Abstract: This ICR covers the usage of TANAs with members of the impacted community in order to determine how the community is receiving technical information about a Superfund remedial or removal site; whether the community needs additional assistance in order to understand and respond to site-related technical information; and whether there are organizations in the community that are interested or involved in site-related issues and capable of acting as an appropriate conduit for technical assistance services to the affected community. The TANA will help ensure the community's needs for technical assistance are defined as early in the remedial/removal process as possible and enable meaningful community involvement in the Superfund decision-making process. Additionally, the TANA process produces a blueprint for designing a coordinated effort to meet the community's needs for additional technical assistance while minimizing the overlap of services provided.

SUPPLEMENTARY INFORMATION:

I. Information About IRIS

EPA's IRIS Program is a human health assessment program that evaluates quantitative and qualitative risk information on effects that may result from exposure to chemical substances found in the environment. Through the IRIS Program, EPA provides the highest quality science-based human health assessments to support EPA's regulatory activities and decisions to protect public health. The IRIS database contains information for chemical substances that can be used to support the first two steps (hazard identification and dose-response evaluation) of the human health risk assessment process. When supported by available data, IRIS provides health effects information and toxicity values for health effects (including cancer and effects other than cancer). Government and others combine IRIS toxicity values with exposure information to characterize public health risks of chemical substances; this information is then used to support risk management decisions designed to protect public health.

II. IRIS Public Science Meetings Conducted in 2013 and 2014

The IRIS Program began conducting Bimonthly Public Science Meetings in December 2013 and continued through 2014. During this period, a total of five public science meetings were held. These meetings covered 12 chemicals undergoing assessment, including 2 assessments undergoing problem formulation, 8 assessments in the step 1 literature search and evidence table phase, and 2 assessments in the step 4 draft assessment phase as indicated in the following table.
