Inhibitors of TDP2 and Their Potential Commercial Applications: Furoquinolinediones and methods of use to treat cancer

**Description of Technology:** The invention relates to novel Furoquinolinediones derivatives and their ability to inhibit the enzyme tyrosyl-DNA phosphodiesterase 2 (TDP2), and therefore to serve as anti-cancer agents. Furthermore, these compounds can be used in combination with topoisomerase II (Top2) inhibitors, such as etoposide or doxorubicin, to more effectively kill cancer cells in a synergistic fashion.

**Potential Commercial Applications:**
- Research tools
- Drug development for glaucoma

**Competitive Advantages:** The new transgenic mouse model carries a mutation associated with a severe form of glaucoma among the identified MYOC mutations.

**Development Stage:** Prototype.

**Inventors:** Christophe R. Marchand, Likun An, Yves G. Pommier (all of NCI)

**Licensing Contact:** Kevin Chang, Ph.D.; 301–435–5018; changke@mail.nih.gov

**Transgenic Mouse Model of Human Open Angle Glaucoma**

**Description of Technology:** Glaucoma is a group of chronic neurodegenerative disorders, which is characterized by progressive loss of retinal ganglion cells (RGC) and results in irreversible damage to optic nerve and thereby loss of vision. Primary open angle glaucoma (POAG) is the most common form of glaucoma; mutations in MYOC gene are the most common genetically defined cause of POAG. As such, MYOC transgenic mouse models are very useful to study MYOC-associated glaucoma and to develop therapies to treat these diseases. The NIH inventors generated a new MYOC mouse model carrying a mutant human MYOC (Y437H) gene. The Y437H mutation is associated with a severe form of glaucoma among the identified MYOC mutations.

**Potential Commercial Applications:**
- Research tools
- Drug development for glaucoma

**Competitive Advantages:** The new transgenic mouse model carries a mutation associated with a severe form of glaucoma in humans.

**Development Stage:** Prototype.

**Inventors:** Stanislav Tomarev (NEI), Yu Zhou (former NEI), Oleg Grinchuk (former NEI)

**Publications:**

**Intellectual Property:** HHS Reference No. E–091–2015(0)—Research Tool. Patent protection is not being pursued for this technology.

**Licensing Contact:** Todd Fenn; 424–297–0336; todd.fenn@nih.gov

National Institutes of Health

**Center for Scientific Review; Notice of Closed Meeting**

Pursuant to section 10(d) of the Federal Advisory Committee Act, as amended (5 U.S.C. App.), notice is hereby given of the following meeting.

The meeting will be closed to the public in accordance with the provisions set forth in sections 552b(c)(4) and 552b(c)(6), Title 5 U.S.C., as amended. The grant applications and the discussions could disclose confidential trade secrets or commercial property such as patentable material, and personal information concerning individuals associated with the grant applications, the disclosure of which would constitute a clearly unwarranted invasion of personal privacy.

**Name of Committee:** Center for Scientific Review Special Emphasis Panel; PAR–12–095: Special Review.

**Date:** May 6, 2015.

**Time:** 11:00 a.m. to 12:00 p.m.

**Agenda:** To review and evaluate grant applications.

**Place:** National Institutes of Health, 6701 Rockledge Drive, Bethesda, MD 20892, (Telephone Conference Call).

**Contact Person:** Angela Y. Ng, Ph.D., MBA, Scientific Review Officer, Center for Scientific Review, National Institutes of Health, 6701 Rockledge Drive, Room 6200, MSC 7804, Bethesda, MD 20892; 301–435–1715, ng}@ocr.nih.gov.

**This notice is being published less than 15 days prior to the meeting due to the timing limitations imposed by the review and funding cycle.**

**Dated:** April 28, 2015.

**Michelle Trout,** Program Analyst, Office of Federal Advisory Committee Policy.
