In order to complete the work, the licensee is requesting a temporary variance of its Dry year minimum flow requirement of 35 cubic feet per second (cfs) between November 1, 2014 and March 15, 2015. During this time, the licensee proposes to release flows through a conduit into a seasonal creek that is a tributary to the East Branch Russian River immediately downstream of the project powerhouse. The licensee states that during the repair period, it would release a minimum flow of 20 cfs from the conduit into the East Branch Russian River, which would include the release of up to 5 cfs for the Potter Valley Irrigation District. As the project is currently operating according to the Dry year criteria, the licensee states that if

site conditions reach a Critically Dry year status, it would instead, maintain the license-required minimum flow of 5 cfs. Upon completion of construction, the licensee states that it would notify the resource agencies and return to the license-required flows.
