Abstract: This information collection implements requirements of the Endangered Species Act (16 U.S.C. 1531 et seq.) (ESA). There are no corresponding Service regulations for the ESA post-delisting monitoring requirement. This information collection also implements the Migratory Bird Treaty Act (16 U.S.C. 704) and Service regulations in chapter I, subchapter B of title 50 of the Code of Federal Regulations (CFR).

The American peregrine falcon was removed from the List of Endangered and Threatened Wildlife on August 25, 1999 (64 FR 46542). Section 4(g) of the ESA requires that all species that are recovered and removed from the List of Endangered and Threatened Wildlife (delisted) be monitored in cooperation with the States for a period of not less

than 5 years. The purpose of this requirement is to detect any failure of a recovered species to sustain itself without the protections of the ESA. We work with relevant State agencies and other species experts to develop appropriate plans and procedures for systematically monitoring recovered wildlife and plants.

The American peregrine falcon has a large geographic distribution that includes a substantial amount of non-Federal land. Although the ESA requires that monitoring of recovered species be conducted for not less than 5 years, the life history of American peregrine falcons is such that it is appropriate to monitor this species for a longer period of time in order to meaningfully evaluate whether or not the recovered species continues to maintain its recovered status. The Monitoring Plan for the American Peregrine Falcon is available on our Web site at <http://www.fws.gov/endangered/esa-library/pdf/Peregrineplan2003.pdf>. Formal collection of monitoring data began in

2003 and continued through 2012. We monitored peregrines nationally four times over a span of 9 years. Although formal post-delisting monitoring concluded in 2012, we will make an effort to continue to monitor peregrine falcons regionally in future years. Under this reduced effort, we will monitor peregrines in four southwestern States in 2015.

We will use the information supplied on FWS Forms 3-2307, 3-2308, and 3-2309 to further our knowledge of American peregrine falcon breeding site occupancy, nest success, productivity, and contaminant levels in parts of the United States:

(1) FWS Form 3-2307 (Peregrine Falcon Monitoring Form) addresses the reporting requirements to record observations on the nesting pair, and the numbers of eggs and young during each nest visit.

(2) FWS Form 3-2308 (Peregrine Falcon Egg Contaminants Data Sheet) addresses the reporting requirements to
