and the Quinnipiac River, north on the Quinnipiac River to its intersection with I–91, north on I–91 to I–691, west on I–691 to the Hartford County line, and encompassing the rest of New Haven County and Fairfield County in its entirety.

NAP H-Unit: All of the rest of the State not included in the AP or AFRP descriptions above.

South Zone: Same as for ducks.

North Zone: Same as for ducks.

Maine

Same zones as for ducks.

Maryland

Resident Population (RP) Zone: Garrett, Allegany, Washington, Frederick, and Montgomery Counties; that portion of Prince George’s County

west of Route 3 and Route 301; that portion of Charles County west of Route 301 to the Virginia State line; and that portion of Carroll County west of Route 31 to the intersection of Route 97, and west of Route 97 to the Pennsylvania line.

AP Zone: Remainder of the State.

Massachusetts

NAP Zone: Central and Coastal Zones (see duck zones).

AP Zone: The Western Zone (see duck zones).

Special Late Season Area: The Central Zone and that portion of the Coastal Zone (see duck zones) that lies north of the Cape Cod Canal, north to the New Hampshire line.

New Hampshire

Same zones as for ducks.

New Jersey

North: That portion of the State within a continuous line that runs east along the New York State boundary line to the Hudson River; then south along the New York State boundary to its intersection with Route 440 at Perth Amboy; then west on Route 440 to its intersection with Route 287; then west along Route 287 to its intersection with Route 206 in Bedminster (Exit 18); then north along Route 206 to its intersection with Route 94; then west along Route 94 to the tollbridge in Columbia; then north along the Pennsylvania State boundary in the Delaware River to the beginning point.

South: That portion of the State within a continuous line that runs west from the Atlantic Ocean at Ship Bottom along Route 72 to Route 70; then west along Route 70 to Route 206; then south along Route 206 to Route 536; then west along Route 536 to Route 322; then west along Route 322 to Route 55; then south along Route 55 to Route 553 (Buck Road); then south along Route 553 to Route 40; then east along Route 40 to route 55; then south along Route 55 to Route 552 (Sherman Avenue); then west along Route 552 to Carmel Road; then south along Carmel Road to Route 49; then east along Route 49 to Route 555; then south along Route 555 to Route 553; then east along Route 553 to Route 649; then north along Route 649 to Route 670; then east along Route 670 to Route 47; then north along Route 47 to Route 548; then east along Route 548 to Route 49; then east along Route 49 to Route 50; then south along Route 50 to Route 9; then south along Route 9 to Route 625 (Sea Isle City Boulevard); then east along Route 625 to the Atlantic Ocean; then north to the beginning point.

New York

Lake Champlain Goose Area: The same as the Lake Champlain Waterfowl Hunting Zone, which is that area of New York State lying east and north of a continuous line extending along Route 11 from the New York-Canada International boundary south to Route 9B, south along Route 9B to Route 9, south along Route 9 to Route 22 south of Keeseville, south along Route 22 to the west shore of South Bay and around the shoreline of South Bay to Route 22 on the east shore of South Bay, southeast along Route 22 to Route 4, northeast along Route 4 to the New York-Vermont boundary.

Northeast Goose Area: The same as the Northeastern Waterfowl Hunting Zone, which is that area of New York State lying north of a continuous line extending from Lake Ontario east along the north shore of the Salmon River to Interstate 81, south along Interstate Route 81 to Route 31, east along Route 31 to Route 13, north along Route 13 to Route 49, east along Route 49 to Route 365, east along Route 365 to Route 28, east along Route 28 to Route 29, east along Route 29 to Route 22 at Greenwich Junction, north along Route 22 to Washington County Route 153, east along CR 153 to the New York-Vermont boundary, exclusive of the Lake Champlain Zone.

East Central Goose Area: That area of New York State lying inside of a continuous line extending from Interstate Route 81 in Cicero, east along Route 31 to Route 13, north along Route 13 to Route 49, east along Route 49 to Route 365, east along Route 365 to Route 28, east along Route 28 to Route 29, east along Route 29 to Route 147 at Kimball Corners, south along Route 147 to Schenectady County Route 40 (West Glenview Road), west along Route 40 to Touareuna Road, south along Touareuna Road to Schenectady County Route 59, south along Route 59 to State Route 5, east along Route 5 to the Lock 9 bridge, southwest along the Lock 9 bridge to Route 5S, southeast along Route 5S to Schenectady County Route 58, southwest along Route 58 to the NYS Thruway, south along the Thruway to Route 7, southwest along Route 7 to Schenectady County Route 103, south along Route 103 to Route 406, east along Route 406 to Schenectady County Route 99 (Windy Hill Road), south along Route 99 to Dunnsville Road, south along Dunnsville Road to Route 397, southwest along Route 397 to Route 146 at Altamont, west along Route 146 to Albany County Route 252, northwest along Route 252 to Schenectady County Route 131, north along Route 131 to

Route 7, west along Route 7 to Route 10 at Richmondville, south on Route 10 to Route 23 at Stamford, west along Route 23 to Route 7 in Oneonta, southwest along Route 7 to Route 79 to Interstate Route 88 near Harpursville, west along Route 88 to Interstate Route 81, north along Route 81 to the point of beginning.

West Central Goose Area: That area of New York State lying within a continuous line beginning at the point where the northerly extension of Route 269 (County Line Road on the Niagara-Orleans County boundary) meets the International boundary with Canada, south to the shore of Lake Ontario at the eastern boundary of Golden Hill State Park, south along the extension of Route 269 and Route 269 to Route 104 at Jeddo, west along Route 104 to Niagara County Route 271, south along Route 271 to Route 31E at Middleport, south along Route 31E to Route 31, west along Route 31 to Griswold Street, south along Griswold Street to Ditch Road, south along Ditch Road to Foot Road, south along Foot Road to the north bank of Tonawanda Creek, west along the north bank of Tonawanda Creek to Route 93, south along Route 93 to Route 5, east along Route 5 to Crittenden-Murrays Corners Road, south on Crittenden-Murrays Corners Road to the NYS Thruway, east along the Thruway 90 to Route 98 (at Thruway Exit 48) in Batavia, south along Route 98 to Route 20, east along Route 20 to Route 19 in Pavilion Center, south along Route 19 to Route 63, southeast along Route 63 to Route 246, south along Route 246 to Route 39 in Perry, northeast along Route 39 to Route 20A, northeast along Route 20A to Route 20, east along Route 20 to Route 364 (near Canandaigua), south and east along Route 364 to Yates County Route 18 (Italy Valley Road), southwest along Route 18 to Yates County Route 34, east along Route 34 to Yates County Route 32, south along Route 32 to Steuben County Route 122, south along Route 122 to Route 53, south along Route 53 to Steuben County Route 74, east along Route 74 to Route 54A (near Pulteney), south along Route 54A to Steuben County Route 87, east along Route 87 to Steuben County Route 96, east along Route 96 to Steuben County Route 114, east along Route 114 to Schuyler County Route 23, east and southeast along Route 23 to Schuyler County Route 28, southeast along Route 28 to Route 409 at Watkins Glen, south along Route 409 to Route 14, south along Route 14 to Route 224 at Montour Falls, east along Route 224 to Route 228 in Odessa, north along Route 228 to Route 79 in Mecklenburg, east along

Route 79 to Route 366 in Ithaca, northeast along Route 366 to Route 13, northeast along Route 13 to Interstate Route 81 in Cortland, north along Route 81 to the north shore of the Salmon River to shore of Lake Ontario, extending generally northwest in a straight line to the nearest point of the International boundary with Canada, south and west along the International boundary to the point of beginning.

Hudson Valley Goose Area: That area of New York State lying within a continuous line extending from Route 4 at the New York-Vermont boundary, west and south along Route 4 to Route 149 at Fort Ann, west on Route 149 to Route 9, south along Route 9 to Interstate Route 87 (at Exit 20 in Glens Falls), south along Route 87 to Route 29, west along Route 29 to Route 147 at Kimball Corners, south along Route 147 to Schenectady County Route 40 (West Glenville Road), west along Route 40 to Touareuna Road, south along Touareuna Road to Schenectady County Route 59, south along Route 59 to State Route 5, east along Route 5 to the Lock 9 bridge, southwest along the Lock 9 bridge to Route 5S, southeast along Route 5S to Schenectady County Route 58, southwest along Route 58 to the NYS Thruway, south along the Thruway to Route 7, southwest along Route 7 to Schenectady County Route 103, south along Route 103 to Route 406, east along Route 406 to Schenectady County Route 99 (Windy Hill Road), south along Route 99 to Dunnsville Road, south along Dunnsville Road to Route 397, southwest along Route 397 to Route 146 at Altamont, southeast along Route 146 to Main Street in Altamont, west along Main Street to Route 156, southeast along Route 156 to Albany County Route 307, southeast along Route 307 to Route 85A, southwest along Route 85A to Route 85, south along Route 85 to Route 443, southeast along Route 443 to Albany County Route 301 at Clarksville, southeast along Route 301 to Route 32, south along Route 32 to Route 23 at Cairo, west along Route 23 to Joseph Chadderdon Road, southeast along Joseph Chadderdon Road to Hearts Content Road (Greene County Route 31), southeast along Route 31 to Route 32, south along Route 32 to Greene County Route 23A, east along Route 23A to Interstate Route 87 (the NYS Thruway), south along Route 87 to Route 28 (Exit 19) near Kingston, northwest on Route 28 to Route 209, southwest on Route 209 to the New York-Pennsylvania boundary, southeast along the New York-Pennsylvania boundary to the New York-New Jersey boundary, southeast along the New York-New Jersey

boundary to Route 210 near Greenwood Lake, northeast along Route 210 to Orange County Route 5, northeast along Orange County Route 5 to Route 105 in the Village of Monroe, east and north along Route 105 to Route 32, northeast along Route 32 to Orange County Route 107 (Quaker Avenue), east along Route 107 to Route 9W, north along Route 9W to the south bank of Moodna Creek, southeast along the south bank of Moodna Creek to the New Windsor-Cornwall town boundary, northeast along the New Windsor-Cornwall town boundary to the Orange-Dutchess County boundary (middle of the Hudson River), north along the county boundary to Interstate Route 84, east along Route 84 to the Dutchess-Putnam County boundary, east along the county boundary to the New York-Connecticut boundary, north along the New York-Connecticut boundary to the New York-Massachusetts boundary, north along the New York-Massachusetts boundary to the New York-Vermont boundary, north to the point of beginning.

Eastern Long Island Goose Area (NAP High Harvest Area): That area of Suffolk County lying east of a continuous line extending due south from the New York-Connecticut boundary to the northernmost end of Roanoke Avenue in the Town of Riverhead; then south on Roanoke Avenue (which becomes County Route 73) to State Route 25; then west on Route 25 to Peconic Avenue; then south on Peconic Avenue to County Route (CR) 104 (Riverleigh Avenue); then south on CR 104 to CR 31 (Old Riverhead Road); then south on CR 31 to Oak Street; then south on Oak Street to Potunk Lane; then west on Stevens Lane; then south on Jessup Avenue (in Westhampton Beach) to Dune Road (CR 89); then due south to international waters.

Western Long Island Goose Area (RP Area): That area of Westchester County and its tidal waters southeast of Interstate Route 95 and that area of Nassau and Suffolk Counties lying west of a continuous line extending due south from the New York-Connecticut boundary to the northernmost end of the Sunken Meadow State Parkway; then south on the Sunken Meadow Parkway to the Sagtikos State Parkway; then south on the Sagtikos Parkway to the Robert Moses State Parkway; then south on the Robert Moses Parkway to its southernmost end; then due south to international waters.

Central Long Island Goose Area (NAP Low Harvest Area): That area of Suffolk County lying between the Western and Eastern Long Island Goose Areas, as defined above.

South Goose Area: The remainder of New York State, excluding New York City.

Special Late Canada Goose Area: That area of the Central Long Island Goose Area lying north of State Route 25A and west of a continuous line extending northward from State Route 25A along Randall Road (near Shoreham) to North Country Road, then east to Sound Road and then north to Long Island Sound and then due north to the New York-Connecticut boundary.

North Carolina

SJBP Hunt Zone: Includes the following Counties or portions of Counties: Anson, Cabarrus, Chatham, Davidson, Durham, Halifax (that portion east of NC 903), Montgomery (that portion west of NC 109), Northampton, Richmond (that portion south of NC 73 and west of U.S. 220 and north of U.S. 74), Rowan, Stanly, Union, and Wake.

RP Hunt Zone: Includes the following Counties or portions of Counties: Alamance, Alleghany, Alexander, Ashe, Avery, Beaufort, Bertie (that portion south and west of a line formed by NC 45 at the Washington Co. line to U.S. 17 in Midway, U.S. 17 in Midway to U.S. 13 in Windsor, U.S. 13 in Windsor to the Hertford Co. line), Bladen, Brunswick, Buncombe, Burke, Caldwell, Carteret, Caswell, Catawba, Cherokee, Clay, Cleveland, Columbus, Craven, Cumberland, Davie, Duplin, Edgecombe, Forsyth, Franklin, Gaston, Gates, Graham, Granville, Greene, Guilford, Halifax (that portion west of NC 903), Harnett, Haywood, Henderson, Hertford, Hoke, Iredell, Jackson, Johnston, Jones, Lee, Lenoir, Lincoln, McDowell, Macon, Madison, Martin, Mecklenburg, Mitchell, Montgomery (that portion that is east of NC 109), Moore, Nash, New Hanover, Onslow, Orange, Pamlico, Pender, Person, Pitt, Polk, Randolph, Richmond (all of the county with exception of that portion that is south of NC 73 and west of U.S. 220 and north of U.S. 74), Robeson, Rockingham, Rutherford, Sampson, Scotland, Stokes, Surry, Swain, Transylvania, Vance, Warren, Watauga, Wayne, Wilkes, Wilson, Yadkin, and Yancey.

Northeast Hunt Unit: Includes the following Counties or portions of Counties: Bertie (that portion north and east of a line formed by NC 45 at the Washington County line to U.S. 17 in Midway, U.S. 17 in Midway to U.S. 13 in Windsor, U.S. 13 in Windsor to the Hertford Co. line), Camden, Chowan, Currituck, Dare, Hyde, Pasquotank, Perquimans, Tyrrell, and Washington.

Pennsylvania

Resident Canada Goose Zone: All of Pennsylvania except for SJPB Zone and the area east of route SR 97 from the Maryland State Line to the intersection of SR 194, east of SR 194 to intersection of U.S. Route 30, south of U.S. Route 30 to SR 441, east of SR 441 to SR 743, east of SR 743 to intersection of I-81, east of I-81 to intersection of I-80, and south of I-80 to the New Jersey State line.

SJPB Zone: The area north of I-80 and west of I-79 including in the city of Erie west of Bay Front Parkway to and including the Lake Erie Duck zone (Lake Erie, Presque Isle, and the area within 150 yards of the Lake Erie Shoreline).

AP Zone: The area east of route SR 97 from Maryland State Line to the intersection of SR 194, east of SR 194 to intersection of U.S. Route 30, south of U.S. Route 30 to SR 441, east of SR 441 to SR 743, east of SR 743 to intersection of I-81, east of I-81 to intersection of I-80, south of I-80 to New Jersey State line.

Rhode Island

Special Area for Canada Geese: Kent and Providence Counties and portions of the towns of Exeter and North Kingston within Washington County (see State regulations for detailed descriptions).

South Carolina

Canada Goose Area: Statewide except for the following area:

East of U.S. 301: That portion of Clarendon County bounded to the North by S-14-25, to the East by Hwy 260, and to the South by the markers delineating the channel of the Santee River.

West of U.S. 301: That portion of Clarendon County bounded on the North by S-14-26 extending southward to that portion of Orangeburg County bordered by Hwy 6.

Vermont

Same zones as for ducks.

Virginia

AP Zone: The area east and south of the following line—the Stafford County line from the Potomac River west to Interstate 95 at Fredericksburg, then south along Interstate 95 to Petersburg, then Route 460 (SE) to City of Suffolk, then south along Route 32 to the North Carolina line.

SJPB Zone: The area to the west of the AP Zone boundary and east of the following line: the “Blue Ridge” (mountain spine) at the West Virginia-Virginia Border (Loudoun County-Clarke County line) south to Interstate 64 (the Blue Ridge line follows county

borders along the western edge of Loudoun-Fauquier-Rappahannock-Madison-Greene-Albemarle and into Nelson Counties), then east along Interstate Rt. 64 to Route 15, then south along Rt. 15 to the North Carolina line.

RP Zone: The remainder of the State west of the SJPB Zone.

Mississippi Flyway

Alabama

Same zones as for ducks, but in addition:

SJPB Zone: That portion of Morgan County east of U.S. Highway 31, north of State Highway 36, and west of U.S. 231; that portion of Limestone County south of U.S. 72; and that portion of Madison County south of Swancott Road and west of Triana Road.

Arkansas

Northwest Zone: Baxter, Benton, Boone, Carroll, Conway, Crawford, Faulkner, Franklin, Johnson, Logan, Madison, Marion, Newton, Perry, Pope, Pulaski, Searcy, Sebastian, Scott, Van Buren, Washington, and Yell Counties.

Illinois

North Zone: That portion of the State north of a line extending west from the Indiana border along Interstate 80 to I-39, south along I-39 to Illinois Route 18, west along Illinois Route 18 to Illinois Route 29, south along Illinois Route 29 to Illinois Route 17, west along Illinois Route 17 to the Mississippi River, and due south across the Mississippi River to the Iowa border.

Central Zone: That portion of the State south of the North Goose Zone line to a line extending west from the Indiana border along I-70 to Illinois Route 4, south along Illinois Route 4 to Illinois Route 161, west along Illinois Route 161 to Illinois Route 158, south and west along Illinois Route 158 to Illinois Route 159, south along Illinois Route 159 to Illinois Route 3, south along Illinois Route 3 to St. Leo's Road, south along St. Leo's road to Modoc Road, west along Modoc Road to Modoc Ferry Road, southwest along Modoc Ferry Road to Levee Road, southeast along Levee Road to County Route 12 (Modoc Ferry entrance Road), south along County Route 12 to the Modoc Ferry route and southwest on the Modoc Ferry route across the Mississippi River to the Missouri border.

South Zone: Same zones as for ducks.

South Central Zone: Same zones as for ducks.

Indiana

Same zones as for ducks but in addition:

Special Canada Goose Seasons

Late Canada Goose Season Zone: That part of the State encompassed by the following Counties: Steuben, Lagrange, Elkhart, St. Joseph, La Porte, Starke, Marshall, Kosciusko, Noble, De Kalb, Allen, Whitley, Huntington, Wells, Adams, Boone, Hamilton, Madison, Hendricks, Marion, Hancock, Morgan, Johnson, Shelby, Vermillion, Parke, Vigo, Clay, Sullivan, and Greene.

Iowa

Same zones as for ducks.

Kentucky

Western Zone: That portion of the State west of a line beginning at the Tennessee State line at Fulton and extending north along the Purchase Parkway to Interstate Highway 24, east along I-24 to U.S. Highway 641, north along U.S. 641 to U.S. 60, northeast along U.S. 60 to the Henderson County line, then south, east, and northerly along the Henderson County line to the Indiana State line.

Pennyroyal/Coalfield Zone: Butler, Daviess, Ohio, Simpson, and Warren Counties and all counties lying west to the boundary of the Western Goose Zone.

Louisiana

Same zones as for ducks.

Michigan

North Zone—Same as North duck zone.

Middle Zone—Same as Middle duck zone.

South Zone—Same as South duck zone.

Tuscola/Huron Goose Management Unit (GMU): Those portions of Tuscola and Huron Counties bounded on the south by Michigan Highway 138 and Bay City Road, on the east by Colwood and Bay Port Roads, on the north by Kilmanagh Road and a line extending directly west off the end of Kilmanagh Road into Saginaw Bay to the west boundary, and on the west by the Tuscola-Bay County line and a line extending directly north off the end of the Tuscola-Bay County line into Saginaw Bay to the north boundary.

Allegan County GMU: That area encompassed by a line beginning at the junction of 136th Avenue and Interstate Highway 196 in Lake Town Township and extending easterly along 136th Avenue to Michigan Highway 40, southerly along Michigan 40 through the city of Allegan to 108th Avenue in Trowbridge Township, westerly along 108th Avenue to 46th Street, northerly along 46th Street to 109th Avenue, westerly along 109th Avenue to I-196 in

Casco Township, then northerly along I-196 to the point of beginning.

Saginaw County GMU: That portion of Saginaw County bounded by Michigan Highway 46 on the north; Michigan 52 on the west; Michigan 57 on the south; and Michigan 13 on the east.

Muskegon Wastewater GMU: That portion of Muskegon County within the boundaries of the Muskegon County wastewater system, east of the Muskegon State Game Area, in sections 5, 6, 7, 8, 17, 18, 19, 20, 29, 30, and 32, T10N R14W, and sections 1, 2, 10, 11, 12, 13, 14, 24, and 25, T10N R15W, as posted.

Special Canada Goose Seasons

Southern Michigan Late Season Canada Goose Zone: Same as the South Duck Zone excluding Tuscola/Huron Goose Management Unit (GMU), Allegan County GMU, Saginaw County GMU, and Muskegon Wastewater GMU.

Minnesota

Same zones as for ducks but in addition:

Rochester Goose Zone: That part of the State within the following described boundary: Beginning at the intersection of State Trunk Highway (STH) 247 and County State Aid Highway (CSAH) 4, Wabasha County; thence along CSAH 4 to CSAH 10, Olmsted County; thence along CSAH 10 to CSAH 9, Olmsted County; thence along CSAH 9 to CSAH 22, Winona County; thence along CSAH 22 to STH 74; thence along STH 74 to STH 30; thence along STH 30 to CSAH 13, Dodge County; thence along CSAH 13 to U.S. Highway 14; thence along U.S. Highway 14 to STH 57; thence along STH 57 to CSAH 24, Dodge County; thence along CSAH 24 to CSAH 13, Olmsted County; thence along CSAH 13 to U.S. Highway 52; thence along U.S. Highway 52 to CSAH 12, Olmsted County; thence along CSAH 12 to STH 247; thence along STH 247 to the point of beginning.

Missouri

Same zones as for ducks.

Ohio

Lake Erie Goose Zone: That portion of Ohio north of a line beginning at the Michigan border and extending south along Interstate 75 to Interstate 280, south on Interstate 280 to Interstate 80, and east on Interstate 80 to the Pennsylvania border.

North Zone: That portion of Ohio north of a line beginning at the Indiana border and extending east along Interstate 70 to the West Virginia border

excluding the portion of Ohio within the Lake Erie Goose Zone.

South Zone: The remainder of Ohio.

Tennessee

Southwest Zone: That portion of the State south of State Highways 20 and 104, and west of U.S. Highways 45 and 45W.

Northwest Zone: Lake, Obion, and Weakley Counties and those portions of Gibson and Dyer Counties not included in the Southwest Tennessee Zone.

Kentucky/Barkley Lakes Zone: That portion of the State bounded on the west by the eastern boundaries of the Northwest and Southwest Zones and on the east by State Highway 13 from the Alabama State line to Clarksville and U.S. Highway 79 from Clarksville to the Kentucky State line.

Wisconsin

Same zones as for ducks but in addition:

Horicon Zone: That portion of the State encompassed by a boundary beginning at the intersection of State 23 and State 73 and moves south along State 73 until the intersection of State 73 and State 60, then moves east along State 60 until the intersection of State 60 and State 83, and then moves north along State 83 until the intersection of State 83 and State 33 at which point it moves east until the intersection of State 33 and U.S. 45, then moves north along U.S. 45 until the intersection of U.S. 45 and State 23, at which point it moves west along State 23 until the intersection of State 23 and State 73.

Exterior Zone: That portion of the State not included in the Horicon Zone.

Mississippi River Subzone: That area encompassed by a line beginning at the intersection of the Burlington Northern & Santa Fe Railway and the Illinois State line in Grant County and extending northerly along the Burlington Northern & Santa Fe Railway to the city limit of Prescott in Pierce County, then west along the Prescott city limit to the Minnesota State line.

Central Flyway

Colorado (Central Flyway Portion)

Northern Front Range Area: All areas in Boulder, Larimer and Weld Counties from the Continental Divide east along the Wyoming border to U.S. 85, south on U.S. 85 to the Adams County line, and all lands in Adams, Arapahoe, Broomfield, Clear Creek, Denver, Douglas, Gilpin, and Jefferson Counties.

North Park Area: Jackson County.

South Park and San Luis Valley Area: All of Alamosa, Chaffee, Conejos, Costilla, Custer, Fremont, Lake, Park, Rio Grande and Teller Counties, and

those portions of Saguache, Mineral and Hinsdale Counties east of the Continental Divide.

Remainder: Remainder of the Central Flyway portion of Colorado.

Eastern Colorado Late Light Goose Area: That portion of the State east of Interstate Highway 25.

Nebraska

Dark Geese

Niobrara Unit: That area contained within and bounded by the intersection of the South Dakota State line and the eastern Cherry County line, south along the Cherry County line to the Niobrara River, east to the Norden Road, south on the Norden Road to U.S. Hwy 20, east along U.S. Hwy 20 to NE Hwy 14, north along NE Hwy 14 to NE Hwy 59 and County Road 872, west along County Road 872 to the Knox County Line, north along the Knox County Line to the South Dakota State line. Where the Niobrara River forms the boundary, both banks of the river are included in the Niobrara Unit.

East Unit: That area north and east of U.S. 81 at the Kansas-Nebraska State line, north to NE Hwy 91, east to U.S. 275, south to U.S. 77, south to NE 91, east to U.S. 30, east to Nebraska-Iowa State line.

Platte River Unit: That area north and west of U.S. 81 at the Kansas-Nebraska State line, north to NE Hwy 91, west along NE 91 to NE 11, north to the Holt County line, west along the northern border of Garfield, Loup, Blaine and Thomas Counties to the Hooker County line, south along the Thomas-Hooker County lines to the McPherson County line, east along the south border of Thomas County to the western line of Custer County, south along the Custer-Logan County line to NE 92, west to U.S. 83, north to NE 92, west to NE 61, south along NE 61 to NE 92, west along NE 92 to U.S. Hwy 26, south along U.S. Hwy 26 to Keith County Line, south along Keith County Line to the Colorado State line.

Panhandle Unit: That area north and west of Keith-Deuel County Line at the Nebraska-Colorado State line, north along the Keith County Line to U.S. Hwy 26, west to NE Hwy 92, east to NE Hwy 61, north along NE Hwy 61 to NE Hwy 2, west along NE 2 to the corner formed by Garden-Grant-Sheridan Counties, west along the north border of Garden, Morrill, and Scotts Bluff Counties to the intersection of the Interstate Canal, west to the Wyoming State line.

North-Central Unit: The remainder of the State.

Light Geese

Rainwater Basin Light Goose Area: The area bounded by the junction of NE Hwy. 92 and NE Hwy. 15, south along NE Hwy. 15 to NE Hwy. 4, west along NE Hwy. 4 to U.S. Hwy. 34, west along U.S. Hwy. 34 to U.S. Hwy. 283, north along U.S. Hwy. 283 to U.S. Hwy. 30, east along U.S. Hwy. 30 to NE Hwy. 92, east along NE Hwy. 92 to the beginning.

Remainder of State: The remainder portion of Nebraska.

New Mexico (Central Flyway Portion)

Dark Geese

Middle Rio Grande Valley Unit: Sierra, Socorro, and Valencia Counties. Remainder: The remainder of the Central Flyway portion of New Mexico.

North Dakota

Missouri River Canada Goose Zone: The area within and bounded by a line starting where ND Hwy 6 crosses the South Dakota border; thence north on ND Hwy 6 to I-94; thence west on I-94 to ND Hwy 49; thence north on ND Hwy 49 to ND Hwy 200; thence north on Mercer County Rd. 21 to the section line between sections 8 and 9 (T146N-R87W); thence north on that section line to the southern shoreline to Lake Sakakawea; thence east along the southern shoreline (including Mallard Island) of Lake Sakakawea to U.S. Hwy 83; thence south on U.S. Hwy 83 to ND Hwy 200; thence east on ND Hwy 200 to ND Hwy 41; thence south on ND Hwy 41 to U.S. Hwy 83; thence south on U.S. Hwy 83 to I-94; thence east on I-94 to U.S. Hwy 83; thence south on U.S. Hwy 83 to the South Dakota border; thence west along the South Dakota border to ND Hwy 6.

Rest of State: Remainder of North Dakota.

South Dakota

Canada Geese

Unit 1: the Counties of Campbell, Marshall, Roberts, Day, Clark, Codington, Grant, Hamlin, Deuel, Walworth, that portion of Dewey County north of Bureau of Indian Affairs Road 8, Bureau of Indian Affairs Road 9, and the section of U.S. Highway 212 east of the Bureau of Indian Affairs Road 8 junction, that portion of Potter County east of U.S. Highway 83, that portion of Sully County east of U.S. Highway 83, portions of Hyde, Buffalo, Brule, and Charles Mix Counties north and east of a line beginning at the Hughes-Hyde County line on State Highway 34, east to Lees Boulevard, southeast to the State Highway 34, east 7 miles to 350th Avenue, south to Interstate 90 on 350th Avenue, south and east on State

Highway 50 to Geddes, east on 285th Street to U.S. Highway 281, north on U.S. Highway 281 to the Charles Mix-Douglas County boundary, that portion of Bon Homme County north of State Highway 50, that portion of Fall River County west of State Highway 71 and U.S. Highway 385, that portion of Custer County west of State Highway 79 and north of French Creek, McPherson, Edmunds, Kingsbury, Brookings, Lake, Moody, Miner, Faulk, Hand, Jerauld, Douglas, Hutchinson, Turner, Lincoln, Union, Clay, Yankton, Aurora, Beadle, Davison, Hanson, Sanborn, Spink, Brown, Harding, Butte, Lawrence, Meade, Pennington, Shannon, Jackson, Mellette, Todd, Jones, Haakon, Corson, Ziebach, McCook, and Minnehaha Counties.

Unit 2: Remainder of South Dakota.
Unit 3: Bennett County.

Texas

Northeast Goose Zone: That portion of Texas lying east and north of a line beginning at the Texas-Oklahoma border at U.S. 81, then continuing south to Bowie and then southeasterly along U.S. 81 and U.S. 287 to I-35W and I-35 to the juncture with I-10 in San Antonio, then east on I-10 to the Texas-Louisiana border.

Southeast Goose Zone: That portion of Texas lying east and south of a line beginning at the International Toll Bridge at Laredo, then continuing north following I-35 to the juncture with I-10 in San Antonio, then easterly along I-10 to the Texas-Louisiana border.

West Goose Zone: The remainder of the State.

Wyoming (Central Flyway Portion)

Dark Geese

Zone G1: Big Horn, Converse, Hot Springs, Natrona, Park, and Washakie Counties; and Fremont County excluding those portions south or west of the Continental Divide.

Zone G1A: Goshen and Platte Counties.

Zone G2: Campbell, Crook, Johnson, Niobrara, Sheridan, and Weston Counties.

Zone G3: Albany and Laramie Counties; and that portion of Carbon County east of the Continental Divide.

Pacific Flyway

Arizona

North Zone: Game Management Units 1-5, those portions of Game Management Units 6 and 8 within Coconino County, and Game Management Units 7, 9, and 12A.

South Zone: Those portions of Game Management Units 6 and 8 in Yavapai

County, and Game Management Units 10 and 12B-45.

California

Northeastern Zone: In that portion of California lying east and north of a line beginning at the intersection of Interstate 5 with the California-Oregon line; south along Interstate 5 to its junction with Walters Lane south of the town of Yreka; west along Walters Lane to its junction with Easy Street; south along Easy Street to the junction with Old Highway 99; south along Old Highway 99 to the point of intersection with Interstate 5 north of the town of Weed; south along Interstate 5 to its junction with Highway 89; east and south along Highway 89 to main street Greenville; north and east to its junction with North Valley Road; south to its junction of Diamond Mountain Road; north and east to its junction with North Arm Road; south and west to the junction of North Valley Road; south to the junction with Arlington Road (A22); west to the junction of Highway 89; south and west to the junction of Highway 70; east on Highway 70 to Highway 395; south and east on Highway 395 to the point of intersection with the California-Nevada State line; north along the California-Nevada State line to the junction of the California-Nevada-Oregon State lines west along the California-Oregon State line to the point of origin.

Colorado River Zone: Those portions of San Bernardino, Riverside, and Imperial Counties east of a line extending from the Nevada border south along U.S. 95 to Vidal Junction; south on a road known as "Aqueduct Road" in San Bernardino County through the town of Rice to the San Bernardino-Riverside County line; south on a road known in Riverside County as the "Desert Center to Rice Road" to the town of Desert Center; east 31 miles on I-10 to the Wiley Well Road; south on this road to Wiley Well; southeast along the Army-Milpitas Road to the Blythe, Brawley, Davis Lake intersections; south on the Blythe-Brawley paved road to the Ogilby and Tumco Mine Road; south on this road to U.S. 80; east 7 miles on U.S. 80 to the Andrade-Algodones Road; south on this paved road to the Mexican border at Algodones, Mexico.

Southern Zone: That portion of southern California (but excluding the Colorado River Zone) south and east of a line extending from the Pacific Ocean east along the Santa Maria River to CA 166 near the City of Santa Maria; east on CA 166 to CA 99; south on CA 99 to the crest of the Tehachapi Mountains at Tejon Pass; east and north along the crest of the Tehachapi Mountains to CA

178 at Walker Pass; east on CA 178 to U.S. 395 at the town of Inyokern; south on U.S. 395 to CA 58; east on CA 58 to I-15; east on I-15 to CA 127; north on CA 127 to the Nevada border.

Imperial County Special Management Area: The area bounded by a line beginning at Highway 86 and the Navy Test Base Road; south on Highway 86 to the town of Westmoreland; continue through the town of Westmoreland to Route S26; east on Route S26 to Highway 115; north on Highway 115 to Weist Rd.; north on Weist Rd. to Flowing Wells Rd.; northeast on Flowing Wells Rd. to the Coachella Canal; northwest on the Coachella Canal to Drop 18; a straight line from Drop 18 to Frink Rd.; south on Frink Rd. to Highway 111; north on Highway 111 to Niland Marina Rd.; southwest on Niland Marina Rd. to the old Imperial County boat ramp and the water line of the Salton Sea; from the water line of the Salton Sea, a straight line across the Salton Sea to the Salinity Control Research Facility and the Navy Test Base Road; southwest on the Navy Test Base Road to the point of beginning.

Balance-of-State Zone: The remainder of California not included in the Northeastern, Southern, and the Colorado River Zones.

North Coast Special Management Area: The Counties of Del Norte and Humboldt.

Sacramento Valley Special Management Area: That area bounded by a line beginning at Willows south on I-5 to Hahn Road; easterly on Hahn Road and the Grimes-Arbuckle Road to Grimes; northerly on CA 45 to the junction with CA 162; northerly on CA 45/162 to Glenn; and westerly on CA 162 to the point of beginning in Willows.

Colorado (Pacific Flyway Portion)

West Central Area: Archuleta, Delta, Dolores, Gunnison, LaPlata, Montezuma, Montrose, Ouray, San Juan, and San Miguel Counties and those portions of Hinsdale, Mineral, and Saguache Counties west of the Continental Divide.

State Area: The remainder of the Pacific-Flyway Portion of Colorado.

Idaho

Canada Geese, White-fronted Geese, and Brant

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power

County east of State Highway 37 and State Highway 39.

Zone 2: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Bingham County within the Blackfoot Reservoir drainage; Caribou County, except the Fort Hall Indian Reservation; and Power County west of State Highway 37 and State Highway 39.

Zone 3: Ada, Boise, Canyon, Cassia, Elmore, Gem, Gooding, Jerome, Lincoln, Minidoka, Owyhee, Payette, Twin Falls, and Washington Counties.

Light Geese

Zone 1: All lands and waters within the Fort Hall Indian Reservation, including private in-holdings; Bannock County; Bingham County east of the west bank of the Snake River, west of the McTucker boat ramp access road, and east of the American Falls Reservoir bluff, except that portion within the Blackfoot Reservoir drainage; Caribou County within the Fort Hall Indian Reservation; and Power County below the American Falls Reservoir bluff, and within the Fort Hall Indian Reservation.

Zone 2: Bingham County west of the west bank of the Snake River, east of the McTucker boat ramp access road, and west of the American Falls Reservoir bluff; Power County except below the American Falls Reservoir bluff, and those lands and waters within the Fort Hall Indian Reservation.

Zone 3: Ada, Boise, Canyon, Cassia, Elmore, Gem, Gooding, Jerome, Lincoln, Minidoka, Owyhee, Payette, Twin Falls, and Washington Counties.

Zone 4: Adams, Bear Lake, Benewah, Blaine, Bonner, Bonneville, Boundary, Butte, Camas, Clark, Clearwater, Custer, Franklin, Fremont, Idaho, Jefferson, Kootenai, Latah, Lemhi, Lewis, Madison, Nez Perce, Oneida, Shoshone, Teton, and Valley Counties; Caribou County, except the Fort Hall Indian Reservation; Bingham County within the Blackfoot Reservoir drainage.

Montana (Pacific Flyway Portion)

East of the Divide Zone: The Pacific Flyway portion of the State located east of the Continental Divide.

West of the Divide Zone: The remainder of the Pacific Flyway portion of Montana.

Nevada

Northeast Zone: All of Elko and White Pine Counties.

Northwest Zone: All of Carson City, Churchill, Douglas, Esmeralda, Eureka,

Humboldt, Lander, Lyon, Mineral, Nye, Pershing, Storey, and Washoe Counties.

South Zone: All of Clark and Lincoln County.

New Mexico (Pacific Flyway Portion)

North Zone: The Pacific Flyway portion of New Mexico located north of I-40.

South Zone: The Pacific Flyway portion of New Mexico located south of I-40.

Oregon

Southwest Zone: Those portions of Douglas, Coos, and Curry Counties east of Highway 101, and Josephine and Jackson Counties.

South Coast Zone: Those portions of Douglas, Coos, and Curry Counties west of Highway 101.

Northwest Special Permit Zone: That portion of western Oregon west and north of a line running south from the Columbia River in Portland along I-5 to OR 22 at Salem; then east on OR 22 to the Stayton Cutoff; then south on the Stayton Cutoff to Stayton and due south to the Santiam River; then west along the north shore of the Santiam River to I-5; then south on I-5 to OR 126 at Eugene; then west on OR 126 to Greenhill Road; then south on Greenhill Road to Crow Road; then west on Crow Road to Territorial Hwy; then west on Territorial Hwy to OR 126; then west on OR 126 to Milepost 19; then north to the intersection of the Benton and Lincoln County line; then north along the western boundary of Benton and Polk Counties to the southern boundary of Tillamook County; then west along the Tillamook County boundary to the Pacific Coast.

Lower Columbia/N. Willamette Valley Management Area: Those portions of Clatsop, Columbia, Multnomah, and Washington Counties within the Northwest Special Permit Zone.

Tillamook County Management Area: All of Tillamook County. The following portion of the Tillamook County Management Area is closed to goose hunting beginning at the point where Old Woods Rd crosses the south shores of Horn Creek, north on Old Woods Rd to Sand Lake Rd at Woods, north on Sand Lake Rd to the intersection with McPhillips Dr., due west (~200 yards) from the intersection to the Pacific coastline, south on the Pacific coastline to Neskowin Creek, east along the north shores of Neskowin Creek and then Hawk Creek to Salem Ave, east on Salem Ave in Neskowin to Hawk Ave, east on Hawk Ave to Hwy 101, north on Hwy 101 to Resort Dr., north on Resort Dr. to a point due west of the south shores of Horn Creek at its confluence

with the Nestucca River, due east (~80 yards) across the Nestucca River to the south shores of Horn Creek, east along the south shores of Horn Creek to the point of beginning.

Northwest Zone: Those portions of Clackamas, Lane, Linn, Marion, Multnomah, and Washington Counties outside of the Northwest Special Permit Zone and all of Lincoln County.

Eastern Zone: Hood River, Wasco, Sherman, Gilliam, Morrow, Umatilla, Deschutes, Jefferson, Crook, Wheeler, Grant, Baker, Union, and Wallowa Counties.

Harney and Lake County Zone: All of Harney and Lake Counties.

Klamath County Zone: All of Klamath County.

Malheur County Zone: All of Malheur County.

Utah

Northern Utah Zone: That portion of Box Elder County beginning the Weber-Box Elder county line, north along the Box Elder county line to the Utah-Idaho State line; west on this line to Stone, Idaho-Snowville, Utah road; southwest on this road to the Locomotive Springs Wildlife Management Area boundary; west, south, east, and then north along this boundary to the county road; east on the county road, past Monument Point and across Salt Wells Flat, to the intersection with Promontory Road; south on Promontory Road to a point directly west of the northwest corner of the Bear River Migratory Bird Refuge boundary; east along a line to the northwest corner of the Refuge boundary; south and east along the Refuge boundary to the southeast corner of the boundary; northeast along the boundary to the Perry access road; east on the Perry access road to I-15; south on I-15 to the Weber-Box Elder County line.

Wasatch Front Zone: Boundary begins at the Weber-Box Elder county line at I-15; east along Weber county line to US-89; south on US-89 to I-84; east and south and along I-84 to I-80; south along I-80 to US-189; south and west

along US-189 to the Utah County line; southeast and then west along this line to I-15; north on I-15 to US-6; west on US-6 to SR-36; north on SR-36 to I-80; north along a line from this intersection to the southern tip of Promontory Point and Promontory Road; east and north along this road to the causeway separating Bear River Bay from Ogden Bay; east on this causeway to the southwest corner of Great Salt Lake Mineral Corporations (GSLMC) west impoundment; north and east along GSLMC's west impoundment to the northwest corner of the impoundment; directly north from this point along an imaginary line to the southern boundary of Bear River Migratory Bird Refuge; east along this southern boundary to the Perry access road; northeast along this road to I-15; south along I-15 to the Weber-Box Elder county line.

Washington County Zone: All of Washington County.

Remainder-of-the-State Zone: The remainder of Utah.

Washington

Area 1: Skagit, Island, and Snohomish Counties.

Area 2A (Southwest Permit Zone): Clark County, except portions south of the Washougal River; Cowlitz County; and Wahkiakum County.

Area 2B (Southwest Permit Zone): Pacific County.

Area 3: All areas west of the Pacific Crest Trail and west of the Big White Salmon River that are not included in Areas 1, 2A, and 2B.

Area 4: Adams, Benton, Chelan, Douglas, Franklin, Grant, Kittitas, Lincoln, Okanogan, Spokane, and Walla Walla Counties.

Area 5: All areas east of the Pacific Crest Trail and east of the Big White Salmon River that are not included in Area 4.

Brant

Pacific Flyway

California

North Coast Zone: Del Norte, Humboldt and Mendocino Counties.

South Coast Zone: Balance of the State.

Washington

Puget Sound Zone: Skagit County.

Coastal Zone: Pacific County.

Swans

Central Flyway

South Dakota: Aurora, Beadle, Brookings, Brown, Brule, Buffalo, Campbell, Clark, Codington, Davison, Deuel, Day, Edmunds, Faulk, Grant, Hamlin, Hand, Hanson, Hughes, Hyde, Jerauld, Kingsbury, Lake, Marshall, McCook, McPherson, Miner, Minnehaha, Moody, Potter, Roberts, Sanborn, Spink, Sully, and Walworth Counties.

Pacific Flyway

Montana (Pacific Flyway Portion)

Open Area: Cascade, Chouteau, Hill, Liberty, and Toole Counties and those portions of Pondera and Teton Counties lying east of U.S. 287-89.

Nevada

Open Area: Churchill, Lyon, and Pershing Counties.

Utah

Open Area: Those portions of Box Elder, Weber, Davis, Salt Lake, and Toole Counties lying west of I-15, north of I-80, and south of a line beginning from the Forest Street exit to the Bear River National Wildlife Refuge boundary; then north and west along the Bear River National Wildlife Refuge boundary to the farthest west boundary of the Refuge; then west along a line to Promontory Road; then north on Promontory Road to the intersection of SR 83; then north on SR 83 to I-84; then north and west on I-84 to State Hwy 30; then west on State Hwy 30 to the Nevada-Utah State line; then south on the Nevada-Utah State line to I-80.

LIST OF PUBLIC LAWS

Note: No public bills which have become law were received by the Office of the Federal Register for inclusion

in today's **List of Public Laws**.

Last List August 13, 2014

Public Laws Electronic Notification Service (PENS)

PENS is a free electronic mail notification service of newly

enacted public laws. To subscribe, go to <http://listserv.gsa.gov/archives/publaws-l.html>

Note: This service is strictly for E-mail notification of new laws. The text of laws is not available through this service. **PENS** cannot respond to specific inquiries sent to this address.
