This section of the FEDERAL REGISTER contains notices to the public of the proposed issuance of rules and regulations. The purpose of these notices is to give interested persons an opportunity to participate in the rule making prior to the adoption of the final rules.

DEPARTMENT OF AGRICULTURE

Animal and Plant Health Inspection Service

7 CFR Part 319

[Docket No. APHIS–2014–0088]

RIN 0579–AE05

Mexican Hass Avocado Import Program

AGENCY: Animal and Plant Health Inspection Service, USDA.

ACTION: Proposed rule.

SUMMARY: Commercial consignments of Hass avocado fruit are currently authorized entry into the continental United States, Hawaii, and Puerto Rico from the Mexican State of Michoacán under a systems approach to mitigate against quarantine pests of concern. We are proposing to amend the regulations to allow the importation of fresh Hass avocado fruit into the continental United States, Hawaii, and Puerto Rico from all of Mexico, provided individual Mexican States meet the requirements set out in the regulations and the operational plan. Initially, this action would only apply to the Mexican State of Jalisco. With the exception of a clarification of the language concerning when sealed, insect-proof containers would be required to be used in shipping and the removal of mandatory fruit cutting at land and maritime borders, the current systems approach would not change. That systems approach, which includes requirements for orchard certification, limited production area, trace back labeling, pre-harvest orchard surveys, orchard sanitation, post-harvest safeguards, fruit cutting and inspection at the packinghouse, port-of-arrival inspection, and clearance activities, would then be required for importation of fresh Hass avocado fruit from all approved areas of Mexico. The fruit would also be required to be imported in commercial consignments and accompanied by a phytosanitary certificate issued by the national plant protection organization of Mexico with an additional declaration stating that the consignment was produced in accordance with the systems approach described in the operational plan. This action would allow for the importation of fresh Hass avocado fruit from Mexico while continuing to provide protection against the introduction of plant pests into the continental United States, Hawaii, and Puerto Rico.

DATES: We will consider all comments that we receive on or before April 20, 2015.

ADDRESSES: You may submit comments by either of the following methods:

• Postal Mail/Commercial Delivery: Send your comment to Docket No. APHIS–2014–0088, Regulatory Analysis and Development, PPD, APHIS, Station 3A–03.8, 4700 River Road Unit 118, Riverdale, MD 20737–1238.

Supporting documents and any comments we receive on this docket may be viewed at http://www.regulations.gov/#/docketDetail?D=APHIS-2014-0088 or in our reading room, which is located in room 1141 of the USDA South Building, 14th Street and Independence Avenue SW., Washington, DC. Normal reading room hours are 8 a.m. to 4:30 p.m., Monday through Friday, except holidays. To be sure someone is there to help you, please call (202) 799–7039 before coming.

FOR FURTHER INFORMATION CONTACT: Mr. David B. Lamb, Senior Regulatory Policy Specialist, RPM, PPQ, APHIS, 4700 River Road Unit 133, Riverdale, MD 20737–1231; (301) 851–2103.

SUPPLEMENTARY INFORMATION:

Background

Under the regulations in “Subpart-Fruits and Vegetables” (7 CFR 319.56 through 319.56–71), the Animal and Plant Health Inspection Service (APHIS) prohibits or restricts the importation of fruits and vegetables into the United States from certain parts of the world to prevent plant pests from being introduced into and spread within the United States. The requirements for importing fresh Hass avocado fruit into the United States from Michoacán, Mexico, are described in § 319.56–30. Those requirements include pest surveys and pest risk-reducing practices, treatment, packinghouse procedures, inspection, and shipping procedures.

The national plant protection organization (NPPO) of Mexico has requested that APHIS amend the regulations in order to allow Hass avocados to be imported from all of Mexico into the continental United States, Hawaii, and Puerto Rico. As part of our evaluation of Mexico’s request, we prepared a pest risk assessment (PRA), “Importation of Fresh Fruit of Avocado (Persea americana Mill. var. ‘Hass’) from Mexico into the Continental United States, Hawaii, and Puerto Rico, A Qualitative, Pathway-Initiated Pest Risk Assessment” (January 2014), which evaluated the risk of permitting the importation of Mexican Hass avocados from all of Mexico into the continental United States, Hawaii, and Puerto Rico. We also prepared a commodity import evaluation document (CIED) to determine what phytosanitary measures should be applied to mitigate the pest risk associated with the importation of Hass avocados from all of Mexico into the continental United States, Hawaii, and Puerto Rico. Copies of the PRA and CIED may be obtained from the person listed under FOR FURTHER INFORMATION CONTACT or viewed on the Regulations.gov Web site (see ADDRESSES above for a link to Regulations.gov and information on the location and hours of the reading room).

In the CIED, entitled, “Expansion of areas allowed to import Fresh Commercial Avocado Fruit (Persea americana Mill. Var. ‘Hass’) from Mexico into the Continental United States, Hawaii, and Puerto Rico,” (June 2014), we determined that because the systems approach currently in place is successful in mitigating the risks of introducing quarantine pests associated with the importation of fresh Hass avocado fruit from Michoacán, Mexico, into the continental United States, Hawaii, and Puerto Rico, the current systems approach will also adequately mitigate the risks of introducing quarantine pests from the other Mexican States. We concluded that the phytosanitary risks for insect pests associated with the importation of Hass avocados from all of Mexico into the continental United States, Hawaii, and...
Puerto Rico would be effectively mitigated using nearly the same systems approach as is currently used for the importation of Hass avocados from Michoacán, Mexico, as set forth in § 319.56–30. We are proposing to make some minor changes to the systems approach. Those proposed changes are discussed below.

Based on the findings of the CIED and the PRA, we are proposing to amend § 319.56–30 to allow commercial shipments of Hass avocados from all growing areas of Mexico to be imported into the continental United States, Hawaii, and Puerto Rico. Specifically, these requirements are found in § 319.56–30(c) and include orchard certification, traceback labeling, pre-harvest orchard surveys, orchard sanitation, post-harvest safeguards, and fruit cutting and inspection at the packinghouse. This proposed rule would allow for future importation of fresh Hass avocados from other Mexican States provided those States meet the APHIS requirements contained in the regulations. Prior to shipments beginning from any future States, APHIS would work with the NPPO of Mexico to ensure that they meet the requirements of § 319.56–30(c). Any additions to the review process for approving new States will be added to the operational workplan as mutually negotiated and agreed upon between APHIS and the NPPO of Mexico.

Pests of Concern

Specific pests of concern associated with fresh avocado fruit for which mitigations are required are listed in paragraphs (c)(1)(i), (c)(2)(i), and (e) of § 319.56–30. They are:
- Conotrachelus australis, a small avocado stem weevil;
- Conotrachelus parvulus, a small avocado seed weevil;
- Cryptaspasma persicae, a weevil, but not for the other six pests listed below, which were determined to pose a medium or low chance of following the importation pathway of fresh Hass avocado fruit from Mexico. These pests, which would be addressed through port of entry inspection, are:
  - Avocado sunblotch virus;
  - Macellicoccus hirsutus (Green), pink hibiscus mealybug;
  - Pseudophilothrips perseae (Watson), a thrips;
  - Scirtothrips aceri (Moulton), a thrips;
  - Scirtothrips perseae Nakahara, a thrips; and
  - Sphaceloma perseae Jenkins, avocado scab.

We have determined that the existing mitigations would be sufficient to prevent these six pests from following the pathway of importation, in particular, packinghouse culling, restriction of shipments to commercial consignments only, and NPPO inspection. The six pests listed above produce symptoms on infested fruit that are macroscopic in nature and thus easily detectable upon surface inspection. Further, commercially produced fruit are grown and packed to meet quality standards that are much higher than non-commercially produced fruit and are therefore less likely to serve as hosts to pests of phytosanitary concern. Interceptions of pests in commercial shipments of fruit versus passenger baggage indicate commercially produced fruit represents a much lower risk of carrying pests.

Fruit Covering Requirements

In § 319.56–30, paragraph (c)(3)(vii) currently references the lid, insect-proof mesh, or other material required to be placed over the avocados prior to leaving the packinghouse to protect against fruit fly infestation. Paragraph (c)(3)(viii) describes refrigerated transit requirements for the avocado fruit within Mexico. Recently, a maritime shipment of fresh avocado fruit from Mexico arrived in Port Manatee, FL, for the first time. The avocados were in uncovered trays inside sealed, refrigerated containers, and the shipment was delayed because the avocados were not covered with a lid, insect-proof mesh, or other material. As a result of this incident, we have examined the requirements in paragraphs (c)(3)(vii) and (c)(3)(viii) and determined that we should clarify our intentions regarding whether those lids, insect-proof mesh, or other material need to remain in place throughout the entire shipping process.

Since the lids, insect-proof mesh, or other material are intended to provide phytosanitary protection against fruit flies, and transport in refrigerated trucks or containers provides the same protection, we are proposing to amend the regulations in order to stipulate that those coverings would not be required when the avocado fruit is inside a refrigerated container or truck. Such coverings would therefore not be required to be applied at the packinghouse, as the avocados are transferred directly from inside the packinghouse into refrigerated containers or trucks, and all transit within Mexico is required to be completed in these containers or trucks. If the avocado fruit is transferred to a non-refrigerated container at an air or maritime port in Mexico for shipment to the United States, a covering would have to be applied.

Port of Entry Fruit Cutting

Currently, Hass avocado fruit are required to be biometrically sampled and cut in the field at the packinghouse, and by an inspector at the port of first entry into the United

operational workplan is an agreement between APHIS’ Plant Protection and Quarantine program, officials of the NPPO of a foreign government, and, when necessary, foreign commercial entities, that specifies in detail the phytosanitary measures that will comply with our regulations governing the import or export of a specific commodity. Operational workplans apply only to the signatory parties and establish detailed procedures and guidance for the day-to-day operations of specific import/export programs. Operational workplans also establish how specific phytosanitary issues are dealt with in the exporting country and make clear who is responsible for dealing with those issues. The existing systems approach for importing fresh Hass avocado fruit into the United States from Michoacán, Mexico, currently requires that an annual workplan be developed. This change would allow APHIS flexibility and responsiveness in adding or removing pests of concern from the list of actionable pests. (The current regulations refer to a “bilateral work plan.” For the sake of consistency with our other regulations, we would change the term to “operational workplan” in this rulemaking.)

Additionally, based on the findings of the PRA, we would add eight pests to the list of pests of concern to be maintained in the operational workplan. Of those, we would require field and packinghouse surveys for Cryptaspasma perseae, a tortricid moth, and Conotrachelus serpentinus, a weevil, but not for the other six pests listed below, which were determined to pose a medium or low chance of following the importation pathway of fresh Hass avocado fruit from Mexico. These pests, which would be addressed through port of entry inspection, are:
- Avocado sunblotch virusoid;
- Macellicoccus hirsutus (Green), pink hibiscus mealybug;
- Pseudophilothrips perseae (Watson), a thrips;
- Scirtothrips aceri (Moulton), a thrips;
- Scirtothrips perseae Nakahara, a thrips; and
- Sphaceloma perseae Jenkins, avocado scab.

We have determined that the existing mitigations would be sufficient to prevent these six pests from following the pathway of importation, in particular, packinghouse culling, restriction of shipments to commercial consignments only, and NPPO inspection. The six pests listed above produce symptoms on infested fruit that are macroscopic in nature and thus easily detectable upon surface inspection. Further, commercially produced fruit are grown and packed to meet quality standards that are much higher than non-commercially produced fruit and are therefore less likely to serve as hosts to pests of phytosanitary concern. Interceptions of pests in commercial shipments of fruit versus passenger baggage indicate commercially produced fruit represents a much lower risk of carrying pests.
California’s production is of the Hass variety. While APHIS does not have information on the size distribution of U.S. avocado producers, according to the Census of Agriculture, there were a total of 93,020 fruit and tree nut farms in the United States in 2012. The average value of agricultural products sold by these farms was less than $274,000, which is well below the SBA’s small-entity standard of $750,000. It is reasonable to assume that most avocado farms qualify as small entities. Between 2002 and 2012, the number of avocado operations in California grew by approximately 17 percent, from 4,801 to 5,602 operations. Avocados produced in the State of Jalisco, north of Michoacán, are expected to be the first that would be exported to the United States under this rule. These imports would help meet the increasing year-round U.S. demand for avocados. Per capita avocado consumption in the United States grew from 1.1 pounds in 1989 to 4.5 pounds in 2011. A growing Hispanic population and greater awareness of the avocado’s health benefits have helped to spur demand.

In 2012, Jalisco produced about 90 million pounds of Hass avocados. Given required phytosanitary safeguards, only a fraction of this quantity is expected to qualify for importation by the United States. But even if all of Jalisco’s avocado production were to meet the requirements for U.S. entry, the total quantity would be equivalent to less than 8 percent of U.S. Hass avocado imports in 2013 of over 1.2 billion pounds. The proposed rule is therefore not expected to have a large impact on the U.S. avocado market or California producers because of potential imports solely from the Mexican State of Jalisco. Any market effects are as likely to be borne by other foreign suppliers, such as Chile and Peru, as by U.S. producers.

Executive Order 12866 and Regulatory Flexibility Act

This proposed rule has been reviewed under Executive Order 12866. The proposed rule has been determined to be not significant for the purposes of Executive Order 12866 and, therefore, has not been reviewed by the Office of Management and Budget.

In accordance with 5 U.S.C. 603, we have performed an initial regulatory flexibility analysis, which is summarized below, regarding the economic effects of this proposed rule on small entities. Copies of the full analysis are available by contacting the person listed under FOR FURTHER INFORMATION CONTACT or on the Regulations.gov Web site (see ADDRESSES above for instructions for accessing Regulations.gov).

Based on the information we have, there is no reason to conclude that adoption of this proposed rule would result in any significant economic effect on a substantial number of small entities. However, we do not currently have all of the data necessary for a comprehensive analysis of the effects of this proposed rule on small entities. Therefore, we are inviting comments on potential effects. In particular, we are interested in determining the number and kind of small entities that may incur benefits or costs from the implementation of this proposed rule.

Mexican officials have requested that additional States in Mexico be allowed to export Hass avocados to the United States under the same systems approach that was implemented for Michoacán, Mexico, and has successfully kept pest infestations associated with imported avocados out of the United States. U.S. imports of avocado from Mexico have increased significantly over the years, from 311 million pounds in 2003 to over 1.1 billion pounds in 2013. U.S. avocado production over the 10 years from the 2002/03 season through the 2011/12 season averaged 423 million pounds per year, of which California accounted for 87.5 percent or over 375 million pounds. Nearly all of

Executive Order 12988

This proposed rule would allow fresh Hass avocado fruit to be imported into the United States from all of Mexico. If this proposed rule is adopted, State and local laws and regulations regarding fresh Hass avocado fruit imported under this rule would be preempted while the fruit is in foreign commerce. Fresh fruits and vegetables are generally imported for immediate distribution and sale to the consuming public and would remain in foreign commerce until sold to the ultimate consumer. The question of when foreign commerce ceases in other cases must be addressed on a case-by-case basis. If this proposed rule is adopted, no retroactive effect will be given to this rule, and this rule will not require administrative proceedings before parties may file suit in court challenging this rule.

Paperwork Reduction Act

This proposed rule contains no new information collection or recordkeeping requirements under the Paperwork Reduction Act of 1995 (44 U.S.C. 3501 et seq.).

List of Subjects in 7 CFR Part 319

Coffee, Cotton, Fruits, Imports, Logs, Nursery stock, Plant diseases and pests, Quarantine, Reporting and recordkeeping requirements, Rice, Vegetables.

Accordingly, we propose to amend 7 CFR part 319 as follows:

PART 319—FOREIGN QUARANTINE NOTICES

■ 1. The authority citation for part 319 continues to read as follows:

■ 2. Section 319.56–30 is amended as follows:

a. By revising the section heading.

b. In the introductory paragraph, by removing the words “Michoacan, Mexico,” and adding the word “Mexico” in their place.

c. By revising paragraph (c) introductory text.

d. In paragraph (c)(1)(i), by removing the words “bilateral work plan” and adding the words “operational work plan” in their place.

e. In paragraph (c)(1)(ii), by removing the words “the large avocado seed weevil Heilipus lauri, the avocado seed moth Stenoma catenifer, and the small avocado seed weevils Conotrachelus aguacattae and C. perseae” and adding the words “avocado pests listed in the operational work plan” in their place.

f. In paragraph (c)(2) introductory text, by removing the words “annual work plan” and adding the words “operational work plan” in their place.

g. In paragraph (c)(2)(i), by removing the words “the avocado stem weevil Copturus aguacattae” and adding the words “avocado pests listed in the operational work plan” in their place.

h. In paragraph (c)(3) introductory text, by removing the words “annual work plan” and adding the words “operational work plan” in their place.

i. By revising paragraph (c)(3)(vii).

j. In paragraph (c)(3)(viii), by adding two sentences at the end of the paragraph.

k. In paragraph (e), by removing the words “Heilipus lauri, Conotrachelus

k. In paragraph (e), by removing the words “Heilipus lauri, Conotrachelus

\brushed
Hass avocados from Mexico.

§ 319.56–30 Hass avocados from Mexico.

* * * * *

(c) Safeguards in Mexico. The avocados must have been grown in an orchard located in a municipality that meets the requirements of paragraph (c)(1) of this section. The orchard in which the avocados are grown must meet the requirements of paragraph (c)(2) of this section. The avocados must be packed for export to the United States in a packinghouse that meets the requirements of paragraph (c)(3) of this section. The Mexican national plant protection organization (NPPO) must provide an annual operational workplan to APHIS that details the activities that the Mexican NPPO will, subject to APHIS’ approval of the workplan, carry out to meet the requirements of this section; APHIS will be directly involved with the Mexican NPPO in the monitoring and supervision of those activities. The personnel conducting the trapping and pest surveys must be hired, trained, and supervised by the Mexican NPPO or by the State delegate of the Mexican NPPO.

* * * * *

(3) * * *

(vii) The avocados must be packed in clean, new boxes or bulk shipping bins, or in clean plastic reusable crates. The boxes, bins, or crates must be clearly marked with the identity of the grower, packinghouse, and exporter.

(viii) * * If, at the port of export for consignments shipped by air or sea, the packed avocados are transferred into a non-refrigerated container, the boxes, bins, or crates must be covered with a lid, insect-proof mesh, or other material to protect the avocados from fruit-fly infestation prior to leaving the packinghouse. Those safeguards must be intact at the time the consignment arrives in the United States.
