

consumers in making purchasing decisions? Would labeling for these products be economically feasible? Would it be technologically feasible? What are the costs of testing these products? What costs would such labeling or other energy disclosures impose on consumers and businesses (including small businesses)?

c. *Energy Use Data*: Is there energy use data regarding these refrigeration products beyond the information already provided by DOE? If so, is there data that shows a significant difference in the energy use of competing models? If so, is there a significant difference in the energy use of such models? What are the annual energy costs of these products?

d. *Format, Content, and Placement*: If the Commission considers labeling or other energy disclosures for one or more of these products, what should the format, content, and placement be of such information? Should the labeling requirements for these products differ in any significant way from the EnergyGuide labels currently applicable to refrigerators, refrigerator-freezers, and freezers? How do consumers purchase these products (e.g., in stores, online, or otherwise)? Are consumers likely to see the label for these products before purchase? Should disclosures appear on the products themselves, on packaging, in other point-of-purchase material, or through some other means?

e. *Internet and Catalog Disclosures*: Should internet and other catalog disclosures for these products be any different than those for other covered products, such as refrigerators already covered by the Rule?

f. *Content*: If labeling or other energy disclosures should be required, what types of information should such labels include? Should labeling provide the same information as the EnergyGuide label for other refrigerators (i.e., yearly operating costs, energy use, and comparative information)? Should the label require something different or additional?
